The National banking system, like that of other great nations, was born of public or national necessity, and came into being at the time of the great civil struggle. The first ten years of its existence were uneventful. There were in existence in 1873 nineteen hundred and eighty National banks. At this time the country suffered from one of the most severe panics in its history, precipitated by the failure of Jay Cooke & Co., the First National Bank, of Washington, and the National Bank of the Commonwealth, of New York. The banks stood the strain admirably, and after the first shock were soon restored to public confidence, although the business interests did not recover from the depression until the resumption of specie payments in 1879.

Again, in 1893, the banks were given a thorough test, but where failure and weakness developed, they were in almost every instance immediately traceable to mismanagement and violation of the law. The system has served its purposes admirably in the past, and with slight modifications from time to time will meet the demands of the future. It is a most gratifying fact that it has never been made an issue by the dominant political parties, and as its privileges are available to all, irrespective of political affiliation, we may consider it safe from such pitfalls.

It is equally gratifying that not one of the financial disturbances which have swept over the country since its establishment, has been in any way attributable to its operations.

The number of National banks on December 10, 1901, was four thousand, two hundred and ninety one, with aggregate assets of five billions, seven hundred and twenty-two millions, seven hundred and thirty-five thousand, six hundred and thirty-five dollars and forty-nine cents, an increase of three hundred per cent. over 1873.

As the changes proposed are modeled after the system employed by other nations,

Digitized by Google

it is interesting and profitable to note the progress made in banking power in this country, as compared with other leading financial powers. The following table is taken from the last report of the Comptroller:

	1890. Millions.	*1901.* Millions.	*Increase.* Per cent.
United Kingdom	£910	£1,199	31
Continental Europe	1,087	1,357	31
Australia, Canada, Cape Colony, Argentina, Uruguay	220	288	31
United States	1,080	2,279	121
Total	3,197	5,123	60

This is a most gratifying showing.

One of the reasons advanced for the change in our banking system, and the establishment of a great central bank, with branches, is that the rates of interest would be equalized, and the outlying districts would therefore be better served.

Under our present system there is every inducement for the establishment of banks in the small towns. These are owned and operated, as a rule, by local citizens, who are thoroughly conversant with the surroundings, conditions and collaterals loaned upon.

A comparison of the facilities extended in this country in the smaller towns with those of Canada, for instance, will develop the fact that no fault can be laid at the door of the National banking system on this point.

To sum the matter up, I should say we have, upon the whole, a most admirable system, altogether consistent with American principles. Should changes be made, it is to be hoped none will be so radical as to destroy the integrity of the present system.

One of the safeguards of the day is the greater conservatism in financial legislation. The people are studying financial questions patiently and thoroughly, and the soundness of their views is finding expression in legislation by the establishment of the gold standard; by the modification of the banking laws relating to bank circulation, and the closer supervision which is daily being exercised by the States over institutions operating under charters from them.

The laws governing National banks are well tried and wholesome. They are in accord with our social and political institutions, and are conspicuous for their conservatism and safety, furnishing under the same provisions admirable banking facilities, not only to the great centers, but to the smaller cities and towns of the country.

The sentiment among the more conservative bankers to-day would oppose legislation extending our banking circulation, for while the business interests have been greatly facilitated by the increase in the capital of our banks and industrial enterprises, this legitimate increase has been accompanied by enormous speculation, which must now be carefully considered and curbed, rather than fostered.

The tendency of our present system of banking is to build up the individual. It would not be American if it were otherwise.

I congratulate you young men in the ranks upon your opportunities. The press of to-day, the bankers' associations, and your own institute, afford you the best opportunities ever enjoyed for study and the thorough mastery of your chosen profession. Master it, and while you may not be called upon to fill the most prominent position in a large bank, you can make a place giving you position and responsibility, and an opportunity to accumulate a competency. The opportunity is yours.

THE FOWLER CURRENCY AND BANKING BILL.

In the House of Representatives, March 10, 1902, Mr. Fowler (by instruction of the majority members of the Committee on Banking and Currency) introduced the following bill, which was referred to the Committee on Banking and Currency and ordered to be printed:

A BILL to maintain the gold standard, provide an elastic currency, equalize the rates of interest throughout the country, and further amend the National Banking Laws.

Division of Banking and Currency.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be, and is hereby, created and established a division of banking and currency, which shall have the entire supervision of all National banks; and said division shall be in charge of a board consisting of three members, which shall take the place of and shall have, exercise, and enjoy all the powers and authority heretofore lawfully vested in the Comptroller of the Currency and be known as the Board of Control of Banking and Currency.

The members of said Board of Control shall be appointed by the President, by and with the advice and consent of the Senate. The term of office shall be for a period of twelve years, except that the terms of the first three members shall be for twelve, eight, and four years, respectively. The member appointed for four years shall be known as the first comptroller and shall preside over the Board of Control, and the two remaining members shall be known as associate comptrollers, and thereafter that member of the board whose term next expires shall become the first comptroller.

The salary of each member of said Board of Control shall be seven thousand five hundred dollars per annum, which shall be paid out of the taxes collected from the banks upon their note circulation; and the members of said Board of Control shall be removed only for cause stated in writing.

Current Redemption of United States Notes.

Sec. 2. That if any National bank shall assume the currency redemption, as hereinafter described, of an amount of United States notes equal to twenty per centum of its paid-up capital, it shall have the right, without depositing United States bonds as now provided by law—

Tax on Circulation.

First. To immediately take out for issue an amount of bank notes equal to ten per centum of its paid-up capital, and may circulate the same by paying a tax, on the first days of January and July of each year, of one-eighth of one per centum upon the average amount of such notes in actual circulation during the preceding six months.

Second. To take out for issue an amount of bank notes equal to ten per centum of its paid-up capital at any time after the expiration of one year from the date of the assumption aforesaid; and it shall pay into the Treasury of the United States, on the first days of January and July of each year, a tax of one-eighth of one per centum upon the average amount of such notes in actual circulation during the preceding six months.

Digitized by Google

The foregoing taxes shall not be increased so long as said bank shall continue to currently redeem said United States notes, but whenever said bank shall cease to currently redeem said notes it shall pay into the United States Treasury, on the first days of January and July of each year, a tax of five-eighths of one per centum upon the average amount of such notes in actual circulation during the preceding six months.

Third. To take out for issue an amount of bank notes equal to ten per centum of its paid-up capital at any time after the expiration of two years from the date of the assumption aforesaid; and it shall pay into the Treasury of the United States, on the first days of January and July of each year, a tax of five-eighths of one per centum upon the average amount of such notes in actual circulation during the preceding six months.

Fourth. To take out for issue an amount of bank notes equal to ten per centum of its paid up capital at any time after the expiration of three years from the date of the assumption aforesaid; and it shall pay into the Treasury of the United States, on the first days of January and July of each year, five-eighths of one per centum upon the average amount of such notes in actual circulation during the preceding six months.

Fifth. To take out for issue an amount of bank notes equal to ten per centum of its paid-up capital at any time after the expiration of four years from the date of the assumption aforesaid; and it shall pay into the Treasury of the United States, on the first days of January and July of each year, a tax of five-eighths of one per centum upon the average amount of such notes in actual circulation during the preceding six months.

Sixth. To take out for issue an amount of bank notes equal to ten per centum of its paid-up capital at any time after the expiration of five years from the date of the assumption aforesaid; and it shall pay into the Treasury of the United States, on the first days of January and July of each year, a tax of five-eighths of one per centum upon the average amount of such notes in actual circulation during the preceding six months.

EMERGENCY CIRCULATION.

Seventh. With the approval of the Board of Control, to take out for issue an amount of notes equal to twenty per centum of its paid-up capital at any time after the expiration of six years from the date of the assumption aforesaid; but it shall pay into the Treasury of the United States, on the first days of January and July of each year, a tax of one and one-half per centum upon the average amount of such notes in actual circulation during the preceding six months.

Eighth. With the approval of the Board of Control, to take out for issue an amount of notes equal to twenty per centum of its paid-up capital at any time after the expiration of seven years from the date of the assumption aforesaid; but it shall pay into the Treasury of the United States, on the first days of January and July of each year, a tax of two and one-half per centum upon the average amount of such notes in actual circulation during the preceding six months.

The manner and form of the assumption of the current redemption of the United States notes, as aforesaid, shall be as follows: Each note shall bear the indorsement:

"For value received, the .... National bank of [city], [State], will currently redeem this note in gold coin until the same has been paid and cancelled in accordance with the provisions of law."

Any notes so endorsed shall be a legal tender for all debts, public and private, except duties on imports and interest on the public debt, as heretofore, and upon presentation and demand be redeemed, as now, out of the issue and redemption division, and the bank which has assumed to currently redeem the same shall, immediately upon the demand of the Secretary of the Treasury, transmit to the Treasury

Digitized by Google

an amount of gold coin equal thereto, and when received shall be paid into the issue and redemption division, and the notes shall then be returned to said bank.

SURRENDER OF UNITED STATES NOTES TO THE GOVERNMENT.

Whenever a National bank shall present any United States notes at the United States Treasury for indorsement, as aforesaid, it shall at the same time surrender to the United States Treasury an additional amount of United States notes equal to one-half of the United States notes presented for such indorsement and receive in exchange therefor gold coin; and the United States notes so redeemed shall not be reissued, but shall be cancelled and destroyed.

WHEN BANKS SHALL NOT PAY OUT UNITED STATES NOTES.

SEC. 3. That when the National banks of the United States shall have assumed the current redemption of United States notes amounting in the aggregate to one hundred and thirty millions of dollars, and the United States has redeemed and cancelled United States notes amounting to sixty-five millions of dollars, no National bank shall thereafter pay out any United States notes the current redemption of which has not been assumed by some National bank, but shall return the same to the United States Treasury for redemption, and the Secretary of the Treasury shall redeem the United States notes so returned out of the gold coin in the issue and redemption division of the Treasury, and they shall not be reissued, but shall be cancelled and destroyed.

WHEN OTHER NATIONAL BANKS MAY TAKE OUT CIRCULATION.

SEC. 4. That after the National banks shall have assumed the current redemption of one hundred and thirty millions of United States notes, and the United States shall have redeemed, cancelled, and destroyed sixty five millions of United States notes, in accordance with section two of this act, any National bank which has not assumed the current redemption of any United States notes as hereinbefore provided may then take out an amount of circulation equal to ten per centum of its capital, and from year to year thereafter additional amounts of circulation in accordance with the provisions of section two of this act; but upon the first twenty per centum of the total circulation to which it is entitled under this act it shall pay into the Treasury of the United States, on the first days of January and July of each year, five eighths of one per centum upon the average amount of such notes in actual circulation during the preceding six months, and upon all such notes taken out for issue in excess of said twenty per centum the same tax as prescribed in section two of this act.

GUARANTY FUND.

SEC. 5. That before any National bank shall receive any of the bank notes referred to in this section it shall first deposit in the Treasury of the United States, as a guaranty of the payment thereof, an amount of United States bonds or gold coin, or both, equal to five per centum of the amount of notes so taken out, and such deposit shall be counted as a part of the lawful reserve of said bank. The interest upon said bonds shall be paid to the bank so depositing them, and if said bank shall retire said circulation, or any portion thereof, an amount of bonds or gold coin, or both, equal to five per centum of the notes so retired shall be returned to said bank: *Provided, however*, That if it should be necessary to sell said bonds for the purpose defined in section eleven of this act, the Secretary of the Treasury is hereby authorized to dispose of the same and use the proceeds in accordance with the provisions of law contained in said section.

NOTES SHALL BE FOR TEN DOLLARS OR MULTIPLES THEREOF.

SEC. 6. That all the bank notes taken out for issue in accordance with the provisions of this act shall be furnished by the United States at the expense of the

Digitized by Google

respective banks issuing them, and shall be in denominations of ten dollars and multiples thereof.

NOTES SHALL BE A FIRST LIEN ON ASSETS.

SEC. 7. That such notes shall be a first lien upon the assets of the respective banks issuing them, and shall be received upon deposit and for all purposes of debt or liability by every National bank at par and without any charge of whatsoever kind.

SEC. 8. That the total amount of circulating notes of all kinds of any National bank may equal, but shall not at any time exceed, the amount of its paid-up capital.

UPON DEPOSIT OF LAWFUL MONEY BANK MAY ISSUE AT ONCE.

SEC. 9. That any National bank having notes outstanding to secure payment of which United States bonds have been deposited may, upon the deposit of lawful money for the redemption of said notes, take out for circulation the notes provided for in this act, in the manner and at the times specified, without reference to the limitation of three millions each month, prescribed in section nine of the act approved July twelfth, eighteen hundred and eighty-two.

DEPOSIT OF PUBLIC MONEYS.

SEC. 10. That the Secretary of the Treasury is hereby authorized, in his discretion, to deposit all the money of the United States in excess of fifty million dollars, except that in the issue and redemption division of the Treasury, in National banks, upon the condition that said banks shall first deposit in the United States Treasury United States bonds equal in amount at par to the sum to be so deposited; and such banks shall, on the first days of January and July of each year, pay interest thereon to the United States at the rate of one per centum per annum upon the average balances of the preceding six months, but such banks shall not be required to hold any reserve against such deposits.

GUARANTY AND REDEMPTION FUND.

SEC. 11. That the United States bonds and the gold coin deposited by the banks as aforesaid, all the money received for taxes upon the bank-note circulation (except that herein otherwise appropriated), and all the interest upon the deposits of the United States with National banks, when paid into the Treasury shall be set aside and constitute a fund which shall be designated as the guaranty and redemption fund.

First. A fund to pay the circulating notes of any National bank outstanding at the time of its failure. But the United States Treasury shall recover from the assets of the failed bank an amount equal to its outstanding notes, and the same shall be paid into the guaranty and redemption fund.

Any National bank desiring to go into liquidation shall first pay into the guaranty and redemption fund an amount of gold coin equal to the amount of its notes then outstanding.

If said fund shall for any reason fall below an amount equal to three per centum of the total amount of the bank notes taken out in accordance with the provisions of this act, the Board of Control may impose an extraordinary tax, not exceeding one per centum in any one year, upon the amount of the notes at the time outstanding; but such extraordinary tax shall be refunded to the respective banks whenever such repayment shall not reduce said fund below an amount equal to five per centum of all the notes outstanding.

Second. A fund the accumulations of which in excess of an amount equal to ten per centum of all the notes taken out for circulation shall be applied to the redemption for cancellation of those United States notes which the banks have assumed to currently redeem; but this redemption shall be in the inverse order of the assumption of their current redemption by the banks: *Provided*, That no such application of said fund shall be made as will reduce the same below five million dollars.

Redemption of United States Notes in Case of Failure or Liquidation of National Bank.

Sec. 12. That if any National banking association which has undertaken to currently redeem any United States notes as aforesaid shall fail or liquidate, such United States notes shall be redeemed by the Government out of the issue and redemption division, and shall not be reissued, but shall be cancelled and destroyed; but as soon as the amount so paid out can be transferred from the guaranty and redemption fund to the issue and redemption division without reducing the same below an amount equal to ten per centum of all the bank notes taken out in accordance with the provisions of this act, the same shall be done: *Provided*, That the amount in the guaranty and redemption fund shall in no case be reduced below five million dollars.

When Banks shall not Pay Out or Hold United States Notes.

Sec. 13. That no National bank, after notice in writing has been given that the United States is prepared and desires to redeem any particular United States notes whose current redemption has been assumed by any National bank, shall pay out or hold the same in its reserve, but shall forthwith return them to the Treasury for redemption.

Amount of Taxes after United States Notes have been Redeemed.

Sec. 14. That when all of the United States notes whose current redemption was assumed by National banks have been redeemed, cancelled, and destroyed, or provision has been made for their redemption by depositing in the issue and redemption division an amount of gold coin equal to the amount of those notes still outstanding, in which case they shall be redeemed out of said fund, and shall not be reissued, but shall be cancelled and destroyed, the taxes upon the bank notes taken out for issue in accordance with the provisions of this act shall thereafter be one-quarter of one per centum per annum upon the note circulation up to sixty per centum of the capital of the respective banks issuing it, and all the accumulations in said guaranty and redemption fund in excess of said ten per centum shall be paid into the general fund of the Treasury.

Fund Invested in United States Bonds.

The Secretary of the Treasury is hereby authorized to keep said guaranty and redemption fund invested in United States bonds.

Sec. 15. That the said Board of Control may grant charters to clearing houses running for twenty years, with such capital and powers to effect clearances between banks, bankers, trust companies, and other financial associations and to do and perform such other business and service incident to clearing-house business as said Board of Control may approve.

Clearing-House Districts.

Sec. 16. That the said Board of Control shall divide the United States into clearing-house districts, and each clearing-house district shall have one clearing-house city for all the bank notes issued by the banks located in said district, and every bank which has taken out circulation for issue in accordance with the provisions of this act shall belong to some particular district, and the notes so taken out shall bear in bold and clear figures the number of the district to which the bank issuing them belongs; but any National banking association may have an agency for the redemption of its bank notes in each of the clearing-house cities.

Notes to be Redeemed in Gold Coin.

Sec. 17. That the bank notes taken out for issue in accordance with the provisions of this act shall be redeemed on demand in gold coin at the home office of the

Digitized by Google

bank issuing them, and if said bank is located outside of a clearing-house city it shall then select a National bank as its agent in the clearing-house city of the district to which it belongs, which shall upon demand redeem said notes in gold coin, or it may make said clearing-house its agent for such redemption, or for the transaction of any other business, and any money deposited at said clearing-house by any National banking association for such purposes may be regarded as a part of its lawful reserve.

SEC. 18. That if any National bank shall receive such circulating notes of any other National bank, located outside of its own district, it shall not pay them out over its own counter, unless the bank of issue has an agency in said district for the redemption of said notes in gold coin, but shall forward them either to some bank in the district to which the notes belong, or to the clearing-house, or to some bank located in the clearing-house city of its own district, and then they shall be returned to the bank issuing them or to the clearing-house or to some bank in the clearing-house city of the district to which the bank issuing them belongs unless the bank of issue has in said district an agency for the redemption of its notes in gold coin.

WHEN UNITED STATES SHALL CEASE TO REDEEM NATIONAL BANK NOTES NOW OUTSTANDING.

SEC. 19. That from and after the first day of July, nineteen hundred and seven, all National bank notes, to secure the payment of which United States bonds have been deposited and which are being redeemed by the United States Treasury, shall be redeemed only at said clearing-houses, or at National banks located in clearing-house cities, in accordance with the provisions of this act; and the United States shall not thereafter be held responsible for such redemption except in the case of the failure of any bank issuing them.

BRANCH BANKS AUTHORIZED.

SEC. 20. That subdivision second of section fifty-one hundred and thirty-four of the Revised Statutes is hereby amended so as to read as follows:

"Second—Location: The places where its banking operations are to be carried on, designating the particular villages, towns, cities, counties, States, Territories, districts, possessions, and foreign countries.

Any National banking association may amend its articles of association with reference to the places where its banking operations are to be carried on upon the unanimous vote of its board of directors by and with the approval of the Board of Control of Banking and Currency."

BANKS MUST HAVE REDEMPTION AGENCIES.

SEC. 21. That every National banking association shall have an agency for the redemption of its notes in gold coin in the clearing house city of every clearing house district in which it has a place where its banking operations are carried on, and if there be no such clearing-house district established, then in the chief commercial city of the Territory, possession, or country.

TREASURY BULLION TO BE COINED IN SUBSIDIARY COIN.

SEC. 22. That the Secretary of the Treasury is hereby authorized to coin all the bullion in the Treasury into such denominations of subsidiary silver coin as he may deem necessary to meet public requirements, and thereafter, as public necessities may demand, to recoin silver dollars into subsidiary coin; and so much of an act as fixes a limit to the aggregate of subsidiary silver coin outstanding, and so much of any act as directs the coinage of any portion of the bullion purchased under the act of July fourteenth, eighteen hundred and ninety, into standard silver dollars, is hereby repealed.

Digitized by Google

Silver Certificates must be Five Dollars and Under.

From and after the passage of this act the Secretary of the Treasury shall not deliver to any National bank a note for issue of any lower denomination than ten dollars, and shall not pay out any silver certificates of a greater denomination than five dollars; and he is hereby directed to keep in the issue and redemption division an amount of gold coin equal to five per centum of the silver dollars at any time thereafter outstanding, and for that purpose he is authorized to transfer from the general fund to the issue and redemption division any gold coin therein.

Parity of Gold and Silver must be Maintained.

The Secretary of the Treasury is hereby directed to maintain at all times at parity with gold the standard silver dollars of the United States; and to that end he is hereby authorized and required, at the demand of the holder, to exchange gold coin for standard silver dollars when presented to the Treasury of the United States in sums of one hundred dollars or any multiple thereof; and, for the purpose of carrying out this provision, the Secretary of the Treasury, when in his judgment there is not sufficient gold coin in the general fund of the Treasury to justify a further use of it for exchange for standard silver dollars, shall be authorized and required to employ any part of the reserve fund of gold coin established by section two of the act of March fourteenth, nineteen hundred, entitled "An act to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the public debt, and for other purposes," and the standard silver dollars received in the reserve fund in exchange for gold coin under the provisions of this act shall be held in said reserve fund and not paid out except in the manner provided in regard to United States notes in said section two of the act of March fourteenth, nineteen hundred; and all provisions of law for the use and maintenance of said reserve fund relating to United States notes are hereby made applicable to standard silver dollars in said reserve fund.

Penalty for Breach of the Law.

Sec. 23. That all powers granted by existing law to the Comptroller of the Currency and Treasurer of the United States in regard to the issue of notes to National banks, the collection of taxes, and the infliction of penalties for non-compliance with law, are hereby extended to the Board of Control of Banking and Currency in respect to bank notes authorized by this act, so far as such powers are not inconsistent with other provisions of this act; and all judicial processes authorized by existing law in regard to notes issued by National banks are hereby made applicable in regard to the bank notes herein authorized so far as they are not inconsistent with other provisions of this act.

Sec. 24. That all laws and parts of laws which are inconsistent with the provisions of this act are hereby repealed.

New Counterfeit $10 National Bank Note.—On the First National Bank, of Jackson, Miss., series 1882; check letter C; charter number, 3332; Treasury number, X3496416; bank number, 1292; B. K. Bruce, Register of the Treasury; A. U. Wyman, Treasurer of the United States. This counterfeit is a photographic print. The charter number panel on the back of the note is tinted green in a bungling manner. A yellowish brown tint has also been applied to the seal, on face of note. It is printed on two pieces of paper of good quality, between which a few silk threads have been distributed. This note is evidently of the same workmanship as the counterfeit on the Merchants and Farmers' National Bank, of Weatherford, Tex., which appeared earlier in this month [March]. Credit for the discovery of this note is due Mr. Charles Byrne, receiving teller of the sub-Treasury at New Orleans, La.

THE PAYING TELLER.

[A paper read before a meeting of the Alexander Hamilton Chapter American Institute of Bank Clerks, March 7, 1902, by Alfred M. Barrett, of the Western National Bank, New York.]

In any consideration of the several departments of bank service by a bank clerk, it would be invidious to describe one as of greater importance than another. Especially is this the case where all the departments are, in a measure, interdependent, as are the branches of a bank's work. Still, if there is any one to which the distinction should be given, I think it is the one which is the subject of my paper. Fortunately, in treating of this matter, I can discuss the paying teller's department from the standpoint of an outsider. For, though once of, I am now outside, of that department.

Importance of the Paying Teller's Department.

I may be asked why I consider the paying teller's department so important. My reasons are manifold. It is the department which, next to the executive of the bank, is brought most into personal relation with the customers. A great deal of the work of the receiving department is done by mail; the loan clerk and the discount clerk see only those of the bank's customers who have paper or collateral to negotiate; the correspondence work is done mainly at a distance, and the bookkeepers are not always in evidence, though upon their work hinges almost every banking transaction. The paying teller, however, is brought in direct personal contact with nearly every depositor of the bank. Secondly, on no other department of a bank does there rest greater responsibility. A mistake made here is in nine cases out of ten fatal to the interests of the bank. If an error is made in the receiving teller's department or the loan department, or any other of the departments, it is in most cases susceptible of correction. Not so with the paying teller's department.

The account of a failing house may be over-certified; a forged endorsement may be paid; a stop-payment overlooked—and the bank in either case must be the loser. An overpayment to an irresponsible messenger, though seldom made, sometimes occurs, and is irreparable.

Thirdly, the paying teller's duties call for the exercise of qualifications of no mean order.

Theoretically, the functions of a bank are to receive moneys, hold them on deposit, and pay them out at the convenience and on the demand of the depositors. In actual practice, however, there are many refinements on this theory, so that sometimes these proper functions of a bank seem to be almost secondary. In fact, under the present advanced system of credits, one might conceive of a bank which, if we except its legal reserve and clearing-house requirements, might almost do business without the use of real or even fiat money.

We can imagine a bank whose entire capital has been paid in in checks; whose deposit bonds have been paid for by checks; whose line of deposits is of these same instruments, and whose payments are made by certificates of deposit or Cashier's checks—a bank, in fact, using but little if any currency beyond its legal reserve and clearing-house funds, in its daily business.

In effect, however, although we may have advanced to a considerable distance along these credit lines, much of the work of the tellers, especially of the paying

Digitized by Google

tellers, is with actual money, or at least paper representatives of coin. Bankers are still attached to the money bench or bank from which their title is derived, and deft fingers are still required for the counting of the vast sums passing over the benches or counters of a modern bank. If we consider the actual handling of bills and coin, the counting and recounting, the bunching, and labeling, and sorting, an enormous amount of manual work is done daily in the paying teller's cage.

The handling of the actual currency is, however, only a small part of the duties of the paying teller. In fact, these are so many and so varied that the mere enumeration of them would make a chapter in itself. The individual capable of adequately meeting all their demands must be a many-sided man. He must combine in one person, safety, as well as celerity; mental alertness, as well as physical smartness; an even disposition, perfect equanimity of temper, and tact of a high order. In a bank of any size in a city like New York, it may well be said of the paying teller, borrowing a phrase from military parlance, that he is "on the firing line" all the time. From the moment he opens his window at ten o'clock in the morning until the close of banking hours for the public at three P. M., it is a constant "rush" for him and his assistants, and, like the advance line of a military force, he must be ever on the lookout for surprises.

Some of the Paying Teller's Qualifications.

The paying teller should be thoroughly familiar with the bank's depositors. When checks are presented over the counter to be cashed or certified, he cannot, ordinarily, stop to enquire whether or not the depositor's account is good for the amount of the check. Such inquiry made in the presence of the person presenting the check might lead to the inference that the depositor did not stand any too well with his bank, and thus harm readily be done. A woman's reputation or a professional man's standing may be ruined by a shrug of the shoulders or a wink at the proper time; in the same way, a man's credit may be impaired by an apparent momentary hesitation on the part of his banker to immediately honor his draft, hence the importance of the paying teller's studying and knowing in a general way something of the sort of account each depositor keeps with the bank.

The paying teller must have a knowledge of commercial or banking law. While, of course, the officers of the bank are its court of last resort, many important questions must be decided upon the moment by the paying teller without appealing to the officers. Questions as to the proper payee of a draft; of raised figures; legality of form of drafts; forged endorsements, etc., come to the teller at first hand. He may or may not pass upon them without the counsel of the higher officials, but the knowledge of when to act and when to refer such questions is almost as important to the bank's interests as making the judgment in the first place.

In most of the city banks, the paying teller may be said to have reached the extent of his promotion. Beyond his tellership there is no advancement. Having found a man fitted for the duties of paying teller, the tendency is to keep him in that place. Paying tellers may be said to be like poets, "born, not made." The importance of the position calls for special qualifications, and the possessor of these, acquired through long experience in bank work, is so valuable in his own place that the officers of the bank keep him there. While thus to circumscribe his ambition and limit his horizon seems at first glance unfair, it is only part of the tendency toward specialization in the business world. It has the advantage, also, that it tends toward the protection of the teller in his place in spite of changes in management, now of such frequent occurrence in banks. The teller is a specialist—the product of long experience and training—and cannot be lightly set aside at the whim of a director or the behest of a special interest.

Not only must he be deft-fingered, but the strain upon his mental activity is so

Digitized by Google

incessant that he must be just as quick of wit, and even of temper, as he is delicate and facile of touch in handling paper and coin.

I think I can best give an idea of the work devolving upon the paying teller by describing the daily routine of his department in one of the large banks of this city, where work has been systematized in a way to make business proceed with despatch, and without loss of accuracy.

In this particular institution (as perhaps in all banks), the first duty of the teller upon his arrival in the morning is to get his cash out of the vault. By cash I mean his drawer money, which runs from $50,000 to $100,000, and covers an average day's necessities in coin and bills for over-the-counter payments. Right at this point, at the very outset of my description of the routine work of the department, I want to call attention to this paying teller's cash and its significance as regards the confidence reposed in, and the responsibility resting upon, the paying teller. His cash box is absolutely under his control. It is, and must be, accessible only to him. The paying teller and his bondsmen are responsible for this cash, hence it must be under his control. There must be no divided or joint responsibility, for very obvious reasons.

And yet, at first glance, this practice would seem to afford opportunity for peculation. It does for the moment, perhaps for a few days, but the practice is safeguarded by the ever-present imminence of an unlooked-for visit by the bank examiner, or a call by an officer of the bank for a count of the cash and securities. Beyond all this, it has, as a safeguard, the general honesty of paying tellers, and it is significant of the care with which the tellers are selected in most banks, after years of service in other departments where their characters are under close scrutiny, that the inviolability of the teller's cash is seldom called in question, and its accuracy is proverbial.

The drawer money of the teller is replenished in most banks from two sources—from the cash received from the receiving teller, and that taken from the reserve. In banks having a currency department, however, it is drawn from that source alone. Here again we run across one of those conditions which illustrate the importance to a bank of the honesty and integrity of the paying teller. All of my hearers who are familiar with banking methods will understand what is meant by replenishing the money drawer from the reserve. The reserve consists of millions, and in actual practice in many banks the paying teller's cash book is the only record from which its condition at any time can be computed. In making his proof, or daily cash statement, the teller reports, so much in the reserve, and so much in the cash box. If his statements account for the actual balance, his proof is made; yet, until an actual examination by the officers of the bank or the examiner, the paying teller's word is the only evidence that either item is correctly stated.

The proper safeguard to throw around transactions of this sort in a bank not having a currency department would be for the paying teller to issue a voucher or draft on the reserve for the funds needed, which draft should be countersigned by an officer of the bank, and only honored by the custodian of the reserve, upon such countersignature, and when thus honored, should go at once to the general bookkeeper, or auditor if the bank has one. The bookkeeper or auditor would thus have a check upon the paying teller's statements, or, if such were not rendered daily, they could make this check by examining his cash book as to its various items. This would not divide the responsibility but would mean an additional safeguard.

The next step in the routine of the paying teller's department, after arranging his money, is to take care of the deposits to be made with the United States Treasury, as called for by correspondent banks, such requisitions being received by the paying teller from the mail or correspondence department. These deposits cover the five per cent. redemption fund, and shipments of silver. He also takes care of deposits to be made at the sub-Treasury for the payment of customs duties. These

Digitized by Google

out of the way, his decks cleared for action, so to speak, the line begins to form in front, and his actual day's work commences.

I have said that the paying teller must have an even disposition, equanimity of temper, mental alertness and tact, and I might have added untiring industry, for all these qualities are now brought into play. To keep the line moving is an ever-present necessity, but only one who has faced a line from the inside of the cage can appreciate what this means.

Most persons presenting themselves at the paying teller's window are there to have checks cashed or certified. Many, however, come to have worn or ragged currency exchanged for new, to get gold for bills or bills for gold, or to get bills of one denomination exchanged for those of another, or to get new money. These, however, are the ordinary customers of the paying teller. It is the casual occurrences before the paying teller's window which are of the greatest interest. It is the shady individuals, the frauds and tricksters, whose visits, much more frequent than angels', the teller must be on the lookout for, and whose tricks he must be prepared to checkmate.

We seldom hear, now, in New York banks, of the sneak thief stealing to the teller's window and with crooked fingers or hook purloining a roll of bills without detection, or more boldly grabbing a bunch and running for the door. The modern thief has improved on these methods, and it is the plausible, oily, smooth fellow with a forged endorsement or a raised check who seizes upon the busiest moment, perhaps, of the busiest day to try to catch the teller off his guard, for whom the latter must be on the lookout.

Under the common law of the land, the presumption is that every man is innocent of crime until he is proven guilty. Such a theory does not obtain with the prudent paying teller. On the contrary, every man appearing before his window must be considered in the light of a suspicious character until he has demonstrated his honesty. Of course, a judgment to this effect by the paying teller is not the work of minutes, or even seconds. In most cases, it is almost instantaneous; that is to say, there is no long process of weighing of a man or his motives. That would be impossible. What I mean is that the attitude of the paying teller toward every-one must be that of suspicion. This is his rampart of defense, so to speak. He must hedge himself about with this fence of suspicious reserve and only upon the presentation of the proper password allow any one to come through it To illustrate. It is a busy day, perhaps, and the line comes along in this wise: Messenger from Brown & Smith, brokers: "Certify," passing in a check for $100,000. The trained eye of the teller takes in at a glance the messenger presenting the check for certification, the check itself, the amount and the signature. The question mentally asked and answered as to each is, "Is it regular?" If the answer is in the affirmative, then, "Am I to certify?" that is, "Is the account of Brown & Smith good for the amount?" or if not, "Does the standing of the firm with the bank warrant me in over-certifying?" Or, "Have I any instructions to that effect?" Bear in mind that this is all the work of a moment, for neither Brown & Smith's messenger nor the line must be kept waiting. Without a moment's apparent hesitancy the paying teller has passed judgment; the check is passed over to his assistant to enter on the certification book, and for the application of the certification stamp, and in another moment or two is returned, the paying teller's signature affixed, completing the certification, and the check is passed through the window to the waiting messenger. In the transaction, $100,000 has practically changed hands. Even while this is doing, while the assistant is making the entry in the certification book, the paying teller may have paid two or three checks handed in over the counter.

Next comes Mr. Jones with his check. "Twenty-five dollars in new bills, please," presenting a check payable to his own order, to cash, or to bearer. If either of the

Digitized by Google

first two, the questions the paying teller must ask himself and answer are, "Is this Mr. Jones?" "Is his account good for $25?" In the last-mentioned case he must ask, "Is Mr. Jones' account good for $25?" "Is this Mr. Jones' signature?" Again no apparent delay. The questions are asked and answered in a moment, and the line kept moving.

Next! Well, here's a check presented for $500 drawn by the Citizens' Bank, of Jonesville, an out-of-town correspondent, payable to Richard Smith. "Are you Mr. Richard Smith?" "Yes." "Can you be identified?" "Yes." "By whom?" "Mr. Brown here, one of your customers." Thus far all right, but the teller must ask himself, "Is the account of the Citizens' Bank, of Jonesville, good for $500?" "Yes." "Is there a stop payment on this item?" "No." Then it is, "How will you have it, Mr. Smith?" and the money is paid out as Mr. Smith requests, all in a moment or two. But it is different if Mr. Smith is not identified. Then there is some parleying. Perhaps Mr. Smith is a stranger to banking methods and it takes time to convince him that it is absolutely necessary that he be identified. Meantime the line behind him is growing impatient, and it may be that during the colloquy the paying teller's attention is distracted by inquiries from the assistant or from one of the officers, or the head of some other department in the bank which have to be answered at once. Perhaps Mr. Smith grows impatient and shows a disposition to block business. He must be gotten out of the way quietly but promptly, and the line moves up a peg. * * *

Coincident with the work of paying out funds over the counter there devolves upon the teller the duty of examining checks which have come to the bank through the mails or through the clearing-house. This examination includes the verification of signatures, the scrutiny of endorsements and the examination of dates and fillings. All these duties are important and must not be done in a perfunctory manner. Checks are found drawn erroneously for one amount in the body and another in the margin. That is to say, a check may be drawn for $300 in the marginal figures, and three dollars in the body. The question is, which is intended? The teller must note the difference and be guided by circumstances in the paying or refusing to pay for one amount or the other, or for either. Tom Brown may be in the habit of paying his gas bills by check, and if his check to the order of the Consolidated Gas Company comes through drawn for $300 in the margin and "three dollars" in the body, the teller might pay it for three dollars, as that was clearly Mr. Brown's intention, he being unlikely to have to pay $300 for his monthly gas bill. But occasions on which the teller can exercise this discretion are few. Usually, a check with a discrepancy between the body and the marginal amount is returned for proper filling or else submitted to the judgment of an officer of the bank. If the paying teller were to pay such a check as I have just described for $300, the bank might be liable for $297.

Checks must be examined as to dates. It might be a fatal error for a paying teller to cash a check dated ahead, and it is a rule of the clearing-house that checks are not payable through that institution on the same day on which they are drawn. Important interests might be affected by disregarding the rules governing in these cases.

I do not think there is any need for me to speak about endorsements. Their importance is self-evident. Checks must be carefully scrutinized to see that they are regular as to endorsements. Instances are of frequent occurrence which demonstrate the necessity for caution in the exercise of this function. * * *

Careful Examination of Signatures.

The examination of signatures is by far of first importance. If Mr. Brown leaves some money with an individual for safe-keeping and comes in person and asks for

Digitized by Google

it, it may be paid to him without question. But if he should send a messenger for it with a written order, one would have to know that his message was genuine before paying over the money. A check or draft being an order upon a banker to pay over some of the funds held by the bank for the credit of the depositor, the bank must be absolutely sure that the signature to the check represents the depositor. For this purpose, the written signatures of all persons opening accounts with the bank are lodged with the bank and preserved in the paying teller's department. Formerly, these signatures were written in what was known as the signature book, in alphabetical order. These books, however, were bulky, clumsy, and difficult to handle, and frequent reference to them soon caused them to become ragged, dirty, illegible, and in some cases absolutely useless. Often, moreover, it was necessary to take the book away from the bank for use in court, which left the teller without his signature book perhaps when he most needed it. Of late years, however, an improvement was started in a New York city bank and has since spread through the entire country, in the use of signature cards, which bear the same improved relation to the old-fashioned signature book that a card-index system in a library bears to the antiquated system of indexing which was in vogue half a century ago.

As it is absolutely necessary that the paying teller should be familiar with all the signatures, it seems to me essential that he should examine all signatures to checks, but in view of the importance of leaving him ample time for this and his other important duties, it would appear that the work of checking the fillings and scrutinizing the endorsements might be done in another department, or at least by some clerk of inferior grade, under the direction of the teller.

For altered checks the paying teller must be ever on the lookout. A certain class of thieves find in the raising of checks a ready method of making money at the expense of their neighbors, and they have become so skillful at it that not even constant watchfulness can always prevent the carrying out of their plans. Generally a check is altered by raising it from a small to a larger amount, say from \$7 to \$700, or from \$17 to \$1,700, but the very latest refinement of the process is to reduce the amount of a check. Certain office boys in New York have recently taken advantage of the fact that there is considerable looseness in some offices about the delivery of brokers' checks and have obtained such a check for a few thousand dollars, reduced it to as many hundreds or tens, made it payable to bearer, and in one or two instances have succeeded in getting it cashed. Modern chemistry has made very easy the task of altering checks, as certain chemicals can now be procured by almost any office boy whereby erasures of written words and figures can be made without possibility of detection except by the microscope.

In the case of the payment of an altered check for a larger amount than that for which it was originally drawn, the paying bank is the loser, hence the importance of careful scrutiny by the teller.

I might say here that it would be impossible for the teller to apply the suggested careful methods of scrutiny to the signatures, endorsements, fillings, etc., of all the checks passing through his hands, and with the vast majority of the checks presented it would be unnessary. It is the one check out of ten or a hundred thousand probably, about which there is likely to be any trouble, and it is only by making it the habit of his life to pass nothing which is irregular that the paying teller can safeguard his work. He must have so trained his mental faculties that the slightest suspicion of irregularity in presenting a check, or the slightest departure from a recognized standard in the check itself, will attract his attention. This mental alertness, this habit of mind of the efficient paying teller can be the result only of years of training, and it is this which puts the paying teller in an attitude of suspicion toward the newcomer. If he fail to cultivate this attitude, he is not prepared to checkmate the many tricks which are liable to be played upon him, but it is this

Digitized by Google

very attitude which is the cause of complaint of "grumpy" and "disobliging" tellers on the part of the unthinking. However courteous a man may be by nature, he cannot successfully maintain such an attitude during the busy day without grating upon the sensibilities of some one, and yet we have seen how necessary it is for the security of his work and the bank's interests. The officials of banks to whom complaints are sometimes made of the discourtesy of the teller must give all these facts proper weight in their judgment.

The Certification of Checks.

Next to the handling of the actual cash of the bank, the most important part of the work of the paying teller is in certifications. It is important for two reasons: First, in the fact that its legitimate use calls for the exercise of the greatest caution and good judgment, and secondly, that its illegitimate use is, beyond question, a grave danger to a bank. It is a danger which it is impossible to effectively guard against. No matter what safeguards are attempted, none give absolute security. That can only be found in the honesty of the paying teller, and in a measure, in the lack of inducement to wrong doing on his part. The certification stamp of a bank renders a check otherwise worthless as good as a Cashier's check, and may commit the bank, in printing the certification thereon, to a liability of hundreds of thousands of dollars. The paying teller is the one who places this stamp upon a check, and in the exercise of this function he has absolutely no limitation for the time being. Of course, except by an elaborate system of frauds, an improper certification would be discovered within twenty-four hours, but by collusion between the teller and outsiders, frauds might be perpetrated because of which a bank would be a heavy loser. Checks are daily certified by New York city banks for amounts which not many years ago would have been considered extraordinary. It is nothing unusual for a bank nowadays to certify a check for a million. Twenty-five years ago, this would have been an event.

Although the certification of checks is a function generally exercised by the paying teller, there is nothing in the banking laws to hinder its being delegated to some other clerk or performed by the Cashier himself. Under certain circumstances, it might be well for a bank to relieve the paying teller of this duty, and impose it upon the Cashier or an assistant especially detailed for this purpose. As it is entirely distinct from the work of paying out cash, there would be no question of dividing the responsibility. Only a small proportion of the total number of accounts ever call for certifications, and the charges against these accounts for checks paid in cash and because of certification could be just as well reported to the bookkeeper from two sources as from one.

Keeping a Proper Supply of Currency on Hand.

One of the details of the paying teller's work which is unthought of by any but those immediately connected with banking, is that of keeping his currency in good shape. This involves the exercise of patience, good judgment and untiring industry. He must carefully weed out his mutilated money, always bearing in mind the danger of running foul of Treasury regulations. The "mutilated" he sends to Washington must bear inspection as having been naturally mutilated. He must not, if he runs across a greasy, unkempt looking bill, tear it across or gouge a hole in it; that is, it must not *appear* as though he had done so, but (and this I put in parenthesis) if his fingers should accidentally bore holes in a ragged bill while handling it, the department cannot assume that it was done on purpose. The teller must have clean money, and in a great many cases, he must have new money for good customers and friends of the bank. We all know the individual who is fond of carrying new money about with him, and when his friends comment upon it, says:

Digitized by Google

"Oh, my bank always gives me new money; they know I like it; the boast serving the purpose of letting people know he is on good terms with his bankers to be treated with such consideration.

Besides providing himself with clean money and with new money, the paying teller must be careful that he has his money in such denominations as are likely to be needed at different times, for there are seasons in banking as well as in the natural world. There are seasons calling for certain denominations of money. There is a demand for large-sized bills at one time, and bills of a smaller size at another, which the paying teller who wishes to be up to his work must bear in mind. It is very awkward and expensive to have a bank find itself called upon to ship money in certain denominations, when the shelves of its reserve vaults are loaded with unavailable stuff.

This brings me to another branch of the paying teller's work—the shipment of currency. I will not dwell on this, however, as now that specialization is so well established, most banks of any size have a currency department which takes this labor off the teller's hands. Yet, in banks where the paying teller still does this sort of work, we all know how careful he must be and how painstaking not to make a mistake, for the troubles likely to accrue out of the shipment of money are endless.

It is apparent from this glance at the various items of a paying teller's work that it falls naturally into two divisions:

(1) Work which now belongs to the paying teller's department and must always continue to be done by the paying teller; and

(2) Work now done by some, if not all paying tellers, which might well be provided for in another department.

In the first class, I would place:

(a) The actual payment of checks over the counter in cash.

(b) Examination of signatures of all checks whether presented at the counter, received by mail, or through other departments, or from the clearing-house.

(c) The making up of the debit balance for the clearing-house.

In the second class I would place:

(a) Certification of checks.

(b) Examination of checks for discrepancies in filling and dates.

(c) Examination of endorsements.

(d) Keeping currency in good shape.

(e) Making up of shipments of currency and deposits for the Treasury.

As before stated, the certification of checks might be made the duty of an executive official, relieving the paying teller of this duty. The examination of checks for discrepancies in dates and fillings and the examination of endorsements, as also the watch on them for stop payment might well be taken from the teller and made a part of the bookkeepers' work; indeed, in many banks, this is the case. The keeping of currency in good shape and the making up of shipments and deposits might be made a part of the work of the currency department, if the bank had such a department.

In these days of specialization of work the tendency in all business lines of effort is to limit the range of function of an individual. Such a limitation as I have indicated, would, I think, make for greater efficiency of service in a bank; would facilitate the transaction of the business of its clients, and last, but not least, under such a system the paying teller, not having his duties distributed over such a wide range, would be able to give closer attention to such as would be left to him, and these the most important, the change conducing to safety of the bank's interests.

Digitized by Google

A COUNTRY BANKER'S VIEWS.

Editor Bankers' Magazine:

SIR: The experience with banks in the United States seems to prove that the unrestricted growth of small banks under the general banking laws extends banking facilities to every part of the country requiring them, as well, if not better, than it could be accomplished in any other way. That these small banks, as banks of discount and deposit merely, reach a high standard of safety. That when tried as banks of issue, they have as a system for the whole country generally proved unsatisfactory. That in the attempt to make them satisfactory, no degree of restriction was successful until the absolute guaranty of the Federal Government backed up their notes, the guaranty being protected by the deposit of United States bonds. That bank issues so secured and guaranteed do not accomplish the results which are desired.

The question now agitating men's minds is, can any way be devised in which our existing banks, very satisfactory as banks of discount and deposit, will be able to issue a bank-note currency which will really serve the purposes for which a bank-note currency is designed; that is, will such a currency be safe, and, second, will it be elastic?

In the last twenty or more years there has not been a plan for the issue of what is known as asset currency by the existing banks, which in its endeavor to secure safety has not more or less sacrificed elasticity. Any proposition that fixes a limit in proportion to capital or any other limit to the issues of the banks, sacrifices perfect elasticity. Of course fifty or sixty per cent. of capital might at a given date be all the notes business would require. But at other times notes to double the amount of capital might be advantageously loaned on the very best security. In the interests of safety some limit has to be fixed, but whatever the limit determined on, where there are several thousand banks to be considered, it will be too high for some, making their circulation unsafe, and too low for others, making the circulation of the latter inelastic.

The difficulty in formulating a plan under which several thousand small banks, of varying resources and capital, may satisfactorily issue unsecured or asset currency consists in the lack of uniformity of the credit of these institutions. Under the present system this difficulty does not arise, as each bank puts up security for all the circulation it gets. No plan can be devised that will in reality overcome the variations of credit of several thousand isolated banks. A safety fund will, of course, equalize these differences as far as the public is concerned, but among the banks themselves this is virtually taxing the strong banks for the benefit of the weak ones.

On the whole I do not believe that the majority of existing banks desire an asset currency under the restrictions it would be necessary to impose to make such a currency safe for the public. It seems to be realized more and more, if the country is to have a safe and elastic bank currency, that some strengthening of the banks is necessary. This is the origin of the propositions for the formation of clearing house circles, for permitting the establishment of branches, and for a central bank of banks as proposed by Mr. Gage. These all aim at the establishment of a more certain credit than is obtainable in the case of unaffiliated independent banks. The clearing-house plan appears to me to be the least practicable of any. It was suggested by the good effects of the mutual support afforded each other by the banks associated in

Digitized by Google

the clearing-houses of the monetary centres in times of emergency. The wisdom of the principle underlying the issue of clearing-house certificates in panics has already been questioned by high authority. It has been pointed out that this mutual support does not enable the banks really to meet their demands, but merely to support each other in a mutual suspension of payments, and that such a course is indubitably a blow to the credit of the banks so associated for the time being. A currency which has for its security an agreement for a disguised suspension of payment, is certainly not a very desirable one.

The branch bank proposition is one that is much more radical and far-reaching than appears on the surface. It has been included in many of the financial bills recently introduced in Congress. It seems to be contradictory of the plans for permitting the existing banks to issue an asset currency. If the establishment of branches is permitted, there will shortly be a complete revolution in banking methods. All of our existing banks of all classes will be absorbed in a new system consisting of parent banks and branches, and a system of asset currency, suitable for the present system of independent banks, will be entirely useless for a system composed of a few great parent banks and their widely extended branches. The branch system may answer when once established, but the destruction and the reconstruction will be on lines so extensive that no one can foresee what uncontrollable disaster may arise in the process. The United States has had seventy or eighty years of trouble in building up the present banking system.

It is inconceivable that so radical a change as that contemplated by the introduction of branch banking, involving so many opportunities for consolidations and combinations in which so many innocent stockholders may be made to suffer, can be accomplished without great losses and disasters. There are no doubt many ambitious and enterprising men who look upon the inauguration of the branch system as the beginning of opportunities for the profitable aggregations of capital which have not been surpassed in the consolidation of railroads and of manufacturing interests. Nowhere in the world can there be found a richer field for the exploitation of capital than in the present banks of the United States. No one can tell to what extent these operations might be carried. An era of over-speculation in banking capital would be much more disastrous than in any conceivable form of productive industry.

Mr. Gage seems to have realized something of the impossibility of an asset currency issued by the present banks, or of the feasibility of any other device, when he suggested a central bank, or as he styled it, a bank of banks. Mr. Gage's so-called plan was no more than a suggestion, but if there is any way to establish a safe and elastic bank-note currency, it seems to be in this direction. Not just such a bank as some have apparently assumed Mr. Gage to have suggested, but one with powers which would not interfere with the existing banks as has been suggested in THE BANKERS' MAGAZINE. Such a bank, issuing the currency of the country, holding public moneys and insuring the collection of checks at par all over the country, ought to recommend itself to the majority of existing banks. There is no necessity that its capital should be subscribed by banks. Its circulation might be guaranteed by the Government, to the extent that the circulation of the Bank of France is guaranteed; that is, the Government should stand ready to aid the bank in the last emergency, if any such should arise. The existing banks do not value the circulation privilege, and they cannot as a whole do much with public moneys. The collection of checks at par in all parts of the country would be a positive relief and benefit to them.

If the United States abandons Government notes and depends on bank currency entirely for its paper circulation, it will require a larger amount than is issued in any country in the world. On March 1 there was in actual circulation in the United States, exclusive of gold certificates, $1,210,212,068, made up of silver certificates,

Digitized by Google

Treasury notes, greenbacks and National bank notes. It may be, as is claimed by some authorities, that this amount is redundant in ordinary conditions of business, but it is the only indication of the amount to be issued by the banks if bank currency be substituted. Leaving out silver certificates as well as gold certificates, the amount of bank circulation to be issued may be fairly placed at between seven and eight hundred millions. This would be an enormous amount for one bank to be responsible for, and to make it safe a reserve of at least forty per cent. in gold would be required. This would be the case were the legal-tender and present National bank notes retired and the bank required to substitute its notes for them; but were the legal-tender notes retained, the reserve on the notes issued by the bank ought to be as high as sixty per cent. In this latter case a greater percentage of the bank notes would at all times be liable to redemption. An elastic bank-note circulation divides itself into two parts. The one part is that which is equal to the average constant demand for paper money, the other which is issued and redeemed as the temporary demand rises above or recedes to the average demand. For example, the Bank of England issues a certain part of its notes upon Government securities, above this it issues notes based upon an equal amount of gold. This amount based on securities was originally fixed in the law of 1844, as equal to the average which remained in circulation under normal business conditions. This by the act referred to was fixed at £14,000,000. The same act fixed the circulation which might be issued by the English joint-stock banks and the Scotch and Irish banks. The banking laws of Great Britain as to bank circulation thus recognize the principle of a certain average amount of notes which the constant requirements of business will keep in circulation so active as to prevent its presentation for redemption. The other part of the bank-note circulation consists of the issues to meet demands in excess of the average. This part furnishes what is called elasticity. It is this part that requires the maintenance of reserve. If, therefore, the legal-tender notes are retained in circulation, the bank only issuing notes as required above and beyond the legal-tender notes, it would be the bank notes that would form the elastic part of the whole circulation and the legal-tender notes the permanent part. The bank therefore would be obliged to keep a larger reserve on its note issues, where those issues only supplemented the legal-tender notes, than if its note issues entirely superseded the legal-tender notes. The same consequence would ensue whether the bank notes be issued by one great bank or by the existing National banks. The retirement of the legal-tender notes would give the banks the advantage of both parts of the circulation, the permanent and the fluctuating. The profit is, of course, mainly from the permanent part.

As there has been no real business redemption of notes, either bank or Government, in the United States, there has been no means of determining just what the elastic or fluctuating part of a credit bank-note currency would be under normal conditions at different seasons of the year. Unless this point can be estimated, it would be difficult to tell what profit the banks would obtain in issuing a credit circulation. Small as the profit on the present National bank circulation is, it can be calculated with ease; but as to a credit or asset circulation the banks would be at sea, unless they could approximate to the probable average redemption. Moreover, if the banks were to undertake the retirement of a portion or the whole of the legal-tender notes, the cost of this operation must be deducted from the profit on circulation.

To sum up, I agree that to carry on great governmental and commercial transactions, such as the expansion of productive energy and commerce make necessary, that a greater concentration of banking power is required. That under present laws and restrictions bankers are very much hampered in bringing about this concentration of power. But while this concentration of power is necessary, it should be accomplished in some way that will not be disastrous to the present system of small banks.

Digitized by Google

These small banks conduce in the most natural and effective way to the general prosperity of the country which is a feeder of the great business transactions.

I believe that any system of consolidation that would destroy these small banks and substitute monopolies for them would be most disastrous to the general prosperity.

I also think that to entrust the issue of an asset currency to these small banks, sufficiently free from restrictions to give the elasticity which is the basis for the demand for such a currency, would not be safe and would in the end discredit many of these banks. An asset currency with sufficient restrictions to make it reasonably safe would not be elastic.

I believe that branch banking will consolidate the banking capital of the country, but that it exposes the people to the dangers of an era of unbounded bank speculation and possible disaster. It would entirely change the status and efficiency of local banking. I believe that the creation of a great central bank, with restricted powers, might perhaps afford the relief required without destroying the advantages of our present banks of deposit and discount. To my mind the problem of the proper settlement of the banking laws of the country is a greater one than is yet fully realized. I recognize too that it is a pressing one. No one of the bills introduced in Congress seems to touch the real requirements of the case. I hope, however, that the importance of the question will be brought home to the legislators, and that these bills will form the basis of a careful and disinterested discussion of the whole situation. COUNTRY BANKER.

WINDOW-DRESSING BY BANKS.—At the last half-yearly general meeting of the shareholders of the Union Bank of London, Limited, Mr. Felix Schuster, Governor of the Bank, in the course of his remarks to the shareholders, said:

"I have, on more than one occasion, alluded to the monthly balance-sheets of banks as giving a truer picture of their position than the half-yearly ones, and I feel I ought in this connection to say one word with regard to certain remarks in the press with reference to the very large borrowing by the market which took place at the Bank of England on the last day of the year—borrowing which was alleged to have been brought about by the 'window dressing,' as the phrase is, on the part of banks. You know my views on this point, for I have stated them more than once, and I consider that the holding of large cash balances not on one day nor on a dozen days, but all the year around, is a measure of precaution which should always be borne in mind, and cannot be too strongly advocated; that even at the sacrifice of some profit such reserves should always be kept, and when the proper time comes should be kept in gold, so as to be available to relieve real pressure, should such arise.

As to the form of publication of bank accounts, I believe the monthly accounts should be sufficient, but if more frequent publication should be thought desirable, this bank certainly would have no objection, and perhaps the plan of the New York Clearing-House might be usefully adopted, according to which, not the figures of any one day, but averages only, are given. In their weekly returns, however, only the aggregate amounts of all the clearing banks, and not the figures of any individual institution, are stated, just as the Bank of England used, up to a certain time, to publish bankers' balances in their weekly returns."

Mr. Schuster is mistaken in saying that the weekly returns of the New York banks state only the aggregate amounts of all the clearing banks. The reports published weekly by the clearing-house show the figures for each individual bank.

There are grave objections in calling for reports of condition at stated dates, known beforehand to the banks. In the case of the New York banks these objections are avoided by requiring reports of average condition, and in the case of National banks throughout the United States by requiring that reports shall be made for some past date.

SECURITY OF NOTE HOLDERS AND DEPOSITORS.

M. Pierre des Essars, who is connected with the Bank of France, has an article in the New York "Journal of Commerce and Commercial Bulletin" of March 14 criticising the American banking system. In speaking of the present method of securing bank notes in this country, he says:

"The State takes the place of the banks in their relations with note holders, and guarantees payment of the notes, in any event; but what promise does it hold out to depositors? What security does it give them? None at all. The act of 1864 has nothing to say about depositors. Now, it is a matter of small importance that one-eighth of the creditors of a bank are secured, if the other seven-eighths are left exposed to every unfavorable contingency. The holders of notes are neither more nor less worthy of protection than the depositors, and they are less numerous; consequently, it is difficult to understand upon what principle or by what course of reasoning they have been erected into a privileged class. Not a single sound reason can be advanced in support of that arrangement."

Most banking authorities have thought that there are sound reasons why note holders should be specially secured. For instance, the notes of the Bank of England are a legal tender (except by the Bank itself), and it would be unjust if they were not fully secured. In this country National bank notes are not legal tender, but in ordinary business transactions they have substantially all the qualities of lawful money, and wherever bank notes are used as currency they are a *quasi* legal tender. Whoever does business can not refuse to receive them. In a country like the United States, with numerous banks of issue, it is impossible for any one to determine the soundness of notes, unless they are in some way specially secured—not necessarily by a bond deposit, but by being a first lien on assets, by a safety fund, or otherwise.

The depositor is in a different situation. He can use discrimination in selecting a bank in which to put his money, and be guided by his knowledge of the bank's condition and the character of its management. Besides, by placing his funds in a bank the depositor derives a profit, either directly in the shape of interest or indirectly in the convenience, safety and business facilities which the bank affords. The person taking a bank note receives no such benefit. By accepting the note when he is entitled to coin, he helps the bank make a profit on the issue of its notes. This is a profit of which he does not partake. So long, however, as the notes are fully secured they will, on account of their convenience, be preferred to coin.

By conferring the monopoly of note issues upon a single large institution, practically under Government control, bank notes are specially secured in France, and it is believed that there is not a nation anywhere that does not recognize this principle of special protection to note holders in some way.

M. des Essars has apparently overlooked very important provisions in the Act of 1864, viz., the double liability of shareholders, prohibition of loans on real estate, restriction of loans to any one person or firm to ten per cent. of capital, publication of reports five times a year, examination by the Comptroller, and many other provisions designed for the protection of depositors and for no other purpose.

But the aim of M. des Essars is to shew that the fundamental weakness in our banking system is the lack of some central institution, clothed with authority to issue notes, and to which the other banks can apply for rediscounts to enable them to extend their credits or to meet the demands of depositors. After reviewing the situation of affairs in this country in times of an urgent demand for currency, M. des Essars says:

Digitized by Google

"The situation would be altogether different if there were in the United States an institution like the Bank of France, the Bank of Germany, or the Bank of England, upon which the smaller banks when pressed by their creditors could rely for a rediscount of their bills receivable or for an advance upon the securities held by them as collateral. Not only would there then be a prompt repayment of deposits, but commerce would no longer be exposed to a lack of credit at the very moment when its need was greatest, and thus many panics would be prevented altogether.

What is lacking in the United States is a focussing of the banking power—a central establishment to serve as a banker for the banks, and to have a privilege of issue, which, if not indefinite, should be at least very extensive. The need of such an institution is so imperative that the banks have found themselves compelled to set up a sort of emergency rediscounting arrangement for issuing fiduciary paper. Such is the exact nature of the clearing-house certificate: but it is a mere imitation, or rather a caricature, of the true note-issuing function; and it falls far short of the services we have a right to expect from the use of real paper money.

The very force of circumstances, then, must sooner or later compel the establishment of a great bank of issue, modelled upon the Bank of France, the Bank of England, or the Reichsbank, to cite only the principal types. Nevertheless, these European institutions, if transferred without modification to the United States, would probably not suit either the needs or the customs of the people.

In my opinion, the territory of the Union is too extensive for its needs to be met by a single bank; the proper management of the numerous branches it would be compelled to establish in order to cover so broad a field would present difficulties practically insurmountable. It would be preferable, therefore, to establish several, perhaps four or six, central banks; on the matter of number, American bankers are best able to judge.

These banks should be stock corporations with a very large capital invested, not principally in their own business, but largely in United States bonds; so as to serve as a guaranty against loss upon their investments, and a basis of protection for their notes. The business of these banks should be simple and cover as few different lines as possible; such, for example, as discounting bills of exchange having not more than three months to run, and bearing three good signatures or two very good; three months' loans on United States bonds, or on bonds of the various States and cities, and upon certain industrial securities of the very highest class; the purchase and sale of foreign bills of exchange; the acceptance of securities on deposit; the acceptance on deposit and the management of the funds, trusts and estates; the purchase and sale of the precious metals.

These banks should be authorized to issue bills payable at sight to bearer, either in return for lawful money of the United States, or in discounting commercial paper, or as a loan upon collateral. There should be no fixed limit to the amount of their circulation; but a tax might be levied upon all bills issued beyond a certain specified limit, as is now done in Germany. The banks should accept each other's bills, making periodical settlement of their mutual accounts."

Perhaps it would be sufficient to establish banks as above suggested in the principal cities—New York, Boston, Philadelphia, Chicago, St. Louis, Baltimore, New Orleans and San Francisco, and possibly two or three other cities. This would obviate the objections to a system of central banks with an unlimited number of branches which would injuriously compete with existing institutions.

Profit on Circulation.—The selling price of the five per cent. bonds of 1904 is 106½, and the profit on $100,000 circulation secured by these bonds is computed as follows:

Interest on circulation at six per cent		$6,000.00
Interest on bonds		5,000.00
		$11,000.00
Less tax	$1,000.00	
Cost of redemption	45.00	
Express charges	3.00	
Plates	7.50	
Agent's fees	7.00	
Sinking fund for bond premium	3,250.00	4,312.50
		$6,687.50
Interest at six per cent. on cost of bonds $106,500		6,390.00
Net profit on $100,000 circulation		$297.50

This is less than three-tenths of one per cent.

FREDERICK D. TAPPEN,

Late President of the Gallatin National Bank.

Digitized by Google

MEMORIAL MEETING FOR THE LATE FREDERICK D. TAPPEN.

A meeting of the representative bankers of the city was held at the clearing-house on March 17 in memory of Frederick D. Tappen, late President of the Gallatin National Bank, and long associated with the clearing-house in the highest official capacities.

George G. Williams, President of the Chemical National Bank, presided, and in opening the memorial services said:

"It is not usual to call this association together on the occasion of the death of any one of its members; it has seemed to us, however, that the services of Mr. Tappen to the association have been of such a unique and remarkable character that it was due to ourselves as well as to his memory to place upon our minutes a suitable record of our esteem for his character and of our estimate of his usefulness to the clearing-house association, and of the benefits he has rendered to the business interests of the country in his action, with others, in averting the terrible perils arising from panics which have threatened with ruin, at times, the financial interests of the whole country.

The day the clearing-house commenced business–October 13, 1853 –Mr. Tappen and he who now addresses you represented our respective banks as 'settling clerks.' Most of that body of young men have since crossed the border and been called to settle more important accounts above. Since that time Mr. Tappen has filled almost every position of consequence in the association, and we had learned to trust him as a leader, as a strong and steadfast guide, as a pilot who would safely take us through the terrible anxieties which at times came upon us. Men are raised up for occasions. Mr. Tappen was one such in our clearing-house business. He has gone to his rest, and each one of us pays a feeling tribute to his memory."

GEO. G. WILLIAMS.

Mr. Williams then read the following resolutions:

Whereas, Death has removed from our midst our friend and associate, Mr. Frederick D. Tappen, who for nearly fifty years has been identified with this clearing-house, giving to it time and thought and labor without reserve, making it largely his life work; and

Whereas, We wish to place upon our minutes our appreciation of his services and our deep sense of the loss we have sustained; therefore,

Resolved, That in the death of Mr. Tappen this association loses a wise counselor, a capable, courageous and self-poised leader; one resourceful in times of difficulty and financial peril; a man undaunted in his devotion to the public good as reflected in the great interests centred in this clearing-house, whose judgment we respected, a d whose presence we always welcomed; further

Resolved, That we record with a sincere appreciation his laborious and responsible services in connection with the issuance at various times of clearing-house loan certificates and the resultant good therefrom; also

Resolved, That an engrossed copy of these resolutions be presented to his family.

J. Edward Simmons, President of the Fourth National Bank, in seconding the resolutions, said:

Digitized by Google

ADDRESS OF J. EDWARD SIMMONS.

I regard it a melancholy privilege, Mr. President, to second the very beautiful and appropriate resolutions that have just been submitted. This is the first distinctively memorial service in the history of the association. There is exceeding fitness in the purpose for which we have assembled, and we do well to pause in the business of the hour and enter into the spirit of this impressive occasion, the object of which is to pay a tribute of affection to the memory of one of our oldest members, who, perhaps more than any other, has commanded the respect and confidence of the financial world.

J. EDWARD SIMMONS.

Frederick D. Tappen, identified with this association from its birth, the recognized and beloved leader of the bank Presidents of New York, amidst universal expressions of sorrow, has entered upon the rest which is eternal.

Mr. Tappen had an hereditary promise of a long life, for his father, sturdy to the last, died a few years ago at the patriarchal age of ninety-seven, and although the son was past the three score year and ten limit, he was so well preserved, so erect in his carriage, so alert and active in his mental and physical movements, no one considered him an old man, and no one realized that he had reached that period of life when tired nature is incapable of vigorously combating exhaustive disease; therefore, when the information of his death came it was as a shock to his large circle of admiring friends: for while it was generally understood that he was ailing, no one supposed that he was critically ill. Mr. Tappen went to Lakewood about the middle of last month, suffering from what he regarded as a slight attack of indigestion. The information as to his condition that came from time to time to his friends in New York indicated that the rest and recreation he was enjoying had resulted in so far restoring his health as to cause him to contemplate an early return to his home. On Monday evening, February 24, a sudden change in the weather took place, and while sitting on the balcony of the hotel where he was staying, Mr. Tappen contracted a severe cold. On Tuesday laryngitis set in and on the following day symptoms of pneumonia appeared and his illness became so alarming that physicans were called from this city in consultation. He grew rapidly worse until Friday afternoon when all hope of saving his life was abandoned; and as the sun's last rays were fading into twilight, in the presence of his wife and daughter and a few sorrowing friends, this master of finance died.

Mr. Tappen came from hardy Dutch ancestors, who settled in this State in 1630. He was born in the city of New York, January 29, 1829, the same year that the bank in which he spent his entire business life was organized, under the name of the National Bank of New York, with Albert Gallatin, the famous patriot and financier, as President. Mr. Tappen was prepared for college at the Columbia College Grammar School and was graduated from the New York University in the class of 1849. His taste for mathematics inclined him to the study of civil engineering, and when in a reminiscent mood he would sometimes rehearse the rough experiences he encountered over fifty years ago as a young engineer on the line of the Erie Railroad. Some relative or friend induced him to abandon the hard life of a surveyor, and in 1850 he accepted the appointment of specie clerk in the National Bank of New York, now known as the Gallatin National Bank, and from that day to the close of his life his career was marked by steady advancement and brilliant achievement.

In 1857, in the midst of one of the most disastrous panics the country had ever known, Mr. Tappen assumed the responsible post of Cashier, and in 1868, he became the President, of the Gallatin National Bank, in which position he served with conspicuous ability until the time of his death. Considering Mr. Tappen's long and active connection with this association, it must be counted as a singular coincidence that the first President of the National Bank of New York, Albert Gallatin, who was Secretary of the United States Treasury under Jefferson, and after whom the Gallatin National Bank was named, should have been the man who first suggested "the formation of a clearing-house as a convenient, labor-saving device in the settlement of bank balances." Twenty years after this suggestion was made, the clearing-house was formed, but from being "a mere labor-saving device," as it was at the beginning, it has

Digitized by Google

developed into a great conservative force, mutualizing the interests of its members and harmoniously subordinating them to the general good. We are to-day a combination of separate units, "distinct as the billows yet one as the sea." No member of this association has watched over its welfare with such paternal solicitude or has witnessed its gradual development into a mighty unifying power with greater pride than Frederick D. Tappen. His practical knowledge of and experience in the varied intricacies of banking made him, at the very outset of his career, a resourceful and valuable aid to his colleagues in the clearing-house, and it may be truthfully said of him that no one has contributed more than he to the power and success that the institution has attained. His service on important committees extended over a period of time pregnant with imposing issues, political, social and economic. Entering the clearing-house as a bank President in 1868, he was soon appointed a member of the conference committee. His practical ideas at once attracted the admiring attention of his associates, but his talent for leadership was not discovered until 1869, when he became a prominent figure in the trying time of Black Friday, when Wall street was shaken to its very centre. Thus we see that at an early period his guiding power made itself known and acknowledged in this association, and whether as chairman or a member of the various standing committees, his promptitude was as characteristic as his judgment was true to the sphere in which he labored.

Mr. Tappen's life for the past thirty-three years is in itself the financial history of this association. Since 1873, he has served with signal ability on every important committee of the clearing-house. In 1882 and 1883 he was President of the association and eight years later he was again placed in supreme command. The gavel in his hand was a symbol of authority, guided by a wise discretion, cheerfully submitted to because of the confidence reposed in his judgment and the affectionate esteem entertained for him by all. In times of financial peril, he was always regarded as a wise and conservative counselor, and on each occasion when loan certificates were issued—1873, 1884, 1890 and 1893—he, as chairman of the loan committee, piloted many a tottering institution through troubled waters, out on to a smooth and tranquil sea.

Not all the battles of the world are won by the soldier. There are generals in finance as well as in war. There are heroes in the counting-house as well as on the battle-field, men who for honor and for duty stand firm with undaunted courage at the post of danger in the day of trial. We all know that Mr. Tappen was one of these heroes of civil life. Who of us can ever forget the great financial battle of 1893 and the glorious victory achieved by the associated banks of New York under the brilliant generalship of Mr. Tappen. In recognition of his valuable services in these trying times, the grateful appreciation of this association was recorded in commendatory resolutions, and the members of the loan committee presented to him a testimonial tankard, which was given in 1696 to the first Governor of the Bank of England, Sir John Houblon, "in token of his great ability and industry and strict uprightness at a time of extreme difficulty." The circumstances surrounding the first presentation of this tankard were in such close parallel to the financial troubles in 1893, and the inscription on it so correctly described the services of Mr. Tappen in that and preceding panics, it seemed fitting that the inscription should be appropriately duplicated and this historic piece of silver presented to him as a lasting memorial of the gratitude of his associates in the clearing-house for the distinguished services rendered by him to the business world. I venture to say that the family of Mr. Tappen regard this silver tankard, which is not of great intrinsic value, as one of their most precious heirlooms.

In 1895, when the Venezuelan boundary question threatened war between this country and Great Britain, and in 1896 when the danger of the victory of the free silver party seemed imminent and a collapse of the public credit was apprehended, and in 1899 when the failure of prominent financial institutions in Boston and New York caused great solicitude, he rendered invaluable service; and last May, when the troubles in Northern Pacific stock created the most intense alarm, men turned to Mr. Tappen "as the traveller turns to the shadow of a great rock in a weary land." With keen perception, deliberate judgment and heroic courage, he undertook to bring order out of chaos. He called to his aid some of the most important and influential men of Wall street and, through their united efforts, the financial storm was stayed and the danger which at one time seemed most threatening was averted.

Mr. Tappen negotiated the purchase of the land on which this clearing-house stands. As chairman of the building committee, it was under his supervision that this superb structure, which is conceded to be one of the most beautiful architectural ornaments of this city, was erected, and so long as it stands and continues to be the home of this association, just so long will it bear witness to the cultivated taste and sound judgment of the man to whom, more than to any one else, its existence is due.

Two years ago, when Mr. Tappen completed the fiftieth year of his connection with the Gallatin National Bank, the day was marked by the presentation to him by his associate officers, directors and clerks of a massive loving-cup of solid gold and a beautiful album, giving the dates of his rise to successive stations in the bank and to the various positions held by him

Digitized by Google

in the clearing-house association. Thus we see that a career modestly begun was honorably pursued, and that those for whom he toiled through half a century of ceaseless activity indicated their appreciation of the importance of his service and the nobility of his character by this golden tribute of esteem.

Mr. Tappen was a man whose thoughts did not always run in the channels of finance. His tastes were varied, as indicated by the fact that he was not only identified with many business corporations, but that he also rendered a loyal service to some of our most prominent charitable institutions, and was a member of several of our most important social organizations. He was Vice-President and trustee of the Metropolitan Trust Company and the Bank for Savings. He was a director in several banks and railroad corporations, and was associated with the management of two of our largest insurance companies. His sympathy for the sick made him a useful governor of the New York Hospital, and his desire to relieve suffering humanity caused him to render an efficient service as a manager of the Society for the Prevention of Cruelty to Children. He was a member of many social organizations, and it was only a short time ago that he retired from the presidency of the Union League Club of this city. He was a churchman, and for many years served as senior warden of All Soul's Episcopal Church, of which the Rev. Heber Newton is rector.

Mr. Tappen believed in culture and science; he loved books and literature, scholars and scholarship. He spoke the French language with fluency and grace; he was an accomplished musician, an expert at whist, a good billiard player, and a skillful fencer. He loved the gun, but the recreation in which he took most pleasure was the idyllic sport of the fisherman. He had many resources of enjoyment, but his life was by no means a constant gleam of sunshine.

He encountered many severe trials in his onward march to success, but his buoyant, happy disposition enabled neither sorrow nor disappointment to get more than a temporary hold upon his heart. His joyous smile was the delight of his associates. In him they found a well-spring of perpetual youth, and neither age nor physical infirmities could wrinkle his sunny face or quench the fire of his watchful eye; and if he had lived a century, he would have died young in heart and in spirit.

Among the names, so fast lessening in number, that shine in the roll of membership of this clearing-house association, as links connecting its present state with the traditions of its origin, none is brighter or worthier than that of Frederick D. Tappen. Who of us can ever forget the faithful devotion that marked the thirty-three years of continuous service freely given to this association, or can recall without admiration the modest dignity with which he bore all the honors that have been so lavishly bestowed upon him? Mr. Tappen was in no sense a great man, and his achievements in life were not such as to entitle him to a conspicuous place in the history of his time; but he was pre-eminently a useful man in the field in which he loved to labor, and his daily life among us has been an exemplification of the proverb: "A good name is rather to be chosen than great riches." Every member of this clearing-house had implicit faith in his integrity: his character was as white as snow, and in thought, speech and act he stood in this association like a majestic Parian marble shaft in the meridian splendor of a cloudless day.

The secret of the love and esteem we cherished for him is to be found in that rare quality which made the essence of his character and gave value and distinction to his whole life—the quality of fidelity. Faithful in all things, great or small: faithful to conviction, faithful to duty, faithful to friendship, an example of principle and probity of the older fashion in a degenerate time, his life is a lesson and its close a public loss.

"He was a man, take him for all in all,
I shall not look upon his like again."

The next speaker was A. B. Hepburn, former Comptroller of the Currency and now Vice President of the Chase National Bank. Mr. Hepburn said:

Address of A. B. Hepburn.

It has been said of nations, "Blessed are they that have no history," implying that history deals mainly with wars, revolutions and other epoch-making experiences, while the peaceful, prosperous periods of a nation's life attract little attention at the hands of the historian. We might also say, Blessed are the banks that have no history. Inherent strength and strength of management, unquestioned and undiscussed, is the character and reputation to which banks do most aspire. The nature of a banker's business tends to reserve, sobriety and quietude. As a dispenser of credits—credits supplied from funds of which he is only trustee—he is necessarily coldly critical and his action is based upon keen analysis and wholly devoid of sentiment. As an arbiter of credits offered, his vocation calls for few words. It is arduous and exacting, calls for a high degree of ability, and demands qualities which command respect and confidence. His life is cast in a dull arena compared with the pulpit or the press, the actor or the orator. He wins esteem, but not applause. He is a general counselor, often a

Digitized by Google

private benefactor, but seldom a public hero. For our heroes we look to the bar and the bridge, the forum and the field.

And yet, Frederick D. Tappen, pursuing this quiet vocation, all his life a banker, from sheer force of character, integrity of purpose, clearness of vision and commanding courage, became a leader among men, and in several financial crises rendered service so conspicuous and meritorious as to approximate heroism and win the applause of the nation. He was not a money maker in the New York sense of the word. Neither himself nor his bank was identified with the promotion of large enterprises. His bank was strong, clean and secure. It was not involved in the success or failure of any scheme. His personal affairs were beyond the influence of boom or panic; hence, whatever the crisis, he was a man whose judgment could be brought to bear uninfluenced and unswerved by personal interest, his sold regard being for the associated banks and the public interests for which they stand.

A. B. HEPBURN.

He was unselfish to a marked degree. He never used the power with which this association clothed him or the knowledge acquired as a consequence of such power to build up the institution of which he was President. He inquired into and became familiar with the affairs of many institutions, and yet no bank ever lost an account in consequence of such knowledge. Inflexibly just and fair, he enjoyed confidence so implicit that all felt safe in entrusting him with knowledge of their bank's affairs without fear of public discussion, so much to be deplored. Mainly his life was spent in the quiet curriculum of financial affairs. Only at intervals, when troublesome times called for a leader strong and true, were his real character and worth revealed to the general public. And yet the good men do, the real worth and character they possess, is builded from the accretions of their daily lives. A flag unfurled at the masthead attracts more attention, but is not of more value to the welfare of the vessel than the anchor

"Deep down among the seaweed and the ooze,
With a grip on the base of the world."

In the church he was a central figure, around which the administration revolved. As a social companion he was cultured, genial, jovial, entertaining and inspiring. His death falls with peculiar force upon those of us whose resources of intellectual and social enjoyment Time with his scythe keeps constantly narrowing. Having crossed the half-century mark, we do not make friends easily, and when a companion, whose friendship time has tried, is taken away, it shocks our sensibilities and burns into our lives as an irreparable loss. The years yet remaining to us afford no time to fill the vacancy.

His family consisted of his wife and daughter and his grandchildren—lovely and accomplished ladies, bright and beautiful children. He was the idol of the family, the pet, the pride, the chum of all, and with all due allowance for partiality, the test and touchstone of one's true character, the sterling qualities of manhood, the real evidence of goodness, are to be found in his relations to his family. If he is mean and cold and selfish, his arrival is not heralded with merry peals of laughter, beaming countenances and general hilarity. No one familiar with Mr. Tappen's household could but be charmed with his domestic relations, the genial, wholesome, lovely and loving relations which cemented and made perfect his family circle.

In recalling the man as I knew him in business, in society, in the church and in his home, I recall the following expressions from distinguished authors as particularly applicable to Mr. Tappen:

Lessing: "The most agreeable of all companions is a simple, frank man without any high pretentions to an oppressive greatness—one who loves life and understands the use of it; obliging alike at all hours; above all of a golden temper and steadfast as an anchor. For such

Digitized by Google

an one we gladly exchange the greatest genius, the most brilliant wit, the profoundest thinker."

Seneca: "The expression of truth is simplicity."

Sophocles: "Truth is always straightforward."

Ovid: "The burden becomes light which is cheerfully borne."

Marston: "Much danger makes great hearts most resolute."

Goethe: "Courage and modesty are the most unequivocal of virtues, for they are of a kind that hypocrisy cannot imitate."

Joseph C. Hendrix.

Like the giant oak rent by the blast, he fell in the full vigor of physical and intellectual manhood; and while we mourn his loss and join with his family and the community at large in deep and lasting sorrow, we also rejoice in his splendid career, his noble, unselfish, glorious life.

Joseph C. Hendrix, President of the National Bank of Commerce, next spoke as follows:

Address of Joseph C. Hendrix.

There is no more appropriate place in which to do honor to the memory of our late associate, Frederick D. Tappen, than this—the council chamber of the clearing-house. This was the arena wherein he achieved national distinction, and here he won his laurels. His heart was truly in the service which he rendered so cheerfully and assiduously to the common interest. Here he found joy in the affection and high esteem of his associates. Here time and again he took upon his shoulders a great load of responsibility. Here he modestly and briefly recounted the results and then swiftly stepped to the ranks to await some future call, when there was need of "iron nerve to true occasion true." When the Duke of Wellington died Tennyson wrote:

"Where shall we lay the man whom we deplore?
Here, in streaming London's central roar,
Let the sound of those he wrought for
And the feet of those he fought for
Echo round his bones for ever more."

The faithful service and unusual ability of our dead friend deserve the distinguished honor of this occasion. His true memorial will be in the history and traditions of this clearing-house.

In the field of finance, so broad and varied, there are many specialists, whose command is of some area, quite insignificant compared to the whole, but to this clearing-house, the great nerve centre of the finances of our country, a million rambling lines of activity run, and it requires a specialist of rare skill to deal with them all at once. His influence for the time being may be international. His judgment may bind up panic or create new disaster. The problem presented is never twice the same. Yet to each problem the same perfection of skill must be brought.

Mr. Tappen had good schoolmasters in finance. He could but derive from James Gallatin some lasting principles, for in the panic of 1857 Mr. Gallatin was the active spirit in trying to keep the banks of the city united in a policy to maintain specie payments. The young bank clerk, who was at his desk in the old National Bank of New York—now the Gallatin National Bank—saw and heard Albert Gallatin, the first President of the National Bank, who had been Secretary of the Treasury under Jefferson and Madison. At eighty he had gone to his rest, but who doubts that a spirit of sane and sound finance survived him; that his son, his successor, inherited it, and that Frederick D. Tappen, the son's successor, was legitimate heir to the principle, policy and practice of sound banking of the Gallatins? It was James Gallatin who, in 1857, stepped to the front to reform the suddenly disordered and dismayed banking forces. It was the day when specie payments were suspended as a result of a run upon the

Digitized by Google

banks for specie. A night meeting of the banks was called. Twenty banks had closed their doors, and they failed to respond. Twenty-nine banks had gone through the business of the day, some sustaining a heavy run. A general suspension of specie payments was imminent. Mr. Gallatin was spokesman, and acted as secretary of the meeting, casting his vote with the ten minority banks voting against suspension. The ten banks organized separately under Mr. Gallatin for mutual aid in an endeavor to keep faith with the public. The clearing-house was the scene of factional strife. Two of the ten banks were persuaded to go over to the majority. The remaining eight agreed to stand together. The derangement of the exchange was so great that settlements were delayed. Some of those that wanted to continue to pay in specie could not get their credit balances, and their high purpose was defeated. A storm of destruction which might have been prevented by instant co-operation swept far afield, carrying distress and disaster. It, however, taught a lesson to New York bank management, and that lesson was "instant co-operation."

In the records of an old bank of the city is a long report of that panic, the refrain of which is that there was no necessity for the suspension—that the banks would not combine. It was all so plain after the event. Young Tappen heard all about it day by day. It was the lesson of his youth. He learned it well. It was his turn to apply it when, in the next great credit panic, he was a pilot giving orders to a united following, yielding obediently to his leadership.

By process of evolution, the clearing-house certificate for use between banks in the settlement of exchanges had come to fortify the weak, appease the discordant and encourage the strong. The plan of these certificates, coupled with the idea of treating the ready money as a common fund for mutual aid and protection, was first presented in November, 1860, substantially in the form in which it has since proved so beneficial.

The loan certificate was in the first instance a war measure, devised to aid the Government, and was based exclusively on United States and New York State bonds, until the great credit panic of 1873, when it was, under Mr. Tappen's guidance, put at the service of the commerce of the country. As it pooled the gold of the banks for the nation in the time of the Government's peril, it massed the cash resources of the banks for the nation's industry later on. For what may be termed the war period, the issue of loan certificates was $59,159,000. The issues since and within the period of Mr. Tappen's leadership amounted to $109,615,000, and all were redeemed in periods ranging from three to six months from the issue date.

This country is without a bank of ultimate reserve. There is no reservoir of cash to which institutions dispensing credit may go when in need. It is the one glaring defect in our banking system. The sub-Treasuries of the Government stand like relics of a primitive civilization, helpless to answer the sharpest necessities of national commerce. The clearing-house loan certificate serves in extreme cases to supply to the business community the help it requires. Valuable as this instrument of relief, as manipulated by the skillful hand of Frederick D. Tappen, has proved, useful as it is, hanging here like a trusty weapon ready for the next event, no one recognized better than he did that it was to be used with the greatest care and caution, and never until minor protective and remedial measures had been fully tried. His experience developed resource. He was fertile in expedients. His first process was a diagnosis. Then he decided upon the remedy. He could be deaf to the voice of speculation. He was alert to the first whisper affecting credit. He could differentiate sharply between a spirit which would use the banks and that which would make the banks more useful. For hysteria he had no prescription. For genuine commercial illness he was a devoted physician.

In minor crises he was singularly useful. He could close a bank under his power from this body with less concern than he would show to give help where it was deserved. He could detect bad banking almost through the leather of the portfolio. He had no use for it, and knew that his associates had none. High as was his standard and exacting as was his rule in protecting our common interest, he was the soul of kindness and sympathy in his personal relations. He had robust notions as to the treatment of a money panic. He stood on no sentiment. The way to break a money market advancing wildly under the bids of excited men was to break it by main strength. Fill every demand at the bid price, and keep offering until every pressing necessity was supplied. The men of the markets knew that this was the skillful method. The editors sometimes doubted a philanthropy bringing such a high percentage of return, but their financial columns showing the closing quotations for money and for securities answered the uninformed criticism. A panic has been defined as a condition where men are frightened at finding themselves afraid. In a money panic the more frightened men are, the wilder are their bids for money, and it is common sense to drive away fear from this class at once, otherwise they remain as a disturbance and defeat the object in hand. Mr. Tappen, in every instance, acted with wisdom and discretion, and attained his end, which was to restore normal conditions.

Mr. Tappen held the old-fashioned notions of banking in New York, and he was determined to conform his acts thereto within his own field, despite the changes of the times. He gained his distinction by bringing to all the benefit of his special skill, and he was better

Digitized by Google

fitted for such a role by his own modesty and reserve in policy and management. Banks, in his judgment, had no right to embody in practice any principle which was inherently pernicious or injurious to the whole community, for banks all had a common interest and could not be isolated. The constitutionally conservative should not, by their high sense of obligation or by their fears, be called upon to provide, not only for their own safety, but for the common safety. These were principles familiar to the bankers under whose leadership Frederick D. Tappen grew up. He was full of the traditions left by the Gallatins. No strange gods tempted him. He believed that while a banker gained his inheritance of wisdom and prudence from the past, it was his duty to apply it to the future, and be prepared for changes such as none can clearly foresee, but all may safely count upon as inevitable in some form. He kept his house in order at all times, and was "whole in himself, a common good."

He was a knight without fear or reproach. No private interests entangled him when his hour for duty arrived. He kept himself scrupulously independent of any set of financial interests or influences which did not have their beginning and end in sound banking. He enjoyed being of use as one "of that antique world when service sweat for duty, not for meed."

ALEXANDER GILBERT.

Alexander Gilbert, President of the Market and Fulton National Bank, then spoke as follows:

ADDRESS OF ALEXANDER GILBERT.

This is an extraordinary occasion. We are assembled to-day to honor the memory of a man who for more than twenty-five years has been a prominent factor in the councils of this association and in the financial activities of this city. Many eminent men, strong, useful men, members of the association in the past, have contributed largely to its upbuilding and have passed away, but I cannot recall that to any one of these has such a tribute been paid as is embodied in this memorial meeting. Therefore I say that this is an extraordinary occasion. Measured by the world's standard of greatness, Mr. Tappen was not a great man; he fought no battles; he wrote no books; he made no important discoveries; he did not achieve pre-eminent distinction in any department of the world's activities. Measured by the standard of usefulness, he did achieve pre-eminent distinction. He was a useful, helpful man; he had the capacity to serve and the willingness to serve, and in his many years of service became one of the most useful men ever identified with the clearing-house association. When I say this, I award to him a place and a distinction which any man should deem it an honor to strive for.

Mr. Tappen and I commenced our business careers not very far apart, although he was many years my senior. He was appointed Cashier of the National Bank in 1857; I of the Market Bank in 1864. I cannot say that I ever was very intimate with Mr. Tappen; there was a certain reserve about him that made it difficult for many to get on terms of intimacy with him; but a common interest in the great questions that were disturbing the country during those early years brought us together occasionally, and at a time when we both were forming our plans and ideals for the future. So I got to know him, and to study him, and to form an estimate of him which I have often expressed but never changed. He had a laudable ambition to be well and favorably known: not an unseemly desire to force himself into unmerited prominence, but he felt the impulse of an inborn conviction that he had the capacity for useful service, and if he could but get out into the wide world of business activity and take a part in shaping its policies, and bearing its burdens, he would win for himself a recognition of his ability, and the place he deserved to fill. It was not so much a desire to be widely known as it was a desire to be well and favorably known in the circle of his own business life.

I said that measured by the world's standard of greatness he was not a great man. I can say with just as much sincerity that he was not an ordinary man. Ordinary men do not win success and hold the confidence of their associates to the extent that he did for so long a time. We judge men by their work, by the esteem in which they are held by those who know them well. We, the members of this association, have watched his goings and comings for many years; we have seen him spend his time, his energy and his best thought in the interest of the clearing-house and the associated banks, and we can truly say that in a large measure

Digitized by Google

the efficiency of the clearing-house to-day and its importance to the associated banks is due to his unflagging interest in its behalf. It would not be right to say that all the credit for the growth and development of the clearing-house system during the past twenty-five years belongs to him, for during that time many men eminent in the world of finance, wise men, members of this association, have contributed equally to the solidifying and unifying of our banking system; he was one of these, and as such we are glad to do him honor.

It may also be said that he came into prominence at an opportune time: the country was passing through quick and wonderful changes: great questions growing out of the Civil War were agitating the nation; questions of finance, of fiscal policy; able men were at the head of our banking system, leaders in our clearing-house work. He became the associate of these men; he imbibed their wisdom, their conservatism, and under their influence developed into a calm, thoughtful, useful man, prepared for the place he so ably filled.

The secret of his success it is not difficult to understand; his plans for future action were laid in advance. He prepared himself for great opportunities when they should arrive. He kept himself in constant touch with strong, helpful men who could be of service to him in the hour of need. He possessed the rare gift of knowing when to act, how to act, and of persuading others to act with him. And so it happened that he was enabled to render signal service to the banking and commercial interests of the country on several important occasions.

The man whom the world delights to honor is the man who spends himself in the service of his kind: who can make himself useful in the small circle of his own environment. The man for whom great opportunities lie in waiting, is the man who is prepared for opportunities when they come to him. Mr. Tappen was willing to serve; he served faithfully; he prepared himself conscientiously for the opportunity to serve, and this is why we assemble here to-day to pay a tribute of respect to his memory. Let us lay upon his tomb a wreath of loving remembrance.

Ex-Postmaster-General James, President of the Lincoln National Bank, was the last speaker. He said:

ADDRESS OF EX-POSTMASTER-GENERAL JAMES.

THOMAS L. JAMES.

A distinguished statesman of varied experience, in a eulogy of President Garfield, delivered before the authorities of the city of Boston, expressed what seems to me to be a very profound truth, when he said that: "In great emergencies there are always many useless men of genius and learning; but, in administration, men of labor are scarce and invaluable." It is a generalization that I have often thought applied with special force and accuracy to the career of Mr. Tappen, long-continued, tried as by fire, encompassed by perils and sudden, momentous emergencies, and coming out of those experiences with increased prestige and with surperb vindication of his judgment both in plan and execution, these being at times almost simultaneous. It was not until the later years of his life that the measure of Mr. Tappen's influence and authority, and their relation to the well-being of the country, were so well understood and so fitly recognized, that he passed into the ranks of those who had gained widespread public appreciation. His public fame, I should say, did not really come until after his magnificent handling of the resources of this institution, during the perilous money famine and silver panic of 1893. His services then for us and for those in close contact with him emphasized the abilities and character which had inevitably pointed him out as the leader in times of peril of that kind. But there was something so dramatic, so courageous, in his service in 1893, and it was continued for such a length of time, and was of such palpable benefit to the entire country, that there came public recognition of what he then did; and, since that time, his name has been almost a household word in financial circles; and with the general public it was typical of the highest integrity and utmost unselfishness, and the capacity to use, with the most skillful strategy, the magnificent resources which this institution possesses and which are available in time of peril and demoralization. It was exactly this work that justifies the characterization of Mr. Tappen as "in administration, a

Digitized by Google

man of labor;" and, as we all know, they are "scarce and invaluable." He did not profess to have—nor would he have deemed it a compliment had he been told that he possessed—the marvelous creative genius of the financier. His force and capacity were conservative. He was no "plunger," excepting that, in a moment of danger and peril, he could, with the swiftest command and execution, marshal your great forces, and advance with them into the very centre of danger, and disperse therewith the forces of demoralization and panic. When he had done this work, he became again the quiet, modest, common-sense, unassuming man, of charming personality, of blunt, rugged speech and honest force, and of affection and friendship that "clung with bands of steel," that we all have known for many years so well. Of him, we can truly say with the poet:

"Gone before us, oh, our brother,
To the spirit land;
In vain look we for another
In thy place to stand."

Manager William Sherer, of the clearing-house association, read a communication from W. A. Nash, President of the Corn Exchange Bank. The resolutions were then adopted by a rising vote and the meeting adjourned.

FINANCIAL AFFAIRS IN RUSSIA.—The report of the Russian Minister of Finance on the Budget of the Empire for 1902 estimates that the expenditures for the year will be 1,946,571,976 roubles, which will be met by estimated ordinary receipts, 1,800,784,482 roubles; extraordinary receipts, 1,800,000 roubles, and the free balance in the Treasury. 143,987,494 roubles.

Thus the excess of ordinary revenue over ordinary expenditure amounts to 24,871,000 roubles, which will be employed to cover part of the extraordinary expenses.

As compared with the Budget for 1901 there is an estimated increase of 70,688,476 roubles in the ordinary revenue for 1902 and of 119,260,925 roubles in the ordinary expenditure.

A report recently published concerning the depreciation of stocks of French and Belgian companies doing business in Russia indicates the effect of the financial and commercial crisis that has existed in this country during the past three years, on all classes of business. On October 15, 1899, the stock exchange value of the shares of ninety-eight Franco-Belgian companies was 1,316,332,000 francs ($254,052,076); on October, 1901, it had depreciated fifty-nine per cent. Among the different industrial branches affected, the glass manufactures suffered very heavily; the aggregate capital of the metallurgical enterprises decreased sixty-five per cent. The shares of the Franco-Russian works fell from fifty-five francs ($10.62) to 2.50 francs (forty-eight cents). The stock exchange value of the shares of the Franco-Belgian concerns in the province of Ekaterinoslaf two years ago was 10,875,000 francs ($2,098,875); to-day, they are worth only 67,500 francs ($13,028). The Yermak Company's shares have fallen from 600 francs to six francs ($115.80 to $1.16). In the various building and constructive branches the loss is sixty-five per cent. The gas and electrical companies' shares have fallen in value sixty-one per cent. The coal companies appear to have come out of the ordeal somewhat better, the value of their capital being reduced from 347,148,000 francs to 185,957,000 francs ($66,999,564 to $35,889,700), or a loss of forty-six per cent.

New Counterfeit $5 National Bank Note.—A photographic print on two pieces of paper with fiber between, on the Union National Bank, of New Orleans, La.; series 1882; W. S. Rosecrans, Register of the Treasury; J. N. Huston, Treasurer of the United States; check letter C; charter No. 1796; bank No. 5470; Treasury No. D569474; portrait of Garfield. Charter number and seal on face tinted reddish brown with a brush. Panel on back containing charter number, tinted blotchy green. Face of the note is fairly deceptive. Same workmanship as the $10 National bank note described elsewhere in this issue.

MR. HEPBURN ON "AN ELASTIC CURRENCY."

Hon. A. B. Hepburn, former Comptroller of the Currency, and now Vice-President of the Chase National Bank, New York, delivered an address before the Academy of Political Science, Columbia University, New York city, on March 18, in which he clearly reviewed some of the proposals recently put forth for changing our banking and currency system.

In analyzing the suggestion of ex-Secretary Gage for a federated bank, the stock to be held by banks throughout the country, Mr. Hepburn said:

"Mr. Gage's suggestions literally carried out would amount to a practical consolidation of the banks. I think the interest of the country in banking, as in all other business, will be best conserved by a wholesome rivalry and competition. Mr. Gage's suggestions should be judged leniently, however. He recognizes a public prejudice against branch banking, which is the natural outgrowth of forty years' experience with such a system under the ban of our National laws. He asserts this prejudice or conviction on the part of the public to be insurmountable, and seeks by indirection to approximate the advantages of such a system."

THE NEED OF AN ELASTIC CURRENCY SYSTEM.

Mr. Hepburn next spoke of the urgent need of legislation permitting a freer use of banking credit, and on this subject spoke as follows:

"What we need is legislation (or relief from legislation) that will permit banks to do within the law and under wholesome regulations precisely what the banks under stress of necessity did in 1893 in contravention of law. A bank note is not money. It is a substitute for money—a non-interest bearing obligation of the banks to pay to the bearer a certain amount in legal tender money upon demand. It should not be a legal tender; the legal tender quality would tend to prevent its return for redemption, and thus impair its elasticity. Called into existence by some commercial need, local to the bank of issue, it should appear and disappear at the beck and nod of commerce.

The Imperial Bank of Germany is authorized to issue uncovered notes to the amount of 450,000,000 marks. All notes issued in excess of this limit must have an equal amount of cash held against the same in the reserve. The bank may, however, exceed the limitation of the cash reserve by paying into the Imperial Treasury a tax of five per cent. on the surplus issue, providing, however, that the bank shall maintain at all times a reserve, exclusive of the notes of other banks, equal to one-third of its notes in circulation. During the acute financial stringency which existed in Germany last year, and from which it has not yet wholly recovered, the Imperial Bank issued over 100,000,000 marks in excess of the limitation of the cash reserve, upon which it paid a five per cent. tax into the Imperial Treasury. Such circulation, so taxed, could hardly be profitable to the bank, and yet it afforded very great relief to the business interests of the empire. Imagine what financial disasters might have ensued had their currency laws been similar to our own. Imagine the advantages to our own country of such a superior currency system, compared with our rigid laws, modified only by clearing-house certificates, limited in their use to bank settlements.

Mr. Gage, in his last report to Congress, recommended: 'That any National banking association which shall deposit thirty per cent. of its capital in the form of

Digitized by Google

United States bonds at their par value, and twenty per cent. of its capital in United States legal-tender notes with the Treasury of the United States as security therefor, shall be entitled to issue its circulating notes to an amount equal to its paid in and unimpaired capital. In addition to the deposit of security so required, banks permitted to issue notes as above shall pay semi-annually to the Treasurer of the United States, in trust, an amount equal to one-eighth of one per cent. on their capital stocks, respectively, such payments to constitute a guarantee fund for the protection of the note of any bank which, by reason of insolvency, shall become unable to pay its notes on demand.' This proposition contemplates a partial retirement of the greenbacks, and authorizes credit currency equal to fifty per cent. of a bank's capital.

Recently, the chairman of the Committee on Banking and Currency of the House of Representatives has introduced into that body a comprehensive scheme for currency reform. It does away with the office of Comptroller of the Currency, as now constituted, and substitutes in place thereof a board consisting of three members. Banks are to assume the current retirement of $130,000,000 of the outstanding United States notes, commonly called greenbacks; the Government coincident therewith is to retire $65,000,000, leaving only $151,000,000 outstanding. In graduated amounts, covering a period of five years, the banks which assume the current redemption of United States notes may take out asset circulation equal to sixty per cent. of their paid-up, unimpaired capital, and thereafter a provision is made for an emergency circulation, subject to an increased rate of taxation. The country is divided up into clearing-house districts with reference to note redemption. A guarantee fund is provided by taxation to redeem the notes of insolvent banks. The Secretary of the Treasury is authorized to deposit Treasury funds in excess of $50,000,000 (not including the $150,000,000 gold reserve) with the National banks, which are required to pay interest at the rate of one per cent. per annum. Silver dollars are made interchangeable with gold. Branch banking is authorized. The effect of such a comprehensive measure is to unite, in opposition to the enactment of the proposed law, all elements who are opposed to any one of its provisions It concentrates and unites the opposition, and renders the success of such a proposition more than doubtful.

The greenback was one of the instrumentalities for putting down the rebellion. Its use, its legality, its continuance, were questioned by many and violently assailed by those people least in sympathy with the prosecution of the war, and by the people of the reconstructed States since the termination of the war. Thus the patriotic sentiment of the country was arrayed in support of the greenback. It has received something of the veneration accorded to the old soldier. It is regarded as cheap money by the populace generally, and good beyond question, because it is a direct obligation of the Government. Its hold upon public sentiment is so great as to determine in advance the fate of any bill looking to its retirement. And yet it seems impossible for any public official or representative to propose any scheme of currency reform without handicapping his proposition with provisions looking to the retirement of the greenbacks. It seems to me that the wise course to pursue and the practical method of accomplishing results would be to formulate a bill authorizing asset currency simply. Predicate such action upon the necessity and desirability of having a currency responsive to the needs of commerce, that can increase in volume as the population and volume of the business of the country as a whole increases. Let such a currency be once established and in practical operation vindicate its safety and utility, then public sentiment will readily accommodate itself to the idea of the retirement of the greenbacks."

BANK ADVERTISING.

Webster says that to advertise means to apprise, inform, make known, or notify; to announce, proclaim, promulgate, publish.

Practically, then, there are eight intentions embodied in one advertisement, and to make these appeal to the receiver of the information harmoniously, effectively, and, to a certain extent, compulsively, is the sum and substance of the boasted art of advertising.

Merchants advertise to attract prospective customers, and to just the extent that money is the medium of exchange which indirectly enables the farmer in Nebraska to do business with the fisherman of Maine, so the advertisement of to-day is the medium that brings about a multitude of transactions otherwise impossible.

In keeping with latter-day progress, the art of advertising is only recently finding general appreciation. So far as the modern volume of commerce in its relation to advertising is concerned, at times it is hard to distinguish between cause and effect; but without question the dealer of half a century ago was restricted in his deals through failure to advertise. Whereas, he who to-day scorns the now universal custom of advertising for business will never see his affairs expand, but at best will remain a stationary fixture in the mercantile community, impervious to the fact that to stand still means to fall behind.

Up to a recent period the dignity, so-called, of the banking fraternity was the obstacle that prevented extensive advertising in this circle. Even to-day it is the maxim of many that paid publicity is beneath the banker's code of ethics. But there exists not the slightest doubt in the minds of present-day, progressive financiers as to the proper course to pursue, and results are always vindicative.

Formerly, the banker would sit comfortably in his easy-chair, welcoming his customer with an air of more or less condescension. That same man to-day probably does not advertise. His brother officer, in the bank across the way, does not cringe before the dealer, but simply omits the air of importance, while he has brought to perfection the faculty of meeting the various characters that cross his path, each according to its proper sphere. No doubt this progressive man advertises.

To sit and wait, and not to advertise, will increase no bank's assets. But to go after business, to "hustle" and to advertise, to seek with all legitimate means new sources of profit, is the plain duty of the modern financier. Of these two mentioned principles, the first is synonymous with slow, old-fogyish, behind-the-times; the second with wide awake, up-to-date, live.

WHY SOME BANKS GROW WHILE OTHERS STAND STILL.

The peculiar fact that some of the most solid and whilom largest banks of the country, while holding their own, are losing in comparison with new institutions can be attributed to a pursuance of the policy first indicated. And the astonishing growth of some of the very youngest financial establishments is due to the application of the second policy—the policy of vigor and life. So in times gone by the clipper sailing-vessels were admired for the high speed they attained, which appears insignificant compared with the records of the ocean greyhounds of to-day. A race between these types would be absurd.

Advertisements embrace a large and varied scope, containing many features whose classification is perhaps doubtful. It may all be divided into two general classes—voluntary and quasi-involuntary advertising.

Digitized by Google

Voluntary advertising includes the use of periodicals, handsome stationery, useful souvenirs, the handy pamphlet and instructive statement. In a measure, involuntary is the successful conclusion of important transactions, an exemplary administration, the courteous treatment of customers, luxurious quarters, social representation and, incidentally, the fact that only clean money is paid out over the bank's counters.

Of these sub-divisions of the art of advertising, each in turn has its numerous applications. Failure in one of them may more than offset the good results brought out in another, so that strict harmony throughout, in point of method, will alone effectively advertise a bank.

There are tricks in all trades, but one trick all trades have in common; and that is this trick of advertising successfully. First of all it must be sought to reach the proper people. The sea-coast bank that advertises in a miner's journal and the inland bank that solicits the accounts of oyster dealers are both wasting money. A bank's customers should see its name in print as well as anyone else, since it will teach them to appreciate their connection with the institution, a feature deserving far more than passing attention. Great care must be exercised in selecting from the thousands of newspapers and periodicals that flood the country such as are within the proper sphere. The choice of the most influential local papers should prevail, except in the case of banks having a savings department, where a card in the publication popular with the masses will not be amiss.

Trade Papers and Financial Publications.

Trade papers can be used to excellent advantage where it is sought to reach a particular line of business. In this connection locality is an item, as before indicated. Banks in reserve cities will bid for bank accounts in the columns of financial publications. Brokers' business can easily be reached in the same manner. Likewise the different mercantile lines are approached by an appeal through one of the numerous organs devoted exclusively to each particular class. Trade publications are ordinarily very influential despite their necessarily restricted circulation. However, the financial papers are not handicapped in this manner, since their columns are a barometer of general business conditions, scanned equally by banker, broker and merchant.

For a bank doing a collection business, a financial publication will be found the best of all mediums, going direct to the ones desired to be reached—the banks. Both city and country banks can materially enlarge this branch of their business by judicious advertising in reputable financial periodicals. A city bank, seeing the announcement of its country correspondent, takes it as an evidence of prosperity, progress and energy; and, on the other hand, the country bank likes to keep its funds with a city institution that publishes a satisfactory statement and is well known. The inter-relations of all parts of the United States and of the various kinds of financial and other enterprises, compel banks, wherever located, either to advertise or fall behind in the race. Besides the direct advantage that accrues to a bank from advertising in a financial publication of wide circulation and high standing, there is the not inconsiderable advantage consequent on being seen in good company. As a rule it is fair to assume that a bank which discriminates in placing its advertising will also be careful in placing its loans and in managing its business generally.

By all means repetition in the same field must be avoided. Which does not mean that a bank should advertise in only one financial journal, but rather that duplication is more frequently a waste than a benefit. It is not necessary to make a contract for costly advertising simply because a competitor has done so. Good judgment and discretion should be employed in all instances. Let it be borne in mind

Digitized by Google

that one impressive card outclasses ten of a miniature character. An independent pace will always attract; for originality is the spice of all advertising.

Let the wording be concise, emphatic. Good grammar is essential and, without crowding, the best possible use should be made of the space at disposal. The correct idea of what is to be presented should be honestly conveyed and misrepresentation avoided. Deceit in an advertisement will make it a mighty costly one in the long run.

The successful card is practical in all respects, not merely so far as its construction is concerned, but mainly in regard to the matter it contains. A condensed statement can most likely be applied favorably. If used comparatively with those published during the past, progress made during certain periods can aptly be illustrated. A directory consisting of men whose names have a good sound in the community will no doubt look well in print. In case of a United States, State or municipal depository, the stated fact will always inspire confidence.

Calling Attention to Special Features.

If there are special features in the administration of a bank that enable it to do particular turns with little expense, they should have mention. When outside connections permit it, a bid for that phase of business will pay. A well-managed foreign department, forcibly brought to the attention of the public, will be more likely to make ends meet and increase the outlook for a solid residue of profits.

So-called reading notices touching on elections, change in directorate, capital, surplus or deposits, always make a good impression. The completion of some notable deal, permitting of publication, can be announced in this fashion. Such insertions frequently carry more weight than an expensive card and ordinarily can be had for the asking.

At all times it must be borne in mind that money is easily spent where it will do no earthly good, and that a mere halo of glory does not swell the profit and loss account. Funds should not be wasted merely because they chance to be available. On the other hand it is to be remembered that one new, profitable connection may more than pay for the advertisement that secured it, be there ever so much apparent abrasion.

Manner of administration is a factor of paramount importance in connection with the problem of advertising correctly. Thousands of dollars spent annually to advertise a bank will not offset a misconception of their duties on behalf of the executive officers. It may be asserted that the successful bank manager will, from the very nature of the thing, be a successful advertiser, and *vice versa.*

Advertising means to keep before the public. Commercial conditions have reached a stage where the acceptor of a commodity relies on the offerer for his supply. To see prospective customers in person generally is a physical impossibility. The problem then presents itself to reach, through the medium of advertising, those elements that constitute a desirable market. And the more discriminating this market grows to be, through the multitude of propositions constantly thrust before it, the sharper, more sagacious must he be who wishes to maintain and broaden his influence in those directions.

The bank's assets are as the steam that moves the piston, and the relation of pressure to working material must be thoroughly understood.

A general reputation for straightforwardness, absolute integrity, strict observance of business principles, a name synonymous with solidity, the standard of administration, educationally as well as in reference to experience of officers and employees alike—these things constitute the momentum which keeps the wheels moving.

Judicious advertising, with close attention to details, is the governor that maintains uniform motion.

R. M. Richter.

TEXAS BANKERS' ASSOCIATION.

The bankers of Texas held the eighteenth meeting of their State association at Galveston, March 20 and 21. Wm. T. Austin, of the Board of City Commissioners, and T. J. Groce, President of the Galveston Clearing-House Association, welcomed the bankers, and Jonathan Lane, Vice-President of the Merchants' National Bank, of Houston, responded in behalf of the association.

PRESIDENT HILLIARD'S ADDRESS.

In his annual address President Hilliard spoke, in part, as follows:

"The time has passed when a Texan's chief pride lay in knowing it was the largest State in the Union. I once heard a gentleman—now the most prominent candidate for Governor—say, referring to his Congressional district, that it was 'the largest representative district in the civilized world, bounded on the north by Colorado and the great Indian Territory; on the east by Arkansas and Louisiana; on the South by the Gulf of Mexico, and on the west by the grace of God alone.'

If that gentleman was talking with you to-day he would tell you of the progress Texas has made in all that moves toward a higher civilization and a modern enlightenment. He would tell you that Texas now is the second State in railroad mileage, and that when work now under way was completed she would be the first. He would tell you that you are now assembled in convention in the second largest cotton exporting port in the world, and that Galveston's exports for the year ending June 30, 1901, amounted to more than those of the entire Pacific Coast from Puget Sound to Cape Horn. He would tell you that her exports were exceeded in value only by New York, New Orleans, Boston and Baltimore; that it is the third largest exporter of wheat in this country, and that her total exportation amounted to $101,857,300, as against $72,627,645 for the Pacific Coast.

The day of the 'longhorn' in Texas has passed. The time is gone when the credit of the cowman is measured by the coarseness of his oath, or the efficiency of the cowboy by the height of his boot heels or the diameter of his spur rowels.

I landed in this city twenty-two years ago—a boy - and went west on the first preliminary survey of the Texas and Pacific Railroad, from Fort Worth to El Paso. I have in that time seen your population grow from a million and a half to over three millions in 1900. I have seen in my twenty-two years in Texas the prairie schooner, drawn by thirty-six mules, give way to the ten-wheel Mogul and the train of sixty-ton cars. The covered wagon has been replaced by the Pullman car for long distances; while for local transportation the electric car, the rubber-tired buggy and the automobile now do the work formerly left to the horse, the mule or the ox.

I have seen the tent of the buffalo hunter give way to the box house of the squatter, and this, in turn, to the substantial home of the modern farmer.

The Indian's whoop is heard no more. The Buffalo are gone. The man with the hoe has taken the place of the one, while the shorthorn and Jersey have supplanted the other.

I have seen interest rates drop from five per cent. per month to the same rate per annum.

PROSPERITY AND PROGRESS OF TEXAS.

In nothing is the great stride Texas is making more apparent than in the increased railroad mileage. In 1871 Texas had but 571 miles of road. In 1880 this had increased to 3,224 miles. In 1890 the steel road had lenghtened to 8,710 miles; while in 1901 over 10,153 miles of the world's greatest civilizer was spanning Texas fields and Texas prairies, carrying products strangers to the soil but a few years previous.

The banking capital of this State has grown proportionately and to-day we have considerably over $30,000,000 capital, besides a surplus fund of some $10,000,000 or $12,000,000 more. There are 229 private banks in Texas and 284 National banks. In 1880 there were but 117 banks in Texas, of which only thirteen were National, the combined capital being but $1,300,000. In 1890 there were 186 banks in the State, the National banks alone having a capital of over $20,000,000, with deposits of over $85,000,000.

The taxable values have grown from $357,000,000 in 1881 to nearly $1,000,000,000 in 1901.

Digitized by Google

The amount of money orders issued in 1881 in Texas by 1,352 offices was $6,451,000. In 1891 the offices had increased to 2,349 in number, and the amount of money issued was $8,180,000. In 1901 the number of offices had grown to 3,188 and these issued the enormous sum of $14,063,772.

In these years there was paid out $4,122,000, $5,301,000 and $9,655,000, respectively. In these years above mentioned Texas contributed towards the support of the Federal Government, in the shape of internal revenue for 1881, $248,635; in 1891, $239,147, and in 1901, $1,681,424. In the last-named year there were chartered in the State 1,372 corporations, with an aggregate capital of $288,629,296. Of these corporations thirty-six had a capital of $1,000,000, nineteen had from $1,000,000 to $5,000,000 capital. Five were chartered at $5,000,000 capital, one at $10,-000,000 and one at $30,000,000. Think of these figures!

The cotton crop of Texas for 1900 was 3,536,000 bales. Of cotton seed, 1,644,103 tons. The value of the crop was, for cotton, $147,460,887.99, and of the cotton seed, $26,306,608, making a total of $173,767,495.99.

It is not generally known that Texas is the sixth wheat growing State in the Union, her product being 23,395,913 bushels, and being exceeded only by Kansas, Minnesota, California, Missouri, Washington and Nebraska, in the order named. She is second in bushels per acre, being exceeded in this respect by Washington only, her product being 23.4 bushels per acre, while Washington produces 23.5 bushels per acre. It is worthy of note, too, that she produces more wheat than any State east of the Mississippi River.

While Texas harvests only about 800,000 tons of hay, her natural, ungathered hay product maintains one-sixth of all the cattle, sheep, and goats in the United States. This is left out of consideration in official estimates of resources, as are many other indigenous products not entering into commercial channels. While Texas furnishes nearly nineteen per cent. of all the cattle raised in the United States, eighteen per cent. of the molasses, twenty per cent of the sweet potatoes, ten per cent. of the hogs, twelve per cent. of the horses, thirteen per cent. of the mules, eighteen per cent. of the sheep, thirty-two per cent. of the rice (think of that), and thirty-four per cent. of all the cotton; she raises only half of one per cent. of Irish potatoes, only 3¾ per cent. of the corn, only 4½ per cent. of the wheat, and only eight per cent. of the oats; this, too, when there is land in Texas that has produced 100 bushels of oats to the acre from volunteer stalks.

The population of the State is only four per cent. of the whole, and the population per square mile is only 11.62, while that of the United States is 25.69 per square mile. What an opportunity for the potato, the corn, the wheat and the oat grower.

If I had time I could show you where other products, such as wool, lumber, fruits, coal and iron form their full proportionate share of the products of the Purchase and of the whole country.

There are no figures with which to compare the oil industry in this State. Indeed, there are no figures in any place with which they could be compared. This discovery is a boon to Texas, and the whole South, which cannot be realized for years to come. It has already awakened new life, and the possibilities of fuel oil can but be conjectured.

While a good part of Texas, as now bound, was formerly included in the Louisiana Purchase, it is not as generally known as it should be that a part of the United States territory, consisting of some 123,784 miles of land, was once a part of Texas. The tract lying to the west and northwest of the present State limit and embracing more than half of New Mexico, part of Kansas, a part of the Indian Territory, a part of Wyoming and the richest mineral belt of Colorado, extending entirely through from north to south, was ceded to the United States in 1850 for a consideration of $10,000,000.

If the statistics of the nature which I have briefly touched on, and which apply in diversified forms to all portions of the State, could be put in shape so as to be available and easily digested by the people who will visit the St. Louis Exposition, the benefits to accrue cannot be guessed at. If it could be known that of all the States the percentage of fertilizers used in Texes was so small that it appears absurd in comparison that one item would be sufficient to induce many a hard toiling farmer living in the less productive sections of the North and South to seek a home in Texas, where the soil needs no artificial fertilizer. A few figures, such as the following, would alone suffice to convince any one of the enormous advantages of Texas soil: In 1890 there was spent for fertilizers in Georgia over $5,700,000; in Virginia over $2,300,000; in North Carolina over $3,800,000; in Florida over $857,000; in Alabama over $2,400,000; in Mississippi over $780,000; in Louisiana over $900,000; in Kentucky over $300,000; in Tennessee over $360,000; in New York, $3,000,000; in Pennsylvania, $3,380,000; in New Jersey over $1,800,000; in Indiana, $770,000; in Illinois, $125,000; in Texas, $58,665.

I have not time to linger longer in the captivating realm of statistics, but we should be gratified that the manufacturing plants in Texas in the last decade increased ninety-three per cent., while the output increased over seventy per cent."

INFORMATION AND STATISTICS.

The committee on information and statistics reported, in part, as follows:

"During the past year the stability of the banking and business interests have been well tested. Following a year of unprecedented prosperity, we had a year of doubts and fears, short crops and a protracted drought. In spite of this Texas may be said to be in a most prosperous condition. Lack of reliable statistical information outside of the National bank reports precludes the possibility of giving this association complete data covering the banking or any other business interests. Taking a compilation made in July, 1900, it would appear that Texas had about 275 National banks and over 200 private banks. The capitalization gives a total of over $30,000,000. Necessarily a large amount of the capital invested in private banks is not included. Deposits show, even with the incomplete data, upwards of $112,000,000. Deposits have decreased during the past year, but it may safely be said that a large portion of the money has been put in vested interests of different kinds. Improvement of property, both business and residence, has been the order of the day. A large portion of the money has been invested in manufacturing industries throughout the State. There have been large sales of farm lands, and consequent improvements, and a great increase of acreage. This is especially noticeable in the southern and eastern part of the State. We cite this as a partial explanation of what has been done with the money held by our people and in deposit in the winter of 1900.

We are unable to furnish you with any details as to bank failures or general statistical information regarding banks, owing to our having no reliable figures outside of the United States Comptroller's report.

It may not be outside our province in furnishing information to call attention to the condition of our manufacturing enterprises. For this we again have to look to the United States reports, as embodied in the last census.

It covers the period 1890 to 1900, and one must remember that previous to 1890 manufacturing in Texas was in decidedly an embryo state, and the increase hereafter mentioned is out of proportion to the real merits of the case, and not by any means what it should be.

The report shows an increase of 7,000 establishments, nearly $40,000,000 in capital invested; 14,000 in number of wage earners, over $50,000,000 in the value of products, on a total capitalization of $90,000,000.

[The committee recommended that the State should make more adequate provisions for collecting statistics in regard to banking, manufacturing, production and commerce.]

Texas leads in the number of new National banks established since the new law became effective, March 14, 1900, the number being to this date 129, with an aggregate capital of nearly $5,000,000.

Pennsylvania follows with ninety-six, Oklahoma shows well with fifty-four and the Indian Territory forty-five.

The total number of new banks established in Texas in the past fourteen months, which includes both the National and private banks, is approximately 138. Of these ninety-four are National and forty-four private banks.

Three banks have failed in Texas since our last convention.

Two National banks are liquidating.

Texas has astonished the world with her oil discovery. The Census Bureau reports that are being issued from time to time give information that should be of interest, particularly that in which it is stated that at the time of the census of 1900 there was $2,227,184 capital invested in cotton manufactories in Texas, and the values of the products of these factories $1,799,990. The number of looms in operation, 1,018. These figures have been largely increased since that time. The visit of the delegations of business men from New York and St. Louis have been a revelation to our guests, advertising the magnificent resources of our State.

It is with sorrow we report the following deaths since we last met:

C. M. Case, Assistant Cashier Farmers' National Bank, Hempstead.

A. A. DeBerry, Cashier San Angelo National Bank, San Angelo.

M. J. Coggin, of Coggin Bros. & Ford, Bankers, Brownwood.

George Sealy, of Galveston.

The repeal of the war revenue tax on bank capital, as also the return of imprinted bank stationery, has been reported favorably by the committee in Congress. The Texas Bankers' Association co-operated with other associations in securing this relief.

Membership in 1898	192	Membership in 1901	291
Membership in 1899	211	Membership in 1902	400
Membership in 1900	259		

There is renewed impetus in railroad construction. The western portion of Texas is being largely benefited in this regard."

Resolutions were adopted asking the bankers of the State to contribute an amount equal to one-tenth of their capital stock toward providing a suitable Texas exhibit at the Louisiana Purchase Exposition at St. Louis; commending the good work done by H. P. Hilliard, retiring president of the association and recommending him for election as a member of the executive council of the American Bankers' Association; against insuring cotton in companies not organized in the State or properly authorized to do business therein; thanking the bankers and citizens of Galveston for their hospitality; also the following:

"We, the bankers of Texas, in session at Galveston this March 20 and 21, 1902,

Hereby express our unbounded admiration of the grit, perseverance and reconstructive ability shown by the people of Galveston;

We believe them to have struck the keynote of the city's future in the erection of a sea-wall, and by the subscription of over one million dollars among their own people, they have assured the success of this reconstruction plan;

We believe Galveston and her port to be a necessity to our State and its future growth and expansion, and we recommend that future Legislatures deal generously with her and render all necessary aid to the development of this port and city;

We believe the protection bonds, being a county four per cent. bond, to be a good investment and recommend that our visiting bankers each take one and recommend same to their friends throughout the State."

The committee appointed to consider the facts in the case against the Bank of Morgan, with reference to holding said bank liable on a bill of lading for the non-delivery of a shipment of wheat, which was destroyed during the Galveston storm, recommended that the association appropriate $250 towards defraying the expenses of an attorney, and further consider at the next convention the question of appealing any adverse decision to the United States Supreme Court.

The committee appointed to nominate officers made the following nominations, which were adopted by acclamation and the officers elected:

President, J. E. McAshan, Houston; first vice-President, A. V. Lane, Dallas; second vice-President, W. H. Rivers, Elgin; secretary, J. W. Butler, Clifton; assistant secretary, Nathan Adams; treasurer, T. C. Yantis, Brownwood.

J. E. McAshan, Cashier of the South Texas National Bank, of Houston, delivered the following address:

Branch Banks and Asset Currency.—Address of J. E. McAshan.

"This subject which has been assigned to me is very broad and comprehensive. It is one of those important questions which have arisen like many others in the economic history of our Government for which mankind's previous history has not prepared any adequate solution, for the reason that problems and principles solved by other nations of the world are not applicable to us, because every other Government of the world is based upon the principle of benefit to the few at the expense of the many, and that all power and benefits are derived first from the sovereign, then through the privileged classes to the common people. With us the reverse of this theory is maintained. With us all power and benefits are derived from the people and ascend through the several channels to the executives. Therefore, the goodness or badness of economic theories cannot be judged by Old World standards when we take any higher and broader views on such subjects than mere expediency.

I feel that this question should be discussed in all its aspects, both from the standard of expediency, which is the narrow and professional view of it, and also from the broader position—the economic standpoint. As a citizen of a great commonwealth, whose final and permanent interest is inseparably blended with that of millions of his fellow citizens, let us discuss it first from the narrower and professional standpoint.

By branch banks and asset currency is meant that large aggregations of capital should be incorporated at some central point, like Houston for example, with the power and privilege of establishing at other points, where it regards such establishments as profitable, branch banks or agencies with the same banking and discount privileges which the parent institution enjoys, and furthermore, that in time of stringency, when, for example, panics are sweeping over the country, or when crops are moving rapidly, the parent banks shall have the privi-

Digitized by Google

lege of issuing their own notes as a legal tender circulating medium to a greater or a lesser extent, secured to a greater or less extent by a first lien on the assets of the bank for the purpose of reinforcing their cash reserves and rendering liquid a certain per cent. of their resources. I believe both propositions to be unsound and inexpedient from a professional standpoint.

In the first place, branch banks would not be as well managed or conserve the public as well as local independent banks managed, as they generally are, by able and honest officials, who thoroughly know the character, capacity and resources of their customers—the people among whom they live. No agency under non-resident control would or could form so intelligent an opinion as to furnish the necessary credit needed in such communities, not only in the crop season, but throughout the year. Such credit is an absolute essential. The farmer, the local manufacturer and the local merchant is never able to furnish collateral in any way commensurate with his requirements—such collaterals as non-resident owners would make a prerequisite to loans. The system of branch banks would tend to cause all the money to flow to large centers, and a system which tends to a wide distributing of actual money is desirable for the people. Such a system would endanger the safety of banks by increasing and opening avenues to dishonesty. National banks with branches would not be as safe as they now are. The Federal Government could not exercise any effective control over them, and such a system would lead to a banking monopoly.

"ROBBING PETER TO PAY PAUL."

The other branch of this subject, 'Asset Currency,' I will simply say, is the rankest treason to the best friends a banker has—those friends by whom he is enabled to do business and from whom is derived the possibility of his profession—I mean the depositor.

It simply means that after borrowing all the money we can from the public, in the shape of deposits, on our credit, we make a preferential assignment to a later creditor, from whom we borrow the last money and leave our old friend—the depositor—out in the cold, while we mortgage assets acquired with his money by giving some more exacting money lender a superior lien upon them; and, gentlemen, no matter how many financiers may think this is progressive and modern finance, I for one think it is wrong and treason to our best friends. No bank and no system of banking can succeed or deserve to succeed that does not keep faith with its depositors, for, to use an old-fashioned term, it is fundamentally dishonest and fraudulent. As to the expediency of such a system, I make the bold assertion and challenge denial that the rural districts of this country that have independent banks are infinitely better equipped to handle a great and growing commerce than the rural districts having branch banks in the Old World countries.

The business of such branch banks as compared to the independent banks of the rural districts of America can only be compared as mole hills to mountains. The only reason on earth for their existence is the fact that they are profitable to a limited number of privileged shareholders and governors. This brings us to that broader view of this question, the great economic side of it, the standpoint of a citizen in a great powerful, growing and free government.

The history of civilization shows that there have been two great forces struggling for sudremacy from the earliest dawn of organized government to the present moment, a centrifugal and a centripetal force. The one stands for a monopoly of power and privileges to the small favored class; the other stands for a distribution of powers and privileges to the nation at large. The one means government of the people; the other means government for the people. Every contest in politics, every struggle for partisan supremacy when reduced to its last and final analysis, no matter under what guise it masquerades, means simply a fight for control of the money-creating powers of the government and a control of the police powers of the government. In this great struggle, which is as old as organic law and which will continue to the end of time; in this supreme contest between the centrifugal and centripetal forces for control of the police and money powers of government, two primary forms of government have been evolved—the autocratic and the democratic—all other forms are mere modifications of these.

The highest development of the autocratic government ever known to the world was in imperial Rome at a time when eighteen hundred men owned all the property of the known world, and when her emperors claimed and exacted homage above that rendered to their supreme god, Jupiter.

The highest form of democratic government ever seen upon the earth is the United States of America in its original simplicity such as is even yet sometimes seen in uncontaminated communities, but which seems destined to disappear in our great centers of population where we are taught to believe that the hopes of the country are imaged in the rainbow tints which shimmer around the golden thrones of the money kings. The history of mankind shows that the autocratic form of government has been most successful in fastening itself upon human-

Digitized by Google

ity. From earliest history there is simply a record of line after line of kings and nation after nation of servile people.

Every citizen of America upon the altar of whose heart burns the sacred flame of patriotism must tremble and stand aghast when he realizes what it will mean to America when the three great financial parties now dominating this country and well advanced towards a realization of their hopes, which are to control the transportation interests and through them the wealth-producing interests and through them the money-creating interests and thorugh them the police and military powers of the country. It simply means an oligarchy or privilege instead of our proud boast, 'Equal rights to all and special privileges to none.' These three great financial parties or groups are so bound together by communities of interests that their absolute control by one autocratic master mind is even now almost an assured fact. Branch banking and asset currency is one move in the general direction of usurpation of privileges, concentration of wealth, monopoly of money and, eventually, the control of the government and the pauperizing the people. No more hurtful fallacy was ever promulgated than that by vast concentrations of wealth are the rich enabled to care for the poor and improvident. This is the argument of the master to the slave and freeborn American citizens cannot contemplate its accomplishment except with horror and disgust.

The American citizen who has caught the breezes of freedom from both oceans cannot view with aught but alarm the prospect which now seems to hover over us of repeating in America the great crimes against mankind which occupy most of the chronicles of the European and Oriental nations. We are confronted with conditions and not theories. Concentrations of wealth, the multiplication of multimillionaires, have throughout the history of man been the sure, the inevitable, precursors and blight of governments. Great concentrations of wealth into a few hands have been the cause of the downfall of nearly all the great governments of the earth and the destruction of their civilization. From history and statistics, we learn that when Egypt, the land of the far-famed Nile, went down, two per cent. of her people owned ninety-seven per cent. of her wealth. When Persia, the land synonymous with all that is glowing in Oriental beauty and splendid in its voluptuousness, went down, one per cent. of her population owned all the land. When Rome went down eighteen hundred men owned all the property of the known world, the rest were slaves.

Now, let us look at the facts in our country in 1850. The capitalists owned thirty-seven per cent. of the wealth, in 1892 they owned seventy-five per cent. of it, and to-day even a greater proportion, although I have not the figures. Thirty-five years ago five-eighths of our people owned their own homes, ten years ago only three-eighths owned their own homes, and to-day even a smaller percentage own them. This concentration of wealth, what does it mean? Does it mean an increase of human happiness, joy and pleasure of life? I think not. It means unparalleled extravagance, licentiousness and debauchery upon the part of its owners. It means unapproachable, hopeless misery on the part of the multitude. It means that its owners so far control the police powers and sources of money supply that the humble citizen cannot even protect his own fireside, the integrity of his home and the honor of his women without the dread of false accusers depriving him of his liberty and his resources for earning an honest and independent living. It means that the owners of such wealth will, with impunity, lay unclean hands upon every branch of Government, not hesitating at the ermine of judge or robe of Senator. It means every crime that ever rendered more dark and hopeless the lives of ordinary men. It means universal pollution.

American citizens after enjoying a century of liberty will not submit, and, therefore, it means revolution. To those who may think I have overdrawn the picture, I will say that should this time ever arise, as arise it must, in the history of our Government, it will be like the story that is told of two Irish emigrants. They landed in America and having very little money, decided to tramp it over the country. They had never seen a railroad or a train, so after walking until they were worn out, they laid down by the side of a railroad track one night and went to sleep. During the night a freight train came by, Mike waked up; he heard the awful roar and rumble, saw the fierce glare of the headlight. He slapped his companion and said, 'Pat, Pat, wake up, Pat! They are a-moving hell, and the first load has just gone by.' If we ever see the unhappy time that I foreshadow, we will think like Mike, that they are a-moving hell.

It is an accepted fact that the Anglo-Saxon of to-day is inferior intellectually to the Greek of 2,000 years ago, yet, he is a vast improvement; the betterment consists in the fact that the condition of the common people like ourselves is greatly better and we cannot afford to lose what we have gained. I would regret to see branch banking and asset currency authorized, for I would regard it as but one more step in the direction of an inevitable and impending calamity to a great, a glorious and happy people. There may be those who will ask why I believe such calamities possible. We judge future history by past history. The shadows of great events precede the events themselves, and to-morrow lives in the light of today. In the history of the world, republics have universally failed. I have shown you why. It is the old, old story of the cormorant and the commune.

Digitized by Google

Look at the facts. The history of free democratic governments in the world's history is a monumental record of failure. Until this Government was founded every similar experiment had failed through the inroads of that insidious disease, privilege. The republics which clustered around immortal Italy, Venice and Genoa exist but in name. In his hurried march, Time has but looked upon their imagined immortality and all their vanities from the palace to the tomb have, with their ruins, erased the very impression of his footsteps.

In the efforts of parties, patriotism is forgotten. In the lurid wars for the control of the military, police and money powers of the government, the success of schemes and of partie have ranked above the august success of patriotism and statesmanship. The spirit of party has its source in some of the passions of the heart and free governments furnish more of it than those governments under which liberty of speech is restricted and where the press is restrained by the strong arm of power. But so naturally do parties run into extremes, so unjust, cruel and remorseless are they in their excesses, so ruthless are the wars they wage on private character, so unscrupulous in the choice of means for selfish ends, so sure is it to dig the grave eventually of those free institutions of which it pretends to be the necessary accompaniment, so inevitably does it end in military despotism and unmitigated tyranny that before giving our sanction to any scheme of privilege we should ask, 'Whither are we tending?'"

After the business sessions of the convention were concluded, many of the members of the association and others embarked on a steamer bound for Cuba.

The Texas Bankers' Association will meet next year at Sherman.

History of the Bank of New York.—This is a new edition of the history, issued originally in 1884 to mark the one-hundredth anniversary of the bank's existence.

As is well known the Bank of New York is the second oldest bank in the country, having been organized in 1784, though it did not succeed in getting a charter from the Legislature until 1791. The Massachusetts Bank was incorporated at Boston in 1784, but the Bank of New York commenced business about a month before the New England institution got under way.

The constitution of the Bank of New York was drawn up by Alexander Hamilton, who was a member of the first board of directors. For fifteen years the bank was without a rival, when Aaron Burr got a charter for the Manhattan Company, to furnish pure water to the city and to do other things not inconsistent with its charter and the laws of the State.

The Bank of New York was a success from the start, and during the first century of its existence paid to its stockholders in dividends 909½ per cent., and continues to-day to be one of the city's large and flourishing banks, having aggregate resources of about $37,000,000. Its capital is $2,000,000, the surplus $1,000,000 and the undivided profits $1,203,000.

When the bank commenced business in the Walton House, 67 St. George's (now Franklin) Square, the settled part of New York was confined to the district below Murray street, and the population of the city was not much over 20,000. During all the changes of the intervening period the bank has stood as a representative of the best banking traditions and practices. While its business has been greatly enlarged, and improvements made wherever desirable, the bank has never found it necessary to change its policy to any marked extent, for it was founded upon the soundest principles, from which no departure has been made.

This history of the bank is interesting not only because of its record of the career of this venerable institution, but it contains incidentally much valuable information in regard to the financial experience of the city and country during the last one hundred years.

The present officers of the Bank of New York National Banking Association are: President, Herbert L. Griggs; Vice President, John L. Riker; Cashier, Charles Olney.

Digitized by Google

THE MERCHANTS' NATIONAL BANK OF THE CITY OF NEW YORK.

There are but few banks in the country whose existence has been longer than that of the Merchants' National Bank, of New York. Its articles of association date back to 1803, but as there was considerable opposition to the granting of bank charters in that year, it was not until the spring of 1805 that the charter was obtained from the Legislature. The four hundred and thirty-nine subscribers for the stock of the bank included many of the city's leading merchants at that time.

Although the bank did not get its charter until 1805, it commenced doing business in 1803, and on November 18 of that year declared a dividend out of the profits from June 1 to November 30, at the rate of three per cent. for six months. It may be remarked that from that time until now the bank has never missed its semi-annual dividend, the 195th consecutive one having been declared on December 19 last. For nearly 100 years, whether times were good or bad, this bank has paid its shareholders, without interruption, a substantial return.

The officers of the bank at its organization in 1803 were: Oliver Wolcott, President; Lynde Catlin, Cashier, and Wm. P. Van Ness, notary. Since that time the Presidents have been, Joshua Sands, Richard Varick, Lynde Catlin, John J. Palmer, Augustus E. Silliman, Jacob D. Vermilye, Robert M. Gallaway; the Cashiers have been, G. B. Vroom, Walter Meade, O. I. Cammann, Augustus E. Silliman, Jacob D. Vermilye, Robert McCartee, Cornelius V. Banta, Joseph W. Harriman and William B. T. Keyser.

From the first the bank did a prosperous business, and established itself in public confidence. A select committee, appointed by the New York Legislature to investigate the State banks, reported May 11, 1837, that "the Merchants' Bank was well conducted, and its accounts very well distributed. This old and respectable institution seems fully to deserve the great favor and confidence it enjoys, and which is evinced by the large average amounts of its individual deposits compared with its incorporated capital." On January 1, 1835, the individual deposits were $1,255,145, and the total resources $4,840,473. By November of the following year the latter item had increased to $6,376,477. These were large figures for those times. An idea of the bank's progress may be gained from the following condensation of the statement made to the Comptroller of the Currency at the close of business February 25, 1902:

RESOURCES.		LIABILITIES.	
Loans and discounts	$14,842,563.85	Capital	$2,000,000.00
Due from banks	1,402,299.86	Surplus	500,000.00
United States bonds	50,000.00	Undivided profits	691,291.88
Stocks, securities, etc	473,798.18	Deposits	20,946,649.93
Banking house	995,257.84		
Cash	6,874,023.13		
Total	$24,137,941.81	Total	$24,137,941.81

In 1865 the Merchants' Bank was reorganized as the Merchants' National Bank, receiving a charter for twenty years, and in 1885 the charter was renewed for a like period. On July 25, 1884, the bank took possession of the massive granite structure erected for its use on the site where its home had been for many years.

After nearly a century of existence the Merchants' National Bank shows undiminished vigor, and its business has grown steadily until it is now much larger than ever before. The present officers and directors include some of the most successful bankers and merchants of the city. They are: President, Robert M. Gallaway; Vice-President, Elbert A. Brinckerhoff; Cashier, William B. T. Keyser; Assistant Cashier, Samuel S. Campbell. Directors, John A. Stewart, ex-President United States Trust Co.; Elbert A. Brinckerhoff, capitalist; Charles Stewart Smith, merchant; Gustav H. Schwab, Oelrichs & Co.; Donald Mackay, Vermilye & Co.; Robert M. Gallaway, President; Charles D. Dickey, Brown Brothers & Co.; George Sherman, Vice-President Central Trust Co.; Edward Holbrook, President Gorham Manufacturing Co.; Orris K. Eldredge, Eldredge, Lewis & Co.; Joseph W. Harriman, Harriman & Co.

THE RIGHTS OF MAN.

Professor George Gunton, in a recent lecture, criticises the economic theories of Henry George, and also of Dr. Lyman Abbott, as set forth in his late book, "The Rights of Man." We quote from Professor Gunton's lecture as follows:

"Dr. Abbott in his 'Rights of Man' reaffirms in effect the doctrines of both Marx and Henry George; and he evidently imagines that he is saying something quite profound when he observes (page 104):

'Every man has a right to the product of his own industry, because it is a part of himself; into it he has put a portion of his life. His life is his own, therefore this portion of his life is his own. * * * The shoemaker projects himself into the shoes; the carpenter into the house; the loom-worker into the cloth. These also are a part of the man. Into them he has put his brain-work or his handiwork; therefore they are his. This right of every man to the product of his own labor is a natural right. * * * [It] is absolute.' (Page 110). 'What is true of ocean and river is equally true of land. No man ever made an acre of land and its contents. Man may transfer the soil from one place to another, in which case we speak of him as 'making land;' but he does not really make the land, he simply moves it. The land belongs to the Almighty. To whom has he given it?'

And from this Dr. Abbott is led to justify the methods of reform advocated by Marx and George and others who believe that society is built upon robbery. A clergyman imbued with these ideas recently said to me, "Society is an organized crime." No amount of high motive, philanthropic zeal or respectable authority can make such a doctrine true. The vital defect of this whole reasoning is that it rests upon a false assumption regarding the rights of man in society. The first assumption about God giving the land to man may be well enough as a poetic sentiment, but it has no foundation in history, experience or economic science. An ancient book tells us that God sentenced man to earn his bread by the sweat of his brow, and he has been doing it ever since. But there is no authority, scientific or revealed, which gives any color to the claim of any compact between God and man regarding the ownership of land or any other means of production. The simple historic truth is that the land was here long before man was. When man came he found it as an indispensable part of his environment. He has had to struggle and use it as best he could to make a living out of it. The land was no more given by God to man than were the sun, moon and stars. It is simply an abstract statement which has no real basis either in philosophy, revelation or experience.

But, suppose for a moment it were true that God gave the land to the whole human race. Then no nation has any exclusive right to any part of the earth's surface. The United States has no more right to exclusive authority over the land in this country than have the inhabitants of India, China, Russia or South America, and so with every other State and every city. And yet Spencer, Marx, George and Dr. Abbott will set up the claim with the same assurance of divine right, that the Government of the United States has the absolute right of ownership of the land in this country. By what authority, when and how did God give this exclusive ownership to a group in this country? If any group of the human race has a right to exclusive ownership of any portion of the earth's surface, then any other group has the same right. If the people of the United States have the right to exclusive ownership of the land in this country, then any other group has the same right over any other territory. This will not be denied; but, upon what principle can eighty million people acquire exclusive right of ownership to any land that forty millions cannot? If forty millions of people can get exclusive right, then why not twenty millions, or ten millions, or one million, or one hundred? And if one hundred, why not one person? What principle of ethics, economics or political philosophy can justify the right of ownership to one of these, while denying it to the others?

It is quite clear that if this doctrine obtains at all it obtains for the whole human race, and that nobody, not even nations, have any ethical and economic right to the exclusive control and disposition of land. Now, that theory would disrupt all society. It would introduce chaos into every form of civilization. It rests upon a false assumption and logically leads to obvious absurdity. There are no 'absolute rights' in society.

Man is born into society and is subject to the conditions and enjoys the opportunities and protection of society. He is part of society and has no economic, political or social rights which are not subject to social conditions. Private or public ownership of land or other means of production is not a question of absolute right, but wholly a question of social utility. Whether the ownership of these means of production shall be public or private

Digitized by Google

depends entirely upon which use of these forms of ownership will best promote the progress, welfare and civilization of the people in any given state of society. Public ownership may be much more conducive to progress under some conditions than private ownership; and private ownership may be much more conducive to progress under other conditions than public ownership. Society is an involuntary organization through which man utilizes nature to the advantage of human welfare. It is only because by ages of experimentation certain economic methods and political forms have been found to yield better results than others that the changes in institutions, in personal rights, in the protection of property have been little by little established, none of which could have taken place if the doctrine of absolute rights had been strictly adhered to during the last thousand years.

All we know of the rights of man in society, and the principles of political and economic ethics, is what we learn from the study of human experience as revealed in the history of society. Man is essentially a social being. His social life is sometimes very simple and meager, at other times relatively complex, but it is always social. In the evolution of society from its simplest to its most highly developed form, man has never had and never could have any absolute rights. That is contrary to the very societary existence. In whatever state of society, man's rights are conditioned and qualified by the influences and consensus of the social aggregate. He has the right to do whatever is not prohibited by the interest and welfare of the social group to which he belongs. Under every conceivable condition, society in its aggregate is the final, and so far as the individual is concerned, the only absolute, authority. Of course, the decision of society is not always the acme of wisdom, but it always has the right of final decision, and hence has the only absolute right; not because the wisdom of the aggregate is always superior to that of the individual, but because it represents a greater proportion of the aggregate interest and welfare and it is the highest authority to which appeal can be made. When the decision of society is less wise than that of some individual, the only remedy is for the individual to convince his fellows of the superior wisdom of his own ideas, and so convert the public opinion to his theory. But the only absolute right is with society and never with the individual. Nor is this because society has a special divine commission from the Almighty, but because in the process of human experimentation life in society is found to be more desirable, and progress more feasible, and personal security better guaranteed than by any known system of isolation. And this fact of the possibility of securing greater protection and progress with society than without is the ultimate reason why conditional rights are accepted in society as preferable to absolute rights out of society.

Dr. Abbott talks about natural rights and artificial rights as if there were an important difference between them, and one was more sacred and important than the other. The right of men to roam like wild animals in the mountains is no more natural than the right to travel over the whole earth with the protection of society and convenience of modern civilization. The rights afforded by society are just as natural and often superior to those afforded by blind nature. There are inherited and acquired rights, but they are all natural, because they all arise from the nature of existing conditions. Slavery is as natural under some conditions as freedom is under others. That is why we should always endeavor to create the conditions under which freedom shall be natural and slavery impossible. It is because rights and duties, ethical standards and civilization are not absolute that progress toward higher ideals is ever possible."

New National Bank Notes.—On March 17 the Comptroller of the Currency received from the Bureau of Engraving and Printing and issued the first delivery of the new National bank notes known as the series of 1902. These notes will be issued only to new banks organized since January 1, 1902, and those extending or re-extending their charters.

Only the denominations of $10 and $20 are ready yet for issue. Later fives, fifties and one hundreds will be issued. These notes are quite a radical departure in designs from bank notes heretofore issued, and are considered a great improvement. The backs have only one plate printing, which is an artistic vignette printed in green. The faces all bear portraits of prominent deceased officials of the Government. These are President Harrison, for the five-dollar note; President McKinley, for the ten; Secretary McCulloch, for the twenty; Secretary Sherman, for the fifty, and Comptroller of the Currency John J. Knox, for the one hundred.

Repeal of the War Taxes.—On April 7 both Houses of Congress passed the bill for repealing the special taxes imposed by the War Revenue Act of 1898.

Extension of National Bank Charters.- On April 7 the House passed the Senate bill providing for the extension of National Bank charters for twenty years.

BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—At a meeting of the stockholders of the Twenty-third Ward Bank, March 27, an amendment of the articles of incorporation was adopted providing for the establishment of branches.

—Group VII of the New York State Bankers' Association, comprising the Long Island banks, held its fifth annual banquet at the Montauk Club in Brooklyn on the evening of March 5. John A. Potter, President of the Patchogue Bank, presided. Addresses were made by ex-Senator Stephen M. Griswold, President of the Union Bank and Vice-President of the State association, H. K. Twitchell, Assistant Cashier of the Chase National Bank, and Rev. Newell D. Hillis.

—The reorganized Seventh National Bank reopened on November 12 last, and since then it has shown a very marked increase in its business. From November 12 to February 25 deposits have increased about $2,500,000, and the undivided profits have increased from $18,520 to $72,121. It is expected that the bank will soon take possession of its new banking rooms in the building now nearing completion at Broadway and Maiden Lane.

—Charles E. Warren, Assistant Cashier of the Lincoln National Bank, has been elected Cashier, succeeding Wm. T. Cornell, who becomes President of the Equitable Trust Company.

—Charles H. Spencer, formerly Cashier of the Domestic Exchange National Bank, is now associated with the New Amsterdam National Bank in an important capacity.

—Oliver I. Pilat, who entered the Fifth Avenue Bank as a messenger in October, 1890, and who for several years has been filling the important and confidential position of credit clerk in that bank, has been elected Assistant Cashier of the Western National Bank, of this city. Mr. Pilat is the fourteenth graduate of the Fifth Avenue Bank who has been elected to an official position in the banks of New York city, and the officials of that institution feel that they have a sort of training school for bank officers.

—The Van Norden Trust Company opened for business at 751 Fifth Avenue March 31. Warner Van Norden, former President of the National Bank of North America, is President.

—Governor Odell has signed the bill passed by the Legislature changing the name of the American Deposit and Loan Company to the Equitable Trust Company.

—The new Trust Company of the Republic opened for business March 31 at 346 Broadway with a capital of $1,000,000 and a surplus of $500,000. The directors of the company are Perry Belmont, Stuyvesant Fish, Henry C. Rouse, Charles F. Brocker, Alexander Greig, Thomas F. Goodrich, Ballard McCall, John M. Parker, James McMahon, W. D. Baldwin, Thomas D. Crimmins, Charles D. Marvin, Charles W. Wetmore, George C. Boldt, James H. Eckels, George J. Gould, Erastus C. Knight, Thomas Randolph, R. Waverly Smith, Herbert L. Satterlee, Elbridge, C. Snow, Daniel G. Wing and Edwards Whitaker.

Daniel LeRoy Dresser is President. The Vice-Presidents of the new company are Alex. Greig, Frederick Y. Robertson and James Duane Livingston. Thomas C. Clarke is the Secretary and Treasurer.

—The Empire State Bank will remove to the Tontine Building, 88 Wall street, about May 1.

—Interests associated with the Hanover National Bank have secured a controlling interest in the Greenwich Bank at 402 Hudson street. Virtually all the Greenwich stock has been secured and it is proposed to modernize the institution in every way. No consolidation, however, is contemplated. The board of directors is to be immediately increased and the bank's capital will also be increased. The Greenwich Bank was organized in 1855, and has been carefully managed. Its capital is $200,000 and the surplus and profits about the same amount, and the deposits over $800,000.

—William T. Cornell, Cashier of the Lincoln National Bank, has been elected President and a director of the Equitable Trust Company.

Digitized by Google

—A branch of the United States Mortgage and Trust Co. will be opened at Seventy-third street and Broadway, with Charles B. Collins as Manager.

—About May 1 the Commercial State Bank will open at Broadway and Eleventh street, with an authorized capital of $1,000,000. Cornelius Van Cott, postmaster of New York, is to President of the bank.

—On March 18 Wells, Fargo & Co. celebrated the fiftieth anniversary of the foundation of the original firm of express carriers by presenting to all employees in the United States who have been with the company for one year a silver medal. The medal shows in bas relief a stage coach, and on the reverse side a railroad train and a steamship.

—At the meeting of New York Chapter, American Institute of Bank Clerks, March 13, the following resolutions were passed:

Whereas, God in His infinite wisdom has seen fit to call from among our friends. Mr. Frederick D. Tappen; and,

Whereas, The one whom He has thus chosen has, by his noble deeds and masterful actions, especially in times of our nation's financial tribulations, established a standard of efficiency which future generations of financiers will strive to emulate: and,

Whereas, By the material encouragement which he gave to our efforts to establish a higher and better standard among the younger students of banking, he has done much to ensure their future success: and,

Whereas, His passing from us now has left a vacancy which we must always feel and will forever maintain for him in loving remembrance; be it therefore

Resolved, That we, the members of the New York Chapter American Institute of Bank Clerks, in meeting assembled, this 13th day of March, 1902, do give expression to our sorrow at the loss which we and the financial world have sustained through his demise: and be it further

Resolved, That a copy of these sentiments be engrossed and duly signed by our chairman and attested by our recorder, then transmitted to his bereaved family as a token of our sincere sympathy for them in this their sad hour.

—It is reported that interests representing the National Park Bank have acquired control of the Mutual Bank, located at Broadway and Thirty-third street. The Mutual Bank was founded about eleven years ago and has $200,000 capital and surplus and profits amounting to about $175,000.

—On April 8 Lyman J. Gage, former Secretary of the Treasury, was elected a trustee, and afterwards made President, of the United States Trust Company. John A. Stewart, the former President, will be chairman of the board of trustees.

—Stockholders of the Union and Kings County banks, Brooklyn, met on April 8 and voted in favor of the consolidation of the two banks into one institution—the Union Bank. Directors have been chosen representing the boards of both of the merged institutions. The capital of the Union Bank will be increased to $340,000 or over, and additional branches established. The new bank will move into the Temple Bar Building, on Court street, about May 1.

—Samuel Woolverton, who has been Cashier of the Gallatin National Bank since February, 1898, was elected President April 2, succeeding the late Frederick D. Tappen. Mr. Woolverton was for ten years in the Fifth Avenue Bank, which he entered as a messenger, rising to be Assistant Cashier. George E. Lewis, who had been Assistant Cashier under Mr. Woolverton, was elected Cashier. He came from the Fourth National Bank, where his services extended over twenty-three years, he having started as a messenger.

—The Consolidated National Bank, which is being organized by interests connected with the Consolidated Stock and Petroleum Exchange, has leased the building at 57 Broadway. All but the ground floor will be sublet by the bank.

—On April 2 the New York Security and Trust Company declared a quarterly dividend of eight per cent. upon its capital stock of $1,000,000. This is an increase of four per cent. and at the rate of thirty-two per cent. a year. The dividend is payable on May 1.

—The Broadway Trust Company will begin business on May 1, at Broadway and Eighth street, with $700,000 capital and $350,000 surplus. Moses May will be President, and Bird S. Coler, Vice-President.

—Frank Tilford, Charles S. Fairchild, John D. Hicks, John Harsen Rhoades, and other well-known capitalists, have incorporated the Lincoln Trust Company, which will shortly open for business at 208 Fifth avenue.

—The Bank of New York National Banking Association recently reached its 118th anniversary. Since it was founded, in 1784, the bank has missed but one semi-annual dividend, in

Digitized by Google

1887, but paid double the usual amount next time, so that the stockholders did not lose anything.

—The stockholders of the Irving National Bank recently voted to increase the capital stock from $500,000 to $1,000,000. The surplus approximates $1,000,000 more.

—The Port Richmond National Bank, of Port Richmond, Staten Island, was organized on March 12 with a capital of $100,000. A board of directors was elected consisting of the following members: Wm. J. Burlee, W. S. Van Clief, C. E. Griffith, Thomas F. Quinlan, Frank Foggin, John Westbrook, F. W. Tompkins, J. F. Smith, W. J. Davidson, Jacob I. Housman, A. F. Merrell, John Snyder, Robt. D. Kent and E. R. Moody.

The officers of the bank are: Chas. E. Griffith, President; Robt. D. Kent, Vice-President; Wm. J. Burlee, 2d Vice-President and E. R. Moody, Cashier.

The bank was organized largely through the efforts of Mr. Kent, the Vice-President, who was President of the National Commercial Bank of New York, recently placed in liquidation because of its principal stockholders acquiring a controlling interest in the National Broadway Bank.

Mr. Kent has organized a number of out-of-town banks all of which are successful.

The Port Richmond Bank will open for business May 1.

—The New York Produce Exchange Bank has added from its earnings $150,000 to surplus account, making the latter now stand at $400,000. It will open a Harlem branch at 116th street and Third avenue about May 1.

—It is understood that James T. Woodward, President of the Hanover National Bank, has acquired a large interest in the First National Bank of Baltimore. The stockholders of the last-named bank recently voted to increase its capital stock from $550,000 to $1,000,000. Mr. Woodward and the Mercantile Trust and Deposit Company of Baltimore will take the $450,000 of new stock in equal amounts. Mr. Woodward's interest is purely personal. He is a native of Maryland.

—The capital of the International Banking Corporation is to be raised from $3,000,000 to $5,000,000 and a like increase made in the surplus. There will also be an enlargement of the board of directors to thirty-six members.

—Interests identified with the National Park Bank, of which Richard Delafield is President, are said to have obtained control of the Yorkville Bank in East Eighty-fifth street.

—James T. Woodward, President, and James M. Donald, Vice-President of the Hanover National Bank, were elected directors of the Greenwich Bank on March 27. Other directors elected were: John Pitcairn, of the Pittsburg Plate Glass Co.; Charles E. Orvis, Frank L. Froment, Wm. C. Duncan, Cashier Colonial Bank; Hudson Hoagland, chairman executive committee New York Security and Trust Co.; John Harsen Rhoades, President Greenwich Savings Bank, and John R. McLean. At the meeting authority was given the bank to establish branches.

—At the annual meeting of the directors of the United States Mortgage and Trust Co., E. B. Thomas, of the Erie Railroad, was elected a Vice-President.

—Having found its business growing beyond its ability to meet requirements with its present capital of $125,000, the Empire State Surety Co. will increase its capital to $250,000.

—J. T. Fountain, Cashier of the Manufacturers' National Bank of Brooklyn, and connected with that bank for about forty years, has resigned.

NEW ENGLAND STATES.

Woonsocket R. I.—There has been such an increase in the Savings bank deposits here that two local institutions have been compelled to ask authority to receive a greater amount of deposits than their charters now permit.

The Woonsocket Institution for Savings is only authorized to receive deposits up to $7,000,000. and it now has $6,500,000. It will therefore seek to have the limit raised to $10,000,000.

The Mechanics' Savings Bank only has authority to receive $1,000,000, and already has $900,000. Authority has been asked to permit the bank to receive as much as $2,000,000.

Taunton, Mass.—For a yearling, the Taunton Safe Deposit and Trust Co. makes a very satisfactory exhibit in its last statement. This company was organized April 1, 1901, and on April 1, 1902, it had $200,000 capital, $11,090 undivided earnings and $550,856 deposits; the latter item has more than doubled since October 31 last.

The officers are: President, Edward H. Temple; Vice-President and Treasurer, Albert M. Gleason; teller, Percival C. Lincoln.

Boston.—There has been introduced in the State Legislature by the Bank Commissioners a bill which provides that ten or more persons, one-half of them residents of the city or town

Digitized by Google

where the bank is to be located, may become a banking corporation. Among the provisions of the measure are these:

If the Commissioners have any reason to suspect fraud, the certificate shall be withheld. The cash capital of each bank shall not be less than $100,000 or more than $1,000,000, except that cities or towns with less than 10,000 inhabitants may have banks of $50,000 capital. No person shall be a director unless he holds at least ten shares of unpledged stock, and three-fourths of the directors shall be citizens of the Commonwealth. Any director whose stock holding is reduced below ten unpledged shares ceases to be a director. Each director is liable for any misconduct of the bank as a whole, or violation of the law by any of its officers. No Cashier nor any subordinate shall borrow any money from the bank. No State bank shall have any connection with a Savings bank. No bank shall loan a dollar on its own shares, nor shall it own any of its own shares unless to protect itself from loss, and then the shares shall be sold at public auction within six months. No person, firm, or corporation may borrow more than one-tenth the capital of the bank. Every bank in Boston shall keep on hand in cash twenty-five per cent. of its deposits, and every other bank fifteen per cent.

Nearly one-half of the bill is made up of penalties and provisions as to liability and safe-guarding of depositors' interests.

MIDDLE STATES.

Baltimore.—Charles S. Miller, formerly Assistant Cashier of the Drovers and Mechanics' National Bank, has been elected Cashier, succeeding James D. Wheeler, who recently resigned. E. P. Hayden, paying teller, was chosen Assistant Cashier to succeed Mr. Miller.

—The new steel vault being put in by the International Trust Co. will weigh 200,000 pounds and will furnish space for 2,000 or 3,000 safe-deposit boxes.

—A new fire-proof building is to be erected by the National Howard Bank.

—On March 22 Mr. James Getty, Vice-President of the National Howard Bank, celebrated his ninety-first birthday. He is still actively engaged in business.

Scranton, Pa.—At a meeting of the board of directors of the Traders' National Bank, March 15, F. W. Woollerton was elected Cashier to succeed E. P. Passmore, who resigned to accept the position of Assistant Cashier of the Franklin National Bank Philadelphia.

Wilkes-Barre, Pa.—The Wyoming Valley Trust Co. will increase its capital from $150,000 to $200,000. It has in addition over $100,000 surplus.

Newark, N. J.—The State Banking Co., of this city, was recently purchased by the Fidelity Trust Co., and will be absorbed by the latter institution. It is also reported that the National Newark Banking Co., the German National Bank and the Fidelity Trust Co. are forming a new bank under a title not yet announced.

A Banker's Long Service.—J. M. Dreisbach, President of the Second National Bank, Mauch Chunk, Pa., recently completed his thirty-fifth year of service in that institution, He entered the bank as a clerk on March 19, 1867. In 1880 he was promoted from teller to Cashier. From 1897 to January 1, 1901, he served as Vice-President, when he was elected President of the institution. The "Lansford (Pa.) Record" says: "During his connection with the Second National the business has increased and its standing improved. His relations with the bank officers and the patrons are congenial. His home life is all sunshine; and he is esteemed most by those who know him best in the political and commercial walks of life. His integrity is never questioned; and although a gold bug in finances, he was never known to deal in gold bricks in politics. He stands up for his friends, and has the courage to tell his opponents no when seeking favors they are not entitled to."

Trust Companies Prosperous.—A recent issue of the "Jersey City (N. J.) Evening Journal" says:

"Hudson County's trust companies are among the most prosperous in the State, according to the report of State Banking Commissioner Bettle, just forwarded to Governor Murphy.

The total profits of the trust companies for the year were $3,400,534.08, an increase of $628,-460. The expenses were $984,978, an increase of $114,589. There was paid to depositors in interest $1,158,199, an increase of $281,627; dividends were declared to stockholders aggregating $262,911, an increase of $20,466.

The total number of depositors at the close of the year was 108,004, an increase of 26,051. The number of deposits on which interest was allowed is 72,430, an increase of 10,400. The total amount of the deposits was $46,809,108, an increase of $10,389,735.

The aggregate deposits of the trust companies show a gain for the year of over twenty-four per cent., and in the number of depositors of over thirty-one per cent. The total resources as reported now exceed those of the Savings banks by $864,828, the increase being over twenty-eight per cent., as compared with the returns for 1900. The surplus and profits together equal $7,448,587, an increase of $1,743,828."

Digitized by Google

Pittsburg, Pa.—James H. Willock, President of the Second National Bank, recently wrote a letter to the "Post," of this city correcting a statement in that paper to the effect that the National banks are deriving large profits from the Government funds deposited with them. Mr. Willock pointed out that these deposits must be secured by a pledge of United States bonds, bought at a premium and yielding a low rate of interest, and that a reserve must be kept against the deposits. The banks do a large amount of business for the Government without charge, and Mr. Willock says that the only advantage to be derived from receiving United States deposits is the credit a bank gains by being a United States depository.

--In commenting on the growth of banking in this city in the past year, "The Banker" says:

"The great bulk of this increase has been in the organization of new trust companies, the number being nearly doubled in the year 1901. With the National banks there has been a large increase in capital and surplus of the older institutions through the issue of new stock and its sale at a high premium. Thus from November, 1900, to November, 1901, the surplus of the National banks of Pittsburg increased from $9.912,000 to $16,000,000, and within the same period the undivided profits increased from $3,823,317 to $5,514,531. With the purely State banks there was comparatively little change. The increase in the capital of the trust companies within the year was from $5,125,000 to $11,237,550; in surplus from $1,376,386 to nearly $6,000,000, and in undivided profits from $1,556,433 to $4,189,014.

When the comparison is carried back to 1890, the gains are surprising even to those who keep in touch with such matters. The increase in the capital of trust companies during this period has been more than a thousand per cent., while the increase in surplus has been no less than 19,802.84 per cent.

The deposits of all the banks and trust companies of the city in 1890 aggregated $71,302,-567. At the close of 1901 they aggregated nearly $225,000,000, an increase of 215 per cent. These figures serve to mark the growth of the general business of Pittsburg in a very striking manner."

Buffalo, N. Y.—At the meeting of the Buffalo Chapter of the American Institute of Bank Clerks, held on March 4, a very interesting address on "The Bank Clerk" was delivered by Frank Dean, Cashier of the Fifth Avenue Bank, New York. In speaking of the address, the Buffalo "Express" said: "Mr. Dean instructed and entertained his hearers for an hour with his remarks on the banking business. His experience makes him competent to treat every phase of the subject. His natural abilities enabled him to present his thoughts in a strikingly forceful manner. He was thanked heartily by all the members."

Bank Gets a Good Start.—The American National Bank, of Waynesburg, Pa., had been doing business only eight days when it made its statement to the Comptroller on February 25, but it made a good showing nevertheless. Its capital stock reported paid in on the above date was $40,130; undivided profits, $256.97; individual deposits, $21,332.82, and the total resources, $61,719.79.

SOUTHERN STATES.

Vicksburg, Miss.—The First National Bank will increase its capital from $100,000 to $200,000.

Southern Banks Consolidate.—There has been a consolidation of the People's Savings Bank, of Greensboro, N. C., with the Greensboro Loan and Trust Co., the officers of the Savings bank becoming officers of the Savings department of the loan and trust company.

New Orleans, La.—At a meeting of the board of directors of the Union National Bank, March 10, resolutions were adopted in favor of accepting the offer of the new Southern Trust and Banking Co. to purchase the bank. The succeeding institution will have $1,000,000 capital and $1,000,000 surplus, and will be under the guidance of able bankers here and in New York.

Macon, Ga.—At a meeting of the directors of the First National Bank, March 26, Luther W. Williams was promoted from the position of teller to that of Cashier, to fill the vacancy caused by the death of Captain W. W. Wrigley, who had been Cashier of the bank for thirty-seven years.

Mr. Williams, the new Cashier, is popular and has had a banking experience extending over a period of twenty-two years.

Atlanta, Ga.—The Maddox-Rucker Banking Company has leased the first floor of the Hillyer Building, Broad and Alabama streets, and will entirely remodel the rooms and fit them up with modern vaults, furniture and fixtures. The exterior will also be greatly improved. This company began business as a private bank twenty-two years ago, and when it was incorporated in 1891 larger quarters were secured. Business has now grown to such an extent that it has been found advisable to provide more room and to make some improve-

Digitized by Google

ment in the equipment that will better enable the bank to handle this increased business satisfactorily to itself and its dealers.

WESTERN STATES.

Chicago.—The capital of the American Trust and Savings Bank is to be increased from $1,000,000 to $2,000,000.

—On May 1 the Western State Bank will remove into its new offices in the National Life building, 157 La Salle street.

—Richard L. Crampton, who was connected with the Northern Trust Co. for many years in an important capacity, was recently elected Assistant Cashier of the National Bank of the Republic.

—Lyman J. Gage, former Secretary of the Treasury, and now President of the United States Trust Co., New York, was elected a director of the Chicago Title and Trust Co. on March 12.

—The new building of the First National Bank is to be built by the National Safe Deposit Co., the stock of which is owned by the bank. To carry out the plan, the National Safe Deposit Co. will increase its capital to $2,500,000, the $2,000,000 of new stock being offered to stockholders of the bank at par, and will issue $2,500,000 in four per cent. bonds. As the bank will pay $100,000 a year rent, this will meet the interest on the bonds, and the earnings of the Safe Deposit Co. will be applied as profits on the stock.

—The $2,000,000 capital of the Federal Trust and Savings Bank has been oversubscribed between $600,000 and $700,000. Notices of allotment have been issued. The corporation will begin business about May 15.

Among the stockholders are E. G. Keith, President of the Metropolitan National Bank; James H. Eckels, President of the Commercial National Bank; Isaac N. Perry, Vice-President of the Continental National.

—Stockholders of the Corn Exchange and Merchants' National Banks have ratified the proposition to consolidate the two institutions under the name of the former, and the combination is now effective.

The enlarged Corn Exchange will have a capital of $3,000,000 and a surplus of $2,000,000. It is expected that practically all of the principal accounts of the Merchants' will be transferred to the Corn Exchange through this consolidation. The two institutions recently reported deposits aggregating about $51,000,000.

Cleveland, Ohio.—A consolidation has been effected between the American Exchange National Bank and the Metropolitan National, under the title of the former, which will have $500,000 capital, $100,000 surplus and $1,500,000 deposits at the start. Richard M. Parmely, President of the American Exchange National heretofore, will continue to act in that capacity.

Galesburg, Ill.—The Bank of Galesburg, incorporated in 1891, reports the following gain in its deposits:

DATE.	*Deposits.*	DATE.	*Deposits.*
February 26, 1897	$209,250	February 26, 1900	$533,803
February 26, 1898	299,898	February 26, 1901	668,334
February 26, 1899	382,922	February 26, 1902	830,400

This bank, since its organization, has made a special feature of its Savings Department, and pays three per cent. interest per annum upon all such deposits of one dollar or more, and compounds the interest semi-annually. It is interesting to note that there have been over 4,500 accounts opened in this department alone.

The officers are: President, A. M. Craig; Vice-President, N. O. G. Johnson; Cashier, P. N. Granville; Assistant Cashier, H. E. Olson.

Iowa Bankers' Association.—The Iowa Bankers' Association will hold its annual convention at Des Moines May 21 and 22.

Houghton, Mich.—A new three-story building, built of brick and stone, and which will be occupied in part by the Citizens' National Bank, is now approaching completion. The rooms have been designed especially for the bank's occupancy and will contain everything necessary for the safe and convenient dispatch of its business.

Minneapolis, Minn.—The Metropolitan Bank has consolidated with the Northwestern National Bank, and the business of both banks will be conducted hereafter under the title of the latter institution.

Wisconsin State Examiner.—Marcus Bergh, who has had considerable banking and official experience, has been appointed State Bank Examiner for Wisconsin, to succeed the late E. I. Kidd.

Digitized by Google

St. Louis, Mo.—It is reported that the Colonial Trust Co. will absorb the Missouri Trust Co. and also the Germania Trust Co.

Beloit, Wis—The Beloit Savings Bank—the only mutual Savings bank in Wisconsin—was established in 1881, its promoter and President for many years being Hon. S. T. Merrill. The deposits on March 1 were $720,435, belonging to 3,750 depositors. The expense for transacting the business of this bank for the year ending December 1, 1901, was .0024 per cent. of its deposits, or a trifle less than one-fourth of a cent for each dollar.

Milwaukee, Wis.—L. J. Petit was recently elected Vice-President of the Wisconsin National Bank, to succeed the late Geo. G. Houghton, and Oliver C. Fuller was elected a director, to succeed Mr. Houghton. The office of Second Vice-President was created, and Frederick Kasten, who has been Cashier since the opening of the bank, was advanced to this position, and Charles E. Arnold, Assistant Cashier, was elected Cashier, to succeed Mr. Kasten. Herman F. Wolf was chosen Assistant Cashier.

Marietta, Ohio.—The First National Bank now occupies its new building, which has just been completed. It is a handsome five-story building, constructed of Bedford stone and buff-colored pressed brick. In its interior arrangements and furnishings the banking rooms represent the last and most progressive ideas. Marble, mahogany, bronze and steel are combined to supply elegance and safety. Prominent among the features of the equipment is the vault, which is fire-proof and burglar-proof and contains numerous safe-deposit boxes. There are also rooms specially fitted up for the directors and for customers, both men and women.

PACIFIC SLOPE.

San Francisco, Cal.—A controlling interest in the American Bank and Trust Co. has been purchased by P. E. Bowles, President of the First National Bank of Oakland.

—F. W. Van Sicklen has been elected a director of the Nevada National Bank and also of the Union Trust Co., to fill vacancies.

Stolen Bank Notes.—On July 3, 1901, a robbery occurred in which $40,000 of the incomplete notes of the National Bank of Montana, at Helena, Mont., were taken. The notes of this bank have in consequence not been redeemed, but it was learned at the Treasury recently that the express company has made up the loss and hereafter all notes of the bank will be redeemed at the Treasury,

Failures, Suspensions and Liquidations.

Georgia.—Rumors were circulated in regard to the People's Bank, of Americus, on March 20, causing a run which the bank was unable to withstand. Liabilities to depositors are not large, and it is said the assets are more than sufficient to meet them.

—Owing to the recent death of its President, Major Wm. H. Ross, the Central City Loan and Trust Association, of Macon, will liquidate its affairs and retire from business. Major Ross owned about $80,000 of the stock, which his estate desires to dispose of.

New York—New York City.—Upon proceedings brought by the Attorney-General, the German-American Real Estate Title Guarantee Co., was placed in the hands of John H. Hammond, temporary Receiver, on March 25. An examiner of the Insurance Department recently reported that the company's capital was impaired to the extent of 81.69 per cent. The application for the appointment of a Receiver was made on the ground that the company is insolvent, and that it is unsafe for it to continue in business.

Pennsylvania—Philadelphia.—A Receiver has been appointed for the Bunnell & Eno Investment Co., which dealt in farm mortgages. It is claimed that its affairs have been badly managed, and that holders of the mortgages negotiated by the company will lose heavily.

The Union Pacific System.—The earnings of the Union Pacific Railway system for the eight months ended February 28, 1902, show a decided gain over the figures for a similar period in 1901. For the eight months ended February 28, 1902, the gross earnings were $32,712,450.07, compared with $29,631,740.95 in 1901, an increase of $3,080,709.12. The surplus earnings for the eight months to February 28, 1902, were $15,901,467.60, compared with $13,123,019.86 in 1901, an increase of $2,778,447.74 over 1901.

These figures are for the Union Pacific Railway system, including the Oregon Short Line and the Oregon Railroad and Navigation Co.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under the different State headings.

National Banks Organized.

6143—First National Bank, Kinmundy, Illinois. Capital, $25,000.
6144—First National Bank, Mount Savage, Maryland. Capital, $25,000.
6145—First National Bank, Emmett, Idaho. Capital, $25,000.
6146—First National Bank, Athens, Alabama. Capital, $25,000.
6147—Old National Bank, Youngstown, Ohio. Capital, $200,000.
6148—Silver Springs National Bank, Silver Springs, New York. Capital, $25,000.
6149—First National Bank, Leroy, Kansas. Capital, $25,000.
6150—Gatesville National Bank, Gatesville, Texas. Capital, $25,000.
6151—First National Bank, Willmar, Minnesota. Capital, $50,000.
6152—Merchants and Farmers' National Bank, Carthage, Texas. Capital, $25,000.
6153—Republic National Bank, Pittsburg, Pennsylvania. Capital, $200,000.
6154—First National Bank, Benson, Minnesota. Capital, $25,000.
6155—National Bank of Jersey Shore, Jersey Shore, Pennsylvania. Capital, $50,000.
6156—First National Bank, Edmond, Oklahoma. Capital, $25,000.
6157—First National Bank, Rolla, North Dakota. Capital, $25,000.
6158—First National Bank, Jermyn, Pennsylvania. Capital, $25,000.
6159—First National Bank, Yukon, Oklahoma. Capital, $25,000.
6160—Montgomery National Bank, Mount Sterling, Kentucky. Capital, $50,000.
6161—First National Bank, Cashion, Oklahoma. Capital, $25,000.
6162—Berwick National Bank, Berwick, Pennsylvania. Capital, $50,000.
6163—First National Bank, Geary, Oklahoma. Capital, $25,000.
6164—Elk City National Bank, Elk City, Oklahoma. Capital, $25,000.
6165—Tremont National Bank, Tremont, Pennsylvania. Capital, $25,000.
6166—Citizens' National Bank, Tecumseh, Nebraska. Capital, $30,000.
6167—City National Bank, Fulton, Kentucky. Capital, $75,000.
6168—Farmers' National Bank, Winnsboro, Texas. Capital, $30,000.
6169—Citizens' National Bank, Livingston, Texas. Capital, $25,000.
6170—First National Bank, Middlebourne, West Virginia. Capital, $30,000.
6171—Citizens' National Bank, Lindsay, Indian Territory. Capital, $25,000.
6172—Monticello National Bank, Monticello, Indiana. Capital, $25,000.
6173—City National Bank, Tuscaloosa, Alabama. Capital, $75,000.
6174—Carnegie National Bank, Carnegie, Pennsylvania. Capital, $100,000.
6175—First National Bank, Freeland, Pennsylvania. Capital, $50,000.
6176—First National Bank, Henderson, Texas. Capital, $35,000.
6177—First National Bank, Timpson, Texas. Capital, $25,000.
6178—First National Bank, Rifle, Colorado. Capital, $25,000.
6179—First National Bank, South River, New Jersey. Capital, $50,000
6180—First National Bank, Sylvester, Georgia. Capital, $25,000.
6181—First National Bank, Freeman, South Dakota. Capital, $25,000

Applications to Organize National Banks Approved.

The following notices of intention to organize National banks have been approved by the Comptroller of the Currency since last advice:

National Bank of Farmersburg, Farmersburg, Indiana; by W. S. Baldridge, *et al.*
First National Bank, Waterford, Ohio; by John R. Wallace, *et al.*
First National Bank, San Augustine, Texas; by E. S. Woodfin, *et al.*
First National Bank, Drayton, North Dakota; by Geo. A. McCrea, *et al.*
First National Bank, Cushing, Oklahoma; by Henry M. Hand, *et al.*
National Bank of Smithburg, Smithburg, Maryland; by Samuel M. Birely, *et al.*

Digitized by Google

First National Bank, Colorado City, Colorado; by Edgar T. Ensign, *et al.*
First National Bank, Sutersville, Pennsylvania; by Jacob Roth, *et al.*
Merchants' National Bank, Allentown, Pennsylvania; by W. D. Beckley, *et al.*
First National Bank, Leesville, Louisiana; by W. H. Powell, *et al.*
National Bank of Pratt, Pratt, Kansas; by Geo. W. Lemon, *et al.*
First National Bank, Norton, Virginia; by J. E. Brading, *et al.*
First National Bank, Enloe, Texas; by W. R. Allen, *et al.*
Citizens' National Bank, Okmulgee, Indian Territory; by Sam Rose, *et al.*
Citizens' National Bank, Pocomoke City, Maryland; by O. M. Purnell, *et al.*
Bartlesville National Bank, Bartlesville, Indian Territory; by R. L. Beattie, *et al.*
Morris National Bank, Morris, Minnesota; by C. H. McNider, *et al.*
First National Bank, Lott, Texas; by A. L. Patton, *et al.*
Planters' National Bank, Bennettsville, South Carolina; by H. H. Newton, *et al.*
First National Bank, St. Charles, Minnesota; by T. L. Beiseker, *et al.*
First National Bank, Hooversville, Pennsylvania; by P. J. Blough, *et al.*

NATIONAL BANK RETURNS—RESERVE CITIES.

By the courtesy of the Comptroller of the Currency at Washington, the BANKERS' MAGAZINE has been favored with the complete returns of the National banks in all the reserve cities, at the date of the call on February 25, 1902. These are published below in conjunction with the two preceding statements of September 30, 1901, and December 10, 1901. In this form the figures become much more valuable by reason of the comparison. In this complete shape the returns of National banks in the reserve cities are published in the BANKERS' MAGAZINE exclusively.

NEW YORK CITY.

RESOURCES.	*Sept. 30, 1901.*	*Dec. 10, 1901.*	*Feb. 25, 1902.*

NOTICES OF NEW BOOKS.

MONEY "TO LOAN;" THE STATUS OF "LOAN" AS A VERB. By EDWIN F. MACK. Chicago: Rogers & Wells.

Mr. Edwin F. Mack, Cashier of the Royal Trust Company Bank, Chicago, has written this pamphlet to justify the use of the word "loan" as a verb. He quotes many authorities to support his contention, and cites the usage of many publications, including THE BANKERS' MAGAZINE.

It will be interesting to read the concluding paragraphs of Mr. Mack's pamphlet:

"Who makes the language if not the people who use it; and whose property is it if not the people's who make it? Whose convenience but their own need the people consult in using what is of their own creation? The people can be trusted to know what they want, and the objections of a handful of purists will accomplish nothing; they are wasting their time. As Brander Matthews says in his 'Parts of Speech': 'It is well that the purist should fight for his hand; but it is well also to know that he is fighting a losing battle.' The purist should bear in mind the words of Wm. Archer, the Scotch critic, in his 'America To-day' (as quoted by Prof. Matthews): 'The English language is no mere historic monument, like Westminster Abbey, to be religiously preserved as a relic of the past, and reverenced as the burial-place of a by-gone breed of giants. It is a living organism, ceaselessly busy, like any other organism, in the processes of assimilation and excretion.'

This paper is not intended as a plea for license but as a plea for sane liberty: for the good common usage of the people as against the dictum of the academic word-stickler. Language is altogether too democratic in its origin and in its growth to have its functions restricted by the narrow rules of an oligarchy of purists."

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, April 3, 1902.

TREASURY OPERATIONS, ANTI-TRUST INVESTIGATIONS and labor difficulties were the principal matters of interest in a month not particularly exciting. Wall Street has been rather dull comparatively speaking. The sales of stock were less than 12,000,000 shares, averaging below 500,000 shares a day, while in March last year they were 27,000,000 shares. A similar falling off occurred in bond transactions, the sales aggregating only about $67,000,000 as compared with $182,000,000 last year. Were the comparison to be carried back of 1899, however, the business at the Stock Exchange would appear large beyond precedent.

The general business of the country is active as reflected by the bank clearings which, outside of New York, in March increased ten per cent. over those of the same month last year, while in New York the decrease was about fifteen per cent. In the first quarter of the year the clearings outside of New York show an increase of nearly $1,000,000,000 over those of the corresponding quarter last year. In New York the decrease is more than $2,000,000,000.

While there has been a decrease in activity in speculative circles, prices of securities continue strong and many classes of stock and bonds have advanced to higher points than any reached prior to last month.

The money situation continues free from any appearance of stringency although gold exports, early in the month, and Treasury accumulations had some tendency to make rates firm.

The exports of gold quickly ended, and Congress appears to be almost ready to repeal the war tax law which will reduce the excess of revenue over expenditure which is now putting money in the Treasury.

Much interest has been taken in the inquiry regarding the organization of the Northern Securities Company, which the Government is preparing to oppose as antagonistic to the Sherman anti-trust law. Mr. J. Pierpont Morgan and other prominent financiers were on the witness stand and testified with unreserved frankness. The testimony showed that the purpose of the organization was to prevent a change in the control of the Northern Pacific and the Great Northern properties, and apparently the steps to that end were entirely legal. Projects to organize similar companies are pending and the legality of the Northern Securities Company once established will start them into active operation.

There was a strike among the freight handlers at Boston which for a while threatened a far-reaching effect, but after a few days a settlement was reached. A threatened strike among anthracite coal miners was averted and also a proposed strike at the Fall River mills.

On March 14 Secretary of the Treasury Shaw gave notice that he would discontinue the purchase of Government bonds after March 15. Because of the rapidly accumulating surplus Secretary Gage, nearly a year ago, began to purchase bonds, and the total purchases up to the time of the suspension amounted to about $66,000,000 par value of the bonds, for which a premium of nearly $16,000,000 has been paid. The change of policy by the present Secretary, and the statements made by the Secretary concerning it have directed attention to several phases of the financial situation and the relation of the Government therewith.

Digitized by Google

The Secretary is reported as suggesting that the banks have been retiring their circulation for the purpose of getting their bonds to use as security for Government deposits. Whatever ground may exist for criticism of particular banks on this score has not been made known. But there can be little doubt that the profit on bank-note circulation at present is practically nil. With two per cent. bonds quoted at eight and nine per cent. premium, and the rate for money as low as it is now, there can hardly be any inducement to the banks to maintain their outstanding circulation.

Under the act of March, 1900, the increase of bank circulation was greatly stimulated, the circulation based on bonds increasing from less than $214,000,000 on February 28, 1900, to nearly $329,000,000 on September 30, 1901. Since the latter date, however, there has been a steady decrease, and on March 31 the circulation secured by bonds was less than $317,500,000.

While the act of March, 1900, stimulated the creation of new banks, it was the provision allowing banks to issue circulation up to the par value of the bonds deposited which had the most influence in causing an expansion. In the twenty-five months from February 28, 1900, to March 31, 1902, there was issued $148,000,000 of new circulation to the National banks, but less than $18,000,000 was to new banks, while $130,000,000 was to banks which increased their circulation. Now the contraction which is going on is due to banks reducing their circulation and not to banks going out of existence.

We have prepared the following comparative table showing the issue and retirement of notes based on bonds during the first year the act of 1900 was in force, and in the thirteen months since:

Additional Circulation Issued.

	March 1, 1900, to Feb. 28, 1901.	*March 1, 1901, to Feb. 28, 1902.*	*Total.*
To new banks	$8,333,840	$9,513,500	$17,847,340
To banks increasing circulation	111,896,995	18,369,871	130,266,866
Total	$120,230,835	$27,883,371	$148,114,206
Circulation Retired.			
By insolvent banks	$343,488	$807,955	$1,151,443
By liquidating banks	1,611,712	5,209,909	6,821,621
By reducing banks	12,668,616	23,622,173	36,290,789
Total	$14,623,816	$29,640,037	$44,263,853

Increase or decrease in circulation—Inc., $105,607,019; dec., $1,756,666; inc., $103,850,353.

In the first year nearly $112,000,000 of circulation was issued to banks increasing circulation, while only a little more than $8,000,000 was issued to new banks. In the last thirteen months only about $18,000,000 was issued to banks increasing circulation, while nearly $24,000,000 was retired by banks reducing circulation. It is evident from the table that the movement of National bank circulation has completely changed.

The retirement of National bank circulation has been exceptionally rapid during the last six months. Under the banking act the National banks desiring to retire circulation are permitted to deposit lawful money with the United States Treasurer and withdraw their bonds. The amount of lawful money on deposit to retire circulation was only about $28,000,000 on May 31 last, but now exceeds $40,000,000, an increase of $12,000,000. In the meantime, however, more than $14,000,000 has been released through the redemption of notes. The monthly deposits of lawful money are shown as follows:

Digitized by Google

LAWFUL MONEY DEPOSITED TO RETIRE CIRCULATION.

	By insolvent, liquidating banks, etc.	By banks reducing circulation.	Total deposits.
June, 1901	$545,480	$2,492,865	$3,038,345
July, 1901	93,140	379,540	472,780
August, 1901	479,340	650,450	1,129,790
September, 1901	1,124,900	789,500	1,914,400
October, 1901	843,315	2,163,240	3,006,555
November, 1901	166,573	2,985,987	3,152,560
December, 1901	375,040	2,757,015	3,132,055
January, 1902	1,499,525	2,279,092	3,718,617
February, 1902	343,235	2,986,520	3,329,755
March, 1902	707,520	2,980,262	3,687,782

For several months the banks reducing circulation have surrendered the maximum amount allowed by law, $3,000,000 a month. The deposits of lawful money by insolvent and liquidating banks have carried the total considerably above that amount. Altogether the evidence is conclusive that the bank circulation has ceased to expand and is now in process of contraction.

An additional feature of the present policy of the Secretary of the Treasury is said to be the increase of deposits of the public funds in the National banks. At no time in recent years have the deposits been as large as they are now, the amount on March 31 being in excess of $118,000,000, or about thirty-six per cent. of the net balance in the Treasury.

Nothing is more remarkable than the extraordinary increase in the cash, gross and net, in the United States Treasury. There is now more than $1,236,000,000 of money in the Treasury, all but the $118,000,000 in the National banks now being locked up in Government vaults. Of this large sum $822,000,000 is to secure certificates and notes outstanding, not including the $150,000,000 gold reserve for legal-tender notes, and $85,000,000 is represented by disbursing officer's balances, National bank note redemption fund, etc. There is still left a surplus of nearly $328,000,000. How affluent the Government has become since 1893 is shown in the following comparison:

	January 1, 1894.	April 1, 1902.
Total cash assets	$737,614,701	$1,236,308,409
Cash in Treasury	722,413,656	1,118,267,099
Deposits in National banks	15,201,045	118,041,310
Certificates and notes outstanding	604,317,424	822,799,089
Other demand liabilities	42,921,722	85,653,031
Total demand liabilities	647,239,146	908,452,120
Cash balance	90,375,555	327,856,289

The cash assets in the United States Treasury have increased nearly $500,000,000 since January 1, 1894, of which $396,000,000 is actually in the Treasury and $103,000,000 has gone into the banks. The certificates and notes outstanding have increased $218,000,000, and other demand liabilities $43,000,000, while the surplus has increased $237,000,000.

With this evidence of wealth so prodigious it must strike the observer who views political economy from the standpoint of a practical business man, as strange that the Government does not pay its promissory notes. It has paid off $100,000,000 of its bonds in the last three years. Within a year it has redeemed as mentioned above $66,000,000 of its bonds, paying a premium of $16,000,000 for the privilege. Here is $82,000,000 used in buying up a debt not due while on the other hand it has $346,000,000 of promissory notes outstanding, redeemable at par any time Congress will remove the restrictions it has placed upon their retirement, and which the Government as long ago as 1869 solemnly pledged itself by act of legislation to pay at the earliest possible moment.

Perhaps at no time before could the Government so easily and with so little dis-

Digitized by Google

turbance to the trade and the currency of the people retire the greenbacks permanently. The present surplus of $327,000,000 in the Treasury without doubt would be ample to provide for the redemption of all the greenbacks in existence. There are only $336,000,000 of the greenbacks now in circulation, but the $10,000,000 in the Treasury is counted as part of the surplus. Allowing for the notes destroyed or lost and those which never will be presented there is hardly a question that the Government can pay all the greenbacks now, and the only effect upon the circulating medium would be that produced by the withdrawal of the $118,000,000 in the National banks. If the Government had used the $82,000,000 spent for bonds in retiring the greenbacks, it would now have all the greenbacks paid off and a surplus in the Treasury of probably $80,000,000, but with the legal-tender notes retired such a surplus would be wholly unnecessary, for the Government makes a practice of charging in its demand liabilities an amount equal to about two months' total disbursements.

There are financial and currency and banking measures now under consideration in Congress. It looks as if some bill to secure the parity of gold and silver at least may be made a law. Doubt generally prevails that any other measure to secure a better currency system will be enacted. Yet the evidence is so strong that no better time could be found for establishing a scientific system of banking and currency that it is not difficult to hope at least that Congress will avail itself of the favorable opportunity.

As far as the greenback is concerned the Government in times past has sold bonds far in excess of the entire face value of the notes now outstanding, merely to obtain gold with which to redeem the notes. It now maintains a gold reserve of $150,000,000, equal to nearly fifty per cent. of the notes, and a large portion of that gold was bought by bond issues. Additional reasons for retiring the legal-tender notes exist, but need not be discussed here.

The first comprehensive compilation of the earnings of the railroads in the United States during the calendar year 1901 has been prepared by the "Financial Chronicle." It has obtained the returns of gross earnings of 179,000 miles of road out of a total of 199,000 miles, which show an aggregate of $1,603,911,087, an increase over the previous year of $148,989,902, a gain of more than ten per cent., on an increased mileage of less than 1½ per cent. This follows an increase of five to ten per cent. each year in the previous four years.

The reports of net earnings cover about 166,500 miles, and show an aggregate of $528,962,185, a gain over 1900 of $64,800,580, or nearly fourteen per cent. on an increased mileage of only 1.82 per cent. This is the fifth consecutive year in which net earnings have shown an increase, the annual gain ranging from about $22,000,000 to $46,000,000 in the previous four years. The following table prepared by the "Chronicle" shows the estimated approximate gains on the entire railroad system of the country in the last five years:

Increase in	*Gross.*	*Net.*
1901 over 1900	$155,000,000	$70,000,000
1900 over 1899	120,000,000	32,000,000
1899 over 1898	140,000,000	55,000,000
1898 over 1897	90,000,000	30,000,000
1897 over 1896	75,000,000	45,000,000
1901 over 1896	$580,000,000	$232,000,000

Such a record of improvement is wholly without parallel in any previous period.

The Comptroller of the Currency has issued the usual abstract of the reports of condition of National banks in the United States on February 25. It shows that there are 4,357 National banks in operation, the largest number in existence at one time, In the past year the number has increased 358. The capital is $667,381,281, an increase of nearly $33,000,000 in a year, but still $22,000,000 less than the high

Digitized by Google

record made on December 9, 1892. Nearly all other items are larger than at any previous time excepting circulation. The following table shows the changes in some of the important items as indicated in the statements issued during the past two years.

CONDITION OF THE NATIONAL BANKS OF THE UNITED STATES.

	Capital.	*Surplus.*	*Individual deposits.*	*Gold.*	*Silver.*	*Legal tenders.*
April 26, 1900	$617,051,455	$253,724,596	$2,449,212,656	$297,683,828	$60,367,240	$146,198,063

THE MONEY MARKET.—Gold exports and declining reserves of the New York banks caused a hardening of rates in the local money market during the early part of the month. Call money reached 5 per cent. It was not until near the end of the month that rates began to decline. At the close of the month call money ruled at 3 @ 4½ per cent., most of the loans being made at 4½ per cent. Banks and trust companies quote 4½ per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 4¼ @ 4¾ per cent. for 4 to 6 months on good mixed collateral. For commercial paper the rates are 4½ per cent. for 60 to 90 days' endorsed bills receivable, 4½ @ 5 per cent. for first-class 4 to 6 months' single names, and 5½ per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—The fluctuations which have occurred in the deposits of the New York Clearing-House banks recently have been of extreme range. From January 1 to February 21 there was an increase of nearly $109,000,000 and in the five months since the latter date there has been a decrease of $54,000,000. The decrease in deposits was followed by a reduction in loans which carried that item down from $938,000,000 on March 1 to $904,000,000 on March 29, a decrease of $34,000,000 in four weeks. The aggregate surplus reserve of the banks was nearly changed into a deficit, falling from nearly $27,000,000 on February 1 to about $3,000,000 on March 15. A number of banks reported a reserve below the 25 per cent. standard. At the close of the month the surplus reserve had increased to nearly $7,000,000 or to about $900,000 less than the surplus of a year ago.

MONEY RATES ABROAD.—Rates for money in the principal European markets were generally easy. None of the European banks made any change in their official

Digitized by Google

rates of discount during the month. The Bank of England rate remains at 3 per cent. Late in the month the Bank of Bengal at Calcutta and the Bank of Bombay at Bombay each reduced its rate from 8 per cent. to 7 per cent. Discounts of 60 to 90 day bills in London at the close of the month were 2⅝ against 2¾ per cent. a month ago. The open market at Paris was 2¼ per cent. against 3⅜ per cent. a month ago, and at Berlin and Frankfort 2⅛ @ 2¼ per cent. against 1¾ per cent. a month ago.

FOREIGN EXCHANGE.—The market for sterling under the influence of dearer money here and gold exports declined early in the month and then became steady. There has been a scarcity of bills and a good demand for remittance, causing a sharp advance in rates in the last week of the month.

National Bank Currency.—The decline in National bank circulation which began several months ago continues. The total amount of notes outstanding decreased $958,460 in March, but the circulation based on Government bonds was reduced $2,614,542. Lawful money deposited to retire circulation increased $1,656,082 and now amounts to more than $40,000,000. Nearly $3,000,000 of bonds securing circulation have been withdrawn, while the amount of bonds deposited to secure public deposits increased nearly $2,000,000.

UNITED STATES PUBLIC DEBT.—The net public debt, less cash in the United States Treasury, was reduced $6,800,000 in March, bringing the total below $1,000,-000,000 for the first time since the Government issued its bonds to prosecute the Spanish war. Since January 1 last, the net debt was reduced nearly $14,000,000, and since January 1, 1901, more than $101,000,000. About $6,600,000 of interest-bearing bonds were retired during the month, and the net cash balance was increased about $2,500,000. The bonded debt is now $931,000,000, the additional debt $1,217,-000,000, and the total cash in the Treasury, $908,452,119. Of the Treasury balance, $118,000,000 is now deposited in National banks.

Certificates and Treasury notes represented by coin, bullion, or currency in Treasury are not included in the above statement.

FOREIGN TRADE.—The exports of merchandise in February were $101,522,718, the smallest total recorded in any month since July, 1899, excepting the single month July, 1900. The highest record ever made was $163,000,000 in October, 1900, and the highest during the present fiscal year was $145,000,000 in October, 1901. The February exports were $11,000,000 less this year than in 1901 and nearly $18,-000,000 less than in 1900, but were larger than the exports for February in any other year. The imports in February were $67,249,079, about $2,700,000 larger than in the same month last year, but $1,600,000 less than in 1900. The excess of exports over imports of merchandise was $34,000,000 in February, a decrease of $14,000,000 compared with a year ago. For the eight months ended February 28 the net exports were $974,000,000, a decrease of $41,000,000 compared with 1900-1. The imports were $593,000,000, an increase of nearly $70,000,000 and the net exports were nearly $381,000,000, a decrease of $110,000,000.

BANKERS' OBITUARY RECORD.

Ayers.—A. E. Ayers, Vice-President of the Ayers National Bank, Jacksonville, Ill., and one of the oldest bankers in the State, died March 10. Mr. Ayers was born in Philadelphia, but early in life went to Illinois, and had been associated with the Ayers National Bank and its predecessor since 1850. He was one of the wealthiest residents of Morgan county at the time of his death.

Conger.—Frank Conger, vice-president of the American Bridge Co., and President of the First National Bank and the Mechanics' Bank, Groton, N. Y., died March 8. He was fifty-two years of age and was well known in the business world.

Estey.—Gen. Julius J. Estey, President of the People's National Bank, of Brattleboro, Vt., died March 7, aged fifty-seven. He was a well-known manufacturer of musical instruments, and had been a member of both branches of the Vermont Legislature.

Digitized by Google

Geishenen.—William H. Geishenen, President of the Garfield National Bank, New York city, died March 21. He had been associated with the bank as a director since 1892 and President since 1898. He was also a director of several other financial corporations, and was a man of great wealth.

Grable.—John M. Grable, a wealthy real estate dealer, and Treasurer of the Savings Institution of Monongahela, Pa., died March 10, aged fifty-six years. He was prominent in local politics and had been elected mayor several times.

Haesloop.—Henry Haesloop, for over eight years President of the Columbia Banking and Trust Co., Charleston, S. C., died March 11 in his fifty-eighth year.

Hirsch.—David Hirsch, President of the Corpus Christi (Texas) National Bank, died March 26. He was born in Germany about sixty-eight years ago. In 1869 he went to Corpus Christi and engaged in merchandising, organizing the bank in 1890.

Humphrey.—Lester H. Humphrey a member of the New York State Senate, and President of the Wyoming County National Bank, Warsaw, N. Y., died March 18. He was born in Wyoming county, N. Y., in 1850, and after being educated and engaging for a short time in other business, he entered the Wyoming County National Bank. He was elected Vice-President in 1873, and in 1890 became President. He was three times elected to the State Senate, and as chairman of the committee on banks he was deeply interested in banking legislation, and did effective work in securing a reform of the laws relating to bank taxation.

Lattimer.—Solomon V. Lattimer, President of the First National Bank, Addison, N. Y., died March 19, aged eighty-four years.

Lee.—Henry S. Lee, President of the Springfield (Mass.) Institution for Savings since 1898, and formerly Treasurer, died March 29.

Lee.—Lewis S. Lee, Assistant Cashier of the Central National Bank, New York city, died March 2. Mr. Lee was born at Albany, N. Y., in 1849, and had been identified with the Central National Bank over thirty years.

Littlefield.—Hon. George L. Littlefield, President of the First National Bank, Providence, R. I., and a director of the Industrial Trust Co., died March 19. He was for two years a member of the town council, a member of the Legislature in 1883, and once Democratic candidate for Governor.

Loomis.—J. H. Loomis, Assistant Cashier of the First National Bank, Cheyenne, Wyo., died March 22. Mr. Loomis was born at Ionia, Mich., about thirty-five years ago. He went to Cheyenne in 1885 and entered the First National Bank as a bookkeeper, becoming Assistant Cashier in 1890.

Luce.—Ransom C. Luce, President of the National City Bank, Grand Rapids, Mich., and a director from the time of the bank's organization, died March 22, aged eighty years. He was a highly successful business man.

Manning.—Hon. J. W. Manning, President of the First National Bank, Putnam, Ct., and one of the incorporators of the Putnam Savings Bank, died March 14. He was born at Pomfret, Ct., in 1822. In 1847 he removed to Putnam to engage in mercantile business. Mr. Manning was elected a member of the House of Representatives in 1866 and was State Comptroller from 1869-1872.

Martin.—Cyrus B. Martin, President of the Chenango National Bank, Norwich, N. Y., died April 2.

Paine.—Gen. Clinton P. Paine, senior member of the firm of Clinton P. Paine & Co., Baltimore, and also President of the Maryland Savings Bank, died March 14, at Naples, Italy.

Pelton.—Hon. F. W. Pelton, President of the Citizens' Savings and Loan Association, Cleveland, Ohio, and formerly city treasurer and mayor of Cleveland, died March 15, aged seventy-four years.

Ross.—Major Wm. H. Ross, President of the Central City Loan and Trust Association, Macon, Ga., died February 21, aged sixty-five years. He served on the Confederate side in the Civil War, and after the close of the conflict he returned to Macon and engaged in business.

Slaymaker.—Wm. M. Slaymaker, Secretary and Treasurer of the People's Trust, Savings and Deposit Co., Lancaster, Pa., died March 3, in his forty-fourth year.

Wright.—John B. Wright, President of the First National Bank, Akron, Ohio, died March 8, aged about forty years. He had been connected with the bank for nearly twenty years.

Witter.—John D. Witter, President of the Bank of Grand Rapids, Wis., and a pioneer lumberman and paper manufacturer, died March 24. Mr. Witter was born in New York State in 1835, and went to Wisconsin in 1851. At the time of his death he was one of the wealthiest and best-known men in the State.

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SIXTH YEAR. MAY, 1902. VOLUME LXIV, No. 5.

IT IS DIFFICULT TO UNDERSTAND the purpose of the proposition that the United States shall open its mints to the free coinage of any form of silver dollar. This is the proposition of the Senate Committee on the Philippines, however, in providing the monetary system of the islands. The committee is not content with substituting an American silver dollar for the Mexican dollar now in use, but proposes that this dollar shall be coined on private account, and that the mint at San Francisco as well as the mint at Manila shall be open for this coinage. The project affords an opportunity for the holders of all the surplus silver bullion of the United States to convert it into legal-tender money and unload it on the Philippines.

There are serious objections to this proposition, even if the silver standard is to be perpetuated in the Philippines. The Senate committee seems to have been strangely careless in its definition of the new coin. It is called a dollar without qualification. Traders in the East who recognize the American dollar, whatever its material may be, as the equivalent of one hundred cents in gold, are likely to be puzzled, if they are not swindled, by the appearance of a dollar worth less than forty cents. This dollar is made legal tender for debts in the Philippines. Under operation of this proposed measure Americans accustomed to make contracts in dollars would be compelled to specify the kind of dollar intended unless they desired to become involved in serious losses and prolonged litigation. The issue of silver certificates in terms of the new dollars would only add to the confusion and compel every one who received American paper in the Orient to subject it to a careful examination to determine whether it represented dollars of one hundred cents or dollars of forty cents.

In addition to this source of confusion in the coinage of the Philippines, there is grave danger that the new silver coins would become a source of trouble in the domestic circulation of the United States.

Digitized by Google

They would not, of course, circulate in large quantities, but they might be worked off here and there upon the careless and the ignorant as the equivalent or nearly the equivalent of the corresponding denomination of American money. This happened with the "trade dollar," and every one old enough to remember its history knows that it was a source of infinite confusion and annoyance. The trade dollar was availed of by unscrupulous persons to make the difference of about ten cents between its bullion value and its face value by passing it upon the public. The tendency to perpetrate this fraud would be multiplied many times when the profit upon the bullion employed was 150 per cent. instead of ten or twelve per cent.

American laborers and tradesmen ought to make their protest heard in Congress against any renewal of the annoyances and frauds connected with the trade dollar.

As the session of Congress lengthens itself, and the time approaches that an adjournment is looked for, the prospects that a comprehensive measure for the improvement of banking machinery may be passed seems to grow less favorable. Other questions conceived to be of more immediate importance have been forced upon the attention of legislators. The party out of power is naturally seeking for new issues upon which to go before the people and its opponents are seeking to avoid giving any openings and opportunities. The old issues have been discredited as far as one party is concerned by two successive defeats. There is even a disposition to grasp at straws in the attempts that are from time to time made to arouse the voting interest of the people. The prosperity of the United States has much lessened general interest in political questions. There seems to be no very burning grievance. Labor questions, sympathy with the Boers, or with the grievances of any other foreign peoples, only excite ripples on the stagnant surface of political feeling. Trusts are regarded by both parties with the same air of inquisitorial justice. The endeavor on the one side is to maintain the *status quo* and on the other to await the political blunders of the opposition. The financial agitation of the last twenty years of the nineteenth century has left its mark on the minds of the politicans who came through it, and considering the height to which the hallucination in favor of silver arose, at one time seemingly impervious to the ordinary resources of argument, it is not at all remarkable that politicians dread a new financial issue. It is undoubtedly this dread that causes a certain aloofness in Congress in taking up banking measures. The possibilities of making political capital for those now almost bankrupt in this respect are certainly great if any financial discussion shall arise. It may, how-

Digitized by Google

ever, be admitted that apprehensions of the dangers of such a debate are exaggerated, but that only increases their effect in delaying banking reform.

The people of the United States, after the experiences of the last six years since the first inauguration of President McKINLEY, are not likely to be fooled by the stock arguments of the silver advocates. There are, however, in the business of banking mysteries even more dark to the ordinary mind than those which surrounded the standard of value. The foundation of credit on which banking rests is something that, should controversy arise, would be very difficult to explain in the face of the mystifications that demagogues can easily practice. Therefore, it will not be without advantages even if the bills for banking reform fail to be taken up in earnest at the present session of Congress.

It is also more than possible that under the law as it now is, without amendment, the banks may be able to devise methods for remedying some of the asserted defects of the system. They may by agreement bring about a stronger mutual support in times of panic than has heretofore been known. The best features of the banking system to-day are those which have been devised through the needs felt by the banks themselves. The clearing-house and clearing-house loan certificates are a type of this class of banking device. On the other hand, the defects of the present system are due to the omission of banking methods approved by experience. The system of forced note redemption of the State banking period is an instance of a valuable banking device not made use of because of the legal restrictions on currency issues.

Apart from the attitude of Congress it is believed that the indifferent attitude of the bankers themselves has much to do with the procrastination in banking legislation. On the other hand, there is no way, apart from the accumulation of gold and silver coin, of increasing the volume of the currency, except through the banks. The common-sense way of changing from the present form of secured circulation to what is known as a circulation based on assets, with the least violent changes in the present law, is to merely increase the percentage of notes that may be issued on bonds. That percentage is now one hundred per cent. of the face or par value of the bonds; an increase to one hundred and twenty-five of the face value of the bonds, with some provision for creating a safety fund from the proceeds of tax on circulation issued over and above the market value of the bonds, would afford all the additional bank currency necessary for some time. When it is seen that no serious consequences have resulted from this step, there will be security for making a further move in this direction. Whatever the wisdom of this suggestion, it

Digitized by Google

is almost absolutely certain that no bill making radical changes in the banking system can be enacted into law in the present temper of Congress. That body had rather patch and repair than to tear down altogether and build an entirely new structure. And Congress in this reflects the general feeling of the bankers and the people.

Banking legislation in the States before the Civil War and since has usually been gradual and tentative. Even where, as in New York, the free banking law was enacted *de novo*, it did not tear down the safety-fund banking previously existing. Free banking and safety-fund banking went on for many years side by side. Generally, however, since free banking laws became a part of the American system, banking legislation has been carried on by a series of amendments adopted as necessity seemed to require. This can also be said of bank legislation in foreign countries. Whatever may be thought of this, it is certain that the vested rights of banks have always been very tenderly treated by legislators. It is in a measure the dread of the effect any sweeping change of law may have on vested rights that renders bankers themselves so averse to giving their support to many good propositions that seem unobjectionable otherwise. But Congress might even at this session take another step toward asset currency by increasing the percentage of circulation to be issued on bonds.

THE HIGH PRICES now prevailing for many of the commodities that are part of the daily consumption of the people have attracted the attention of the newspapers in the absence of any interest in political matters. In the period of depression following the crisis of 1893, it was freely asserted that low prices meant hard times and that everything was out of joint. Many were the remedies suggested for the evil, but the chief panacea was more money. The money of redemption had been cut in two by the authors of the crime of 1873, and silver should be restored. With the doubling of the amount of money low prices would vanish and the wished-for era of high prices and prosperity would ensue. But this remedy was not adopted, the money was not tampered with. There was just legislation enough to assure people that it should not be tampered with either then or in the future. There were a number of other conditions that favored business and produced activity of demand. Among these were the war with Spain and the successful introduction of manufactures of this country into foreign markets, as well as good harvests here when bad agricultural conditions prevailed abroad. Perhaps our money had the least to do with it, although it was no longer a threat to foreign investments or to domestic capital. At any rate prices have continually risen and confidence in the future has been strengthened. At

Digitized by Google

first the increase of prices was hailed with joy. Everyone seemed to find employment. Now, however, though prices still tend upward, the murmurings of dissatisfaction are beginning to be heard. People are thinking they have to pay too much for this or that, and that it is becoming difficult for those on fixed wages to make both ends meet. It is also a fact that wages have risen too, but apparently not in proportion. They rise more slowly, however, and may perhaps yet be adjusted to the high cost of living.

It is a trait of human nature never to be satisfied long, which is perhaps fortunate, for the tendency to bettering conditions would not exist in a condition of absolute contentment. The philosophical spectator who observes the course of events over a sufficient period of time must notice that the joy of achievement is generally followed by the cry that this too is vanity and vexation of spirit.

The high prices of living complained of are not difficult of explanation. The nation has been selling its products abroad to an extent that has reduced the stock in the country. The failure of the corn crop has been an important factor in preventing normal replenishment. The condition, while a hardship to many, is not a cause for discouragement. It will incite agricultural effort and will tend to maintain the general spirit of enterprise that will result in a speedy renewal of resources.

THE DEATH OF CECIL RHODES, the autocratic financier of South Africa, has attracted the attention of the world. He did not leave an excessive fortune as great fortunes now go, but this was perhaps due to his being taken away in the midst of his incomplete enterprises, and before the settlement of affairs in South Africa. His dying expression of regret at leaving so much work unfinished indicates the mind still unconquered by physical failure. With some the mind fails and desires and ambitions give way with the decadence of the physical power. Perhaps it is characteristic of the organic disease of which he perished that the mental powers retain their strength and alertness to the last.

RHODES was a typical man of the modern era of business enterprise. He had imagination to dignify and expand the motives for the acquisition of wealth. In this he exhibited the characteristics of the conquest-making leaders of history, with this difference: they impressed and organized men by their mental and physical superiority, and used the forces thus obtained to acquire power and wealth, while CECIL RHODES pursued successfully the peaceful methods of acquiring fortune which modern civilization permits, recognizing wealth as a means through which he could impress and organize his fellow men.

Digitized by Google

All leaders, the worst as well the best, have at bottom a design to benefit the human race. Their cruelty and tyranny even are but the means to an end. The great captain of industry is interesting as an example of what may be one consequence of the modern possibility of acquiring fortunes producing revenues equal to those of many ancient and modern States. When multi-millionaires are considered, the philosopher is tempted to ask, for what purpose do men struggle to accumulate such enormous fortunes, what good is it all ? Display and luxury without stint cannot satisfy the ambitious mind, and one would think the manipulation of stocks and the money market, or the mere gambling for more wealth with other men controlling millions, might after a while pall on a man whose other faculties were not all seared or stunted.

What, then, can the man of millions do with his wealth that does not partake of vulgar ostentation or of the shop in which he made it? It remains either to give it away, like CARNEGIE and others are doing, in the endowment of religious and educational institutions—certainly affording snug berths for the necessary officials who manage them, whatever accomplished for humanity at large—or to continue piling it up for transmission to descendants.

When fortunes became great in Ancient Rome, their possessors used them as means to raise them to leadership—CRASSUS and CAESAR, one establishing an empire, and the other with unequal fortune perishing under the weapons of the Parthians. As time goes on there may be some similar development in modern times, if not among those who have exhausted their energies in acquiring wealth, perhaps among their descendants who inherit it.

The death of RHODES shows that one life is usually too short to both acquire the necessary wealth and also to use it in carrying out the dictates of ambition. He has been criticized as a man with a too ardent faith in the power of money to accomplish all things. He certainly could not be criticized for any low or mean motive of acquisition. In all material matters, and to a certain extent in morals, his faith was justified. There may be now and then a hardened, iron-clad philosopher who cannot be turned even from starvation by money, but its general adaptability for softening and bending the minds of men in legitimate directions cannot be denied, to say nothing of its potency in iniquitous directions. His antagonism to the Boers arose from their being an obstacle to his conceived plans for the betterment of the land of his adoption. Who shall say that the moral position of one was better than the other ? Judging from the outcry against trusts in the United States, the operations of the moneyed men who conceal their personality behind these institutions do not meet with universal approval. They may have a high moral purpose also, as is

Digitized by Google

claimed for RHODES by his admirers. On the other hand, the opponents of trusts may be as obstructive as the Boers. RHODES, however, has not left the world in doubt as to his purpose or plans. The endowments for scholarships provided for in his will tend to prove that he aimed at the sodality of the best minds of English and Germanic races. It is also shown that his ideas were imperial. He probably believed in the domination of inferior races for their own good by those he recognized as superior. A will has, more than any other document, the marks of the testator's sincerity. The greatness and magnanimity of the idea of gaining by education, under the shadow of the recollection of his personality, the concord of the best minds of three great nations, has apparently disarmed criticism. But it is in strict accord with the imperial views he sought to carry out while living and for which he has been censured. It may be asked whence did RHODES receive the impulses which have shaped the chief landmarks of his career? He if any one is the practical exponent of THOMAS CARLYLE'S ideas on government. He, more than any one as yet, has in his life put in operation the lines of thought so impressively enunciated by the philosopher of Chelsea. He was the born ruler whom all inferior men, including even the fops and featherheads, must perforce obey. The scholarships he has founded are a monument to the memory of the GAMALIEL at whose knees he learned the lesson of domination. Will this educational design have its intended effect, and finally render practical the rule of the real heroes of the human race. CARLYLE hooted at the woe of those who deplored the overcrowding of population in England and asked, are there no waste places in Africa and South America, not yet occupied, where there might be room for willing hands; are there no leaders to lead out the superabundant people, are there no ships to carry them, etc. RHODES, more than any other man, has been the leader to make ready the spaces of South Africa for the landless people of Great Britain.

THE SUPPLY OF GOLD in the coming year, according to the report of the Director of the Mint as well as reports from other sources, promises to be greater than ever before. As was prophesied during the height of the silver controversy, the establishment of the single-gold standard practically throughout the world has had the effect of intensifying the search for new placers and mines, and the search for more thorough and cheaper methods of extraction. The war in South Africa at first cut off the supply derived from that quarter and diminished the possible production of the last year, although the actual production, owing to increased activity in other gold-producing

Digitized by Google

countries, was sufficient to show that there would be no falling off in the necessary supply. With the reopening of the South African mines there will be a great further increase and it is now estimated that the year's production will reach if not exceed the unprecedented sum of $400,000,000.

During the decade beginning with 1850, it was feared by economists that the augmentation of the production of gold consequent on the discovery of the deposits in California and Australia would diminish the purchasing power of money and depreciate the value of investments. At that time silver was still in use as standard money, and the impression of the new supplies of gold was therefore expected to be greater. M. CERNUSCHI, who first sounded the alarm, proposed among other remedies for the anticipated evil the adoption of the single silver standard. Silver was at that time comparatively scarce. The chief source of that metal had been the Mexican and South American mines. Many of these workings had been abandoned because of the unsettled political conditions existing in those countries. But as time went on the supplies of gold adjusted themselves to trade conditions. Or rather the impulse given to the business of the world by the increased supply of money caused an increase of trade and enterprise that seemed to absorb this new supply, and relieved the apprehensions excited by M. CERNUSCHI'S warning. By 1870, however, the production of silver began to excite alarm. New deposits of great extent were discovered and developed, and the production of Mexico and South America began to revive. The production of gold remained stationary and even diminished. As most investments since 1850 had been adjusted to a gold basis, the new flood of silver threatened to disturb all calculations, and then began the movement for the demonetization of silver which, though bitterly and persistently resisted, has now been accomplished throughout the greater portion of the business world.

The reasons for the fears of M. CERNUSCHI in 1850 are as potent now as they ever were. If new discoveries and new processes increase the production of gold to such an extent as to cheapen the metal, all investments based on the gold standard must necessarily fall in value. Undoubtedly such cheapening of gold would produce wider effects at the present time than would have been produced in 1850–60 if the apprehensions then felt had been realized. Invested capital to-day is represented by an enormously increased sum. The cheapening of gold by overproduction would be shown by increased prices for all products and for the labor of production, and undoubtedly prices have increased and are increasing, although it would be premature to assert that this is due to the abundance of gold. There are undoubtedly other causes at work, and perhaps of much greater importance.

Digitized by Google

But it is a well-known fact that gold at least in small quantities is a widely distributed metal, and this seems to indicate that somewhere there are large sources of supply from which this distribution commenced. Also from time to time gold is discovered in comparatively large quantities, although as yet it has not been found in such inexhaustible deposits as copper or iron. But it is not impossible that such deposits may be found. In fact, this is possible with any material known to exist in the earth. With increased skill in engineering the possibilities of such discoveries continually increase. The faith of mankind in the metals styled precious at one time included gold, silver and copper. Two of these have already disappointed this confidence, and there is really no adequate ground for asserting that gold may not prove similarly disappointing. That all materials, precious or otherwise, are subject alike to fluctuation of value under the inexorable law of supply and demand will not now be denied; and as long as the adopted measure of the invested capital of the world is a material, so long must it be liable to deviation from the changes in the supply of that material.

The struggle for the gold standard was a struggle for the accuracy and certainty demanded in modern business and financial operations. Inasmuch as a concrete standard could not be surrendered in the present state of human affairs, the metal supposed to be in the most uniform and steady supply was selected in place of two metals. Whether as between gold and silver this choice was the better or not remains to be seen, but the selection of one metal for the standard instead of two is mathematically a step toward certainty.

If, however, gold shall prove disappointing, the only further step is to give up a material standard altogether at least for permanent investments. The question then arises, can an abstract standard of value be devised? There have been suggestions made on this point, but none of them is very satisfactory. In fact, while the fluctuations of any material standard of value will at times be more or less noticeable, and cause unjust loss or gain to individuals or classes, yet this variation in any possible material standard of value, while perhaps greater in degree than the variations of standards of weight and extension, is in common with variation of all standards whatever. All are alike merely approximate. They answer well enough practically for ordinary periods of time. If, however, the supply of gold should greatly increase the first step in order to maintain its value would be to do away with many of the substitutes for money now used, and to let the gold perform the function now usurped by many paper substitutes. If gold should become abundant enough it could take the place of all notes in any way based on credit; that is, the supply of gold cannot be called superabundant until it is sufficient to

Digitized by Google

furnish a reserve for all forms of paper now used as money, every paper note becoming a gold certificate against which the face value in gold is held payable on demand. Therefore, if there is actual danger that the supply of gold shall tend to cause its shrinkage as a standard, the way to counteract this tendency is to legally enforce the holding of larger reserves. If all the great nations enforce this policy the demand may for an indefinite period be kept commensurate with any probable supply. In fact, much larger supplies of gold than any now in prospect could be absorbed, with very good effect in checking the most dangerous aspects of credit, while not interfering with the legitimate use of the latter.

THE SAFETY OF AN ASSET CURRENCY is the chief point considered in the discussion of the matter; that is, security for its redemption at all times on demand in real money. In this discussion it has generally been assumed that the safety mentioned must be of like character with the safety of the notes based on bonded security under the present system. The safety of the present National bank notes is ultimate safety; that is, they will be provided for whether the bank issuing them fails or not. It is well known there is but little redemption of the present National bank notes, except as they are sent to the redemption bureau at Washington when worn out and mutilated and exchanged for new notes. Banks are seldom or never called upon to redeem their notes at their own counters. No National bank was ever placed in the hands of a Receiver because its notes were protested for nonpayment at its counter except where this method was used as a pretext to secure the appointment of a Receiver of a bank which had failed for some other reason.

Some give one reason some another why there has been no redemption of National bank notes. Probably, if there had been no other paper money in circulation and the notes had been redeemable in gold, there would have been considerable redemption to procure gold. Supposing there had been a sufficient bonded debt to have allowed the National banks to issue all the notes required by the business of the country, and that they were redeemable in gold as they would be were legal-tender notes out of the way—then in all probability there would have been many National banks placed in the hands of Receivers for failing to redeem their notes at their own counter. In such a panic as that of 1893, there would be many banks, small and large, that would have to succumb for this reason.

It is therefore not difficult to perceive that had the National system been permitted to perform all the functions for which it was designed, the statement that the notes are good under all circumstances, beyond

Digitized by Google

the peradventure of a doubt, could not be accepted as true. In fact, it is far otherwise.

The National bank-note system could not to-day be relied on to supply the paper money of the country were Government notes retired, not only because the bonded security available is too small and too high in price to allow of a sufficient issue, but because, if this difficulty did not exist, the banks are not in condition to redeem their notes on presentation. In 1874 Congress repealed the provisions requiring a reserve on notes, wisely enough seeing that these notes under the circumstances were never actually redeemed, but very unwisely, if the present National system were ever called upon to furnish all the paper currency.

The public should therefore rid itself of the idea that the National bank-note system is one of the best ever devised. If to-day placed in the position of the Bank of England or the banks of Canada, it would fail most lamentably. What use would the ultimate safety of the note be, if the banks failed to redeem their notes in gold when gold was demanded for export, and when the only way of procuring it was by National bank notes. Many firms might be bankrupted for want of the gold before the slow process of liquidating the banks, selling their bonds and taking up the notes could be carried through.

If these statements are true, and it will be very difficult to deny them, it follows that while the ultimate safety of National bank notes is admitted, their immediate safety, if used as bank notes with full dependence on them to supply the paper money required in business, is very precarious under present law. On the other hand, an asset currency may not seem to be so absolutely secure as to ultimate payment. It can, however, be issued in sufficient quantities to supply all the paper money necessary or required by the business of the country. Equally with the bond-secured currency it must, in order to be redeemed on demand, be protected by cash reserves. But the banks can afford to keep these cash reserves on asset notes. If they were required to keep them on notes now issued secured by bonds, the loss on such notes would compel their retirement. At the present prices of bonds the profit is less than one per cent on the circulation issued, and if the National banks were required to keep the reserves they did keep on notes prior to 1874, the loss of interest on this reserve would more than wipe out this profit.

One reason nothing is done toward banking reform is because people believe that the present bank-note system, although perhaps a little clumsy in its operation, can be easily expanded to meet all wants should Government notes be retired. Never was there a greater delusion. But to continue the comparison between the present National bank note and a National bank note based on assets, what the

Digitized by Google

latter lacks in absolute safety, in the minds of those who think there can be no safety except in Government bonds, it makes up in its ability to expand to meet the wants of business, in its quick redemption, because of the natural impulse to constantly test the assets on which it is based, in its tendency even without law to compel the banks to keep larger reserves, which the possible profit upon it enables the banks to do.

On the other hand, there are two difficulties which prevent the National bank note, based on bonds, from taking the place of Government notes. The first is the scarcity and high price of bonds, already causing retirement. Second, under the present reserve law, the banks could not in times of panic redeem their notes at their own counters. The last might be remedied were it not for the utter impossibility of remedying the first difficulty. It has been pointed out that the expense of redemptions at the United States Treasury is greater than under the Suffolk banking system. This has been the case because the same machinery has to be kept up to redeem a small number of notes which would be adequate for much greater redemptions. If the redemption of National bank notes were as free as those of the old New England banks, the cost would be very much less.

But whatever may be thought of an asset bank-note currency, it should not be lost sight of, first, that if we ever get rid of Government notes there must be a bank currency to take their place; second, that the present National bank-note system could neither supply the notes required nor could it under present law redeem them in gold on demand under the circumstance that attend a tight money market.

THE REPEAL OF THE WAR TAXES was almost a foregone conclusion. Apart from the essential justice of taking off taxes no longer required, many of these taxes caused inconvenience and annoyance to business men much greater than the value of the revenues to the Treasury. While a state of war involving the honor of the nation lasted the inconvenience could be endured. If, however, the object of the repeal was merely to reduce revenue so as to prevent the recurrent accumulation of surplus cash in the Treasury, it is not likely that the bill will prove more than a palliative. The probability is that the increase of taxable importations will more than make up for the reduction of revenue effected.

If members of Congress had any idea that this bill would lessen the necessity for some amendment of the present laws for the keeping of the public moneys, it is believed they will be disappointed. It is probable that the money market will suffer from time to time from the locking up of public moneys just the same as before.

THE HALT IN THE INCREASE OF BANK CIRCULATION.

The operations under the banking provisions of the law of March 14, 1900, during the last two years indicate an increase in the capital stock of the National banks of a little more than eight per cent. of the amount when the law took effect. The expectation that the reduction of the limit of capital would result in the organization of a large number of small banks was realized; out of the 919 banks which have commenced business since March, 1900, 611 have a capital of less than $50,000. Over 411 of the 919 new National banks represented State or private banks previously existing. They were either converted under the law or the State and private banks were liquidated and reorganized.

Of the 508 new organizations it may be surmised that most of them would perhaps have been organized in response to business needs, even if the law of 1900 had not been enacted. The inducement held out by the law made them prefer to enter the National system, otherwise they might have organized as State or private banks. In other words, there seems to be no sufficient reason for claiming that this law has caused any material increase of the banking capital, over and above the amount of new capital that would, during the period of two years, without the law have been invested in the business. During the period named there has been an increase in National bank circulation secured by bonds of over $100,000,000. Here the law of course has had real effect, but this increase is not chiefly due to the new organizations. It represents principally the additional ten per cent. taken out by the banks already in operation under the permission of the new law. Even under its provisions the profit on circulation is so meagre that the banks have never taken all the notes they were entitled to. This profit grows smaller and smaller with every increase of the market premium on the bonds. In fact, the law has been of service to the banks, because it lessens their possible losses from the requirement to deposit bonds, and not so much because it offers them any startling profit on circulating notes. The main impulse to increase of circulation was the offer to fund unmatured United States bonds at a lower rate of interest, the Government paying a fixed premium which was certainly rather more than would have been paid if there had been competition in the open market. The banks could afford to take bonds at two per cent., and run at least no risk of loss by using them as a basis of circulation, but since refunding has ceased, the issue of circulation has also ceased, and the banks are beginning to retire that already issued.

Some time must elapse before the full force of this retirement is felt. Formerly, when a National bank retired circulation, the lawful money deposited was retained in a separate fund in the Treasury and not paid out until the bank notes were presented for redemption. Now, however, the legal-tender notes deposited go into the general funds of the Treasury and may be paid out at once if necessary. The notes when presented are redeemed from the

Digitized by Google

general fund. In other words, when the reports of the Comptroller of the Currency state that there are outstanding, as on April 1, $317,460,382 National bank notes secured by bonds, and $40,016,025 secured by lawful money, there is a distinction in the status of the security in the two cases. The bonds securing the $317,460,382 bank notes are actually in the Treasury, and can be used for no other purpose than to redeem the notes. The lawful money is undoubtedly paid in by the banks, but it is not set apart for the special purpose of redeeming the notes. It may be used for any other purpose. As long as there is lawful money of any kind in the Treasury, this makes no difference, as far as the security of the notes is concerned; but this plan has the advantage of causing less contraction than if the legal tenders were kept as a special fund. The National bank notes may remain outstanding for some time. Apparently they come in at the rate of about a million a month, under present conditions, although the retirement by the banks of circulation based on bonds is more than double this sum, the amount so retired for the month ending April 1 being nearly $3,000,000.

But whether the effect of this retirement of circulation is immediate or protracted, it seems certain that all the force there was in the law of 1900 for augmenting the currency has been spent, and that it is not likely to afford any further help in this direction. The effect of the banking provisions of the bill, in so far as obtaining a temporary supply of currency and facilitating the refunding of Government bonds are concerned, have proved successful, but it cannot be claimed that any permanent improvement of the bank-note system has been effected. If it proves a precedent for further reducing the bonded security required, the measure will have its value.

KNOX'S HISTORY OF BANKING.—The Fowler Banking and Currency Bill, which is now being discussed at the meetings of bankers' associations, contains provisions for issuing what is usually termed an asset currency. Perhaps few of the younger generation of bankers are familiar with the country's experience with this kind of currency before the adoption of the National banking system.

Some of the States required the deposit of State or other bonds and stocks as a condition precedent to the issue of notes by State banks, and others did not require such deposits, the notes in the latter case being secured by the general commercial assets, by the specie reserve, and in some instances by a safety fund. Naturally, the experiences under so many diverse systems were varied in character, but an account of them will be found interesting, as well as helpful in discussing the provisions of the Fowler bill.

KNOX'S HISTORY OF BANKING IN THE UNITED STATES not only fully describes these experiences, but contains a vast storehouse of information relating to the development of banking, under both State and Federal laws, from colonial days until the present time. A detailed history of banking in the respective States forms a prominent feature of the work, the material therein having been collated at great expense of time and money.

To all who wish to discuss the various banking problems, or to be better informed in regard to them for their own business protection, KNOX'S HISTORY will be found of great value.

SPECIAL SOUTHERN NUMBER OF THE BANKERS' MAGAZINE.

To mark the Convention of the American Bankers' Association to be held at New Orleans in November next, and to bring the extensive and varied natural resources of the South to the attention of the capitalists and investors of the United States, THE BANKERS' MAGAZINE has decided to make the October issue a Special Southern Number.

It will summarize the remarkable progress of the South in the past decade, and also show fully the causes of this development, together with a complete exhibit of the present abundant undeveloped wealth of the mines, forests, and farms of the South, as well as the opportunities for profitable investment in manufacturing, banking, commercial and transportation enterprises.

Probably the world to-day affords no territory so large and fertile, with a mild climate, and possessing such an infinite variety of the materials required for safe and sure returns on invested capital as the Southern States. An adequate presentation of these advantages to the moneyed men of the country is bound to be of mutual benefit; the South will gain from the cheaper and enlarged offering of capital certain to ensue, and the capitalists of the country are sure to obtain satisfactory returns on all investments judiciously placed.

What the South has to offer to the home-seeker, investor and business man will be shown with completeness and in detail, and the services of a large and trustworthy corps of expert writers will be entrusted with the work of collecting and preparing the material for publication.

No pains or expense will be spared in the accomplishment of the purpose of the publishers of THE BANKERS' MAGAZINE to make in this Southern Number the fullest and best showing of the South's resources ever presented.

THE BANKERS' MAGAZINE is unapproached in the quantity and quality of its circulation—going directly into the hands of large numbers of bankers, capitalists and investors generally. No other publication affords such facilities for reaching the investing public. Besides going to its regular list of subscribers—embracing most of the banks in the United States and Canada, and also a large number of bankers and financiers of Europe and other foreign countries—this issue of THE BANKERS' MAGAZINE will have a largely increased circulation among bankers and investors owing to the exceptionally valuable character of its contents.

As an advertising medium for banks, industrial and all other legitimate business enterprises, the Southern Number of THE BANKERS' MAGAZINE will be unexcelled. The rates for advertising in this number will be:

One page.....	$100;	yearly contract beginning with Southern Number...	$600
Half page.....	60;	" " " ...	300
Quarter page..	45;	" " " ...	150

☞ Present yearly advertisers in the MAGAZINE occupying the space of a quarter page or over therein and desiring to secure additional space in the Southern (Convention) Number, will be given a discount of ten (10) per cent. from above rates for the special number.

PRIZE ESSAY COMPETITION.

AWARD OF PRIZES FOR THE BEST PAPERS ON INCREASING THE EFFICIENCY OF THE WORKING FORCE.

Beginning with July, 1901, THE BANKERS' MAGAZINE has been publishing a series of articles on The Practical Work of a Bank, the special topic first dealt with being on "Increasing the Efficiency of the Working Force."

For the best paper on this topic a prize of $100 was offered, and for the second best a prize of $50. As there were seven topics proposed in the contest, the total prizes to be awarded to the bank clerks and officers entering the competition will amount to $1,050.

Publication of the papers on Topic V (Increasing the Efficiency of the Working Force) was completed in the December, 1901, issue of the MAGAZINE. In accordance with the terms of the competition the papers were submitted to a jury composed of the Editor and Associate Editor of THE BANKERS' MAGAZINE and three well-known New York city bankers. We are not at liberty to give the names of these gentlemen, but we can say that they are prominently identified with three of the large and successful banks of the city, and that they are men of thorough practical banking experience, and have carefully considered the merits of the several papers.

In the opinion of the MAGAZINE, upon first consideration, the first prize was due to "Semper Vigilans" (July, 1901, p. 24), and the second prize to "Xenophon" (July, 1901, p. 18); but on further reflection, we conclued that the paper by "Uncle Lew" (November, 1901, p. 700) was best entitled to second place.

The first of the New York bank officers to whom the papers were submitted voted in favor of "Spooks" (September, 1901, p. 319) for first prize, and "Semper Vigilans" for second prize.

The next banker who passed upon the papers decided that the article by "Karl Kennard" (October, 1901, p. 578) was the most meritorious, and that by "One of the Working Force" (December, 1901, p. 948), the next best, closely followed by the paper by "Spooks."

Here was a serious disagreement, and the situation was not cleared up when the third banker voted in favor of "Spooks" for the first prize and "Semper Vigilans" for second, though this opinion coincided with that of the first banker.

Upon further conference, a majority of the jury voted to award the first prize of $100 to "Spooks," and the second prize of $50 to "Semper Vigilans."

On opening the envelopes containing the real name and the *nom de plume* of the respective authors of the papers, it was found that the first prize had been won by A. C. CHERRY, of the Warren Deposit Bank, Bowling Green, Ky., and the second prize by GEO. WILSON, an accountant in the Imperial Bank of Canada, Ingersoll, Ont.

It is proper to say that no one of the judges knew who were the authors of the papers, and that the decision was absolutely impartial.

Digitized by Google

On opening the envelope forwarded by Mr. Cherry the following letter was found:

Bowling Green, Ky.
June 25th, 1901.

Messrs Bradford Rhodes & Co.,
87 Maiden Lane,
New. York,

Gentlemen:-

This article is written from a Clerks point of view, by a young man 23 years of age, with but two years experience in the banking service.

It could not therefore be written altogether from the standpoint of actual business experience, but from a close study of the methods of some men who have been successful as bankers, & by reading your Good Magazine.

Very truly yours
A. C. Cherry.
C/o Warren Deposit Bank
Bowling Green, Ky.

The judges who awarded the prizes endeavored to base their decision upon the merits of the respective papers from a practical, behind-the-counter standpoint. It must, therefore, be especially gratifying to the author of the prize paper that after two years of service in a country bank his ideas could meet the approval of three of the officers of prominent New York city banks,

Digitized by Google

and that he won first place in a contest with others of much longer and wider experience.

Some of the correspondence in regard to the final decision may be interesting, and we therefore make the following extracts from letters from two of the bankers acting as judges.

One of the bankers acting as a judge wrote as follows:

"I regret exceedingly that I failed to return the pamphlet yesterday.

As stated over the 'phone, I did not favor article II on account of the recommendations on page 11, which I have marked. I believe in liberal treatment toward the family of an old employee at time of death; but I agree with the writer of article VI, on page 34, that is, that the pensioning of employees is not conducive to the best individual effort during service. Every effort should be made by a bank to encourage savings and preparation for future needs. An employee who feels confident that he will be as well served on retiring as one who makes greater sacrifices in the bank's interests will not do the best work.

The other points in article II, however, are very good, and I am perfectly willing to join with the other members of the committee in recommending article V for the first prize and article II for the second. In my opinion, there is very little difference between the one first mentioned and the one selected by me in my first examination."

Another banker wrote:

"I return herewith various papers submitted for my opinion, and would say that from the standpoint of practicability I consider paper No. V signed "Spooks," worthy of first place, and paper II, signed "Semper Vigilans," entitled to second place. I have not overlooked the fact that some of the other papers are superior in literary excellence, but I do not understand that feature to be the test of merit in this matter.

I have conferred with Mr. —— and suggested that he read over the papers again, which he has done. I enclose herewith his letter of Saturday's date to me, in which he indicates his agreement with Mr. —— and the writer. I fully concur with the remarks of Mr. —— respecting the views of "Semper Vigilans" on the subject of pensions. Were it not for the excellence of the other parts of paper II, I should not feel warranted in favoring that paper for second place. * * * All the papers have some good features—notably paper VI. In fact, it is almost a 'toss up' between that paper and paper II for second place, in my judgment."

In addition to the papers appearing in the MAGAZINE on Topic V, a number of others were received which were not published.

The competition is still open on the following topics:

"Collection Department," "Discounts, Loans and Investments," "Bookkeeping for City and Country Banks," "Embezzlements and Defalcations," "Increasing the Net Earnings."

A first prize of $100 and a second prize of $50 is offered for the most meritorious papers on any of these topics. All bank clerks and officers are invited to contribute. Full particulars in regard to the competition may be obtained by addresssing the publishers of THE BANKERS' MAGAZINE.

FOR FINANCIAL STATISTICS.—Senator Platt, of New York, has proposed the following amendment to the bill making appropriations for the legislative, executive and judicial expenses of the Government for the fiscal year ending June 30, 1903, and for other purposes:

To amend chapter 10, title vii, of the Revised Statutes as follows:

"The monthly and annual report published by the Bureau of Statistics, under the direction of the Secretary of the Treasury, shall include imports and exports of bonds, stocks and other evidences of value not now reported through the custom house or post office."

THE PRACTICAL WORK OF A BANK.

THE BANKERS' MAGAZINE—May to December, 1902, inclusive, .
Pamphlet (88 pages) containing fifteen Prize Articles on "The Practical Work of a Bank," . . . . } $3.00

Since July, 1901, THE BANKERS' MAGAZINE has been publishing a series of Prize Articles on The Practical Work of a Bank, the topics so far treated of including the best methods of Increasing the Efficiency of the Working Force of a Bank, and Banking Rules and Customs.

The papers on these subjects have been reprinted in a neat pamphlet of eighty-eight pages. They contain many practical and helpful suggestions for improving the work done by bank clerks and officers, and show how time and labor may be saved by adopting the latest and most improved methods of banking administration.

These papers have all been prepared by men now engaged as officers, clerks and bookkeepers in some the most successful city and country banks in the United States.

A careful study of these Prize Articles will assure better work on the part of clerks and junior officers and aid in securing promotion and better pay, and also bring increased results to the bank.

Some of the points comprised in these papers are as follows:

Increasing the Efficiency of the Working Force of a Bank.

(Eight papers.)

Pay, discipline, pensions and profit-sharing; promotion—relative value of influence and efficiency; working plans. Practical suggestions for securing the best service from officers and employees—relations with each other and with the public.

These and numerous other ideas are treated of in detail from a practical standpoint.

One of the papers in this series was awarded a First Prize of $100, and another a Second Prize of $50. The award was made by prominent officials of three of the leading banks of New York city.

Banking Rules and Customs. (Seven papers.)

Practical hints as to what bank clerks and officers should know in order to aid in the safe, expeditious and profitable conduct of business.

Every-day banking law. The latest and best way of doing things. Banking practice relating to money, negotiable paper and general dealings. Points to be observed to safeguard the bank's interests.

Among the many valuable features contained in the papers on this topic one will be found worthy of careful study. It takes up the every-day transactions of a bank and describes them in detail from their inception to the

Digitized by Google

bank statement. Every transaction is fully explained and recorded in the proper book. This paper is illustrated by photographic facsimiles of all the books used. (Sixty-eight forms.)

Other papers contain features of equal value, and thoroughly treat of the following topics:

- **Banking Rules and Customs.**
  - I. Every-day banking law.
    - Negotiable paper . .
      - Notes.
      - Checks.
      - Collections
    - Endorsements.
    - Protest.
    - Deposits.
  - II. Latest and best methods.
    - Test sheet.
    - Posting.
    - Errors . . . .
      - Transpositions.
      - Transplacements.
    - Proving additions, etc.
  - III. Banking practice.
    - Money.
    - Negotiable paper.
    - General dealings.
  - IV. Protecting the bank.
    - Banker's own work.
    - His dealings . . . . . .
      - For bank clerks.
      - Customers or depositors.
      - Strangers.
    - Safeguards . . . .
      - In writing.
      - In counterfeiting.
  - V. Promoting the bank's welfare.
    - Officially . . . .
      - Directors.
      - Competitors.
      - Clerks and officers.
      - Depositors.
      - Customers.
    - Personally.

Also numerous other rules to be observed to secure orderly and efficient service.

In order to place these valuable papers within the reach of all bank clerks and junior officers, we will send the above-mentioned eighty-eight page pamphlet, containing fifteen articles on The Practical Work of a Bank, all complete and comprising all the papers published up to date, also THE BANKERS' MAGAZINE for the remainder of the year—May to December, 1902, inclusive—at the special low rate of $3.

☞ This offer is open only to clerks or officers in banks now subscribers to the MAGAZINE.

The Pamplet containing the Prize Articles will be found convenient for preservation so that the articles may be referred to at any time.

In addition to securing the pamphlet containing the Prize Articles above referred to, those subscribing at the above special rate will get THE BANKERS' MAGAZINE for eight months. The papers on The Practical Work of a Bank will be continued throughout the present year, the topics still to be treated of in future numbers including:

Digitized by Google

The Collection Department.

Improved books and forms. Summary of rules governing collections. How to make collections pay the best profits.

Discounts, Loans and Investments.

How to determine the value of paper offered for discount. Hints about minimizing losses. How to keep the bank's funds safely and profitably employed. What part of the funds should be kept in securities immediately available, such as high-class R. R. bonds, stocks, etc. Suggestions for managing a Credit Department, with records and blanks required in conducting such a department.

Bookkeeping for City and Country Banks.

Modern methods of accounting, showing the latest forms of books and blanks, with full explanations.

☞ Two important papers on this topic appear in the May issue of the MAGAZINE.

Embezzlements and Defalcations.

What experience has shown to be the most effectual means of guarding the bank's funds. System of checks and verifications in use in the best managed banks.

Increasing the Net Earnings.

Prudent and economical management. Preventing useless expenditure of time and money. Increasing the bank's customers. Ways in which business may be profitably extended.

A first prize of $100 and a second prize of $50 is offered for papers on any of these five topics. All bank clerks and officers are invited to enter the competition. Full particulars may be obtained on application to the publishers of THE BANKERS' MAGAZINE.

Progressive banks will find it a profitable investment to place these papers in the hands of every junior officer and employee.

Bank clerks who desire promotion should keep thoroughly informed in regard to modern methods of bank work.

BRADFORD RHODES & CO.
87 MAIDEN LANE, New York.

THE NEW CASHIER OF THE BANK OF ENGLAND.—Mr. John G. Nairne, the recently appointed Cashier of the Bank of England—one of the highest position in the banking world—is a son of the late Mr. Andrew Nairne, accountant in the National Bank, Castle Douglas, and a nephew of Sir Halliday Macartney. Mr. Nairne was connected with a bank in Glasgow for some time before he joined the staff of the Bank of England.

JOHN SMITH'S CAUTIOUS CHECK.—A check regarded as unique was deposited with the Seaboard National Bank recently. It was indorsed, "Please pay to John Doe personally $50. Do not pay same to nobody else but him. John Smith."—*New York Times.*

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

RESTRICTIVE INDORSEMENTS—RIGHT OF INDORSEE TO INDORSE.

Supreme Judicial Court of Massachusetts, March 10, 1902.

HASKELL vs. AVERY.

Where paper is indorsed "for deposit," the indorsement, though restrictive, confers upon the bank the right to collect the paper, and, to that end, to bring a suit, if necessary, in its own name.

The bank to which paper is so indorsed may transfer the title therein, subject to the trust imposed by the first indorsement.*

Claim by Elmer E. Haskell against Margaret W. Avery, executrix of the insolvent estate of Edward Avery, deceased, brought on a promissory note payable to and indorsed by decedent, and on a draft accepted by him, and each of which are held by claimant. A finding of the commissioners of the estate, disallowing the claim, was affirmed by the court, and plaintiff excepted.

HOLMES, *C. J.:* The only question is whether the holder of the note and draft can prove in his own name.

To decide this it is necessary to consider the purport and effect of the two indorsements. The first is that of Neher: "For deposit in the National Bank of the State of Florida, Jacksonville, Fla., to credit of E. J. Neher." Neher's name is a signature although it also makes part of a sentence. The signature is often made part of the last sentence of a letter, but no one ever thought, we suppose, that it was less a signature on that account. The indorsement then is in effect the same as if it read, "For deposit * * * to my credit. E. J. Neher."

Such an indorsement is restrictive in the sense that it gives notice of the trust to anyone who should take the note thereafter, and therefore makes it impossible for one who should discount it for the holder to retain the proceeds, when collected, to his own use. (Lloyd vs. Signourney, 5 Bing. 525.)

But there seems to be no reason for denying that it gave to the Florida National Bank the right to collect the note, and to that end to bring a suit, if necessary, in his own name. (Flour Mill Co. vs. Holmes, 156 Mass. 11, 12, 30 N. E. 176.)

---

* By the Negotiable Instruments Law it is provided that "A restrictive indorsement confers upon the indorsee the right: 1. To receive payment of the instrument; 2. To bring any action thereon that the indorser could bring; 3. To transfer his rights as such indorsee, where the form of the instrument authorizes him to do so. But all the subsequent indorsees acquire only the title of the first indorsee under the restrictive indorsement." (Section 67, New York Act.)

Digitized by Google

In other words, there seems to be no reason for denying that it gave the bank the legal title to the note, as the bank certainly would have owned the proceeds of the note when collected, and thereafter would have been simply a debtor to Neher for the amount. It does not matter if the title was voidable in case the depositor should have seen fit to revoke his mandate, or the bank had returned the paper upon a failure to collect.

If these preliminaries are admitted, there is not much more difficulty in taking the next step. The very purpose of indorsing the note payable in Boston to a Florida bank for deposit is that the Florida bank should get the note collected and make itself the depositor's debtor by the usual measures. Those, it is well-known, are the indorsements through intervening banks to a bank or person in Boston. The fact that the words "or order" were not added did not, of itself, limit the power of the bank to indorse. (More vs. Manning, 1 Comyns, 311; Acheson vs. Fountain, 1 Strange, 557; Edie vs. East India Co. 2 Burrows, 1216; Leavitt vs. Putnam, 3 N. Y. 494.) And the fact that the indorsement to the bank was restricted in the sense that it disclosed a trust, did not prevent the bank from passing the legal title subject to the trust to the Boston bank or person ultimately called upon to collect. This is in accordance with reason, has the sanction of Massachusetts authority, as well as of other courts, and seems to be established as the law for future transactions by statute. (Freeman's Nat. Bank vs. National Tube Works, 151 Mass. 413, 417, 24 N. E. 779, 8 L. R. A. 42; 1 Daniel, Neg. Inst. [4th Ed.] § 698d. note 4; Rev. Laws, c. 73, §§ 53, 54. See National Pemberton Bank vs. Porter, 125 Mass. 333, 335.)

The second indorsement to be considered is the last appearing upon the paper. It is by a New York bank, "for [its] collection account." The indorsement is in blank, and there is less doubt than in the former case that the words "for collection account" do not preclude the holder from suing or proving in his own name. (Freeman's Nat. Bank vs. National Tube Works, *ubi supra;* Flour Mill Co. vs. Holmes, 156 Mass. 11, 12.)

For these reasons the appellant should have been allowed to prove his claim. Exceptions sustained.

USURY—AMOUNT OF PENALTY.

Supreme Court of the United States, January 15, 1902.

FIRST NATIONAL BANK OF FORT BENTON vs. WATT.

The amount of the penalty which may be recovered of a National bank where usury has been paid is twice the amount of interest paid, and not merely twice the amount in excess of the legal rate.*

In error to the Supreme Court of the State of Minnesota.

By this action, which was commenced in a court of the State of Minnesota, recovery was sought from the First National Bank of Lake Benton, Minn., plaintiff in error here, of twice the amount of the entire interest which it was alleged had been paid to that Bank by Watt, plaintiff below, who is the defendant in error on this record. The right to the relief was based on the averment that the bank had, in violation of the law of the United States, re-

* To the same effect see Henderson National Bank vs. Alves, 91 Ky. 142; Schuyler National Bank vs. Bullong, 28 Neb. 684.

Digitized by Google

ceived from Watt usurious interest. The cause was tried to a jury and a verdict returned in favor of Watt.

WHITE, *J.:* The contention of the plaintiff in error is that the State court erroneously condemned it to pay twice the amount of the entire interest which it had collected because it had taken a usurious rate, while under the law of the United States, it is insisted, the recovery should have been, not twice the amount of the entire interest, but only twice the sum by which the interest received exceeded the lawful rate. To dispose of this contention involves ascertaining the meaning of §§ 5197 and 5198 of the Revised Statutes of the United States, which are as follows:

"Sec. 5197. Any association may take, receive, reserve and charge on any loan or discount made, or upon any note, bill of exchange, or other evidences of debt, interest at the rate allowed by the laws of the State, Territory or district where the bank is located and no more, except that where by the laws of any State a different rate is limited for banks of issue organized under State laws, the rate so limited shall be allowed for associations organized or existing in any such State under this title. When no rate is fixed by the laws of the State, or Territory, or district, the bank may take, receive, reserve, or charge a rate not exceeding seven per centum, and such interest may be taken in advance, reckoning the days for which the note, bill, or other evidence of debt has to run. And the purchase, discount, or sale, of a *bona fide* bill of exchange, payable at another place than the place of such purchase, discount or sale, at not more than the current rate of exchange for sight drafts in addition to the interest, shall not be considered as taking or receiving a greater rate of interest.

Sec. 5198. The taking, receiving, reserving, or charging a rate of interest greater than is allowed by the preceding section, when knowingly done, shall be deemed a forfeiture of the entire interest which the note, bill, or other evidence of debt carries with it, or which has been agreed to be paid thereon. In case the greater rate of interest has been paid, the person by whom it has been paid, or his legal representatives, may recover back, in an action in the nature of an action for debt, twice the amount of the interest thus paid from the association taking or receiving the same; provided, such action is commenced within two years from the time the usurious transaction occurred. (That suits, actions and proceedings against any association under this title may be had in any circuit, district or territorial court of the United States held within the district in which such association may be established, or in any State, county, or municipal court in the county or city in which said asociation is located having jurisdiction in similar cases.")

The argument that the recovery should have been limited to twice the amount by which the usurious interest exceeded the legal rate is predicated on what is assumed to be the correct construction of the second sentence of § 5198 above quoted. The sentence relied on is as follows:

"In case the greater rate of interest has been paid, the person by whom it has been paid, or his legal representatives, may recover back, in an action in the nature of an action of debt, twice the amount of the interest thus paid from the association taking or receiving the same; provided such action is commenced within two years from the time the usurious transaction occurred."

It is urged that the statute is penal in its character and must be strictly construed; therefore, the sentence relied upon must be interpreted as relating

Digitized by Google

solely to the usurious portion of the interest paid, and not to so much of the rate of interest as was lawful. Although it be conceded that the statute is penal in character, we do not consider, even under the strictest rule of construction, it is possible to give to it the meaning contended for without departing from its unambiguous letter and thereby frustrating its obvious intent. The first section of the sentence provides that "the taking, receiving, reserving, or charging a rate of interest greater than is allowed, * * * when knowingly done, shall be deemed a forfeiture of the entire interest which the note, bill, or other evidence of debt carries with it, or which has been agreed to be paid thereon." This, without the slightest ambiguity, provides for the forfeiture, not of the amount by which the usurious has exceeded the lawful rate, but of the entire interest. When the statute then proceeds in the very next sentence to say, "In case the greater rate of interest has been paid, the person by whom it has been paid, or his legal representatives, may recover back * * * twice the amount of the interest thus paid," it cannot in reason be held that the words "the interest thus paid," refer to any other sum than the entire interest as provided in the previous sentence. To hold otherwise would be to decide that the statute forfeited the entire amount of interest whenever a usurious rate had been taken, received, reserved, or charged, and yet limited the debtor's right to recover back only to twice the amount of the excess of the usurious over the legal rate. This would be to interpret the law as in one sentence imposing a forfeiture of the entire interest, while in the next sentence it rendered such forfeiture, in many cases, absolutely nugatory. That such would be the result becomes apparent when it is considered that while it is conceded that in case usurious interest is received the entire amount is forfeited, it is yet argued that in case suit is brought to recover the forfeited usurious interest, the entire interest received can not be awarded. The contention otherwise stated is this: The entire interest, in the event usurious interest is received, is forfeited at the election of the creditor, such election on his part, by which the forfeiture is escaped, being manifested by his insisting on retaining the money taken by him in violation of the statute. This, however, involves not only the conflict pointed out by the considerations just mentioned, but the further contradiction that the greater the violation of the statute the lesser the penalty which it imposes. The disregard of the text and the confusion as to the purpose of the law, which the argument involves, disappears if the statute be harmoniously enforced according to its letter and spirit. By both it is apparent that the statute, on the one hand, causes a forfeiture of the entire interest to result from the taking, receiving, reserving, or charging a rate greater than is allowed by law, and, on the other, subjects the creditor to pay twice the amount of the entire interest, illegally exacted if by persistence in wrongdoing he subjects the debtor to the necessity of suing to recover.

While the question here presented has not been heretofore passed upon by this court, the circuit courts of the United States have had occasion frequently to consider it, and have uniformly construed the statute in accordance with its plain import as we have just expounded it. (National Bank vs. Davis, 8 Biss. 100; Fed. Cas. No. 10,038; National Exch. Bank vs. Moore, 2 Bond, 174 Fed. Cas. No. 10,041; Crocker vs. First Nat. Bank, 4 Dill. 358, Fed. Cas. No. 3,397; Hill vs. National Bank, 21 Blatchf. 258, 15 Fed. 433; Louisville Trust Co. vs. Kentucky Nat. Bank, 87 Fed. 143, 149, 102 Fed. 442.)

Digitized by Google

The State courts of last resort have also, as a general rule, upheld the same construction. (Boerner vs. Traders' Nat. Bank, 90 Tex. 443, 39 S. W. 285, and authorities there cited.) True it is that in a few cases some State courts have hesitatingly taken an opposite view; but we think, for the reasons which we have given, the letter of the statute is too plain and its intention too manifest to justify such an interpretation.

NATIONAL BANKS—SUCCESSIVE ASSESSMENTS UPON STOCKHOLDERS—CONSTRUCTION OF STATUTE BY COMPTROLLER OF CURRENCY.

Supreme Court of the United States, February 24, 1902.

CLEMENT STUDEBAKER vs. JOHN PERRY, AS RECEIVER OF THE NATIONAL BANK OF KANSAS CITY.

The Comptroller of the Currency has power to levy successive assessments upon the stockholders in an insolvent National bank, where the aggregate of the assessments does not exceed the total liability of the stockholders, and his power is not exhausted by one assessment.

Where the meaning of the National Bank Act is clear, the construction placed thereon by the Comptroller of the Currency will not be deemed within the rule that the practical construction of a statute by executive officers is to be adhered to.

In error to the United States Circuit Court of Appeals for the Seventh Circuit.

This was an action by the Receiver of the National Bank of Kansas City against Clement Studebaker to recover an assessment made by the Comptroller of the Currency on stock of such bank held by the defendant. The declaration set forth the ownership by the defendant of 189 shares of its capital stock of the par value of $100 each; the insolvency of the bank; an assessment by the Comptroller of the Currency on February 11, 1896, of sixteen per cent. on the stock; the payment by the defendant of said assessment; a finding by the Comptroller of the Currency on February 25, 1899, that the first assessment was insufficient, and the necessity of an additional assessment of seven per cent; the levy of said second assessment; the direction by the Comptroller to the Receiver to collect it, and the refusal of the defendant to pay.

A demurrer was filed raising the question of the sufficiency in law of the declaration. The demurrer was overruled, and the defendant electing to stand by his demurrer, judgment was rendered for the amount of second assessment upon the stock owned by him. The cause was taken to the Circuit Court of Appeals of the Seventh Circuit, where the judgment of the circuit court was affirmed. The case was then brought to the Supreme Court.

Mr. Justice Shiras delivered the opinion of the court:

The single question for our determination is whether the Comptroller of the Currency, acting under the National banking laws, can validly make more than one assessment upon the shareholders of an insolvent National banking association.

It is not denied by the plaintiff in error that the first assessment, which he voluntarily paid, was insufficient to pay the debts and liabilities of the bank, but his contention is that the Comptroller of the Currency exhausted his power to levy assessments upon the shareholders of stock in an insolvent National bank by the single exercise of that power. He advances two argu-

Digitized by Google

ments in support of his contention: First, that the individual liability of National bank shareholders is contractual, and that hence only one assessment and suit to enforce the same is authorized by law; and, second, that by a course of practice for many years the Comptrollers of the Currency, charged with the execution of the laws, construed them to authorize but one assessment, and that such construction is now conclusive upon the courts.

Those portions of the statute which are involved in this controversy are found in section 5151 of the Revised Statutes of the United States, in the following terms. [The Court here quoted sections 5234 and 5236, Rev. Stat. U. S.]

The proposition of the plaintiff in error, as expressed in the brief of his counsel, is "that section 5234 simply authorizes the Comptroller to enforce the individual liability of shareholders in a National bank, if necessary to pay the debts of such bank; that the Comptroller is therefore plainly authorized to decide as to the necessity of enforcing such liability and as to the time when the same is to be enforced, and fix the amount to be collected; that there is to be a decision by the Comptroller as to these matters, and then a demand or requisition by him, followed by one suit, at law or in equity, as circumstances require; that it is this decision which is termed an assessment; that the Comptroller is nowhere expressly authorized to enforce such liability by several decisions and suits; that he is simply authorized to enforce the individual liability of National bank stockholders according to law; and that there can be but one decision by the Comptroller as to the time, necessity and extent of enforcing this liability, and, therefore, but one assessment, as the statute certainly does not authorize an assessment which could not be enforced by suit."

It is further urged, in behalf of the plaintiff in error, that as the liability of a shareholder of an insolvent National bank for all contracts, debts and engagements of such association to the extent of the amount of his stock therein, at the par value thereof, in addition to the amount invested in such shares, is contractual in its nature, it therefore follows that the general rule that the plaintiff can not split up a single and entire cause of action and make it the subject of different suits applies.

We do not deem it necessary in the case before us to enter at length into the discussion suggested. It is sufficient that, by entering into the relation of a shareholder in a National banking association, the plaintiff in error subjected himself to the obligation created by the statute, and the only question is whether the Comptroller of the Currency has power to make and to enforce by a suit at law more than one assessment upon the shareholders of an insolvent National bank, if necessary to pay the debts thereof. The general purpose of the statute undoubtedly was to confer upon the creditors of the bank a right to resort to the individual liability of the shareholders to the extent, if necessary, of the amount of their stock therein, and it would be a singular construction of law that would empower the Comptroller, by making an inadequate assessment, to relieve the shareholders upon paying such assessment, from their entire liability.

The logic of the plaintiff in error requires him to convince us that his voluntary payment of one assessment, made when the Comptroller was imperfectly acquainted with the amount of the bank's indebtedness, amounts to a satisfaction *in toto* of his obligation. Such may be the true construction of

Digitized by Google

the statute; but, defeating as it would in the cases supposed, the main and obvious purpose of the enactment, such a construction will only be made by a court when compelled by the necessary meaning of the language. The inconveniences that would be occasioned by the meaning proposed are so great and obvious as to lead us to expect to find that reasonable construction of the law does not require us to adopt it.

If it be the duty of the Comptroller to give the creditors of an insolvent National bank the remedy providing for the individual liability of the shareholders, and if the law be that he can do so by one assessment only, then he must, no matter what the condition of the bank may appear to be, make an assessment upon the shareholders up to the entire amount of their liability. In many instances, the value of the bank's assets might make it altogether probable that but a small portion of the shareholders' contribution would be needed. To require payment in full of money which might be held for years while the bank's affairs were being wound up, and then be returned without interest, would certainly be a hardship upon the shareholders. If, to avoid that hardship, the Comptroller should postpone the assessment until he could fully inform himself of the condition of the bank's affairs, in the time that might thus elapse, some of the stockholders might become insolvent or remove their property from the reach of legal proceedings, and thus a loss be thereon upon the creditors.

There is nothing in the language of the sections involved to compel us to adopt a view of the law which would result in such manifest inconveniences.

In Kennedy vs. Gibson, 8 Wall. 498, 19 L. ed. 476, some aspects of the question were considered. Mr. Justice Swayne said:

"The Receiver is the instrument of the Comptroller. He is appointed by the Comptroller, and the power of appointment carries with it the power of removal. It is for the Comptroller to decide when it is necessary to institute proceedings against the stockholders to enforce their personal liability, and whether the whole or a part, and, if only a part, how much, shall be collected. These questions are referred to his judgment and discretion, and his determination is conclusive. The stockholders cannot controvert it. It is not to be questioned in the litigation that may ensue. He may make it at such time as he may deem proper and upon such data as shall be satisfactory to him. This action on his part is indispensable whenever the personal liability of the stockholders is sought to be enforced, and must precede the institution of suit by the Receiver. The fact must be distinctly averred in all such cases, and if put in issue must be proved.

The liability of the stockholders is several and not joint. The limit of their liability is the par of the stock held by each one. Where the whole amount is sought to be recovered, the proceeding must be at law. Where less is required, the proceeding may be in equity, and, in such case an interlocutory decree may be taken for contribution and the case may stand over for the further action of the court—if such action should subsequently prove to be necessary—until the full amount of the liability is exhausted. It would be attended with injurious consequences to forbid action against the stockholders until the precise amount necessary to be collected shall be formally ascertained. This would greatly protract the final settlement, and might be attended with large losses by insolvency and otherwise in the intervening time. The amount must depend in part upon the solvency of the debtors and

Digitized by Google

the validity of the claims. Time will be consumed in the application of these tests, and the result in many cases cannot be foreseen. The same remarks apply to the enforced collections from the stockholders. A speedy adjustment is necessary to the efficiency and utility of the law; the interests of the creditors require it, and it was the obvious policy and purpose of Congress to give it. If too much be collected, it is provided by the statute that any surplus which may remain after satisfying all demands against the association shall be paid over to the stockholders. It is better they should pay more than may prove to be needed than that the evils of delay should be encountered."

These observations clearly imply that the Comptroller, in the exercise of his discretion, may levy successive assessments as they may appear to be necessary. If the power can be exercised only once no reason is apparent why equity should have jurisdiction for the collection of an assessment less than 100 per cent. If the stockholders' liability is fixed once for all by the first assessment of the Comptroller, the legal remedy for the collection of a ten per cent. assessment is as full, adequate, and complete as it is for the collection of the 100 per cent. assessment. The reason why, when the assessment is for the 100 per cent, the proceeding must be at law, and when for a less amount it may be in equity, is obvious. When the full amount is assessed there can be but one suit against each stockholder. He is suable for his full liability at once, and there is no reason for equitable jurisdiction. If a partial assessment is made, there may be other assessments, when the Receiver has liberty to sue at law for even a partial assessment, though equity has concurrent jurisdiction to prevent a multiplicity of suits.

Casey vs. Galli, 94 U. S. 673, 24 L. ed. 168, was the case of a suit at law by the Receiver of a National banking association to enforce the individual liability of a shareholder. It was there contended that the defendant was bound to contribute ratably, and that the proper amount could be ascertained only in equity; that the defendant was bound to contribute ratably a large sum; that this sum was not stated in the declaration, and hence what would be ratable and proper did not appear; that the obligation of the defendant was to pay into the hands of the Comptroller of the Currency a ratable portion of the debts of the association proved before him, and that the declaration did not show that any debts had been so proved; and that the declaration demanded a larger sum than the defendant is required by the statute to pay, and also an additional sum by way of interest. But it was held by this court that "in regard to the first three of these objections it is sufficient to say that Kennedy vs. Gibson, 8 Wall. 498, 19 L. ed. 476, is conclusive against them. It is there said that the amount to be paid rests in the judgment and discretion of the Comptroller; that his determination cannot be controverted by the stockholders in suits against them, and that, when the order is to collect the full amount of the par of the stock, the suit must be at law. It is unnecessary to reproduce the reasoning of the court in support of these propositions. The sum to be paid being liquidated, and due and payable when the Comptroller's order was made, it follows that the amount bears interest from the date of the order."

In United States vs. Knox, 102 U. S. 422, 26 L. ed. 216, an attempt was made to enforce a deficiency, caused by the insolvency of some of the shareholders of an insolvent National bank, against solvent shareholders, but it

Digitized by Google

was held that the liability of the shareholders was several, and was not affected by the failure of any other shareholder to pay the amount assessed against him, and it was said by this court, that "although assessments made by the Comptroller under the circumstances of the first assessment in this case, and all other assessments, successive or otherwise, not exceeding the par value of all the stock of the bank, are conclusive upon the stockholders."

Germanica Nat. Bank vs. Case, 131 U. S. 144, Appx., and 23 L. ed. 961, was a case where the Comptroller had levied an assessment for an amount on each shareholder, not sufficient to justify an appeal from the circuit court of the United States, and where a motion to dismiss the appeal was made in this court, but the motion was denied, Chief Justice Waite saying: "If the decree asked and obtained in this cause had been confined to an order for the payment of the seventy per cent. upon the amount of the stock held by the appellants respectively, which the Comptroller of the Currency has already instructed the Receiver to collect, the objection taken by the appellee to our jurisdiction might have been good; but the decree as given goes further, and after providing for the seventy per cent. adjudges that each of the appellants shall be liable to further contribution as stockholders until a sufficient sum is realized to pay the debts of the bank, and that the bill be retained until it shall be certain that no further contribution will be required. This fixes the liability of each of these appellants to contribute in this suit to the extent of the nominal amount of his stock if necessary, and as the bill alleges that at least twenty-five per cent. more will be required, it is apparent that the 'matter in dispute' is not alone the amount already decreed, but a sum in addition that may amount to thirty per cent. of the stock, and is now expected to reach twenty-five per cent. Their liability generally as stockholders to make contributions has been fully established. That can never again be contested in this suit except under this appeal. For the purposes of jurisdiction, we may consider that as in dispute which would be settled by the decree if it had not been appealed from." The right of the Comptroller to levy a further assessment was thereby plainly implied.

Bushnell vs. Leland, 164 U. S. 684, 41 L. ed. 598, 17 Sup. Ct. Rep. 209, was a late case, in which the power of the Comptroller to determine the necessity and amount of an assessment upon the shareholders was challenged on constitutional grounds, but it was held, in the language of Mr. Justice White: "All these alleged errors may be reduced to the single contention that under the National Banking Law the Comptroller of the Currency is without power to appoint a Receiver of a defaulting or insolvent National bank, or to call for a ratable assessment upon the stockholders of such bank without a previous judicial ascertainment of the necessity for the appointment of the Receiver and the existence of the liabilities of the bank; and that the lodgment of authority in the Comptroller, empowering him either to appoint a Receiver or to make a ratable call upon the stockholders, is tantamount to vesting that officer with judicial power, in violation of the constitution. All of these contentions have been long since settled, and are not open to further discussion. (Kennedy vs. Gibson, 8 Wall, 498; Casey vs. Galli, 94 U. S. 674; United States vs. Knox, 102 U. S. 423.")

The precise question raised in the present case has several times been argued and determined in the lower Federal courts. In Aldrich vs. Yates, 95 Fed. 78, the question was thus stated and answered by District Judge Evans

Digitized by Google

in the circuit court for the district of Kentucky: "The question, then, remains, has the Comptroller of the Currency the power to make a second assessment in any event? The ultimate liability of the shareholder in such cases is for the full amount of the par value of the stock, * * * under the statutory conditions, if they are found by the Comptroller to exist. A mistake of that officer in making an estimate of the amount of a needed assessment cannot be held to release the shareholder from the full statutory liability. A mistake of such a character would be natural, if not inevitable, in many instances, in view of the uncertain value of assets; and the indisposition, in the first instance, to make an assessment unnecessarily large may well excuse its not being done, when there is certainly no statutory provision, prohibiting in terms or by necessary implication, further assessments, if the necessity exists. In practice, second assessments have frequently been made. The court is of opinion that such a course is within the power of the Comptroller, in the exercise of his duty to see that the liability of the stockholders is sufficiently enforced to pay the debts of the bank, and that practice has been recognized as proper by the Supreme Court. (United States vs. Knox, 102 U. S. 422, 26 L. ed. 216.")

In Aldrich vs. Campbell, 38 C. C. A. 347, 97 Fed. 663, it was held by the circuit court of appeals for the ninth circuit that the action of the Comptroller of the Currency in ordering an assessment against the stockholders of an insolvent National bank, whether a first assessment or one subsequently made, is a determination of the necessity for such assessment, which is conclusive on the stockholders, and cannot be questioned by them in any litigation which may ensue, either at law or in equity.

In De Weese vs. Smith, 97 Fed. 309, it was held by the circuit court that a judgment against a shareholder of an insolvent National bank on a first assessment was a bar to a second suit brought to recover a later assessment, but this judgment was reversed by the circuit court of appeals for the eighth circuit, in De Weese vs. Smith, 45 C. C. A. 408, 106 Fed. 438. And, as already stated, the circuit court of appeals for the seventh circuit held in the case now before us that it was discretionary with the Comptroller to make one or more assessments (Studebaker vs. Perry, 43 C. C. A. 69, 102 Fed. 947), Woods, Circuit Judge, saying:

"The dominant purpose of the parts of the statute touching this question is that the shareholders of an insolvent National bank shall be liable for its debts 'to the extent of the amount of their stock therein,' and rules of construction are not to be invoked in a way to defeat that purpose. Under the direction of the Comptroller the Receiver is authorized to enforce the shareholder's liability; but the power to enforce does not include a power to cut off or limit, and by no proper application of general rules of construction can the statute be so read as to permit the failure of its main design."

The cases cited by the plaintiff in error wherein courts of high authority have held that, where some particular act involving judicial discretion is to be performed by an executive officer the power is exhausted by its single exercise, are not applicable to cases like the present, where the law merely provides that the shareholder shall pay what may be necessary to meet the debts and obligations of the bank. How much that is may not be ascertained at once, but as it is important that the settlement shall progress without delay, it is a reasonable construction of the statute that, while it is just and for his benefit

Digitized by Google

that the stockholder be called on for no more than seems to be necessary, so it is just to the creditor that further calls may be made when necessary. This is a case where the power to assess belongs exclusively to the Comptroller, and the power to enforce the assessment belongs to the courts, and the construction contended for on behalf of the plaintiff in error confuses the remedy provided for by this statute of the United States with the ordinary remedy for the enforcement of statutory liability of stockholders by the courts.

It is finally argued on behalf of the plaintiff in error that the doctrine of contemporaneous and practical construction put upon a statute by executive officers is applicable. It is said that former Comptrollers of the Currency held, in several instances, that the power to assess under the National Banking Law was exhausted by a single exercise; that subsequent Comptrollers ought not to have departed from that construction; and it is urged that this court should, by its decision in this case, set aside the construction at present prevailing and restore the former one.

The doctrine invoked is a useful one, but its application should be restricted to cases in which the construction involved is really one of doubt and where those to be affected have relied on the practical construction, and rights have accrued by reason of such reliance. The rule is well expressed in Cooley on Constitutional Limitations, 5th ed. p. 69:

"If the question involved is really one of doubt the force of their [officers'] judgment, especially in view of the injurious consequences that may result from disregarding it, is fairly entitled to turn the scale in the judicial mind. Where, however, no ambiguity or doubt appears in the law, we think the same rule obtains here as in other cases, that the court should confine its attention to the law, and not allow intrinsic circumstances to introduce a difficulty where the language is plain. To allow force to a practical construction in such a case would be to suffer manifest perversions to defeat the evident purpose of the lawmakers."

That the language of the statute under consideration is plain and its construction free from doubt are sufficiently shown by the decisions of the courts heretofore cited; and it would be absurd to claim that the plaintiff in error bought his stock in a National banking association with a right to rely on the contingency that the Comptroller might inadvertently or mistakenly make an insufficient assessment should the bank become insolvent.

The judgment of the circuit court of appeals is affirmed.

TAX UPON SHARES OF STOCK IN TRUST COMPANY—DEDUCTION FOR UNITED STATES BONDS.

Supreme Court of the United States, February 24, 1902.

CLEVELAND TRUST COMPANY vs. M. A. LANDER, TREASURER OF CUYAHOGA COUNTY, OHIO.

A tax upon the shares of stock of a trust company is not equivalent to a tax upon the property of the corporation, and hence the stockholders are not entitled to have deducted from the gross value of the shares the amount of capital invested in United States bonds.

In error to the Supreme Court of the State of Ohio.

This suit was brought by the Cleveland Trust Company for an injunction to restrain the collection of a tax upon its shares. The return of the company made to the county auditor included 174 bonds of the United States of the

Digitized by Google

denomination of $1,000 each, "then and for a long time prior thereto owned by the plaintiff and in which the plaintiff had invested its capital stock." The plaintiff valued these bonds at the sum of $213,274.81, and in its return deducted that sum from the $500,000 par value of paid-in capital stock included among the liabilities of the plaintiff, leaving a balance of $256,720.19.

The county auditor refused to allow the deduction of the Government bonds, and fixed the value of the shares of the capital stock at $338,700, exclusive of the assessed value of the real estate.

Mr. Justice McKenna delivered the opinion of the court:

The argument of the plaintiff in error claims a greater immuni'y from taxation for the shares of the trust company than section 5219 of the Revised Statutes of the United States gives to shares in National banks. That section permits the States to assess and tax the shares of shareholders in National banks, with the limitations only "that the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State;" and that the shares of non-residents "shall be taxed in the city or town where the bank is located, and not elsewhere." The prayer of the petition is also opposed by decisions of this court.

In Van Allen vs. The Assessors, 3 Wall. 573, sub nom. Churchill vs. Utica, 18 L. ed. 229, the provision contained in section 5219—then a part of the act of Congress of June 3, 1864—came up for consideration. There was a dispute as to the meaning of the statute, and its validity was also assailed. The court asserted a distinction between the property of the bank and corporation as such, and held that the tax authorized by the statute was a tax on the shares, the property of the shareholder, not a tax on the capital of a bank, the property of the corporation. The validity of the statute was sustained, and interpreting it the court said that it authorized the taxation of such shares, and shares were defined to be the whole interest of the holder without diminution on account of the kind of property which constituted the capital stock of the bank. Of the provisions of the act expressing this purpose and the right of the State to tax, the court said nothing "could be made plainer or more direct and comprehensive." The case was subsequently affirmed. (4 Wall. 244, 259, 18 L. ed. 344, 350; 121 U. S. 138, 30 L. ed. 895, 7 Sup. Ct. Rep. 826.)

The plaintiff concedes the distinction between the property of the corporation represented by its capital stock and the property of the shareholders represented by their shares, and bases an argument upon that distinction, and yet excludes from consideration, as immaterial to the questions at issue, the laws of Congress governing the taxation of the shares. The reasoning advanced is that under the laws and Constitution of the State of Ohio the property of the trust company "must be and is subject to taxation;" and "that the sections of the statutes of the State of Ohio which provide the method for determining the tax value, so far as they apply to such trust company, simply prescribe a convenient method for arriving at the true value in money of the property of the corporation." And the deduction is made "that, in determining the value of such property for taxation, the trust company is entitled to deduct from its capital and surplus the value of the United States Government bonds then owned by it." In other words, the contention is that the tax on the shares being equivalent to a tax on the property of the trust company, there must be deducted from the value of the shares

Digitized by Google

that portion of the capital of the company invested in United States bonds. The answer to the contention is obvious and may be brief. The contention destroys the separate individuality recognized, as we have seen, by this court, of the trust company and its shareholders, and seeks to nulify one provision of the Revised Statutes of the United States (section 5219) by another (section 3701), between which there is no want of harmony. And what the constitution of the State of Ohio requires, or what the statutes of the State require as to taxation, must be left to be decided by the Supreme Court of the State, and whether that court has decided, logically or illogically, that a tax authorized by the laws of the United States on the shares of the company satisfies the constitution of the State as a tax on the corporation, is not open to our review or objection. The manner of taxation being legal under the statutes of the United States, its effect cannot be complained of in the Federal tribunals. We do not mean to be understood as implying that the plaintiff's view of the constitution of the State, or of the laws of the State, is correct. The inquiry is not necessary. Accepting such view as correct, plaintiff shows no right, under the Constitution or laws of the United States, which has been violated. Judgment affirmed.

TRANSFER OF STOCK AS SECURITY—PLEDGE.

Supreme Court of Oregon, March 3, 1902.

IRVING PARK ASSOCIATION vs. WATSON.

The transfer of a certificate of stock to a creditor as collateral for a note, with power to sell the stock upon default, is a pledge, and not a mortgage thereof.

This was a suit to foreclose a pledge of certain shares of stock in the Irving Park Association—given to secure the promissory note of the defendant. The note was in the following form:

"$1,779.49. Portland, Oregon, March 16, 1897. Eighteen months after date, without grace, we or either of us promise to pay to the order of the Irving Park Association, at the office of Ladd & Tilton, in this city, the sum of seventeen hundred and seventy-nine and forty-nine hundredths dollars, payable in gold coin of the United States of America, and not otherwise, with interest thereon from December 14, 1896, until paid, at the rate of seven (7) per cent. per annum, the first payment of interest to fall due on March 31, 1897, and thereafter every three (3) months; and, if not so paid, the whole of said note to become due and collectible at the option of the holder thereof, for value received. And we hereby assign and transfer to the Irving Park Association, and deposit with it, as collateral security for the payment of the above promissory note and the expenses that may accrue thereon, the following personal property, of which we are the sole owners, the same being at our own risk and expense, to wit: Certificate numbered thirty-eight, for one (1) share of stock in the Irving Park Association, the face value of which is sixty-five hundred dollars. It is hereby understood and agreed that the said Irving Park Association is not to be held responsible for any injury or loss to said property arising from the act of God, robbery, fire, or flood. All securities received hereunder may be held and applied by said company to secure said indebtedness or liability of any nature whatsoever, existing or which may hereafter arise, from us to said Irving Park Association. In view of the non-

Digitized by Google

payment of the said promissory note or the interest thereon when due, we hereby appoint and constitute said company or its treasurer our attorneys in fact, irrevocable, with the power of substitution, and we hereby authorize and empower them, or either of them, or their substitute or substitutes, to sell, at any time after said promissory note or interest thereon shall become due, at public or private sale, and with notice to us, the whole or any part of the property or collaterals deposited with or held by said company, and to deliver the said property sold to the purchaser or purchasers thereof, and to apply the proceeds of such sale to the payment of said promissory note, with interest and other expenses, together with five (5) per cent. commission on sale and collection of said collateral, and, should any suit be brought upon said note to enforce the collection thereof, to pay all costs of suit and counsel fees incurred therein. If, after the sale of said property, and the application of the proceeds as aforesaid, there should be a balance of indebtedness still unpaid, we hereby promise to pay on demand such balance in gold coin to said company; but, in case said promissory note and all other indebtedness to said Irving Park Association be paid, with interest and other expenses, as above stipulated, then this agreement shall be void, and all property held as security shall be returned to us; and all provisions of law providing for sale of pledges are hereby expressly waived. Should any such sale be made, such attorneys in fact, or either of them, directly or in the name of any other person, shall have the right to purchase. Witness our hands and seals this 16th day of March, A.D. 1897. Virginia Watson."

BEAN, *C.J.* (omitting part of the opinion: The first contention for the defendant is that the instrument sought to be foreclosed is a chattel mortgage, and under act 1866, p. 688, § 2 (section 3838 Hill's Am. Laws) as interpreted in Jacobs vs. McCalley, 8 Or. 124, can be foreclosed only in the manner stipulated, since plaintiff has possession of the property. While for the plaintiff the contention is that the transaction was a pledge and not a mortgage. Speaking generally, the distinction between a mortgage and pledge of personal property is that in the former the thing pledged must be delivered to the pledgee, while in the latter the possession may remain in the mortgagor. It is often difficult to determine whether a given transaction is a mortgage or a pledge when possession of the property is delivered to the creditor. But the general rule is that an assignment and transfer of shares of stock in a corporation by a debtor as security for a debt is a pledge, and not a mortgage. Indeed, it is said by Mr. Cook that "it is difficult to ascertain from the cases how shares of stock may be mortgaged; and a few early decisions, which held certain transactions to be mortgages, would to-day be held to be pledges." (Cook, Stock and Stockh. and Corp. Law. § 464.)

Mr. Edwards, in his work on Bailments (2d Ed., § 219), says: "Shares of stock in a corporation are now, and have been for many years, habitually pledged as collateral security for money loaned. The pledge is made by a direct transfer of the scrip in writing, with an authority to effect a transfer in due form on the books of the corporation; and in his note for the sum loaned the borrower further authorizes the pledgee to sell the stock. The effect of the transaction is not a mortgage, but a pledge of the stock to secure the prompt payment of the money borrowed. On account of its incorporeal nature, property in stocks cannot be otherwise delivered. The delivery of the scrip alone is not considered sufficient, because it does not of itself enable

Digitized by Google

the pledgee to sell the stock and apply the proceeds to pay the debt. * * * The contract of pledge is entirely consistent with the owner's right as a stockholder. Until the pledge is rendered available by a foreclosure, he remains a member of the corporate body, interested in its management." And Mr. Jones, in his work on Pledges (section 153), says that the transfer of the legal title to the stock to the pledgee is not inconsistent with the existence of a pledge, but, on the contrary, it cannot generally be pledged without a written transfer of the title, because it is not capable of manual delivery; and, "in general it may be said that any transfer as collateral security of shares in a corporation, made in the ordinary form of an indorsement of a certificate, or by delivery of it with a power of attorney to make a transfer upon the books of the corporation, or by an actual transfer upon the books, is a pledge, and not a mortgage; and it is immaterial in this respect whether such transfer appear to be absolute or is expressed to be made as security."

Within these authorities we think the transaction between the plaintiff and the defendant as set out in the pleadings constituted a mere pledge of the stock, coupled with a right to sell it in case of default; and such a construction was given by this court to practically a similar transaction in State vs. Smith, 15 Or. 98.

DEMAND NOTE—WITHIN WHAT TIME PRESENTATION MUST BE MADE TO CHARGE INDORSER—CONSTRUCTION OF NEGOTIABLE INSTRUMENTS LAW.

Supreme Judicial Court of Massachusetts, March 3, 1902.

MERRITT vs. JACKSON.

Under the provisions of the Negotiable Instruments Law, when the holder of a note payable on demand seeks to hold an indorser, the burden is on him to show that a demand was made upon the maker within a reasonable time; and if there is any usage of trade or any fact or circumstance to excuse a delay, the burden is upon him to show it.

In the absence of any evidence of a usage of trade to the contrary, a demand made upon the maker after the expiration of sixty days is not within a reasonable time.

LATHROP, *J.:* This is an action against the defendant, as indorser of four promissory notes made by the Jackson Typewriter Company, payable to the defendant upon demand, and indorsed by him in blank. One note is dated December 19, 1899, and the other three are dated January 5, 1900. Demand was made and notice given on April 4, 1900. In the superior court, after the introduction of evidence not material to the exceptions, the defendant requested the court to rule that upon all evidence the plaintiff was not entitled to recover. The court refused so to rule, and found for the plaintiff, and the case is before us upon the defendant's exceptions. The only question in the case is whether the demand was made within a reasonable time. St. 1898, c. 533, § 71, is in part as follows :

"Where it [the instrument] is payable on demand presentment must be made within a reasonable time after its issue." Section 193 of the same act provides : "In determining what is a 'reasonable time' or an 'unreasonable time' regard is to be had to the nature of the instrument, the usage of trade or business, if any, with respect to such instruments, and the facts of the particular case." Before the statute of 1898, which took effect on January 1, 1899, was passed, the law applicable to notes payable on demand was regulated by St. 1839, c. 121, which was retained in substance in the subsequent

Digitized by Google

compilations of the statutes. Section 1 of this statute provided, in substance, that the maker should have the same defense against an indorsee as against a payee. Section 2 provided that on any promissory note, payable on demand, made after the act took effect, a demand made at the expiration of sixty days from the date thereof without grace, or at any time within that term, should be deemed to be made within a reasonable time. Section 3 provided for the liability of indorsers. Section 1 of this act was slightly changed by St. 1857, c. 192, but was revived, with an amendment, by St. 1858, c. 70. And so it appears in Gen. St. c. 53, § 10, and Pub. St. c. 77, § 14. Sections 2 and 3 of the act appear in Gen. St. c. 53, § 8, and Pub. St. c. 77, § 12. We have no doubt that the section of Pub. St. c. 77, last mentioned has been repealed by section 197, St. 1898, which provides: "All acts and parts of acts inconsistent with the provisions of this act are hereby repealed."

We are therefore obliged to consider what is the law merchant which was in force in this commonwealth before the statute of 1839 took effect, and which is restored by the statute of 1898. Before St. 1839, c. 121, was passed, the rule was well settled that, as to a promissory note payable on demand, a demand, in order to charge an indorser, must be made within a reasonable time, and, if no such demand was made, the note was considered as overdue and dishonored. This question arose also in another class of cases, namely, as to the length of time in which a note payable on demand, and remaining unpaid, would be held to be dishonored, and subject to the grounds of defense which would be open to the maker in a suit by the payee. (See Paine vs. Railroad Co., 118 U. S. 152, 160, 6 Sup. Ct. 1,019, 30 L. Ed. 193.) But, while the general rule was well settled, there was found to be great difficulty in its application, and it was said to be impossible to fix any precise period, as each case depended upon its particular circumstances. (Parker, *C. J.*, in Field vs. Nickerson, 13 Mass. 131, 137.) In Seaver vs. Lincoln, 21 Pick. 267, it was said by Chief Justice Shaw: "One of the most difficult questions presented for the decision of a court of law is, what shall be deemed a reasonable time within which to demand payment of the maker of a note payable on demand in order to charge the indorser. It depends upon so many circumstances to determine what is a reasonable time in a particular case that one decision goes but little way in establishing a precedent for another."

As to what has been held by this court to be a reasonable or unreasonable time, the cases are thus summed up by Mr. Justice Dewey in Ranger vs. Cary, 1 Metc. 369, 374: "In Field vs. Nickerson, 13 Mass. 131, the period of eight months was held not to be within a reasonable time to make a demand to charge the indorser; and in Seaver vs. Lincoln 21 Pick. 267, where the demand was made in seven days after the date of the note, it was held to be within due time.

In Sylvester vs. Crapo, 15 Pick. 92, a note that had remained unpaid for eleven months before it was negotiated was held to be dishonored; and the shorter period of six months was, in Thompson vs. Hale, 6 Pick. 259, held sufficient to subject it to the defense of a note overdue. On the other hand, a note indorsed seven days after its date was held, in Thurston vs. McKown, 6 Mass. 428, to have been transferred in season to avoid any ground of defense arising from the equities between the original parties."

In Ranger vs. Cary it was held that a note payable on demand was not to be regarded as overdue if indorsed within one month after its date. The

Digitized by Google

cases on this subject may be found collated in Norton, Bills & N. (3d Ed.) p. 347, § 140.

In the case before us no evidence has been introduced of "the usage of trade or business, if any, with respect to such instruments," nor the facts of the case, apart from what the instrument itself shows. We have no doubt that when the holder of such a note seeks to hold an indorser, the burden is on him to show that a demand was made upon the maker within a reasonable time; and that, if there is any usage of trade or any fact or circumstance to excuse a delay, the burden is on him to show it. (See Keyes vs. Fenstermaker, 24 Cal. 329.)

It is urged, however, that the court will take judicial notice of business in a community, including the universal practice of banks, and attention is called to the fact that in the charge to the jury in Field vs. Nickerson, 13 Mass. 131, 132, where the question was whether an action could be maintained by an indorsee against an indorser on a promissory note payable on demand where the demand was made on the maker eight months after the date of the note, Chief Justice Parker, after stating to the jury that the demand must be made in a reasonable time, and that what was a reasonable time was a question of law in that case, further instructed the jury "that, all the parties to the transaction living in a town where credit for loans of money among merchants is commonly given for thirty, sixty, or ninety days, the indorser must be considered as having contracted with reference to the usual period; that a delay of eight months was unreasonable." The jury were directed to return a verdict for the defendant. Nothing is said on this subject in the opinion. Whether or not an analogy can be drawn from the fact that in the business community the rate of credit may be thirty, sixty, or ninety days, St. 1898, c. 533, § 193, as we already have pointed out, limits the question of usage to that of trade or business "with respect to such instruments." The statute took effect on January 1, 1899. All but one of the notes in suit were dated early in January of the next year. We are not aware that in the interval any usage of trade or business with respect to demand notes had grown up different from that which had had the force of law for nearly sixty years. In a case like the present, in the absence of any evidence to bring the case within section 193, St. 1898, we are of opinion that a demand on the maker should be made at or before the expiration of sixty days, that the demand in this case was not made within a reasonable time, and that the ruling requested should have been given.

Exceptions sustained.

CONDENSED LEGAL DECISIONS OF INTEREST TO BANKS.

AGENCY—BANK CASHIER—AUTHORITY—RATIFICATION OF ACTS—NEGLIGENCE OF BANK OFFICERS.

There is no reason that can be given which is founded upon principle for not applying the same rule of agency to a Cashier as to other persons occupying fiduciary relations.

A person can not deal with a Cashier of a bank as an individual in securing a draft, and claim, after the draft is delivered, it has become the transaction of the bank.

Digitized by Google

While a Cashier of a bank is presumed to have all the authority he exercises in dealing with executive functions legally within the powers of the bank, or which are usually done, or held out to be done, by such an officer, still the test is whether the transaction is with the bank and in its business, or with the Cashier personally and in his business. As to the former, all presumptions are in favor of its regularity and binding force. As to the latter, no such presumptions arise.

Upon the proof that the transaction was known to the claimant to be an individual one and not with the bank, the burden is cast upon the claimant to establish that the act of the Cashier thus done for his own individual benefit was authorized or ratified.

Neither authorization nor ratification arises from unknown concealed fraudulent transactions of the Cashier. It is only known open ones, similar to the alleged dishonest ones, which work an estoppel.

Failure to detect that which an inspection with ordinary care would not have discovered will not work a ratification. Where a draft on a corresponding bank is regular on its face, and the entry upon the stub of the draft book from which it is taken is also regular, there is nothing to go to a jury to establish laches in the officer of a bank for neglect to discover its fraudulent character from inspection.

Campbell vs. Manufacturers' Nat. Bank, 51 At. Rep. (N. J.) 497.

COLLECTIONS—INSTRUCTIONS—PROTEST—NEGLECT OF NOTARY.

Instructions sent with a note forwarded by one bank to another for the purpose of collection, "to protest," *held* to mean, and to have been understood to mean by the notary to whose attention it was called, that the necessary steps to bind indorsers were to be taken.

While a prompt return to the sender of a protest, showing no notice to an indorser, would have enabled it to serve notice in time, having intrusted that duty to a notary, it was not bound to make examination to see whether it was done. He should either have discharged the duty or called attention to the fact that it was not done.

Giving notice of dishonor of protested paper is, in the absence of contrary instructions, an official duty of a notary public, for neglect of which an action is maintainable by the party injured upon his official bond.

Dartmouth Sav. Bank vs. Foley *et al.* 89 N. W. Rep. (Neb.) 395.

CORPORATIONS—LIABILITY OF STOCKHOLDERS—GEORGIA STATUTE.

The charter of a State bank in Georgia provided that, in addition to the liability of the bank, the stockholders should be individually liable as sureties to its creditors "to the extent of the amount of their stock therein, at the par value thereof, respectively, at the time the debt was created." A statute of the State (Code 1882, § 1496) provided that "when a stockholder in any bank or other corporation is individually liable under its charter and shall transfer his stock, he shall be exempt from such liability unless he receives a written notice from a creditor within six months after such transfer of his intention to hold him liable, provided he shall give notice once a month, for six months, of such transfer immediately thereafter," etc. *Held*, that one who for a short

Digitized by Google

time held stock of such bank as collateral security, during which time it stood in his name, and was then transferred back to the owner, was not liable for debts of the bank subsequently contracted, without any reference to his holding of the stock, although no notice of the retransfer of the stock was published, but that the statute was intended only to enable stockholders who had become liable for existing debts to terminate such liability by giving the prescribed notice, and did not apply to a case where the stockholder was never, in fact, liable under the terms of the charter, because he did not hold the stock "at the time the debt was created."

Brunswick Terminal Co. *et al.* vs. National Bank of Baltimore, 112 Fed. Rep. (U. S.) 812.

DEPOSIT IN SAVINGS BANK—PAYMENT.

Where a deposit in a Savings bank is placed in the name of "Diedrich or George Grafing," the Savings bank is protected on payment to the executrix of Diedrich on presentation by her of the pass book and testamentary letters, where George Grafing had never made claim for the deposit, and had never deposited or withdrawn any money from the fund, and had never had the pass book.

Grafing vs. Irving Sav. Inst. 74 N. Y. Supp. 741.

DRAFTS FOR COLLECTION—INSOLVENCY OF TRANSMITTING BANK—APPLICATION OF PROCEEDS.

Plaintiff, holding a personal draft payable to her order and drawn on a bank in St. Louis, left it for collection with a bank in Milwaukee, indorsed in blank. The Milwaukee bank sent the draft to defendant, its regular Chicago correspondent, which sent it to a bank in St. Louis, collected the amount from the drawee, and credited it to the account of the Milwaukee bank, which was overdrawn. The last-named bank had, meanwhile, suspended payment, but defendant had no knowledge of this fact when it made the credit, and had at no time notice that the Milwaukee bank merely held the draft for collection, and was not its owner. *Held*, that defendant was entitled to apply the proceeds of the draft to the overdrawn account of the Milwaukee bank, and was not liable therefor to plaintiff.

American Exch. Nat. Bank vs. Theummler, 62 N. E. Rep. (Ill.) 932.

INSOLVENCY—UNPAID STOCK—POWER OF DIRECTORS TO LEVY ASSESSMENTS—ORDER OF COURT—NECESSITY.

Under the banking act of 1895 (St. 1895, p. 175), providing that, if a bank is adjudged insolvent, the court shall enjoin it from transacting any further business, "and shall order the [bank] commissioners to surrender to the corporation the property thereof in their possession for the purpose of liquidation," giving to the court power to remove directors for cause and to appoint others, and declaring that "subject to this right of removal and appointment the directors or trustees * * * shall be permitted to continue the management * * * during the process of liquidation, under the direction of the bank commissioners," etc., the directors of a bank adjudged to be insolvent have power, without authority of the court first obtained, to assess

Digitized by Google

shareholders for unpaid capital stock for the purpose of liquidating the bank's indebtedness and making final settlement of its affairs.

Union Sav. Bank of San Jose vs. Dunlap, 67 Pac. Rep. (Cal.) 1084.

INSOLVENCY—SET-OFF—STIPULATION—NOTES—ASSIGNMENT BY CASHIER OF BANK.

A debtor of an insolvent bank can not set off against his debt a claim against it which he bought after its insolvency.

Stipulation that a bank "went into insolvency" on a certain day, and has been insolvent ever since, means more than that it was unable to pay its debts, and implies a positive and affirmative act on its part.

Plaintiff's indorsement of the note, as Cashier of the payee bank, to herself individually being voidable merely at instance of bank, her *prima facie* title to the note by possession can not, in the absence of *mala fides*, be attacked by defendant maker, he being protected from claim by the bank by payment of any judgment plaintiff may recover.

Dyer vs. Sebrell, 67 Pac. Rep. (Cal.) 1036.

LIABILITY FOR TORTS—FALSE STATEMENT BY CASHIER—FRAUD—ACTION FOR DECEIT—PERSONS ENTITLED TO SUE.

A statement made by the Cashier of a bank, certifying to the insurance commissioner of a State that a recently organized insurance company had on deposit in the bank a sum which had been paid in as the full amount of the capital stock of the company and as a surplus fund, is false where a considerable portion of the deposit consisted of the proceeds of notes given by subscribers in payment for stock, and by officers of the company, which the bank had discounted on the indorsement of the company, and for which it held the stock as collateral security, whether such discounts were real or pretended, since the bank had knowledge that the deposit did not represent either capital or surplus; and, where such certificate was made in the interests of the bank, for the purpose of enabling it to secure a large deposit from the company, or to sell the stock it held as collateral, it was an act done in the due course of business, for which the bank is responsible.

The Cashier of a bank is the proper officer to receive deposits and to give certificates or vouchers in respect thereto, which may properly include, with the consent of the depositor, a statement of the source from which the deposit arose; and for a false statement in that respect, made to subserve the interests of the bank, the latter is liable in tort to one injured thereby, although the Cashier was not expressly authorized to make such statement by the board of directors.

That a State insurance commissioner was induced to issue a license to do business to an insurance company by a certificate made by a bank, falsely stating that the company had the full amount of its capital stock, as well as a surplus, on deposit therein, does not give a right of action against the bank for fraud and deceit to one who purchased stock of the company solely in reliance on the fact that it had been licensed to do business, or even in reliance on such certificate as a part of the public records; but the plaintiff in such case must show some direct connection between the bank and the communication of the statement, either to himself personally or to the general

Digitized by Google

public. It is sufficient to establish such connection, however, and to give a right of recovery, that the bank, knowing that plaintiff contemplated the purchase of stock, referred him to such certificate for information, and that he acted on the information obtained therefrom.

Hindman vs. First Nat. Bank of Louisville, *et al.* 112 Fed. Rep. (U. S.) 931.

LIQUIDATION—EXAMINATION OF BOOKS.

The supreme court has power, in its discretion, to compel the officers of a National bank in process of liquidation, on expiration of its charter by limitation, to exhibit books, papers, and assets of the bank to the stockholders, and to permit them to examine and take extracts therefrom.

Tuttle, *et al.* vs. Iron Nat. Bank of Plattsburgh, *et al.* 62 N. E. Rep. (N. Y.) 761.

SAVINGS BANKS—POWER TO CONTRACT DEBTS—ESTOPPEL—STOCKHOLDERS—CREDITORS—PRIORITIES—APPEAL—PRESUMPTION.

Act April 11, 1862, Sec. 10, providing that it shall be unlawful for a Savings bank corporation or its directors to contract any debt or liability against the corporation for any purpose whatsoever, is to be construed in connection with the remainder of the act, which authorizes such corporation to purchase a lot and building for its business, and to employ and compensate help, and to incur other expenses, and in connection with the amendatory act of March 12, 1864, conferring on such corporations power to do a commercial banking business, buying bonds, securities, etc.; and hence the former act does not prevent the bank from incurring any liabilities whatsoever, but only those not authorized by the other legislation mentioned.

Where there is a finding in an action against the bank by a creditor that a debt of the latter is for money expended by the creditor for the use and benefit of the bank and at its request, it will be presumed on appeal that that money was expended for purposes for which the bank could incur a liability.

Where the debt of a creditor of a bank is for money expended for its benefit and at its request, it will not be heard, in an action by the creditors to recover the money, to deny liability on that ground that it could not legally be bound by a contract to pay.

Act April 11, 1862, Sec. 10, providing that the assets and stock of a Sav-bank shall be security to depositors who are not stockholders, does not give priority to the claim of a depositor who is not a stockholder over the claim of a creditor of the bank who is also a stockholder thereof.

Laidlaw vs. Pacific Bank, 67 Pac. Rep. (Cal.) 897.

SAVINGS BANK—WHAT CONSTITUTES DEPOSITS SUBJECT TO CHECK—INTEREST—POWERS OF BANK.

Whether in order to avail itself of privileges conferred by statute, a particular banking institution has shown itself to be a Savings institution, which pays interest on its deposits and whose deposits are not subject to check, is, in this case, a question of fact for determination by the jury under the evidence.

A charge that "subject to check" means subject to payment without

Digitized by Google

limitation or restriction, except that the check must be presented to the bank within banking hours, on banking days, is substantially correct.

A charge that "the bank, if it did pay interest to its depositors, could agree with its depositors at what time it would pay interest, and in what amounts it would pay interest," was correct.

The act of 1889, which confers upon all Savings institutions all the provisions of the act of 1888 (which conferred on building and loan associations enlarged and additional powers), when properly construed, had the effect of conferring on Savings institutions of the class named therein the powers and privileges conferred by the act of 1888 on building and loan associations, without qualification as to when such Savings institutions were incorporated.

Dottenheim vs. Union Sav. Bank and Trust Co. 40 S. E. Rep. (Ga.) 825.

SAVINGS BANKS—POWER TO MAKE LOANS—CONTRACT—PERFORMANCE OF STATUTORY REQUIREMENTS.

A contract by a Savings bank to lend money on mortgage security cannot be made the basis of an action for a breach in failing to make the loan, when there is no report in writing by at least two members of the bank's board of investment, together with their certificate of the value of the premises to be mortgaged, as required by St. 1894, c. 317, Sec. 21, cl. 1, as a condition precedent to the making of a loan on mortgage security; for persons, dealing with such banks must take notice of their limited powers.

Gilson vs. Cambridge Sav. Bank, 62 N. E. Rep. (Mass.) 728.

WITNESSES—COMPETENCY—TRANSACTION WITH DECEDENT—COLLATERAL SECURITY—DEED OF TRUST—PRIORITIES BETWEEN CREDITORS—BANK DIRECTOR—TRANSACTION WITH BANK—NOTICE OF FRAUDULENT INTENT.

The Cashier and stockholder of a bank, who was present as clerk when its discount committee negotiated a loan to a person since deceased, by which it acquired from him collateral in connection therewith, is not precluded from testifying to the transaction by Rev. St. 1899, Sec. 4652, providing that, in actions where one of the original parties to the contract in issue is dead, the other party shall not be admitted to testify; a "party to the contract," as used therein, meaning the person who negotiated, rather than the one in whose name and interest it was made.

The president of a corporation, to secure an increase in a loan to him from a bank, delivered as collateral security notes of the corporation, and a deed of trust of its property, securing the same. The notes were made to an employee of the President, and indorsed, by the latter's direction, without recourse. The bank thereupon promised to increase his loan, and did so a few days later, by crediting the amount to him on its books. In the meantime the deed was given to him to record, and he was permitted to retain the recorder's receipt therefor, which he exhibited to the bank on the following day. Before the bank had given him credit on its books, however, the receipt which he was allowed to retain was used by him as collateral security to secure credit from a third party, who took the same in connection with a set of notes similar in all respects to those described in the deed, and which, after comparison therewith, he was induced to believe were in fact the ones

Digitized by Google

described therein. The recorded deed was afterwards delivered to him in lieu of the recorder's receipt, by means of which the borrower had obtained possession of the deed. Neither creditor knew of his dealings with the other. *Held*, that the bank was entitled, notwithstanding, to the security of the deed, as against the creditor in possession thereof.

That a borrower was officially connected with a bank as director is insufficient to charge it with notice of his fraudulent purposes in negotiating a loan.

Southern Commercial Sav. Bank vs. Slattery's Admr. *et al.* 66 S. W. Rep. (Mo.) 1066.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B.; Barrister, Toronto.]

BILLS OF EXCHANGE—DISHONOR—NOTICE OF DISHONOR.

RE FENWICK STOBART COMPANY (1902, 1 Chy. page 517).

STATEMENT OF FACTS: Mr. Higgins was the secretary for each of three companies known as the Gardar Company, the Fenwick Stobart Company, Ltd., and the Deep Sea Fishery Company, Ltd., all of which had their offices together in the same building and were closely united in their business relations. In order to adjust some outstanding matters the Fenwick Stobart Company drew upon the Gardar Company for the sum of $18,000, and afterwards endorsed an acceptance over to the Deep Sea Fishery Company, Ltd. The bill was dishonored and Higgins as secretary of the Deep Sea Company, the holders, had knowledge of the dishonor but did not notify the Fenwick Stobart Company. This latter company went into liquidation and the Deep Sea Fishery Company claimed against them for the balance due upon this acceptance.

JUDGMENT (BUCKLEY, *J.*): Mr. Higgins was the secretary of the Deep Sea Fishery Company, the holders of the bill, and was also secretary of the Fenwick Stobart Company, the drawers and endorsers of the bill. In the former character he knew that the bill was dishonored. Was that fact notice of dishonor to himself as secretary of Fenwick Stobart Company? In other words, is it true as a general proposition that a fact which comes to the knowledge of a man as secretary of one company is notice to him as secretary of the other company from the mere existence of a common relationship? In my opinion it is not. What Mr. Higgins says in his affidavit is this: "Fenwick Stobart Company never received notice of dishonor of the bill from anyone. I never gave notice of dishonor of the bill to them and I was fully aware that it never was the intention of anyone connected with the transaction that they should be liable, and that the bill was as above stated merely drawn by them at the request of and for the purpose of the Deep Sea Fishery Company, Ltd." So that here the secretary of the Deep Sea Company knew the fact under circumstances such as that it was not his duty to communicate it to himself as secretary of Fenwick Stobart Company. I think the true test is this: where a man holds a double character it is not necessary that he should write a letter from himself in one character to himself to inform himself in another character. What the court has to see is whether the information he gets as secretary of one company comes to him under such circumstances that it is his duty to communicate it to the other company. Suppose, for instance, as

Digitized by Google

secretary of the first company he learns something which it would be a breach of his duty to that company to communicate to the other company, I should certainly hold that that is not notice to the other company. It depends upon the circumstances relating to each particular case. Here he knew of the dishonor of the bill by the Deep Sea Fishery Company under circumstances which it was not his duty to communicate to the Fenwick Stobart Company. Therefore, I think there was no notification of dishonor to that company. The result is that upon that ground also the defendants, if ever they were liable, would be discharged.

JOINT STOCK COMPANY—PAYMENT OF SHARES—EQUIVALENT FOR CASH—WRITTEN CONTRACT—STATUS OF BANK AS CREDITOR OF INSOLVENT COMPANY.

MORRIS vs. UNION BANK; CODE vs. UNION BANK; UNION BANK vs. MORRIS (31 Supreme Court Reports, page 594).

STATEMENT OF FACTS: A company known as "The Anderson Trading Company" was organized, and the appellant, W. J. Morris, was offered stock therein of the par value of $5,200 upon the payment of $3,000 cash. Upon consulting his solicitor Mr. Morris was informed that the company could not sell its own stock for less than par, and an arrangement was come to that Mr. Morris should take thirty-four shares of the par value of $3,400 and should give his check to the company for that amount and thereupon should receive back the company's check for $1,400 for services which he was to render to the company. Mr. Code, Mr. Morris' solicitor, took the remaining eighteen of the fifty-two shares and gave his check to the company for $1,800, receiving back from the company a check for $800 in consideration of certain services he was to perform in negotiating with the Customs Department. Share certificates were issued under these circumstances, and Mr. Morris handed his certificate to his wife, expressing them to be her property, and subsequently he obtained certificates in the name of his wife from the company and handed them to her. The company became insolvent, and the Union Bank, to whom they were indebted, sued Mr. and Mrs. Morris and Mr. Code for the amount due upon their shares which had not been paid in cash. The court of appeal gave judgment in favor of the bank on all claims, and from this judgment an appeal was taken to the Supreme Court.

JUDGMENT (SIR HENRY STRONG, *C. J.*): It is impossible in the teeth of the statute which requires that when shares are contracted to be paid for, not in money, but in money's worth, there must be an agreement in writing, to do otherwise than to dismiss these appeals. I may add, however, that I have no doubt whatever on the evidence that, as the appellants have claimed, these shares were honestly paid for by the services rendered to the full amount of their value at least.

Now, the Winding-Up Acts entitle the creditors to insist on payment for shares in cash, or (subject to the statute requiring an agreement in writing) for money's worth, and the companies can no longer, as they could when mere corporations, make special agreements with shareholders respecting the payment for their shares. Even if the first statute mentioned above had not been passed the change wrought by the Winding-Up Act would by itself have been a difficulty in the appellants' way, but as it is we cannot, however honest

Digitized by Google

and upright the intention of the appellants was, and I believe it to have been, avoid giving effect to the peremptory language of the statute.

The appeals must be dismissed with costs.

BILL OF EXCHANGE—NEGOTIATION—HOLDER IN DUE COURSE—BILLS OF EXCHANGE ACT, SECTION 20.

HERDMAN vs. WHEELER, (1902, 1 King's Bench, page 361).

STATEMENT OF FACTS: The defendant Wheeler agreed to borrow $75 from Anderson, and at his request signed and gave to him a blank paper which he authorized Anderson to fill up as a note to himself for the sum of $75. The stamp on this blank piece of paper was sufficient for a note of $150. Anderson filled up the blank paper as a promissory note for the sum of $150, payable to plaintiff Herdman, to whom he gave it for value, without any notice to Herdman that it was a breach of his authority.

JUDGMENT (CHANNELL, *C. J.*): This whole case turns upon the interpretation of section 20, sub-section 2, of the Bills of Exchange Act; that is to say, whether this bill was "after completion negotiated to a holder in due course."

Section 20 reads as follows: "Where a simple signature on a blank paper is delivered by the signer in order that it may be converted into a bill, it operates as a *prima facie* authority to fill it up as a complete bill for any amount, using the signature for that of the drawer, or the acceptor, or an indorser; and, in like manner, when a bill is wanting in any material particular, the person in possession of it has a *prima facie* authority to fill up the omission in any way he thinks fit.

In order that any such instrument when completed may be enforceable against any person who became a party thereto prior to its completion, it must be filled up within a reasonable time, and strictly in accordance with the authority given; reasonable time for this purpose is a question of fact.

Provided, that if any such instrument after completion is negotiated to a holder in due course it shall be valid and effectual for all purposes in his hands, and he may enforce it as if it had been filled up within a reasonable time and strictly in accordance with the authority given."

It was argued that this bill of exchange was never negotiated to the plaintiff, who was an original party to it and did not take it by transfer, and therefore section 20 can have no effect in this case as it does not apply to the immediate parties to the note.

By section 96, sub-section 2, of the same act, the rules of the law merchant are to continue to apply to bills and notes except so far as inconsistent with that act, so that if the act does not expressly change the law as it was before that law governs the case. A review of the authorities before the passing of the Bills of Exchange Act does not reveal any case similar to this one.

We have to decide the whole case on the interpretation of these sections. Sub-section 1 of section 20 shows that Anderson had a *prima facie* right to fill in the note, but sub-section 2 provides that unless the case comes within the proviso at the end, the note is not enforceable against the defendant if it is not filled up strictly in accordance with the authority given, so that in all cases where the plaintiff has himself filled in his own name, he would, in order to recover, have to show that in doing so he was acting within the authority

Digitized by Google

given him by the signer of the note. But we have now to consider the important proviso of sub-section 2 above quoted, and upon consideration we are of the opinion that "completion" refers to completing "form" of the bill or supplying the wanting material particular. It is after it has been made complete and regular on its face, to take the words of section 29 defining holder in due course, and we are not therefore of the opinion that "completion" includes delivery. In this case it was delivered to the plaintiffs by Anderson and was negotiated "after completion" if what happened on the plaintiff's giving his check for it and becoming a holder for value is "negotiating it to a holder in due course."

Does negotiating to a holder in due course cover what was done in this case? Section 2 defines a holder as "the payee or indorsee of a bill or note who is in possession of it, or the bearer thereof." Notwithstanding the terms of section 29 we are on the whole not prepared to hold that the payee of a note can never be a holder in due course. But the whole point in this case really turns upon whether the bill was "negotiated" within the meaning of the proviso of section 20. Section 31 says: "A bill is negotiated when it is transferred from one person to another in such a manner as to constitute the transferee the holder of the bill."

Would this include only transfer from one holder to another, or would it include the transfer from an agent in possession of the bill otherwise than as a holder whose delivery constitutes the receiver a holder. Mere possession of a promissory note, complete and regular on its face and payable to a named payee, is not conclusive evidence of the authority of the person to deliver it to the payee. Although we are reluctant to decide against the rights of a person acquiring a promissory note, complete and regular on its face and without notice of any irregularity, we are forced to come to the conclusion that it would be unfairly straining the words if we did not hold that negotiating in the proviso to section 20 meant the transfer from one holder to another. The technical word "issue" defined in section 2 of the act expressed what was done by Anderson, and if such a case were intended to be covered by the proviso it would have read "issued or negotiated." Before the passage of the Bills of Exchange Act the present case might have been decided for the plaintiff, but we cannot consistently with the meaning of "issue" and "negotiate" in the act say that the present case is covered by the words used in the proviso.

That being so, it falls within the first part of section 20, sub-section 2, and as the authority of the defendant was not strictly followed, he is liable.

PROMISSORY NOTE—INDORSER—BILLS OF EXCHANGE ACT, 1890, SECTION 56—CHATTEL MORTGAGE—CONSIDERATION.

ROBINSON vs. MANN (31 Supreme Court Reports, p. 484).

STATEMENT OF FACTS: The facts of this case are set out in the report at page 607 of the October number of the MAGAZINE, referring to the judgment of the court of appeal, which upholds the note in question but stated that it would have been impossible apart from other circumstances to enforce the liability on the note, because the defendant George T. Mann had endorsed the note before endorsement by the payee, in this following the Canadian Bank of Commerce against Perram (31 Ont. R.).

Digitized by Google

JUDGMENT (SIR HENRY STRONG, *C. J.*): It was contended that the defendant was not an indorser and as such was not liable to the bank by whom the note was subsequently indorsed and discounted, because he did sign his name upon the back previous to the endorsement by the payee, and so his contract was merely that of guarantee, and that there being no consideration expressed in writing, the Statute of Frauds would have been an answer if the bank had sued the defendant on the note. In this case, however, the note was negotiated, and the bank were holders in due course, and consequently the transaction came under the fifty-sixth section of the act, which provides: "Where a person signs a bill otherwise than as a drawer or acceptor he thereby incurs the liability of an indorser to a holder in due course and is subject to all the provisions of this act respecting indorsers."

The effect of this section is in like circumstances to create a liability as indorser independently altogether of the principle of guarantee.

Then as to the recital in the chattel mortgage. It declares the indorsement of the note to be the consideration and sets out the note itself which is surely a sufficient compliance with the requirements of the act that the consideration should be recited.

I agree with the reasons given by their lordships in the court of appeal, but I do not agree with Mr. Justice Osler, who puts the case too favorably for the appellant when he says that the bank would have found it difficult to enforce the liability on the note against the respondent. In my opinion the respondent was clearly liable under the fifty-sixth section of the Bills of Exchange Act already referred to.

REPLIES TO LAW AND BANKING QUESTIONS.

NOTE MADE PAYABLE AT BANK.

Editor Bankers' Magazine: HOLLAND, Mich., April 15, 1902.

SIR: A depositor in this bank made a note to a manufacturing company in Grand Rapids payable at this bank. The depositor has been getting into close quarters of late, and the note has been forwarded to us for collection when due, with instructions to use every effort to collect. The note is not due for thirty days, and during that time the depositor, according to the amount of business done with him heretofore, will have enough on deposit to pay the note three or four times, that is during the middle of every week. Now, does the fact that he has made the note payable here authorize us to apply his deposits in its payment without further authority from him, and, if so, are we liable to the payee of the note if we do not do so? CASHIER.

Answer.—You have no authority to do so. The note is not equivalent to a check, and you have no authority to apply any part of your customer's deposit in its payment. In an Ohio case, decided in a *nisi prius* court, the contrary has been held (Francis vs. People's Nat. Bank, 1 Ohio N. P. 281), but the courts in Illinois and Tennessee have held differently, and though an early New York case (Griffin vs. Rice, 1 Hilt. 184) held that so making a note amounted to a request to the bank to pay it, a later case (Egerton vs. Fulton Nat. Bank, 43 How. Prac. 216) holds that such a note does not, in the absence of an acceptance by the bank, appropriate the deposit, or in any manner

Digitized by Google

change the relations between the depositor and the bank. The former may give a different direction, and the latter is bound to obey it. We would not advise you to pay the note without express authority from the payor.

FORMS OF BANKS.

Editor Bankers' Magazine: NEW YORK, N. Y., April 28, 1902.

SIR: In a city of ten thousand population in Michigan, where manufacturing is the paramount industry, what would you advise as to the best form of organization for a bank, a State bank, a National bank or a trust company? There are two banks already in the place, a National bank and a State Savings bank. Would a trust company be apt to pay in so small a place? How does it differ from a bank? Can it do everything a bank can, and more, or is it more limited in its powers than a bank? CAPITALIST.

Answer.—There is considerable difference between a bank and a trust company. The powers of a trust company, while somewhat broader than the powers of a bank, are not strictly banking powers. The trust company, like the Savings bank, pays interest upon deposits, but its deposits are strictly loans not subject to check. It may not issue its own notes for circulation, nor does it buy or sell exchange in the ordinary course of dealings. In directions that are not akin to banking its powers are much broader, and extend outside the monetary realm into real estate transactions, trusteeships, and the conduct of property interests of all kinds. The exercise by a trust company of some of the functions of a bank does not make the company a banking institution, nor lay its officers liable to prosecution for violating the banking laws. (3 Am. & Eng. Ency. of Law, 2d Ed. 791.) Thus it has been held that a law which forbids the officers of any banking institution to receive deposits when such institution is insolvent does not control the officers of a trust company which is permitted by its charter to exercise some of the functions of a bank. (State vs. Reid, 125 Mo. 43.) There are statutory requirements, however, which trust companies must comply with, with which banks are not burdened. In Michigan, in a city of the size you mention, you must have a capital of $150,000, one-half of which must be paid in on incorporation and the balance within six months. This is much larger than the usual capital and surplus combined in cities of that size, and you will have to do that much larger business to pay the same dividends.

REDEEMING MORTGAGES.

Editor Bankers' Magazine: BUFFALO, N. Y., April 7, 1902.

SIR: What is the redemption period under mortgage foreclosure sales in Wisconsin? JASPER.

Answer.—As in most States, mortgages in Wisconsin are foreclosed in two ways. If the mortgage is foreclosed by advertisement the period of redemption extends for one year from the date of sale; while in foreclosure by action at law no sale may be made until after the expiration of a year from the date of the judgment, and the property may be redeemed at any time before sale by the payment of the judgment and costs, with interest.

STORE CHECKS.

Editor Bankers' Magazine: TEXARKANA, Arkansas, April 9, 1902.

SIR: I am interested in a store in this State handling general merchandise. The principal industry there is a manufacturing concern, which also operates a general store. On the 15th of each month it pays its employees in cash, but many of them cannot wait until that time, depending on their daily labor, and to them the company pays their wages as requested

Digitized by Google

in store checks, which they can trade out at the company store. As a result the men have been forced to trade there, although I am selling the same goods at twenty per cent. less, for instance, a sack of flour for which I charge fifty cents costs seventy-five cents at the company store. I am informed by a Cashier of a bank here that there is a law in this State prohibiting the use of store orders, and at his suggestion I write you about it. Why couldn't I buy up these orders and force their redemption in cash? They are printed across the face, "Not redeemable in cash." MERCHANT.

Answer.—Your informant doubtless refers to the provisions of chapter 18, Sand. & H. Dig. The design of that chapter was to prevent the creation or circulation by private individuals of "any note, bill, bond, check or ticket, purporting that any money or bank note will be paid to the receiver, holder or bearer, or that it will be received in payment of debts, or to be used as a currency or medium of trade in lieu of money." Also to prevent the issuance by "any city, town, or corporation whatever of any small bills or notes, commonly denominated shinplasters." They are not "bills" and "notes" if redeemable in commodities instead of money. The statute is leveled against any attempt to create a private circulating medium or currency. Now, you say, that these orders were specifically made "not redeemable in cash." They were doubtless issued to save trouble in bookkeeping. It seems to us that these store checks are merely contracts or agreements in writing for the payment of merchandise, and under section 489, Sand. & H. Dig., they are assignable by delivery. A case in point in your own State has recently been decided, Martin-Alexander Lumber Co. vs. Johnson, 66 S. W. Rep. 924, and we believe the orders are perfectly legal.

COLLECTIONS—LIABILITY OF SENDING BANK.

Editor Bankers' Magazine: WHEELING, W. Va., April 24, 1902.

SIR: Will you give me in as little space as possible a statement of the law, as settled, as to liability of bank accepting draft for collection? What I mean is what is the liability of the bank as between it and the drawer for loss through the default or neglect of its correspondent to whom draft is sent? BANKER.

Answer. —On this question the law is not quite settled. What is regarded as the best doctrine is that the forwarding bank is responsible for default of correspondent. This is sustained by a long list of authorities including Federal cases and cases in England, Michigan, Minnesota, Montana, New Jersey, New York and Ohio. The theory is that the correspondent, or collecting bank, is the subagent of the forwarding bank and that there is no priority of contract between it and the depositor so that the latter can maintain an action against it. On the other hand there are many weighty authorities, including the courts of Connecticut, Illinois, Iowa, Kansas, Maryland, Massachusetts, Mississippi, Missouri, Nebraska, North Carolina, Tennessee and Wisconsin which hold the correspondent bank is the agent of the depositor, and is directly liable to him for his default, and that the forwarding bank cannot be held liable therefor.

EFFECT OF INDORSEMENT AND TRANSFER BY COLLECTING BANK.

Editor Bankers' Magazine: ST. LOUIS, Mo., April 17, 1902.

SIR: B bought a lot of machinery from the D Manufacturing Co., at a cost of $10,000, for which he executed to said D Manufacturing Co. his three several promissory notes, for $3,333 each, payable in eight, sixteen and twenty-four months, respectively, after date, with interest at eight per cent. per annum at the N Bank. To secure such notes he executed a chattel mortgage to said Manufacturing Co. on said machinery. Before the maturity of either of said notes the Manufacturing Co., by indorsement in blank, transferred said notes to M. Some time after the execution of said mortgage B executed a second mortgage to H, trustee, for

Digitized by Google

the benefit of the A Company, which last-named deed of trust covered the real estate and building as well as the machinery therein. Upon the maturity of the first of said notes M placed the same in the hands of the P Bank, for collection, and it was sent by said P Bank to the S Bank. The S Bank presented the note for payment to the maker, but it was not paid by the maker. Shortly thereafter a representative of the N Bank appeared at the S Bank, and offered to take up the note on behalf of the said A Company, on condition that the S Bank would transfer to the A Company said note by indorsement, without recourse, which the latter bank at first hesitated to do; but, the said representative of the N Bank declining to take the note on any other condition, the Cashier of the S Bank, after consultation with its President, accepted the money, and indorsed the note, as Cashier for said bank, without recourse. The money thus paid was furnished by the A Company, and the purchase was made by it on its own account, and the note taken by it as security. The money was thereupon transferred by the S Bank to the P Bank and by the latter paid over to M. At about the time of the maturity of the remaining notes in the hands of M, he visited B's mill for the purpose of seeing about the collection thereof, when he learned for the first time of the facts and circumstances under which the money was obtained for the first note, and the fact of the transfer by the S Bank to the A Company. Up to this time M had been under the impression that the note had been paid by the maker, B. Though now past their maturity, B has failed to pay either of the two remaining notes. The A Company some time ago foreclosed the deed of trust given to it by B, and at the sale of the B estate, B having died, became the purchaser of the property described in the deed of trust, and received the trustee's deed therefor. Now the B estate claims that the machinery described in the first chattel mortgage was of the nature of permanent fixtures, appurtenant to the building, the title to which passed under the deed of trust under which it claims, and, on the other hand the A Company claims that it became the purchaser and the owner of the first-named note, and that the same is a lien on said property secured by the chattel mortgage, and that it is entitled to have same satisfied out of the proceeds under the chattel mortgage. Are either of these contentions true? If so, what remedy has M?

C. C. A.

Answer.—We are inclined to think that the contention of the A Company is correct. The indorsement of a note without recourse, after maturity, by a bank, to whom it was sent for collection, to one paying full value therefor, but who prior to said transfer was a stranger thereto, is not a payment of the debt, but is a valid transfer of the note with its security. This being true then, in the case in question, the note first maturing is entitled to priority of payment out of the mortgaged estate. As to the contention of the B estate, we think this untenable. In executing the mortgage, the mortgagor recognized the machinery as personalty, and he would now be estopped, as would also all claiming under him, from claiming differently.

PAYMENT OF FORGED CHECKS.

Editor Bankers' Magazine: PITTSBURG, Pa., April 25, 1902.

SIR: The X bank opened an account with M as a depositor, and from that time, for a period of over two years and a half, his deposits, made in the ordinary way, aggregated over $622,000. During all that time M had in his employ one B as confidential clerk and bookkeeper to whom he especially intrusted the business of attending to his bank accounts. That duty included making deposits, occasionally handing in the bank book to be written up and balanced, and when that was done, the further duty of receiving the canceled checks, etc., with the payment of which the bank had credited itself, and delivering the same to M for examination, approval, etc. In the same connection it was the duty of the clerk to verify the bank book, as the same was written up and balanced, from time to time, by the bank, and report the result to M. This he professed to do, but, in fact, he falsely reported that the balance was correct. For nearly the whole of these two years B forged checks amounting in all to over thirteen thousand dollars, which were paid by the bank and charged to M in his bank book. For the purpose of concealing forgeries, B falsified M's books, and by misadditions and missubtractions forced the balances in the check book so as to make them agree with those in the bank book. During the time M's bank book was balanced twelve times. The first settlement included two forged checks—one for $300 and the other for $200. The last settlement included a $300 forged check. At each settlement the amount of each check, not previously settled and canceled, was entered on plaintiff's bank book, by the bank as a charge against him, and the book, together with the checks, was delivered to his clerk for the purpose

of examination and verification. Can M now, after the two years since the first forged checks were honored by the bank, recover from the bank the amount thus paid out on forged checks? J. M.

Answer.—No objection having been made at the time of the first settlement, the bank had a right to assume that everything was correct, including the two checks purporting to be signed by M. His silence was tantamount to a declaration to that effect; and, afterwards honoring checks signed by the same person, the bank had a right to consider the fact that these signatures had been at least tacitly recognized by the plaintiff as genuine. If at the time of each settlement the forged checks had been examined by M, or if the number and the aggregate amount of the checks had been compared with the number and amounts of the checks separately entered in the bank book, or if the checks had been compared with the stubs of the check book, the forgery would have been discovered. M certainly cannot recover from the bank, as he alone is responsible for his failure to reject the checks within a reasonable time.

REAL ESTATE AGENT'S COMMISSION.

Editor Bankers' Magazine: **CONCORD, N. H., April 29, 1902.**

SIR: In 1901 E placed the sale of his farm with P, agreeing to pay him $100 commission if he sold it. In August, 1901, P produced a customer, one M, with whom an agreement in writing was made, by which E agreed to sell the farm to M, and convey it by a good and sufficient deed, on or before October 15, 1901, for $2,250, and M agreed to purchase it on those terms. The agreement also contained this provision: "It is hereby agreed, in case of a failure on the part of either of the parties to this agreement to perform any stipulation or agreements by him to be performed, that the party in fault shall pay to the other party the sum of $200 as liquidated damages." M declined to take the property and paid E the $200 damages, whereupon the agreement was canceled. P demanded the $100 commission of E and the latter refuses to pay it. Is P entitled to this commission? BROKER.

Answer.—Yes. The case stands no differently than it would had E conveyed to M by deed, taking a mortgage back for the whole purchase money, and subsequently released the mortgage and taken the farm back upon payment of $200.

ESTOPPEL.

Editor Bankers' Magazine: **ST. LOUIS, MO., March 17, 1902.**

SIR: B executed a note to the S bank, signing his own name as maker, and as indorser the firm name of B C "and" Co., under which he did business alone. The note was from time to time renewed until B organized the B C "Saw" Co., nearly all the stock of which he owned, and of which he was president and his son vice-president and secretary and treasurer. All the property owned by him in the old business was transferred to the new company, which did not, however, agree to pay the debts of the old business. Afterwards the note was three times renewed, B signing his own name as maker and the name of the new company as indorser. It was then protested, and notice given to the new company's bookkeeper, who was also a director, but no steps were taken by the new company to disclaim liability. Afterwards a new note was given by B at the request of the bank with the name of the new company as maker and with his own name as indorser. The new company never by word or act, except through B's unauthorized conduct, assumed to pay the indebtedness. Can the bank recover from it? DIRECTOR.

Answer.—If the bank was honestly induced by the facts as stated, and by the new company's failure to pay any attention to the notice of protest, to believe that it had assumed to pay the debt, we think the new company is estopped to claim otherwise and the bank can recover from it.

RESPONSIBILITY OF A BANK FOR THE ACTS OF ITS OFFICERS.

Perhaps banking institutions are the only corporations or business concerns in which their officers stand in peculiar relation to the parties with whom they do business, as well as to the concern which they represent. In a mercantile house the executive officers are responsible only to the board of directors of the corporation for their acts and their misconduct in office can only affect the interest of the corporation.

With the bank or trust company, however, the case is a different one. Here the President, Cashier and other persons holding managerial offices have a duty to the depositors and persons with whom they do business. They stand in a fiduciary relation to those who have placed confidence and trust in them as representatives of an institution, and in many cases they can be held to account by the client of a bank for any misconduct in the management of his affairs.

Often, however, outside parties dealing with the bank through its officers have sought to hold the bank itself for any loss they may have sustained through the wrongful action of the banking officer.

There have been numerous cases upon this point, and the question seems to have been a difficult one for the courts to solve. The courts readily admit that some one is liable, but they hesitate to say that in all cases of official misconduct of its officers the bank itself is responsible. One of the principal rules of the law of agency is, "The principal is liable for the wrongful, fraudulent, or deceitful act of the agent committed within the scope of his authority," but the courts have distinguished the cases where there was authority to commit a fraudulent act from cases where the authority was merely to transact business in the course of which the fraudulent act was committed. The Cashier of a bank who steps outside of the usual duties of a Cashier to transact businesss in connection with his office and acts fraudulently therein, commits an act for which the bank is not responsible, since he was not called upon to exercise the authority which he undertook.

Bank Held not Liable for Officers' Acts.

An interesting case upon this subject was decided not long ago in Arkansas, entitled Grow vs. Cockrill, Receiver of the First National Bank, of Little Rock. In this case it seems that one Jennie Grow had a credit in the First National Bank, of Little Rock. She wrote to the President of the bank personally asking him the rate of interest the bank would pay for the loan of her money. She was answered by the Cashier, who informed her that the bank paid four per cent. on savings deposits, and the Cashier also mentioned that he could obtain a loan for her money, amounting to $1,000, at nine per cent. for a year secured by the stock of his bank. The plaintiff, Miss Grow, accepted this offer and asked the Cashier to loan the money from the bank for her which was done. She received a note for $1,000 made by one G. R. Brown, who assigned to her certain shares of stock in the bank owned by him, as security. The bank was wrecked about three months afterwards through mismanagement of the President, and Brown became insolvent. The plaintiff then sued the Receiver of the bank for $1,000 loaned by the President and the Cashier for her, claiming that her money never left the bank and that the bank President had merely had a worthless note sent her secured by stock which he knew to be worth-

Digitized by Google

less in order to keep the money in the bank, as it had never been transferred to Brown.

The case came up in the circuit court, where it was decided in favor of the Receiver, upon which the plaintiff appealed to the supreme court of the State. The Chief Justice held that the bank would have been liable for the acts of its officers only when those acts were committed as part of their authorized duties, and declared they did not think that the acts of the President and Cashier of the bank in this case were within the scope of their authority. "The service the Cashier undertook to render for the plaintiff," he said, "seemed to have been done gratuitously, done as an accommodation to her; there is no showing that the bank by its charter had authority to transact such business as that of loaning the money of its depositors or other people in general." He further held that the business of loaniug money of others or to borrow for others is not the business in which a National bank can lawfully engage.

The decision of the court therefore was that since the President and Cashier had acted outside the scope of their usual and proper duties the bank itself could not be held responsible for their wrongful acts. And therefore since the Cashier of this bank had no right to make the loan for the plaintiff, she lost her case against the bank.

Another case somewhat similiar appeared in Maryland, in which the suit was brought against a National bank for damages growing out of the purchase of certain bonds which the teller of the bank had sold to a man and had falsely represented to be what they really were not, much to his injury. The plaintiff maintained that the bank was engaged in buying and selling these bonds and was therefore liable for damages sustained by the false representation of the teller as one of the agents of the bank. In this suit the court held that the bank had no authority to transact business of that kind and that the teller was therefore not acting within the scope of his authority when he committed the misrepresentations complained of, and as a result Wackler lost the suit and the bank was held not to be liable.

When the Bank is Liable for its Officers' Acts.

From the two cases mentioned above the general rule of law upon which a bank would not be held responsible for the wrongful acts of its officers can be understood. But there are cases where the bank will be held responsible for such wrongful acts. One of the latest decisions of the United States Supreme Court stated that the bank can be held responsible for acts which are not strictly within the corporate powers but which were assumed to be performed for the corporation and the corporate agents who were competent to execute the powers actually exercised. Of course where a bank acts fraudulently by order of its board of directors, even in matters outside of its usual scope of business, it can be held responsible for damage done to individuals who are injured by such fraud. But we are speaking here of the liability of banks on the wrongful acts of its agents who have not been expressly authorized to act as they did.

In a comparatively recent case decided by the United States Court of Appeals a question of this sort was decided. It seems that in Louisville, Ky., a certain fire insurance company was organized. The company made application to the Insurance Commissioner of that State for a license to do business, alleging that it had a capital of $200,000 and a surplus of $48,000, all of which was on deposit in a National bank, in Louisville, subject to check. The Commissioner applied to the bank for confirmation of this statement, upon which the Cashier made a sworn certificate to the Commissioner that the amount of said capital and surplus was actually on deposit at his bank. As a matter of fact neither the capital nor the surplus was in the bank nor was there any capital or surplus in existence. The Cashier had conspired with the

Digitized by Google

promoters of the insurance company in making the false certificate for the purpose of obtaining the deposits of the insurance company for the benefit of the bank. Upon the showing of the Cashier, a license was duly issued and the insurance company began to do business and advertised its stock for sale. The insurance company placed its stock upon the market, and through newspaper and other advertisements gave the full amount of its capital and surplus and appended a certificate of the bank to that effect. One H——, relying upon these advertisements and statements, purchased eighty shares of the capital stock of said insurance company at $125 a share, making a total of $10,000, all of which was paid for in cash and which was duly issued to him.

After existing for a little over a year the insurance company was forced to make an assignment and became insolvent, rendering the stock absolutely worthless. H—— then discovered that the insurance company was worth nothing, having no real capital stock nor surplus, and thereupon began suit against the bank for the fraudulent statement of its Cashier which had induced him to purchase the shares of stock.

In the United States Circuit Court the verdict was given to the bank and the plaintiff appealed his case to the Court of Appeals. The opinion was delivered by Judge Taft, who held that if a bank, in order to increase its deposits, makes or causes to be made false statements concerning the financial condition of one of its customers or depositors to a third party for the purpose of misleading that person to his injury, then the bank is liable in deceit for the losses sustained, and he declared that the giving of such information to third persons or to the public at the instance of the customer or depositor was not beyond the scope of banking powers. The act of the Cashier was really the act of the bank, inasmuch as the board of directors were cognizant of what was going on, and by their silence acquiesced. The Cashier's statements were not alone for the benefit of the insurance company, but for the benefit of the bank as well, which made the fraud a personal one from which it hoped to gain.

The sum and substance of the decision was that since the Cashier had lent the influence of the bank to a fraudulent purpose to mislead others and to deceive prospective investors, all of which was for the benefit of the bank, that therefore the bank must be held responsible for any injury it may have caused to persons by reason of its misrepresentation. The case was reversed and H—— was permitted to recover.

From the cases above cited, the distinction as to when a bank will or will not be held responsible for the wrongful acts of its officers can be readily understood.

EMANUEL T. BERGER.

VICTORIA SAVINGS BANKS.—The annual report of the Savings bank of the State of Victoria, Australia, for the year ending June 30, 1901, shows that the total amount of depositors' balances on June 30, 1901, was £9,662,006 14s. 1d., being £551,213 17s. 5d. greater than on June 30, 1900; the increase being made up of excess of deposits over withdrawals, £352,450 0s. 2d., and the amount of interest, £198,763 17s. 3d., added to depositors' accounts during the year.

VALUE OF ALASKA PRODUCTS.—Since Alaska became the property of the United States, the value of the product of her fisheries has been over $70,000,000, furs $34,000,000, and the yield of her gold mines approximately $40,000,000.

BANK BOOKKEEPING.

[An Address before the New York Chapter of the American Institute of Bank Clerks, March 18, by WALTER L. DAY, of the Chemical National Bank, New York city.]

MR. CHAIRMAN AND FRIENDS: The subject on which I have the honor to speak to you this evening—Bank Bookkeeping—covers a broad and inexhaustible field, as there is the bookkeeping of National, State and Savings banks, loan and trust companies doing a general banking business, and the private banker, each of which has its own particular method and special requirements for keeping books, according to its size.

I shall confine my remarks to the books of a National bank, with a capital, surplus and undivided profits of seven million, five hundred thousand dollars, and average net deposits of about twenty-six million dollars, doing a general commercial and collateral loan business.

The principal sources from which a bank obtains its funds for the transaction of business are capital, surplus and undivided profits, its circulating notes and deposits. It is the skillful management of these funds that would procure some of those "Twenty-five-thousand-dollars-a-year" positions that ex-Secretary of the Treasury Gage had to offer in a speech at Denver some few months ago.

Bookkeeping is the science of recording business transactions in a systematic manner. When one embarks in an enterprise, in whatever line of business, good administration and thorough bookkeeping are of the utmost importance; and in the banking business it is especially so, as the moneys and securities there deposited are for safe keeping, and are the property of other individuals for which the institution is liable. So it is necessary not only that all transactions should be recorded in a clear, simple, concise and systematic manner, but also that every precaution be taken to guard against the possibility of errors, either on the part of an officer or employee who has anything to do with the books of the bank or is in touch with other departments of its business.

SOME OF THE BOOKS USED IN A NATIONAL BANK.

To begin my brief description of the books used in a National bank, I beg leave to remind you that I offer for your consideration an outline sketch only, as my time will not admit of details. I will first mention the books that are usually in the custody of the officers, viz., the stock ledger, transfer book, dividend book, minute book and daily statement book.

The stock ledger is a record of the names of each shareholder and the number of shares held by same, and the stock certificate number. The companion book to the stock ledger is the transfer book, which name describes its uses.

The dividend book is a record of names and amounts due each shareholder at date of declaration of dividend, or date of closing books for transfer of stock.

The minute book is a record of the attendance of the board of directors at its regular and special meetings, and the business transacted.

The daily statement book is a summary of the assets and liabilities of the bank, from which the required reserve is computed, and the weekly clearing-house statement is prepared.

The profits of banking are derived chiefly by the charging of interest on loans and the discounting or buying of commercial paper.

Digitized by Google

The principal books used in the loan and discount department are the loan book, discount register (sometimes called the "offering book"), bill ledger, and ticklers. The loan book is a register or record of demand and time loans on collateral (other than collateral loans discounted, which are sometimes entered in the discount register); in either case the collateral is fully described in the register.

The discount register is a record of name of discounter, a complete copy of the note discounted, its maturity, number of days to run to its maturity, interest or discount charge and place of payment; if payable at a point where exchange is charged, the amount of exchange is recorded and mail time. The sum total of these charges is deducted from the face of note and proceeds placed to dealer's credit. The face of the note is charged on the general ledger to bills discounted account and the deductions, such as exchange and interest, are credited to discount received and exchange account.

The bill ledger is a record of notes that are discounted for depositors; each depositor or discounter having a separate account therein. In order that at any time the total amount each discounter has obtained can be quickly ascertained, notes purchased or discounted for others than depositors are recorded under name of payer as a usual custom.

The ticklers are a record of all notes, arranged according to their maturity, so that all notes maturing on the same date are classified together.

My reason for speaking of these books in the discount and loan departments is because I consider them some of the books of original entry which contain a complete narrative or history of the business. The entries in these books should be so fully worded and descriptive as to explain themselves to strangers after a lapse of years, and still further, if litigation arises, these are the books that must be relied upon in a court of law. As the proceeds of these departments go to the credit of the accounts in the general ledger, known as interest account, and discount received, these two accounts become the "meter" by which the profit or loss is determined—in fact the *life-blood* of the institution passes through these departments.

The Primary Purposes of Bookkeeping.

We are to understand that a bank on entering business has two distinct objects in view—one is to know whether the business is being conducted on a profitable basis; the other, is to be constantly aware of the state of the accounts of its depositors, and of the accounts to whom the bank sends its various items for collection. To accomplish these objects, we have: First, the general ledger, which is the grand final book of accounts and results. This book contains in the most summary form possible the entire history of the business expressed in dollars and cents. In it, all the dealings with the same account, and all the transactions resulting from the same object, are brought together on one page under a proper title; the purpose being to show at a glance all the dealings pro and con, debit and credit, and especially the results of those dealings and transactions. Every transaction is entered (posted) twice in the general ledger—that is, it is posted to the debit of some one account, and, simultaneously, to the credit of some other account, and this is why the system is denominated "double entry." But the principle of duality is carried further: all the accounts on the general ledger belong to one or the other of two divisions; one of which comprises only those accounts that are introduced and kept as against the business itself, in order to show its results; and the other, those accounts which relate purely to the position as debtor or creditor that outside parties may at any time occupy towards the bank.

A City Bank's Method of Bookkeeping.

Through the courtesy and by permission of our officers, I will endeavor to give you an outline of how we run our ledger system. Our bank keeps eight separate

Digitized by Google

ledgers of original entry; viz., four city ledgers, the National bank ledger, State banks and bankers' ledger, collection ledger and the country ledger. This last one comprises all individual and commercial accounts not located in New York city.

In the keeping of these ledgers we endeavor to maintain the greatest accuracy, simplicity and clearness. Theoretically, one might be justified in saying there should be no errors, but by every day actual experience, we find they will sometimes creep in upon us. (We handle about twelve thousand checks each day in our exchanges, and about three thousand checks in the collection department.) So, to protect our depositors, and ourselves as well, from embarrassing circumstances, and reduce the possibility of errors to a minimum, we have for each set of accounts a duplicate set of ledgers—that is, the ordinary depositors' ledger with a corresponding daily balance or skeleton ledger.

In the city department, the bookkeeper of the depositors' ledger makes his credit postings direct from the deposit tickets, and the debit postings direct from the checks; if there are more than one check for an account, he has to list them and post the total amount to the debit of the account.

The balance ledger bookkeeper makes his postings direct from the books, obtaining his debit cash books from the check clerk, and his credit books from the receiving and note teller. After the postings are completed for the day, for each set of accounts, the work is then called off by a balance bookkeeper to his corresponding depositors' ledger, and if there be any errors in posting on the part of the bookkeepers, or if any of the cash books should be written in wrong, the error is detected at once.

When a pass-book is balanced and before it is returned to the depositor, the balance is compared with the balance ledger, the bookkeeper of which places his initials over same.

The ledgers having the out of-town accounts vary a little from the system of proving the city ledgers, as we have a method of proving them by the accounts-current sheets.

Items received for collection other than cash are recorded in the registers in the collection department, in minutest detail, and credited to the depositor when advice of payment is received. This department is divided into city and foreign.

The teller's books: Paying teller, proof book, and certification book and memo. book between tellers.

The proof book shows the cash classified, the certification book needs no detailed explanation. The receiving teller has cash books showing depositors' gross deposits and proof book which contains the total amount to be charged each member of the clearing-house, the total of city items other than clearing-house items, and total of foreign cash items received and money classified. The note teller has cash books in which are entered all records of mail received for credit of depositors, and proof book is similar to that used by receiving teller, and several books for memo.

As all bank dealers have credit balances, the aggregate individual ledger balances constitute the credit balance of that account on the general ledger, termed: A to E, F to K, etc., etc., to which all payments and receipts of cash by the bank are debited and credited. The balances of these ledger accounts are reported each morning by the general bookkeeper to the balance ledger bookkeepers for comparison with the latter's trial balance, as the business of the bank cannot proceed with safety until the work proves—the joy and delight of every bank clerk.

Those of us who occupy the humble position of bookkeeper may take comfort in the fact that some of the most talented bank officials in this country were at one time on that rung of the ladder, known as a bookkeeper. It is the man who makes the position—and not the position the man. Opportunities sometimes come to us; let us qualify ourselves so that we may be equal to our opportunities.

NOTES ON FOREIGN EXCHANGES.

[Read before the Scottish Society of Economists, by WILLIAM GRAHAM, Secretary Union Bank of Scotland, Limited, Edinburgh.]

The foreign exchanges deal with the relative indebtedness of two or more countries, and may be defined as a kind of automatic or self-adjusting clearing-house—the innumerable transactions between nations practically adjusting themselves through a few centres, as automatically as in a clearing-house, with this difference, that while the balances of the "clearing" are periodically declared and settled in some form, the balances of exchange are never brought to a conclusion, but go on, year after year, adjusting themselves to a common plane, as the waves of the ocean follow one another in endless succession, now sinking to a calm, now rising to a storm, but in general result ever tending towards equilibrium or balance.

While these balances can never be fixed in amount, their volume perpetually manifests itself in the movements of the rates of exchange, above or below par. When the rate of exchange is below par, the balance is supposed to be unfavorable to that nation whose money is below par, and interest must be raised, or goods exported, or imports cut down, until the rate is again normal. When the rate is above par a favorable balance is indicated, implying that exports have been heavy, or foreign investments and trade profitable, whereby moneys are due to that nation by other nations.

Paris is the exchange centre or clearing-house of France and the Latin countries, Berlin and Vienna of Germany, New York of North America, and London of the British Empire and partly of the world, where millions of debt are balanced by contra millions, any excess of the one over the other instantly showing itself in a rise or fall of the rate of exchange, which no sooner appears than its very publication (in normal circumstances) sets certain operations into action which reduce the inequality once more to equilibrium.

It is possible for two persons to exchange commodities and set off the value of the one against another, but such settlements fall under the category of compensations or set-off—they are not operations of exchange in the limited sense in which that word is here used. True exchange requires at least three persons; as, for example, where a debtor M'Gregor, a Glasgow merchant, owes to Young, his London correspondent, £100. But M'Gregor has in London a debt due to him by Jones, an export agent, also of £100. If M'Gregor remits to Young an order on Jones for the sum of Young's debt, the payment of the order by Jones completes the exchange operation. The same set of circumstances occurs each time—say an Edinburgh merchant having a London bank account pays a debt due by him to some other house by a check on his London bank. Here there are two debts and debtors, and one creditor. In the more complex foreign exchanges there are four principals. A Berlin banker is due £1,000 to a London banker, and a Hamburg merchant has due to him £1,000 by a Birmingham dealer. If Hamburg draws a bill on Birmingham and sells it to the Berlin banker, the latter remits it to his London creditor, and the operation is complete when our London friend collects the sum of the draft from the Birmingham dealer. Or, London may draw on the Berlin banker and sell his draft to the Birmingham man, who remits it to his creditor in Hamburg, he in turn col-

Digitized by Google

lecting it at maturity from the Berlin financier. Here also there are two debts and debtors, but two creditors.

Exchange in its wide economic sense covers all exchanges of commodities, but the use of the word in foreign exchanges has no such wide meaning, but is limited to the questions arising in the monetary settlement of such exchange of commodities or of incorporeal interests.

Exchange in this limited sense was better understood by our ancestors of 1700 or 1800 than in this day; and this for the reason that an inland exchange was then systematically carried on under the same principles as now regulate the foreign exchange. Indeed, so much was an inland exchange a part of every merchant's business, one or two centuries ago, that it was not then usual to apply two different names to the two classes of exchange. Such transactions were simply those of "buying or selling exchange" or "'Change," whether on London, Cadiz, or Inverness. Since then, "exchange" has become in public or non-banking estimation wholly associated with our foreign monetary settlements, while the mutilated "change" has fallen from its high estate to the humble level of the shopkeeper's till.

It is easy to trace the causes which have banished the idea of an inland exchange from the popular mind. If the British public were to awake some morning to a country void of railways, canals, roads, or banks, dependent for all intercommunication or financial correspondence on drove roads, or lumbering wagons, or a few merchants here and there in place of banks, the present generation would soon realize the existence of, and acquire facility in the conduct of inland exchange.

Sir William Forbes, in his "History of a Banking House," states that the business of his predecessor, Provost John Coutts, about 1744, was in "corn, buying and selling goods on commission, and negotiation of bills of exchange on London, Holland, France, Italy, Spain and Portugal. The negotiation of bills of exchange formed at that period a considerable part of the business of Edinburgh; for there were then no country banks, and consequently the bills for the exports and imports of Perth, Dundee, Montrose, Aberdeen, and other trading towns in Scotland, with Holland, France, and other countries, were negotiated in Edinburgh." He adds: "I see many notices of the difficulty at that time of effecting money transactions of any considerable extent in the country towns of Scotland, a sure proof of the utility of provincial banks."

As another example of the estimation of "exchange," we may note that about 1700, when the Bank of Scotland sought for some means of enlarging its operations, so important was this business deemed as a source of profit, and so little did they then foresee later methods of banking, that branches were opened in Glasgow, Dundee, Montrose, and Aberdeen for the sole purpose of increasing their note issues through dealing in "exchange," and when they found the business "unsafe and improper" they closed the branches and withdrew to Edinburgh without further effort. * * *

After the wreck of 1745, trade expanded with the increase of road-making, banking and manufactures. As in foreign exchanges at the present time, the "bullion points" limited the variations in the rate of exchange above or below par; that is, no debtor wishing to remit money to his creditors through a banker or exchange dealer would pay more to the latter for his bills or drafts than the amount of the debt, plus the cost of sending a bag of coin to the creditor's house. Thus the cost of transmitting bullion became the limit of exchange variations between various towns and districts, as it still does between different countries and nations.

Occasionally other factors had to be taken into account. For example, a metallic currency whose value has been lowered by clipping or abrasion to such a degree as that of 1690 or 1750 could not be accepted at the same exchange valuation as new coin. The condition of a depreciated paper currency is simply an extension of the

Digitized by Google

same example. A notable instance of this evil occurred in Scotland about 1760. A slight error had been made at the beginning of the century in the Mint "tie" between silver and gold, by which silver was slightly undervalued: as a result it was exported abroad, where its true value was got. The Government neglected to alter the tie or to coin any new silver, and caused the people incessant worry for more than a century by failing to supply a sufficient currency. In England thousands of tokens were issued; and in Yorkshire and Scotland immense quantities of paper money were emitted by all classes of tradesmen and shopkeepers.

Owing to certain legal decisions, holders of these notes could not then enforce payment, and as they were useless as means of settling external debt in foreign exchanges—say with England, then almost a foreign country to Scotland—any coin which existed was at once used as a remittance, and exported. In these circumstances a metallic currency ceases to be valuable as such, or rather becomes more valuable as merchandise, being highly suitable for exportation. In the ensuing absence of coin, the latter ceases to be the standard currency, and its place is taken by the paper currency. As none will give full value for such paper, it falls in value in relation to all other merchandise, bullion or coin included, and as a consequence all prices, again including that of bullion, rise. In this position it is more correct (though not customary) to say that notes are at a discount than that gold is at a premium, because gold and silver have simply maintained their relative value with other commodities. It is the paper which has lost its place. The "bullion points" are then further separated the one from the other by the amount of depreciation in the paper currency. Indeed they cease to act, for coin being practically gone from the country, some other means of settling the foreign exchanges have to be found.

The Act of 1765, which prohibited notes under £1 and granted a rapid legal remedy on dishonored notes, speedily removed the causes of trouble, and reduced the exchange on London within the bullion points, beyond which it only once afterwards oscillated, in 1772.

In the early years of this period, 1760 to 1765, when the exchange between London and Carlisle was at par, that between Carlisle and Dumfries was occasionally £4 per cent. against Dumfries. The London exchange was sometimes as much as £5 per cent. against Scotland, or £4, 5s. per cent. beyond the bullion point of the time.

Coming down to 1820, the exchange from Inverness on London was equal to the interest on the sum remitted for sixty days, while from Edinburgh on London it was forty days—equal in cash terms to about 15s. per cent. and 10s. per cent. respectively for drafts on London from Inverness or Edinburgh.

The gradual improvement of communication, and above all the restoration of the coinage and alteration of the currency system in 1816, decreased the cost of transmitting gold; but owing to the prolonged financial crisis following the resumption of cash payments in the years after Waterloo, the banks made no reduction in their rates for exchange on London. They were not, however, long permitted to enjoy the unnecessarily high rate. An Englishman, Mr. John Maberley, of Shirley, a member of Parliament, appeared on the scene in 1819. He opened spinning mills in various towns, and had banks in Edinburgh, Glasgow, Aberdeen and elsewhere. In Edinburgh his office was at the corner of the North Bridge, and was recently demolished to make room for the new railway hotel. There he issued drafts on London at twenty days' date, when the other banks charged forty days. On their reducing their rate to twenty, he lowered his to ten, equal to 2s. 6d. per cent. commission, and developed a large remittance trade with London. English commercial travellers in the provinces hoarded their note collections until they came to an office of Maberley's bank. Merchants drew money from their own banks and went to Maberley to purchase cheap drafts on London. In this way the new banker's Edinburgh office collected large sums in the notes of other banks, which he passed against these banks

Digitized by Google

in note-exchange. The balances of the latter, from the smallness of Maberley's own note issue and the nature of his business, was generally favorable to him, and under the then existing arrangements for settlement of such balances he received payment in drafts on London drawn at ten days' date—this rate being allowed by the Edinburgh banks for settlements amongst themselves, though refused to the general public. Thus deprived of much of their remittance business, the banks perceived that the effect of their rival's operations was to compel them, at second hand, to lower the exchange rate on London to ten days, and they plotted for his destruction. After leading him into a long litigation, the old banks without warning refused to grant drafts for the balance of the note-exchange, and tendered gold instead—£30,000, it is said, in one day. Maberley needed paper for despatch to London by post for the purpose of meeting the many drafts he had issued. Gold could not be thus sent, and its transmission with insurance in repeated quantities disagreeably reminded the new banker of the meaning of the bullion points, for it was not then profitable to effect a gold remittance at 2s. 6d. per cent. It was not until 1862 that the cheaper transit afforded by railways led the banks to lower the par of exchange on London from twenty to fourteen days, and in 1863 to seven days, commuted for a commission charge of 2s. per cent; since then still further reduced to 1s. per cent. Thus the national system and control of the banks enabled them to make one uniform rate of exchange for all parts of Scotland irrespective of distance, just as the post office has also reduced its distance charges of former days to one rate for the whole United Kingdom.

Maberley struggled on until 1832, when business losses led to bankruptcy. His story conveys an interesting object-lesson of the danger of meddling with exchange operations without understanding their limits and the factors which control their movements.

When trading from London he had lived under conditions where exchange was invariably favorable to that city, and being thus accustomed to see drafts on the provinces sold at par or sometimes at a discount but never at a premium, he was apparently unable to understand why the reverse operation—namely, drafts from Scotland to London—should be sold at a premium, or at such a premium as the demand for them really warranted.

In normal times the inland exchange is usually in favor of the capital city and against the provinces, in ratio of their distance. London, as the centre of the United Kingdom, attracts immense funds from the provinces, which are permanently retained; for example, bankers' investments in consols, Bank of England balances, remittances of taxation, and expenses of the wealthier provincial families resident in London. These payments, not being counterbalanced by returns to the provinces, maintain the exchanges permanently in favor of the capital, and compel provincial debtors who desire to pay debts due to London to offer a premium for bills or drafts payable there; while London debtors, having no such competition to meet, may purchase drafts on the provinces at par or send their London checks direct to their provincial creditors. For these reasons, good checks on London banks may be used as remittances back to London, and are regularly sold by Edinburgh and Glasgow stockbrokers at a commission somewhat below that charged for drafts on London by the banks.

These notes on inland exchange may enable some who have not considered the subject to see why Scottish banks charge an "exchange" for granting a draft, and also why such exchange is charged by them on drafts on London, but no commission for checks on London. The word "exchange" has now ceased to have any popular meaning in connection with inland remittance, since the abolition of special charges for special distances has been effected by cheaper transit and banking facilities throughout every part of the Kingdom.

Digitized by Google

Conditions Affecting Foreign Exchange.

Turning to strictly foreign exchange, the trader is faced by a more complicated settlement, since in addition to the questions of time and distance involved in inland exchange there fall to be considered those relating to different monetary standards in other countries, the degrees of fineness of their coins, whether these be of gold or silver, rates of interest, and other less normal questions.

Reference has been made to the meaning of the expression "bullion points," and as the mere explanation of this and other technicalities goes far to throw light on the whole practice of the exchanges, the following notes may be interesting on the subject generally:

Bullion or specie points have already been named as limiting, in normal times, the variations in rates of exchange above or below par. The French exchange is a useful illustration. The par between London and Paris is £1 sterling to Fcs. 25·22½. If French debtors exceed British debtors in value of transactions—*i. e.*, if France is due us money on the balance of trade—the demand in Paris for bills on London to meet such indebtedness will be greater than the demand in London for bills on Paris, and, according to the sum of the excess and the urgency of the case, French debtors will gradually offer a higher amount of their money, above the par of Fcs. 25·22½, until they reach such figures as Fcs. 25·33, a rise of 10½ centimes per £, or a little over £4 per mille (£1,000). Beyond this, were the gold market in France quite free, the rate could not go, because £4 is sufficient to pay the freight, packing, and insurance of £1,000 of gold from Paris to London, and rather than pay a higher rate the Frenchmen would transmit gold to London. In France, however, silver five-franc pieces are legal tender as well as gold, and have thus a value in external trade which our own silver coinage does not possess. This has the effect of placing a slight premium on gold in France; so that on the few occasions in which exchanges have gone against that country it has been found that no gold was exported (although the bullion point had been nominally reached) until the rate of exchange so rose as to cover also the internal premium on gold. On the other hand, assuming that London is indebted to Paris, the competition in London for purchase of drafts on Paris compels English debtors of France to offer more and more English money, or (seeing that the British £1 is the fixed term of the exchange) to take less French money for the £1, until the exchange rate drops to Fcs. 25·11 per £1, below which our London debtor will not go, as the difference from par now amounts to eleven centimes, or £4 per £1,000, which, as we have seen, is sufficient to transmit gold to Paris instead of a bill.

The French exchange is a specially interesting study to bankers on this side of the Channel. It continues with remarkable uniformity favorable to France, to the extent that Britain is found exporting gold to France much oftener than France remits to London. This appears to be due to a number of causes, all acting in the same direction.

1. The fertility of French agriculture supplies internally much of what Britain has to import. This fact alone accounts for many million pounds in the relative exchange position of the countries with the outside world, Britain annually importing forty millions of breadstuffs, while France not only does not import but exports largely.

2. The direct exchange of goods of all kinds between France and Britain is nearly forty millions in favor of France. In 1899 we exported to France only £15,000,000, while we received from her over £53,000,000.

3. France is the head of the Latin Union, and her close geographical connection with Belgium, Switzerland, and Italy makes Paris the leading exchange market and clearing-house for all three countries.

4. British foreign trade annually amounts to £20 per head of her population,

Digitized by Google

while in France it is only about £8 per head: the difference is again in favor of an easier settlement in France.

5. French banks buy enormous quantities of foreign bills in London and on London—a kind of business which our own banks studiously, and perhaps unwisely, avoid. In the months of October and November just past, the Paris exchange was set heavily against London, sinking to Fcs. 25·08, by heavy sales of British Treasury and bank bills from Paris, this operation alone compelling the Bank of England to protect its gold stock from exportation by raising the rate of interest from £3 to £4 per cent. on October 31 last.

6. A contrast of expenditure by the French tourist in Britain with that of the Briton abroad tells at once of large sums annually expended in France and Switzerland by our countrymen, the settlement of which further helps the French exchange.

7. Lastly, the power and policy of the Bank of France tend to steady the money market in Paris and France, and give the French Bank a much greater stability than the Bank of England enjoys under the unsatisfactory regulations of the Bank Act. The necessities of the act compel many otherwise unnecessary changes of the interest rates, whereas in France rates of interest remain unchanged for years. From 1890 to 1900 the Bank of France changed its official minimum nine times, while the Bank of England's changes in the same period were sixty-six! Those of the Imperial Bank of Germany were thirty-nine. The average rate has been, for France £3, 4s. per cent., for London £3½ per cent., and for Berlin £4, 4s. per cent. The figures already given of the balance of exports and imports show that the Paris-London exchange is peculiarly liable to movement from purely financial operations apart from exchange of commodities, and it is this which makes it so much safer as a guide to the probable course of interest in London than Government returns of mere export and import.

Turning to another exchange expression: midway between the bullion points is the Mint par or parity of exchange. This is arrived at by comparing the quantity of pure gold or silver in the standard coin of one country with that of another. Thus the grains of pure gold in the British £1 are equalled by the grains of pure gold in the Fcs. 25·22½ of France, by the twenty marks forty-three pfennige of Germany, or $4.87 of the United States. All the nations of the Latin Union would have the same rate as France were they on a metallic basis, which notoriously some of them are not. Belgium and Switzerland use francs; Italy, lira and centisimi; Greece, drachmas; and Spain, pesetas—although the latter exchange is usually quoted in British pence to the duro, or silver dollar, of five pesetas.

These pars are called the nominal exchanges, as distinguished from the real exchanges; just as shares of a company are said to be of the nominal or face value stated on the share certificate, while the real value is their selling price in open market at the moment of a sale. Thus the real exchange is the exchange rate for each day.

The exchange terms of a country may be either fixed or movable. In the French and German exchanges the British pound is the fixed term, while the francs and marks are the movable or fluctuating terms, as a greater or less number of the latter is given for the former. In the Spanish and East Indian exchanges, the Spanish dollar or duro and the Indian rupee are the fixed terms, exchangeable for a fluctuating number of British pence. Thus the same country may have both fixed and movable exchanges, according to its quotation with other countries. In exchange lists and newspaper quotations the movable terms only are given, a knowledge of the fixed terms being presumed.

The country with the fixed term receives, and that with a movable term gives, the exchange. Thus Britain receives from Italy twenty-five lira and twenty-two and one-half centisimi; from Norway, Sweden, and Denmark, eighteen kroner and

Digitized by Google

sixteen öre; and from Holland, twelve florins, one stiver, to the British £1 sterling. In the Russian exchange, when quotation is made in that country, it is of 100 silver roubles to £10 sterling, the present rate being about ninety-four to £10. Austria gives 240 kronen to the £10 sterling when quotations are made in Vienna on London. On the other hand, London gives shillings and pence to Shanghai and China (presently 2s. 5d. or 2s. 6d.) for the tael; to Japan for its dollar (present value 1s. 11¾d.); to South American countries for the more or less convertible peso, sol, or milreis, and to Russia for its rouble (present value 2s. 1d.), the latter when quotations are made in London.

The words rising or falling are often used, and must be applied strictly in relation to the particular exchange where they are referred to. Thus "rising" may be either favorable or unfavorable to the same country, and the same remark applies to the use of the word "falling," when used in respect of different exchanges. The point to remember is the connection of the word with the movable term in the exchange, not the fixed term. For example, if it be said in a British newspaper that the French and Spanish exchanges are rising, a careless reader is not to assume that both movements are favorable to Britain. The French exchange being quoted in a fluctuating number of francs and centimes to the £1, a "rising" in that connection means more French money for our £1, and the operation is therefore favorable to London. In the Spanish exchange the British pence form the movable term, and "rising" in this case means that we give more pence to the Spaniard for his duro, and that therefore the movement is unfavorable to Britain. In the same way, a falling exchange is favorable to Britain if in connection with India, where we pay the movable term of pence to the rupee; but it is unfavorable to us when quoted on the New York exchange, where the fixed term is the £1 and the movable is in dollars and cents, because fewer of the latter continue to purchase our £1.

The following rules may be established as to those expressions: In all cases where London receives the variable or movable term from a foreign country, a rise is favorable to London, showing that bills on London are relatively scarce, and are being competed for. On the other hand, a fall in these exchanges is unfavorable to London, showing that there is less demand for such bills, and the holders have to take less of the foreign moneys for them. Conversely, in all cases where London gives the variable term, a rise is unfavorable to London, showing Britain's indebtedness and competition in London for bills on the foreign countries. Again, where such exchanges fall, they are favorable to London, because we give fewer shillings and pence for the foreign fixed term.—*Accountants' Magazine* (*Edinburgh*).

(*To be continued.*)

THE GOLD STANDARD.—The turning point for the American republic came when W. J. Bryan and free silver went down to defeat. Nowhere in the annals of the world can we find a parallel to the prosperity which came with leaps and bounds after the people had voted to establish the gold standard. The enormous advance of our country since 1896 is due in a greater measure to the adoption of gold as a basic money than to all other causes combined, and any attempt to account for it which does not give the principal credit to the election of 1896 is without grasp upon a very plain situation. As we look back now it is easy enough to see the mistake that was made in 1873 and again in 1875. In 1873 we virtually adopted the gold standard without closing the question. In 1875 we again foolishly dodged the issue by providing for specie resumption without establishing a standard. If the American people had gone boldly to the gold standard in 1873 there would now be no question about the location of the world's financial center.—*Kansas City Journal.*

PREVENTION OF BANK PANICS.

"An ounce of prevention is better than a pound of cure," runs the old adage. Much has been written upon the subject of bank panics; but the aim of the writers, almost without exception, has been to outline plans for the safe conduct of a bank during the continuance of the panic, rather than to ascertain the cause of bank panics and, by removing this cause, to prevent panics altogether. It is true that financial writers are fairly well agreed upon the primary cause of the phenomenon in question; but it seems to have been taken for granted that this cause is inherent in the very nature of banking, and therefore cannot be removed without completely revolutionizing the business. The writer takes exception to this assumption, and hopes to show that bank panics can be prevented without any very radical changes in present banking methods and policies.

It will hardly be denied that the proximate cause of every bank panic (or "run on the bank") is distrust, that is, a lack of assurance on the part of the depositors that they will be able to obtain their money when they want it. Sometimes this distrust is occasioned by the failure of a dealer who has a large line of credit; sometimes it arises from rumors—well or ill founded—of mismanagement of the affairs of the bank by its officers. Or it may owe its origin to an unusual depression in a line of business upon which the bank depends for most of its business. The bank affected may be perfectly solvent, but when widespread distrust exists, it is natural that prudent depositors should withdraw their balances as soon as possible. If the bank proves to be solvent, they lose nothing (except perhaps a little interest); if it fails, they have escaped. Other depositors, noticing unusual withdrawals, become panic-stricken and withraw their balances, and thus a "run" is caused. Depositors of other banks become alarmed, because of affiliations with the bank in trouble, or for less plausible reasons; and so the panic spreads.

Remote Causes of Panics.

I have mentioned some of the immediate causes of the distrust which produces bank panics. There is, however, a remote cause preceding all these immediate causes. In most panics the depositors are afraid not so much of losing their money altogether, as they are of not being able to obtain it *when they want it*. It is a small consolation to a depositor who has an obligation to meet to-day, to be assured that his bank is perfectly solvent and that he will eventually get his money. He must have it now, or fail. Therefore, if there is the slightest doubt in his mind that the bank will meet its obligations on demand, he withdraws his balance.

Every business man knows that the banks invest a considerable part of their funds in time loans and discounts, thus making it impossible for them to pay all of their depositors on demand, should they all demand their money at once. In other words, the banker invests money which he has promised to return upon demand in such a manner that it is beyond his power to fulfill that promise. This fact, I think, is at the bottom of all bank panics. It is for this reason that depositors are so easily panic-stricken by the mishaps, often slight or even imaginary, which befall a bank. Each depositor wants to get his money, at any rate, and let the other man have his circulating capital tied up.

When, in other lines of business or in the affairs of life generally, a man makes a promise which he knows that he cannot perform, on the assumption that such per-

Digitized by Google

formance will not be required, he is considered culpable. It is a hard saying, nevertheless it seems true, that the case of the banker is exactly a parallel one. He promises to return deposits on demand, and yet he invests them in time obligations; so that, no matter how good the paper which he has bought, or how great an assurance he may have that the obligations will be met when due, he is not in a position to repay his depositors, should they all desire their money immediately.

I am fully aware that this statement will be met by the time-honored reply, that the depositors of a bank never do, in point of fact, all want their money at the same time; and that the banker soon learns by experience what portion of his funds he must keep in his till to meet current demands upon him, that is, to make good his promise to repay all depositors at their request. The first part of this assertion is disproved by the very phenomenon under discussion. What better definition of a bank panic can be given than this, that the depositors all want their money at the same time? And the fact that bankers suspend payment, because of runs made upon them, shows that such bankers, at least, have not learned from experience what portion of their deposits they must keep in their tills to insure safety. I say, to insure safety; for it is not enough for a bank to be able to meet current demands upon it. To be safe, it must be able to meet unusual demands; it must, in short, be able to meet every possible demand that may be legitimately made upon it.

It will probably be objected that, if a banker attempted at all times and under ordinary circumstances to maintain a reserve sufficient to meet every possible demand that could be made upon him in time of panic, he might as well shut up shop; he could not make any money. It will be said that banking, from its very beginning, has consisted in receiving funds for safe custody and loaning that portion of them which experience showed was not likely to be demanded under ordinary circumstances. It is granted that banking has generally been carried on in this manner; but, for that very reason, panics have been with us from the beginning also, and they will remain a menace to the business as long as it is so conducted. No amount of history can annihilate the fact, that a man cannot tie up trust funds in three or six months' loans, and yet be in a position to repay them instantly upon demand.

There seem to be but two methods by which this cause of bank panics can be removed and the banks enabled to meet every demand which can be legitimately made by the public. Either the bank's investments (apart from the investment of its own capital) must be such as are instantly convertible into cash, or its deposits must not be repayable upon demand. I am aware that it will be objected that neither of these courses is feasible; that, if a bank never made any but demand loans secured by stock exchange collateral, it could not make money enough to pay expenses; and that it would be impossible for a commercial bank to hold its deposits, if it did not agree to repay them upon demand at all times, for the reason that the active merchant or manufacturer could not run the risk of having his funds tied up (say for sixty days, as the Savings banks reserve the right to do) when he needed them most.

Separation of Time and Demand Deposits.

The solution of this difficulty seems to me to lie in a combination of the two methods mentioned. By offering a somewhat higher rate of interest for deposits repayable after a fixed time, it would seem to be entirely practicable to separate the active and inactive accounts in the community and to build up a line of deposits payable only at the end of six months or a year. It is evident that a banker could well afford to pay a higher rate of interest for such deposits, since they would be worth more to him than demand deposits. Deposits being thus separated into demand and fixed deposits, the bank would be perfectly safe in loaning the latter class on time, provided, of course, the maturities of the loans fell within the time when payment of the deposits could be demanded.

Digitized by Google

A concrete illustration may make the writer's scheme clear. Suppose a National bank to have a capital and surplus of $4,000,000, demand deposits of $8,000,000 and fixed deposits of $4,000,000. If in a central reserve city, it would be required by law to keep a reserve of $3,000,000. In order to be always in a position to repay upon demand its demand deposits, it must keep $5,000,000 more in the form of demand loans. Of the remaining $8,000,000 of its funds, $4,000,000 could be invested in discounts and time loans, with the maturities so arranged that funds would at all times be repaid in time to meet maturing time deposits. The remaining $4,000,000, being the bank's own capital, could be invested in any manner that the law allowed and the directors thought profitable, in Government bonds, securities of various kinds, the financing of new enterprises, etc. It will be noticed that a bank whose balance sheet stood thus would be at all times in a position to meet every possible demand upon it. No panic could compel it to close its doors.

It is assumed in this illustration, that the affairs of the bank are properly managed and that no undue losses are made. There has at yet been no scheme devised by which a bank could lose the funds entrusted to it by the public and yet have them.

It is worthy of remark, that the plan outlined is already being introduced to some extent by certain trust companies in New York city, who, having seen the danger of tying up a large part of their funds in re-organizations or in the financing of new enterprises, have offered special rates to attract deposits payable only after a fixed period. The operation of some of the banks of the Middle West, also, doing both a commercial and savings business, is somewhat similar. It is to hoped that the wisdom of this course will be seen by the banking fraternity generally, and that efforts will be made to remove one of the greatest dangers to our banking system. The writer is not so sanguine as to imagine that this can be done in a month or a year; but that it can and should eventually be accomplished, he does not doubt.

OSCAR NEWFANG.

FRENCH BANKING METHODS.—I was studying the mechanism of the Bank of France under the guidance of one of the officers. We went into one great room in the old building in which there were 200 desks inclosed in wire cages, all empty at the moment. I asked what these were for:

"These cages are for our city collectors," I was told. "When a small merchant borrows from the Bank of France he does not, as with you in America, borrow a bank credit, and have his loan merely added to his balance on the books of the bank. With us the merchant, when he makes a loan, gets the actual money and takes it away. He probably has no bank account with us. He writes no checks. When the loan is due he does not, as would be the case in your banks, come in and pay his indebtedness with a check; instead of that we send a collector to him, and that collector is repaid the loan in actual currency. Two hundred men start out from the Bank of France every morning to collect matured loans. Several days each month it is necessary to send out 400 men, and on the 1st and 15th of each month 600 collectors go out."

These collectors were uniformed men carrying leather pouches in which they have the matured notes and which are later filled with currency as the collections are made from the bank's borrowers.—*The Century.*

New Counterfeit $10 National Bank Note.—On the Merchants and Farmers' National Bank, of Weatherford, Texas, series 1882, check letter A, charter number 8975, Treasury number V723828, bank number 5005, W. S. Rosecrans, Register of the Treasury, James W. Hyatt, Treasurer of the United States. This counterfeit is a photographic print. The charter-number panel on the back of the note is tinted green in a bungling manner. A yellowish brown tint has also been applied to the seal on face of note. It is printed on two pieces of paper of good quality, between which a few silk threads have been distributed.

CANADIAN BANKING, COMMERCE AND MANUFACTURES—QUARTERLY REVIEW.

A review of the banking, commerce and manufactures of the Dominion of Canada for the past three months shows that the business conditions were never so sound as they are at the present time. Failures have been few in number, and mostly of minor importance. The great development of the country's vast natural resources is going rapidly forward; the older industries are being worked with renewed vigor, and abundant capital is being readily furnished for such enterprises.

One of the most satisfactory indications of the great expansion in trade that must take place in the next six months, is the increase in the number of settlers coming into Canada. Most of these are of a very superior class. They are all moving into the western provinces of Canada, and business men are taking a great interest in the present rapid development of the Canadian Northwest. It means much to manufacturers and the mercantile and financial interests in Eastern Canada.

The Budget Speech.

One of the most important matters which have occupied the attention of the people of Canada is the Budget Speech, which was delivered on March 11 last by the Minister of Finance, Hon. Mr. Fielding. It was a most satisfactory statement of the Dominion's affairs. It showed the past year had been one of great activity throughout Canada in all branches of industry, and that there had been a fair degree of prosperity in the permanent industry of agriculture, which must long continue to be the foundation of the country's success.

The revenue received for the current year to March 10 was $38,047,685. This should mean for the current year a revenue of $56,800,000, as against an actual revenue last year of $52,514,701. There will thus be a probable increase in revenue this year of $4,285,298.

The expenditure this year to March 10 has been $30,183,508, which will probably make an expenditure of nearly $51,000,000 for the whole year.

It is anticipated that $6,000,000 will have to be added to the debt of the Dominion for the current year.

The British Budget.

The British Budget, which was presented in the House of Commons by the Chancellor of the Exchequer, Sir Michael Hicks-Beach, on April 14, containing the recent startling departure of Great Britain from the paths of free trade by the imposition of a duty on wheat and flour, and the bearing of the new policy upon Imperial Federation, have excited great interest in the Dominion of Canada. The subject has already caused one of the most important debates which have yet taken place in the Canadian House of Commons, and has drawn forth from the Prime Minister and all prominent men on both sides of the House opinions of great value. The general opinion seems to be that the step taken by Great Britain is liable to lead to the most far-reaching results so far as Canada, her sister colonies, and the Empire at large are concerned. It is thought by some that the new departure is heading for an Imperial defence; on the other hand the prevailing opinion among the Federal members is that it is merely a measure for raising revenue.

Sir Wilfrid Laurier, Premier of Canada, expresses himself as follows:

Digitized by Google

"Since the British Government has adopted this new line of taxation the field is clear for negotiations in a new direction at London next summer. I do not despair that we may be able to lay down the basis of a system which will improve the trade relations between Great Britain and her colonies, and will establish freer trade between all sections of the Empire."

Revenue and Expenditure.

The revenue of Canada still continues to grow, and clearly reflects the great expansion of the trade of the country.

For the nine months ending March 31, it amounted to $41,351,818, an increase of $3,433,801 for the same period of last year. For the month of March only the receipts were $4,785,210, or nearly half a million more than the same month of 1901. The ordinary expenditure reached a total of $30,914,135, which was $10,437,683 less than the ordinary receipts, but $2,286,000 more than the disbursements of the preceding nine months. The expenditure for the month, however, is $115,698 less than it was for a year ago. The total capital expenditure for the nine months was $8,837,-451, which reduces the surplus in ordinary receipts over ordinary revenue to $1,600,-000. The capital expenditure for the nine months increased by $1,536,000 over that of 1901. For the month of March, however, there is a decrease of $693,000.

Canadian Trade.

Canada's foreign trade is still on the increase and beating all previous records.

For the nine months of the present fiscal year, which ended on March 31, the aggregate was $302,498,000, as compared with $282,297,000 for the same period of the previous twelve months, a gain of $20,200,000. The imports for the nine months were $140,782,000, being an increase of $11,720,000. The exports of Canadian merchandise only, excluding coin and bullion, show an increase of $9,075,000, the figures being $144,546,878, as against $135,471,000 for the previous nine months. The imports for last March amounted to $17,021,000, or $2,495,000 better than for the same four weeks of 1901. The exports of domestic merchandise for the month totalled $9,846,652, a gain of $864,000. Taking up the domestic exports for nine months, it will be seen from the comparative statement given below that mine products diminished by $2,443,000; products of the fisheries made a gain of over $3,000,-000; forest products increased by $1,242,000, and animals and their produce by nearly $1,500,000. Agricultural products show a growth of $4,436,000. Manufactures boast a betterment of $1,896,000, and miscellaneous exports decreased. The following are the imports and exports in detail:

Imports for Consumption—Nine Months Ending March 31.

	1901.	1902.
Dutiable goods	$78,001,163	$85,545,747
Free goods	51,010,958	55,186,962
Total	$129,012,121	$140,732,709
Coin and bullion	3,828,946	4,670,936
Grand total	$132,841,067	$145,403,645
Duty collected	21,582,314	23,565,580

Domestic Exports—Nine Months Ending March 31.

	1901.	1902.
The mine	$28,542,386	$26,098,560
Fisheries	8,392,986	11,405,618
Forest	21,902,746	23,144,749
Animals and their produce	45,544,278	46,969,163
Agriculture	19,640,901	24,077,783
Manufactures	11,405,050	12,801,194
Miscellaneous	42,923	29,804
Total merchandise	$135,471,270	$144,546,878
Coin and bullion	212,651	....
Grand total	$135,683,921	$144,546,878

Digitized by Google

Agricultural Development.

There has been a great increase in agricultural activity during the past three months, and the outlook for the future is very promising. There is at present a rapid development of the Northwest. The unprecedented influx of settlers into that part of Canada, who will at once go to work on the land and get a good deal of ground prepared for spring wheat, must greatly add to the wheat acreage during the present year.

In the territories the cereal crops have grown to such an extent that the product beyond Manitoba from now on will become an important factor in the wheat production of the continent. The export wheat crops of the territories will doubtless in the near future equal that of Manitoba a few years ago, and, with an export surplus of fifteen to twenty millions, the facilities for transportation will be developed in a way that will greatly increase the profit of wheat growing in that distant part of the country. The quality of the hard wheat raised in the territories is very fine, and will doubtless command a premium in the British markets when it becomes better known.

The constant demand for shipment of cattle from Canada to the United States for breeding purposes is a very practical acknowledgment of the healthiness of Canadian cattle, and the continued refusal of the Mother Country to admit Canadian cattle on the hoof for sale in the interior markets of the United Kingdom seems to our dealers an ignorance of the conditions which involves unfair discrimination against that important Canadian industry.

Colonial Exhibition.

A Colonial Exhibition is now being held at London, England, and much interest is being manifested in the Canadian exhibit, which will be most attractive and valuable for advertising the Dominion by means of a display of its rich and varied natural and other products, the value of which is only beginning to be appreciated throughout the world.

Transportation.

The net results of the railways for the past quarter show a satisfactory increase, shipments continuing very heavy. The demand for cars is very active, and, although the grain movement in the West is larger than it was a short time ago, the large quantities still to go to the seaboard will continue to cause a large movement till the next crop begins to come on the markets. The settlers coming into Canada are also taxing the capacity of the railways to get promptly moved to their destination.

The gross earnings of the Canadian Pacific Railway for the fiscal year from July 1, 1901, to date are $29,965,343, an increase of $5,310,284.

The net earnings from the railway last year were $1,978,000, or about three per cent. on the capital stock. This year the net earnings from these sources will be about $3,000,000. The value of the property outside the railway is estimated as follows:

Telegraph lines, Pacific fleet, grain elevators	$30,000,000
"Soo" preferred stock	4,846,000
"Soo" common stock	4,239,000
Duluth S. S. & Atlantic stock	2,300,000
23,000,000 acres land at $3.20 per acre	73,600,000
Vancouver and other city real estate	15,000,000
Northwest land stock	500,000
Total	$139,976,000

The value of these outside properties is equal in value to capital stock of $85,000,000. The railway this year will earn about $38,000,000. The total fixed

Digitized by Google

charges are $7,300,000. Placing operating expenses at ninety per cent. of the gross, which is a high rate when compared with that of the Northern Pacific, which is about fifty-five per cent., there would be yielded $10,100,000 in net profits, or about thirty-three per cent. more than the amount necessary to pay fixed charges. In addition to the above assets the company has $10,000,000 cash in the bank and some $7,000,000 due on the deferred payments on land already sold.

On June 30 last, according to the official returns compiled by the Department of Railways, there were 163 steam railways in actual operation in Canada, including the two Government roads, the Intercolonial and the Prince Edward Island Railway. At the close of the fiscal year the number of miles of completed railway was 18,294, an increase of 658 miles, besides 2,710 miles of sidings. The number of miles laid with steel rails was 18,184, of which 634 miles was double tracked. The number of miles in operation was 18,140. The paid-up capital amounted to $1,042,785,539, an increase of $31,398,893. The gross earnings amounted to $72,898,749, an increase of $2,694,396, and the working expenses aggregated $50,368,726, an increase of $2,987,-037, compared with those of the previous year, leaving the net earnings $22,530,023, a decrease of $292,642. The number of passengers carried amounted to 18,385,722, an increase of $1,281,397, and the freight traffic amounted to 36,999,371 tons, an increase of 1,286,149 tons.

A report was recently presented by Professor S. J. McLean, Ph. D., M. A., dealing with railway commissions and railway rate grievances. One of the most important points investigated, and one most exhaustively discussed in the report, is that of excessive rates and discriminations. Investigations were made at leading points in Ontario, the chief shipping points in Manitoba and the territories, and in most of the commercial centres of British Columbia. Professor McLean states that, in the public interest, there should be a supervision of all matters pertaining to classification. Distributive rates are among the pecularities of the system that has grown up under the policy of charging all the traffic will bear. Certain cities and towns are favored with lower rates than others, and are thus able to grow into extensive distributing centres.

In regard to competitive and non-competitive traffic, Prof. McLean, after citing various examples, states that while it is true that the shorter distance traffic cannot justifiably expect the same rate per ton per mile as the longer distance traffic, still at the same time the discrepancy is too great between the rates on the two classes of traffic, and considers regulative supervision necessary.

In regard to the subject of American and Canadian rates, Prof. McLean considers numerous specific cases. He remarks as follows: "Public policy demands that when a low rate basis is given to American goods which come into competition with Canadian goods there should be regulation to see that the expansion of Canadian trade is not hampered. It should be seen to that Canadian goods are given such a rate as to offset their geographical advantage."

Upon the point of the regulation of rates, Prof. McLean discusses the system in use, pointing out the weak points of the policy of regulation through maxima adopted in Canada. "In general," he says, "the body interested with the regulative power should give up reliance upon maxima, and should desire the company to file with it the rate actually to be charged in respect of the traffic denominated. The same facilities in respect of publication might attach as at present, and if any preliminary objections should be presented to any phase of the tariff these might be considered. But in the great majority of cases these rates would be subject to revision only when it appeared in the cause of a complaint that rectification of some grievance was requiied. By this procedure the regulative body would be enabled to focus its attention upon a special case."

He discusses the question of elasticity, holding with regard to competitive traffic

Digitized by Google

that the tariff might be filed, immediately becoming effective, "and that the rate so fixed might be changed as often as was desired by filing new rate sheets, each of which would be effective as soon as filed. The regulative body would have reserved to it a supervisory power in regard to all rates charged under such rate sheets. Every such rate charged would be subject to the revision of the commission."

The most gratifying section of the report is that recommending the establishment of a Railway Commission, for such a tribunal will safeguard the future. The work of railway regulation is concerned with administrative, not political problems, and should be placed in the hands of a body specially organized for the purpose and independent of political conditions.

The wisdom of encouraging railway construction in the newest parts of the Province of Ontario is being more and more made clear. Twenty years ago there was not a mile of railway in Ontario, North of Bracebridge, now the mileage in New Ontario alone exceeds 1,800, while lines under construction, or subsidized, or under charter will, when completed, add another 2,000 miles.

It is estimated that nearly $9,000,000 were expended on railway construction and its connecting interests in Northern Ontario during 1901, and this sum will be greatly increased during the present year.

Manufacturing.

The situation with reference to manufactured goods still continues firm. Plants are well employed, except where wage disputes interrupt; in fact, mills and factories are so busy on contracts for goods that they have little or no surplus stocks on hand to throw on the market at the end of the season, which is, from a mercantile point of view, very encouraging.

Foreign trade still continues on the increase and beats all previous records.

New Ontario has grown up to be one of the greatest hives of industry in this country, and these industries are just in their infancy, stretching out in all directions, and turning this part of the country into one of the great manufacturing centres of the world. There is now being laid the foundation of great industries all over New Ontario, which in time will make Ontario one of the greatest pulp and paper producing districts in the world.

The enterprises of the Clergue Syndicate now represent a capital of over $15,000,000, covering the pulp and paper mills, the iron, nickel and copper industries, the fleet of eighteen vessels of the Algoma Steamship Co., the blast furnaces and reduction works, the tube works, the cyanide works, the Lake Superior Power Co., and the Algoma Commercial Co. Six thousand men are now on the payroll of these industries, there being last month a payroll of $150,000, and in the month of February $900,000 spent for supplies; $20,000,000 has been laid out on the Canadian side, and $15,000,000 remains in the treasury with which to complete all the plans.

Evidence of continued industrial expansion is contained in the number of new companies and increases of capital.

Two most important commercial transactions have occurred recently, one being whereby two of Canada's greatest industries have come together, namely, the Dominion Iron and Steel Company, and the Dominion Coal Company, under the terms of the option which the Dominion Iron and Steel Company has held for the past two or three years on the property of the Dominion Coal Company.

The other transaction has been the sale of the W. W. Ogilvie Milling Company. It is understood that Messrs. C. R. Hosmer and F. W. Thompson have purchased the entire property and good-will at a figure ranging between $2,500,000 and $3,000,000.

Digitized by Google

Iron and Steel.

Canada's iron and steel business is in a most prosperous condition.

There are now in Canada fourteen blast furnaces, without counting those in the course of construction. When those being built are completed, the aggregate capacity of the Canadian furnaces will be about 1,100,000 tons per year.

Already the export trade in pig iron is greatly in excess of that for the whole of the last fiscal year. In the latter year, which ended June 30 last, the quantity was 8,623 tons, and value $117,456. For the seven months of the fiscal year, ending January 31 last, the quantity was 64,849 tons, and the value $627,971. In other words the value of the export trade in pig iron was 441 per cent. larger than for the seven months of the fiscal year 1901.

It is expected that before August of this year, the Dominion Iron and Steel Company will turn out 1,000 tons of steel per day, at a net profit of $8,000 per day.

Lumber Industry.

The outlook for the lumbering industry is favorable. A great new pine belt has recently been found in Central Algoma, along the banks of the Mississaga River. It is estimated that there are 1,000 square miles of virgin white pine. In some places it runs over four million feet to the mile, and it is thought it will equal in quantity the pine of the Temagami Forest Reserve, estimated at 3,000,000,000 feet, and is of the very best quality.

Banks and Banking.

The fact that Canada is rapidly getting to be a wealthy country is every day becoming more apparent.

The public deposits in Canadian chartered banks have in the past year increased at the rate of nearly $3,000,000 a month. This is independent of the expansion in the savings in other places of deposit. This large accumulation of savings has in recent months been seeking channels of investment. Numerous domestic securities have absorbed large sums of money offering for investment in the way of bonds and new issues of stocks, and besides this the demand on the stock exchanges for good investment stocks which present opportunities for appreciation have been largely sought, and that has largely contributed to the recent expansion in business. The fact that the great expansion in the demand for some of the stocks has gone on largely independent of the banks, is an indication of the growing wealth of the country, showing as it does the large sums of private funds available for speculation or investment.

The Canadian Private Bankers' Association, comprising over two hundred private bankers in the Dominion, and representing many millions of capital, much more than is involved in any other unauthorized business in Canada, was organized recently. The object of the association is protection, and for the furtherance of private banking interests generally.

The March Bank Statement.

The statement of the Canadian chartered banks for March reflects in a satisfactory manner the large expansion in the business of the country. The note circulation continues to expand. It was $52,000,000 for March, an increase of nearly $3,000,000 over February, and an expansion of nearly $5,000,000 over March last year. The March figures this year make a record showing for that month. Public deposits last month totalled $362,000,000 for the three items, the deposits on demand showing a decrease of some two and one-half millions, compared with that item for February. The total for February was $363,650,000, and for March last year the total was $322,700,000. The balances due from foreign countries last month showed a small increase over February. The banks' holdings of specie are larger than last

Digitized by Google

month. Call loans increased some two millions for the month, and were $38,500,000, compared with $33,000,000 in March, 1901. Call loans elsewhere were much the same as in February, but about $8,700,000 larger than in March last year. Current loans continue to expand; the total for March was $300,000,000, against $292,000,000 in February, and $280,000,000 in March last year. The total liabilities for March increased only $2,460,000, while the total assets increased $5,200,000

The increase in Canadian bank clearings is noteworthy. The average clearings per week at all clearing-houses in April last year were $34,114,000, but in April this year they reached $50,000,000. This is doubtless largely because of extensive speculative transactions in industrial stocks.

Auditing the Individual Ledger.

Editor Bankers' Magazine:

SIR: I am much interested in an article in your March number on "Auditing the Individual Ledger," and as some of the ideas therein suggested are similar to ours and we have what we consider an excellent system, I thought it might not be amiss to give you an outline of it.

It is our rule to prove every account on this ledger at least twice a year, active accounts being proven monthly, either by rendering statements or balancing pass-books; and in order to do this without referring to the ledger except for old balances with which to begin statements and when completed for verification, it becomes necessary to file checks and deposit slips in such a manner as to be readily accessible.

We have from fifteen hundred to two thousand accounts and use a Globe file of eight drawers, two of which are used exclusively for deposit tickets and the other six for checks. For active accounts we have a separate apartment for each account, filing checks and deposit slips together, checks in front and slips behind, and for the less active accounts we file the checks regularly in check drawers and slips in deposit slip drawers. When pass books are to be balanced or statements rendered, checks and slips are gotten out and the books or statements made up without reference to ledger except as above noted, when they are compared with the balance book for proof when they are ruled and sent out with the vouchers.

For the preservation of old deposit slips we have a deposit-ticket transfer file corresponding in arrangement with the file above referred to, and to which all old tickets are transferred during the year; at the close of the year the tickets are taken out and carefully assorted with every customer's tickets for the year together and all alphabetically arranged and bound in packages of convenient size, labelled and put away for ready reference when needed.

This method may at first glance appear to be tedious, but after a trial of several years we find it eminently satisfactory and that the results fully justify the time given it. At pass-book and statement time every man in the office makes a hand, in so far as his other duties will permit, and the work is very promptly disposed of.

From the general ledger we render monthly statements to every bank that does not render statement to us, and the Loan and Certificates of Deposit accounts are verified every two months, so taken altogether we know at least twice a year that "things are just what they seem."

T. U. COLE.

HONEY GROVE, Texas, April 17.

*THE PRACTICAL WORK OF A BANK.

BOOKKEEPING FOR CITY AND COUNTRY BANKS.

I.

There are two classes of accounts in a bank, viz., individual ledger items and general ledger items.

THE INDIVIDUAL LEDGERS.

In these are kept all accounts subject to check, except the accounts with banks.

Q.—Are there more than one class of accounts, subject to check, in a commercial bank? *A.*—There are at least three classes of accounts; first, under the head of "business accounts" may be placed those that change almost every day; second, "personal accounts" that are not changed so often; third, "dead accounts" are such as are likely to have but a few changes in the lifetime of a ledger.

Q.—Should these all be kept the same way? Certainly not. Each class should have a different method of bookkeeping.

A certain bank has 3,000 ledger accounts, 500 of these are "business accounts" and the bulk of the transactions of the day are with these. Seventeen hundred are "personal accounts." Perhaps less than one-fifth of the day's transactions are with these. Eight hundred are "dead accounts" and in these there will probably be one or two changes per week.

Q.—Should each class have a different bookkeeper? *A.*—No; the same bookkeeper should have all the accounts in each class beginning with the same letter. They should be divided according to the letters of the alphabet.

Q.—Why? *A.*—There are a number of reasons. It is easier to assort the checks. You know which bookkeeper to go to to ascertain about the account, and it renders it practicable and easy to keep a separate record of the amount that goes to each bookkeeper from the various departments of the bank through which they come to him. When he has footed his checks, he knows he is right if his footing agrees with the sum of the footings of the various departments against him.

Q.—How would you keep the "business account?" *A.*—In a journal and ledger combined—each page ruled for six days' work and about fifty accounts. (See form of depositors' ledger and journal for business accounts.)

This shows a column for the number of the account on each page, also the name, and then the day's work. For example, take Wm. Cahoon's account for Monday. To commence business he had a debit balance of $9.62, which is entered opposite his name in red ink (it is in heavy figures in the cut, as everything is required to be printed in black). Above this balance are the debit transactions of the day; and in the credit column are his deposits for the day. Deduct the footing of the debit column from that of that credit column, and we find he has a credit balance of $1,425.68 to begin Tuesday with, which is placed in red ink in the credit column of Tuesday.

Q.—Why do you not have a column for the total debits and credits of each account? *A.*—Because it would allow only three days' work on a page, and now

* A series of articles to be published in competition for prizes aggregating $1,050, offered by THE BANKERS' MAGAZINE. Publication of these articles was begun in the July, 1901, number, page 18.

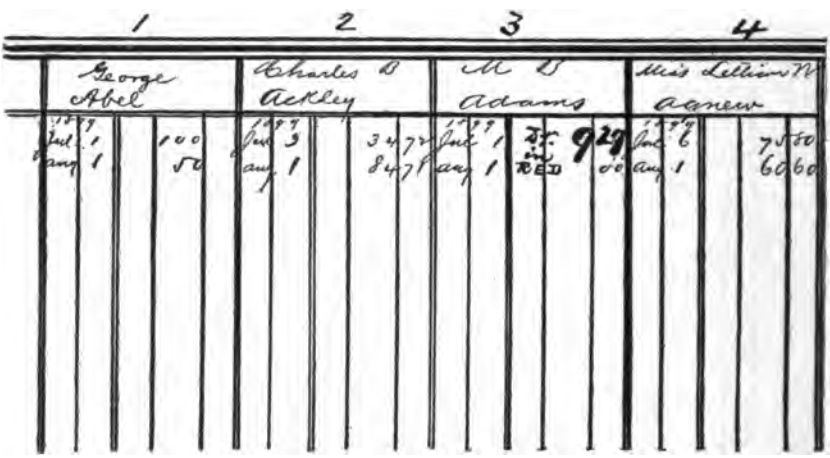
Depositors' Ledger and Journal—Business Accounts.

you have six, and because it is worse than useless. It takes time in extending these totals, when you ought to be doing something else. The first thing you want to know, after you have entered all the checks and deposits, is whether you agree with the other books. You don't want to wait to extend 500 accounts, but proceed to add and find the sum of the checks and deposits the first thing. When you have done this and find you have everything correct, you may proceed to do what footing is necessary with the different accounts to enable you to bring forward the correct balance for the next day. To load up your book with such footings is labor and space lost.

Q.—How do you keep the second class that you call "personal accounts?"
A.—See cut of depositors' ledger No. 2, and depositors' journal to accompany this ledger.



DEPOSITORS' LEDGER NO. 2.

The entries are all made on the journal of checks and deposits—the checks in the first ruled column and the deposits in the second. In the next column I bring forward the last balance. (See Geo. Abel account on the ledger.) The last balance was $100, which I put in this column. His checks amount to $50, which leaves a balance due to him of $50, which I put in the last column, and post it immediately to the ledger, glancing at the same time at the last balnnce to see that I have it right in the journal. The work is proved in the journal and nothing but the balance is posted to the ledger. These balances tell the whole story. The previous balance being $100 and to-day's balance $50, you see at a glance that $50 has been checked out.

Take the next account, Chas. B. Ackley. He deposited $49.99. His last balance was $34.72 and to-day's balance is $84.71, which is posted to the ledger.

The next account, M. B. Adams, had a debit balance of $9.27. This is entered on the ledger in red ink. On this book all red ink figures show Dr. balances. Adams deposits $9.27 to-day and his last balance is put in the journal in red ink. This leaves him no balance, and the ciphers are posted to his account, to show that it is even.

I use a book eleven inches long and fifteen and one-half inches wide for the accounts from A to K, which now number 850 accounts. There are 200 pages in this book, and it is ruled for ten accounts on a page, making room for 2,000 accounts from A to K. The depositors' names are all on a line at the top of the page, and

JOURNAL FOR DEPOSITORS' LEDGER NO. 2.

Digitized by Google

the accounts are recorded in the ledger and index, by numbers, each letter beginning with No. 1.

This will be found a very convenient method of keeping such accounts. A ledger 11 x 15½ inches and 1¼ inches thick is easily handled. It will last for about three years, and you get all the information from it that you get from any ledger. The balances are proven as well as balances can be proven. You find the customers' names easily, and it is most convenient to take off a trial balance.

Q.—How do you keep your dead accounts? *A.*—See cut of depositors' ledger No. 3. The accounts are arranged as in an index. One line is given an account. The last two columns are the debit and credit balances transferred from the previous ledger, and each page is footed. This is convenient when you take off a trial balance. It is more satisfactory to take the footing of forty accounts than to copy each one. It will take about twenty pages for the 800 accounts and probably the changes will average about two accounts on each page in a year. When there is a change, it is usually to close the accounts, but if the transaction is a different amount from the balance, a transfer of the account should be made to ledger No. 2, and the account on ledger No. 3 closed by transfer. You will notice on the ledger that A. Hanan checked for $4.75, on May 1, 1901, which closed his account. B. Henegar deposited twenty dollars March 10, 1900, which closed his account. Miss Hilton, on June 1, 1901, checked for $5 and had $100 due her. The $100 is transferred to her credit in ledger No. 2, and the $5 check is taken care of there. In taking your trial balance, you merely take a footing of the changes on each page and deduct the amount from the total footing of the ledger. This is a quick job, and you get a correct trial balance of 800 accounts in a few minutes.

Take a note of this, Mr. Bookkeeper. When mixed with other accounts, you have made more mistakes in your trial balance copying these 800 accounts that scarcely ever change, than with the other 1,700 accounts that are frequently changed. There are so many little overdrafts among them, and it is so much easier to skip an account with but one item.

Important.—As all figures must be printed in black ink, please note that all figures printed heavy represent red ink figures, and are the balances due from and to banks or individuals at the opening of the business of the day.

The use of red ink figures for balances allows the use of twice as many days on a page of ledger; thereby saving one-half of the books, besides saving time, and is more satisfactory in every way.

Credit Side.—As the mail is opened in the morning, the letters containing cash items for credit are acknowledged, and the acknowledgments handed to the bookkeeper for banks, who will credit the amounts to the respective banks; as in Rome City National Bank. We credit their letter of the 31st, inclosing items amounting to $750.25, and a cash item which the Rome Bank had entered for collection, reporting the credit by their "No. 327, $1,625."

The sum of all these credits will be made (in pencil will do) and the total amount given to an auditor whose business it is to check off and assort the items which make up these credits. The items consist of checks of our depositors, checks on clearing-house banks in our city, checks on outside banks, checks of outside banks on us, and items we call cash.

These are footed separately, and charged by the auditor to the respective departments, and their sum must be the same as the amount of total mail credits received from the bookkeeper for banks. In this way, such mail matters are speedily and correctly disposed of.

During the day, the bookkeeper for banks enters additional credits for collections paid, proceeds of discounts, etc., and at the close of business enters to the credit of

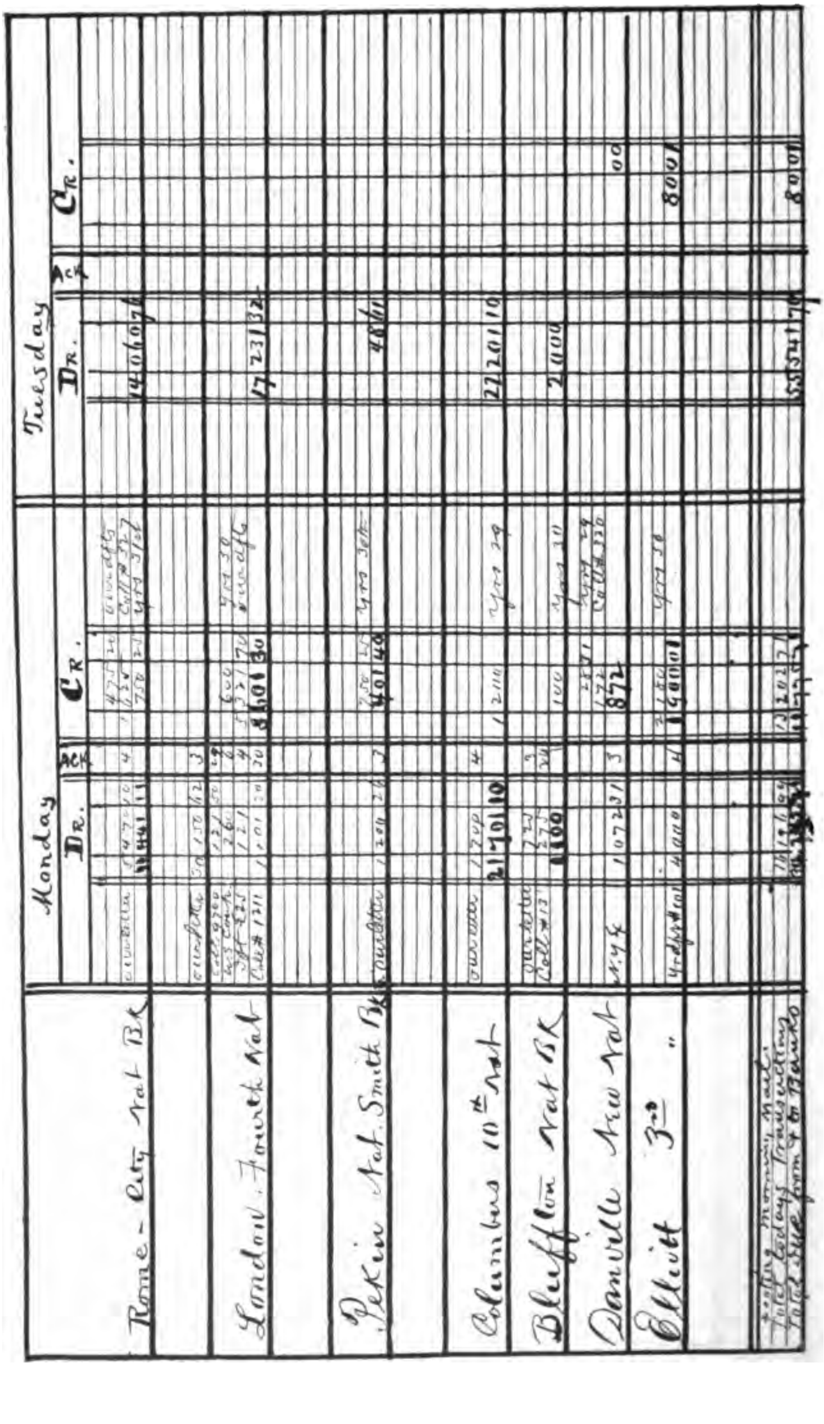
DEPOSITORS' LEDGER No. 8.



BANK ACCOUNTS—JOURNAL, LEDGER AND STATEMENT COMBINED.

each bank the total amount of checks drawn on that bank during the day. This he gets from the draft register.

A footing is then made of all bank credits, which must agree with the auditor's account against him, for these items are all received by the bookkeeper through the auditor. If their totals agree we may say the credit side agrees, or is balanced.

Debit Side.—After the mail items are checked off and assorted, the letters that in any way pertain to the accounts with banks are turned over to the bookkeeper of bank accounts. The collections reported paid are charged to the reporting bank. In the account of Fourth National Bank, London, we charge No. 9,700 $121.50 and mark in the acknowledgment column the date of the advice—29th ult. No. 9,700 is our discount number and the amount will be credited to that account. We also charge collections No. 1,211 $1,101.20 and mark advice 30th ult. This is our number for collections received from banks, and is credited to the proper bank account.

We receive from a depositor a check for £25, for which we give him credit and charge the amount to the London Bank, $121. There will be an additional charge to this bank when the item is reported paid, as the London Bank will credit us a larger amount than this and the difference will be credited exchange account, when reported.

All the mail items will be properly taken care of in this way, and after the entries are made there will be a footing of these debtor amounts, which will be given to the person who audits the accounts. He will have found credit items to correspond, which are given to the bookkeeper having those accounts.

The letters acknowledging our letters containing cash items will be checked off by inserting the date of our correspondents' acknowledgment opposite our charge, as, in the account of the Pekin Bank, our letter of Monday was acknowledged on the 3rd.

You will notice on the ledger a space for acknowledgments, where is to be inserted the date of our correspondents' letter of advice of the amount charged.

Summary of Argument.

On the two pages of an open ledger, you may have accounts of sixty banks. Each morning there are items coming through the mail for the credit of at least fifty of these banks. To prove your mail items, there must be entries of these amounts where they can be footed. Enter them on this ledger and they can be at once footed and there is no other entry to be made of them. By any other method you must enter them, with the same labor, to be footed, and then they must be entered again on fifty different pages of a ledger, and again at the close of business the total amount of each is transferred to some balance book, to enable you to get your balance. And if you are out you may have to go through the whole thing again—perhaps more than once—to find your error or omission.

On the debit side there will probably be more than 100 mail letters to check off for sixty banks. On my ledger you need not turn more than one leaf. The entries for collections paid may be made at once and all the items that have come through the mail are before you in plain sight, charged to the proper bank. When you have footed them and find the mail items to agree, you know you will be troubled no more with them. Then when you come to charge the footings of the sixty letters you send out containing cash items, it is a matter of only a few minutes, and you are ready to foot all of the transactions of the day. If you are out, it is a small matter to find the difference, for all the items are before you. When you agree, you have nothing to do but extend the balances to begin next day's work.

For writing up or checking off bank accounts no method of keeping such accounts is easier, and if you have made an entry to the wrong bank you do not have to turn

Digitized by Google

over the pages of sixty bank accounts, but at once find the item by running your eye down one page.

Q.—What do you do with the other general ledger items—other than banks? *A.*—The discounts and certificates of deposit I would keep on registers, which should also be ledgers. The expense account, real estate, bonds, stock, and items of that class I would keep in an ordinary ledger. They don't fill up a book very fast and it will not take a large book to keep all such accounts for ten or twenty years. This is desirable. There are two classes of bank accounts that I would keep one book for if the transactions are numerous, viz., items that you send for returns I would list against the banks to which you send them, and transfer the total of all these to the book of bank accounts and treat the credit side of that account likewise. Remittance accounts is a good name for it.

Cash Items Accounts.

There is another class of accounts that I would keep in a similar way, except that I would give each paper a number as you do collections. These are drafts with bills of lading that will be held for arrival of goods, and no protests and other items that you know will be cut out of your cash letter. Where these are charged in the regular account, you have a picnic reconciling accounts.

The Auditor.

Q.—You have spoken several times of an auditor. What is his place in a bank? *A.*—The items come to the different bookkeepers through the mail—the receiving teller, the collection or note teller, and the paying teller. These must be assorted for the different accounts and the debits and credits proved. The teller then need only to be concerned for the actual cash received and paid out—marking the cash in a way that the auditor will not mistake. The auditor proves the work and has an account with each teller and bookkeeper, and at the close of business his books show the total transactions of every department. His work is a complete check on wrong additions and every wrong entry of deposit of every description. The method of doing the auditor's work is very important, but cannot be elucidated in this article.

The auditor is a comfort and a boon to all the bookkeepers and tellers. He is really the pivot on which everything revolves. His work is the greatest need of almost every bank. Tom Curio.

BOOKKEEPING FOR CITY AND COUNTRY BANKS.

II.

In the following the writer has tried to plan a set of books, more suitable to the needs of country banks than the larger city institutions, something simple and practical, and at the same time a system where an absolute check on the work can be had. Doing away with books which are the means of verifying the correct entering of items may be a saving of time and expense, but in the long run it is unsafe, unprofitable and exceedingly wearing both upon the bookkeeper and management.

Just where absolute safety ends and danger begins, is a disputed question; but too much precaution in this respect is preferable to even a little short-coming. Errors which may lead to expensive damage suits or the loss of valuable accounts, to say nothing of direct money losses, are as apt to occur as those involving smaller amounts and less annoyance, and a reputation for accuracy and promptness is a valuable asset, and this is especially true in a small community where such things are easily passed from mouth to mouth.

In the forms used the arrangement is such as to facilitate the work of the book-

keeper without detracting from their appearance. His convenience is too often overlooked, which should not be the case.

THE INDIVIDUAL BOOKS.

We will first take up the individual books which will consist of the following: Two balance books, active and auxiliary; two ledgers, loose-leaf, active and auxiliary.

The auxiliary books may be used or cut out, but where there are enough inactive accounts to justify their use, a great amount of time and labor may be saved. The main or active balance book is a modified form of the long and short leaf "Boston Ledger" and is ruled (see form No. 1) with two columns for "checks in details," one for "total checks," one for "credits" and a "balance column;" black ink is to be

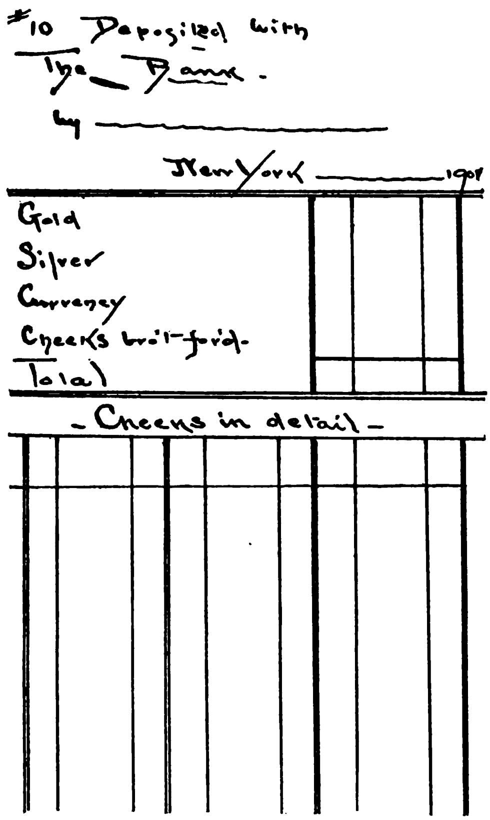
Heavy flexible covers to be used, and when in use should be placed inside a pair of leather covers.

The auxiliary balance book is ruled simply with balance columns (see form No. 2)

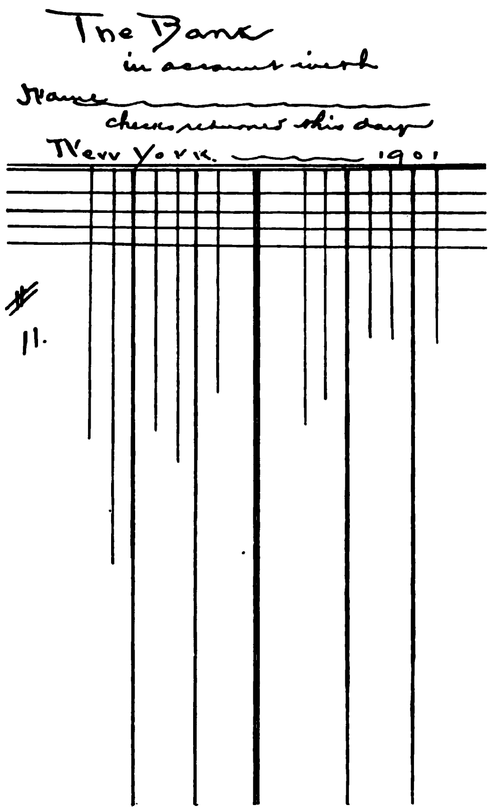


and is made with long and short leaves, the same as the active book, though much smaller and can be made to contain six months' or a year's business. The covers should be of light paper, and the book is then small enough to be slipped inside and at the end of the other. In this book, no overdraft accounts are to be run. A balance is carried forward only when a change is made, the date of the entry being placed in front of the item, as shown in the illustration. All the balances should be forwarded, added and proved by the balance in the main balance book on the 5th, 15th and 25th of each month. The names of the auxiliary accounts are to be carried in the main book in their respective alphabetical order but written in red ink, which will denote where the balances are to be found and may be interlined to save space. An auxiliary balance account will have to be carried in active balance book. In addition to this book, a sundry credits account for odds and ends and a credits in suspense account, for actually dead accounts, may be opened, both of which may be

Digitized by Google

carried in the auxiliary balance book. A watchful bookkeeper, however, will keep the first named accounts reduced to a minimum and not allow fragments to accumulate.

The individual ledgers are loose-leaf, the same sheets, ruling, etc., being used in both; the auxiliary ledger is distinguished from the other by use of the word auxiliary on the outside cover, in addition to any other lettering that may be used. The accounts in each are to correspond with those in their respective balance books. Checks to be entered in total and credits in detail, with whatever explanations that



may be necessary. The posting is made directly from the items, and a balance struck, which must agree with the corresponding balance in the balance book.

The same method of posting is used in the auxiliary ledger and balances proved in the same manner. This gives the same check on balances in both balance books, making the auxiliary as secure as the other. It may be thought that this double system of books (main and auxiliary) would be cumbersome, but actual experience has proved it otherwise. For ledger rulings, size of page, etc., see form No. 3.

General Books, Consisting of Balance Book and Loose-Leaf Ledger.

There are two forms of balance books, either of which may be used (see forms 4 and 5) and can be made to run for one year and are to be covered with light-weight card-board, and when the books are in use they may be incased in leather covers. The names of the accounts should be printed. Debit entries and debit balances are to be written in red ink and credit entries and credit balances in black.

Digitized by Google

The general ledger to be used is as shown on form 6, the account to be run in the same order as found in the balance book, thus facilitating posting. Items to be entered from the vouchers in total into the balance book and posted with explanations directly from the vouchers and a balance struck to correspond with that in the balance book. Two balance columns are used in the ledger, a debit and a credit, which will assist in posting and do away with the use of a red ink pen and ink. No indexes are necessary in either the individual or general ledgers.

Forms which the bookkeeper will be required to use are to a great extent self-explanatory. No. 7, check form; No. 8, charge ticket; the name and date of this form correspond in position to those in the check and may be seen when less than half of the check or charge ticket is exposed. The charge ticket is also roomy. The size will be governed by the style of files used. Nos. 9 and 10, credit tickets. The first is the ordinary size, permitting the listing of a limited number of checks. No. 10 when folded is the same size as No. 9, but has an increased listing capacity. When folded the total appears on its face, obviating the necessity of its being turned. The square credit ticket is also favored on account of its differing so much in shape from the check and debit ticket, and is roomy and economical.

The Bank
in account with
Name —

New York ——— 1901.

Pass books with a simple ruling are preferable, and checks may be listed in them in detail or on slips, the latter being the better. Forms 11 and 12. The first is ruled for pen use, the second for adding machine. Slips are especially advantageous to bookkeepers, inasmuch as checks may be listed from time to time during the month, thus saving the annoyance of a rush at the end of a month, when pass books come in in quantities. It is a good idea to place signs where they may easily be seen by customers, toward the end of the month, asking that pass books be left to balance, and then have them ready at a stated time, say on the morning of the first, showing the balance of the previous evening. In this way you can avoid the accumulation of checks and also detect any errors and where it is impossible to render statements or secure the books, the checks should, at least, be listed and proven by the ledger.

By means of a rubber stamp, with the wording that is found at the top of the printed slips, the paper in the adding machine may be used, with a saving of both time and material. Slips should be pasted in the pass books. Form 13 is also a check-listing form, in the shape of an envelope and may be used when found desirable. Institutions very often have favorite customers and a systematic or fastidious customer can often be held by such little devices as this. Leather covers for check books and a superior grade of pass books are also very effective in this respect. When practical, pass books should be balanced by some other than the bookkeeper.

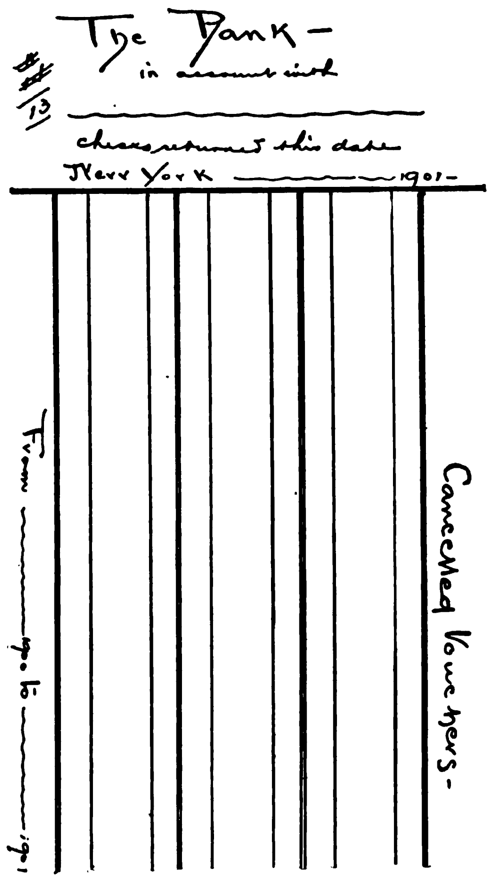
Number 14 is also a very handy blank, in the form of an overdraft advice slip, and is convenient for both bookkeeper and officer and should be "O. K'd" by the latter before being mailed.

CHECK FILES.

Two sets of check files should be used. One for checks of the active accounts and the other for dead accounts. As soon as an account is closed and there is no

Digitized by Google

probability of its being opened again, should there remain any canceled checks or other vouchers in the file, an effort should first be made to have the account balanced and handed or mailed to the customer, and in case this cannot be done then the account, after balancing, should be placed in an envelope, labeled and filed in its proper place in the auxiliary file. Under this system there is no rehandling from time to time of dead matter and less liability of other vouchers being lost or misplaced and it often locates some item that has previously been incorrectly filed. Each customer's checks, in the main file, should have their separate compartment and be



filed according to consonants. In the auxiliary, this is not necessary, but each letter may be divided into two or more compartments, for convenience' sake. It will require a larger file for the auxiliary. The writer has seen this system in use and when conscientiously used, affords the cleanest, safest and most practical method for the care of checks and other vouchers. One set of files for general vouchers is all that is necessary. At the end of the year, the old vouchers should be removed, tied and filed in chests, properly labeled, or other place.

As was first stated, the above system can be shortened, some of the books being dispensed with ; but it is safe to say that should the auxiliary books and files be cut out, one bookkeeper could not do more than two-thirds of the work that another could do under the system as fully planned. In most banks, running from 500 to

New York —— 190

Dear Sir—
We beg to notify you that your account is overdrawn to the amount of $——
Please call or remit to adjust same, at your earliest convenience—
Yours truly —— Cashier

1,000 accounts, there is always a large percentage of inactive accounts, the work is certainly lighter and the liability of making errors less, when these inactive accounts can be separated from the others and left quietly by themselves until a change is actually necessary. In this way the work of a bookkeeper is reduced to a minimum with perfect safety. In addition to this, the set of books may be made to look neater and accounts will be easier to locate and plainer to see on account of their being less crowded and always in their proper place.

In planning a set of books, accuracy should be given the first consideration, neatness second and conciseness next. This order is too often reversed.

A. B. Snell.

United States Safes in Brazil.—The Advance sheets of the Consular Reports for March 10 contain the following from K. K. Kenneday, United States Consul at Para, Brazil:

"Fire recently destroyed the establishment of Frank da Costa & Co. of this city. This firm is one of the largest exporters of rubber and other commodities in the Amazon Valley, and there were forty-three tons of rubber in the building at the time, of which twenty-eight tons were totally destroyed and fifteen tons damaged.

The noteworthy feature of the fire was the fine showing made by the American safes. There were in the offices of the company six safes: one English, one German, one French, one Portuguese, and two of American manufacture. These were all placed together in the center of the second floor. After the fire, it was found that the Portuguese safe was a complete wreck, and fell to pieces when touched. Its contents were totally destroyed, and the same was true of the French and German safes. The English safe contained, in addition to valuable books and papers, 700 contos in Brazilian currency, equivalent to about $175,000. This safe was opened only after the greatest difficulty, and the money was found in an almost unrecognizable, charred, and pulpy mass, and the remaining contents were a total loss. There is little hope of recovering anything of the money thus damaged by fire and water.

When the American safes were opened, their contents were found perfectly intact—money, books, and papers being little, if any, the worse for the ordeal through which they had passed.

There could not have been a more convincing illustration of the superior quality of the American product than was afforded by this incident, which has given rise to general comment. * * * Until this occurrence, there was a popular impression among business men here that there was no safe equal to the English one, and this belief was so firmly established as to make competition on the part of American manufacturers difficult. The incident should establish a market for our safes throughout Brazil, if our manufacturers make the proper efforts to win the trade."

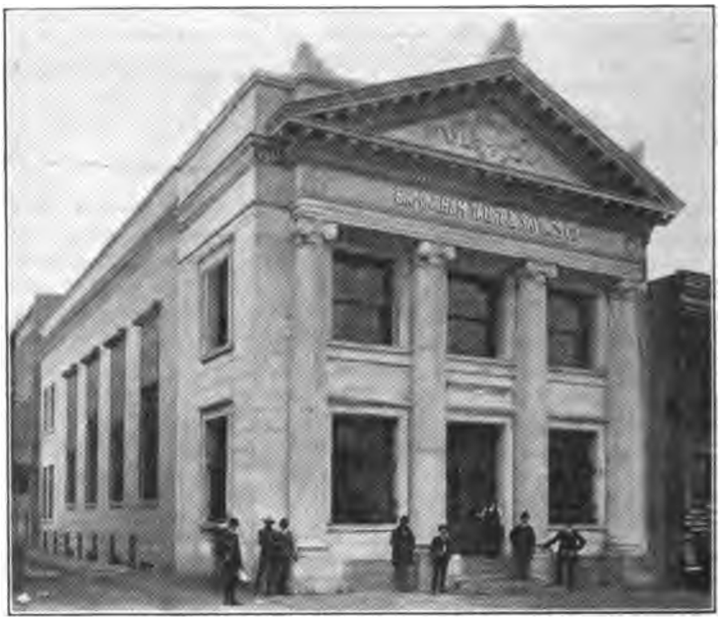
THE BIRMINGHAM TRUST AND SAVINGS COMPANY.

The accompanying illustration is an excellent representation of the exterior of the bank building recently constructed by the Birmingham Trust and Savings Company, of Birmingham, Ala.

In point of construction and elegance of appointment, this structure, erected for the exclusive use of the bank, is not surpassed, and conveys the assurance of strength



THE BIRMINGHAM TRUST AND SAVINGS COMPANY'S BUILDING.

and solidity. It is in thorough keeping with the character of the institution which it shelters.

Since its organization, December 9, 1887, the career of the Birmingham Trust and Savings Company has been one of uninterrupted growth in all of its departments.

The late Henry M. Caldwell was the prime mover in its formation, and on its organization was elected President. Two years later, Mr. P. H. Earle succeeded to the presidency. These two able financiers by their integrity and indomitable energy laid the foundation for the public confidence which the bank has always enjoyed. In the panic of 1893, although many of the banks in the South and elsewhere suspended payment, this institution paid cash over its counters for all demands. The Birmingham Trust and Savings Company also enjoys the distinction of never having failed to pay its regular semi-annual dividend since its organization.

On the death of Mr. Earle, in November, 1900. the presidency was assumed by Mr. Arthur W. Smith, who had been for years Vice-President of this institution.

Digitized by Google

He is in full sympathy with the policy of his predecessors, and has continued to carry it out with such amplifications as the spirit of the times and a resourceful individuality have suggested.

The business of the bank was never in a more flourishing condition than it is at the present time and its collection department ranks with the first institutions of the South. An able, conservative and progressive management, supported by a directorate the strength of which is equalled by few Southern institutions, has placed the Birmingham Trust and Savings Company among the secure and conservative banks of the country.

Its directors are: Arthur W. Smith, President; James Bowron, Vice-President Dimmick Pipe Co.; J. M. Caldwell, of Caldwell & Ward, Bankers and Brokers; S. L. Earle, of Earle, Terrell & Co., Merchants; W. H. Kettig, President Milner & Kettig Co.; Alex. T. London, Attorney-at-Law; W. T. Northington, President Continental Gin Co.; James Spence, Vice-President Birmingham Machine and Foundry Co.; R. A. Terrell, of Earle, Terrell & Co., Merchants; R. S. Munger, director Continental Gin Co.; James T. Woodward, President Hanover National Bank, New York.

The officers are: Arthur W. Smith, President; Tom O. Smith, Cashier; W. H. Manly, Secretary and Assistant Cashier.

Some Reflections on Wealth.—There is really nothing to be gained by denouncing wealth. Wealth is very likely to consider denunciation as the tribute which envy compels.

Then, too, those who denounce wealth are very likely to be suspected of hypocrisy. It is generally known that most people would like to try the experiment of wealth. When a farmer gets forty acres of land he generally wants eighty, and when he gets eighty he wants 160, and when he gets 160 he wants more.

It is currently reported that a legislator who used to denounce stocks and bonds with great force and violence, went up to New York at the close of the last Congress and cashed in a tip at something like $250,000.

It is hard to please people, anyhow. If a man is economical, you call him parsimonious; if he is a spendthrift, you call him a fool; if he is rich, you call him a plutocrat.

Besides, wealth is the victim of its own environment. When you see one of those figures in a grocery window grinding coffee, the figure seems to be running the machine; but in reality the machine is running the figure, and the figure can not very well escape the tyranny of its own surroundings.

To the man of moderate means unlimited wealth seems a good deal like the prospect of unlimited jam to the small boy, but he can hold only about so much anyhow.

Generally speaking, it means rather a dreary round, certainly not more interesting than the keen ambition of the man seeking to get there.

"The wheel of life turns high, turns low," but there is no point where the average man, rich or poor, is willing to stop.

Above a certain moderate sum wealth becomes a financial expression, a column of figures.

The capitalist plays for thousands as the schoolboy plays for marbles, and is not so much interested in the money as in the game.

After all, enjoyment is not so much in the thing tasted as in the palate of the taster.

The millionaire maintains a palace and finds his comfort in one room; keeps many servants to wait on each other; keeps a carriage and walks for exercise; has plenty to eat and diets for his health; has unlimited means for diversion and seldom has time for diversion; gets tired of watching the boundaries of his own possessions, but has to remain on guard.

Every once in a while, after he has drained all there is in it, he turns State's evidence against the world, the flesh and the devil, good form, charitable brokerage, and the well-dressed treadmill generally, and tells us there is nothing in it; but we keep right on after it.

Capital is only labor grown prosperous, and when it becomes prosperous it acts just as prosperity always acts, and gets envied in turn just as prosperity is always envied.

[Extracts from a speech by Hon. Edward L. Hamilton, of Michigan, delivered in the House of Representatives.]

NOTICES OF NEW BOOKS.

[All books mentioned in the following notices will be supplied at the publishers' lowest rates on application to BRADFORD RHODES & CO., 87 Maiden Lane, New York.]

THE CONQUEROR. By GERTRUDE ATHERTON. New York: The Macmillan Co.

We have here a panegyric of Alexander Hamilton that ought to satisfy, even if it does not surfeit, his most ardent admirers. Hamilton was a great statesman, but he was not the demigod that Mrs. Atherton portrays. Evidently, she is too much dazzled by the brilliancy of her subject to see clearly. History written under such inspiration may be fervid, but it is apt to be unjust, and we believe that there is in these pages a tendency to depreciate Hamilton's contemporaries—even General Washington—that is altogether uncalled for. His greatness needed no such methods to establish its just proportions. As a work of fiction, the story halts too much, and the polemical passages relating to the Constitution are tedious interruptions of the human interests involved. After all, the story is the thing in a novel and whatever purposeless interference with its progress is introduced serves to weary and distract the reader, even though so momentous a document as the Constitution of the United States should be the subject of the discussion. However admirable a work of fiction may be in other respects, it fails in the essential requirement if its plot is encumbered with irrelevant incidents. Even the development of eccentricities of character must be made to contribute to the progress or the catastrophe of the tale. When Wilkie Collins in one of his stories introduces a religious fanatic who quotes scripture in regard to marrying a divorced woman and who falls in love with that woman under the belief that she is a widow, we are not in any doubt as to what will happen when the deception is revealed.

The Conqueror mingles history and fiction together as indiscriminately as Herodotus is said to have done. Doubtless there is sufficient fiction in most of the literature that passes for history without making any more palpable combinations. In "Ben Hur" Gen. Wallace shows how a great Figure in the world's history may be rightly used to consummate a denouement that could have been brought about in no other way, the preceding conditions being as they were.

It is now the fashion to redress the great historical characters in the garb of fiction, in order to gain the attention of those whose minds are too flippant to be attracted to the study of history pure and simple, and we may expect to see Washington as the hero of a swashbuckling romance, Lincoln as the chief character in a melodrama, and so on *ad nauseam.*

The story of Alexander Hamilton's life, mysterious in its origin and tragic in its end, furnishes abundant material for a romance. His career is interwoven with the birth of the Republic, and perhaps no man contributed more than he to the establishment of the national sovereignty. He was a master of finance, and whatever relates to his public services will be found worthy of study by those engaged in banking.

It is said that visitors to St. Paul's Cathedral in London, on being shown the obscure grave of Sir Christopher Wren, the architect of the building, ask for his monument and are told to look around them—the building itself is his monument. ("*Si monumentum requiris, circumspice.*") Alexander Hamilton lies buried in Trinity

Digitized by Google

Churchyard, New York city, his resting place being marked by a much-worn and unimpressive sculpture; but almost within the shadows of Trinity is the venerable Bank which he founded, while all around are the financial institutions whose existence and prosperity are a result of the sound principles he inculcated. To Hamilton's patriotism and genius the United States owes an immeasurable debt.

"SURVIVALS." By LEWIS V. F. RANDOLPH. New York: G. P. Putnam's Sons.

The author of this tasteful little volume of verse is President of the Atlantic Trust Company, New York city, and his reputation as a financier is too securely established to suffer because of the declaration of a former employer, that "poetry and banking don't mix." Edgar Allan Poe once wrote a very elaborate essay in which he sought to establish the theory that the art of writing poetry was largely mechanical. He claims to have written "The Raven" just as he would solve a problem in mathematics; but this poem and "The Bells" and "Annabel Lee," in all of which the machinery, though perfectly adjusted, is plainly exposed to view, justified the appellation that Mr. Emerson bestowed upon him—"the Jingle-Man." But Poe forgot his theory when he wrote the lines "To Helen," as well as several of his other poems.

Were Poe's contention true, there is no reason why anybody, by patient study, might not become proficient in the art of verse-making, and certainly any one possessed of sufficient skill to handle the funds of a financial institution so as to be able to return them on demand, or to judge accurately the value of paper tendered for discount, might be expected to acquire a working knowledge of the laws of poetic composition; but having carried this knowledge to the highest degree of perfection, it is more than probable that the poet thus equipped, and lacking the indefinable qualities that distinguish those who have immortalized themselves by their verse, would be capable of producing only lines that would be as sounding brass or a tinkling cymbal.

Nor is imagination alone the supreme endowment of the poet; for Shakespeare, though unapproachable in the realm of imagination, and gifted with infinite fancy, is greater still as a delineator of life—of its realities, its loves, hates, prejudices, foibles and virtues. His characters are not types, but living men and women. He knew the heights and depths of human nature better than any one before his time or since.

The critic who thinks he has discerned the limitations of art may assert that subjective experiences are not properly themes for poetic treatment; but if this rule be applied, we should have Byron without "Childe Harold" and Burns without "Highland Mary"—losses for which the profound observations of the critics would afford no recompense.

Mr. Randolph's verses are marked by dignity, nobility of theme, deeply religious sentiments, and a tenderness of feeling and delicacy of expression that are the denotements of the poetic temperament. The quality of what he has written requires no apology—though the Preface is one of the delightful features of the volume—and the fact that a banker has shown his capacity to write poetry has as a precedent the example of Stedman and of Rogers, to mention no others.

BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—The Thirty-fourth Street National Bank is being organized by Bradford Rhodes, Henry W. Sackett, Richard R. Hunter and others. It will be located on Thirty-fourth street in the vicinity of Broadway, and will have, when the organization is complete, $400,000 capital and surplus.

A large amount of the stock has been placed among merchants in the neighborhood where the bank will do business, and whatever stock may not be thus taken has already been underwritten.

The new bank will make a specialty of family and mercantile accounts.

—At the quarterly meeting of the Banking Commission in the Mayor's office May 1 the following institutions were added to the list of city depositories:

The Van Norden Trust Company, Greenwich Bank, Trust Company of the Republic, Empire State Trust Company, Bronx Borough Bank, Lincoln National Bank and United National Bank. The rate of interest is two per cent.

—The first anniversary of the New York Chapter of American Institute of Bank Clerks was celebrated by a banquet at the Hotel St. Denis on the evening of April 24.

S. Ludlow, Jr., chairman of the chapter, presided, and after the banquet made a graceful speech reviewing the work of the chapter during the past year.

James G. Cannon, Vice-President of the Fourth National Bank, and president of the American Institute of Bank Clerks, spoke on "The Institute; the Benefits It Offers." He urged the bank clerks to take a broader view of their duties. Herbert Noble spoke on "The Ideal Banker" and Geo. H. Kretz, of the National Park Bank, spoke on "Our Chapter." Joseph C. Lincoln recited several original poems, State Senator Edmund W. Wakelee, of New Jersey, spoke on "Educational Opportunities of the Present Day." In the course of his speech he said that the attention of people was now greatly occupied by the colossal figures in the financial world, but he said that we should not lose sight of the fact that it was the average man who constituted the real strength of the country.

Geo. E. Allen, editor of "The Bulletin," made a few remarks. A quartette from the New York Bank Clerk's Glee Club added greatly to the enjoyable features of the occasion. There was a large attendance, and all pronounced the banquet a great success. The menu cards were in the form of pass books.

—The Northern National Bank is to be opened for business shortly on Broadway near Spring street with $300,000 capital. Frank C. Mayhew, formerly with the Broadway branch of the Corn Exchange Bank, has been offered the presidency of the new bank.

—Plans have been filed with the building bureau for the proposed addition to the National Park Bank building at 214 Broadway. They provide for a fireproof extension of brick and granite, one and three stories in height, running through the block in the rear of the present building with frontages of 67.2¼ feet on Ann street and 91.10½ feet on Fulton street and a depth from street to street of 117.6 feet. The improvement is to cost $350,000.

—The new Trust Company of the Republic, located at 346 Broadway, will make a feature of dealing in notes secured by warehouse receipts of the Security Warehousing Co., which are guaranteed by the National Surety Co., this guarantee being that the goods warehoused are of the quantity and quality called for in the receipt.

—President Arthur D. Bissell, of the New York State Bankers' Association, and of the People's Bank, of Buffalo, has appointed Presidents Henry P. Davison, of the Liberty National, and E. S. Schenck, of the National Citizens', Vice-President William H. Porter, of the Chemical, and Cashier Gates W. McGarrah, of the Leather Manufacturers' National, all of Manhattan; President Stephen M. Griswold, of the Union, of Brooklyn; Manager William Sherer, of the New York Clearing-House, and President Charles Adsit, of the First National, of Hornellsville, a committee to make arrangements for the annual convention of the New

Digitized by Google

York State Bankers' Association which is to be held at the Waldorf-Astoria, New York city, in October.

—The trustees of the Eastern District Savings Bank, Brooklyn, were tendered a dinner on the evening of April 16 by the counsel of the bank, Charles L. Sicardi. The banquet was held at the new Cafe Martin, Manhattan.

Grouped around the board were Lewis E. Meeker, J. Parker Sloane, Homer L. Bartlett, William A. Locke, Charles J. Edwards, James Gascoine, E. M. Hendrickson, John Bossert, Henry Volweiler, Henry L. Gaus, Charles Jacob, P. J. Menahan, Frederick E. Brandis and Charles L. Sicardi.

President Meeker made an interesting speech, in which he stated that when the bank was located at Broadway and Gates avenue, a few years ago, the most sanguine could not have hoped for so phenomenal a success as had been achieved. That with the opening of the new bridge, the Gates avenue section must receive an enhancement in value and population, which would correspondingly increase the business of the bank.

—There was a fully-attended meeting of the executive council of the American Bankers' Association in this city April 23. In the evening a dinner was given the visiting bankers at the Metropolitan Club.

It was decided to hold the next annual convention of the association at New Orleans early in November, the precise date to be announced hereafter.

—Redmond, Kerr & Co. of 41 Wall street, New York, have issued a pamphlet describing the letters of credit issued by their banking house. It is handsomely gotten up, and contains illustrations of the principal banking houses abroad where the letters of credit are cashed. Information is also given as to the general working of a letter of credit, the value of foreign coins, cable and telegraph rates, and differences in time and similar information.

—The National City Bank has made arrangements whereby it issues certificates representing British consols registered on the books of the Bank of England in the joint names of the Union Bank of London and Baring Bros. & Co., and pursuant to an arrangement whereby they can be disposed of only on the joint order of the National City Bank and the Farmers' Loan and Trust Company.

A circular letter has been issued describing this arrangement in full and recommending the certificates issued under it as an investment for American capital. The peculiar advantages pointed out for such investment are that they yield at present prices 2¾ per cent., that the certificates will be salable in New York at prices equivalent to London quotations for consols and that the certificates will be available for collateral by borrowers in New York from local institutions.

—After a meeting of the directors of the National City Bank April 24 this notice was given out:

"The directors of the National City Bank of New York to-day unanimously recommended to its shareholders that the capital stock of the bank should be increased from $10,000,000 to $25,000,000 by the issuance of 150,000 additional shares of stock. The present capital of the bank is $10,000,000 and the present surplus about $7,500,000. The new stock will be offered to shareholders for subscription at 150 per cent. This will provide, in addition to the new capital of $15,000,000, an additional surplus of $7,500,000, so that when the new stock is paid for the capital and surplus of the bank will be respectively $25,000,000 and $15,000,000.

A special meeting of the shareholders to vote upon this question of increase of the capital and surplus of the bank will be called for an early day in June. The date fixed for payment for the new stock will probably be about July 1 next."

—Cecil Baring has retired from the firm of Baring, Magoun & Co. and Hugo Baring and Geo. D. Hallock have been admitted as partners.

—On March 27 the members of New York Chapter and Alexander Hamilton Chapter, American Institute of Bank Clerks, met to listen to a joint debate on the topic,

"*Resolved*, That the present economic conditions require a Central Bank."

Affirmative—New York Chapter: Speakers: David King, J. C. Martine, Oscar Newfang.

Negative—Alexander Hamilton Chapter: Speakers: W. E. Stevens, G. Lawrence Pegram, Wm. S. Knox.

Judges: Valentine P. Snyder, President Western National Bank; Frank A. Vanderlip, ex-Assistant Secretary of the Treasury of the United States and now Vice-President of the National City Bank; Gates W. Garrah, Vice-President Leather Manufacturers' National Bank.

A large audience heard the debate, ex-Secretary Lyman J. Gage being among those present.

After an interesting discussion, the judges gave their decision in favor of the affirmative.

—Count Matsukata Masayoshi, twice Premier and for many years Finance Minister of Japan, arrived in the city on a visit April 7. He is regarded as the leading financial author-

Digitized by Google

ity in the Empire, and has rendered distinguished service to his country. His work in retiring the inconvertible paper and in placing Japan on the gold standard was particularly notable. His Report on the Adoption of the Gold Standard was a substantial contribution to financial literature, and showed him to be a master of monetary science.

At a reception given by the Japanese residents of the city at Sherry's on the evening of April 9, Count Matsukati spoke of the improving financial and commercial conditions in his country. He stated that he did not intend to negotiate a loan for his country, and expressed the opinion that the introduction of foreign capital into Japan, through official instrumentality, would do more harm than good at the present time.

—It is reported that Messrs. J. P. Morgan & Co., Baring, Magoun & Co., the National City Bank and three prominent life insurance companies subscribed for $25,000,000 of the new British loan.

—The Bank of the Metropolis is building a sixteen-story bank and office structure at 31 Union Square at a cost of about $500,000.

—In order to provide for the establishment of additional branches the Corn Exchange Bank will increase its capital from $1,400,000 to $2,000,000.

—R. W. Poor, formerly Cashier of the Garfield National Bank, has been elected President, to succeed the late W. H. Gelshenen. W. L. Douglass, formerly Assistant Cashier, succeeds Mr. Poor as Cashier. Mr. Poor has been with the bank since 1888.

—It is expected that the new Lincoln Trust Company will begin business about July 1 in the building No. 208 Fifth avenue and 1128 Broadway.

—Following is the text of a circular recently issued by the New York Clearing-House Association:

—The following resolution has been unanimously adopted by the clearing-house committee. The preamble and first section were adopted at a meeting held April 21, 1902, and the other sections on April 28, 1902:

Resolved, That, acting under the authority given this committee by the amendment to the constitution adopted October 14, 1890, and further amended December 21, 1896, the circular issued November 6, 1899, be amended to read as follows:

(1) No institution shall be permitted to clear through any member of this association, unless such institution shall have been in actual operation for at least one year at the time of making the application.

(2) No institution shall be cleared by any bank member of this association until it shall have been examined by the clearing-house committee, or some other committee of the association duly appointed for such purpose.

(3) Every institution which hereafter may be granted permission to clear through a member of this association shall furnish a weekly statement of its condition to the manager, in the same manner as weekly statements of non-members clearing through this association are now rendered, or in such form as may be prescribed by the clearing-house committee.

(4) Every institution which hereafter may be granted permission to clear through a member of this association shall be required to keep in its vaults such cash reserve to its deposits as the clearing-house committee may determine. The percentage of such reserve, however, is not to exceed that required of banks members of the clearing-house association.

—The Yokahama Specie Bank, whose head office is at Yokahama, Japan, recently issued its forty-fourth report, presented to the shareholders at the half-yearly ordinary general meeting held on March 10.

Gross profits for the half-year ending December 31, 1901, including 527,081.325 yen brought forward from last account, amount to 5,755,721.688 yen, of which 3,841,564.890 yen have been deducted for current expenses, interest, etc., leaving a balance of 1,914,156.798 yen. The directors recommended an addition of 200,000 yen to the reserve fund, raising it to 8,710,000 yen. From the balance a dividend at the rate of thirteen per cent. per annum was provided for, and the remainder, 544,156.798 yen was carried forward to the credit of next account.

—The one hundred and thirty-fourth annual meeting of the Chamber of Commerce was held May 1. Morris K. Jesup was re-elected president, James G. Cannon treasurer and Geo. Wilson secretary. Whitelaw Reid, Clement A. Griscom and Charles Lanier were chosen vice-presidents, to serve four years.

John Harsen Rhoades, chairman of the committee on finance and currency, submitted a report reiterating the former position in favor of making silver dollars exchangeable for gold.

—The Mechanics and Traders' Bank will increase its capital from $400,000 to $700,000.

—A branch of the Trust Company of the Republic has been opened at 71 William street. This office will be in charge of the third Vice-President, James D. Livingston, and the Assistant Secretary and Treasurer, Claude W. Jester.

Digitized by Google

—Henry Ollesheimer, of the firm of Theodore Ollesheimer & Bros., has been elected a director of the National Shoe and Leather Bank to fill the vacancy caused by the death of Wm. C. Horn.

NEW ENGLAND STATES.

Boston.—Receiver Wing, of the Globe National Bank, recently paid the final ten per cent. dividend to creditors. The total dividends now reach 100 per cent., and amount to $6,600,000. After paying some interest yet due, there will be something left for shareholders.

—The stockholders of the Massachusetts Loan and Trust Co. recently voted to change the title to the Massachusetts Trust Co.

—Removal of the First National Bank is announced, the new location being in the Equitable Building at Milk and Devonshire streets.

Providence, R. I.—The Providence Chapter of the American Institute of Bank Clerks was recently organized with the following officers: President, Frank D. Lisle of the Providence Banking Company; vice-president, H. H. Pepper of the Industrial Trust Company; secretary, Gilbert A. Harrington of the Rhode Island Hospital Trust Company; treasurer, Joseph L. Guild of the Union Trust Company.

Springfield, Mass.—According to "The Republican" there is good reason to believe that the plan of the directors of the Pynchon National Bank for a stockholders' liquidation of the affairs of that institution will be carried through. The three Springfield Savings banks which are among the four largest stockholders have decided to go into the scheme proposed, and take the American Writing Paper Company bonds. It is understood that the directors will take care of at least $100,000 more of the bonds, and that a considerable number of the stockholders have decided to accept this method of settling for their liabilities.

The plan of the directors is that stockholders should buy three $1,000 writing paper bonds at ninety-five for every ten shares of stock. The bonds are now selling for about seventy-one, which would mean, if they were taken at ninety-five, a loss of $240 a bond, or practically an assessment of seventy-two per cent. on the stockholders. If the assets should be found to be as large as expected, it may be possible to reduce this assessment considerably after the Bank is liquidated, making it possibly no greater than fifty per cent.

When the money is secured from the bonds, it could be used immediately toward paying the claims of the depositors and a liquidating agent could then be appointed to clear up the entire business of the bank.

MIDDLE STATES.

Philadelphia.—On May 1 the directors of the Philadelphia National Bank declared a dividend of five per cent. for the last six months and added $250,000 to surplus, making the total of that fund $1,750,000.

—The Corn Exchange National Bank has purchased the property adjoining it on Second street and when plans have been completed will erect an addition to the bank's present quarters. The new lot occupies a frontage on Second street of thirty feet with a depth of seventy-five feet, thus giving the bank much-needed room. The building now occupied by the bank has only been completed a little over a year and is handsomely fitted up with all the conveniences of an up-to-date banking-house, but the rapidly growing business necessitates more space, hence the purchase.

—Morton McMichael, for thirty-nine years Cashier of the First National Bank, and one of the oldest National bank officers in point of continuous service in the country, has resigned as Cashier but will still be actively associated with the bank as Vice-President, which office he has held in connection with that of Cashier for several years. Mr. McMichael will go abroad shortly, to remain for some months.

Kenton Warne becomes Cashier. He has been with the bank thirty-seven years, serving in every capacity below the rank of Cashier.

Charles H. James has been appointed Assistant Cashier. He has been connected with the bank for seventeen years.

Newark, N. J.—The Comptroller of the Currency has approved the plans for the new consolidated bank in Newark, N. J., to be known as the Union National Bank. The charter of the present German National Bank will be used, and the capital of the latter will be increased from $200,000 to $1,500,000, and its surplus from $400,000 to $1,500,000. The Second National and the State Banking Company will be liquidated and merged.

Pittsburg, Pa.—It is reported that the City Trust Co. will be absorbed by the Colonial Trust Co.

—It is expected that the capital of the Lincoln National Bank will be increased from $300,000 to $600,000.

Digitized by Google

—The Columbia National Bank recently increased its capital by $300,000, making the total $600,000.

Easton, Pa.—A new building for bank and office purposes is to be put up by the First National Bank. It will be a seven story steel frame structure, occupying the entire lot, forty by 120 feet. The outside material of the first story will be granite, and that of the remaining stories grayish brick with ornamental terra cotta trimmings. The entrance to the building will be in the centre, with large windows on either side, and will lead to a lobby twenty by forty feet. Beyond the lobby will be the banking room, forty by 100 feet. The second and remaining floors will be used for offices. The building will be fire proof throughout and provided with all the conveniences of a modern office building.

Buffalo, N. Y.—On May 1 it was announced that the Marine Bank had bought a controlling interest in the Buffalo Commercial Bank, absorbing its business.

—The Manufacturers and Traders' National Bank has absorbed the Merchants' Bank. It was only lately that the former bank entered the National system, increasing its capital at the time to $1,000,000.

Paterson, N. J.—Henry C. Knox, who has been connected with the Paterson National Bank since its organization in 1889, first as Cashier and later as Vice-President, has resigned to accept the position of treasurer of the American Brake Shoe and Foundry Company in New York. This position carries with it a very much increased salary, and is a recognition of Mr. Knox's financial abilities. Since his connection with the bank, dating from its organization, it has grown until the deposits exceed $2,000,000, and it was never in a more prosperous condition than at the present time. Mr. Knox will continue to reside here, and will remain a director of the bank.

Yonkers, N. Y.—A neat and attractive pamphlet has been issued by the Westchester Trust Company, of Yonkers, N. Y. It presents in a clear and concise manner the laws of the State of New York in regard to the descent of real and personal property, and contains much additional valuable information in regard to the duties of administrators, executors, trustees and guardians. The illustrations present many buildings notable in the history of Westchester county.

The Westchester Trust Company has $200,000 capital and $100,000 surplus, and its officers are: President, John Hoag; Vice-Presidents, Francis M. Carpenter and Howard Willets; Secretary, Charles P. Marsden. The directors include a number of well-known capitalists and business men, and the company is meeting with deserved success.

SOUTHERN STATES.

Louisiana Bankers' Association.—A largely attended convention of this association was held at New Orleans April 29 and 30, James T. Hayden, President of the Whitney National Bank, of New Orleans, presiding. Secretary L. O. Broussard reported a total membership of ninety-seven—an increase of thirty-one in the past year. M. J. Sanders spoke on "The Port of New Orleans," and brief addresses were also made by J. E. McAshan, president of the Texas Bankers' Association, and J. M. Dinwiddie, secretary of the Iowa Bankers' Association. Resolutions were passed extending a warm welcome to the American Bankers' Association, which will hold its convention at New Orleans next fall.

At the second day's session B. K. Miller spoke on "Warehouse Receipts and Their Value as Collateral Security in the Present State of the Law," and G. W. Bolton, President of the Rapides Bank, Alexandria, spoke on "Banking and Security of Banking in Agricultural Districts."

Officers were chosen as follows:

President—John H. Fulton, of the Commercial National Bank, New Orleans.

Vice-President—L. M. Carter, President Merchants and Farmers' Bank, Shreveport.

Secretary—L. O. Broussard, Cashier Bank of Abbeville.

Treasurer—L. M. Tully, Cashier Bank of Plaquemine.

Baton Rouge, La.—The "Daily Truth" of April 8 says:

"For the second time in the existence of the Bank of Baton Rouge the one million dollar mark has been reached, and in this instance, passed by more than $6,000. The first occasion was between the publication of two statements; this time at the close of the quarter ending March 31, 1902, the statement which appears elsewhere in our columns and presently discussed.

Aside from the figures which show the resources to have grown from the original capital of $50,000 to the sum of $1,006,728.44, the statement furnishes information of a material increase in individual deposits, the best indication of a bank's popularity and of the confidence of its patrons in its stability and management. It conveys also the gratifying information that the undivided profits for the quarter sum up something over $5,300, and that the capital, surplus and undivided profits are now $234,460.62, with a flattering increase in almost every item.

Digitized by Google

Not only has the bank prospered itself but it has been one of the chief factors in creating general prosperity. With the establishment of banking institutions may be dated the birth of the present spirit of progress and the wonderful strides made by all commercial interests. From a small beginning this bank has reached the seventeenth place among all the State banks in the United States, and the first place in the State, due to the liberal methods and skillful management of the officials who have presided over its destiny since the day of opening its doors."

West Virginia Bankers' Association.—The ninth annual convention of the West Virginia Bankers' Association will be held at Charleston May 21 and 22. J. T. Carskadon is president and Robert L. Archer, secretary.

WESTERN STATES.

Chicago.—Geo. M. Reynolds, formerly Cashier of the Continental National Bank, was recently elected Vice-President of the bank to succeed Isaac N. Perry.

Mr. Reynolds became Cashier of the Continental National in 1896, resigning as President of the Des Moines (Iowa) National Bank to accept this position. His promotion is fully deserved, and will be a source of gratification to his many banking friends in the Northwest.

—In speaking of the marked changes that have taken place in banking circles in recent years, the "Evening Post" of April 26 says:

"Of the twelve National banks shown to have been eliminated from the situation in the last six years, there are only three that have not been merged with other banks. The Atlas and Home were liquidated, and the National Bank of Illinois was closed by order of the Comptroller of the Currency. The American Exchange was absorbed by the National Bank of America, the latter in turn by the Northwestern, and subsequently the Northwestern was taken over by the Corn Exchange. The Corn Exchange has also acquired the business of the Globe and Merchants' National, the absorption of the latter having taken place only a few weeks ago. The Hide and Leather went into the Union and the Union into the First. The Bankers' National got the Lincoln, and the Prairie State National was converted into a State bank.

The most important change in the State bank situation in the last six years was the reorganization of the Corn Exchange as a National bank. This bank since then has had a remarkable growth, and, as shown in the foregoing, has succeeded in absorbing several of its rivals. Most of the other banks in this group that have disappeared were comparatively small affairs. A few failed, one or two were liquidated, and the others were consolidated with other banks. One new State institution, the Foreman Brothers Banking Company, has come into existence during the period under review.

The remarkable thing in connection with these changes in the Chicago banking situation is that in spite of the large number of banks that have gone out of existence there has been no reduction in the amount of banking capital. Furthermore, the loans and deposits of the local banks were never before so large as now. The twelve National and five State banks shown to have dropped out of the field represented an aggregate capitalization of $14,650,000. This amount has been practically offset by increases in capital made at various times by the institutions that have survived. The total capital of the National banks of Chicago, January 1, 1896, was $21,800,000, and of the State banks $11,877,000, or an aggregate of $33,677,000. The figures at present, allowing for the proposed increase of $2,000,000 by the First, are $18,900,000 and $13,300,000 for the National and State banks respectively, or a total of $32,200,000. This shows a reduction of about $1,500,000, but this loss will be more than made up within the next few weeks. Three new State banks—the Federal Trust, the Colonial Trust and Savings and the State Street Savings—have been organized recently, and their combined capital will amount to about $2,500,000. In addition to this the Western State Bank has increased its capital $200,000, and the National Bank of the Republic doubtless will make an increase of $1,000,000. There will thus be shown a net gain of more than $2,000,000 in Chicago banking capital, as compared with that employed January 1, 1896.

The development of the Chicago banks is, however, most strongly reflected by their loan and deposit accounts. These, as stated, are now at the highest points in the history of the city. The total deposits of the National and State banks January 1, 1896, were $201,688,388. February 25, 1902, the date of the last official reports, they stood at $474,383,635. Six years ago the loans amounted to $159,149,378. Now they are $290,874,358. The cash means have in that period increased from $80,555,668 to $186,770,269, the surplus and undivided profits from $21,081,130 to $26,782,142, and the holdings of stocks and bonds from $14,002,606 to $59,106,644.

The prosperity of the Chicago banks is reflected in the market for their stock. The shares of all the leading institutions have had a sharp advance in the last few years, and in some cases they are selling on a high-grade bond basis.

The following table shows the bid prices for stocks of leading banks a year ago and this week (April 26):

* Carrying prospective rights to $1,000,000 new stock at par."

—Jno. J. P. Odell, former President of the Union National Bank, is working on the organization of a new National bank to have a capital of $1,000,000.

—Reports have been current recently of a combination of the Commercial and Continental National banks, and there has been a sharp advance in the shares of both banks.

—The directors of the First National Bank have approved of the terms for absorbing the Metropolitan National Bank. A special meeting of the stockholders of the Metropolitan has been called to ratify the merger. By the terms of the consolidation, the business and assets of the Metropolitan will be transferred to the First National and the stockholders of the Metropolitan will receive dollar for dollar for their $2,000,000 capital in stock of the First National.

The capital of the First National will be increased to $9,000,000, with a surplus of $6,000,000, the largest of any bank outside of New York city. The total deposits of the First National Bank after the consolidation, which is to take place May 31, will be about $100,000,000.

—Isaac N. Perry, former President of the Continental National Bank, was recently offered the presidency of the new Southern Trust and Banking Co., of New Orleans, and had decided to accept. It is now stated, however, that Mr. Perry will remain in Chicago to organize the National Bank of Commerce with a capital of $2,000,000 and $500,000 paid-in surplus.

St. Louis.—On April 10 the capital of the St. Louis Trust Co. was increased from $3,000,000 to $5,000,000, which action is said to be a virtual ratification of the consolidation of the St. Louis and Union Trust companies under the name of the St. Louis Union Trust Company.

Kansas City, Mo.—A joint convention of the bankers' associations of Missouri, Kansas, Oklahoma, Indian Territory and Colorado will be held at Kansas City May 13 and 14. This convention promises to be one of the largest bankers' meetings ever held in the United States, and the subjects of "Assets Currency" and "Branch Banks" will receive special discussion.

On May 13 "Branch Banks" will be discussed, and addresses on this subject will be made by Hon. Horace White, Editor of the New York "Evening Post," and Hon. Henry W. Yates, President of the Nebraska National Bank, Omaha.

On May 14 the subject of "Assets Currency" will be considered, and addresses delivered by Hon. James H. Eckels, former Comptroller of the Currency and now President of the Commercial National Bank, Chicago, and by Hon. Chas. G. Dawes, ex-Comptroller of the Currency.

—A chapter of the American Institute of Bank Clerks was recently organized here. S. Bradley, of the Fidelity Trust Co., was elected temporary chairman and G. J. Radcliffe temporary secretary.

Iowa Bankers' Association.—The sixteenth annual convention of the Iowa Bankers' Association will be held at Foster's Opera House, Des Moines, May 21 and 22. Secretary Dinwiddie reports that Gov. Cummins, ex-Comptroller Dawes and Hon. Chas. A. Clark will be among the speakers who will address the convention.

As the Iowa association is one of the largest and most active bankers' organizations of the country, an interesting and profitable meeting is assured.

Branch Banks Opposed.—A meeting of the bankers comprising Group I of the Iowa Bankers' Association was held at Council Bluffs, Ioa., April 23. The following resolution, presented by Ernest E. Hart, President of the First National Bank, of Council Bluffs, was adopted unanimously:

"*Resolved*, That it is the sense of this convention of bankers that the proposed banking legislation now under consideration by Congress known as the Fowler bill, will not tend, if enacted into law, to advance the best good of the business interests of the people of this country; especially that feature of the bill relating to branch banking; and we hereby request our Senators and representatives from this State to use their influence against the enactment of this proposed bill into law."

D. L. Heinsheimer, President of the Mills County National Bank, Glenwood, spoke vigorously against branch banks, as did a number of others.

At the close of the meeting officers were elected for the ensuing year. E. F. Wentz, Cashier of the Citizens' State Bank, of Oakland, was accorded a re-election by acclamation for a third term as chairman of the Group, and T. K. Elliott, Cashier of the Commercial National Bank, of Essex, was similarly re-elected secretary.

Digitized by Google

Minneapolis, Minn.—The First National and Security Banks will enlarge their quarters owing to the pressure of business. The First National, which put a large clerical force on the second floor of the Phoenix building at the time the Nicollet National was absorbed, has been compelled to secure more space and has added a large room adjoining to the suite.

The Security Bank in the Guaranty Building will extend the present lobby the entire depth of the building. Various other improvements are contemplated, including a ladies' department far superior in equipment and convenience to the present one. The banking rooms occupied by W. E. Steele & Co. will be included in the Security's enlarged apartments after May.

Property has been bought by the Northwestern National Bank on which a handsome modern banking building will be built.

Youngstown, Ohio.—The First National Bank, which was original No. 3 of the National banking system, dating from June 2, 1863, has recently extended its charter for another term of twenty years, which will make sixty years under the present title.

The bank has paid about $1,500,000 in dividends, $450,000 in taxes, and has $900,000 surplus and profits.

In speaking of the bank, a recent issue of the "Telegraph," of this city, said:

"This bank and the one preceding it have an honest record of over fifty years, and while old and proud of its age and record, has a good sprinkling of young blood among its stockholders and officials, and starts out on its third term of twenty years with its strength renewed and increased. It will be true to its history, safe yet liberal in its policy, and always loyal to the interests of the city which it has done so much to build up."

Holdenville, Indian Ter.—The National Bank of Holdenville is taking rank as one of the most solid and progressive banks in this locality. Under the enterprising management of Cashier J. H. Edmondson the deposits of this bank increased from $83,000 in October, 1901, to $73,000 on February 25, 1902. Mr. Edmondson is a young man, and the results which his bank has achieved show the possibilities of western banking institutions when managed by men of push and executive ability.

The officers of the National Bank of Holdenville are: President, Charles E. Billingsley; Vice-President, R. M. McFarlin; Cashier, J. H. Edmondson. The paid-in capital of the bank is $25,000.

PACIFIC SLOPE.

California Bankers' Association.—The ninth annual convention of the California Bankers' Association will be held at San Jose, May 29, 30 and 31.

Besides the business sessions of the convention, which are expected to be of exceptional interest, arrangements are being made for social features which will greatly enhance the attractiveness of the meeting. R. M. Welch, of San Francisco, is secretary, and Frank Miller, of Sacramento, chairman of the executive council. J. M. Elliott, of Los Angeles, is president of the association.

Washington State Bankers' Association.—The next annual convention of the Washington State Bankers' Association will be held at Seattle, June 19, 20 and 21.

San Francisco.—A large and successful chapter of the American Institute of Bank Clerks is in operation here, the membership embracing representatives of all the banks. The chapter is under the local direction of the following board of governors: J. D. Ruggles, Bank of California; L. R. Cofer, California Bank; P. J. Eastwick, Jr., Wells, Fargo & Co.'s Bank; C. H. McCormick, First National Bank; Irving Lundborg, San Francisco National Bank; Gustave Folte, German Savings and Loan Society; A. M. Whittel, San Francisco Savings Union.

Great Falls, Mont.—At a special meeting of the stockholders of the First National Bank, April 21, the resignations of the old directors and officers were presented and accepted, and a new board and staff of officers elected, the latter all being connected with the Daly estate. The new officers and directors are:

Directors—John D. Ryan, president of the Daly Banking and Trust Company, Butte; D. J. Hennessy, of the Hennessy Mercantile Company, Butte; J. G. Morony, former State examiner; A. J. Campbell, attorney for the Daly estate; John C. Lalor, business agent of the Daly estate.

Officers—John D. Ryan, President; D. J. Hennessy, Vice-President; J. G. Morony, Cashier.

Butte, Mont.—John D. Ryan succeeds W. W. Dixon as President of the Daly Bank and Trust Company, and John R. Toole succeeds Mr. Ryan as Vice-President, the other officers remaining as heretofore. This bank now reports $90,000 surplus.

Failures, Suspensions and Liquidations.

Michigan.—On April 23 the Algonac Banking Company, of Algonac, was closed, and Lewis T. Bennett has been appointed Receiver. Liabilities are placed at $32,000, and the assets are reported to be of very little value.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under the different State headings.

NATIONAL BANKS ORGANIZED.

6182—Clarion County National Bank, Edenburg (Knox, P. O.) Pennsylvania. Capital, $50,000.
6183—First National Bank, Farmington, New Mexico. Capital, $25,000.
6184—Marine National Bank, Buffalo, New York. Capital, $200,000.
6185—First National Bank, White Rock, South Dakota. Capital, $25,000.
6186—Manufacturers and Traders' National Bank, Buffalo, New York. Capital, $1,000,000.
6187—First National Bank, Portales, New Mexico. Capital, $25,000.
6188—First National Bank, Gulfport, Mississippi. Capital, $100,000.
6189—People's National Bank, Springfield, Tennessee. Capital, $60,000.
6190—Caribou National Bank, Caribou, Maine. Capital, $50,000.
6191—First National Bank, Greenup, Illinois. Capital, $25,000.
6192—First National Bank, Garrett, Illinois. Capital, $25,000.
6193—Sheffield National Bank, Sheffield, Pennsylvania. Capital, $25,000.
6194—First National Bank, Rockport, Indiana. Capital, $35,000.
6195—First National Bank, Lubbock, Texas. Capital, $40,000.
6196—First National Bank, Friendsville, Maryland. Capital, $25,000.
6197—First National Bank, Carthage, Texas. Capital, $30,000.
6198—Fort Richmond National Bank, Port Richmond, New York. Capital, $100,000.
6199—First National Bank, Hills, Minnesota. Capital, $25,000.
6200—City National Bank, Evansville, Indiana. Capital, $200,000.
6201—First National Bank, Sidney, Nebraska. Capital, $25,000.
6202—Citizens' National Bank, Pocomoke City, Maryland. Capital, $30,000.
6203—First National Bank, Tyler, Minnesota. Capital, $25,000.
6204—First National Bank, Minnesota Lake, Minnesota. Capital, $25,000.
6205—First National Bank, Keyser, West Virginia. Capital, $60,000.
6206—Page Valley National Bank, Luray, Virginia. Capital, $25,000.
6207—First National Bank, Louisville, Georgia. Capital, $35,000.
6208—First National Bank, Long Prairie, Minnesota. Capital, $25,000.
6209—American National Bank, Ebensburg, Pennsylvania. Capital, $100,000.
6210—First National Bank, Courtenay, North Dakota. Capital, $25,000.
6211—First National Bank, Philo, Illinois. Capital, $25,000.
6212—First National Bank, Troupe, Texas. Capital, $25,000.
6213—First National Bank, Sutton, West Virginia. Capital, $35,000.
6214—First National Bank, San Augustine, Texas. Capital, $25,000.
6215—Valparaiso National Bank, Valparaiso, Indiana. Capital, $100,000.
6216—Cosmopolitan National Bank, Pittsburg, Pennsylvania. Capital, $200,000.
6217—American National Bank, Frankfort, Indiana. Capital, $100,000.
6218—First National Bank, Hankinson, North Dakota. Capital, $30,000.
6219—St. Charles National Bank, St. Charles, Illinois. Capital, $25,000.
6220—First National Bank, Everett, Pennsylvania. Capital, $25,000.
6221—First National Bank, Lyons, Nebraska. Capital, $25,000.
6222—First National Bank, Campbellsport, Wisconsin. Capital, $25,000.
6223—First National Bank, Lott, Texas. Capital, $25,000.
6224—Planters and Merchants' National Bank, Commerce, Texas. Capital, $50,000.
6225—First National Bank, Drayton, North Dakota. Capital, $25,000.
6226—Ronceverte National Bank, Ronceverte, West Virginia. Capital, $25,000.
6227—First National Bank, Port Clinton, Ohio. Capital, $35,000.
6228—First National Bank, Pawpaw, Illinois. Capital, $30,000.
6229—National Bank of Pratt, Pratt, Kansas. Capital, $25,000.
6230—American National Bank, South McAlester, Indian Territory. Capital, $50,000.
6231—Megunticook National Bank, Camden, Maine. Capital, $50,000.

Applications to Organize National Banks Approved.

The following notices of intention to organise National banks have been approved by the Comptroller of the Currency since last advice:

Northern National Bank, New York, New York; by Sidney Bernheimer, *et al.*
First National Bank, Smithville, Texas; by J. G. Wessendorf, *et al.*
Rumford National Bank, Rumford, Maine; by Leland B. Lane, *et al.*
City National Bank, Johnson City, Tennessee; by S. L. Howard, *et al.*
Norton National Bank, Norton, Virginia; by J. E. Morton, *et al.*
First National Bank, Scottsbluff, Nebraska; by M. W. Folsom, *et al.*
Lee National Bank, Long Prairie, Minnesota; by Wm. E. Lee, *et al.*
First National Bank, Ligonier, Pennsylvania; by D. E. Beitz, *et al.*
First National Bank, Spring Valley, Minnesota; by Theodore Wold, *et al.*
First National Bank, Plainview, Minnesota; by A. L. Ober, *et al.*

The Fowler Currency Bill.—Concerning the Fowler currency bill, which has been favorably reported to the House of Representatives, it is remarked by its friends that the bill is "a sort of omnibus measure, with so many features that everybody ought to find something in it suited to his taste." There are probably few if any of the friends of sound currency who would object to everything in the bill. There are many, however, who find in it things which are not at all suited to their taste, and who will strenuously object to the bill as it comes from the House Currency and Banking Committee being crystallized into law. They are for buttressing the gold standard, but they are not for an unnecessary and undesirable revolution in the currency system of the United States. They hold that there is no excuse for doing away, at the stroke of a pen, with what has been tried for forty years and found good.

The Fowler bill is evidently an emanation from people who are not content with letting well enough alone. It is altogether more sweeping than the exigencies of the situation demand. It bears on its face the evidence that it did not originate with the populace, nor with the bankers as a class, but with a class of bankers. The people of the United States have learned by experience to value the existing National banking system for two things -first for the absolute security of its note issues; second for the large measure of local financial independence which it allows. They abhor unsecured note issues, and they abhor financial centralization.

The Fowler bill would do away with the present system of absolutely securing holders of National bank issues by a deposit with the Comptroller of the Currency of United States bonds equal to the face of the notes put in circulation by the National banks, and it would inaugurate a branch banking system, or, in other words, a money trust, under which strong banks located in the financial centers would in the course of a few years control the banking capital and deposits of the entire country.

The best thing to do with the Fowler currency bill is to cut off its tail immediately behind its ears.—*Milwaukee (Wis.) Evening Wisconsin.*

Former Chief Cashier of Bank of England Dead.—Horace G. Bowen, until recently chief Cashier of the Bank of England, member of the councils of the Institute of Bankers and the Royal Statistical Society, died May 6.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, May 3, 1902.

ONE-MILLION-SHARE DAYS AT THE NEW YORK STOCK EXCHANGE were frequent last month, in fact the average daily sales of stocks was slightly above 1,000,000 shares, the total for the month being about 26,600,000 shares. This is the highest record made since May last year, when they exceeded 35,000,000, but it was in April last year that the high record was made, nearly 42,000,000 shares. In reviewing the financial situation in that month we expressed the view that the month of April, 1901, would for many years to come be considered an epoch-making period in the history of Wall Street operations. Subsequent events have confirmed this view.

It will be remembered that the sales of shares in April last year were exceptionally large, not only on a few days, but every day. Except on one Saturday (a half holiday) when the sales were 761,000 shares, the smallest daily total exceeded 1,000,000 shares, while on April 30 the sales went above 3,200,000 shares. This year the sales exceeded 1,000,000 shares on fourteen days, while on April 21 the total reached 1,971,000 shares, the largest for any day last month.

Of eleven stocks which were most active a year ago only two, St. Paul and Union Pacific, were leaders in last month's market. Only five stocks recorded as much as a million shares in April this year. They were: Southern, 2,200,000 shares; Union Pacific, 1,600,000 shares; St. Paul, 1,400,000 shares; Louisville and Nashville, 1,300,000 shares, and Reading 2,100,000 (half) shares.

Aside from the activity displayed by the stock market, the most noticeable feature was the extraordinary strength of prices. Nearly every stock made substantial gains, while a number reached the highest prices they ever recorded. Gilt-edged stocks like Northwest common and preferred and New Haven, beside Michigan Central, North American, Wheeling and Lake Erie, Pullman and other stocks, all made new records.

Some of the advances made during the month were almost unprecedented. Chicago and Eastern Illinois advanced 17¾ per cent., Northwest common 39 per cent., preferred, 27 per cent., Omaha 17½ per cent., Keokuk and Des Moines 20¾ per cent., preferred 21½ per cent., Louisville and Nashville 27¾ per cent., Michigan Central 42 per cent., Nashville, Chattanooga and St. Louis 32½ per cent., New Haven 40 per cent., and Reading 11¾ per cent. Among the industrials American Snuff advanced 31½ per cent., Brooklyn Union Gas 19 per cent., Colorado Fuel and Iron 15½ per cent., General Electric 12 per cent., International Power 104 per cent., New York Air Brake 41¾ per cent., Pullman 16 per cent., United States Express 16⅞ per cent., Westinghouse Electrical and Manufacturing Co., 35½ per cent., and preferred 36 per cent.

Two stocks caused a sensation during the month, they were Louisville and Nashville and International Power. In the former stock a corner was effected early in the month, certain operators having discovered that the company had sold 50,000 new shares in the market before they were listed at the Stock Exchange. There was danger of a panic being precipitated, and after the stock had advanced from about 105 to 133 within two weeks a settlement was arranged. The firm of J. P. Morgan & Co. was requested to take charge of the matter, and their intervention relieved the situation.

International Power, which furnished the second sensation, is the stock of a com-

Digitized by Google

pany incorporated about three years ago. It was first dealt in at the New York Stock Exchange in June, 1900, and sold during that year at 24 @ 55¾. Last year it sold up to 100½ in May and June, but was down to 86 last February. On April 1 it sold at 95 and was moved up slowly until on April 12 it was quoted at 110⅝. Then the manipulators rushed the price up furiously, as will be seen by the following record of highest prices:

April 14	119½	April 21	172⅝	April 28	196⅝
" 15	130⅞	" 22	180	" 29	199
" 16	150½	" 23	185¼	" 30	*120
" 17	156	" 24	188¾	May 1	*101
" 18	163	" 25	192¾	" 2	*85
" 19	168	" 26	193¼		

* Lowest price.

By April 29 the stock was quoted at 199 an increase of 104 per cent. in four weeks. Then the crash came. In one day the stock dropped seventy-nine per cent., the next day nineteen per cent. more and the third day sixteen per cent. more, a total of 114 per cent. in three days. The effect of such a collapse in speculation was unfavorable to the general stock market and no doubt prevented the general list from closing in April at the highest prices recorded during the month. However, the stock market presents exceptional signs of strength and prices are very near the top figures for many stocks.

There is a strong conservative feeling apparent in financial circles, which recognizes the extraordinary advances that have occurred in prices. The extent of the rise it is well to keep in mind. It will be about six years next August when the stock market was in the depths of depression. In the autumn of that year the turn came and during most of the period that has elapsed since values of securities have appreciated. To measure the rise which has occurred we give here a list of forty-eight stocks with the lowest prices at which they sold in 1896 and the highest prices they reached last month, with the extent of the advance:

	Lowest in 1896. Per cent.	Highest in April 1902. Per cent.	Advance. Per cent.		Lowest in 1896. Per cent.	Highest in April 1902. Per cent.	Advance. Per cent.

* 1897. † 1898. ‡ 1901.

Digitized by Google

It is hardly necessary to say that never before in the history of the Stock Exchange has there been so extensive an advance in prices. That there have been legitimate causes for an extraordinary increase in values no one can question. As to the future of values that must depend upon influences which affect the general prosperity of the world.

There have been few events of significant importance to affect confidence during the month. There was a shipment of gold aggregating $2,500,000 early in the month, but the advance in money in our local market checked the movement. There has been some uneasiness caused by the advance in call money, which touched 7 per cent. early in the month, and the close working of the reserve of the clearing-house banks.

The surplus reserve of the banks has not been as much as $10,000,000 since February 21 last, and it was down to about $2,600,000 on April 5, but had increased again to $7,484,000 at the close of the month. This is less than one per cent. above the 25 per cent. usually maintained, still there is no reason why the banks in an active business period should carry an excessive reserve. The increase of nearly $11,000,000 in loans and of nearly $14,000,000 in deposits in the week ending this date is recognized as a favorable circumstance.

The Executive Committee of the New York Clearing House has adopted certain rules which are causing no little discussion. These rules require that any institution before being permitted to clear through a member of the clearing house must be at least a year old, and must be examined by a committee of the clearing house. They also provide that every institution which may hereafter be permitted to clear through a member of the clearing house must furnish a weekly statement of its condition, and must keep in its vaults a cash reserve the percentage of which is to be determined by the clearing-house committee. Whatever opinion may be entertained regarding the necessity of the proposed rules, it is generally accepted that the purpose is to strengthen the banking system of the great financial center of the country. There is now about $10,000,000 of new capital going into banking institutions in process of being organized. It is important that these new enterprises be made as secure as experience can possibly make them.

The record of the clearing-house associations of the United States in April is very satisfactory. In New York there was a decrease of about 15 per cent. in clearings, as compared with April last year, but that is accounted for by the very heavy speculation which prevailed a year ago. Outside of New York the exchanges show an increase of nearly 6 per cent., and scarcely a dozen cities report a decrease.

April brings in the first report concerning the condition of the growing wheat crop that the Department of Agriculture issues. The report this year is not favorable. The condition on April 1 averaged 78.7 per cent. as against 91.7 per cent. on the same date in 1901, 82.1 per cent. in 1900, and 82.4 the average for the last ten years. This indicates a yield for winter wheat this year of about 416,000,000 bushels, as against 457,000,000 indicated a year ago. The estimated winter wheat harvest last year was about 413,000,000 bushels, the Government not yet having published any returns of the actual harvest in 1901.

The prices of grain generally are considerably higher than they were a year ago. On April 30 wheat was 3 cents a bushel higher than a month ago, and 6 cents higher than in 1901. Corn advanced 1½ cents for the month and 15⅝ cents for the year.

Cotton has again made a considerable advance, the best prices for the season being reported last month. The net advance for the month was ⅞ cent.

The announcement that Messrs. J. P. Morgan & Co. were interested in a new venture involving a "community of interest" of various large shipping interests, was one of the most talked about events of the month, nor was the discussion limited to an expression of views on this side of the Atlantic. It is understood that a

Digitized by Google

company with a capital of $120,000,000 and a bonded debt of $50,000,000 will be organized to take control of the harmonizing interests.

About the same time that this announcement was made the United States Supreme Court granted leave to the State of Washington to file an original bill for an injunction against the companies interested in the Northern Securities deal. This action of the court had no influence upon the stock market, the feeling being general that it is as well to wait until the matter is threshed out on its merits by the court.

Commercial failures in April were larger than in the corresponding month last year, but that month made the most favorable record ever known. This year according to "Dun's Review" the failures were 855 in number with liabilities of $7,859,341, as against 763 last year with liabilities of $5,571,222.

The export movement of merchandise shows a further falling off, the decrease in March being $18,000,000, and for the nine months ended March 31, $59,000,000. A large part of the decrease is due, however, to smaller shipments of corn. The exports still exceed the imports however, the excess for nine months being $402,000,000.

The decline in the price of silver in London on April 21 to 23 5-16d. per ounce English standard, made a new record minimum price for that metal. Nothing could more emphatically testify of the changed financial conditions, as compared with a decade ago, than the little effect the recent fall in silver has had upon the financial situation. Nobody apparently cares what the price of silver is. The price of silver 1000 fine on April 21, was about fifty-one cents, or just about one-half the average price at which the Government purchased all its silver for coinage into dollars between 1873 and 1893. The Government paid nearly $509,000,000 for silver purchased in those twenty years, the price averaging $1.024 per fine ounce.

At the present time there are in the United States Treasury $468,000,000 silver dollars, nearly $33,000,000 silver bullion, and $12,000,000 subsidiary coin. While all but about $20,000,000 of the silver dollars and bullion is represented by certificates outstanding, still the duty of protecting the value of the entire amount of silver and its paper representatives is generally acknowledged. Were it to become the duty of the Government to turn its silver into gold, the cost would approximate $300,000,000.

This is a very different showing from what Treasury reports from year to year have presented as the result of our silver coinage policy. Every year the "seigniorage" on silver coinage, that is the profit arising from turning cheaper silver bullion into dearer silver coin, has been carefully figured out and the "profit" turned into the Treasury. This alleged profit has approximated $60,000,000.

The fact is generally overlooked that the Government is still making something out of nothing. While silver bullion is worth only about fifty per cent. of the actual price paid for it years ago by the Government, we are still turning it into coins which are valued at about fifty per cent. more than the bullion cost the Government. The purchase of silver by the Government ceased in 1893, when there was more than $127,000,000 (cost value) of silver bullion in the Treasury. For eight years the Government has been turning this bullion into coin with the result of largely increasing our silver money supply without any actual increase in the quantity of metal composing it.

A fairly accurate idea of this increase may be had from comparing the total stock of silver bullion and coin used as money in the United States since June, 1894. It does not show exactly the amout of coin produced from bullion, but most of the increased supply of silver has unquestionably resulted from the coinage of the "seigniorage." We show the amount of silver bullion in the United States Treasury on November 30, 1893, on June 30 of each of the eight succeeding years, and on May 1, 1902:

May 1, 1902..........	32,623,815	537,620,994	95,299,190	665,540,999

While the stock of bullion in the United States Treasury has been reduced nearly $95,000,000 since November, 1893, the supply of silver dollars has been increased more than $118,000,000 and of fractional silver $18,000,000, a total increase in coin of more than $136,000,000, making the present stock of silver in use as money about $42,000,000. The present stock of silver bullion will probably be exhausted before the close of the next calendar year.

THE MONEY MARKET.—Money has ruled firmer in the local market of late and at the close of the month was high, call loans touching 8 per cent. on the last day of the month. Nothing like stringency is looked for at the present time. At the close of the month call money ruled at 3¾ @ 8 per cent., most of the loans being made at above 5 per cent. Banks and trust companies quote 4 per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 4 @ 4½ per cent. for 60 days to 6 months on good mixed collateral. For commercial paper the rates are 4¼ @ 4½ per cent. for 60 to 90 days' endorsed bills receivable, 4½ @ 5¼ per cent. for first-class 4 to 6 months' single names, and 5 @ 5½ per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—The local banks in April suffered a continuance of the drain in deposits which was so pronounced in March. From March 1 to April 19 the deposits were reduced from $1,017,000,000 to less than $953,000,000, a loss of $64,000,000, nearly $13,000,000 being in April. Between April 19 and May 3, however, the deposits increased $15,000,000 which leaves them nearly $3,000,000 greater than at the end of March. Loans were reduced from $938,000,000 on March 1 to $898,000,000 on April 26, a decrease of $45,000,000, but a gain of nearly $11,000,000 in the last week left them slightly larger than they were on March 29. The surplus reserve after falling to $2,649,525 on April 5, increased to $9,461,050 on April 26 but fell to $7,484,000 on May 3 as compared with $16,000,000 a year ago and $21,000,000 two years ago.

Money Rates Abroad.—No change was made in the posted rates of discount by any of the European banks last month. The Bank of Bengal and the Bank of Bombay each reduced its rate from 7 to 5 per cent. Discounts of 60 to 90 day bills in London at the close of the month were 2 7/8 against 2 5/8 per cent. a month ago. The open market at Paris was 2 per cent. against 2 1/4 per cent. a month ago, and at Berlin and Frankfort 1 3/4 per cent. against 2 1/8 @ 2 1/4 per cent. a month ago.

European Banks.—The gold holdings of the principal European banks have not been changed very much since April 1, the Bank of Germany being the largest loser parting with about $9,000,000. It has, however, $30,000,000 more than it held a year ago as also have France and Austria-Hungary, while Russia has $16,000,000 more.

Silver.—The price of silver has once more fallen to a record breaking price. On April 9 the price fell to 23 3/4d. per ounce which was the record price made in August and September 1897. On April 21 a still lower figure was reported, 23 5-16d. Sub-

Digitized by Google

sequently there was an advance and the price closed on April 30 at 23⅛d. a decline for the month of 1⅝d. per ounce.

Foreign Exchange.—Early in the month sterling exchange was firm and one shipment of gold was made. As the New York money market became stiff, however, exchange declined. Later, however, it advanced the rise being influenced by purchases abroad for American account of Louisville and Nashville stock and by subscriptions to the new British loan which caused a demand for bills.

mates the surplus in revenues reported for the month. The gross debt was increased nearly $10,000,000, more than $2,000,000 being the deposits of National banks to retire their notes, while $8,000,000 is represented by an increase in gold and silver certificates, mostly the former. The total cash assets in the Treasury now amount to about $1,244,000,000 an increase for the month of $7,600,000. The net cash balance is $334,739,988, an increase of nearly $7,000,000.

FOREIGN TRADE.—While the exports of merchandise in March were larger than in the previous month they show a falling off of $18,000,000 as compared with those of the corresponding month last year, and of nearly $28,000,000 compared with March, 1900. Except 1899 the exports are the smallest reported in March since 1897. Imports of merchandise show a very large increase exceeding those of March last year by $8,000,000, and of the same month in all other years excepting 1900. The

exports were $106,000,000 and the imports nearly $84,000,000, the net exports being only a trifle more than $22,000,000, the smallest reported in any month in a number of years. A year ago the balance of exports was more than $48,000,000 and in 1900 more than $47,000,000. Since September 1 there has been a constant decrease in exports compared with a year ago, the decrease in seven months being $72,000,000. Imports during the same time increased $58,000,000, making a reduction in the net balance of $130,000,000 or at the rate of $220,000,000 a year. For the nine months of the fiscal year the balance of net exports has fallen off $138,000,000.

MONEY IN CIRCULATION IN THE UNITED STATES.—The volume of money in circulation was increased by $8,700,000 during the last month, of which $7,000,000 was in gold coin and certificates and $1,500,000 in silver certificates. The changes in the other forms of money about offset each other.

MONEY IN THE UNITED STATES TREASURY.—The Treasury gained about $3,000,000 in cash last month but there was an increased issue of certificates to the extent of $5,000,000 making the net cash show a decrease of $2,000,000, which is almost entirely accounted for in the loss in net gold. Of the balance of $292,000,000 now in the Treasury nearly $243,000,000 is gold.

BANKERS' OBITUARY RECORD.

Brewster.—Hon. John Brewster, formerly President of the Merchants' National Bank, Norwich, Conn., and later Vice-President of the Norwich Savings Society, and the oldest member of the board of trustees, died April 22, in his eighty-sixth year. He had filled a number of local offices and was for several terms a member of either the House or Senate of the State Legislature.

Clark.—James Clark, Vice-President of the First National Bank, Louisville, Ky., and a director of that institution since its foundation, died April 26. He was born in Scotland seventy-two years ago, coming to Canada at an early age and later locating at Louisville. Mr. Clark was president of the Farmers' Tobacco Warehouse Co. at the time of his death.

Cannon.—Wm. P. Cannon, President of the Second National Bank, Danville, Ill., and a brother of Congressman J. G. Cannon, died May 8.

Early.—Robert Morris Early, Secretary and Treasurer of the Merchants' Trust Co., Philadelphia, from its organization in 1889, died April 22. He was born in Philadelphia in 1838.

Forbes.—Alexander D. Forbes, President of the People's Bank and Trust Co., Rockford, Ill., died April 1, aged seventy years.

Graves.—John Graves, President of the Hallowell (Me.) National Bank, and prominent in the financial affairs of the State, died May 8, aged ninety-three years.

Hedges.—Gen. Ira M. Hedges, past department commander of the Grand Army of the Republic, of New York State, and prominent in Republican politics, died April 9. At the time of his death he was President of the National Bank of Haverstraw, N. Y., which he organized in 1870.

Hill.—Henry Hill, President of the Bank of Hill, Sons & Co., Minneapolis, Minn., and extensively engaged in business enterprises in the Northwest, died April 24. Mr. Hill was born in England in 1828, but had resided in this country since a very early age.

Hines.—Henry W. Hines, Vice-President of the Pasadena (Cal.) National Bank, died April 6. He was born at Wilkes-Barre, Pa., about forty-three years ago, and had resided at Pasadena for the past seventeen years.

Hoskins.—Col. W. P. Hoskins, President of the Union Bank, Knoxville, Tenn., and also of the Elk Valley Coal and Iron Co., died April 18, aged sixty-three years.

Howes.—Joshua C. Howes, President of the First National Bank of Yarmouth, Yarmouth Port, Mass., died March 30, in his eighty-sixth year. He had held a number of State and Federal offices, and had been connected with the bank since 1870, first as a director, and since 1879 he had been President.

Neal.—Captain T. B. Neal, President of the Neal Loan and Banking Co., Atlanta, Ga., and one of the well-known business men of the South, died April 11. Captain Neal was a native of Atlanta. He was in the Confederate service, and when the war closed he went to Louisiana and engaged in business. In 1885 he established the Neal Loan and Banking Co., at Atlanta, becoming its President. For two years he was president of the Chamber of Commerce, and had been connected with other important organizations.

Paul.—Wm. M. Paul, President of the Moorestown (N. J.) National Bank, and of the Burlington County Safe Deposit and Trust Co., died April 26, aged fifty-five years.

Pierce.—Daniel Pierce, head of the banking firm of Daniel Pierce & Co., Sycamore, Ill., died April 28, aged eighty-eight years.

Perkins.—Edward H. Perkins, Jr., for the past twenty-two years President of the Importers and Traders' National Bank, New York city, died April 12, aged sixty-six years. Mr. Perkins was born at Athens, Pa., and began his career in the Park Bank of this city. In 1866 he was chosen Cashier of the Importers and Traders' Bank, holding this position till 1880, when he became President. He was for many years a member of the clearing-house committee, and was chairman of the committee in 1896. He was a director in a number of banks and other corporations.

Richardson.—John A. Richardson, Cashier of the Yale National Bank, New Haven, Conn., died April 19. He was stricken with apoplexy while at the theatre and died on being removed to his home. Mr. Richardson was born at North Canaan, Conn., in 1833. After being educated he became a bookkeeper in a general store, and in 1868 began work in a similar capacity in the Yale National Bank, of New Haven. Two years later he was appointed teller, and in 1871 became Cashier, holding this position until his death.

Webber.—S. W. Webber, who was interested in private banks at Lyons and other towns in Michigan, died April 19, aged seventy-nine years.

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SIXTH YEAR. JUNE, 1902. VOLUME LXIV, No. 6.

ONE EFFECT OF THE DISTRIBUTION OF ARGUMENTS in favor of the Fowler currency reform bill has been a recrudescence of the discussion of branch banking. It is plain that the individual bankers are very much alive as to the far-reaching possibilities of this feature of the measure. A great many bankers recognize the fact that there are imperfections in the present system of issuing a bank-note currency, and a simple bill for removing some of these defects would receive some support. The provisions of the Fowler bill having reference to the betterment of the bank currency, though they seem to be somewhat clumsy and circuitous, would no doubt effect the object desired, but the further provision in the bill for engrafting branch banking on the present system of independent banks involves a complete and radical change in the principle of anti-monopoly on which banking is conducted in the United States. Much that is said of the advantages of branch banking in economy of management and in lessening the amount of capital in proportion to business may be true enough; but the test of the practicability of any measure is necessarily largely political.

The people of the United States are well content with the present system of independent banking. It was arrived at after a long struggle against monopolistic tendencies. The country started with branch banking. Branches were features of the two banks of the United States. They were permitted under many State systems, but they have without any serious legislation against them generally disappeared, with the great specially chartered National and State banks that occupied the early banking field. Of course these institutions were attacked, not because of their branches, but because they were monopolies, and the branches were tacitly recognized as the very potent machinery of a banking monopoly. Branch banking had almost died of inanition when the National Currency Act became a law in 1863-64. Those who drew this measure were careful to withdraw

Digitized by Google

the power to establish branches from the National associations. They made this withdrawal the more impressive by an exception allowed in the case of certain existing State banks should they desire to convert under the new law.

To establish the branch system now means a much more radical change in the banking methods than that involved in substituting a currency based on assets for a currency secured by bonds.

The main arguments in favor of branch banking are economy of management, economy in the use of banking capital, and a wider distribution of loans. One parent bank with its five hundred branches will cost less in salaries than five hundred independent banks. Each independent bank necessarily has its full complement of officers and clerks, whose salaries will average higher than the salary of the average manager of the branch bank. This difference in favor of branch banking is more apparent than real. The present officers of independent banks are men who have more or less stock in these institutions; they are capitalists. They receive dividends on their stock, and the further advantage that because they are stockholders they are employed as Presidents, Cashiers, etc., in the institutions to which they belong. These men as a class receive larger returns on their invested capital under the present system of independent banks than they would under a branch system where the number of situations would be very much diminished. The money saved in expense of management would go to increase the dividends of the stockholders, and as a mere stockholder the bank capitalist would perhaps be benefited by the change to the branch system, but he would lose his employment, his position as bank President, Cashier, or director, together with the dignity, the business opportunity and the sense of being a factor in the active development of the section in which the bank may be located.

Those who advocate the branch system seem to forget that as they reduce the active talent and labor now engaged in banking in the United States they must certainly diminish the enterprise and ardor with which banking capital is now applied in developing new resources. The branch system would change a very large number of men who take a lively interest in the investment of their own capital, from active business men to mere coupon-clippers, who would sit inactive and watch the machinery of a branch bank grind out dividends. Their field would be narrowed, and the country would lose the benefit of the activities necessary under the present system. Nor would the general business public gain much. The object in branch banking would be to return dividends as great as possible. The nominal capital would be smaller, the amount taken from capital being transferred to deposits. The increased interest on deposits would not compensate for the loss of opportunity to invest in bank stock.

Digitized by Google

To illustrate some of these propositions: Take the case of an ordinary bank with $100,000 capital, located in an average banking locality; supposing this institution to be replaced by a branch of some great parent bank; the President, the Cashier, the directors, are all active business men and they hold a considerable part of the stock; they receive dividends on this stock, and also salaries, business accommodations, and opportunities for information that they would not otherwise have. All these advantages constitute a very respectable return on the capital they have invested. The bank abolished, these men place their capital as deposits in the branch bank, or if very much favored they may obtain a few shares in the parent bank. The dividends on the stock of the latter will be increased, but these will generally go to those who have engineered the monopolistic institution whose branches have superseded the independent banks. These active business men find themselves reduced to the position of ordinary customers. They are no longer leaders to whom the average business man looks for example and support. When it is considered how many men of this kind will find the conditions under which they now know how to achieve success entirely changed by the introduction of branch banking, it must be admitted that the apprehensions as to the effect on the enterprise of the country of so radical a change in banking methods are well founded. Many of those who advocate this change take no cognizance of the human equations involved, nor do those who oppose branch banking, declaring that the free and independent system has built up the prosperity of the United States, make it clear why this is so. It is the encouragement the present system gives to the individual that increases enterprise, and conduces to business success. Branch banking, on the other hand, reduces the chances of the individual, and to this extent will discourage and repress enterprise. All monopolies tend to diminish the energies of those who enjoy their protection. They restrict the opportunities of the outside public, and thus repress the general business enterprise of a community or country. Monopolies tend to destroy themselves, because those who enjoy them become slack, and leave opportunities for competition. There may, then, in most branches of business be hope that competition cannot be entirely and forever suppressed. In banking, however, experience has shown that monopoly once established is more difficult to overthrow. This is because banking deals with credit, which, once controlled by a monopoly, cannot be wrested from its clutches.

The apparent advantages of branch banking are, it is believed, much exaggerated, and the more the subject is discussed the less desirable it will appear as a substitute for the present system of independent banking.

THE PAPERS ON THE PRACTICAL WORK OF A BANK, which have appeared from time to time in the MAGAZINE, indicate the high average of intelligence and literary ability that prevails among the employees of banks in this country. One can hardly credit the arguments for the necessity of the educational work carried on under the auspices of the American Bankers' Association among clerks and employees of banks after reading these papers. They show not only that the writers know their business very well, but that they can also tell what they know in a readable and intelligent manner.

The truth is that the system of independent banking in operation in the United States requires for its successful operation a high order of practical ability. It must be remembered too that the system of universal education in the common schools gives every one who desires to advance in life a full opportunity for self-improvement. Bank positions are regarded as desirable, and they naturally draw some of the most intelligent graduates of the schools. The criticism of free education is that it makes education too common; that, because it is free, it is undervalued, and that many who go to the schools are in a measure forced there. But this probably applies only to those who are the least capable of being benefited. It is probable also that while banking as a business attracts many of the brighter pupils, and affords special opportunities for mental and moral improvement, that all kinds of business, even those in which success seems less connected with intellectual acquirements, require a higher order of mental development than they once did.

If prize essays treating of other lines of business and their methods were asked for there is little doubt that a high order of talent would be shown by the essays received. In railroading, in engineering, in mining, in manufactories, even in the science of evolving trusts and combinations, and in the business of speculative buying and selling, those who are engaged in subordinate positions and striving to rise must know better than any one else the practical bearings of the business in which they are engaged. In any business the confidential conversation of subordinates among themselves will show that at least they think they know more than their employers of what is progressing, and very often they do. The man who is studying the business in which he is engaged with the intention of rising to the top probably is quite accurate in his measurement of details. Certainly, the offers of the MAGAZINE have brought satisfactory responses as to the practical work of a bank, and the papers already published only represent a portion of the topics treated.

It is not, of course, the province of this periodical to pursue this investigation into other spheres of business than that of banking. In this day when publicity is so much insisted upon it would be bene-

Digitized by Google

ficial for those associated with other lines of business to offer prizes for essays on the practical working of the various important industries. Those engaged in any business are, as a rule, without any motive for publishing its practical working. In fact, it is rather better for them to keep their knowledge locked up in their own breasts. If adequate prizes were offered, a motive for telling their practical knowledge for the benefit of the public would be furnished. Many directions in which these practical revelations of business methods might be pointed out will be at once apparent.

The offers of prizes for essays on the practical work of a bank has brought out the fact that there is no lack of educated ability among the rank and file of banking assistants; but it may be that this talent is not appreciated to the extent it might be, and that the increase in pay and emolument does not follow self-improvement to the extent it should.

The work of the Educational Committee of the American Bankers' Association may, in addition to attracting the attention of bank employees to the advantages of self-improvement, also attract the attention of the higher officers and directors to the increased value to a bank of intelligent service, and may tend to increase compensation on that account.

The National City Bank of New York is to increase its capital stock to $25,000,000. This places the bank more on a par with the great banks of England and France, as far as capital is concerned, although its power of issuing notes being restricted, it cannot use its credit with the same effect.

The first Bank of the United States had a capital of $10,000,000, and the second a capital of $35,000,000. The National City Bank, however, far excels either of those institutions in the deposits entrusted to it.

An institution of such resources would, if the law permitted, be able to settle the currency question for the whole country much more safely than it could be accomplished in any other way, and it does seem that the simplest and easiest way of obtaining an elastic bank currency would be to permit the great banks of the money centres to issue it. The apparent discrimination could be cured by giving the same privilege to any institution that could show a given capital and line of deposits. The banks of the country, both National and State, have for many years accustomed themselves to do business with paper money furnished by the Treasury. They get along well enough as banks of discount and deposit, without the issue of a circulation based on credit. The possession of the privilege by the banks of large cap-

Digitized by Google

ital and deposits would be for the benefit of all their correspondent banks.

As some compensation for an exclusive privilege the banks possessing it might be taxed, while the banks not issuing notes might be relieved from Federal taxation. Although the American system tends to increase the number of banks of moderate capital, yet it does not preclude the development of institutions for banking purposes as great as any to be found under the laws of other countries.

There is at present no substantial profit in the issue of circulation, and if all the banks in the country were deprived of the privilege they would not be any the poorer. They could no doubt employ their capital more profitably than in buying United States bonds. At the same time, if the privilege of issuing notes on commercial assets were allowed to a few large banks in the principal cities, the safety and adequacy of such circulation would be unquestionable.

FINANCIAL CRISES will occur under the best systems of protection that can be devised for the business of banking. The history of these events indicates that their causes lie deeper than mere imperfection in banking law or practice. It would, of course, be an admirable thing if banking could be so conducted that all business wants would be supplied by loans, and at the same time cash kept on hand to meet all possible demands. The inadequacy of any system founded on credit must become evident in times when credit is shaken. Chances have to be taken in banking. The expectation is that demands will never exceed a certain proportion of the money deposited or credited, but there is a chance that at some periods there may come exceptions to the regular rule. In this respect banking is not different from any other human undertaking.

The dream of a bank in which the security of depositors shall be absolute, is a favorite with the banker who desires to outstrip his competitors. The bank which can the most strongly guarantee its depositors will soon have the largest line of deposits. But there is not and cannot be an institution doing a business of receiving and loaning deposits which is absolutely able to pay all its liabilities on demand at all times. But even in times of panic, demand is seldom made by all the depositors at once. The more bank customers understand the true character of a bank the less likely are they to become panic-stricken. Therefore, it is not good policy to keep suggesting plans for the attainment of impossibilities. In times of crises money is demanded for two reasons—to meet engagements and to obtain the money in one's own hands for safety. If the depositors who make demands from the latter motive could be eliminated, banks would, if

Digitized by Google

ordinarily well managed, never fail to meet demands for legitimate business purposes.

Like a great many other desirable improvements in society and business, the only way in which bank panics can be prevented is by educating the depositor so that he will understand that his greatest safety consists in not demanding his money unless he requires it for an ordinary purpose. In other words, never to demand it in order to hide or hoard it. This process of education has been going on ever since banks were first invented, and there is no doubt that the severity of bank panics has been mitigated within the last half century by the better knowledge possessed by depositors of the limits of banking power. It is quite the exception when a wild unreasoning run is made on a bank unless there has been a known loss of funds by robbery or mismanagement. The ordinary solvent bank can count to a very considerable extent on the forbearance of its depositors. It is this process of education of depositors that enables the banks of the older countries to do business safely upon comparatively small reserves, rather than any special methods of protection. The confidence of the depositors, as a whole, in the ultimate solvency of a bank, is what enables the demands of all the depositors to be promptly met when they are made. The monetary campaigns of 1896 and 1900, and the immense amount of information in regard to banks distributed among the people during those years and since, will do much to prevent the panic which is to banks the most dangerous feature of a financial crisis. Financial crises have occurred and will continue to occur from causes beyond control of the banks, but the panic which induces the unnecessary demand for payment has been noticeably less in each succeeding case. This improvement has been especially noticeable in the demands made by the banks on their correspondents.

THE PRICE OF UNITED STATES BONDS is now tending lower, and this will doubtless have some effect on National bank circulation. Probably the next month will show a smaller diminution in the amount outstanding than has been taking place for several months past. The cessation of purchases by the Government and also of refunding operations, as well as sales by banks reducing circulation, have all combined to make the supply of bonds more plentiful in the markets.

It is not probable that this tendency to smaller quotations will continue very long, as there is a steady demand which will take up all bonds offered, for future organization of new banks and for future deposit as security for public moneys. The low prices now prevailing are the investor's opportunity.

Digitized by Google

These temporary suspensions of demand for United States securities in no way weakens the general rule that as long as they are made the basis of circulation and also form the principal resource for the relief of the Treasury surplus, the price will tend upwards. The National bank circulation is dependent upon bond prices, and with every advance there will be a sale of bonds held by the banks until the minimum is reached. This minimum is, of course, the amount required to be deposited as a preliminary to organization.

The repeated reductions in interest on United States securities, and the premium that such securities command even at the low rate of two per cent., indicate that if the present method of issuing circulation is to be maintained it would be possible for the Government to refund the present two per cents into bonds bearing no interest at all, just as it has already refunded sixes into threes and fours, and threes, etc., into two per cents, because of the value the bonds have apart from interest as a basis for circulation. In fact, it is the competition between the banks and outside investors that has made the securities an unstable and precarious basis for maintaining a bank circulation. If the bonds on which circulation is based were only available for the banks, there might be some competition among the banks for them, but this would not have any effect in reducing circulation. For security a non-interest bearing bond would be as good as an interest-bearing, and the banks would never be tempted to reduce their circulation, unless there was some other bank that wished to pay more for the privilege. As ordinarily calculated there seems to be very little profit in bank circulation, and if the bonds are held to maturity these calculations are sound enough, but the banks do not hold the bonds to maturity; they only hold them long enough to get what they deem the highest possible profit out of increase of premium. The only bonds they hold to maturity are the minimum amount required as a preliminary to organization. Instead of the premium paid proving a loss it often is entirely made up with some profits added by taking advantage of the proper moment to retire circulation and sell bonds. If, however, the bonds required as security for circulation and deposits bore no interest, but merely bound the Government to pay the principal after due notice, the Government would be relieved of the annual interest on a large part of its debt, the banks would issue circulation as the only way of securing profit on their holdings, and the circulation would not as now be expanded or contracted with the fluctuations of the bond market. On the contrary, the business demand for bank notes would entirely control the price of the non-interest-bearing bonds. If there were many banks desiring to issue circulation, the price would rise, and *vice versa*. Whatever advantage might accrue to the banks or the public, it is evident that the Gov-

Digitized by Google

ernment by maintaining the present bank circulation, representing the special security principle, has the possibility of successfully making one or more refunding operations.

BRANCH BANKING HAS BEEN TRIED in the United States both under Federal and State laws. The establishment of branches by the Bank of the United States was the cause of much friction in some localities. The State banks always regarded the branches of the Federal bank as dangerous rivals. Branch banking under the State systems was seldom greatly developed even within the State, and, of course, the State law did not extend beyond the boundaries. The successful branch systems of Ohio and Indiana were established in a field left vacant by failure of previous systems. There were few if any banks in operation to be crowded out by the branch system. The development of the banks under State laws since the Civil War has shown a preference among bank capitalists for the independent bank. Under the laws of many of the States branches could be established if desired at the present time, but there is little tendency in this direction. Perhaps the State affords too narrow a field. But the real reason of the failure to use existing State laws for branches is perhaps that the present system of so-called independent banks is really used to effect many of the purposes which it is claimed would be effected by branch banking. The existing banks are so affiliated as correspondents that they distribute capital with almost as much effect as could be done under a branch system. It can not be disputed either that the larger capital, considered a defect in the present system, is a protection to depositors, and that the reduction of technical bank capital in proportion to deposits, which would take place under a branch system, would be looked upon by many as weakening the security of those who placed their money in banks. With the growing wealth of the country the proportion of capital to deposits constantly diminishes. The first and second Bank of the United States, an example of the branch system, seldom had deposits equal to half of the capital. The independent banks of New York city hold deposits amounting to more than ten times their capital. It is not altogether proved that a branch system would, as is claimed for it, be so much more economical than the present banks, and there is certainly reason to apprehend that it might not be as secure.

It seemed to be assumed in some of the addresses at Kansas City that the banks of New York and of the East generally were seeking to force the branch system on the country. So far as the New York banks are concerned they are generally more or less indifferent to the whole matter, and certainly the majority of them are not at all de-

Digitized by Google

sirous of going into branch banking. The result of this system would be not only to eliminate the country banks, but it would also kill off all but a few of the largest city institutions, consequently the greater number of New York banks are opposed to the scheme.

There is one thing that seems to have been missed in the discussion of the branch bank proposition, and that is the difficulty of competing with State banks already well established and enjoying greater privileges than National banks. The State banks, owned and managed by local men, would have a prestige that it would be hard to overcome, and the branch, even with the greater capital of the parent institution and possibly more economy in its local expenditure, would find it difficult to compete for business under such circumstances. The possibilities of State taxation are also to be taken into account, and it is not improbable that if antagonisms were aroused, as they would be by the establishment of branch banks, some way would be found to impose greater taxes on the branches than on the State banks without violating the Federal laws.

THE EXACT BALANCE OF EXCHANGE between the United States and foreign countries is not easily determined, and this has made it difficult to judge of the real reasons controlling the movements of gold to and from this country. The great excess of exportations of products and manufactures during the past four or five years would appear to indicate that the general balance was in favor of the United States. But that there must be other causes at work to change or at least to mask the usual consequences, is evident from the very erratic gold movements.

A resolution has been introduced in the Senate calling upon the Bureau of Statistics to report upon the exportation and importation of bonds and securities. If the difference between exports and imports reported were absolutely correct, that is covered the whole ground of trade and speculation between this and other countries, it would be easy to deduce the balance to be paid on either side, and it would naturally be expected that the gold movement would, in some degree at least, correspond with the payment of these balances. Ordinarily, the balance of trade, as far as trade is reported or known, if in favor of the United States, importations of gold would be expected, and the public entering the speculative market would be apt to act in accordance with this expectation. By borrowing from or lending to foreign bankers the expected result can be postponed until it is neutralized by other causes. In fact, it is for the interest of those who seek to control the speculative world to render the real causes of events difficult for the public to perceive. Many of the operations are perfectly nat-

Digitized by Google

ural. If a balance is due to the people of the United States and foreigners desire to postpone payment, what more natural than to use credit to defer payments? Undoubtedly credit as a factor in business between nations is growing as it grows in individual business. The ample supplies of gold which are held by all the great depositaries of reserve in the world have taken away the motive for quickly getting all the gold possible which seemed to exist when the gold standard agitation began. Bismarck compared the struggle for gold to a number of bed-fellows struggling for a share of a short blanket. Just as soon as a balance of trade existed the nation to whom it became due wanted it as soon as possible to add to its gold reserve. The supplies of gold have so increased that within very narrow limits the chief nations have all they desire to keep as reserves. Knowing that each other's gold reserves are ample, there is a tendency among nations, as among individuals, to let indebtedness lie as long as it is useful to draw against at convenience, or as long as it commands even a low rate of interest. Between their transactions among themselves to-day and those of a former period, in settling balances, etc., there is the same difference as between the settlements of the banks through the clearing-house and their settlements with each other before clearing-houses were in existence. The chief nations, those whose credit is good and reserves ample, form a clearing-house among themselves; nations of less credit do not belong, but settle through one of the regular members, as it were. This clearing-house of nations has no regular rules, nor does it publish its operations, but it works with no less certainty than if it did. When each bank paid daily its debit balance in money to every other bank, there was a great deal of money passing along the streets. When nations paid up balances in gold as soon as they occurred, there was much gold crossing the seas. Now, since a clearing-house of nations virtually exists, the actual gold balances paid are comparatively small, and how they happen to be paid as they are, in the absence of accurate statistics of this national clearing-house, it is impossible to tell. Wonder arises when gold is exported from the United States under conditions that according to old rules should preclude such exports. But, perhaps, this country is clearing for some outside nation that does not belong to the clearing-house. Bonds and securities held by one country or the other are clearing-house certificates, or at least answer the same purpose. What renders the matter difficult of perfect elucidation is the fact that the Nation does not, like a bank, have set down in one set of books all the financial transactions of its citizens. These appear in the books of millions of merchants, bankers and business men, and are concentrated in the books and accounts of a few great banks and banking firms.

Digitized by Google

It is because they have great banks, as in England, France, Germany, Austria, and other countries, that the nations having these institutions know better where they stand than do the people of the United States, where there is no one great institution holding such superior control that information of all transactions naturally flows to it. A great bank may grow up here because necessity requires it, and there are indications that such a bank is already being built up by private initiative.

The whole business of national exchanges is in its infancy, and although the methods of to-day are far in advance of those of twenty-five years ago, they are yet as far behind what they might be in safety and convenience and expense as were the exchange methods of the banks of 1836 behind the improved manner of clearing employed by banks of to-day.

Credit among nations has been of slower growth than credit among business men of the same nation. There have been national rivalries and antipathies to overcome. The growth of wealth and of commerce has inspired by degrees a mutual respect, and given knowledge of each other's resources and integrity of purpose. This knowledge is the basis of credit, and when credit is once established the use of credit machinery is sure to follow. The employment of gold as an ultimate reserve will probably continue for centuries to come. There seems to be nothing better for the purpose. It has its defects, however, and as nations know and trust each other more, transfers from one reserve point to another will become less and less frequent.

THE DECLINE IN THE PRICE OF SILVER during the last month, and the feeling that a still further falling off may be expected, would seem to indicate that here at length there is a case in which even Mr. BRYAN cannot charge a conspiracy upon the part of the gold bugs and money kings. In fact, dealing in it purely as a commodity it might be suspected that these enemies of silver might possibly have an interest in seeing its price increase. Heretofore the price had been comparatively steady, but not apparently sufficient to incite any great increase in the output. The fall is ascribed to the unsettled conditions in China and to the trade situation in India. It is believed, however, that the nations of the East heretofore using silver with the faith of traditional attachment are following the example of the West and turning more and more toward the gold standard. That is, they are using banking methods more and are perhaps avoiding as far as possible the receiving of trade balances in silver.

RESERVES UNDER THE BRANCH BANKING SYSTEM.

The advantages of branch banks were set forth at the meeting of the Milwaukee Bankers Club, by Mr. J. B. Forgan, President of the First National Bank of Chicago. His address was an exceedingly strong presentment in favor of the branch system. Mr. Forgan claimed that there would be a great reduction in the reserves required, as well as in the cost of management, under the branch system. He pointed out that the Bank of Montreal with a capital of $12,000,000 carries on its business with a cash reserve of only fifteen per cent., while some banks in the United States, selected for purposes of comparison, with a capital of $8,750,000 hold a cash reserve of forty-one per cent. Naturally, the Bank of Montreal can invest eighty-five per cent. of its total resources, while the banks selected for comparison can invest fifty-nine per cent.

This comparison seems to be particularly effective in favor of branch banks, and it would be really so, were the advantage of the Bank of Montreal due to the fact that it has branches. To see whether this is really the fact, it is necessary to consider that it is the superior confidence of the public in the Bank of Montreal that enables its managers to consider themselves safe with fifteen per cent. cash reserve when the American managers keep forty-one per cent. to insure the same degree of safety.

The Bank of France is a bank with branches, and yet its managers deem it necessary to maintain reserves even larger than those of the banks in this country.

It is evidently the faith in their banks which the public of any country entertain by education and habit that determines the reserves which prudent bank managers find it necessary to keep, and this faith and education of the public mind and its attitude towards banks vary so in each country that it is not exactly safe to deduce conclusions from comparison of bank statistics.

The faith of the English public in bank stability is noticeably much greater than that of the French. The faith of the citizens of the Dominion in the banks of Canada resembles that of the English public.

The use of bank checks and other devises to lessen the actual need of cash is greater in England than in any country in the world. Canada is not far behind in this respect. This public confidence is gained by long experience with a system of banks founded on scientific principles, assisted by the long maintenance of a solid and uniform monetary standard. England, of all countries, was the first to establish the single gold standard, and has maintained it unchanging for nearly a century. Canada in monetary affairs has been under the beneficent influence of the mother country.

In France, while the monetary standard has been more or less securely guarded, yet there was not the same decisive action in regard to it as in England. Moreover, France has not enjoyed the immunity from political changes that has prevailed in England. Changes of rulers and of the form of government have kept the French closer to a concrete view of monetary transac-

Digitized by Google

tions. They have feared to avail themselves, to the full, of the conveniences of credit. Their credit transactions are more frequently referred to the touchstone of cash. The frequent liquidations due to the necessity of making certain of the cash basis, render larger supplies of cash necessary. Naturally, then, reserves are larger in France than in England or Canada. The branch system prevails in all three places, and it cannot therefore be the branch system alone that causes the reserves in one country to be greater than in the other two.

When conditions of banking in the United States are examined, they are not found to correspond with those prevailing either in France or Canada or England. There has been no homogeneous system of banking in this country. The National banks have won an enviable reputation for solidity and safety, and so have many of the State and private banks; but the ease with which banking can be entered into by individuals with small capital causes a large percentage of failures that tend to diminish the faith of the public in all banks. The sound banks suffer for the unsound, and the general faith of the public in banking is very much weakened. If all the banks in the United States had been National banks—or State and private banks of the first class—even as they have been, without branches, and there had not been the constant failure of small banking experiments that has taken place, public faith in banks would to-day be much higher, and instead of forty-one per cent. of reserve now required according to Mr. Forgan, bank managers might, perhaps, securely rely on fifteen or twenty. Even if branches had from the very start been permitted the condition of public faith would probably be no different from what it is now in the face of the liberality allowed by our laws to all who desired to become bankers by taking deposits from their fellow citizens. Nor is it believed that the introduction of branch banking into the United States system would be any remedy for the large reserves now required. The people of the United States, although they use checks extensively, still employ large sums of actual cash in their ordinary transactions. That is, a greater proportion of checks drawn in the United States are presented for cash than in Canada or England; not necessarily to the banks, but to intermediaries who deal with the banks.

The greatest difference, however, between the Bank of Montreal and the banks of the United States, between which, to show the superiority of branch banking, Mr. Forgan has instituted a comparison, is that the Bank of Montreal has the privilege of using its credit freely in the issue of its notes, and in this fact there lies a potential reserve of much more than forty-one per cent., and this potential reserve is in the hands of the Canadian to a much greater extent than in those of the English banks. The banks of the United States selected by Mr. Forgan, if they possessed this potential power to issue notes against their credit, would not find it necessary, except as a requirement of law, to keep a visible cash reserve of even ten per cent. Our National banks issue their notes as a means of profit upon such portions of their funds as they choose or are compelled by law to invest in United States bonds. They cannot profitably hold this kind of circulation back to be used as a reserve; they must either put it out where it can never serve as a reserve, or refuse to use their privilege of issue at all. If the Canadian bank, able to earn six per cent. on all its loans, was compelled by law in order to issue circulation to buy bonds that only brought in two per cent., it too would either re-

Digitized by Google

fuse to buy bonds, or if it did buy bonds would find itself forced to put out all the notes it received on its deposited security, leaving no reserved power in this direction to be employed in an emergency. If, on the other hand, the banks of the United States had the privilege of issuing notes on their credit in the same manner as the Canadian banks, they too would find they could employ this circulation more profitably by using it as a potential reserve. This would enable them to reduce the apparent reserve on their balance sheet, and use a larger part of their resources.

To look at this question in all its aspects, it must here be said that many doubt the wisdom of granting this free circulation privilege to the individual banks, composing the banking system of this country. This excess of cash reserve that, because of the independence of the separate banks is kept in the United States, is the price paid for that independence and freedom from monopoly. The suggestion of branch banking is a disguised argument in favor of the issue of credit currency. By many, it is not deemed safe to give the free asset currency privilege to independent banks, and it therefore becomes necessary to force these banks into combinations that can safely issue the notes. The introduction of branch banking would very soon entirely do away with the present independent system.

These independent banks, notwithstanding their defects as money making institutions for their stockholders and managers, through the competition kept up among themselves, undoubtedly accommodate the general business public better than a more monopolistic system would do. The tendency of a monopolistic system is to do the smallest possible amount of business for the greatest amount of profit. If a perfect monopoly of banking could be established it would take only the very cream of the business and leave the balance undone or in the hands of the sharks who always spring up under the shade of a monopoly. On the other hand, the independent banks, State, National and private, in free competition with each other, leave hardly any enterprise, however new and struggling, without a chance at least of support. Of course, losses are more frequent when this competition goes on. But which is best for the general prosperity of a country, a system under which no risks are taken, and no losses occur, or a system that, with all its risks, keeps enterprise alive and active in all its departments, which otherwise would be restricted to supposed certainties. On one side there would be an excess of caution, far more deleterious than the excessive risk on the other.

The independent banks of the United States have done so much for the country that if it were possible to inaugurate a bank currency system, while still retaining this independence, it would be exceedingly desirable. Even the weakness of the individual banks, so much dwelt on by the advocates of the branch bank system, is much exaggerated. A small, well-managed bank, within its sphere of action, is just as strong as a larger institution within its sphere. It is the fringe of badly-managed banks, small and large, that discredit the others. But there is no way of securing absolute immunity from failure under any system whatever. Branch banking will certainly destroy independent banking, whatever it may offer in its place.

It is believed the problem will work itself out, without resorting to a remedy that will overturn in its unfinished stage a naturally evolved system that promises to develop into greater and greater adaptation to the business wants of the country. Critics may say of the banks of the United States that they

Digitized by Google

do not conform in this particular or that to the Bank of France or of England, or the banks of Scotland or Canada, or of Japan or Australia. This is merely saying that a citizen of the United States is not a Japanese or a Russian, a Frenchman or an Englishman. He is an American, adapted to his own climate and surroundings, and upon the whole seems to be doing pretty well.

Our system of banking is adapted to its environment and is capable of further adaptation, without a resort to expedients that will radically change it.

Mr. Forgan's early association with banking in Scotland and Canada naturally inclines him in favor of the system prevailing in those countries. He believes, and perhaps rightly, that the branch system of banking tends to the immediate accomplishment of a degree of safety and economy that is attainable under a system of independent banks only after a more or less extended period of experimentation and evolution; but, of course, the real question is as to whether these advantages would be obtained only by surrendering others still greater.

MINORITY REPORT ON THE FOWLER BILL.—The minority members of the Banking and Currency Committee of the House have prepared an adverse report on Chairman Fowler's Banking and Currency Bill. Here are some things they say in regard to branch banks:

"In the strongest and most positive and emphatic terms we wish to record a protest against the establishment of branch banks throughout the United States and its Territories; for the proposed system of branch banks we consider decidedly one of the most dangerous features of the bill. It means the creation of an immense money trust, the establishment, by law, of a financial monopoly; it means death and destruction to a free bank system and the demolition of the local banks in all communities where the trust banks may wish to operate; it means to place the money and finances, by law, under the control and dictation of a few large banks, which can confederate and crush out all opposition; it means that the power and influence which will dominate the local institutions in the whole country will emanate from a few centers, and local sympathy with local enterprise will be unable to co-operate, while any financial aid for communities or localities will be dictated from a distance.

The independent banks of the country are owned by local stockholders who feel the deepest interest, and encourage and promote all enterprises that tend to build up the home town or city and surrounding country. The stockholders of the branch bank will not be residents of the community where the local institution has been supplanted, but will live, perhaps, at a distance and will be interested chiefly in dividends, while there will result a universal loss of pride in home institutions, which has been invaluable in the development of our country.

In every country where a branch bank system prevails there is a monopoly in banking. It is so in Germany, in France, in Canada, and largely so in England. The home, or parent, bank controls and dictates the whole financial policy of the country. These countries have grown up under a centralized system. But not so in this country. Here everything is quite different, and public sentiment is strongly against centralization of power in any direction, and particularly so in affairs of finance.

As a resultant of this system, the suppression of individual enterprise in banking, we have only to look to Canada, where a quarter of a century ago the bank capital was $66,800,000. To-day it is only $67,480,000.

The act of March 14, 1900, especially encouraged country banking by permitting the establishment of National banks with the small capital of $25,000. Now it is proposed to reverse this position and destroy these banks by authorizing the large city banks to establish branch banks over the country.

The majority offer as a reason for a branch-bank system that it will lower the rates of interest and equalize them throughout the country. Of this we have no assurance. Interest rates are determined largely by the local conditions and surroundings and security offered. * * *

Another weighty consideration against the branch-bank system is found in the fact that it affords an opportunity for widespread disaster and distress. If by fraud, corruption, mismanagement, or any unforeseen contingency the home bank should fail, it carries in its ruin all its branches, and becomes, in its scope of disaster and ruin, a national calamity."

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

CERTIFICATE OF DEPOSIT—IS NEGOTIABLE INSTRUMENT.

Court of Appeals of New York, March 4, 1902.

***In Re* BALDWIN'S ESTATE.**

A certificate of deposit in the usual form is a negotiable instrument, and not a mere receipt.

A person who signs a certificate of deposit with the banker issuing the same for the purpose of giving the banker credit is liable thereon to the payee.

This was a proceeding to direct the sale of the real estate of Henry Baldwin, deceased, for the payment of his debts. One of the claims was based upon an instrument in the following form:

"Certificate of Deposit. James Baldwin & Co., Bankers. $1,000, no—100. Addison, N. Y., June 20, 1895. Mrs. S. Warner has deposited in this bank one thousand dollars, payable to the order of herself, in current funds, as specified below, on return of this certificate, properly indorsed, six months after date, with four per cent. interest; twelve months after date with five per cent. interest; ——— months after date with ——— per cent. interest. No interest after time specified. James Baldwin & Co.

No. 710. [Signed] Henry Baldwin."

The decedent, Henry Baldwin, was not interested in the business of James Baldwin & Co.

CULLEN, *J.* (omitting part of the opinion): It is contended by the appellant that Henry Baldwin assumed no individual liability by subscribing his name to these certificates; that the instruments are not promissory notes, but merely certificates of deposit; that they acknowledge a receipt of the funds by the bank, not by Henry Baldwin individually; and that therefore Mrs. Warner's administrator should share only ratably with the other firm creditors.

If we assume that the instruments are mere certificates of deposit, we think that does not relieve the estate of Henry Baldwin from liability as for his individual debt. While it may be that the obligation to repay the amount represented by the certificates does not proceed from any express promise in the instruments, but springs from the duty imposed by law, nevertheless the certificates are negotiable instruments upon which an action could be maintained. (Pardee vs. Fish, 60 N. Y. 265; Miller vs. Austen, 13 How. 218; National Bank Ft. Edward vs. Washington Co. Nat. Bank, 5 Hun, 605. See Daniel, Neg. Inst. Sec. 1,698 *et seq.*)

In the case in this court Judge Miller said: "Even although a demand

Digitized by Google

was necessary, upon the bank, before an action could be brought against it on the instrument, thus distinguishing the case from that of a promissory note, where the maker may be sued without any demand, I do not think that this fact takes away the negotiable character of the instrument, under the decisions cited, and it must therefore be considered as possessing all the features of a negotiable promissory note."

The statement contained in one of the opinions in Hotchkiss vs. Mosher, 48 N. Y. 478, that such a certificate is a mere receipt, must be considered as overruled by the case from which I have quoted. If these instruments had been promissory notes, though in terms purporting to express only an obligation upon the part of James Baldwin & Co. or his bank, still by signing his name thereto Henry Baldwin would have become liable as a surety. (Parks vs. Brinkerhoff, 2 Hill, 663.)

If there is no substantial difference between negotiable certificates of deposit of the character of those now before us and promissory notes, except as to the running of the statute of limitations, the same doctrine must prevail here, and Henry Baldwin be deemed a surety.

PAYMENT OF CHECK—WRONG INDORSEMENT.

Court of Appeals of Colorado, March 10, 1902.

WESTERN UNION TELEGRAPH CO. vs. BIMETALLIC BANK.

The agent of a telegraph company having received directions to pay a certain sum to "W. H. Daily," delivered to a person representing himself to be the person meant, a check drawn to the order of "W. H. Daily." The check was afterwards indorsed "W. H. Daley," and as so indorsed, was paid by the bank. The person to whom the check was delivered was not the one for whom the money was intended. *Held*, that the bank could not charge the check to the account of the drawer.

WILSON, *P. J.*: This suit grows out of the alleged payment of a check drawn by the plaintiff telegraph company upon the defendant bank to a person other than the payee, and without his indorsement. The main facts were contained in an agreed statement, that portion that is deemed material to the determination of this appeal being as follows: "(1) That on or about December 12, 1895, the agent and manager of plaintiff's office at the town of Cripple Creek was telegraphically instructed by the plaintiff to pay to one William H. Daily, at Cripple Creek, the sum of one hundred and seventy-two dollars ($172).

(2) That a person presented himself at the office of said plaintiff at Cripple Creek, representing himself to be said William H. Daily, and was so identified by one S. J. Polin.

(3) That the agent of the plaintiff thereupon drew a check on defendant's bank for one hundred and seventy-two dollars ($172), to the order of William H. Daily, and handed it to the person so representing himself as such William H. Daily.

(4) That said person was not the William H. Daily for whom the money was intended by said telegraphic message.

(5) That said check, bearing indorsements as follows: 'Wm. H. Daley, S. J. Polin, Blum,' and stamped 'Paid' by the First National Bank of Cripple Creek, was paid by the Bimetallic Bank, the defendant herein, December 14, 1895.

Digitized by Google

(6) That none of the indorsements on said check were made in the presence of, or with the knowledge of, the plaintiff's said agent.

(7) That the name of the person who so received said check from plaintiff's said agent is William H. Daley." In addition to this, one witness, the agent or manager of plaintiff who drew the check, testified. His evidence was to the effect, in substance, that upon telegraphic instructions to pay a certain amount of money to W. H. Daily he sent out a notice to that person. Afterwards, in answer to the message, a man presented himself, and stated that he was the person to receive the money. He brought with him another man for identification, but the agent, not being satisfied with the identification, and knowing the person brought in for that purpose, as he stated it, to be "no good," he drew up a check for the amount to be paid, naming as payee the person named in the telegraphic transfer, spelling the name as there spelled, Daily, and gave it to the man who represented himself to be Daily; that he did this for the purpose of having the bank identify the payee, he not being satisfied himself. It also appears from his testimony that upon delivering the check he took from the person representing himself to be the individual for whom the money was intended a receipt for the money, which receipt was signed, "Wm. H. Daley." The check seems first to have been cashed by another bank. In due course of business it reached the defendant bank, the drawee, bearing upon its back the indorsements of Wm. H. Daley, S. J. Polin, Blum, and the "Paid" stamp of the First National Bank of Cripple Creek, and was by it paid and charged to the account of the plaintiff.

The contract between a bank and a depositor is that it will pay out his money only upon and in accordance with his express direction. A check drawn in favor of a particular payee or order is payable only to the actual payee or upon his genuine indorsement, and if the bank mistake the identity of the payee, or pay upon a forged indorsement, it is not a payment in pursuance of its authority, and it will be responsible. It is also true, however, that the bank may be relieved from liability for payment to the wrong person, or under an indorsement not genuine, when the circumstances of the case amount to a direction from the depositor to the banker to pay without referance to identification or to the genuineness of the indorsement.

These rules are well settled, and are supported by a long line of decisions of the highest authority. We cite a few: Dodge vs. Bank, 20 Ohio St. 246, 5 Am. Rep. 648; Id. 30 Ohio St. 1; Pickle vs. Muse, 88 Tenn. 382, 12 S. W. 919, 7 L. R. A. 93, 17 Am. St. Rep. 900; Jackson vs. Bank, 92 Tenn. 155, 20 S. W. 802, 18 L. R. A. 663, 36 Am. St. Rep. 81; Crippen vs. Bank, 51 Mo. App. 510; Hatton vs. Holmes, 97 Cal. 208, 31 Pac. 1,131; Welsh vs. Bank 73 N. Y. 426, 27 Am. Rep. 175; Citizens' Nat. Bank vs. Importers and Traders' Bank, 119 N. Y. 200, 23 N. E. 540; Corn Exchange Bank vs. Nassau Bank, 91 N. Y. 80, 43 Am. Rep. 655; Bank vs. Whitman, 94 U. S. 343, 24 L. Ed. 229; 2 Daniel, Neg. Inst. Sec. 1,618 *et seq.*; Shipman vs. Bank, 126 N. Y. 319, 27 N. E. 371, 12 L. R. A. 791, 22 Am. St. Rep. 821.

It is claimed by the appellee, and such was the ground upon which it is alleged the trial court based its judgment in its favor, that the circumstances of this case are such as to bring it within the exception to the general rule, and thereby release it from responsibility. It is claimed that the plaintiff, by delivering the check to Wm. H. Daley, and by accepting a receipt signed by him in that name, identified him as the person to whom payment might be

Digitized by Google

properly made, or under whose indorsement the drawee would be authorized to pay. In our opinion, the contention of appellee is not correct, and is not sustained by the authorities which counsel cite, because, first, it does not appear that the defendant at the time of payment had any knowledge of the existence of these circumstances upon which it now relies to escape liability. It was not induced in the remotest degree to make payment on account of these circumstances. It did not even make payment to the person who received the check originally, or who claimed to be the payee. It paid to another bank, which had in the first instance cashed the check, and in so doing relied solely upon the indorsements. It is not even shown that the bank which first cashed the check had any knowledge of the circumstances attending its delivery by the drawer. The authorities cited by counsel for appellee are all of cases which are clearly distinguishable in this respect from the one at bar. In all the bank had knowledge, or there was communicated to it some fact or circumstances, relative to the action of the drawer, from which it might conclude that he had waived further identification, or any question as to the genuineness of indorsement. An additional fact in this case brings out in stronger light the dereliction and neglect of the bank, because in ignorance of all these circumstances attending the delivery of the check it paid, as we have said, simply upon the face of the indorsement, and that indorsement did not purport to be that of the payee named in the check. It was that of a different name entirely. No question of *idem sonans* can arise, because, if for no other reason, payment was made upon the written indorsement only. The name of the indorser, being different from that of the payee, was amply sufficient to have placed the defendant upon its guard, and caused it to have made some inquiry.

Appellee invokes the doctrine that, where two persons are equally innocent, and one is bound to know and act upon his knowledge, and the other has no means of knowledge, the latter will not be compelled to bear a loss for the purpose of exonerating the former. It contends that the plaintiff in this case was in default in giving the check to the wrong person, and that by means of this he was enabled to perpetrate the fraud; that this being the case, it cannot complain of the consequences of its own default against the defendant, who was misled by it without any fault of its own. This doctrine is sound where it is applicable, but we do not see wherein it is applicable under the facts of this case. In the first place, there is no evidence that the defendant was misled by the alleged default of the plaintiff, because it had no knowledge of it. We do not believe it to be in accord with the settled rules of commercial law that the mere possession of a check would justify a bank in making payment to the person who has such possession without some identification, or some evidence of the genuineness of the indorsement, if an indorsement is in question. If there had been in this case a forged indorsement of the name of the payee, the defendant might possibly have had some ground upon which to stand in support of its contention; but this was not the case. It made payment under the indorsement of a name different from that of the payee. This fact alone would, in our opinion, prevent it absolutely from setting up this defense.

The judgment will be reversed. Reversed.

COLLECTIONS—FORWARDING CHECK TO DRAWEE BANK.

Supreme Court of Michigan, March 18, 1902.

CARSON, PIRIE, SCOTT & CO. vs. FINCHER AND OTHERS.

A bank upon which a check is drawn is not a suitable agent to collect the same; and a bank receiving a check for collection should not send it direct to the drawee bank.*

On May 8, 1900, defendants were indebted to plaintiff for goods purchased to the amount of $192.39, which account was subject to a discount if paid within thirty days, leaving the account, if paid in the month of May, $184.29. The defendants on May 8, 1900, mailed to plaintiff their check, drawn on Nielson & Co., bankers at Pentwater, for $184.29. Plaintiff on May 10, 1900, received said check, and deposited it with the First National Bank of Chicago for collection, which bank forwarded the check by mail to Nielson & Co., who received the same on May 11, but made no remittance therefor. The defendants, after learning of the receipt of said check by plaintiff, heard nothing further concerning it until on or about the 22d day of the same month, on which day they were notified by plaintiff that the check had not been paid. Nielson & Co. continued to do business to and including Saturday, May 19, but did not open their doors on Monday the 21st, and on or about the last-named day said bank was put into the possession of a Receiver. The Receiver returned the check to plaintiff. There was a mail twice daily each way between Pentwater and Chicago; also an express daily each way, with usual route and local agents.

MOORE, *J.* (omitting part of the opinion): It is pretty well settled in this country that when a check is sent to some other place than where the bank is located upon which it is drawn, and it is put into a bank for collection, it is the duty of the bank to forward it in proper time to a sub-agent selected with due care. The bank should use every reasonable precaution to secure the collection, if possible; and if it has been careless in the choice of an agent, and selected one it knew, or ought to have known, was an improper one, it will be answerable for any injury which results therefrom. The bank upon which a check is drawn is not a suitable agent for its collection, and the judge was right in so instructing the jury. (Morse, Banks [3d Ed.] Sec. 236.)

But even though an improper agent has been selected, if the drawer of the check had had no funds with which to pay the check, had it been presented in proper time, or if the bank had no funds with which to pay it, no harm has come to the maker of the check, and, if given timely notice, he would continue to be liable; but if, on the other hand, as claimed by the defendants, the maker of the note had funds to his credit in the bank, and the bank had funds, and the check would have been paid if presented over the counter in proper time, then the maker of the check would have been discharged.

We do not think, under the evidence in the case, it was proper to say to the jury they might say, under the facts proven, that defendants committed a fraud by sending them this check. It is true, the defendants had learned facts from which they might infer the bank was not as strong as many banks; but it does not appear they had any reason to suppose that, if the check was

---

*See Merchants' National Bank vs. Goodman, 109 Pa. St. 422; Drovers' National Bank vs. Provision Co. 117 Ill. 100; First National Bank vs. Fourth National Bank, 56 Fed. Rep. 967; German National Bank vs. Burn, 12 Colo. 539.

Digitized by Google

presented properly, and in a reasonable time, it would not be paid. They had a right to assume the plaintiffs were familiar with the law, and if they accepted the check they would select a proper agent to present it, and that it would be presented in proper time, and, if it was not paid, defendants would be notified. If the plaintiffs had done what it was their duty to do, no harm would have come to them. If the check was paid, that would have ended the transaction. If it was not paid, defendants would have been notified, when it would have been their duty to make the check good, and no harm would have come to the plaintiffs. This being so, we cannot see how the inference of fraud could be drawn from what was done.

FORGED CHECK—NEGLIGENCE OF DEPOSITOR AND OF BANK.

Court of Appeals of New York, May 13, 1902.

CRITTEN vs. CHEMICAL NATIONAL BANK.

A bank which pays a raised check, that was altered so skillfully by the drawer's clerk, who presented it, as to avoid detection on reasonable inspection, must sustain the loss, unless the depositor has, by leaving blanks in the check or by some other affirmative act of negligence, facilitated the fraud.

But a depositor, on the periodical writing up of his account and return to him of the pass book and vouchers, is bound to make reasonable examination and verification of them and to notify the bank if forgeries have occurred, so that it may guard against recurrence.

If he neglects to make such verification, or intrusts it to his clerk, who, from being connected with the forgeries, fails to disclose the discrepancies, the bank, in the absence of neglect on its part, is not chargeable with subsequent payments made to the clerk on a series of such forgeries.

When, however, the bank, while the forgeries were going on pays a forged check to the clerk under such circumstances as to practically disclose its dishonest character, and gives no notice of the transaction to the drawer, its negligence in paying the check and, by its silence, permitting the forgeries to be repeated, is an answer to its charge of negligence against the drawer for failing to verify his vouchers.

CULLEN, *J.*: The plaintiffs kept a large and active account with the defendant, and this action is to recover an alleged balance of a deposit due to them from the bank. The plaintiffs had in their employ a clerk named Davis. It was the duty of Davis to fill up the checks which it might be necessary for the plaintiffs to give in the course of business, make corresponding entries in the stubs of the check book and present the checks so prepared to Mr. Critten, one of the plaintiffs, for signature, together with the bills in payment of which they were drawn. After signing a check Critten would place it and the bill in an envelope addressed to the proper party, seal the envelope and put it in the mailing drawer. During the period from September, 1897, to October, 1899, in twenty-four separate instances Davis abstracted one of the envelopes from the mailing drawer, opened it, obliterated by acids the name of the payee and the amount specified in the check, then made the check payable to cash and raised its amount, in the majority of cases, by the sum of $100. He would draw the money on the check so altered from the defendant bank, pay the bill for which the check was drawn in cash and appropriate the excess. On one occasion Davis did not collect the altered check from the defendant, but deposited it to his own credit in another bank. When a check was presented to Critten for signature the number of dollars for which it was drawn would be cut in the check by a punching instrument.

Digitized by Google

When Davis altered a check he would punch a new figure in front of those already appearing in the check. The checks so altered by Davis were charged to the account of the plaintiffs, which was balanced every two months and the vouchers returned to them from the bank. To Davis himself the plaintiffs, as a rule, intrusted the verification of the bank balance. This work having in the absence of Davis been committed to another person, the forgeries were discovered and Davis was arrested and punished.

It is the amount of these forged checks, over and above the sums for which they were originally drawn, that this action is brought to recover. The defendant pleaded payment and charged negligence on plaintiffs' part, both in the manner in which the checks were drawn and in the failure to discover the forgeries when the pass book was balanced and the vouchers surrendered. On the trial the alteration of the checks by Davis was established beyond contradiction and the substantial issue litigated was that of the plaintiffs' negligence. The referee rendered a short decision in favor of the plaintiffs, in which he states as the ground of his decision that the plaintiffs were not negligent either in signing the checks as drawn by Davis or in failing to discover the forgeries at an earlier date than that at which they were made known to them.

The relation existing between a bank and a depositor being that of debtor and creditor, the bank can justify a payment on the depositor's account only upon the actual direction of the depositor. "The questions arising on such paper (checks) between drawee and drawer, however, always relate to what the one has authorized the other to do. They are not questions of negligence or of liability of parties upon commercial paper, but are those of authority solely. * * * The question of negligence cannot arise unless the depositor has, in drawing his check, left blanks unfilled, or by some affirmative act of negligence has facilitated the commission of a fraud by those into whose hands the check may come" (Crawford vs. West Side Bank, 100 N. Y. 50). Therefore, when the fraudulent alteration of the checks was proved, the liability of the bank for their amount was made out and it was incumbent upon the defendant to establish affirmatively negligence on the plaintiffs' part to relieve it from the consequences of its fault or misfortune in paying forged orders. Now, while the drawer of a check may be liable where he draws the instrument in such an incomplete state as to facilitate or invite fraudulent alterations, it is not the law that he is bound so to prepare the check that nobody else can successfully tamper with it (Societe Generale vs. Met. Bank, 27 L. T. N. S. 849; Belknap vs. Nat. Bank of No. Am. 100 Mass. 380). In the present case the fraudulent alteration of the checks was not merely in the perforation of the additional figure, but in the obliteration of the written name of the payee and the substitution therefor of the word "cash." Against this latter change of the instrument the plaintiffs could not have been expected to guard, and without that alteration it would have no way profited the criminal to raise the amount. Apart, however, from that consideration the question was clearly one of fact to be determined largely by an inspection of the checks themselves. They are not produced before us, and we cannot say that the finding of the referee, that the plaintiff was guilty of no negligence in signing them in the condition in which they were presented for signature, was without sufficient evidence for its support.

We are now brought to the consideration of the finding of the referee that

Digitized by Google

the plaintiffs were not guilty of negligence in failing to discover the forgeries after the return of the checks and the balancing of the account in the pass book. Preliminarily we must determine what duty the depositor owes to his bank by way of examination and verification of his checks and account, for the learned counsel for the respondent asserts that no such duty in reality exists. This contention is principally based on the authority of Weisser's Adm'rs vs. Denison (10 N. Y. 68). In that case a depositor sued his bank for the amount of certain checks to which his signature was forged by his clerk. His pass book was balanced and vouchers returned at intervals as in the present case. At the trial he recovered a verdict for the full amount of the forgeries. On appeal the General Term of the Superior Court ordered a reversal of the judgment unless the plaintiff would reduce his recovery to the amount paid on the forged checks prior to the time when the bank book was first balanced and vouchers returned. To this reduction the plaintiff assented, and, on the defendant's appeal, the judgment as modified was affirmed by this court. In the opinion delivered by two distinguished judges the doctrine is asserted that the depositor owes no duty to the bank to examine his pass book or vouchers with the view to the detection of forgeries, but the decision itself is not authority for more than the proposition that the bank was not relieved from liability for forged checks which it had paid before the account was balanced by the failure of the depositor to subsequently discover the forgeries. As was said by Judge Johnson as to these checks. "Whatever loss the bank has sustained it has suffered from its own negligence or want of skill in a matter as to which, in the first instance, it and it only was bound to exercise skill and diligence. To this loss no act of Weisser has contributed." The question again came before this court in the case of Frank vs. Chemical Nat. Bank of N. Y. (84 N. Y. 209). That action also was brought to recover the amount of a series of checks forged by the depositor's clerk. A recovery by the plaintiffs was upheld, though not on the principle that the depositor owed no duty to his bank, but on the ground that he had discharged that duty.

In the opinion there delivered Judge Andrews said: "It does not seem to be unreasonable, in view of the course of business and the custom of banks to surrender its vouchers on the periodical writing up of the accounts of depositors, to exact from the latter some attention to the account when it is made up or to hold that the negligent omission of all examination may, when injury has resulted to the bank, which it would not have suffered if such examination had been made and the bank had received timely notice of objections, preclude the depositor from afterward questioning its correctness. But where forged checks have been paid and charged in the account and returned to the depositor, he is under no duty to the bank so to conduct the examination that it will necessarily lead to the discovery of the fraud. If he examines the vouchers personally and is himself deceived by the skillful character of the forgery, his omission to discover it will not shift upon him the loss which in the first instance is the loss of the bank." In that case the depositor compared the returned checks with the stubs in the check book, but was deceived by the fact that the forger had abstracted the forged checks from the package. In the Supreme Court of the United States and in several of our sister States the rule is settled that the depositor owes his bank the duty of a reasonable verification of the returned checks.

In Leather Manufacturers' Bank vs. Morgan (117 U. S. 96) it was held that

Digitized by Google

a depositor is bound personally or by his agent, and with due diligence, to examine the pass book and vouchers, and to report to the bank without unreasonable delay any errors which may have been discovered therein, and that if he fails to do so and the bank is thereby misled to its prejudice, he cannot afterwards dispute the correctness of the balance shown in the pass book. In Dana vs. Nat. Bank of the Republic (132 Mass. 156) the Supreme Court of Massachusetts said: "The mistake was in the payment of the money upon an altered check, believed to be genuine; it was not for the advantage of the defendant, and its condition was changed by it. It was in the course of dealings between the parties in relation to which each owed duties to the other. * * * The plaintiffs (depositors) owed to the defendant (bank) the duty of exercising due diligence to give it information that the payment was unauthorized; and this included not only due diligence in giving notice after knowledge of the forgery, but also due diligence in discovering it " In Myers vs. Southwestern Nat. Bank (193 Penn. St. 1) it was held that the bank was entitled to have the vouchers which it surrendered with the pass book examined, and, if rejected, returned within a reasonable time, and that if this was not done because of the depositor's failure to perform his duty in that regard he should not be permitted to recover. The same rule of law obtains in Louisiana (DeFariet vs. Bank of Am. 23 La. Ann. 310), in Texas (Weinstein vs. Nat. Bank, 69 Tex. 38) and in Alabama (Nat. Bank vs. Allen, 100 Ala. 476).

The course of dealings between banks and their depositors is well known, and is considered at length in the three cases first cited from other jurisdictions. The methods of depositors in drawing checks on their accounts have become much more uniform than at the time of the decision in Weisser vs. Denison (*supra*). The practice of taking checks from check books and entering on the stubs left in the book the date, amount and name of the payee of the check issued, has become general, not only with large commercial houses, but with almost all classes of depositors in banks. The skill of the criminal has kept pace with the advance in honest arts, and a forgery may be made so skillfully as to deceive not only the bank, but the drawer of the check as to the genuineness of his own signature. But when a depositor has in his possession a record of the checks he has given, wi h dates, payees and amounts, a comparison of the returned checks with that record will necessarily discover forgeries or alterations. It is true that it will give no information as to the genuine character of the indorsements, and because the depositor has no greater knowledge on that subject than the bank, it owes the bank no duty in regard thereto (Welsh vs. German-Am. Bank, 73 N.Y. 424; Shipman vs. Bank of the State of New York, 126 N.Y. 318). It is also true that verification of the returned checks would not prevent a loss by the bank in the case of the payment of a single forged check and probably not in many cases enable the bank to obtain a restitution of its lost money. It would, however, prevent the successful commission of continuous frauds by exposing the first forgeries. That this is a numerous class of frauds is apparent from the number of cases which we have cited, in all of which the forgery was not a single act, but a series of acts extending over a considerable period of time and the crime committed by a clerk or employee of the depositor. Considering that the only certain test of the genuineness of the paid check may be the record made by the depositor of the checks he has issued, it is not too much, in jus-

Digitized by Google

tice and fairness to the bank, to require of him, when he has such a record, to exercise reasonable care to verify the vouchers by that record.

While we hold that this duty rests upon the depositor, we are not disposed to accept the doctrine asserted in some of the cases that by negligence in its discharge or by failure to discover and notify the bank the depositor either adopts the checks as genuine and ratifies their payment or estops himself from asserting that they are forgeries. Such a doctrine would be in conflict not only with the opinions rendered in Weisser vs. Denison (*supra*), but against the decision there actually made. That authority has remained for nearly fifty years, and we would not feel justified in now overruling it. Nor, if the question were an open one in this State, would we deem the rule of estoppel or that of ratification a just one. If the depositor has, by his negligence in failing to detect forgeries in his checks and give notice thereof, caused loss to his bank, either by enabling the forger to repeat his fraud or by depriving the bank of an opportunity to obtain restitution, he should be responsible for the damage caused by his default, but beyond this his liability should not extend.

In the cases cited from the Supreme Court of the United States, from that of Massachusetts and that of Pennsylvania, it is conceded that, if the bank has been guilty of negligence in paying the forged checks, then the doctrine of ratification and estoppel does not apply. It seems to us that the exception is somewhat inconsistent with the principle on which the doctrine rests. Moreover, we see no reason why the bank should be entitled to anything more than indemnity for the loss the depositor's negligence has caused it.

In the present case a check altered by Davis from the sum of $22 to $622 was paid by the defendant to the Colonial Bank, in which Davis had deposited it. Against that bank the defendant has ample recourse. If it were to be held that the plaintiffs are estopped from denying the genuineness of that check as against the defendant, the latter could have no claim against the Colonial Bank, nor is it clear that the plaintiffs would have any direct right of action against that bank. The Colonial Bank took the check solely on the responsibility of Davis. To it the plaintiffs owed no duty. If the plaintiffs and the defendant had never settled their accounts the Colonial Bank could have had no complaint against either party for that cause. A rule which might operate to relieve that bank from the liability it assumed when it collected an altered check merely because the plaintiffs failed in their duty, not to it, but to a third party, should not be upheld. Nor would it operate justly in a case in which the bank had paid a single forgery unless by the depositor's fault and delay the bank had lost its opportunity to secure restitution. This question is well discussed by the Supreme Court of Alabama in the case of Nat. Bank vs. Allen (*supra*), and we concur in the view expressed by that court that the liability of the depositor for neglect of his duty to examine and verify his account with the bank is limited to the damages sustained by the bank in consequence of such neglect.

In the present case Davis falsified the additions or totals at the foot of the pages in the check book. But with a few exceptions he did not alter the amounts expressed in the stubs. In no case did he change in the stubs the name of the payee of the check. It is clear, therefore, that at all times a comparison of the returned checks with the stubs in the check books would have exposed the alterations made in the checks. Of course, the knowledge

Digitized by Google

of the forgeries that Davis possessed, from the fact that he himself was the forger, was in no respect to be attributed to the plaintiffs. But we see no reason why they were not chargeable with such information as a comparison of the checks with the check book would have imparted to an innocent party previously unaware of the forgeries. The plaintiffs' position may be no worse because they intrusted the examination to Davis instead of to a third person. But they can be no better off on that account; and if they would have been chargeable with the negligence or failure of another clerk in the verification of the accounts, they must be equally so for the default of Davis, so far as the examination itself would have disclosed the facts.

We think it plain, therefore, that the finding of the referee that the plaintiffs were not negligent in the examination of the pass book and vouchers is without evidence to sustain it, unless the plaintiffs discharged their duty to the defendant when they committed the examination to a proper clerk and were not responsible for the manner in which the clerk performed the task. From the language of the report of the learned referee it would seem as if this last were the theory on which his decision proceeded. We do not think it can be sustained. If any duty rested on the plaintiffs we do not see why the ordinary rule of principal and agent or master and servant, that the principal or master is liable for the fault of his servant or agent in the master's business, did not apply.

This was so held in the case of Leather Mfrs' Bank vs. Morgan (*supra*), and nothing to the contrary is to be found in Frank vs. Chemical Nat. Bank of New York (*supra*). There it is said: "The alleged duty, at most, only requires the depositor to use ordinary care; and if this is exercised, whether by himself or his agents, the bank cannot justly complain, although the forgeries are not discovered until it is too late to retrieve its position or make reclamation from the forger." In that case, however, the question of the liability of the principal for the negligence of his clerk did not arise, for the plaintiff made the examination personally. There are exceptions to the general rule of the liability of the master for his employee. But this case does not fall within those exceptions nor within the principle on which those exceptions are based.

These views would render it necessary to wholly reverse the judgment appealed from except for another fact now to be noted. The referee's report is in the form of a short decision, and on appeal it is to be presumed that all facts warranted by the evidence and necessary to support the judgment have been found (Amherst College vs. Ritch, 151 N. Y. 282; Bartlett vs. Goodrich, 153 N. Y. 421; Marden vs. Dorthy, 160 N. Y. 39). The sixth in sequence of these forgeries was a check of June 20, 1898, for $12.49, altered to the sum of $112.49, with the name of the payee erased and "Cash" written in the place thereof. The teller of the defendant, who paid the check and a witness on its behalf, testified that the check showed on its face that the word "Cash" had been written in the place for the payee's name over an erasure, that the number of dollars was also written over an erasure; that he did not like the appearance of the check, and that it was in such a mutilated condition when it was presented to him that, before paying it, he required Davis to indorse upon the check a receipt for its amount. That the defendant was grossly negligent in paying that check and has only itself to thank for that loss is apparent. But the effect of that neg-

Digitized by Google

ligence did not cease with the payment of the check. The referee might well have found that, had payment of the check been refused or had Davis been required to obtain the indorsement or guaranty of the plaintiffs as to its correctness, the forgeries of Davis would have been exposed and their repetition would not have occurred. That Davis was able to successfully continue from this time to his arrest a series of forgeries was as fairly attributable to the folly of the bank in paying to a clerk a check of his employers which had plainly been altered without making inquiry as to the reason or authority for the alteration as it was to any carelessness of the plaintiffs in failing to detect the alteration when the checks were returned to them from the bank. Since we have held that the question in the case was not one of ratification or estoppel, but that the liability of the plaintiffs to the bank was solely for the loss caused by their negligence, it is a complete answer to the defendant's claim that its own negligence contributed to the loss. The learned counsel for the appellant contends that the plaintiffs' cause of action is not based on negligence, and that the plaintiffs cannot sue on contract and recover in tort. This claim is without force. The action unquestionably was brought on contract, but it remains such. The plaintiffs sue for a debt, to which the defendant answers: We have paid the money, true, not according to your direction, but in compliance with what we believed to be your directions, and your negligent conduct in your duty towards us led us into that error, to which the plaintiffs rejoin: Your own negligence contributed to the loss. All this may be true, yet the plaintiffs recover not in tort, but on contract, for the allegation of negligence on the part of the defendant is used only to defeat its claim for relief on account of the plaintiffs' negligence.

It follows that, under the authority of Weisser vs. Denison (*supra*), the defendant is not entitled to credit for the two checks paid by it before the account was balanced and vouchers returned. For the third, fourth and fifth checks, amounting to $300, it is entitled to credit, unless it was guilty of negligence in their payment, a fact which is neither found by the referee nor established by the evidence. For the sixth check and the subsequent ones it is not entitled to credit because of its negligence in paying the sixth check.

The judgment should be reversed and a new trial granted, costs to abide the event, unless the plaintiffs consent to deduct from their recovery the sum of $300, with interest from November 15, 1899, in which case the judgment, as modified, should be affirmed, without costs of this appeal to either party.

TRUST FUNDS—DUTY OF BANK TO PAY CHECKS OF DEPOSITOR—OUTSTANDING CHECKS.

Supreme Court of Nebraska, March 5, 1902.

NEHAWKA BANK vs. INGERSOLL.

Deposits in a bank create between it and the depositor the relation of debtor and creditor, and, as long as this relation exists, the bank is in duty bound to honor the checks of the depositor, and it cannot refuse to do so on the ground that the money deposited belongs to some other person, or that the title of the depositor to it is defective.

But, if the bank appropriates the trust fund to the payment of a debt due the bank from the trustee, it would be liable therefor.

Knowledge by the bank that a draft has been drawn on the depositor and is outstanding would not justify a refusal by the bank to pay out the money deposited when demanded by the depositor.

Digitized by Google

The petition in this case set forth that Dorsey Bros. & Co. were a commission firm engaged in selling live stock on a commission in South Omaha, at the stock yards; that in May, 1893, they gave Ingersoll a letter of credit to the plaintiff, in substance telling plaintiff that if it would furnish Ingersoll the money to buy from one to three cars of cattle they would pay his drafts therefor; that this letter was presented, and that Ingersoll was furnished the money by plaintift to buy one car load of cattle, with the additional agreement that when the cattle were shipped they should be consigned to Dorsey Bros. & Co., and that Ingersoll should draw his sight draft in favor of the plaintiff on said Dorsey Bros. & Co. for the amount of the money so furnished; that the cattle were shipped and the draft drawn as agreed; that the sum so advanced was $784.50; that Dorsey Bros. & Co. transacted all of their financial business with the said defendant bank; that the stock arrived in South Omaha, and was sold by said Dorsey Bros. & Co. on the market; that said Dorsey Bros. & Co. received for the stock weight tickets (which seemed to be used in place of an equivalent to checks from the purchasers), which were turned over to defendant bank for collection, and were collected by it; and at the time of the deposit and collection of these weight tickets the defendant then knew that Dorsey Bros. & Co. were insolvent, and were selling stock belonging to other parties, and that the proceeds thereof did not belong to them, and it was their duty to remit the proceeds of the sale, less their commission, freight and yardage fees, to the shippers of the stock; that the defendant knew of the existence of this draft, and with this knowledge applied the proceeds of said weight tickets to the payment of an overdraft of Dorsey Bros. & Co. at the defendant bank; that of the proceeds from the sale of these cattle received and applied by the defendant bank $784.50 thereof was a trust fund for the payment of this draft.

OLDHAM, *C.* (omitting part of the opinion): The testimony is short, and is not conflicting on any point. It showed the furnishing of the money by the plaintiff, the drawing of the draft by Ingersoll, the shipment and the sale of the cattle on May 6 by Dorsey Bros. & Co., the deposit of the weight slips by Dorsey Bros. & Co. in the defendant bank, and the collection of the proceeds of the sale by the defendant bank, and the paying out of this and other moneys of Dorsey Bros. & Co. on their checks to various parties, none of whom are designated. The books of the defendant bank were introduced in evidence, and show the state of the account of Dorsey Bros. & Co. at the bank during this period as follows:

On May 6, at opening of business on hand to the credit of Dorsey Bros. & Co	$1,069.84
Deposits on that day	4,306.13
Total	$5,375.97
Checks paid out that day by bank	2,195 64
Balance to credit of Dorsey Bros. & Co. at close of business that day.	$3,180.33

May 7 was Sunday.

May 8, at opening of business, to the credit of Dorsey Bros. & Co....	$3,180.33
Deposits on this day	2,583.46
Total	$5,763.79
Checks paid by the bank	6,781.96
Ove.draft	$1,018.17

Digitized by Google

On May 10, Dorsey Bros. & Co. failed, and suspended business, with their account with the defendant bank in the above condition. There is no testimony whatever that the defendant bank applied any of this money on any indebtedness owing it by Dorsey Bros. & Co., but, on the other hand, the uncontroverted testimony of the Cashier of the bank is that every dollar paid on May 6 and 8 as shown by the above tabulation was paid on the checks of Dorsey Bros. & Co., issued to and held by other parties, and not one cent thereof was retained by the bank.

It therefore appears by the record, without contradiction or dispute, that the defendant bank paid out this money in the regular course of business to other parties on the checks of Dorsey Bros. & Co. Deposits in the bank create between it and the depositor, or the person to whom the credit for the deposit is given, the relation of debtor and creditor. So, where a bank receives money from a person, and gives him credit therefor, it is in duty bound to honor his checks to the amount of such deposit, and it cannot refuse to honor his checks or drafts against the fund on the ground that the money deposited belonged to some other person, or that the title of the depositor to it is defective. These are matters in which the bank is not interested or concerned until the third party who claims to own the fund shall proceed to enforce his rights. (McLaughlin vs. Bank [Dak.] 43 N. W. 715; Bank vs. Mason, 95 Pa. 113, 40 Am. Rep. 632; National Bank vs. Insurance Co. 104 U. S. 54, 26 L. Ed. 693; Bank vs. Luman [Wyo.] 42 Pac. 874; Walker vs. Bank [C. C.] 25 Fed. 255; Morse, Banks, Sec. 317.)

This rule applies to the deposit of trust funds the same as it does to individual funds deposited. Mr. Morse, in his work on banks, *supra*, says: "Supposing that the banker becomes incidently aware that the customer, being in a fiduciary or a representative capacity, meditates a breach of the trust, and draws a check for that purpose. The banker, not being interested in the transaction, has no right to refuse the payment of the check; for, if he did, he would be making himself a party to an inquiry as between his customer and a third party." And in the case of Walker vs. Bank (C. C.) 25 Fed. 255, the Court says: "A banker cannot question the right of his customer by refusing to honor his demands by check or otherwise upon any theory that it is the banker's duty to look after the appropriation of the trust fund when withdrawn from the bank, and to protect the trust by setting up a *jus tertii* against the demand. This would be to make every trustee accountable for his conduct in the trust to every agent whom he happened to employ, and would carry the principle of constructive trust to an inconvenient, and, indeed, to an impracticable, length."

The rule, however, is otherwise where the banker appropriates the money to the payment of a debt due the bank from the trustee, as was the case in Cady vs. Bank, 46 Neb. 764, 65 N. W. 906.

In Bank vs. Luman, *supra*, the court, in speaking of the duty of the bank in this respect, said: "And, first, it had the right, even with knowledge, through its officer, of the trust character of the fund transmitted to it by Pfleiffer, to place the amount to his credit, and even to pay his checks drawn on it, not applied to itself, or passing to it with such knowledge; but it had no right to participate in the wrongful diversion of the fund, and pay itself out of the proceeds of the draft. A banker is not required to protect the rights of third parties or to initiate any inquiry between himself and the customer."

In Duckett vs. Bank, 86 Md. 400, 38 Atl. 983, 39 L. R. A. 84, 63 Am. St. Rep. 513, the Court said: "The obligation of the bank is simply to keep the fund safely, and return it to the proper person, or to pay it to his order. If it be deposited by one as trustee, the depositor as trustee has the right to withdraw it, and the bank, in absence of knowledge to the contrary, would be bound to assume that the trustee would appropriate the money when drawn to a proper use. Any other rule would throw upon the bank the duty of inquiring as to the appropriation made of every fund deposited by a trustee or other like fiduciary, and the imposition of such a duty would practically put an end to the banking business, because no bank could possibly conduct business, if, without fault on its part, it were held accountable for the misconduct or malversation of its depositors, who occupied some fiduciary relation to the fund placed by them with the bank."

Goodwin vs. Bank, 48 Conn. 551, was a case in which the Court said: "The contract of a bank with its depositor is that it will pay his checks upon his funds in the bank, and, if the checks are properly drawn, it is bound to pay them. The law will not charge the officers of a bank with knowledge that a depositor is committing a fraud, nor impose upon them the duty of inquiring simply because he is drawing upon a trust account checks payable to himself, or is transferring funds from the trust account to his private account."

In line with the foregoing decisions are Munnerlyn vs. Bank, 88 Ga. 333, 14 S. E. 554, 30 Am. St. Rep. 159; Freeholders of Essex vs. Newark City Nat. Bank, 48 N. J. Eq. 51, 21 Atl. 185; Bank vs. Reilly, 124 Ill. 464, 14 N. E. 657; Howard vs. Bank, 80 Ky. 496. From the principles above enunciated it would seem clear that it was the duty of the defendant bank to pay this money out on the checks of Dorsey Bros. & Co. and it is an elemental rule of law that a person cannot be chargeable for performing his duty.

There was an attempt to prove that the defendant bank had notice that this draft in question had been drawn and was outstanding at the time the weight tickets were deposited. This fact seems to be strongly relied upon as a factor to charge this bank by the counsel for appellee. Why it should does not clearly appear. It was drawn, not on this bank, but on Dorsey Bros. & Co., and there was nothing, as disclosed by the record, that would lead this bank to believe at this time that it would not be paid by them in the regular course of business. And even if it did believe, and had reason to believe, that Dorsey Bros. & Co. would not pay this draft, it could not refuse to pay out the money, if demanded by the party who deposited it. This would be setting up a *jus tertii* against the demand, which the law does not allow. But the evidence of this notice is weak. March swears (the only witness who testifies on this point) that at the time the weight tickets were gathered up to be deposited he stated to the collector of them that a draft in favor of the Nehawka Bank had been drawn against the proceeds of this sale. It is not pretended that this collector was the Cashier or other managing officer of the bank, but was in reality a messenger boy, who was employed by the bank to wait upon its customers for this purpose. There is no evidence that this collector imparted any of this information to the Cashier, or to any other person; nor does it appear that it was a part of his duty to do so. A corporation can act only by its agents who are empowered to act for it, and can only be bound by notice to some of its officers or agents who have the power to act upon the

Digitized by Google

notice, or whose duty it is to communicate the notice to the officers who have this power.

We have considered this case on the theory that this was a trust fund—the theory most favorable to the plaintiff bank—but even on this theory we can find no reason for holding the defendant bank liable in this action. It is therefore recommended that the judgment of the district court against the defendant bank be reversed, and the petition as against the said defendant bank be dismissed.

Barnes and Pound, CC., concur.

PER CURIAM: The conclusions reached by the commissioners are approved, and, it appearing the adoption of the recommendations made will result in a right decision of the cause, it is ordered that the judgment of the district court as against the Packers' National Bank of South Omaha be reversed, and the petition as against the said Packers' National Bank of South Omaha, dismissed.

COLLECTIONS—FAILURE OF TRANSMITTING BANK—TITLE TO PROCEEDS OF PAPER.

Court of Errors and Appeals of New Jersey, March 3, 1902.

NASH vs. SECOND NATIONAL BANK OF RED BANK.

The plaintiff, having sold a car load of oats, drew a draft on the buyer for the price, dated July 12, 1899, and payable at sight to the order of the Middlesex County Bank. On July 13 he delivered the draft to that bank for collection, and on the same day the bank indorsed it, and sent it for collection to the defendant bank, located in the town where the drawee lived. On the afternoon of that day the Middlesex County Bank, being insolvent, was closed by the banking department of the State, and its business as a bank ceased. On July 14 the defendant presented the draft to the drawee, and received payment thereof. The plaintiff was never credited with the amount of the draft by the Middlesex County Bank, nor was that bank credited with it by the defendant, until after the draft was paid, when the defendant, having no notice of the other bank's insolvency, gave credit for it on the account current between the banks, which still shows a balance due the defendant. *Held*, that the plaintiff was entitled to recover the proceeds of the draft from the defendant.

(Syllabus by the court.)

DIXON, *J.:* The plaintiff, having sold a car load of oats, drew a draft on the buyer for the price, $499.03, dated July 12, 1899, and payable at sight to the order of the Middlesex County Bank. On July 13 he delivered the draft, together with a bill of lading for the oats, to that bank for collection, and on the same day the bank indorsed the draft, and sent it for collection to the defendant bank, located in the town where the drawee lived. On the afternoon of that day the Middlesex County Bank, being insolvent, was closed by the banking department of the State, and its business as a bank ceased. On July 14 the defendant bank presented the draft and bill of lading to the drawee, and received payment thereof. The plaintiff was never credited with the amount of the draft by the Middlesex County Bank, nor was that bank credited with it by the defendant until after the draft was paid, when the defendant, having no notice of the other bank's insolvency, gave credit for it on the account current between the banks, which still shows a balance due the defendant. On these facts the Middlesex circuit court found that the plaintiff was entitled to recover from the defendant the amount of the draft, and on that finding error is now assigned.

Digitized by Google

If the defendant, when the draft was received, had accepted it as its own, by applying it to the subsisting indebtedness of the Middlesex County Bank, its title would have been good against the plaintiff (Bank vs. Loyd, 90 N. Y. 530; Hoffman vs. Bank, 46 N. J. Law, 604), for on its face it was a negotiable instrument, and in this State the payment of a precedent debt is a valid consideration for the transfer of such instruments. But the defendant never accepted title to the draft, and when it collected the draft it did so as a mere agent. The question therefore arises, to whom did it then become accountable for the proceeds? It is a reasonable inference that the act of the plaintiff in selecting the Middlesex County Bank as his agent to collect the draft was induced by the expectation that it would continue to transact banking business, so that such continuance was an implied condition of the continuance of the agency; and when that business was abandoned by the closing of the bank's doors on July 13 the agency was terminated. (Manufacturers' Nat. Bank vs. Continental Bank, 148 Mass. 553.)

The bank thereby renounced its agency, as it had power to do, subject to liability for injurious consequences. (Story, Ag. § 478.) It was no longer entitled to stand as intermediary between the defendant and plaintiff, or to demand the proceeds of the draft, or to control them for its own benefit. If those proceeds had been transmitted to it or to its Receiver, the duty of the recipient would have been to forward them directly to the plaintiff. (Bank vs. Hubbell, 117 N. Y. 384.)

These considerations make it clear that when the defendant received the proceeds of the draft, it received that which belonged wholly to the plaintiff, and in which the Middlesex County Bank had no right whatever. The law of commercial paper was no longer applicable to the circumstances. The case had become one in which the defendant's right was simply the right of a person who holds funds that belong to another. No doubt, conditions may be supposed in which the defendant, if it had actually parted with the funds under the direction of the Middlesex County Bank and in ignorance of its insolvency, might protect itself against the plaintiff's demand on the ground of estoppel, or on the doctrine that, when one of two innocent parties must suffer, he who by greater caution might have prevented the loss shall bear it.

But the defendant has not parted with the proceeds, and will suffer no detriment by being obliged to pay them to the plaintiff. It merely fails to give an advantage which it would reap if it were allowed to apply the plaintiff's funds to the payment of a debt due from an insolvent debtor.

The case of First Nat. Bank of Crown Point vs. First Nat. Bank of Richmond, 76 Ind. 561, is like the present in its essential features. The only difference lies in the fact that there the indorsements were special "for collection," so that the will of the indorsers prevented any transfer of title, while here such transfer was prevented by the will of the indorsees. But the important fact in both cases is that title to the paper never passed out of the plaintiff, and therefore its proceeds were the property of the plaintiff. The right of the plaintiff to recover from the collecting bank was upheld in that case, and should be in this. The defendant is accountable to the plaintiff, and to him alone, for the proceeds of the draft. (Comstock vs. Hier, 73 N. Y. 269.)

The judgment should be affirmed.

CONDENSED LEGAL DECISIONS OF INTEREST TO BANKS.

AUTHORITY OF PRESIDENT—LIMITATIONS.

When the President and Cashier of a bank, acting in his official capacity for such bank, collects money for and places it on deposit in such bank to the credit of one of its customers, and pays out of such deposit notes due to the bank from the customer, and checks drawn by him against such deposit, the bank cannot, for the purpose of escaping liability to its customer for the mistakes or malfeasance of its President and Cashier, deny his authority to represent it in this kind of a transaction.

As between a bank and one of its depositors, the statute of limitations does not begin to run in favor of the bank until a demand has been made for the money on deposit.

Citizens' Bank of Humphrey vs. Fromholz, 89 N. W. Rep. (Neb.) 775.

CHECKS—PAYMENTS TO WRONG PERSONS—IDENTIFICATION OF PAYEE—WAIVER—INDORSEMENT—DIFFERENT NAME THAN PAYEE—NAMES—IDEM SONANS.

Where a bank had no knowledge of the fact that the drawer of a check was not satisfied that the person receiving the check as payee was the person therein named as payee, and took his receipt therefor, it cannot claim that such circumstances amount to a direction from the drawer to pay without reference to identification or to the genuineness of the indorsement, so as to relieve the bank from liability for paying to the wrong person, it having paid to another bank, which had in the first instance paid the check, and in so doing relied solely on the indorsements.

Where a bank paid a check simply upon the face of the indorsement, which was made by one "Daley" while the check was payable to one "Daily," that fact was amply sufficient to have placed the bank upon its guard, and caused it to have made some inquiry as to whether it was paying to the proper person.

The mere possession of a check will not justify a bank in making payment to the person in possession, without some identification, or some evidence of the genuineness of the indorsement, if an indorsement is in question.

Western Union Tel. Co. vs. Bimetallic Bank, 68 Pac. Rep. (Colo.) 115.

DEPOSIT —CHECKS—REFUSAL TO PAY—CORPORATIONS—NOTICE.

Deposits in a bank create between it and the depositor the relation of debtor and creditor, and, as long as this relation exists, the bank is in duty bound to honor the checks of the depositor, and it cannot refuse to do so on the ground that the money deposited belongs to some other person, or that the title of the depositor to it is defective.

But, if the bank appropriates the trust fund to the payment of a debt due the bank from the trustee, it would be liable therefor.

Knowledge by the bank that a draft has been drawn on the depositor and is outstanding would not justify a refusal by the the bank to pay out the money deposited when demanded by the depositor. The law would not allow the bank to set up a *jus tertii* against the demand.

Digitized by Google

A corporation can act only by its agents who are empowered to act for it, and can only be bound by notice to some of its officers or agents who have the power to act upon the notice, or to one whose duty it is to communicate the notice to its officers or agents who have this power.

Nehawka Bank vs. Ingersoll, *et al.* 89 N. W. Rep. (Neb.) 618.

CHECKS—PRESENTATION—AGENCY—NONPAYMENT—NOTICE—FRAUD—EVIDENCE—INSTRUCTIONS.

Defendants sent plaintiff a check on account, which the latter deposited for collection. The bank forwarded it by mail to the bank on which it was drawn. Payment was not made promptly, and the latter bank subsequently became insolvent. There was evidence that defendants had a balance in the bank sufficient to pay all outstanding checks, and that if the check had been presented it would have been paid. Defendants had information from which they might infer that the bank was not strong, but it did not appear they had any reason to suppose that if the check was properly presented in a reasonable time it would not be paid. *Held*, that in an action on the unpaid check, it was error to instruct that defendants committed a fraud in sending plaintiff the check, and were not entitled to notice of nonpayment.

It was proper to instruct that the bank on which the check was drawn was not a suitable agent for its collection.

Carson, Pirie, Scott & Co. vs. Fincher, *et al.* 89 N. W. Rep. (Mich.) 570.

DEPOSITS—APPROPRIATION TO DEBTS—TRUST FUND—EVIDENCE—BOOKS OF ACCOUNT.

A bank has the right to appropriate the funds of a depositor to the extent of the indebtedness due from him; but if the deposit, or any part thereof, is a trust fund, and the bank has notice of this fact, it will be liable to the true owner if it appropriates such fund to the discharge of an indebtedness due from the depositor.

In a suit against a bank, entries on its books, made by its officers or bookkeeper in the regular course of its business, are admissible in evidence on behalf of the adverse party when in the nature of admissions.

A bank that appropriates a deposit made by a customer to reduce his indebtedness due the bank, knowing the deposit, or a part thereof, to be a trust fund, is liable to the true owner for a conversion of his money, and an action at law to recover the amount can be maintained.

Globe Sav. Bank vs. National Bank of Commerce of New London, Conn., *et al.* 89 N. W. Rep. (Neb.) 1030.

DEPOSITS—PAYMENT OF CHECKS—SIGNATURE CARDS.

Where the treasurer of a foreign corporation opened a bank account with defendant, and at the same time handed it authorized signature cards to guide it in the payment of checks drawn thereon, which cards contained the signatures of both the president and the treasurer, defendant was not authorized to pay checks signed by the treasurer alone, and was liable to the corporation for the sums so paid.

Where the secretary-treasurer of a foreign corporation opened a bank

Digitized by Google

account with defendant, handing it authorized signature cards to guide it in paying checks drawn thereon, which cards contained only his signature, the corporation could not hold defendant liable for the amount of checks so paid on the ground that they should also have contained the signature of the president.

Shoe Lasting Mach. Co. vs. Western Nat. Bank of City of New York, 75 N. Y. Supp. 627.

DRAFT—COLLECTION—LIABILITY OF COLLECTING BANK.

On July 13 he delivered the draft to that bank for collection, and on the same day the bank indorsed it, and sent it for collection to the defendant bank, located in the town where the drawee lived.

On the afternoon of that day the Middlesex County Bank, being insolvent, was closed by the banking department of the State, and its business as a bank ceased. On July 14 the defendant presented the draft to the drawee, and received payment thereof. The plaintiff was never credited with the amount of the draft by the Middlesex County Bank, nor was that bank credited with it by the defendant, until after the draft was paid, when the defendant, having no notice of the other bank's insolvency, gave credit for it on the account current between the banks, which still shows a balance due the defendant. *Held*, that the plaintiff was entitled to recover the proceeds of the draft from the defendant.

Nash. vs. Second Nat. Bank of Red Bank, 51 At. Rep. (N. J.) 727.

FORGERY OF CHECK—SIGNING BY AUTHORITY OF DEPOSITOR—INSTRUCTIONS TO JURY.

In an action against a bank to recover a deposit in which plaintiff by reply denied that a check for the amount sued for, which defendant had paid, was signed by her, or by her authority, it was error to instruct the jury that in order to find for defendant, it must believe that the check was signed by plaintiff, but the court should, as requested by defendant, have instructed the jury to find for defendant if it believed that the check was signed by plaintiff, "or by another for her and with her consent, or by her authority."

If plaintiff received the proceeds of the check with knowledge of the fact that the money had been paid by defendant thereon, or the money was deposited to plaintiff's credit in another bank, and drawn out by her or by her authority, she was not entitled to recover, and the court should have so instructed the jury as requested by defendant.

Phoenix Nat. Bank vs. Taylor, 67 S. W. Rep. (Ky.) 27.

INSOLVENCY—KNOWLEDGE OF DIRECTORS—PROSECUTION—EVIDENCE.

On a prosecution under Starr & C. Ann. St. c. 38, Sec. 168, providing for the punishment of an officer of a bank receiving deposits when it is insolvent, accused should have been allowed to testify as to his belief that the bank was solvent.

On a prosecution under Starr & C. Ann. St. c. 38, Sec. 168, providing for

Digitized by Google

the punishment of an officer of a bank receiving deposits when it is insolvent, it was not harmless error not to permit accused to testify as to his belief of its solvency, the testimony being overwhelming to the effect that it was insolvent to his knowledge.

Paulsen vs. People, 63 N. E. Rep. (Ill.) 144.

NOTES—ACTION—DEFENSES—FRAUDULENT REPRESENTATIONS—BANK OFFICERS—RENEWAL—WAIVER OF DEFENSES.

C and M were sureties on a bond given for the faithful performance of a contract to build railroad machine shops. The contractors being about to abandon work, M, then President of the plaintiff bank, told C that they ought to make a note, in order to carry out the contract, and thus save themselves from being sued as sureties. C said that he had risked all he intended to in the matter, whereupon M stated that they would not have to pay a cent; that he had a contract with the railroad company that would protect them; that the bank had loaned the contractors all the money it could afford to, and simply wanted the note to show to the bank examiner; and that the first money paid in under his contract with the railroad company would be applied to the note. Upon these representations, C executed the note. *Held*, that the bank, having no actual knowledge of M's representations, who was acting for himself, was not bound thereby, and, having advanced money on the note, could hold C liable therefor.

Defendant, in order to the carrying out of a contract for the building of railroad shops, on which he was surety, signed a note jointly with another surety, who was President of the payee bank. Defendant relied on his co-surety's statement that the note was mere form and that they would not have to pay it, as he had a contract with the railroad company which would protect them. The bank's attorney for collection had a conference with the makers, in which it appeared that defendant had no protection under the latter contract. Defendant then executed a note for a *pro rata* part of the old note. *Held*, in a suit on the new note, that defendant had waived any defense he may have had against the old note by reason of any fraudulent representations made by his co-surety.

National Bank of Cleburne vs. Carper, *et al.* 67 S. W. Rep. (Tex.) 188.

REFUSAL TO HONOR CHECKS—ACTION—MOTION FOR SECURITY FOR COSTS—INSOLVENCY—PAROL EVIDENCE—BANK PRESIDENT—AUTHORITY TO LOAN—RATIFICATION—ESTOPPEL—BANK BOOK ENTRIES AS EVIDENCE—PURCHASE OF PLAINTIFF'S CLAIM—APPLICATION OF DEPOSITS ON NOTE—PAROL AGREEMENT—INSTRUCTIONS—TRIAL—EXCLUSION OF EVIDENCE—REOPENING CASE—WITNESSES—IMPEACHMENT.

The President of a bank is authorized to make an agreement whereby a party is to get money from the bank to buy a certain description of hogs.

A person borrowing money from a bank through its President cannot deny the authority of the President either to loan the money to him or to dedicate the terms of such loan.

Where a bank permits its President as its agent to arrange a loan of money for the purchase of stock, it is estopped to afterwards deny the legitimate nature of the loan.

Digitized by Google

Where the books of a bank show that a certain loan was made, and there is no countervailing evidence, it will be presumed that the nature and character and all the essential features of the loan were known to the bank; and, no disapproval of the loan appearing, it will be further presumed that the bank approved of the loan.

Though the act of a bank's President in arranging for a loan of money for the purchase of stock is unauthorized, yet, if the loan is afterwards ratified by the bank, the bank cannot subsequently question its legitimate character.

Where the President of a bank made an agreement with a party whereby such party was to get money from the bank to buy a certain description of hogs, he is competent to testify of the kind of hogs which the party was to buy under the terms of the contract as a condition of getting credit at the bank.

An agreement by the maker of a note to a bank that any money thereafter deposited by him in the bank shall be credited on the note, although before its maturity, need not be in writing.

In an action against a bank for damages to business and credit, consequent on the bank's refusal to honor checks, it appeared that plaintiff was a stock dealer, and obtained money from the bank from time to time on his checks to enable him to purchase hogs suitable for the market, the proceeds of which, when sold, were deposited in the bank to meet his overdrafts, and that to meet a large overdraft plaintiff executed a note for a portion thereof payable within a certain time. There was evidence that at the time the note was given plaintiff expressly directed the Cashier of the bank to apply the deposits that might be made from time to time, as the hogs should be sold, as a credit on the note, notwithstanding it might not be due when the sales were made. *Held*, that it was proper to instruct that if the above facts were so, and afterwards and before the maturity of the note the bank received money from plaintiff, which was credited on the note, and plaintiff had no other money in the bank at the time of the protest of his checks, then the verdict should be for defendant.

Where the maker of a note to a bank agreed that deposits thereafter made by him might be applied on the note, though it was not due when such deposits were made, and directed the Cashier to so apply the deposits, he is estopped from claiming such deposits as subject to his checks.

Roe vs. Bank of Versailles, 67 S. W. Rep. (Mo.) 303.

USURY BY NATIONAL BANKS—ACTION TO RECOVER BACK USURIOUS INTEREST—MEASURE OF RECOVERY.

Twice the amount of the entire interest paid, and not twice the sum by which the interest received exceeded the lawful rate, is the measure of recovery from a National bank for collecting usurious interest, under U. S. Rev. St. Sec. 5198, providing for a forfeiture of the entire interest whenever taken, received, reserved, or charged at a usurious rate, and for the recovery, "in case the greater interest has been paid," of twice the amount of the interest thus paid.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B.; Barrister, Toronto.]

PROMISSORY DEMAND NOTES—NOTICE OF DISHONOR—ACCOMMODATION MAKER—CONDITIONAL DELIVERY—AUTHORITY OF BANK MANAGER—BANK HELD BOUND BY NOTICE TO MANAGER—FINDINGS OF JURY.

COMMERCIAL BANK OF WINDSOR vs. SMITH.

STATEMENT OF FACTS: All the facts of this case will be found set out in the judgment which was delivered by the Court of Appeal in this action. The judgment of that court was delivered by Ritchie, J.

JUDGMENT: This is an action to recover the amounts of three promissory notes, given to the plaintiff bank as collateral security for the liability of the defendant, George Smith, and had been defended by A. J. Morrison, who is an indorser on one of the notes, and joint maker with Smith on the other two.

The suit was tried before a jury, to whom questions were submitted by the learned trial judge, and on the answers to these questions, he directed a verdict to be entered for the bank on the first two notes, and for the defendant on the third. The defendant has appealed from this judgment as respects the first two notes, and moved to set aside the third, sixth and eleventh findings of the jury. The plaintiff bank also appealed as regards the judgment on the other note, but this was abandoned on the argument, and it is unnecessary to consider any questions in relation to it.

As regards the note for $1,000 on which the defendant Morrison was indorser, and which was payable on demand, he claimed that it had been presented for payment on November 16, 1897, and had been dishonored, of which he received no notice. The jury, however, have found by their third answer, that it was not then presented, and I think there is sufficient evidence to sustain such finding. There is no evidence of any other presentment to the maker until July 26, 1898, on which day it was afterwards presented to the indorser Morrison, and notice of dishonor given him. But the jury have, by their answer to the twentieth question, to which no objection is made, found that Morrison, after the alleged presentment, promised to pay the notes. This makes it unnecessary for the plaintiff bank to prove either presentment or notice of dishonor.

The principal defence was that these notes were signed by Morrison for the accommodation of Smith and under a special agreement with him, that they should not be used until they were signed by other parties as co-sureties, of which the plaintiff bank, at the time it became holder, had notice. Whether or not such agreement was entered into as regards the $1,000 note, was submitted to the jury by the fourth question, but they failed to concur and did not answer it. If no such agreement was made the bank must recover, and the liability on this note cannot be determined until this fact is definitely found, one way or the other. The onus of substantiating such an agreement is on the defendant, and unless he can satisfy the jury that it was made they should be instructed to find against it, but I do not think it can be assumed from the fact that the jury failed to agree that no such agreement was really made, and judgment entered for the plaintiff.

As regards the second note for $4,000 the jury found, in reply to the ninth

Digitized by Google

question, that the defendant Morrison signed it upon condition that before it was delivered to Marshall, the agent of the bank, Smith would obtain the additional signature thereon of C. S. Harrington, and that it was not to be used until then; also that Marshall, the agent of the plaintiff bank at Middleton, while he was such agent, had knowledge and notice of such condition.

These findings are in my opinion sustained by the evidence and cannot be disturbed. The jury also found that Marshall did not have such knowledge and notice in the course of the business of said agency, at Middleton, and at the time, or before, said note was delivered to him as such agent, and that he did not communicate such condition to the Cashier, or any of the directors. It was proved, and not denied, that the note was signed, and the condition agreed to in the presence of Marshall, who wrote out the note. That Marshall was then told not to take the note unless Harrington's name was on it, and replied "that is all right." The agreement was made and the note signed, and handed to Smith in Morrison's office in the afternoon, no part of the transaction taking place in the banking office. If the jury based their finding "that Marshall did not get his knowledge of the condition in the course of the business of the agency" upon the circumstance that the transaction did not take place in the bank in business hours, as may fairly be assumed from the opposite answer given to a similar question regarding the third note, when the tránsaction took place in the bank, it is not of much bearing. But if full effect is to be given to the answer, and I think we must so consider it, such answer is, in my opinion, contrary to the evidence, and cannot be sustained.

The position of affairs in relation to Smith's dealings with the bank at that time, was as follows: Smith was largely indebted to the bank in consequence of advances made through Marshall, for which the bank was anxious to get collateral security, and these notes were taken for that purpose, and not as ordinary discounts.

Mr. Lawson, the Cashier of the plaintiff bank, in his evidence, said:

"The notes in this action were taken in consequence of instructions from me to Marshall. * * * I gave Marshall verbal instructions to get Morrison's name on these three notes."

We must, I think, assume that Marshall called upon Morrison and got his signature in accordance with these instructions received from the Cashier, and such transactions would clearly be in the course of the business of the agency at Middleton, and within the scope of the agent's authority, and his knowledge must be held to be the knowledge of the bank.

In the language of Kaye, L. J., in Bawden vs. L. & E. & G. Assurance Co. (1892), 2 Q. B. 534: "The knowledge was obtained by him when he was acting within the scope of his authority and must be imputed to the company."

If we assume that a similar condition existed with respect to the $1,000 note, without which assumption the answer of the jury to the fifth question is meaningless, the above remarks would also apply to it.

If Marshall, acting under the authority of the Cashier, applied to Morrison to sign these notes, and in order to induce him to do so, made any representation, agreed to any condition, or did anything to lead him to believe that they would not be used by the bank until another person had signed them, the bank would be bound, although the conduct was unauthorized by, and the knowledge was concealed from its officers, for the principal cannot take

Digitized by Google

advantage of the security obtained for him by his agent, without giving effect to the conditions under which the security was agreed to be given.

TAX SALE—ASSIGNMENT OF PROCEEDS OF—POWER OF TREASURER IN RESPECT TO—POWER OF TREASURER TO PLEDGE CREDIT OF MUNICIPALITY.

CANADIAN BANK OF COMMERCE vs. TOWN OF TORONTO JUNCTION (Ontario Law Reports, Vol. III, page 309).

STATEMENT OF FACTS: The "Leader and Recorder Publishing Company" were indebted to the plaintiffs in the sum of $1,800 to secure which they gave an assignment to the plaintiffs of the proceeds of a contract with the defendants for the advertisement of the sale of certain lands for taxes. This assignment was in the form of a letter from the company to the town treasurer requesting him to "pay whatever the amount of the account of the tax sale advertising might be for the present year to the plaintiffs." On this letter there appeared a memorandum signed by the town treasurer in these words: "Whatever amount may become due to the 'Leader and Recorder' for advertising tax sale for 1900 will be paid by me to the Canadian Bank of Commerce." The proof sheets sent to the treasurer contained a serious error inasmuch as fifty-six lots were misplaced and were not set up opposite the amount for which each lot was in arrears for taxes. The treasurer did not observe this error and returned the proof marked correct. The company proceeded to advertise the lands, but became insolvent and passed into the hands of a liquidator who continued the publication. The treasurer fearing that the publication would not continue and that the terms of the statute as to advertising would not be complied with, caused the insertion of the advertisement in another paper. Later, the plaintiffs having been advised by the company that the contract had been completed and that the sum due under it was some $462.50, demanded this sum from Jackson, the town treasurer, under the assignment. Jackson replied by stating that no amount whatever was due to the "Leader and Recorder." This action followed. There had been no by-law or resolution of the town council touching this matter from first to last nor had the town directly made any contract in respect of it.

JUDGMENT: If the action had been brought against the treasurer, questions of some gravity might arise as to whether or not there could be a recovery, but in the view that I have taken in respect of another part or element of the case, I need not concern myself with these. For the purposes of the collection of arrears of taxes the 224th section of the Assessment Act (R. S. O. 1897, ch. 224), provides that the treasurer and mayor of every city or town shall perform the like duties as are (in the act) before, in the case of other municipalities, imposed on the county treasurer and warden, respectively. In this case the warrant was issued by the mayor of the town.

In the case of Warwick against the County of Simcoe, 36 C. L. J. 461, the trial judge says: "A county municipality is not liable for the cost of advertising the county treasurer's list of lands for sale for arrears of taxes, although sent to the plaintiff by the county treasurer. The county treasurer does not act as an officer of the corporation in relation to tax sales, and the duties connected therewith are not within the scope of his authority as county treasurer. He is merely *persona designata* on behalf of the local municipalities, and a creditor must look to him personally."

Digitized by Google

The distinction sought to be made between the case Warwick vs. County of Simcoe above referred to and the present case is that there the treasurer was the person designated by the statute to act on behalf of the local municipalities, but here the treasurer was the person so designated on behalf of the one municipality.

I do not think this a sound distinction. Section 224 of the act provides that he shall perform the like duties as those imposed upon the county treasurer. The duties imposed by the statute, at least so far as the purposes of this action here are concerned, are the same. In each case the treasurer is an officer pointed out by the Legislature, and commanded to perform certain duties for the general good, and in neither case can the municipality interfere with the officer in the performance of these defined duties.

The treasurer in the present case did not at any time, so far as the evidence shows, attempt to pledge the credit of the defendant municipality. I am of the opinion that he had no power to do so. A perusal of the documents in evidence shows that the treasurer from first to last acted for himself, and not for another. I cannot think that there is any legal ground for charging these expenses of this printing against the defendant municipality, even if it were assumed that they constituted a valid claim against the treasurer, and I think the action should be dismissed with costs.

DAMAGES—WRONGFUL AND WILFUL TRESPASS—MODE OF ASSESSMENT.

THE UNION BANK OF CANADA vs. BIDEAU LUMBER COMPANY (O. L. Reports, Vol. III, page 269).

STATEMENT OF FACTS: The judgment in this action had directed that the plaintiffs had a right to recover damages from the defendants in respect to the matters complained of in the statement of claim, and referred it to a master to assess the damages. The judgment had in terms declared that the defendants were liable as trespassers from every possible standpoint and the evidence warranted the conclusion that the trespass had been fraudulent. The master on the reference assessed the damages as though the trespass, which consisted in the cutting and carrying away of timber, had been innocent and *bona fide* and from this basis of assessment this appeal was taken.

JUDGMENT: The judgment in the action having found the defendants to have wilfully and fraudulently trespassed in the premises, the master should have applied the severe rule and not the mild one in assessing damages. All things will be presumed against a fraudulent wrongdoer. The plaintiff's appeal must therefore be allowed and the matter referred back to the master to ascertain the damages to be recovered from the defendants on the footing of wrongful and wilful trespass.

EXPIRATION OF CORPORATE FRANCHISE.

Editor Bankers' Magazine: CHICAGO, Ill., May 5, 1902.

SIR: A corporation of this State entered into a contract with a corporation of Pennsylvania which provides that it is to run as long as their charters exist. The Illinois corporation

Digitized by Google

has a charter which does not expire until 1915, while the charter of the Pennsylvania company expires this year, but steps have already been taken to have it extended. Will the extension of the corporate existence of the Pennsylvania company extend the life of the contract of itself? SECRETARY.

Answer.—The extension of the charter will not extend the contract unless the contract contains some express provision to that effect. A new contract should be entered into, if it is desired to have it extended, or acting under the old contract, after the extension of the charter, may be construed as an implied contract according to the same terms.

RAILROAD AID BONDS.

Editor Bankers' Magazine: PITTSBURG, PA., May 7, 1902.

SIR: Negotiable bonds were issued by a county and placed in escrow, and were authorized to be delivered in payment for stock of a railroad company when its road had been "so completed through such county that a train of cars shall have passed over the same." The road was built into the county, and within two miles of the opposite side, and cars were run thereon. There being a question as to whether the condition precedent to delivery of the bonds had been complied with, the company secured a right of way, and prepared to extend the road beyond the county line, desisted when, after public discussien of the question, it was determined by the trustees holding the bonds that the condition had been fulfilled, and he delivered the bonds. It is not claimed but that parties acted in entire good faith. The county received, retained, and votėd the stock, and paid the interest on the bonds for three and one-half years, and then set up their invalidity for the reason that the road had not been constructed entirely through the county from one side to another. The bonds are in the hands of a *bona fide* holder, having been negotiated for value, and are deposited with us as collateral. Are they valid, or is our collateral worthless? It might be well to add that the bonds were issued in accordance with the provisions of a special act of the Legislature, which act provides for the trustee and the placing of the bonds with him in escrow, and the giving of bond by him for the faithful performance of his duties. DIRECTOR.

Answer.—It would seem that when the trustee adjudged that all conditions precedent to the delivery of the bonds were complied with, and delivered the bonds, the railroad company took such a title as, transferred to a *bona fide* holder, would enable him to recover against the county. We think there is no question about this. That the trustee was the agent of the county, and responsible to it for the manner in which he discharged his duty, is obvious from the provision of the act requiring him to give a bond for the performance of his duty. If the bonds could be held invalid if the condition for their delivery was not performed in the hands of a *bona fide* holder, there would be little need of requiring the trustee to give any security. The validity of the bonds is strengthened by the fact that the utmost of good faith seems to have existed between the county and the railroad company at the time of delivery.

FIDELITY INSURANCE.

Editor Bankers' Magazine: ST. JOSEPH, MO., May 8, 1902.

SIR: This question is entirely hypothetical and is asked to settle a dispute, thinking possibly you may have encountered a similar case. A Cashier gives a bond signed by a fidelity and surety company; the bond provided that the company would be liable for loss, etc., discovered within six months from "the death or dismissal or retirement of the employee from the service of the employer." In the case I am imagining there was a suspension of the bank, and the bank examiner took possession, and afterwards a Receiver was appointed. No irregularity was found in the accounts of the clerk until two months after the Receiver took charge, and until eight months after the suspension. In the meantime the Cashier was performing services for the examiner and the Receiver, having only abandoned his work a month before the irregularities were discovered. The surety company was at once notified. Now, was the condition that the loss must be discovered within six months sufficiently complied with to make the surety company liable? INQUIRER.

Digitized by Google

Answer.—Yes. A case very similar to this was decided by the United States Supreme Court (American Surety Co. of New York vs. Pauly, 18 Sup. Ct. Rep. 552) and it was held that where the Cashier actually continued to render services to the examiner and Receiver, he must be deemed to have remained in the service of his employer, at least until the appointment of a Receiver by the Comptroller.

USURY.

Editor Bankers' Magazine: BRADFORD, Pa., May 10, 1902.

SIR: A National bank makes a charge of interest which is usurious. The interest is not paid but is computed and added in as principal in a renewal obligation not yet due. I understand that in the case of a National bank under Federal statutes such a charge forfeits all interest, and in case that the interest has been paid, twice the amount can be recovered. The renewal note also calls for usurious interest. Can the payor offset against this note all the interest and twice the amount of the interest on the first note included in the principal?

BROKER.

Answer.—No. The bank, however, can recover only the original principal. It has been held in a similar case that the interest included in the renewal note has not been "paid" so as to entitle the payor to recover twice the amount.

CLAIM AGAINST INSOLVENT BANK FOR RENT.

Editor Bankers' Magazine: LITTLE ROCK, Ark., May 12, 1902.

SIR: The C—— Bank entered into a lease with the H—— estate of a banking office of a certain building owned by the said H—— estate. In accordance with its terms the bank paid $1,250 on the delivery of said lease. The term was for a period of five years from May 1, following, the lease having been made in November, at an annual rental of $6,000, payable in equal monthly installments of $500, in advance, exclusive of and in addition to the $1,250. The bank entered into and took possession of said premises on May 1, and the first installment of rent fell due and was payable on that day. This installment was not paid when due, nor had it, or any part of it, been paid, when on May 9, the bank became insolvent and a National bank examiner took possession of its assets and of said premises. On July 21 a Receiver was duly appointed, and on July 27 he notified the manager of the H—— estate of his election to terminate said lease after July 31, so far as he, as Receiver, was concerned. On the same day said Receiver paid to the H—— estate the sum of $1,354.84, which was, as agreed, the ratable amount of rent due for the period to July 31. The premises remained vacant until May 1 of the next year, when they were relet at a reduced rental. Can the H—— estate prove up its claim for damages because of the bank's default in the lease and to the extent of this claim participate in the distribution of the assets?

LANDLORD.

Answer.—Yes. The right of action existed as soon as the bank became in default on May 1, the amount of damages only being unliquidated. If the amount of these damages could not be agreed upon without litigation the bank continued in existence long enough as a matter of law for the litigation of all contested claims against it. As soon as the claim is proved and a judgment rendered for an amount certain it becomes a claim against the insolvent estate, no rights having been lost by the necessary delay.

ACTING AS AGENT FOR SALE OF NOTES.

Editor Bankers' Magazine: FARGO, N. D., May 19, 1902.

SIR: Being indebted to the B—— National Bank in the sum of $2,000, I deposited with it as collateral security notes due me amounting to $7,000, and afterwards, on closing my business there, arranged with the Cashier to sell the notes, extinguish my indebtedness to the bank and send me the balance. Instead of doing this the bank purchased the notes itself and refuses to settle with me for the reason that it is not liable, the act being outside of its powers as a National bank and being really the act of the Cashier. Is this position good in law?

AGENT.

Digitized by Google

Answer.—No. While it is true that a National bank can not act as agent for another in the sale of notes, if the Cashier agreed to do so his agreement was the agreement of the bank and the bank is liable for the proceeds if it did sell the notes, whether it sold them to itself or to someone else.

PREFERENCES AS TO SAVINGS BANKS.

Editor Bankers' Magazine: ROCHESTER, N. Y., May 18, 1902.

SIR: A statute of this State provides that debts due Savings banks by an insolvent bank shall be preferred as against other creditors. Has there been any decision with reference to this statute holding that it is not applicable to insolvent National banks? DEPOSITOR.

Answer.—Yes. In the case of Davis vs. Elmira Bank (16 Sup. Ct. Rep. 502) decided by the United States Supreme Court March 2, 1896, the court held that this State statute was repugnant to Rev. Stat. §§ 5236, 5242, requiring the assets of an insolvent National bank to be distributed ratably among the creditors, and is therefore inapplicable in the case of a National bank.

COURSE OF DEALING.

Editor Bankers' Magazine: BELOIT, WIS., May 20, 1902.

SIR: A National bank rediscounted a large number of notes at different times with another bank in accordance with the usual course of business not only between the two banks but between banks generally doing a legitimate business. The transactions were conducted on the part of the borrowing bank in some instances by the President, and in others by the Cashier. The directors had knowledge that such rediscounts were being made, but made no inquiry as to which officer conducted the business or indorsed the notes. In response to an acceptance of an application made by the Cashier for further rediscounts, the President forwarded a number of notes, among which were certain notes bearing his individual indorsement, and below it the indorsement of the bank by him as President. The notes were accepted, and a list returned, with a statement of the discounts and of the amount credited to the borrowing bank. This letter was received, and answered by the Cashier, who accepted the credit without objection, and it was drawn against by the bank in the usual course of its business. The President had been given no express authority to indorse notes for the bank, and as a matter of fact the notes indorsed first by him individually were for his individual benefit. On their maturity they were not paid, and the bank denied liability on its President's indorsement. Will it be held liable, in your opinion, in an action on the indorsement?

CREDITOR.

Answer.—We believe it would under the circumstances outlined. The rediscounting bank was not put upon inquiry as to the authority of the President of the borrowing bank, nor charged with notice that these notes were the individual property of the President and rediscounted for his benefit. It was certainly justified in assuming that they were the property of the bank, and entitled to hold the bank for their payment at maturity.

RIGHT TO ASSIGNMENT OF MORTGAGE.

Editor Bankers' Magazine: EL PASO, TEX., May 20, 1902.

SIR: In proceedings to enforce the collection of a debt due me I secured the cancellation of a deed from my debtor to his wife and lived upon the land covered by the deed and bought it in under the judgment. While the land was in the name of the wife she and her husband had executed a mortgage upon it to secure money borrowed by them. It is necessary for me to pay that mortgage now, or it will be foreclosed. What rights do I obtain on buying the mortgage, and do I want a discharge or an assignment? Can I compel an assignment?

R. W. M.

Answer.—You are entitled to an assignment on paying the mortgage, and this is the instrument you should take. If you choose you can foreclose the mortgage yourself, and in case of a deficiency you will be entitled to look to the original mortgagors.

DISQUALIFICATION OF CASHIER.

Editor Bankers' Magazine: HARTFORD, Conn., May 23, 1902.

SIR: D is the Cashier of the M Bank and was also the treasurer of the H Company or corporation. Some years ago, before the bankrupt act went into effect the H Company became insolvent and I accepted the position of assignee. Everything was in good faith, and the intention of all concerned was for me to collect the assets, realize as much as possible from them, and apply the proceeds on debts. The court extended the time for settling the estate so that nothing should be sacrificed. At the time of the assignment the H Company had on deposit in the M Bank $28,213.19. Among the liabilities of the company were three notes amounting to $8,700, which had been indorsed to the bank, but which were not yet due. At the time of the assignment D as Cashier of the bank agreed with me that the bank would transfer the deposit to my account as assignee, and honor my checks thereon. From this time on we deposited and drew out money, and except when we paid the first dividend and for a short time thereafter, have always had on hand a good-sized deposit. The bank never proved-up its claim on account of the notes. When we got ready to pay the final dividend we found that it would amount, with what had been paid before, to eighty per cent. of the total indebtedness, including the three notes. On settling with the bank to get the true balance, we found it had deducted the amount of the notes and interest, in full. As a result we were obliged to reduce the dividend, and since then things have remained in *statu quo*. Can the bank be made to account for the difference between what it would have been entitled to on the same basis as the other creditors and the amount it took out of the deposit?

ASSIGNEE.

Answer.—We think not. If it had been bound by your agreement with the Cashier, of course you could have drawn out the account at any time, but, from the fact that the Cashier was also a member of the assignor corporation, he was not a proper party to represent the bank in dealings with the assignee, and we do not think the bank was ever bound by the arrangements, and it was the same as though no understanding had ever been had. Under these circumstances the bank was entitled to pay its notes out of the deposit.

ACCOMMODATION CHECK.

Editor Bankers' Magazine: MONTPELIER, Vt., April 16, 1902.

SIR: B being indebted to R for goods sent R his two checks on account thereof. They were received and credited but went to protest, whereupon R charged them back with the protest fees. B then obtained H's accommodation check, payable to R, and sent it for the same purpose, and it was received and credited, and B's check returned. His check also went to protest and was charged back with the others, leaving the account unpaid. R, however, returned the last check. It was payable to R or order. Can R enforce collection of the check from H, it being merely accommodation paper, and the account between R and B not having been affected by it?

INQUIRER.

Answer.—The check was sent and received as money's worth, and justice requires that it should be as truly the property of R as would have been the money it represents had it been paid. There is no question that R can recover.

ASSIGNMENT OF VENDOR'S LIEN.

Editor Bankers' Magazine: CENTREVILLE, Tenn., June 2, 1902.

SIR: A gentleman in Texas sold his farm on one, two and three years' time, the purchaser executing his note with lien on the land. The owner of the paper wishes to sell same to a Tennesseean. Now, would the lien be operative in outside hands and would there be any difficulty in collecting note experienced by a citizen of Texas? J. B. WALKER, *Cashier*.

Answer.—In some of the States, the rule is that the vendor's lien is personal to the vendor, and incapable of being transferred; but in Texas the lien has been held to be assignable. (Johnson vs. Townsend, 77 Tex. 639; Hamblen vs. Foltz, 70 Tex. 132; Brooks vs. Young, 60 Tex. 32.) The fact that the assignee is a citizen of another State would not impair his rights, for under the Constitution of the United States the State could not refuse to him the equal protection of its laws.

Digitized by Google

CONTRACT FOR PURCHASE OF REAL ESTATE.

Editor Bankers' Magazine: GALVESTON, Tex., June 7, 1902.

SIR: Will you kindly give me your opinion on the following: A and B made a contract whereby A agreed to purchase from B a tract of land provided a certain attorney, C, approved of the title of said land. Five hundred dollars of the purchase money was by the terms of the contract to be placed in a certain bank, and said $500 was placed in said bank by A. Before the attorney had approved the title to the land the bank failed. The question is, Who loses the $500? If the attorney had approved the title, then, by the contract, he was to give the order to the bank to pay the $500 to B. If, after the attorney had approved the title, A refused to purchase, the $500 was to be forfeited to B. Since the bank has failed, the attorney refuses to approve or disapprove of the title or to say anything. Can A waive said approval and agree to take said land and order the insolvent bank to pay over said $500 to B, and in this way make B lose the money in the bank? Z.

Answer.—Under the arrangement, the right to control the deposit passed from A, the prospective purchaser, and he lost all claim upon the same, unless C should not approve the title. The title to the fund, therefore, vested in B, subject to the right of A to reclaim it in case the title to the real estate should prove defective; and, upon the happening of the condition, B's title would become indefeasible. But the condition was intended for the benefit of the purchaser, and hence he has the right to waive the same, and insist that the sale be completed; and upon tendering the balance of the agreed purchase price, he has the right to demand a deed of the property. The fact that the bank has failed can not affect this right; for this was not one of the conditions upon which the title to the fund was to revest in A.

STATUTE OF LIMITATIONS—ACTION IN FEDERAL COURT.

Editor Bankers' Magazine: BOYDEN, Ia., April 29, 1902.

SIR: A contract (or note) made and to be performed in Iowa is valid there. The makers moved, one to California and the other to Minnesota. By the laws of those States, action to enforce collection of this note is barred by their statutes of limitations. Can the action be brought to enforce the collection of this note in the United States District Court of Iowa by service of notice on the makers in those States? Will the court have jurisdiction over the makers and subject matter? Amount of note about $1,500. J. W. MCCRUM, *Cashier.*

Answer.—As regards the time of bringing actions, the Federal courts are governed by the statute of limitations of the State in which the court is sitting; and hence, in the case stated, the fact that the action is barred by the statute of limitations both in California and Minnesota, would be a bar to maintaining it in the Federal court in either of those States. (Bell vs. Morrison, 1 Peters, 351; Tioga R. R. Co. vs. Blossburg, etc., R. R. Co. 20 Wall. 137.) Besides, the amount involved is less than the amount necessary to give the Federal court jurisdiction, which is $2,000.

DEMAND NOTE—STATUTE OF LIMITATIONS.

Editor Bankers' Magazine: PRESCOTT, Ariz., May 7, 1902.

SIR: When does the statue of limitations begin to run against a note drawn payable on demand? In other words, when is such a note past due—immediately, or when demand has been made and payment refused? I have been taking such paper supposing it is not past due until demand is made for payment. The above question has arisen in this connection.

BANKER.

Answer.—The rule is that in the case of a note payable on demand the statute of limitations begins to run in favor of the maker immediately, and this is so whether the note is payable with or without interest. The reason of this rule is that payment might be immediately demanded or suit brought without any previous demand. (McMullen vs. Rafferty, 89 N. Y. 456; Wheeler vs. Warner, 47 N. Y. 519; DeLavallette vs. Wendt, 75 N. Y. 579; Massie vs. Byrd, 87 Ala. 681; Mobile Savings Bank vs. McDonnell, 83 Ala. 597; Jones vs. Nicholl, 82 Cal. 32; Cousins vs. Partridge, 79 Cal. 228.)

THE BANK AUDITOR.

[Address delivered before New York Chapter of the American Institute of Bank Clerks, by J. C. MARTINE, of The National City Bank of New York.]

It is our good fortune at present to be enjoying a period unprecedented in commercial history. The industrial world is advancing at a pace never before witnessed—the pessimist has been vanquished, the optimist is the hero of the hour. In the adoption of new and improved methods, the development of exceptional ability, the enlargement of plan and scope and the achievement of successful results, progress is observed to be the watchword of the man of business. Within the memory of many of our people, the diversity of our industries could have been enumerated upon one's fingers, but the demand for the products thereof, under the influence of continued prosperity, has gradually increased in volume and variety to such an extent as to produce constant subdivision and specialization. Manufactures, from the stimulus afforded by discovery and invention, have become innumerable, having been successively revolutionized by the introduction of steam and of electricity. Further more, our natural wealth has assumed larger value and utility and its production been multiplied many times by improvements in the arts of mining and agriculture. Our success along these lines has matured the time when, for the purpose of imparting stability and effecting economy, leadership and uniform direction are essential. And this necessity has produced men capable of satisfying it, who have effected combination by purchase, control and community of interest to such an extent that millions of dollars have become as familiar to us as thousands were, and billions have made their entrance upon the balance sheet of the accountant, while such a degree of strength has been infused into credit and the cost of production so far reduced in spite of advancing wages that this country has been enabled to compete successfully in markets the extent of which is world-wide.

The accomplishment of such results as these have required the use of extensive banking facilities, and to meet this need banks, through the ability of their managers to control large sums of money, have acquired resources equal to the entire banking assets, a few years ago, of the cities in which they are located. It is reported that one of these great institutions employs four hundred people, whereas recently four dozen was a large office force. The checks that were carried formerly in a hand satchel are now dispatched to and from the clearing house in boxes resembling trunks and requiring the services of four messengers. These are received from thousands of customers by a dozen tellers and many assistants. The letters received and forwarded during the year, laid end to end, would cover thirty miles. It follows naturally that the accounting is proportionately more complicated and that the perfecting of a system by which this vast array of figures may wend their way, orderly, to the bank statement is a matter of considerable importance.

No less necessary, perhaps, is a constant and careful audit of these accounts. This is no longer expected of the Cashier, whose other duties have become likewise enlarged. The other examinations are still essential, although insufficient. That of the Government covers two essential points; first, that the requirements of law are complied with, and, secondly, that the assets shown by the bank statement are of the value claimed therein. That of the directors adds experience and the special study of various lines of business to their inspection of the collateral securities of the loans of the bank. The work of the bank auditor, whose position has been

Digitized by Google

evolved by these conditions, goes further, however. It is his duty to prove within reasonable certainty that the balances submitted to the directorate are a true statement of the transactions which they represent, that these transactions are duly authorized by officers or depositors and to arrange for and assist in the other examinations. His usefulness is the result of continual instead of occasional attention, resulting in a thorough knowledge of the bank's methods and system.

The necessity of auditing is threefold, primarily because errors of clerks, arising either from negligence, or, as a bank officer has expressed it, "temporary mental aberration," will occur even in the most carefully conducted bank and there is always the possibility of fraud and defalcation. Perhaps the best means of prevention is the probability of exposure afforded by a thorough and comprehensive system of audit. Habits of carefulness among the clerks are fostered in this way and if any one is affected by temptations growing out of the responsibility of his position, a more or less effectual influence is thus silently brought to bear upon him. But when prevention has been unsuccessful auditing is needed for the detection and adjustment of these discrepancies, and in a large bank quite a considerable part of the auditor's time is used in the reconcilement of the balances on the bank's books with those shown by the books of its clients. This work requires very careful and accurate handling, for if errors of themselves are objectionable, evidently errors in the adjustment of errors are hardly tolerable. But again, there are also to be considered the benefits of audit from the point of view of the bank's clientele. This can scarcely be overestimated, more particularly when it receives the advertisement of the auditor as an official position. A powerful influence is in this way exercised upon the very desirable class of depositors whose first consideration in dealing with the bank is to secure a safe place to carry their uninvested balances.

It is apparent from a consideration of the duties required of him that the bank auditor should be thorough in his methods, careful, accurate, observant, of few words and of sterling integrity. Furthermore, he must be capable of treating with the bank's customers in connection with their accounts and of operating a system of checking which will, with reasonable certainty, accomplish the results which we have outlined and for which his position is created. It is of the explanation of this especial portion of his work that I wish to speak particularly this evening. Broadly observed, a bank's resources are its cash, investments and loans; its liabilities are to its shareholders, noteholders and depositors. To make it easier for you to follow me closely in the analysis of this large subject presented in a brief way, I will write these divisions upon the board, as well as the subdivisions from the point of view of the auditor, and this order of subjects will be followed as I proceed.

Assets.

CASH—
- Currency.
- Clearing-house checks.
- Sight drafts.
- Cash items.

INVESTMENTS.

LOANS—
- Discounts.
- Loans.

Liabilities.

TO STOCKHOLDERS—
- Capital.
- Surplus.
- Undivided profits.
  - Interest.
  - Commission.
  - Exchange.
- Less:
  - Expense.

TO NOTEHOLDERS.

TO DEPOSITORS—
- Deposits.
  - Statement accounts.
  - Pass book accounts.
- Cashier checks.
- Certified checks.
- Less:
  - Foreign cash.
- Less or plus:
  - Foreign exchange.

Digitized by Google

Beginning with the first of these, the total cash balance as shown by the bank's books is arrived at by deducting the first teller's payments as shown by his check list and exchanges paid from the balance of yesterday and adding thereto the receipts of the other tellers. The result is proven by adding together the four subdivisions of cash. The currency can be proven only by counting it, and since this is always done at regular examinations it ordinarily does not receive much attention from the auditor. Much the larger part of a bank's reserve is in gold or Government certificates representing it, in the personal custody of the Cashier. Additional safety is secured, when possible, as in this city, by depositing gold with the clearing-house and receiving therefor certificates or receipts, payable only to a member of the association. Many banks secure money counters employed elsewhere to verify the amount of currency on hand several times during the year. The totals of the lists of checks for the clearing house are occasionally compared by the auditor immediately before they leave the bank, with the clearing house summary or "sheet." It is observed that the original and duplicate slips have been listed by different clerks, that the addition of the "sheet" is correct and that the total thus arrived at is settled for at the clearing-house and correctly accounted for in the teller's proofs and cash account proof. The sight drafts and cash items should be of recent date, encashable, small in amount, properly added and transferred to the proof. A fully explanatory list of these should be kept by the teller, showing their final disposition, which should be frequently examined by the auditor. This is a time-honored place for the concealment of differences.

The bonds and stocks constituting the bank's investments are usually under the personal direction of the officers, and the auditor will merely observe when purchases or sales are made that the amounts are posted in accord with official intention, with especial attention to the adjustment of premium and discount from par value.

The balance of bills discounted account is proven by listing the unmatured notes and acceptances directly from the paper and likewise the list of loan envelopes agree with time and demand loans. The examination of the contents of these envelopes is usually cared for by the directors, but by being familiar with the work the advice and assistance of the auditor may be made quite invaluable. They should contain the power of attorney, note or receipt of the borrower and substitution papers, all properly signed, and collateral security exceeding in value the amount of the relative loan about twenty per cent. The market price is usually a safe basis of value, but if at the quoted figure the stocks or bonds yield a materially lower rate of interest than that at which the issuing company could negotiate loans on other forms of paper, it is probably inflated by market manipulation, and the margin should be proportionately greater. While checking these papers it should be observed that where endorsement is required the documents are in order in this respect, that coupon bonds are free from any marks and writing and all unmatured coupons are attached, that the registered holder of bonds is the signer of the power, that accumulated freight charges on bills of lading or storage charges on warehouse receipts do not unduly depreciate the market value of the merchandise. The weights and quality of goods requiring it should be certified and releases from store or by the carrier should be noted. The auditor also keeps a miniature loan and investment ledger for frequent comparison with the official list of borrowers and securities, recording in the simplest possible way the date, names and amounts posted directly from the book crediting depositors ; the duplicate stub detached from checks issued in payment describing the payee, check number and amount, both officially signed ; the maturity book signed by the note teller and the loan credit book listing checks received receipted for by the receiving teller.

Turning to the liabilities, we observe that a bank owes its stockholders the amount of its capital stock and the profits accumulated by its use, viz., interest,

Digitized by Google

commission and exchange, less expense. The latter is invariably paid by check and audited from the detached duplicate stub, and the exchange debits and credits are checked to the credit book officially signed, collection journal and letters from correspondents upon which exchange is charged. Interest account is checked by use of the rate book showing the amounts loaned, discounted and invested at each rate of interest, these totals being occasionally proven by adding the various amounts under the rates given in the officers' list of borrowers, and comparing them. To effect the audit of interest account balance, the earnings for each day are computed at the rates listed and the unearned discount added thereto, from which total is deducted the uncollected accrued interest on loans and the amount of interest credited to banks for the use of their daily balances. This proof is very much simplified by separating interest account on the general ledger into loan interest, discount received, coupons and dividends and depositors' interest accounts.

The balance due to noteholders is audited from the Washington correspondence relative thereto. The liability to depositors for the purpose of audit may be divided into statement accounts, pass-book accounts, Cashier and certified checks outstanding, less uncollected paper and less or plus foreign exchange. Of these, Cashier account is checked from the duplicate stubs referred to in describing loans and expense, certified account by adding together the unpaid amounts in the certified book signed by the paying teller. The audit of depositors' accounts is an important part of the duties under consideration. Customers' checks, either from the clearing-house or tellers, as fast as they are sorted by the check clerks, entered into the debit cash books and posted by the bookkeepers, are listed by the auditor's assistants for delivery to the depositor, the totals being added together on the arithmometer and proven with those arrived at by the check clerks. When the latter prove, the checks are sorted away according to accounts, the previous totals being carried forward. With the checks is also filed an account card, upon which are posted daily from the letters and tickets the deposits received by mail and over the counter. When a book is left to be balanced, it is entered in a record ruled so that sufficient space is left for the party to receipt when he calls for it. By reference to this list while the bookkeeper is balancing the book the total checks are deducted from the credits on the account card, leaving the depositors' balance for comparison with the pass book before delivery. Where the depositor resides out of town and has been furnished with no pass book, the statements of the accounts as they are received from the bookkeeper are similarly compared and forwarded with the vouchers, with a request for reconcilement and report of any discrepancies within a reasonable time. No account is allowed to continue unbalanced for a longer period than three months, the work of the bookkeepers and assistants is frequently changed and no one is permitted to converse with depositors respecting adjustment of their accounts other than the auditor or the officers. Of the three classes of collections, viz., paper credited upon payment, paper credited immediately and foreign exchange, the first is listed by the receiving teller by number to the collection teller and this number follows the paper to its final credit or return when the auditor compares the final disposition with the original receipt and accounts for each collection. With foreign cash, letters written numerically are sorted alphabetically and as each letter is settled for it is refiled numerically, thus proving the proper return of each item. The unpaid letters are occasionally added together and the totals compared with the balances of the collection ledger. Foreign exchange account is audited at the sailing of each steamer, from officially signed sources, by adding to the previous balance if credit (and *vice versa* if debit) the drafts and cables sold by means of the duplicate stub showing the amount in foreign currency, the rate and the American equivalent, less exchange purchased as shown by the amount expended by use of the duplicate stubs of the Cashier checks issued in payment and the tickets crediting depositors.

Digitized by Google

Having thus ascertained that the foreign exchange account balance on the bank's books is correct, the balances abroad in sterling, marks, francs, etc., are next proven to be the equivalent of these amounts in American currency and the first requisite is to carefully check the computation at the rates given on the stubs and tickets. The statements of our accounts with foreign correspondents are then verified by canceling from the duplicate records the drafts and remittances retired, and at the same time checking the rebates of interest and charges for stamps, commission and postage. To effect a reconcilement of the accounts, to the foreign balances, if debit, and *vice versa* if credit, are added the outstanding drafts less the unpaid remittances. The proving of these statements is difficult and tedious even to the experienced clerk, but it may be considerably simplified by taking as a basis of calculation the totals on the books at the time of the sailing of the steamer arriving abroad just prior to the despatch of the statement, allowing for cable payments in the interim, thus eliminating from consideration all the exchange in transit.

In conclusion I would like to remark that the methods of audit in the synopsis that you have listened to are based upon the practice of banks rather than upon theory. Originality can be claimed only for the arrangement of their presentation, the safeguards having been evolved from the experience obtained from the successive defalcations of many years. It is agreeable in this connection to note that the men among us who would betray the trust confided in them are few indeed. The party against whom the audit system is directed is the exceptional clerk and the justification of its existence is the possibility of disastrous results, rather than the probability of fraud. We may be excused, therefore, for expressing a pardonable pride in being one of the thousands of bank clerks of this great city, to whom with almost perfect safety has been entrusted the accounting of billions of dollars, and especially of that ambitious number who are members of the American Institute of Bank Clerks.

Taxation of Bank Stock.—In the case of John G. Jenkins and other stockholders of the First National Bank of Brooklyn vs. the Board of Assessors of that city, involving the right of the State to tax the bank's stock, the United States Supreme Court, on June 2, affirmed the decree of the Supreme Court of the State of New York. The contention was that of discrimination against the stock, which it was declared was not permissible under the Federal statutes. The court held that the State's practice with reference to National banks is not different from the practice in regard to State banks, and that there was no discrimination.

To Recoin Silver Dollars.—The House, on May 29, passed the bill to increase the subsidiary silver coinage. The text of the bill is as follows:

"That the Secretary of the Treasury is hereby authorized to coin the silver bullion in the Treasury purchased under the act of July 14, 1890, into such denominations of subsidiary silver coin as he may deem necessary to meet public requirements, and thereafter, as public necessities may demand, to recoin silver dollars into subsidiary coin; and so much of any act as fixes a limit to the aggregate of subsidiary silver coin outstanding, and so much of any act as directs the coinage of any portion of the bullion purchased under the act of July 14, 1890, into standard silver dollars, is hereby repealed."

Coinage of Silver in Venezuela.—Consul E. H. Plumacher writes from Maracaibo, April 16, 1902, that a recent decree issued by the President of Venezuela orders the coining of 2,000,000 bolivars ($386,000) in silver money, three fourths of this to be in 5-bolivar (96 cents) pieces and the rest in 2-bolivar (38 cents) pieces.

*RESPONSIBILITY OF A BANK FOR THE ACTS OF ITS OFFICERS.

Continuing the discussion on the subject of when a bank is liable for the acts of its officers, a number of very interesting cases may be cited. The case about to be discussed belongs to that class in which the funds of a bank have been misappropriated by certain officers having authority to handle them. The great power of the President and Cashier of banking institutions in their dealings in commercial paper, representing large sums of money, is used daily in so many different kinds of transactions that it rarely occurs that any one questions the officer's authority to exercise that power. Cashier's checks, bank drafts, and other forms of banking paper signed by the President or Cashier, are so numerous and have come into such popular and frequent use that in many instances they have passed almost like money, and we rarely expect to question the authority of the man placing his name to the paper which gives it such value. However, it has been held in a comparatively recent case, which has become an established authority, that where a bank President deals in drafts, or otherwise with the funds of the bank for his own purpose, the person receiving the draft is immediately placed upon inquiry as to whether the President had due authority to issue such paper.

In the case of Lamson vs. Beard, Receiver of the First National Bank, of Pella, Iowa, reported in the 94 Federal Reporter, page 30, the principle last mentioned was declared.

It seems that one E. R. Cassatt was President of the First National Bank, of Pella, Iowa, which had a capital stock of $50,000. Cassatt was President and principal executive officer and did nearly all the work in connection with the institution. The directors performed very little of the work and what they did do was done perfunctorily; in fact, the bank was E. R. Cassatt. Cassatt began to have dealings with the firm of C. B. Congdon & Co., commission merchants on the Board of Trade in the city of Chicago. His operations on the market were not very successful, and as a result he lost large sums of money on margins, which he was bound to make good. This he did by making drafts on the First National Bank, of Pella, of which he was President, signing the drafts as President. In all Cassatt defaulted and embezzled in the bank the sum of $65,000. Of this amount about $20,000 was sued upon in this case.

The suit was brought upon the theory that the bank itself was responsible upon these drafts drawn by its President, Cassatt, even though they were fraudulently drawn, for the reason that the drafts were commercial paper and were drawn in the ordinary course of business and that the payees were not bound to inquire whether or not the President had special authority to draw them, and especially as they had no notice that there was any fraud in connection with them.

The Receiver of the bank, however, maintained that the receipt of the drafts of the Pella National Bank signed by Cassatt in his official capacity to be used as margins in his personal transactions put the plaintiffs upon notice that Cassatt was using the funds without authority, and that therefore the plaintiffs took the drafts upon their own risk, and that while it was true that the drafts were commercial paper, the circumstances of their payment and the purpose of their payment were sufficient

* Continued from the May number, page 695.

Digitized by Google

to create a suspicion that they were not drawn in the regular course of the business of the bank.

After listening to a vast number of cases cited by the counsel on both sides, the court rendered an exhaustive opinion, the substance of which was that a bank can not be held responsible for the wrongful, unauthorized, misappropriation of its funds by its President for the payment of his own debts. And the court further held that although the President of a bank is its chief executive and representative, knowledge by him of his own frauds on the bank, perpetrated for his individual purposes, cannot be attributed to the bank. The Court said that the plaintiffs should have inquired whether Cassatt had authority to draw drafts upon his own bank, upon its funds for use in his individual transactions. And that if they did not so inquire they must be presumed to have accepted the drafts upon their own risk, and cannot therefore hold the bank liable. It was further maintained that it is not in the ordinary course of a bank's business transactions to permit its funds to be applied for the payment of its President's debts, especially when the orders are drawn by the President himself.

In some cases an officer has unusual powers in regard to drawing commercial paper, but then that power is expressly conferred by the board of directors and is usually made known to the person with whom the bank deals to any great extent. In this case the powers assumed were very unusual and no effort was made by the plaintiffs to ascertain whether they were properly exercised. For those reasons it was therefore held that the bank was not responsible for the wrongful act of its President, although his transactions were so closely connected with the ordinary business of the bank that they were ordinarily indistinguishable.

Another interesting case in which the fraud of a high officer of a bank was concerned, was the case of Guilmartin against the Merchants' National Bank of Savannah; reported in the seventeeth volume of the Lawyers' Law Reports. In that case certain parties deposited with the bank through the Cashier certain valuable securities as a special deposit to be kept simply for the depositor's accommodation and were to be returned to the depositor upon demand. Afterwards the Cashier, without the bank's knowledge, sold and fraudulently appropriated these securities to his own use, and this suit was brought in the circuit court at Savannah, Georgia, to compel the bank to return the value of the securities sold by its Cashier.

The court went into the question very thoroughly and considered the question of master and servant, which was the relation of the bank to the Cashier in connection with the liability of the bank. The court held as a general rule that a master is liable for the wrongful acts of his servants when committed within his authority or within the progress of his usual business. However, the court added that the question in this case was, whether or not the act of the Cashier was so closely connected with his usual transactions that the bank could be held responsible for his fraud. The court held that where a Cashier "steps asi le" from his usual employment to do an act for his personal gain regardless of the business for which he was engaged, then such an act may be said to be lacking in a compliance with the intent of his employer, who should afterwards not be held responsible for such unauthorized and unpremeditated acts. There is a duty of the bank to inquire into the integrity, honesty and skill of its Cashier and of the fitness of its officers to do its work properly. Having used due diligence in selecting such a Cashier, they can no longer be held responsible for his acts committed outside of his authority and especially in regard to a special deposit which was made for gratuitous safe keeping. The court added that it was an old rule that a master is generally responsible for the wrongful acts of his servant, when these acts were committed within the ordinary pursuits of the business or upon the master's direction, and one of the principal questions in this case was, whether or not the Cashier was or was not acting within the scope of his

Digitized by Google

authority or during the progress of the usual business transactions when he wrongfully used the special deposit. The court held that the theft of the Cashier was not an act anticipated by either party and was an act for the benefit of the Cashier alone in which the bank could gain nothing. In view of all the facts the bank was held not to be responsible for the theft of this special deposit by its Cashier.

A more recent case has just been published in the latest volume of the Supreme Court Reports for the State of Michigan ; namely, the case of State Savings Bank of Ionia vs. Montgomery. In that case it appeared that the Cashier of a bank falsely represented to a maker and endorser of certain notes for his own accommodation that one of such notes had been paid, when as a matter of fact the note had not been paid, and thereby secured a renewal. This was fraud very closely connected with the ordinary business of the bank by which a customer of the bank suffered but for which the bank was held not to be responsible. The defendant in this case gave two accommodation notes for $1,500 and $1,000 respectively to the bank for the benefit of the bank's Cashier, whose name was F. A. Sessions. These notes were discounted by Sessions at his own bank. After maturity of the notes, the defendant was told by the Cashier that the $1,500 note was paid, and relying upon this statement he executed a note which was to be a renewal of the $1,000 note which had not been paid. Sessions became insolvent some time afterwards, and as he was found to be in debt to the bank in a large amount, he was dismissed. The bank then sued Montgomery on above notes that he had given, and it appeared that the $1,500 note had not been paid by Sessions. On the trial the defendant claimed that the notes in question were procured by means of false representations of the Cashier of the plaintiff bank, who was acting for the plaintiff in accepting said notes, that the bank was chargeable with its Cashier's knowledge of the fraud used by him in securing such notes to be signed by the defendant. In other words, the defendant claimed that the fraud of the Cashier was imputable to the bank and that therefore the bank was guilty of fraud and could not recover. The court held that the Cashier was not representing the bank when the paper was discounted, inasmuch as these notes were issued for his own accommodation and therefore if he used fraud in procuring the defendant's signature to them, such fraud was a personal fraud and not imputable to the bank, holding in substance that the act of the Cashier was an act of his own and not one in the ordinary course of the bank's business nor was it done for the benefit of the bank. There was no doubt that the defendant was perfectly innocent in the transaction, but nevertheless the bank was given a judgment for the amount of both notes. This case will be found in 126 Michigan Reports, page 327. EMANUEL T. BERGER.

A BANKER'S PRINCIPLES.—Being asked by the editor of a high school paper of Oak Park, Ill., to give some of the principles which had guided him in his business career, Mr. John Farson, the well-known Chicago banker, wrote:

"Some of the principles I followed I believe would be valuable to you also. Like my mother, I was never discouraged in my life. I always set my ideals very high. I endeavored to associate with the very best class of people, intellectually, morally and socially, and to read the very best books. Whatever I attempted to do, no matter how seemingly inconsequential, I put all my energies into, and tried to do the work just right. I was never afraid of the hardest kind of hard work. I was never envious or jealous of a man that lived, but was only desirous of emulating every one's good qualities, and any faults I tried not to see. I have always made it a special point to be interested in young men and women who are coming up to take the responsibilities of life upon their shoulders. I never pass a young lad on the street in Oak Park, but I think that Oak Park's chief claim in history may be the fact that that young lad grew up in our town. There was never a time in the history of the world more than to-day, when strong, earnest, rugged, conscientious, loyal men were needed. The opportunities and possibilities are absolutely unlimited, and the young man himself is the arbiter of his own destiny."

THE MAIL DEPARTMENT OF A BANK.

[Address delivered before Alexander Hamilton Chapter American Institute of Bank Clerks, by J. Edward Weeks, of the Chemical National Bank, New York.]

Mr. Chairman and Gentlemen: I will not apologize for my attempt to give my ideas of the mail department; for, while I never have had charge of just such a department as I shall endeavor to outline, I have given it much thought, and am convinced that this department could be made decidedly valuable in a large institution.

The Value of Courtesy.

This department is one which affects many of the departments in the institution and should be handled by men who know the value of courtesy and who make it the habit of their lives, for in this way they can save much of the friction that otherwise would be sure to arise. The fact is becoming more generally recognized that the clerk who is the most considerate of others' feelings is the one who makes the most successful head of a department. Nothing can be successfully accomplished by men who are overbearing to their subordinates and assistants. The rule so continually repeated, "Unfailing courtesy to customers," might be amended so as to include our fellow workers and do no harm to the rule or to those who are to be guided by it. So the successful mail department should have a thoroughly practical man at the head of it who has the one trait of courtesy firmly fixed in his habits.

We will consider the needs of a bank having an incoming daily mail of about 1,000 letters, large and small. It will be necessary to call on about thirty-six of the younger men in the bank to report at about 8:30 A. M. of which one will collect checks, four will stamp, four will sort, twenty-six will call off and look over the larger letters, and one may be sick, etc.

The chief will take all letters and sort them into piles of large and small, taking out the private mail and distributing it himself as experience may direct.

I say this advisedly, for it has been my sad experience to have passed out unthinkingly some daintily-perfumed missives to the young men (can't call them boys when they get these letters, for that would hurt their dignity) and it was hard work to get them to think about their duties to any one, save the fair sex. I have nothing to say against the ladies or their friends, but we had better make it a rule to hold private mail until the exchanges have been attended to.

The force, divided as before mentioned, will at once call off the items separating the checks into piles of clearing-house items, city collections and checks on the local institutions. Thus there is left in the letters only the out-of-town collections, notes, coupons, no protest and special items. These letters, with the last few mentioned items, are then taken in charge by the regular men of the department for further consideration.

To go back now to the travels of the checks which have been taken out of the letters by the junior force; we first notice that the lad who has last entered the employ of the bank is given the work of collecting the clearing-house checks, thus giving him his first idea of the different styles of checks, and also teaching him to discriminate a little.

Digitized by Google

Explaining Work to Beginners.

Right here I would emphasize the good effect on a young lad of a few kindly explanations of the reasons why incidental to these first duties. It may seem funny to mix up a new hand and then to laugh at his embarrassment when corrected, but a kindly word here often means much to the new boy and makes him feel more like doing his best instead of arousing all the rebellion innate in a boy when he feels an injustice is done him. He in turn passes these checks to the lad just preceding him in the employ of the bank to be stamped received payment. etc.; from here the checks are passed to the rack to be sorted, and four good men should be given this work. The mail clerk who makes a success to-day of his department must insist on careful sorting of checks, for the bank is often caused considerable annoyance by carelessness on the part of these clerks, and to-day with the new rule of the clearing-house, which is recognized to a limited extent, carelessness in this detail causes expense in money and a loss of reputation.

Of course, other minor details would be tiresome. Every chief must invent his own rules, and pick out the men best suited to hustle the work along in an emergency, such as fogs, trainwrecks, Brooklyn "L" delays, etc.

Getting the rack ready for the settling clerk is next in order, and we would here require additional men, taken from all over the bank. The clearing-house items should be listed in duplicate, so that a record may be kept in the department. The second and third teller's work of the previous day is received and, together with the mail treated as morning work, constitutes the total for the clearing-house.

Duplicate slips should be called back to the rack to locate any difference, and then listed by an experienced man on the delivery clerk's sheet.

The totals should be called off to the settling clerk, and the clearing-house tickets made out at the same time. The two sheets must prove, and then, when your exchanges finally leave the bank and you hear the cab as it races away to reach the clearing-house in time, your mail clerk may breathe easy, knowing the first part of his work for the day is well done.

No possible assistance should be refused and nothing should be allowed to hinder the settling clerk in this work preparatory to leaving for the clearing-house, for while he is not the most important man in the office, still, upon the proper discharge of his work hinges the figures for the day, and the satisfactory discharge of his duties enables the officers to have promptly, reliable information of the bank's standing with the clearing-house.

The mail department proper should have six regular men. Three of undoubted abilities, two younger men who are learning the work, and a boy. As soon as the mail is checked off by the younger men, the mail clerks take it and tick off the country checks, notes, coupons, no-protest items, and any special matters that may arise, foot, sort and advise the letters.

Advising the Mail.

Emphasis should be placed on the advising of mail. Every letter should be advised by the mail department. I do not believe in the practice of each department advising the mail that may come to it. Some one should be held responsible for every letter, and properly the responsibility belongs to the mail department. As an illustration there are many correspondents who in writing make it a practice to refer to as many items as possible in one letter, and each is apt to refer to different departments. Such as inquiry regarding a missing check, which should have been returned with last statement; this needs the attention of the check clerk; a request that we sell bonds and credit proceeds to their account; this is for the securities department; also asking for a discount and inquiring as to what collateral would be accepted as security for a time loan; this would go to the discount and loan de-

Digitized by Google

partments. As can readily be seen, in this case some of these items might be overlooked unless the letter was advised by some responsible clerk.

A good rule in this connection is for every department attending to any item in such a letter to initial same, showing that it has received proper attention and this also furnishes a guide to the mail department, which then advises the letter as received and contents noted.

Separate totals are made by machines of these different kinds of checks and they in turn are charged to collection department, note teller and coupon department, and receipts taken for the same in every case.

I have mentioned cash or city collection items and checks on the local bank ; the former are charged to the runner's department and the latter are treated like any other bank and charged to the paying teller to become a part of the day's proof of the check desk.

These various totals, together with the exchanges sent to the clearing-house, form one side of our proof, and to arrive at the other side we credit the total amount of the letters in credit cash books, and their totals give us our chance for the banker's delight—a difference.

Many letters have items sent for collection, such as notes, checks, drafts, coupons not yet due and no-protest items, which are not included in the total footing of the letters and so would not enter into the regular proof for the day.

These would all be entered in a separate book or tickler and turned over to the respective departments for collection and when collected are credited on the opposite side of the book. This tickler should be ruled showing debit and credit sides, with necessary columns ruled for the date received, description and amount of item, date paid, amount credited, name of account and remarks.

Sundry Collection Tickler. Mail Department.

		Dr.		Cr.				
Date received.	*Description.*	*Amounts.*		*Amount paid.*		*Date paid.*	*Depositor.*	REMARKS.
Jan. 1, 1902..	Draft, Smith&Co.	$440	25	$440	25	Jan. 16.	2d Nat. Bank, Elmira	Goods arrived Jan. 16, 1902.
	Jones & Co., note due Jan. 10	500	....	500	....	Jan. 10.	1st Nat. Bank, Phila	

Sample ruling.

As hinted before, a credit cash book would be required for each ledger except where there were few credits to be made, in which case one book would answer for several. This book should be ruled so as to allow the totals for each ledger to be entered in separate columns and a proof of the book made by cross footing.

The sundry collection tickler, together with the books just mentioned, would keep a complete record of all items coming to the bank through the mail, during the day, and the receipts from each department receiving items from the mail department would complete the record of the handling of the work and place the responsibility, should question ever arise afterwards as to the disposition of any item.

All mail other than the early morning mail should be treated as afternoon work and the same methods followed, save the checks for the clearing-house are held over until the next morning as cash.

Of course, it is necessary to have several collections of mail during the day to keep the work well in hand, and of course these extra mails will necessitate a set of afternoon books like the ones mentioned for the morning work.

And now in closing I wish to repeat that I did not start out with the idea of telling any one how to conduct his work, but I have had before me all the time the earnest wish to be able to explain to some of our younger fellow clerks the working of a mail department planned on practical and simple lines. If I have succeeded even in the smallest degree, I shall feel more than repaid for the thought and work expended on this little paper.

*THE PRACTICAL WORK OF A BANK.

BOOKKEEPING FOR CITY AND COUNTRY BANKS.

III.

General Bank Accounting.

The larger the bank is the greater the necessity that the system of accounting be made as nearly "skeleton" as possible. The one I am describing is in use in a bank of very rapid growth and has been made on the principle stated above, not losing sight of the checks and safeguards necessary for any conservative bank. While not altogether new, a modified form of the Boston system, it has several new features which may commend it to the readers of The Bankers' Magazine.

Five books comprise the set: (1) general ledger; (2) general cash book; (3) bank ledger; (4) bank credit book; (5) bank debit book.

The first two require little explanation beyond the diagram given herewith (Fig. 1). The ledger differs in form from the cash book only in the spacing of accounts. The debit and credit books are the books of original entry and contain all detailed work of the day. Each double page is ruled for six days.

The great advantage of these auxiliary books is found in the neatness of a ledger containing only total debits and credits for each account, and in the fact that it enables several clerks to work on the different parts without interfering with one another.

The bank ledger (Fig. 2) is also ruled for six days. All balances are carried forward and statement proved each morning, the exact balance of an account being thus always before one's eyes. The rapidity with which an experienced bookkeeper puts down these balances, as fast as pen can travel, each subtraction involving the use of several sets of figures in both debits and credits, all without additional figuring, is a great mystery to the uninitiated. All balances, of course, are in red ink, and the credits or debits of each day (in black ink) are easily footed up without confusion. Another check is added in having all the statements of accounts made up from the original vouchers, just as the books themselves are, instead of being copied. Compared every day with the bank ledger, these can be easily balanced and sent off the first of each month.

The total of the bank ledger is proved by the balance to credit of other banks on the general ledger. A great advantage over the old system is that each page of the bank ledger can be proved separately, thus enabling one to find in a few minutes the error that might have required an hour, and the review of every balance.

All of the general bookkeeper's work passes through the receiving teller's cash, and with his totals does the bookkeeper prove. The diagram appended (Fig. 3) shows the method. The teller is charged with total of all mail, which for convenience' sake is divided as follows: Clearing-house checks, foreign checks, sight drafts on city, etc., and each proved separately. He is also charged with the note-teller's city collection book, the itemized credits being entered in the general books. The same applies to the foreign collection journal, but in this case, instead of being paid by

* A series of articles to be published in competition for prizes aggregating $1,050, offered by The Bankers' Magazine. Publication of these articles was begun in the July, 1901, number, page 18.

FIG. 1.—GENERAL LEDGER.

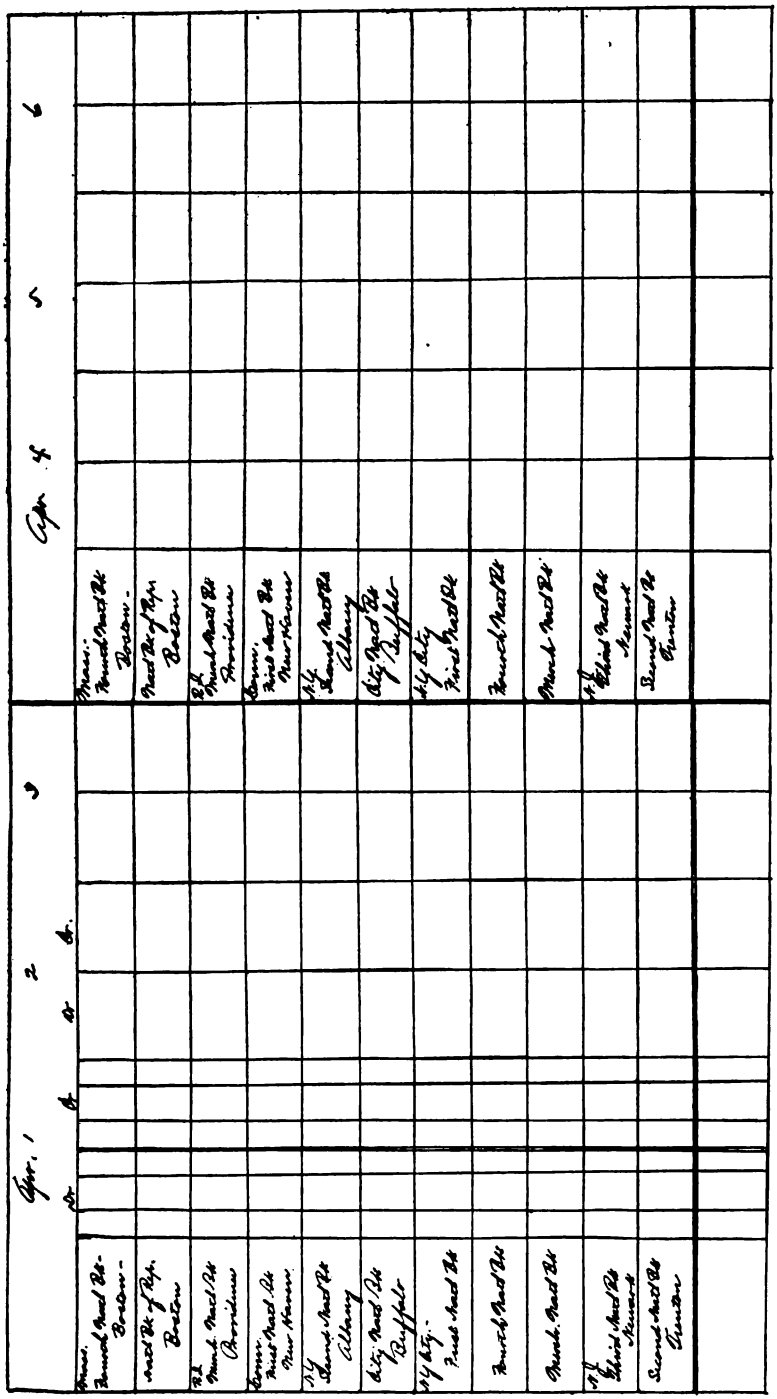

FIG. 2.—SPECIMEN PAGE OF BANK LEDGER.

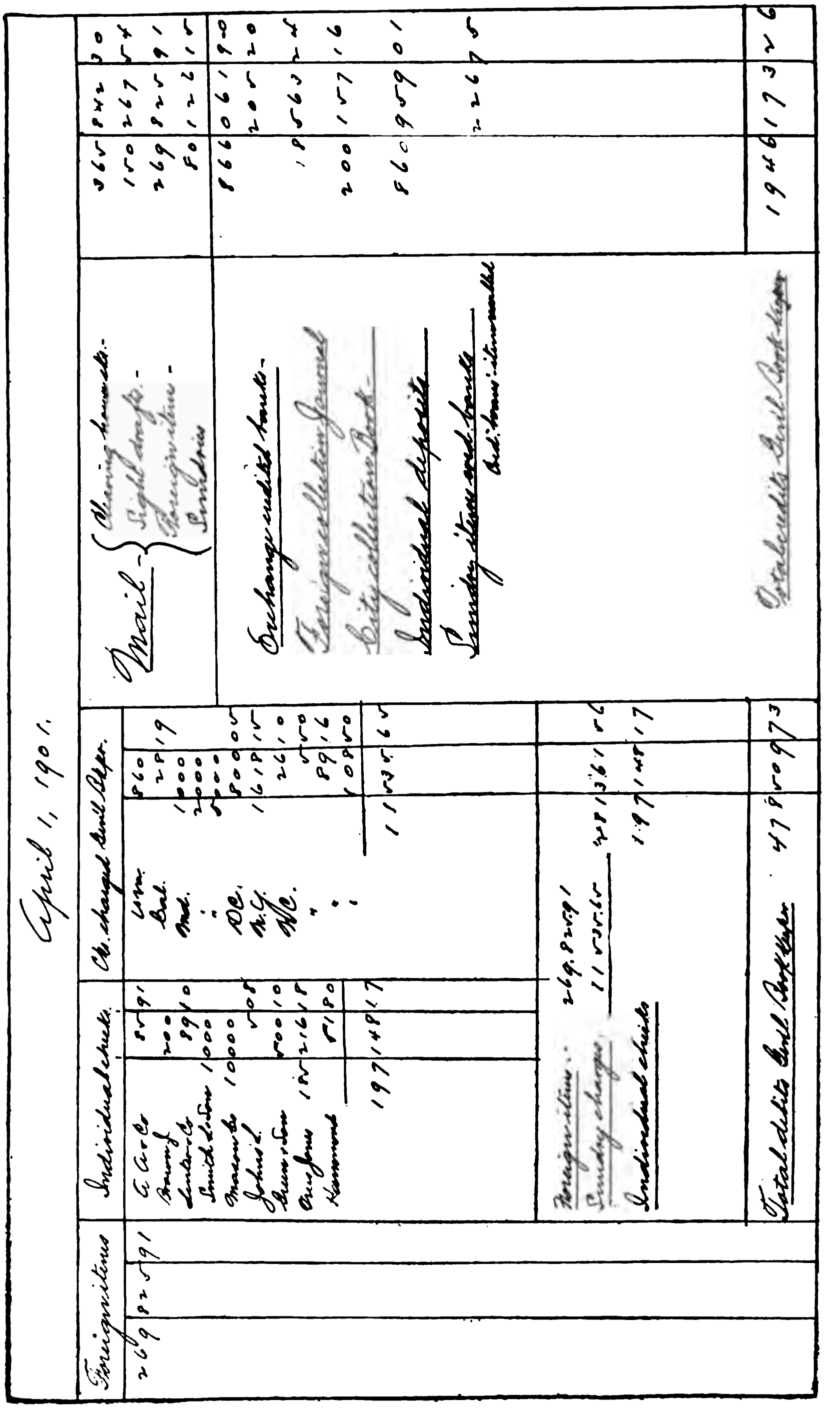

FIG. 8.—SPECIMEN OF RECEIVING TELLER'S SETTLEMENT BOOK, SHOWING GENERAL BOOKKEEPER'S PROOF OF DEBITS AND CREDITS.

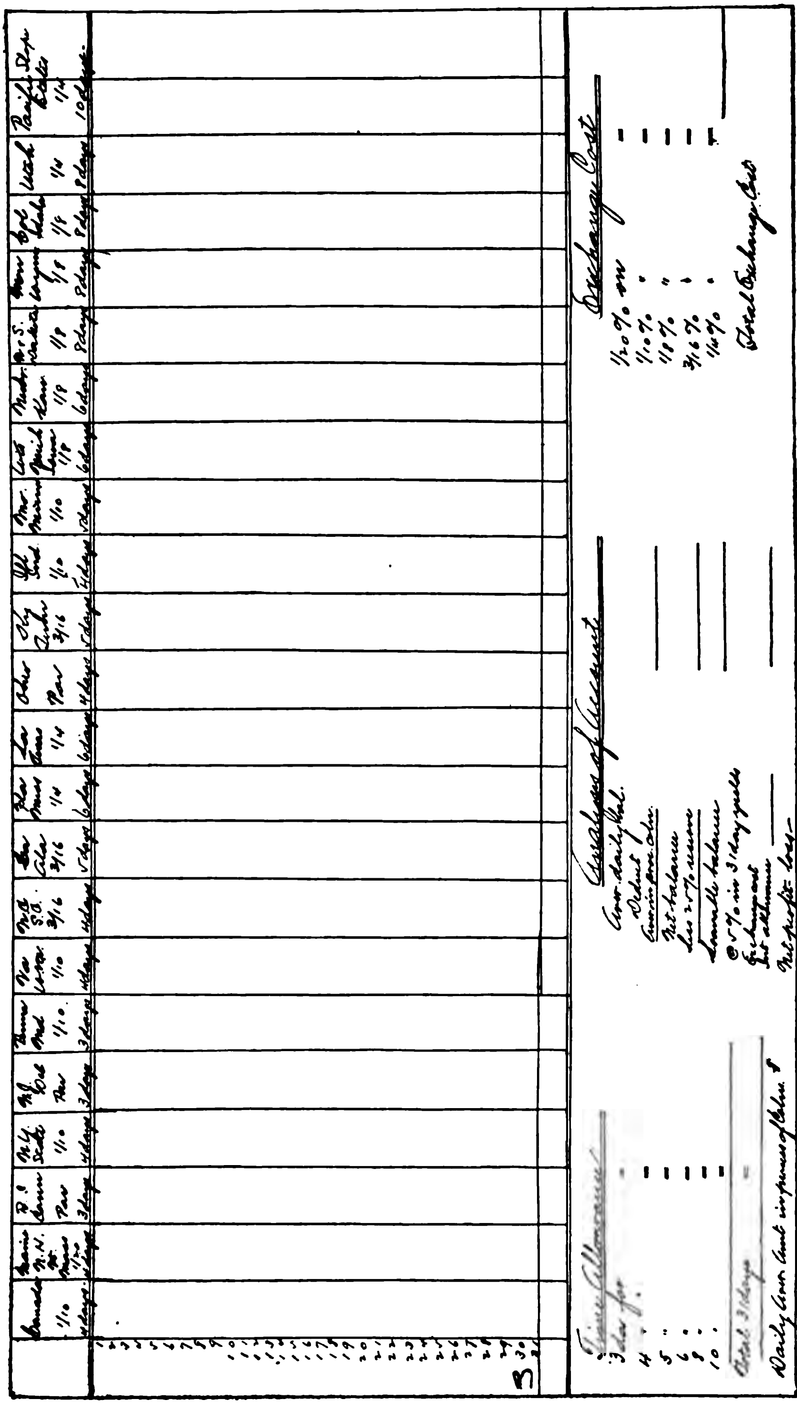

FIG. 4.—ANALYSIS OF ACCOUNTS.

checks, as with the city collections, the receiving teller charges the amount of journal to the general bookkeeper, making a cross-entry in his work.

The foreign items are kept in a separate column from charges to the general bookkeeper, that they may be proved by another department, but if the general bookkeeper handles these items, they may be passed over in one column.

Individual deposits and checks are taken from the teller's book as a total.

I have attempted simply to sketch a form that can be used, and is now used, successfully. Detail work will in a measure adjust itself to the conditions existing in various banks.

To sum up, the great advantages of this method are:

1. An easily comprehended, business-like daily proof with receiving teller.

2. The readiness with which the daily balance of an account can be followed through a week or a month, as may be necessary.

3. An easily proved daily statement.

4. The additional safeguard of original entry monthly statements, thus correcting daily any errors in posting of general bookkeeper.

Of late years banks have been paying more attention to their exchange account. Various methods have been adopted to ascertain whether the balance kept by a correspondent bank justified the expense involved in collecting its scattered country items. The merit of the plan given here lies in the fact that it is easily kept and its results as satisfactory as approximate calculations ever can be.

Following down the left margin of the diagram (Fig. 4), we find a space for each day of the month. Crossing the diagram, at the heads of the columns are the names of the various States and Territories. Under these names is the cost of collecting, both in actual exchange charges and in estimated time consumed before returns are received. Each day the country items, sent by the bank under analysis, are divided into their proper columns on this sheet. At the close of the month the additions are made, and in the lower left-hand corner we find the grouping of all columns headed with the same time cost. The averaging of these gives the daily average amount in process of collection.

In the lower right-hand corner is the grouping of the columns according to actual exchange charges. From the average balance for the month, as shown by the ledger, we deduct the average amount in process of collection. From this we deduct the twenty-five per cent. legal reserve (the bank's idle money). The result gives the balance available for loaning. When the interest on this is computed for the month, we have the gross income.

On the debit side we reckon the exchange paid out and the interest allowance on daily balances. The difference gives the net profit or loss, as the case may be.

No attempt has been made in this explanation to apportion the running expenses of the bank, clerk hire, stationery, stamps, etc. This can be, and is done, by dividing the gross expenses for the year by the number of accounts on the books and charging each account (in the analysis) with its pro rata. When this is done the result will give a very just idea of the status of the account. OBSERVER.

BOOKKEEPING FOR COUNTRY BANKS.

IV.

In many towns throughout the country will be found prosperous banks of modest size which, for reasons of economy or other reasons best known to the board of directors, are managed, as far as the clerical work is concerned, by the Cashier alone who not only manages his own affairs as executive and administrative officer of his bank, but those of the teller and bookkeeper as well.

Digitized by Google

The writer being the entire working force of a prosperous bank of the above-named order, has found that such a condition of affairs necessitates a condensed and labor-saving system of accounting which, while simple, concise and explanatory in method, must be productive of such results as would be shown by the books of the most modern and best conducted city bank.

I do not claim that this method is the best or even a new departure in bank book-keeping, but offer the accompanying forms and explanations to my country brethren with hopes of bettering the condition of those who may be using a more cumbersome method in their work. Furthermore, with the exception of the journal, which is an original design, the writer is the originator of none of the books used.

The principals in this system are the journal, general ledger and individual ledger, together with the following auxiliaries, viz.: the discount and collection registers, draft and certificate of deposit registers, discount tickler and proof book—all of which appear in this article, except the discount and collection registers, which do not enter into the main scheme as do the other books.

With this understanding of the books used, let us proceed to close them up for the day. First, balance the cash and enter the result in the proof book as shown in Fig. 1; an ordinary pass book will answer this purpose.

Of the principal books, let us first take up the work of the Boston ledger for individual accounts. This ledger, if not already used by him, is more or less familiar to the average bank clerk, but for explanation of the work the recapitulation page of this book is shown in Fig. 2. In this ledger are entered the deposits and checks paid during the day, all entries being made direct from the checks and deposit slips, thus doing away with the old style check and deposit scratchers or debit and credit books, in which it was necessary to enter these items before posting to the ledger. Much of the work of entering the debits and credits on this book can be done during the day or as soon as your exchanges are in, and a half hour or so before closing time the striking of balances can be commenced. The result of the work will be shown as here illustrated, after which the totals of deposits and checks paid

are carried to the journal in section marked individual deposits in Fig. 3. This form of journal answers the purpose of the debit and credit books and regular journal, these triplets still being used in some banks; the size of this book depends, of course, upon the volume of business you are doing. The writer's journal is twenty inches long and eleven inches wide and accommodates a business with total resources of from $150,000 to $175,000 and six correspondent banks; the ruling is gauged to about three-sixteenths or one-eighth of an inch, the sections for name of accounts being divided by a red line.

A book of this size would have the sections divided about as follows: Blank section, 5 lines; exchange, 3; interest, 10; bills discounted, 15; discount, 15; expense, 6; Cashier account, 3; certificates of deposit, 10; individual deposits, 3; banks 3 or 4 lines each; certified checks, 2, and cash 1 line, the name of all accounts being printed in the book by your stationer.

This is a handy book to be lying open on your desk, the items entered during the day being carried short into the first column and at the close of the day's business carry totals to the columns headed Dr. and Cr.

Contrary to usual banking customs, we will commence at the top and work down. First is a section left blank for the writing in of any tramp accounts that may straggle in. Exchange credit item "Cks" is taken in total from the pad of credit slips

Digitized by Google

which will be found on every bank's desk and upon which you have jotted down during the day the amount of exchange derived from the cashing of out-of-town checks, etc., and credit item "Reg." is taken from the total shown by the draft registers; the charge to this account is taken from the advice of your correspondents who have been obliged to make a charge for the collection of some of the items sent by you.

arise from rebates, but I will not discuss rebates, for I have never had any experience with them. Expense debits explains itself and the credit is a sale of revenue stamps.

Cashier account credits are the Cashier checks issued and payable at your own bank, and the debits such checks as have been paid. In the smaller banks so few of these checks are issued it does not require the use of a register as is the case with drafts.

Certificates of deposit debits are entered direct from the paid certificates, the figures in the item column being the certificate numbers; the credit is the total of certificates issued during the day as shown by the register in Fig. 5.

Individual deposits debit and credit are the footings of the deposits and checks paid as shown by the ledger in Fig. 2.

Certified checks credits are the checks you have certified for your customers and the charges such checks as have been returned to you and paid. Immediately upon certification of a check it is entered in the ledger against your customer's account as a check paid and credited to certified checks on the journal; when the check is returned for payment it is a charge to certified checks.

Charges to the different banks are made direct from your letters, as shown by the journal entries "L," their advices of paid collections which you may have sent them, interest, etc. Credit entries from their letters, paid collections from your discount tickler, as shown in Fig. 4 and drafts drawn from the draft registers, as shown in Fig. 6.

Now that all entries have been made, we will proceed to prove our work, which must be done before final postings to the general ledger can be made. Add the Dr. and Cr. columns of the journal and bring down the totals in small figures with a pencil. Now carry these results to the proof book as shown in Fig. 1, and if no errors have been made the journal debits added to to-day's cash on hand will be found to balance with the journal credits which we have added to yesterday's cash balance which has been brought forward. If an error exists in your work it will be shown by the proof, but we will leave that for discussion until a little later and for the present we will consider our work as correct. Returning to the journal, we enter the total of its debits to the credit of cash and the total of its credits to the debit of cash which, when added to the pencil footings, will give a proof of the journal. We now turn to the general ledger for the final summing up of all our transactions as shown in Fig. 7.

This book, combining the general ledger and daily balance book, is patented and like the individual ledger the names of all accounts are printed therein to meet your requirements and the right side of every leaf is scored, in order to fold over and receive Saturday's balances; our cut shows this balance as well as our work of Monday as posted from the journal, and it being the end of the month, the various accounts which go to make up our profits and losses are also closed as an illustration of the ledger work.

This completes our work for the day, and I trust the forms shown, together with the explanations, have enabled you to obtain a clear understanding of all entries. The writer has not attempted to enter on the journal all the transactions likely to be

Digitized by Google

met with in the course of your banking experience, but these forms are supposed to show the actual business of our bank for one day and the various entries made will serve to show its workings.

Possibly some entries on the auxiliaries may seem a little blind, so we will return to the discount tickler, Fig. 4. This form is a simple one and answers all purposes for a small bank, there being three days' maturities on each page; please observe that the items shown in the upper portion of the section are your own notes while those in the lower portion are such items as have been sent you for collection. At the top you will notice that $760 was sent to the Empire Bank, April 1, for collection and has not yet been reported back; $411 was not due until May 1, but was paid

to-day (see Tuesday's section for explanation). Referring to the draft register, you will notice draft $904 to the Waverly Bank is for our credit in that bank, and is entered on the journal as a letter as is the draft $905 to the order of the Empire Bank.

In connection with the banks let me refer you to the general ledger, where you will notice that the names of the Empire and Citizens' Banks appear in both the resource and liability columns. These two banks are what we term credit banks, or banks with whom we balance account by draft, once a week or according to the terms of our agreement, and as the balance is sometimes in our favor, it is necessary to enter their names in both columns of the ledger.

I would also call your attention to the closing of the several accounts into profit and loss; the letters "P. L." and the balance figures opposite may be made in red ink if desired, but it is not necessary, for the letters would signify that it was the balance as carried to the profit and loss account.

In referring to the individual ledger you will note that the account of F. A. Waite marked X $13.65 is an overdraft, which is always carried out in red ink, and as the amount $13.65 has been added in with the rest of the balances, we must deduct twice that amount, or $27.30, from the totals in order to correct the net balance as shown at the bottom. For a detailed description of the Boston Ledger see the November, 1899, number of THE BANKERS' MAGAZINE.

We will now consider, for a moment, that brain-racking pastime (?) a search for differences. No man is infallible, consequently an error will sometimes creep in during the rush of a busy day; the proof book will show it up, however, unless said error be a "double header;" *i. e.*, an error of equal amount existing in both the debits and credits, which Father Time will bring to the surface. The first place the writer searches for an error is the individual accounts which, though seemingly in balance, may be harboring such a mistake as would occur in the extension of checks in detail to total checks, which you can readily see would not affect the balancing of the ledger, since checks in detail have nothing to do with the striking of balances.

Digitized by Google

Should an error be discovered here and you did not care to make erasures, an explanatory slip carried in the cash as a debit or credit will correct it until the next day, when the charge or credit, as the case may be, can be made on the ledger against your customer's account. Other errors are more easily traced as there are fewer accounts to refer to. Possibly your cash might not prove, but if a recount fails to correct it and you have exhausted all other means, you can determine whether it is in the cash itself or in the figures by deducting the total of journal debits from the total of journal credits and cash on hand as shown by yesterday's cash balance, and if the difference agrees with the cash as shown by your count, said count is correct; but if the difference agrees with what you should have according to the cash blotter, then your actual cash is over or short as the case may be.

Proof of the bills discounted can be made from the notes or by footing up the amounts as shown by the tickler, the latter method showing whether all notes have been entered on the tickler. Certificates can be proved by deducting the total of the paid from the total issued as shown by the certificate register; neither of these proofs need be taken oftener than once a month or as often as you are desirous of ascertaining their correctness.

The discount and collection registers being what you might term auxiliaries to the discount tickler, it is not deemed necessary to illustrate them for they are familiar to all bank clerks and usually carried in stock by all bank stationers as are the draft and certificate registers, and the manufacture of blank books has reached such a state of perfection as to enable one to procure any special book at a very reasonable price.

Many things might be said concerning the merits of the different styles of ledgers now on the market. It is largely a matter of opinion, and I will be brief in giving mine. Many banks hold to the old style Dr., Cr. and balance, or three-column ledger, which possesses some features superior to the Boston style. In the writing up of pass books and the averaging of balances it is far ahead of the Boston, but until a trial balance has been taken, you are never sure of its accuracy, and the extra time consumed in the balancing of pass books, etc., is trivial when you consider the joys (?) of taking a trial balance which the Boston gives you every day.

What has been mentioned in connection with the individual ledgers will also apply to the general ledger, for the cloud of uncertainty hovers over the old-style book and can only be banished by drawing off a statement every day or once a week as your President or directors request, which calls for an extra book and extra labor. Modern books as well as modern ideas are adapted to any business whether large or small, and of what use are modern improvements anyhow if they are not applied to our needs?

E. C. Glenwood.

Branch and Other Banks.—The most successful illustration of the benefits of branch banking is probably afforded by the banks of Canada.—*N. Y. Journal of Commerce.*

The most successful example of independent banks is to be found in the United States—a country whose progress in banking and other forms of material prosperity has no parallel.

Valuable for Reference.—William Hazzard, Assistant Cashier of the Commercial National Bank, Peoria, Ill., writes under a recent date:

"In renewing our subscription to the Bankers' Magazine for the current year, for which find draft for $5 enclosed, permit us to express our appreciation of your very excellent publication. We consider it of such substantial and permanent value that for some years past it has been our practice to have it bound in half-yearly volumes, which we find valuable for reference and review."

NOTES ON FOREIGN EXCHANGES.*

[Read before the Scottish Society of Economists, by William Graham, Secretary Union Bank of Scotland, Limited, Edinburgh.]

Favorable and unfavorable are terms which were once, and still may be, used loosely if applied to the exchanges of goods between two countries. Under the old mercantile systems a country was thought to be on the road to ruin whose exports did not exceed its imports, with gold payments receivable for the balance thus due, and these terms favorable and unfavorable then referred solely to this erroneous conception. Thanks to the noble army of economists, and to the second great Scottish economist—Adam Smith—the words are no longer so applied, but are used strictly in reference to the exchange value of the monetary standard of a particular country when contrasted with those of other countries. Thus in a British newspaper the words favorable or unfavorable have relation to the pound or pence sterling; in a French paper they relate to the franc, and so on.

The expression short and long exchanges may be referred to. Short exchange implies payment at sight, and is the basis of all other exchange, upon which the long exchange rate is calculated by reckoning interest for two or three or six months, as may be required. Both quotations afford guidance when carefully considered. The short exchange is an index to probable gold movements as it rises or falls from par, and tells the course of trade at the movement of quotation, as also the chances of alteration in internal interest rates for the immediate future.

In purchasing a bill drawn at a long exchange, interest is deducted from the short exchange at such rates as should repay the purchaser for the delay in getting payment and for the risks he runs until the day of payment. In this way the long exchange states the expectation as to the future course of interest rates, just as the prices of commodities quoted for future delivery may differ from those quoted for immediate delivery, the future price indicating the market idea as to the price likely to be current at such future date. The long rate has also to consider the *credit* of drawer and acceptor of drafts drawn at three or six months, as much may occur in that time to affect either party. Such questions of credit may expand in times of political or financial unrest beyond the names on the bill, and include the nations of either drawer or payee. For any circumstances, private or public, which may affect the ability of the drawer to pay, or the standing of the drawer in event of the drawee failing to pay, have their effect in fixing a rate of long exchange. Any events likely to alter the course of exchange at or near the date of payment, which would reduce the value of bills, are important—for example, depreciation of paper currency or stoppage or restriction of gold exports, such as harass the Russian exchange.

Direct and indirect or arbitrated exchanges open up a wide field—the latter involving the most intricate transactions in the settlement of exchange, and being often employed for operations of special magnitude.

Direct exchange, as a technical term, explains itself, and simply refers to the settlement beween two countries being concluded in the currencies of these countries directly with one another.

Indirect exchange may be divided into two classes—arbitrated and cross exchange.

There is no official quotation of arbitrated exchanges, all such operations being

* Continued from the May number, page 705.

Digitized by Google

calculated on quotations of direct exchange between three or more countries consecutively. This at once distinguishes the class from direct exchange, where two countries only are concerned. Arbitrations may be simple or compound. As an example of simple arbitrated exchange, suppose that London is indebted to Berlin at a time when the German rate is low—*i. e.*, unfavorable to a London remitter—the latter, in place of further lowering the exchange by competing for a bill on Germany, perceives that the French exchange is high and therefore favorable for his purpose; further, that the exchange between France and Germany is favorable to France.* He accordingly purchases bills on Paris and remits them to his Berlin creditor, who is able to sell them there at a premium from the competition in Germany for bills on France. This is called a simple arbitration, through Paris. If the operator had bought bills in London on Amsterdam, and remitted those for sale in Paris and transmission of the proceeds to the original Berlin creditor, the transaction would be an example of compound or circuitous arbitration, there being two intermediate places of exchange—Paris and Amsterdam.

Owing to the small margin of profit in such circuitous exchanges, and to the more numerous brokerages deducted, they are only used at special times and for special transactions, where or when the direct exchange may require some support, or where some effect is desired to be produced in the realms of finance.

Some of the largest financial operations have been facilitated by these settlements; as, for example, the oft-cited payment of the French War Indemnity of 1871, where any attempt through direct exchange alone to achieve the results aimed at would have created financial disaster.

Mr. Macleod, in his "Theory and Practice of Banking," gives an outline of the transaction based on the address delivered to the French Assembly by M. Leon Say. The sum to be paid to Germany was £210,000,000. Payments were agreed to be made in gold or silver coin, notes of the Banks of England, Prussia, Holland, Belgium, or in first-class bills of exchange. They were effected thus:

Set off against French railways in Alsace taken over by Germany......	£13,000,000
Paid in notes of the Bank of France..	5,000,000
German bank notes and money...	4,200,000
French gold coins..	11,000,000
French silver coins..	9,500,000
Bills through the foreign exchanges...	169,300,000
Total...............	£212,000,000

Thus only thirty millions of this immense sum were paid in money (paper or metallic); the actual transfer of bullion being little over nine and one-half per cent. of the whole, of which nearly one-half was silver—a bad investment for Germany, as events proved. One hundred and sixty-nine millions, or eighty per cent., were settled through the foreign exchanges by purchase or drawing of bills—an eloquent testimony to the adaptive capacity of the system to meet circumstances so extraordinary.

M. Leon Say in his report states:

> "It is not possible to explain the operations of a portfolio which contains 120,000 bills. There were all sorts of bills, from less than £40 to more than £200,000; some mentioned the purchase of merchandise, others appeared only to be fabricated for the purpose, and destined themselves to be covered at maturity by bills which were to be created to pay real transactions."

Mr. Goschen states that such bills as are last referred to play an important and legitimate part in the foreign exchanges. He gives the example of an agricultural

---

* *I. e.*, anything below 123⅓ francs to 100 marks.

Digitized by Google

country importing goods in the spring and summer when it has no goods ready to export in payment, the harvest and crops not being yet marketed. How is the blank time to be tided over? In such cases some influential houses draw accommodation or non-value bills, which are purchased by importers and remitted in payment. By the time these bills mature the harvest is on the coast for export, and the value bills drawn for it are employed to liquidate these accommodation bills. Thus the exchange rate is supported and trade not interfered with. Such a system is liable to abuse; but, as Mr. Goschen observes, until it is seen that the evil of an occasional abuse is greater than the permanent and real advantage, it is not likely to be discouraged.

Returning to the French indemnity—in addition to a London office, agencies operated in Amsterdam, Berlin, Brussels, Frankfort and Hamburg, for the purchase and negotiation of bills. The London office continued from June, 1871, to September, 1873. Its average rate of exchange was Fcs. 25·4948, or twenty-five centimes in favor of London. At one point the rate rose to Fcs. 26·18, being the maximum for the whole payment; the minimum rate was Fcs. 25·26¼. It will be seen that even the mean of the rates was sixteen centimes above the high bullion point, while the maximum was no less than eighty-five centimes above that point. I have not traced the cause of this curiously high rate. M. Say refers to "hasty action." The ten or eleven centimes per £ above par, which raise rates to bullion point, work out about £4 per £1,000. The fact that the French Government paid a rate equal to £3, 7s. per cent., or $33, 14s. per £1,000, may indicate that during one point of the journey the ship had got perilously near the rocks, when stoppage was almost caused through gold and bills being equally scarce. It was perhaps inevitable that something abnormal should arise in so abnormal an operation.

In this settlement all kinds of exchange were employed. Direct exchange from the various cities of France on the various cities of Germany. Cross exchanges by remittance to Berlin of bills drawn in Paris on Spain, London, Belgium, or Holland. Arbitrations of exchange were effected through one and all of these countries when direct and cross exchanges were exhausted or ceased to be profitable, and finally these enormous drafts were created, of which notice has been taken, which anticipated real value transactions yet in the future.

The second form of indirect exchange is called "cross exchange." In this the operation is between two countries for interest of or through the medium of a third. London is the great centre of this business. It constitutes a large portion of colonial and inter-continental business, and is also much used in the various countries of Europe. Numerous examples might be cited, each shedding light on separate branches and scenes of the world's trade. The trade of the United States with China, where exports to the latter country are smaller than imports from it, is largely settled through London, in virtue of our goods exports to the States being very largely exceeded by our imports from them, the payments being partly balanced by our exports to China being much in excess of our imports from China.

The Parsee merchants of Western India export cotton to Germany, but in absence of a balancing import from Germany an exchange of bills cannot be effected directly between the two countries. Both have operations in London, so the Indian exporter draws on that centre, and Germany buys bills on London in the markets of Hamburg, Bremen or Berlin, and remits to London for payment of the cotton drafts.

In these transactions rupees are exchanged in pounds sterling, which in turn are paid in German marks. The steady extension of German shipping and commerce in the far East may affect these and similar operations, and give Germany an opportunity of settling direct with India, as she is beginning to do with China; for it cannot be forgotten that every invasion of Britain's enormous foreign trade, every degree in which the exports of other countries replace those of Britain, involve a

Digitized by Google

slow but certain curtailment of London's power and profit as the exchange centre of the world.

Mr. Goschen in his "Foreign Exchanges" asks, "Why it is that in the East Indies those who ship produce to America draw on London and not on New York, and why a New Orleans cotton exporter draws on London instead of St. Petersburg for the cotton shipped to Russia?" and replies that the great reputation of the London banking houses cannot be looked on as a primary cause, but is rather itself the result of that cause. The primary cause he thinks is to be found "in the stupendous and never-ceasing exports of England, which have for effect that every country in the world, being in constant receipt of English manufactures, is under the necessity of making remittances to pay for them either in bullion, in produce, or in bills. It may divert its produce to other countries, but the bills drawn against such produce will be sure to find their way to England. There can be no exchange on any place to which remittances have not constantly and regularly to be made."

The fact that the vast bulk of these and other countries' exports are carried in British shipping, the freights for which are paid to London, all tend to make the world London's debtor.

An interesting case of cross exchange was disclosed shortly after the Argentine crisis of 1890 had spent its force, and as that event in its causes and effects deeply affected the foreign exchanges, it may be briefly considered. Prior to 1888 Argentina had rushed into gross extravagances, meeting expenditure by issues of paper money and borrowings in the London market. Prices rose within the country, stopping exports but greatly stimulating imports, until the exchanges turned heavily "against," down to and beyond the bullion point. Coin was exported to pay debts, and it became necessary to import large quantities from London, raised by loans issued through the Barings and the Muriettas.

These gold shipments depleted the Bank of England's reserves, and led to elevation of interest rates at a time when there was no monetary scarcity in London. The banks and discount houses therefore continued to lend at their former low rates, and thus nullified the Bank's efforts to raise its gold stock. The higher rate was at last made effective by the Bank borrowing in the open market, and thereby creating an artificial scarcity until gold came from the Continent. Meantime London refused to absorb more South American loans, and there followed the collapse of Baring's and Murietta's houses, the revolution in Buenos Ayres against Celman's rascality, and hopeless failure of all the native Argentine banks.

As nothing remained current but the rags of inconvertible paper money, the premium on gold arose, and with it the prices of all goods. At last a *moratorium* or delay of some months was granted to debtors, without regard to creditors' feelings or necessities.

After the political confusion had subsided, the abnormal charge for foreign remittances (through rise in gold premium) compelled importers to look for means of remittance, and they naturally perceived that their only available method was their best—viz., the export of goods, chiefly agricultural produce. Thus season after season, from 1890, the depreciated paper currency, with the enormous loss on foreign exchange, gave an incentive to increase the area under wheat and maize grown for export purposes. The following figures from the "Economic Journal" show the Argentine wheat exports in quarters, without including maize exports, which were on an equally large scale:

In 1887 the quarters of wheat exported were			1,806,250
" 1890	"	"	1,582,960
" 1893	"	"	4,873,000
" 1894	"	"	7,648,000

Including the maize figures, this increase had an effect on Anglo-American grain prices altogether out of proportion to its actual bulk. It came, however, following

Digitized by Google

the unprecedented crops of three preceding years from the United States and Canada. It was also in the heat of the bimetallic controversy, when one side maintained that the fall in general prices was due to demonetization of silver and consequent fall in silver values, whereby silver-exporting or silver-using nations, no longer able to get the old values in the exchanges, were encouraged to make up the deficit by exports of goods. Thus India increased her wheat and the United States their agricultural produce to such an extent as to undersell European growers, so reducing the value of home land and its produce.

The monometallic side replied that the demonetization of silver came at a time when the world was ready for vast increase of natural production; the boundless prairies of Manitoba and the States having been just placed under the plough, while South Australia also came into the market. Concurrent with this there came extensive and almost unprecedented discoveries of silver ore. These causes in combination were held to explain the fall in silver bullion and to justify the abolition of the old parity between silver and gold.

At such a moment, towards the end of 1893, with wheat lower than it had ever been in civilized history, exaggerated rumors of the immense Argentine crop of that year reached the market. The average price of English wheat for 1882 had been 47s. per quarter; for 1887, 33s.; for 1891, 36s. 8d.; for 1892, 30s. 3d., and the fall at end of 1893 lowered the average for that year to 26s. 4d., or 21s. per quarter below the average of 1882, a fall of forty-four per cent. in ten years. Worse was yet to come, and the following paragraph may assist in sounding the depths reached.

Apart from contentions of monometallist or bimetallist, it was evident that the fall of thirty per cent. in the *then* value of the silver currency of India enabled that country to sell her wheat twenty-five to thirty per cent. cheaper than before that fall, and still be no loser on exchange rates; thus using wheat as a remittance rather than purchase of bills. The effect on American and British wheat prices in London was obvious; India could afford to undersell all her rivals, and although the actual quantity so sold was trifling in comparison with United States' quantities, yet the lowered price of the small quantity fixed the price for the larger, as it invariably does.

But the fall in Argentine currency (that is, its paper currency) was not merely thirty per cent., but sixty and eighty per cent., and it is equally obvious that the Argentine in turn could now afford (rather than remit by bill) to undersell Indian cheap labor and silver rupee, not to speak of American prairie values, and still not be a loser on exchange operation. Where the Indian could lower his price by 6s. per £ the Argentine could do so by 15s. per £. Fortunately he was not called on to do so, but his position enabled him always to command a market by selling just under the prices of all other countries, so that as with India, though the Argentine quantity was smaller even than the Indian supplies, yet it lowered the price of all wheat for that year, inasmuch as it was there for sale, without reserve, at any price. Since writing this I see the "Statist" of December 7 current, in forecasting the future of the wheat trade, concludes with a notice of Argentine exports which strikingly shows the effect a relatively small quantity of goods may have on prices in certain circumstances. The world's wheat crop for 1901 is estimated at 335 million quarters. Argentina, which last year exported nine million quarters, is expected, through a rainy season, to send only three millions into the market this year, as to which the "Statist" remarks, "This probable absence of any severe Argentine competition is one of the strongest features in the position." In ordinary circumstances one might wonder how even nine millions could seriously affect the price of 335 millions, or nearly forty times the bulk; but the fact remains that the Argentine gold premium is still 135, and as long as their paper currency is thus at a discount of sixty-eight per cent. they can undersell all other nations, and their supply has to

Digitized by Google

be reckoned with.* No one is likely to forget the losses in the grain trade in February, 1894, when wheat dropped to £1 per quarter—the average for the year being only 22s. 10d.

The disaster, viewed as an effect of a misused paper currency, in exchange law, was not, as far as I recollect, much noticed at the time, the monometallist treating it as a mere question of overproduction in the goods affected, while the bimetallist ignored the Argentine origin of the mischief and continued to ascribe all to demonetization of silver. Assuming that the bimetallist was right in his argument up to 1891–92, it cannot be denied that the ruinous falls of 1893–94 were due to a cause entirely apart from any question of silver *versus* gold, a cause which might operate in similar circumstances even though the bimetallic law were world-wide. A bankrupt anxious to raise money can always realize his stock if it is vital for him to do so, even though the prices received injure his fellow tradesmen far and wide. What is true of the individual is equally true of a nation in such a position as Argentina then was.

In 1894 and 1895 it was admitted by the New York newspapers that America had bought Argentine and South American produce to so large an extent as to become committed to Britain (from whom Argentina took the bulk of her exports and to whom she owed the bulk of her money) to the extent of £20,000,000—*i. e.*, Argentine importers of English goods remitted money to London by drafts on New York purchased from exporters in Buenos Ayres.

As the bulk of those payments accumulated at a time when the United States Treasury was in trouble over its own currency experiments, the effect was to increase the export of gold from New York to London at a point when the apparent course of trade would have warranted an opposite movement, thus affording another illustration of the vast hidden trade causes, speculations in stocks, and other purely monetary operations, which render it increasingly difficult to foretell the courses of exchange between countries from the actual transfers of goods in sight.

These notes on the technicalities of exchange have reached an undue length, and leave no time for any general survey of the subject. It might have been desirable to add something as to the nature of the transactions which make up international indebtedness, or the relations which interest rates bear to exchange rates. I might have entered into more detail of settlements of the more complicated forms of exchange, embracing, as these necessarily would, examples of all simpler operations. For those who wish to study those matters to best advantage, reference may safely be made on questions of theory to Viscount Goschen's classic work, and for those of practice, including all questions of metallic parities, to the equally well-known Tate's "Cambist."

I trust, however, that you may have perceived in what has been said that those questions have not been altogether passed over; that, with regard to the two first named, it has been noted how uncertain a guidance is obtained by watching merely the movements of goods; how vastly incorporeal and unseen influences affect the rates of exchange—whether political disturbance, wars, experiments in currency, depreciations of currency, foreign loans, or hidden trade movements be the causes, singly or in combination. It has been shown how causes operating on one side of the world may now produce effects at our own doors, with a rapidity and unexpectedness which in former days were impossible. Electricity and steam have so bound the earth into one family that it is increasingly difficult for any member to escape when others suffer, or for one alone selfishly to enjoy prosperity. The same rapidity

* At the conclusion of the lecture, a gentleman largely interested in the Leith grain trade stated as confirmatory of the argument at this point, that the recent telegram as to Argentine supply referred to in the "Statist" has raised wheat values by 2s. per quarter over the whole world.

Digitized by Google

of communication which has tended to equalization of price has acted also on interest rates, which after all are only a price—that of money. Every equalization of these assists in maintaining equilibrium in the foreign exchanges; and it is remarkable how quickly the Parisian financier extracts a profit from any serious inequality of the interest rates in London or Paris, by conducting remittances through the medium of the foreign exchanges to that city where the higher rate exists.

Another cause which has had, and may have great effects in the world's exchanges, is the rise of a new nation. The nineteenth will be remembered as the century of new or regenerated nations. The United States, South America, Italy, Germany, and Japan, may all be said to have risen or been reborn within the last hundred years, and how vast have been their effects. Our exchange operations with the United States alone now exceed £250,000,000 per annum. In another half-century what may not the figures be and who shall be the operators? The appearance of Japan during the last quarter of a century may be equalled and exceeded in effects by the regeneration of China in the succeeding quarter. The possibilities of China open up vistas in the political, financial, and industrial future which may spell revolution in Europe no less than in the East. Every reduction in the number of separate nationalities implies a simplification of the exchange system. Nothing need surprise us. The world seems again to be shaping for four or five great empires. The land of Sinim may be one.—*Accountants' Magazine* (*Edinburgh*).

Failures of National and Other Banks.

Editor Bankers' Magazine: TOULON, Ill., June 4, 1902.

SIR: I have seen it stated that a smaller percentage of private banks fail than either National or State banks in proportion to the number of each. You perhaps know. Kindly give the percentages. W. E. GOULD.

Answer.—According to the Report of the Comptroller of the Currency the failures of the different classes of banks were as follows in the years named:

Year ended October 31, 1893:		
National banks suspended	4.09	per cent. of those existing.
State and Savings banks suspended	4.36	" "
Private banks suspended	4.48	" "
Year ended October 31, 1897:		
National banks suspended	1.05	per cent. of those existing.
State banks and trust companies suspended	1.36	" "
Savings banks suspended	1.49	" "
Private banks suspended	1.23	" "

POSTAL CHECK SYSTEM.—An Administration bill for the establishment of a postal currency has been drafted by the committee appointed to consider the question. It authorizes the Postmaster-General to cause to be issued postal checks of fixed denominations, not above $1, in even multiples of five and ten cents. These are to be redeemable or payable at any money order postoffice. A fee in addition to the face value will be charged for every check issued.

These postal checks will not be negotiable nor payable after the expiration of three calendar months from the last day of the month which may be written or stamped thereon, but a duplicate may be issued at any time thereafter by the Post-Office Department without charge. Duplicates will be similarly valid for three months. After the postal check is once paid the United States shall not be liable for any further claim for its payment. Postal checks will be sold wherever the regular stamps are sold.

AN EXPENSIVE PURSUIT.—Yeast—It costs a good deal of money for this Government to look after the counterfeiters.

Crimsonbeak—Yes, it looks just like sending good money after bad.—*Yonkers Statesman.*

THE COMPANY'S NEW BUILDING.

INTERNATIONAL TRUST COMPANY OF BALTIMORE.

Among the buildings that have been erected in recent years for the various trust companies and banks in Baltimore, there is no building more remarkable for its dignified simplicity than the new home of the International Trust Company. The marble front, with its massive columns, gives an idea of strength and impressiveness rarely found in buildings of this type.

The interior is one of beauty and symmetry, and is lighted by a magnificent dome of leaded and colored glass. Passing through the main door from the street and through the vestibule, to the right, we have the executive officers, and to the left we have the clerical force. To the rear is the safe deposit department, with a special division, looking to the wants of lady customers, which is to be made a feature of the International Trust Company. The vaults are of chrome steel, surrounded by cement and iron, making them not only drill proof but making it impossible for the sides of the vaults to be melted by electric current.

On the second floor, in the rear of the building, there will be a large suite of offices devoted to committees, directors and stockholders. The interior of the building will be finished in marble, mahogany and bronze.

The erection of this fine and appropriate structure is another evidence of the prosperity of the International Trust Company, and is a gratifying result of the capacity and skill shown in the management of the company's affairs.

THE TWENTY-THIRD WARD BANK OF NEW YORK CITY.

A short time ago the Twenty-Third Ward Bank, located in the Borough of the Bronx, this city, opened a branch at 960 Boston avenue, about a mile and a half distant from the parent institution. This action seems to conform fully to the spirit of the law enacted a few years ago in this State, authorizing banks to establish branches. The sponsors of that law claimed that its purpose was, and its effect would be, to supply to localities lacking them necessary banking facilities, furnished by established institutions possessing the confidence of the public.

In this case a very important section in a rapidly growing part of upper New York, heretofore without a bank, has its wants supplied by an institution which for

CHARLES W. BOGART, *President*.

GEORGE E. EDWARDS, *Cashier*.

fourteen years has been closely identified with the business interests of the two largest wards in the city, known under the comprehensive title of the Bronx. It was on April 17, 1888, that the Twenty-Third Ward Bank was organized to do a banking business in a territory in which no bank existed at the time. Years before banks had been organized in what was then known as the Annexed District, and had come to grief; so the new institution had not only to overcome the usual difficulties which threaten the progress of a bank in its infancy, but it had to override the prejudice created by local tradition.

The men who organized the Twenty-Third Ward Bank were well known in business circles, not only uptown but in the lower part of the city as well. Their names commanded confidence and their wisdom was displayed in their selection of the officers to manage the institution. All the principal officials now in control were with the bank when it started.

The President, Charles W. Bogart, during the first seven years filled the posi-

Digitized by Google

tion of Cashier, while he also performed the duties of President to a large extent. Mr. Bogart was fully equipped for his office by a banking experience extending over many years, first with the Metroplitan National Bank and afterwards with the Gallatin National Bank of this city. From the latter he went to the Twelfth Ward Bank as paying teller, going thence to the Twenty-Third Ward Bank. Seven years ago Mr. Bogart was elected President, which position he still retains. His long connection with the bank and his faithful devotion to its service were pleasantly recognized by the directors at the celebration of the fourteenth anniversary of the bank on April 17 last, by the presentation of a handsome gold watch.

JOHN HAFFEN, *Vice-President.*

Mr. Bogart is especially fitted for the position he holds by reason of his training under so wise and conservative a banker as the late Frederick D. Tappen, of the Gallatin National Bank.

The Twenty-Third Ward Bank is essentially a people's bank, and its management is necessarily different from that of a bank whose principal business is connected with Wall Street securities and operations. Recognition of this fact accounts largely for the success the bank has met with in winning the support of the business people in the Bronx.

Mr. Bogart is widely known and is a member of a number of social and business clubs. He is the Treasurer of the North Side Board of Trade, and a member of the Harlem, the Tallapoosa, the Schnorer and other organizations.

Mr. John Haffen, the Vice President, is one of the incorporators of the bank. He is President of the J. & M. Haffen Brewing Company, President of the Dollar Savings Bank, Treasurer of the People's Guaranty and Indemnity Company, and a director of the Union Surety Company. Mr. Haffen gives much of his personal attention to the affairs of the Twenty-Third Ward Bank, and his connection with that institution has greatly enhanced its popularity and contributed to its prosperity.

The Cashier is Mr. George E. Edwards, who is also a director of the bank. Mr. Edwards was appointed general bookkeeper and teller at the time the bank was organized. Subsequently he was advanced to paying teller, and when Mr. Bogart became President, he was made Cashier. Mr. Edwards possesses the essential qualifications of the ideal bank Cashier. Strong in character, of keen judgment and courteous manner, he is the right man in the right place.

The decision of the bank to open a branch was arrived at after a careful study of the situation. A bank was needed in the neighborhood selected, but it is doubtful if an independent bank could have succeeded. In fact, it has already been demonstrated that the reputation and popularity of the Twenty-Third Ward Bank were necessary to the success of the branch.

The Twenty-Third Ward Bank has a capital of $100,000. Its surplus and undivided profits per last report were $77,526, and its deposits, $1,249,679, while the cash reserves were more than $400,000. It owns its banking house at 135th street and Third avenue. The directors are : William S. Beckley, Charles W. Bogart, George E. Edwards, Alfred E. Fountain, John Haffen, Brian G. Hughes, George M. Mackellar, Anton Rinschler, David B. Sickels, and Hon. James L. Wells.

SAVINGS BANKS ASSOCIATION OF THE STATE OF NEW YORK.

PROCEEDINGS OF THE NINTH ANNUAL MEETING.

The ninth annual meeting of the Savings Banks Association of the State of New York was held at the rooms of the Chamber of Commerce, New York city, Wednesday, May 7, representatives from a number of the Savings banks of the State being present.

President Andrew Mills, in opening the meeting, called attention to the fact that in the past calendar year the deposits in the Savings banks had increased $67,000,000, the total now being $1,014,000,000—the largest ever reported. The number of depositors is 2,174,511, or about one in three and one-half of the entire population of the State. He said that the depositors in the Savings banks of the State could pay the national debt and still have $200,000,000 remaining. He urged conservatism in dealing with the vast sums entrusted to these institutions, and deprecated the lack of harmony among members in matters of legislation. Other speakers also expressed the sentiment that the executive committee should be unanimously supported in its attitude toward bills affecting Savings banks.

W. B. Van Rensselaer, President of the Albany Savings Bank, made a report as chairman of the executive committee. This report was read by Chas. E. Hanaman, President of the Troy Savings Bank, Mr. Van Rensselaer not being able to be present. The report dealt with the matters that have engaged the attention of the committee since the previous meeting, and related chiefly to various bills introduced in the Legislature relating to Savings banks.

Mr. Hanaman offered the following resolution, which was adopted :

"*Resolved*, That the prosperity, influence and strength of the association are dependent upon the harmonious relation of its members; and it is the sense of this meeting that in future no action should be taken, by public expression of any divergence of opinion between the executive committee and the individual members, unless through a special meeting to be called such expression of opinion is authorized."

The nominating committee submitted the following list of officers, which was adopted :

President—Charles A. Schieren, President Germania Savings Bank, Brooklyn.

First Vice-President—James McMahon, President Emigrant Industrial Savings Bank, New York city.

Second Vice-President—Edward S. Dawson, President Onondaga County Savings Bank, Syracuse.

Third Vice-President—Charles E. Hanaman, President Troy Savings Bank, Troy.

Secretary—William G. Conklin, Secretary Franklin Savings Bank, New York city.

Treasurer—Samuel D. Styles, President North River Savings Bank, New York city.

Executive Committee—Wm. G. Sturges, President Seamen's Bank for Savings, New York city; James M. Wentz, President Newburg Savings Bank, Newburg; Wm. B. Van Rensselaer, President Albany Savings Bank, Albany; Bryan H. Smith, President Brooklyn Savings Bank, Brooklyn; John D. Hicks, President Bowery

Savings Bank, New York city; Robert S. Donaldson, Secretary Erie County Savings Bank, Buffalo; Alexander E. Orr, President South Brooklyn Savings Bank, Brooklyn; Charles E. Sprague, President Union Dime Savings Bank, New York; David Hoyt, Secretary Monroe County Savings Bank, Rochester. Members Ex-Officio—Charles A. Schieren, President Germania Savings Bank, Brooklyn; Charles E. Hanaman, President Troy Savings Bank, Troy; James McMahon, President Emigrant Industrial Savings Bank, New York city; Edward S. Dawson, President Onondaga County Savings Bank, Syracuse; Wm. G. Conklin, Secretary Franklin Savings Bank, New York city; Samuel D. Styles, President North River Savings Bank, New York city.

A. T. E. Lansing, Treasurer of the Jefferson County Savings Bank, Watertown, read the following paper:

Paper Read by A. T. E. Lansing.

Mr. President and Members of the Savings Banks Association of the State of New York—This paper is presented pursuant to the request of your committee for a description of the methods in use in the Jefferson County Savings Bank, a country institution with deposits under $5,000,000. It is not intended as an article on any abstract question or method, but will be confined exclusively to the manner of conducting business in this bank. The system is no doubt substantially the same as in many other like institutions, and has grown up in this bank from ideas and methods borrowed from other institutions, combined with the experience of the management in the conduct of its business.

The primary object has been to simplify and reduce the work, at the same time retaining accuracy. The card-index system is used in place of signature book, supplemented with suitable indices. The signature cards are printed with blanks for desired information. With the information obtained the tellers are enabled to identify depositors with a reasonable degree of certainty, and without causing them the inconvenience of being identified. It is not infallible although thus far the bank has been very fortunate in not paying the wrong party.

In the transaction of business with depositors, deposit slips are used for deposits and receipts for withdrawals made by depositor personally. Otherwise by the usual form of order.

Pass books are of the balance kind. Interest is credited in red ink. When the interest is added on a pass book, that interest is checked on the ledger, showing the pass book has been presented since last interest day. This checking is also of use in making up dormant account report.

The books of the bank are a general ledger, individual ledgers and a general day book for the assembling of totals for the day's business.

The day books for individual ledgers are sheets for each ledger showing the numbers of accounts therein.

The deposit sheets are printed in black ink and the draft sheets in red ink. Portfolios for holding sheets are bound in black for deposits and red for drafts; and each holds the number of ledger sheets in use, and a total sheet for assembling footings of each ledger for general day book.

During the day the assistant bookkeeper enters the deposit slips on deposit sheets or "tabbies," entering the number of account in first column. The next space is for page of posting, then the name of depositor. The amount is placed on the coupon at the right. After the bookkeeper has posted the amounts to the respective accounts, the coupon is removed, and the assistant bookkeeper then checks the bookkeeper's work by looking up what is posted and entering it in a column for the amount on original sheet. If the footings of the original sheet and coupon agree, the work must be correct. He also verifies the extension into the balance. The drafts are treated in the same manner. The lines on the sheets are numbered in succession, so that the total number of deposits or drafts on each ledger can be seen at a glance. The last column on sheet is for new and reopened accounts and closed accounts. The reopened accounts are marked on the deposit slip with a letter "R," also on deposit sheet; and the number indicating a new account. The draft sheets are printed in red ink. Receipts or checks closing an account are marked with a letter "C;" also on draft sheets.

The total deposit and draft sheets are for assembling the footings of the deposits and the drafts of the different ledgers; each line on these sheets representing a ledger. The first column has the number of accounts contained in the ledger; the next space is the letter or number of the ledger; the next space is for the amount of the footings of each ledger; next column, number of deposits or drafts; a column for closed accounts or new and reopened accounts. The total footings give the amount deposited and withdrawn for the day, also the

Digitized by Google

number of transactions with depositor and new and closed accounts. These sheets are copied into the general ledger deposit account.

The general ledger is ruled and made especially for this system. The first hundred pages are for the deposit account. The left-hand page is for drafts with word "Draft" printed in red ink, and the columns have printed headings as follows: Number of deposit, number of drafts, number of new and reopened accounts, number of closed accounts. Then follow columns for amount of drafts on each individual ledger, and a column for the total amount of drafts for the day. The right-hand page has the date, total amount deposited for the day, and the balance the bank owes depositor. Then follow columns for the amount deposited on each individual ledger for the day. The lines down the page are numbered for the days of the month, with a number of extra lines for the assembling of the totals of the different ledgers for a proof; also for assembling the different months for taking trial balances.

The expense account is ruled in columns with printed headings to correspond with the Superintendent of Banks "Schedule F," and as the items come in the daily course of business they are posted into the respective columns. This account has a credit column next to the balance, but it is seldom used. Then follow cash, bank, bond and mortgage, stock, premium, interest and profit and loss accounts. All balances show in balance column. The last fifty pages are memorandum accounts for listing bonds, with columns with printed headings as follows: Date of purchase, rate of interest, bond number, year due, amount bought, amount paid, balance, when interest is due, amount of interest, date when paid, remarks.

Cash is made up daily on a separate cash book.

For figuring interest or dividend in January and July sheets are used ruled with columns for folio of ledger, number of account, the amounts to figure interest on for three and six months, a column for the time, a column for the assembling of the amount of interest, and another column for total interest to be added to each account. All ledger accounts are figured in this manner. The totals of the sheets for each ledger are credited to the ledger's column on deposit account in general ledger.

The individual ledgers are balance ledgers with an interest column. Nothing is ever posted in the interest column but interest. When figuring interest dividend on sheets the amount is immediately entered on the ledger from sheet, and called back before footing. When drafts or deposits are made on an account after interest is entered, it is dropped down a line; and if any change is made in the interest, it is noted on the correction sheet of that ledger, and is deducted from total amount of the footing for said ledger.

Trial balance sheets for individual ledgers are ruled with a column for folio, previous balance, total drafts on each account, total deposits and interest added, present balance, and ruled for thirty-six accounts. The previous balance is the last trial balance. All drafts made on each account since last trial balance are added together, and the total entered in debit or draft column. All deposits made and the interest credited since last trial balance are added together and entered in credit or deposit column. The present balance of account is entered in the present balance column. Each line represents an account, and the transactions thereon for six months. To prove the work the previous balance and credit columns are added together and should equal the sum of the debit and present balance column. If they do not agree, there is an error in those thirty-six accounts, which is easily located. Each ledger is verified in the same way, proving thirty-six accounts at a time. The total footings of these sheets for this ledger will agree with the columns of this ledger on the general ledger. Care is exercised not to leave any amount off or of going back of last trial balance date. Either will cause trouble and show error. It proves the posting is correct; that the interest was footed and entered correctly, and that the ledger is in balance. There is only one thing it wont prove, one error balancing another, on these thirty-six accounts.

The mortgage book is ruled and headed for borrower's name, residence and amount of loan, rate of interest, attorney's approval as to title, time to run, its record in county clerk's office, date when interest is payable, when paid and payment on principal appraisal, amount of insurance held and appraiser's name. Notices are sent to mortgagors about fifteen days before the date on which interest is due. When mortgage interest is paid, a receipt is issued with record on the stub. This is transcribed to general day book, and from there to interest account on general ledger, name and amount in full. A mortgage interest tickler is used, in which a line is given to a mortgage and the interest marked off by checking back the stubs with it, and then checking up mortgage book with tickler.

Blank notices are also used for delinquent mortgagors, for renewals of insurance, for city treasurer and county treasurer to certify as to taxes and for mortgagors that taxes are unpaid.

Blanks are provided for opening out-of-town accounts, with instructions, signature blank and answers to questions on card index. Also for signature and answers to questions on card index, when deposit is made for another person.

The working force is composed of a teller, bookkeeper and assistant bookkeeper, the Treasurer taking hold in any and all places. The bookkeeper takes a hand at the counter to

Digitized by Google

relieve the depositors from a long wait. Each pass book is compared with the ledger when adding the interest, and always before closing an account, the assistant bookkeeper coming in for his share of comparing pass books as well as the Treasurer. At times one or two trustees check pass books that happen to come in with ledger balance. They also check up the trial-balance sheets. In figuring interest and drawing off trial balance, the work is interchangeable and it is impossible for any irregularities to exist without detection.

At the afternoon session Chairman Mills introduced the principal speaker of the day, Hon. E. J. Hill, a member of Congress from Connecticut. A full report of Mr. Hill's address follows:

Address of Hon. E. J. Hill.

Mr. President and Gentlemen: When the Japanese worshipper goes to the Buddhist temple in the city of Narra, in Japan, he has his prayers printed on slips of tissue paper, and wetting them in his mouth, he throws them at the idol. If they stick he goes away happy, believing that the prayers are answered.

So I am here to-day to fling some thoughts at you from this manuscript, in the firm belief that if I can make them stick in your memory, somewhere and somehow, the answer will come in a sounder currency and a better banking system for our beloved country.

Hon. E. J. Hill.

My subject will be House Bill 13,363, entitled "A Bill to Maintain the Gold Standard, Provide an Elastic Currency, Equalize the Rates of Interest Throughout the Country, and Further Amend the National Banking Laws."

While we may not all agree concerning every feature of this measure, of one thing I am sure, that, representing as you do more than two million depositors in this State and over a billion in amount of the savings of your people, you not only strive to guard with jealous care and keep in perfet safety the trusts committed to you, but when the savings of the past are called for in times of stress and sore necessity, your duty and your pride as well, will lead you to meet those calls with money that is good the world around and with the highest purchasing power everywhere.

In one respect you are the eyes and ears and brains for nearly one-third of the population of this State.

So far as deposits are made for investment purposes, they are a tribute to your sagacity, and their great increase a testimonial to the confidence which is placed in you; but the weekly savings which are entrusted to you represent the vigor and strength of active life which are stored and held till age and weakness make their use imperative, and any shrinkage in the purchasing power of the money which measures these, means just so much less of comfort and so much more of deprivation when old age comes.

It is, therefore, to the everlasting credit of the mutual savings banks of this State, that when the kind of money in which those deposits should be paid became a disputed political question in '96, you promptly declared, "that in our judgment the future prosperity of the country and the welfare of the people demand not only that the gold standard shall be maintained, but the currency system now in use shall be so changed and remodeled as to meet and adapt it to the increasing needs of commerce, and equal in security and credit with the best in circulation by any of the civilized nations of the earth."

In the House of Representatives the Committee on Rules often bring in a rule, that a certain subject shall be made a "continuing question until disposed of," and I take it that this resolution was one of that kind; that what you said in '96 you mean to-day, to-morrow, and all the to-morrows in the future.

Now let me tell you what has been done to carry that resolution into effect.

Then the only dangerous feature of our currency system was fiat money.

Then we had $346,681,016 of greenback promises to pay.

Every dollar of it is still outstanding.

Digitized by Google

Then we had 401,688,649 silver dollars, worth 52.2 cents each, but legal tender for one hundred cents.

Now we have 534,606,654 silver dollars outstanding, worth about forty-one cents each, and are steadily coining a million and a half a month and have been doing so from that day to this, and unless legislation is had forbidding it, will continue to do so till the aggregate will be 570 millions.

Since you passed your vote not one dollar of the demand notes has been canceled, and no provision whatever has been made for maintaining the parity of our enormous mass of silver. Indeed, so far as legislation is concerned, barring the right to issue three per cent. certificates of indebtedness given in the War Revenue Act, the Treasury Department has less power than it had prior to the Act of March 14, 1900, to maintain the parity with gold of all forms of money.

That act, in its first section, did declare that 25.8 grains of gold nine-tenths fine should be the standard unit of value, but in its last section it proclaimed senatorial faith in international bimetallism.

It did increase our gold reserve from one hundred to one hundred and fifty millions; but where, under the old law, all of it could, in the discretion of the Treasury, be used before the signal of distress in the shape of bond issues was put out, now such use is limited to fifty millions, and I need not say to a convention of bankers that a reserve which can, under no conditions, be used, is a delusion and a snare.

It did, perhaps, strengthen the position of the greenback by restricting to this one form of currency all of the powers which the Treasury before possessed to maintain all our money at parity with gold; but, in so doing, left a much larger amount of silver stark naked and alone to maintain itself by use, with the confidence of the people as its only redeemer.

I take the position here to-day that the United States has no more right to put in circulation any form of legal-tender money which it will not redeem in the money of the standard which it has itself proclaimed than an individual has to issue his note with the deliberate intention of defaulting in its payment.

No good reason can be given why the greenback, which is all fiat, should be redeemed in gold, and the silver dollar, which is more than half fiat, should not be also.

Indeed, the only excuse—for there is no reason—which can be offered is that it would be dangerous, and that it would increase the so-called "endless chain," and so prove a burden which the Treasury could not carry.

The claim refutes itself, for the silver dollar is a legal tender for all dues to the Treasury, and Hon. Lyman J. Gage, who filled the position of Secretary of the Treasury with an ability equaled by few men in our country's history, told the simple truth when he said, "The Government might just as well face the redemption at the front door as to delay until it must take it under the revenue laws at the back door." The danger is ever present in our financial system, and it is far safer to find it out and be prepared for it than it is to ignore it and have it find us unprepared, as it did in '93.

God, in His goodness to us as a nation, has given us splendid crops and an abounding prosperity, and the miner, with his pick and shovel, has more than doubled our stock of gold since then, and so shielded us from the otherwise inevitable result of our foolish financial policy; but Congress has had little to do with either of these causes, and, indeed, so far as effective financial legislation is concerned, has been practically content to let things drift, and will be so content in the future, unless an aroused public opinion shall demand some action or adversity shall come again to compel it.

Do you doubt it?

The late Comptroller of the Currency, in a speech a few days ago, used this language:

"The adoption of asset currency would involve the reorganization of the entire banking business of the country, and this, of course, is not to be thought of during times of prosperity. Those things are best done during periods of adversity, when a little uncertainty added to the total cannot influence business much for good or bad."

It may be that this is good policy and good politics as well, but I do not think it is either; for when trouble does come, as come it will, the people will hold the party in power to a strict responsibility for failure to prepare for it when they had the opportunity.

Many years ago the wise man said: "A prudent man foreseeth the evil and hideth himself, but the simple pass on and are punished."

I commend this proverb, with all that it implies, not only to those who, having given little thought to the question, are content to "let well enough alone," but especially to those who, fully realizing the situation, are indifferent to it because a Congressional election is approaching. Is the currency system of the United States always to be a political football, only to be kicked back and forth between the parties, and, when the game is finished, to be laid away as a trophy of victory, battered and bruised and soiled with the dirt of party conflict?

Three months ago the National Board of Trade recommended "that Congress enact such legislation as may be necessary to put this country on a permanent gold basis," and by

Digitized by Google

specific votes declared that the retirement of the greenbacks and the exchangeability of the silver dollar for gold were essentials to that end.

On March 5 the New York Chamber of Commerce, upon an elaborate report prepared by John Harsen Rhoades, Henry W. Cannon, E. H. Perkins, Jr., August Belmont and George G. Williams, unanimously voted that "the first stone in the foundation of the structure of national credit is the inviolate character of its unit of value, and now is the time to complete the Act of March 14, 1900," and to that end favored the exchangeability of the silver dollar with gold.

And yet, since January 13, a bill to that end has been upon the House calendar, and cannot be touched because, forsooth, some Republicans who voted for it two years ago now fear that the agitation of the silver question will hurt them in their districts this fall, and some democrats, who were driven by public sentiment to cast a like vote then, now say that political conditions have changed.

When you add to this the fact that one great committee of the House of Representatives has reported a bill deliberately putting the government of the Philippine Islands into the banking business to maintain the parity of a full legal-tender silver coinage at a ratio of two for one, and that coinage issued with the openly-avowed purpose of perpetuating the wage system of the Islands on its present silver basis, and then supplement these things by a report of the Senate committee on the Philippines in favor of the unlimited coinage of a full legal-tender silver dollar on private account as the currency system of the Islands, and add to that, that this dollar may be coined in San Francisco from American bullion, with the great probability that it will enter into American circulation precisely as the trade dollar did, is it not high time that the sound money men of the United States should demand from their Representatives and Senators, and their President and Cabinet, that the overwhelming victories of '96 and 1900 for honest money and a sound financial system should not be frittered away and go for naught?

Gentlemen, there is no room in a gold standard system for fiat money.

It must either be paid and canceled or the responsibility for its current redemption squarely assumed by the issuing power. And when the Government does this it, in effect, gives notice to all the world that it will furnish all of the gold required for international trade, for it has no control of interest rates, and cannot check demand as a bank can by raising the price of discounts.

With fiat money in circulation there is neither place for nor safety in a bank-note issue "adapted to the increasing needs of commerce," to use the language of your resolution of five years ago, for every bank note practically becomes a sight draft upon the Treasury reserve of gold, and every bank will look to the Treasury for relief in time of panic, as they have been doing for thirty years, even when their notes have not been made redeemable in gold.

The financial barometer of this country to-day is the accumulation of gold in the Government Treasury, and we watch each day for its rise and fall.

Every dollar of it above a fair working balance should be employed in the industries of the country, and is so used by every one of our commercial rivals.

Who thinks of looking at the Treasury holdings of any European country to judge of the possibilities of a panic?

It is the business of the banks there to safeguard and keep sufficiently abundant the supply of redemption money. And it should be here, but it never will be till the demand notes of the Government are eliminated from our system.

It is fiat money which has made impossible every scheme for the improvement of our banking system since the Civil War.

It was this which paralyzed the excellent plan of Hon. Joseph H. Walker, for he was compelled to propose a heavy penalty tax upon the deposits of all the banks of the country to force them to maintain the parity of all our moneys, which of course was impossible unless they could control the amount which the Government should issue.

It was this which made hopeless the plans of Carlisle and Gage, and the monetary commission, and it is this which complicates the Fowler bill and brings its intrinsic benefits to the country far too slowly for the country's good.

The greenbacks should be paid and the ultimate retirement of the legal-tender silver dollar provided for now, and meanwhile made exchangeable for gold.

It could be done, as Mr. Gage said to the Banking and Currency Committee, "without making a ripple upon the financial surface of the country."

He had the power and courage to do it, but Congress would not permit it.

Charles S. Fairchild had the courage but not the power.

If this was done, a bank-note issue redeemable in gold could be provided which would respond to every legitimate trade requirement and by its economy save to the business interests of this country in the next five years more than the amount of the entire volume of the outstanding greenbacks.

Digitized by Google

Think of the difference between a greenback and a bank note.

So far as the issuing is concerned, the greenback has absolutely no relation to trade and commerce, for the Government borrows but never lends, and cannot issue currency except to pay an existing debt which represents past consumption as the greenback represents debt incurred in the Civil War.

When the greenback is issued there is no returning stream of assets to provide for its redemption, and it is in essence the equivalent of an individual note perpetually renewed. But a bank lends and is not supposed to borrow except from its depositors, and when it issues its note, it swaps its credit for its customers' credit, and at the time of issue receives back something which it can use to cancel its own obligation when it is presented for redemption.

One deals with the past and pays for "horses" which are eternally dead, the other with the future and buys live and productive assets.

Two reasons are given for the continued existence of the greenback:

First—That it is a loan without interest.

Second—The sentimental one that it saved the nation in the Civil War, and must now be held as sacred as a soldier's grave.

For reply to the first I cite you to the report on the pending bill on page 7, where the Treasury Actuary clearly proves that the cost to the Government of maintaining the greenback since resumption in '79 has been nearly seven per cent, per annum.

For reply to the second I have no recollection that the "Grayback" of the Confederacy had any such effect upon its fortunes, and am therefore compelled to believe that the resources of the North rather than its liabilities were the deciding factor in that conflict.

The fact is that we are flying in the face of the experience of the whole commercial world by maintaining a system of fiat money, and this bill recognizes that and proposes to get back slowly but surely to the solid ground of gold as the legal tender, silver as subsidiary coin, and bank notes as the instruments of trade.

Then deficits may come and surpluses may go, but the money of the people will be unchanged and unchangeable.

Then the ghost of parity will no longer haunt our sleeping hours, and the Governmental relation to commercial interests will be one of taxation only.

The bill proposes, first, to stop the further coinage of the silver dollar, to use the bulli n remaining in the Treasury for subsidiary coin, and when public necessities require more, to begin the recoinage of the dollar into subsidiary.

The committee believe that with our rapidly increasing population the whole amount can in time be converted into change money and held in daily use among the people, and with the greenbacks retired, with no bank notes below ten dollars and silver certificates restricted to five dollars, it can be safely carried.

It has been strongly urged that the United States should follow the example of Germany and Japan, in melting down and selling all of our legal-tender silver which is not in actual circulation, but this means assuming a loss of fifty-nine cents on every dollar so treated, and recoinage means a nominal gain of about seven cents on every dollar which can be permanently held in circulation.

The difference between the two plans would aggregate about three hundred million dollars.

The second feature of the bill providing for the maintenance of the gold standard, is the retirement of the greenbacks.

In my judgment this should be by the direct and independent action of the Treasury, for they are a Government debt and in no sense a bank obligation.

The complications which are certain to arise by throwing a part of this burden upon the banks are wholly unnecessary, and there is no essential relation, even in point of time, between the withdrawal of the greenback and the issue of the bank notes, for whenever a greenback is paid, a dollar will go into circulation and the bank note is only a credit instrument and not a legal tender; but the committee thought that it would be politically wise to induce the banks to assume the current redemption of such an amount as could not be canceled with the gold now in the Treasury, and in that way divest the Treasury more promptly of its banking functions, even if it did delay the date of their entire payment somewhat longer.

It is proposed that any bank which shall assume the current redemption in gold of greenbacks to the amount of twenty per cent. of its capital, shall have the privilege of issuing within two years thereafter a like amount of bank notes redeemable in gold over its own counter, and at some clearing-house or agency in a clearing-house city, and such notes shall not require a previous deposit of bonds and shall bear a tax of but one-fourth of one per cent. per annum. The greenbacks thus assumed for current redemption will have the endorsement of the separate banks, and each bank must hold itself ready to currently redeem its respective share in gold, either over its own counter or by immediate reimbursement to the Government if redemption is demanded at the Treasury. These greenbacks so assumed are to be

Digitized by Google

finally paid by the Treasury from a fund derived from taxes on all bank-note circulation, and the interest on deposits in National banks of all Government funds in excess of a working balance of fifty million dollars, which deposits the bill prescribes shall hereafter be covered by Government bonds at par and shall bear an interest charge of one per cent., but no reserve is to be held against them.

Concurrently with the assumption of the greenbacks referred to, the banks shall present an additional ten per cent. to the Treasury for immediate payment and cancellation and receive the gold therefor.

With sixty-five million greenbacks paid and one hundred and thirty millions assumed for current redemption by the banks, the remaining one hundred and fifty-one million, less those lost and destroyed in forty years, can easily be met from the reserve fund of the Treasury.

The success of the plan depends upon the willingness of the banks to assume the current redemption of greenbacks to the amount of twenty per cent. of their capital.

In the opinion of the committee, the inducements are sufficient. What are they?

First, the banks so consenting will have the exclusive privilege of note issue on assets until the entire one hundred and thirty million of greenbacks are assumed.

Second, an abatement of one per cent. in the tax upon asset note issues on an amount equal to the greenbacks assumed.

Third, the final redemption of the assumed greenbacks in the inverse order of their assumption, so that the tax abatement remains longest with those who avail themselves of it first.

Provision is made for the change from bond-secured, to asset note issues, without reference to the present limitation of three millions per month, and in view of the fact that the present bond-secured circulation is over three hundred and twenty million dollars, there is little question that one hundred and thirty millions of it would be promptly changed in order to realize the greatly increased profit which this plan would give.

If it was so changed, as I have no doubt that it would be, the entire volume of the greenbacks would be retired and canceled within twenty-five years, and any increase of the present amount of bank-note circulation would hasten the happy day. Then the grand international choir of England, France, Germany, Austria, Russia, Japan, and last of all the United States, could join in singing the old hymn, "Believing, we rejoice to see the curse removed," and so far as the great powers of the world are concerned, fiat paper money would be dead and buried.

ASSET NOTE ISSUES.

You have already seen that the bill involves a change in our note issue system.

Seven years ago when I entered Congress and was appointed by Mr. Reed as a member of the Banking and Currency Committee, I was a sincere and enthusiastic advocate of a bond-secured currency and an independent bank system.

Persistent inquiry, constant study and patient investigation have brought me squarely to a belief in asset note issues and branch banks, and, I believe, will bring any man there who will pursue the subject with an open mind.

I declare it as my honest belief, as a bank officer with a modest interest in the game, that the sole stake which the banks are now playing for, in dealing out bank notes, is the profit on the bonds, and that not a single dollar of the three hundred and twenty millions circulation now outstanding remains out with reference to any commercial transaction. How could it be otherwise, in view of the fact that the profit on such circulation, even when all of it is loaned all the time—which, you know, is impossible—is, in a six per cent. locality, but two-thirds of one per cent. when based on two per cent. bonds; one-sixth of one per cent. on threes; one-twenty-fifth of one per cent. on short fours; one-half of one per cent. on fives, and a loss of about one-fifth of one per cent. on long fours, and the additional fact that at least thirty-two million dollars is locked up in premiums when it should be available for commercial purposes. As the National banking system was instituted for the purpose of making a market for Government bonds, it is only fulfilling the plans of its creator; but conditions have changed in forty years, and there is no reason now why one hundred and ten dollars of capital should be locked up in bonds in order to put one hundred dollars of notes into circulation.

Over against a bond speculation and a possible two-thirds of one per cent. profit on circulation, this bill gives an asset note issue of sixty per cent. of the capital, with a tax of one-fourth of one per cent. on the first twenty per cent. and one and one-fourth per cent. tax on the other forty per cent., and a profit to the banks, above all expenses, taxes, interest on redemption funds, cost of carrying greenbacks, etc., of at least four and one-third per cent., or a corresponding reduction of interest rates to the country, or, preferably, a fair division between the two.

Of the three hundred and twenty millions outstanding it means a gain to somebody of

Digitized by Google

more than ten millions annually, and a very much larger amount, proportionately, in those portions of the country where higher interest rates prevail.

There is but one question concerning it. Is it safe?

If three billions of deposits are safe, the three hundred millions of asset notes would be, for they would be controlled by the same men, and would have a prior lien upon the assets.

The fact is that when anyone suggests asset note issues, we at once recall the days of "wild-cat" banks and "red-dog" bank bills, with banks started at will under varying State laws or without any law or supervision or responsibility.

Under the provisions of this bill a board of three comptrollers will pass upon the charter, the capital stock must be fully paid in, a rigid Government supervision is provided for, no issues beyond the amount of the capital are permitted under any conditions, and none above sixty per cent. without special approval of the comptrollers; all notes are redeemable in gold, a five per cent. redemption fund must be deposited with the Government in advance, five per cent. more is added to it from taxes on circulation, a special emergency tax of one per cent. on all circulation annually is authorized, if necessary; a first lien on all assets is given, the double liability of the stockholder is continued, and, best of all, prompt and frequent redemptions are compelled in district clearing-houses or redemption agencies, where each bank must make provision for redemption of its notes satisfactory to the clearing-house as well as to the Board of Control before it can take out any notes for issue at all.

The records of the Treasury show that a tax of 22-100ths of one per cent. on circulation laid annually would have paid in full every note of every failed bank, from the organization of the National banking system to this day, and the margin of safety in the tax prescribed here is nearly ten times greater than that, without any reference to the five per cent. redemption fund.

In my opinion it is safe, far safer than the bank-note systems of any other country, and fully as safe as the present bond-secured bank note, for I do not believe that a single dollar in either case could ever be defaulted.

It is feared by some that the withdrawal of bond security would disastrously affect the price of bonds. Not so at all; for, even if every note so secured was changed as rapidly as possible under the provisions of the bill, it would take five years, and, including bonds to secure Government deposits, the requirements of the sinking fund would, in that time, take all thus held, saying nothing of Savings banks, and insurance companies' purchases at any reasonable price. Objection is also made that asset note issues by large banks under restrictive legislation or monopoly privilege in other countries afford no criterion by which we can judge of such note issues here, where we already have more than four thousand National banks and an open field for more.

Personally, I would have preferred to have limited the issue privilege to banks of not less than half a million of capital, or, better yet, to one large bank in each redemption district, or, best of all, to one bank in New York city; but none of these propositions is politically possible to-day, and can only become so by a process of evolution, a process which we must admit to be in excellent working order just now.

The principle of asset banking is equally applicable to large or small banks.

Both can be made equally safe.

The difference between the two is that the large bank is an ever-present help in time of trouble, and the little one is apt to be an ever-present trouble when help is needed.

Of course, economy of management is found in the large bank rather than the small one, but, if we are to be controlled by our prejudices, we must be willing to pay for the privilege.

With an increased profit to the banks shown, and with safety provided for, the unquestionable advantages to the people of an elastic bank-note issue are so great that it would be presumption to discuss them before a bankers' convention.

BRANCH BANKS.

There is one other feature of the bill—and, I think, the most important one—which I wish to bring to your careful attention, and that is branch banks.

Whenever a man finds himself at variance with the almost universal opinion of mankind it is high time for him to begin to doubt his own infallibility, and this is precisely the position in which the opponent of the branch bank system is placed to-day, for, after a careful examination, including the laws of forty countries, as compiled by Comptroller Eckels in 1896, I can find no government in the world where branch banks are not permitted except our own; and even here they are excluded by the laws of only twenty States and by the National Bank Act, and even that act permits them where State banks come into the system with branches already in existence. The United Kingdom has 116 banks, with 5,515 branches, in a territorial area less than half the size of Texas; 8,517 of them have been established in the past forty-four years.

France made it a condition precedent to the extension of the charter of the Bank of

Digitized by Google

France that a branch should be established in every department of the Republic. Europe and South and Central America are solidly in favor of the system.

Voyaging around the world last year, I found branches of British banks throughout the Philippines acting as commercial drummers for English trade and financial agents for our Government at the same time.

German, English, Russian, every one, our commercial rivals in the Orient, but not an American bank and hardly an American ship.

All through Japan, English, German and Russian banks are taxing American trade by excessive charges for exchange on London, and from Vladivostock to Moscow, straight through Siberia, German branch banks and department stores are laying foundations for the future trade of what is sure to be one of the great markets of the world.

In the City of London alone there are fifty-eight incorporated banks, with four hundred and fifty-three million dollars of capital, and one hundred and seventy-six millions of surplus and undivided profits employed in international trade, with twenty-two hundred and fifty-three branches scattered all over the world, extending English prestige and developing English trade everywhere, and we pay tribute to them.

The Committee on Banking and Currency could see no reason why American capital and American enterprise should not do its share in promoting American trade in other lands, and long for the time when American National banks will fly the American flag and care for American interests in all the great capitals of the world.

The bill limits the foreign branch privilege to those National banks which have a full paid-up capital of five million dollars, for, if we are to enter upon this work, it should be in such a way as to command the respect and confidence of all, and so insure success.

The field is the world, and duty and self-interest bid us go forth and take it, for the time is soon coming, if it is not already here, when we must fight for markets abroad or find stagnation at home.

But, important as this is, the establishment of a domestic branch banking system is still more worthy of serious consideration.

In 1901 the average capital and surplus of National banks was $880,314,389.96, and the current expense of doing business, not including taxes, was $72,043,890.98, or about 87-100ths per cent. on the capital employed.

The average loans for the same year were $2,881,594,312, and the percentage of expense was 25-10ths.

In Germany the Imperial Bank, with average loans of $138,030,935, had a percentage of expense of 23-10ths, maintaining 330 branches.

The Bank of France, with 392 branches and average loans of $157,040,000, had a percentage of expense of 19-10ths.

When we consider that both of these institutions perform much of the work transacted by the Treasury here, and, in addition to this, that the Bank of France is compelled by law to discount notes as small as one dollar in amount, which adds greatly to the expense account, the difference in cost of maintenance of the branch and independent systems is plainly seen.

The bank loans of the United States on June 29, 1901, as shown by the Comptroller's report, aggregated $6,491,680,743, and if the economy of the French system could be applied to this business, the banks or the people of the United States would save in a single year $38,949,784.45.

I presume many of you will think that this would be impossible in this country, and I thought so, too, until I procured from the Comptroller's office the loans and expenses of banks, and demonstrated conclusively to myself that a thoroughly developed branch bank system, with large parent banks, would make even greater economies possible.

First let me give you the relative expense of bank management to loans in different parts of the country by grand divisions—from September, 1900, to September, 1901:

	Average loans.	*Expenses not including taxes.*	*Percentage of expenses to loans.*
New England States	$416,395,831	$9,025,653	2.17
Eastern States	1,240,251,875	29,285,344	2.36
Southern States	230,969,408	8,441,336	3.70
Middle States	769,921,542	20,300,994	2.64
Western States	126,856,280	5,114,780	4.12
Pacific States	64,786,931	2,081,549	3.23

This did not entirely satisfy me, so I tried another plan. I compared the ten largest banks in New York city with ten fairly representative New England banks of $100,000 capital each, and ten representative banks in Iowa and Nebraska of $50,000 capital each, and ten representative National banks of $25,000 capital each, in different parts of the country, and found this surprising result:

Digitized by Google

	Average loans.	*Expenses not including taxes.*	*Percentage of expenses to loans.*
The ten largest New York city banks........	$370,273,620	$6,228,420	1.68
Ten representative New England banks of $100,000 capital each..........................	3,244,664	88,418	3.94
Ten representative National banks in Iowa and Nebraska of $50,000 capital each........	1,337,803	71,270	5.33
Ten representative National banks of $25,000 capital each in different parts of the country..	448,063	31,382	7.00

So that if it were possible to conduct all of the banking business of the United States on the same relative basis of expenses to loans as obtained with the ten largest banks in New York city last year, the annual saving to either the banks or the borrowers or both would be $53,231,172.00. Of course I do not assume that this could be done, but I do believe the twenty-five and fifty and even the one-hundred-thousand-dollar banks could all be converted into branches of large and strong institutions with a great saving to the people and profit to the stockholders.

It is wholly useless to make comparisons of interest rates between this and other countries to show the greater economy of the branch bank system, for like differences will be found between countries where the system is the same, and interest rates depend largely on conditions in no way connected with expense of management; but that the expense account is a very important factor in effecting the general result is clearly shown by the strenuous claims put forward by the independent banks that they could not compete with the branch system, and, therefore, that the existing banks would be driven out of business.

I admit that in many cases this would be true, but in the end it would mean the survival of the fittest and result in inestimable advantage to millions of borrowers who have a right to have their welfare considered in framing legislation.

And I know of no reason why a bank should be restricted to one place of business any more than an insurance company, for a fair distribution of risks is just as essential to safety in one case as in the other.

But I do not believe that the stockholders of any bank which has a reason for existence would suffer by the change, for every such institution well established could enlarge its field of work without a proportionate increase of expense.

The process is going on every day now, on the "community of interest" plan, and it is far better to have it done under the law than outside of it.

A few days ago I sold some stock in a Kansas bank at 125 which for the past three years has been unsalable at par.

It was bought by the managers of a Missouri bank, and the organization will hereafter be to all intents and purposes a branch of the larger institution.

The necessities of the community were greater than the limited capital of the little bank could meet, and the expense of management consumed the profits.

Now all the legitimate wants of that vicinity will be met by the aid of the larger bank, and the increased patronage and reduced expenses will fully justify the price paid for the established business and unused good-will, and all parties will be benefited.

On the other hand, all through the manufacturing towns of the East, banks have been capitalized beyond the normal necessities of the places where they are located, to meet the wants of one or more factories there, and not violate the law concerning the ten per cent. limit, and single-name notes bought "on the street" have absorbed the surplus funds at rates utterly ruinous to the dividends of the country banks.

In the West and South, where bank capital is limited, an expensive system of rediscounts compels heavy rates to borrowers. A well-regulated branch bank system would adjust itself to these conditions, and not only provide a better distribution of loanable funds, but with like conditions of security and credit is sure to result in lower and more uniform interest charges.

This has been proven beyond dispute in Canada, Great Britain, France and Germany.

How is it in this country?

As shown by the Comptroller's report for 1899, the average discount rate

of New England	National	banks was...	4.7 per cent.,	of State	banks..	5.2	per cent.
" Southern	"	"	... 7.4	"	"	.. 7.4	"
" Middle West	"	"	... 5.8	"	"	.. 6.8	"
" Western	"	"	... 8.9	"	"	.. 10.1	"
" Pacific	"	"	... 7.8	"	"	.. 7.3	"

Every banker here knows that the difference between the rates received by the State and National banks in the same locality is due to the more conservative character of the National

Digitized by Google

bank loans caused by the restrictions of the law, but he knows also that the great difference in National bank rates of 4.2 per cent. between New England and the Western States is due to an unequal distribution of capital and small independent banks operated at large expense, both of which a well-regulated branch bank system would correct, as it has done in Canada, where, from the Atlantc to the Pacific, discount rates vary less than two per cent.

The bill does not provide for speculative branches, opened here to day and there to-morrow, but specifies that in each case where a branch is instituted the articles of association shall be amended upon the unanimous vote of the board of directors and then only when approved by the board of Comptrollers in Washington.

Under these circumstances, how absurd it is to talk of lack of local interest, and refusal to aid in development of the towns where branches are, and to fear that the parent bank will suck deposits from the branches and give back nothing in return.

Was it for this or the reverse of this that the French Parliament compelled the Bank of France to establish branches in every department?

Is it to aggrandize London, or to build up the colonies and so make money for themselves, that the British joint-stock banks have followed the English drum-beat around the world?

Do independent country banks send their funds to their reserve agents at one and one-half or two per cent. when good loans are offered at home at five or six per cent?

Men do not conspire against their own welfare, and to claim that the interests of the permanent customer in the country will be sacrificed to the temporary needs of the city speculator is contrary to the experience of the branch system everywhere.

Indeed, Mr. E. S. Clouston, the General Manager of the Bank of Montreal, in a reply to Hon. J. H. Walker's remarks before our committee, says:

"Mr. Walker's fear that the customers of a country branch are in times of stringency sacrified to the necessity of the parent institution, is a phantom of his imagination, for the loans of a branch being less liquid, the knowledge of the difficulty of realizing them and the small proportion they bear to the whole amount, leaves them practically undisturbed in the acutest panic, and their only knowledge of a stringency is imparted through the medium of newspaper articles."

NO BANK MONOPOLY.

It will not do to cry trusts and talk of bank monopoly as argument against this bill, for its very purpose is to strip one man of the power which he now has to paralyze the industries of the land at will, and that man, the Secretary of the Treasury, controlled by party politics.

I can conceive of but one money trust in a country as large as ours, and that is to have all of the currency issued by the Government on the Populist plan.

The very object of this measure is to get as far away from that as possible, to divest the Government of all banking functions, to put the money taken for taxes at once into industrial use, to make the gold standard a reality and not a dream, by compelling gold redemptions by the banks from their own reserves instead of at Government expense, and lastly by taking the whole banking business out of politics by putting it under the supervision of a board of three comptrollers appointed for periods of twelve years each, with one man's term expiring each four years, so that no Administration can destroy their influence or prestige by packing it with ignorant or inexperienced men, or using it as a headquarters for future political campaigns.

A CHANGE NECESSARY.

And now as Savings banks Managers and investors in Government bonds, as officers and stockholders in National banks, what is to be your policy in the future?

That some change must be made in our note issue system is plain to every thinking man.

If the character of security is to be changed, admitting the bonds of States and cities, it only adds to your troubles by bringing another buyer into the field and lessening the returns from your investments.

To longer depend on Government bonds as a basis for circulation is impossible, for the requirements of the sinking fund will soon exhaust the supply, and the increasing premium is even now forcing the withdrawal of circulation as fast as the law permits.

There is no probability whatever of bond issues in the future, for whatever else of good or ill came to us from the Spanish War, it demonstrated as never before that the possibilities of taxation in this country have hardly been touched.

It is a bit of unwritten history of that war that at its beginning Secretary Gage intended to issue but one hundred million dollars of bonds for immediate contingencies, and to rely upon taxation for funds to carry it to a successful conclusion.

He was overruled by those who did not realize as he did the resources of this great country, or who lacked the faith which he possessed in the patriotism of the people.

As a result, two hundred millions of bonds were issued, of which one-half are still out-

Digitized by Google

standing, on which we must continue to pay interest till 1908, or buy them in at heavy premiums.

Meanwhile the money which they represent lies idle in the Treasury.

A few days ago I requested the Treasury Department to make up a balance sheet of receipts and expenditures as they would have appeared from March 31, 1898, to March 31, 1902, if no bonds at all had been issued, and if the Treasury had availed itself of the power given it under the War Revenue Act to issue certificates of indebtedness at three per cent., payable within one year.

It is as follows:

	Receipts.	*Expenditures.*
Quarter ended June 30, 1898	$97,407,828.04	$140,009,448.89
Fiscal year ended June 30, 1899	515,960,620.18	605,072,179.85
" " 30, 1900	567,240,851.89	487,713,791.71
" " 30, 1901	587,685,337.53	509,967,353.15
Nine months ended March 31, 1902	419,002,879.50	357,844,901.97
Available cash, exclusive of $100,000,000 gold reserve, March 31, 1898	126,166,943.78	....
Proceeds of three per cent. certificates of indebtedness, Act June 13, 1898	100,000,000.00	....
Redemption of three per cent. certificates with interest for one year	....	103,000,000.00
Transfer of gold to reserve fund under Act March 14, 1900	....	50,000,000.00
Available cash, exclusive of $150,000,000 gold reserve, March 31, 1902	....	159,856,285.35
	$2,413,463,960.92	$2,413,463,960.92

It shows that starting with the cash on hand and adding proceeds of the certificates, we could have paid from taxation alone the entire expenses of the four years, amounting to $2,100,607,675.57, retired all the certificates with a year's interest added, placed fifty millions in the gold reserve, as we have done, and on the first of April this year, found the Treasury with the comfortable sum of $159,856,285.25 on hand, and the country ready to repeal all war taxation, and all this without any bond issue whatever.

Our past experience will fix our future policy, for the power to issue one-year certificates still remains, and with our rapidly increasing wealth and almost limitless taxing power, the necessity for greenbacks and long-time bonds is passing away, never, I trust, to come again.

Something then must be done or our bank note circulation will soon disappear.

It is for you and such as you to say what legislation shall be enacted.

The Committee on Banking and Currency do not claim that this bill is perfect or that the individual members all agree as to every detail of it, but they are a unit in the firm belief that the principles on which it is based are everlastingly right, and they ask your co-operation and the kindly criticism of every sound money man in the United States in what they believe to be the patriotic work of making the monetary system of our beloved land the best which the world can show.

On motion of Bradford Rhodes, Mr. Hill was tendered the thanks of the association for his address.

Hon. Lyman J. Gage, President of the United States Trust Company, and former Secretary of the Treasury, was called on, and made the following remarks:

Remarks of Hon. Lyman J. Gage.

Mr. President and Gentlemen of the Savings Banks Association—I thought on this occasion that I was going to have the pleasure of listening and I did not for a moment suspect that I should be called upon. I want to say, however, that I have not been disappointed in my expectation of being instructed.

I sympathize absolutely and fully with all the principles so ably presented, and so eloquently expressed, by the Congressman from Connecticut, Mr. Hill. It would be foolish, idle, and like an anti-climax for me to undertake to add anything to the force of his argument.

For a number of years it was my duty and privilege to come into very close contact with the financial question as our country is interested in it, and in all its aspects which have been so well covered here to-day. In that study I have had frequent con-

Digitized by Google

ferences with the gentleman who has just addressed you. My mind has always been strengthened and enlightened by my discussions with him. There are others, not so many as there should be, but enough to give promise of great usefulness to the country in the future in their labors in the congressional hall, and there are many outside of that body, who are studying carefully, conscientiously and intelligently these great problems.

It is the fashion too much, gentlemen, to make light of the serious study of this question. If you will not study thoroughly and carefully so as to get at the principles which make so eagerly for the welfare of the country, if you will not study them thoroughly so that you are able to grasp all of the principles in detail for your own sakes, you should do so to give in some degree confidence to these men who, standing apart without any interest of their own to serve, are studying these problems for you and trying to accomplish something for your everlasting benefit.

Mr. J. HARSEN RHOADES: I am sure that I echo the sentiment of every gentleman here present in saying how much we have all enjoyed this address by the honorable Representative in Congress on this very important question. As Savings bank officers, we are directly interested in what makes for the welfare of the masses of our working people. More so, perhaps, than any one else, because we are their trustees. We are the custodians of their thrift. If these people are to remain prosperous, if this country is to grow, if employment is to be steady and regular, the basis of our currency upon which their wages rest, must be inviolate in its character. Therefore, we, as Saving bank officers, endorse any plan that is feasible which will make the obligations of the Government redeemable now and at all times in a gold dollar.

Therefore he may take back to Washington, I am sure, from all of us here, the feeling that he has our hearty co-operation in any scheme which will bring about that result.

The currency of the country must be based upon the assets of the banks. You may put off the day, Congress may delay and hang back, but in the end that has got to be the result, and the sooner that comes the sooner this country is going to be established permanently upon a basis of prosperity, and the sooner it is going to be for the benefit of the people at large.

I think it is a part of our duty and our pleasure to say something in recognition of the very able address which has been made here to-day, and I move that copies of it be sent to the officers of every bank and every trust company in the city of New York. It should be read by every one of them. It is strong, able, and to my mind most convincing.

A MEMBER: Why not make it New York State?

Mr. RHOADES: Very well; throughout the entire State of New York. I make a motion to that effect. It will not cost very much.

The motion was seconded and carried.

Votes of thanks were tendered to the Chamber of Commerce for the use of its rooms, to the Secretary of the Chamber, Mr. Geo. Wilson, for courtesies, and to Andrew Mills, the retiring president, for the able and efficient manner in which he has presided over the association's deliberations for the past two years, and the valuable services he has rendered to the association; also to Mr. Lansing for his valuable paper.

On motion, the meeting then adjourned.

THE WAUKESHA NATIONAL BANK'S NEW BUILDING.

THE WAUKESHA (WIS.) NATIONAL BANK.

This institution was founded as the Waukesha County Bank in 1855, organizing with $25,000 capital. On May 8, 1865, the bank entered the National system under its present name, with A. Miner, President; Sebina Barney, Vice President, and C. H. Miner, Cashier. On May 22, 1865, A. J. Frame was appointed Assistant Cashier, and in 1880, on the death of Hon. Wm. Blair, who had succeeded Mr. Miner as President, Mr Frame became the chief executive of the bank. He has been in the service of the institution continuously since May 2, 1862, a period of more than forty years.

A. J. FRAME, *President*.

An idea of the bank's growth may be had from the following statement of the amount of deposits on January 1 of the years named: 1856, $53,012; 1866, $133,627; 1876 $243,660; 1886, $548,590; 18 6, $743,036; 1902, $1,603,742. From January 1, 1902, to April 18, 1902, the deposits increased from $1,603,742 to $1,807,857.

The capital of the bank is $150,000 and the surplus $77,919

The Waukesha National Bank passed through the panics of 1857, 1873 and 1893, meeting promptly every obligation on demand, and is to-day stronger and more prosperous than ever.

In its interior decorations and furnishings the bank corresponds with the handsome exterior, shown in our illustration. Three steel vaults comprise an important part of the equipment.

President Frame was formerly President of the Wisconsin State Bankers' Association, and is well known by his addresses at the State and National conventions of bankers. The other officers of the bank are: Vice-Presidents, R. Weaver and F. H. Putney; Cashier, H. M. Frame; Assistant Cashier, E. R. Estberg.

THE JOINT BANKERS' CONVENTION.

MEETING OF THE BANKERS' ASSOCIATIONS OF MISSOURI, KANSAS, OKLAHOMA AND INDIAN TERRITORY, AT KANSAS CITY, MO., MAY 13 AND 14.

A joint convention of the bankers' associations of Missouri, Kansas, Oklahoma and Indian Territory was held at Kansas City, Mo., May 13 and 14. There was a large attendance of local bankers and visitors and an interesting and able discussion of branch banking and asset currency. The proposal to overturn the system of independent banks and substitute for them a monopolistic system made up of a limited number of large banks at the money centres with the country banks operated as branches of these institutions, was condemned in a series of resolutions.

It is inconceivable that the bankers of the West, who have had such an active share in the rapid and wonderful development of that section of the country, should have taken any other position.

The joint session of the associations above named was called to order in the Grand Opera House at 2 o'clock, May 13, by President Gordon Jones, of the Missouri Bankers' Association. He introduced Horace White, Editor of the New York "Evening Post," who spoke as follows:

Branch Banking and Asset Currency.—Address of Horace White.

Gentlemen of the Convention—You have paid me the compliment of asking me to address you on the subject of branch banking.

Let us begin by defining the phrase branch bank. It is oftenest used to signify an office having no independent capital of its own, which belongs to, but is geographically separated from, a bank. The branch is thus separated from the bank in order to attract customers who live at a greater or less distance from the head office—for the same reason that a drug store down-town may find it profitable to establish a branch up-town. The credit of the parent bank always attaches to the branch bank, but the capital may or may not be with it. More capital may be collected at the branch in the form of deposits than can be profitably used there. In that event the surplus will be drawn to the parent bank. Most probably, however, there will be times when the head office will be sending money to the branch, and other times when it will be drawing money from it. The sole reason for branch banking is that this flow and counterflow may take place according to the needs of business, with the least loss of time, with the smallest amount of friction, and hence with the greatest profit to the bank.

The phrase branch banking is also applied to a group of banks, each of which has a capital of its own, but all of which are under a common management. If such a group is situated in a single country, under modern conditions of rapid communication, the *modus operandi* will be the same as in the other case. If they are in separate countries, however, there must be an assignment of a certain amount of capital to each of the branches in order to save time and expense in transferring funds from one to the other.

There is a wide diversity of opinion in this country as to the advisability of branch banking, and this diversity exists largely among bankers themselves. The mass of the people know nothing about it, and few of them care enough about it to study the question. The doctrinaires, the college professors, the economists, are generally in favor of branch banking. They are not, however, so far as I know, in favor of forcing that system upon the National bankers against their will. If I were a banker, and if I believed that branch banking would injure my business, I should be opposed to it, and especially if, while holding such views, I were a trustee of bank capital for other people. Whether branch banking be conducive to the general interest or otherwise, it is not a soul-stirring matter. Patriotism is not concerned in promoting it. Some people think that patriotism is concerned in opposing it, and that branch banks, if permitted to exist, will destroy American liberty. Such persons do right to oppose

Digitized by Google

it. Those who think that it would be, on the whole, a wise policy for the country, agree that they have no special claim on the public attention, and I for one do not believe that branch banking will ever be adopted by Congress until the majority of bankers acquiesce in it. Nevertheless, I believe that it will come, because I believe that it will be economical and profitable to all banks in both city and country, and that it will extend and enlarge instead of crippling their business, and that after trying it they will wonder why they were ever opposed to it.

BRANCH BANKS BEFORE THE CIVIL WAR.

It is a matter of history that when the country banks of New England were asked to redeem their notes at the Suffolk Bank in Boston, and to pay the Suffolk a small compensation for its trouble, they declared and sincerely believed that such a policy would ruin them. Yet after a trial of the system they found their credit so much improved and their circulation so much extended that nothing could have induced them to abandon it. So, too, I think that it would have been impossible for anybody to have told beforehand what would be the consequences and effect of branch banking. For my own part, I know of no way to judge the future but by the past. I feel sure, however, that what has happened before will happen again under like conditions, and that what branch banking does in other civilized countries it will do here if the opportunity is offered.

We had several examples of branch banking in our own country before the Civil War.

[Mr. White here gave a sketch of the branch systems of the first and second banks of the United States, and those of the State banks of Indiana, Ohio and Iowa, and of their systems of note issue.]

The five groups of banks here enumerated had one hundred and one branches. They existed at various times from the foundation of the Government to the end of the Civil War, during a period of great disorder in banking, amounting at times to financial chaos. There were five general bank suspensions from 1791 to 1861. Not one of these banks or branches failed during that period. Now, the test of solvency is the supreme test of banking, and if we find a particular system that passes this test for three-quarters of a century while failures of individual banks are frequent and disastrous, we may resonably infer that this immunity is due, in part at least, to the system itself. This is not saying that, under the branch system, banks never fail. There have been two or three bad failures of such banks in Scotland, but we may fairly infer that the people have greater confidence in a group of banks linked together and co-operating with each other than they have in the same number of banks separate from and competing with each other. Public confidence is the *sine qua non* of successful banking, and the system which best assures such confidence is the one which should receive our favor.

We will now glance at the experience of other countries, and first at that of our neighbors on the north.

BRANCH BANKING IN CANADA.

In Canada there are thirty-four banks with an aggregate capital of $67,591,000 and a surplus of $37,865,000. Thus the average capital is $2,000,000, and the average surplus $1,000,000 to each bank. No new bank can be established with less than $500,000 subscribed, of which at least $250,000 must be paid before beginning business. All of the larger banks have branches, of which there are 690 in the Dominion, situated in 392 localities. Each bank is allowed to issue notes to an amount equal to its paid capital, but competition and the prompt return of the notes for redemption have always kept the circulation below the authorized amount. All banks are required by law to make arrangements to insure the par value of their circulation in any and every part of Canada, and for this purpose to establish redemption agencies at the chief city of each of the seven provinces and at such other places as may be determined by the Treasury board. In practice the notes of the different banks are exchanged daily at the clearing-houses in the larger cities. At other places they are exchanged between the nearest branches, and balances are paid either in Dominion notes or by drafts on the commercial centers. There is, accordingly, no discount on any Canadian bank note in any part of the Dominion.

Nor is there any discount on the notes of failed banks. The law provides for the protection of noteholders (1) by giving them a prior lien on all the assets of failed banks, including a double liability of the shareholders; (2) by a bank circulation redemption fund contributed by all the banks, equal to five per cent. of the average circulation of each; and (3) by a provision that the notes of failed banks shall draw five per cent. interest from the time of default till public announcement is made of readiness to redeem them. There have been three bank failures since 1890, when these provisions of law took effect, but the noteholders lost nothing; nor did the other banks lose anything from the common redemption fund.

The Canadian system of branches tends to equalize the rates of interest in different parts of the Dominion. A bank receiving deposits in Halifax, Montreal and Toronto may lend them

Digitized by Google

the following day through its branches, and by the issue of its own notes, at Winnipeg, Vancouver and Victoria, the branches redeeming the notes by drafts on the head office. The rate of interest in the smaller towns of the West is only one or two per cent. higher than in the large cities of the East on the same kind of loans. To this equalization of the rate of interest both the branch system and the freedom of note issue contribute. Under the branch system in Canada, the parent bank is like a reservoir having pipes of different sizes running to different consumers, each of whom can draw as much from the general supply as he can advantageously use and give security for.

BRANCH BANKS IN SCOTLAND.

The country in which branch banking has received the highest development, however, is Scotland. There are ten banks in that country with an aggregate capital of $46,000,000 and a surplus of $35,000,000. The capital and surplus, if equally distributed among them, would be $8,000,000 each. They have all together 1,065 branches. One of these banks, the Commercial, whose head office is in Edinburgh, has 189 branches, and thirteen of these are in the city of Glasgow. The Union Bank, whose head office is at Glasgow, has 143 branches, and ten of these are in Edinburgh. This system has grown up during the past two hundred years to its present perfected state. It has met some disasters in that time, but comparatively few. There have been only three bank failures of any importance in Scotland—that of the Ayr Bank in 1792, of the Western Bank in 1857, and of the City of Glasgow Bank in 1878. All of these failures were due to speculations of a most disreputable kind carried on with the money of the banks by the connivance of the directors.

By means of their branch system deposits are secured from every nook and corner of the country, and capital is transferred easily and quickly to the places where the demand for it is greatest. There is no hamlet so small that it cannot obtain banking facilities adapted to its needs. Whatever assistance banks can give to industry is available to the poor and to the rich on equal terms. In no other country, except possibly in France, has the doctrine of equality in bank favors been carried so far. If I were asked to name the countries where the democratic principle has reached its widest application in the matter of loans and discounts, I should name those where the branch bank system has received its highest development and has been pushed to the greatest extreme. And here Scotland would stand in the front rank. If I were asked to name the country where agriculture has received and still receives the greatest help from banks, I should name Scotland. The branch bank adjoins the inglenook everywhere, and "cash credits" are available for every farmer of good character. A cash credit is a permission extended by the bank to a borrower to draw money as it is wanted, not exceeding a certain sum, paying interest for the time and amount actually used. As a corollary to the cash credit system the banks allow interest on all deposits, and thus the habit of saving is stimulated among the people.

The circulating notes of the Scotch banks are exchanged daily at the Edinburgh clearing-house, and settlements are made between banks by drafts on London. No deposited security for bank notes has ever been required in Scotland, but noteholders have a prior lien on the assets, and the liability of shareholders for note issues is unlimited. For these reasons the note issues of insolvent banks in Scotland are always accepted at par by the other banks, and are never depreciated. Although deposits are received and loans are made at each branch, the branches pay out only the notes of the parent bank, which are redeemable at the head office. So it is necessaay to have real money only in one place, instead of one hundred different places.

BRANCH BANKS IN FRANCE AND GERMANY.

The Bank of France is required by law to have at least one branch in each of the eighty-seven departments into which the country is divided. It has now 392 branches. Some of these are subsidiary offices in places too small to support a branch with the usual complement of officers and employees. In some places the branch or office is only deskroom, and is open only once or twice a week, and is served by an agent who serves other branches on alternate days. The rate of discount is uniform at the parent bank and at all branches and offices. During recent years it has been usually two and one-half to four per cent., and is less fluctuating than in any other country. No paper is rejected on account of its smallness. Loans of five francs are not uncommon. In 1889 there were at the parent bank nearly 20,000 discounts of ten francs ($1.93) or less each, and more than 1,000,000 ranging in size from fifty-one to 100 francs.

The Bank of France has a monopoly of note issue, and its notes are what we call "asset currency." Its present circulation is about $800,000,000, and its specie holdings $720,000,000, of which $500,000,000 is gold. It is much the largest bank in the world. Its assets and liabilities foot up one billion dollars. Yet it has numerous competitors in its own territory, among them the Credit Lyonnais, with a capital of $50,000,000. The Credit Lyonnais has twenty-six branches in Paris and its suburbs, 116 in the departments, and twenty-six in foreign countries.

Digitized by Google

The Imperial Bank of Germany has 320 branches. It has the right to issue $110,000,000 of circulating notes regardless of its cash reserve. It may issue as many more as it has cash on hand, and as many above that figure as it chooses, by paying a tax at the rate of five per cent. per annum on the excess, until it has outstanding three dollars of notes to one dollar of cash. The latter is what we call "emergency circulation," and the bank has several times availed itself of its permission to issue it, to the great benefit of the business community, and incidentally of the Imperial Treasury. There is nothing in the branch bank system of Germany, however, that calls for special attention.

I might go on and recite the experience of other countries, but we should find no novelty among them. In the year 1896 our Government called for reports from its diplomatic agents on the banking systems of other countries, and asked specifically whether branch banking was allowed in them. Replies were received from forty different countries, and all of them said that branch banking was permitted, and in most of them practiced. Of course it would not be practiced if it were not profitable. If it is profitable in Canada, in Great Britain, and on the Continent of Europe, it would probably be so here. So the question before us is whether the law ought to prohibit a kind of banking which would be advantageous to the persons engaged in it, which is not dishonorable in itself, which is practiced in all other countries, and which was extensively practiced here before the National Bank Act was passed.

BRANCH BANKING SYSTEM NOW IN OPERATION.

It may be said that if branch banking were permitted the large banks would open branches in the small towns and take away the business of existing banks. They could do so only by offering loans at lower rates to the business community, or by giving them better terms in exchange for their deposits. Competition is always inconvenient, and we need not expect to make it look attractive to any class, whether bankers or others; but competition is not to be avoided by preventing branch banking under the National system. New State banks are starting up all the time in places where National banks exist. I have a book which tells how Mr. W. S. Witham of Atlanta, Ga., has started twenty-six banks as branches of a parent bank in Atlanta, of which he is the President. These are not National banks, but they are competing banks all the same. They get deposits, and they make loans. These branches are managed by local directors, just as the branches of the State Bank of Indiana were in the olden time, but Mr. Witham is the President of each branch and he appoints the Cashier of each.

This, however, is only a symptom of a mightier movement in the way of bank extension now going on. Scarcely a day passes that we do not read of some existing bank passing under the control of a larger one. During the past six months there has been much quiet absorption of small banks in New York city by large ones, but latterly the process has been extended to banks outside of the city and outside of the State. Not only so, but some of the large banks in cities far distant from each other have been exchanging shares through the persons of men who own controlling interests in each. A bank President from an interior town in Missouri, which contains two banks, was in New York a few days ago in order to arrange for an affiliation with one of the large city banks. He had heard that his competitor, which we will call Bank A, was negotiating for an affiliation of this kind, and he did not intend to be caught napping. He wanted to be able to say at once that his bank (Bank B) had just as strong connections as Bank A. Why did Bank A desire to establish relations of this kind with a large city bank? Because it believed that it would acquire more importance in the eyes of the community and get a larger line of deposits thereby. Other things being equal, the depositor puts his money in the strong bank, because he considers it safer. No bank likes to lose its relative importance in the financial world. Therefore, this movement of weak banks seeking the alliance of strong ones is likely to go on.

Congressman Hill, of Connecticut, in a speech at New York last week, gave an item of his own experience. "A few days ago," he said, "I sold some stock in a Kansas bank at 125, which for the past three years has been unsalable at par. It was bought by the managers of a Missouri bank, and the organization will hereafter be, to all intents and purposes, a branch of the larger institution. The necessities of the community were greater than the limited capital of the little bank could meet, and the expense of management consumed the profits. Now all the legitimate wants of that vicinity will be met by the aid of the larger bank, and the increased patronage and reduced expenses will fully justify the price paid for the established business and unused good-will, and all parties will be benefited."

I presume that branch banking in this shape is robbed of much of its terrors to the small bank. The next thing that will happen, probably, in the case mentioned by Congressman Hill, will be that the little bank thus cheerfully converted into a branch will establish an office in some smaller place which now has no banking facilities at all—an agency like those of the Scotch banks, where it would not be profitable to have a fully-equipped branch, but where some deposits can be obtained and some profit made. This will be a benefit to the community and to the banks.

Digitized by Google

Are these affiliations sufficiently cohesive to be classed as branch banking? Undoubtedly they are intended to be so. It would not be worth while for a bank seeking a branch in this way to be satisfied with less than a majority of the shares, but a National bank is not permitted to buy the shares of another bank, although it may lend money on them. We must suppose, therefore, that the amalgamation which is now taking place here and there is accomplished by individuals connected with the large bank, buying the shares of the small one, and borrowing from the former the money which pays for them, the shares being pledged as collateral security for the loan. When the borrower dies the loan must be shifted, and this shifting may make the control insecure, but there is no doubt that means will be found to perpetuate a control once obtained. The main question is whether the union of the two turns out to be profitable. If it does, it will be permanent, and the bank whose shares have been bought in this way will continue to be a branch of the other.

ECONOMY OF BRANCH BANKING.

That such union will, in general, result in profit to the bankers concerned there is every reason to anticipate. Congressman Hill, in the speech to which I have just alluded, presented figures showing the percentage of the cost of loans in banks of large and of small capital respectively; that is, the amount of expense that the banks incur on each dollar they invest in loans and discounts. Of course, the percentage of cost is much less in any large business than in a small one. In railroad transportation, for example, the percentage of expense grows less and less as the volume of traffic grows greater and greater, until the full capacity of the road is reached, and the same rule holds good in banking. But nobody could have imagined so large a difference in expenses as Mr. Hill found to exist between different banks in this country. According to reports compiled by the Comptroller's office the percentage of expense to loans in ten large New York city banks was 1.68; in ten New England banks of $100,000 capital each it was 3.94; in ten banks of $50,000 each in Iowa and Nebraska it was 5.33, and in ten banks of $25,000 each in various parts of the country it was 7.00 each. The wonder is that these banks of $25,000 capital can exist at all, when it costs them seven dollars on each hundred that they lend for one year. If all the banking business in the United States could be done at the same percentage of cost as the ten large banks in New York city, Mr. Hill shows that the annual saving to be divided between the banks and their customers would be upward of $58,000,000 in a single year. Of course, no such economy is possible under any conditions of banking over a widely extended territory, but it is certain that the percentage of expense could be largely reduced if branches were allowed. In fact, it is this saving of expense that has caused the great extension of branch banking in Canada, in the British Islands, and on the Continent of Europe.

ARGUMENTS AGAINST BRANCH BANKS.

Another objection urged against branch banks is that they will draw away all the money from the small towns and use it in large cities. This objection is not in harmony with the one which says that the large city banks will send so much money into the small towns through the branches and will lend at such low rates that existing banks cannot make a living. We might leave these two classes of objectors to neutralize each other, but my opinion is that the flow of capital to and from the small towns under the branch system will bear pretty close relation to the demand. Bankers use their money to make a profit, and they are just as keen to make a profit in a small town as in a large city, and they will neglect no opportunity in one place more than in the other. The object of having a branch is to make money at the branch. Drawing away money from the small town when there is a local use for it would soon bring the branch to an end. Its depositors would leave it, and presently Mr. Witham, or somebody else, would establish a branch there to be conducted on more rational principles. My belief is that more money would go from the large city to the small town through branches than goes now in the shape of rediscounts of the paper of independent banks. I think so because the city bank will have confidence in the judgment of its own agent at the branch, and will follow his advice, and because it will get all the profit on the loans made there, instead of dividing it with the independent bank; and also because it will desire to extend its business and get new customers.

A third objection against branch banking urged with some plausibility at the present time is that, if it is permitted, all the banks will be consolidated into a gigantic trust, so that nobody can get any money except on terms dictated by a few powerful magnates. In reply to this we might point to the examples of other countries where branch banking has full swing. In Canada, in Great Britain, in France, and Germany there is not the smallest sign of a "money trust," although trusts and monopolies in other trades are plentiful. On the contrary the sharpest rivalry exists in the competition for deposits and for loans and discounts, and the rate of interest there tends downward rather than upward. This happens, too, in countries where note-issuing is a monopoly by law. It is a monopoly in France, yet that is the country which has the lowest interest rate, and in which the rate is most uniform to all

Digitized by Google

classes of borrowers in both city and country. Note-issuing is almost a monopoly in England and Germany, yet we never hear of anything like a money trust in either country. The truth is that money cannot be monopolized. The money in the banks does not belong to them. It belongs to the depositors for the most part. The trust companies, the Savings banks, and the private bankers would no doubt be glad to hear of the intention of the regular banks to discontinue the lending of money, or to put up the rate of interest on loans. They would cheerfully fill the vacuum. So, too, would the agents of foreign banks. Fortunately there is no protective tariff against money. We admit gold free of duty. We allow Canadian banks to have branches in the United States, as many as they like. It is one of the queer features of our system that any foreign bank can have branches here, but our own National banks cannot. Another curious fact is that State and private banks may have branches here, while National banks may not. I received in my mail a few days ago a circular from the Colonial Bank of New York, with a list of five branches. The greatest oddity of all is that if this Colonial Bank, with its five branches, desired to enter the National system, it could do so and still retain its branches, for the law expressly authorizes that.

Let us dismiss the thought of a consolidation of banks and a money trust as a consequence of branch banking. Money cannot be monopolized. Every village has its private money-lenders competing with banks in "shaving notes." You might as well think of monopolizing the water of the Mississippi River by building a dam at St. Louis as to monopolize money by a combination. You never could get an agreement of bankers to attempt it, and if they should do so the combination could not last a week.

Another argument against branch banking, a sort of corollary of the one preceding, is that it tends to subvert free institutions. I have read with attention a recent speech by Mr. McAshan, of the South Texas National Bank, on this subject. He gives us an interesting discourse on governments, ancient and modern, monarchical, oligarchical, and democratic, and tells us, in so many words, that "branch banking and asset currency is one move in the general direction of usurpation of privileges, concentration of wealth, monopoly of money, and eventually the control of the Government and the pauperizing of the people." But if money cannot be monopolized—and I have already shown that it cannot—Mr. McAshan's fears are groundless and our liberties are not threatened in that way. The money power may be a present and growing danger in this country by distorting our vision, lowering our ideals, and setting up a golden calf, instead of Almighty God, as the object of daily worship, but the money power is not the same thing as bank power. The money power resides with the man who has the right to draw checks on the bank, not with the one who pays them.

AN ASSET CURRENCY.

Branch banking and asset currency are grouped together by Mr. McAshan. Although there is no necessary connection between them, I acknowledge that they are very helpful to each other. They fit together very nicely, and I am in favor of both. However useful branch banks may be as channels for the distribution of capital, they are still more so as instruments of credit. A Scotch bank with one hundred branches does not divide its capital into one hundred parts. It lends its notes at the branches and redeems them at the head office. Local redemption is dispensed with, and is, in fact, quite unnecessary. Economy of capital, of time, and of labor are here conjoined, but this would not be possible without practical freedom of note issue. A Canadian bank may receive deposits in Halifax to-day, and lend them in Winnipeg to-morrow, because it can issue its notes promptly at the latter place. If it were obliged to wait till it could transmit the money from Halifax by express, time and interest would be lost. If it could not issue its own notes without first buying bonds, lodging them in a Government office, and "taking out" currency, the entire profit of the loan might be dissipated.

The principal defect of our National bank system is the rigidity of its note circulation. In a broad sense, the volume of notes is regulated, not by the wants of trade, not by the amount or kind of commercial paper offered for discount, but by the market price of United States bonds. Even if the bonds were sufficient in amount and satisfactory in price, the note circulation would still be lacking in the elasticity which should characterize a good system. By elasticity is meant the capacity to increase or diminish in volume in accordance with the needs of the community, and simultaneously therewith.

Note issuing is, to the banker, simply a question of profit. When he buys bonds and deposits them in the Treasury as security for circulation, he virtually buys notes from the Government; and his question is whether he can get more profit by such an investment than by using his capital in other ways. His gains arise only from the average amount of his notes which the public will take and hold. There will always be some notes in transit to Washington for redemption and thence back to the bank; and after they come home they will remain unused for a while. During this period they are unproductive capital. Therefore, the banker will take from the Government no more notes than he thinks he can keep in circulation. He will hold none for emergencies.

Digitized by Google

In every country the alternations of seed-time and harvest have a marked influence upon the currency movement. During the spring and early summer, when the farmers are engaged in planting and tilling their crops, they usually incur debt to the country merchants for household supplies, and the currency movement is then sluggish. When harvest comes a great deal of work must be done within a short space of time, and this requires a large amount of currency to pay the wages of laborers and to meet the various claims against the farmers which then mature. These seasonal demands are imperative. They come simultaneously in large sections of the country. Every other demand for currency is secondary to this, since the only time to harvest the crops is when they are ripe.

The annual crop movement in Canada is marked by an expansion of the note circulation, while no such thing takes place in the United States. What occurs among us is a movement of the currency itself from one part of the country to another, or from the commercial centers to the farming districts, and a reverse movement after the bulk of the autumnal grain and cotton is sold and housed. This money has to be carried long distances and guarded at considerable expense and with loss of interest, and these costs fall upon the agricultural community, since the work of moving must be compensated out of the things moved. In Canada it costs nothing to keep bank notes in the bank's vaults from one crop-moving season to the next. Accordingly they are always on hand at the places where they are wanted.

Our National bank currency not only fails to meet the varying demands of the seasons, but fails to keep pace with the nation's growth in population and commerce. The volume of bank notes reached its maximum, $358,742,034, in 1882. Then it began to shrink. In 1892 it had fallen to $172,683,850, or about one-half the sum outstanding ten years earlier. In 1893 a rise began and continued till 1900, when it was accelerated by a change of the law, which authorized an addition of ten per cent. to the currency issuable on the security bonds. The net amount was thus brought up to $323,868,597 on September 30, 1901, which is $30,000,000 less, however, than the amount in circulation twenty years ago. Now a fresh decline has begun. Banks are allowed to retire their circulation at a rate not exceeding in the aggregate $3,000,000 per month. Nearly $17,000,000 has been thus retired during the six months ending March 31, 1902.

Within a comparatively brief period the bonded debt of the United States will in all probability have been wholly redeemed and cancelled. It is not likely that the nation will continue for an indefinite period to pay interest on a debt of which it might easily pay the principal. Such a policy would be unjust to the taxpayers, and could not fail to meet public condemnation. So the problem is not merely how to make note-issuing under the present system a little more profitable, but how to keep the system going at all. It can not be done, except by using other securities than United States bonds. To use inferior securities like municipal, or railroad, or "industrial" bonds, would require the exercise of discrimination on the part of public officers in the selection of them, and would thus open the door to political influence in making the selection. Moreover, the best judgment of the most impartial Comptroller of the Currency would at times be at fault, as was frequently the case under the State systems of bond-secured currency before the Civil War.

How to meet the approaching crisis is the chief banking problem of the present day. Any plan for obtaining a real credit currency—a currency based upon the assets of the banks—must have regard to the traditions, habits and experience of the American people. The smallest change consistent with the end to be achieved will be the one most likely to succeed.

Many plans for securing the needed change in our system have been proposed. The best of these is the one presented by the Indianapolis Monetary Commission. Under this plan bank notes are to be a first lien on the assets of the issuing bank, including the personal liability of the shareholders. The superior claims of noteholders over the depositors of a bank rest upon the fact that the societary movement can not go on without a currency, and that the very term "currency" implies that whatever passes from hand to hand shall be accepted without hesitation or dispute. This can not be the case with a bank note if there is any doubt about its goodness. Therefore, the first step to be taken by a Government which authorizes the issuing of notes to circulate as money is to provide that they shall be worth what they purport to be. The Government has so provided in the existing law, by requiring that a sufficient portion of the assets of each note-issuing bank shall first be set aside and held in the Treasury for the redemption of its notes. If the preference given to noteholders in the Indianapolis plan is regarded as an injustice to depositors, the same injustice exists under the terms of the present law.

The goodness of the currency is still further secured in the Indianapolis plan by a bank-note guaranty fund equal to five per cent. of all the outstanding circulation, to be held in the Treasury for the redemption of the notes of failed banks. A guaranty fund of five per cent. on the present circulation of National banks would be upwards of $15,000,000. The total circulation of banks that have failed during the forty years that the system has been in force has been only $23,559,915. The assets of these banks, including the contributions of sharehold-

Digitized by Google

ers, have yielded this sum minus $1,352,612. A guaranty fund of one-half of one per cent. would have covered this loss.

If the fund is at any time reduced below five per cent. of all outstanding circulation, the Comptroller of the Currency is to make an assessment on the banks, in proportion to their notes, to replenish it. The plan contemplates the substitution of the guaranty fund in place of the existing bond security, by the gradual withdrawal of the latter, so that at the end of ten years from the passage of the act no bond deposit shall be required. The existing provision of law, by which all National banks are compelled to receive the notes of other banks at par in the payments of debts to themselves, is to remain in force; also the provision by which the Government is required to receive bank notes at par for all public dues except duties on imports. The proposed bill repeals that portion of the present law which provides that National bank notes shall be received at par for all debts owing by the United States. Therefore, every holder of a failed bank note can pay it to the Government at par, and the Government can not pay it to anybody without the consent of the payee. The significance of this part of the Indianapolis plan evidently did not impress the framers of it, since their bill disclaims Government responsibility for the notes beyond the proper application of the funds and due enforcement of the remedies provided: but since the Government itself will in practice be the last holder of every note which falls below par, such disclaimer is meaningless.

No person or corporation could lose anything by such notes, nor could the Government itself lose by them. Ordinarily it would pass the bank notes received in the course of business on to the Redemption Bureau at Washington, and there obtain legal-tender money for them. Any failed bank notes received would be passed into the guaranty fund where legal-tender money would be obtained for them. In case of a deficiency in the latter fund, the power of requiring fresh contributions would remain; but the experience of the past assures us that no such deficiency would occur.

Objections to the Indianapolis plan based upon supposed danger of loss to noteholders are groundless. Even if rascals should take advantage of the law to start sham banks, in order to put out notes and then abscond with the proceeds, the means which the Government would have for self-protection would be infinitely greater than any governmental powers in existence during the Suffolk bank period in New England. And yet the total losses to noteholders under that go-as-you-please system were only $877,004 in twenty years, and would have been covered by a tax of one-eighth of one per cent. per annum on the average circulation outstanding. Anybody who objects to the Indianapolis plan is bound to offer a better one, since the present bond-secured system of note issues is doomed.

THE ADVANTAGES OF BRANCH BANKING.

The advantages of branch banking are briefly these:

I. Other things being equal, two banks joined together are stronger than one, and three are stronger than two. Branch banking is not a guarantee against bad banking and internal rot, but it is a protection against accidents and external calamities. It is another illustra- of the familiar proverb, "In union there is strength."

II. For this reason the public have greater confidence in a union of banks than in the same number of banks taken separately. Branch banking would, therefore, improve the credit of the banks so allied, and increase their deposits. This advantage would accrue more particularly to the branch bank, or the small country bank taken into the system, than to the parent bank in the city.

III. Branch banking would reduce the total expense of banks, and this saving would, in the long run, be shared with the bank's customers in the form of lower rates of interest.

IV. Branch banking would tend here, as in other countries, to uniform rates of interest between cities and the rural districts.

V. Branch banking has the advantage that it can be extended to places too small to support a regular bank, which requires a full complement of officers and a reserve of coin or greenbacks. Offices or agencies can be established at places which are now wholly destitute of bank facilities, but where some deposits could be obtained and some safe and profitable business done, if the public were assured that the parent bank was a strong institution.

VI. Branch banking affords facilities for communicating knowledge of the relative needs of business in different places and for responding to them. Knowledge of the demand and supply of money would be quickly conveyed from the branch at the small town to the parent bank in the city, and funds could be quickly transferred to the branch, either from the parent bank or from any other branch where the demand was less pressing, and *vice versa*.

These are the principal reasons why I recommend branch banking to the gentlemen who have done me the great honor to listen to this address. Another reason is that branch banking is bound to come, and that you can not stop it.

Digitized by Google

President Hopkins, of the Kansas Bankers' Association, introduced Henry W. Yates, of Omaha, who spoke as follows:

BRANCH BANKS.—ADDRESS OF HENRY W. YATES, PRESIDENT OF THE NEBRASKA NATIONAL BANK OF OMAHA, NEB.

The subject of branch banks, upon which I have been requested to give my views at this gathering of bankers, is, I think, of much greater importance than is generally realized.

I must admit, however, that I have been somewhat disturbed from the outset at the position I shall be compelled to occupy in discussing it.

Many of our most eminent bankers and financiers have declared themselves in no uncertain terms as being in favor of the adoption by the United States of this system of banking.

Some of those so grouped are men for whom all bankers entertain the highest respect, and whose opinions upon financial subjects most of us have been willing to accept as correct.

To go adverse to them now requires no small amount of courage, if indeed it may not be called presumption.

My convictions, however, upon this subject are so strong and decided that I shall not hesitate to show to the best of my ability wherein I believe they are wrong and that if they succeeded in accomplishing what they propose it would be disastrous to our existing banking system and against the best interest of the public.

We cannot as bankers be blind to the events which are occurring in the commercial and industrial world—events which seem to change entirely the manner in which these affairs have hitherto been conducted. We cannot expect that our business will remain unmolested when there is a whirl of change going on all around us.

The most conservative among us recognize the situation, and old and young alike are prepared to receive new ideas and take in all the improvements upon the old ways of doing business, so that we may be fitted to work out our part in the great transformation.

We are all conscious of the weaknesses which prevail in our banking system, and we are desirous of having them removed and the system strengthened and improved in any manner that good judgment and wise experience will dictate.

But it does not follow from this that we should conclude that our banking system is so utterly bad that the only remedy for the situation is its entire extinguishment and the creation in its place of another system.

This is what I believe would result from the passage of a law which would establish among us the monarchical British and continental systems of large central banks with numerous branches.

A certain class of branch banks would not be undesirable. The banks of Kansas City, for instance, might very properly be permitted to maintain branches at its stockyards town and the same would be the case at St. Joseph and Omaha. The plan might be expanded so as to permit country banks to maintain branches in towns and hamlets within the limits of the same county. Such an arrangement as this would be fair between banks and beneficial to the public.

There are, however, no limitations of this character in the bill which was recently reported and recommended for passage from the Banking and Currency Committee of the House of Representatives.

This act authorizes the establishment of branches anywhere in the United States, its colonies or in foreign countries.

Mr. Fowler, the chairman of the committee, announced a few days ago that over 1,000,000 of copies of the bill, together with a circular advertising its merits, had been distributed throughout the country wherever it would do the most good.

A campaign of education in its favor has been inaugurated, which is to be prosecuted at the expense of the general Government, and no means will be spared by the powerful combination working for it to accomplish the passage of the act.

Under this law any large Eastern bank can establish a branch, for instance, here in Kansas City and take from the men who are engaged in the business the result of years of toil and devotion. It does not help the case to say that the Kansas City banks may in a like manner prey upon their smaller neighbors in the surrounding towns and villages.

In opposition to the statement that the branch system would destroy the existing system of independent banks, the committee publishes a letter from Mr. E. S. Clouston, General Manager of the Bank of Montreal and President of the Canadian Bankers' Association, in which he says that the statement is fallacious and that there are many Canadian instances which prove the contrary. Upon this most important phase of the question the committee itself has nothing to say except to brand the statements as being "superficial stock statements usually put forward by those who are utterly unfamiliar with this subject," and closing with "we submit that traditional prejudice and selfishness shall give way to reason, experience and common interest of the whole people."

Digitized by Google

Calling names is not argument under any circumstances. Those who differ from the committee's conclusions may be just as unprejudiced and unselfish and have just as great a regard for the public interest as those who support them.

It is not my purpose to consider the conditions prevailing in Canada which Mr. Clouston asserts make it possible for the two systems to exist alongside of each other.

I do not know anything about Canada, although judging from the noise which has been made concerning the superior merits of the Canadian system, it comes somewhat as a surprise to be told that any other kind of banking is tolerated there. They doubtless know in Canada what is best for them—what we want to know is, what is best for the United States?

Against Mr. Clouston's statement, who admits that he speaks from the standpoint of a Canadian banker and does not know whether the branch bank system would be successful in the United States or not, although he says "he should dearly like to make the attempt," we have the statements of prominent American writers and thinkers upon the subject who concur in the belief that the branch system proposed in the Fowler bill would result in the elimination of the existing system of independent banks.

This concurrence may be fairly inferred from the utterances of some of the advocates of the branch system.

For instance, Hon. James H. Eckels is one of its strong advocates. He recommended branch banks in his Comptroller's report of 1896, but in his plan they were restricted to cities, towns and villages where a National bank did not exist. This of course rendered them harmless.

Prof. Charles F. Dunbar in a paper upon the National banking system, reprinted for use in Harvard University, also endorsed the system, but he would restrict branches to State limits.

Prof. J. Laurence Laughlin in his report of the Indianapolis Monetary Commission also favored branch banks. He was undecided upon the question of monopoly, but declared this would be no valid objection to them—that—to use his own words—,'even if independent banks must disappear in the face of the new system, this could only come about through the elimination of the institutions less fit to perform given services for the community at least cost to it." Prof. Laughlin welcomes the monopoly and believes in it. The conclusions of writers like Prof. Laughlin are based solely upon theoretical grounds. They discuss the question from that standpoint alone and give no consideration to any practical difficulties connected with it, for the reason perhaps that having had no experience in the business, they do not discern the difficulties.

INDEPENDENT BANKS LEGISLATED OUT OF EXISTENCE.

Practical bankers, however, must instinctively realize when their attention is directed to the subject, that if this amendment becomes a law, the independent bank must go—not for the reason suggested by Prof. Laughlin—that they would be the least fit to live, but because they would be legislated out of existence.

The advantages which the branch banks would possess under the law would be sufficient to guarantee their success in competition with the existing system of banks.

I will name some of these advantages:

NO CAPITAL REQUIRED.

Every bank under the existing system must be provided with some capital. It is demanded by law and also by necessity in order that it may supply a guaranty in attracting deposits.

A bank without capital would be shunned by depositors and would soon be forced out of business.

The branch banks on the contrary would have no capital and would need none. They will be able to obtain credit and transact business upon the capital and the credit of the parent bank the capital of which would naturally be much larger than that of a local bank.

NO TAXES TO PAY.

The capital of the independent bank is taxed like other property. It must stand its fair share of the public burdens. The branch banks would pay no taxes. Under the National Currency Act, the shares of bank stock can only be taxed at the place where the bank is located, which would be the domicile of the parent bank, and the branch having no capital, there would be nothing to tax.

These two features alone—freedom from capital and from taxation—would seem to settle the question against the independent banks and make it unnecessary to refer in detail to other advantages which the branch banks would possess, among which are—the better facilities for obtaining collections, for loaning money and freedom from the requirement to maintain a fixed reserve against deposits.

Digitized by Google

EXISTING BANKS COULD NOT BECOME PARTS OF BRANCH BANK SYSTEM.

But it may be thought by some one that granting the fact that the independent banks would not be able to compete with the branch banks, yet the system would be free and the independent banks could secure its advantages by organizing under the act. A very slight consideration will show that this would be practicable in a comparatively few cases.

The habits, tastes, temperament and education of the independent bankers would unfit them to become the mere employees of a board of directors perhaps a thousand miles away.

The managers of these branches, as stated to be the case in Canada by Mr. Clouston, are usually men trained from boyhood in the service of the bank. Our bankers as a rule do not possess these clerical attainments.

They are generally men who have acquired some capital to start with in some other line of business. They may have been merchants or cattle dealers or what not, and the experience gained in this manner has been of far more practical value to their banks than would have been the possession of any amount of clerical ability.

They have proven to be excellent drivers for the simple machines they have been running, but they would make indifferent cogs in the complex mechanism of the branch bank system.

Others may believe that even if the branch bank bill becomes a law it will be impossible to put the system into operation to the extent suggested. It may be pointed out that no disposition has been shown by large banks in the past to establish branches—that the difficulty which exists for obtaining proper local management would defeat the purpose.

Without doubt, this difficulty is a serious one and has had its influence in preventing extensions heretofore, but the experience of the past in this respect cannot be considered in this connection. Both our National and State laws have practically prohibited branch banks. If anything of the kind was attempted, it could only be done by organizing separate banks under the ordinary forms and requirements of the banking laws prevailing.

I do not think that many of the old and successful banks in the eastern cities would indulge in branches, no matter what the inducements offered might be. But if these banks are authorized in the manner proposed, concentrated capital will see to it that the plan will not be a failure. If existing banks refuse to take advantage of the privilege, other banks will be organized especially for the purpose.

I have endeavored so far to make clear the following points:

The branch bank system if adopted as proposed will destroy our existing system of independent banks.

Our existing banks will not be merged into the new system.

If the bill becomes a law, the system proposed will go into operation.

THEORY FOR BRANCH BANKS.

It now remains for us to consider the theory upon which the plan is based and the benefits to be derived from it, which in the opinion of its advocates will justify the radical action proposed.

There are two words which we hear frequently now-a-days when our financial problems are discussed—"elasticity"—for circulation, and "fluidity"—for capital.

This "fluidity" for capital is to be realized by means of the branch bank system.

Money it is thought will flow naturally and automatically, without friction and at a minimum of cost, from one section of the country to another and the power of the whole system may be concentrated whenever the occasion calls for it.

It is a plausible and attractive theory.

Attention is always directed at the beginning of the argument to the practice and experience in other countries where the branch system has prevailed with success.

This kind of argument has its merits, but is it a good one in this case? We might with equal force declare that because nearly all the great governments in the world are monarchies, therefore monarchies are superior to republics. The business methods prevailing in these countries and the circumstances attending them are entirely different from those which prevail with us. It has not been our custom to look to those countries for examples to guide us in our mercantile and industrial methods—why then should we attach so much importance to their financial methods?

ADVANTAGES CLAIMED.

The main advantages asserted for the system are as follows:

The security of a strong banking credit which will prevent and control panics.

The extension of banking facilities into localities unable to supply the capital required for banks.

The lowering and equalizing of the interest rate.

All of these things are of great importance, but there are other things in this connection of equal or greater importance to be considered.

Digitized by Google

If in order to secure certain advantages these other things are threatened or endangered, it would be well to halt before the step is taken.

BANKING A FACT, NOT A THEORY.

The banking business is not a theory, but a fact, and it pertains especially to communities taken separately. It is—what General Hancock said of the tariff—a local question. The business is also a species of trusteeship.

It has been said that he is a public benefactor who causes a blade of grass to grow where none grew before. So is the banker, who releases the buried talents, represented by bank deposits, and joins with them other talents of equal power and value.

But the master of the talents is the community in which the banker operates. The gains and the profits must not be sequestrated or taken away, but diffused in various ways through the community. If taken away to swell the perhaps inordinate gains of some other community, then so far as the master community is concerned, the talents may just as well have remained buried.

In the committee's report the following fine words are found:

"In each individual community the banks gather all the golden threads of thrift and American genius and with the warp of energy weaves them into garments of prosperity."

Now, I submit that the communities in which this gathering and weaving are done should have some assurance that they will also be permitted to wear these garments which are the product of their thrift, and not that they should be mere "hewers of wood and drawers of water" for some other communities.

BRANCH BANKS A WEAKNESS.

This, then, is my strongest plea—branch banks instead of being elements of strength for the communities in which they would be established, would be elements of weakness—of wasted efforts and lost opportunities.

They would bring nothing into the community and would take much out of it,

But let us investigate the special claims advanced for them.

CONCERNING PANICS.

Is it certain that they would prevent panics or control them?

No panic has ever been occasioned by the failure of country banks or from any causes which had their origin in the country.

It has always been the failure of city banks which has brought on the trouble, and there is nothing in this proposed law which will make the city banks any stronger than they are now—on the contrary there is much to weaken them.

Instead of the independent units which now distinguish our banking system and which to a remarkable degree have borne the brunt of the tempest and survived the storm, when city banks have gone down by the wholesale, we shall have central institutions with their numerous connected branches all going down together, just as rows of bricks will tumble when you overturn one at the head of the line.

Many different views prevail concerning the cause of panics. There are people who believe that they travel in cycles, and that there is some mysterious connection between the numbers of the years intervening between them.

But if this were true, we should expect the rule to be universal, whereas as a fact this is not the case, because they occur with greater frequency in the United States than in other countries.

One feature pertaining to them is simple enough and will be conceded by all, and that is the manner of their ocular demonstration—which is a struggle to obtain all the money in sight, it being well known that there is not enough to go around. Panics are generally preceded by large withdrawals of money from circulation—the movement having been induced from some plainly discerned action or trade movement. In the United States we have had more of these operating causes for currency contraction and therefore we have had more panics.

For instance—the panic of 1873 was preceded by the contraction incident to the funding of the war debt and the panic of 1893 was preceded by the heavy exportation of gold, which was demanded in payment for the unusual amounts of American securities which for some reason were thrown back upon our hands.

What the reason was for the return of these securities is also no mystery.

Mr. Stickney in his Milwaukee address declared with great emphasis that the fact that the panic of 1893 was experienced only in the United States proves his contention as to the superiority of the foreign system of banking, which prevented the panic from extending to those countries, and he asserts that if we had had this system in the United States the panic would have been prevented here.

Digitized by Google

But Mr. Stickney failed to note another fact which should be considered in this connection. That only in the United States had a political warfare with large possibilities of success been waged against the standard of value which had previously prevailed and in whose terms all contracts for the payment of money had been made. That only in the United States was the business of the country paralyzed by the threat of such a far-reaching financial revolution. It was not strange that the holders of these money contracts should throw them upon the market at this particular period when the controversy and its puerile compromises had produced their logical effects.

It is only reasonable to believe that the like circumstances in other countries would have produced like results, branch banks or no branch banks.

We have had more panics in the United States mainly because we have had more political interference with business and financial matters and they probably could not have been prevented by any system of banks.

WIDER EXTENSION OF BANKING FACILITIES.

The wider extension of banking facilities would be desirable. The enjoyment of them by communities which do not possess the capital required for a bank would undoubtedly prove of advantage to such communities, but this feature of itself is not of sufficient importance to justify the sweeping measure proposed.

It may also be asked if these facilities could not be as well supplied by branches of banks in the same county or State?

EQUALIZING AND LOWERING INTEREST RATES.

It is probable that the interest rate would be more generally equalized.

The loaning business being reduced to a system and the same rules applied everywhere for the grading of credits and valuing of securities, would naturally work to this end.

It is possible that the prevailing rate of interest might be lowered, especially if banks are also to be permitted to issue unsecured bank notes—but this is by no means certain.

The interest rates which have prevailed for a number of years past in the United States have been very low and it is doubtful if they could be forced any lower. It would be much safer to prophesy that they would go higher. There would be a less number of competing banks, and their thorough organization would easily permit of combinations to maintain rates.

MERITS OF EXISTING SYSTEM.

Having considered what I conclude to be the strongest points advanced in favor of the branch system, I will now endeavor to show some of the merits of our existing system in comparison with them.

Mr. Stickney declared that this is no system at all, and others maintain that it is so weak and decrepit that it cannot be mentioned in comparison for instance with the Canadian system and that it is at a disadvantage when compared with the banking system of some little South American State, whose people know nothing of gold and silver as money, but possess the inestimable advantages supplied by a central bank and its branches.

AMERICAN SYSTEM PECULIAR TO AMERICA.

We will admit that our American banking system is a peculiar one, but it can at the same time be fairly claimed for it that it is exactly adapted to American ideas and American manners, and that it has accomplished for American commerce and American industry what no other system could have ever supplied for them, and has never supplied to any other country in the world.

This system has been a process of natural growth, not a creation of law. The circumstances demanded banks and the banks came in response to that demand.

HISTORICAL REFERENCE.

Let us glance briefly at its history:

The downfall of the "wild cat" banks and some that were not "wild cat" in the panic of 1857 left a disorganized condition for the banking business. The day of specially chartered banks had come to its close, and in most of the States banks could only be incorporated under a general statute applicable to all corporations. Many years passed before there was any State supervision provided for them.

The National Bank Act of 1862 supplied the need for banks in the older and wealthier sections of the country, but the minimum of capital demanded was too large for small communities and especially for the rapidly growing States of the West.

State organizations were the only means presented for satisfying this need.

As an illustration of what has occurred in the lifetime of a man who may not yet be called old, let me instance the commencement and growth of banking in Nebraska.

Digitized by Google

In 1863 I joined in the organization of what was probably the first National bank west of the Missouri River, and which at the time was the only incorporated bank in the limits of the present State of Nebraska.

At that time there were within those limits only seven banking institutions—two of which were in Omaha and three in Nebraska City.

Their combined resources would not have aggregated a quarter of a million dollars. Nineteen years afterwards the number of National banks had only increased to ten, but there were eighty-three State banks. The following nineteen years were ones of marvelous development, and in 1901 there were 116 National and 421 State banks, making a total of 587 banks, with aggregate resources of 113.9 millions of dollars.

The ratio of growth in Kansas was very similar to that of Nebraska. In 1880 there were only twelve National banks, but there were 148 State banks, and in 1901 the number of Nationals had increased to 119 and State banks to 410, making 529 banks with aggregate resources of 106 millions of dollars.

These figures tell the story of banking in all of our Western States, and under no branch system would such growth have been possible.

The history has been a continuing one and is so to-day. As the earlier settled portions of our great domain have grown in wealth and population and put away the crude conditions of the pioneer life, National banks have taken the place of the early State banks. But the pioneer conditions have been reproduced elsewhere—have moved on as westward the star of empire has taken its way.

The covered wagon of the emigrant has carried with it the embryonic banker, and along with the first store, the first blacksmith shop, the first hotel and livery stable has been the shanty of the first bank.

Educated employees and well-equipped bank managers would have been out of place here. The close and intimate relations established between the banker and his customers would have been impossible for the branch bank manager. He could not have that liberty of action which has made the success of the independent banker.

It is true that the independent banker might not always exercise the care and caution which would be imposed upon the branch banker.

At times his sympathies might run away with his judgment and loss and disaster would be the penalty—but where there has been one case with this result there have been a dozen of the opposite result of success and profit, which would be equally impossible of realization for the branch banker.

Many of the most successful and prosperous financiers and business men of the country acknowledge that they owe their success to the timely assistance of some friendly banker, who instead of demanding security or scrutinizing closely the security offered for a loan, has shut his eyes to what he knew did not exist and has accepted for his sole security the trust and confidence he reposed in the man.

What do such customers as these care about interest rates? They need the money to finance some enterprise from which profits are expected, which will make the interest charge, no matter how large it may be, a mere pittance in comparison.

Such instances as these have been frequent. I have no doubt that nearly all of you can recall cases of the kind in your own experience.

The statistics at hand demonstrate what it has achieved and perhaps speak for it more strongly than any words could convey.

STATISTICS.

Mr. Mulhall, who is an authority upon the subject, states that in 1900 the banking power of the United States exceeded that of the United Kingdom of Great Britain and Ireland and all Europe put together.

The banking power of the single State of Massachusetts is almost double that of Canada, although it has only about one-half of its population. The clearings of the banks of Kansas City alone are almost double those of all the banks of Canada.

AMERICAN SYSTEM SUPERIOR.

Judged only by these figures, which indicate the actual work performed and service rendered, the conclusion is inevitable that our American system of banking, notwithstanding its admitted imperfections, its shortcomings and its weaknesses—which in time may all be remedied—is superior to any system of banking in the world.

This so-called reform in banking is proposed and urged by well meaning men, but men who in almost every case will be found to be guided solely by their environments, and not by any experience obtained along the lines of this strenuous life to which is due the existence of our American banking system.

The passage of the amendment proposed, by destroying the harmonious relations which

Digitized by Google

now exist in our banking world and by threatening the existence of our present organized banks, would not only be disastrous to the banks concerned, but would be a National calamity.

Address of J. P. Huston.

J. P. Huston, of Marshall, Mo., spoke as follows:

It should not be forgotten that the marvellous material development of our country during the past five years has never been eclipsed in time of peace by any people in any age. In agriculture, in manufacture, in mining and in transportation, new high levels of profitable enterprise have been established. Economies of management in productions and distribution have been introduced, not at the expense of the wage earner, but to his infinite betterment. The United States became first the granary of the world, next its workshop and now aspires to become its clearing-house. We may yet become that hydra-headed monster, the money power, against which we of the Southwest have so long railed unavailingly.

Our banking system has kept pace with this marvellous development and has had a share in its prosperity, and yet, thanks to the lamp of experience, banking transactions have been confined to strictly commercial advances more closely than ever before. The banks of to-day are in a clean, healthy condition. Never before, perhaps, in a period of inflation and high value have their holdings been so free from "boom" and speculative enterprises.

Our exports for the five years past have exceeded one billion dollars annually. Our exports in 1901 were $1,487,000,000, with a trade balance in our favor of $664,000,000. Our banking system has not only been equal to the task of financing this enormous trade, but we have taken a hand in financing foreign loans as well. We buy English, German and Russian bonds, and are easily paramount in Mexican financial undertakings.

The well-informed banker is justly proud of our present achievements. Let us weigh well the reasons before we discard the system that has served us so well, to adopt the branch banking system of Europe and Canada, which may be well suited to meet old-world traditions, but may fail to thrive if transplanted to the democratic soil of a free republic.

It is claimed that by the adoption of the branch banking system we would avert panics. Every branch of the parent bank would have behind it the splendid resources and credit of the parent bank, and there would be no cause for public distrust. If trouble occurred in isolated places, funds could be hurried to these places from the head office, but would be sent only when needed, and there would be no waste of forces. Well, panic is war! And war, as General Sherman said, is hell! If branch banking is proof against panic, I am in favor of its adoption. Perhaps we have panic conditions more frequently than in older communities, but it may be that our national temperament, and not our banking system, is responsible for the sudden changes from heat to cold, from extreme contraction. We are exploiting a new world. We go from extreme contraction to extreme expansion. We cannot wait on the slow processes of time, but wish to accomplish in a generation the results that have been the work of a century to others. Branch banks did not prevent panics in Australia, in Argentine Republic, in India! Rapid growth has its weakness, but who does not prefer the impetuous blood of youth to the stagnation of old age.

We lead the strenuous life. We are not content with mediocrity. The poor man would become rich; the rich man would become richer. Our enterprises are too vast for individual effort, and great corporations have almost covered the entire field of natural effort. The public invests in corporate stocks more largely than ever before, because the field for individual effort is narrower than in any previous time. The success or failure of these enterprises is of greater vital interest to us than ever before.

The managers of too many of our great corporations devote greater energy to stock-jobbing operations than to the earning of dividends for stockholders. The investing public is not yet sufficiently protected in its rights as part owners of the great railway and industrial enterprises. Too often stocks are deliberately forced to fictitious calculations by false statements of earning capacity. We develop periods of undue inflation, and the backward swing of the pendulum carries us into periods of undue contraction. The changes are sudden, severe and dangerous. Under these conditions distrust becomes universal. As values sink, credits based upon these values must contract. Banks must adjust themselves to meet new conditions each day. It is argued that a system of branch banks is stronger in a crisis than a system of independent banks, but if so, it must be proven that banks in the money centers suffer less strain in time of panic than the country banks. The very reverse is true. The storm centers are in the great cities. The metropolitan bank with a hundred branches would have a hundred points to guard, while the independent bank would have but one.

There is a saying that a bundle of sticks is stronger than a single stick. There is also a saying that a chain is no stronger than its weakest link. Let a single outpost fall under the branch banking system, and the parent bank is doomed. The independent banker can fight a panic in his own way. A branch bank must do so under directions from the head office.

Digitized by Google

individual initiative is sometimes more effective than blind obedience to distant commands. Every South African burgher is his own general in battle, and the successful strategy of the Boers has been a severe lesson to the pride of army tacticians who insist upon close formation and battalion movements.

They tell us that branch banking will equalize interest rates. But will it do so? Will it not rather impose metropolitan standards of credit upon country borrowers, and transfer the deposits of the country bank to the money centers, there to be employed in stock speculations, with interest rates fluctuating from two per cent. per annum to two per cent. per month? The country borrower is not known to the commercial agency and has no stock exchange collateral to offer. When his home bank is absorbed by some metropolitan bank, he may be compelled to resort to the chattel mortgage shark to secure accommodation at all.

We are told that great economies of management would be effected by branch banks. Economy of management would only be secured when the branch bank entered a locality and absorbed the cream of the business, and rejected small accounts as too troublesome to handle. The local bank would find its usefulness greatly impaired, and would cease to be the factor in the upbuilding of the community that it had hitherto been. A few rich borrowers might profit by the change, but the community as a whole would suffer by trusting the control of its finances to distant and, to its mind, alien hands.

Our system of banking is a free banking system in its widest sense. To engraft upon it the branch banking system would be to pave the way to numerous frauds and speculative enterprises. Mushroom ventures of the Zimri Dwiggins type would be exploited speedily.

Any restriction of privileges which would prevent such abuses would in effect grant special privileges to the few. We cannot engraft upon our system of free banking a system of banks having special privileges without violating the spirit of our free institutions. A law which in effect creates class privileges would fail to meet the approval of our people.

Would the branch bank be managed with more ability than the small independent bank at present? The country banker of to-day is thoroughly intrenched in his place and has an intimate personal knowledge of local conditions. He has the assistance of stockholders and directors who have the strongest personal interest in the welfare of the bank. A stranger of equal capacity sent out by the head office to take his place could not inherit the same measure of confidence and helpfulness.

Eastern banking capital has invaded the Southwest during the past five years, buying cattle paper freely. The record of losses will show that the local banker has exercised better judgment in making cattle loans than has the Eastern banker, and has made fewer losses. The cattle industry is an important one, and credit is required to carry it on. It has not yet been proven, however, that the non-resident banks have exercised better judgment than the local banks in extending these credits. Experience proves quite the contrary.

It is claimed that greater mobility of capital would be secured by a system of branch banking. Capital, we are told, will be taken from a point where it is not needed and transferred to a point where it is needed. Under our present system the surplus of the country is gathered together in the independent banks, and when not needed at home is sent to the reserve cities. Under the branch banking system funds might be absorbed by the financial centers in times of stress regardless of the wants of the farmer or country merchant. The country banker is not alone in his opposition to branch banks. There is not a city in the Southwest in which the news that its leading bank had been absorbed by a trust would not produce profound dissatisfaction. The country banker lives very close to his people and understands their wants thoroughly. Every applicant for a loan finds a sympathetic listener, whether the loan is granted or refused. The little dividends are put in circulation in the home city and the people feel and know that it is "our bank." They could never entertain the same kindly sentiment toward a foreign corporation.

Address of J. M. McDonald.

J. M. McDonald of Chanute, Kansas, spoke as follows:

This is no time, gentlemen, to indulge in pleasing platitudes or rythmical rhetoric, for we are confronted not only with a theory, but threatened with a condition which means an entire revolution in the banking of this country.

Now, the first thing as honest citizens of a great republic which we should consider is its effect for good or bad, not alone on the bankers, but on the masses, and its effect upon the citizenship of this great commonwealth.

The very foundation of our law-making power is based on representation in Congress from the different sections of the country—wisely, too, that all portions of the country should have voice in the management of the affairs of State, and we take it there is not a man in this assembly who would have it otherwise. With this righteous right guaranteed to the American citizen, how ridiculously foolish it would be to take away from the thousands of

Digitized by Google

competent bankers of this country the privilege of serving their patrons in the banking line and delegate that privilege to an organized monopoly, thus jeopardizing the functions of one of our most important commercial pursuits, and for whose benefit? Certainly not the average banker. Most assuredly not the masses. The public asks no better facilities than we now have. The Government cannot be better served, as the banks readily absorb all the demands at the lowest rates known to the world. No, gentlemen, no one is benefited by branch banking except greedy gluttons of an unholy alliance, who desire by this method to lay their hands upon every dollar created by honest thrift and industry; to dictate the financial policy of the Government itself, and so control the money of this country as to put their blighting touch upon the trade and traffic of this new world. Branch banks do not offer any increase in capital or any conditions by which anyone can be benefited, except the plutocratic combinations. It contemplates the special privilege of controlling the people's money without giving anything in return that the people do not already have. Its provisions are the rankest injustice and the worst specimen of class legislation ever brought before the people of this country. One of the first and paramount points in banking should be safety to depositors who entrust their money to a bank, and on this ground the branch banking scheme is possibly the weakest. The large capital presumably behind the parent institution is compromised by the excessive operations contemplated, and weakened by its various allies, the branches, until when panic does come and confidence cashes in all its checks and its children clamor for all it has and more, what becomes of your boasted safety? No, sirs, the small bank can always get through a crisis easier than your large institutions. In fact, the liabilities of the smaller bank are generally much less in proportion to its quick assets than the large bank. It is a beautiful theory that all the banking business can be done on the capital of the parent bank, but it is infamously more unsound than was ever the fiat money idea that the money would always be good because no one would want to cash it. This is the felicitous fake of our branch bank friends—that everything would be lovely, for the depositor would be so supremely content with the big New York syndicate that he would never cry for cash. Now, gentlemen, you overestimate the confidence you enjoy, for we verily believe the average depositor feels safer with his local banker than he would with your Stickney-Gage rock pile all in New York—and we think he would be, too. It is not the fear of competition that the country banker predicates his objection upon. It is the injustice of the competition which permits the branch bank to enter the field without pick or spade and go to making garden in the grounds he has been years in preparing.

Undue expansion has no allurement for the conservative banker, and safety in times of panic or at any other time can never be enhanced by such expansion of business as branch banking has in view; and there is no demand whatever for such an expansion outside of a few financial Samsons who imagine they own the earth and all there is on or in it. We speak from a Western standpoint and say to these gentlemen: You are welcome to the good things of the boundless West upon equal terms and a fair distribution of the benefits you shall have, but also take your fair share of the burdens: you cannot grind your axe on our grindstone unless you help turn the crank. The people of the great Western Empire are honest, just and patriotic, and whatever favors we have obtained we have put up the collateral for, and if King Solomon wanted to erect a temple upon the plains of Kansas, he would have to conform to that eternal principle which guarantees "equal rights to all and special privileges to none."

The argument of our branch banking friends, that with branch banks facilities would be improved, is the merest "rot," as all sections of this country have abundant banking facilities, and if there is any locality that has been overlooked, will some gentleman hold up his hand and we will guarantee to send him someone who wants a banking location in the next thirty days.

Exchanges and interest are reasonable everywhere, and the silly twaddle about equalizing the rates of interest all over this country is just as sensible as would be equalizing the price of wheat or corn all over the world. Competition and conditions regulate the value of money and always will, and no one knows this better than the branch bank supporters, and on this point they are not honest, and we are not going to admit that this is the only point upon which they are in doubtful positions.

We reassert what others have said, that the public has infinitely better banking facilities in this country with independent banks than has any country in the world that has branch banks. The encroachment of corporate power upon individual effort is the greatest danger to-day to this republic.

If branch banks mean anything they mean the displacement of our home institutions by branches of aggregations of capital owned and controlled in the financial centers. This means centralization of money, which will do more to destroy the citizenship of this country than any one thing, do more to array the poor against the rich, do more to encourage anarchy and precipitate ruin, do more to weaken the patriotism of the masses, do more to weaken the Government and increase our millionaires at the expense of the common people—in fact, it

Digitized by Google

will do more to fasten upon all branches of this Government the poisonous touch of fraud and will do more to pollute the ballot and degrade our citizenship and disgrace and humiliate our populace than anything that has confronted us in the past century. Just at this time, when all lines of commerce are taut and the old ship is in clear waters with all sails hoisted, it is very unfortunate indeed that a few of our wiseacres shou'd suddenly discover such a panacea as branch banking and threaten serious disturbance to the banks of the whole country; but it is only in times of extreme prosperity, when confidence sits serene upon the bulwarks of safety, that such heresies could even be born. Such progeny could not survive over night in times like 1896—and you gentlemen engaged in banking know it, too. One of the old landmarks in the banking world who has recently passed to the Grand Clearing-House of the Universe, a few weeks before his death, in answer to a letter we wrote him for the views expressed at a dinner party in New York, at which Mr. Gage had aired his new financial prophecies, said that after thirty-four years' close observation as President of the Gallatin National Bank, he was thoroughly convinced that these advanced theories of Mr. Gage were absolutely wrong and a trial of them would be a serious mistake. Such was the opinion of Mr. Frederick D. Tappen, for over thirty years President of one of New York's banks.

Branch banking is a banking monopoly, its privileges only enjoyable by the larger institutions, and as such we must consider it. In theory it is as beautiful and fascinating as a Kansas maiden in her new Easter bonnet, but in practice it is as ugly and uninviting as a Creek Indian without a blanket. It will soak up local enterprise like the hot winds of August, and be a non-resident stumbling-block in the pathway of home industries. Monopoly never advanced the condition of mankind and never will—from that first experiment in the Garden of Eden, where Adam had a monopoly on Eve; he made a mess of it, and the world has suffered from it ever since. * * *

THE FOWLER BILL CONDEMNED.

Now, gentlemen, be candid and honest—did you ever read anything or ever hear of anything like the "Fowler bill?" Gentlemen, we are unalterably opposed to your plan of branch banking. We don't think it honest to try and secure the people's money on deposit without some capital behind your bank capital that belongs to the bank receiving the deposits. No bank with its directorate in New York can intelligently serve the people of the country a thousand miles away; no bank can do so except that bank which is in touch with the people, knows them and is on the ground, familiar with the details and resources of the community in general. These kid-gloved gentlemen from New York may theorize beautifully, but when you come to put it into practice it will fail—not fail possibly in doing the local banks serious injury, but fail to supply the wants now supplied by local banks.

Emergencies may arise, and our branch bank friends seem long on the emergency proposition; but it is not distance that lends confidence. The fact of the parent bank being at a great distance from the many branches cannot long be out of reach, and every branch must be sustained, or down comes the whole tree. The local bank is substantially in the confidence of the community, which is in a general way familiar with the class of investments it has, knows the personal character of the man in charge, and allow me to say it is largely upon such things that rest the credit and confidence of the bank.

If the city bank would insist on operating branch banks in the country, the country banks would be driven to organize and put in their own correspondents at the financial centers. We do not think this would be a good thing for either the country banks or the city banks; but this is what will be done as certain as branch banking is ever permitted in this country. Our present system of National banking was an emergency measure, but with its modifications is to-day the best system of banking the country ever had—not so liberal, probably, as some of our branch bank advocates prefer, but it serves well, honestly and faithfully the people who patronize it, and is safe and well managed, because its requirements are upon business lines and do not permit wild catting like branch banking provides for. We had a Dwiggins in Chicago a few years ago who tried a similar plan to branch banking, and at one time upon the capital of his Chicago bank operated quite a number of banks in Illinois; but they all came to grief, and the promoter of this modern financial folly came along with them.

With assets currency and branch banking we would enter upon an era of inflation that would be a world wonder, and the end would be no doubt also a world beater; but why attempt that which has always been productive of such disastrous results? Why not let well enough alone and be prudent and honest, and the bankers and the people will be much better off in the end. There is not an argument in favor of branch banking except in favor of monopoly and inflation, nothing but possible gain for the few at the expense of the many.

Gentlemen, we of Kansas are a liberty-loving and independent people. We believe in the largest measure of individual liberty that is consistent with good government. We believe in equal rights and always have. Our fathers struck the first blow for the emancipation of slavery. We are patriotic and allow no State in this Union to surpass us in our allegiance to

Digitized by Google

good government and pride ourselves upon the boundless resources of our fields and mines. But more do we pride ourselves upon the high order of our citizenship, the high standard of manhood and excellency of womanhood—and allow me to say that no Kansan asks any special privileges in any arena, neither does he seek to enter any, but courts the honest competition of the world in all pursuits and avocations, and welcomes all upon the broad plain of justice and right. We throw down the gauntlet to no man, neither do we shun combat if taunted to it. We know no commercial lines except those good for one hundred cents. We hanker not after any banks except those with paid-up capital of their own, upon which they pay their fair share of the expenses of maintaining the county and State; neither do we wish the confidence of capital except upon the most approved plans of safety. We are still banking on the old-fashioned lines that the depositor should always have the first lien upon the resources of a bank, and if this is against asset currency, then we are "agin it."

The very air in Kansas makes a man despise these little advantages that are sometimes miscalled financial schemes.

We are perfectly satisfied to keep our surplus that our patrons don't need with New York, Kansas City and other banks—so long as they do not attempt to enter our yard by stealthy means—and when they do (which we think they will attempt in the dim distance), we will do our best to make it warm for them, and our banks will place their own depository in New York and other needed financial centers and we will do it without withdrawing one dollar from the capital of our home banks.

Address of Edward McKenna.

Edward McKenna, President of the Bank of Poteau, I. T., spoke as follows:

Gentlemen of the Convention—In speaking on the affirmative side of the subject of branch banking, I ought to be able to give you some peculiar ideas, for it is a subject that I don't know anything about—have never heard it discussed—and have never read anything dealing directly with the question. Yet I have given the subject some thought, and I am really thankful that I am on the affirmative side of this discussion.

In the first place, I believe in branches, and while I have had no experience in branch banking, I have had some experience in branch stores, and with me they have always been successful, which I admit is contrary to the general experience of the mercantile world. But this is easily explained; branch stores are sometimes started by firms in an embarrassed condition to relieve an overstock of goods, or for fraudulent purposes, and are bound to be failures. But when a branch store is started in a good locality, as a sound business proposition, with a proper choice of manager, with the constant supervision of the parent concern, there is every reason to believe that it will succeed. With branch banking, the reasons for the failure of the store do not exist, but the same reasons for success do exist, for with the proper choice of locality, the careful selection of a manager, and the constant supervision of the parent concern, success is assured.

A strong bank in a financial centre like Kansas City, having many branches in the different States and Territories of the Union, would occupy an almost impregnable financial position. It could take the funds of the money-congested Eastern and Middle States, pay a good interest on deposits, loan them in the enterprising communities of the West and South, where opportunities for safe and profitable investment are to be found, thus doing good to all sections and with perfect safety to its depositors.

Compared with small independent banks, the branch bank would have a great advantage, and especially in times of financial distress. The independent bank would have only itself to rely upon, for its fair-weather friends, upon the first approach of the storm, would look out for themselves, and the cry would be "Every one for himself and the Devil take the hindmost." With the branch bank it would be different; it would have the parent bank to rely upon and that might not be affected, for while there would be trouble in one section, prosperity might reign in another, and an equilibrium would be established which would conduce to the general prosperity.

Of course, in starting a branch bank, as well as any other kind of business, good judgment should be used, but the men in charge of large financial institutions are supposed to possess good judgment, and they generally do. The principal thing should be the selection of a manager, and for this purpose it would not be necessary to have a prodigy of financial ability, for any commonplace man would be so guided and protected by the rules and regulations of the home office that he need not err, and even in case a dishonest person should be selected, there would be less chance for peculation than there would be in an independent concern, for the home office would do business on business principles, and would have its system of bonds and other safety appliances that would make the business perfectly safe.

In the older countries of the world the system of branch banking has been practiced ever since banks have existed, and practiced successfully. In our own country the same princi-

Digitized by Google

ples have been practiced, and are not practiced by large concerns in other branches of business. Take your large packing establishments, the telegraph and express companies, and they are all setting the example of what might be done in a system of branch banks. The same economy in management, the same close supervision, the same system of checks and balances, might all be used to advantage in the operation of these institutions.

To many of us, and especially those from the South, the ideas and methods of the trusts are not likely to be adopted in full faith, yet we are bound to admit that their ideas and methods are based on sound business principles. It has been said that the man who can cause two blades of grass to grow where one formerly grew, is a benefactor of the human race. I will go further and say that the man who can do a piece of work at half the usual expense and in half the usual time, is in the same category. And I believe that the reduction in the work of the world is not a misfortune, but a blessing, for it gives more leisure and more comfort to the people.

Address of D. W. Hogan.

D. W. Hogan, President of the First National Bank, Yukon, O. T., spoke as follows:

The subject of branch banking has been under discussion for several years, and the interest taken in the matter, by those who seem to see something in it, has grown and developed, until of late one can hardly pick up a banking journal that does not contain articles and editorials in regard to it. The seeming indifference of the public on this subject has encouraged the advocates of the measure to such an extent that they have pushed it along until it has now taken form and has been incorporated in the Fowler Currency and Banking Bill and the public suddenly finds itself up against the real thing, and confronted by a proposition and not by a theory. Those who are in favor of the measure, say that the branch bank system would be a benefit to the rural districts where there are no banks, or only small ones; that it would lower and equalize the rates of interest; that it would do away with many small banks and that it would be an advantage to the public in general. This may all be true. But before passing the proposition by on its appearances, dig into it and uncover it, tear away the sugar coating, and you will find a colossal trust in embryo.

There is no mistake as to its identity. The earmarks are all there. But where did it spring from? Did it come from the rural districts? No. If there are such things as rural districts, we surely have them in Oklahoma, and I can state from personal observation that there is no clamoring there for branch banking. Banks on wheels are kept in stock in Oklahoma City ready for any emergency that may arise, by a new town springing up in the night. We might say, on general principles, that it came from Kansas, but Brother McDonald, from Chanute, informs me that he has examined his State carefully and finds no trace there.

If any bank in the Indian Territory is contemplating a branch in the City of New York I have not heard of it. As to you Missourians, I am sure that after I have shown it to you that you will not claim it.

That this movement found its inception in some of the great cities there is no reasonable doubt. And why not? Who is it that is wanting to establish branches? Is it the city banker or the country banker? It would be absurd to think of the latter. It is very plain that the city banker who advocates it thinks that he would derive much benefit from such a measure, but that benefit, if obtained, would be gained at the expense of hundreds of country bankers, each of whom is entitled to the same consideration at the hands of our lawmakers as their brother city banker.

We are all aware of the fact that these city bankers are not in business for their health alone, and the talk that is made about reducing and equalizing the rates of interest in the rural districts and helping them out, is all rot. Did the Standard Oil Company ever do anything like this? I think not. The branch bank might reduce rates for a time to freeze out an independent bank, but when this was accomplished there would be a different story to tell. All trusts do business about alike after they get the road clear, as is shown by the fact that we still pay twenty cents per gallon for oil in Oklahoma regardless of the scores of gushers in our adjoining sister State. Some city bankers, no doubt, feel sick and sore at heart, when after a restless night they pick up their morning papers and find that one of their neighbors, who happens to be in the trust business instead of banking, has closed a deal that will net him several millions in cash, and seeing how easy it is done, his appetite is wrought up to the point of preying on his own kind, and he breaks out with the theory of branch banking. It has been said that the trust fever is catching, and no doubt it is, judging from certain sypmtoms manifest here to-day. So far, the country banker has paid little attention to the proposed trust, the sole object of which is to devour him, but now since the application of pepper and salt, he is beginning to smart under the situation, and ere long you will hear him, if not at this time, calling for a halt, and the opposition that is now felt in Congress already shows which way the wind is blowing.

Digitized by Google

At the last presidential election both of the great political parties incorporated in their platforms an anti-trust plank, and the fact that a bill creating a trust is introduced so soon thereafter would indicate that there was an organized effort being made from some source.

Canadian branch banking is pointed out to us with a great deal of gusto. The idea of comparing that poor, undeveloped, insignificant branch domain, with our free, independent, prosperous republic, the greatest on earth, is too absurd for serious consideration. Why, there are almost as many banks in the State of Iowa alone as there are in the whole of Canada. The undeveloped rural districts of Canada might well be accounted for by the branch bank system sapping their financial strength and depositing it with the parent bank, many miles away. The people of the rural districts of the United States differ from the Canadians from the fact that they are not educated up to trust banking, and it is likely that their prejudices against trusts would keep them from depositing their funds. It is passing strange that some of the advocates of the branch bank system do not change their places of business to Canada, where they can have laws more to their liking. The independent banker fills a conspicuous and important place in every village, town and city in the United States. He is consulted on both public and private matters, and he is interested in the upbuilding of his community because his business and his home are there.

Contrast this with the cheap agent of the branch-bank system. His sole interest would be in the salary that he was drawing and how long that he would hold his job. Any matter of importance taken to him would have to be referred to the parent bank, thus making inconvenience and delay. The advocates of this measure must not be too sure of their game. A bank is run as much for the purpose of getting deposits as to loan money, and one who has money to deposit is very careful to select the bank that he thinks is the safest, and he then keeps tab on it, and the slightest change in its management or methods is not passed by unobserved. The city bank with a family of two hundred branches, each of which would be a vulnerable point of attack, and each managed by an agent who has no particular interest and acting only as a machine, would certainly not be as safe as the same bank run independently. For instance, a borrower on approaching the agent of a branch bank could say to him that if he would color the report of his application for a loan and get it through, that he would pay him a commission, and thus a loan would, perhaps, be made that would prove a loss. Even a good loan sometimes turns out bad, and in such cases it is safe to say that the independent banker, on the theory that self-preservation is the first law of nature, would come nearer shaping the matter up and collecting it than the machine agent of the trust bank. The independent country banker would be foolish indeed that would keep his deposit in such a bank.

CITY BANKER OPPOSED TO BRANCH BANKS.

I do not mean to infer that all city bankers are in favor of this measure, and I am satisfied that numbers would not enter such a hazardous field if it should become a law. A city banker, of wide experience, stated in a letter on this subject, that "he was trying to run his bank on conservative, safe and profitable banking methods, and as a city banker he would rather take care of his good customers from the country than to start branch banks." I think all country bankers will join me in saying amen to the good common sense of this statement, and I hardly think that they would differ with me in thinking that such a bank would be a good place to carry a reserve. The country banker, who has the funds of widows and orphans entrusted to his keeping, has a right to enquire into the methods of his correspondents. In fact, this is the only source of danger to him over which he has no control. During the panic of '93 our bank was cut entirely out of the circuit, that is our correspondents all closed up, and for a time we had to buy postoffice money orders to make remittances, and I shudder to think what would have happened if branch banking had been in vogue then.

The independent system gives the home people a chance to invest in the stock of their home bank, and the profit arising from the investment is kept at home to further other enterprises and build up the country. The directors of the home board have the welfare of their banks at heart, and are always on the alert to further its interests. Its loans and investments are passed upon by those who are vitally interested, and should it run short of funds during certain seasons, its city correspondent stands ready to supply it. Now, would it be justice for Congress to pass a law that would drive such institutions out of business? Would it be better for the public to have the individuality and personality of the independent banker taken away and the tool of the trust bank substituted? Certainly not.

The banking business is different from other lines. It is founded on confidence, a more sacred basis, and should be kept out of the trusts.

Undue competition in the cities is inducing this idea to a great extent, and it is apt to carry matters so far that a leveling process will have to set in to right it. The country banker feels this competition and rivalry by the number of letters he gets from his correspondent's competitors, and the pet phrases that some of them use, such as "your good bank," etc.,

Digitized by Google

would better be omitted, as they produce a tired feeling on the subject addressed. The score card that some of the banking journals publish from time to time, showing in order the deposits of a number of banks, tends to create an undue rivalry and does more harm than good.

Statistics show that the small towns of the United States have more banks than any other country. Then why depart from a time-honored custom? Is the public clamoring for it? Has anyone heard any howling from the rural districts on account of their having no funds on which to do business, or because there was no convenient bank in which to deposit? If so, I have not heard of it. There is at present a friendly feeling between the public and the banks, and both are doing well, and a disturbance such as this would bring about is ill-advised and uncalled for. I have a great deal of faith in the lawmakers of our country and have little fear that this measure will become a law.

However, a little work is a good thing to mix up with faith if you want a matter to go your way, hence I would favor a ringing resolution being passed at this meeting opposing the bill. I would further recommend that each country banker take the matter up individually and at the State bankers' associations, and that each one write their city correspondent and representative in Congress, that in your opinion it is better "for every tub to stand on its own bottom."

Address of Hon. James H. Eckels.

At the Wednesday afternoon session, Hon. James H. Eckels, former Comptroller of the Currency, was introduced, and delivered the following address:

Mr. President, and Ladies and Gentlemen—I wish to thank the members of this association for the pleasure which they have given me in permitting me to come before them to form a personal acquaintance. For a number of years I enjoyed official relations with a great many of them, and I now indulge myself in the pleasure of a better and a personal acquaintance.

It is to be stated to the credit of the associations who are met here that, departing from the regular lines of discussion at bankers' conventions, they have taken up (and I trust with the purpose of arriving at a right conclusion) the argument and the investigation of economic questions of vital interest and of vital welfare to the country. I trust that there is no one here present but is willing to look into these questions which have been presented and which are to be presented, from any other standpoint than the standpoint of merit and the standpoint of doing that thing which in the end means the best thing for both the banker and the patron of the banker - the people; for I take it that there can be nothing done of benefit to the banker which is not as full a measure of benefit to the great body of the people, for the prosperity of the one is dependent upon the prosperity of the other, and the impossibility of one succeeding while the other fails has been more than once demonstrated in the history of economic and commercial crises in this country. I have heard it more than once from the platform, I have read it more than once in the columns of the press, that the banker succeeds through the impoverishment of the people, and the thing which he wants is the thing which the people ought to be against. There is no greater fallacy than such a doctrine, and if you doubt it you have but to recur to some of the past economic history of this country to correct the conclusion to which you may have come; for I take it that no thoughtful citizen who investigated the condition which existed in this country from 1893 to 1897 would dare say that the banker was in a prosperous condition while the great body of the public was suffering from distress and impoverished conditions. The relations between the two are interdependent, as much so as are the relations between the barest portions of this great country and between this great country and the peoples of other nations. The politician standing upon the platform, seeking to gain for his party some advantage, may talk to you of the impoverishment of one section of the country to the enrichment of the other, of the impoverishment of this country of ours to the enrichment of the world at large; but such statements are false in theory as they are false in fact, because when this section of the country has idleness within its domain and poverty within its homes, poverty is found in the East and in the South and in the North. When this whole country of ours is impoverished, business lagging, commercial conditions of a character that makes distress, so too is impoverishment abroad, financial distress abroad, and commercial depression everywhere abounds. So, let us put away from us the idea, as we put away the idea in our national history, that this section or that section can have a distinctive system of finance to its advantage to the disadvantage of some other, any more than this people of ours can have what more than once has been boasted upon the platform as an American system of finance.

It is impossible, for the relations of business in the West to bear too close a relation to the business conditions of the East and the impoverishment of the West bespeaks the poverty of the East. There is no moneyed octopus in the East stretching its tentacles to the West, hoping therein to gather that which you have laid up, because what is the prosperity of the East

Digitized by Google

is but the reflected prosperity of the West; and what is prosperity for the West shows likewise in the prosperity of the East; for as the eastern bank has grown up, it bespeaks the growth of the western bank, for without that growth, the growth in the East is an impossibility. Poverty is not the heritage of one and riches the heritage of another; but in a great country poverty and riches are the inheritance of all sections and of all people, and the condition of the one is likewise the condition of the other.

So, in discussing this question which it is proposed to discuss this afternoon, of whether or no it is possible to have a better system of note issue on the part of the banks than that which already exists, let us remember to discuss it without respect to State lines and irrespective of geographical distinction, because you cannot have a currency now in this country for Kansas and Missouri and the Territories of Oklahoma and Indian Territory which is not equally as well adapted and as good in New York and Illinois and Pennsylvania. We have passed the point of provincialism in this nation, as this nation has passed the point of provincialism in this world at large. What we must have in any innovation undertaken, whether it be bearing upon the subject of note issue by the banks or branch banks to the banks, is a system founded upon sound economic principles, that is sufficiently sound for one section of the country as it is sufficiently sound for another section of the country, and withal, which is not only sufficient for our own country, but which accords with the financial systems and the economic doctrines which prevail in all great commercial countries.

THE CURRENCY SHOULD MEET COMMERCIAL REQUIREMENTS.

We drove from within our border the silver heresy, because it was untrue as an economic doctrine and accorded not with economic facts, because it was a great illusion, and because it was opposed to all the commercial history of mankind and the commercial requirements of every great economic commercial nation. And what was the result upon the silver question and the test as to the correctness of that doctrine must also be the test as to any suggestion which is made either upon the better banking facilities of the country or the better note-issuing facilities of the banks. Unless such suggestion meets the requirements and the demands of commerce, then those suggestions are economically false and ought not to be adopted, because the currency of every commercial country ought to meet the requirements of the commercial conditions of that country. The bank came into being for what? To advance the interests of the State? Never! For the purpose of advancing the interests of some political power? Never! But it came into being as the handmaid and the handmaid alone of commerce, to meet the requirements of commerce; and whenever the banking institution fails to meet the requirements of commerce, then that institution fails of the purposes of its creation and is no longer an aid, but is a detriment to the welfare and the advancement of the prosperity of the people. Unless your currency conditions are in accord with your commercial conditions, there is something wrong with those currency conditions. Unless your banking conditions comply with the requirement of your commercial conditions, there is something wrong with your banking conditions; and a great people, a fair people, will investigate the one and investigate the other, not with the purpose of backing up some preconceived idea, not for the purpose of vindicating the pride of personal opinion, but for the purpose of arriving at a correct conclusion which in its results shall be beneficial to all the people of the country; and that conclusion must be a conclusion where the investigation of the scholar accords with the experience of the man of affairs, so that when a finality is reached the man who has investigated from the standpoint of history and economy, science and economic proof, meets with the man who has been behind the counter and in the affairs of business, both can say: "My investigation of the facts accords with your experience as you have found it in the affairs of the larger transactions of life."

So, approach these new questions, not from the standpoint of what already is your notion, but from the standpoint, first, of getting at the truth as the truth is, and then from the further standpoint of a courage sufficiently great to take the advanced step, knowing that in so doing no right is jeopardized and no danger is encountered.

When it comes to the issuing of notes by a banking institution, let us remember, first, that a bank is organized to meet the needs of commerce; that its purpose is to make possible not one transaction with the actual property in a trade changing hands, but for the purpose of facilitating the many transactions through the creation of a proper medium of exchange, whether that exchange takes the form of a currency in the distinct promise to pay, in the form of a note given to a customer and redeposited, as needs be, in the bank, or in the shape of a credit taking the form of a deposit placed upon the book of the bank. Let us take a step farther and remember that the bank is the only agency which has ever been created which furnishes the proper medium of exchange in the business transactions of a people; that there has been in that bank a continued evolution—first, a place merely of safety; then, as transactions grew, the commercial relations of a people took on a wider scope with peoples of adjacent countries, then with people beyond the sea, that the bank, not by aid of legislation, not by the aid of the "be-it-enacted" of parliament or Congress—the bank,

Digitized by Google

through the management thereof, found out the means whereby the credit could be transferred and utilized, whether for one part of the country or another or in lands far beyond the sea. With that evolution came the further idea that in the commercial relations of a people there must be not only a deposit currency, a utilization of credits upon the books of the bank in the shape of deposits manifested in bills of exchange and currency in the shape of checks, but in the remote places far distant from the centers of industry and commerce, there too were peoples who must have some evidences of credit which would be of use to them in the transferring of property, whether that property be great or small, as between themselves. This was all right in the cities where there was growth and utilization of deposits, but where banks were not, where people were remote, where transactions were small, there must needs be, too, a credit, just as essential as the utilization of credits in the city, but not necessarily as large, but for the same purpose of transferring property without the actual intervention and swapping of property.

What was the result? The bank, even before it had created its deposit credits and its deposit currency, looked about for the purpose of creating a currency note-at-hand credit in the form of a small promise to pay, issued by the bank against actually existing values, and we had the bank note as a forerunner of the deposit credit, created by the bank in the later years. Always the bank note has been the instrument issued before the deposit credit, and in the countries where bank deposits yet are small, where the people are uneducated upon the use of banks and the use of checks and the use of bills of exchange, we have the banks confining themselves to the issuances alone of promises to pay in the form of bank notes rather than in the utilization of credits in the shape of bank deposit credits represented in the transaction of business by the draft, the check and the bill of exchange. What has been the result? The result has been that there have arisen two ideas upon the subject; one that the bank note is a greater and better instrument than that which is represented by the second idea, the issuance of such small notes to circulate as the representatives of money by governments, represented by their legislative and executive power. Unfortunately, in this country, under the stress of great civil war, to meet the exigencies in camp and on field and water, to sustain the integrity of the nation, this people unhappily for a time lapsed from the true idea of a bank note being the best representative of money, and permitted the Government to issue its promises to pay, in the shape of the greenback; and from that day until this the commercial relations of this country have been disturbed, the business affairs of this country have been overturned, an extra charge has been placed upon every man, woman and child in the country, speculation has been rife, the credit of the Government and the people endangered by the notes issued by the Government of the United States instead of the notes issued by the banks against actually existing values rightfully converted into value. We have had, throughout more than thirty years, trouble and turmoil, anxiety and doubt, the recurring watchings of the export or the import of gold, the studying of the reserve of the Government, the taking from the channels of trade and commerce immense sums to lie in wasteful idleness, because of that error, an error which at last the people at least realize, and in the last session of Congress undertook to impound those dangerous elements in our currency system and to make if not entirely a source of harm, at least less a menace to the business interests of this great country. The act of Congress impounding the greenback or making the greenback an interchangeable dollar only with a gold dollar, demonstrated the truth of the assertion witnessed by the history of every great commercial people, that it is a dangerous thing for the legislative power to undertake to issue promises to pay in the shape of notes payable upon demand instead of permitting the properly organized institutions, knowing the commercial relations of the country, to be the agencies and put forward those promises to pay and to be the agencies of caring for those promises to pay and the agencies to furnish whatever gold is necessary for the meeting of the demands of domestic and foreign commerce.

So we advance to a point where the legislative act of the Government finally has said, to an extent at least, that the protestor against treasury issue from the day of their issue until this, was correct in his contention that the issue of the treasury of a government in the form of a promise to pay was a constantly recurring source of danger to a people in their commercial and business relations. We have yet other steps to take. Our financial system—the result in the greatest part of emergency legislation under the stress of circumstances, a system yet incomplete—presents to the citizen, to the banker, a constant study, not for the purpose of weakening it, but for the purpose of making it strong wherever it is weak, so that its weak point can bear the burden placed upon it irrespective of what may be its strongest condition.

We will approach from time to time new questions, and the question which will be considered and upon which a final conclusion will be reached according to the needs of commerce, according with economic history, willl be as to the improvement of the bank-note function of the banks of this country. To-day that note issue rests upon a bonded security, as it did thirty years ago when the National banking system was brought into being—not for the purpose of according with commercial interests, not for the purpose of meeting commercial conditions

Digitized by Google

as they then existed, but for the public political reason of meeting the interests of a government driven to dire extremes by the impairment of its credit and which, for the purpose of making that credit strong enough to furnish the means for armies and navies and maintaining the integrity of the Government, had to resort to creating a financial institution, not for commercial needs, but for the sole purpose of making a market for Government bonds. It was not, in a party sense, a political measure, because it was a measure the outgrowth of the needs and the requirements of the Government: and into it, because of that need, entered a wrong doctrine of note issue which, as the people have gone along with, has come to be considered an absolute essential to the safety and the well-being of commerce and to the soundness of the promises to pay of the banks issuing such notes.

The protest against a bond-secured currency in the first place is that it is an unscientific note issue, which has in and of itself, granting that the bonds themselves are always sound and will be redeemed by the Government, only the one essential element requisite to a note issue on the part of a bank—and that is the condition and the requirement of absolute soundness. Its best defenders, I take it, will not undertake to say that beyond the element of soundness it presents a single feature of such pre-eminent importance as to warrant the clinging to it and the worshipping of it as some fetich. It has soundness, I grant you; but the fact that it has soundness does not preclude the fact that we could have a note currency issued by the banks which not only possesses soundness, but as well possesses the elements of responsive ability to the varying changes and the requirements of commercial conditions. Do not forget, in the study of this question, first, that the bank is the instrument of commerce and that the currency of a people must be regulated by the commercial conditions of a people and no other conditions whatsoever; because the bank and the currency of the bank are from first to last the responsive requirements of commerce.

So, I say that commerce wants a note issue on the part of a bank, first, that is absolutely sound; and in the present note issues of the National bank it has a note which is absolutely sound. But commerce wants more than that. Commerce wants a note issue which is sound and which from day to day in its volume meets, not only in the cities of great commercial undertakings, but upon the frontier and in the sparsely populated places, the needs of the people in their transactions, in their transferring of property from one to the other; which will meet the requirements of these people. So if you have a note issue upon the part of the bank which, as I have stated, is admittedly a better note issue than a note issued by a government, if you have a note issue on the part of the bank sound, always redeemable, quickly responsive to the varying changes in the commercial relations of the people one with the other, harmonious with economic truth, according with economic history, not in violation of the laws of finance of a single people or the laws of the finances of a whole world of people, you have advanced a step and made more sure the commercial supremacy of this people and taken an advance which more and more means the enrichment of the individual, whether he live in Oklahoma or in the financial maelstrom of Wall street. And if your note issue is not responsive to the needs of the farmer or the ranchman or the trader in Oklahoma, it falls as far short of meeting the needs of the great financial giants of Wall street or Lombard street. Do not, in the study of this question, lose sight of the fact that there is but a difference of degree between the interests of the farmer upon the plains and the financial chieftain sitting at his desk in some great banking institution of the East.

A bank note issue, then, must be safe, must be responsive from day to day to the needs of commerce, must be redeemable upon demand in the standard coin of a realm, the standard coin of the world—in gold; must be quickly usable, must be quickly withdrawn when not needed. When you have such a note issued by a bank, you have a note which meets the needs of commerce and you have one which, as against the present bank note, is as far superior in meeting the demands of commerce as is the dollar of gold as against the dollar of silver, because it has all the requirements equally sound in every particular instead of a single requirement with a great many weaknesses in other directions.

SAFETY OF NOTES NOT SECURED BY BONDS.

It is alleged that there can be with safety no note issued except a bond-secured note. Why? Because the people will be afraid of such a note? Will the people be afraid of such a note if safeguarded by uniformity of the issue from the general Government, of quick and careful supervision by the general Government, of quick redemption? Will such a note be of any less value with a sufficient fund established by a system of taxation, making redeemable the note of a failed bank immediate upon presentation, as today is the case with the National bank note? Will such a note be an unsafe note because of the fact that the Government does not hold the security, when it is issued against actually existing, quickly convertible commercial assets? But some one says there will be an over-issue by some bank in Oklahoma or in New York. How an over-issue? Do these gentlemen think that the banker is going to issue these notes and give them away? Does he think there will be a free distri-

Digitized by Google

bution of assets currency upon the issue thereof? How will those notes be issued? Not for fun nor to please the people nor to make a gift; but they will be issued just as a check is issued or a draft is issued or a present bank note is issued, to a borrower, if you please, or to a man who has property to sell; issued because of value therefor received in exchange. And I say that as an economic proof and as a banking doctrine fortified by the experience of every great commercial country, it is an impossibility, with a proper system of redemption, to keep in circulation more bank notes than the requirements of commerce call for, and that bank notes issued against assets on the part of the banks for them, and you must regulate the amount of currency that you need in your community, not by what the merchant or the farmer or the manufacturer may require from day to day as you see it, but by what the source of profit may be for you to issue these notes after you have bought the Government bonds in the market and have sent them on to Washington. I say that such a system is a detriment to commerce and not an aid to commerce.

PROFIT AS AN INCENTIVE TO ISSUE NOTES.

What is the result? The result is that, dependent upon the source of profit in the note issuing of the banks, the very sections of the country that are least able to transact their business with the deposit credit issue of banking, are deprived of the only other source which they have of transacting such business, and that is a proper amount of bank notes issued from time to time as the needs of the commercial conditions of the various communities in this country require? What do you see when you base a bank note issue, not upon profit, but upon the price of Government bonds? What do we witness now? A demand for currency? The banks taking out currency? No! The banks of every large city and many small places are retiring their currency, selling their bonds—why? Because the price of bonds in the market insures more profit than does the issuing of bank notes against the bonds deposited with the Treasurer of the United States. A bank is not an eleemosynary institution. It is not conducted for fun nor for health, but it is conducted as is the grocery store and the farm—as a source of profit to the stockholders who have invested their money in the capital thereof and have taken the responsibility therefor: so when a bank note is issued, the basic principle of that note under all the existing conditions is as to whether or no there is more money to be made by the banks in the issuing of such notes or more money to be made in loaning the money which would have been invested by the banks in the requisite for those notes, or whether or no there is more profit in selling the bonds at the market value thereof? What do you see—you who in this country with each recurring year feel the pinch and the necessity of having a sufficient amount of bank notes for representatives of money in the shape of notes to care for your crop—what do you see? You see that in this country most needing such a currency there is the least amount of such currency issued; but there is more such currency issued in the New England and Eastern States, where such currency is not so much required, because of the fact that more business is done by the utilisation of deposit credits. What is the outcome of it all? The outcome of it is that you here suffer in the fall and spring, and we who hold your reserves suffer because of the continuing and recurring anxiety as to whether or no we can furnish you enough of bank notes or small notes in the shape of promises to pay, for the marketing of your crops and carrying on the farmer between the time when he can sell the product of his farm and the time when he plants the produce of the farm. You do not take out bank notes here—why? Because there is no profit in it at present to speak of; because the bond requisite is high, the amount of currency you get less than what you pay for the bonds, and you can make more money by taking your money and loaning it direct than by issuing notes in the shape of promises to pay which will circulate as money among your patrons.

When I was in the Comptroller's office in 1897 (and the conditions have not to any great extent changed) I found that in the States of New Hampshire, Rhode Island (without the city of Providence) and Vermont, having 182 banks with a capital of $17,000,000 entitled under the then existing laws of 90 per cent. to issue about $15,000,000 of circulating notes in the shape of bonds; that upon the bonds already deposited as a prerequisite to the existence of such banks as they were entitled to issue $3,700,000 of circulating notes, but as a matter of fact they had a circulation actually issued in excess of the circulation permitted on the bonds of 52.6 per cent—52.6 per cent in excess of that issued on the bonds which, under the National Banking Act, they were permitted to issue because of the deposit of bonds prerequisite to the existence of the bank. What was found in the States of Nebraska, Kansas and Missouri, (with the exception of St. Louis)? It was found there were 264 banks, with a capital of $25,000,000, with a permitted circulation, if all had been taken out, of $22,000,000, with a circulation actually issued in excess of the circulation permitted on the bonds which it was prerequisite they should deposit, of but 4.6 per cent as against 57.6 per cent in three New England States which I have cited in comparison with these. In the South there was issued but 3.9 per cent in excess of the circulation issued upon the bonds deposited as prerequisite to the existence of the bank. What is the explanation? That New England needed the currency to circulate from hand to hand to transfer property more than Missouri or Kansas or Nebraska or the States of the South? No! The explanation is that under our existing system there was not a sufficient profit in note circulation to warrant the banks of these sections, where commerce and trade most need it, to take out the note circulation or to have note credit as against the bank note credit taken out in the States of New England which I have enumerated.

In a word, this conclusion: That a bank-note currency, based upon assets, is a safe currency, properly safeguarded by the Government of the United States, with proper agencies for redemption; that it is responsive to the needs of commerce; that it is a source of profit to the banker and a still greater source of profit to the borrowing public; for as against the profits of the banker through his discounts and loans, the profit is infinitesimal as against the profit of the merchants and manufacturers who, through the utilization of bank credit through the agency of the bank, are enabled from one period to the other to carry on the great transactions in which they are engaged and in which is the maximum amount of profit as against the infinitesimal amount of profit which that transaction gives to the banker. It is therefore, safe, responsive, scientific, accords with the commercial needs, and having such prerequisites of a safe currency, it is better than a currency which has the simple, sole requisite, essential as that requisite may be, of simple safety without having any other of the requirements necessary in the bank-note currency issued in accordance with the requisites of commercial conditions—the only requisite upon which the currency of a great people, engaged in manufacturing and commerce, ought ever to rest its commerce. Let us not be visionists. Let us think. Let us not think that because in the past there were failures of a bank-note issue, issued against credits, that therefore there must be in the future, with higher commercial development, with better civilization, with better facilities for transportation, with quicker facilities of interchanging our views and thoughts, with a period reaching to us when the whole world is bound together in a solidity of interests, and where the financial and commercial interests of the United States are in accord with the requirements of England and Germany and all the great European and Asiatic countries. Let us not be carried away by the thought that in the past there were failures, for in the past there were great successes in a note asset secured currency. Where a better bank than the Bank of Louisiana? Where a better bank than the great institution founded by the first and greatest of all Comptrollers, Hugh McCulloch, in the State of Indiana? Where a better bank than the Bank of Ohio, issuing its notes? And where in this commonwealth of Missouri was a bank any better, whose notes were any better and more promptly redeemed than the notes of the Bank of Missouri, issued against assets, as against notes issued against the bond deposited circulation? The traditionist has no place in this country of ours except as traditions make for advanced things and do not retard. The pessimist has no place in this great country of ours, for the pessimist has never builded anything nor advanced any great interest. The pessimist has torn down and worn out and made people fretful, and has caused distress. But the optimist, looking to the past only for an inspiration to go forward to better things and more advanced ideas, has builded this country until from the Atlantic to the Pacific it is a source of recurring wealth and a mine of continuing happiness to the people—a country great in its past history, splendid in its present attainments, and whose future will make these people still more glorious and their Government still more great.

Asset Currency—Address of Hon. Charles G. Dawes, Ex-Comptroller of the Currency.

The term "asset currency" as now used in the discussion of changes in our National bank laws, means bank notes issued by a National bank, and depending for their security upon the general assets of the bank, and also upon a limited guarantee fund in the hands of the Government, as trustee, which guarantee fund is created by limited payments by all the banks choosing to issue such currency. Under our present laws National banks are required to deposit in the hands of the Government as security for their circulating notes, Government bonds equal in amount to the bank notes outstanding, which deposit makes the notes safe, whether the bank fails or not.

When the asset currency plans were first proposed, they were chiefly urged as being necessary to provide additional currency to fill the vacuum which would be created by the retirement of the greenbacks, if such retirement should be made as a means of currency reform. However, the passage of the law of March 14, 1900, has so protected the credit of the greenbacks that they are no longer the menace to our currency system that they were in 1896.

One of the chief arguments for the asset currency plans now is that they will provide a currency to take the place of our present bond-secured National bank-note issues when our Government bonds are retired. There are at present about $950,000,000 Government bonds outstanding, and on April 30, only $317,484,130 were a basis for note issues. There is no im-

Digitized by Google

mediate necessity for asset circulation to replace our bond-secured issues. When the redemption of Government bonds progresses further toward a stage which will compel the retirement of bond-secured bank issues, we can then discuss from this standpoint, not alone the expediency, wisdom and safety of asset currency, but of alternative and different remedies. There is no future emergency near enough to justify present asset issues if they are not safe under existing banking conditions; for we will not better future conditions by endangering present conditions if the latter are unsatisfactory. The issue of asset currency under the plans urged would be at the option of the individual banks of the National system. It is proposed that a lien shall exist upon the assets of any failed bank which may have issued currency, until it has contributed to such fund to be held by the Government as trustee, an amount sufficient to redeem its outstanding notes in full. Upon the failure to collect from the assets of an insolvent bank, a sufficient amount to redeem its notes in full, resort is to be had to a tax on the solvent issuing banks to replenish the diminished guarantee fund, but the tax is limited to less than one per cent. annually.

The issue of notes under such plans being optional with the individual bank, how is it possible without knowing the number of banks of the National system which will issue the notes to determine what tax upon them will provide a large enough fund to make them safe? The National system now comprises 4,279 banks.

In the United States there are also 5,204 commercial banks organized under State authority, and approximately 4,000 private banks. To these are to be added the trust companies and Savings banks, making a grand total of 14,893 banks in the country, 10,614 of which are not in the National system.

We cannot safely predict the increase in the National system if the asset currency privilege is granted, which will result from conversion of other banks into National banks—to say nothing of the organization of entirely new National banks. Why, then, with such uncertainty as to what tax will be required to protect the notes, should any fixed limit be set to the tax upon any individual National bank issuing notes, which tax will be the limit of its liability for losses upon notes of other issuing banks? What moral right is there to make the public take a risk on its bank currency, which under the present law is safe, which certain banks would not even take with the inducement of profits on the circulation? It would be the small banks to which the asset currency privilege would offer the greatest inducement proportionately for entrance into the National system. There would be the smallest inducements to the issue of asset notes in those communities where deposits are largest, and where experience demonstrates that banking is safest. So far as the elasticity is concerned, we have at present in this country an enormous volume of bank currency, consisting of checks, drafts and bills of exchange. This currency is extremely elastic, and expands and contracts in accordance with the demands of trade and business. It is the medium through which the great bulk of the business of the country is transacted. Except in times of disturbed confidence and business panic, it is amply adequate to our business needs. Evidence of the great elasticity of this kind of bank credit currency lies in the fact that in the New York Clearing-House alone the clearings for 1897 were $31,337,760,948, while in 1900 they were $51,964,588,579, and this latter sum was a decrease of $5,403,642,199 as compared with the clearings of 1899.

AN EMERGENCY CIRCULATION FAVORED.

As opposed to these plans for asset currency, and in order that collapsing credits may be protected in times of panic by a greater elasticity in our circulation, I favor an emergency circulation, unsecured by bonds, but subject to so large a tax that the notes will not only be made safe, but cannot be used as an instrument of current business. This currency will appear only when needed in a panic, and will be retired when the emergency is over on account of the heavy tax.

Confidence in the stability and safety of our medium of exchange is one of the foundation stones of prosperity. Any change calculated to decrease confidence in our currency by decreasing to any extent its safety is fraught with danger to existing business conditions.

Asset currency, subject to only a small tax, will become an instrument of current business, and add to the amount of credits in existence to be cared for in a panic. The more issued in ordinary times the less could be issued in times of panic. It is not safe to base arguments for asset currency upon the experience of the great central Government banks of the Continent, when we consider a banking system consisting of over 4,000 banks widely scattered and surrounded by most varying conditions of customers, collaterals and business. It is no time to indulge in radical experiment with our currency in this country. We do not want an asset currency that will help us into a panic when we are out of one, but an emergency circulation which will help us out of a panic when we are in one.

ADDRESS OF P. I. BONEBRAKE.

P. I. Bonebrake of the Central National Bank, Topeka, Kan., spoke as follows:

The ten-minute rule makes it impossible to make an argument on great questions like asset currency and branch banking, especially after the addresses of our two distinguished guests have been heard.

I am opposed to both plans.

I hold the first duty of a bank is to its depositors, after that, to its stockholders. The asset currency scheme reverses this order and protects the bank's promises to pay first.

The greatest example of faith I know of is that of a depositor who lays his good money down on the counter, has a brief entry in a little pass book and goes his way. He may not know a single individual in the bank. Let us see how the asset currency bank treats this confiding depositor. A widow comes to the counter with $10,000, the result of her dead husband's insurance policy. The banker puts it in his safe, issues thirty or forty per cent. currency on this money. The widow put in good money at par, but in an emergency could get only sixty or seventy per cent. of that amount. The balance has gone to secure the asset currency.

It is said that honesty is the best policy, but this is neither; it is not honest to the depositor, nor is it good policy.

Let me show you that it is not good policy. There are about forty-three hundred National banks, with about 660 millions of capital; in round numbers about six billions of assets. Under this plan the banks would be authorized to issue currency to the amount of, say, a billion and a half or more dollars in asset currency. We now have an abundance of money for all legitimate purposes, a higher rate per capita than for many years past. The result of this asset currency expansion would induce speculation which would end in such disaster as that of '37, '57, '73 and '93, or would have happened May 9 of last year, had not the men who started the fire helped to put it out.

You will remember we bragged very much in the early part of last year that we were the creditor nation and would call upon Europe at any time for gold. You will also remember that about six months after May 9, to everybody's surprise, we began to lose gold. It proved that owing to over speculation in watered stock, Paris, London and New York had to join in preventing a "Black Friday" on that day—May 9.

For years there has been a hue and cry for a more flexible currency, and this has been suggested as one of the plans to secure it. Will it do it? I think not. There is not a banker present who, if he could add forty or fifty per cent. to his loanable resources by asset currency, but would do so to make the four or five per cent. earnings that he could make with this addition. When the emergency came we would be in the same condition we are to-day, with our loanable resources out, and nothing left for an emergency.

Our National banking system I consider the best in the world. Why tamper with it? For years we have fought over the silver question, and by a close call settled that. For years we were trying to eliminate the greenback and establish the gold standard, and have partially succeeded. Why unsettle financial affairs again? We have had all sorts of trusts; steel trusts, oil trusts, railroad trusts, beef trusts, shipping trusts (with a ship subsidy pending to sweeten it). In fact, we have had trusts in almost everything except trust in God. We have gone half way in that, as on our silver dollars we have the motto "In God we Trust," but, in fact, that trust is only worth fifty cents on the dollar.

As to branch banking: Mr. Stickney, at the meeting at Milwaukee, started the question, and it has been discussed in addresses and financial papers since. If he is as far off in his conclusions as he is in his history of panics in England and Scotland in '57, '73 and '93, they are not worth much. Secretary Gage in Milwaukee well said: *

"The tendency of a central bank system having branches scattered over the country would be toward a gradual abolition of the existing independent banks, or if they continued at all it would be only as appendages of the large city institutions. The bankers of this country are rather independent and prefer to stand on their own responsibility and manage their own affairs. Despite occasional lapses, they are generally abundantly able to do so. It is not believed that any considerable number of country banks will be content to become mere offices of the city concerns."

If the thousands of small independent banks were made appendages of a few large city banks they might be made stronger, but it is not likely that they would have the same value to their respective localities as now. A bank owned and operated by local shareholders becomes a powerful factor in building up the business interests of a community, and it is not too much to say that this feature of American banking has had much to do with the rapid growth of American towns and cities.

If the branch banking and asset currency plans are made lawful there will be banking trusts in all the large cities, and thousands of our bankers in small places will have to plow corn and dig potatoes for a living.

I repeat, why not let well enough alone? Our ships are on every sea. Our national income is far beyond our expenditures, extravagant as they are. We are at peace with all men, except the Filipinos, and we will be at peace with them, if we have to give every one of them the water cure. Our industries are making good dividends—watered stock and all. Our mines are yielding more precious metals than ever before. Our farmers and livestock men are satisfied. I suggest to the party, or rather to the friends of sound money, that they have now about all they can carry before the country, and if they are loaded with new issues next fall, we may see a lower House of Congress that may stand in the way of making permanent the victories we have already obtained.

---

* Mr. Bonebrake's authority is not precisely cited; the quotation is from this publication. (See BANKERS' MAGAZINE, November, 1901, p. 669, also p. 813.)

STATE BANKERS' ASSOCIATIONS.

REPORTS OF RECENT AND PROSPECTIVE MEETINGS.

IOWA BANKERS' ASSOCIATION.

The sixteenth annual meeting of the Iowa Bankers' Association was held at Foster's Opera House, Des Moines, May 21 and 22, C. B. Mills, President of the State Security Bank, Sioux Rapids, presiding. In the course of his annual address President Mills said :

"The resources of the Iowa National banks have grown during the past year from $111,007,741 to $119,917,768, while the reports of the Auditor of State show that the resources of Iowa State and Savings banks have grown from $139,554,390 to $162,082,278. These figures would be very substantially increased were we to have reports from the private banks within the boundaries of our State."

Reports of Treasurer L. F. Potter, President of the First National Bank, Harlan, and of Secretary J. M. Dinwiddie, Cashier of the Cedar Rapids Savings Bank, showed the association to be in a flourishing condition.

Hon. Charles G. Dawes, former Comptroller of the Currency, spoke on "Asset Currency," and a number of banking questions were generally discussed.

Resolutions were adopted adverse to the substitution of an asset currency for the present bond secured circulation, and a resolution in favor of the bankers' money-order system was tabled.

The new officials are :

President—Homer A. Miller, Cashier Des Moines Savings Bank.

Vice-President—L. F. Potter, President First National Bank, of Harlan.

Secretary—J. M. Dinwiddie, Cashier Cedar Rapids Savings Bank.

Treasurer—Frank Y. Locke, Cashier Sibley State Bank, Sibley.

Delegates to American Bankers' Association meeting at New Orleans—C. B. Mills, Sioux Rapids; L. F. Potter, Harlan; T. J. Fletcher, Marshalltown; D. H. McKee, Mediapolis; J. P. Brooks, Hedrick; J. L. Edwards, Burlington; Fred. Heinz, Davenport; P. W. Hall, Sheldon; Arthur Reynolds, Des Moines; G. D. Ellyson, Des Moines; D. L. Heinsheimer, Glenwood.

The association voted to support Arthur Reynolds, President of the Des Moines National Bank, for member of the executive council of the American Bankers' Association.

KANSAS BANKERS' ASSOCIATION.

The Kansas Bankers' Association met at Kansas City May 13 and 14, a joint meeting of the associations of Kansas, Missouri, Oklahoma and Indian Territory being held.

Secretary Thornton Cooke reported the following facts in reference to the work of the Kansas Bankers' Association :

"Since we met in Lawrence last year the membership of this association has increased from 310 to 365. The insurance and bond business, then only fairly started, has gone on still more favorably. We have now in force about $1,200,000 of burglary insurance. We have fur-

Digitized by Google

nished about $1,000,000 of registered mail insurance. We have in force more than $600,000 of fidelity bonds, and slightly less than $400,000 of county depository bonds. We have collected in premiums during the year about $8,000. We have allowed liberal discounts and commissions to members. We have paid all the expenses of the office and now have with the treasurer in the insurance fund $788.59. In the general fund we have collected $2,275 in dues, and have a balance with the treasurer of $1,166.21."

President Scott Hopkins delivered his annual address at the second day's session. It was conservative in tone and pointed out the dangers of the present era of commercial and industrial expansion.

J. C. Postlethwaite, President of the Formoso State Bank, spoke on "The Banker Citizen," after which C. C. K. Scoville, on behalf of the committee on resolutions, made a report commending the work of the officers of the association, favoring the repeal of the Federal Bankruptcy Act and opposing branch banking. Don Kinney, Cashier of the Midland National Bank, of Newton, spoke on "The Successful Banker," and interesting addresses were made by J. M. Harper, Manager of the Bank of Conway Springs, and by James T. Bradley, National bank examiner. Samuel Bradlee, of the Fidelity Trust Company, Kansas City, Mo., explained the educational work of the American Institute of Bank Clerks.

Officers for the ensuing year were chosen as follows:

President—James T. Bradley, Cashier First National Bank, Sedan.

Vice President—George W. McKnight, President First National Bank, Junction City.

Secretary—C. L. Brokaw, Cashier Commercial State Bank, Kansas City.

Treasurer—J. M. McDonald, President First National Bank, Chanute.

MISSISSIPPI BANKERS' ASSOCIATION.

The fourteenth annual convention of the Mississippi Bankers' Association was held at McComb City, May 13 and 14, B. L. Roberts, Cashier of the Mississippi State Bank, Canton, presiding. After President Roberts had delivered his annual address and the secretary and treasurer had read his report, a committee was appointed to investigate and report upon the matter of cotton insurance and the system of warehouse certificates and receipts.

J. T. Thomas, Cashier of the Grenada Bank, spoke on "Bank Supervision," and made a forcible argument in favor of State examination and control of banks.

W. S. Pettis, Cashier of the Bank of Ellisville, delivered an address on "The Financial and Commercial Future of South Mississippi." He described the great resources of the State, particularly in the shape of the forests, and spoke of the need of better transportation facilities.

At the second day's session a resolution was adopted favoring the bankers' money-order system, and papers were read by Secretary B. W. Griffith on "The State Revenue Agent, His Past, Present and Future," and by A. Lotterhos, of the Bank of Commerce, Crystal Springs, on "Trucking and Its Relation to Banking." Edwin McMorries, Cashier of the First National Bank, of Meridian, delivered an interesting address on "Cotton Insurance."

Resolutions were adopted thanking the bankers and citizens of McComb City for their hospitality, and commending President Roberts and Secretary Griffith for their faithful labors in behalf of the association.

Officers for the ensuing year were elected as follows: J. W. White, President of the McComb City Bank, president; J. T. Thomas, Cashier of the Grenada Bank, Grenada, vice-president, and B. W. Griffith, President of the First National Bank, of Vicksburg, was re-elected secretary.

Next year's convention will meet at Hattiesburg.

MISSOURI BANKERS' ASSOCIATION.

The annual convention of the Missouri Bankers' Association was held at Kansas City, May 13 and 14. President Jones gave an interesting review of matters affecting the banks, in his annual address, and the report of Secretary J. S. Calfee showed a total membership of 605—the largest of any State bankers' association in the country. He reported that on May 1, 1902, 736 banks and trust companies were doing business in Missouri. This includes 559 State banks, eighty-nine private banks, seventy-two National banks and sixteen trust companies. Official statements of State banks of November 23, 1901, and National banks of February 25th, 1902, report an aggregate capital, surplus and undivided profits of $90,510, 853.00, and deposits of $310,843,618.

As a result of the association's work great savings have been made in the rates for burglary insurance and fidelity bonds. The protective work also has been successful.

At the second day's session M. T. Davis, of Aurora, spoke on "Missouri at the Louisiana Purchase Exposition," and W. T. Jones, of St. Louis, delivered an address on "The Fedêral Bankruptcy Law."

The nominating committee reported the following nominations, which were unanimously ratified by the convention: President, C. O. Austin; vice-president, J. S. Calfee; secretary, E. D. Kipp; treasurer, Harry M. Rubey; delegates to the convention of the American Bankers' Association, W. H. Powell, Jr., W. C. Harris, M. T. Davis, J. P. Huston, Geo. B. Harrison, Jr., Byrd Duncan, F. P. Hays, J. R. Handy, G. G. Lacey, F. W. Stumpe, C. O. Austin, C. G. Daniels and W. H. Owen.

OKLAHOMA AND INDIAN TERRITORY BANKERS' ASSOCIATIONS.

A joint meeting of the bankers of Indian Territory and Oklahoma was held at the Hotel Baltimore, Kansas City, in connection with the meetings of the Kansas and Missouri associations on May 13 and 14. Resolutions were adopted by the Indian Territory Association favoring the allotment of land in severalty to the Indians, also asking that better government and more schools be provided. The following officers were chosen: President, W. M. Tomlin, Cashier Chickasaw National, Purcell, I. T.; First Vice-President, J. L. Dabbs, President First National, Muskogee, I. T.; second vice-president, D. M. Hailey, President Bank of Haileyville, I. T.; Secretary, E. D. Nims, President First National, of Roff, I. T.; Treasurer, F. S. Genung, President First National Bank, South McAlester, I. T.

The following officers of the Oklahoma Bankers' Association were chosen: President, Jas. H. Wheeler, President Bank of Commerce, Oklahoma City; vice-presidents, J. C. McClellan, Cashier Bank of Pond Creek; D. W. Hogan, President First National Bank, Yukon; treasurer, L. B. Heliker, Cashier State Bank, McLoud; secretary, H. W. Painter, Cashier Bank of Indian Territory, Guthrie.

The proposal to consolidate the Indian Territory and Oklahoma associations was defeated.

WEST VIRGINIA BANKERS' ASSOCIATION.

The ninth annual convention of the West Virginia Bankers' Association was held at Charleston, May 21 and 22, J. T. Carskadon, Cashier of the Keyser Bank,

Digitized by Google

presiding. An important feature of the convention was the discussion of the following proposed plan of bank taxation :

"That in lieu of all other taxes on their personalty, either by State, county, municipal, district or other local authority, the banks be taxed at the rate of one per cent. per annum on the sum of their capital, surplus and undivided profits, after deducting from said sum the book value of real estate owned.

Real estate owned by the bank to be assessed as all other real estate is assessed.

The tax on the personalty to be collected by the State, and distributed to the State, counties, municipalities and districts in proportion to the several rates of State and local taxation.

The tax on real estate to be assessed and collected as now assessed and collected."

Frank M. Eastman, of Harrisburg, Pa , read a paper on the subject, and there was a general discussion by a number of bankers present. The matter was referred to a committee for an investigation and report.

The election of officers resulted as follows: President, J. D. Baines, Vice-President Kanawha National Bank, Charleston ; vice-president first district, O. J. Fleming, Secretary Trust Company of West Virginia, Elkins ; vice-president third district, F. M. Staunton, Vice-President Kanawha Banking & Trust Co., Charleston ; vice-president fourth district, C. T. Hiteshew, Assistant Cashier Farmers and Mechanics' National Bank, Parkersburg ; vice-president fifth district, C. C. Bowyer, Cashier Merchants' National Bank, Point Pleasant ; secretary-treasurer, Robt. L. Archer, Assistant Cashier First National Bank, Huntington.

INTER-STATE BANKERS' CONVENTION.

A joint meeting of the bankers' associations of Virginia, North Carolina and Georgia will be held at Savannah, Ga., Tuesday and Wednesday, June 17 and 18. The following interesting programme has been prepared :

First Day.

Joint meeting at the Savannah Theatre.

Meeting called to order at 10.00 o'clock Eastern time, the Presidents of the Virginia, North Carolina and Georgia Associations presiding. The officers of each association to occupy seats upon the stage.

Invocation, Rev. James Young Fair, pastor of the Independent Presbyterian Church, Savannah, Ga.

Roll call by States.

Address of welcome—Mr. Pleasant A. Stovall, editor of the "Savannah Press," Savannah, Ga.

Response for Georgia—Mr. R. F. Maddox, Vice-President Maddox-Rucker Banking Co., Atlanta, Ga.

Response for North Carolina—Mr. John F. Bruton, President North Carolina Bankers' Association, President of the First National Bank, of Wilson, N. C.

Response for Virginia—Mr. George J. Seay, President Virginia Bankers' Association, and Cashier Petersburg Savings and Insurance Company, Petersburg, Va.

Address—Hon. Charles T. O'Ferrall, ex-Governor of Virginia.

Address—Mr. W. A. Blair, Vice-President People's National Bank, Winston, N. C.

Address—Hon. Charles N. Fowler, Congressman from New Jersey, Chairman of Banking and Currency Committee, House of Representatives.

Address—Hon. Ebenezer J. Hill, Congressman from Connecticut, member of Banking and Currency Committee, House of Representatives.

Business of Convention. Adjournment.

Afternoon.—Reception at Yacht Club at 4.30 P. M.

Night.—Reception at the De Soto Hotel at 9.30 P. M.

Second Day.

Meetings of the respective State associations.

WASHINGTON STATE BANKERS' ASSOCIATION.

The annual convention of the Washington State Bankers' Association will be held at Seattle, June 19, 20 and 21.

BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—It is reported that Wm. C. Whitney, Thomas F. Ryan and others have bought a controlling interest in the Hide and Leather National Bank, and that the capital of the bank will be largely increased.

—The Guaranty Trust Company and the International Banking Corporation have been appointed fiscal agents of the United States in the Philippines and in China.

—A controlling interest in the Flushing Bank was recently bought by a syndicate represented by Samuel R. Smith, President of the Far Rockaway Bank. In reference to the purchase Mr. Smith said:

"This last purchase completes a chain of banks represented in College Point, Flushing, Elmhurst, Richmond Hill, Jamaica, Far Rockaway and Rockaway Beach, with total resources approximating three millions of dollars, and we feel that the present and prospective growth of this section justifies the purchase of these prosperous, well-established institutions at the price paid."

—The stockholders of the National City Bank have approved by a practically unanimous vote the propositions to increase the capital stock from $10,000,000 to $25,000,000, and to provide for a board of directors of not less than seven or more than twenty-five members.

—John A. McCall, president of the New York Life Insurance Company, and Charles W. Harkness are new trustees of the Continental Trust Company, elected to fill vacancies.

—G. M. Wynkoop has been elected Secretary of the North American Trust Company, succeeding E. C. Lockwood.

—Members of the Cotton Exchange are organizing the Exchange Trust Company, with $500,000 capital and $500,000 surplus.

—Messrs. Farson, Leach & Co., of New York and Chicago, were recently successful bidders for $28,000,000 of five per cent. bonds issued by the city of Havana, Cuba.

—J. Edward Simmons, President of the Fourth National Bank, was recently elected a life trustee of his alma mater, Williams College. Mr. Simmons was of the class of 1862, and has been a trustee of Williams for five years.

—Messrs. Fisk & Robinson, of 36 Nassau street, have issued an attractive and useful Government Bond Calendar, showing the dates on which interest is payable on the various classes of bonds, also the dates on which transfer books close.

—On June 2 the Equitable National Bank opened for business at 805 Broadway with $200,000 capital. Cornelius Van Cott, postmaster of New York, is President and James S. O'Neale Cashier.

—F. L. Rodewald has been elected Vice-President of the First National Bank of Staten Island to succeed the late J. M. Emmons.

—Alvah Trowbridge, former President of the Ninth National Bank, has been elected President of the Registration Trust Co.

—Stockholders of the Mechanics and Traders' Bank have authorized an increase of $300,000 in the bank's capital.

—Shareholders of the Corn Exchange Bank have approved the increase in the capital from $1,400,000 to $2,000,000.

—Peter A. Welch has resigned as President of the New York Savings Bank, and Wm. Felsinger, for many years Secretary of the bank, has been elected to succeed him. Archibald M. Pentz, second Vice-President, has been elected Secretary, and Wm. H. Jackson second Vice-President.

—The Eleventh Ward Bank will be operated hereafter as a branch of the Corn Exchange Bank.

Digitized by Google

—Bird S. Coler, former city comptroller, has been elected President of the Guardian Trust Co., which will begin business in the new Broadway-Maiden Lane building about July 5.

—A fine of $5,000 has been paid by the Central National Bank for a technical violation of the clearing-house rules in regard to charges for collecting out-of-town checks.

It seems that a customer of the Central National Bank had an account in a bank at Orange, N. J., to which he sent out-of-town checks, and on receipt of advice the Central National credited its customer with the full amount of the checks.

NEW ENGLAND STATES.

Brookline, Mass.—The Brookline National Bank is improving the building which it bought several months ago. Its banking rooms are to be entirely remodeled and greatly enlarged. A new fire and burglar-proof vault, about twice the size of the one now in use, will be built and used in connection with the present one. The improvements to be made will afford the bank the latest and best equipment in all departments.

Boston.—The Massachusetts Supreme Court recently decided that a member of the Stock Exchange could assign his seat in the exchange as collateral security and that the claim could be enforced after his death.

—The largest and most successful meeting of the Bank Officers' Association of Boston was held in Copley Hall, on the evening of May 21, when 946 members, after enjoying a banquet, heard encouraging reports from all committees, elected officers and voted to become affiliated with the American Institute of Bank Clerks.

E. A. Stone presented a report of the board of managers in part as follows: "A year ago the membership was 818; 136 have been received, 83 have withdrawn, 5 have died, so that the present number is 946, a net gain of 98.

"The finances are exceptional, there having been a gain of $1,505.55 in the current and relief funds, $820.84 in the permanent fund, making a total gain in our resources of $2,450.49 which now amount to $37,436.55. The permanent fund now amounts to $29,674.02."

Robert E. Hill, the treasurer, reported receipts during the past year of $11,560, expenditures of $10,558.37 and a balance of $4,043.70.

The following officers were elected for the ensuing year: President, Charles L. Burrill of the Second National Bank; vice-presidents, George O. Stimpson of the National Bank of Republic, Frederic W. Rugg of the National Rockland Bank; treasurer, Robert E. Hill of the National Webster Bank; secretary, Edwin A. Stone of the Franklin Savings Bank; nominating committee, C. Dexter Richards of Hamilton Bank, W. L. Swindlehurst of the National Bank of the Republic; O. F. Davenport of the Shawmut Bank; Charles C. Handy of the Webster Bank, and Thomas Milleygan of the Five Cents Savings Bank.

—At the recent annual meeting and dinner of the National Bank Cashiers' Association of Massachusetts officers were chosen as follows: President, George S. Parker of Watertown; vice-presidents, C. Fay Heywood of Concord and Edward W. Kennedy of North Easton; secretary, F. G. Newhall of Brighton; treasurer, N. A. Very of Salem; executive committee, H. B. White of Ayer, W. I. Nickerson of Melrose and E. S. Brown of New Bedford.

—Clifton H. Dwinell has been appointed an Assistant Cashier of the National Bank of Redemption.

—The Kidder-Peabody or Savings bank syndicate, which undertook the liquidation of various Boston National banks, lately transferred the unliquidated assets of certain banks to a new syndicate, and has finally achieved its own liquidation. The syndicate made a net loss of about one and one-half per cent., but counts this small when set against what it considers the benefit arising from the elimination of weak banks and the reduction in number of the strong ones. Below is a list of the liquidated banks, with the purchase price, and the book value at the date of purchase and the dividends in liquidation:

BANKS.	*Purchase price.*	*Book value.*	*Total divs. paid.*
Boston	$99¼	$128⅜	$120.00
Columbian	96⅞	123⅛	101.50
Hamilton	114	139⅛	187.56
Howard	97¼	124	48.00
North	102	124	112.85
Market	77	109	45.25
Eagle	88	115⅛	101.50
North American	102¼	124⅛	125.10
Revere	92	111⅛	83.80

The Shawmut National Bank has paid a final dividend of $4.50 per share, $129.50 in all liquidated in process of reorganization.

Digitized by Google

—Harry L. Burrage entered the Third National Bank, Boston, in 1889 as messenger, at the age of seventeen. In 1891 he was appointed discount clerk; in May, 1894, elected Assistant Cashier; in December of the same year elected Cashier, which position he held for five years, resigning in 1899 to accept the Vice-Presidency of the Eliot National Bank. He was elected President of that bank on June 2, 1902.

In the last five years the deposits of the Eliot National Bank have increased from $1,500,-000 to $10,000,000 and the surplus and profits in the last three years from $500,000 to $850,000. The capital of the Eliot National Bank is $1,000,000, and since its organization fifty-two years ago, it has not passed a semi-annual dividend.

Association of Savings Banks.—Treasurers of a number of the Savings banks of Connecticut have agreed to form a State organization. One of the questions to be discussed is a reduction in the rate of dividends paid depositors.

Stamford, Ct.—At a meeting of the board of directors of the Stamford Trust Co. held on June 2, it was voted to increase the capital from $100,000 to $200,000. The new stock will be sold to present stockholders at $125 per share.

MIDDLE STATES.

Pittsburg.—Messrs. T. Mellon & Sons are reorganizing as the Mellon National Bank, capital, $2,000,000 It is also announced that Mellon & Sons, who have been heretofore large owners of the stock of the Union Trust Co., have sold the stock of the Mellon National Bank to the Union Trust Co., taking stock of the latter institution in payment. The Union Trust Co. is to organize the Union Savings Bank, with $1,000,000 capital. This bank will open for business in the Frick Building about July 15. H. C. McEldowney will be the President.

The Union Trust Co. has also acquired a controlling interest in the Citizens' National Bank.

The officers of the Mellon National Bank will be: President, A. W. Mellon; Vice-President, R. B. Mellon; Cashier, W. S. Mitchell.

—It is reported that the Real Estate Trust Co. has bought the Anchor Savings Bank.

—The Union Trust Co. will increase its capital from $500,000 to $1,000,000, and the new stock will be sold at a price that will bring the present surplus and profits up to $6,000,000.

—The trustees of the People's Savings Bank recently voted to increase the capital from $300,000 to $600,000.

—The Commonwealth Real Estate and Trust Co. has purchased the stock of the Commercial National Bank, and will succeed to the business of the latter institution July 1.

Baltimore.—By amendments made in its charter, the Monumental Savings Bank is now authorized to engage in a general banking business.

—The Commercial and Farmers' National Bank has purchased the property at No. 15 South street from the Safe Deposit and Trust Co., and will remove to this building and will also probably enlarge the capital of the bank.

—The capital of the United States Fidelity and Guaranty Company will be increased $500,000, of which it is reported one-half will be used in acquiring the Lawyers' Surety Co. of New York.

—Negotiations are pending for the sale of the stock of the Mechanics' National Bank to the First National Bank, and a merger with the latter institution is regarded as certain.

Tax on Savings Banks.—In a case brought before the State Comptroller by the Bank for Savings of New York city, to test the act imposing a tax on the surplus of Savings banks, the State Comptroller holds that the tax is constitutional.

Buffalo, N. Y.—It is announced that the German Bank has absorbed the business and deposits of the Union Bank.

East Orange, N. J.—It is reported that the Fidelity Trust Company, of Newark, has absorbed the East Orange National Bank and will conduct it as a branch.

Paterson, N. J.—The increase in business of the Paterson Savings Institution has compelled the directors to make provision for additional space and by the first of the new year it is expected that the banking institution will be occupying the ground floor of its large new building at the corner of Market and Main streets.

SOUTHERN STATES.

New Orleans.—The Hibernia National Bank and the Southern Trust and Banking Company are planning to merge under the title of the Hibernia Bank and Trust Company, with $1,000,000 capital and $2,000,000 surplus. If the shareholders ratify the plan, the two institu-

Digitized by Google

tions will be merged about August 1, but business will be carried on separately until a new building is put up. J. W. Castles, President of the Hibernia National Bank, was recently elected President of the Southern Trust and Banking Company.

—The Commercial Trust and Savings Bank has been organized by interests connected with the Commercial National Bank. It will have $250,000 capital, which may be increased later to $2,000,000. Branches of the institution are to be established in different parts of the city.

Richmond, Va.—The American National Bank has purchased the assets, business and good-will of the Security Bank of Richmond, and the capital of the American National has been increased to $300,000 and the surplus and profits to $50,000. E. G. Gunn, James R. Gordon and H. W. Rountree have been added to the board of directors. There is no other change in the management.

—Since 1890 the deposits of the banks and trust companies of this city have increased from $8,749,000 to $19,759,000.

Bristol, Va.—A. P. Moore was recently appointed Cashier of the Dominion National Bank. Mr. Moore has had about fourteen years' successful experience here, and resigned as Cashier of the Exchange Bank and Trust Company to accept his new position.

The Dominion National Bank was recently designated as a Government depository.

—The Exchange Bank and Trust Company is reported as having consolidated its business with the National Bank of Bristol.

WESTERN STATES.

Chicago.—On June 5 the shareholders of the National Bank of the Republic voted to increase the capital of the bank from $1,000,000 to $2,000,000, the new stock being sold to present shareholders at $150 a share, which will bring the surplus and profits up to $785,450.

—The consolidation of the Metropolitan National Bank with the First National Bank has been ratified by the shareholders of both banks.

The capital of the First National has been increased from $5,000,000 to $8,000,000, and W. J. Watson and E. G. Keith elected directors. H. H. Hitchcock is a new Vice-President and E. Dickinson an additional Assistant Cashier.

—Preliminary to the absorption of the Metropolitan National Bank by the First National Bank, the latter institution sent out the following notice to the patrons of the Metropolitan National.

"In accordance with the circular herewith from the Metropolitan National Bank of Chicago, we shall assume the balance to your credit in that bank May 31, 1902. While the business of the consoldated banks will be large, it will be thoroughly organized in its various departments under the management of a large and competent staff of officers, including Messrs. Hitchcock and Dickinson of the Metropolitan National Bank. In order to provide ample banking quarters we have removed all departments not dealing directly with customers to the second floor of our building. We have added about 1,500 square feet to to our public space and have provided several additional tellers, thus insuring prompt and efficient service to our patrons. Our ability to afford to our clients absolute security and unsurpassed facilities cannot be questioned. Our new building will be a model of construction and convenience, designed to give the most complete and perfect banking service attainable. We confidently believe that our new clients will soon feel at home with us, and we shall welcome them at once as an integral part of the constituency of this bank."

—On June 2 the new Federal Trust Co. opened for business in the Home Insurance building.

—Among the new institutions are the National Bank of North America and the Central Trust Co. The latter institution will open July 1 with $4,000,000 capital and $1,000,000 surplus. Ex-Comptroller Dawes will be President.

—The annual election of the Chicago Stock Exchange June 2 resulted in the election of the following officers: President, Reuben H. Donnelley; treasurer, John J. Mitchell; governing committee, R. A. Peters, Joseph E. Otis, Jr., Sidney C. Love, Alfred L. Baker, Charles C. Adsit, John C. King and A. J. Whipple.

—Vice-President George M. Reynolds, of the Continental National Bank, has sent out the following letter to the bank's patrons: "In view of the frequent rumors of bank mergers (both on the street and in the daily press) directly involving this bank, we feel our customers and friends should know that there is no plan under consideration looking toward the consolidation of this bank with any other.

We believe the interests of our customers can best be advanced by continuing as heretofore as an independent institution, adding to its volume of business through the instrumen-

Digitized by Google

tality of active competition and faithful service. We will continue to adhere to that liberal policy and careful attention to all affairs which has heretofore characterized the conduct of our business.

We take this opportunity to express to you our highest appreciation for your patronage in the past, and we can assure you that our constant aim is directed toward the perfection of plans and methods tending to the promotion of your interests."

Cleveland, Ohio.—Branches of the Guardian Trust Co. and the American Trust Co. were recently opened, the former at 63 Euclid avenue, and the latter at No. 65.

New Government Depositories.—Among the Indiana banks recently designated as Government depositories by the Secretary of the Treasury are: First National, Richmond, Ind.; Columbia National, Indianapolis; Delaware County National, Muncie, Ind.; First National, Frankfort, Ind.

Indianapolis, Ind.—A meeting of the shareholders of the American National Bank is to be held on June 24 to vote on a proposal to increase the capital from $350,000 to $500,000, affirmative action having been already taken by the board of directors. It is the intention to issue the new stock at $130, and $45,000 of the premium will be added to the surplus fund.

A special examination of the bank recently made by the American Audit Company showed the condition of the bank and the methods employed in its management to be highly satisfactory in every particular.

—The Indiana Trust Company recently took possession of the entire first floor of its building, and has had the rooms fitted up most attractively and with a view to the convenience and comfort of patrons and employees. All the different departments are provided for in a manner to ensure the highest standard of efficient service to the public.

Meeting of Kansas Bankers.—Group No. 2 of the Kansas State Bankers' Association, consisting of bankers from ten counties in Southeastern Kansas, held a two-days' session at Chanute May 6 and 7, John R. Lindburg, President of the First National Bank of Pittsburg, presiding.

The first day's programme consisted of a speech of welcome by Mayor John F. Roe, which was responded to by Hon. Fred Perkins of Oswego, followed by an address on "Chanute's Cordiality" by J. M. McDonald, President of the First National Bank of Chanute, followed by the reading of the minutes of the last meeting. A reception with music and dancing concluded the first day's programme.

At the second day's session an able paper on "Asset Currency" was read by Jas. T. Bradley, National bank examiner, which was listened to with marked interest. Thornton Cooke, Secretary of the Kansas Bankers' Association and Assistant Treasurer of the Fidelity Trust Company of Kansas City, read a paper on "The Fowler Currency Bill," and showed the good results of the branch bank system. Mr. Cooke's remarks on the latter subject showed him to be a student of banking matters. Discussion of a topic of much interest entitled "Chattel Mortgages" was led by J. W. Marley, Cashier of the Oswego State Bank, of Oswego, and many instructive points were brought out of much importance to bankers. The session was concluded by an able address by J. M. McDonald, of Chanute, entitled "Branchlets," in which he alluded to the branch bank system as a bankers' trust and a detriment and destroyer of the country banker. This view was acquiesced in by a majority of those present.

At two o'clock a carriage drive was taken, the immense oil and gas fields in the vicinity being visited. A number of oil gushers were allowed to spout for the edification of the visiting members. This oil field is next to Beaumont in productiveness and in number of gushers, and a great future is already assured for Chanute and Southeastern Kansas. The meeting was brought to a happy close by a banquet at the Oriental Hotel and all departed expressing their appreciation of the hospitality of the bankers and citizens of Chanute.

Interesting Banking Information.—Through the courtesy of Thos. P. Martin, Jr., Cashier of the First National Bank, Marlow, Indian Ter., the MAGAZINE has been furnished with the following information:

The First National Bank, of Fort Worth, being the clearing-house, paid to the Farmers and Mechanics' National Bank, of Fort Worth, in part payment of balance due, a package containing $500 in currency, which package had been counted by the First National previous to paying out, and so stamped by First National. The Farmers and Mechanics' took this package to the bank, counted it and laid it away. Several days after, a local party presented a check for some $635, and in payment of this check was given the package above referred to, however without the teller again counting it.

The package was still in its original wrapper and the customer receiving the package looked at the label, $500, and placed the package in his pocket, counted the loose money, and left the bank. He carried the package all day, intending to use it, and that afternoon tendered the package as $500 on deposit at another bank where he also kept an account. The

Digitized by Google

receiving teller at this bank counted the money in the package and found it $200 short. The customer went back to the Farmers and Mechanics' Bank and demanded the $200 difference, but was refused. He brought suit in a justice's court and the first trial was a hung jury; the next trial was in favor of the customer and the matter was finally decided in the county court against the bank and they paid over the $200, prefering to do this rather than to spend more money as costs.

The First National Bank of Marlow, Indian Ter., opened for business March 4, 1901. At the time of opening of an authorized capital of $30,000 there was paid in $15,000. The city assessor called on the Cashier for a statement for assessment for city taxes for year 1901, such statement representing the amount of capital paid in on first Monday in March, which was March 4. Referring to the Arkansas Statutes under which the Indian Territory is governed in such matters the Cashier found that rendition should be made for the first Monday in February instead of March. As the assessor insisted on a statement it was given him and the bank was assessed taxes at the rate of $1.75 per $100 for the year 1901, and upon a claim by the assessor for taxes and being refused by the bank, the matter was brought into court, the city claiming that they were right under a city ordinance made by them changing the date of rendition from February till March and the bank put up the defense that they had no right to change the statutes by city ordinance.

The case came up in the United States Court at Paul's Valley, Indian Ter., April 8, 1902, and Judge Townsend decided that the city ordinance was null and void because of the fact that it was contrary to the Statutes of Arkansas in force in Indian Territory, and issued a restraining order against the town of Marlow from the collection of any taxes from the First National Bank of Marlow for the year 1901.

Denver, Colo.—The Union National Bank, which suspended in the panic of 1893, resuming in a short time, and again closing and going into a Receiver's hands July 29, 1895, has paid off all claims in full under the management of Receiver John W. Schofield. The assets were believed to be of little value and before Mr. Schofield's appointment the shareholders were assessed 100 per cent. Matters have been managed so well by Mr. Schofield that they will get back thirty-five per cent. of the amount, realized from the assets.

Des Moines, Iowa.—"Sound and Progressive" is the motto of a neat pamphlet recently issued by the Des Moines National Bank. The title fitly characterizes the standing and methods of this well-known institution.

Detroit, Mich.—Stockholders of the Preston National Bank have approved of the consolidation of that bank with the Commercial National Bank.

South Dakota Bankers.—The convention of the South Dakota Bankers' Association was held at Huron May 21. An important feature of the meeting was the address of President B. A. Cummins, Cashier of the First National Bank, of Pierre, in which he reviewed the progress of the State in agriculture, mining, etc. Officers were chosen as follows: President, L. K. Lord, President First National Bank, Parker; Vice-President, Geo. F. Schneider, Cashier Pennington County Bank, Rapid City; chairman executive council, W. A. Mackay, of Mackay Bros., Madison; treasurer, Chas. E. McKinney, President Sioux Falls National Bank, Sioux Falls; secretary, E. L. Abel, President State Bank, Bridgewater.

St. Louis.—A compilation of the reports of the trust companies of this city made on April 30 shows the total capital of those institutions to be $17,768,880; deposits, $63,917,474; total assets, $105,482,610.

—J. Pierpont Morgan, James J. Hill, Geo. F. Baker, of New York, and F. Weyerhauser, St. Paul, have acquired an interest in the Third National Bank.

—The Missouri Trust Co. has removed into the Missouri Trust building (formerly Union Trust building) at the northeast corner of Seventh and Olive streets.

—The Germania Trust Co. has reduced its capital from $2,000,000 to $1,000,000.

—It is announced that the National Bank of Commerce has absorbed the Continental National Bank.

—The directors of the Mechanics' National Bank have decided to submit to the stockholders a proposition to increase the capital stock to $2,000,000. The increase will be made by the sale of 10,000 additional shares of stock. Stockholders of record June 20 will be permitted to subscribe for the new issue at $275 per share.

Cincinnati.—The Provident Savings Bank Co. and the Provident Trust Co. have been consolidated as the Provident Savings Bank and Trust Co., capital $500,000.

Minnesota Bankers' Association.—The thirteenth annual convention of this association will be held at Crookston June 25, 26 and 27.

Digitized by Google

St. Joseph, Mo.—On June 2 the Tootle-Lemon National Bank, capital, $200,000, succeeded the old and well-known private banking firm of Tootle, Lemon & Co. A considerable amount of the stock was taken by E. H. Harriman, of New York, Chairman of the Union Pacific and Southern Pacific Railways.

The officers of the bank are: President, John S. Lemon; Vice-Presidents, Milton Tootle, Jr., and Graham G. Lacy; Cashier, E. H. Zimmerman; Assistant Cashier, W. A. Evans.

The Tootle-Lemon bank is intimately associated with the commercial history of St. Joseph, and it is known from New York to San Francisco as one of the strongest and most enterprising institutions of its kind in the country. No panic has ever disturbed it in the least and its founders, who are still represented in the reorganization in leading capacities, are among the men who made the city of St. Joseph what it is. The reorganization simply adds to the importance of the bank.

PACIFIC SLOPE.

San Francisco.—According to a recent report the San Francisco Chapter of the American Institute of Bank Clerks has 202 active members and twenty-six associate members.

Salt Lake City, Utah.—The private bank of T. R. Jones & Co. has been absorbed by McCornick & Co.

Wyoming State and Private Banks.—The State Examiner of Wyoming reports that on April 30 the capital of the private banks of that State amounted to $186,000 and the deposits were $1,362,769. On the same date the capital of the State banks was $223,500 and their deposits $1,C08,280.

CANADA.

The Growth of Canadian Banks.—In its issue of May 30 "The Shareholder and Insurance Gazette," of Montreal, publishes the following:

"In 1891 there were forty chartered banks in operation in the Dominion with liabilities to the public amounting to $181,564,745, while the assets were $263,476,221. Seven of these banks then in operation have ceased to exist. These are the Federal Bank, the Bank of London, Banque du Peuple, Banque Ville Marie, Commercial Bank of Manitoba, Bank of British Columbia, and Summerside Bank. The Merchants' Bank of Prince Edward Island has since been added to the list. This reduces the number from forty in 1891 to thirty-four in 1902.

Since April, 1891, the assets of the banks have continued to increase, but during the past two years the expansion in this direction has been almost, if not altogether, phenomenal. Such has been the increase that new banks have been authorized to do business; one of these, the Sovereign Bank of Canada, has already commenced business, and the prospects are that during the present year no less than three more will be added to the list, acts incorporating them having been passed at the session of Parliament recently prorogued. These are the Crown Bank of Canada, the Securities Bank of Canada, and the Metropolitan Bank. When these are in operation we shall have thirty-eight banks, with branches extending in all directions.

The growth of the banks in operation in April last will be best seen from a statement of the assets and liabilities to the public as taken, year by year, from the bank statement. It may be well to mention that the difference between assets and liabilities to the public represents the liabilities of the banks to their own shareholders. While the number of banks has been reduced as already pointed out, the assets of the banks at the end of April last were more than double those at the end of the same month in 1891, and the excess of assets over liabilities to the public is now more than double that of the same year. The following are the figures for the month of April year by year, beginning with 1891 and ending with and including 1902:

	Assets.	*Liabilities to the public.*		*Assets.*	*Liabilities to the public.*
1891	$263,476,221	$181,564,745	1897	$333,357,594	$243,421,066
1892	283,069,961	199,471,250	1898	358,531,275	268,619,023
1893	302,490,430	217,365,066	1899	396,440,210	304,961,109
1894	305,575,405	218,008,548	1900	429,714,067	328,568,220
1895	312,740,834	225,570,990	1901	511,569,603	400,802,203
1896	315,410,893	225,666,491	1902	564,576,264	448,326,515

During the same time the aggregate paid-up capital of the banks has increased from $60,374,784 to $68,474,523, an increase of $8,099,739, and the rest or reserve fund has been increased from $22,137,459 to $38,665,823, an increase of $16,528,364. As the the capital and reserve fund of the banks which have ceased to exist since 1891 are not included in the amount shown at the present time, the increase is consequently so much greater."

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under the different State headings.

NATIONAL BANKS ORGANIZED.

6232—First National Bank, Ralston, Oklahoma. Capital, $25,000.
6233—Williamstown National Bank, Williamstown, West Virginia. Capital, $30,000.
6234—Jester National Bank, Tyler, Texas. Capital, $100,000.
6235—First National Bank, Norton, Virginia. Capital, $25,000.
6236—City National Bank, Johnson City, Tennessee. Capital, $50,000.
6237—First National Bank, St. Charles, Minnesota. Capital, $25,000.
6238—First National Bank, Colorado City, Colorado. Capital, $50,000.
6239—Yorkville National Bank, Yorkville, Illinois. Capital, $25,000.
6240—First National Bank, Scottsbluff, Nebraska. Capital, $25,000.
6241—Citizens' National Bank, Okmulgee, Indian Territory. Capital, $50,000.
6242—First National Bank, Burlington Junction, Missouri. Capital, $25,000.
6243—First National Bank, Barnesville, Georgia. Capital, $30,000.
6244—First National Bank, Sturgis, Kentucky. Capital, $25,000.
6245—San Augustine National Bank, San Augustine, Texas. Capital, $25,000.
6246—Parksley National Bank, Parksley, Virginia. Capital, $25,000.
6247—First National Bank, Morgan, Texas. Capital, $25,000.
6248—First National Bank, Latonia, Kentucky. Capital, $25,000.
6249—First National Bank, Burton, Ohio. Capital, $25,000.
6250—First National Bank, Hooversville, Pennsylvania. Capital, $25,000.
6251—First National Bank, Tipton, Indiana. Capital, $100,000.
6252—First National Bank, Bristol, Vermont. Capital, $25,000.
6253—Northern National Bank, New York, New York. Capital, $300,000.
6254—First National Bank, Wewoka, Indian Territory. Capital, $25,000.
6255—First National Bank, Fairmount, North Dakota. Capital, $25,000.
6256—Redfield National Bank, Redfield, South Dakota. Capital, $25,000.
6257—First National Bank, Arapahoe, Oklahoma. Capital, $25,000..
6258—Bartlesville National Bank, Bartlesville, Indian Territory. Capital, $25,000.
6259—First National Bank, Campbell, Minnesota. Capital, $25,000.
6260—First National Bank, Bristow, Indian Territory. Capital, $25,000.
6261—Kokomo National Bank, Kokomo, Indiana. Capital, $100,000.
6262—First National Bank, Barboursville, Kentucky. Capital, $25,000.
6263—First National Bank, Mounds, Indian Territory. Capital, $25,000.
6264—First National Bank, Leesville, Louisiana. Capital, $25,000.
6265—Fayette National Bank, Connersville, Indiana. Capital, $100,000.
6266—First National Bank, Eagle Bend, Minnesota. Capital, $25,000.
6267—City National Bank, Hobart, Oklahoma. Capital, $25,000.
6268—First National Bank, Ontario, California. Capital, $30,000.
6269—Union National Bank, Chandler Oklahoma. Capital, $50,000.
6270—First National Bank, Sutersville, Pennsylvania. Capital, $25,000.
6271—First National Bank, Enloe, Texas. Capital, $25,000.
6272—Tootle-Lemon National Bank, St. Joseph, Missouri. Capital, $200,000.
6273—First National Bank, Clintonville, Wisconsin. Capital, $25,000.
6274—First National Bank, Apalachicola, Florida. Capital, $50,000.
6275—First National Bank, Clifton Heights, Pennsylvania. Capital, $50,000.
6276—First National Bank, Perham, Minnesota. Capital, $25,000.
6277—Gonzales National Bank, Gonzales, Texas. Capital, $50,000.
6278—Marine National Bank, Wildwood, New Jersey. Capital, $30,000.
6279—First National Bank, Preston, Minnesota. Capital, $25,000.
6280—National Bank of Delphos, Delphos, Ohio. Capital, $60,000.

Digitized by Google

6281—First National Bank, Ligonier, Pennsylvania. Capital, $25,000.
6282—Gothenburg National Bank, Gothenburg, Nebraska. Capital, $25,000.
6283—Old National Bank, Martinsburg, West Virginia. Capital, $100,000.

Applications to Organize National Banks Approved.

The following notices of intention to organize National banks have been approved by the Comptroller of the Currency since last advice:

First National Bank, Washburn, North Dakota; by James T. McCulloch, *et al.*
First National Bank, Groveton, Texas; by Geo. W. Riddle, *et al.*
First National Bank, Anderson, Texas; by H. F. Moore, *et al.*
National Bank of Larimore, Larimore, North Dakota; by F. E. Kenaston, *et al.*
Union National Bank, Warren, Ohio; by E. D. Kennedy, *et al.*
Federal National Bank, Duluth, Minnesota; by Edward D. Nelson, *et al.*
National Bank of Commerce, Natchez, Mississippi; by Ernest E. Brown, *et al.*
Lindsay National Bank, Gainesville, Texas; by H. R. Eldridge, *et al.*
First National Bank, Cullman, Alabama; by Geo. H. Parker, *et al.*
Madill National Bank, Madill, Indian Territory; by E. W. Derrick, *et al.*
First National Bank, Truman, Minnesota; by A. L. Ward, *et al.*
First National Bank, Leeds, North Dakota; by E. B. Page, *et al.*
Third National Bank, Albany, Georgia; by Morris Wesloskey, *et al.*
First National Bank, Comanche, Indian Territory; by J. T. Jeanes, *et al.*
Bannock National Bank, Pocatello, Idaho; by W. V. Rice, *et al.*
National Bank of North America, Chicago, Illinois; by Isaac N. Perry, *et al.*
First National Bank, Koochiching, Minnesota; by L. C. Simons, *et al.*
McKinley National Bank, New York, New York; by R. Ross Appleton, *et al.*
First National Bank, Twin Valley, Minnesota; by A. H. Froshaug, *et al.*
First National Bank, Calvin, Indian Territory; by J. R. P. Sewell, *et al.*
National Bank of Comanche, Comanche, Indian Territory; by C. W. Brown, *et al.*
Citizens' National Bank, Anadarko, Oklahoma; by L. W. Meyers, *et al.*
Citizens' National Bank, Harrisonville, Missouri; by Allen Glenn, *et al.*
Equitable National Bank, New York, New York; by Otto Horwitz, *et al.*
First National Bank, Columbiana, Ohio; by W. Harry Schmick, *et al.*
People's National Bank, Wellsville, Ohio; by H. B. Nicholson, *et al.*
First National Bank, Mount Auburn, Illinois; by J. A. Brown, *et al.*
First National Bank, Mitchell, Indiana; by Henry C. Truebold, *et al.*
First National Bank, Norwood, Ohio; by Wm. R. Collins, *et al.*
First National Bank, Snyder, Oklahoma; by M. A. Nelson, *et al.*
First National Bank, Floresville, Texas; by Sam Houston, *et al.*
Wharton National Bank, Wharton, Texas; by H. J. Bolton, *et al.*
Farmers and Merchants' National Bank, Wabash, Indiana; by Howard M. Atkinson, *et al.*
Athens National Bank, Athens, Texas; by R. B. Caldwell, *et al.*
First National Bank, Tamaroa, Illinois; by R. B. Caldwell, *et al.*
First National Bank, Pocahontas, Iowa; by W. S. McEwen, *et al.*
First National Bank, Columbia, Alabama; by G. H. Malone, *et al.*
First National Bank, Falls Creek, Pennsylvania; by D. S. Herron, *et al.*
Consolidated National Bank, New York, New York; by Mortimer H. Wager, *et al.*
First National Bank, Collinsville, Texas; by T. F. Rodgers, *et al.*
Spring Valley National Bank, Spring Valley, Minnesota; by Everett Jones, *et al.*
Leetsdale National Bank, Leetsdale, Pennsylvania; by Edwin L. Porter, *et al.*
First National Bank, Moneka, Oklahoma; by F. M. English, *et al.*
First National Bank, Paris, Kentucky; by Claude M. Thomas, *et al.*
First National Bank, Welsh, Louisiana; by John H. Cooper, *et al.*
First National Bank, Forman, North Dakota; by J. L. Mitchell, *et al.*
First National Bank, Forest City, South Dakota; by J. R. Hughes, *et al.*
First National Bank, Bonesteel, South Dakota; by F. W. Rathman, *et al.*
Blair County National Bank, Tyrone, Pennsylvania; by S. R. Russell, *et al.*
First National Bank, Grand Rapids, Minnesota; by A. D. Davidson, *et al.*
National Bank of Eau Claire, Eau Claire, Wisconsin; by W. K. Coffin, *et al.*
Caldwell National Bank, Caldwell, Kansas; by M. M. Fulkerson, *et al.*
Citizens' National Bank, Springville, New York; by Henry Curtis, *et al.*
Valley National Bank, Chillicothe, Ohio; by Geo. H. Smith, *et al.*
First National Bank, Richwood, West Virginia; by Geo. D. Landwehr, *et al.*
First National Bank, Jasper, Missouri; by B. A. Gooding, *et al.*

MARTINSBURG—National Bank of Martinsburg; in voluntary liquidation May 31.

Training of Bank Clerks.—In a lecture delivered some months ago, at St. Louis, Patrick J. Sweeny, of New York, had the following to say in regard to the training of stenographers. We have substited "bank clerks" for "stenographers" in quoting his remarks:

"Employers are clamoring for men with a goodly supply of common sense; those who can be original at times; those who will use their brains. Constant, careful, level-headed attention will inspire confidence; confidence will bring responsibility, and increased responsibility will bring increased salary. Ours is a world of work, and the world demands workers. Let us train bank clerks to work for the future and not for the present: to acquaint themselves with all the details of the work; to realize that when the opportunity comes for advancement this varied knowledge will help more than anything else. The less a bank clerk reqires looking after, the more able he is to stand alone and complete his tasks, the greater his reward. If he can not only do his work, but direct intelligently and effectively the efforts of others, his reward is in exact ratio, and the more people he can direct, and the higher the intelligence he can rightly lend, the more valuable are his services.

In every office there is some one who knows where things are. That one will tell the others whether the work is right, where to find things, and what to do next. He will come a little earlier to lay out the work, and remain a little later to clear up the day's work. He will show he thinks of his employer's interests between going home at night and returning in the morning. Responsibility gravitates to the person who can shoulder it, and power flows to the man who knows how—to the one who picks up things off the floor instead of walking over them or kicking them aside. 'People who take pains never to do any more than they get paid for, never get paid for anything more than they do.' By hard work, the exercise of the mental faculties, strictly obeying the rules of honor, daring to do right, and observing kindness and gentleness, success will come to the aspiring bank clerk. In conclusion, I would urge that we all teach our bank clerks to live up to the motto of President Roosevelt: 'Better faithful than famous.'"

NATIONAL BANK RETURNS—RESERVE CITIES.

By the courtesy of the Comptroller of the Currency at Washington, the BANKERS MAGAZINE has been favored with the complete returns of the National banks in all the reserve cities, at the date of the call on April 30, 1902. These are published below in conjunction with the two preceding statements of December 10, 1901, and February 25, 1902. In this form the figures become much more valuable by reason of the comparison. The complete returns of National banks in the reserve cities are published in the BANKERS' MAGAZINE exclusively.

NEW YORK CITY.

RESOURCES.	*Dec. 10, 1901.*	*Feb. 25, 1902.*	*Apr. 30, 1902.*

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, June 4, 1902.

THE ANTHRACITE COAL MINERS' STRIKE was one of several events which influenced financial affairs during the month just closed. There had been rumors of trouble and negotiations for some time, when, on May 15, after a "temporary suspension" of work by the miners for four days, a strike was ordered. About 140,000 mine employees have quit work, and the loss to them and to the employers is already very great. Following the beginning of the strike there has been a rapid advance in the price of anthracite coal, and an apparent scarcity exists.

The coal strike began at a time when other influences were at work to check the course of speculation. The remarkable slump in International Power, which occurred at the close of April, was followed by what bordered upon a panic among the "curb" operators who have been dealing in outside stocks and securities not sold on the floor of the Stock Exchange.

There was a complete collapse in what were known as the Webb-Meyer properties, and fabulous fortunes on paper suddenly disappeared. It has not needed long experience nor expert knowledge to discover in the recent wild buying of securities, of whose value the investing public had absolutely no knowledge, a situation that was full of danger. When some of the bubbles began to explode there was at once a general collapse in securities of questionable merit.

Co-incident with the break-up in that quarter there was a sharp rise in money, caused in part by the unexpected decrease in the reserves of the New York banks. For a time there was an exceptional demand for money, and some of the large institutions had important financial engagements to protect. The rise in money helped to depress prices of securities, while it also sent foreign exchange to the lowest point it has reached this year. The money stringency, however, was only temporary, although speculation has been much more conservative and cautious since the break in prices.

The total sales of stocks at the Stock Exchange in May fell below 18,500,000 shares, as compared with more than 35,000,000 shares in May last year. Still, this is a larger total than was ever recorded for the same month, except in 1899 and 1901. The sales of bonds were about $80,000,000, as against $156,000,000 last year. Many issues of bonds sold at a decline last month, in some the fall being very noticeable.

The situation as regards values is not looked upon with any degree of apprehension, for the evidences of material prosperity are at every hand. The check to unbridled and unreasoning speculation is really favorable to a continuance of the upward movement in values of securities of real worth. It has at least removed one serious menace to a further advance.

Interest is now being taken in the growing wheat crop. The condition on May 1st as reported by the Department of Agriculture was 76.4 as against 78.7 on April 1st, so that the decline in condition in April was small. A year ago the condition was 94.1. Some improvement is believed to have occurred in May as the weather was generally favorable. The Department reports that 4,868,000 acres sown to wheat have been abandoned, but as there had been a considerable increase in the

Digitized by Google

area sown compared with that harvested last year, it is probable that the actual decrease this year will be found to be very small.

The final estimates of the acreage, production and farm value of the cereal crops of the United States in 1901 were delayed by the Department of Agriculture to give due consideration to the Census report on the crop of 1899. The estimates as issued by the Department last month were:

	Acres.	*Bushels.*	*Value.*
Corn	91,349,928	1,522,519,891	$921,555,768
Wheat	49,895,514	748,460,218	467,350,156
Oats	28,541,476	736,808,724	293,658,777
Barley	4,295,744	109,932,924	49,705,163
Rye	1,987,505	30,344,830	16,909,742
Buckwheat	811,164	15,125,941	8,523,318

The weight of authority is now generally favorable to the theory that for some years past the actual yield of wheat and other cereals has been larger than the official estimates.

An investigation of the acreage planted in cotton this season and of the condition of the plant has been made by the "Journal of Commerce." It estimates a decrease of 2.23 per cent. in the acreage planted, comparing with the June, 1901, report of the Department of Agriculture. The reduction is 612,000 acres in area planted, while the condition of the plant is 10.4 points higher than reported by the Department a year ago.

The end of new records in the iron trade has apparently not been reached yet. The weekly capacity of the iron furnaces on May 1st was 352,064 tons thus for the first time in the htstory of the industry bringing the output up to 1,500,000 tons a month. New furnaces are being constructed, and the "Iron Age" suggests that it may be possible that in the autumn or winter of 1903 the productive capacity will have been increased 4,000,000 tons a year. As about 17,750,000 tons will be produced this year, the output next year may exceed 21,500,000 tons.

The prominence which the United States has taken as an iron producer is attracting much attention abroad. The Bureau of Statistics has issued a bulletin quoting the London "Commercial Intelligence" on the subject. From the bulletin we take the following table, showing the production of pig iron in the United States, United Kingdom, Germany. and all other countries at quinquennial periods from 1865 to 1901, stated in gross tons:

YEAR.	*United States.*	*United Kingdom.*	*Germany.*	*All other countries.*
	Tons.	Tons.	Tons.	Tons.
1865	831,770	4,819,300	759,700	2,839,300
1870	1,665,179	5,963,515	1,369,139	2,902,200
1875	2,023,733	6,365,462	1,907,317	3,509,736
1880	3,835,191	7,749,233	1,685,909	3,201,248
1885	4,044,526	7,415,469	3,629,158	4,439,221
1890	9,202,703	7,904,214	4,584,835	5,737,993
1895	9,446,308	7,703,459	5,379,041	6,735,800
1900	13,789,242	8,959,691	8,385,985	9,265,200
1901	*15,878,354	7,750,000	*7,736,663	9,042,200

* Iron and Steel Association figures.

The Bureau of Statistics also furnishes encouraging information concerning our exports of manufactures. Our total exports are not as large this year as they were last, although that is in part due to a change in reporting certain exports to our colonies. In the ten months ended April 30 we exported $1,190,158,674 of merchandise, or $70,000,000 less than in the previous year. The value of manufactures exported was $333,820,809, or within $4,500,000 as much as in 1901. On the other hand the exports of manufactured articles in April were $4,500,000 larger than in

Digitized by Google

the same month last year. The prospect therefore is good that the exports of that class this year will equal those of last year.

The railroads of the country continue to enjoy a prosperity never before experienced. The "Financial Chronicle" compilation of railroad earnings for the first quarter of 1902 shows that the gross earnings of 145 roads increased $16,635,689, or 5.6 per cent., and the net earnings increased $3,051,384, or 3.3 per cent. These gains are shown on earnings which have been increasing for several years. The gross earnings of 88 roads for the four months ended April 30 increased $16,249,874 or nearly 8 per cent. From the table published by our contemporary we have taken the number of roads, reporting their mileage and earnings for the first four months of the year, and we have added the mileage per road and gross earnings per mile calculated upon those figures. We give the results for the last ten years as follows:

YEAR.	*Number of roads.*	*Mileage.*	*Gross earnings Jan. 1 to Apr. 30.*	*Increase in earnings over previous year.*	*Mileage per road.*	*Gross earnings per mile.*
		Miles.			Miles.	
1893............	138	89,860	$156,005,337	$3,882,475	651	$17,360
1894............	117	93,662	136,210,527	*21,518,308	801	14,540
1895............	119	95,120	138,633,489	1,109,087	800	14,570
1896............	125	90,539	144,356,576	10,979,714	724	15,940
1897............	127	94,489	143,231,183	*3,178,894	744	15,160
1898............	125	96,616	169,183,383	23,473,967	778	17,520
1899............	119	93,648	168,596,988	6,869,375	787	18,000
1900............	110	96,918	204,218,414	27,863,118	881	21,080
1901............	97	96,874	205,862,063	16,971,147	999	21,250
1902............	88	95,147	225,617,790	16,249,874	1,084	23,710

* Decrease.

While the comparison in the above is only approximately accurate, still it shows certain facts concerning which there can be no dispute. It shows first that earnings have been increasing almost continuously since 1894. This is true both as to aggregate earnings and earnings per mile. The earnings in 1894 were $14,540 per mile, and except for the decrease in 1897, have increased every year until the present year, when they were $23,710 per mile, an increase of more than fifty per cent.

Another interesting fact shown is the increase in mileage per road, which has been exceptionally rapid in the last three years. The average mileage per road, as the basis of the above table, is now 1,084 miles, as compared with 787 miles in 1899, and 651 miles in 1893.

Attention has been directed to the currency question by certain events of the month. The Fowler financial bill has made no progress in the House of Representatives, but on the other hand a bill has passed that branch suspending the coinage of silver dollars and authorizing the coinage of silver dollars and bullion into fractional silver.

Significant was the action of the bankers' associations of Missouri and Kansas last month in condemning the branch banking system. It is evident that both in the South and the West there is a strong opposition to the plan, and any attempt to incorporate it into the National banking system will be resisted.

National Bank of the United States.—The reports of the National banks made for April 30 show a further increase of sixty-six in number of banks in existence as compared with the reports of February 25. The net increase since April, 1901, was 359. There are 4,423 banks in operation, with an aggregate capital of $671,176,312, an increase of nearly $4,000,000 since February, and of more than $30,000,000 since April 24 last year. The surplus and undivided profits aggregate $461,000,000, an increase of $11,000,000 in two months, and of nearly $45,000,000 in a year. The surplus and profits now equal nearly seventy per cent. of the entire

Digitized by Google

capital of all the National banks in the country. The individual deposits, for the first time since the system was organized, have gone beyond $3,000,000,000, reaching $3,111,690,196, an increase of $129,000,000 since February, of $218,000,000 in the last year, and of $662,000,000 in the last two years. In addition to their deposits the National banks hold $291,000,000 belonging to State banks, $266,000,000 to trust companies and Savings banks, and $120,000,000 to the Government. The total resources are $5,962,135,451, an increase of $331,000,000 in the last year.

Creditable to the National honor was the turning over by the United States of the control of the Government of Cuba to its own people on May 20. This action redeemed a pledge made four years ago.

THE MONEY MARKET.—The local money market is easy and rates generally are lower than they were a month ago. Time money is freely offered although the banks are not lending for long periods except to a limited extent. At the close of the month call money ruled at 2¾ @ 3½ per cent., most of the loans being made at above 3 per cent. Banks and trust companies quote 3 per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 4¼ @ 4½ per cent. for 90 days to 6 months on good mixed collateral. For commercial paper the rates are 4¼ @ 4½ per cent. for 60 to 90 days' endorsed bills receivable, 4¼ @ 4¾ per cent. for first-class 4 to 6 months' single names, and 5 @ 5½ per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—There has been another of those wide fluctuations in the "averages" of the New York Clearing-House banks which until recent years were comparatively unknown. In the first three weeks of the month the deposits fell more than $36,000,000, increasing in the last week almost $17,000,000. Loans were reduced $34,000,000 in three weeks and increased $15,000,000 in the fourth week. The former at the close of the month were nearly $20,000,000 less than on May 3 and the latter $19,000,000. Rarely is the movement of deposits and loans as

Digitized by Google

uniform as this in any particular period. The banks complete the month with a surplus reserve about $4,500,000 larger than they had a month ago, although the total cash reserves are somewhat smaller than they were then.

MONEY RATES ABROAD.—There has been no change in the posted rates of discount of any of the European banks during the past month, and the Bank of England adheres to its 3 per cent. rate. Discounts of 60 to 90 day bills in London at the close of the month were 2¾ @ 2⅞ against 2⅝ per cent. a month ago. The open market at Paris was 1¾ per cent. against 2 per cent. a month ago, and at Berlin and Frankfort 2⅛ @ 2¼ per cent. against 1¾ per cent. a month ago.

EUROPEAN BANKS.—Germany was the largest gainer of gold last month, about $14,000,000 going into the Imperial Bank since May 1. It is the only bank showing an increase of as much as $1,000,000, and it holds $30,000,000 more than it did a year ago. All the principal banks except the Bank of England are much better supplied with gold than they were at this time last year.

FOREIGN EXCHANGE.—The market for sterling was generally weak throughout the month and rates fell to the lowest point of the year. The high rates for money prevailing in the local market early in the month influenced the decline in sterling. There were transfers of securities abroad to be used as collateral for loans in Europe, and also purchases of securities here for foreign account and these influenced the sterling market also.

NATIONAL BANK CURRENCY.—While the decrease in National bank notes outstanding was only $240,215 last month, there was an increase in the deposit of lawful money to retire circulation of $1,263,340 and a decrease in circulation based on Government bonds of $1,503,555. The bonds on deposit to secure circulation decreased nearly $1,300,000, while the amount deposited to secure public deposits was increased $3,700,000.

NATIONAL BANK CIRCULATION.

	Feb. 28, 1902.	Mar. 31, 1902.	Apr. 30, 1902.	May 31, 1902.
Total amount outstanding	$358,434,867	$357,476,407	$356,987,399	$356,747,184
Circulation based on U. S. bonds	320,074,924	317,460,382	315,113,392	313,609,837
Circulation secured by lawful money	38,359,943	40,016,025	41,874,007	43,137,347
U. S. bonds to secure circulation:				
Funded loan of 1907, 4 per cent	5,785,000	5,652,500	5,397,500	5,281,250
Five per cents. of 1894	333,400	333,400	343,400	343,400
Four per cents. of 1895	2,640,109	2,552,600	2,130,600	2,078,100
Three per cents. of 1898	3,625,080	3,462,080	3,826,080	3,310,080
Two per cents. of 1900	310,191,450	307,526,750	306,287,550	305,183,350
Total	$322,575,080	$319,526,330	$317,484,130	$316,196,180

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents of 1907, $9,014,000; 5 per cents. of 1894, $929,000; 4 per cents. of 1895, $8,339,250; 3 per cents. of 1898, $7,631,100; 2 per cents. of 1900, $96,880,800; District of Columbia 3.65's, 1924, $985,000; a total of $123,779,150.

GOVERNMENT REVENUES AND DISBURSEMENTS.—The Treasury statement for May shows a surplus of $10,762,652, making for the eleven months of the fiscal year a total surplus of more than $76,000,000 as compared with $58,600,000 last year. The revenues are smaller than for last year, being $3,000,000 less in May, and $22,000,000 less in the eleven months, but the decrease in expenditures has been still larger.

UNITED STATES PUBLIC DEBT.—Little change has occurred in the principal of the public debt, the only change of any importance being an increase of about

$2,000,000 in certificates and Treasury notes. The gross debt is $2,160,000,000. Deducting the cash in the Treasury leaves the net debt at about $982,500,000, a decrease of $10,600,000 for the month. The cash balance increased by an equal amount and is now more than $345,000,000, or within about $1,000,000 of the total volume of legal-tender notes—greenbacks—outstanding. Nearly $125,000,000 of this balance is on deposit in National banks.

MONEY IN CIRCULATION IN THE UNITED STATES.—THE volume of money in circulation was reduced more than $6,000,000 in May, the result of Treasury accumulation of surplus; about $5,500,000 of gold coin was withdrawn from circulation while nearly $3,000,000 gold certificates were issued. The remainder of the net decrease was principally in silver certificates and Treasury notes.

MONEY IN CIRCULATION IN THE UNITED STATES.

Certificates and Treasury notes represented by coin, bullion, or currency in Treasury are not included in the above statement.

Foreign Trade.—The export movement continues smaller than in the previous two years, although the exports of merchandise are still in excess of $100,000,000 per month. In April the total exceeded $109,000,000 while imports were slightly below $76,000,000, making the net exports $33,000,000. This balance is the smallest for April in the last five years excepting 1899. The exports for the ten months of the current fiscal year were $1,190,000,000, the largest for any year excepting last year, when the total reached $1,260,000,000. The imports for the ten months were $754,000,000, an increase over the previous year of $78,000,000, and over 1900 of $37,000,000. The balance of net exports for the ten months is $435,000,000, the smallest since 1897, and nearly $149,000,000 less than in 1901. The gold movement has been small, and the exports and imports for the ten months nearly balance.

BANKERS' OBITUARY RECORD.

Birdsall.—Geo. N. Birdsall, Treasurer of the Union Dime Savings Institution, New York city, died May 15. He was born in Ohio in 1836. He became Treasurer of the above institution in 1892, having been a trustee for some time previously.

Brown.—Daniel Brown, Vice-President of the Wickersham Banking Company, Petaluma, Cal., died May 20. He was born in Ireland seventy years ago, coming with the family to New Orleans while a boy. He was one of the Pacific Coast pioneers, and had been highly successful in business.

Burnham.—E. P. Burnham, President of the Saco and Biddeford Savings Institution, Saco, Me., died May 12. He was mayor of Saco in 1872, and had held a number of other local offices.

Case.—John S. Case, President of the Rockland (Me.) National Bank, four times mayor of Rockland and a member of the Legislature for four years, died May 10.

Cassils.—John Cassils, Vice-President of the Merchants' Bank of Canada, Toronto, died May 21.

Fisher.—S. J. Fisher, President of the People's National Bank, Independence, Iowa, died May 21.

Hartman.—Lemuel Hartman, Cashier of the First National Bank, Fort Wayne, Ind., died May 27, aged sixty-six years. He had been connected with the bank for thirty-nine years.

Harvey.—Blaney Harvey, President of the Tradesmen's Trust and Saving Fund Company, Philadelphia, died June 3. He was born in Ireland seventy years ago, and came to this country in 1849.

Hulshizer.—A. H. Hulshizer, Vice-President of the Industrial Trust, Title and Savings Company, Philadelphia, died May 19.

Kite.—John H. Kite, Cashier of the First National Bank, Rockville, Conn., died May 15, aged fifty-three years. He had worked in the bank continuously since he was of age, and since 1870 had been Cashier.

Lee.—John R. Lee, Vice-President of the First National Bank, Plymouth, Pa., died May 7, aged fifty-two years.

Martin.—Charles E. Martin, Vice-President of the Plattsburg (N. Y.) National Bank, died May 29.

Maxwell.—Henry W. Maxwell, head of the Stock Exchange firm of Maxwell & Graves, New York city, Vice-President of the Liberty National Bank, and a director of several other banks and trust companies, died May 11. He was identified with many social and benevolent enterprises, and was one of the leading citizens of the Borough of Brooklyn.

McCormick.—Hon. Henry C. McCormick died at Williamsport, Pa., May 26. He was born in Lycoming county, Pa., June 30, 1844, and after being educated was admitted to the bar in 1866. For two terms he was city solicitor of Williamsport, and was a member of Congress from 1886 to 1890. In 1895 he was appointed Attorney-General of Pennsylvania. He was one of the organizers of the Lycoming National Bank, of Williamsport, and in 1887 he organized the banking firm of Cochrane, Payne & McCormick, of which he was a member at the time of his death.

McIntosh.—Andrew J. McIntosh, President of the Chicopee National Bank, Springfield, Mass., and one of Springfield's oldest business men, died May 9, aged seventy-nine years. He had been a director of the bank since 1871, Vice-President since 1891, and President from 1893 until his death.

Park.—R. A. Park, President of the Atchison (Kans.) Savings Bank, died May 2, aged seventy-five years.

Ramsey.—J. L. Ramsey, Cashier of the Homestead (Pa.) National Bank, died May 29, aged twenty-four years.

Robinson.—J. F. Robinson, President of the Rock Island (Ill.) National Bank and also President of the Central Trust and Savings Bank, died May 23. Mr. Robinson was born in Rock Island county in 1849 and had always resided there. Besides his banking interests, he was associated with a number of important manufacturing and other business enterprises.

Sorg.—Paul J. Sorg, a former member of Congress from Ohio, and President of the Merchants' National Bank, of Middletown, died May 28. Mr. Sorg's wealth was estimated at from $4,000,000 to $6,000,000.

Springs.—H. G. Springs, Vice-President of the Merchants and Farmers' National Bank, Charlotte, N. C., and one of the wealthiest and most prominent men of that section, died May 25.

Stone.—Hon. Jesse Stone, Vice-President of the Bank of Watertown, Wis., died May 11. He was a member of the State Assembly for three terms, and was twice elected Lieutenant-Governor of Wisconsin.

Wakefield.—Geo. W. Wakefield, for ten years Secretary and Treasurer of the Camden (N. J.) Safe Deposit and Trust Co., died May 20.

Withington.—Geo. E. Withington, Cashier of the First National Bank, Portland, Ore., and connected with the bank for thirty years, died April 29. He was born at Northumberland, Pa., July 9, 1850.

Woodworth.—Chauncey C. Woodworth, President of the Flour City National Bank, Rochester, N. Y., and one of the best-known men of that city, died May 1. He was born at Rochester in 1843.

HOME OFFICE, - BALTIMORE, MARYLAND.

METHODS AND MACHINERY OF

PRACTICAL BANKING

BY CLAUDIUS B. PATTEN,

For many years Cashier of the State National Bank of Boston.

The Tenth Edition of this remarkable Book has just been published.

NO WRITER of the present generation has presented so much valuable information on Practical Banking subjects as the author of this work. It is written in an admirable style. The book is entertaining as well as instructive. It has taken *first rank* as an AUTHORITY on banking matters, and it is also regarded as a Text-Book by bank clerks, bank officers and all others who wish to become proficient in the banking business.

A number of the leading banks in New York, Boston, Philadelphia, Chicago and other principal cities, as well as in smaller towns and villages, have ordered additional copies for their clerks and junior officers.

The book should be in the hands of every one actively connected with a bank—Officers, Tellers, Bookkeepers and general Clerks—and every man should have a copy for his own use.

No bank, be it large or small, in city or country village, old established or just beginning business, can afford to be without Patten's Practical Banking.

An Octavo Volume of 520 pages, printed on fine paper and substantially bound in Cloth sides, with Leather back.

TERMS:

Single Copy . . . . $5.00.

NOTICE.—Subscribers for THE BANKERS' MAGAZINE will receive a copy of Patten's book at three dollars ($3) by remitting eight dollars ($5 for the MAGAZINE and $3 for the book).

Paid-up subscribers for the MAGAZINE by sending $3 will receive a copy of Patten's Practical Banking, carriage prepaid. In no case will a single copy be sold at less than the regular price, $5, except to MAGAZINE subscribers.

☞ CLUB RATES.—Following are the rates to BANK CLERKS who get up clubs to supply themselves with copies; and the same terms apply to Banks ordering a number of copies at one time for use by their own officers or employees.

Five Copies or over in one order	. . . .	$3.00 a copy.
From Three to Five copies, do	. . . .	$3.50 a copy.
Two Copies, do	. . . .	$4.00 a copy.

Will be sent postage (or expressage) prepaid on receipt of the price.

BRADFORD RHODES & CO., Publishers, 87 Maiden Lane, New York.

City Trust and Banking Co.,

BALTIMORE, MD.

Chartered by the Maryland Legislature with broad corporate powers.

BANKERS' SUPPLIES.

Manufacturers and dealers in Bankers' Supplies, such as Safes and Vaults, Office Furniture, Blank Books, Bankers' Stationery, and in fact everything required to fit up and maintain a modern banking room, should bear in mind these facts:

1—It is much cheaper to place an attractive advertisement in a high-class publication going regularly to the people you wish to reach than it is to send them circulars, which usually go unread into the waste basket; besides, the advertisement appearing in a medium of character and influence among bankers secures in a large degree the prestige and influence of the publication in which it is seen.

2—THE BANKERS' MAGAZINE aims to bring before its readers only such advertisements as will interest them, and at the same time the publishers strive to present only THE BEST in the several lines of business seeking bankers and capitalists as customers.

3—It is an undisputed fact that the MAGAZINE'S paid-up circulation is *more than double* that of any other banker's publication in the United States; and moreover its character and influence in the field of banking and finance outranks all others.

4—The MAGAZINE'S advertising rates are low considering the many advantages it offers. Terms are printed in each issue and there is no deviation therefrom.

ADVERTISING RATES.

The Bankers' Magazine

AND

Rhodes' Journal of Banking

CONSOLIDATED.

THE advertisements of Banks, Bankers and Financial Institutions, and such other advertisements as may be of interest to Bank officers, Bankers or Investors, will be accepted for publication at the following rates:

For the advertising pages in FRONT PART:

Quarter page *one year*	....	**$150**
Half page, lower, *one year*	....	**250**
Half page, upper,	"	**300**
One page	"	**500**

Advertisements in BACK PART, *page not specified.*

Quarter page *one year*	....	**$100**
Half page	"	**175**
One page	"	**300**

COVER PAGES, the spaces *facing reading matter*, and the pages *facing front and back cover*, are not included in above quotations. Terms for these choice locations will be furnished on application.

☞ *There is no discount from the published rates except on contracts running two years and over, on which ten per cent. discount is made.*

DIVIDEND NOTICES, wants, business announcements and other transient advertising, one dollar ($1) a line each insertion.

NOTICE.—Yearly advertisers occupying a Quarter-page or over are allowed the usual space in the MAGAZINE'S "Special List of Banks and Bankers" *without additional charge*, in which attention will be directed to their advertisement.

SPECIAL LIST OF BANKS AND BANKERS.

The "Special List of Banks and Bankers" is corrected monthly and published in every number, thus enabling Subscribers to keep their Names, Capital, Correspondents and the Main Features of their business prominently before the public at a *small expense*.

Only paid-up annual subscribers are solicited for representation in the Special List.

Terms, **$10** a year, in addition to subscription, for the usual style and space.

SUBSCRIPTION TERMS.

NOTICE.—The subscription price of THE BANKERS' MAGAZINE is **$5** a year. Subscriptions are payable in advance, and are continued from year to year and until orders to the contrary in writing are received and arrears paid up. On Foreign subscriptions add 96 cents for postage.

BRADFORD RHODES & CO., Publishers,
87 MAIDEN LANE, NEW YORK.

A Friendly Word to Bankers.

The value of the collateral in your loans is steadily changing for better or for worse as the properties represented by the collateral develop. Often these changes are noticed only by careful study of the operations of the properties. The quoted prices of the collateral are sometimes no criterion whatever. It is a positive help therefore to have your office equipped with the most representative daily paper of Wall street which makes a specialty of Studies in Value and posts you on securities, viz.:— THE WALL STREET JOURNAL, published by Dow, Jones & Co., 44 Broad St., New York, for 20 years specialists in this business. THE WALL STREET JOURNAL is cheap insurance on investments; $12 a year.

Travelers to California

Naturally desire to see the grandest and most impressive scenery en route. This you will do by selecting the Denver & Rio Grande and Rio Grande Western, "The Scenic Line of the World," and "The Great Salt Lake Route," in one or both directions, as this line has two separate routes across the Rocky Mountains between Denver and Ogden. Tickets reading via this route are available either via its main line through the Royal Gorge, Leadville, over Tennessee Pass, through the Canon of the Grand River and Glenwood Springs, or via the line over Marshall Pass and through the Black Canon of the Gunnison, thus enabling the traveler to use one of the above routes going and the other returning. Three splendidly equipped fast trains are operated to and from the Pacific Coast, which carry through standard sleepers daily between Chicago, St. Louis, Denver and San Francisco. Dining cars (service a la carte) on all through trains. If you contemplate such a trip, let us send you beautifully illustrated pamphlets, free. S. K. Hooper, G. P. & T. A., Denver, Colo.

Selected List of Lawyers.

NOTICE.—The Lawyers in this List have been recommended to the Publishers of The Bankers' Magazine by a Bank or well-known Merchant in the place or vicinity. It is the intention to have the List include only the names of individual Lawyers and firms especially equipped for handling (1) the general legal business arising from banking operations; (2) litigated cases intimately related to the banking and mercantile business, and (3) collections of bankers and merchants.

Legal business may be entrusted to the Lawyers represented below with the assurance that it will receive: 1st, proper attention; 2d, a quick and business-like response; and 3d, prompt remittances of collections.

Detective Stories

Conan Doyle considers Poe the inventor of the detective story, and as pre-eminently the master of the short story, and adds: "The imaginative quality, the intellectual skill, the keen adaptation of means to ends, the subtilty of insight, the management of dramatic effects, are qualities upon which I delight to dwell, and I would emphasize my own indebtedness to Poe and my appreciation of his great abilities."

Do you know Poe? And do you wish an authoritative memoir which gives the true facts of the life of the man whom Tennyson considered the greatest American author; one which proves the untruth of many existing libels? If so, address

GEORGE BARRIE & SON, 1313 Walnut Street, Philadelphia.

A historical treatment of these sciences, easily comprehended by even the general reader. 12 mo. Cloth. 488 pp. Illustrated.

HISTORY OF MODERN BANKS OF ISSUE. By CHARLES A. CONANT 3.00
A summary of the facts regarding banks of issue, the crises through which they have passed and the lessons thereof. Cloth, 595 pp. With Index.

CLEARING-HOUSES, By JAMES G. CANNON. Cloth 2.50
Their History, Methods and Administrations. 383 pp. With Index.

MONEY. By FRANCIS A. WALKER 2.00
A standard American treatise. Author rejects the word "currency" and extends the term "money" to include bank notes. Substitutes the definition "common denominator in exchange" for "measure of value." Holds that paper money, nominally or really convertible into coin, is liable to over-issue. States and examines the various theories of money. 8vo. 550 pp.

HISTORY OF AMERICAN CURRENCY. By W. G. SUMNER 3.00
With chapters on the early Bank Restrictions and Austrian Paper Money. Deals with facts more than with theories. The historical information which it contains has never been brought together before within the compass of a single work. English "Bullion Report." 390 pp.

STANDARD LAW BOOKS.

ELEMENTS OF THE LAW OF BILLS, NOTES, CHEQUES, AND THE ENGLISH BILLS OF EXCHANGE ACT. Student's Series. By MELVILLE M. BIGELOW, Ph.D 2.50

BOOKS FOR BANKERS.

INTEREST TABLES.

ROBINSONIAN UNIVERSAL INTEREST TABLES, ETC. **$5.00**
The most complete and comprehensive interest book extant. Gives *all* rates of interest from 1¼ to 12 per cent., 360 days, and from 2 to 10 per cent., 365 days to the year, Averaging Accounts, Sterling Exchange, etc., etc.

ROBINSONIAN SAVINGS BANK TABLES:
Tables giving interest for both 3 and 6 months, at 3 per cent. on every dollar from $1 to $1,000. The same at 3½ per cent., extended for 6 months from $1,001 to $1,600........ 1.50
Tables giving interest for 6 months at 3, 3¼, 3½ or 3¾ per cent. on every dollar from $1 to $1,600........ 1.50
Tables at either 3 or 3½ per cent., giving interest for 1, 2, 3, 4, 5 and 6 months on every dollar from $1 to $1,000........ 2.00
All on thick cardboard.

ROBINSONIAN BUILDING-LOAN INTEREST TABLES 5.00
Containing Sinking Fund Tables; Compound Interest Tables, with interest compounded annually, semi-annually, quarterly and monthly; Present Worth Tables, with interest compounded as in preceding; Monthly Payments required to pay up Loans; Building and Loan Maturity Tables, showing when shares mature; Comparative Simple and Compound Interest Tables; Withdrawal Values of Building and Loan Shares; and many other valuable tables.

ROBINSONIAN INTEREST ON DAILY BALANCES **3.00**
Giving at *one view* the interest for one day on any amount from $1 to $100,000,000.00, at 1, 1½, 1¾, 2, 2¼, 2½, 2¾, 3, 3½, 4, 4½, 5, 5½ and 6%, on the basis of 365 days to the year.

ROBINSONIAN 5, 6, 7 AND 8 PER CENT. INTEREST BOOK **5.00**
Computed on basis of 360 days to the year. To which are added tables of Interest on Daily Balances, on 365 days' basis at 1½, 2, 2½, 3, 3½, 4, 4½ and 5 per cent. on any amount from $1.00 to $100,000,000.00. Arranged also for Averaging Accounts.

ROBINSONIAN SIX PER CENT. INTEREST BOOK **2.00**
Giving at a glance the interest on any amount from $1 to $10,000 for any time. Also arranged for averaging accounts by the very shortest, simplest and easiest method in the world, and with special tables for use of such Savings Banks as compute interest quarterly and half-yearly. This book is a perfect gem, leaving Rowletts old 6% Interest Book far behind.
Also 7 and 8 per cent. Books similarly arranged........ 2.00

ROBINSONIAN STERLING EXCHANGE TABLES **2.00**
These tables readily convert Sterling to Federal money, and the converse, at all *quarter-cent* rates from $4.75 to $4.95 to the pound. The only book published that does this.

ROBINSONIAN MULTIPLICATION AND DIVISION TABLES **3.00**
Being the multiples of all numbers from 1 to 1,000 by all numbers from 1 to 100 and by the fractional sixteenths. Every page indexed by projecting tags.

BEACH'S INTEREST TABLES. By OREN M. BEACH........ **5.00**
New and enlarged edition, containing two sets of tables of interest on all sums, from $1 to $1,000,000, at 3, 3½, 4, 4½, 5, 6, 7, 8, 9 and 10 per cent. One set is for days, 365 days to the year; the other is for months and days, 360 days to the year. By these tables interest can be calculated on Dollars, Sterling, Francs and Marks, and with greater rapidity than by any others. Also the most comprehensive tables of compound interest, compound discount, annuities, sinking fund, etc., yet published, at rates from ½ per cent. (progressing by ½ per cent. increase) to 10 per cent., and for periods of from 1 to 100 years.

STERLING EXCHANGE CONVERSION TABLES. By OREN M. BEACH........ 2.00
These tables convert Sterling money into Dollars and Dollars into Sterling at all quarter-cent rates from $4.70 to $5.00 and all sums from 1, to 1,000,000. These are the most convenient and best arranged Exchange Tables published.

HAINE'S INTERLINEAR INTEREST TABLES **2.50**
Show interest on any sum from 1, to 100,000 dollars, for from one day to one year, at 6, 7, 8, 9, 1 and 10 per cent per annum, 360 days per annum. Also at 7 and 10 per cent. per annum for from 1 to 150 days, 365 days per annum. Arranged for averaging accounts. Also Time, Sterling Exchange, Compound Interest, Present Worth and Due Date Tables.

CAMPBELL'S INTEGER PERIOD INTEREST TABLES. By MYRON CAMPBELL........ **2.00**
Showing the interest on any sum from $1 to $10,000, 1 day to 1 year, at 6, 7, 8, 9 and 10 per cent.; with Sterling Exchange, Compound Interest, Present Worth, Time and Due Date Tables.

HUMPHREY'S DAILY BALANCE INTEREST TABLES **2.50**
Calculated on a basis of 365 days to the year. Shows at a glance the interest for one day on any amount at 1½, 2, 3, 6, 8 and 10 per cent.

LANGLEY INTEREST TABLES 3.50
Showing exact interest for one day on any multiple of $1,000 from $10,000 to $1,000,000 at 2 2½, 3, 3½ and 4 per cent. on basis of 365 days to the year.

SMITH'S INTEREST TABEES. Calculated by DUANE DOTY........ **1.00**
Showing the interest on any sum from $1.00 to $10,000, from one day to five years, at 5, 6, 7, 7 3-10, 8½, 10 and 12 per cent. per annum.

STOCK TABLES. By FRANKLIN W. LANTZ, A.M........ **2.50**
Showing annual rate per cent. realized semi-annually on securities bearing interest payable semi-annually, at 3, 3½, 3 65-100, 4, 4½, 5, 6, 7, 8 and 10 per cent., running from 1 to 50 years, or in perpetuity.

Sent post-paid on receipt of price, by **BRADFORD RHODES & CO., 87 Maiden Lane, N. Y**

◎ MANHATTAN ◎

The Manhattan Oil Company is now drilling on a 40-acre tract in one of the finest locations in the Boulder oil fields. Every well in the Boulder field which has been sunk deep enough to reach oil has actually gotten it. The oil is one of the very highest grades found in the world.

The Company also owns 640 acres in the Rio Blanco oil fields between the Whiskey Creek and Raven Park wells.

The Company is officered by responsible people who have been established in business in Denver for years. There are no debts, no salaries, no litigation, the stock is non-assessable, and carries no liability. A large treasury reserve in stock and cash. Stock registered by the International Trust Company of Denver.

We have already distributed over 100,000 views of the Colorado oil fields in the last two months, which shows the general interest. These are the finest views of the fields ever taken and are copyrighted. We will be pleased to send them absolutely free, as long as they last, to any address on application. This is an exceptional opportunity, and can be investigated thoroughly through any bank or commercial agency in the country.

We will be pleased to send further particulars on request.
