THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SIXTH YEAR. JANUARY, 1902. VOLUME LXIV, No. 1.

THE RECENT GOLD EXPORTS did not excite the apprehension that was formerly occasioned by similar movements. The favorable condition of the foreign trade of the United States and the changes for the better in the monetary laws, as well as prosperous domestic conditions, have brought about a degree of confidence that is not easily shaken. Nevertheless the business public is very sensitive to any sympton that might be construed to indicate a turning of the tide, and the fact that the tendency to the export of gold makes little impression indicates the belief among bankers and financial leaders that the stock necessary to be held as reserve is not being trenched on. In other words, that the present exportations represent the product of our mines that is not needed in our own money markets. But it must be added that the flow of gold to and from a country is a feature of exchange operations always closely watched, and the exact explanation of which is eagerly sought.

In the case of the other great commercial nations the great Government banks, in one way and another, exert more or less control over the movement of the standard metal. The Bank of England raises or lowers the rate of discount according to the condition of its gold reserve, which under its organic law controls its note issues. The Bank of France prevents the outgo by virtually charging a premium, and attracts importation by offering the same. In these days of large transactions and small profits it takes very little in the way of premium either way to accomplish the desired result.

The United States seems to be the only country having a large stock of gold where trade in the metal is perfectly free, or at least subject only to the natural laws governing the money market. There is no agreement among the large banks of New York to fix discount rates, and the United States Treasury pays gold on demand to whoever presents Government notes. The discount rates are the resultant of the independent action of the banks and all other capitalists and financial institutions having money to loan, and this action is governed only by the laws of demand and supply.

The ease and speed of communication between this country and Europe enable transactions to be made in all kinds of securities, as well as gold, at a margin of profit that would have been impossible a few years ago. The large shipment made a short time ago on one of the fastest of the ocean liners, it is alleged, would not have been made on any boat with a slower record.

It is, however, to be expected, whenever the money markets of any commercial nation show symptoms requiring the strengthening of the reserves, that efforts will be made to attract gold without waiting for the slower operation of natural laws. When, during the panic of 1893, the gold reserve of the Treasury, which in the United States corresponds to the gold reserves of the Bank of England and the Bank of France and other European banks, began to fall to what was regarded as the danger point, extraordinary means were successfully taken to attract gold to this country. The wonderful credit of the United States Government enabled this to be done. The situation was retrieved, but at great expense, and after great losses had been incurred by the public. Other nations do not permit their reserve to weaken so as to excite public distrust. They begin restorative measures in time to allay apprehensions of weakness. If during the months preceding the panic of 1893, when the gold of the Treasury was being depleted, steps had been quietly taken to attract gold, the alarm of the public might not have been greatly aroused, and the run on the Treasury would have ceased before it attained dangerous proportions. Seeing that most of the money markets of the world, when they fail to satisfactorily maintain their gold reserve, under the ordinary laws of supply and demand, always turn to the United States as the locality in which they can buy gold cheapest, it is not to be wondered at that exports will now and then occur most unexpectedly, and in a manner difficult to explain. The final destination of the gold may be kept a secret. A bank or Government in some part of Europe or elsewhere may require a supply. The deal may be made with some cosmopolitan financier, with whom they have business affiliations, who acts as a middleman. He buys in the cheapest market; and, deducting his own commission, turns the goods over to his customer. The gold recently shipped to France may or may not be needed to strengthen French reserves, but some French financier will make a profit by filling some order he has received. As secrecy is an important element of some of these transactions, the real customer may never be known. Our gold exporters may be content with the profit they receive, but they must often be subject to a chilling doubt as to whether they

Digitized by Google

might not, with a wider knowledge of the field, and with such an abundant supply of gold, secure for themselves the profits now going to the middleman.

THE REPORT OF MR. RIDGELY, the Comptroller of the Currency, owing to his assuming the duties of his office so late in the year, does not, as he says, contain so extended a discussion of the general state of monetary affairs as those of some of his predecessors. It is, however, a compact and well-ordered presentation of the operations of the National banks during the year, from which those who wish to draw conclusions can readily do so. The new Comptroller has not yet had time to develop any hobby, or to undertake to advise Congress as to what should be done.

The statistics for the year show the growth of the system under the impulse of the additional circulation privilege conferred by the monetary law of 1900, especially in the direction of the banks organized with the new minimum capital of $25,000. The conversion of the bonds held by the banks into the thirty-year two per cents has been well-nigh universal; out of $329,833,939 bonds held to secure circulation, $316,625,650 were two per cents. The calculated profits on circulation indicate why this is so. But the premium on these bonds has already risen so high that the profit on circulation based on them is less than three-quarters of one per cent. The price of these bonds is still rising, and it is easy to see that it will soon be so small as to afford little inducement for increase of circulation. As might be expected, the average capital of the banks has been reduced by the influx of new banks with the new minimum of $25,000, and the average capital in the whole country is now $117,057. The prosperity of the banks, as shown by dividends and earnings, has increased. During the years from 1894 to 1898, the dividends on capital ranged between 6.7 per cent. in 1897 and 6.9 per cent. during the years 1895, 1896 and 1898. In 1899 they rose to 7.4 per cent. and in 1900 to 7.9. For 1900 they are over eight per cent. This increase in dividends is in some measure due to the increase in surplus, and probably to the greater proportion of deposits to capital.

The Comptroller's recommendations are not numerous. He is rather inclined to let well enough alone as to the gold-standard law, but suggests that anything to strengthen the status of the gold standard would be desirable. As to asset currency he advises caution and moderation in adopting the plans proposed. Mr. RIDGELY is opposed to the sub-Treasury system, and in favor of an increased use of National banks as public depositories. He recommends directly the passage of a measure for extending the corporate existence of Na-

Digitized by Google

tional banks, and for restricting the use of bank funds by directors and managers.

On the whole the report is a very satisfactory one, and shows that Mr. RIDGELY holds sound views on currency matters, that he discerns the points in the monetary system needing change and improvement, and that he has not yet arrived at any conclusion as to the best means of making these improvements. In all of which he is at present much in line with the majority of experts on the subject. He has nothing to say about any substitute for the sub-Treasury system or about branch banks.

THE LIABILITY OF BANK DIRECTORS for fraudulent acts of the executive officers, committed without the knowledge of the directors, is considered in a decision reported in the banking law department of the December MAGAZINE of last year, among the Canadian cases.

When a bank fails, and as sometimes is the case, very little remains to be divided among the creditors, even after the liability of stockholders is exhausted there is a disposition to bring action against the directors to make them pay, if sufficiently solvent, all the losses incurred. Of course, where the directors have been guilty of actual misappropriation and are responsible for the losses, it is right to compel them to disgorge. But in the majority of cases of failure the board of directors, as a whole, is very seldom found to be seriously at fault. It is very improbable that the members of a board will conspire together to rob their own institution, or even that they will knowingly permit such robbery by others. But when a bank fails feeling runs high and the director is assumed to be an omniscient creature who ought to have detected the beginnings of evil, and who, because he did not, must have been criminal or at least criminally negligent. The men selected as directors of banking institutions are generally good business men, awake to the condition of all sorts of enterprises within their bank's circle. They know who are entitled to loans and who are desirable customers, but with the technical handling of the funds of the bank they may not necessarily be acquainted, especially in large institutions. They select employees in whom they have confidence, and provide for such checks upon them as experience has shown to be necessary. Occasionally they may be deceived by those whom they employ, but they have to run this risk or else do all of the technical work of the bank themselves. This they are neither fitted nor expected to do. The sphere of action in which they incur the most responsibility is in making the loans of the bank. The probability is very strongly in favor of their being, as a rule, exceedingly careful and jealous of this duty. As a board, directors

Digitized by Google

generally watch very closely loans made to each other. In this they are actuated by the spirit of business competitors, and even if some of the board are more or less favorable to each other, there is generally a minority who impose a check on unwise liberality to the united majority. Sometimes, but not often, a manager will gain an ascendancy by means of the confidence reposed in him. This increases the risk of malfeasance, but usually this confidence is wholly warranted and does not result in harm.

On the whole it ought to be remembered that in the great majority of cases directors perform their duties satisfactorily, and that in the minority of cases where disaster occurs it happens in such a way that they can seldom be charged with more than error in judgment. There are undoubtedly a few cases where directors are culpable and should be made responsible, but the general outcry against these officers whenever a bank fails or a defalcation occurs is, as a rule, unwarranted.

THE INDEPENDENT TREASURY is frequently referred to as standing in the way of complete monetary renaissance. All financial authority seems to agree that it should be deprived of its function of receiving and holding the revenues of the Government; nevertheless the independent Treasury was the logical consequence of banking conditions existing at the time it was placed in operation. Its continued existence is due to banking conditions existing to-day. Under the various statutes relating to it a system of receiving and paying out the public moneys has become fixed and well understood by all the collecting and disbursing officers of the Government, and all who are in any way connected with the payment and receipt of public moneys. The paragraphs of the revised statutes and all the later laws by which the handling of the public funds is controlled, with their interpretation and construction by the courts, constitute a vast body of rules for which it will be difficult to find a substitute. When the abrogation of the independent Treasury is talked of few immediately realize what a dislocation of all the vast operations of the Treasury Department, conducted in accordance with the practice of half a century, might result.

While the general principle of the laws making the Treasury independent of the banks is that all public funds shall be kept in the Treasury and sub-Treasuries, in the custody of Government officers, yet these laws also provide for the use of the banks as depositories of public moneys of certain classes and under certain circumstances and conditions. Even if the principle of keeping Government funds as far as possible in its own vaults should by act of Congress give way

Digitized by Google

to the principle of depositing these funds in one or more banks where they may be a part of the active circulation of the country, it would not be necessary or perhaps advisable to abolish the machinery of the independent Treasury. This might still be useful to the Government. Of course, much of the space used now for vaults and storage could by degrees be utilized for other purposes, but the general system of disbursements might remain much the same as it does now. It might still be advantageous for the Government to keep certain sums for immediate use in its own custody. These would be constantly passing in and out, and would have no effect on the flow of the main circulation. All the machinery for the payment of interest on the public debt would still remain as it is. The checks for disbursements would be drawn on the bank depository instead of on the Treasury or sub-Treasuries.

An investigation of the methods and practice under the present system would show exactly at what points the public moneys are collected and disbursed, and would afford a foundation for the intelligent establishment of a new system. Statistics as to the details of Government transactions at various dates in the year through a series of years can not fail to throw much light on the circulation of money in the country and the effect of Government operations on the general circulation. They would also show to what extent the present method of collection and disbursement is beneficial or harmless, and to what extent it acts detrimentally to the business of the country. Any change made from the present system should be made carefully and with due regard to securing in the future a system of collections and disbursements at once the most convenient for the Government and the most beneficial to business.

THE REPORT OF THE SECRETARY OF THE TREASURY, published in the December MAGAZINE and briefly commented on in that number, is a clear and succinct statement of the monetary condition of the country, and is in every way worthy of the high reputation of Mr. GAGE, both as a statesman and financier. While those portions of the report relating to the reduction of revenues will no doubt be criticized according as they represent or antagonize the views of those who are interested in the doctrine of greater or less protection of home industries, his views on the currency and banking must, it would seem, appeal with great force to all who have made any study of these questions.

In the December number of THE BANKERS' MAGAZINE a suggestion was made for a great bank, controlled and owned by the other banks of the country, for the purpose of encouraging and promoting

Digitized by Google

community of interest and mutual support among the scattered bank units making up the so-called banking system of the country. The Secretary's recommendations, in a measure, endorse the plan which has been for some years suggested by the MAGAZINE, although the plan of the MAGAZINE did not necessarily include the contribution of the capital of the proposed institution by the banks themselves. Although the capital might be obtained in the way mentioned by the Secretary, yet if the banks could not unite in such a course on account of their mutual jealousies and rivalries, yet this capital could, if Congress should grant the necessary charter, be easily obtained by private subscription.

But the method of organizing such an institution is of minor importance. The main difficulty will be to bring the people of the country, and more particularly that part of the people interested directly in banks as managers, directors and stockholders, to look favorably on the idea of a regulating bank. To do this it is necessary to show that the proposed institution is an entirely different thing from any great State bank which is now in existence or has ever existed; that in its powers and functions it will have nothing in common with the former Bank of the United States, with the Banks of England, France, Russia, or any other country; that it will work in a sphere entirely outside of and independent of existing banks, and that it will in no way interfere or compete with them in their present or future activities.

The Secretary leaves much to the imagination as to how this proposed bank is to send abroad its beneficent influence. The plan of the MAGAZINE is to confine the powers of the bank to receiving public moneys and performing the fiscal operations required by the Government, while at the same time making advances to banks on commercial paper. It is to have the exclusive right of issuing bank notes on which issues it is to maintain a coin (or until the greenbacks are retired, a greenback) reserve. Banks are to obtain these notes on the security of commercial paper. It is to pay interest on public moneys. In return for the note-issuing privilege it is to receive at par for collection checks drawn on all points in the country, thus rendering the check system homogeneous. It is not to deal with individuals at all but only with banks and other financial corporations.

Undoubtedly some of the functions which this bank would perform are now to some extent imperfectly performed by some of the large banks in the money centres, and to this extent it might be regarded as a rival by them; but the interference would be very slight and the aid such an institution would extend in other directions would far counterbalance this small disadvantage. However, it is useless to mention now more than the general outlines of such an institution.

Digitized by Google

The Secretary's plan for an asset currency partially secured by bonds and Government notes is also in line with a plan which for some years has been suggested in the MAGAZINE, and was partially approved by Secretary CARLISLE in his report for 1894. Mr. GAGE'S remarks as to the weak points of our banking system are also in line with the views of the MAGAZINE.

Naturally, it is not his province to discuss the probabilities of this or that measure being acceptable to the people, or to the banks or to Congress, in a political sense. He can only give the results of his thoughts and experience and let Congress, by its usual methods, find out whether it can command the support of the people in embodying these ideas into law.

The problem of currency and banking reform requires for its solution the devising of plans which will adapt themselves to existing conditions of banking law and practice with the least possible interference. These conditions are a growth which has so intertwined with the habits and modes of thought and prejudices of the people that it would be practically impossible to abolish them and to clear a field for a new departure. Improvements must be made on the old foundations, and luckily these foundations have much to recommend them.

It is because of the necessity of adaptation to the existing system, with its irremovable twists and angles, that it is so difficult to devise a plan that at once appeals to a sufficient number of minds to secure the support which is necessary to its adoption. Therefore, it is necessary to take into account the prejudices, the business rivalries, the jealousies, all the heterogeneous factors that go to make up opposition to any proposition. The path of least resistance has to be followed, and many personal preferences relinquished. There are, unfortunately, those who propound good plans, but who refuse to acknowledge the force of unreasonable opposition. People often prefer to find and rely on doubtful arguments to sustain the course which they deem for their interest, rather than to yield to unanswerable arguments for a better course which offends their prejudices.

It is encouraging that the bankers of the country have been aroused to the fact that something should be done, but it is believed that they are still very far from an agreement as to what that something should be. If they could agree, there is little doubt that Congress would carry their wishes into effect.

EXCESSIVE LOANS TO DIRECTORS AND OFFICERS are declared by the Comptroller of the Currency to be responsible for a large percentage of National bank failures. The Comptroller recommends the

Digitized by Google

passage of some repressive measure similar to that introduced by Representative Brosius in the last Congress.

This is a very delicate subject and lies deep at the roots of the whole banking business as conducted in the United States. While the fact cited by the Comptroller seems to be beyond dispute, yet it is due to the principles of growth that underlie the system of banking, the word system being used in the widest sense. The great increase of banking power in this country as compared with that in other civilized countries is no doubt due to the freedom with which any one with moderate capital can enter into the business. In other countries the large capital required renders banking virtually a monopoly, and in those countries men with small capital who, in the United States, would invade the business and do their own banking, are obliged to swell the resources of the established banks with which they can not compete, and as depositors and customers obtain such banking facilities as they require from the monopolistic institutions. It is probable that the business men of an enterprising section of the country, where there are resources to develop, can do their banking business much more cheaply and advantageously by starting a bank for themselves than they could if compelled to solicit help from a large institution. It is such business men who as a rule organize the numerous small banks which are at once the pride and the despair of banking theorists. These are the men who become the directors and managing officers and furnish a very large proportion of the banking power of which the country is proud, but at the same time they stand in the way of the adoption of methods which would permit a freer use of credit and a more economical use of the banking power developed. The number of individuals who are directors and managers of banking institutions in this country, and who consequently have a say in the use of bank funds, is immensely greater than the number similarly situated in other countries, and it is not remarkable that more of them should prove incompetent or reckless. But it is this very facility and freedom with which any one can become the director or officer of a bank that draws into the business the most thoughtful, the most enterprising, and very many of the most talented individuals. Considering their opportunities, it is surprising with how little percentage of loss from their ignorance or malfeasance the business of banking is conducted. The repressive and restrictive laws of Federal banking and the strict enforcement of these laws by the Federal courts as well as the tendency of many of the States to imitate the Federal laws, have, notwithstanding this freedom, greatly reduced the losses in banking, both State and National.

The comparative safety of the banks in most parts of the country, under the legal restrictions imposed, attracts the public to them and

Digitized by Google

thus gives them a business advantage which compensates them for the more or less rigid laws under which they are obliged to conduct their business. But there is a limit to the imposition of restrictions. When the managers of National banks, or of State banks in States that rigidly supervise banking institutions, find that the increase of business does not warrant the enduring of restrictions, they will naturally divert their capital to private banking or to the States where restrictions are less severe.

It is believed that a large proportion of the small National banks of the country, and also of the State and private banking institutions, are primarily organized in order that the directors and managers who organize them may obtain a freer use of banking facilities in their private business. There is nothing wrong in this, because they probably furnish most of the capital and take the chief risk. The outside public is also benefited, and the advantage is to a certain extent reciprocal.

It is vain to suppose that those who control the bank will not use its funds for their private business, especially as their private business is frequently the foundation and mainstay of the community in which the bank is located.

A sweeping law restricting the facilities of directors and managers of National banks, enacted because a small percentage of these men go wrong, would be manifestly an injustice to the great mass of honest and well-meaning and reasonably efficient directors. It would certainly drive a great many out of the National banking system.

It is the ideal of some theorists to have a banking system absolutely perfect, absolutely safe, so that a failure will never occur; but to attain this ideal the bonds and handcuffs will have to be so strong and numerous as to prevent the victim from moving at all. The restrictions imposed by law on National banking, and on State banking in many of the States, are now sufficient to reduce loss from failure to a minimum. Before the granting of additional privileges by the act of 1900 the growth of the National banking system had virtually stopped. The new circulation privilege overcame the disadvantage of restrictions, and the National banks are increasing. Will this increase continue if Congress unwisely tampers with the rights of directors and managers?

THE ADDRESS OF EX-COMPTROLLER DAWES before the Illinois State Bankers' Association, printed in the December MAGAZINE, shows that the ex-Comptroller is still strongly opposed to an asset currency. While Mr. DAWES agrees with those who deem an asset currency unsafe, at the same time he thinks that an emergency currency, subject

Digitized by Google

to a tax insuring its retirement when the emergency has ceased, would be practicable. The word practicable does not ordinarily mean safe, but as applied to any form of currency must necessarily include this definition; and therefore it is not an extravagant assumption, that while he thinks an asset currency unsafe, he believes an emergency circulation would be safe. How these two opinions can be reconciled it is difficult to see. An emergency currency must be based either on special or on general security. If based on bonds deposited with the Treasurer, it could not very well serve the purpose for which it is intended; few banks could procure the bonds and obtain the currency in time to meet the emergency. If based on general assets, it would be in the same boat with ordinary currency based on general assets, and necessarily could not be any safer, while open to objections to which the ordinary currency would not be liable. In fact, the object being to afford a means of liquidating obligations, when the ordinary instruments of liquidation fail, it has been thought that in such times of stress the usual safeguards that surround the use of a bank's credit might be temporarily relaxed, and the bank permitted to supply itself with something that will serve the purpose of money until the immediate pressure is relieved.

During the panic of 1893, it was found by many banks with abundance of assets quick enough in ordinary times, that they could not procure either gold, silver or paper money to meet the demands made upon them. It was also found that their creditors were willing to accept due bills or certificates of deposit, for temporary use as money, and it was justly inferred that if these banks had been legally permitted to issue promissory notes in response to demand, the situation would have been immediately relieved. Out of this experience, coupled with some knowledge of the issue of extra circulation, in times of stringency by Continental banks, subject to a tax causing their early retirement, has grown up the proposition for an emergency circulation in this country. The success of foreign banks with this device is no assurance that it would prove equally satisfactory here. The difference between a system composed of a comparatively small number of large banks and one composed of a great and constantly increasing number of small banks, makes a comparison very uncertain. Asset currency is regarded as safe in France and Germany, as their banks are conducted, and the emergency currency of German banks is safe for the same reason and to the same extent that the ordinary currency is safe.

The main objection to an asset currency in the United States is the small and numerous banks which under a general banking law would become entitled to the privilege. In their case the same objection applies with even greater force to an emergency circulation. If

Digitized by Google

it is unsafe for the thousands of small banks to issue a currency based on their general assets in ordinary times, it is easy to see it would be positively dangerous to permit them to issue an emergency circulation to meet their obligations under the pressure of adversity. It must not be forgotten that in 1893 the circulation of the banks was absolutely secured by the deposit of bonds. There was no distrust of the bank note and no run on the banks on account of note issues. Their only demand liability which gave them trouble was their line of deposits, and it is not difficult to see why the public was willing to accept any evidence of indebtedness issued by the banks which could be used as a substitute for money. Assume a panic to occur, when the banks had already used their privilege to issue notes on assets to the possible limit; the weaker the bank the greater the tendency to use the privilege. The run on the banks which excited popular distrust would be for the redemption of notes. Of what avail would be the issue of more notes? The bank would have to pay specie or specie funds or fail. In the State bank days, the pressure might begin with a demand for deposits. These were paid in notes as long as possible. As credit failed the notes were sent in for redemption. The issue of notes never saved a weak bank.

But assuming that an emergency currency were theoretically a correct device, and one that might prove of service to many institutions, there would always be a temptation to reckless and dishonest bankers to use the liberty they afforded for their own profit. A dishonest banker, knowing the weakness of his bank, would be tempted to force as much as possible of this currency into circulation, regardless of any repressive tax. Notes of warning against this very plausible-looking expedient have already been sounded, notably by Mr. JAMES H. WILLOCK, president of the Pennsylvania Bankers' Association, in an address commented on favorably by the London "Bankers' Magazine."

Both asset currency and emergency currency would be rendered still more unsafe if deprived of the security of a first lien on all the assets; that is, if such issues were, as Mr. DAWES seems to propose, placed on the same basis of security as deposits. If there is anything axiomatic in banking theory and practice it is that the note holder should be a preferred creditor. The bank in its business benefits first its stockholders, then its depositors, and lastly, especially if it issues notes, the general public, by furnishing a circulating medium which, as experience proves, has many advantages over all other forms of money. If bank notes have not proved their advantages, there is no room for further controversy. The general public, taking the bank notes as money, are if these notes are discredited, exposed to the greatest risk for the least return. The depositor takes the next

Digitized by Google

risk, but he receives more in return. He is a part of the bank, a friend of the court—through him and his account the credit paper of the bank is passed on to the public. He can obtain loans and often receives interest upon his balances. The stockholder is next; he receives his share of the profits of the bank. Legislators, in settling the affairs of a failed bank, protect the outsider, the note holder, first, the depositor next, and the stockholder must not only be satisfied with what is left, but often contribute more to pay note holders and depositors. The whole fabric of business, where bank notes are used, rests on their credit. If this is tainted the whole business structure is shaken. The notes are the foundation of deposits, of checks and of all transactions. Legislators have recognized that the foundation should be stronger than the superstructure.

MANY OPPORTUNITIES FOR AMERICAN BANKERS will open in the Philippine Islands as soon as proper legislation is enacted by Congress. Some idea of the nature of these opportunities is suggested in the special report made to Secretary ROOT by Mr. CHARLES A. CONANT, from which extracts are printed elsewhere in this issue of THE BANKERS' MAGAZINE. The report was the result of a visit paid to the Islands by Mr. CONANT for the express purpose of investigating this subject and making recommendations to be submitted by the Secretary of War to Congress.

Positive legislation is required, first, to do away with the restrictions of the Spooner amendment to the last army appropriation bill, which practically prohibited the granting of any franchises; and, secondly, to prescribe regulations for the conduct of banking which will at once establish favorable conditions for American banks and will give the assurance to the business community that banking in the Philippines shall be conducted upon sound and conservative lines.

These points are quite fully covered in the special report submitted to the Secretary of War. It is pointed out that only strong banks with large capital and with authority to establish branches will be of any avail in competing with the branches of the big English banks and the other foreign institutions which control the exchanges of the Orient. The proposal that National banks shall have authority to establish branches outside the United States will probably excite no opposition. The collateral suggestion made by Mr. CONANT, that National banks of the United States shall have power to establish branches within the United States for conducting foreign business, is likely to attract some attention among the smaller banks of this country. The kind of business which such branch banks may do is carefully limited, however, by excluding them from discounts on domestic

Digitized by Google

bills and advances made in the way of local loans within the United States. Under these limitations, which practically restrict such branch banks to dealing in foreign exchange and to the acceptance of special deposits to be employed in the Philippines, the business of other National banks in the United States cannot be affected.

It is not probable that this privilege to establish branches for foreign business would be availed of by more than two or three banks in the United States in any case, or that it would be availed of outside of two or three of the largest cities. This, indeed, appears to be the purpose of the provision—that if a National bank should establish branches in the Orient, it may have the privilege of establishing branches for foreign exchange business in such cities as Chicago, San Francisco and New Orleans. If any further limitation were needed to protect the country banks from the possibility of branch competition, it could be attained by naming the large cities in which branches would be permitted or by limiting the authority to establish such branches, as is suggested by the report, to cities of 100,000 or more inhabitants. Perhaps it would be well to add the provision, which does not seem to be embodied in the report, that no branches could be established in the United States by any bank which did not maintain several *bona-fide* branches in the Philippines or elsewhere outside the limits of the Union. With these limitations, the grant to National banks of the power to establish branches for foreign business would infringe in no way upon the privileges and business of the country banks, but would rather tend to divert the large city banks away from the field of country banking which they have recently been entering by the investment of their surplus resources in the purchase of bank stock.

THE EXTENSION OF NATIONAL BANK CHARTERS is one of the subjects that will probably engage the early attention of Congress. The last act for this purpose was enacted in 1882, and twenty years, the statutory length of life prescribed for a National bank, has elapsed.

The National system was inaugurated in 1863, and under the first act it was provided that the franchise of the banks might continue for any period, not exceeding twenty years, which each bank might determine in its articles of association. Many of the banks determined on nineteen years only, and so their corporate existence expired in 1882. An act for extension was therefore passed in that year. As a matter of fact one or two charters expired before the Act of 1882 became a law. These banks merely liquidated and started new associations under the same name, which they could do easily enough.

The National system is a continuing one. New banks are organ-

Digitized by Google

izing under it almost every day, and there is hardly a date at which some charter does not expire. Like the aerolites, there are dates when more of these corporate lives burn out than at others, and owing to the expiration of great numbers in 1882, 1883 and especially in 1884, the years 1902, 1903 and 1904 will witness a similar ending of the corporate lives renewed twenty years before. But there is no reason why these lives cannot be again renewed under the Act of 1882, as they were at the date of their first renewal. This act, for all that any one can see, provides for any number of renewals of the same corporate life. The only reason that can be perceived for another renewal act might be to frame it on the lines of the old act, and at the same time omit some of the useless provisions with which the old act is loaded. This might be worth while. A new act for renewal might moreover be made a nucleus for some further bank legislation, and the introduction of some needed amendments to the present banking law.

THE FREE TRANSPORTATION OF SILVER DOLLARS by the Government suggests the inquiry, why should the charge continue to be borne by the Treasury instead of by the bankers or business men who wish to use the silver dollars, the same as they pay the express charges on other kinds of money. At first sight there appears to be no reason why the Government should pay charges on any kind of currency forwarded at the request of the consignee. But it might be better policy to pay charges on all shipments of currency rather than to confine these payments to one kind only. If the Government paid these charges it would tend to encourage a better distribution of money throughout the country.

It is highly improbable, however, that Congress would consent to granting so sweeping a benefit. Even if the general impolicy of saddling the Treasury with the expense of sending out money be conceded, it is not so certain that it would be either politic or just to treat silver dollars in accordance with this principle. If the public had to pay the charges on silver dollars as they do on the transportation of other currency, not many of the dollars would remain in circulation. Their bulk and weight so increase the cost of transportation that any one desiring small denominations would send for one and two dollar silver certificates in preference.

If there is any advantage in keeping these dollars in the hands of the public, the Treasury had better keep on paying, the cost of transportation. Even if it were more advantageous to keep all the dollars stored in the Treasury vaults, and substitute silver certificates, ones and twos, in their place, yet the cessation of the free circulation of

Digitized by Google

silver dollars might not be counterbalanced by an equal circulation of silver certificates. The transportation charges on the latter might check the demand for them, and the people in those parts of the country where the silver dollars are now most freely used, might not be able to obtain their usual supplies of money of any kind. In the poorer sections, where the bankers have to struggle to maintain themselves, the charge for transportation becomes quite important. Since the country has coined so many silver dollars, the only hope of ever getting rid of them is that they may be lost or buried, and this delusive hope would not exist if the dollars are to be stored in the Treasury. If kept in circulation, they may perhaps in the course of some centuries become lost or worn out. As long as they are to form a part of the circulation the least the Government which created them can do is to offset their disadvantages and inconvenience as far as possible by paying for their transportation.

THE RESIGNATION OF SECRETARY GAGE, although not yet officially proclaimed, is believed to be one of the certain events of the near future, and the appointment of Governor LESLIE M. SHAW, of Iowa, as his successor is considered equally certain.

It has been known for some time that Mr. GAGE desired to leave the cabinet, and while his retirement occasions no surprise, it will cause much regret, for his administration of the financial affairs of the Government has been such as to contribute greatly to the remarkable prosperity of the country since the first inauguration of Mr. MCKINLEY as President. He was instrumental in securing the enactment into law of provisions for more firmly establishing and maintaining the gold standard, and has also successfully managed the conversion of a large part of the public debt into gold bonds bearing a low rate of interest. His work in carrying on the financial operations of the Government during the war with Spain, and in preserving a comparatively stable condition of the money market in an era marked by considerable speculation, must also entitle him to high rank as a financier.

Mr. SHAW, the new Secretary, is a man of sound views and long political training, and should prove a worthy successor to Mr. GAGE.

A portrait of Governor SHAW, together with some reference to the salient facts in regard to his business and political career, will be found elsewhere in this issue of the MAGAZINE.

Both Mr. SHAW and Mr. GAGE have been noted for their candor in dealing with financial questions, and have not hesitated to point out the reforms necessary to the highest security and efficiency of the currency and banking system.

THE EXTENSION OF NATIONAL BANK CHARTERS.

The Comptroller of the Currency, in his remarks in regard to the expiration and extension of the corporate existence of National banking associations, states that during the last session of Congress a bill to provide for the extension of the charters of the National banks passed the House of Representatives but failed to receive the consideration of the Senate. The Comptroller urgently recommends that this measure or a similar one be enacted into law, inasmuch as the first charters will expire in July, 1902.

It is not easy to see why such a law is necessary ; or, in other words, why the act of July 12, 1882, still in force, does not fully provide for the extension of the charters which commence to expire in 1902 just as it has provided for all the charters which have expired since 1882. The act seems to be a continuing act and renewals are to-day made under it. It reads that any National banking association organized under the acts of February 25, 1863, June 3, 1864, February 14, 1880, or under any of the sections of the revised statutes in which these acts have been embodied, may at any time within two years next previous to the date of the expiration of its corporate existence under present law, under certain conditions and in a manner provided, extend its corporate existence for a term of not more than twenty years, etc., etc. The bank availing itself of the provisions of this act continues to be the identical corporation that it was before.

It is difficult to understand why an association organized under any of the acts named cannot extend its corporate existence as many times as its stockholders agree to do so, for as many succeeding periods of twenty years as they see fit, under the law of July 12, 1882, as it stands. In other words, what is there to prevent an association organized under the act of February 25, 1863, which in 1882 extended its corporate existence for twenty years, from again extending that existence for another period of twenty years, and as long as the act of July 12, 1882, is not repealed, for as many additional periods of twenty years one after another as the life of the bank is desired by its stockholders. The association is just as much organized under the act of February 25, 1863, in 1902, as it was in 1882; the act of extension in 1882 did not change its status in the least. And this being so in regard to an association organized under the act of 1863, it is the same in regard to those organized under the other acts and sections mentioned in the law of 1882. This law, in section four, provides distinctly that the association extending, under it, its articles of association "shall continue to be in all respects the identical association it was before the extension of its period of succession."

The idea that more law is necessary to enable National banks, which have nearly outlived the second period of twenty years, to revive themselves for a third or fourth period, seems to be based on the fallacy which in other respects has caused much trouble in National bank legislation, that the National system as a system was some way limited to the twenty-year period. Some appear to have regarded the National system as a sort of corporation

Digitized by Google

beginning at a certain date and expiring by limitation at the end of twenty years. But National banks forming the system, the units of which it is composed, may, as long as the law authorizing organization continues, be organized at any time and thus the system be continued forever. Even if there were no provision for extension, the creation of new banks would perpetuate the system, and as a matter of fact many stockholders prefer to let the old bank die and use the capital to organize a new one. When the act of 1882 was passed it was understood that it was a measure that would allow the indefinite continuance of a National bank under its provisions.

While, however, the provisions of law for extension of the corporate existence seem to be ample, yet there are other provisions that need amendment. Section six, which requires the extending banks to retire all the circulation which they have issued previous to extension, and receive new circulation of a different design, to issue during their new life, is a useless and annoying section, which causes much unnecessary expense to the banks. This section was inserted by certain legislators who were noted for their hostility to the system. Their argument was that it was necessary in order that the Government should receive the profit of all notes lost and destroyed and which might never be presented for redemption. They were dreadfully afraid that the gain which arises from this source, slight though it is, would swell the profits of the banks. They ignored the fact that, under the laws as they previously existed and now exist, this profit, such as it was, did go to the Government. If section six were repealed to-day, the profit on notes lost and destroyed would still inure to the Government. The section itself was and is a mere piece of supererogation, annoying and expensive to the banks and only making more work for the Bureau of Engraving and Printing. The only possible danger was and is that some claim might be trumped up by the banks to their profit, but this might have been guarded against by simply providing that the banks should have no claim to it.

The provisions of section nine should also be repealed. These obstruct National banks in the retirement and reissue of circulation, and restrict the amount which may be retired by all the banks in any one month to three millions of dollars, except in certain cases. These provisions tend to destroy what little elasticity the National bank note may possess. There are also other amendments which should be made in this law, which are far more necessary than any new legislation for the extension of corporate existence.

Bank Burglars Active.—There has been an epidemic of bank burglaries in Iowa and some other States recently, and in consequence many of the banks are putting in improved safes and vaults. Steps are also being taken to secure the enactment of severe laws against burglars who are found to be "professional" criminals, and the bankers' associations will no doubt be spurred to renewed activity in hunting down and prosecuting those who rob banks.

Where banks are located in places not much frequented after nightfall, especially in the smaller towns, they are open to attack by burglars, and all possible precautions should be taken. There is double propriety in adopting all reasonable safeguards; first, the depredations of the burglar will be prevented, and, second, the confidence of the public will be secured. People will be attracted to a bank that is prudent in making every physical provision against assaults on the funds committed to its keeping.

THE EXPANSION OF AMERICAN BANKING IN THE FAR EAST.

*BY EMIL S. FISCHER.**

The contest among the civilized nations of the world for political, financial and commercial supremacy in the Far East is being energetically carried on, especially since the Chinese-Japanese war of 1894. Great strides have been taken by several of the world powers in the effort to acquire "spheres of influence" in the Chinese Empire. Great Britain had her eye principally upon the immensely rich and fertile Yangtze Valley; Russia took a firm footing in Manchuria; Germany stretched her arms over the borders of Shantung; France got a hold along her Indo-Chinese frontier, while Japan, which is recognized as a rightful arbiter in the affairs of the East, as well as Austria, Belgium, Holland, Italy and Portugal, are following in the wake of the greater nations, hoping for a favorable moment to secure proportional advantages.

The transfer of the Philippines to the United States has necessarily worked a change in the attitude of the American Government towards her immediate neighbors in the Orient. The United States heretofore was only an unselfish observer and protector of its own commercial interests along the coast of Eastern Asia. And even in 1900, when the United States forces joined the allies to relieve the legations at Peking, the immediate withdrawal of its troops was accomplished when the actual danger of the Boxer uprising had passed. However there was a growing necessity of protecting the new markets which American manufacturers and exporters had secured, against the counteracting influences of other powers seeking a foothold, threatening the partial exclusion of American goods from Chinese markets. Secretary Hay's note to the powers and their agreement to an "open-door policy" in China has been universally recognized as an excellent "*coup d'état*" of American diplomacy.

The importance of United States interests in the East, following the acquisition of the Philippines and of the Hawaiian Islands, together with the marvellous march of its foreign commerce, has led to a general desire on the part of importers, exporters and manufacturers, that an American financial institution be established in the extreme Orient. It should be recalled that for years the representatives of the United States stationed in China and Japan have urged that an American banking concern should open branches in the Far East, so as to facilitate the handling of the growing financial transactions between Asia and America. Moreover, the War Department and civil authorities governing the Philippines have constantly recommended that

* Mr. Fischer was connected for many years with the Deutsch-Asiatische Bank of Shanghai, and since his return from China in 1899 he has been with the North American Trust Company, of New York, as Foreign Exchange Manager.

Digitized by Google

the vast receipts and disbursements of the United States funds should be entrusted to an American banking institution with headquarters at Manila, and acting as fiscal agents of the United States Government.

In October, 1899, during the International Commercial Congress at Philadelphia, public utterances were made strongly advising the establishment of an American bank with branches extending to the large financial trading centres and settlements of the East, in order to enter the profitable field of foreign banking in the Orient. The same opinion was expressed by the Hon. E. A. Conger, United States Minister at Peking, at the dinner tendered to him last year by the American-Asiatic Association of New York.

Reference should also be made to Minister Wu Ting-fang's address before the New York Bankers' Association at Buffalo, when he said:

> "In China there are established large British, French, Russian, German and Japanese banks, but the American banker is conspicuous by his absence, which is all the more remarkable when the large share of China's trade, enjoyed by Americans, as compared with the amount participated in by other nations, is considered."

Of late we have heard the expressions of the Hon. Lyman J. Gage at the convention of the American Bankers' Association, when he called attention to the close intimacy between the Government's finances and our commercial affairs. Such close relation existing here, why should not law encourage American financiers and bankers to enjoy the same advantage in foreign countries or in the Colonies?

American Banks Would Promote American Commerce.

The United States has come to be the most formidable competitor of the trading nations in the East, and to reap the full benefit of the enterprise of its people, their commercial interests in the Orient should be represented by a strongly capitalized banking institution established with the moral support of this Government. Notwithstanding the predominant position which this Government has acquired in the Colonies since the Spanish-American war, we are not getting the full measure of the commerce that belongs to us, simply because we are not supported by our own national financial system. This is largely due to the difficulty in establishing foreign branches, as the laws do not foster branch banks, and it will be one of the next Congressional policies to remove these obstacles. The only provision of law for the maintenance of branch banks of National associations is found in section 5155 of the Revised Statutes of the United States, which appears in paragraph thirty-nine in the most recent compilation of the National Bank Act, which authorizes State banks to retain and keep in operation, under certain conditions, any branches they may have in existence at the time of conversion to the National system. A statement, kindly supplied by the Hon. William B. Ridgely, Comptroller of the Currency, relating to the subject of operation of branches, contains reference to the statutes and decisions of the courts, and says that "the granting of this special privilege to State banks, and the absence of similar provisions in the law with respect to banks of primary organizations have always been construed by this (the Comptroller's) office to imply that the latter banks were not permitted to have any branches, and as the section indicated restricts branch banks of converted associations to such only that have a definite proportion of the capital of the parent bank assigned to them, it is not to be assumed that the law contemplated that asso-

Digitized by Google

ciations of primary organizations should be permitted to operate branches without any part of the capital of the parent bank being assigned to them."

The banking law of the State of New York authorizes trust companies, if provided with a special charter, to establish branches and agencies, with the consent of the Superintendent of Banks, throughout the United States or elsewhere. There are corporations which on the basis of such charters have established branches in the Colonies, which under the ægis of the colonial administration have given very satisfactory results. However, our bank examiners, not yet sufficiently familiar with colonial affairs, have generally objected to the investments of the parent bank with regard to their branches in the Colonies. This effort on the part of bank examiners to protect stockholders and depositors by a strict scrutiny of loans and securities, has practically prohibited investment in colonial enterprises by State banking concerns, no matter how safe or profitable these investments might prove to be. Under such circumstances of course there has been very little inducement for our large financial institutions to follow the examples of British, French, German, Russian and even Japanese bankers.

EUROPEAN BANKING ACTIVITY.

The large trading nations of Europe, especially so Great Britain, Germany and France, have kept a watchful eye for the fostering of their foreign trade, which they encouraged by the passage of laws furthering the opening of branches in the Colonies, or making provisions for the establishment of National banking institutions in foreign countries. Under such laws bankers and capitalists of Great Britain have secured almost exclusive control of colonial trade. They established monetary exchanges for mercantile accommodations in the Colonies, doing away with the barter of goods. J. B. Attfield, in his work on "English and Foreign Banks," says in this regard :

> "Joint-stock companies established by charter came into existence and their *raison d'être* appears to have been that without some such privilege as a charter could give them, the business would not have been undertaken on account of the risk. * * * Chartered companies are now almost things of the past, and no doubt they are contrary to the spirit of the times. In regard to banking they are found in some cases to be a hindrance rather than an advantage, for the charter so often contains clauses that at the time they were granted appeared necessary, but as time passed have been found restrictive; in reality their inelasticity has been felt, and thus when a charter has expired it has not been unusual for the company to be reconstituted under the Company Acts."

Most of the British colonial banking institutions are incorporated or registered under the Companies Acts of 1862 to 1890, or under special Royal charter. We find among these the Chartered Bank of India, Australia and China, with branches in all the prominent trading centers of the Orient. The Hongkong and Shanghai Banking Corporation, the leading banking institution in the East, was established pursuant to the confirmation of the British Government, under ordinance of the legislature of Hongkong in 1867. A number of Australian, African and South American banks, whose head offices are in London, have similar charters. The London and San Francisco Bank, the Anglo-Californian Bank, the London, Paris and American Bank, and others, which have branches in this country, are institutions incorporated under British laws. Several Canadian banking institutions enjoying the privileges of the Canadian banking law, which is based on the Scotch banking system, have agencies in New York city and elsewhere in the United

Digitized by Google

States, and whenever occasion offers they have the additional benefit afforded by the facilities of our financial markets. German financiers followed the lead of Great Britain as soon as the German merchant had firmly settled in the Colonies. The Germans were greatly strengthened in their enterprise by the formation of colonial banking syndicates. The leading banking institutions of Hamburg, Berlin, Dresden, Frankfurt, Cologne, and Munich combined for the purpose of establishing German banks abroad. These colonial banking syndicates included: the *Direction der Disconto Gesellschaft*, of Berlin; the *Deutsche Bank*, of Berlin; the *Norddeutsche Bank*, of Hamburg; the *Dresdner Bank*, of Dresden; the *Royal Seehandlung*, of Berlin; the *Bank fuer Handel und Industrie*, of Berlin; the *Handelsgesellschaft*, of Berlin; S. Bleichroeder, Mendelssohn & Co., Robert Warschauer & Co., of Berlin; M. A. von Rothschild & Soehne, of Frankfort-on-the-Main, and other prominent private bankers and joint-stock companies belonging to their group, better known as the "*haute* finance of Germany." German export and import trade has received an enormous stimulus since German colonial banks were established. Thus, we find in Argentine, the *Banco Aleman Transatlantico*, with its main office in Buenos Ayres; in Brazil, the *Brazilianische Bank fuer Deutschland*, with its seat in Rio de Janeiro; in the Far East, the *Deutsch-Asiatische Bank*, at Shanghai and Calcutta, and other prominent trading centers; on the South American West Coast, the *Bank fuer Chile und Deutschland*, at Valparaiso. Similar German banking agencies are making headway in Australia, South Africa, Mexico and in this country.

As a result of these colonial banking investments the Germans have profited in many ways by the expansion of their merchant marine, the tonnage of which during the last thirty years has increased over 150 per cent. in the international trade alone, not including their enormous coast trade. The German trade with America, Africa, Australia, China, Japan and India, has been growing continuously. During the last quarter of the century there has been an increase of over 100 per cent. with the United States; with Mexico, Central and South America, over 300 per cent.; and with the Far East and Australia, about 500 per cent.

The financial institutions of Germany, now covering all parts of the world, have helped Germany in acquiring large railroad and mining concessions; they own and control important Egyptian and South African roads, several Brazilian and Venezuelan lines, the Shantung Railroad in China, the Turkish railways, which constitute the connecting link between the Bosporus and the Persian Gulf.

If the American railroad concessionaires in China had had the vigilant support of an American financial institution on the spot, sufficient interest would have been taken to prevent the granting of railroad concessions encroaching upon an exclusive right, theretofore held by Americans. The concession granted by the Chinese Government to Calvin Brice and others for the Hankow-Canton line, which was surveyed in 1899 by Chief Engineer Wm. Barclay Parsons, passes from its Southern terminus, Canton, through a rich, important and very populous section of the country. It ends at Hankow, a city surrounded by an immensely rich iron and coal area. This important railroad line, known as the American Railway of China, begins on the south coast and goes almost straight northwards through the heart of China, to the Yangtze Kiang; from here the Belgians connect with their line, the American

Digitized by Google

route ending in its course at Peking. While the Belgians now have their connecting line to Peking about half finished, the Americans have not yet begun building. However, the carrying through of this great railroad scheme is now fully secured; J. P. Morgan has given his strong financial support and at the recent election of the board of directors of the American-Chinese Railway, Chief Engineer Wm. Barclay Parsons was chosen president.

The consideration of railroad construction in China is financially important, because the banks established in the East possess great advantages in the handling of financial business pertaining to these great enterprises. There is no doubt that the foreign powers interested in carrying through the various Chinese railroad concessions would have frequently encountered serious obstacles if they had not been supported by their own banking institutions in the East. The value of having such institutions at hand is demonstrated in the case of the Manchurian Railway concession. As a condition to its construction, the Chinese Government had to deposit several million taels with the Russo-Chinese Bank. Russia required this guaranty for the fulfillment of the agreement by the Chinese to build the Manchurian Railway from the Siberian frontier in connection with the Trans-Siberian continental line to the southern borders of the Gulf of Pechili. The British Government has its arrangements for the Yangtze Valley line, the fiscal agents being the Hongkong and Shanghai Banking Corporation. The *Deutsch-Asiatische* Bank represents the interest of the German Railroad concessions in Shantung and elsewhere, while the American Railway interests must seek representation by foreign banking institutions. Of course the *Banque de l'Indo-Chine*, which is intimately connected with the *Comptoir National d'Escompte*, of Paris, represents the French railway interests for the extension of the lines from the Tonkin frontier into Yunnan and Szechwan, the rich Hinterland of China. But French banks have fostered international trade not only in the Far East, but also in all other parts of their colonial activity. Among these institutions are : the *Crédit Lyonnais*, with about 200 branches and agencies in all parts of the world; then the *Société Générale* with over 300 branches in France alone. Other French banks also have aided in a very remarkable way the commercial and political progress of the French nation in the French Colonies, especially in Algiers, Tunis, Madagascar, Indo-China, as also in many of the British possessions, in South America, Egypt and in the United States.

The Profits Derived from Oriental Banking.

Having considered the important inter-relations between the establishment of colonial and foreign banking institutions and the development of trade and commerce with the mother country, we now come to the question of the vast financial possibilities in store for future colonial undertakings.

Most of the foreign banking institutions of the Far East have been working very profitably for many years. Among these the Hongkong and Shanghai Banking Corporation is very noticeable. This company has its main office in Hongkong and has branches and agencies in all the prominent trading centers of China, Japan, the Philippines, the Straits Settlements, Java, India and Burmah; also in London, Hamburg, Lyons, New York and San Francisco. Its capital fully paid amounts to 10,000,000 Mexican dollars and its reserve fund, invested in consols and other sterling securities, has accumulated to 13,750,000 Mexican dollars out of business profits.

Digitized by Google

It is interesting to show statistically the increase of the reserves of the Hongkong and Shanghai Banking Corporation during the last ten years, as well as the amount of the annual dividends paid and the occasional bonus distributed among its shareholders.

* Figures not available.

The Hongkong and Shanghai Banking Corporation, whose business is now so extensive and scattered over so many places, has grown to its present importance through its management in the East by a *personnel* absolutely familiar with the problems of Oriental commerce and finance, currency and banking, politics and government business, as well as with the policies carried on by the powers interested in China.

The statistical table of figures above referred to shows that the reserve fund of the bank has increased annually since 1893 at an astonishing rate. The business of this bank was so profitable that is was able to make up (out of its earnings) for the serious shrinkage of its capital, caused by the deterioration in the price of silver. The directors have wisely invested their enormous surplus and reserves, at present amounting to 13,750,000 Mexican dollars, in consols and other sterling securities.

The semi-annual dividend, which up to June 30, 1894, amounted to £1 per share, was raised to a semi-annual dividend of £1, 5s. and, beginning with the end of December, 1898, the Hongkong Bank distributed semi-annually a dividend of £1, 10s.; in addition the shareholders also received during recent years an annual bonus of from half a sovereign to one sovereign per share, which shows a distribution among the shareholders during 1900 as follows:

Considering a semi-annual dividend of £1, 10s. per share of 125 Mexican dollars, gives per annum	£3
Plus the bonus for 1900	10s.
Or, in full, a dividend of	£3, 10s.

the equivalent of which at 2 shillings per dollar is $35, Mexican, yielding a dividend of twenty-eight per cent. on its capital, or about six per cent. per annum upon the investment at the average quotation for 1900, which was at a premium of 375 per cent.

Not only has the Hongkong and Shanghai Banking Corporation prospered in such an astonishing way, but most of the other banks in the East have

Digitized by Google

equally participated in the remarkable expansion of trade since the conclusion of the Chinese-Japanese war of 1894. The *Deutsch-Asiatische* Bank of Shanghai, with a full paid-up capital of 5,000,000 Shanghai taels, has distributed for 1900 a dividend of seven per cent. The Chartered Bank of India, Australia and China, has for years regularly maintained a dividend of ten per cent. The Russo-Chinese Bank since its start on Chinese soil in 1895, after absorbing the interest of the Shanghai branch of the *Comptoir National d'Escompte* of Paris, has also paid large dividends. The Yokohama Specie Bank, another large financial institution of Japan, has kept pace with the foreign banking institutions established in the East. It has paid annual dividends at the rate of thirteen to fifteen per cent.

Such results could not be derived from the success of the regular business transactions and the exchange operations alone which by the existing competition is carried on with small margins of profit. The large Government transactions, continuously carried on between the foreign banks and the Oriental Government, the floating of the Chinese-Japanese war indemnity loans and the foreign debt which China and Japan incurred since 1894, the large commissions which the banks received from their Governments in the course of their financial transactions, all of which was occasioned by the incidents of the Boxer campaign, these and other business transactions have resulted in securing handsome profits to all the banks largely interested in the East. And there is no doubt that the scope of business and the expected future of expansion of eastern trade give promise to the banks of an era of profitable financial activity.

The Boxer troubles of 1900 stopped for a time the stream of foreign capital into China intended for the better development of its immense natural resources. But this stoppage is only temporary ; it is to be hoped that, with the establishment of an American banking institution in the East with large resources wisely distributed by a system of branches and agencies in the more important trading centers of China, Japan and the Philippines, a decisive step will have been taken for the entrance of large United States enterprises into the successful field of Eastern business. A strong institution should be reared, charged with the important financial transactions of the United States Government in the East. Such an institution will be able to stand side by side with the older ones.

The import and export trade of China has increased during recent years enormously, showing an advance of over 100 per cent. during the last decade. The total foreign trade of China amounted to 214,251,961 Haikwan taels in 1890, and 460,533,286 Haikwan taels in 1900, which was brought about by the opening of so many new treaty ports of which twenty-eight in all now foster foreign trade. The commerce of Shanghai amounts annually to over 200,000,000 dollars (United States currency), and there is no doubt that a large share of the business would be acquired by the American banking institution. The American commerce with the Flowery Kingdom will receive a new stimulus, and our business with the East, which has suffered of late according to the reports of the Treasury Department, will revive. Imports into China from the United States in 1900 amounted to 16,724,493 Haikwan taels, while in the corresponding period of 1899 American goods valued at 22,288,745 Haikwan taels were imported into China. There was a remarkable falling off of American drills, of which in 1899 China imported 1,626,107 pieces, while in

Digitized by Google

1900 only 805,892 pieces were imported, showing a reduction of over fifty per cent., which seems to be accounted for by the lessened demand for heavy American drills in those provinces of North China where the Boxer rebellion had raged. American sheetings showed a decline from 3,975,903 pieces imported in 1899, to 2,312,494 pieces in 1900 ; American kerosene oil, which has to compete with Baku and Sumatra oil, fell from 40,724,989 gallons in 1899 to 34,447,112 gallons in 1900. These are only temporary effects caused by the troubles of 1900, and there is abundant hope that the present prospect of affairs in China, as well as the increasing trade with Japan and the Philippines will supply the means of securing, and successfully managing, American banking interests in the Far East.

China's Increasing Foreign Trade.

The official reports on the commerce and finance of the United States for June, 1901, show that during the last twenty-five years the foreign commerce of China has increased as follows :

Exportation from China in 1873 valued at, * Haikwan taels...............	69,451,000
Exportation from China in 1899 valued at, Haikwan taels.................	195,784,832
Importation from China in 1873 valued at, Haikwan taels.................	76,687,000
Importation from China in 1899 valued at, Haikwan taels.................	264,748,456

The Imperial Maritime Customs of China, supplying the statistical figures, does not give exact data, indicating the country whence the merchandise originates, or is destined, but credits the trade to the country from which the carrying ship clears. Therefore all the goods shipped from or to the United States by the Canadian Pacific steamers are credited to the British Dominion of Canada ; goods from America going via London are entered as British goods. The same is true with respect to the American goods carried in Japanese, French and German ships—everything carried under foreign flags—and minimizes considerably the statistics of trade of this country with the East.

There is no doubt that it is the intention of the Eastern trading people to buy more and more goods from the United States, and this increased purchasing power goes along with the development of Oriental resources, combined with a larger offering to us of their raw material and colonial products. It will depend upon an American banking institution established in the East to foster both sides of the Oriental trade, whereby it will make substantial marginal profits. Such an institution will be able to do the business directly instead of doing the transactions over London and the Continent.

Banking business has undergone considerable change in recent years. Formerly only Wall street private bankers did an international banking business while the National and State banking institutions undertook only local and internal financial transactions. This has changed. Consolidation of several of the larger institutions have taken place ; strong and well capitalized banking concerns have taken up, like their European *confrères*, the fostering of the enormously increasing foreign trade of this country by opening foreign exchange departments. But in order to advance American interests in the best possible way, it seems desirable that the financial energies of the nation be centered in some giant institution in the American metropolis with competent branches stretching throughout the commercial centers of the Union, to take care of the interior financial needs of the country. On the other hand an international institution, with appropriate branches in the Colonies, will have to serve the national demand for the development of our colonial and foreign interests.

---

* The present value of the Haikwan tael is about seventy cents, United States currency, but to convert the value of the Haikwan tael of 1873 and the one of 1899, would give a misleading idea, considering the enormous differences in value of the tael on account of the fall in the price of silver from 1873 to 1899. It has also to be considered that the fall in the price of commodities from 1873 to 1899 is an element in calculating the growth of the commerce of China.—E. S. F.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

COLLECTIONS—DEFAULT OF CORRESPONDENT—DUTY TO INQUIRE AFTER PAPER NOT HEARD FROM.

Court of Appeals of Kentucky, November 15, 1901.

SECOND NATIONAL BANK OF LOUISVILLE, KY., vs. MERCHANTS' NATIONAL BANK OF NEW ALBANY, IND.

Where a bank receives for collection paper payable at a distant point, it is only bound to exercise due care and diligence in the selection of an agent to which to transmit the paper; and where it has done this it is not responsible for the default or negligence of such agent.

But if such paper is not heard from within a reasonable time the transmitting bank should make inquiry concerning the same; and this duty is especially important in times of financial uncertainty, or where there are circumstances which require prompt action.

This was an action by the Merchants' National Bank of New Albany, Ind., against the Second National Bank of Louisville, Ky., to recover the amount of certain notes alleged to have been lost by negligence of the defendant. Judgment for plaintiff, and defendant appealed.

HOBSON, *J.:* The Second National Bank of Louisville made an agreement with the Merchants' National Bank of New Albany, Ind., by which, in consideration of the New Albany bank depositing with it its surplus, it agreed to pay three per cent. interest upon the daily balances in favor of the New Albany bank, and also agreed to do the collecting of that bank without charge. After this, on April 1, 1893, the Bedford Stone Quarries Company, a corporation doing business at Bedford, Ind., executed its two negotiable notes to the New Albany Manufacturing Company, a corporation doing business in New Albany, Ind.—one for $652.07, due in thirty days, and the other for $650, due in sixty days—both payable at the Bedford Bank, of Bedford, Ind. The New Albany Manufacturing Company discounted the notes before maturity to the Merchants' National Bank, and the latter on April 22 sent the thirty-day note, which matured May 4, to appellant by mail, for collection, and on May 13 sent it the other note in like manner. Appellant, on the same day that it received the notes, sent them to the Bedford bank for collection. On June 6, 1893, the Bedford bank assigned for the benefit of its creditors; and so, soon afterwards, did the Bedford Stone Quarries Company, the maker of the two notes. On June 14 the two notes were returned to appellant unpaid and unprotested, and were returned by it to the New Albany bank. On the next day it returned them to appellant, claiming that diligence had not been used, and that by the failure to protest them the indorser was released. The notes were governed by the laws of Indiana, and thereby were placed on the foot-

Digitized by Google

ing of foreign bills of exchange. The indorser was therefore released, and, the maker being insolvent, it was insisted by the New Albany bank that appellant was liable to it for the amount of the notes. The court below adjudged in favor of the New Albany bank.

That the Bedford bank was negligent, and that it is primarily liable for the loss, is admitted; but appellant is not liable for the neglect of its correspondent. In Bank vs. Newland (97 Ky. 464) this Court said:

"When a customer deposits with a bank a note, bill of exchange, certificate of deposit, check, etc., for collection at a point distant from the location of the bank, he must know the bank cannot send one of its officers or agents to such point to make the collection. He is presumed to know the method employed by banks in making such collections. He knows that the bank must select some other bank or agency to aid in accomplishing the undertaking imposed on it. He has made the bank his agent for that purpose. He has employed the bank to do, through its method of making collection, that which would cost him much time and money to do himself. When he so engages the bank, and makes it his agent to make the collection, he does so with the implied understanding that the bank will follow the customary method in making such collections, which necessitates the selection of agents or correspondents at other points to carry out the undertaking; and the bank can only be held responsible for the exercise of due care and diligence in making such selection."

The evidence in this case shows very conclusively that the Bedford bank was regarded as solvent, and appellant cannot be held liable for negligence in the selection of the agent. But there are other facts shown by the proof. The notes were both signed thus: "Bedford Stone Quarries Company, by W. C. Winstandley, Secretary and Treasurer." W. C. Windstandley was also the Cashier of the Bedford bank, and appellant knew this. By the course of business between the two banks, if a note was collected the amount was immediately remitted by the Bedford bank to the appellant. When the note matured on May 4, and nothing was heard from it, appellant should have ascertained the cause, and in a reasonable time thereafter have given notice to the New Albany bank of the situation. Notwithstanding this, on May 13 it forwarded to the Bedford bank the other note, and took no steps, so far as appears with any certainty, until June 7, when in response to a letter from appellee a tracer was sent; and after this, on June 14, the notes were returned by the Bedford bank, with the statement that they had not been protested because the maker expected to pay them from day to day. The New Albany bank had no notice of the state of affairs until June 14, or eight days after the Bedford bank had failed, and only twenty days before the Stone Quarries Company failed.

At the time of the transaction a great panic was on the verge of sweeping over the country, and business men everywhere were on the alert. The bank that collects for its correspondent must use due diligence; and, while it was not negligence to send the notes to the bank of which Winstandley was Cashier, although he filled the position of secretary and treasurer in the Quarries Company, still, when the notes were not paid or protested according to the usual course of business, the exercise of ordinary care was required of appellant, to learn what the trouble was and apprise its customer of it, especially under the existing conditions in the financial world.

In Shipsey vs. Bank (59 N. Y. 485) the plaintiff deposited a check drawn by another upon a bank at Portchester with the defendant for collection, who forwarded it by mail on the same day. It should have reached Portchester on the 3d, and an answer on that day would have reached the defendant on the 4th. The check was lost. The defendant did not discover the loss until the 16th, and on the 18th it notified the plaintiff. The drawer failed on the 20th, and before another check could be forwarded. The defendant was held liable for the loss, in not discovering and notifying the plaintiff sooner of the loss of the check.

In First Nat. Bank of Trinidad vs. First Nat. Bank of Denver (4 Dill, 290, Fed. Cas. No. 4,810), the check was sent for collection on January 10, and remained good until January 29; but the defendant made no inquiries until February 9, and gave the plaintiff no notice of the non-payment of the draft until February 11. The bank was held responsible, Judge Dillon saying that the decisions in England and in this country are uniform that such delay to make inquiry and omission to notify the party interested imposed a liability for the loss. (See, also, 3 Am. & Eng. Enc. Law [2d Ed.] p. 805, and cases cited.)

These authorities seem to us conclusive of the case before us. It was the duty of appellant to use reasonable skill and diligence in protecting the interests of its depositor, and, in determining whether it did this, we must look to all the circumstances of the case. It was a time of great financial stress. Windstandley, whose duty it was, as Cashier of the Bedford bank, to collect the note, was the treasurer of the stone company, and therefore the person whose duty it was to pay it. The sum of the matter was that Winstandley was to collect the note from himself. While a bank, in forwarding paper for collection to its correspondent, is not required to inquire who its officers are, before sending the paper, when it does actually know that the Cashier is to collect the note from himself, and the paper is not paid or heard from after maturity, in a time of financial pressure, inquiry should be made by it promptly, and notice given the depositor without unreasonable delay. On May 5 appellant should have received either the money or notice of protest of the first note. It was grossly negligent if it made no inquiries before the 13th, and, if it made such inquiries, it was equally negligent to forward the second note to the Bedford bank without an answer to its tracer. For it was bound to know that the indorser on the first note had been released, and it should have taken reasonable steps to protect the interest of appellee.

[The remainder of the opinion discusses questions not of interest here.]

CASHIER—AUTHORITY TO SUE ON NOTES OWNED BY BANK.

Supreme Court of Michigan, November 4, 1901.

BATTERSBEE vs. CALKINS.

The Cashier of a bank may maintain an action on a note held by the bank without express proof of authority.

This was an action upon a promissory note payable to the order of Myers & Co.

The note was sold before maturity to the Citizens' Savings Bank of Detroit, under circumstances which admittedly made the bank a *bona fide* purchaser. It was sold to this bank by E. F. Bacon, the attorney of Myers & Co., to

Digitized by Google

whom it had been sent for collection. It does not appear whether or not Myers & Co. directed such sale. Bacon indorsed the note before sale in blank, as Myers & Co. had previously done. The note went to protest for non-payment, and subsequently it was indorsed to "any bank or order," over the signature of the Citizens' Savings Bank, and transferred to the State Bank of Croswell, which sent to the Citizens' Savings Bank its check for the amount due upon the note. The plaintiff is the Cashier of the Croswell bank, and testified that he is not the owner of the note, having brought this action for the benefit of the bank.

HOOKER, *J.* (omitting part of the opinion): We are of the opinion, however, that the court erred in his instruction upon the subject of plaintiff's ownership. The plaintiff was trying his case upon the theory that the bank owned the note. If it did not own it, it was lawful for it to permit suit to be brought upon it in the name of another, and, the note being indorsed in blank, the possession was presumptive evidence of ownership by the plaintiff. Furthermore, the plaintiff was the Cashier of the bank, and presumptively authorized to represent the bank in the collection of its paper. Whether the bank owned this paper, or held it as agent for Myers & Co., there was no testimony in the case tending to overcome the presumption that the plaintiff was entitled to bring an action upon the note. He had a presumptive title. He was Cashier, and represented the bank in whatever capacity the bank acted (Boyd vs. Corbitt, 37 Mich. 52; Moore vs. Hall, 48 Mich. 143; Coy vs. Stiner, 53 Mich. 42); and, if it did not act at all in the premises, there is nothing to show that plaintiff was not authorized to collect the note for whoever owned it.

STOCKHOLDER—LIABILITY—WISCONSIN STATUTE.

Supreme Court of Wisconsin, November 5, 1901.

GAGER, *et al.* vs. PAUL, *et al.*

Under the provision of the Wisconsin statute, that any person holding stock in any bank who shall sell or assign his stock shall be held, for six months after such sale, liable to the amount of such stock for all debts of such bank existing at the time of such sale or assignment, the liability is limited to those who are creditors at the time of such transfer.

The action must be commenced against the ex-stockholder within six months after the transfer.

While it may be that a banking corporation may bind itself by an agreement with the subscribers for its stock to accept anything in full payment for the stock so that it could recover nothing more, such contract may be attacked by subsequent creditors, and if fraudulent as to them, they may demand its repudiation and payment by the stockholders as if it had never been made.

DODGE, *J.*: (omitting part of the opinion): This appeal presents a few of the very numerous questions that are liable to arise for solution by the courts in working out the policy of the general closing-up action upon insolvency of corporations, especially of banking corporations whose stockholders are chargeable with the so-called additional statutory liability for the par value of their stock. The recoveries here sought are of three classes: (1) The statutory liability above mentioned; (2) the liability of a stockholder for the amount of his stock subscription where, by reason of contract with the corporation, it has not been paid for in full, either in money or its equivalent; and (3) the liability of a stockholder for dividends received by him practically

Digitized by Google

out of the capital of the corporation—that is, paid and received at a time when there were no earnings or profits out of which they could be paid. Some of these questions are further involved by the peculiar circumstance that the action is against a residuary legatee of a stockholder, brought after the completed settlement of his estate.

1. Statutory Liability. This rests upon two sections of the banking act, now included as subdivisions under section 2024, Revised Statutes, 1898. These are subsections 47 and 16. Subsection 47 provides: "The stockholders in every corporation or association organized under the provisions of this act shall be individually responsible to the amount of their respective share or shares of stock for all its indebtedness and liabilities of every kind." Subsection 16 provides that "each and every person owning or holding stock in any bank or banking association who shall sell, transfer or assign his stock * * * shall be held and remain for the term of six months from and after such sale * * * personally liable to the amount of the stock so as aforesaid sold * * * for the payment of all debts and liabilities of such bank or banking association existing at the time of such sale, transfer or assignment." That appellant's testator was a stockholder, and that the stock remained in his estate, and the property in trust of his executors, until May 6, 1897, and was then transferred, is conceded; also, that this action was commenced under sections 3218, 3219, Id., by Marsden as a stockholder merely on October 19, that his complaint was amended so as to allege that he was also a creditor on November 8, and that further amendment joining Rebecca Morgan as a party defendant and service of summons upon her occurred March 11, 1898.

It is contended on the one hand that no suit can be maintained on this liability if it had expired by the statutory six-months' limitation before the commencement of the action, and that the action was not commenced against the party sought to be charged until after that period had expired. On the other hand, it is contended that the general action, which might involve the enforcement of this liability, having been commenced on October 19, within six months after the transfer of I. P. Morgan's stock, the creditors are entitled to hold the estate of I. P. Morgan, and, that having been distributed, to hold the residuary legatee, Rebecca Morgan, and, she having since died, to hold her administrator.

The maintenance of such an action as this in the circuit court against the estate of the deceased person, instead of the presentation of claim in the county court against that estate, has already received adequate discussion and decision in Gianella vs. Bigelow, 96 Wis. 185, and we entertain no doubt that the rights of recovery of this liability are the same against the appellant as they would have been against I. P. Morgan if living. We must therefore proceed to consider the force of our statutes above mentioned.

Subsection 16 differs radically from the provisions on the same general subject in other States, and there are cited to us no decisions from other States helpful upon its construction. Some statutes with more or less clearness extend the liability of a transferrer, not to the then creditors for a term of six months, but to all who shall become creditors within a term of six months; thus warranting a construction to the effect that the class to whom liability shall exist only is limited by that term, and the liability, having arisen, may be enforced when the creditors choose, subject, only, to the gen-

Digitized by Google

eral limitations upon actions. Such construction is clearly excluded by our statute. The liability is limited to those who are creditors at the time of the transfer, and, if that liability were intended to be enforceable at any time within the ordinary period for bringing actions, the clause "for a term of six months" would be meaningless. That clause can have but one significance, and that its obvious one—namely, that at any moment within the specified period there exists a liability from the transferring stockholder to each and all of the defined class of creditors on which suit can be brought (the form of such suit needing to be in compliance with the holding of this court from Coleman vs. White, 14 Wis. 700, 80 Am. Dec. 797, to Bank vs. Benson, 106 Wis. 624), and that after such six months he is not liable at all.

Hence the only reasonable construction seems to be that, if a suit is commenced while that liability exists, the creditors are entitled to recover, but, after such liability has expired, no action can be maintained or serve to revive it. It being essential, then, that the action be commenced against the ex-stockholder within six months after the transfer, we must consider what constitutes such commencement. The liability thus imposed is a personal and separate one of each stockholder, and while, for convenience, it can be properly ascertained and enforced only in an action which brings before the court all creditors and all stockholders upon whom the liability is to be fixed and among whom it is to be adjusted, yet in ultimate analysis it is a direct, personal and legal liability of the individual. That it cannot be adjudicated and enforced against him without making him a party to the action is at least inferentially decided in Finney vs. Guy, 106 Wis. 256. In that case a contrary doctrine, suggested by the Minnesota court in Harper vs. Carroll, 62 Minn. 152, 64 N. W. 145, which is now urged upon us by the respondent, was repudiated. The necessity that the stockholder shall have been brought before the court by service of process as fully and completely as in any other action against him, is recognized and certainly intimated by all our decisions on the subject, among which Foster vs. Posson, 105 Wis. 99, Finney vs. Guy, *supra*, and Bank vs. Benson, *supra*, may be mentioned.

It must not be forgotten that, while proceedings in equity to close up a banking corporation may include recovery of stockholders' statutory liability, they equally may not; for assets of the corporation or other liabilities to creditors, equitably prior to this, may satisfy all creditors. It is therefore an unwarranted presumption that an action seeking to enforce some of the rights of creditors is necessarily one to enforce all. (Gager vs. Marsden, 101 Wis. 598, 603.) The only safe course, which, while protecting diligent creditors, still gives full protection of this statute to stockholders, is to construe these actions like others—measure the cause of action by the complaint, and deem them commenced against any defendant when, and only when, any other would be so deemed. On this subject section 4239, Revised Statutes 1898, fixes the service of summons as the commencement of an action, except for cases where a diligent attempt to make service may suffice, under section 4240. This statute would seem sufficiently unambiguous to conclude the question. It is, however, confirmed by the holding in Levy vs. Wilcox, 96 Wis. 127, that, however necessary a party may be to the general purpose of an action, it is not commenced against him until he is actually and by name brought in. The conclusion seems irresistible that no suit was commenced to enforce the liability of I. P. Morgan's estate until March 11, 1898, some

Digitized by Google

four months after that liability had expired, and that, consequently, judgment therefor against the administrator of his residuary legatee is erroneous.

2. Stock Subscription Liability. It appeared and was found by the court that I. P. Morgan, in 1880 and 1885, received certificates of stock, purporting to be full-paid, for $1,000 par value, for which he in fact paid into the capital of the bank but $300. It quite clearly appears, however, that this was by contract between him and the corporation that he should not be under obligation to pay anything more. That contract is evidenced by the action of the corporation in 1885, when by resolution it attempted to pay for said stock with assets of the corporation, treated and declared as profits, but which were not profits. There can be no doubt whatever that, as between creditors and a stock subscriber, the latter is liable to make good any known or fraudulent deficit between the amount paid by him and the face value of his stock; but the first question is whether, under such circumstances as here presented, this is a liability to the corporation, or a liability enforceable only by the creditors, in derogation of the contract between the corporation and its stockholders, as a fraud upon them. If the former, it might perhaps be barred by statutes of limitation, or lost by failure to present in county court against the estate of I. P. Morgan. If the latter, no such defense could be urged. Respondent has discussed the situation and appellant cited authorities as if the attempt here were to collect upon an actual contract to pay par value for subscribed stock, and as if the transfer to W. H. Morgan were of concededly part-paid stock. In that respect they are clearly wrong. As between the corporation and I. P. Morgan there was never anything due for these two shares of stock, certainly after 1885. As between it and a transferee for full value, relying on the certificate of full payment, no recovery could be had, though perhaps as to either the corporation might defensively raise the shield of our statute (section 1753, Rev. St. 1898) declaring such stock void. (Land Co. vs. Parker, 111 Wis. 1.)

The corporation could bind itself to accept anything in full payment for stock, so that it could recover nothing more. (Wells vs. Canal Co. 90 Wis. 442, 452; Gilman vs. Gross, 97 Wis. 224, 227; 2 Beach, Priv. Corp. §§ 559, 561.)

But any such contract between corporation and stockholders may be attacked by subsequent creditors, and, if fraudulent as to them, they may demand its repudiation and payment by the stockholders as if it had never been made. (Gogebic Inv. Co. vs. Iron Chief Min. Co. 78 Wis. 427.)

While by legal fiction it is said that in such proceeding the creditors recover in the right of the corporation, it is still true that they enforce rights which the corporation did not have, and are not precluded from their suit by statutes of limitation, nor by other omissions of the corporation to proceed against the stockholder.

NOTES GIVEN TO BANK FOR ITS ACCOMMODATION—DEFENSES.

Supreme Court of Missouri, Division No. 1, Nov. 19, 1901.

CHICAGO TITLE AND TRUST COMPANY vs. BRADY.

Where notes have been delivered to a bank without consideration, that they may be used to apparently swell the assets of the bank, the maker may, if sued by the bank thereon, interpose the defense that they were given merely for accommodation.

The same defense may be interposed where suit is brought on the notes by a Receiver of the bank.

Digitized by Google

This was an action by the plaintiff, as Receiver of the Globe Savings Bank of Chicago, upon six promissory notes—one for $5,000, one for $4,200 and four for $700 each—executed by the defendant, and delivered to said bank, and which were found by the Receiver among the assets of the bank. The answer of the defendant admitted the execution and delivery of the notes to the bank, and set up as a defense that they were so executed and delivered without any consideration, for its accommodation.

BRACE, *P. J.* (omitting part of the opinion):

This brings us to the main contention of appellant's counsel, which seems to be that, although it appears from the evidence that all of these notes were executed and delivered to the bank for its accommodation, they had never been negotiated by the bank, or been out of its control or possession, but came into the hands of the Receiver with the other assets of the bank. Yet, as it also appeared from the evidence of the defendant himself that the purpose for which they were so executed and delivered was simply to swell the apparent assets of the bank, whereby the State bank examiners and others might be deceived as to the condition of the bank, the court erred in holding by its instruction that the plaintiff, "as Receiver of the Globe Savings Bank, was in no better position than the bank itself"; and the argument in support of this contention seems to go to the length of maintaining that the court, upon this evidence, erred in holding that, as against the Receiver, the defense set up in the answer could be maintained.

* * * * * * * * * *

It is upon this evidence that counsel for appellant base their contention that the defense in this action should not have been maintained. We find nothing in it even tending to prove that the notes sued on were not accommodation paper. Being such, they were without consideration, which is always a defense to a suit upon such paper between the immediate parties. (1 Am. & Eng. Enc. Law, 350.) "The appointment of a Receiver does not have the effect of changing any rights of action, or of changing the contract relations existing between the original parties against whom the Receiver is appointed, and their debtors. A Receiver, therefore, cannot maintain an action upon a note or obligation running to the original party which he himself could not have maintained. * * * For the purpose of actions and suits connected with their receivership, receivers occupy substantially the same relation which was occupied by the original parties against whom or over whose estate they were appointed. Any defense, therefore, which defendant might have made to an action brought by the original party in interest is equally available, and may be made with the like effect, when the action is instituted by his Receiver." (High, Rec. [3d Ed.] §§ 204, 205; Smith, Rec. § 70; Cox vs. Volkert, 86 Mo. 505.)

As the defense would have been good if no Receiver had been appointed and the suit on the notes had been brought by the bank, so it must be held to be good against the action of the Receiver. The fact that the effect of giving these notes was to swell the apparent assets of the bank, and that such was the purpose of giving them, and that thereby the bank examiner, creditors and stockholders of the bank may have been deceived as to its condition, in no way changes the relation or rights of the parties. Accommodation paper is simply a loan of credit by the person making it to the person to whom it is given, and its necessary effect is to swell the apparent assets of the latter

Digitized by Google

to the eyes of any one to whom it is exhibited; but, unless it is negotiated, such person can acquire no right of action thereon by reason of that fact, nor does it supply a consideration for the paper.

As was said in Bank vs. Robinson, 24 Me., loc. cit. 277, 41 Am. Dec. 387: "If the doctrine were admitted that the probability of loss or injury which the creditors or stockholders of a corporation might sustain by its taking a note and making a false exhibit of its funds constituted a sufficient consideration for it, it would be difficult for any one to avoid his contract with a corporation by proof of a want or a failure of consideration. It would not be difficult in many cases for the corporation to prove that such contract had been exhibited as constituting a part of its assets, and that debts had been contracted with those who relied upon such assets as a means of payment, or that its stock had been sold, and dividends declared upon it, on the faith that such contract constituted a part of its assets. But a more conclusive answer is that there must be a consideration at the time of making the contract, and that no injurious consequences to the parties or to others which may afterward happen from their having made it can constitute a legal consideration." It is undoubtedly true that the Receiver of a corporation, being not only its representative, but also a trustee of its assets for the benefit of its creditors and stockholders, may repudiate the fraudulent and illegal contracts of the corporation whereby those assets have been impaired, diminished, or misappropriated, and maintain actions in many instances when such actions could not be maintained by the corporation itself; and this is the character of cases cited by appellant's counsel in support of their contention, but such is not the character of this case. The contract here is a lawful one. Accommodation paper is not fraudulent or unlawful by reason of the fact that it swells the apparent assets of the person to whom it is given, and that others thereby may be deceived as to the financial condition of such person; and the Receiver in this instance is not repudiating the contract of the bank with the defendant, but is seeking to enforce it. In doing so he necessarily stands in the shoes of the bank, with the same rights, no more and no less; and the defense of failure of consideration is just as good against him as it would have been against the bank had no Receiver been appointed and the suit been brought by the bank. There was ample evidence to sustain the defense, and the verdict of the jury thereon is conclusive. Finding no reversible error, the judgment of the circuit court is affirmed.

EMBEZZLEMENT BY NATIONAL BANK OFFICER—INTENT TO DEFRAUD.

United States Circuit Court of Appeals, Sixth Circuit, November 11, 1901.

McKNIGHT vs. UNITED STATES.

An intent to defraud or injure the bank is an essential ingredient of every offense specified in section 5,209 Rev. Stat. U. S., and this applies to embezzlement as well as to the other acts enumerated in such section.

In error to the District Court of the United States for the District of Kentucky.

DAY, *Circuit Judge:* This case, upon a former writ of error, was before this court at its October term, 1899, and is reported in 38 C. C. A. 115, 97 Fed. 208. At the second trial of the case the plaintiff in error was convicted upon two counts, numbered 39 in the indictment in case No. 5,782, and 2 in

Digitized by Google

indictment in case No. 5,783. These counts severally charge McKnight with embezzlement of the funds of a bank. Upon the trial the court was requested to charge the jury that the defendant could not be found guilty unless the jury believed that the acts of embezzlement were committed with the fraudulent intent charged in the indictment. In both the counts under consideration the embezzlements were charged to be with the intent to injure and defraud the bank, in this respect using the language of section 5,209, Rev. St. U. S. defining the offense. The court, however, refused so to do, being of the opinion that the language of the statute requiring the criminal acts to be done with intent to injure or defraud the association did not apply to the offense of embezzlement.

This section (5,209) undertakes to provide, in the first instance, for the acts of certain officers of the association—President, director, Cashier, teller, clerk, or agent—whose acts are made criminal by the section. These acts are defined to include embezzlement, abstraction or willful misapplication of the moneys, funds or credits of the association, or, without authority from the directors, issuing or putting in circulation the notes of the association, or, without such authority, issuing or putting forth any certificate of deposit, or drawing any order or bill of exchange, making any acceptance, assigning any note, bond, draft, bill of exchange, mortgage, judgment, or decree, or making any false entry in any book, report, or statement to the association, with intent, in either case, to injure or defraud the association, etc. "In either case," obviously includes all or any of the acts which have been previously denounced as criminal when done by one of the officers named, and one of them is embezzlement of the moneys, funds, or credits of the association. These acts are criminal only when done with the intent which the statute has made an essential element of the offense. This is the natural interpretation of the language used, and has been the uniform holding of the courts of the United States, in construing this section, so far as we are advised. (U. S. vs. Britton, 107 U. S. 655, 2 Sup. Ct. 512, 27 L. Ed. 520), in which case the supreme court said that the intention to injure and defraud is an essential ingredient to every offense specified in the section, and the failure to aver the intent is a fatal defect in the counts in which it occurs. To the same general effect are Evans vs. U. S. 153 U. S. 584, 14 Sup. Ct. 934, 38 L. Ed. 830; Agnew vs. U. S. 165 U. S. 36, 17 Sup. Ct. 235, 41 L. Ed. 624; U. S. vs. Northway, 120 U. S. 326, 7 Sup. Ct. 580, 30 L. Ed. 664; U. S. vs. Harper (C. C.) 33 Fed. 471; U. S. vs. Youtsey (C. C.) 91 Fed. 864.

It is true that the court defined "embezzlement" as the fraudulent appropriation by an officer of a National bank of the funds of the bank which had been committed to his custody and care, and further told the jury that it must appear that McKnight fraudulently appropriated the money to his own use, in the one instance in order to bribe Britt and Reeder, and in the other to his own use as charged in the two counts of the indictment upon which the accused was being tried. It may be fairly argued that the fraudulent appropriation of the money of the bank intrusted to his charge would include the intent to injure or defraud the bank, to be inferred from such fraudulent appropriation of trust funds. In the same connection the court told the jury that, if the intent charged was necessary to be proved, the jury would be authorized to conclude that it was present from the fraudulent act of misappropriation of the money which constituted embezzlement. But,

Digitized by Google

when the attention of the court was directly called to the necessity of proving the intention to injure or defraud the bank in order to work a conviction, the jury was told that it was merely surplusage to allege in the indictment that the appropriation of the money was with intent to injure or defraud the association, and more than once the jury was told that it was unnecessary to allege or prove that the misappropriations in question were with intent to injure or defraud the bank. This charge negatives the inference that such intent is included in the fraudulent misappropriations which the court told the jury would constitute the crime. Undoubtedly the intent to injure or defraud may be inferred where such is the natural consequence of doing the prohibited act; for the law properly concludes, in the absence of circumstances negativing the inference, that one intends the natural consequences of his acts knowingly and intentionally done. But this rule, while it may suffice to define the measure of proof required to establish such wrongful intent, does not dispense with the necessity of proving its existence, where, as in the present case, it is made an essential element of the crime. The statute only makes the acts of the officers therein named criminal when done with the specific intent named. In charging the jury that the accused could be convicted without proof of the intent to injure or defraud, the court failed to give a proper construction to the terms of the statute, and permitted a conviction without proof of an element of the offense as defined in the statute. This conclusion renders it unnecessary to examine the other errors assigned.

It follows that the judgment must be reversed, and a new trial awarded.

COUNTERFEITING OF BANK NOTES.

United States District Court, District of Oregon, November 7, 1901.

UNITED STATES vs. CONNERS.

Notes issued by a State bank are not obligations issued under authority of the United States within the meaning of Sec. 5430 Rev. Stat. U. S., and counterfeiting the same is not an offense within the meaning of that section.

BELLINGER, *District Judge:* This is an application by the United States for an order for the removal of Harry Conners, alias Harry Conway, to the Northern District of California, on an indictment charging the defendant with feloniously having in his possession, without authority of the Secretary of the Treasury or other proper officer of the United States, two obligations and securities, each of which was engraved and printed after the similitude of an obligation and security issued under the authority of the United States, and which were as follows: One obligation and security purporting to be an obligation and security issued by the State Bank at New Brunswick, in the State of New Jersey, of the denomination of $2, and payable to bearer on demand; and one obligation and security purporting to be an obligation and security issued by the State Bank of New Brunswick, in the State of New Jersey, of the denomination of $5, and payable to bearer on demand.

It is further charged that the defendant well knew said obligations not to be lawful and genuine, and that he intended to sell or otherwise use the same to defraud some person or persons to the grand jury unknown.

A second and third count in the indictment charges the defendant with having sold to a Mrs. Burdick and to a Mrs. Wassman notes of said State

Digitized by Google

Bank of New Brunswick, in the State of New Jersey, for the purpose of defrauding such purchasers.

The question as to whether these facts constitute a crime under the laws of the United States was recently considered by me upon a presentment made by the grand jury in the case of F. W. Burk. My conclusion was that these facts do not constitute a crime against the United States, and I so instructed the grand jury. The question is free from doubt. The bills described in this indictment are not in the similitude of any obligation issued by the United States, and the statement in the indictment that they are so does not countervail the facts alleged, which show the contrary.

These bills are described as notes and obligations issued by the State Bank of New Brunswick, in the State of New Jersey. They do not purport on their face to be obligations of the United States, but something altogether different.

The petition for removal is not resisted by the defendant, and the suggestion was made in the application that the order prayed for in the petition was agreeable to his wishes. But this can make no difference. There can be no order of removal upon consent of the party whose removal is sought, where the facts charged in the indictment do not constitute a crime.

The petition is denied.

COLLECTIONS—FAILURE TO PROTEST—CORRECTION OF ACCOUNTS.

Court of Appeals of Kentucky, October 29, 1901.

LOUISVILLE BANKING COMPANY vs. ASHER.

In Kentucky presentment and notice of dishonor are not required in order to hold the indorsers on a promissory note, which is not discounted at the bank at which it is payable, or at some bank in that State incorporated under its laws, or under the laws of the United States.

Where presentment and notice of dishonor are not required in order to charge an indorser a collecting bank is not liable for failure to make demand and give notice.

If the indorsers discharged by the negligence of the collecting bank are insolvent, the latter is not liable for the face value of the paper, but only for the actual loss sustained by the holder of the paper, which in such case would be only a nominal sum.

In Kentucky accounts settled between banks may be opened for mistake, even though the mistake is one of law.

This was an action by the Louisville Banking Company against the Union National Bank of Louisville, Ky., and others praying that defendants be required to interplead for the purpose of determining the right to a fund held by the plaintiff, and to enforce a banker's lien on such fund.

HOBSON, *J.:* The Louisville Banking Company and the Pineville Banking Company were correspondents for each other. The Pineville Banking Company made an assignment on July 28, 1893, to appellee T. J. Asher for the benefit of all its creditors, being then hopelessly insolvent. As shown by the books of the Louisville Banking Company, the Pineville Banking Company had then to its credit with it $1,370.42. As shown by the books of the Pineville Banking Company, this balance was $4,928.83. But this omitted a credit of $500 which should have been entered, so that, as shown by these books as corrected, the balance was $4,428.83. This litigation involves a settlement of these accounts. On February 28, 1890, five notes were executed by different persons to P. Barry, due six months after date, negotiable and

Digitized by Google

payable at the Pineville Banking Company, aggregating in all $2,168.28. Barry discounted these notes to the Citizens' National Bank of Cincinnati, and on August 15, 1890, that bank sent them to the Louisville Banking Company for collection, marked "Protestable." On August 19 the Louisville Banking Company sent them to the Pineville Banking Company, its correspondent, at which they were payable. The notes matured ten days later, and were neither collected nor protested for non-payment by the Pineville Banking Company, but were sent back by it to the Louisville Company without explanation. It returned them to the Cincinnati bank. The Cincinnati bank sent them back to the Louisville Banking Company, demanding the money on them, upon the ground that it was responsible for the negligence of its correspondent, the Pineville Banking Company, in not protesting the notes. The Louisville Banking Company then wrote the Pineville Banking Company, returning the notes to it, and demanded that it should pay the money.

The Pineville bank claimed that the notes were sent to it marked "No protest," and again returned them to the Louisville Banking Company. This was on September 11. On September 12 it wrote the Pineville bank this: "Yours of 11th returning notes received. In order that we may fit the responsibility upon the right one in this office, will you kindly return for our inspection our instructions not to protest the notes? Our letter book shows that they were sent protestable." On the 13th the Pineville bank replied that it had not preserved the letter, and was sorry it could not produce it. Some other correspondence ensued, and on October 6 the Pineville bank wrote, in answer to a letter received by it in regard to the matter, stating that it would have its Mr. Fish call and see the Louisville Banking Company during the week. On the 8th that bank replied thus: "Our Cincinnati correspondent from whom we received the items is whooping us up pretty lively. There is nothing left for us to do but to credit their account with proceeds of their collections, and, while we regret it sincerely, we shall be compelled to look to you in like manner."

In answer to this letter on October 10 the Pineville bank again wrote that Mr. Fish would call and investigate the matter, and, after stating that Fish, who attended to the notes, understood they were sent without protest, added: "We certainly don't want you to have any trouble about these items, and will fully see that they are properly adjusted at once." On October 20 the Louisville bank wrote again, inclosing a letter from the Cincinnati bank insisting that the matter be adjusted, and repeated this again in a letter of October 24.

No further correspondence appears in the record until November 20, 1890, when the Louisville bank wrote as follows: "Enclosed herewith you will find the five notes which have been charged to your account, as the Cashier wrote you yesterday. We regret the circumstances that force us to do this, but can't help it." On the same day the Louisville Banking Company charged the amount of the notes to the account of the Pineville Banking Company, and credited the Cincinnati bank by the amount, and it was checked out by that bank. The Louisville Banking Company at the end of the month of November sent the Pineville bank a statement of its account, and received from it this in substance: "Your statement of account for November, 1890, is correct." This statement showed the charge of the $2,168.28. Similar statements and acknowledgments were made at the close of each month from that time until the Pineville bank failed, on June 28, 1893. But the Pineville Banking Company did not credit the Louisville Banking Company on its books with the amount. The Louisville Banking Company did not know this, and seems to have acted on the idea that the matter was settled, until this controversy arose. The evidence shows that the notes were sent to the Pineville Banking Company marked for protest, and we think the circumstances warrant the conclusion that the Pineville bank realized that a mistake had been made by its man in not protesting the notes.

It is earnestly insisted for appellant that after the numerous statements sent, and acknowledged to be correct, the account was stated, and the balance shown by the statements is conclusive between the parties. We think, under the evidence, it should be regarded as an account stated. (Henderson Cotton Mfg. Co. vs. Lowell Machine Shops, 86 Ky. 668, Union Bank vs. Planters' Bank, 31 Am. Dec. 113.) The rule as to an account stated is thus well put in 3 Enc. Law & Proc. pp. 451, 455: "Formerly the stating of an account was considered so deliberate an act as to preclude an examination into the items, but since an early day a greater latitude has prevailed; and it may now be said to be the rule that an account stated does not create an estoppel, and that neither a stated nor a settled account is conclusive, but simply affords strong presumptive evidence, which may be rebutted by showing fraud or mistake. And, while the practice of opening accounts which the parties have themselves adjusted is considered dangerous, yet a settlement must be so far considered as made upon absolute mistake or imposition, if palpable errors are shown, as not to be obligatory upon the injured party. The presumption is one relating to the evidence. In determining whether an account stated can be impeached, the case is put upon the same footing as if the money had been paid. Such payment would be conclusive, subject to the right to recover it back on a failure of consideration; and so, on the statement of an account, if the case is one in which a payment, if made, could have been recovered back, the facts which show the failure of consideration may be proved."

In the correspondence between the two banks it seems to have been assumed that the indorser of the notes had been released by the failure to protest them, and that the Pineville bank was responsible for the loss if the notes were sent to it by the Louisville bank with instructions to protest them if not paid. But promissory notes are only put on the footing of foreign bills of exchange when they are regularly discounted by the bank at which they are payable, or another bank in this State incorporated under its laws, or organized in this State under the laws of the United States. (Ky. St. Sec. 483; Carlisle vs. Chambers, 67 Ky. 268, 96 Am. Dec. 304.)

The notes in question, having been discounted by the bank in Cincinnati, Ohio, and not by any bank in this State, were not, therefore, placed on the footing of a bill of exchange, but stood as any other promissory note which had been assigned. The indorser was not released by the failure to protest them. The Cincinnati bank had not sustained any loss by reason of the failure to protest them. The protest would have been only an unnecessary expense. There was no liability of the Louisville bank to the Cincinnati bank, or of the Pineville bank to the Louisville bank, for the failure to protest the notes, which were executed in this State, were payable here, and must be governed by its laws.

Digitized by Google

It is clear from the evidence that the parties to the notes were all insolvent at the time, and that the notes were in fact worthless. The question then arises, is there such a palpable mistake here that equity should relieve against it, treating the account as stated, and applying the principles followed in this State in the case of a payment of money by mistake? The distinction made in some jurisdictions between a mistake of law and a mistake of fact has been rejected in this State, and it is settled that money paid without consideration under a palpable mistake of law or fact, which was not owing in law or conscience, and ought not to be retained, may be recovered back. (McMurtry vs. Railroad Co. 84 Ky. 462, and cases cited.)

The mistake here is palpable, and the charge against the Pineville bank cannot be allowed to stand unless it has lost its rights by laches, and is now estopped to assert them. It does not appear from the evidence that the Pineville bank led the Louisville Banking Company to take the action it took. On the contrary, the correspondence would indicate that the Louisville bank charged the amount to the Pineville bank, and credited it to the Cincinnati bank on the same day, expressing to the Pineville bank regret that it was compelled to do so. In other words it acted on its own judgment, and not by the direction of the Pineville bank. It did not wait for the Pineville bank to affirm its action before crediting the Cincinnati bank by the money or paying its checks upon it, and it does not appear that it was misled by the Pineville bank, or is now in a worse position than it would have been if the Pineville bank had promptly disaffirmed what it did. Nor does it appear that it will be unable now to get its money back from the Cincinnati bank.

We are therefore of opinion that appellee was properly credited in the settlement of the account with the amount of these notes.

[The remaining questions discussed by the court are not of interest here.]

NEGOTIABLE INSTRUMENTS—CONSIDERATION—PRE-EXISTING DEBT.

Supreme Court of North Carolina, November 5, 1901.

BROOKS vs. SULLIVAN.

Formerly in North Carolina the transfer of a negotiable note as collateral security for a pre-existing indebtedness did not constitute the transferee a holder for value so that he took the paper free from equities of which he had no notice.

This rule has now been changed by the Negotiable Instruments Law.*

CLARK, *J.:* The only question is whether, when a negotiable note is transferred before maturity as collateral security for a pre-existing debt, the assignee is such holder for value that he takes free from equities of which he had no notice. The negotiable instruments statute (Laws 1899, c. 733, §§ 25–27) settles that such is the case now, to the extent of the debt secured, but that is a change of the law, which was previously otherwise. (Holderby vs. Blum, 22 N. C. 51; Harris vs. Horner, 21 N. C. 455, 30 Am. Dec. 182; Potts vs. Blackwell, 56 N. C. 449.) This case is governed by the law as it stood prior to the act of 1899.

* The statute changed the law of New York in this respect also. (Brewster vs. Shrader, 26 Misc. [N. Y.,] 480.)

CONDENSED LEGAL DECISIONS OF INTEREST TO BANKS.

ASSIGNMENTS FOR CREDITORS—PREFERENCE OPERATING AS ASSIGNMENT —DEPOSIT IN BANK INTENDED AS PREFERENCE.

Where an insolvent debtor deposited in bank an amount almost exactly equal to the amount of a note which the bank held against him, and the deposit was applied by the bank to the payment of the note, the making of the deposit was, in effect, a payment to the bank, and therefore an act of preference, under the statute, as no inquiry was ever thereafter made by the debtor as to the deposit, and he must have known when he made it that the bank was bound in law to apply it to the payment of the note or release the surety thereon.

Mt. Sterling Nat. Bank vs. Priest, *et al.* 64 S. W. Rep. (Ky.) 972.

BILLS AND NOTES—ACTION AGAINST INDORSERS—DEFENSE—BONA-FIDE PURCHASERS—PROTEST—NOTICE—PLEADING—PRESENTATION FOR PAYMENT.

The indorsers of a note cannot claim that it had no legal inception, and was put into circulation contrary to the purpose of its creation, where their answer contains no such defense, and there is no proof that the payees were cognizant that the note was designed for a specific purpose.

Bona-fide holders of a note cannot be defeated in an action against indorsers on the ground that it had no legal inception, and was put into circulation contrary to the purpose which induced its creation.

Where a note is protested, and the notary, not knowing the residence or place of business of any of the indorsers except the last, forwards all the notices to him, and he without delay sends the prior indorsers the manifests of such protest, such notice is sufficient to bind the prior indorsers.

Where a note has been transferred by the payees, an allegation in an action by the holder against prior indorsers that it was delivered to plaintiff by the defendants, is proper.

Where a note on day of maturity is presented to the bank where payable during banking hours, it is unimportant that the notary protesting it presented for payment after the bank closed.

Metropolitan Bank vs. Engel, *et al.* 72 N. Y. Supp. 691.

COLLECTION OF NOTES—CREDITING PROCEEDS—GENERAL DEPOSIT—TRUST FUND—ACTION—EVIDENCE—AGENCY—KNOWLEDGE OF AGENT—PRESUMPTION.

Where, for two years, the general agent of a corporation had been accustomed to send notes due the corporation to a bank for collection, and the bank, as it collected the notes at different times, gave the agent credit on its books, sometimes retaining the collections as long as two months before remitting the balance due the corporation, the corporation was merely a creditor of the bank, and the proceeds of collections made by it could not be regarded as trust funds.

In the absence of any affirmative showing that the corporation had knowledge of such course of business, it will be presumed to have knowledge through its general agent.

Digitized by Google

In an action against the Receiver of a bank to have the proceeds of certain notes collected by the bank declared a preferred claim as a trust fund, the funds in the bank at the time of its insolvency having amounted to less than plaintiff's claim, it was proper to admit in evidence judgments recovered by certain preferred creditors of the bank, in order to show that there were preferred creditors, entitled to share *pro rata* in the funds in the bank at the time of its insolvency.

Where for two years the general agent of a corporation had been accustomed to send notes to a bank for collection, and the bank as it collected the notes at different times gave the agent credit on its books, from time to time remitting all the balance due the corporation, in an action by the corporation, on the insolvency of the bank, to have the proceeds of the notes declared a preferred claim as trust funds, it was not error to refuse to allow a witness to answer a question as to the manner in which the corporation collected its accounts in the State, it not being shown that the bank had any knowledge of the manner in which the corporation did business with other banks, and such question not being material.

It was not error to sustain an objection to a question as to whether the corporation kept or authorized a general account with any bank outside of certain ones, inasmuch as the question in issue was whether the transaction between the corporation and defendant bank was such that the relation of debtor and creditor existed.

A contention that it was error to permit the Receiver of the defendant bank to show the manner in which the accounts were kept, for the reason that such issue tended to contradict the express agreement between the parties, was untenable.

What is a prompt transmittal of funds, within the meaning of an agreement between a bank and one who sends it notes for collection, depends upon the understanding of the parties, shown by the usage or course of business between them.

McCormick Harvesting Machine Co. vs. Yankton Savings Bank, *et al.* 87 N. W. Rep. (S. D.) 976.

CHECKS—PERSONS ENTITLED TO PAYMENT—FRAUD.

H secured a loan from plaintiffs, giving a note and mortgage therefor by the name of D, under the false representation that his name was D, and that he owned the land. The loan was turned over by a check on defendant's bank. H indorsed the check as D, and again as H, and received the money. The land was owned by the real D. *Held*, that H, and not D, was the intended payee of the check, and he was entitled to payment as between himself and the bank, and the bank, having no notice of the fraud, was not liable to plaintiff for the amount of the check.

Meyer, *et al.* vs. Indiana Nat. Bank, 61 N. E. Rep. (Ind.) 596.

COURT OF COMMON PLEAS—JURISDICTION—INSOLVENT CORPORATION—ACTION TO DISSOLVE—INSOLVENT BANK—LIABILITY OF STOCKHOLDERS.

In 1894 (Const. Art. 6, Sec. 12) the superior city courts, of which the common pleas of the city and county of New York was one, continued with jurisdiction then possessed, and such further civil and criminal jurisdiction

Digitized by Google

as might be conferred by law. Code Civ. Proc. Sec. 263, subd. 2, provided that the superior city courts should have jurisdiction of actions for causes specifically enumerated, as well as for any other cause of action arising within the city, or where defendant is a resident of that city, or where the summons is personally served on him therein. *Held*, that the court of common pleas of New York had jurisdiction to entertain an action to dissolve a State bank incorporated under Laws 1882, c. 409, where New York city was its principal place of business, and the summons was served there, and the cause of action arose therein.

An action to dissolve an insolvent corporation is controlled by Code Civ. Proc. c. 15, tit. 2, Art. 3, Sec. 1785, and not by Art. 4, Sec. 1798.

Though when a bank was organized there was no liability of stockholders for the debts of the corporation, if the bank did not issue notes, the Legislature had power to enact a law rendering stockholders of such bank liable for debts thereafter incurred.

Under the Banking Law of 1892, all stockholders of State banks, whether issuing notes or not, and whether incorporated before or in business after the passage of that act, are liable for the debts of the bank, in addition to the amount invested therein by them, for an amount proportionate to the par value of their shares, except where the stock is held as collateral or in a representative capacity, or the debt was payable more than two years after it was contracted.

Laws 1882, c. 409, imposed upon stockholders of banks no personal liability for debts of a bank not issuing notes. Banking Law 1892, Sec. 52, imposed a liability on stockholders of banks, whether incorporated before or in business after the passage of that act. This latter act repealed the act of 1882. Statutory Construction Law, Sec. 31, declares that the repeal of a statute shall not affect any act done or right accruing or acquired prior to the time when such repeal takes effect. Section 1 provides that the statutory construction law shall apply to every statute, unless its general object, or the context of the language construed, or other provisions of law, indicates that a different meaning or application was intended from that required to be given by this chapter. *Held*, that as the Banking Law of 1892 shows an intent to make the stockholders of every bank personally liable for its debts, whether they became such before or after that law took effect, the stockholders of a bank organized prior to the law of 1892 were not exempt from personal liability.

Hagmayer, *et al.* vs. Alten, *et al.* 72 N. Y. Supp. 623.

STATUTORY LIEN ON STOCK—PRIORITY BETWEEN BANK AND PLEDGEE —NOTICE OF LIEN—REPRESENTATION BY OFFICER—KNOWLEDGE OF CASHIER AS NOTICE TO BANK—NOTICE TO PRESIDENT.

A stockholder in a bank may pledge his stock as collateral security to a third person by a written assignment and delivery, notwithstanding a statute requiring transfers to be made on the books of the bank, and the lien of such pledgee, acquired before the stockholder becomes indebted to the bank, will prevail over a statutory lien given the bank to secure its debt, where the bank before or at the time its debt was contracted had notice of the pledge; but, in the absence of such notice, the lien of the bank is superior, and the burden of proving notice rests upon the pledgee.

Digitized by Google

A pledgee of bank stock is chargeable with notice of a statutory lien on such stock in favor of the bank for an indebtedness from the stockholder to the bank existing when the pledge is made.

Although a party to a suit is permitted by statute to testify in his own behalf, the considerations which excluded his testimony at common law still exist, and may properly be considered as affecting the weight to which it is entitled, especially where his right to recover as a plaintiff depends solely on his own testimony in regard to transactions with persons since deceased, through whom, as officers and agents of a defendant corporation, he seeks to charge such defendant with notice.

The Cashier of a bank, in pledging stock of the bank, owned by him, as security for a personal debt, acts in his individual capacity, and not as an officer of the bank; and his knowledge of the transaction is not attributable to the bank to affect the validity of its statutory lien on the stock as security for a loan subsequently made him.

Notice that a stockholder in a bank has pledged his stock to a third person, acquired by the President, who has no part in the active management of the bank's business, and who is not at the time acting in its behalf, is not notice to the bank which will affect its statutory lien on such stock for a loan subsequently made to the stockholder without the President's knowledge.

Curtice vs. Crawford County Bank, *et. al.* 110 Fed. Rep. (U. S.) 830.

STOCKHOLDERS—TRANSFER OF STOCK—LIABILITY—ACTION—TIME OF COMMENCEMENT—RESIDUARY LEGATEE—DIVIDENDS—REPAYMENT—RIGHTS OF CREDITOR.

Under Rev. St. 1898, Sec. 2024, subsec. 16, providing that any person holding stock in any bank who shall sell or assign his stock shall be held for six months after such sale personally liable to the amount of such stock for all debts of such bank existing at the time of such sale or assignment, the liability is limited to those who are creditors at the time of the transfer, and to enforce such liability action must be commenced within six months after such transfer.

Under Rev. St. 1898, Sec. 4239, fixing the service of summons as a commencement of an action, an ex-stockholder in a bank cannot be held liable under such section 2024, subsec. 16, unless summons is served on him within six months after the transfer.

Where a bank assesses certificates of stock at less than par value, in pursuance of a contract between it and the buyer that he shall not be required to pay more, and accepts such stockholder's proportion of fictitious profits in discharge of his liability to pay money for the stock, creditors of the bank, on its insolvency, have a cause of action for the difference between the amount paid and the par value, which never existed in the corporation, as a fraud on them, against the estate of such stockholder, and may proceed against the residuary legatee to whom has passed that portion of the stockholder's estate out of which should be paid liabilities arising against the testator.

Where dividends are paid a stockholder in an insolvent bank in disobedience of the banking act (Rev. St. 1898, Sec. 2024, subsec. 40), the liability to repay is owed to the corporation and enforceable by it.

Though such liability is owed to the corporation, a creditor thereof may

Digitized by Google

proceed in equity to compel restoration on the corporation's failure to do so.
Gager, *et al.* vs. Paul, *et al.* 87 N. W. Rep. (Wis.) 875.

GARNISHMENT—LIABILITY OF GARNISHEE—CONTINGENT LIABILITY.

Money deposited in a bank, to be paid defendant on delivery of an approved deed, is not subject to garnishment prior to delivery of the deed.

Becker vs. Becker, *et al.* 87 N. W. Rep. (Wis.) 830.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B.; Barrister, Toronto.]

BANKERS' LIEN—RIGHT TO LIEN ON PRIVATE ACCOUNT WHERE PARTNERSHIP ACCOUNT IS OVERDRAWN—REFUSAL OF CHECK—DAMAGES.

RICHARDS vs. THE BANK OF BRITISH NORTH AMERICA (British Columbia Reports, Vol. 8, Page 143).

STATEMENT OF FACTS: Messrs. Richards & Riley were a partnership carrying on a hotel business, and had a current account in the Bank of British North America, which was drawn upon by checks signed by both Richards and Riley. On July 21 last they sold the hotel business to one Johnson, who was to take over the business as it stood, pay all debts and get in any outstanding assets; the balance in the bank at the credit of the firm was to be applied by them in the payment of the hotel debts. On July 24 Richards went to the ledger-keeper of the defendant bank and asked for a statement of the exact balance at the credit of his firm, saying that they were retiring from business and wished to close the account. The ledger-keeper wrote the balance in the pass-book in pencil and returned the book to Richards, who with his partner subsequently signed checks to pay the hotel debts, to the full amount of the balance as so indicated.

About this time Richards opened an account with the defendant bank in his own name. At the end of July the bank found that the ledger-keeper had credited Richards & Riley with $200 more than they were entitled to, and that this sum had been paid out on the checks issued by Richards & Riley. Richards was at once told of this, but refused to do anything in the matter.

At the end of August the defendant bank informed Richards that there was an overdraft in the partnership account of $199.97, and that this amount had been charged to his private account. Richards did not acquiesce, but drew out all the rest of his money from his private account. In December he issued a check for the sum of $199.97, which check was duly presented for payment and payment refused. Richards thereupon brought this action against the bank for damages for refusal to pay when it had sufficient funds to his credit.

JUDGMENT: Martin, *J.*, stated that under the circumstances of this case it was with great reluctance that he held the bank had no lien on Richards' private account for the overdraft of the firm of Richards & Riley arising as above indicated. He felt himself bound by Watts vs. Christie (II Beavin); Wolstenholm vs. Sheffield Union Banking Company (54 Law Times, N. S. 746), and Lindley on Partnership (1893) 303–8; 676–7. There would therefore be judgment against the defendant company for the sum of $199.97 of debt; the

Digitized by Google

damages were limited to the interest at the statute rate on this sum from the date when the check was presented for payment.

The court further held that the circumstances of this case were such that the plaintiff, although successful, should not be granted his costs.

HOUSTON & WARD vs. MERCHANTS' BANK OF HALIFAX (31 Supreme Court Reports, page 361).

The judgment in this case, at the trial, is reported in the December number of the BANKERS' MAGAZINE, page 988. The appeal taken by both Houston and Ward did not turn upon the principal point of banking law therein referred to, and therefore the affirmation of the judgment by the supreme court can hardly be taken as satisfactorily settling the point referred to in the note to the report, page 989.

CERTIFIED CHECK—ALTERATION AFTER CERTIFICATION—PAYMENT IN GOOD FAITH—RECOVERY BACK OF MONEY SO PAID—DUTY OF BANK IN CERTIFYING NEGLIGENCE.

BANK OF HAMILTON vs. IMPERIAL BANK OF CANADA (31 Supreme Court Reports, page 344).

STATEMENT OF FACTS: The facts involved in this well-known case are set out in the April number of the BANKERS' MAGAZINE at page 562, where the judgment of the Ontario Court of Appeal is reported. An appeal was taken from that judgment to the Supreme Court for Canada, which sustained the judgment already given.

JUDGMENT: The judgment of the court was delivered by the learned Chief Justice Sir Henry Strong. The case is governed by the ordinary rule, that money paid under mistake of fact may be recovered back unless there is something in the circumstances of the case to take it out of the operation of this general rule. The Imperial Bank alleged two sets of circumstances to take this case out of the operation of this rule:

(First.) The Bank of Hamilton was debarred by reason of its negligence in certifying the check, which from its form was susceptible of alteration on account of the blank spaces left in it. On this branch of the case they relied strongly on Young vs. Grote (4 Bingham, 253), which was the case of blank checks being left by a trader with his wife, who handed them out from time to time to her husband's manager with instructions to fill in the amount which he at the time told her was necessary for the business. The manager filled in amounts in excess of the sums which he was authorized to draw and it was sought to recover these amounts in excess as being paid on forged checks. The Court, however, held this branch of the case to be governed by Schofield vs. the Earl of Londesborough (1896 Appeal Cases, 514). "It would seem that there is no duty obliging a man who is dealing with others to take precaution to prevent loss to them by the criminal acts of third persons, and the omission to do so does not, in the absence of some special and exceptional relationship, amount to negligence in law."

A precisely similar state of circumstances was under judicial consideration in the National Bank of Commerce vs. the National Mechanics' Banking Association (55 New York, page 251), where the judgment is in accord with this one.

(Second.) The Imperial Bank relied upon the delay in the demand for

Digitized by Google

repayment, which the Chief Justice of the Ontario Court of Appeal in a dissenting judgment had held to be sufficient to take the case out of the ordinary rule. On this point Sir Henry Strong says: "I deny that there is any abstract rule of law which requires that the money paid shall be demanded on the day of the erroneous payment without regard to any question of prejudice to the holder; each case must depend on the facts." In this case it was impossible that the delay should cause detriment in the least degree to the Imperial Bank.

The appeal was dismissed with costs, Gwynne, J., dissenting.

Special leave to appeal to the Judicial Committee of the Privy Council in England has been granted in this case.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

RECOVERY OF USURY VOLUNTARILY PAID.

Editor Bankers' Magazine: EAST ST. LOUIS, Ill., Dec. 16, 1901.

SIR: Will you state whether or not a person can recover usurious interest in this State after he has paid the same?

Answer.—The Illinois statutes do not provide for the recovery of usury after voluntary payment, the maker of a note or contract bearing usury being limited in his remedy to an offset in an action on the contract when such defense is specially pleaded. (Mason vs. Pierce, 142 Ill. 331.) Where, however, the note does not show on its face that it includes usury and the maker is compelled to pay it to a *bona-fide* transferee, he may recover in equity from the original payee, the amount of the usury. (Woodworth vs. Huntoon, 40 Ill. 131.) So where the contract is absolutely void for usury a recovery can be had on the ground of absolute failure of consideration (Town vs. Wood, 37 Ill. 512.)

PAYMENT OF DEPOSITS IN SAVINGS BANKS TO HOLDERS OF PASS BOOKS.

Editor Bankers' Magazine: PATERSON, N. J., December 16, 1901.

SIR: C. E. was a depositor in a Savings bank in this city. At the time of opening his account he was provided with a deposit book upon which was printed a by-law of the bank which provided that "deposits and dividends shall be drawn out only by the depositors in person, or by their written order, or by some person legally authorized, and only upon production of the depositor's book that such payments may be entered therein, and all payments to persons who present the deposit book shall be valid payments to discharge the bank and its officers." C. E. belongs to a class of workingmen of whom several thousand are depositors in the bank and with whom it is impossible for the officers to have personal acquaintance with all. A person representing himself to be C. E. presented the deposit book to the bank and drew out two hundred dollars of the deposit. The person who drew this money had stolen the deposit book from C. E. The latter as soon as he learned of his loss notified the bank and demands payment from it of the amount of his deposit including the two hundred dollars paid out to the person presenting the book. What is the bank's liability to him?

DIRECTOR.

Answer.—The by-law printed upon the pass book given to C. E. and accepted by him was a part of the contract between him and the bank. Under such contract, a payment made by the bank, in good faith, and in the exercise of due care, to any person who produced the pass book, operated to

Digitized by Google

discharge the bank without regard to whether or not such person was really entitled to draw the money.

RETRANSFER OF NOTES FROM BONA-FIDE HOLDER.

Editor Bankers' Magazine: ST. LOUIS, Mo., December 19, 1901.

SIR: A note was given a commission house, or what is known as a "bucket shop," in settlement of losses in a stock transaction. The deal was entirely a marginal deal and no stock was passed between the parties or purchased for the customer who gave his note to cover loss. The commission company transferred the note to a bank as collateral security for a loan. Afterwards the note was retransferred to the commission company, which is the present holder. The note will fall due in a few days. Can the commission company collect the note? BROKER.

Answer.—No. The transaction was a gambling transaction and as between the parties the indebtedness represented by the losses was not a valid consideration for the note, entitling payee to collect from maker. Its passage into the hands of the bank and retransfer to the payee did not alter the right of the maker to assert his defense. While the general rule is that a *bona-fide* holder of negotiable paper may pass it to an assignee freed from all equitable defenses, even if the latter may have notice of such facts as would have defeated the right to recover had the instrument remained in the hands of the original party, an exception to the rule is that, if the paper returns to the original party, it is not shielded.

FALSE STATEMENTS OF FINANCIAL CONDITION.

Editor Bankers' Magazine: RALEIGH, N. C., December 9, 1901.

SIR: A bank, while in an insolvent condition, published statements representing the bank to be in a solvent condition. These statements were prepared by the Cashier and accepted by the directors, although an investigation of the affairs of the bank by the latter would have shown such statements to be false. Are the directors personally liable to a depositor who suffered a loss by reason of the failure of the bank? DIRECTOR.

Answer.—Yes. It was the duty of the directors to know that the statements published under their authority were true, and they are liable for damages to any one dealing with the corporation relying on the truth of such statements.

LIABILITY OF WITHDRAWING MEMBER OF BANKING PARTNERSHIP.

Editor Bankers' Magazine: CHICAGO, Ill., December 19, 1901.

SIR: A private banking firm was composed of three members, A, B and C. About one year ago C sold his interest in the bank to D, but no change in the style of the firm was made and no public notice given. The bank became insolvent a few months after C retired. Can a party who became a customer of the bank while C was a member and who had no knowledge of the fact that C had retired from the firm hold C responsible as a partner for loss he sustained through the failure of the bank? C.

Answer.—Yes. C should have seen that the customers of the bank were notified of his withdrawal from the firm.

USE OF RUBBER STAMP FOR SIGNATURES.

Editor Bankers' Magazine: LOUISVILLE, Ky., December 11, 1901.

SIR: A depositor in a bank used a rubber stamp with which he signed his checks. This stamp he was accustomed to keep in his safe to which he alone had the combination. At some time through unknown means a clerk obtained possession of the stamp long enough to stamp with it the owner's signature to a check. This check the bank cashed. Can the depositor make the bank return to him the amount paid out on the check? DEPOSITOR.

Answer.—In the case, Robb vs. Pennsylvania Co., etc. (40 At. Rep. 969), the Supreme Court of Pennsylvania, in a somewhat similar case, held that

Digitized by Google

the bank was liable for the loss of the money unless it could show that the owner of the stamp was negligent in its custody. We question, however, the conclusion arrived at by the Pennsylvania court. The signature to the check was not a forged signature but the actual signature of the depositor. It seems to us that the attaching of the signature might be likened to a case where a depositor falls into the hands of bandits and is compelled to draw his check to secure his release, or where through some hypnotic influence his signature is secured. In neither case would he have voluntarily signed the check but his signature would be attached and the bank would be protected in paying, without notice, such check. If a person assumes the hazard entailed by the adoption of a rubber stamp signature he ought in equity to be charged with loss occasioned by its fraudulent use. To hold otherwise puts the bank entirely at the mercy of negligent or conspiring depositors.

FAILURE TO PRESENT DISCOUNTED NOTE TO MAKER.

Editor Bankers' Magazine: HARTFORD, Conn., December 17, 1901.

SIR: A presented to the B bank a note made payable to him for three hundred dollars and requested the bank to discount the same, and told the bank at the time of the request that he, A, would take care of the note at its maturity. The bank looked to A for the payment of the note and notified him of its maturity, but did not present the note to the maker. A claims that as indorser of the note he is released from all liability thereon by reason of the failure of the bank to present the same to the maker. Can the bank collect the note from A?

R. H.

Answer.—We think the agreement of A to take care of the note would be held a waiver by him, as indorser, of the presentment of the note at maturity to its maker, and A can be held liable thereon. (See Daniel Neg. Inst. Secs. 1085, 1103; Souther, *et al.* vs. McKenna, *et al.* 40 At. Rep. [R. I.[736.)

MATURITY OF DEMAND NOTES.

Editor Bankers' Magazine: NEW HAVEN, Conn., December 16, 1901.

SIR: A note dated December 31, 1900, for $8 was payable on demand but contained a stipulation for the payment of interest semi-annually in advance, on December 31 and June 30, each year. Interest was paid in advance on the dates named in the note. In September the makers of the note failed and persons who had guarantied payment of the note claim that they are relieved from payment thereof by the State statute which provides that negotiable notes payable on demand, and remaining unpaid for four months from date, shall be considered overdue. Their claim for relief is founded on the failure of the payee to properly protest the note for non-payment within the four months limit named in the statute. Is their claim valid?

A. C.

Answer.—The note providing for the payment of interest in advance, the extension of it must have been in the minds of the guarantors at the time of signing the same and section 1859, Gen. St. Conn. relating to maturity of demand notes did not apply. If the guaranty was an absolute guaranty, as indicated by your question, the guarantors are liable.

NEGOTIABILITY OF NOTE PROVIDING FOR ATTORNEY'S FEES.

Editor Bankers' Magazine: AUGUSTA, Me., December 14, 1901.

SIR: Where a note was purchased by a bank that called for the payment of $200 on or before December 5, 1901, and attorney's fees, can maker of the note set up a claim against the payee as a defense to the note? The note was purchased before maturity. No particular sum is mentioned as attorney's fees.

PRESIDENT.

Answer.—A note such as you have described is held in Maine to be non-negotiable. To be negotiable it must "run to order or bearer, be payable in money for a certain definite sum, on demand, at sight, or in a certain time, or upon the happening of an event which must occur, and payable absolutely and not on a contingency." (Roads vs. Webb, 40 At. Rep. 129.) The note in question fails to answer these requirements both as to the time and amount of payment.

FORGED ENDORSEMENTS—KNOWLEDGE OF DRAWER.

Editor Bankers' Magazine: PITTSBURG, Pa., December 19, 1901.

SIR: A manufacturing corporation was a depositor in the M bank. W, an officer who had charge of the settlement of the accounts of the corporation, had a check of the corporation for $500 issued in favor of G. W then forged G's indorsement to the check and secured the cash thereon. Afterwards W had another check for the same indebtedness made to G and on this latter check G secured the money. Subsequent to the time that the second check was paid to G, a third check for $700 was drawn in G's favor for an additional indebtedness due him, and W, who secured possession of the check, again forged G's signature to it and obtained the money thereon. The company learning of the forgeries demands that the bank shall credit their account with the $1,200 charged to it on the forged checks. The bank claims that at least so far as the $700 check is concerned that it ought not to have to stand the loss. The bank contends that the corporation was negligent in not discovering the forgery and that it is chargeable with the knowledge which W obtained, not through his forgery, but through the entry of the second payment of $500 in G's account for the same indebtedness, the latter knowledge being gained by him in the line of his duty. Is the corporation thus chargeable with W's knowledge? D.

Answer.—The knowledge which W obtained through his care and charge of the corporation accounts is such as the company would be held liable for were the fraud not one committed by W himself. Whether the rule is applicable where, as in this case, the party committing the fraud, is the person who subsequently comes into the possession of facts which would charge the corporation with knowledge thereof, is a question on which the authorities differ. In Pennsylvania, however, in the case of Gunster vs. Power Co. (181 Pa. St. 327), and the case of United Security Life and Trust Co. vs. Central Nat. Bank (40 At. Rep. 97), it is held that the corporation is not chargeable with such knowledge, and according to the decisions in those cases the corporation can recover from the bank the amount paid out on the forged checks.

TITLE TO DRAFT CREDITED TO AN ACCOUNT.

Editor Bankers' Magazine: LEAVENWORTH, Kan., December 20, 1901.

SIR: A produce shipper drew a draft on an eastern bank for $400 and deposited it with a bank in this State for collection. The bank, as was customary with it in dealing with such customer, credited him with the amount of the draft and sent the latter to its correspondent in New York city for collection. Before the proceeds had been returned to the bank in which the draft had been deposited such bank failed. At the time of the failure of the bank the account of the depositor of the draft was only $175. The depositor claims the right to the proceeds of the draft less the $225 which the bank had paid him thereon. Is he entitled to the difference? BANK.

Answer.—If the sale of the draft to the bank was absolute the depositor has no claim on the proceeds of the draft different from other creditors. In many States it would be held that the facts you have stated vested title in the bank to the draft and that the proceeds would pass to the Receiver, but if the credit given the depositor could have been charged back to his account on failure of the drawee to honor the draft, then it would be held in Kansas that the sale was only a conditional one so as not to vest title in the bank, and the produce shipper had a right to the difference between the amount of the draft and the sum he had received thereon. (See Mann vs. Bank, 30 Kan. 412).

ASSIGNMENT OF DEPOSIT BY DRAFT.

Editor Bankers' Magazine: SAVANNAH, Ga., December 12, 1901.

SIR: A factor engaged in the shipment of cotton gave a local bank a check on a Boston bank for $750, and secured from the local bank the money called for by the check. Before the check could be presented to the Boston bank the factor failed and a Receiver in bankruptcy has been appointed to take charge of his assets. The Boston bank, learning of the failure, refused to pay the check, although the factor had money on deposit with the Boston bank in excess of the amount of the check. Can the bank cashing the check compel the Boston bank to pay the same? X.

Answer.—No. The drawing of a draft or check does not constitute such an assignment of a fund or demand as to transfer the title to the payee until the check or draft has been presented, and the money to the factor's credit in the Boston bank passed with the remainder of his estate to the Receiver appointed in the bankruptcy proceedings. In some States, notably Illinois, it is held that the title to a deposit is transferred by the delivery of a check therefor, but the Illinois rule does not prevail in Georgia, nor in Massachusetts.

ASSIGNMENT OF UNEARNED SALARY.

Editor Bankers' Magazine: COLUSA, Cal., December, 12, 1901.

SIR: A is a county official. He borrowed $150 from a bank and to secure payment he gave the bank three orders for $50 each on the county auditor directing such auditor to make out and deliver to the bank on the first day of each of the three succeeding months a warrant for $50 and to deduct the $150, the amount of such orders, from his, A's, salary to become due during such succeeding months. Can the bank compel the auditor to deliver such warrants in accordance with A's instructions?

Answer.—No. The assignment of the unearned salary of a public official is held, on the grounds of public policy, to be non-enforceable and void.

RESPONSIBILITY OF PERSON INTRODUCING AND VOUCHING FOR PAYEE OF CHECK.

Editor Bankers' Magazine: TOLEDO, Ohio, December 24, 1901.

SIR: A is a merchant of this city and a good customer of ours. B is a friend of his whom we never saw until this transaction.

A came into our bank not long since, accompanied by B; he introduced B to our teller, saying "this is Mr. B; he is all right and has a check which he wants you to cash for him;" after which he engaged in conversation with another customer of the bank who happened to be standing near. B presented his check to the teller, it being a fifty-dollar check drawn by an individual on a bank in Cincinnati. Our teller had B endorse the check, but, through error did not have A endorse it. We sent the check to our correspondent in Cincinnati for collection, and it was duly presented to the bank upon which it was drawn and payment was refused, the bank saying that the party had no funds with them with which to pay it, and the check was returned to us, when we presented it to A for payment, we holding that he was responsible to us for the amount we had paid out on it, as he had brought B in, and it was upon his recommendation that we paid the check. A refused to pay the amount on the grounds that he had not endorsed the check and therefore was not responsible for its payment.

Who is responsible for the amount of the check; that is, who should lose it, A or ourselves? CASHIER.

Answer.—It is plain that A is not liable upon the check, since his signature does not appear thereon. (Miller vs. Reynolds, 92 Hun [N. Y.] 400.) Nor can he be held liable as a guarantor; for by the statute of frauds an agreement to answer for the debt or obligation of another must be in writing. But it is quite possible that the bank may maintain an action against him for deceit upon the representation that B was "all right." In such case it would not be necessary to prove that he knew that the statement was false; but it would be sufficient to show that he was ignorant as to whether it was true or untrue. (Hexter vs. Bart, 125 Pa. St. 52; Chatham Furnace Co. vs. Moffatt,

Digitized by Google

147 Mass. 403; McKinnon vs. Vollmar, 75 Wis. 86; Weels vs. McGeoch, 71 Wis. 196; Middleton vs. Jerdee, 73 Wis. 39; Swayne vs. Waldo, 73 Iowa, 749; Mohler vs. Carder, 73 Iowa, 582; Hubbard vs. Weare, 79 Iowa, 678; Kirkpatrick vs. Reeves, 121 Ind. 280; Bullitt vs. Farrar, 42 Minn. 8; Reynolds vs. Franklin, 39 Minn. 24; Rowell vs. Chase, 61 N. H. 135; Cooper vs. Schlesenger, 111 U. S. 148; Cabot vs. Christie, 42 Vt. 121; Babcock vs. Chase, 61 Pa. St. 430; Reese River Mining Co. vs. Smith, L. R. 4 H. L. 64.)

The question of his knowledge or ignorance would be one of fact for the determination of the jury; and as his statement actually misled the bank, and the bank parted with its money on his assurance, the disposition of any jury would be to find against him.

DRAFT WITH BILL OF LADING.

Editor Bankers' Magazine: CHICAGO, Ill., December 6, 1901.

SIR: A bank sends to us for collection with its endorsement on the back, a demand, or sight, draft on a citizen of this town, with bill of lading attached.

No instructions accompany draft except, "No Protest." Drawee refuses payment until arrival of goods; goods are not of a perishable nature.

Have we an implied legal right to hold draft for such arrival?

THOS. WALKER, *Collector*.

Answer.—In the case stated in the inquiry we think the bank may hold the draft a reasonable time to await the arrival of the goods. But it should at once advise its correspondent of the facts, so that the correspondent may give any instructions that the exigencies of the case may require. Of course where there are no instructions to omit protest, the draft must be protested when payment is refused; for in such case the duty of the bank as collecting agent is not excused, though the non-arrival of the goods may be, as between the drawer and drawee, a good excuse for the refusal of the latter to pay the draft.

ORAL ACCEPTANCE OF CHECK.

Editor Bankers' Magazine: SOUTH BEND, Ind., November 19, 1901.

SIR: S has been engaged in buying and selling livestock in this city and has had an account with the A bank. On Tuesday of last week a telephone call was received at the bank from B, who lives at a neighboring town from which the call came. B stated to the bank that he had sold a team to S, who had paid for it by check on the A bank, and wanted to know if the check was good for the required amount. The bank replied that the check was "all right." During the week other checks of S were presented at the bank and paid, exhausting his deposit. On Monday the check given B by S was presented at the bank and the bank has refused to pay the same as S no longer has any money on deposit with it. Is the bank liable to B for the amount of the check? R. D.

Answer.—There is no Indiana statute requiring acceptance or certification of checks to be in writing and there was no such requirement under the common law, and in the absence of a statute the common law rule is binding on the bank and it is liable on the check. (L. E. & St. L. Railroad vs. Caldwell, 98 Ind. 245; Spurgeon vs. Swain, 13 Ind. App. 188.) In the States which have adopted the Negotiable Instruments Law, however, the contrary would be true, as by that statute it is provided that a certification is equivalent to an acceptance (N. Y. Act., Sec. 323) and that an acceptance must be in writing (id. sec. 220). Hence, in those States, any merely oral acceptance, whether given over the telephone, or otherwise, would not be sufficient to bind the bank.

*THE PRACTICAL WORK OF A BANK.

BANKING RULES AND CUSTOMS.

I.

A Synopsis of Banking Transactions Traced from Their Inception to the Bank Statement.

March 1, 1901, "M" National Bank, New York, receives from "B" Bank, Boston, its draft on "L" Bank, New York, for $50,000 in payment of Boston foreign cash items, forwarded on the 26th ult. aggregating $50,200.60 (Fig. 25), and collection on Haverhill, Mass., $600, forwarded the 20th *idem*, less exchange charge, one-tenth per cent., 60 cents (Fig. 25), and returned dishonored draft $798.50 plus notarial expenses, $1.50 (Figs. 1, 4). We stamp the letter with date and time of receipt, credit "B" Bank, Boston, $50,800.60 (Figs. 1, 25, 56, 64), add $50,000 (Figs. 9, 8, 19) to the exchange of yesterday for the clearing-house, make ticket charging exchange account sixty cents (Figs. 1, 11, 23, 56, 64), and after cancelling our indorsement, deliver the returned draft to our customer, receiving his check for $800 (Figs. 11, 23, 24, 56, 64). After clearing, a letter is received from "C" Bank, Chicago, enclosing check on "L" Bank for $51,000 (Figs. 3, 7, 59, 64), and on "M" National Bank for $21,000 (Figs. 11, 23, 24, 29, 56, 64) note for $10,000, due March 12, and draft at three days' sight for $1,900 (Figs. 4, 2). Advice of the delay is telegraphed, the checks are credited (Figs. 1, 26, 15, 29, 56, 64), and the note and draft entered for collection.

Rights, Duties and Liabilities Attaching to Commercial Paper.

To entitle us to its ownership and the right of transfer, this paper must be negotiable, *i. e.* there must be an unconditional promise or order to pay a certain sum of money, for value received, to the order of a specified person, or to the bearer, at a certain but not necessarily definite time. Because the maker has promised to pay at a fixed date, we file the note for presentment when due; but the drawer of the draft has ordered payment by the drawee three days after sight. It is therefore presented at once for acceptance (Figs. 4, 2), to hold the drawee, who becomes the acceptor, to determine its maturity and to continue the liability of the drawer and indorsers. For the latter reason, if acceptance or payment is refused, protest and notice of dishonor, unless waived, is necessary in the case of foreign bills, *i. e.* drawn in another State or country, and permissible of inland bills, *i. e.* drawn and payable in the same State, of promissory notes and of checks, as evidence of presentment. It is customary, unless waived by the last indorser, to protest all dishonored paper not returnable to the depositor by messenger the same day.

* A series of articles to be published in competition for prizes aggregating $1,050, offered by The Bankers' Magazine. Publication of these articles was begun in the July, 1901, number, page 18.

Digitized by Google

If payable at a fixed time, *e. g.* "thirty days after date," presentment for acceptance is necessary to bind the drawee only; but if presented and refused, protest and notice is necessary to hold the drawer and indorsers, and they are liable at once.

Acceptance, altering the tenor of a bill other than by making it payable at another place in the same town, discharges all prior parties who do not consent to the alteration.

Drafts may be retained for examination by the drawee a reasonable time, say twenty-four hours, acceptance being dated as of the first day; but notes and acceptances are left with the promisor, only upon receipt of money or certified check. Notices are sent by mail the day preceding the maturity of paper not payable at a bank.

In the event of the dishonor of bills designating a party to whom presentment is to be made "in case of need," they must be protested for non-acceptance before such presentation. At maturity, calculated from the date when first presented, demand is made of the drawee and the paper protested for non-payment if again refused, and presented or forwarded to the alternate party not later than the following day.

We receive from "A & Co.," Chicago, a sight draft for $900 (Figs. 4, 3, 7, 59, 64), which is presented for payment, check on Boston for $90,000 (Figs. 12, 10, 16, 25, 8, 22, 56, 64), and on "M" National Bank, New York, $25,000 (Figs. 11, 23, 26, 29, 56, 64). Their account is credited $115,900 (Figs. 1, 24, 29, 56, 64, 15). The Boston check is forwarded for collection, a carbon copy of the letter being filed alphabetically for record, and the total transferred to the posting sheet for proof with the teller's foreign cash.

"D. Bros.," New York, deposit bills $20,000, gold $1,000, silver $100 (Figs. 8, 38, 59, 64), and draft on "H" Trust Co. $250,000 (Figs. 4, 3, 7, 59, 64). The latter is accepted payable at "K" Bank, and the total, $271,100, is credited (Figs. 1, 24, 56, 64). "D. Bros." also deposit for credit, when paid, three days' sight draft on Boston for $40,000 (Figs. 5, 13). This is receipted for by the collection clerk and checked off when settlement is made by return or credit, thus accounting for each item. A special form of letter, numbered consecutively, is used for collections, the items being numbered to correspond, and two carbon copies retained, one in the book and the other filed alphabetically. When an amount is paid and credited, or returned, the latter is so marked and re-filed numerically, the completion of each hundred being final proof that all have been accounted for. The copy in the book supplies the details of missing letters if needed. Foreign cash and collections are constantly watched and "tracers" sent promptly regarding overdue paper. Due diligence requires that checks should not be kept in circulation, but forwarded for presentation, when possible, not later than the day following receipt. A bill of exchange should, at the first opportunity, be forwarded for presentment or further negotiation.

We credit "A & Co.," Chicago, $600, less one-tenth per cent. exchange charge (Figs. 54, 24, 29, 15, 64), in respect of paid collection on Haverhill, Mass., "C" Bank, Chicago, $4,200 (Figs. 2, 4, 1, 26, 29, 14, 56, 3, 7, 59, 64), for New York city item due and collected, and Bills Discounted account $800 (Figs. 47, 4, 1, 56, 3, 7, 59, 64) and $5,000 (Figs. 47, 54, 25, 64) for discounted paper maturing in New York and Boston. The $800 is collected and the latter amount, forwarded to "B" Bank, Boston, February 20, is charged to

Digitized by Google

their account, and so marked on the carbon letter copy, being thereby transformed from a collection into foreign cash. We also credit loan and foreign exchange payments, $30,050 (Fig. 44) and $5,000 (Figs. 38, 3, 7, 8, 59, 64), and Cashier account $200, handing our Cashier's receipt for a like amount, payable through the clearing-house to "L" Bank in redemption of check on "K" Bank, sent to them in error (Figs. 1, 3, 7, 56, 59, 64).

We receive from "L" Bank a similar receipt for $1,400 (Figs. 20, 21, 19, 17, 56, 24, 29, 64, 3, 7, 59, 64) in settlement of check returned to them because of missing endorsement, and from Washington $1,000 (Figs. 1, 8, 19, 56, 64) National currency, an equivalent amount of our notes having been paid out of our redemption fund with the Treasurer of the United States, which we observe does not reduce it below the required five per cent. of circulation. We credit Five Per Cent. Redemption Fund account and the first teller covers the bills into his cash. When no payments are made at Washington, our total note issue is increased and National Bank-Notes account is credited with the amount of currency received.

We issue our certificate of deposit $1,000 (Figs. 1, 6, 56, 64) for cash (Figs. 8, 59, 64), and credit Certificate of Deposit account. The total credits now agree with our cash, plus amounts charged to other departments (Fig. 8). The first teller pays salaries of employees and other bills, $2,000, charging Expense account by ticket (Figs. 63, 18, 23, 56, 64), check of "D. Bros." $30,000 (Figs. 18, 19, 24, 23, 56, 64), and checks received from the clearing-house (Figs. 20, 21, 19), less amount sent (Fig. 19) $6,400.

Payment, Indorsement and Certification of Checks.

The bank, in paying checks, admits the genuineness of the drawer's signature, a specimen of which is secured, for comparison, when the account is opened. It must pay the amount in writing if it differs from the figures, and cannot pay a post-dated check. Although not liable for the genuineness of indorsements, they must be apparently correct or guaranteed by the holder. The order of the drawer to stop payment of a check is as binding as the order to pay. Except when a check is drawn payable to "bearer," identification of the holder is necessary. Therefore, the teller examines carefully the date, number, filling, signature, and indorsement. If an indorser signs his name only, it is called indorsement in blank, and passes the title to the bearer, with recourse. If he specifies a person to whom or to whose order payment is to be made, it is called indorsement in full, or special indorsement, and the indorsee's signature is necessary to further negotiation. Indorsement is qualified, or "without recourse," when by adding these words the title to the paper is passed without incurring liability; restrictive, when further negotiation is prohibited or the indorsee is constituted an agent or trustee, and conditional when something must be performed before the title can be claimed. As it has been held that an indorser to whom paper is indorsed restrictively for collection is not liable for the genuineness of prior indorsements nor on the instrument after the funds have been paid to his principal, such paper must be guaranteed by the indorsee. Guarantee is also necessary of stamped indorsement, except by bank stamp or special indorsement to a bank, and when one person indorses for another, other than the treasurer of a corporation, secretary of a trust company, or Cashier of a bank. One executor or administrator is sufficient to bind all, but when there are two or more trustees all must indorse.

Digitized by Google

We certify a check drawn by "D. Bros." for $220,000 (Figs. 17, 24, 56, 64). Like acceptance, it binds the bank absolutely, but differs in that it is not required by the check and when procured by the holder discharges the drawer. Their account is therefore charged at once.

The Different Kinds of Money.

We now find that the balance carried from yesterday and receipts from the second teller agree with our payments and cash in hand (Fig. 19). Of the latter; the clearing-house and Treasury gold certificates, and the Treasury silver certificates are issued against deposits of a like amount of gold and silver dollars respectively, the Treasury notes against the silver bullion, at cost, purchased under the "Sherman Act," and silver dollars coined therefrom; United States notes ("greenbacks" or "legal tenders") against Government credit, and National bank bills against an equivalent deposit of United States bonds at par. The value of the metal in the silver dollar being about fifty cents, its full purchasing and debt-paying power is maintained by the Government policy of keeping the gold and silver dollar at par with each other, to accomplish which the coinage of the latter is limited. The value of gold is practically stable because of the even relation existing between the cost of production and the demand. Being almost universally the standard of value the slight variations are adjusted by a rise or fall in the price level.

The clearing-house exchange and other checks paid by the tellers are proven by the check clerk (Figs. 23, 22). The bookkeeper's postings (Figs. 24, 25, 26) are made from the checks, tickets and letters and compared later with the debit (Fig. 23) and credit (Fig. 1) books; and from the bank journal (Fig. 54), and certification book (Fig. 17). The checks are filed alphabetically, and, for city depositors, listed in the pass book (or on a separate slip and the total transferred) when balanced.

For out-of-town clients statements (Fig. 29) are made from original vouchers and entries, compared with the ledger and forwarded with return blank for reconcilement. To ascertain the value of the accounts the evening balance less the next morning's exchange is extended each day (Figs. 24, 26), including Sundays, and the month's total, divided by the number of days, entered in the average balance book (Figs. 28, 32b).

Foreign and Domestic Exchange.

"A. & Co.," Chicago, wire us to pay "C. & V." $10,000 (Figs. 63, 1, 23, 24, 29, 15, 56, 64). We charge their account and credit Cashier account by ticket, initialed by the bookkeeper that the balance is sufficient and by the Cashier that the key word authorizing payment is O. K., and hand the payee our Cashier's check. It may be observed that, whereas we expect payments by draft for items forwarded for collection, we credit the proceeds of collections made for other banks (Fig. 26), because there is always a demand for New York exchange throughout the country and the bankers wish to draw against their New York balances. The same is true of other cities, but for a less extended area, and of London in respect of the world. Foreign and domestic exchange are thus essentially similar, except that with the former the currency differs, and since the premium or discount can increase only to the amount of the cost of transporting the money instead of drawing or remitting, the greater distance permits of wider rate fluctuation; *e. g.* £1 ster-

Digitized by Google

ling gold equals in value $4.8665 gold. The rate can advance (or, *vice versa*, decline) to $4.8665 plus the cost of insurance, freight, brokerage, unearned interest and, if coin, abrasion, in exporting £1 gold to London. Rate fluctuations depend upon the overplus or deficiency of bills drawn by Americans on foreigners who owe them, to meet the demand by Americans, for bills to pay debts abroad; the comparative earning power of money, particularly the rate for short time and call loans in New York and foreign cities, and the transfer of funds from one foreign country to another by buying drafts on one country and covering the purchase by selling drafts on another. We sell "V. & Co." a cable transfer for £999 1s. 8d. at $4.88 one-eighth, plus cable cost, $2, equals $4,878.78, and after affixing revenue stamps, ninety-six cents, wire "F." Bank, Limited, London, adding a prearranged key word for identification, to pay "W. & Co." for account of "V. & Co." a like amount (Figs. 33, 38, 1, 56, 3, 7, 59, 8, 64). We sell "U. & Co." check on London for £10,000 (Figs. 33, 40, 36). Payment is received here tomorrow, March 2, but is made abroad at clearing the day after the arrival of the steamer, say, March 11. We therefore deduct nine days' interest at three per cent., .00366, and since there is no revenue tax on checks, the stamp charge on the cable per pound sterling, .00096, total .00462, from the cable rate, 4.88125, and charge 4.88¼ less one-eighth (4.8825 less one-eighth per cent., .0061, equals $4.8764). We buy £20,000 sixty days' sight, documentary, commercial, payment bills, delivery first half of March, C.O.D., at 4.84¼ (Fig. 37). The hypothecation agreements accompanying the bill will permit the bank to sell the merchandise covered by the documents and apply the proceeds to the payment of the draft, if dishonored, and direct the delivery of the papers against payment only, under rebate for the period from payment to maturity at one-half per cent. below the rate of the leading joint-stock companies, which is one-half per cent. under the Bank of England discount rate. The rate is arrived at by deducting from the cable-selling rate $4.88125—.03875, consisting of revenue stamps on cable, .00096, English stamp tax 1s. each £100, .00242, bills usance, sixty days; grace, three days; and allowance for transit nine days, equals seventy-two days' interest at three per cent., .02929, and profit, including commission abroad, about one eighth per cent., .00608. The margin of profit is close, because the drawee rebates promptly (Fig. 31), diminishing the risk from a possible change in the discount rate, and the credit of the parties is good. If the documents were to be delivered against acceptance of the bill, it would run to maturity and the interest would be computed at the open market rate for long time bills. We purchase from "D. Bros." a clean bill, *i. e.* without documents, at three days' sight for £102, 16, 7, at 4.86¼ (Figs. 33, 34), and credit the proceeds $500 (Figs. 33, 54, 64, 24, 34). The English Stamp Tax on three days' sight bills is 1d. only, and there are fifteen days to maturity, making the profit, including foreign commission, one-quarter per cent. "T. & Co." deliver £7,611, 3, 5 (Figs. 33, 34, 30, 31, 37), sixty days' sight, closing contract of February 20, at 4.83¼ C.O.D. for which we hand them Cashier's check for $36,800 (Figs. 33, 54, 64). In forwarding these bills a carbon copy of the letter is retained as a record of the documents attached. These are all properly signed and endorsed, the merchandise being deliverable, and the loss, if any, payable to the order of the shipper; the marks and numbers on the insurance certificates are like those on the bills of lading and the value of the merchandise is greater than the amount of the draft, as is

Digitized by Google

also the total insurance, which is held covered in event of the ship's deviation from her usual course.

The needs of merchants trading with countries with which we have no direct exchange are supplied by the issue of commercial letters of credit (against an agreement providing for payment or forfeit of the collateral), authorizing the seller abroad to draw, with bill of lading and certified consular invoice attached, on a London banker, who, after he accepts the bill, sends the documents to the issuer of the credit, and at maturity charges his account. The latter holds the documents as collateral security, or, to permit of storage or sale, delivers them to the purchaser against a trust receipt stipulating the surrender of the warehouse receipt or proceeds upon delivery (Fig. 42). Of a somewhat similar nature are travellers letters of credit, authorizing drafts on London up to a certain amount encashable in all parts of the world (Figs. 41, 33, 38, 1, 56, 64). The foreign exchange balance on the general statement (Fig. 66) when debit, shows the amount of the bank's investment in exchange; when credit, the amount of exchange funds in use by the bank; and the balances abroad, when debit, indicate the amount of foreign funds in use by the Exchange Department; when credit, the amount of funds on deposit abroad. But, since considerable exchange is always in transit and the larger portion of commercial bills remitted are not rebated until from ten to thirty days after arrival, the foreign balance materially differs from the New York balance.

This is adjusted by the issue of long bills maturing at short intervals when the rate of discount, as shown by the difference between the rate obtainable for our sixty day and demand bills, is more favorable than the cost of an overdraft abroad. To estimate foreign balances (Figs. 35, 39, 66), we enter the total payments credited abroad, as per cable advice, and against this the cable transfers, when sold, demand bills when the steamer arrives and long bills at maturity. Another important factor is our liability to foreign correspondents, *i. e.* the extent to which our drafts are secured by bills in process of collection. This is indicated by the foreign register balance at the time of the sailing of the steamer arriving last abroad, allowing for cables, sold and purchased in the interim (Fig. 66).

"A. & Co.," Chicago, offer "K. & Co.'s" note for $10,000 payable ninety days after date for discount, *i. e.* for credit of a like amount less interest to maturity. After entry in the offering book (Fig. 52) it is approved by an officer or director. The paper is timed, the interest calculated, and the details entered directly from the note, and the books are checked to each other (Figs. 52, 51, 53, 47, 54, 24, 29, 64, 15), after which the paper is filed under its due date. Items maturing are ruled off and if dishonored so marked for future reference. We loan "J. & Co." $25,000 (Figs. 43, 45, 54, 64) at two per cent., subject to call rate fluctuation (by Cashier's check), against their demand note, secured by 200 shares of "C" Mining Co. stock assigned in blank, by the terms of which, if dishonored, we may sell the collateral and apply the proceeds, and any other property of the borrower, in liquidation of the loan. The certificates of stock entitle the party named on their face to the ownership of the net assets of the company to the extent that 200 is a part of the total number of shares issued; that is, to the capitalization (par value) plus net profits, or minus net losses. They are quoted at $156 per share, making the market value $31,200. The certificates may be passed from one

Digitized by Google

person to another indefinitely, but the assignor having only authorized the transfer, is entitled to the shares (and accruing dividends) until the certificates are surrendered to the company for transfer on its books in exchange for new certificates in the transferee's name. Assignment, therefore, differs from negotiability, which is a property of paper payable in money only, in that it permits of but one transfer of the certificate. Bonds differ from stocks, being evidences of debt payable at a specified time, for a stated amount, and usually secured by a mortgage on the property, or collateral deposited with a trustee. The owner is a creditor, instead of a shareholder.

We also loan "D. Bros." $20,000 (Figs. 43, 45, 54, 24, 64) by credit in account at five per cent. against their demand note as described above, secured by bill of lading, insurance, and inspection certificates covering 32,000 bushels wheat *en route* from Duluth to the seaboard by rail and lake steamers. It is quoted in Duluth at seventy cents, making the market value $22,400, and the documents are in order. "B. & Co." pay their loan of January 23, with interest from February 1, 1901, $30,050 (Figs. 44, 43, 45, 1, 56, 3, 7, 59, 64). The loan card (Fig. 48) entries are made in pencil to permit of change in the quotation as the market varies. The total amounts loaned or discounted at each rate are added and the payments deducted from the rate book (Fig. 55). When clients wish to change their securities a written order is required (Fig. 49) and the substitution noted in a book and on the card (Figs. 50, 48, 49, 46). A daily trial balance of the loan ledger, in the form of a slate to facilitate daily changes, is essential to avoid making loans above the legal limit or greater than is warranted by the responsibility of the borrower. The loans must also be judiciously arranged so that the bank's customers are well cared for and the maximum of profit derived from its funds without reducing the reserve below its required percentage of deposits. Some uncertainty always exists in regard to how the bank will stand at the next morning's clearing, but a fair estimate may be made by comparing the certifications and Cashier's checks issued with the large checks received on other banks, and the collection balances due.

The debits and credits in the Bank Journal (Fig. 54) are equal, and the receipts are charged and payments credited to cash account (Figs. 1, 23, 22, 56). This agrees, therefore, with the cash on hand (Fig. 59) and the two sides of the general ledger balance. The books of the various departments prove with their respective accounts (Figs. 24, 25, 26, 33, 36, 64). The net deposits (Fig. 57) net loans, (Fig. 60) circulation, legals and specie (Fig. 58) are entered in the clearing-house average book together with the proportion of the cash to the deposits (Figs. 65, 58).

A debit always records something given, and a credit something received. If that which is given or received must be returned, it is an asset or liability, and if not, a loss or a profit respectively. The profits less the losses are the surplus and undivided profits (Figs. 61, 68).

This, however, is only the apparent profit, the net gain is arrived at by adding accrued but uncollected interest on loans, and deducting the discount credited but unearned (Fig. 68). ERLE.

THE FINANCIAL AND INDUSTRIAL CRISIS IN GERMANY.

Leading banks of Germany, *hypotheken*, mortgage and loan, saving deposit institutions, stock corporations and *actien gesellschafts*, caught in the disastrous wave of speculation which swept over the Empire and resulted in a series of crashes during the current year, which utterly paralyzed finances and industries, are undergoing a process of reorganization and liquidation which is sarcastically termed "financial sanitation." Almost every banking house and corporation is afflicted with the sanitation fever. Only two institutions remained firm and unscathed during the period of probation; namely, the *Reichsbank* and *Deutsche Bank*, which resisted every temptation to launch into the speculative maelstrom under the able managements of Presidents Koch and the late Von Siemens, whose recent death called forth the title of "Germany's greatest financier."

German banks and stock corporations are now experiencing the inevitable aftermath of reckless speculation, over-capitalization and misappropriation of trust funds. Four bankers and directors, unable to face the disgrace, sought refuge in suicide during the present year since the Leipsig Bank tumbled to the ground and carried along also scores of private corporations, including the *Treber-Trocknung Actien Gesellschaft*, dependent upon the institution for subsistence. Other guilty accomplices fled to the United States or other distant shores. Some of the bolder "financiers" and "promoters" remained to soothe irate stockholders and creditors or induce them to make a fresh start through reorganization. Many *hypotheken* banks and *actien gesellschafts* formerly went into liquidation but are now once more venturing upon the troublous waters with new titles and officials. The *Pommern Hypotheken Bank*, which went to the wall with $6,000,000 obligations, ventures to make a new appeal to stockholders and directors offering new issues of stock in lieu of the old worthless papers. Such braggadocio is astounding when it is recalled what a nest of corruption, misuse of funds and stock speculation was unearthed in the stockholders' meetings. It was equalled only by the audacity of the group of directors and *aufsichtsraths* involved in the destruction of the Leipsig Bank, when they recently made another attempt to rejuvenate the house, but had to desist because of the opprobrium which attaches to the name. Nevertheless they managed to reorganize the *Treber-Trocknung Gesellschaft*, which was the principal factor in the ruin of the Leipsig Bank.

The *Saxon Hypotheken Bank*, which followed the Leipsig and Pommern failures, is likewise to be revived. In Mecklenburg-Strelitz a novel plan was hit upon to restore the insolvent bank, bearing the same name. Stockholders received a proposition to give up two-thirds of their claims against the interest-bearing debt of the bank and were promised reimbursement for the remaining obligations. The majority of the stockholders resisted the plan, but a few clever former directors forced the reorganization through despite these protests. More recently a stormy meeting of the stockholders of the Hanover city street railway company was held, at which open charges were made that the road was being manipulated to enhance the real-estate holdings of several of its officers and directors. Owing to the peculiar laws of Germany governing stockholders and banking institutions, the numerical majority of the stockholders of this company were compelled to agree to a contribution equal to

Digitized by Google

twenty-five per cent. of the value of the stock in order to meet the interest on a loan of $500,000 from the Dresdner Bank. From Breslau still come echoes of the badly tangled affairs of the Breslau Steamship Company, whose stockholders awoke one morning to discover that two of their trusted directors had fled to another country, leaving behind as their legacy a heap of obligation paper contracted with the Reichsbank in the name of the corporation.

INFLUENCES THAT CAUSED THE SPECULATIVE CRAZE.

These are but the luminous object lessons taught the German financier to-day. There are scores of private *hypotheken* and *pfandleih* institutions which closed their doors and brought misery in many a humble household. Widespread indeed was the havoc caused by the panic, for the savings of capitalists, as well as the humble laborer and peasant who trusted them to banks in order to draw a small interest, were thrown into the pool. It was a speculative whirlwind which caught up the small mites as well as the capitalist who was mesmerized by the giant paces of the German export movement during the last few years, the development of industries in the Empire from infancy to sudden maturity. For it was the inauguration of the colonial policy under the present German Emperor, the construction of giant fleets for the protection of interests on the high seas, the building of a magnificent mercantile fleet of which the North German Lloyd and Hamburg-American lines were the pillars, which started the speculative craze. The German financier and merchant who had hitherto resigned himself to the dominant influence of Lombard Street and the Rothschild house, became animated with the conviction that Germany's star of empire was destined to make a meteoric ascent. Within the space of four years the total exports of the Empire leaped from $700,000,000 to over $1,000,000,000, while imports of raw materials and staple articles increased from $900,000,000 to over $1,150,000,000. The swift, capacious German steamers carried German products into new markets opened in Asia, the Indies, Australia, South America, the Mediterranean and other parts of the world. Wages were increased nearly fifty per cent. and workmen began to live like human beings instead of starvelings. Everywhere the midday sun of industrial, commercial and financial prosperity blinded capitalists, bank directors and fortune-seeking investors. Banks opened streams of gold and assumed control of *actien gesellschafts* and private corporations. Large sums of money were invested on what later proved to be worthless security. For example the Pommern Bank loaned a well-known merchant 7,000,000 marks, or $1,750,000, for the establishment of a large trade emporium, whose aggregate assets at the time were but half a million, which was largely mortgaged in other directions.

But the thirst for speculation was so strong that the dignified, white-haired directors and banking officials who had been held up as careful investors, and as models of ultra-conservatism, found themselves irresistibly carried along with the current. In one year, during the height of the recent German industrial bulge, 182 industrial corporations were organized with a total capital of $63,922,040, while in the following year 254 companies were created with a capital stock of $90,551,860. But these figures are infinitesimal when contrasted with the huge sums devoted to the extension of existing plants. An *actien gesellschaft* with less capital stock than 5,000,000 marks was looked upon with disdain. The higher the capitalization the more eager became the demand for stock on the *Borse*. Bank clerks, professional men and laborers all deluged stock brokers with orders while *actien gesellschafts* continued to increase their capitalization on the familiar liquid basis. Banks sanctioned such stock issues and made large contributions to enterprises for the establishment of railways under German control in German colonies in South and East Africa, Sumatra, Samoa, New Guinea and in the densely German settled sections of South America. For Germany was destined to wrest supremacy from England as lord of the seas and as

Digitized by Google

a colonial power. That was the battle cry which brought showers of gold from investors. Huge sums were sent to South Africa for the construction of the railway from Swakop-Mundung to Windhoek, for another in East Africa from Dar-es-Salaam to Tanganyika Sea. Germany must increase and hold its prestige as a "world power" instead of an isolated empire threatened by foes on all sides, by building railways in distant lands, by diverting immigration to German possessions and by obtaining footholds wherever possible. Only a short time ago I attended a lecture delivered before the German Asiatic Society where an officer declared that Germany had been forced to seek an outlet for its surplus products in Asia because the Monroe Doctrine obstructed its path in South America and the swamps and fevers of Africa discouraged immigration to those colonies.

Consolidation of Industrial and Mercantile Establishments.

A powerful engine in the development of the German industrial and commercial movement was the consolidation of all branches of industry, manufacture and mercantile houses. All sources of production were embraced in this giant consolidation and made part of a great military syndicate. Each special branch was controlled by a governing board of directors, while these in turn were responsible to a central organization which dictated market prices, the amount to be produced each year, the amount to be devoted for home consumption and for export and the scale of wages. Labor unionism proved a puny thing against this giant trust. The consummation of such consolidations was aided by the banking houses of Germany, which likewise formed a co-operative system of extending credits to each other. Some of the more clear-headed financiers warned their fellow directors that they were departing from the path of rectitude, were endangering funds entrusted to them and undertaking enterprises and promotions which had nothing in common with the banking business. But their voices were lost in the acclaim of the "expansionists." The Government joined in by sending commissions to China, Africa and distant lands to study opportunities for the opening of new markets to German manufacturers and exporters. Emperor William in his speeches at Kiel and naval construction centers frequently reiterated, "Our future lies upon the sea."

Speculation Stimulated by the Banks.

It is necessary to contrast banking and corporation laws and methods in the Empire with those in vogue in the United States to show how such reckless speculation was allowed to sweep on unchecked until the fall came, until stocks became worthless in the hands of holders, *bona fide* papers decreased in value from thirty to sixty and seventy per cent., while the *Borse* was besieged with wild-eyed men seeking in vain to dispose of their securities.

Viewed on paper the banking system in Germany leaves nothing to desire. Each bank as well as corporation has two governing boards. One is the directory the other the *aufsichtsrath*. The latter is in supreme control and usually embraces capitalists, men of highly honored standing in the communities, and noblemen. In fact, the higher the title the more famous is the institution. Banks eagerly sought to add the names of counts, dukes and even princes to their *aufsichtsrath*. Their duty was to outline in general the policy of the bank, pass upon credits and preferred securities and in general to keep a watch on accounts. The books were laid before the *aufsichtsrath* at stated intervals for their approval while the directing board of officers received their instructions from this governing council.

Despite its red tape, its top-heavy systems and multiplicity of governing boards, the entire fabric has been brought to the ground through the recent bank failures. Instead of checking, exposing fraud and reckless methods, the dual character of the governing bodies in banks encouraged deception and made conditions possible which

Digitized by Google

could not have happened in United States National or State banks where comparative simplicity is the safeguard. The sensational disclosures made after the failure of the Leipsig, Pommern, Rhenish and Saxon banks all showed that either the *aufsichtsraths* were kept in ignorance of the management by "doctored accounts" and false information or were accomplices in the schemes of directors. In the Leipsig case the *aufsichtsrath* tried to clear its skirts of blame by insisting that the directors had made loans to the *Treber-Trocknung Actien Gesellschaft* and other private enterprises taken under wing without informing the *aufsichtsrath*. This excuse was also made by the council of the Pommern and other banks. But the evidence showed that either one or more of the *aufsichtsrath* were well informed and aided in keeping up the deception. Not only did these banks make credits on security which would have been rejected by any intelligent banker in Wall Street, but issued loans beyond the proportion allowed by law. It is significant that only recently a poor newspaper editor of a social democratic paper was arrested, dragged through the streets and beaten for writing a sarcastic editorial, but the *aufsichtsraths* and directors who remained behind in spite of the evidences of their guilt escape scot free and are even daring enough to start new stock enterprises.

Voluntarily the director of the imperial bank inspection service resigned his office after the succession of failures. It was a gracious act but not a confession on the part of this official so much as the inefficiency of the German bank inspection laws. With great *naivete* and cunning the financiers and promoters whose enterprises were wrecked on the breakers are now laying the blame for the whole reaction on the *Borsengesetz*, the tax on bank papers and the banking laws. They also blame stockholders and creditors who rushed to the *Borse* to sell their holdings as soon as the crash of the Leipsig Bank announced the approach of the panic, while depositors thronged banks and withdrew their accounts. The statements of banks, large and small, with the exception of the Imperial Bank and *Deutsche Bank*, revealed a startling decline in deposits, resulting in a general decrease of the value of bank stocks, from twenty to thirty per cent. among the stablest institutions. The promoters and directors who had their hands in *actien gesellschafts* suddenly found that they could obtain no more funds with which to float loans or pay interest and dividends, for the German modern financier knows just as well as his American brother how to pay dividends from the principal account instead of actual revenues. That explains the enormous dividends paid by the heavily capitalized *actien gesellschafts* in order to induce the public to buy its stock on the *Borse*. The withdrawal of deposits and the scarcity of money in the market caused by the distrust everywhere, through the dishonest practices of the insolvent banks, brought about the stagnation from which German banking circles and industries are now suffering, rather than the uncertainty of the pending tariff agitation.

"Reform the *Borsengesetz* and banking inspection laws," is the cry which is sounded in the ears of the ministers. "We must remove the popular distrust and reassure the public," is the complaint of the German bankers. Gilt-edged securities and the stocks of the best corporations go begging because of the withdrawal of funds. The Prussian Minister of Finance heeded this despairing cry. He called delegations of bankers, board of trade directors and financiers into his audience-chamber and received suggestions for the reform of the banking and stock-dealing laws. These have been drafted into a bill to be presented to the Prussian Diet at its assembly in January. It aims at the inspection of the *hypotheken* mortgage and loan banks through Government agents. It requires the monthly publication of assets and liabilities, while official examiners are authorized to tally accounts and make periodical inventories of assets and liabilities. The proposed reform bill also requires banks of certain grades to take out licenses from the Government and which will be revoked in case the bank violates the provisions of the law.

PROPOSED MODIFICATION OF THE LAW PROHIBITING OPTION TRADING.

The bill formed by the Prussian Minister of Finance also intends to moderate the anti-option law. From all sides there are storms of protests against the continuance of this law, which became operative in 1897 and was brought in by the Agrarians, who are styled the enemies of liberal commercial and industrial interests. The anti-option law forbids speculation in stock and grain futures. Its object was to enhance the price of farm products and thereby increase the value of ground and leases held by the titled landowners or feudal aristocracy of the Empire. But the law utterly failed to fulfill its purpose. Instead of discouraging speculation it reduced the Berlin grain market to the importance of a provincial market, extinguished the middleman or commission man and was responsible for the dissolution of the large produce exchanges. Speculation in grain has been carried on through exchanges at Liverpool, New York and Chicago, while the stagnant condition which prevails at the *Borse* reveals how utterly inefficacious the law was in preventing vicious speculation in stocks. The stock-brokers and financiers are now clamoring for the repeal of the law; but the Agrarian party is still in the saddle and has already issued its ultimatum that the tariff law and budgets must first be passed before banking reform or the correction of banking inspection laws can be undertaken.

OUTLOOK FOR THE FUTURE NOT REASSURING.

The prospects faced by the financial and banking interests of Germany in common with its industries and commercial circles are dark and foreboding. The *Koloniale Gesellschaft* complained bitterly at its recent annual convention that no money was forthcoming to complete railways in Africa, South America and other territory where German commerce is to be promoted by the investment of German capital. Several railway projects lie in unfinished stages, while other prospective lines have been abandoned. The German capitalist is too wary now to venture into these treacherous colonial development schemes. Moreover, Germany has not proven successful as a colonial power. German immigrants continue to wander to the United States, South America and Australia but refuse to take up the burdens of the Fatherland in its African colonies, in Sumatra, New Guinea, Marshall Islands and Samoa. These possessions are all "white elephants" on Germany's hands to-day and require annually large expenditures for administration, garrisons and indirectly demand the elaboration of naval projects. But the most serious danger which to day awakens the fears of German financial and commercial interests is the threatened "Americanization" of the North German Lloyd and Hamburg-American. The prospects of Morgan bodily wresting the control of these giant steamship lines from German capitalists by the gradual acquisition of stock in the Berlin, Vienna and Hamburg exchanges is gravely discussed in long editorials and the warning held out that such a transaction is within the realms of probability in view of the colossal undertakings of the Morgan syndicate. Not only would the "Americanization" of these two great German steamship lines be a bad and indeed fatal blow to German commercial prestige, but would deprive the Government of its ablest auxiliaries in the event of war. Under the German subsidy statutes the Government may employ the steamers of these German lines for transports, for munitions, provisions and other available service if war is declared with another power.

A remarkable contrast amidst the confusion of German banking and industrial finances to-day is the situation which prevails among the life insurance companies. During the last year twenty-three capitalized corporations were formed to transact life insurance business with a total capital of 76,383,109 marks, while twenty-one mutual companies were formed with a total of 64,216,362 marks. The success of the life insurance companies in Germany is largely due to the Government statutes,

Digitized by Google

which are so framed as to discourage foreign companies in entering the field as competitors. Nevertheless it is theNew York company which underwrites the Imperial Exchequer loans of Germany.

German banks also suffer a severe handicap because of the burdensome stamp taxes which the Government imposes upon checks, drafts, exchanges, negotiable papers and all bank transactions. The tax was increased in 1897 and is said to have driven a large proportion of banking business to Paris and London. The heavy expenses of the Government for the maintenance of the army, the naval elaboration programme, the colonies and the civil government, are shared perhaps more heavily by the banks than any other interests. In addition to the income tax there are State, imperial, local taxes and the stamp duties. The Prussian Minister of Finance has been appealed to from all sides to lighten the burdens thrown upon banking institutions by a reduction of the bank stamp taxes. But the German Government is face to face with a deficit in making up the annual budgets for 1902–3; its revenues from the imperial railway have been less than last year, while the income tax has brought in less than in years because of the depression in industrial circles. In view of these facts it is improbable that the German banks will succeed in obtaining the repeal of the onerous taxes.

Cumbersome Banking Methods.

"We should send our directors and clerks to New York to learn banking," remarked an official of one of the oldest and leading banks of Berlin to the writer. The delay in cashing checks and drafts, in making deposits, negotiating exchanges and the volume of red tape in the German banks would drive the American business man to desperation. Every transaction must be entered in three different sets of books, before it is concluded, while the patron waits. Another source of weakness in the German financial institutions is the ridiculously low wages paid to clerks. Owing to the "sanitation" epidemic most of the banks have radically reduced the already small salaries of bank employees. In one of the "sanified" banks the following changes have been made: One married officer, who has been employed steadily with the institution for twenty years and had four children to nourish, has been reduced from $900 a year to $375 ; another officer with twelve years' steady service, who formerly drew an annual salary of $680, now obtains $500. It is generally acknowledged that the average bank employee in Germany is not as rapid, quick-witted and valuable as the clerks, bookkeepers and desk officers in the United States, but it is nevertheless a sad commentary against the German banks to contrast the salaries paid here and in the "States." Christian A. Luhnow.

Berlin, December 23, 1901.

Surety Company Not Liable.—On January 6 Chief Justice Fuller, in the United States Supreme Court, delivered an opinion in the case of the Guarantee Company of North America vs. the Mechanics' Savings Bank and Trust Company, of Nashville, Tennessee.

The bank attempted to hold the Guarantee Company on a bond given by it for the proper conduct of a man named Schardt, who was first teller and then Cashier of the bank and who abstracted $100,000 of the funds of the institution. The court held that this could not be done, on the ground that the bank had forfeited all protection through the carelessness of its officials in failing to notify the Guarantee Company that Schardt was speculating, as the contract required that they should do in case they became aware of such conduct on his part.

SOME DIFFICULTIES IN THE WAY OF A CENTRAL BANK.

[W. R. Lawson in the London "Bankers' Magazine."]

But, as President Stickney impressed on the bankers' convention at Milwaukee, money is a very subordinate factor in modern banking transactions. If his homely but forcible definition of banking as a "swapping of credits" be accepted, the credits become the test of bank management. They are the final crux, whether the banks be large or small; whether they be isolated and independent, as in the States, or centralized, as in England. If we go a step further with Mr. Stickney, and adopt his view that it is the duty of banks to go ahead "swapping credits," however critical the times may be, or however precarious their own position, then the quality of the credits becomes of still greater consequence. A well-managed bank, which has all along been very careful in its selection of credits, may have no need to draw in during a panic. It may even extend its operations then with safety and advantage, for the business brought to it will be much better than that of ordinary times, and it will have more scope to discriminate. But, if a bank has so managed its credits in the good times that it dare not increase them during a financial emergency, it will be vain for Mr. Stickney or anyone else to preach to it on the banker's duty to keep on working the credit machine to the bitter end.

It is almost a truism to say that the business of banking, or, as they prefer to call it in the West, "swapping credits," depends altogether on the quality of the credits created. In every commercial country, and under every banking system, these differ. They originate among different classes of people, and in an endless variety of business transactions. They have their national peculiarities in France, in Germany and among ourselves. In the United States they follow no European model, but have struck out channels of their own, purely American both in magnitude and audacity of design. There is no inherent probability, but the reverse, that banking methods which have answered well in a humdrum country like our own would serve equally well in the United States, where everything is on a Niagara scale, and is driven at breakneck speed. Even if the United States were a *tabula rasa* as regards banking, and could start fresh with an exact duplicate of the Bank of England, the success of the experiment would be by no means assured. But where, as in this case, there is a fully-developed system already in possession of the field, the chances of success would be infinitely smaller.

In finance, as in politics, every country develops institutions suited more or less to its genius and its local conditions. The American banks of to-day, however open they may be to criticism, would not be where they are but for certain national needs and popular sentiments to which they have responded. These needs and sentiments would have to be respected in any new system, and there is no guarantee that one could be devised which would answer to them as completely as the existing system does. It is already interwoven in the history of the country, and has taken deep root among the social and commercial habits of the people. They know both its weak and its strong points, and can strike an average of them. But to change over suddenly to a foreign banking system would be launching on an unknown sea.

That American banking is equal, or nearly equal, to what is required of it no one will venture to assert, least of all anyone who has had practical experience of it. It

Digitized by Google

will have to be greatly strengthened at various points before it can be trusted to weather such another storm as that of 1893; which after all was a mere breeze compared with the possible panics of the future. But the strengthening can be best done perhaps on existing lines, and with as little imitation of foreign systems as may be. All through the free silver agitation we continually cautioned the Americans against violent and excessive changes in the details of their currency, which after all are secondary matters so long as they have a safe working standard behind them. The same advice applies equally now to the details of their banking business. The real danger does not lie there, but in the furious inflation of the business itself. So long as the credits created by the banks for the service of commerce are of the right quality, it will matter little how they are issued to the public, whether by a central bank with many branches, or by a multitude of local banks.

President Stickney, and the other American financiers who advocate centralization in place of dispersion, seem to us to attach too much importance to the mere process of creating and distributing bank credits. By giving that undue prominence they divert attention from the much more critical question of the quality of the credits. A time is fast approaching in the States when the latter question will force itself on the large banks and the small ones alike. And when the ordeal arrives it may not be the small banks that will come least creditably through it. Every one knows, or at least has a shrewd guess, what sort of credits the New York banks have been manufacturing and "swapping" with each other in the past few years. The billion-dollar trusts, the copper corners and the Wall Street "combines" they have had to finance are not the best possible creators of banking assets, and so far as these are concerned there has perhaps been quite enough banking centralization already.

A Fling at the New York Banks.

Banking centralization is indeed a very large subject, especially in the States, where the very term has a variety of meanings. President Stickney himself, clear thinker as he is, has used it in more than one sense. In one part of his address he applies it to large banks with branches, as distinguished from small local banks. In another it refers to his ideal "bank of banks," which is to supersede the Treasury as the keeper of the national reserves. These are two radically distinct things, which may, and in fact ought to be, kept separate in banking discussions. The issue as between large and small banks may be considered quite apart from the other. It may gradually solve itself in practice without much help from theorists. There are already signs of a tendency in that direction, and of late big banking amalgamations have varied the monotony of railroad combines and steel trusts.

This part of the issue is comparatively simple. It is rather a matter of fashion and convenience than of principle. So long as the Americans can "swap credits" satisfactorily with their one-horse banks, they will probably stick to them. When they find they can be better served by centipede banks, they will not be slow to change. During the next few years they will have ample choice offered them between the two. Banks with branches are being projected, and existing banks are said to be considering the advisability of establishing branches. In the case of the National banks there may be some legal restrictions to overcome, but none which could not be easily removed if there were a decided desire for it. So long as banking business proceeds smoothly, there may be very little disposition to try a change; but next time the banks are caught in a squall, Mr. Stickney may see a rush made for the Scotch system.

His supreme central bank is quite another question, much more important, and at the same time more difficult of solution. It is not to be settled by popular sentiment, and little light is thrown upon it by the past experience of the American people. All they know is, that the experiment of a head bank has been already

Digitized by Google

twice tried, and both times it has failed. It may have been special causes that killed the first Bank of the United States in 1811, and the second in 1886, but two events so unique in the history of banking do not augur well for a third experiment of the same kind. If such a bank was so little suited to the United States of that day, it would have to be proved that the circumstances had completely changed before another attempt could be made with better hope of success.

A London Opinion of New York's Prominent Financiers.

Certainly some of the hostile influences which ruined the two Banks of the United States still survive. The jealousy of the other banks would be quite as keen as it was in 1811 and 1836. And it would be much more formidable, because more powerful. Not only would there be thousands of National banks and State banks arrayed against it, but a far more dangerous rival than all these put together would have to be reckoned with in the inner circle of high financiers who now rule New York, and through New York are trying to rule the whole financial world. However powerfully and convincingly reformers like President Stickney may plead for a "bank of banks," their eloquence will go down the wind so long as Mr. Pierpont Morgan and his billionaire bodyguard stand aloof. It really rests with these financial magnates to say what the American banking of the future is to be. They control it almost as completely as they do the railroads, the big trusts, the churches and the newspapers. Without their approval not a finger can be lifted in any of these connections.*

The question may therefore be as well faced at once: What attitude would they be likely to assume towards a central "bank of banks?" The answer that will occur to everyone is, that so far as it could be made useful to themselves they would very probably support it. But their friendship might be even more fatal to it than their hostility. The financial dictatorship they have established would brook no rivalry, still less any superior authority. At the very birth of the "bank of banks" they would cause a grave dilemma. A choice would have to be made between the risks of having them in the direction or of excluding them from it. In the Bank of England such a dilemma has never arisen, nor is it at all probable. Its directors are pre-eminently safe men. They are not as a rule brilliant financiers or great banking experts. Most of them are plain, steady-going merchants, with neither the will nor the power to indulge in financial fireworks. As English gentlemen they do their duty honorably and carefully according to their lights. They are not too friendly either with the Government of the day or with the Stock Exchange. In the difficult decisions which often devolve on them they study the general interest in a broad, business-like spirit, and the conclusions they arrive at are in nine cases out of ten practically sound.

Whether a similar directorate, representing the happy medium between plain business and high finance, could be found in any other country is a question. In New York it would be an obvious impossibility.† There the high financiers hold

*The notion that banking legislation will be dictated by New York could not have originated in this country, where it is known that the bankers of New York are generally indifferent on the subject, desiring only safety and stability in the banking system. They opposed the National Banking Law when it was enacted, for the reason that it was in some respects an experiment, and was not any better than the banking law of New York State on which it was modelled. They do not take the lead in the agitation for a central system of banks with branches, knowing that many of the advantages of the branch system may be secured under existing laws, and they are not prominent in championing an asset currency, because their chief business is done on deposits furnished by their customers. In short, the attitude of most of the New York banks is extremely conservative in regard to changing the banking system of the United States.

†The severity of the comparison which Mr. Lawson makes between the financiers of New York and London may be tempered somewhat when one reflects that the wonderful strides

Digitized by Google

such unchallenged sway that with them it is *Aut Cæsar, aut nullus*. Mr. Stickney's Government bank could neither do with them nor without them. If there were no other objection, this of itself would be almost ground enough for despairing of success. But there are other difficulties, both national and general, to be feared. The relations of such a bank to Congress, to the Treasury, to existing banks, to the stock and foreign exchange markets, as well as to the public, would all demand careful adjustment. At first, absurd and extravagant ideas might prevail as to its proper duties. It would be expected to do everything the Treasury does now, and a good deal more besides, for the relief of the money market. It would be blamed, as the Treasury is now, for all that went wrong with stocks, or the foreign exchanges, or the gold reserves.

But there is a prior question we might have asked: How is the proposed bank going to earn its living without upsetting present arrangements, and intensifying the scramble for money which Mr. Stickney deplores? It is to be a business bank, of course, and to be self-supporting. No one proposes that the Government should subsidise it beyond giving it the Government account to keep. But that might not be a very lucrative job if the Treasury drove as close bargains with it as it does with its existing bankers. It would have to pay interest on Government deposits, as all deposit banks do now,* and how is it to employ them in order to make a profit? If it should lend them out, it would come at once into collision with the existing banks doing similar business. It would be such a large lender that it would control the market—a condition which the other banks might not enjoy. Should it enter into competition with them, what inducement would they have to keep their reserves with it? And what would it do with their reserves if it got them? If it kept them idle, it would be doing its rivals a free service at its own expense. If it used them, or a large proportion of them, they would cease to be reserves.†

Holding gold reserves for other banks cannot from its very nature be a profitable business. Unless accompanied, as in the case of the Bank of England, by compensating privileges, it could not possibly pay. But President Stickney, as we have seen above, expressly stipulates that his "bank of banks" shall have no special privileges. It would not, he says, be necessary, or even desirable, to grant it a special charter. It is to be under no obligations to the Government, because "banking business is a part of commerce, and commerce is an individual, not a governmental function"—which brave sentiment compels us to ask once more, what is this magnificent institution to live on? If it is to have no privileges, or perquisites, but to have to fight for its own hand all the time, it might find that its theoretical grandeur did not pay.

Now, let us imagine this head-centre bank duly established in New York, and in full exercise of its principal function—taking care of the gold reserves—not only of the New York banks, which of itself would be a serious undertaking, but of all the banking reserves throughout the Union. Mr. Stickney has, perhaps, never estimated what these generally amount to. The associated banks of New York held at the end of September (1901) the following cash assets:

Specie	$178,936,400
Legal tenders	71,469,700
Total	$250,406,100

towards financial supremacy made by New York in recent years may have tended to excite the jealousy and ruffle the composure of some of the London financial writers.—Editor BANKERS' MAGAZINE (New York).

* National bank depositories in the United States do not pay interest on the Government funds deposited with them.—Editor BANKERS' MAGAZINE (New York).

† The National Banking Law contemplates the use of bank reserves, as only the banks in central reserve cities (New York, Chicago and St. Louis) are compelled to keep their entire reserves on hand.—Editor BANKERS' MAGAZINE (New York).

Digitized by Google

The National banks, as a whole, showed at the date of the Comptroller's last report (July 15, 1901) an aggregate of over $540,000,000 in cash, thus made up:

Gold	$302,826,000
Silver	68,259,000
Legal tenders	169,714,000
Total	$540,799,000

For the innumerable State banks, Savings and private banks, it is impossible to obtain returns, but their cash reserves should be fully one-half those of the National banks, or say $270,000,000. Still another large reserve has to come into the reckoning, namely, the net cash in the Treasury. It has averaged of late about $300,000,000. The grand total of the three cash reserves which our ideal "bank of banks" would have to take care of has thus got considerably ahead of $1,100,000,000, coinciding almost exactly with the capital of the steel trust. The precise figures are:—

BANKING RESERVES OF THE UNITED STATES, 1901.

National banks	$540,799,000
State and private banks (estimated)	270,400,000
Treasury	300,000,000
Total	$1,111,199,000

If Mr. Stickney's dream could be realized, and the bulk of the bank reserves—say three-fourths of them—were transferred to a head-centre bank in New York, that institution would have $830,000,000 of legal money to deal with. The cash in its vaults would be more than four times as large as the stock of gold in the Bank of England. It would amount to nearly two-thirds of the total stock of specie held by the seven great National banks of Europe. Such an enormous sum is not likely to be entrusted to any single institution without proportionate guarantees. The "bank of banks" would require to have a handsome capital merely to protect its deposits, and there would have to be a promise of liberal dividends in order to get the capital subscribed, but how are even moderate dividends to be earned by merely sitting like a hen on the nest-eggs of other banks?

When we consider how many practical difficulties there are in the way, and how ittle they appear to be appreciated by even the most intelligent advocates of a head-centre bank, it is permissible to doubt if the Americans have as yet taken the subject up seriously. If they had done so they might have discovered ere now that this is not a very suitable time for such an ambitious undertaking. American finance has never been so deeply committed at home and abroad as it is just now. Its short-lived dream of making New York the monetary centre of the world has been rudely dispelled by an unaccountable fall in its foreign exchanges and compulsory shipments of gold to Europe. The trade returns, which year by year produced on paper magnificent surpluses of exports over imports, have proved a mirage. The huge credits which were supposed to be accumulating in Europe have somehow vanished. In place of them we find London and Paris full of American paper which has been renewed again and again during the past year. The great "creditor nation" that was to be is still a great debtor nation.

Even the most prominent American capitalist, with all his courage, might think twice before attempting to consolidate eight hundred million dollars of bank reserves. The gigantic combinations already launched in the States must be placing a sufficient strain upon the resources of every bank and trust company concerned in them. So active have the banks been recently in "swapping credits" that their loans and discounts almost equal their deposit money. Formerly they used to show a considerable balance of deposits unemployed, but latterly they have been lending up to the hilt. Ten years ago the National banks—then 3,679 in number—had less than two

Digitized by Google

thousand million dollars ($1,989,854,000) of loans and discounts. In July last the total had risen to nearly three thousand million dollars ($2,956,906,000), while the number of banks had increased to 4,165. In a single decade the loans and discounts had thus grown nearly one thousand million dollars, or at the rate of fifty per cent., while the individual deposits aggregated $2,941,837,000, or very little more than the amount of the loans and discounts.

How different the National bank policy of 1901 to that of 1893! Then the banks held on to their deposits like grim death, but now they appear to be loaning them out again as fast as they are received. In another direction they have developed an activity which calls for remark. Their balances to and from other banks have undergone a remarkable development. The aggregate accounts due by other banks have advanced from $317,805,000 in 1891, to $788,227,000 in July, 1901; and those due to other banks have risen from $137,727,000 to $526,151,000.

Transactions between the banks themselves constitute about a fourth of the total business done. Similar ramifications probably exist among the State and private banks, indicating a complex situation not to be meddled with lightly. Even if the proposed consolidation of banking reserves were a more practicable scheme than it is, and beset with fewer difficulties, this does not seem to be at all a propitious time for so hazardous a venture. Attractive as the British model may be, which President Stickney is so eager to copy, there is little evidence that it would suit the Americans, but a good deal of evidence to the contrary. How it would fit into their intricate scheme of banking, entirely different as it is from ours, we are at a loss to imagine. Whether or not it could, even if successful, compensate for the universal disturbance which its introduction must involve is more than doubtful.

Important as it may be in itself, and deeply interested as many leading financial authorities may be in it, this is not the most urgent banking question of the day for the Americans. They may have several others to solve before it comes within the range of practical finance. On this side of the Atlantic people who watch the course of American affairs are much more concerned about how the existing banks may be able to bear the weight of sky-scraping combines; how much longer they can be expected to carry the loads of high-priced stocks that have accumulated in Wall Street; and what effect a spell of really dear money might have on them. In short, is there any danger of a repetition of 1893? The bare thought of such a possibility will, when realized, eclipse all academic schemes of banking reorganization.

KNOX'S HISTORY OF BANKING.—In a notice of this work in its issue of December 7 the Springfield (Mass.) "Republican," says:

"It is a book of 850 pages, containing a vast amount of useful matter touching on the banking history of the country. Part II of the work deals with the State banks, which held the field exclusively from the closing of the Bank of the United States to the establishment of the National system. An effort has been made to secure an adequate account of the banking legislation and State banking experience of each of the American commonwealths, and in most cases it has been successful, certainly for all practical purposes. The result is a voluminous compendium of information concerning banking and currency in the United States, most valuable for reference uses."

At this time, when the reconstruction of the American banking system is under discussion, and when proposals are being put forth for alterations in the method of issuing bank notes, this book will be found especially interesting and valuable. It gives a full account of the history of the State bank currency of the period preceding the Civil War, recording impartially the facts in regard to the banks that issued insecure notes as well as those whose circulation was always promptly redeemed.

A thorough understanding of the country's banking history will greatly aid in the intelligent consideration of the currency and banking questions that are certain to be prominently discussed in the next few years.

Knox's History of Banking is the only book that gives a history of the first and second United States Bank, the State banking systems of all the States and of the National banks.

THE FALL OF THE SECOND UNITED STATES BANK.

A DRAMATIC EPISODE IN OUR FINANCIAL HISTORY.

The recent advocacy by some of our most distinguished financiers, among them Secretary Gage, of a great central bank to replace our present independent Treasury system, recalls the fact that the country has already experimented with two National banks, both of which were emphatically "turned down" by the public opinion of their day.

The first Bank—Hamilton's—chartered in 1791, ran peacefully for twenty years, and expired as peacefully in 1811, Congress having declined to renew its charter.

Each political party, in turn, strove to gain possession of it, and the one which failed naturally discovered that the Bank, in the hands of the opposition, was an engine of injustice and oppression.

But the emergency of a second war with England quickly demonstrated the inadequacy of private State banks for any such crisis, and in 1816 the second Bank of the United States was chartered. This bank also ran for twenty years to 1836, when Jackson refused to recharter the institution, and compassed its final ruin amid convulsions which shook the small business world of that day to its very foundations.

In 1830, when Jackson opened fire upon it, the Bank of the United States was an apparently impregnable financial fortress. Its home was in Philadelphia, where it occupied a stately marble building. Twenty-five branches were maintained in the principal cities. These branches, of which there were too many, proved afterwards to be a source of weakness.

The handsome and able Nicholas Biddle was President. Biddle, who was chosen for this high office when only thirty-seven years of age, was a man of fine appearance, ambitious, adroit, and wielding the pen of a ready writer. On the other hand, he was visionary, and quite failed to comprehend, especially in his earlier passages with the Administration, the spirits whom he so jauntily defied. His fluent letters, full of fine phrases, drew out all the venom of the "Kitchen Cabinet," as Jackson's intimate, but unofficial, advisers were called.

The first cloud appeared over the branch bank at Portsmouth, New Hampshire.

Affairs at this branch had been mismanaged, and Jeremiah Mason, a Federalist, an able lawyer, and a friend of Webster's, had been appointed to set them right. In setting them right he incurred the enmity of local politicians, one of whom, Jackson's favorite henchman, wanted the place. Complaints and charges were forwarded to Washington.

Biddle went on to investigate, found Mason and the Bank all right, and so reported.

Had he stopped here all might have been well. But no, he must needs write another letter to the effect that as the Bank was not in politics, interference of that sort would not be tolerated from any quarter. A sound enough principle, but hardly applicable to that day when nearly every bank was chartered and conducted as a party institution, and clearly not in accord with the Jacksonian idea so happily formulated by Governor Marcy of New York, "that to the victor belonged the spoils."

Amos Kendall, at once Mephistopheles and Machiavelli of the Administration,

Digitized by Google

lost no time in interpreting Biddle's letter as an act of defiance to his chief. The wrath of the old Indian fighter, who was much more "in the hands of his friends" than people imagined, rose instantly to the boiling-point, and he swore "by the Eternal," that the "Monster," and "Beast," as he called the Bank, should be destroyed. In his next message to Congress, he fired his first gun by questioning the Bank's constitutionality. Immediately the Administration organs joined in the hue and cry, ably seconded by the State banks, which were in nowise averse to profiting by the ruin of their monster rival. The uproar was prodigious, but the Bank stood firm. Its stock, which was quoted at 125, dropped a few points, but quickly recovered and rose to 130.

Towards the close of his first Administration, Jackson's anger had so far cooled that he would probably have signed the bill for the recharter, had the Bank been only a little more complaisant. The enormous pressure brought to bear in its favor would have frightened a more timid man and crushed a weaker one.

The utility of the Bank was undeniable. It furnished the only paper circulation worthy of the name. Everywhere in the States, and even in Europe, its notes were accepted at their par value.

So far, the Bank had withstood the malice of its enemies; it had now, unhappily, to contend with the imprudence of its friends.

The Bank as a Political Issue.

Jackson was to run for a second term. His opponent was Henry Clay. Clay, who in spite of his magnetic eloquence was never a prudent political manager, insisted that the Bank should be one of the main issues of the campaign. The directors protested against this most unwise course, but they could not afford to offend their great champion, who, at this juncture, was quite as obstinate and dictatorial as Jackson himself. Thrown into the dusty arena between clashing political factions, what chance did the Bank have, what chance would any bank have had, which staked its popularity against the popularity of the Hero of New Orleans?

Inflamed by this direct challenge, Jackson, after his triumphant re-election, took the next step in compassing the destruction of the "Monster" by the withdrawal of the public funds. Duane, the then Secretary of the Treasury, refused to obey the President's behest, and a more compliant Secretary was found, in the person of Roger B. Taney, afterwards Chief Justice, and author of the celebrated Dred Scott decision, who proceeded to distribute the Government funds among such of the State banks as could possibly be got into condition to receive them. Compelled by the loss of these deposits to call in its loans, a period of great business depression set in, culminating in the panic of 1837. Two years before, when the financial skies were lowering, a great fire in New York city had swept away the larger part of the business section. During that hard winter monster delegations went on to Washington to implore the President to cease his war against the Bank. Jackson only swore and stormed at them, between the puffs from his cob-pipe, and bade them go to Nick Biddle, who had millions lying idle in his vaults.

Final Downfall of the Bank.

When the charter finally expired, in 1836, so determined was Philadelphia not to lose the Bank, and her commercial supremacy over New York at the same time, that a State charter was procured, and five years more of life as the United States Bank of Pennsylvania was left to the concern. But its birth was tainted. Bribery in securing its charter, followed by the wildest of speculative banking by Biddle and his associates when once relieved from Governmental restraint, ended finally in ruin and disgrace to all concerned. The Bank, with many others, suspended twice, once in 1837, again in 1839, and finally, in 1842, closed its doors for good. Biddle was

Digitized by Google

arrested, and only escaped imprisonment on a technicality. He died the next year, insolvent and broken hearted, Jackson himself dying the year after.

Although the most rigid Congressional investigation failed to unearth any serious mismanagement in the conduct of the old Bank, it naturally, though most unjustly, had to bear much of the odium which was heaped on the new Bank after its downfall. No institution ever had stronger friends or more inveterate foes. Many people believed that the Bank of the United States could not fail.

Three months before it wound up its affairs, its stock sold for 116. For a decade, or more, Bank or no Bank was the paramount issue in American politics, and was only dwarfed by the rising agitation against slavery. While at times sinking to the level of a personal quarrel between Jackson and Biddle, the "Bank war" was, in reality, only a phase of that contest between democracy and the "money power" which so largely engrosses the annals of all republics. The Bank then stood for railroads, trusts and our modern combinations of capital. All those prejudices and superstitions which are continually smouldering against organized capital blazed out in the early thirties against this "Monster" and "Beast," which Jackson and his demagogic advisers constantly affirmed was destroying our liberties.

The struggle of the masses for political power culminated in the election of Jackson in 1828. Before that time, our Massachusetts and Virginia Presidents, with their Administrations, had adhered, in varying degrees, to old-world precedents and traditions. The advent of the Tennessean marked the downfall of the old classical order, and as a part of that order and one of its main bulwarks, the United States Bank was overthrown.

The State banks, which had contributed in no small measure to this end, flooded the country with their paper issues, and for the next twenty years we had "all kinds of money" in circulation. But these banks, in the crisis of our Civil War, were again tried and found wanting, and the National bank idea had a sort of rebirth in the National banking system devised by Secretary Chase.

Meantime, the independent Treasury had, after considerable opposition, commended itself to public favor, so that to-day our various sub-Treasuries, together with the National banks, perform about the same functions and stand in nearly the same relations to the Federal Government as did the first and second banks of the United States.

JESSE C. JOY.

DOUBLE-FACED BANK NOTE.—A freak $50 bank note caused W. H. Adams, of Chicago, to miss his Christmas dinner. Mr. Adams is a member of the firm of Adams & Smith, dealers in stocks and bonds. On Christmas eve, when the Cashier tried to balance his books he found he was $50 short, and Mr. Adams took it upon himself to try and find the shortage. He went to the office early in the morning and spent the entire day in counting the money and checking the books. Late in the afternoon he found a bill which had caused all the trouble.

It was a bank note, the face value of which was $50, but on the back of which was printed a $100 note. The note had evidently got out of the Government printing office by mistake. The face of the note bears the name of the Ætna National Bank, Kansas City, Mo. The number is 4,251, series of 1882. The check number is A 330,250. It is signed by L. D. Cook, Cashier, and F. W. Truman, President. It was issued on March 10, 1890. On the reverse side the figure C and 100 are plain. The number 4,251 in the center of the note is printed upside down.

PHOTOGRAPHIC COUNTERFEIT $20 GOLD CERTIFICATE.—Act of July 12, 1882, check letter "C," J. W. Lyons, Register, Ellis H. Roberts, Treasurer, portrait of Garfield, No. C2952835. This counterfeit is an untinted photograph and should not deceive the ordinarily careful handler of money.

SUGGESTIONS FOR SAFEGUARDING AN ASSET CURRENCY.

An elastic paper currency that automatically expands and contracts with the business demand for it, thus preventing the alternate periods of stringency and redundancy now experienced, would be a great improvement on the present bond-secured National bank currency. In an article in the December number of the "North American Review," H. C. McLeod, General Manager of the Bank of Nova Scotia, points out that elasticity may be secured by allowing the banks to issue notes on a basis that will afford a fair degree of profit. With profit as an incentive each bank will not only pay out its own notes, but will send back the notes of other banks for redemption in cash.

That the incentive of profit is practically wanting under the present method of issuing circulation is shown by the figures given in the recent report of the Comptroller of the Currency. On three classes of bonds available for circulation purposes the profit was in the case of the fours of 1907 and the threes of 1908 less than one-half of one per cent., and on the fives of 1904 less than three-fourths of one per cent. On the fours of 1925 there is a slight loss in issuing circulation.

There is not the same incentive to send notes in for redemption that there would be if each bank derived a reasonable profit from issuing its notes.

Mr. McLeod does not regard the introduction of the branch banking system into the United States as practicable, but he suggests that the notes could be safely issued by the banks placing themselves under the regulation and supervision of an association, which might be termed the National Bank of Issue, which would be under Government supervision. He proposes that the powers of this association be limited strictly to the issue and redemption of notes, and to the establishment of branches in central reserve cities for redemption purposes only. He also suggests a cash reserve of twenty-five per cent. on circulation and a guaranty fund of five per cent. to redeem the notes of insolvent banks.

These suggestions contemplate the voluntary association of the banks for securing the safety of note issues, and in a way that would not interfere with existing banks. An association assuming to determine the value of paper offered as security for circulating notes would have to be most carefully managed and ought to have branches in all of the principal cities. If the operations of these branches were confined merely to the supervision of note issues they would not interfere with established banks of discount and deposit.

In an address before Group VIII of the New York State Bankers' Association at the annual meeting in New York, December 19, 1900, Hon. Lyman J. Gage, Secretary of the Treasury, said:

"As to the system of a few larger banks, with a multiplicity of branches * * * which the experience of France, Great Britain and Canada commends to your approval, can a similar system be inaugurated with us? Probably not. While recognizing the value of it as to strength, we are too afraid of centralized power and authority. It antagonizes the spirit of our institutions. But it may be possible to secure to a degree its advantages while avoiding the apprehended danger. Our political system is representative. It begins in small units. The townships, associated by representation, constitute the county, and the counties in like manner the States, and

Digitized by Google

from the States that indissoluble federation, the general Government. With no powers specifically extended to it or clearly implied, the Federal authority nevertheless stands for the general defence and the general welfare.

Something like this is vaguely defined in my thought as possible in our banking system. No consolidation of interests, no absolute sovereignty, no powerful head, with authority to create and control, but association with reference to a common defence against common dangers; the individual bank an independent unit; the district clearing-house a center of association, where the surplus strength of the strong could be made available to support with entire safety, and proper reward, the exposed position of the momentarily weak. The district clearing-houses, associated in a similar way, might be made to constitute the national clearing-house, and thus, in lines almost parallel to our political institutions, we might secure in the field of banking what we enjoy in our national life, namely, individual freedom with an associated strength, which in the nation has been found equal to all emergencies. The operation of your own clearing-house in times of peculiar stress and peril typifies what may be realized along the broader lines to which I refer."

No one who is familiar with the history of New England banking and the examples furnished in Louisiana, Indiana, Ohio and other States prior to the Civil War, or the existing practice of issuing notes in Canada and many European and other countries, can question the security of notes issued on commercial assets. On the other hand, no one who is familiar with the diversities of our present banking system would seriously propose that all National banks should be permitted to issue notes equal to their capital secured only by the general assets of the issuing banks, unless some adequate safeguard is thrown around such issues.

All the banks in the United States linked together are unbreakable. If it were possible to combine them in such a way, for the purposes of issuing circulation, that the charge of a monopoly or trust would not justly lie against the union, safety would be assured and the desired independence of individual banks still maintained. That safety could be made certain by a guaranty fund or by some plan of qualified affiliation through clearing-houses or otherwise is hardly open to doubt.

The strongest opposition to an asset currency comes from those whose minds are filled with memories of the "wildcat" currency of the *ante-bellum* days. They do not seem to know that the banks of New England, united through the Suffolk redemption system, issued bank notes that were thoroughly good, even in those days when banking and transportation were not so fully developed as now. With improved methods of communication and the better banking system of to-day, there is no doubt that the current and ultimate redemption of notes could be provided for when once the public mind is educated up to the point of giving up the paternalistic notion that the Government must guarantee the issue of bank notes.

If the banks were permitted to issue circulation to the amount of their capital, without depositing bonds or other special security, their loaning power would be increased 100 per cent. above what it is now. In other words, their capacity to facilitate the business development of the country would be doubled.

Valuable for Reference.—The Cashier of the Elgin (Ill.) National Bank writes, under date of December 21, that after reading THE BANKERS' MAGAZINE for fifteen years he finds it so valuable that he has decided to have the numbers bound so as to give the MAGAZINE a permanent place in the bank's library.

By preserving and binding the numbers of the MAGAZINE, subscribers will have at their ready command a very large fund of interesting and valuable information relating to banking and finance, and the index furnished with each volume greatly facilitates reference.

The legal department alone contains information that every bank ought to have at hand continuously in a form easily accessible. It is of direct practical value to know how the courts are construing questions of banking and commercial law, and to be able to refer without loss of time to important decisions.

THE NEW SECRETARY OF THE TREASURY.

On January 6 the following correspondence was made public:

The President:

I respectfully submit this as my resignation of the high office of Secretary of the Treasury, the same to take effect upon the appointment of my successor.

In this step toward separation from your executive staff, permit me to thank you for the confidence bestowed upon me, and for the kindness and courtesy of which I have been the recipient at your hands.

With most earnest desires for the highest success of your administration, I remain,

Sincerely yours, LYMAN J. GAGE.

TREASURY DEPARTMENT, Washington, December 19, 1901.

The President's letter accepting the resignation follows:

To Hon. Lyman J. Gage:

MY DEAR MR. SECRETARY: In accepting your resignation, I wish to express my great regret that you feel it necessary to leave the Cabinet, and my hearty thanks for the invaluable services you have rendered. Your service to the nation has been rendered at the cost of loss to you—heavy loss, from a material standpoint, as must ever be the case with a man like you who deliberately abandons the comparative ease and the high pecuniary rewards of a large private business for the exhausting work of the position you have so honorably filled during the last five years. With all good wishes, believe me, most sincerely yours,

WHITE HOUSE, January 4, 1902. THEODORE ROOSEVELT.

Leslie M. Shaw, Governor of Iowa, has been appointed as Mr. Gage's successor.

The new Secretary of the Treasury is a native of Vermont, having been born in Morristown, that State, November 2, 1848. At an early age he emigrated to Iowa. When twenty-three years old he entered Cornell College, at Mount Vernon Iowa. He worked his way through college, and later took a two years' course in the Iowa College of Law.

In 1876 he began to practice law at Denison, Iowa, a small town in the western part of the State, which he still claims as his home. Some years later he became interested in banking, and was made President of the Bank of Denison and also of the Bank of Manilla, Iowa. It was not until the first Bryan campaign that he identified himself with politics.

At the outset of that campaign he came out strongly for McKinley and sound money, and soon acquired a high reputation as a public speaker. He made many speeches, confining himself almost exclusively to financial issues. As a result of his campaign on the stump he was nominated for Governor of Iowa in the following year and was elected.

In January, 1898, he was made Chairman of the Monetary Conference at Indianapolis. The delegates were much impressed with his skill and readiness in debate, and by his efficiency as a presiding officer.

For his second term as Governor he was nominated by acclamation. He continued as a stanch adherent of President McKinley, and made several speeches in the Republican cause in the campaign of 1900. He is prominent in Methodist church circles, and four times he has represented the Des Moines Conference in the Quadrennial General Conference of the denomination.

Governor Shaw is one of the directors of the college from which he was graduated, and Simpson College has conferred upon him the degree of LL D. He was one of the foremost spirits in the founding of the Denison Normal College. He was married on December 6, 1877, to Miss Alice Crawshaw, daughter of James Crawshaw, of Clinton county, Iowa.

In the July, 1901, issue of the MAGAZINE appears a full report of an address delivered by Governor Shaw before the Northeastern Nebraska Bankers' Association, which gives a fair idea of the views he then entertained on banking and financial questions.

A portrait of the new Secretary of the Treasury is presented in this issue of THE BANKERS' MAGAZINE as a title illustration.

COINAGE AND BANKING IN THE PHILIPPINE ISLANDS.

EXTRACTS FROM A REPORT MADE TO THE SECRETARY OF WAR BY CHARLES A. CONANT, SPECIAL COMMISSIONER.

SIR: In compliance with your commission to investigate and report upon the state of coinage and banking in the Philippine Islands, and to recommend proper legislation to be proposed to Congress with regard to the same, I have the honor to submit the following report:

I visited the Philippine Islands and there took the views of representative business men and bankers in the city of Manila. I visited the city of Hongkong and took the views of leading bankers there upon the proper currency system for the Philippines and upon general monetary conditions in the East, and also conferred with the consuls of the United States at Hongkong and Nagasaki. In Japan, which recently adopted the gold standard, I conferred with the Minister of Finance and the Vice-Governor of the Bank of Japan.

The chief medium of exchange in the Philippine Islands at the present time is the Mexican silver dollar, which contains 416 grains of silver of the fineness of 902 one-thousandths. It has become to a large extent the standard money of China and certain other Oriental countries as well as of the Philippine Islands. It has not always, however, been the standard in the Philippines, nor is it the only form of silver money which has been in common use there. The disappearance of gold and the confusion in the forms of money in use led the Spanish Government in 1897 to issue a distinctive Filipino peso, which has circulated in considerable quantities side by side with the Mexican silver dollar. The peso contains less pure silver than the Mexican dollar and has continued, therefore, to remain in the Philippine Islands, while the Mexican dollar has come and gone according to the demand for it in other countries. This Filipino peso is still in circulation, but constitutes only a small percentage of the amount of silver in use in the islands. The steady fall in the gold value of silver has affected prices and wages as expressed in silver in the form of a gradual advance in prices and a slower advance in wages, with the result of a serious loss to the wage earner.

PRINCIPLES OF THE SYSTEM RECOMMENDED.

The principles governing the coinage system which I have the honor to recommend are the same as those set forth in the annual report of the Philippine Commission to the War Department last year.

The general lines agreed upon by the commission and myself are as follows:

1. That there should be a distinctive Philippine coin of silver which should be legal tender for fifty cents in the gold money of the United States.

2. That this distinctive silver coin should be known as the peso, should contain twenty-five grams of silver of the fineness of 0.835, and should be divisible into one hundred equal parts, called centavos.

3. That this coins hould be issued by the Government of the Philippine Islands in such quantities, to be determined by such Government, as may be required by the needs of trade.

Digitized by Google

4. That the distinctive coin should be maintained at par with gold by the limitation of the amount coined and by a gold reserve, to be constituted from the seigniorage derived from the coinage of silver bullion, and to be employed, in the discretion of the Philippine Government, for the direct exchange of silver for gold, and in such other ways as may be necessary to maintain the parity fixed by law.

5. That the Mexican silver dollar and other coins now in use in the Philippine Islands should cease to be legal tender after specified dates, and that the new silver coins and the gold money of the United States, where not otherwise stipulated by the contract, should be the sole legal tender for public and private obligations.

6. That the new coinage should be executed as far as possible at the mint at Manila, and should bear distinctive devices expressing the fact that it is intended for use in the Philippine Islands.

The Regulation of Banking.

One of the most obvious and pressing needs of the Philippine Islands is an increase of banking facilities and a larger supply of paper currency. Both of these needs are constantly forced upon one's attention in conversation with business men and by observation of the conditions of both retail and wholesale trade. There is a strong desire among Americans that encouragement should be afforded by legislation for the opening of American banks, which shall do business according to American methods, and afford a convenient means of increasing trade with the United States. Among the officers of the army and navy and other public officials, there is also a strong desire for the creation of a legal depositary for United States funds in the custody of public officials. All these ends appear to be legitimate, and can be promoted by legislation so far as such legislation will tend to remove the obstacles imposed by law to the extension of banking facilities.

Such banks as are needed can not be created in the islands under present conditions, because of the prohibition upon the grant of franchises embodied in the last army appropriation act. It is doubtful whether, even in the absence of that restriction, they could be constituted under the National Banking Act and made responsible to the Comptroller of the Currency without direct authority of Congress. In any case no National bank of the United States can lawfully maintain a branch under the interpretation given by every succeeding Comptroller of the Currency to the National Banking Law. It is not possible, therefore, under existing law for any National bank to be established in the Philippine Islands, nor for any National bank of the United States to establish a branch in the Philippine Islands.

Outlines of the Plan Proposed.

For these reasons it is recommended that the National Banking Act be extended, with certain modifications, to the Philippine Islands, and that these modifications include, as the vital conditions of the usefulness and success of American banks, the power to establish branches and to issue circulating notes. This subject was considered in detail by the Philippine Commission, and a plan was agreed upon, upon my recommendation, acceptable to the commission. Its outlines are as follows:

1. That provision should be made by Congress that no person, firm, or corporation shall be permitted to conduct a banking business, or to establish or maintain a branch bank, in the Philippine Islands after June 30, 1902, without the written approval of the Government of said islands.

2. That full power should be conferred upon the Government of the Philippine Islands to frame and enforce regulations regarding the business of banking, including the appointment of examiners and the right to have access through such examiners to all the records and assets of all banks doing business in the Philippines.

3. That the laws relating to National banking associations in the United States

Digitized by Google

should be extended to the Philippine Islands, with certain important modifications regarding the creation of branches and the issue of circulating notes.

4. That National banks established in the Philippine Islands and National banks of the United States should have authority, with the approval of the Government of the Philippine Islands, to establish branches in any part of said islands and in the United States, but that branches in the United States should not be permitted to discount commercial bills or to make advances upon securities when such transactions are carried on wholly within the United States.

5. That circulating notes may be issued by the Comptroller of the Currency of the United States, under the conditions hereinafter set forth, to any National bank established or having branches in the Philippine Islands, to the amount of fifty per cent. of the paid-up capital of said bank without the deposit of United States bonds required by the National Banking Law, but without suspending the provision that bonds shall be deposited to the amount of one-fourth of the capital, but not exceeding $50,000.

6. That the conditions governing the issue of such notes shall be that they shall constitute a first lien upon all the assets of the issuing bank except public funds; that they shall pay a tax at the rate of one-half of one per cent. per annum into a guaranty fund; that they shall be protected by a cash reserve equal to twenty-five per cent. of the amount of the notes outstanding, of which one-half may be in first-class gold bills or on deposit in some other bank; and that notes shall not be issued in denominations of less than five pesos.

7. That the power to issue notes should not be granted to any bank having a capital of less than $500,000.

8. That the guaranty fund constituted by the payment of the tax upon circulation should be employed for the immediate redemption of the notes of failed banks, but that such fund should have a lien upon the assets of a failed bank for the amount thus paid for the redemption of the notes.

9. That the Spanish-Filipino Bank should be required to comply with the requirements regarding circulation governing National banks, except that it may maintain a circulation equal to the whole of its paid-up capital instead of fifty per cent. of such capital.

10. That mortgage banks should be authorized by the Government of the Philippine Islands for making loans upon real estate and agricultural products, and that other banks having a capital of $1,000,000 or more may set aside an amount not exceeding one-fourth of their paid-up capital for mortgage business.

11. That mortgage banks should be permitted to loan upon real estate not more than one-third of its value, according to impartial appraisement, and should not be permitted to loan more than one-tenth of their aggregate resources to any one person, firm or corporation.

12. That the Treasury of the United States should be authorized to receive deposits from the Government of the Philippine Islands, and that the treasuries of the two Governments should be authorized to carry on any convenient and proper transactions with each other.

13. That the treasury of the Philippine Islands and its branches may be designated by the Secretary of War as legal depositories of public money.

Classes of Banks to be Dealt With.

The classes of banks with which Congress and the Government of the Philippine Islands will have to deal may be divided arbitrarily into four:

1. National banks of the United States which may establish branches in the Philippine Islands.

2. National banks whose head offices are established in the Philippine Islands.

Digitized by Google

3. Banks not national issuing notes in the Philippine Islands.

4. All other banks doing business in the Philippines, including the existing foreign banks, American and foreign loan and trust companies, mortgage banks, Savings banks, and all other forms of investment and finance companies.

It is recommended, therefore, that the National Banking Law be extended to the Philippine Islands, but with several important modifications. The most important of these, beyond those which are merely incidental to the extension, are the power to establish branches, the power to issue notes under different conditions from those imposed by the present National Banking Law, and the authority to devote a small portion of capital to mortgage loans. Among the incidental changes recommended is the amendment of the requirements as to the residence of directors, so that any resident of the Philippine Islands may lawfully act as director of a National bank engaged in business in the Philippines.

Power of Foreign Banks in the Orient.

An American bank doing business in the Orient will be confronted by foreign competitors long established, of unquestioned credit, and possessing great resources. English capital for many years dominated the colonial and foreign banking field, especially in the East, but has recently encountered powerful competition in French, German, Belgian and Russian institutions, or in banks deriving their capital from these sources. No less than nine large banks do business in Hongkong, and other powerful institutions are scattered over Japan and the Russian and French establishments in Eastern Asia. A few of the leading banks doing business in the East, with their capital and reserve funds, appear in the following table:

	Capital and reserve (local currency).	*Capital and reserve (equivalent in United States currency).*
Hongkong and Shanghai Bank	$23,700,000 (Mexican)	$11,500,000
Chartered Bank of India, Australia and China	1,500,000 (pounds sterling)	7,500,000
Deutsch-Asiatische Bank	5,000,000 (Shanghai taels)	5,000,000
Imperial Bank of China	2,500,000 (taels)	5,000,000
Mercantile Bank of India	602,500 (pounds sterling)	3,000,000
Yokohama Specie Bank	26,500,000 (yen)	13,000,000
National Bank of China	324,374 (pounds sterling)	1,500,000
The Bank of Japan	44,600,000 (yen)	22,000,000
Japanese private banks	209,973,431 (yen)	104,000,000

These banks represent only a part of the banking power available in the Orient for competition with American institutions. London is still the center of foreign banking enterprise, and in that city are the head offices or the London offices of some thirty large banks organized to do business in British dependencies and foreign countries, independently of the banks organized chiefly for domestic business in Great Britain and Ireland. The deposits of these colonial and foreign banks having offices in London are about £200,000,000, and represent an advance of nearly a thousand millions of dollars of English money for the development of trade in the British colonies and in foreign countries.

It is this great banking power against which American banks must contend in seeking business in the Orient. It is obvious that if American banks are to make head against such competition they should be benefited by all the privileges and armed with all the proper powers which Congress can confer. These foreign banks derive their power largely from their ability to establish branches throughout the world. There is hardly any Government but that of the United States which prohibits the creation of branch banks and limits its national banking institutions to a single office for doing business. Some idea of the use which has been made of the

Digitized by Google

power to establish branches in the leading commercial countries of the world may be obtained from the following list of the number of banking offices in different countries:

	Number of banking offices.
English banks	4,741
Scotch banks	1,061
Irish banks	678
Bank of France	125
Imperial Bank of Germany	330
Bank of Belgium	40
Canadian banks	500

These figures show that the power to establish branches has been freely availed of in all these countries. The figures are incomplete for France and Germany, because they relate only to the central bank of issue and do not include the branches of the other large commercial banks of those countries. The banking business of France is almost wholly concentrated in the hands of five large institutions with head offices in Paris and with branches scattered throughout the Republic, but the exact number of branches is not available. In Germany also many powerful financial institutions compete with the Imperial Bank, and have their branches in every part of the Empire. The same is true, though in a less degree, of Austria-Hungary and of every other country of Europe.

The value of these branches is not merely in giving great power to the central bank, but in affording a channel for the diversion of capital from the points where it is least needed to those where it is most needed. A striking illustration of this transfer of capital is afforded by the history of the Australian banks. Most of them have their head offices nominally in Australia, but all have branch offices in Great Britain. By means of these British branches they have been able to gather up many millions of the savings of British investors and transfer them to Australia for investment on more liberal terms than could possibly be obtained by their employment in Great Britain.

Reliance upon small and isolated banks for the development of the Philippines and for the management of American business there would involve many other objections than their inherent weakness and isolation. They would be unable to attract large deposits of American capital seeking safe employment, and would be limited in the resources they disposed of to their own capital and the local funds of depositors in the Philippines. Scarcity of capital would continue under such a system to retard the development of the islands, and the lack of close association with other American banks would place the local banks of the Philippines more or less at the mercy of their powerful foreign rivals.

The Pressing Need for Paper Currency.

The paper currency of the Philippines is now limited to the issues of the Spanish-Filipino Bank, and such amounts of American paper money as may happen to come to the islands through the operations of the War Department and in the pockets of visitors. This American money rapidly disappears, because it possesses a higher exchange value in Mexican silver at Hongkong and other places than at Manila. The act of the Philippine Government, fixing the value of the American dollar at $2 in Mexican silver, has not seriously affected the quotations of Mexican dollars in other places and has not prevented their fall below fifty cents in gold since the cessation of the acute demand for them in the summer and autumn of the year 1900 for the military operations in China. The quotations of Mexican silver dollars have tended to fall to the level of silver bullion, and have fallen below the official rate fixed at Manila. This fact has inevitably tended to drain American money rapidly away

Digitized by Google

from the islands, and even such quantities as remain in the hands of disbursing officers are not all of the denominations required for the convenience of trade. The tendency of American currency to leave the islands will persist so long as present conditions continue, and will probably not be seriously arrested if a sufficient quantity of distinctive silver coins are issued as the basis for monetary operations in the islands.

The Spanish-Filipino Bank has claimed the privilege, under a grant from the Government of Spain, of issuing circulating notes to the amount of three times its paid-up capital. This paid-up capital is $1,500,000 in Mexican currency, entitling the bank under this claim to issue $4,500,000 in circulating notes. The actual issues, according to a statement made by the directors of the bank before Judge Ide, the Secretary of Finance and Justice, at a hearing given on September 9, 1901, never exceeded 3,400,000 pesos. These issues have recently been reduced by degrees to about 2,100,000 pesos, and the directors of the bank have expressed their willingness to conform to the wish of the Philippine Government that the issues should be reduced to the amount of the paid-up capital, or to 1,500,000 pesos. This is equivalent to only $750,000 in gold at the official rate of exchange established at Manila, and even this amount would be subject to deduction if allowance were made for notes lost or destroyed, which still figure as a part of the outstanding obligations of the bank. Leaving aside the American money, which tends to disappear under present conditions, these issues of the Spanish-Filipino Bank, amounting to $1,000,000 or less, constitute the only paper money available in the Philippine Islands.

It is obvious that this small quantity of paper is insufficient for the needs of an active trade. This is pre-eminently true in a country where silver is the usual money in use and payments of large amounts can not be economically made in gold coin, as they can be where gold coins are in universal use. Much complaint is made of the difficulty of carrying even moderate amounts in Mexican silver dollars, especially since these coins have come to represent a value of only fifty cents in gold. The fact that the demand for paper is acute is indicated by the difficulty which the directors of the Spanish-Filipino Bank have encountered in reducing their paper issues. Nearly all the notes in circulation are much worn and defaced, but they are not paid into the bank for reissue, because it is known that the bank is pursuing the policy of reducing its paper issues. As stated by one of the directors of the bank at the hearing already referred to, the notes are a continuing obligation, payable on demand, but without set date of payment. It is not possible to call them in when their holders do not choose to present them, unless by notice of repudiation after a certain date, which would be contrary to the principles upon which notes are issued by solvent banks.

Necessity of Liberal Provisions for Note Issues.

Ability to obtain a larger volume of paper currency is not only vital to the prosperity of the Philippines, but the privilege of issuing notes upon a profitable basis is one of the most effective weapons of competition with the foreign banks which can be put into the hands of American banks doing business in the islands. This weapon will not be supplied by the power to issue notes under the provisions of the present National Banking Law, requiring the deposit in the Treasury of United States bonds for the full face value of the notes issued. This privilege would certainly not be availed of sufficiently to supply the paper circulation urgently needed in the Philippine Islands. The reason why it would not be availed of is found in the relatively small profit obtained upon circulation when thus secured, with the various restrictions which govern it, when compared with the profit obtained by the direct loan of the capital without the formalities attending its investment in bonds.

Circulating notes will not be issued by any bank under conditions which afford no

Digitized by Google

profit. The contraction of the bank currency which went on for many years, even in the United States, because of the high price of bonds, is a slight indication of the influences which would operate on an American bank doing business in a country where a much higher rate of return can be earned by capital than under present conditions at home. The obstacles to issuing notes in the Philippines based upon United States bonds would be greater than in the United States, because of the absence of a local bond market, the necessity of obtaining bonds from long distances at high prices, and the delay which would occur in reducing circulation and getting possession of the bonds when market conditions suggested it. It is not an unreasonble assertion that American banks, clothed only with the power of issuing notes under the conditions of the present National Banking Law, would, because of these obstacles, entirely refrain from issuing notes and would leave the islands without any increase in this class of paper currency.

It is recommended that different and more liberal provisions be made in respect to note issue, holding out sufficient prospect of profit to induce National banks established in the Philippines to supply the pressing need for currency. There can be no question of the safety of such issues in the case of banks with the large capital which has been suggested in this report, with their profits and losses diffused over different sections and different countries through the system of branches. The colonial and foreign banks having their head offices in London issue notes upon their general assets in various countries of the Orient, Africa and South America without depositing special pledges with the British Government or with the local government where they are established for the security of these notes. The reputation and resources of the bank are in many cases superior to any reputation for security which they would derive from having deposited any part of their assets as pledges with the local governments.

The deposit of the assets of a bank in a Government office or in any place out of its own custody deprives the bank of that quick command of its resources which is one of the fundamental principles of safe commercial banking. Even where the English law sometimes requires banks to hold certain classes of assets against their issues of notes, these assets are held in most cases in the bank itself, and the bank is not required to part with control over its resources. The same is true of all the great banking institutions of the European Continent. The special securities required for the protection of circulation are held by the bank itself, and are not segregated in the public treasury from its banking resources. Whatever distinction may be drawn between the business of these banks, because of their size and the importance of their transactions, and the business of local banks in the United States, will not lie against this class of banks to be established in the Philippine Islands if the recommendations of this report are adopted, because such banks will conform more closely to the great banks of issue in Europe than to the isolated banks of modest capital in the small towns and cities of the United States.

A circulating note is only another form of certified check put into a form which permits its ready transfer from hand to hand without indorsement. As an obligation of the bank it differs in no essential respect from the obligation to a depositor, except where its character is strengthened by making it a preferred lien upon all the assets. Both the deposit obligation and the note obligation are liabilities payable on demand. If there is any distinction, it is in favor of the note obligation, because a note circulates through many hands and is less likely than a deposit obligation to be a subject of frequent demands upon the bank. The power to issue notes instead of issuing obligations in the form of deposit receipts is important in an undeveloped country, because the people of such a country are less accustomed than in a fully developed country to the use of other forms of credit. To deprive them of that form of credit is to discriminate against those seetions which desire notes and in

Digitized by Google

favor of those sections which make use chiefly of deposit accounts and checks. There is no reason by which this discrimination can be justified unless it is required by public security and convenience. Upon these grounds it is only necessary to provide that the power to issue notes shall be safeguarded in a manner which will insure the redemption of the notes in full in case of the failure or liquidation of the bank by which they are issued.

Safeguards Suggested for Note Issues.

The safeguards recommended in regard to the issue of circulating notes by banks in the Philippine Islands are:

1. That notes shall not be issued except by banks with a capital of $500,000 or more.

2. That notes shall be a first lien upon all the assets of the issuing bank.

3. That notes shall not be issued beyond the amount of fifty per cent. of the paid-up capital of the bank.

4. That a reserve shall be kept in cash or in cash obligations equal to twenty-five per cent. of the amount of the circulation outstanding.

5. That banks issuing notes shall continue to make the deposit of $50,000 in United States bonds required from National banks with a capital of $200,000 or more as a preliminary to beginning business, and that such bonds shall constitute a part of the security for note issues.

6. That a tax at the rate of one-half of one per cent. per annum shall be paid upon the circulation actually outstanding, whose proceeds shall constitute a safety fund to be used, if necessary, for the redemption of notes of failed banks beyond the amount provided by the first lien upon their assets.

7. That bank notes shall not be issued below the denomination of five pesos, or $2.50.

These safeguards are abundantly sufficient, judged by the history of banks of issue during the last century in the United States and in other countries, to insure the redemption of the notes of failed banks in full in all cases. The effects of limiting the issue of notes to large banks have already been pointed out.

The provision that the notes shall be a first lien upon the assets would in itself provide for the payment of the notes in full in almost every case, without permanent drafts upon the guaranty fund. The average dividends paid by National banks in the United States which have been placed in the hands of Receivers have been about seventy-five per cent. The assets have rarely fallen below the amount required to pay the full value of the circulating notes. If this is the experience with several thousands of isolated banks, some of them of very slender resources and conducted by persons with limited banking experience, a much better showing would obviously be made by strong banks with widely diffused resources and such a limited power of issue as is proposed for the Philippine Islands.

The limitation of the amount of notes issued to fifty per cent. of the capital of the bank is a precaution which goes beyond that of the banking law of Canada, where the system has been most effectively worked out of issuing notes upon the general credit of the banks. Banks are there permitted to issue notes to the full amount of their capital and are not required to deposit any pledges in the custody of the Dominion Government, except the bank-note guaranty fund, which is constituted from the proceeds of the tax upon circulation. In the few cases of failure which have occurred since the creation of the guaranty fund, the notes of the Canadian banks have remained constantly at par and have been redeemed promptly from the fund without seriously reducing its amount. The Government has been able in nearly every case to recover from the assets of the bank on behalf of the fund a sufficient amount to cover all the amounts disbursed for the redemption of the notes.

Digitized by Google

SUSTAINING THE GUARANTEE FUND BY TAXATION.

The sufficiency of the rate of taxation provided for maintaining the guaranty fund may be judged from the history of the National banking system of the United States. The rate of taxation there levied upon circulation from the beginning of the National system until very recently has been one per cent. per annum. The proceeds of this tax have been about $90,000,000. The total circulation of failed National banks at the time of failure has been about $22,000,000. If the notes represented by this circulation had not been secured by United States bonds, but had been a claim upon the general assets of the issuing banks, seventy-five per cent. of this amount, or about $16,500,000, would have been provided for from the general assets. This would have left $5,500,000 to fall upon the guaranty fund, if such a fund had been constituted from the proceeds of taxation. As this fund would have been $90,000,000, the demands upon it would have been less than one-fifteenth of this amount, and the fund would have scarcely felt the effect of paying these losses. It is obviously safe, therefore, to make the tax one-half the rate which has been collected upon the circulation of National banks in the United States, or one-half of one per cent. Such a tax would have raised upon the circulation of the National banks up to a recent date, $45,000,000, or about nine times the demands which would have been made upon the guaranty fund if the notes of failed National banks had not been secured by United States bonds.

Additional safeguards are provided for the circulation proposed for the Philippines in the provisions for a specific cash reserve against circulation and for the continuance of the system of minimum bond deposits by banks entering upon business. A bank having a capital of $500,000 would be permitted to issue only $250,000 in the class of notes recommended in this report. These notes would be covered at the outset to the amount of twenty per cent. by the bond deposit which is required as a preliminary to beginning business under the National Banking Law. The further requirement that banks should hold a reserve of twenty-five per cent. of their circulation, or an amount of $62,500, if they issued circulation to their full legal limit, would add another safeguard, raising the total proportion of the circulation fully covered by special security to forty-five per cent. There would be still another small amount in the custody of the Government to make up the five per cent. fund for the current redemption of notes. If this fund and the other two resources mentioned remained unimpaired, the notes would be covered by actual cash or bonded security to the amount of fifty per cent. of their face value. It is possible that in case of failure the cash reserve required against circulation would be found to be somewhat impaired, but frequent reports of the state of this reserve and of the other resources of the bank would enable the bank examiners and officials to note any weakness in bank management, and to take prompt steps to correct it or close the bank before its resources became further impaired. Deliberate fraud in making returns might conceal a depleted reserve between the dates of two inspections, but all banking experience demonstrates that such fraud is rare and is extremely difficult in the case of a large bank having many agents and high-salaried officials of supposed good standing and responsibility.

The requirement that a cash reserve shall be kept against circulation goes beyond the requirements of the National Banking Law in respect to notes secured by the deposit of bonds in the United States Treasury. There is at present no requirement for a cash reserve against circulation except the small fund of five per cent. for current redemption deposited in the Treasury at Washington. It is proper that such a reserve should be kept, because it constitutes a resource more immediately available for cash demands than any class of securities. It is recommended, however, that half of this reserve may consist of gold bills drawn upon countries out-

Digitized by Google

side of the Philippine Islands or in deposits in other banks. The sale of such bills or drafts upon such foreign bank deposits are the equivalent of gold and would be more acceptable than coin or bullion when the demand for money took the form of a demand for export.

STATUS OF EXISTING BANKS.

The adoption of a new banking system in the Philippines is necessarily complicated by consideration of the status of existing banks in the islands. The principal commercial banks are three in number—the Spanish-Filipino Bank, and branches of the Hongkong and Shanghai Banking Corporation, and the Chartered Bank of India, Australia, and China. The latter banks, both owned in England, do not issue circulating notes and will come under regulations adopted by the United States or the Government of the Philippine Islands only so far as those regulations apply generally to all banks of their character. All of these banks have abundant capital, are prudently conducted, and are entirely safe in their character and management. The two English branch banks have behind their obligations in the Philippines the great resources of the parent banks, and the Spanish-Filipino Bank has a surplus fund equal to more than fifty per cent. of its paid-up capital.

The case of the Spanish-Filipino Bank stands upon a different footing from the others in respect to the issue of notes. This bank claims the exclusive right of issuing notes within the entire Philippine Archipelago under a special charter of the Spanish Government. The bank was founded in 1851, and is governed by by laws and regulations approved by the Spanish Government in a royal decree dated October 17, 1854, with subsequent amendments. The last decree of the Royal Government was dated July 14, 1897, and approved changes in the by-laws recommended to the bank in the previous year. The original capital of the bank was 400,000 pesos, divided into shares of 200 pesos each, payable to order. Authority was given by several subsequent decrees to increase the capital to 4,500,000 pesos, but this authority has been availed of only to the limit of 1,500,000 pesos. The decree of October 17, 1854, granted to the bank the exclusive right to issue notes payable to bearer on demand, for general circulation in the Philippine Islands. The decree of June 5, 1864, authorized the bank to issue notes to the amount of double its paid-up capital. The decree of February 7, 1896, authorized the issue of notes to the amount of three times the paid-up capital of the bank, subject to the provisions of article 180 of the commercial code, which provides that banks shall keep in their vaults in cash at least one-fourth of the amount of the deposits and current cash accounts and of notes in general circulation. The same decree extended the charter of the bank for twenty-five years from the date of the expiration of the present grant, which is January 1, 1903.

CLAIMS OF THE SPANISH-FILIPINO BANK.

The Spanish-Filipino Bank under these grants claims that its exclusive right to issue circulating notes in the Philippine Archipelago continues unimpaired until January 1, 1928, and that its authority extends to the issue of 4,500,000 pesos of such notes. The actual maximum attained by the issue was about 3,400,000 pesos in 1898. The amount has since been reduced to about 2,100,000 pesos and is still in process of reduction. The legal question, whether the exclusive privilege claimed by the bank is one which cannot lawfully be impaired by the government of the Philippine Islands, is one of a comprehensive character, involving important considerations of Spanish and American law regarding the obligation of contracts and the character and sanctity of the franchise. Without undertaking to deal with these questions, it may be pointed out that the Congress of the United States would probably be able to find means to render the privilege of the bank nugatory, under the decisions of the Supreme Court sustaining the power of Congress to levy a tax of

Digitized by Google

ten per cent. upon the issues of banks other than National banks. In my opinion it would not be advisable to exert such a power as this, not only because of the arbitrary character of such action toward the bank and the effect it might have upon its credit and that of its many commercial patrons in Manila and throughout the islands, but because of the contraction which it would operate in the volume of paper currency. Such action, taking effect at any near date, would be likely to invoke something like a commercial crisis, which would be without excuse.

It is obvious, however, that the existing privileges of the Spanish-Filipino Bank, in so far as they restrict the power to establish other banks of issue, are in conflict with the interests of the commerce of the Philippines and are, therefore, opposed to the public policy of the Government of the United States and of the Philippine Islands. Fortunately, the directors of the Spanish-Filipino Bank appear to recognize this fact and to be ready to adapt themselves to the new conditions established by American sovereignty and the increase in American trade which will naturally follow. The bank is governed in its ordinary commercial transactions by two directors. More important questions are submitted to a board of governors, and questions affecting the statutes of the bank are submitted to meetings of the shareholders. The two directors, Messrs. Balbas and La Rosa, appeared before Judge Ide, the Secretary of Finance and Justice, during my presence in Manila, on the occasion already referred to, and discussed with him a recent dispatch from the Department at Washington suggesting that the circulation be brought within the limits of the paid-up capital of the bank. Both gentlemen expressed their willingness to comply with this suggestion and to adopt other safeguards conforming in some respects to the American law regarding the issue of notes. They were willing as soon as practicable to reduce their circulation within the limits of the paid-up capital, to deposit bonds with the Government of the Philippine Islands as partial security for their outstanding notes, and to maintain the reserves already required by Spanish law. In respect to the exclusive character of the privileges of the bank they reserved an official opinion for the judgment of their shareholders, but Senor Balbas, the managing director, frankly expressed his personal opposition to monopoly, and evidently anticipated that the exclusive privilege would be objected to by the American Government.

Need for Mortgage Banks.

One of the most influential means of promoting prosperity in the agricultural districts of the Philippine Islands would be a system of loans at moderate rates to agriculturists. The desire for some system of such loans was strongly expressed in many towns and provinces on the tour of the commission for the creation of civil governments, and such a system is vigorously urged by the commission in their annual report. The methods of agriculture now employed in the islands are antiquated and fail to yield the best results attainable by the culture of the soil. Even such slender resources for their development as the people possessed prior to the insurrection of 1896 have been impaired by the disorders of the succeeding five years, down to the restoration of civil government in the spring of the present year. The means of education in better methods are being offered, to some extent, by the system of agricultural colleges which is provided for in the scheme of education prepared by the efficient Commissioner of Education of the islands. The instruction given in such improved methods can not well be availed of, however, unless cultivators have the means of acquiring good seed, draft animals and modern tools. Only by some system of agricultural loans can these means be placed in the hands of the people, and the stimulus given to the agriculture of the islands which will produce the results which their rich resources are capable of yielding. Interest rates for agricultural loans are now excessively high. Small money lenders charge inter-

Digitized by Google

est running as high as twenty-five per cent. per annum, and in some cases approaching, with commissions and charges, the almost incredible limit of forty per cent. A large corporation which does business in Negros, nominally charges twenty-five per cent., but in effect collects from thirty to forty per cent. upon the value of the amount loaned, by requiring that the crop of the borrower shall be delivered at the price fixed by the company, that purchases of supplies shall be made from its stores, and that other operations connected with the marketing of the crop shall be conducted under its charge and at its profit. It is obvious that under favorable conditions a rich field lies open here for the loan of American capital at rates which will greatly relieve the present condition of borrowers in the Philippines and yet afford profits far in excess of those which are usually earned in enterprises at home.

RESTRICTIONS UPON MORTGAGE BANKS.

The limitations which should be imposed upon banks engaged in the mortgage business are the fundamental ones which distinguish such forms of banking from commercial banking. Banks engaged in accepting deposits payable on demand and especially those engaged in the issue of circulating notes, which are also payable in lawful money on demand, can not safely embark any portion of their deposits in securities which can not be quickly converted into cash at need. A bank devoted wholly to mortgage business, on the other hand, may derive its resources, if it is properly conducted, from deposits for long terms or from the sale of bonds payable at fixed dates. The method adopted by the leading mortgage banks of Europe, to which the Philippine Commission have made reference in their annual report, is to sell bonds from time to time in comparatively small blocks maturing in a general way and on the average at about the time when given amounts of their mortgage loans mature. The proceeds of the loans constitute the resources from which the bonds may be redeemed. In practice new issues of bonds are usually eagerly taken by investors and the proceeds applied to the continuance of old loans and the granting of new ones, but the condition of solvency required for such banks is the same as that for commercial and note-issuing banks—that they shall have at command the resources for meeting their obligations when they mature. The difference between them consists in the fact that the obligations of commercial banks may mature at any moment without notice, while those of mortgage banks mature only at fixed dates against which full preparation can be made.

If Congress authorizes mortgage banks in the Philippine Islands, it is recommended that such banks be governed by the following restrictions:

1. That no such bank shall be authorized with a less capital than $250,000.

2. That such a bank shall not loan more than ten per cent. of its aggregate resources to any one person, firm or corporation.

3. That such a bank shall not loan upon any real estate more than one-third the market value of such property as determined under regulations to be framed by the Government of the Philippine Islands.

4. That such a bank shall not loan more than one-third of its aggregate resources upon the security of building lots or buildings in cities or large towns.

5. That such banks shall be subject to such visitation, inspection, and regulation as may be imposed by the Government of the Philippine Islands.

SCOPE OF THE MEASURES RECOMMENDED.

The possession of a sound and sufficient currency is one of the most essential factors in the industrial progress of any community, because the state of the currency affects all classes of business transactions and every individual. In this respect the proper regulation of the currency is more important than the regulations governing almost any other single branch of the public administration or those affecting any one or several industries. In making the recommendations em-

Digitized by Google

bodied in this report the effort has been made to consider all aspects of the needs of the Philippine Islands and of their future growth. The systems of coinage and banking recommended are capable of indefinite expansion as the need for money and credit extends with the growth of business.

Unless it contains defects which are not apparent, this system will, if adopted, require no material change for many years to come. The tendency of the silver coins which are proposed will be, if they are exported for any reason, to return to the Philippine Islands, because they will have a higher exchange value in gold in Manila than their bullion value in any foreign country. Containing less silver than the Mexican silver dollar, they will not pass into general circulation in other countries where they are not legal tender and where silver money tends to the level of the price of silver bullion. If, however, the new coins should prove acceptable in foreign countries, as have the Mexican silver dollar and the British dollar, the Government of the Philippine Islands would profit rather than lose by such a condition, because a seigniorage would be derived from the additional coinage, and these profits would be added to the reserve fund held in Manila for maintaining the coins at par with gold.

It is one of the most important conditions of the progress of the islands that the currency system should be such as to attract American and foreign capital by the assurance that investments there can be realized upon at any time in the standard money of the world. For this important result of bringing into the islands the means of developing their great natural resources even some temporary benefits might well be sacrificed, if such benefits pertained to the existing system or to a special silver coinage. The system proposed, however, is substantially the system of two other important oriental countries—British India and Japan—and conforms to the standard of the European countries with which the chief trade of the Philippines has heretofore been conducted. By continuing the use of silver upon substantially the present basis the consequences of any jar attending the adoption of a new system will be avoided, and all the benefits will be attained which would be derived from either the silver standard alone or the complete introduction of American currency.

The maintenance of the gold standard in a country of small resources depends to some extent upon the state of its trade relations with other countries. In the case of Japan large imports of merchandise undoubtedly had something to do with the loss of gold in the year 1900. The effect of this pressure for gold was intensified by the absence of a well-regulated stock market, which serves in every country as a buffer between the market for merchandise and the market for gold, lightening the shock of any special demand for either class of commodities by affording another acceptable means of exchange and permitting the adjustment of international balances without strain upon the currency system. In the Philippine Islands the course of business in the future should be such as to preclude any pressure for gold and to increase the supply of metallic money.

If American capital comes to the Philippines in large amounts for investment it will come chiefly in the form of agriculture, mining, and manufacturing machinery, railway equipment, and supplies for the maintenance of laborers. Investments of capital in undeveloped countries are inevitably made in these forms in the ultimate analysis, since the money advanced by the investor is expended by promoters for these necessary elements in carrying on their enterprises. So long as these investments exceed the demands upon the islands there will be an excess of imports of merchandise, which will not require to be paid for by a countermovement of merchandise or gold. On the contrary, the only compensation made to the investor will be in the form of printed certificates of bonds or shares, whose issue will not for the time being impose any burden for repayment of the principal upon the productive resources of the islands. Contented with a small portion of the net proceeds of the

Digitized by Google

islands in the form of interest, the whole body of investors, including those entering the market with new savings, will steadily send more to the islands than they take away.

If any danger is to be feared in the influence of the balance of trade upon the maintenance of the gold standard, it would arise only at that distant date at which new capital would cease to enter the islands and the profits of existing enterprises would be continuously withdrawn under a system of absentee ownership. This condition is too problematical and too far in the future to call for legislative provisions at the present time except such as will tend to keep capital in the islands and encourage its continuous investment and the investment of the interest upon it in new enterprises. This continuous reinvestment of capital was the history of British investments in Australia, until a shock was given to confidence in 1893 by excessive loans by the banks upon landed security, which deprived them of the power to meet their demand obligations. The drain of the precious metals from a country suffering from unfortunate economic conditions will affect either metal which may happen to be the standard, whether that metal be silver or gold. Against such unfavorable conditions it is not the function of currency legislation to make direct provision, but such provision is indirectly made in a manner which is highly effective by the adoption of a system which insures the stability and sufficiency of the circulating medium in all its forms, and holds out the inducement of security and opportunity for the continuous reinvestment of capital.

The disturbing influence of demands upon the stock of metallic money is greatly mitigated in any country by a flexible and unfettered bank-note currency. Such a currency automatically takes the place of coin in meeting pressing demands for the tool of exchange, and the demand for it throws upon the banks the obligation of restoring the supply of precious metals in order to maintain the reserves required by law. A bank-note currency such as is recommended in this report is capable of indefinite expansion as the demand increases for additional credit facilities and for a larger volume of money. It is a necessary forerunner of the system of checks and deposit accounts—those more perfected forms of credit which tend to supersede it in advanced commercial communities. If the duty is imposed upon the banks, as proposed, of maintaining specified reserves against every increase of their issue, they will be led by self-interest and the interest of the business of the islands to supply a sufficient volume of paper currency and at the same time to protect it by an increase in the metallic stock adequate to the expanding needs of trade. Such an auxiliary to a proper coinage system will do much to promote its successful operation, to lighten the burden of interest charges upon the Filipino people, and to hold out the inducement to the large investment of American capital so essential to the prosperity of the country and the justification of American sovereignty both to the people of the islands and the citizens of the United States.

All of which is respectfully submitted. CHARLES A. CONANT.

WASHINGTON, D. C., November 25, 1901.

NOTICES OF NEW BOOKS.

[All books mentioned in the following notices will be supplied at the publishers' lowest rates on application to BRADFORD RHODES & CO., 87 Maiden Lane, New York.]

HOW TO READ THE MONEY ARTICLE. By CHARLES DUGUID. London: Effingham Wilson.

Although written for English readers, this work contains a great deal of valuable information for American financial students also. Explanation is given of many of the technical terms employed by writers in dealing with topics bearing on the finances, and the influences of various conditions on the money markets and business matters generally.

THE LAW OF PROMISSORY NOTES, DRAFTS, CHECKS, ETC. By LESLIE J. TOMPKINS, M.S., LL.M. New York: Business Publishing Co.

This is a very concise and conveniently arranged statement of the law and rules relating to notes, checks and negotiable instruments in general, and will be found serviceable to bankers and commercial lawyers.

The RISE OF COMMERCIAL BANKING INSTITUTIONS IN THE UNITED STATES, by ADOLPH OSCAR ELIASON, M. A.

In a thesis presented at the University of Wisconsin as a part of the work done for the degree of doctor of philosophy, Mr. Eliason laid down the following proposition: "There were no commercial banks in America during the colonial period. The so-called banks of this period existed merely for the purpose of issuing notes and were not commercial in character. The first real bank to be established was the Bank of North America, chartered in 1781. This tardy rise of banking institutions was due to the peculiar conditions of colonial trade and industry. Commercial banking institutions did not arise until there was a change in these conditions which made the rise and growth of banks necessary, and when they did arise, commercial banking developed in compliance with trade requirements."

We often hear complaints at the present day of "the lack of banking facilities in agricultural communities," and branch banking or some other scheme is prescribed by the currency reformers as the appropriate remedy. In the early history of the country it was thought that paper money, issued on the security of land or merchandise, was what was needed, and the so-called banks of that time were, as Mr. Eliason says, mere paper-money machines. After failures, more or less disastrous, the era of commercial banking commenced as called for by the development of the country. From this it seems that the bank is not the forerunner but an accompaniment of business. It would be, perhaps, too narrow an application of this theory to declare that a bank only measures the volume of business as a clock does time, or as a thermometer registers the temperature. A bank is not quite so passive an instrument as this: for by making business easier and money more effective banks undoubtedly multiply business activity and in time assist in the creation of capital. However, without resources that are capable of profitable exploitation a community can have no need for a bank. Resources of lands, minerals, forests, etc., are not enough; there must be an enterprising population capable of bringing latent resources into a realizable form. The people of Scotland, though laboring under the disadvantages of a small country, and a scanty soil, have made greater progress than the people of many other countries under more favorable conditions. The branch

Digitized by Google

banking system exists in Scotland and in several of the other countries also, but in no case has it been the determining factor in the development of the natural resources. Branch banking may, of course, be an economical form of handling a country's banking capital; but in a country which permits the organization of National banks with $25,000 capital, State banks with $5,000 capital (in some States) and private banks without any known capital, the field is certainly open enough.

Mr. Eliason's monograph gives evidence of thorough and careful research, and the numerous authorities cited show how completely he has covered the early banking and financial history of the country. It is a painstaking and scholarly investigation of two early epochs of the banking history of the United States and a serious and valuable contribution to banking literature.

BANKING: NOTES ON THE ORIGIN AND DEVELOPMENT OF BANKING, AND LESSONS TO BE DRAWN FROM ITS HISTORY. By ARTHUR DOUGALL COCHRANE. London: Effingham Wilson.

In his introduction the author says: "The utmost care has been taken to verify every fact quoted in this book." Perhaps so; but it is not evident that the same care was taken to verify the names used in the work, as Mr. Cochrane speaks of "McCallough's Men and Measures," and "Nathanial Biddle." To demand accuracy, even in the matter of names, is doubtless asking too much of British writers on American finance.

Mr. Cochrane shows us what was the real cause of the American Revolution. He says: "Previous to the American Revolution numerous swindling 'land banks' in what were then known as our Colonies were issuing notes broadcast, and repudiating them afterwards when presented for payment. Professor W. G. Sumner, of Yale University, admits that it was the just repression of these wild-cat schemes by England which led to the Rebellion."

Prof. Sumner's "History of Banking in the United States" is quoted to sustain this view, and with an apparent show of reason. It is doubtful, however, if Prof. Sumner intended to imply that the rebellion of the American Colonies was unjustifiable.

COMMERCIAL TRUSTS—THE GROWTH AND RIGHTS OF AGGREGATED CAPITAL. By JOHN R. DOS PASSOS. New York: G. P. Putnam's Sons.

This is a thorough statement of the legal principles involved in the formation of corporations and combinations. It is contended that vast aggregations of capital do not create monopolies, as exclusive privileges are not conferred.

The author makes a plea for a careful study of the subject before attempting to suppress trusts by legislation, as ill-advised laws designed for the control of commercial relations have been almost invariably ineffective. He cites as an instance of this that there are already severe Federal and State laws against combinations and trusts, but that most of them are not enforced.

Much of the denunciation of large corporations undoubtedly proceeds from those who view all accumulations of wealth with suspicion, and certainly nothing is to be gained in dealing with the great combinations until all the light possible has been thrown on their organization and operation. Mr. Dos Passos has ably stated many of the legal and economic principles that should be kept in mind in forming a proper estimate of the relations of corporations to the public. His optimistic tone regarding trusts will prove an offset to the vague denunciations of the politicians. Perhaps, in the end, it will be found that while the consolidations of capital are not without dangerous possibilities, they may be averted by wise and well-considered public control. Mr. Dos Passos makes a strong argument in favor of that moderation which is an essential to intelligent legislation.

STATE BANKS—REPORTS OF SUPERVISING OFFICERS.

VERMONT.

The report of Frederick S. Platt, Inspector of Finance for the State of Vermont, just received, gives some interesting facts in regard to the Savings banks and trust companies of that State.

The statements and reports show the condition of such institutions at close of business June 30, 1901.

SAVINGS BANKS AND TRUST COMPANIES.

Twenty-two Savings banks and nineteen trust companies have done business in the State during the year ending June 30, 1901.

The aggregate deposits in the Savings banks, Savings institutions and trust companies at close of business June 30, 1901, was $40,209,059, which is $1,918,664 more than was on deposit June 30, 1900.

The number of depositors was 123,151, a gain of 4,797 during the year.

107,695 residents of Vermont had deposits of $33,415,771; 15,456 non-residents had deposits of $6,769,544.

Resident depositors show an increase for the year of 3,896 in number and $1,546,885 in amount of deposits.

Non-resident depositors increased 901 in number and the amount of their deposits increased $348,036.

Three banks have reported among liabilities dividends due depositors July 1, 1901, to the amount in all of $23,742, without classifying same between resident and non-resident depositors.

This $23,742 is included in the $40,209,059 aggregate amount of all deposits, but is not included in either the above division of deposits between resident and non-resident depositors.

The average amount of deposits to each depositor was on June 30, 1901, $326.50, an increase in average for the year of $2.98.

The average deposit to each resident depositor was $310.28, as compared with $307.02, the average June 30, 1900.

The average deposit to each non-resident depositor was $437.99, which is $3.19 less than the average June 30, 1900.

Depositors to the number of 3,460 had each more than $1,500 in a bank. The total amount of such deposits was $7,358,444.53, an average of $2,126.72.

This class of depositors show an increase of 240 in number, $588,425.18 in amount, and $24.24 in average since June 30, 1900.

RESOURCES.

The total resources of all Savings banks, Savings institutions and trust companies on June 30, 1901, were $43,384,106.19 and exceeded the resources June 30, 1900, by $2,029,758.15.

These resources are classified as follows, cents omitted:

DESCRIPTION.	*Amount.*	*Compared with June 30, 1900.* Inc. or Dec.
Mortgages on real estate in Vermont	$8,131,182	$326,911
Mortgages on real estate elsewhere	15,077,207	1,249,389
Loans on personal security	2,807,518	*135,268
Loans on deposit book collateral	169,621	21,372
Loans on bank stock collateral	223,113	19,784
Loans on mortgage collateral	686,334	39,392
Loans on other collateral	364,277	*98,391
Loans to towns, cities, etc	906,266	93,447
United States bonds	855,854	*131,078
Municipal bonds	9,488,310	563,175
Real estate for banking purposes	324,337	2,880
Real estate by foreclosure	674,900	*72,998
Bank stock	472,767	6,703
Miscellaneous assets	88,834	*191,408
Deposits in banks	2,656,264	373,282
Cash on hand	457,313	*37,434
Total	$43,384,106	$2,696,338
Net increase	....	2,029,758

* Decrease.

SURPLUS, TAXES AND EXPENSES.

The twenty-two Savings banks have a "surplus fund reserved" amounting to $1,025,136; this is $41,894 more than the "surplus fund reserved" of the same banks June 30, 1900.

The total surplus and accumulated profits (exclusive of capital stock) of all the Savings banks and trust companies was $2,085,647, an increase during the year of $116,465.

During the last year taxes to the amount of $255,159 have been paid into the State Treasury by the Savings banks and trust companies; this is $18,566 more than were paid the year before.

The expenses of the Savings banks and trust companies for the year have been (in addition to taxes) $201,918.79, which is $11,087.16 more than the expenses of the previous year.

The average expense for each $1,000 of deposits cared for was $5.02, which is four cents more than the average expense per $1,000 for year ending June 30, 1900.

DIVIDENDS TO DEPOSITORS.

The total amount paid (or credited) to depositors as dividends or interest was $1,224,210, which is less by $2,896 than the amount credited the year before.

Savings banks paid interest as follows: Twenty paid at the rate of three and one-half per cent.; two paid at the rate of three per cent.

Trust companies paid interest at the following rates: Three paid four per cent.; four paid three and one-half per cent.; one paid three and one-fourth per cent.; ten paid three per cent.

DIVIDENDS TO STOCKHOLDERS.

The amount of dividends paid by trust companies to stockholders for the year was $51,500, being $1,000 less than was paid during the year previous.

Three trust companies paid no dividends to stockholders; one paid fourteen per cent.; one paid ten per cent.; two paid eight per cent.; seven paid six per cent.; one paid five per cent.; three paid four per cent.; one paid three per cent.

EXAMINATIONS.

I have examined all Savings banks and trust companies during the past year.

I have assisted the State Auditor in his examination of the accounts of the State Treasurer.

Proper vouchers were exhibited and the State Treasurer's books were found to be correct.

FREDERICK S. PLATT, *Inspector of Finance.*

SIMPLICITY OF THE FATHERS.—Jeffersonian simplicity is often held up for the imitation of the present generation of Americans, but the French airs and manners affected by Jefferson in his later years would no doubt cause him to be considered as much of a fop as the latest importation from Piccadilly. John Hancock, who made such a display of his penmanship in signing the Declaration of Independence, literally got himself up regardless of expense, and in most gorgeous fashion, as may be seen from the following, which we quote from a recent monograph on "The Rise of Banking Institutions in the United States," by A. O. Eliason:

"The wealthier families in the Colonies imported nearly all their wearing apparel, and boxes of splendid clothing were brought by every sailing vessel that came from England. Hancock was perhaps the most particular of the colonial gentlemen about his personal appearance and dress. His letter-book shows him ordering goods from his London agents with very careful instructions; such as two wigs for his own use, 'fashionable and of a light color,' and articles for family use 'very neat' and 'of very best kind, cost what it will;' and it is recorded that he was seen at noonday wearing a scarlet velvet cap, a blue damask gown lined with velvet, white satin embroidered waistcoat, black satin small-clothes, white silk stockings and red morocco slippers. Washington was also very exacting about his dress, and his orders for clothing show that he wore wigs, laces and ruffles, and the richest of silks and velvets, all imported from Europe."

This reads like a campaign slander, but no doubt it is authentic. Gen. Benjamin Harrison, afterwards President of the United States, was once defeated for Governor of Indiana by a man whose chief distinction was that he wore homespun trousers. Gen. Harrison was known as "Kid-Glove" Harrison and his competitor as "Blue Jeans" Williams.

Jefferson, Hancock and Washington, were remarkable men, though not above the weaknesses of humanity.

EARLY BANKING IN INDIANA.

[From the Indianapolis "Daily Journal."]

In 1820, four years after Indiana became a State, the population was 147,178, considerably less than the present population of Indianapolis. By the last census it was 2,516,462. Every material interest of the State has grown in the same proportion as the population, and the banking business with the rest. When the State was admitted to the Union there were but two banks within its limits, one at Vincennes and one at Madison, both of which had been chartered by the Territorial Legislature. There are now 492, including National and State banks. The old Constitution, that of 1816, prohibited the establishment of any bank of issue, except that the Legislature might charter a State bank and branches, "not exceeding one branch for any one three counties." The first Legislature passed an act establishing a State bank, with branches at Corydon, Brookville and Vevay, and adopting the banks at Vincennes and Madison. Owing to bad management and dishonesty all these banks failed in 1821, three years after their establishment. For several years after that date there was not a bank of issue in the State. In 1834 the Legislature chartered the old State Bank of Indiana, with a limit of thirteen branches, ten of which were organized within a few months after the passage of the act, and three more, one at Fort Wayne, one at South Bend and one at Michigan City, within the next two years. This bank was well organized, well managed and entirely successful. In October, 1834, Hugh McCulloch, then a rising young lawyer at Fort Wayne, was appointed Cashier and manager of the branch at that place. This was the beginning of his long and honorable banking career. In 1836 he was appointed a director of the State Bank, and he held the office of Cashier of the branch and director of the State Bank until the expiration of the charter, in 1857. No State had a better banking system than the old State Bank of Indiana as long as it lasted. It was a monopoly, as during the existence of the charter no other bank or corporate banking institution could be authorized or permitted in the State. The State held one-half of the stock and elected the President of the bank and one-half of the directors, the stockholders electing the remaining directors. The stockholders of each branch were liable for the debts of the branch to an amount equal to the par value of their shares, and each branch, although independent in respect to its profits, was liable for the debts of every other branch. The branches could issue circulating notes to twice the amount of their capitals, and, while they could not extend their regular discount lines beyond twice their capitals, they could use their surplus funds in dealings in foreign and domestic exchange. The charter contained many wise and conservative provisions, and its directors and managers were capable and honest, so that eventually the bank attained very high credit throughout the country. The charter of the bank for active business expired January 1, 1857, but its legal existence for the winding up of its affairs continued until 1859. Mr. McCulloch, in his "Men and Measures of Half a Century," says:

There was never a more wholesome banking business done between banks and their customers than was done by the State Bank of Indiana and its customers through a large part of its career. * * * If the history of the bank should be written it would be both interesting and instructive. It would be the history of a bank which, although established in a new State and committed to the charge of inexperienced men, through periods of speculation and depression, prosperous and unprosperous years, was so managed as largely to increase the wealth of the State and secure for itself a reputation for honorable dealings and fidelity to its engagements which placed it in the front rank of wisely and honorably conducted banking institutions.

The following extract from McCulloch's book shows how conditions have changed since the early days of the old State Bank. He says:

There were, in the times of this bank, no express companies in the West. Money was carried from place to place by its owners or by private messengers. At the quarterly meetings of the bank directors the accounts between the branches were adjusted. It was at these meetings also that the branches usually obtained their circulating notes. Every director, therefore, in going to or returning from these meetings was under the necessity of taking with him considerable amounts of money, and although the most of the directors traveled on horseback, and were sometimes two or three days on their way, there was no instance of robbery. Fort Wayne was three good days' ride from Indianapolis, mostly through the woods. For fifteen years I made this journey on horseback and alone, with thousands of dollars in my saddlebags, without the slightest fear of being robbed. I was well known upon the road, and it was well known that I had money with me, and a good deal of it, and yet I rode unarmed through the woods, and stopped for the night at the taverns or cabins on the way, in perfect safety.

Travelling facilities in the State have improved very much since then, but it is doubtful if public morals have.

The expiration of the charter of the old State Bank was followed by the establishment, in 1855, of "The Bank of the State of Indiana," and by a few years of disastrous "free banking." Mr. McCulloch was elected President of the new State Bank, his former associates making that a condition of their taking stock. This institution had a short but honorable career, and fully maintained the credit of its predecessor. On the passage of the act of Congress by which notes of all banks except those of the National banks were taxed ten per cent. the Bank of the State went into liquidation. Then began the era of National banks of issue and private banks under the State law, which still continues, and which has contributed very largely to developing its resources and advancing its prosperity. At first Mr. McCulloch was opposed to the National bank system, and in 1862 he went to Washington to oppose the passage of the bill establishing it. After the passage of the bill he changed his mind as to the merits and the necessity of the system and became the first Comptroller of the Currency, and was largely instrumental in popularizing and establishing it.

The present bankers of Indiana are successors to a long line of honorable traditions.

LETTER ADDRESSED TO THE PRESIDENT OF THE AMERICAN BANKERS' ASSOCIATION.

Mr. Myron T. Herrick, President American Bankers' Association, Cleveland, Ohio.

DEAR SIR: In times of extreme monetary stringency in the United States, many banking institutions, in solvent condition, are forced to the wall; and with the instantaneous contraction of credits, the market values of securities and properties suddenly shrink enormously—entailing bankruptcy and hardships upon all classes of the community, and resulting in a stoppage of production, a decrease in consumption, and a fall in prices of manufactured articles and food products. This is largely the result of our present defective banking system.

These defects were plainly illustrated at the recent meeting of the American Bankers' Association in Milwaukee, in papers read by Mr. A. B. Stickney, President of the Chicago Great Western Railroad Company, on "The Medium of Exchange and the Banking Function:" by the Hon. Lyman J. Gage, Secretary of the Treasury, on "The Defects of our Treasury System;" and by the Hon. Charles Francis Phillips, President of the Corporation Trust Company of Delaware, New York city (read before the Trust Company Section), on "The Business of Foreign Countries Analogous to the Trust Companies in the United States."

In his paper and the discussions which followed, Mr. Phillips explained very clearly the democratic and accommodating methods adopted both in prosperous and trying times, by the four great banking institutions of France (with their branch systems), namely: Bank of France, the Credit Foncier, Credit Lyonnais and Societe Generale. Great advantages are realized, not only by the banks in rediscounting loans with each other, but by all classes of people, for whom thousands of small notes are discounted daily—in amounts even as low as forty francs, and at a rate of interest rarely exceeding three per cent.

France, Germany, Great Britain and Canada are comparatively free from bank failures. In times of monetary stringency banks in all the countries named expand their credits instead of contracting them, as we do—thus preventing failures and violent fluctuations in the markets.

Some of the reforms suggested, and which cannot be clearly or satisfactorily discussed during the short sessions of National and State bankers' conventions, are:

First. Provision for a legal emergency circulation, which might be obtained by the incorporation of clearing-houses in the leading commercial centers. This legislation should be secured before another money, credit, or bankers' panic shall occur.

Second. Retirement and cancellation of all demand issues of the United States Government.

Third. Abolition of the United States Sub-Treasuries.

Fourth. A system of large banks—with branch systems—having the power to issue and circulate a banking currency based, possibly, upon the assets of banks, protected by a tax on circulation and enforced redemption of notes at the commercial centers.

Fifth. International American banking institutions. These cannot be established and command the confidence of the world until we put our own house in order at home, and there shall not be the slightest question, anywhere in the world, as to the intrinsic value of the United States dollar.

How can existing laws be repealed and new ones passed by the Congress of the United States?

We learned many lessons in the meetings of the Indianapolis Monetary Convention. One important one was, that, to bring large bodies, representing varied interests, to a substantial agreement, involved the submission of all suggestions to an able committee composed of practical men of affairs, statesmen and competent lawyers; their final report to be the basis for discussion and action.

We were both present at the banquet of the Bankers' Club in Chicago on October 19. One of the speakers, an attorney and member of Congress from Indiana, made a plain statement: That bankers were not agreed among themselves; when they could agree, and submitted their propositions to Congress, they could depend upon favorable consideration.

In a short address at the recent annual meeting of the Bankers' Association of the State of Illinois, Judge Sherman, Speaker of the Illinois House of Representatives, made substantially the same statement; namely, that when bankers of Illinois came to an agreement among themselves as to what they wanted, they could secure legislation in Springfield.

It will take many years to secure, in the Congress of the United States, the legislation to carry into effect the remedies suggested or proposed in the recent meeting of the American Bankers' Association. The work cannot be accomplished during your term of office as president of the association; nor, possibly, by men who have either sought office in the association, or been complimented by appointment to office.

Is it not practicable, however, for the officers and executive committee of the association to call to their assistance bankers, statesmen and lawyers, outside of its own membership, conspicuous for their ability, who will be competent to recommend the repeal of existing laws, and frame for passage new laws which shall ultimately perfect the fiscal policy of the Government, bring greater stability to banking interests, and prevent great losses to all classes of the community? The expenses thus incurred by the association would be money well spent.

As a practical man of affairs, you know something of the political difficulties in the way, and are capable of laying good foundations for this work, and for your successors in office.

Your respectfully,

QUINCY, Ill., Nov. 13, 1901. E. J. PARKER, *Vice-President (Illinois).*

TAXATION IN THE STATE OF NEW YORK.

REPORT OF THE COMMITTEE OF THE CHAMBER OF COMMERCE OF THE STATE OF NEW YORK ON STATE AND MUNICIPAL TAXATION.

To the Chamber of Commerce:

In view of the early meeting of the Legislature your Committee on State and Municipal Taxation deems it right to briefly restate considerations in regard to taxation to which it has adhered, and to which the Chamber has given approval.

Your committee believes that the tendency of the Legislature to create indirect revenue for State purposes, and to look to this revenue exclusively for State purposes, is unwise.

(*a*) Because it takes away from the taxpayers that interest in State expenditures and State taxation which is present when taxation is direct.

(*b*) Because it weakens the sense of responsibility of legislators and tends to promote extravagance.

(*c*) Because it has already so operated as to throw nearly all of the burden of State expenditures on the urban political divisions, and to free a large section of the State from any contributions whatever to the expenses of the State.

(*d*) Because in the pursuit of the purpose to create indirect revenue for the State the principle of uniformity in taxation has been lost sight of.

(*e*) Because it takes from the political divisions, which need for local purposes nearly ten times as much money as the State needs for its purposes, some of the best subjects of taxation, and thus throws a heavier burden on those remaining.

(*f*) Because it encourages the disposition to extend the charges of the State to subjects heretofore considered local, and which, in some instances at least, must be considered purely local.

In view of these considerations, your committee wrought out last winter a bill for local option and apportionment, the purpose of which was to indicate that, by a very simple enactment, the evils indicated above could be avoided for the future, and the State continue the earlier policy under which all local burdens were borne locally and the State burden was divided equitably between the political divisions.

Your committee is of the opinion that the Legislature should not now go further in the direction of selecting special subjects of taxation for the exclusive benefit of the State, but should allow the subject to rest until, as a result of further experience, the people are in better position to judge whether the policy will prove conducive to the best interests of the Commonwealth or the reverse.

Your committee is the more disposed to take this view because it has no reason to believe that the State is in need of new sources of revenue.

Your committee has on several occasions urged that the taxation of mortgages is unwise. It has presented to you the following reasons for its belief:

(*a*) Because the tax cannot fall otherwise in the end than upon the property mortgaged.

(*b*) Because the incidence of taxation upon real property is already heavy, whether to people living under urban conditions or to farmers.

(*c*) Because the tax can only be collected at much expense and by methods which will be extremely vexatious.

(*d*) Because if property is to be taxed it is always better to tax it directly than indirectly in ways which mislead the people as to the actual incidence.

It is the purpose of your committee to advocate the views which have been thus stated before the coming Legislature if the opportunity or occasion to do so occurs.

Your committee submits the following resolutions:

Whereas, The propositions stated in this report have heretofore received the sanction of the Chamber and are now deemed sound; therefore, be it

Resolved, That the Chamber accepts and approves of the foregoing report; and

Resolved, That the Secretary of the Chamber is directed to transmit a copy of this report to the Governor of the State, to each member of the Senate and Assembly, and to each member of the Chamber.

(Signed) George F. Seward,
Charles S. Fairchild,
Clarence H. Kelsey,
Alexander E. Orr,
John Harsen Rhoades,
Committee on State and Municipal Taxation.

New York, December 5, 1901.

BANKING IN HAWAII, PORTO RICO AND THE PHILIPPINES.

[From the Annual Report of the Comptroller of the Currency.]

BANKS AND BANKING IN HAWAII.

Information relating to banks and banking institutions in Hawaii has been secured from two sources—first, from statements transmitted directly to the office by a number of banks and banking companies doing business in the Territory, and, second, from returns obtained by Mr. A. R. Serven, representing this office in an official capacity at Hawaii, while on a visit to the islands during the past season. Reports from both sources show the existence of banks with banking capital as follows: Bank of Hawaii, capital $600,000, surplus and undivided profits $204,000, deposits, $1,250,000; First American Savings and Trust Company of Hawaii, capital $250,000, deposits about $200,000; First National Bank of Hawaii, capital $500,000, surplus and undivided profits, $44,995, deposits, $741,266; Claus Spreckels & Co., capital $500,000, deposits $869,706; Bishop & Co., capital $800,000; Hawaii Trust and Investment Company. All of these banks and banking firms are located at Honolulu. There is also in operation at this point branches of the Yokohama Specie Bank and the Kei Hin Bank, Limited, of Tokyo. In addition to transacting general banking business, selling exchange, etc., the banks generally allow interest on deposits.

At Hilo, the second town of importance in the islands, there is in operation the First Bank of Hilo, with capital of $200,000 and deposits of $100,000. At Wailuku there has recently been organized the First National Bank of Wailuku, with capital of $25,000.

Several of the more important plantation agents have banking departments in connection with their other branches of business and aid the planters very materially by advancing funds for the production and marketing of crops. The demand for money is apparently steady, as the moving of the large sugar crop, which is practically the only crop, is in progress the entire twelve months.

The deposits in all of the banks are approximately $3,500,000, while the actual cash in circulation, including Hawaiian silver coinage amounting to $1,000,000, will probably not exceed $2,000,000. The Hawaiian silver coinage was minted at San Francisco in 1883 and 1884, during the reign of Kalakaua. These coins, in denominations of dollars, halves, quarters and dimes, have the same intrinsic value as United States silver.

During the past three or four years new enterprises, capitalized at about $75,000,000, have been launched without sufficient money in circulation to properly float them; consequently at the present time there is great demand for more capital, and loans can be readily made at seven, eight and nine per cent. interest on what are considered gilt-edged securities, that is, stocks, etc., of the sugar industries.

Section 6 of the act of Congress approved May 30, 1900, entitled "An act to provide a government for the Territory of Hawaii," provides "that the laws of Hawaii, not inconsistent with the laws of the United States or the provisions of this act, shall continue in force, subject to repeal or amendment by the Legislature of Hawaii or the Congress of the United States," and section 55 of the act provides, among other things, that the legislature "may by general act permit persons to associate themselves together as bodies corporate for * * * conducting the business of insurance, Savings banks, banks of discount and deposit (but not of issue), loan, trust and guaranty associations."

PORTO RICO.

No National bank has been organized in the island of Porto Rico, notwithstanding the fact that the Attorney-General, in an opinion rendered June 2, 1900, held that the following provision of the act approved April 12, which took effect May 1, 1900, was broad enough to authorize the organization of National banks in Porto Rico: "That the statutory laws of the United States not locally inapplicable, except as hereinbefore or hereafter otherwise provided, shall have the same force and effect in Porto Rico as in the United States except the internal-revenue laws, which, in view of the provisions of section 3, shall not have force and effect in Porto Rico."

The only bank of issue in the island is the Spanish Bank of Porto Rico, chartered by royal

Digitized by Google

decree on May 5, 1888, the chartered rights of which were recognized in the Paris treaty and in joint resolution adopted by Congress on June 6, 1900. The authorized capital stock of this bank is $900,000, and the aggregate resources on June 29, 1901, were $1,888,416. There is also in operation in the island the American Colonial Bank of Porto Rico, a corporation chartered under the laws of the State of West Virginia, and which has been designated by the Secretary of the Treasury as the depository in the island for United States funds. This bank has capital of $400,000, and its aggregate resources, including United States bonds on deposit to secure public deposits, amount to $1,349,888. Through the courtesy of the officers of the Crédito y Ahorro Ponceno the office has been placed in possession of a statement of condition of the bank on June 30, 1901. This bank has a capital of $120,000 and aggregate resources of $680,738.

The Philippines.

The bulk of the banking business in the Philippine Islands is transacted through the instrumentality of the Hongkong and Shanghai Banking Corporation, the Chartered Bank of India, Australia and China, and the Spanish-Filipino Bank. The first-named corporation has agencies at Manila and Iloilo, the Chartered Bank of India, etc., at Manila and Cebu, the main office of the Spanish-Filipino Bank being at Manila, with agency at Iloilo. There is also in operation at Manila a Savings institution and public pawnshop entitled "Monte de Piedad." This institution, as stated by Mr. Edward W. Harden, special commissioner of the United States, is operating under a charter issued by the Spanish Government, and is practically under control of the church. Savings deposits are received in sums from fifty cents to $25, and interest allowed at the rate of four per cent., which is compounded annually. In the pawn department loans are made on precious metals, jewelry, clothing, etc., at six per cent. per annum. The report of condition of this institution, of date June 30, 1901, shows the capital stock as amounting to $243,978.92; Savings deposits, $699,099.12, and total liabilities, $1,156,718.38. The loans on bonds, stocks and certificates of deposit aggregated $141,275, and on pledges $647,598.

A Criticism of the Canadian Banking System.

(From the Toronto "Economist.")

Editor "Economist," Toronto, Ont.:

Dear Sir: In looking over recent issues of your valuable journal I was pleased to notice your timely articles on the banking question, and to note several of your remarks in regard thereto.

As one who has given this question considerable study from a Western point of view, I entirely agree with your statement that the Canadian banking system as at present operated certainly retards the progress of any new country. Until some three months ago my prejudices were strongly in favor of our own system, but after reading some discussions carried on at the time in the Toronto "Globe" and "World," and a few other journals, I began to make some further inquiries into the working of the American system, and found that as far as helping to build up a country is concerned our system does not begin to compare with theirs.

Scarcely any little town of from 500 to 1,000 inhabitants but has a local bank of its own, officered and financed by their own local people, who have nothing but the interest of their own town and community at heart, and are constantly doing everything in their power to build up and push the prosperity of that particular district. Compare this with some new district or town in the Canadian West, where one of our large banks will open up a branch, the only aim of which is to make as large dividends as possible for eastern stockholders, and consequently drain all the surplus money they possibly can out of that locality, to be used by the directors and management for investment anywhere and everywhere except the place in which they are making this money.

I do not think it possible for anyone who will go carefully into this matter and take time to make comparisons between the two systems to arrive at any other conclusion than one favorable to the American system. As a rule, their local banks offer equal security with our own, and in addition, they are part and parcel of the community in which they are situated, their whole object being to build up and assist their own locality. Any dividends and profits are in nine cases out of ten reinvested right at home.

Looking at the question from this standpoint it would seem as if our system of branch banks had no other object in view but to drain all surplus money out of the outlying districts for use in investments elsewhere.

I do not agree with your proposition to limit the establishment of banks to $200,000 paid-up capital. This would prevent many localities from having a bank that otherwise would do so if, say, $10,000 were the limit, as this would be sufficient for all the business that would be transacted in that particular place. The regulations could be such that the security given would be the same no matter what the capital would be.

Yours truly,

Winnipeg. Charles M. Simpson.

BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—Group VII of the New York State Bankers' Association, comprising the banks of Long Island, held its fourth quarterly meeting at the Montauk Club in Brooklyn on the evening of December 3. Forty of the fifty-four banks in the group were represented at the dinner. Hon. Stephen M. Griswold, vice-president of the State association, presided. At the election following the banquet, John A. Potter, President of the Patchogue Bank, was elected chairman, and Hiram R. Smith, President of the Bank of Rockville Center, was elected secretary. The following members of the executive committee were chosen: Chas. T. Young, President National City Bank, Brooklyn, chairman; H. J. Oldring, President Mechanics and Traders' Bank; William L. Wood, Vice-President Queens County Bank; Joseph Dykes, President Flushing Bank, and H. E. Hutchinson, President Brooklyn Bank.

Brief speeches were made by Gen. A. C. Barnes, T. Ellwood Carpenter, Chas. J. Edwards, Edgar McDonald and others.

—At the meeting of New York Chapter of the American Institute of Bank Clerks, to be held at 72 Fifth avenue, Thursday evening, January 23, James G. Cannon, Vice-President of the Fourth National Bank, will lecture on "A Modern Bank," illustrating his subject with stereopticon views. "Cuban Banking Methods" will be the theme of an address by F. W. Black, of the North American Trust Co., and Wm. C. White will speak on "How a Corporation is Organized."

—The New Amsterdam National Bank recently declared a special dividend of sixty per cent. This special dividend brings the profits of the stockholders in the bank up to 100 per cent. for the year on a capitalization of $250,000.

It is said that when Charles W. Morse took control of the bank a year ago he invited every one employed in the bank to invest as heavily as possible in stock of the institution, and offered to take their notes for stock, and all the forty employees of the bank are said to have made investments in the stock, paying 700 per share. It is now quoted at about twice that figure.

—Figures published by the Morton Trust Company for the past year show an increase of over $1,200,000 in its undivided profits, being at the rate of over $100,000 a month, making the total surplus and undivided profits of the company over $4,500,000.

—Benjamin Seymour Guinness, a member heretofore of the banking house of Guinness, Mahon & Co., of Dublin and London, and Walter T. Rosen, heretofore a member of the law firm of Underwood, Van Vorst, Rosen & Hoyt, have been admitted as general partners in the banking firm of Ladenburg, Thalmann & Co.

—It is reported that the National Park Bank will build on the adjoining property secured some time ago, and also improve the present building very materially.

—On December 27 the First National Bank declared a dividend of ten per cent. out of its earnings for the past six months. With the distribution of this dividend the bank will have distributed $21,310,000 among its shareholders since it was organized in 1863—a record said to be unequalled by any American banking organization, and probably by any throughout the world. The record of having declared the largest dividend ever declared by a National bank is held by the First National. This dividend amounted to 1,000 per cent., and was declared on the old stock at the time the capital was increased from $500,000 to $10,000,000.

—The publishers of THE BANKERS' MAGAZINE are in receipt of the following letter under date of December 18, 1901, from Robert Hockey, recorder of New York Chapter, American Institute of Bank Clerks:

"It is my pleasure to advise you that at the meeting of New York Chapter held last evening the books given by you to us were presented to the chapter in your behalf, and it was unanimously resolved that a vote of thanks be tendered by the chapter to Messrs. Bradford Rhodes & Co. for their interest in our work as evidenced by this gift.

Digitized by Google

We anticipate that our members will get a great deal of profitable reading from these books, and so increase their knowledge and understanding of the questions coming up in their daily work, thus making themselves more valuable as members of society, and to their employers."

—On December 21 Hon. Lyman J. Gage, Secretary of the Treasury, was the guest of honor at a dinner given in the Metropolitan Club by Frank A. Vanderlip, who for four years was Assistant Secretary of the Treasury under Mr. Gage, and who is now Vice-President of the National City Bank of this city.

Besides Mr. Gage and his host there were thirteen other guests, all of them prominent in banking and financial affairs. Mr. Gage sat next to Mr. Vanderlip, on the other side of whom was E. W. Bliss. The others were George F. Baker, President of the First National Bank; Jacob H. Schiff, of Kuhn, Loeb & Co.; William A. Nash, President of the Corn Exchange Bank; George W. Perkins, of J. Pierpont Morgan's firm; J. Edward Simmons, President of the Fourth National Bank; James Stillman, President of the National City Bank; Joseph C. Hendrix, President of the National Bank of Commerce; Stuyvesant Fish, President of the Illinois Central Railroad and Vice-President of the National Park Bank; James Speyer, of Speyer & Co.; A. B. Hepburn, Vice-President of the Chase National Bank; Frederick D. Tappen, President of the Gallatin National Bank, and William Rhinelander Stewart.

There were no set speeches, but there was an informal discussion of the ideas of Secretary Gage, as outlined in his report to Congress and in his speech before Group VIII of the New York State Bankers' Association at its recent annual banquet. This was a proposition for a federation of National banks into a great central corporation, which, Mr. Gage believes, would be a big stride in the direction of averting national panics. There was also a discussion of the clearing-house system in this and other cities, and an interchange of ideas for improving it.

—It is reported that the Central Trust Company voted $50,000 to President Frederick P. Olcott, as a Christmas present, and that each of the employees of the company received fifty per cent. of his annual salary. The Christmas donations to employees given by banks and other financial institutions and private banking firms in Wall Street range in numerous instances all the way from ten per cent. to 100 per cent. of the yearly salaries.

—At a special meeting of the stockholders of the Guaranty Trust Co. on December 6 it was voted to amend the articles of incorporation so as to permit of the establishment of branches in Hongkong and Shanghai and in the Philippine Islands also as soon as Congress shall authorize American incorporated banks to operate there.

—On December 17 official announcement was made that the Bank of North America will absorb the Bank of the State of New York. The President of the former, Warden Van Norden, will retire, and the President of the latter, Richard L. Edwards, will become President of the combined bank.

This is another move on the part of the Morse syndicate, which already had a large interest in the Bank of the State of New York. The old building of the latter, at the corner of William street and Exchange place, is to be torn down and a new structure will be erected on the old site, and will, in addition, extend through to 41 and 43 Wall street, thus forming an "L" shaped building, which will be twenty-three stories in height. This will be the permanent home of the bank. Charles W. Morse will be first Vice-President of the new bank, and Henry Chapin, Jr., now Cashier of the Bank of North America, will be second Vice-President of the new institution. Following is an official statement given out by Mr. Van Norden:

"The board of directors of the National Bank of North America has voted to double its capital and surplus by offering for subscription by present stockholders enough new shares at 200 to make the capital two millions and the surplus two millions, or four millions in all, as against two millions at present, the object being to absorb the business of another bank. This result has been brought about by the friends of the bank to be liquidated, in connection with Warden Van Norden, the President of the Bank of North America, who owns the contol of that bank. For a year past Mr. Van Norden has desired to retire from active banking, and will avail himself of this opportunity to secure more time to himself for the gratification of tastes other than those connected with business. He has parted with a portion of his large holdings to gentlemen of influence and extensive connections, who will be able to add materially to the bank's resources. He will remain in the board, together with Mr. Wm. F. Havemeyer, Hon. Elihu Root and others of the present board."

Under Mr. Van Norden's administration of eleven years the National Bank of North America has reached the zenith of its prosperity. Its capital and surplus have been doubled out of its profits, the dividends advanced to eight per cent. and the deposits increased sevenfold.

The combined resources of the two banks are about $40,000,000, divided nearly equally between the two institutions.

—At the annual election of the New York Security and Trust Co., January 8, the following trustees were chosen in addition to those that hold over: Charles M. Schwab, President United States Steel Corporation; Frank Tilford, Woodbury Langdon and Osborn W. Wright; Norman B. Ream, of Chicago, and John S. Phipps, of Pittsburg.

—The annual banquet of Group VIII of the New York State Bankers' Association, comprising the banks in the Boroughs of Manhattan and Richmond, took place at the Waldorf-Astoria on the evening of December 19, Geo. F. Baker, President of the First National Bank, presiding. There was a large attendance of the leading city bankers. Hon. Lyman J. Gage, Secretary of the Treasury, spoke in favor of improving the banking system, his address following the lines of his recent annual report. Addresses were also made by Hon. Thos. B. Reed, ex-Speaker of the House of Representatives, and by Amos Parker Wilder.

—The International Banking Corporation, organized under the laws of Connecticut with $3,000,000 capital and $3,000,000 paid-in surplus, according to recent reports is to have the handling of the indemnity of $25,000,000 which this country is to receive from China in installments running to 1940, and also act as fiscal agent of the Government in the Orient. It is understood that a branch office of the corporation has been opened at Shanghai, and that branches will be located at other points in the Far East. The officers and directors of the International Banking Corporation are mostly well-known capitalists.

—Prominent capitalists are reported to be organizing the Trust Company of the Republic, with $1,000,000 capital and $500,000 surplus, the latter representing a premium of $50 on each of the 10,000 shares.

—Edwin R. Thomas, president of the Evansville and Terre Haute Railway Co., has been elected a director of the Bowling Green Trust Co.

—George E. Lewis, formerly with the Fourth National Bank, has been appointed an Assistant Cashier of the Gallatin National Bank.

—Edwin S. Schenck, who has been Vice-President of the National Citizens' Bank, succeeds Ewald Fleitmann as President, the latter becoming Vice-President. Mr. Schenck is only thirty-three, and is one of the youngest bank Presidents in the city.

—The United States Mortgage and Trust Co. has added $250,000 to its surplus, making the total $2,750,000.

NEW ENGLAND STATES.

Boston.—The building at the northeast corner of Devonshire and Water streets, which was recently vacated by the National Bank of the Commonwealth on account of the consolidation of this bank with the National Shawmut, has been leased by the State National Bank.

For upward of a half century the State National Bank has been located in the old Union Bank building, at the corner of State and Exchange streets. It was incorporated in 1811 and organized as a National bank in 1865. Its affairs are conservatively managed by Samuel N. Aldrich, President; G. B. Warren, Cashier; Amos W. Stetson, Henry C. Weston, Henry R. Reed, William H. Allen, Frederic Amory, Charles U. Cotting, Allen Curtis, Lester Leland and Gordon Abbott, directors.

—H. W. Forbes and Walter H. Nash are the local managers of the Boston office of Messrs. Farson, Leach & Co. Mr. Nash was formerly connected with Messrs. Denison, Prior & Co.

Connecticut Savings Banks.—An interesting feature of the annual report of Bank Commissioners Noble and Kendall, recently submitted to the Governor, is the showing of the heavy increase in deposits in the Savings banks during the past year. The total rose in the twelve months ending October 1 from $183,781,942 to $193,248,909.

The depositors having less than $1,000 increased 12,962 during the year and now number 369,055, with deposits aggregating $76,484,384, or about forty per cent. of the total deposits. The aggregate number of depositors of all classes is 425,588 and the average deposit is $454.07.

The total of the assets of the banks has increased from $194,324,227 to $204,426,844, a gain of $10,102,617. The loans on real estate have increased only about $2,000,000, and now reach $69,425,229, while there has been a large increase in investments in railroad stocks and bonds under the new law extending the scope of Savings bank investments. The investments in United States bonds (yielding a smaller interest than is paid depositors by the banks) have fallen from $1,268,200 to $311,790.

The tendency of the banks has been to invest more extensively in railroad bonds and dispose of United States and municipal bonds, the holdings of United States bonds having decreased $956,500, the holdings of municipal bonds being $124,138 less than shown in the report of 1900, while the investment in railroad securities has increased $7,912,070.

Lowell, Mass.—The Union National Bank is reported here as the successor to the First National, Railroad National and Merchants' National. The new bank starts with $350,000 capital and $175,000 surplus.

MIDDLE STATES.

Philadelphia.—Because of its largely increasing business the Girard Trust Company has acquired property at the northwest corner of Broad and Chestnut streets on which a fine building will be put up.

Baltimore.—A branch of the American Institute of Bank Clerks, to be known as Baltimore Chapter, was organized here December 4, and the following officers chosen: President, W. S. Hammond; vice-president, J. C. Fenhagen; treasurer, S. M. Reid; secretary, T. B. Ewalt.

—Plans have been made for the improvement and enlargement of the Citizens' National Bank building, including provision for a Savings bank department, safe-deposit vaults, coupon rooms and additional desk room for the bank officials.

—The International Trust Co. has accepted designs for its new building, which 's to be erected on the south side of Baltimore street between Charles and Light streets. The building will have a frontage of fifty-four feet and a depth of 100 feet and will contain a ground floor, a mezzanine floor and a basement. The front will be of white marble decorated with handsomely carved figures.

Pittsburg.—An idea of the very large business done by trust companies may be had from a recent advertisement of the Union Trust Company, which announces that the company is transfer agent, registrar and trustee for corporate securities amounting to $418,178,165.

—By March 1, 1903, the Farmers' Deposit National Bank expects to have its new twenty-four-story building completed. This structure will be built on the northeast corner of Wood street and Fifth avenue, and will be the highest building in the city. The bank will occupy the corner rooms on the ground floor.

The capital of this bank is to be increased from $500,000 to $800,000.

—On September 30 the Union Trust Company reported total resources amounting to $20,221,793. Its capital is $500,000; surplus, $500,000, and undivided profits, $584,641. Deposits are $19,291,963.

Jamaica, N. Y.—The Title Guarantee and Trust Co. has purchased a three-story brick building, which will be improved and occupied by the company.

Waynesburg, Pa.—Announcement is made of the opening of the American National Bank here about February 1 with $50,000 capital. Thomas Adams will be President, Peter Bradley, first Vice-President, John S. Fuller, second Vice-President, and Thomas C. Bradley, Cashier.

Clinton, N. J.—Extensive improvements have been made in the building and equipment of the Clinton National Bank, the work being done under the supervision of Messrs. Mowbray & Uffinger, the New York architects. Besides remodelling and completely refitting the old building, a two-story addition has been built, containing a directors' room, storage room, etc. The vaults, safes and safe-deposit boxes have all been brought up to the best modern standards, and all the new appointments of the banking rooms are tasteful and elegant.

The Clinton Bank, of New Jersey, was organized April 1, 1856, with $59,600 capital, the amount being gradually raised to $100,000. On July 1, 1865, it was reorganized as the Clinton National Bank. On January 18, 1883, the capital was reduced to $50,000—an equal amount being returned to the stockholders in cash.

During the last thirty-six and one-half years the bank has regularly paid dividends at the rate of from ten to fourteen per cent. per annum, and since July, 1886, continuously at the rate of sixteen per cent. In addition, surplus and profits have been accumulated exceeding $100,000.

President Joseph Van Syckel was one of the original shareholders of the bank, a member of the board of directors since 1863, and President since 1875. Cashier B. V. Leigh was chosen teller in 1866, Cashier in 1874 and director in 1885.

Scranton, Pa.—The First National Bank will put up a new building, constructed of steel and granite, at a cost of about $100,000. The building will be fireproof, and a burglar-proof steel vault will also be constructed. It is expected that the new building will be ready for occupancy in a year.

The First National is one of the leading banks of the United States in point of wealth and has no superior in the matter of stability. It has deposits of more than $8,000,000; a surplus of $1,000,000, and holds in bonds and other securities nearly $7,000,000. Its stock is not on the market, but it is safe to say $800 a share would be a conservative estimate of the figure at which it is held.

The officers of the bank are: President, James A. Linen; Vice-President, George L. Dickson; Cashier, Isaac Post.

Buffalo, N. Y.—Clifford Hubbell, who has been connected with the Columbia National Bank, resigned as Cashier of that institution a short time ago to accept the position of Assist-

Digitized by Google

ant Cashier of the Marine Bank. The business of the Marine Bank has grown so steadily and so rapidly that it was found necessary to enlarge its staff. Its deposits exceed $18,000,000, with a capital stock of $200,000 and a surplus of $1,000,000.

Albany, N. Y.—The National Commercial Bank, it is reported, has purchased the business of the Merchants' National Bank, in addition to having bought the Albany City National bank.

National Bank Resumes.—The First National Bank, of Ballston Spa, N. Y., which was placed in the hands of a Receiver on December 3, resumed business on December 19. About $350,000 cash was on hand at the reopening, and the available assets were $827,224 against $725,871 liabilities to depositors.

Ithaca, N. Y.—Owing to advancing years, Hon. Henry B. Lord, for thirty-five years Cashier of the First National Bank, retired from active service on January 1, continuing his relations to the bank, however, in the capacity of Second Vice-President.

Chas. W. Gay, formerly Assistant Cashier, succeeds Mr. Lord as Cashier; Charles W. Major becomes Assistant Cashier and Benjamin L. Johnson, teller.

—The Tompkins County National Bank has reduced its capital from $150,000 to $100,000, adding the difference to the surplus.

Gouverneur, N. Y.—The officers and directors of the Bank of Gouverneur recently issued an invitation to the public to inspect the new banking room, which has been rearranged and redecorated, making it one of the most elegant and commodious to be found in Northern New York.

Freeport, N. Y.—A new brick and stone building, costing about $20,000, will be put up for the Freeport Trust Company, of which General Daniel E. Sickles is President.

SOUTHERN STATES.

West Virginia State Banks.—M. A. Kendall, State Commissioner of Banking, reports that on September 30, the date of the last official call, there were 108 State banks in West Virginia. He also reports the following figures:

Total deposits, September 30, $27,861,283; an increase since July 15 of $1,078,726.

Loans and discounts, $21,172,682; an increase since July 15 of $1,204,969.

Total resources, $35,984,828; an increase since July 15 of $1,467,148.

North Carolina Banks.—At the close of business on September 30, the date of the last official report, the State, private and Savings banks of North Carolina had $17,367,776.92 total resources, divided as follows: State, $13,097,118.44; Savings, $2,646,077.27; private, $1,624,581.21.

A Prosperous Southern Bank.—The Monroe (La.) National Bank recently declared a special dividend of twenty per cent. in addition to the regular semi-annual dividend of five per cent. The capital is $60,000 and surplus and profits $80,000. As indicated by the above facts, the business of the bank in the past year has been very prosperous.

Columbus, Ga.—To insure better accommodations for its patrons the National Bank of Columbus will put three new burglar-proof safes in its banking rooms.

—The Third National Bank sent to its customers a "Credit Balance Souvenir," at Christmas, in the form of a fourteen-karat gold fountain pen, enclosed in a handsome box, to which this inscription was affixed:

"Your account shows a balance to its credit on our books. May the fountain of your prosperity always be full, and with this good pen handy, may you affix your signature to the 'business end,' of checks during 1902, with that cheerful confidence born only of a growing credit balance, is the sincere wish of the Third National Bank, Columbus, Ga."

The souvenir is both tasteful and useful, and besides being an acceptable gift, it is a graceful reminder that the bank appreciates the patronage of those who keep up their credit balances.

While the growth of the Third National Bank has been due primarily to its strength and management, it has also profited very much by judicious advertising.

Tennessee Bank Statistics.—The last General Assembly of Tennessee passed an act requiring the State banks to publish a semi-annual statement of their condition in a paper printed in the town in which they are located, and to furnish the State Comptroller with a copy of this paper. The first publication was due July 1, but owing to a rush of work the Comptroller was unable to tabulate the statements as they came in. From the publication recently made a number of interesting facts are obtained.

There are 153 banks in the State that are chartered under the laws of Tennessee, and of these the Comptroller has the sworn statements of the conditions of 149.

These banks have aggregate resources of $31,510,309. Their liabilities are as follows: Capital, $6,440,882; surplus and profits, $1,397,614; due banks and bankers, $627,604; due depositors, $22,206,047; bills payable and rediscounts, $838,160.

Appointed Bank Examiner.– Ward B. Albertson, for the past twelve years connected with the First National Bank, Waycross, Ga., has been appointed State Bank Examiner for Georgia.

Mississippi Banks.—Auditor Cole has completed a comparative statement showing the condition of the various banks of the State on November 15, 1901, compared with September 30, 1900. There are fourteen more banks included in the last statement than in the former. One striking item noted is the large increase in deposits, there being $3,484,210 more reported by the banks on November, 1901, than on September 30, 1900. The statement also shows a half million more capital paid in than the previous report showed. The net increase in resources is $5,822,997.

Atlanta, Ga.—Manager Darwin G. Jones, of the Atlanta Clearing-House Association, presents figures which by contrast show that within four years the business has almost doubled, and compared with eight years ago has trebled. For 1900, the year ending with September, the annual clearings were $90,490,051; and for 1901 the sum was $106,845,606.

—According to the annual report of the Secretary of State twenty-five State banks were incorporated in Georgia in 1901. This is more than double the number of the largest year known before.

—Col. Robert J. Lowry, President of the Lowry National Bank, was appointed a member of the McKinley Memorial Association by President Roosevelt. Speaking of this appointment, a correspondent of the "Macon Telegraph" says:

"No better appointment could have been made. Col. Lowry was McKinley's friend, and he had the courage to vote for him, and say in the public prints that he regarded his election as the best thing for the South.

Col. Lowry is no demagogue. He belongs to one of the best families in the South, hailing originally from Virginia, and both he and his late honored father were among the most prominent upbuilders of Atlanta at a time when the town needed helpful and public-spirited friends.

If the Colonel had ever fancied public life he would have been very successful. He is a man of brains, culture and courage, and I don't know a finer-looking man anywhere."

—At the meeting of the directors of the Lowry National Bank, December 31, the twenty-seventh semi-annual dividend of four per cent. was declared and $20,000 added to the surplus. This institution since its organization as the Lowry Banking Company in 1888 has paid in dividends $354,000, besides accumulating a surplus of $100,000 and a large amount of undivided profits.

Richmond, Va.—Dividends paid by the banks of this city about the first of the year amounted to nearly $1,000,000. In the last three years the bank clearings have nearly doubled, and the banking and general business situation is exceptionally good at the present time.

Chattanooga, Tenn.—A very gratifying exhibit is made in the official statement of the Chattanooga National Bank for September 30. Total resources amount to $1,124,151, including $698,773 loans and discounts, $219,000 United States and other bonds and $183,047 cash and sight exchange. The capital stock is $200,000; surplus and profits $16,668, and deposits $707,302.

Birmingham, Ala.—This city now has two Government depositories—the Alabama National having been designated in addition to the First National. "The Birmingham News" regards this as an evidence of the growth of business in the city and State. About one and one-half million dollars of Government money is handled annually here.

—The Birmingham Trust and Savings Co. has moved into its new building, constructed exclusively for the bank's use.

Austin, Tex.—The First National Bank, which has been closed since August, resumed business January 2, having made arrangements to pay the $358,000 of State funds on deposit when the bank closed.

WESTERN STATES.

Chicago.—On January 2 a new system of accounting, designated by Deputy Controller Frost as a "consolidation of revenues," went into effect. Hundreds of new books were started in the various departments, and thousands of entirely new forms, recommended by Haskins & Sells, expert accountants, were used the first time. With few exceptions, the old forms were laid aside.

The most important features are the consolidation of all revenues in the city collector's office, and the re-establishment of a bureau of audit similar to such bureaus in railroad offices. In future money paid to the city will be taken by the city collector. The bureau of water is the only exception. Daily reports of collections will be made by the collector to the controller, and these accounts must tally with the reports furnished by the various departments.

Digitized by Google

—A banquet was given to a number of city bankers at the Marquette Club on the evening of December 14. Hon. James H. Eckels, former Comptroller of the Currency, and now President of the Commercial National Bank of this city, and James B. Forgan, President of the First National Bank, made addresses. A. B. Stickney, President of the Chicago Great Western Railway, spoke in favor of a central reserve bank.

—The First National Bank has acquired property adjoining its present location, and will build on the entire site. This new structure will cost between $3,000,000 and $4,000,000, and will probably be sixteen stories in height, and will be one of the largest and finest bank and office buildings in the country.

—Owing to the enforcement of a rule requiring reports of condition from members, several private banking houses, brokers and two department stores have withdrawn from membership in the Chicago Clearing-House Association.

St. Louis, Mo.—Edward Buder and Pope Sturgeon have been elected Assistant Cashiers of the Mechanics' National Bank. Mr. Buder has been second Assistant Cashier for several years, and prior to that time was a discount clerk. Mr. Sturgeon has been a note teller for a number of years. Both gentlemen are eminently qualified by long experience in banking and familiarity with the affairs of the bank to fill the positions to which they have been promoted.

—The first annual report of St. Louis Chapter of the American Institute of Bank Clerks (which is the local successor of the Bank Clerks' Economic Society) shows a list of forty-three active members.

The officers are: President, R. M. Richter; vice-president, E. C. Fach; secretary, J. E. Conroy; treasurer, S. L. St. Jean. Future meeting dates for this winter and spring are January 21, February 11, 25, March 11, 25, April 8, 22 and May 13.

—The new eight-story building of the Commonwealth Trust Co., at the northeast corner of Broadway and Olive street, will be one of the finest bank and office buildings in the West.

—Bank clearings on January 2 were the largest on record, amounting to $12,441,477. The previous high record, $11,582,065, was made on May 7, 1901.

—The Colonial Trust Company has opened for business in temporary quarters at Sixth and Locust streets. It is the intention to remove later to the American Central Building.

Sioux City, Iowa.—The official statement of the People's Savings Bank, made to the Auditor of State on September 30, shows total resources amounting to $236,880, of which $101,813 is in cash and sight exchange. The capital of the bank is $50,000 and the deposits $186,673.

M. W. Ingwersen recently succeeded A. T. Bennett as Cashier, the latter still remaining a director.

A rule of this bank prohibits the loaning of any sum whatever to any officer, stockholder or employee.

Missouri State Banks.—A compilation of the reports of 625 State banks of Missouri made by Secretary of State Cook from their reports for November 23, shows that since December 1, 1900, the total resources have increased over $13,000,000, and individual deposits over $12,000,000.

The total resources of the State banks of Missouri on November 23 last were $149,213,208, and their deposits $121,323,301.

Nebraska State and Private Banks.—Reports of the State, Savings and private banks of Nebraska, at the close of business September 30, 1901, show: Total assets, $41,469,992; capital, $7,149,450; surplus, $1,174,042; profits, $1,237,504; general deposits, $31,759,644; reserve, 46¾ per cent.

Compared with the statement for September 20, 1900, increases are as follows:

Loans, $3,477,940; stocks, bonds, etc., $114,864; cash, $122,614; capital stock, $163,500; surplus, $139,547; deposits, $4,954,560.

Des Moines, Iowa.—Plans have been drawn and bids secured for a new building, seven stories in height, for the Capital City State Bank.

East Liverpool, Ohio.—One of the most attractive and telling advertising booklets that have come to the notice of THE BANKERS' MAGAZINE is that of the Potters' National Bank, of East Liverpool, Ohio.

This bank was organized in 1881, and has $100,000 capital, $85,000 surplus, and assets amounting to $600,000. The officers are: Wm. Brunt, President; N. A. Frederick, Vice-President; R. W. Patterson, Cashier.

A new building, fitted with the latest bank equipment, adds to the security and convenience with which business may be transacted with this institution.

Digitized by Google

Jacksonville, Ill.—The new banking rooms of the Ayers National Bank were thrown open to the public on the evening of December 19. Greatly enlarged space has been secured, new vaults have been put in and new fixtures and furniture also. Officers of the bank are: President, M. P. Ayers; Vice-President, A. E. Ayers; Cashier, John A. Ayers; Assistant Cashier, C. G. Rutledge. One of the old employees is George Bardsley, collector and watchman, who has been in the bank's service since 1869.

Detroit, Mich.—The Union Trust Co., at a meeting of the directors on December 23, declared a semi-annual dividend of two per cent. and added $50,000 to the surplus.

—According to the compilation made by the State Savings Bank, the aggregate deposits held by the State and National banks of this city on September 30 and December 10, 1901, were:

	Sept. 30, 1901.	*Dec. 10, 1901.*
STATE BANKS.		
Savings deposits	$40,489,827.38	$40,974,673.14
Commercial deposits	11,394,365.97	9,900,391.60
Due banks and bankers	4,489,827.38	4,637,034.52
	$56,373,431.94	$55,512,099.26
NATIONAL BANKS.		
Commercial deposits	$14,454,544.46	$14,146,436.08
Due banks and bankers	8,823,346.16	9,158,614.67
United States deposits	745,589.12	661,449.99
	$24,023,479.74	$23,966,500.74

Davenport, Iowa.—At a meeting of the shareholders of the Davenport National Bank, the proposed consolidation of this bank with the Union Savings Bank was ratified.

Wisconsin Bank Reopens.—The German Exchange Bank, of Chilton, Wis., whose affairs have been tied up by litigation for some time, reopened December 4 and paid creditors a dividend of thirty per cent.

PACIFIC SLOPE.

San Francisco.—At a meeting of the shareholders of Wells, Fargo & Co., January 2, Dudley Evans, of New York, was elected Acting President, to fill the vacancy caused by the death of John J. Valentine. E. H. Harriman was elected a director.

Portland, Ore.—On December 10 the deposits of the four National banks of this city amounted to $9,751,815. Of this amount the First National Bank had $6,455,378.

Private Bank Incorporated.—The banking firm of Sylvester Rapier & Co., New Haven, Ky., was incorporated January 2 under the laws of Kentucky, with $20,000 capital, and $4,000 surplus, all of which is paid in in cash. Besides, the charter of the bank provides that stockholders shall be liable in an amount equal to the par value of their shares, the same as stockholders of National banks.

Sylvester Rapier has been elected President, Francis Bowling, Vice-President and Nicholas A. Rapier, Cashier.

Newcastle, Wyo.—On January 1 the Bank of Newcastle increased its capital from $30,000 to $50,000. For the past two years the bank has been able to declare a twenty-five per cent. dividend, and reports excellent prospects for future business. The officers remain as heretofore.

Santa Fe, N. M.—As an evidence of the progressive character of the First National Bank, of this city, it may be noted that the institution has just completed substantial improvements and alterations in its banking rooms. Among the changes are a new steel ceiling, tiled floor in the lobby, new flooring in the banking rooms, new wainscoting and decorations, and a general renovating of counters, rearrangement of desks, etc. The exterior of the building has also been greatly improved.

St. Paul, Minn.—George C. Power, formerly Vice-President of the Merchants' National Bank, and associated with that bank for twenty-six years, and more recently a National bank examiner, has been elected President of the Second National Bank, succeeding S. R. Flynn, resigned.

Mr. Power has had long and varied experience in banking, but is still a comparatively young man, being but forty-four years of age. He is a native of Iowa, but has lived in St. Paul since his boyhood.

The Second National Bank is one of the oldest banks in the State, having been organized as a private bank in 1854, becoming a National bank ten years later.

CANADA.

Prosperity in Canada.—In his address at the last annual meeting of the Canadian Bankers' Association, President Clouston said, in regard to the slow increase of population in the Dominion, that quality of immigration was more desirable than quantity. Continuing, he said that taking the present population of the Dominion at 5,400,000, he found the foreign trade per head to have been $71.50 in the fiscal year 1901, as against $45 in 1891, $47 in 1881, and $49 in 1871. The deposits of the people in the joint stock, Government, and Savings banks have risen in steady progression from $19 per head in 1871, to $27 in 1881, $40 in 1891, and $74 in 1901—most striking evidence of the practical prosperity of the people. The amount of money employed in the daily business of Canada, excluding subsidiary coinage, is now $11 per head; whereas twenty years ago it did not exceed $7.70 per head.

Toronto.—A prospectus of the new Sovereign Bank of Canada was issued on January 6. It will have $2,000,000 capital, and the head office will be in this city.

Failures, Suspensions and Liquidations.

Colorado.—The Colorado State Bank, of Grand Junction, was reported closed on January 6. It is said to have procured a loan from a New York bank for a local sugar company, and the calling of this loan for payment forced the suspension of the bank. Deposit liabilities are said to be about $180,000.

Georgia.—On December 10 the New South Savings Bank, of Barnesville, was reported closed. This suspension followed that of the Barnesville Savings Bank and two local manufacturing companies recently.

Indiana.—The Wanatah Bank suspended December 18, having experienced a run owing to an unsuccessful attempt to rob the vault. It is stated that the assets are $91,000 and liabilities $29,100.

Maryland.—Upon the application of creditors, the Dime Savings Bank, of Annapolis, was placed in the hands of Richard P. Stevens, Receiver.

—The Farmers' Bank, of Hurlock and St. Michaels, has been closed by the proprietor.

Minnesota.—The St. Paul Trust Co., of St. Paul, organized in 1884 with $200,000 capital, voted to go into liquidation January 3. Some of its administrations of estate affairs had not been profitable of late. Assets are $510,579, and consist largely of real estate.

Nebraska.—The State Bank, of Gothenburg, with $20,000 capital, was closed by the State Banking Board December 19. Its last reports showed $32,000 deposits.

—On December 11 the Omaha Loan and Trust Company was placed in the hands of a Receiver, on the application of a stockholder, whose petition stated that the company had exhausted its capital and surplus, and had incurred an indebtedness of $100,000, exclusive of debenture bonds secured by first mortgages on real estate.

Pennsylvania—PHILADELPHIA.—The First Colored Bank was reported closed on December 7, but it was announced later that a reorganization had been effected and that if necessary arrangements could be made business would be resumed. The bank was incorporated in July with $50,000 capital, divided into shares of $2 each.

South Carolina.—On application of the President and directors of the German-American Trust and Savings Bank, of Charleston, a Receiver was appointed for that institution on December 10.

Tennessee.—The Lenoir City Bank suspended December 4 and was placed in charge of its President as temporary Receiver. Liabilities to depositors are about $25,000.

New Counterfeit $1 Silver Certificate.—Series 1899; check letter C; J. W. Lyons, Register; Ellis H. Roberts, Treasurer; Treasury number, upper right end, 1257472; lower left end, 1257475.

This counterfeit is a crudely executed zinc etching, printed on bond paper of good quality, no attempt having been made to imitate the silk fiber. The word "Washington," right end face of note, is printed in ordinary script type; the number is put on with an ordinary numbering machine, and no serial letter appears before the number as in the genuine. The back of the note is better than the face, but is printed upside down. The first of these counterfeits was passed in Chicago. The same evening that the notes were passed the agents of the secret service captured the maker and his confederate, and obtained possession of the plates, press, paper, inks, and other paraphernalia, together with 600 completed notes.

NATIONAL BANK RETURNS—RESERVE CITIES.

By the courtesy of the Comptroller of the Currency at Washington, the BANKERS' MAGAZINE has been favored with the complete returns of the National banks in all the reserve cities, at the date of the call on December 10, 1901. These are published below in conjunction with the two preceding statements of July 15, 1901, and September 30, 1901. In this form the figures become much more valuable by reason of the comparison. In this complete shape the returns of National banks in the reserve cities are published in the BANKERS' MAGAZINE exclusively.

NEW YORK CITY.

RESOURCES.	*July 15, 1901.*	*Sept. 30, 1901.*	*Dec. 10, 1901.*

FOREIGN TRADE.—The exports of merchandise continue to be large in volume, the total for November exceeding $136,500,000, which is almost up to the highest record for that month, which was made in 1900. The exports were $9,000,000 less than in October. The imports, which were $7,000,000 greater than in November last year, were $6,000,000 less than in October. The excess of exports over imports for the month was $64,000,000, making the net balance for eleven months of the year $528,000,000, which is $43,500,000 less than in the previous year. Net exports of gold to the amount of nearly $11,000,000 in December make the net movement for the year unfavorable for the first time since 1897.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, January 4, 1902.

GOLD EXPORTS, DEARER MONEY and a strong stock market were the principal features of the financial situation last month. There were some unfavorable conditions with which the stock market had to contend, the most potential being the disastrous break in Amalgamated Copper. This stock, which sold on December 2 at 76⅝, touched 60½ on December 17. This break of nearly sixteen per cent., however, followed a previous decline of still greater magnitude, for on June 17 it was quoted at 130.

The decline in copper stock legitimately followed the reduction in the price of the product, for the attempt to maintain a high price has been abandoned owing to the increased competition and production abroad. The dividends of Amalgamated Copper have been "cut in two," the quarterly dividend declared last month being only one per cent., as against two per cent. last July and 1½ per cent. last October.

More than 2,500,000 shares of Amalgamated Copper were traded in during the month, or about double the transactions in any other stock. Another active stock was American Sugar Refining, which recorded 1,000,000 shares sold. The latter stock was also subject to bearish influence, and declined from 126¾ on December 2 to 103⅛ on December 24, a fall of 23⅝ per cent. This stock sold at 153 last June, so nearly fifty points were knocked off its quotation in about six months.

The extraordinary strength of the stock market in general is strikingly brought out by contemplation of the weakness of these two special securities. The general market, particularly railroad and coal shares, was strong, and a number of stocks were quoted towards the close of the month at prices the highest reached during the year, and the highest in some cases ever recorded.

There was an active market, the total sales in December amounting to nearly 17,000,000 shares. This brings the total for the year up to almost 266,000,000 shares, exceeding the record of all previous years. In 1900 the aggregate was 138,000,000 shares; in 1899, the previous high year, 176,000,000 shares, and in 1898 112,000,000 shares. The sales of bonds for the year were also the largest ever recorded, amounting to nearly $1,000,000,000 in 1901, as compared with $578,000,000 in 1900, $839,000,000 in 1899 and $917,000,000 in 1898.

The money market was an important factor all through the month, most of the time rates for money on call ranging from eight to ten per cent. Higher rates were frequently paid, however, twelve per cent. being recorded more than once, while on the last day of the month fifteen per cent. was touched. The surplus of the local banks was drawn down to little more than $5,000,000, subsequently recovering to about $8,000,000. There was a heavy movement of currency to interior points early in the month, which with gold exports and a movement on the part of some of the National banks to retire their circulation by depositing lawful money with the United States Treasury, caused a rapid withdrawal of money from the usual channels. The consequence was an exceptionally stringent money market for a time, yet, as noted, without exerting any serious influence upon the stock market.

Gold exports were heavy during the first part of the month, about $5,500,000 go-

Digitized by Google

ing out in the first two weeks. The advance in rates for money here, however, soon forced sterling down and exports ceased. For the year the gold movement will show a net loss to the United States for the first time in four years. For eleven months ended November 30 we exported $2,790,195 more gold than we imported. The December movement may increase the balance to $7,000,000 or $8,000,000. These net exports compare with imports of $12,000,000 in 1900, $6,000,000 in 1899 and $142,-000,000 in 1898. In 1897 our exports exceeded our imports of gold by only $253,589, while in 1896 the net imports were more than $46,000,000. Practically for five years, until last year, we have gained gold from abroad, the balance amounting to $207,-000,000, The exports last year will leave us with about $200,000,000 as the result of the last six years' movement.

No probable gold movement is likely to give the Government much concern at this time. The increase in our monetary supply of gold in recent years has been wholly without precedent. In the past year alone the stock of gold in use as money in the United States was increased nearly $68,000,000. In six years it has increased from $598,000,000 to $1,176,000,000, a gain of $578,000,000.

This addition of nearly $100,000,000 a year to our gold supply is wholly unprecedented. Back in the "fifties" when California was turning out its immense gold yield, we were producing from $50,000,000 to $60,000,000 of gold annually and exporting $25,000,000 to $60,000,000 gold each year. For ten years prior to 1860 the net exports of gold averaged more than $40,000,000 a year.

The circulating medium of the country is not only in ample supply for immediate needs, but it is based upon a high ratio of gold. The total amount of money in circulation on January 1 was $2,250,000,000 of which $913,000,000, or more than forty per cent., was in gold. On January 1, 1896, the total circulation was $1,579,-000,000, and only $534,000,000 was gold, or a little less than one-third.

With the present volume of circulation, equal to $28.69 per capita, there seems to be no reason for apprehending a shortness of supply for a while. Still, it is apparent that there is again only one source of supply for future increase in our stock of money, viz., gold. The increase in National bank note circulation has come to a stop, in fact, there is every likelihood that a decrease is now to set in. The high price of Government bonds and the low rate of interest they yield make the holding of such securities merely for the sake of circulation unprofitable. The Treasury has already received applications from National banks to retire the maximum amount of circulation, $3,000,000, this month. The Continental National Bank of Chicago has withdrawn $1,700,000 of its two per cent. bonds and surrendered the circulation based upon them. The Hanover National of New York and banks in Boston, Chicago and other cities are also preparing to retire their circulation.

In the last six years the increase in National bank notes has been $175,000,000, of which nearly $94,000,000 was in 1900 and only $20,000,000 last year. The increase in bank circulation was encouraged and in fact made possible by the new bond issues of the Government since 1898. The act of March 14, 1900, allowing banks to take out circulation to the extent of 100 per cent. of the face value of Government bonds deposited to secure the notes also had a stimulating effect, but that is now ended. On the other hand, the United States Treasury is again confronted with a surplus, and the only way to get rid of it under the present conditions is to buy bonds and further reduce the basis of bank circulation.

During December the revenues of the Government were $9,742,966 in excess of the disbursements, making a surplus of $42,621,897 for the six months since July 1. In only two months since July, 1899, has the Treasury reported an excess of expenditures, in July and August, 1900. The surplus since July 31, 1899, has been $206,-000,000, an average of $7,000,000 a month. With a surplus of $321,000,000 now in the Treasury, an accumulation of $7,000,000 a month more compels the Secretary of

Digitized by Google

the Treasury to take the only course permitted him by law and buy bonds at the best prices obtainable.

To relieve the money situation to some extent the Secretary of the Treasury announced that he would anticipate the payment of January interest on December 16. This at best is only a partial and temporary remedy.

Connected with the Government finances and of very great importance was the announcement that Secretary Gage would retire. The event caused general regret, for Mr. Gage by his conservatism and recognized ability as a financier had won the complete confidence of the financial world. Governor Shaw, of Iowa, is to succeed Mr. Gage, and is expected to carry out the same policy which Mr. Gage maintained in the management of the national finances.

The general conditions of business and trade reflect prosperity from nearly every view point. Prices of commodities in many instances are much higher than they were a year ago. This is especially true regarding grain. Wheat experienced an advance last month by reason of the unfavorable weather reported in the winter wheat belt. Cotton has had another advance, stimulated by the report of the Department of Agriculture indicating a yield of cotton equivalent to 9,245,000 bales of last year's average weight. This would mean a decrease of more than 1,000,000 bales compared with the previous year's crop.

The record of bank clearings in the United States in 1900 has no parallel in any previous year. In New York they amounted to nearly $79,428,000,000, as compared with $52,634,000,000 in 1900, an increase of $26,794,000,000, or nearly fifty-one per cent. Outside of New York the total was $39,098,000,000, an increase of $5,527,000,000, nearly seventeen per cent. Boston increased sixteen per cent., Philadelphia seventeen per cent., Chicago fourteen per cent., St. Louis thirty-four per cent., Pittsburg twenty-six per cent., San Francisco fourteen per cent., Baltimore ten per cent., Cincinnati twenty-two per cent., Kansas City eighteen per cent., Minneapolis eight per cent., New Orleans eight per cent., Detroit thirty-four per cent., Cleveland twenty-four per cent., Louisville nine per cent., and Omaha five per cent. In hardly any instance is there a decrease of any importance.

Compared with a year ago there have been some notable changes in the condition of our local banks. There has been an extension of the branch bank system, and at the same time a consolidation of banking interests, which has in some cases caused the retirement of old established institutions, and in others has placed under the control of certain groups of capitalists several banks formerly independent of each other.

The capital of the banks in the New York Clearing-House Association has increased from $59,422,700 in 1899 and from $74,222,700 a year ago to $83,622,700. Their surplus, which was less than $81,000,000 two years ago and only about $92,000,000 on January 1, 1901, is now nearly $100,500,000. Loans are now $858,000,000, an increase of $62,000,000 since a year ago; deposits, $911,000,000, an increase of $57,000,000; reserves, $236,000,000, an increase of $11,000,000; circulation, $31,856,000, an increase of $816,000.

The final return of railroad earnings for the year 1901 will not be completed for some time to come, but the results for the year are known to be highly satisfactory. The compilation made by the "Financial Chronicle" for the ten months ended October 31 shows that 101 roads had gross earnings amounting to $943,000,000, as compared with about $846,000,000 in the previous year, an increase of more than $97,000,000. What is still more gratifying is that nearly one-half of the gain in gross earnings is to be found in increased net earnings. The latter were $313,000,000, as compared with $268,000,000 in 1900, an increase of $45,000,000. These are exceedingly favorable exhibits and justify the high place which American railroad securities are taking among investments.

Digitized by Google

One announcement of an unfavorable character was made last month to the effect that the Inter-State Commerce Commission had prepared for submission to Congress an amendment to the Inter-State Commerce Law giving the commission the right to fix rates on all railroads. From legislation of this sort, threatened or effected, railroads in the past have suffered grievously. The effect of such a law would be to weaken confidence in railroad investments.

In the iron trade we find another new record, the production of pig iron on December 1 being at the rate of 324,761 tons a week, or nearly 17,000,000 tons a year. In spite of this enormous output stocks of pig iron continue to decline, being only 223,462 tons on December 1, against 273,251 tons on November 1.

While our foreign trade has not been making new records recently, still the export movement continues very large, the total exports in November being nearly $137,000,000. For the eleven months the total is $1,328,000,000, or $3,500,000 less than the high record for the same period in 1899–1900. The net exports for the eleven months are $528,000,000, a decrease of $43,000,000.

THE MONEY MARKET.—The local money market was affected last month by gold exports and the withdrawal of funds from the banks through sub-Treasury operations. Call money touched 12 per cent. on December 12, the highest rate recorded since July last. On December 30, 12 per cent. was again recorded, and on the following day fifteen per cent. At the close of the month call money ruled at 6 @ 15 per cent., closing at 6 per cent. and most of the loans made at 12 per cent. Banks and trust companies quote 5 per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 6 per cent. for 30 days, 5 per cent. for 60 to 90 days and 4¾ per cent. for 6 months on good mixed collateral, and 4½ per cent. on highest grade of railroad collateral. For commercial paper the rates are 5 per cent. for 60 to 90 days' endorsed bills receivable, 5 @ 5½ per cent. for first-class 4 to 6 months' single names, and 5½ @ 6 per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—During the first three weeks of December there were very important changes in the condition of the clearing-house banks of this city, changes which made for a stringency in the money market. Deposits were reduced $36,500,000 while reserves declined nearly $17,000,000 of which more than $15,000,000 was in specie. The surplus reserve dropped from $13,000,000 to less than $6,000,000 and loans were reduced $19,000,000. The last week of the month witnessed an increase of nearly $7,000,000 in deposits with an increase of nearly $4,000,000 in reserves. The year closed with the surplus reserve slightly below $8,000,000, deposits nearly $911,000,000 and loans about $858,000,000.

Money Rates Abroad.—There was no change in the posted rates of discount of the leading European banks last month. On December 19 the Bank of Bengal advanced its rate from 4 to 5 per cent. Open market rates were generally steady but became easy toward the end of the month. Discounts of 60 to 90 day bills in London at the close of the month were 3¼ per cent., against 3½ per cent. a month ago. The open market at Paris was 2¾ per cent., the same as a month ago, and at Berlin and Frankfort 3¼ per cent., against 2⅞ @ 3 per cent. a month ago.

European Banks.—The Bank of England lost about $13,000,000 gold last month but still has nearly $20,000,000 more than a year ago. France and Germany both lost some gold in December while Russia gained about $7,000,000. Compared with January 1, 1901, France shows a gain of $23,000,000 and Germany of $32,000,000, while Russia lost $20,000,000; Austria-Hungary gained $5,000,000 in December and $40,000,000 in the year.

FOREIGN EXCHANGE.—The sterling exchange market fluctuated widely and frequently during the month, and was largely dominated by the fluctuation in the rates for money in our local market. There were free offerings of cotton bills at times but they were quickly absorbed. While rates for money were exceptionally high at the close of the month sterling was fairly firm.

NATIONAL BANK CURRENCY.—While the circulation of National banks based on Government bonds was reduced more than $1,200,000 the total amount of notes outstanding was increased nearly $600,000. There were nearly $2,000,000 of bonds formerly deposited to secure circulation withdrawn in December. Out of $437,000,-000 bonds held for circulation and for public deposits $400,000,000 consist of the two per cents of 1930.

Total	$330,721,930	$329,833,930	$328,107,480	$326,280,280

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents of 1907, $6,261,100; 5 per cents. of 1894, $400,000; 4 per cents. of 1895, $9,706,950; 3 per cents. of 1898, $6,464,300; 2 per cents. of 1900, $87,047,300; District of Columbia 3.65's, 1924, $965,000; a total of $110,844,650.

The circulation of National gold banks, not included in the above statement, is $79,095.

GOVERNMENT REVENUES AND DISBURSEMENTS.—The Treasury receipts were $9,742,966 in excess of the disbursements last month, making the surplus for the six months since July 1 $42,621,897. These results compare with a surplus of $6,600,-000 in December, 1900, and of nearly $19,000,000 for the last six months of 1900. For the latter period this year shows a decrease in receipts of only $7,000,000, a decrease of $15,000,000 in internal revenue receipts being partly offset by an increase of $8,000,000 in customs and other revenues. Expenditures have, however, been reduced $31,000,000 of which $25,000,000, is in war expenditures.

UNITED STATES PUBLIC DEBT.—The Secretary of the Treasury purchased nearly $6,000,000 of bonds last month, reducing the interest-bearing debt to about $943,000,000, as compared with $1,001,000,000 a year ago, a reduction of $58,000,000. The total debt, exclusive of certificates and Treasury notes of 1890, is $1,330,000,000, a decrease for the month of $4,000,000 and for the year of $56,000,000. The net cash balance is $321,603,000, an increase in December of $4,600,000 and of $31,500,000 since January 1, 1901. The net debt less cash in the Treasury is now $1,011,628,000, comparing with $1,020,000,000 on December 1 and with $1,099,000,000 on January 1, 1901.

Money in Circulation in the United States.—The volume of money in circulation was increased last month less than $500,000, the Treasury absorbing nearly all the increased stock of money in the country. The gold coin in circulation increased $3,000,000 but gold certificates decreased $4,000,000. Silver certificates increased $1,600,000 while the Treasury notes decreased about the same amount. United States notes increased $1,800,000 while National bank notes decreased $1,500,000.

BANKERS' OBITUARY RECORD.

Batchelder.—Carlos Batchelder, President of the Conway (Mass.) National Bank, died December 21. He was born at Conway in 1829. He had served in the State Legislature and had held a number of local offices. Since 1883, he had been President of the bank and was also connected with several other successful business enterprises.

Carmany.—Allen H. Carmany, aged sixty-four years, President of the Myerstown (Pa.) National Bank, died December 20.

Dickinson.—W. F. Dickinson, President of the Bank of Redwood Falls, Minn., died December 22.

Evans.—Dr. I. Newton Evans, President of the Hatboro (Pa.) National Bank, died December 3, aged seventy-four years. He was a member of Congress for three terms.

Foulkrod.—John J. Foulkrod, President of the Manayunk National Bank, Philadelphia, died December 21, aged fifty-two years. He had long been connected with banking in Philadelphia, and was for twenty-six years Cashier of the Manayunk National Bank, becoming President in 1897.

Frick.—Jacob Frick, a well-known Ohio banker, died November 17. He was President of the Wayne County National Bank, of Wooster, having held that office since 1880. He was born in Westmoreland county, Pa., in 1834. Since 1859 he had resided at Wooster, Ohio, where he was for many years engaged in the grain, wool and milling business. In 1899 he was elected vice-president of the American Bankers' Association for the State of Ohio. His support of benevolent enterprises was generous, and several years ago he erected a fine soldiers' monument and presented it to his city.

Gilfillan.—Hon. Calvin W. Gilfillan, President of the Lamberton National Bank, Franklin, Pa., died December 2, aged sixty-nine years. He was admitted to the bar in 1859, and subsequently held several important local offices, and in 1878 he became President of the Lamberton Savings Bank, which was merged into the Lamberton National Bank in 1900. Mr. Gilfillan was elected to Congress in 1868, and was a member of the Electoral College in 1880.

Digitized by Google

Haines.—Granville S. Haines, President of the First National Bank, Westminster, Md., died December 9 in his seventy-ninth year. He became a director of the bank at its organization in 1864, was made Vice-President in 1865, and President in 1872.

Haldy.—Walter A. Haldy, Cashier of the Lancaster County National Bank, Lancaster, Pa., died December 1. He was born at Lancaster fifty-one years ago.

Hardin.—Daniel Hardin, President of the Commercial National Bank, Saginaw, Mich., died December 11. For many years he was connected with the lumber manufacturing interests at Saginaw, and about twenty years ago became President of the Citizens' National Bank, withdrawing from this position to found the Commercial National Bank, of which he became President.

Humason.—Wm. J. Humason, Assistant Secretary of the Erie County Savings Bank, Buffalo, N. Y., died December 16, aged fifty-nine. He had been connected with the bank for nearly thirty years.

Madill.—Judge George A. Madill, President of the Union Trust Co., St. Louis, Mo, died December 11. He was born in Bradford county, Pa., June 9, 1838, and was educated at Schenectady, N. Y., and at the Albany Law School, and practiced law at Owego, N. Y., until 1865, when he went to St. Louis. Here he practiced law successfully, and was elected a circuit judge in 1870. In 1898 he retired from the bench and became President of the Union Trust Company. Judge Madill was a man of distinguished ability, and was highly regarded in legal and financial circles.

McKeown.—James A. McKeown, Assistant Cashier of the National Bank of Claysville, Pa., died December 8, aged fifty years.

McSparran.—Wm. McSparran, Vice-President of the First National Bank, Delta, Pa., died December 15 in his eighty-second year.

Mills.—Hiram P. Mills, President of the Genesee River National Bank, Mount Morris, N. Y., and one of the oldest bank Presidents in the United States, died January 6, aged ninety-six years. He had been President of the bank since its establishment in 1853, and had resided at Mount Morris since 1836.

Mills.—John F. Mills, Sr., President of the Portchester (N. Y.) Savings Bank, died December 5.

Sealy.—Geo. Sealy, senior member of the banking firm of Hutchings, Sealy & Co., and President of the Texas Guaranty and Trust Co., Galveston, Texas., died December 14 while en route to New York city. He was born in Pennsylvania in 1835. He went to Galveston in 1857 where he secured employment with the banking firm of Ball, Hutchings & Co., in which he soon became a stockholder. He was a man of considerable wealth at the time of his death and had been very energetic in his efforts to aid in rebuilding the city of Galveston since its recent destruction by flood and storm.

Slocum.—Wm. H. Slocum, for forty years President of the East River Savings Institution, New York city, did November 23. He was born at South Portsmouth, R. I., November 15, 1819, his ancestors being among the New England pioneers of 1637. Early in life Mr. Slocum came to New York, where he was successful in mercantile pursuits, and in 1862 was elected President of the East River Savings Institution, holding this position continuously to the time of his death.

Spencer.—Frederick A. Spencer, Vice-President of the Dime Savings Bank, Waterbury, Conn., died December 8. He had seen considerable military service, and was a member of numerous benevolent organizations.

Swain.—Geo. B. Swain, State Treasurer of New Jersey, and Vice-President of the German National Bank, Newark, died December 25.

Tracy.—Daniel D. Tracy, President of the Second National Bank, Erie, Pa., died December 9, aged sixty-four years.

Valentine.—John J. Valentine, President of Wells, Fargo & Co's Bank, San Francisco and New York, died at his home in East Oakland, Cal., December 21. He was born at Bowling Green, Ky., in 1840, and in early life became identified with the express business. In 1861 he went to California and entered the employ of Messrs. Wells, Fargo & Co. He became Cashier for the company at San Franciso in 1867, later being promoted to positions in connection with the company's service on the Pacific Coast and in New York. In 1882 he was elected Vice-President, and two years later was made general manager. In 1892 he was elected President.

Wattenberg.—Leopold Wattenberg, President of the Bank of Washington, Mo., died December 24. He was born in Germany in 1830 and came to the United States in 1849. In 1861 he settled at Washington, Mo., and became President of the bank on its establishment in 1880.

Wheeler.—D. P. Wheeler, Cashier of the Citizens' National Bank, Akron, Ohio, was found dead in front of the bank vault December 25. He had been killed by an electric shock due to handling the socket of an incandescent lamp and opening the vault door at the same time, thus forming an electric current which killed him.

Yorks.—S. A. Yorks, for the last ten years Cashier of the First National Bank, Danville, Pa., died December 4.

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SIXTH YEAR. FEBRUARY, 1902. VOLUME LXIV, NO. 2.

THE REDEMPTION OF SILVER DOLLARS in gold is provided for in the bill introduced by Mr. HILL, of Connecticut. This measure has been reported favorably by the House committee on Coinage, Weights and Measures.

If this bill becomes a law it will place all the money of the country definitely on the gold basis, as it recognizes that the Government is responsible for the difference between the face and the bullion value of the silver dollar. This coin becomes in law what it has always been in fact, a subsidiary coin on the same footing as the fractional silver coin.

The Government now receives the silver dollar in payment of customs duties and other dues, but it is under no legal obligation to redeem them in gold. The coin itself circulates in proportion of about one-eighth of the whole number issued from the mint. On January 1, $530,784,617 silver dollars had been coined, and $73,239,986 were in circulation. The remainder, $457,544,631, were held in the Treasury. Of these $449,492,892 were in circulation in the form of silver certificates.

In a way the silver dollars in circulation are kept there by the force of the Treasury agreement to pay the cost of their transportation to those parties who call for them. Silver certificates of low denominations would be more convenient, but the saving of express rates causes the dollars to be called for.

The silver certificates or silver dollars would never be presented for redemption in large quantities, as they form but one-fifth of the total amount of money in circulation, the remaining four-fifths being gold or redeemable in gold. It has always therefore been practicable to secure gold when needed without resorting to the redemption of silver certificates, if the certificates had been so redeemable. In the ordinary business of the country these certificates seem to appear in

Digitized by Google

larger proportions than either greenbacks, National bank notes or gold. Under the action of the Gresham law, the certificates and the dollars they represent would be the last currency to disappear from ordinary use if conditions arose causing money to be hoarded, and so long as their quantity was not disproportionate to the needs of business they would remain at par. If, however, times became so adverse as to cause gold to disappear from circulation, the silver certificates and dollars, not being redeemable in gold, would open a way to a return to a silver basis. Although such a disastrous change in the business conditions of the country is highly improbable, yet the possibility exists, and as long as silver dollars are irredeemable in gold, they are a threat, faint and remote it may be, but nevertheless a threat, to the continuance of the gold standard.

Since the investment of capital is cosmopolitan, the nation that offers the greatest inducement to the investment of foreign capital assumes at once a financial superiority over others. In many respects the United States offers superior inducements for such investments. But the threat of danger to the gold standard, which the maintenance of silver dollars virtually as fiat money gives color to, deters investments of foreign capital. Mr. HILL'S measure removes this threat, and establishes the doctrine that all debts and contracts must under all circumstances be settled on the basis of the highest monetary standard of the civilized world.

There is also a minority report from the committee objecting to the measure on the ground that it will be necessary to increase the gold reserve, and that like the legal-tender notes, the dollars may be used to deplete that reserve. The experience of the past shows that there is really nothing in this objection, because with the present reserve they are now maintained at par, and it is improbable that the dollars or certificates would be used to any great extent to obtain gold, especially when the stock of gold money is so great as it now is.

It is almost impossible to conceive such a decadence in the prosperity of the country that would render it necessary to obtain gold by the redemption of silver certificates or dollars. If, however, they should all be redeemed immediately after the enactment of Mr. HILL'S measure, the stock of gold taken out of the Treasury would enter into the circulation of the country, and would soon flow back into the Treasury. In the event of any such rush on the gold reserve, it would be in the power of the Treasury to renew its supplies under present laws. The probability is that the silver dollars and certificates will not be presented for payment in gold any more than were the greenbacks when gold resumption took place in 1879.

It should be provided, however, as a means of finally getting rid of silver dollars altogether, or at least of the excess of them, that as

Digitized by Google

received gradually for redemption they should be set aside as bullion and held for future disposition. They might thus within the next ten years be reduced to about $100,000,000, an amount that, without the use of silver certificates, could be kept in circulation as subsidiary coin.

THE SUGGESTION OF A CENTRAL BANK, made by Mr. GAGE, the former Secretary of the Treasury, for the purpose of affording a point to which the banks of the country could rally for mutual support, may have its effect upon the minds of capitalists already interested in some of the larger banks of the money centres, and perhaps induce them to bring about the organization of such an institution, either by the consolidation of banks already established or by the promotion of an entirely new creation. If several banks already of great power and influence enter into combination, the result would be an institution of such magnitude and power that by offering reasonable inducements it could no doubt attract the following of a very large number of the average banks, and to a very great degree carry out Mr. GAGE'S suggestion. This might apparently be done without much if any change in the powers now possessed by the combining banks. It would not, however, settle the other important branch of the banking question, viz., the furnishing the country with an elastic bank currency, unless Congress, finding such a great institution ready to its hand and also finding it cordially supported in its projects by a large majority of the banks and bankers of the country, should see its way to granting it the exclusive right of providing a bank currency under appropriate conditions.

Undoubtedly such a combination is possible, but it would with equal certainty be opposed in its full development with additional powers by capitalists interested in other large banks not in the combination, who would feel that the great interests and industries in the following of the combination would be treated by it with undue partiality.

If all the banks in New York city, for instance, could be united in one great institution, it would fulfill the expectation in affording a rallying point for all the banks in times of failing credit. It is to be feared, however, that such a combination would prove impracticable. Mr. GAGE'S preference seems to be for a new institution, independent of all existing ones, its capital being contributed by the other banks, and with such banking powers and under such restrictions that it could not enter into competition with the ordinary business of existing banks. But why should the subscription to the stock of the suggested bank be confined to banks? While they or other corpora-

Digitized by Google

tions ought not to be excluded as subscribers, the stock should be offered to the general public. Mr. GAGE did not suggest that the central bank shall have the power of issuing bank notes. It might at first sight be inferred that he did not contemplate this as one of its powers, inasmuch as he proposed a plan later in his report for the issue of asset currency by all the banks. This, however, may be regarded as an alternative plan, in the event that the great bank scheme does not meet with favor.

It is not to be expected that any proposition for banking reform, either for a central supporting bank or for asset currency, will materialize in practice without the application of some degree of force. Opposition will arise to any change. The only way force can be applied is through legislation. If Congress shall enact either of the suggestions of Mr. GAGE, or any other proposition for banking reform, it will be because the opposition has been pretty accurately gauged from a political standpoint, and found to be of sufficiently small proportions to be disregarded.

THE FINANCIAL CENTRE OF THE WORLD still remains fixed at London despite enthusiastic American assertions to the contrary. The securities dealt in and listed on the London Stock Exchange are in greater variety and more cosmopolitan in character than in any other of the great monetary centers. The reason of this is not far to seek. The Government of England was the first to adopt the single gold standard of value. Whether this action was the result of a deliberate exercise of sagacity, or an accidental but fortunate chance, will be decided according to the prejudice or the information of the individual student; but the act making the pound sterling in gold the basic unit of all business transactions had much to do with the growth of the credit of British securities all over the world.

The position of the British Islands and their comparative freedom from the immediate effects of war, and the stability of the Government, made them the depositories of the reserve wealth of the inhabitants of the Continent. London was a safe place to store treasures which were subject to plunder and confiscation at home. The British Islands, during the revolutionary upheavals of the last two centuries, were in the modern world like the island of Delos in the ancient. The shaky rulers of the governments of Europe provided for the time when they might be toppled from their thrones by storing up funds in the strong and steady British Consols, and as deposits in the solid banks of England. A political refugee was safer on the shores of Great Britain than in any other refuge in the world. The laws also were administered with a consistent regard for the rights of property,

Digitized by Google

with no bias on account of the political disabilities of the possessors in their own country.

In fact, the governments of nearly every part of the civilized world, for the last one hundred and fifty years were in a condition of change. The British Islands, from their situation and earlier experience of the revolutions out of which limitations have been placed on the ideas of sovereign rulers, were the first to emerge from the confusion of development and obtain a strong and settled government. Under this government their commerce developed, and colonies were founded all over the world. Vast territories and millions of people became dependent upon these islands in the northern Atlantic for the orderly transaction of their affairs. The capital of Great Britain was invested in enterprises all over the world. Freedom of trade became a necessity, and multiplied the power of her commerce and theavailability of her credit. London, the great city of the British Empire, became the settling place of the exchanges of the world.

At the present time, however, are there not signs that the superiority gained by the early start in the race and the advantages of an insular position, is beginning to wane? The governments of other great nations are settling themselves into something like an equal stability to that of Great Britain. Perhaps also the importance of government, as anything more than a maintainer of the police, is on the wane. The masses of men are becoming more thoughtful, as civilization advances, and are beginning to recognize that it is possible to conserve individual rights of property, under most any form of government; or, rather, that the struggle for the opportunity to use political power may go on with little real interference with those who devote themselves to the pursuit of wealth. There is now hardly a country in what is regarded as the civilized world and its dependencies, where the man who merely desires to work and save, may, if he does not meddle unnecessarily in political contests, do so according to his ability. It looks as if the time had arrived, when the "jingling of the guinea heals the wound that honor feels, and the nations do but murmur snarling at each other's heels." It is a survival of the mediæval notion of national honor that magnifies the police wars of the present era into contests of national importance in the old sense. The wars of the last few years have chiefly arisen in an effort to compel sections of people who have hung back in the economic race to conform to the idea that government should not unnecessarily repress business enterprise. A very little more elevation of the average intelligence of mankind will bring such questions as caused the Spanish war, the Boer war, and the squabbles which arise for the possession of territory by a particular nation, to arbitration. But at the same time those who think that arbitration will wholly abolish the soldier, do away

Digitized by Google

with weapons and armaments, are altogether too hopeful. Arbitration may give a decision approved by the common sense of a majority of civilized nations, but the enforcement of the decision may still require a police, operating by the common consent of the majority of mankind. If the case of the Boers had been heard before a court of national arbitration, created after the majority of men in all nations had reached the necessary level of civilization to make such a court possible, and if it had been proved that the Boers were subjecting individual right to a mediæval and exploded notion of clannish superiority, and the court had decided against them, then the enforcement of the decision would have rested with the police of all nations, and there would be nothing heard of the international abuse and criticism which now arise when opposition to the general trend of progress is undertaken by one nation alone.

International law may some day come to be enforced with as little general comment as is municipal law when any kind of a nuisance is abated. It is the tendency to the protection of production and the preservation of property that is fast taking away the distinction in this respect which has hitherto given Great Britain an advantage.

If the pre-eminence of London as the financial centre of the world is gradually growing less marked, at what other point will the future world's exchange be established? For it is probably necessary that there should always be some market which will be paramount over others. The credit of nations in the management of their financial affairs perhaps affords as reliable a criterion as any other when other conditions approach equality. Certainly the credit of a Government in monetary affairs indicates the ease with which the necessary expenses of Government are borne. The easier a people can bear taxation imposed to secure good government, the greater the opportunity for them to secure continued prosperity. Of all the nations of the world the credit of the United States, as indicated by the premiums which its bonds command, and the rate of interest realized by investors, is the greatest. It may be urged that the use of bonds to secure bank circulation and deposits has some effect to produce this result, but the main reason is the ease with which a revenue is raised which not only meets the expenses of the Government, but also reduces the debt by the purchase of large sums annually for the sinking fund. It is also true that the resources of the country are so great that the rates of taxation imposed hitherto are very light in proportion to those that might be confidently relied on as bearable in times of emergency. Moreover, the nation has been wasteful in the handling of its monetary affairs. Its currency and banking system and independent Treasury form together an antiquated piece of machinery that needs renovation and improvement before the full possibilities of the use of

Digitized by Google

the capital of the country can be realized. In the economical use of money and credit other commercial nations far surpass our own. But even with the imperfect means now available, New York, the great commercial centre of the United States, is rapidly gaining as a market where capital may be obtained for cosmopolitan enterprise. Enough foreign securities are listed on its exchanges to prove that it will not be long before it will be a recognized market equal to any. Progress in this direction will be more rapid when the chains that now bind our banking and monetary system are removed, and the country adopts methods that will allow the most economical and safe use of money and credit.

THE UNREST IN BANKING CIRCLES is manifested by the numerous propositions for consolidations, for chains of banks and for international banks with branches at home and abroad. There seems to be a blind groping for some shaping of present banking conditions to fit them to meet the demands of large enterprises, without resorting to legislation.

Within the last five years the outlook of American enterprise has been singularly extended. The immense export of our productions to foreign markets, the acquisition of the Sandwich Islands, the development of Alaska, the acquisitions of territory resulting from the war with Spain—not to say anything of the sounder knowledge of finance consequent on the educational campaign of 1896—have all excited the imagination of business men and have enlarged their ideas to a wonderful extent. Larger enterprises require greater banking facilities, and in the field of banking there has been no advance commensurate with the great strides taken by other lines of business and industry. The people of the United States have been trained to depend on their legislators to furnish banking facilities, and hitherto they seem to have hesitated to act for themselves. In banking they have had great faith in the directing energy of legislatures, State and Federal, while in other lines of business they have relied on themselves. They have built up great combinations of capital in all industries, sometimes favored by tariffs and sometimes in spite of them. They have suited their efforts to the difficulties, whether natural or imposed by law, and these difficulties have been largely overcome or evaded. In banking, however, it has not been so. Bankers have been content, and to a very great degree are still content, to work strictly in accordance with laws imposed nearly forty years ago. Only within the last four or five years has there been any great manifestation of impatience with these conditions. Although, from the rise and prosperity of great private banking concerns at the money centres, it might have been seen that the ordinary

Digitized by Google

banks were not meeting all the requirements of industry and commerce, the immense credit which lay within the reach of the banking power of the country has never been but partially utilized.

The bankers and business men have blindly realized this for some time, but they apparently knew but one way of relief and that through the action of the Federal Congress. Scheme after scheme and plan after plan have been devised and presented, and as yet Congress has not risen to the occasion. Every one of these plans has been opposed by some powerful section of the bankers themselves, and there has been no financier in Congress powerful enough to weld the conflicting elements into one comprehensive plan. It seems as if it were almost hopeless to expect Congressional assistance. This deadlock arises because of the great present prosperity of the country, even under the existing imperfect banking and financial methods. It seems to be the sentiment that it is best to let well enough alone. The great mass of people and their average representatives do not realize the greater possibilities that would arise were the banking power of the country made as available as it might be. The great bankers, however, see the necessity of advance; they fear also that advance under the guidance of legislation might prove to be in lines too narrow for future development. They dread the results of Congressional wisdom, judging from exhibitions of it witnessed in the past. Without invoking Congressional aid, and running the risk of measures ostensibly for the reform of the banking law, that may remove old chains but add new ones to prove yet more oppressive, they seem to be asking, can we not develop from present conditions into the conditions we deem necessary to place the banking facilities of the country on a level with the present and future demand for them?

This seems to partly explain the efforts at consolidation of banking power, by affiliations and chains of banks, and also by such schemes as that of a so-called international bank with branches both abroad and at home. The room for the extension of branches in what may be called foreign territory of the United States is very small compared with the field in strictly foreign territory. But when all foreign territory is exploited, the temptation to establish branches in home territory will preponderate, and it is possible that a bank might be gradually built up by private enterprise that in time would have all the features of a great monopoly. If such a bank were to issue notes in connection with its foreign business, it might and probably would result that these notes would circulate in this country. At least it will be interesting to watch the development of the use of banking power. The race is between the banks themselves seeking to gain their ends under present restrictions, and Congress seeking to attain the same end by legislation.

THE OPINIONS OF PROMINENT NEW YORK BANKERS in regard to the affiliations and consolidations of large New York banks, in order to form coalitions of banking power to meet the requirements of the large interests that have resulted from consolidations in other lines of business show, as might have been expected, considerable divergence. The old-fashioned, conservative banker, whose long service has accustomed him to the old order of things, and whom the long routine of a lifetime has deprived perhaps of the capacity for new initiative, naturally looks with dislike upon these startling innovations and developments. He is averse to a change which will compel him to reach out for business and take new risks, which he is unable to measure. Of course, to him the disadvantages and dangers are very threatening.

In a typical interview one of this class, spoken of as a well-known banker, referring to consolidations and affiliations, says: "The great banks, with their series of branches, are needed by speculators to complete their schemes." How unfair this is almost goes without saying. Banks, big and little, are always used by speculators to carry out their enterprises. Probably there is not a bank in New York city that has not been availed of to advance enterprises more or less speculative in both the wide and the narrow sense. But when those who thus use the banks are friendly customers of one's own bank, they are called "enterprising business men;" when they are customers of a business rival, they are "speculators." There is sound speculation and unsound speculation, but the greatness of the enterprise does not necessarily prove its unsoundness.

This well-known banker continues: "I do not say that all combinations of capital are based on that theory, but where you place $50,000,000 or $100,000,000 of deposits in the hands of a few men heavily interested in stock-market ventures, or great industrial enterprises, you expose banking capital to dangers unheard of in the days of the men who formed the National banking system."

Granting the premise, the conclusion follows smoothly enough. It would be still stronger were the premise that this enormous line of deposits is to be placed in the hands of reckless, incompetent or dishonest men. It is the old story of the stage-coach and the railroad train. If the stage-coach breaks down the damage could not be very large, but when a railroad train goes to smash loss of life and property is very great. As a matter of fact, accidents to railroad trains are probably more rare than were accidents to stage-coaches. But perhaps if the railroad trains were conducted by the drivers of stages there would not be the same comparative immunity from accident.

The well-known banker adds: "Tie half a dozen banks together put one man or half a dozen men in absolute control of all, and the

Digitized by Google

banks will share the fate of the men who hold the reins. Knock one down, and the others will topple. Let a great panic overtake the market, and if the banks are affected, the sentimental effect will be felt at the counters of the various banks the next day." This is one of those propositions which nobody can deny. If the banks are injuriously affected by a panic they will undoubtedly be affected. But was there ever a panic which affected the average New York bank when the sentimental effect was not felt at the counters of the remaining banks the next day, even if they were not in any way affiliated?

The banker quoted adds apologetically: "I may be old-fashioned and living in the nineteenth instead of the twentieth century, but my education has never carried me beyond a point where a bank is recognized as an institution of trust, organized for public, not syndicate ends."

Probably the great consolidations and affiliations, those already materialized and those which may yet be formed, think themselves institutions of trust, and they may imagine that a syndicate or union to secure strength gives greater security for loans and the use of capital than the various elements forming the syndicate when disunited. The banks themselves in the past have often formed syndicates to undertake large loans for the Government, and the strength thereby gained was thought no disadvantage.

This conservative banker concludes: "In the great tendency towards the consolidation of capital, let us not become so confused as to think of a bank in the same category as a railroad. If we do, panic Thursdays or blue Fridays will remind us of our mistake."

This is a good deal like the ejaculatory conjurations of evil of some old woman; may this or that evil never happen, but I very much fear it will. The object of combination and affiliation is more strength to resist the panics and avert the blue Fridays, and is in precise line with the development of the strength of association among the New York banks. There is, however, a modicum of truth in these apprehensions of evil as there always is in such cases, and if the strength of combination is misused the well-known banker may be able to say, "I told you so," which causes one of the dearest and most exquisite sensations that can pervade the human breast.

On the other hand, the opinions of bankers taking a different view were voiced by one of them as follows: "We have passed the day of small banks; an institution with $1,000,000 capital and surplus for a similar amount is not apace with twentieth-century progress. Big men want big banks that can finance $10,000,000 deals at a week's, not a month's notice. * * * We shall have great banks for great enterprises, and the $10,000,000 institution with a string of affiliated

Digitized by Google

banks is the logical outcome of existing tendencies in other branches of activity. The big bank is a necessity—therefore it will stay."

This is a satisfactory explanation of the effort that is being made without the aid of special legislation to satisfy the growing demand for banking facilities. The banks of the United States, independent and isolated as they are, have at several periods in the history of banking endeavored to overcome the competitive spirit and have associated to greater or less extent to overcome the difficulties which seemed too great for any one institution to encounter. In proof of this it is only necessary to recall the invention and formation of clearing-houses, the united action of the banks of New York, Boston and Philadelphia in loaning to the Government at the beginning of the Civil War, and the banking syndicates formed to place other Government loans. In another way the banks rose to the occasion in inaugurating a system of redemption of the old State bank currency. And perhaps without special legislation bank combinations may be formed which will supply the lack of a great regulating institution which by some is considered the greatest defect in the present system.

There are, however, some difficulties that may be apprehended which even the greatest combinations under present law may encounter. The independent Treasury system and the lack of a truly elastic bank-note currency will always prove a threat to the strong as well as the weak banks. However, those who help themselves are apt to receive help, and possibly when the combination is once effected and shows its strength and usefulness, the other banks may be willing that extraordinary powers in the use of its credit may be granted by legislation; especially if in return it will assume certain duties and burdens in extending and sustaining credit when occasion arises, and will submit to the restrictions which may be deemed necessary in its position as the rallying point of the other banks in times of failing credit. There will, however, be opposition as is indicated by the interview quoted, and it may be easier to secure legislation for a regulating bank to be created *de novo*, than legislation granting the additional powers necessary to fit an already existing institution for the same functions.

THE TEMPORARY COLLAPSE OF THE EVERETT-MOORE syndicate for the acquisition and consolidation of a number of electric trolley lines in Ohio and Michigan cities and suburban localities, and the construction of other lines to connect some of those already finished, was due to imperfect financing. The syndicate commenced its operations gradually and relied on the Cleveland money market as the chief source of the funds required. The properties acquired were

Digitized by Google

generally such as had demonstrated their paying capacity, and were increasing in paying power. In addition to electric railways, the syndicate was interested in the purchase and construction of telephone lines. The proportion of finished paying lines, acquired in the railway business, was greater to those that had to be constructed as connecting links, than in the telephone side of the syndicate venture. It seems to have been the necessity of constructing the connecting lines in both branches, in order to carry out the comprehensive plan of covering the territory occupied, that most exhausted the available resources of the syndicate. The completed lines were able to pay dividends and perhaps something more, and their stock was good collateral. The syndicate, in constructing some of the connecting lines, was often forced into undue haste in order to obtain right of way and franchises, because of competition on the part of rivals seeking to control the same route.

The main difficulty was, however, that the Cleveland money market upon which the syndicate appears to have chiefly relied, was not sufficiently large to meet the demands made upon it safely. No money market except one to which money returns quickly from all directions could safely carry through so large a series of enterprises as that undertaken by the syndicate. If the money borrowed and expended could have been paid out in Cleveland, it would have returned to the banks there and they could have continued their support indefinitely. But the necessary material and supplies had to be purchased all over the country, and the money expended returned in large proportion to banks in other places far out of the financial currents which feed the Cleveland money market. Naturally, as the designs of the syndicate developed, the demands for funds were greater and the difficulty of local borrowing increased. The syndicate managers realized this at last, but apparently too late. They then endeavored to secure a sufficient loan to complete their operations in New York, the great money centre, to which all money expended in all parts of the country in extraordinary enterprises is sure sooner or later to return. The negotiation of the required loan was not successful, because it is said the rates asked were too high. However, there was still such faith in the syndicate and the value of the properties it controlled, that for a time the success of the New York negotiation was thought to be assured, and the syndicate was able to make short loans sufficient to permit of the completion of some construction and the securing of valuable franchises which otherwise might have been lost. As the big loan did not materialize and the temporary loans based on its promise of success fell due, the stocks of the various properties used as collateral began to be forced on the market and depreciated far below their real value as investments.

Digitized by Google

The wide interest in the suspension taken by the bankers of Cleveland, and the immediate formation of a committee to take in hand and straighten out the affairs of the syndicate, show first a confidence in the value of the properties involved, and second how important it was to the Cleveland money market that the stocks of these properties should not be sacrificed.

There is at the present time great faith on the part of promoters and investors in the construction of electric trolley lines through well-settled country districts lying between cities and large towns. When these roads are properly financed at the beginning, they almost always prove to be paying properties. The average length of between twenty and thirty miles, through a settled farming community, does not require a very great sum for its construction and equipment. The general sentiment among the owners of the land required for right of way is to give it freely in exchange for the improvement and convenience the completed road will afford, to say nothing of the increased value of contiguous land. Such a road not only pays, as a rule, from the first, but also builds up the country and increases its own earnings.

Between contiguous towns the rapid settling up of the territory through which the road runs is generally assured. No doubt, in course of time, as was the experience with steam roads, these short lines will be connected and through routes established, reducing greatly the operating expenses and effecting other economies. There is danger, however, in forcing this process before it would naturally take place. To connect these roads before the proper development of them often costs more than it did to build the original roads. Every one sees where the connection must be made and right of way and franchises are only granted at exorbitant prices. Moreover, failure of the attempt often injures the stock of the paying properties, and diminishes public confidence in the desirability of subscribing to new and perfectly good enterprises of the same kind.

The failure of the EVERETT-MOORE syndicate will doubtless shake public confidence much more than it should. The separate properties held are very valuable and with good management, which is assured by the committee of Cleveland bankers, will soon be out of the hands of the Receivers appointed to protect the properties. But it must also be remembered that the failure was due not to anything unsound in the separate railways, etc., involved or very much to the attempt to connect them so as to reduce running expenses and increase profits, but to the attempt to carry out the plan on too narrow a financial management. If a little more time had been taken, perhaps some chances might have been lost, but the intrinsic merits of the plan would no doubt have carried it through successfully. However this

Digitized by Google

may be, the failure of the EVERETT-MOORE syndicate was caused by special reasons and should not shake the faith of investors in the value of suburban trolley roads.

THE POSSESSION OF THE PHILIPPINE ISLANDS and other territory recently acquired by the United States opens new opportunities for banking capital. In the Philippines and in Porto Rico and Cuba there are already banks established with Spanish charters, and whether or not well adapted to the business of those islands, are at least well acquainted with the customs and methods of business there conducted. The change in sovereignty may well bring about changes in banking with new business affiliations, and thus give an excellent opportunity to American banking capital to compete with that already domiciled there.

The Spanish banks under their chartered rights issue notes for circulation almost as suits their convenience. The quantity of notes that may be legally issued is not checked by the amount of capital or deposits, but appears to be left to the judgment of the managers of the bank. The only check on the latter in the use of notes is the necessity of maintaining their credit. As a general principle it cannot be denied that a good bank manager, well acquainted with the values dealt in by his customers, can use his credit in the issue of promissory notes to an extent many times his actual capital, or with no reference to the amount of his capital. In exchange for every promissory note he issues he expects to take into his possession some tangible security of greater value than the note put in circulation. He may make some errors in the value of the securities he takes, but experience has shown that a banker may attain to such a knowledge of the business going on around him as to seldom err in taking too little security. In fact, his capital after it has served its purpose to attract business and found a credit, cuts little or no figure. He exchanges his credit, transformed into money, for the titles to the wealth dealt in by his customers. He holds these titles, converts them and holds their proceeds to redeem the credit notes issued in exchange for them.

This is the freest kind of banking, and except as a Spanish bank has had to pay taxes and bonuses to the Government, for the privilege of engaging in so profitable a business, its charter usually permits it to bank in this way. Thus the Spanish-Filipino Bank with a capital of $1,500,000 was privileged to issue notes to the extent of $4,500,000. Its issues never exceeded $3,400,000, and are now something over $2,000,000. This indicates the kind of banking with which American banking capital will come in competition. How can a bank

Digitized by Google

organized on the narrow lines laid down in the National Banking Law, for instance, successfully compete with the freer institutions already established in the late possessions of Spain? The banking powers of the Spanish charters must be diminished, or those of the American banks increased before they will be on anything like an equality. Even then the prestige, the experience of the local banker and his knowledge of his public, will give him a decided advantage. Already it has been recommended that a restriction be put on the issue of circulation by the Spanish-Filipino Bank. Whether the powers under the Spanish grants are protected by the treaty rights has not yet been tested. It is hardly possible they will be given up without a contest. If these rights are vested, will Congress grant equal rights to American bankers who go to the islands? It will be somewhat anomalous to concede the right of issuing currency to bankers in these newly-acquired territories, denied them here at home. If there can be safe banking with asset currency in the Philippines, why should not there be equal safety with such currency in the United States? If asset currency be dangerous for the citizens of the United States, there is no special reason why it should prove safe in the islands.

The necessity of banking legislation for the islands lately under Spanish rule may induce Congress to view the whole subject from a new standpoint, and impressed by the light shed on asset currency banking by an actual examination of it as practiced in Cuba, Porto Rico and the Philippines, Congress may be able to approach the subject of banking reform in the United States with a broader spirit. It will be of interest to observe how Spanish and American banking will agree together. Perhaps they will each borrow some of the features of the other and a result be produced beneficial to those who require banking facilities both in the United States and the islands.

THE BILL INTRODUCED BY SENATOR PLATT, of New York, enabling State banks to receive circulating notes from the Comptroller of the Currency, upon State, county and municipal bonds deposited with the United States Treasurer, does not seem to meet the approval of conservative bankers. This of itself would not be a conclusive argument against the measure, as among all the bills for the improvement of currency conditions it would prove difficult to point out one that can claim the unqualified approval of the banking community.

If the principle of requiring bonded security for circulation had proved entirely satisfactory in the experience of the National banking system, where United States bonds are the only permitted security, something might be said in favor of the extension of the security basis, by the admission of State, county and municipal bonds. The objections

Digitized by Google

to these bonds are colored to a considerable extent by the prejudice arising from the recollection of the misfortunes of State banking at a period when the credit of States and municipalities was in a very unsettled condition. State stocks and bonds, of very uncertain market value, were then used as a basis for circulation, and many abuses existed in their valuation as security for circulation. Now, however, the real values of securities of this class are better understood, and although there is some variation, State, county and municipal bonds have in most cases as safe a basis for payment of interest and principal as United States bonds. The legal principles on which they are issued have been well thrashed out in the courts, and they are widely sought for as investments by very conservative people.

If the principle of bond deposit as security for circulation is to be retained, it is evident that some extension of the class of securities available for the purpose must be made. United States bonds are to-day entirely inadequate, and becoming more so. The continual struggle between the great investing public, and investors for bank purposes, always results unfavorably for the latter.

THE RETIREMENT OF MR. GAGE as Secretary of the Treasury, which took place February 1 on the qualification of his successor, Hon. LESLIE M. SHAW, occurred at a time when the Government finances are in a highly satisfactory condition. Though this state of affairs is due primarily to the general prosperity of the country, it cannot be doubted that the unprecedented business development of the past five years has been due to a great extent to the sound and business-like administration of the Government finances.

It has been Mr. GAGE's chief distinction that he applied business principles to the management of the Treasury Department. His appointment immediately inspired confidence in the financial world, and that confidence grew as the results of his policy were manifested. Confronted at one time with the necessity of quickly raising large loans for war purposes, he was soon called on to handle a large surplus; and despite the cumbersome sub-Treasury system, he managed these large accumulations of money without disturbance to the money market. His work in shaping the Act of March 14, 1900, whose purpose, as he frankly declared, was "more firmly to commit the country to the gold standard," and the refunding of a large part of the public debt at the low rate of two per cent., entitle him to a high rank as a financier. The credit of the United States is to-day better than that of any other nation in the world, and Mr. GAGE, by his sagacity and skill, has helped to bring about that result.

SOME ASPECTS OF HIGH FINANCE.

In these days, when dollars are counted by millions in enterprises of quite ordinary nature, and when there are financial institutions that can without straining themselves furnish these millions at short notice, the expression, "high finance," at one time confined to operations of governments in raising and expending their revenues, can now very appropriately be used in regard to many of the enterprises inaugurated by the energy of ordinary citizens. The management of many of the great industrial trusts of this new century involves as much study of all the conditions that underlie the prosperity of a people, as do the management of the financial affairs of many existing governments. The dependence of one industry upon another comes into light at once when, through the mismanagement of any of these great modern combinations, the others, though perhaps more scientifically handled, at once show signs of weakness.

The finances of a government are usually dependent for their prosperity or otherwise upon the conditions existing within its own territory; but the management of many an industrial combination involves the study of a special product in all parts of the world. High finance is not only a science dealing with money and the various mechanisms for its use, but it has to do with the study of all kinds of production by nature and by human energy. It ceases to be material, and enters the domain of psychology when it takes up of necessity the study of the minds and dispositions of men, and watches carefully the play of those two great motives of action, as Napoleon called them—fear and self-interest.

The effect of the mental condition of men is most easily understood by considering the effect of a financial panic, spreading over the business world. In everything material there is no appreciable change. There is just the same quantity of every product, of every material resource, to-day there was yesterday; the change is in the mental and moral condition of the people.

Previous to the Civil War the Government of the United States had conducted its financial operations on a very small scale. Seldom had a loan of over twenty millions of dollars been made at one time. Yet in 1861 and 1862, although the material resources of the country could not have been appreciably increased over their amount in 1860, loans were made amounting to hundreds of millions. It was the unity of mind that was encouraged and brought about by the resolution and wisdom of the leaders of that period that enabled these burdens to be borne. Instances are not wanting in all nations, where by the proper incitements peoples have been roused in almost one day from the depths of despondency to continuous and prosperous effort. There is nothing that affords so much encouragement under such circumstances, as an improvement of financial conditions. Let the object in view be definitely settled, and then let it be understood that every one can help and that every one shall be paid, even if every one has to undergo taxation to furnish the means of payment, and the task is courageously undertaken.

Digitized by Google

Finance itself is the application of money and the development of faith or credit by the use of money which multiplies indefinitely the power of the money, in effecting the production, transportation, distribution and consumption of the various materials and combinations of materials, necessary to the general welfare and sustentation of men. Some of the effects produced by financial operations do not at first sight appear to relate to materials; they relate to the mental and moral training of men to enable them, however, to act more perfectly by their energy and labor on physical material. It is on the proper disposition of materials found on and in the earth, and the elements that reach it from outside, that the welfare of mankind depends. The proper use of financial science therefore is as the director of human action to successful conclusion, and any exercise of financial science stimulates human energy to some result, which may be good or bad or perhaps indifferent.

High finance means the application of financial science to great undertakings calling for the energies of large numbers of men. It is of course a relative term. The high finance of Pharaoh had for its object the construction of a tomb for his mummified body that should outlast the ages. The high finance of despotic leaders was to maintain wars of plunder and conquest. The high finance of modern times excels that of earlier periods in that it endeavors to maintain a continual conservation of force. Every force expended in dealing with material is expected to produce another force equal to or perhaps greater than that originally exerted. It is a kind of perpetual motion. In building a railroad it is expected that something will be made which by its operation will continually return the labor and material expended on it. Not only will it repay those who furnished the original force, but it also maintains itself. Great undertakings like wars of defense or conquest were at first paid for by simply paying out money collected by taxation. But the financial conception of borrowing, and merely using the proceeds of taxation to pay a moderate interest, multiplied the offensive and defensive resources of a nation to almost any extent. The punctual payment of interest created of a debt a resource, which within reasonable limits had a constant value equal to money.

The history of national debts is the history of the discovery of the principal of capitalization by which apparently people may eat their cake and still have it, may see their money spent and yet recover it. It is said that capitalization merely pushes on the payment of the debt to future generations, and to some extent this is so with money expended for the waste of war. But when capitalization is applied to the funds borrowed for works of utility, posterity inherits the benefit of the work done, which aids them in paying the debt. Nor is money expended for apparently quite hopeless purposes, such as inconsequent wars, altogether wasted. In a national effort, the expenditure of money and material is rather a redistribution than an actual casting away.

So the conclusion is arrived at that when financial operations are conducted on a large enough scale, we are able to perceive that as no material is ever entirely lost or destroyed but merely passes from one condition to another, so none of the expenditures made in financial operations are ever entirely wasted, but continue to exist in a redistributed form, to be recollected and used again and again.

This process of distribution and recollection of financial energy, although

Digitized by Google

apparently a natural law, is assisted and made more rapid, and kept within bounds, so that its operations can be kept in sight and counted on, by the machinery which has been devised by the growing wisdom of mankind. Among the chief parts of this machinery are banks and financial institutions of all kinds, clearing-houses and the appliances and methods of business they employ, stocks and bonds and the various evidences of debt, with the stock exchanges to handle their transfer efficiently.

In the handling of all the machinery of finance there are always two principles at work, one tending to secrecy and the other to publicity. The general operations of all financial institutions, of exchanges, of the transfers and sales of products, are at the present time given the greatest publicity. But, on the other hand, the advantage of secrecy is well understood in particular transactions. The wider the knowledge of what is going on the better the chance for one side to gain at the expense of the other, for there are always two sides—the borrower and the lender, the buyer and the seller, the debtor and the creditor. There is always a lurking hostility between the one and the other, and secrecy is to each a valued protection. As between individuals, this is fair enough; but between great institutions, dealing with a scattered public, the advantage of secrecy is often unfair; it is the disciplined army against a mob. But both publicity and concealment of purpose until the proper time have their legitimate place in financial operations. The proper bounds of one and the other are not yet well understood and deserve careful study by legislators who desire to enact laws which are to check powerful financial institutions when showing a disposition to disregard and override individual rights. It would seem that while the subject requires study, it will not be difficult to determine the proper rules which should govern the concealment or publication of financial operations.

The greatest financiers, who with good faith exercise their talents, as a rule know that it would be suicidal to take undue advantage of their superior knowledge. Most of the use of financial machinery which results in danger to the public is made by men who are not entitled to be considered as belonging to its legitimate managers. In fact, all so-called speculators are merely hangers-on, a sort of financial *lazzaroni* who watch for accidental droppings and leavings of the great mechanism. They cannot, however, be abolished. This is a free country, and genuine speculation is the life of trade; but it is impossible to distinguish when legitimate speculation ends and that based on wind begins. Although high finance must necessarily take into account all the phenomena of the stock market, the jackals that infest its purlieus as well as the participants in its proper functions, it does not properly include the typical broker, or speculator, scheming to effect changes in prices which may result in profit to himself. Such men are frequently popular heroes celebrated in the newspaper and the ephemeral drama. They compare with the real financier as Hermann, the prestidigitateur, compares with Edison, the wizard applier of electric power.

The real director of high finance, of couse, is well up in the technique of the financial mechanism, the banks, the stock markets, the exchanges, but he directs this machinery through others. His proper and peculiar province is the study of the minds and dispositions of men as they act and react in the business of the world, and also the study of industries and their various productions, their distribution and mutual relations. A knowledge of the

Digitized by Google

resources which are the basis of financial action, and the proper preparation, conservation and use of which constitute wealth and property, are the main requisites of a director of high finance. These resources include the various mental, moral and physical factors making up the effectiveness of human energy, as well as the material to be acted upon. Men are often placed in positions to direct the high finance of a nation, because they can talk with clearness and force upon the technical operations of financial machinery. This sort of capacity and knowledge can easily be displayed in the civil service examination, as it might be called, to which candidates for high office are subjected by those who collect such information for the public. But a brilliant professor of technique may be lacking in the deeper and more essential qualities, of which no display is possible. Perhaps this fact is the foundation of the distrust, that seems to be felt, towards financial men who become conspicuous as talkers or writers. In the selection of men to fulfill the duties of a position requiring skill in high finance, it is a question, whether a training which tends to make a man expert in the use of financial mechanism, or a training that tends to develop a knowledge of the characters of men, and the resources of the country, best fits for the place. In other words, should the finance minister of a great nation be a banker or a politician? An ideal finance minister should not have been trained too exclusively either in the one line or the other, but should have training in both directions.

The history of the Treasury of the United States reveals the fact that as a rule the political factor, in the training of those who were at the head of that department, was the controlling one. It is only necessary to cite Boutwell, Bristow, Windom, Carlisle, Foster, and other Secretaries, who were first of all politicians, and with a very small tincture of real financial training. On the other hand, there have been McCulloch and Gage, whose training was purely financial, that of McCulloch more narrowly so. The latter failed, from lack of political weight and training in political methods, in carrying out the policy of contraction he inaugurated. This was a very good policy for the time, and if it could have been made permanent would have saved many subsequent disasters. Perhaps if applied with more tact and gentleness it might have eventually been carried to a successful conclusion. But McCulloch as head of the Treasury acted with the same undisguised positiveness as if he were still the President of a bank.

Mr. Gage was not like Mr. McCulloch in this respect; he sunk the bank President more, but still, in a position requiring much political training, the lack of it perhaps rendered him less able to resist the aggressions of politicians to which all officers of the Government are continually exposed.

John Sherman was a type of a successful finance minister. Of wide experience as a politician, and with the cool temperament often observed in successful bankers, he combined a considerable tincture of knowledge of financial technique.

In private business it is more difficult to find leaders in high finance. This is because, until within a few years, private business has been on a comparatively small scale. There has been no necessity or opportunity to look over the whole field. The founders of the great estates, Gould, Vanderbilt, Astor and others, each confined himself to his own circle of profit or loss. With the growth of wealth and of the combinations in different lines of labor and business, each combination, by faulty or perverse management, becomes

Digitized by Google

capable of shaking the whole fabric of financial relations. Such being true, it becomes feasible and necessary that there should be some one of sufficient energy and power, to settle differences and even force compromises.

The functions popularly ascribed to J. P. Morgan in the appeasing of the labor interests, and in unifying other competing elements, in connection with his other numerous employments, point to him as such a director of high finance. His prominence in such a position has been caused not by popular vote, nor by executive appointment, but by the evolution of the fittest. And so it will usually be in private as distinguished from governmental business. With the growth of combinations the dangers of finance enter into a new phase. Under the *regime* of individual, firm, and corporation business it frequently happened that the failure of some one firm or individual or corporation might precipitate a panic at critical times, and often quite unexpectedly. The combinations reduce the chance of failure, but they make the calamity far more to be dreaded should failure of any one actually occur. With the advance of financial knowledge, the greatest force of financial ability is often applied to sustain the weak brother whose collapse may injure all. There are, of course, even in this age, the contests of competition, when the losses of victory are often as great as those of defeat. But these senseless exhibitions of the spirit of a cruder age are beginning to be frowned upon. In repressing such irregularities which impede the normal working of business, such men as J. P. Morgan exercise the greatest functions of high finance, greater than those of financial ministers of governments.

Combinations are new things, as were railroads once. Some irregularity may be expected in their methods of working at first, but the time will come when their operations will be carried on with the same regularity as those of trust companies and banks. Scientific principles, which will enable men to regulate production and consumption, and prevent undue fluctuations in prices, will be discovered through them. In this field as in no other is there room for the exercise of the function of directors of high finance by such men as J. P. Morgan.

Chief Cashier of the Bank of England.—The London "Statist" of January 11 contains the following paragraph:

"There is general regret that Mr. H. G. Bowen, Chief Cashier of the Bank of England, has, owing to ill-health, resigned his position. Mr. Bowen has been in the service of the Bank for no less than forty years, and has been Chief Cashier for over eight years. Mr. J. G. Nairn, who has been in the service of the Bank for twenty-one years, has been appointed to succeed Mr. Bowen."

Banking in the United Kingdom.—In its review of the "Progress of Banking in Great Britain and Ireland in 1901," the January number of the London "Bankers' Magazine" reports a net increase of £2,189,763 in banking capital and reserve funds, compared with a net increase of £1,263,390 in 1900. It is also stated that the increase would have been much greater in the past year but for the fact that "considerable sums have been taken from profits to write down the price of consols and similar securities held, which have dropped so much in value recently."

Cost of the South African War.—According to the London "Statist" of January 4 the outlay of Great Britain in the South African war, including the possible supplementary estimates which may be presented to Parliament in the coming session, will reach £163,-500,000. The same publication says that should the balance of the war expenditure after March 31 reach £60,000,000, the total cost of the war would be £223,000,000.

BANK NOTES ISSUED THROUGH CLEARING-HOUSES.

Clearing-houses of issue are provided for in a bill recently introduced in the House of Representatives by Hon. C. A. Pugsley, of New York. The bill was introduced by request, and is understood to be mainly the work of Mr. Theodore Gilman, a well-known New York city banker.

This measure is entitled, "A bill to protect and support commercial credit, to equalize rates of interest, to provide for the incorporation of clearing-houses, to regulate and define their operations, to provide a clearing-house currency secured by pledge of commercial assets and the responsibility of the associated banks, and to provide for the circulation thereof." It contains twenty-six sections, all carefully drawn with a view to accomplishing these purposes.

The bill provides for Federal incorporation of clearing-houses in towns of 6,000 inhabitants and upwards; all National and State banks to be allowed to become members. To entitle them to membership State banks must comply with the National Banking Act so far as it applies to the keeping of reserves. These local clearing-houses are to transact the business usually incidental to such organizations. Sections nine to eleven, inclusive, relate to the method of issuing circulating notes. Said sections are as follows:

"SEC. 9. That the clearing-house association organized under this act, in the chief commercial city in each State, or in the city most central and convenient for business in each State, or any clearing-house so organized effecting bank clearings of over two hundred million dollars annually, to be designated and approved by the Secretary of the Treasury, shall be made a clearing-house of issue. And if there shall be more than one clearing-house of issue in a State, then the Secretary of the Treasury shall divide the State into a like number of clearing-house districts which shall be convenient for the business tributary to each clearing-house of issue. The Secretary of the Treasury shall authorize the organization of a clearing-house of issue in any State or Territory in which there may not be a city or town having five banks duly incorporated under either the National Bank Act or under the laws of said State or Territory, and shall fix the location of same: *Provided*, That said clearing-house of issue shall be composed of not less than ten banks, none of whom shall have a capital less than the minimum amount authorized by the National Bank Act and a majority of whom shall be organized under said National Bank Act. Banks in each State, Territory, or district shall transact the business described in Section 10 of this act only with the clearing-houses of issue in their State, Territory, or district.

At the annual meetings of the clearing-houses of issue there shall be appointed or elected a loan committee, whose duties shall be as described in Sections 10 and 11 of this act. Members of this committee shall not be eligible for re-election or reappointment until one year after their terms of office shall have expired. They shall be divided into three classes at their first election or appointment; one-third shall serve one year, one-third two years, and one-third three years, and at every election or appointment thereafter they shall be elected or appointed for a term of three years.

SEC. 10. That every clearing-house of issue organized under this act shall be authorized and empowered to obtain from the Comptroller of the Currency and issue to banks composing the clearing-house associations within its State, Territory, or district notes to be circulated as money in accordance with the provisions of this act, and to act as trustees by receiving from bank members, and holding in trust in accordance with the provisions of this act, securities pledged by said bank members as collateral to the circulating notes issued to

Digitized by Google

them. The collateral securities which a clearing-house of issue may receive from its bank members, or from any bank member of a clearing-house within its State, Territory, or district, shall consist of commercial assets, promissory notes, bills of exchange, convertible bonds and stocks, and other securities and evidences of debt. On the approval of the loan and appraisement of the value of said commercial assets by its loan committee, the said clearing-house of issue may deliver to said bank member seventy-five percentum of said value in its said circulating notes as an advance upon said pledged property, and shall require from said bank member its promissory note of equal amount, which note shall be in form as approved by said clearing-house of issue. The bank member taking said circulating notes shall engage to redeem them in the lawful money of the United States at all times upon demand of payment duly made during the usual hours of business at the office of such bank member, and also when called upon to do so by the clearing-house issuing the notes, and to give any additional collateral needed to restore any depreciation in the value of the assets pledged, on demand. On failure to comply with such demands before the close of business hours of the day when made, said bank member shall be adjudged in default, and shall be thereupon closed pending an examination by a committee from the association which issued the notes. On recommendation by the examining committee the loan committee shall proceed to liquidate the loan by turning the securities into cash, in accordance with the method provided in Section 11. The bank member taking said notes may release its securities from pledge by depositing with the said clearing-house of issue clearing-house currency, United States legal-tender notes, coin, or coin certificates, with any charges made by said clearing-house of issue, whereupon it shall be entitled to and shall receive all its securities so pledged. The charges shall be regulated by each clearing-house of issue. Upon the receipt of such deposit the clearing-house of issue shall immediately give notice in a newspaper published in the city, town, or county in which the association is located, which notice shall be published at least once a week for six months successively, that the notes of such bank member will be redeemed at par, and that the circulating notes of such bank member must be so presented for redemption within six years from the date of such notice; and all notes which shall not be thus presented for redemption and payment within the time specified in such notice shall cease to be a charge upon the funds in the hands of the clearing-house for that purpose. At the expiration of such notice it shall be lawful for the clearing house of issue to surrender, and such bank member or its legal representative shall be entitled to receive all the money remaining after such redemption, except so much thereof as may be necessary to pay the reasonable expenses chargeable against the said accounts, including the payment for the publication of the above-mentioned notices.

All circulating notes which shall be thus redeemed either by the clearing-house of issue or by the bank member shall be burned to ashes in the presence of three persons, one to be appointed by the Comptroller of the Currency, one by the clearing-house of issue, and one by the bank member on whose account they were issued; and a certificate of such burning shall be made on the books of the clearing-house of issue and duplicates forwarded to the Comptroller of the Currency and to the bank member whose notes are thus cremated.

SEC. 11. That each bank member taking such circulating notes shall guarantee the clearing-house of issue from loss resulting from such issue to them, and in case of a default in the payment of a loan when demanded by the clearing-house of issue or of a default arising in any other manner, then it shall be the duty of said clearing-house of issue to levy upon all the clearing-houses in said State, Territory, or district, in proportion to the capital of their bank members, a sufficient sum to provide for the payment of said loan, which sum shall be held for the payment and redemption of the circulating notes so issued. And if enough money can not be obtained by such assessments, then it shall be the duty of said clearing-house of issue to report to the Comptroller of the Currency the fact of said default, and it shall be his duty to levy a further assessment upon all the clearing-houses organized under this act in all the States and Territories until such sum is secured, in which case the sum so raised by the Comptroller shall be paid by him to the Treasurer of the United States as a special fund to pay the circulating notes of the defaulting bank member; and he shall appoint a receiver for the collateral securities to the loan or loans in default, who shall take possession thereof and turn them into cash and distribute the proceeds to the banks which have contributed to the assessment, and any surplus after reimbursing them their advances shall be handed over to the bank member in default or its legal representative. But if the assessment by the clearing house of issue on the banks of its State, Territory, or district is

Digitized by Google

sufficient to provide the needed funds, then the collaterals shall be administered upon and turned into cash by the loan committee or by a liquidating committee of said clearing-house of issue, and the cash proceeds shall be appropriated as above provided. At no time shall the total amount of such notes issued to any bank member exceed the amount at such time actually paid in of the capital stock of the bank member so applying. And said loan committee are charged with the duty of supervising said loans so as to maintain the margin of the value of the collateral security, and shall demand additional securities to make good any depreciation in their value, and they may allow withdrawals and substitutions of securities which shall not diminish the said value."

As will be seen the underlying principle is a union of the banks, securing the advantages of combination, without any actual consolidation or sacrifice of the independence of the scattered bank units comprising the various clear-house associations. This plan is somewhat on the line of the Federal Union, and would appear to be a good device for securing the strength to be derived from combination and yet without creating a monopoly or causing a loss of freedom in the organization and management of banks. To secure circulaing notes, a bank, instead of buying Government bonds as now, would merely deposit its commercial assets, bills of exchange, convertible bonds and stocks, and other securities and evidences of debt, with the clearing-house of issue, together with the promissory note of the bank applying for the circulation. On approval of the securities, seventy-five per cent. of their value would be returned to the depositing bank in the form of circulating notes. As an additional security all the banks of a State, Territory or district, and, finally, all the banks of the country, are liable to be levied on to provide for the payment of such notes. With a margin of twenty-five per cent. between the value of the securities and the circulation issued against them, and with the further provision for an assessment to meet deficiencies, as above noted, it would seem that every necessary precaution had been taken to secure the safety of the notes.

We think that provision should also have been made in the bill for the issue of notes based on a deposit of gold with the clearing-houses of issue. There is no better form of security, and the profit is not inconsiderable to the banks, while the convenience of the public would be served and the circulation of gold facilitated.

The redemption features of the bill are probably susceptible of improvement. Section 10 provides: "The bank member taking said circulating notes shall engage to redeem them in the lawful money of the United States at all times upon demand of payment duly made during the usual hours of business at the office of such bank member, and also when called upon to do so by the clearing-house issuing the notes."

"Lawful money," of course, includes legal-tender notes and silver dollars, as well as gold. If the banks of the country are to be permitted to issue their notes on the pledge of commercial assets, it would be only a reasonable check against inflation to require the redemption of notes in gold and in that coin only. The ability to redeem its notes promptly on demand in gold coin is a proper test for every bank that seeks to give public currency to its credit instruments. To permit redemption in anything else is to lower the standard and to invite disaster. It might be more difficult for the banks to procure and maintain a reserve of gold than it would be one composed of "lawful money," but that very fact would make them more cautious in issuing their notes.

Digitized by Google

The notes, under this bill, would be redeemable at the offices of the issuing banks; but they ought also to be redeemed at the chief commercial centers. Unless daily commercial redemption is made as easy as possible, inflation will certainly result. If a bank desiring to replenish its reserves must send the notes of all other banks to each bank for redemption, the trouble and expense involved will be very burdensome. Perhaps the provision for redemption "when called upon to do so by the clearing-house issuing the notes" may be intended to cover this point, but it ought to be made clearer.

State banks are to be permitted, under this bill, to issue notes; and, since they will offer the same security and be required to keep the same reserve as National banks, to deprive them of the privilege would be an injustice. There is no good reason why a State bank desiring to issue notes under present law should not be permitted to do so on depositing Government bonds with the Treasury.

That the volume of bank circulation should be based upon the business of the country, and not dependent as now upon the fluctuations in the price of Government bonds, is generally conceded by those who have given the matter any serious study. But with a system of banking made up of so many diverse elements, it has been found very difficult to devise a feasible plan whereby all the banks of the country could be permitted to issue notes on the security of their commercial assets, and at the same time fulfill all the requirements of safety. In short, to make the notes absolutely safe, for nothing less than this can receive the approval of Congress, or of the majority of the banks.

Mr. Gilman's plan would unquestionably assure the ultimate redemption of all notes issued, and it leaves the banks entirely free as they now are. It is certainly more in accord with our democratic form of government than a central bank with branches enjoying a monopoly of the note-issuing privilege. How the bankers of the country will regard the bill, it is difficult to say. THE BANKERS' MAGAZINE would be pleased to receive and publish concise expressions of opinion in regard to the bill.

Banking Opportunities in Ecuador.—Perry M. de Leon, United States Consul-General at Guayaquil, Ecuador, contributes the following to a recent number of the Advance Sheets of the Consular Reports:

"I regard the present as an opportune time for any American house interested in South American trade, or for capitalists seeking investment, to establish a bank of issue and discount in Guayaquil.

The profits are tempting, and business can be done on a safe basis, as the records of the Bank of Ecuador show. Established in 1868, it has paid dividends of from fifteen to thirty-three per cent. per annum, has a handsome reserve, and its stock sells at 180 to 190.

The current bank rate of discount is nine per cent. per annum, and the difference between buying and selling rate of exchange is two and one-half per cent. on Europe and the United States.

The rash management of the only other bank of issue in the Republic, the 'Comercial and Agricola,' it is generally believed, will force liquidation; its stock is virtually unsalable.

The commerce of this city, large for South America, requires at least two banks. An American bank would be a great aid to our trade, and, conducted in accordance with sound business methods, could not fail to be profitable."

For Progressive Business Men.—J. W. L. Todd, of the Velardeña (Mexico) Mining and Smelting Co., writes as follows under a recent date:

"I desire to say that I appreciate greatly the excellent literature presented in THE BANKERS' MAGAZINE. Every young man should read it, and to the young business man who would be progressive it seems to me to be indispensable."

My Fellow Banker: Herewith I give you what are, in my opinion, some practical hints as to what bank clerks and officers should know for the safe, speedy and successful conduct of banking. I assume that you are familiar with the routine work of banking, and I give you these hints as further aids in the work.

I.—Every-Day Banking Law.

Negotiable Paper.—It must be certain in every way, free from any restriction, and based upon a consideration. The time of payment must be fixed, or on demand, the amount certain, and payable only in money.

---

* A series of articles to be published in competition for prizes aggregating $1,050, offered by The Bankers' Magazine. Publication of these articles was begun in the July, 1901, number, page 18.

Digitized by Google

As to what words will destroy the negotiability of an instrument, the courts differ. It is seldom done by saying too little, but often by saying too much.

Any alteration destroys the instrument. It cancels the debt for all parties to the instrument who did not agree to the change (15 App. Ills. 166).

A National bank, some hold, cannot buy negotiable paper (52 Md. 78; 24 Minn. 140; 23 Minn. 198), but see 26 Ohio St. 141.

The written words prevail over figures.

A note not dated is valid. The true date may be inserted if it can be proved to be the right date. Better to have the maker fix it.

Notes dated on Sunday are good; made on Sunday are void.

The statutes where the instrument is made govern the liability of the maker; the statutes where the endorsement is made govern the liability of the endorser.

Extension of time acts as a release.

New York holds that a note payable "on demand, after date, with interest after maturity," must be presented and protested at once to hold endorser.

A National bank cannot take its own stock as collateral, unless to secure a debt previously made.

It may lend on the stock of other National banks.

One who endorses in blank a non-negotiable note is liable as maker.

A bank cannot apply on a past-due note money that a surety has on deposit.

A bargain or promise not in writing, when the amount is above from $25 to $50, is worthless, no matter how many witnesses it has (N. Y.).

Although the promise to pay the debt of another be in writing, it is void unless founded upon a consideration. (Parsons on Contracts, 6th Ed., 2d. E.)

A note payable at a bank, and owned by it, may be charged, even on the morning of the day when due, to the depositor's account. If not owned by the bank, do not charge it unless it comes through the clearing-house.

Forgery of the maker's name to a note delivered by the payee to the holder of the original note does not discharge the maker. The giving of the forged note does not pay the original. (Second National Bank vs. Wentzel, Pa. Sup. 24 A. 1087.)

The ordinary municipal warrants or orders are not negotiable, and only pass subject to all equities and defenses.

You must know what authority a municipal corporation has when it wants to borrow money.

A life insurance policy is not negotiable, but is good collateral.

A certificate of deposit is a promissory note, and is negotiable. The bank should know the signature of the payee.

In most States, the death of a joint obligor releases his estate (63 N. Y. 205).

A judgment against one joint obligor releases the other joint obligor (93 N. Y. 349).

State usury laws do not apply to National banks (64 N. Y. 212).

Checks.—Checks made and dated on Sunday, or not dated, are good.

A drawer of a check who knows he has no funds may be sued at once for fraud.

A drawer of a check who, by any fault, enables a third person to defraud a banker with the check, must lose the amount. Without some such excuse, the bank loses.

Digitized by Google

If an account be in dispute, and a check sent marked "in full" and is retained, it becomes full payment; otherwise, it would not hold.

Do not pay part of a check.

If a check be paid after the death of a drawer, but before notice of death, the payment is valid.

Do not pay a check before due, if on time; nor after notice of insolvency.

Do not pay a check after notice that it was lost. Some hold, however, that payment cannot be stopped after a check has passed to a *bona-fide* holder (80 Ills. 212).

If a check be payable to "John Smith," the banker must know that the endorser is the *right* John Smith.

Certifying a check makes a new contract between the holder and the bank. The funds are, in legal contemplation, withdrawn from the drawer's credit, and held for payment of the check (77 Ala. 168).

A bank cannot be compelled to certify a check.

The drawer of a check would lose, if a check be fraudulently raised before or after certification, and cashed by the bank.

A stranger called at a country bank with a New York draft. The Cashier told him he must not only be identified, but must have a responsible man endorse the draft. A merchant called at the bank and endorsed the draft, the bank thus having notice that he was an accommodation endorser. The draft had been raised. The bank could not hold the merchant, for he was an accommodation endorser, and it was not promptly protested. If the merchant had received value from the bank, he would have been held without protest for the full amount (N. Y.).

Collection Drafts.—The measure of damages for negligently failing to collect a draft is its amount.

A bank is liable for negligence of its agents.

An acceptance once made cannot be withdrawn.

Although the signature be forged, an acceptor is liable to an innocent holder for value.

A bill is dishonored when presented, and acceptance refused or cannot be had.

Unless protest be waived, a bill must be protested the same day and place it was dishonored.

Endorsers.—The endorsers of a paper are each liable for its amount (unless it is endorsed "without recourse").

An endorser guarantees that the instrument and all antecedent signatures are genuine.

Dishonored paper must be protested to hold endorsers.

Genuineness of stamped endorsements must be proved in disputes.

Protest.—Its object is to hold the endorser.

Employ notaries if possible; otherwise, it may be done by any one, if a demand, notice and record be made.

Each endorser should waive protest, or paper should be protested if dishonored.

Deposits.—The relation of bank and depositor is that of debtor and creditor.

Cash deposited in the bank belongs at once to the bank (15 Fed. Rep. 675).

Digitized by Google

The title to checks remains in the depositor until collected, although they are placed at once to his credit (98 Fed. Rep. 485).

The pass book belongs to the bank.

A bank may refuse to honor checks of a depositor, who owes on a past-due note more than the sum on deposit (35 S. W. 911).

Over-checking is illegal, and cannot be supported by act of the directors.

A bank cannot charge over legal rates on overdrafts.

If a bank be free from negligence, and takes special deposits without pay, it is not liable. The question of negligence is for the jury, and there is the danger. It is not enough that you be as careful as with your own property—you may have been careless about that; nor that you trusted a clerk—you may have been careless in not knowing that he gambled.

II.—The Latest and Best Way of Doing Things.

The best way is not always the shortest.

In the mechanical work, the balance column ledger and deposit book are as good as any, because complete and easily investigated.

Here is a test sheet to prove each day's postings:

July 1, 1901.	
$34.62	$35.43
47.82	12.13
10.56	51.31
22.43	91.38
12.00	15.62
21.10	12.11
11.06	32.03
$159.59	$250.01

$250.01		$2,147.98 Cr. footing in deposit book.
159.59		2,057.56 Dr. footing in deposit book.
$90.42	OK	$90.42

$34.62 was a depositor's balance before posting.
$35.43 was his balance after posting.
$47.82 was the second depositor's balance before posting, etc.

The difference in the footings must equal the difference in the footing of the Dr. and Cr. pages of the deposit book.

After each posting write the two balances on test sheet.

Write figures on test sheet in *one* kind of ink *only*.

Put the black	balance before posting in left	column.
Put the black	balance after posting in right	column.
Put the red (over check)	balance before posting in right	column.
Put the red	balance after posting in left	column.

Do this each day. It is an immense help. Only an occasional trial balance is needed to prove the ledger.

Digitized by Google

To Save Time in Posting.—On July 1, John Doe deposits $387.99 and checks $346.94, leaving a balance of $41.05.

Now, post July 2 by adding $56.78 to $41.05 and subtract $12.34, thus:

John Doe

1901		Dr.	Cr.	Bal.	
July	1	346.94	387.99	41.05	a
	2	12.34	56.78	85.49	b
	3	89.75	92.89	88.63	c

Begin 2nd day with line b, 3rd with line c

5 (of bal in a) + 8 (of dr in b) = 13 13 − 4 (cr in b) = 9 Write 9 in Bal column of b *
0 " + 7 " = 7. 7 − 3 " = 4 " 4 " " "
1 " + 6 " = 7. 7 − 2 " = 5 " 5 " " "
4 " + 5 " = 9. 9 − 1 " = 8 " 8 " " "

July 3.

9 (of bal in b) + 9 (dr in c) = 18 18 − 5 (cr in c) = 13 " 3 " " " *
4 " + 1 carried = 5 + 8 " = 13 13 − 7 " = 6 " 6 " " "
5 " + 2 " = 7. 7 − 9 (carried 7) = 8 " 8 " " †
8 " − 1 carried = 7 + 9 " = 16 16 − 8 (cr in c) = 8 " 8 " " "

Transpositions.—Such errors are divisible by 9.

Errors in Dollars and Cents: Divide the error by 9. The quotient is the amount that produced the error.

Take an error of $21.60: $21.60 ÷ 9 = $2.40. $24.00 posted as $2.40 makes $21.60 error.

Errors in Two Figures: Take an error of 18 cents: 18 ÷ 9 = 2. Look in the cents column for any figure that is 2 larger than its mate. Thus $18.46 posted $18.64.

Error in Three Figures: In such errors the middle figure is always 9. If $125 be posted $521, the error is $3(9)6. Now drop the 9, making 36. 36 ÷ 9 = 4. Then look through the postings for a number of three figures, whose left exceeds the right by 4. Rule: drop the middle figure, divide by 9. The quotient equals the left-hand figure minus the right-hand figure.

Transplacements.—These often occur where bookkeepers omit ciphers. Subtract the cents of the error from imaginary ciphers. The remainder will be *dollars* posted wrong. Thus $93 posted as 93 cents. Error $92.07; .00 − .07 = .93. Therefore look for $93 posted wrong.

Proving Additions, etc.—There is only one way to add. Nothing but practice makes an adder.

A way to prove work is by casting out nines. I show it for addition and division, the other processes are similar. Add the figures of each horizontally.

11229.29	is 26, which has 2 nines and 8 over.	
44518.67	is 35, which has 3 nines and 8 over.	
55747.96		16

55747.96 has 7 over }
16 has 7 over } the excess being equal, the addition is correct.

* Carry one and add. † Carry one and subtract.

$$\begin{array}{r} 13{,}448)48{,}983(3 \\ \underline{40{,}344} \\ 8{,}639 \end{array}$$

Divisor has 2 over; quotient has 3 over; remainder has 8 over; dividend has 5 over.

$2 \times 3 + 8 = 14 = 5$ over; dividend has 5 over; therefore the division is correct.

Interest.—The six per cent. method considers that two months' interest at six per cent. is one per cent. of the principal. Thus, the interest on $100 for two months at six per cent. is $1 ; for four months $2, etc.

The four per cent. rule considers that three months' interest is one per cent. of the principal.

Applications from these rules can easily be used for counting interest rapidly.

III.—Banking Practice.

Money.—The first duty of a bank—a duty far above all others—is to protect its depositors.

Never allow your cash to get too low; keep a good margin for emergencies.

Always take time to count your money, whether receiving or paying.

Have the depositor fill out his own deposit-slips.

Have pay-rolls sent in before pay-day. Have them counted by their owner before they are taken from the bank.

Know thy depositor.

Balance his pass book every month.

Negotiable Paper.—The most important feature of a bank is its loans.

Banks make money by paying good loans, and by not making bad loans.

This work needs the greatest care, the highest tact, the utmost courtesy, and the best judgment, possible.

Know thy borrower, through and through.

Watch the principal more than the interest.

All paper should be "passed upon" by the directors or their committee. Do not trust too much to one man's judgment.

The collaterals are often changed. Be careful at this point. Try also to have collaterals that can easily be converted into money.

If a man borrow heavily at several banks, let the bankers confer on his case.

Some banks require from such a man a signed statement of his financial condition. All local banks should use the same form of statement for such cases.

Some day banks will have an expert go through his books to verify such statement.

Make notes and acceptances payable on certain date; thus: "July 5, after date, I promise," etc.

On the tickler, have with each note entered a minute of the rate of its discount.

General Dealings.—The relation of banker and all customers should be mutually helpful.

Digitized by Google

Competition, however, has caused some evils to banks; *e. g.*:

A merchant deposits a check. We spend twenty-five cents to collect it. Some banks would not charge the merchant. We do.

A merchant brings some drafts on retailers in other towns. Some banks credit him with them at once. We do not.

Another evil is overchecking. Simply do not allow it.

"Is a customer we must buy worth having? Is a customer we must hire to stay worth keeping?

Customers are often what you make them. They must be educated as to their business with banks. The more independent you are, the more you do what is right, and the sooner you teach the business man what is right, the better."

To remedy these evils, let the bankers of a town make an agreement and stick to it.

IV.—Protecting the Bank's Interest.

Your Work.—Keep your work up to date.

Be neat with it. You and the bank are judged by it.

Be familiar with every book in the bank.

As much as possible have the work pass under two persons' inspection.

Pay attention to every detail. See which accounts are the losing ones.

Always keep doing something. The steady worker does the most.

Dealings for the Bank.—Always be on the alert.

The counter should have as much talent behind it as in front.

When your courage fails you, to ask what is best for your bank, or to refuse what is not best, you have lost your birthright as a banker. Learn to say "no" gracefully; but if necessary, be cold as steel.

Never allow anger to influence you.

Never buy what you do not need. Never pay too much for what you buy. Keep the expenses down.

In such matters as stationery, buy the best; your bank is judged by it.

Treat a broker who sells you paper the same as any one else.

When you send collection drafts, enclose postage.

If you receive "no protest" drafts from firms, do not return them if dishonored, unless postage came with them.

When you remit for collections, always keep the letter that came with them.

Keep charity out of business.

Do not do things for nothing because other banks do them for nothing.

Lend nothing to speculators or gamblers.

Do not lend too much to friends or relatives. A wise man said, "Save me from my friends; I can fight my enemies."

"Guard well thy tongue."

Clerks and Officers.—Bond the Cashier, equal to the capital stock, in a good fidelity company, at the expense of the bank.

Limit him to small loans.

Make him liable for overdrafts.

Divide the work equally to save time.

Have a statement of the general books made every day.

Give no clerk or officer too much work or too little pay.

Digitized by Google

Compel all clerks and officers to take vacations. While they are gone check over their work, or have an actuary from another city do it.

Do not let a favored relative advance over a clerk who has merit only to recommend him.

Employ no one in the bank who dissipates in any way, or is loose in his habits, no matter how well he is "connected."

Employ no one because he will bring certain men as customers. He may help those men to the injury of the bank.

If a customer wants a draft, make it payable to his order. He can endorse it to a third person. This makes of it a better history and a better receipt.

If he buys a draft and wants identification at another town, give him an oral pass-word and notify bank in that town; or, tear a piece of paper in two, give him one piece, send the other to the bank. They can match the papers.

In remittances, write on drafts the address of the payee; as, "pay to the order of John Doe, Jackson, Ohio."

In remitting to banks, make the bank, not the Cashier, the payee.

If a stranger gets a draft, notify your drawee.

Wait a reasonable time before issuing a duplicate. Under the word "duplicate" write date of issuing the duplicate and sign your name. A forger could write the mere word "duplicate."

Require the party getting a duplicate to indemnify him.

Require everyone presenting checks to endorse them.

Always check off certificates of deposit on register before paying.

Do not allow checking, or part payments, on certificates of deposit.

Safeguards.—Use differently colored paper for drafts of different amounts.

Or, use coupons on right end of drafts to indicate hundreds, and coupons on left to indicate dollars.

Write a strong, legible, bold, signature.

Have your signature extend to the end of the draft.

Be a member of the American Bankers' Association, and of your State association. It will pay you in many ways, and may save you thousands of dollars.

Counterfeiting.—The *figures* of a bill are made of a network of fine lines —made by lathe work.

Beginning at the center of the figure, these lines can be traced, one within the other, through the figure.

A counterfeiter cannot make them well. The figure will look dull, scratchy, heavy, and in some places broken and irregular.

The *shading* of letters is also by fine lines, horizontal or diagonal, but always parallel. The shading uniform, with the spaces between them exact.

In counterfeits they are not exactly parallel, and some end too soon.

The *pictures* on good bills are accurate, delicate, clear-cut. The eyes, mouth, position, are natural, and sharply defined.

In counterfeits they are imperfect and blurred.

Solid print in good bills is a perfectly even shade of black, green or red.

Counterfeits have some parts lighter than others.

Printing on good bills is clear and sharply outlined. *Ink* glossy and *paper* the best in the world.

To Detect Counterfeits: Look at the bill as a whole. Its general appearance may condemn it. Examine the lathe work, then the shading. See if

Digitized by Google

the amount has been changed. See if the portraits are life-like—the pictures perfect, the ink glossy and even.

Any part of a bill that is counterfeit condemns the bill.

V.—To Promote the Bank's Interest.

A bank should be governed by good men, rather than by good laws.

Have the directors of various lines of business, of different churches, different lodges, different nationalities.

Have them of financial standing and active business men, rather than capitalists.

Avoid, if possible, a one-man bank.

Have good help, and remember good men are not cheap.

Have the help not only harmonious but congenial.

Do not judge a man's finances by his clothes. I have known men, as Stephen Girard says, "who could not only buy and sell, but buy and *keep*," the richly dressed men who elbowed them away.

Be courteous to your competitors. Co-operate with them. "Every man his own banker" is not wise practice.

Show an interest in your depositor. Visit him in his shop.

Do not solicit an account directly. Your customer may want to impose upon you.

Act by the plumb.

Remember that a satisfied customer is the best advertisement.

Yourself.—Keep yourself in good condition, mentally and physically.

Don't work on Sunday. Don't grow old. Don't get into moods or into a rut.

Remember that the bank will succeed after you are gone.

Have a hobby for recreation, but don't let it interfere with business.

Don't take the bank home with you.

Keep out of partisan politics.

Be happy over your work. Make all you can of yourself.

Live within your means.

Make your work a profession not a trade. Believe in its usefulness and its eminence.

What is more important, you must have the people's confidence, and you must have their respect. Win these by:

Honesty. By all means be honest.

Diligence. "Seest thou a man diligent in his business, he shall stand before kings."

Temperance, in all things.

Study. The man of thought strikes deepest and safest. Associate with men of good judgment. Be a student, not only of men but of books. Make a specialty of banking; its laws, customs, and practices. Study law and legal forms. Read Patten's "Methods and Machinery of Practical Banking." But above these, read a good banking periodical. I commend, as by far the best of all, "The Bankers' Magazine."

Courtesy. Courtesy pays big dividends. It is a cardinal virtue of banking. Remember, it pays.

Digitized by Google

Silence.

> "Give thy thoughts no tongue"—
> "Give every man thy ear, but few thy voice;
> Take each man's censure, but reserve thy judgment."

Character.

> "This above all: to thine own self be true,
> And it must follow as the night the day,
> Thou canst not then be false to any man."

Remember, the bank is an artificial person, and acts through *you*. Therefore, my fellow banker, be at once courteous, studious, tireless, prompt, safe, progressive, a gentleman, and honest. Do all, and be all, I have asked in these pages, and you will be a successful banker.

Respectfully, WILLIAM STRONG.

BANKING RULES AND CUSTOMS.

III.

Some years ago a couple of young men began banking in a small town, with a few thousand dollars capital and a limited education, but no experience, save, as one of them said, he had slept in a bank two or three years. This illustrates how vague an idea many people entertain concerning the requirements and the qualifications necessary for success in that profession.

A man may announce himself a banker and advertise to receive deposits, even though he has not learned the first principles of banking. If he has the financial backing to induce people to risk their money and sufficient integrity of character to gain their confidence, he will secure some patronage, as in the case just mentioned. But the time has come when that kind of banking promises small returns, if within range of competition.

EDUCATIONAL REQUIREMENTS FOR SUCCESS IN BANKING.

Much has been said and written on the subject of education as it applies to the business man. It is not the purpose of this article, however, to discuss this point, only so far as it bears upon the subject before us.

Until recent years, none but the prospective professional man was expected to devote the necessary time and money for a liberal or college course. The young man looking forward to a business life was expected, after a brief training in the rudiments of education, to graduate from the school of experience only. In these days, however, the educated man is being sought more and more in all lines of activity. The mechanic who commands the best place and the highest pay is the graduate of a training school. The merchant who desires a confidential clerk is looking for the man of broad mental training as well as business experience.

The young man who expects to rise above a clerical position should not hesitate to devote himself to obtaining the most liberal preparation possible. No longer are colleges and training schools merely for the rich man's son, but the poor young man can, if he will, receive as good as the wealthiest. It is no longer necessary, as one of our college presidents recently said, for a man to be self-made.

In keeping with the advance in other callings, and because of its important

Digitized by Google

place in the world's affairs, banking has become a profession, and its successful management requires the best of training.

A liberal education should be sought first and the bank training, which is equivalent to a post-graduate or professional course, should be taken afterward, even though the candidate be prepared in all other respects to occupy the position of President.

In advocating the larger training it is to be understood, of course, that the foundations should always be laid broad and deep. The fundamental principles which form the basis of every-day business transactions should become a part of one's very self, so to speak. It is more important that a man be able to add a column of figures quickly and accurately than to be able to demonstrate a theorem in geometry, and more important that he speak and write the English language correctly than that he be able to conjugate a Greek verb.

Practical Qualifications of Officers and Clerks.

Every officer of a bank should be familiar enough with the details of each department to take up the duties without a moment's warning if emergency requires; and no executive officer can properly superintend the institution without such familiarity. His duties should not be so onerous that he cannot frequently give personal attention to the working of the details in the various departments and to receive customers and friends without causing them to feel that they are intruders. Gentlemanliness in a bank clerk or official is always indispensable. Nothing is ever gained by arrogance. The customer who is not treated with courtesy will do business elsewhere.

The banker, if thoroughly qualified for his profession, stands in a unique position. He is not only to be familiar with his own business, but with that of every one else. The very nature of his business, if rightly conducted, tends to make him conservative; therefore, his advice, if heeded, is usually correct. Thus it follows that many people wisely confer with him before engaging in any line which would lead them to the use of his institution as borrowers.

Every officer should be familiar with banking law, otherwise he is liable to involve his institution in a labyrinth of legal intricacies. The daily transactions are based upon laws governing collections, indorsements, protest and many other subjects, which should be carefully studied in all their bearings. Many things, also, which apply to National banks alone, should be perfectly familiar to those associated with that class of banks.

There are valuable reference books on points of law in the conduct of daily transactions, such as "Parson's Laws of Business," or "Commercial Precedents."

Economy of Time and Money.

Brevity, speed, accuracy and economy should be the chief characteristics in all banking methods.

Brevity and speed are so interwoven that they apply with equal force in every department. The proficient bank officer is generally ready to answer before the proposition being presented is completed. Undue delay in one transaction is liable to disturb and annoy many persons whose interests are suffering by each moment of detention.

Digitized by Google

Much can be done by depositors to assist in the rapid transaction of business, by the orderly arrangement of their money and checks, which should always be accompanied by a list of the same on blanks which every bank provides.

As each day's business must be completed within its own prescribed limits, brevity becomes a necessity and a habit. The same limitations also require rapidity of thought and action. It often happens that in a moment of time a legal point must be decided or a signature recognized or a chain of indorsements scrutinized. Not unfrequently a single transaction may involve all the above and more.

Accuracy is a bank's first law, if there can be any first. Accuracy in judgment, in accounts—in everything. No class of business or professional men make so few mistakes as bankers. They are wards of other people's money, and as a rule they feel the responsibility and guard with jealous care the confidence reposed in them. The position is a consciously defensive one, for errors of honest people and tricks of rogues must be continually guarded against.

Economy stands parallel in importance with the three other characteristics mentioned. There is no place where the old adage, "Time is money," is so emphatically true as in the detail work of a bank.

Time-Saving Methods in Doing Bank Work.

A few years ago a bank clerk in Chicago conceived the idea of having draft numbers placed on the same end and immediately above the dollar sign to facilitate in checking up paid vouchers. This seemed like a small matter, but so convenient and important was it that all the country correspondents of all the banks in the city were asked to have their drafts thereafter printed in that way.

The old-time custom of filing away checks to be entered in pass books at the end of the month is being superseded by a better way. An envelope of sufficient capacity to hold the checks of an individual for a month is used to receive the cancelled vouchers on day of payment, and an itemized entry is made on the outside. Thus the work is spread over the entire month, at the end of which time the work of balancing the book consists only in entering the total, and striking a balance, returning envelope and vouchers with the book.

Many devices in bookmaking have been tried to save the time of the bookkeeper, but the latest and best of all is the loose leaf ledger. This requires but one entry of the items of an individual account in a single day. When the leaf has been filled it is removed to an indexed file and another leaf takes its place.

Another important device for saving time is the carbon copy remittance book, so ruled and arranged that the second leaf, being perforated, and an exact copy of the first, can be removed from the book and forwarded to the correspondent with the remittance, thus saving the time and labor of listing the items a second time.

It has been demonstrated that by systematic and economic methods, the entire business and work can be accomplished by two men in a bank having a deposit of a quarter of a million dollars and a clientage of from five hundred to six hundred patrons.

Digitized by Google

It is not economy, neither are the profits of a bank greatly enhanced by a style of dealings which appear to be small. It is often necessary to perform some gratuitous labor, and to favor customers when there is in the transaction no immediate profit. But a policy which is fair to the customer and not unjust to the banker will always be appreciated and bring its recompense in added business.

Within a few years and since people have come to use the banks so freely and universally, the country check system has sprung up like a noxious weed in a garden, making untold trouble and expense which every one is trying to shift upon some one else. It is but natural that the small cities and towns should look to the central cities for relief, as they, like the nerve centers, are in direct communication with all the rest, and can dispose of these items with the least labor and expense.

This class of paper is likely to remain in circulation, in spite of the efforts in some cities to suppress it, so long as the manufacturer continues to receive it in payment for his goods. Just so long, therefore, will remain the problem of its treatment, for while the local bank enjoys the benefits of a good balance from the manufacturer it will be reluctant to look to him for recourse in the matter of exchange.

Discrimination in Making Loans.

The most difficult duty in the range of banking practice is that of loaning money. Discriminations must be made in the character of individuals, paper, securities and the obligations of the bank to the applicant. The bank owes, in a measure, a reciprocal obligation to its patrons. It should seek to accommodate those who patronize it, but at the same time it is quite easy for its patrons to overestimate the bank's obligations.

Not long since a patron hired a sum of money at his bank, giving his note on demand with interest, not being certain as to the time he would need the money. Upon paying the note he demurred against paying interest, on the ground that he had previously had on deposit, without interest, a larger sum for a much longer time and the bank was, therefore, under obligations to waive the interest on his loan.

The bank is a custodian responsible for its trust, and has the legitimate right to the use of a certain per cent. of its aggregate deposits. But if it were to loan to its customers free of charge, as a sort of reciprocal courtesy, it would have to close its doors at once.

"In the multitude of counsel there is safety." It is safe practice, therefore, for those who have the management of this peculiarly responsible part of banking, to be in touch with those whose knowledge of men and their circumstances can be of service. There is more need of firmness and rigidity of rules in this department than in any other. Experience also has taught that it is best to treat all men as nearly alike as possible.

A certain bank has a well established rule that it will loan no money on single-name paper without collateral. Applications for loans are consequently always accompanied with the required security, either personal or collateral. The statement should not be omitted, perhaps, that not a dollar has been lost by that bank during the years in which that rule has been in force.

EXPERIENCE.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

FRAUD IN RECEIVING DEPOSIT—DISCHARGE IN BANKRUPTCY.

New York Supreme Court, Appellate Term, October, 1901.

LEWIS J. FREY vs. DAVID M. TORREY.

A banker who receives a deposit at a time when he knows he is insolvent is guilty of a fraud. His discharge in bankruptcy does not discharge the debt, and the depositor does not, by proving his debt in bankruptcy, waive his right to sue the banker in a State court.

GILDERSLEEVE, *J.:* This action is brought to recover the amount deposited by the plaintiff with the defendant, who was a private banker, which deposit was, according to the plaintiff, received by the said banker, although the latter knew he was insolvent at the time of receiving such deposit. The answer is a general denial and a discharge in bankruptcy. The justice gave judgment for the plaintiff for $162.05 damages and costs. The defendant appeals.

The defendant was a private banker, with whom plaintiff had been making deposits for more than a year. His last deposit was on October 11, 1898. On October 4, 1898, the plaintiff's total balance with the defendant was $1.19, but on October fifth, sixth, seventh, tenth and eleventh he deposited sums aggregating $150. However, during the aforesaid days of October, 1898, he withdrew sums aggregating $28, so that at the close of business on October 11 he had a balance of $123.19, of which $122 had been deposited by the plaintiff and received by the defendant as such private banker; subsequently, on October 4, 1898, other checks were drawn by the plaintiff on the defendant on October 10, and payment refused, although the amounts were within the limit of the plaintiff's balance with the defendant. No part of the balance of $123.19 has been paid by the defendant, although duly demanded. On October 13, 1898, the defendant made a general assignment for the benefit of creditors. The assignee only succeeded in collecting about $600 of assets. The plaintiff introduced considerable evidence, both documentary and oral, tending to show that the defendant was insolvent at the time that said deposits were made, and that he accepted them with full knowledge of his own insolvency, while carefully concealing that fact from the plaintiff. There is much dispute as to facts, but there is sufficient evidence to uphold the finding of the justice in the plaintiff's favor.

By accepting such deposits, under the circumstances disclosed, the defendant was guilty of fraud. (Cassidy vs. Uhlmann, 54 App. Div. 208; Craig vs. Hadley, 99 N. Y. 135; Blair vs. Hill, 50 App. Div. 33.) His discharge in bankruptcy did not relieve him from a debt founded on fraud (Bank. Act, § 17,

Digitized by Google

subd. 4); nor, by proving his claim against the defendant in the bankruptcy proceeding, did the plaintiff waive his right to bring this action. (Ewart vs. Schwartz, 16 J. & S. 390; Stokes vs. Mason, 10 R. I. 261.) The numerous authorities cited by the defendant's counsel do not seem to apply to the circumstances of the case at bar.

The judgment, upon the whole case, should be affirmed, with costs.

NATIONAL BANK—USURIOUS INTEREST.

United States Supreme Court, December 2, 1901.

SEWARD A. HASELTINE vs. CENTRAL NATIONAL BANK.

In an action upon a note given to a National bank the maker cannot set off interest paid in cash upon renewals, or upon other notes which have been consolidated into it.

In error to the Supreme Court of the State of Missouri to review a judgment affirming a judgment of the Circuit Court of Greene County in favor of plaintiff in an action on a promissory note.

This was an action instituted in the Circuit Court of Greene county, Missouri, by the Central National Bank, to recover of the defendants the amount of a promissory note for $2,240, executed June 15, 1896, by two of the defendants as principals and two others as sureties.

The answer was a general denial and a special defense of usury in the original notes, and partial payments, as set up in the several paragraphs of the answer.

The case was referred to a referee, who reported the note sued upon to be a renewal note, and a consolidation of five original notes, the first of which was for $800, given July 27, 1891; the second for $100, of the same date; the third for $500, dated January 24, 1892, and credited by $100 payment thereon; the fourth for $340, dated January 16, 1893, and the fifth and last for $600, dated May 29, 1893.

The referee further found that the defendants had received on this note for $2,240 (or rather out of the notes constituting that note) the sum of $2,199.35 in cash, making the amount reserved out of the note when it was made $40.65. That there has been paid cash discounts upon the several renewals of the notes which constituted the $2,240 note sued upon, down to October 24, 1894, exclusive of the amounts reserved out of the notes at the time they were originally given, the sum of $566.70, which cash discounts were paid in advance at the dates of the several renewals. That the whole amount of discounts and interest paid, as well as those deducted by the bank, upon all said loans from the beginning to the end down to and including the note sued on, was $947.50. That these payments were made in excess of the legal rate for said loans.

Upon this report the court entered judgment in favor of the plaintiff for $2,199.35, that being the face of the note sued on after deducting the discount of $40.65, reserved when the note was executed. Upon appeal to the supreme court this judgment was affirmed (155 Mo. 58), and defendants sued out this writ of error.

Mr. Justice Brown delivered the opinion of the court:

The only question involved in this case is whether, in an action upon a note given to a National bank, the maker may set off usurious interest paid

Digitized by Google

in cash upon renewals of such note, and of all others of which it was a consolidation.

In this case, defendants sought to show that they had paid to the plaintiff bank within two years prior to the execution of this note, upon other notes of which this was a consolidation, and also upon this note, usurious interest aggregating $580, which they asked to have deducted from the principal sum of $2,240, represented by this note, thereby reducing the plaintiff's claim to $1,660.

We understand it to be conceded that, as the note in question was given to a National bank, the definition of usury and the penalties affixed thereto must be determined by the National Banking Act, and not by the law of the State. (Farmers and Merchants' Nat. Bank vs. Dearing, 91 U. S.) In that case it was held that a law of New York forfeiting the entire debt for usury was superseded by the National Banking Law, and that such law was only to be regarded in determining the penalty for usury.

That part of the original National Banking Act which deals with the subject of usury and interest is now embraced in Sec. 5197 and 5198 of the Revised Statutes, the first one of which authorizes National banks to charge interest "at the rate allowed by the laws of the State," and, when no rate is fixed by such laws, a maximum rate of seven per cent. The next section is as follows:

"5198. The taking, receiving, reserving or charging a rate of interest greater than is allowed by the preceding section, when knowingly done, shall be deemed a forfeiture of the entire interest which the note, bill, or other evidence of debt carries with it, or which has been agreed to be paid thereon. In case the greater rate of interest has been paid, the person by whom it has been paid, or his legal representatives, may recover back in an action, in the nature of an action of debt, twice the amount of the interest thus paid from the association taking or receiving the same; provided such action is commenced within two years from the time the usurious transaction occurred."

Two separate and distinct classes of cases are contemplated by this section; first, those wherein usurious interest has been taken, received, reserved, or charged, in which case there shall be "a forfeiture of the entire interest which the note, bill, or other evidence of debt carries with it, or which has been agreed to be paid thereon:" second, in case usurious interest has been paid, the person paying it may recover back twice the amount of the interest "thus paid from the association taking or receiving the same."

While the first class refers to interest taken and received, as well as that reserved or charged, the latter part of the clause apparently limits the forfeiture to such interest as the evidence of debt carries with it, or which has been agreed to be paid, in contradistinction to interest actually paid, which is covered by the second clause of the section. Carrying this perfectly obvious distinction in mind, the cases in this court are entirely harmonious.

That of Brown vs. Marion Nat. Bank, 169 U. S. 416, arose under the first clause. The facts are not stated in the report of the case, but referring to the original record, it appears that plaintiff sued the bank to recover twice the amount of certain usurious interest paid to it. Another action was consolidated with this, in which plaintiff sought to enjoin defendant from proving certain notes against the estate of which he was assignee, in which a large amount of usurious interest had been included.

Digitized by Google

In the opinion a distinction is drawn between usurious interest carried with the evidence of debt or which has been agreed to be paid, and interest which has actually been paid, and it was said that interest included in a renewal note, or evidenced by a separate note, does not thereby cease to be interest within the meaning of Sec. 5198, and become principal; and that, in a suit by a National bank upon the note, the debtor may insist that the entire interest, legal and usurious, included in his written obligation and agreed to be paid, but which has not been actually paid, shall be either credited on the note or eliminated from it, and judgment given only for the original principal debt, with interest at the legal rate from the commencement of the suit; and that the forfeiture declared by the statute is not waived or avoided by giving a separate note for the interest, or by giving a renewal note in which is included the usurious interest. It was further held that interest included in a renewal note is not interest paid, since, if it were so, the borrower could, under the second clause of the section, sue the lender and recover back twice the amount of the interest thus paid, when he had not, in fact, paid the debt nor any part of the interest as such. The words, "in case the greater rate of interest has been paid," in Sec. 5198, refer to interest actually paid, as distinguished from interest included in the note and "agreed to be paid."

The cases under the second clause of the section, are more numerous. Barnet vs. Muncie Nat. Bank, 98 U. S. 555, was an action by a National bank upon a bill of exchange. Defendants set up that the acceptors had been constant borrowers from the bank for several years, and that it had taken from them a large amount of usurious interest; that the bill in suit was the last of eight renewals, and that illegal interest had been taken upon the series to the amount of $1,116, which it was insisted should be applied as a payment upon the bill in question. It was also insisted that illegal interest had been taken upon other bills of exchange to the amount of $6,363.24, and that the defendants were entitled to recover double this amount from the bank. It was held that the State statutes upon the subject of usury should be laid out of view, and that where a statute created a new right or offense and provided a specific remedy of punishment, that remedy alone could apply; that the payment of usurious interest being distinctly averred, it could not be recovered by way of offset or payment of the bill in suit, and that the same rule applied to the payment of interest upon other bills of exchange which the defendants sought to recover back.

The case of Driesbach vs. Second National Bank, 104 U. S. 52, was a like suit by a bank upon a note, upon several renewals of which usurious interest had been paid. It was said that, as the claim was not for interest stipulated for and included in the note sued on, but for the application of what had been actually paid as interest to the discharge of principal, there could be no set-off against the face of the notes.

In Stephens vs. Monongahela Nat. Bank, 111 U. S. 197—a similar case of interest actually paid—the averments of the defense were made under the first clause of the section; that "the bank knowingly took, received, and charged" usurious interest, but as it elsewhere appeared that the interest stipulated had not been included in the note, but that interest had been actually paid at the time of the discount and renewals, which it was sought to apply to the discharge of the principal, the defense was held insufficient.

The construction of both clauses of this section having been thus settled

Digitized by Google

by this court, it only remains to determine to which class of cases the one under consideration properly belongs. As to this there can be no room for doubt. The referee finds that there was paid cash discounts on the several renewals of the notes which constitute the $2,240 note, as well as the renewal of said note as executed, down to October 24, 1894, exclusive of the amounts reserved out of the notes at the time they were originally given, the sum of $566.70, which cash discounts were paid in advance at the date of the several renewals. He further found that the "defendants in their answer are only asking credit for the payments down to and including October 29, 1894, which aggregate the sum of $540.40." Under the rulings last above cited the person making these cash payments can only recover them back by a direct action against the association taking or receiving the same.

The Supreme Court of Missouri was correct in holding that the defendants could not be allowed set-off or credit for the usurious interest thus paid, the remedy provided by the statute being exclusive, and its judgment is therefore affirmed.

CHECK—PROTEST THEREOF—NOTARY'S FEES.

Supreme Court of Nebraska, December 18, 1901.

GERMAN NATIONAL BANK OF BEATRICE vs. BEATRICE NATIONAL BANK.

A local bank check, which has been indorsed by the payee, may be formally protested for non-acceptance or non-payment.

Bank checks are regarded as inland bills of exchange.

The fees of a notary public for protesting a bank check are recoverable against the drawer and drawee.

(Syllabus by the Court.)

NORVAL, *C. J.:* The facts are stipulated: W. H. Bowman, a resident of Gage county, drew a check upon the Beatrice National Bank in favor of James Dougherty, a resident of the same county, who indorsed the check to A. E. Vortman & Co. who were engaged in business in the city of Beatrice. The latter indorsed the check to the German National Bank of Beatrice, and it presented the same to the Beatrice National Bank, which refused payment. The check was thereupon turned over to a notary public, who duly protested the same. The German National Bank thereupon brought this action against the drawer and drawee of the check to recover the amount thereof and protest fees. The district court decided that the defendants were not liable for the protest fees, and refused to render judgment therefor, but entered judgment in favor of plaintiff for the amount of the check.

The sole question we are called upon to decide is whether the fees of the notary for protesting of the check are recoverable against the drawer and drawee. Our conclusion, upon a careful consideration of the subject, is that the defendants are liable therefor. Under the common law the formal protest of an inland bill of exchange is not required. But in this State, by Sec. 6, c. 61, Comp. St., authority is conferred upon a notary public "to demand acceptance or payment of any foreign, inland or domestic bill of exchange, promissory note or other obligation in writing, and to protest the same for non-acceptance or non-payment, as the case may be, and give notice to indorsers, makers, drawers, or acceptors of such demand and non-acceptance, or non-payment; * * * and over his signature and official seal certify

Digitized by Google

the performance of such duties, so exercised and performed under the provisions of this act, which certificate shall be received in all courts of this State, as presumptive evidence of the facts therein certified to," etc.

This section confers undoubted authority upon a notary public to protest a local check which has been indorsed by the payee. Defendants do not contend for the opposite of this, but insist that a notary public would not have such power, were it not that a local check is included in the term "other obligation in writing," as employed in the statute quoted. To this proposition we are unable to yield assent. In Wood River Bank vs. First National Bank, (36 Neb. 746), it was expressly decided that "bank checks, in this county, are regarded as inland bills of exchange, for the purpose of presentment and demand and notice of dishonor." Such checks do not require a formal protest to charge the indorser. A formal protest is, however, entirely proper. The great weight of authority sustains the proposition that a bank check is substantially an inland bill of exchange. (2 Daniel, Neg. Inst. [2d Ed.] Sec. 1566, 1567, and note; Boone, Banking, Sec. 165; Moses vs. Bank, 34 Md. 574; Bickford vs. Bank, 42 Ill. 238, Rogers vs. Durant, 140 U. S. 298, Ct. 754.)

It will be observed that the section of the statute quoted confers power upon a notary public to protest inland bills of exchange, which, we have seen, embrace local bank checks. The right to recover protest fees is given by Sec. 6, c. 41, which declares that "it shall be lawful for any person or persons having a right to demand any sum of money upon any protested bank note, or bill of exchange as aforesaid, to commence and prosecute an action for principal, damages, interest and charges of protest against the drawers, makers or endorsers, jointly or severally or against either of them separately. And judgment shall and may be given for such principal, damages, charges and interest upon such principal, after the rate aforesaid, to the time of such judgment, together with costs of suit." In view of the statutory provision herein set out, the conclusion is irresistible that plaintiff is entitled to recover from the defendants the cost of protesting the check.

The judgment is reversed, and the cause remanded for further proceedings. Reversed and remanded.

CHECK—POWER OF DRAWER TO REVOKE—EFFECT OF DRAWER'S DEATH.

Court of Appeals of Kentucky, December 12, 1901.

WEILAND'S ADMINISTRATOR vs. STATE NATIONAL BANK OF MAYSVILLE.

The drawer of a check may stop payment thereof at any time before the bank has incurred a liability thereon.*

The death of the drawer operates as a revocation of the authority of the bank to pay the check, and if the bank pays after notice of that fact, it does so at its peril.

This was an action by E. H. Roden, as administrator of Anthony Weiland, to recover the amount of a check for $199 drawn by him upon the State National Bank of Maysville, Ky., and $500 damages for the refusal of the bank to pay such check. The facts were that Weiland, shortly before his death, which occurred on August 19, 1900, drew his check for $500, dating it August

* This is the rule in all the States where the Negotiable Instruments Law has been adopted. That statute provides that "a check of itself does not operate as an assignment of any part of the funds to the credit of the drawer with the bank, and the bank is not liable to the holder, unless and until it accepts or certifies the check."

Digitized by Google

20, and sent the same to the payee. Before this check was presented for payment, the administrator notified the bank of Weiland's death and instructed it not to pay the check. Notwithstanding this direction, the bank when such check was presented paid thereon the entire amount of Weiland's balance, to wit, $199. The administrator then drew his own check for such sum, and delivered it to another bank, and payment being refused, brought this suit.

Du Relle, *J.*, (omitting part of the opinion). It is contended for appellant that the death of the drawer revoked the check, and that the title and claim to the $199 vested in the appellant, the administrator. It is further contended that appellant, by actual notice to the appellee, revoked the check, and that the appellee was under no obligation to pay the check, and in fact protested it, and that it could not afterwards pay the $199, and thereby defeat appellant's right to collect the same. Dana vs. Bank, 13 Allen, 445, is cited by appellant. The main portion of the opinion in this case reads as follows: "This is an action by assignees in insolvency against a bank to recover the amount on deposit to the credit of the insolvent when the proceedings in insolvency were instituted, namely, October 7, 1865. The defense is payment of the balance of $1,060.90, to the holder of a check for $4,375 drawn September 23, and presented for payment and dishonored September 25. The next day the holder demanded payment of the actual balance, offering to indorse it on the check, and to leave that for a voucher. This was then refused. But on October 28 the bank did pay the amount on hand to the check holder, taking indemnity from him. We do not refer to the trustee process served on the bank, nor to the circumstance that many other checks were drawn, presented, and dishonored at the same time with the one upon which payment was subsequently made. These facts cannot aid the case of the bank, and might of themselves present serious difficulties in the way of establishing the defense relied upon, if it were not defeated upon other grounds. The question to be determined is whether there was an equitable assignment of the balance on deposit in favor of the holder of the check. If he was entitled in any form to enforce the appropriation of the deposit for his benefit, then the payment by the bank, although subsequent to the proceedings in insolvency, was justifiable, and constitutes a defense to this action.

In Bullard vs. Randall (1 Gray, 605), it was held that a check for a part of the drawer's funds in a bank constitutes no assignment until presented for payment and accepted by the bank. 'It was a draft on a bank at sight, for a fixed sum, payable out of a general deposit of the drawer, being a larger sum standing to his credit. Such an order is held not to be an assignment.' If the present check had been for less, instead of more, than the amount on deposit, that case would be an authority precisely in point; for equitable assignments are respected upon trustee process as fully as in proceedings in equity.

In Gibson vs. Cooke, 20 Pick. 15, it was held that an order upon a trustee by the *cestui que* trust to pay a sum larger than the amount of income in his hands when the order was made and presented, and not corresponding precisely with the amount payable on any one or more days when the installments of income were to be paid, did not constitute any equitable assignment, against the consent of the trustee. The result of this decision is to establish —what would seem to be clear on general principles—that the bank was under no obligation to pay a part of the check, when not possessed of funds suffi-

Digitized by Google

cient to pay the whole. In the present instance there was at first no consent, but a refusal, to pay on account of the check the balance to the credit of the drawer. And this refusal continued until after the commencement of proceedings in insolvency, when the rights of the assignees had intervened, and it was out of the power of the bank and the check holder to make any arrangement to their prejudice.

The two authorities from our own Reports are, therefore, taken together, decisive against the theory that there was any equitable assignment in favor of the check holder in the present case. And it becomes unnecessary to decide whether a check drawn for the exact balance in a banker's hands is an equitable assignment thereof, with or without evidence that it was so intended by the parties. It may be observed that bills of exchange and checks do not stand on the footing of orders drawn upon a particular fund, with a manifested intention to create a lien thereupon, and that the tendency and preponderance of authorities seem in favor of the rule that neither a bill of exchange nor a check on a bank can operate as an assignment or appointment of the fund in the drawee's hands, or create any manner of lien upon it; in short, that the drawee owes no duty to the holder of either of these mercantile instruments previous to presentment and acceptance. This rule is supported by considerations of commercial convenience, and may be regarded as a corollary from the one, well established, that a bank having funds is liable in damages to a depositor for refusing to pay his check. It was said in Gibson vs. Cooke that 'a draft by the creditor on his debtor in the form of a bill of exchange, to the amount of the debt or the whole fund in his hands, is a good and valid assignment of the debt or fund.' But the remark, in the connection in which it stands, perhaps only means a draft on a particular fund; and, so qualified, it is undeniably correct. It is enough now to hold that a check drawn upon a bank for more than the amount of the drawer's funds on deposit creates no lien upon and gives the payee no right to the actual balance until the bank has agreed to pay it *pro tanto*."

As before stated, it is the contention of the appellant that the death of the drawer of the check, as a matter of law, countermanded or revoked the authority of the drawee to pay the check, unless it had been certified or accepted by the drawee. Several authorities are cited in support of this contention.

It is said in 2 Edw. Bills & N. p. 546, Sec. 739, that: "A draft that has not been accepted, and a bank check, should not be paid after notice from the drawer countermanding the authority, nor after the death of the drawer, which is a revocation of the authority. But, if the bank pay without knowledge of the drawer's death, it seems, the money cannot be recovered back, and there is no reasonable ground for holding the payment invalid. For the authority of an agent is presumed to continue until terminated by notice brought home to him, and the bank on which the check is drawn, having funds, is bound to pay the draft."

Byles, Bills & N. (7th Ed.) p. 20, in discussing the rights and liabilities of drawers and holders of checks, says: "The check is an absolute appropriation of a sum of money in the banker's hands to lie till called for; but by delay the holder takes the risk of the bank's failure, or revocation of their authority to pay by death of the drawer." On page 22 the same author says: "It has been said that the holder of an unpaid check, as assignee of the chose

Digitized by Google

in action, has an equitable claim on the drawee, and, in the event of his bankruptcy, may prove under the fiat. But in America it has been held that a check is not an equitable transfer by the drawer of part of the debt due to him from the banker, and the decisions of the English courts are to the same effect"—citing the following cases: Bullard vs. Randall (1 Gray, 605); Shand vs. Du Buisson (L. R. 18 Eq. 283); Hopkinson vs. Forster (L. R. 19 Eq. 74); Citizens' Bank of Louisiana vs. First Nat. Bank of New Orleans (L. R. 6 H. L. 352).

It is further said: "It seems that the death of the drawer of a check is a countermand of the banker's authority to pay it, but that, if the banker do pay the check before notice of the death, the payment is good"—citing Tate vs. Hilbert, 2 Ves. Jr. 118.

It seems that the decision in Tate vs. Hilbert sustains the text above quoted. It is said in section 310, 1 Morse, Banks, that: "If the drawer has revoked the order before the bank has made payment or bound itself to pay, it must not pay; nor if the drawer is insane, and the bank knows of it (if the bank pays in ignorance of the insanity, it will be a good payment), or if the drawer is dead, not being a corporation or a firm (it is to be hoped that this law of revocation by death as to checks will be changed by statute); and the payments made will be appropriated in their order, the first sum drawn being deemed a payment *pro tanto* of the first sum deposited, even though some of the items of the account were trust moneys."

As to revocation of a check, we find the law thus stated in 5 Enc. Am. & Eng. Law (2d Ed.) 1079: "The drawer, as between the bank and himself, has the right to countermand the payment of a check before it is paid, and takes upon himself the consequences of his act. But he has no right to recall the check after it has been paid to one who took it in good faith and for value, nor can his banker do so for him. And when the check has been certified the authority as well as the responsibility of the drawer ceases, and he cannot countermand it. The same effect is produced when the law intervenes and attaches or sequesters the funds. The insolvency of the drawer, when brought to the notice of the drawee, acts as a revocation of the check. There is no express adjudication on this point, but the text writers, with perhaps one or two exceptions, state that the death of the drawer countermands or revokes the authority of the drawee to pay the check, unless it has been certified. It is generally accepted, however, that the bank will be protected if it pays checks in ignorance of the death of the drawer."

It was held by the supreme court in Tramell vs. Bank (11 Ky. Law Rep. 900), that a check is simply a written order of a depositor to his bank to make a certain payment. It is executory, and as such it is, of course, revokable at any time before the bank has paid, or committed itself to pay. It is further stated in the opinion that a check is an assignment of the funds of the drawer to the amount of the check, which assignment is complete upon the presentation of the check; and, if the bank improperly refuses payment, that the holder may sue the bank is a well-settled law of this State. But the check is no assignment to the bank until notice is given to it. The drawer may, in the interim between the delivery to the payee and its presentation for payment, draw his deposit from the bank and place it to the credit of another person, or incumber it so as to defeat the check; and we can, therefore, see no good reason why, as between the immediate parties to the check (where

Digitized by Google

innocent parties are not affected), the drawer may not revoke or countermand it.

We are referred to the decision of the Illinois Supreme Court, which held that the drawer of a check cannot revoke payment, and that the bank, if it had the funds, must pay it when presented. But it seems to us, both upon principle and the decided weight of authority, that the risk is the other way. Morse, in his work on Banks and Banking (section 397), referring to the Illinois case with disapproval, says: "The current of authority is very strong to the effect that the drawer may countermand." 1 Morse, Banks, Sec. 398, in discussing the question under consideration, says: "The remark once fell from Judge Story, in the oft-cited Matter of Brown, that the drawer of a check had no right to countermand payment at the bank. It was obvious from the context that the Judge referred rather to the moral right than to the legal right. He meant simply that a debtor who had given to his creditor a check in payment of his debt had no right toward that creditor, 'right' being considered as a matter of right to the check. The language of the judge, taken in isolation from the circumstances of the case and from the remainder of the opinion, seems to admit a different meaning, and is therefore capable of the misinterpretation and misuse which have been sometimes feebly attempted. But, if such a misunderstanding is possible, still the authorities to the contrary effect are numerous, and leave no shadow of doubt upon the point."

In further support of the above quotation the learned writer cites with approval the case of Gibson vs. Minet, 2 Bing. 7. Gibson executed the following writing: "Waterford, July, 1822. I request you to hold over £400 from my private account to the disposal of J. Mintern & Co. Wm. Gibson." This order was addressed to Messrs. Minet & Stride. This order was delivered to a partner in the house of Mintern & Co. on July 8, and to Minet & Stride on July 13. The drawer had funds to his credit to the amount called for. Upon the receipt of it, one of the bankers wrote upon the debit side of Gibson's account: "N. B. By Mr. Gibson's letter of July 8, 1822, £400 is to be held at the disposal of Messrs. J. Mintern & Co." Mintern & Co. were customers with the same banker. On March 19, 1823, Gibson notified the bankers that he countermanded the order. The bankers immediately notified Mintern & Co., and desired instructions. Mintern & Co. replied, requiring that the amount be carried to their credit, and the bankers complied, and notified Gibson. The jury found that the order to the bankers was executory, and had not been acted upon at the time of the countermand, and the Court held that the countermand was therefore in season, and good. Another recent English case also well illustrates the operation of the doctrine of this section. A debtor gave a check in payment of his indebtedness. Before presentation of the check, garnishee process was served on him in the suit against the payee. The drawer at once countermanded his check, and directed that it should not be paid. The Court held that by this stopping payment on the check the original debt from the drawer to the payee was revived, and was held by the garnishee process. It is further said in reference to the right of the drawer to countermand the check as follows: "This right he possesses until the bank has paid it out, or promised or become bound to pay it out, upon some order emanating from him, and presented for payment or acceptance at the bank counter, or until the operation of law

Digitized by Google

intervenes by reason of some process. It is a matter of no consequence how many checks are, with the knowledge of the bank, outstanding in the hands of his creditors at the time of his counter direction or demand of payment of the whole fund to himself. The bank is not, and has no right to constitute itself, the agent of those parties. It not only owes them no duty, but it has not even any legal power to act in their behalf."

It may be conceded that the Supreme Court of Illinois has announced a different doctrine from the foregoing; also that Daniel on Negotiable Instruments seems to be in accord with the doctrine announced by the Illinois Supreme Court; but it seems to us that the great weight of authority is against the conclusions of the Illinois court and Mr. Daniel.

It will be seen from the opinion in the case of Lester vs. Given (8 Bush, 357) that the court incidentally recognizes the right of the drawer to revoke the check before its presentation for payment; and, besides, the question of revocation or death of the drawer is not discussed or considered in the opinion. Nor have we been referred to any case in which the precise facts existed as appear in the case at bar.

The case of Dana vs. Bank (13 Allen, 445) conclusively settles the question adversely to the contention of appellee. It will be seen in the case at bar that before the check became payable, and before presentation, the drawer died, and that the check was for $360, and the only amount of money in the bank due to the drawer was $199. And it is averred in the petition that on August 21, at the time the check was presented, the plaintiff notified the bank of the death of the drawer and forbade the payment of the check, and that the appellee bank protested the check, but afterwards paid the $199 thereon, and afterwards plaintiff drew the check upon the bank, which the bank refused to pay. The right of a bank to refuse to pay a check drawn for a larger sum than it has funds of the drawer seems to be admitted and sustained by all the authorities. The bank in this case exercised that privilege, but afterwards undertoook to revoke its action and pay part of the check. We think it clear that the bank had no such authority. The great weight of authority seems to be that the drawer may at any time revoke the payment of a check before its presentation and demand for payment. The decided weight of authority is that the death of the drawer operates as a revocation of the check; but, if the check be paid by the bank before notice of the death of the drawer, it seems that the payment will be held valid. It may also be well to remember that the giving of a check does not pay or extinguish a debt due from the drawer to the payee until the check is actually paid, unless it is specially agreed by the parties that the check is accepted in satisfaction of the debt. The bank is, in a sense, the agent of the depositor, and must at all times obey the order or direction of the depositor, unless other legal rights have intervened. It may be true that the drawer who gives a check and then countermands the payment may be guilty of a moral wrong towards the payee. It may sometimes happen that a revocation of a check by death will result in loss or inconvenience to the payee. But such things cannot change, and ought not to change, the well-settled rule of law governing such transactions. Commercial business and the convenience of banks and depositors seem to require the enforcement and maintenance of the law as herein indicated.

It results from the foregoing that the court erred in sustaining the demur-

Digitized by Google

rer to the petition. Judgment reversed and cause remanded, with directions to overrule the demurrer, and for proceedings consistent herewith.

Paynter, C. J., not sitting.

NATIONAL BANK EXAMINER—POWERS OF INSOLVENT BANK.

Supreme Court of Nebraska, December 4, 1901.

TECUMSEH NATIONAL BANK vs. CHAMBERLAIN BANKING HOUSE, *et al.*

A bank examiner, who takes charge of the assets of a National bank under the directions of the Comptroller, is not the agent for the bank in such negotiation as the bank may be permitted to enter into with a view to the resumption of business.

In this case the plaintiff in error, Edith R. Chamberlain, sought to recover certain securities, which she had assigned to the Tecumseh National Bank, and which assignment she alleged to have been procured by the misrepresentations, among others, of a National bank examiner who was at that time in possession of the bank, under the direction of the Comptroller of the Currency.

SEDGWICK, *C.* (omitting part of the opinion): when the friends of Mrs. Chamberlain went to the examiner for information, they did so at their own risk, and cannot hold the bank responsible for his statements.

It is very clear that Mr. Griffith was not the agent of the bank in the transaction in question. "He had no authority, as such [examiner], to act for the bank in any manner, and could not bind it by any act done or undertaken in its behalf. He represented a department of the Government which supervises and controls the banks as to whether in certain cases they shall do business at all or not; but it does none for them, other than to wind up their affairs for their creditors. The examiner makes report to that department to furnish a basis for action with reference to the continuance of the banks in business. His reports might be favorable or otherwise, as any advice he should give might be followed. He doubtless acted for the best interests of the creditors of the bank in giving this advice, but what was done in following it had no more effect than as if it had been done without it." (Witters vs. Sowles [C. C.] 32 Fed. 764.)

The appointment of a Receiver does not work a dissolution of the corporation. (First Nat. Bank vs. Pahquioque Nat. Bank, 14 Wall. 383.) The authority of its officers is not destroyed, but partially suspended; and the result of the proceedings may be that the corporation is dissolved, or its powers fully restored, and this will depend upon conditions as they may be developed, or may be brought about, by prompt action on the part of those interested in the bank. In the meantime the examiner, from the time he takes possession, has certain designated powers and duties. He must take possession of the books, records, and assets of every description of the association, and may collect the debts due and claims belonging to it, but he is given no general powers to act for the corporation.

When he stated to Mr. Chamberlain's advisers that he wanted the liabilities of Russell & Holmes provided for, and that arrangements were being made to induce the Comptroller to authorize the bank to resume business, and that he wanted to make as good showing to the Comptroller to that end as possible, he was acting in the line of his duty, and no one could possibly be deceived in regard to his position in the matter. And when he further stated to Mrs.

Digitized by Google

Chamberlain's advisers that everything had been straightened up at the bank, that she would not lose the stock, that the paper it was to secure had been passed upon by the directors and said to be good, and other representations in regard to the condition and value of the securities that had been turned over to the bank by Russell & Holmes, Mrs. Chamberlain's advisers must have known the capacity in which he was acting, and that he had no authority to bind the bank by statements of that character, and had no knowledge in regard to the condition and value of the securities, except that they had been passed upon by the directors; and they were bound to know, and must certainly, under the circumstances, in fact have known, that Mrs. Chamberlain, if she furnished these securities, was furnishing them to Mr. Russell, that her contract was entirely with him, and that the transactions were had for the purpose of enabling Russell & Holmes to so far make good their default with the bank as to make it proper and safe on the part of the Comptroller to authorize the bank to resume business.

ATTACHMENT AGAINST NATIONAL BANK—APPLICATION OF FEDERAL STATUTE IN CASE OF INSOLVENT NATIONAL BANK.

New York Supreme Court, Appellate Division, First Department, December, 1901.

HENRY VAN REED vs. THE PEOPLE'S NATIONAL BANK OF LEBANON, PENNSYLVANIA.

The provision of section 5242 of the Revised Statutes of the United States, that no attachment, injunction, or execution shall be issued against a National bank or its property before final judgment in any suit, action or proceeding in any State, county or municipal court, applies to National banks generally whether solvent or insolvent.

Section 5242 of the Revised Statutes was not repealed by section 4 of the act of July 12, 1882.

LAUGHLIN, *J.:* The action is brought to recover for legal services, the plaintiff being the assignee of the claim. The warrant of attachment was granted on the ground that the action is on contract to recover a sum of money from a foreign corporation. The defendant appeared specially and moved to vacate the warrant of attachment on the ground that it was issued in violation of section 5242 of the Revised Statutes of the United States, which provides as follows: "All transfers of the notes, bonds, bills of exchange or other evidences of debt owing to any National banking association, or of deposits to its credit; all assignments of mortgages, sureties on real estate, or of judgments or decrees in its favor; all deposits of money, bullion, or other valuable thing for its use, or for the use of any of its shareholders or creditors; and all payments of money to either, made after the commission of an act of insolvency, or in contemplation thereof, made with a view to prevent the application of its assets, in the manner prescribed by this chapter, or with a view to the preference of one creditor to another, except in payment of its circulating notes, shall be utterly null and void; and no attachment, injunction, or execution shall be issued against such association or its property before final judgment in any suit, action, or proceeding in any State, county, or municipal court."

There being no evidence that the defendant is insolvent, its solvency is to be presumed. (Market National Bank of New York vs. Pacific National Bank of Boston, 64 How. Pr. 1.)

It was held in Robinson vs. National Bank of Newberne (81 N. Y. 385)

Digitized by Google

that this statute does not prohibit the issuing of an attachment against a solvent National bank; and in Raynor vs. Pacific National Bank (93 N. Y. 371) the court held that the effect of the statute was to prohibit an attachment against a National bank which was insolvent or had committed an act of insolvency.

Subsequent to these decisions, Chief Justice WAITE, in delivering the opinion of the court in the case of Pacific National Bank vs. Mixter (124 U. S. 721), in construing section 5242 of the United States Revised Statutes, after stating that said section was a re-enactment of Section 52 of the original act (13 U. S. Stat. at Large, 115) and the amendment of Section 57 adopted in 1873 consolidated, said: "The fact that the amendment of 1873 in relation to attachments and injunctions in the State courts was a made part of section 5242 shows the opinion of the revisers and of Congress that it was germane to the other provision incorporated in that section, and was intended as an aid to the enforcement of the principle of equality among the creditors of an insolvent bank. But however that may be, it is clear to our minds that, as it stood originally as part of section 57 after 1873, and as it stands now in the Revised Statutes, it operates as a prohibition upon all attachments against National banks under the authority of the State courts. That was evidently its purpose when first enacted, for then it was part of a section which, while providing for suits in the courts of the United States or of the State, as the plaintiff might elect, declared in express terms that if the suit was begun in a State court no attachment should issue until after judgment. The form of its re-enactment in the Revised Statutes does not change its meaning in this particular. It stands now, as it did originally, as the paramount law of the land that attachments shall not issue from State courts against National banks, and writes into all State attachment laws an exception in favor of National banks. Since the act of 1873 all the attachment laws of the State must be read as if they contained a provision in express terms that they were not to apply to suits against a National bank."

That was a suit in equity by the Receiver of a National bank against attaching creditors and sureties on bonds given by the bank, to dissolve attachments, to reduce to his possession securities held by the sureties for their protection against liability and to restrain the attachment creditors from enforcing the attachment bonds on the ground that the attachments were unauthorized, illegal and void. At the time the attachments were issued the bank was embarrassed, its doors were closed and it was in charge of a bank examiner. It is, therefore, contended that the question as to whether this statute prohibited attachments against solvent National banks was not necessarily involved in the decision of the case. While this may be conceded, it is evident that the opinion relates to National banks generally, whether solvent or insolvent, and seems to have been intended as an authoritative construction of the statute.

We do not find that this case has been modified or distinguished by the Supreme Court. In Earle vs. Pennsylvania (178 U. S. 449), which was not an action against a National bank, but was a case where an attachment had been issued against the bank as garnishee, Justice Harlan, in delivering the opinion of the court, said: "Sections 5234, 5235 and 5236 above quoted have reference to the affairs and property of National banks in the hands of Receivers and the administration of its assets by the Comptroller; the words in

Digitized by Google

section 5242, 'no attachment, injunction or execution shall be issued against such association or its property before final judgment in any suit, action or proceeding in any State, county or municipal court,' are to be construed in connection with the previous parts of the same section declaring null and void certain transfers, assignments, deposits and payments made after the commission by the bank 'of an act of insolvency, or in contemplation thereof,' with the intent to prevent the application of the bank's assets in the manner prescribed by Congress, or with a view to the preference by the bank of one creditor to another. Whatever may be the scope of section 5242, an attachment sued out against the bank as *garnishee* is not an attachment against the bank or its property, nor a suit against it, within the meaning of that section. It is an attachment to reach the property or interests held by the bank for others."

In that opinion no reference was made to the case of Pacific National Bank vs. Mixter (*supra*), and we think, therefore, that the court did not intend to modify or limit its former decision. The appellant relies on the case of the Bank of Montreal vs. Fidelity National Bank (49 Hun, 607; 112 N. Y. 667), which was affirmed by the Court of Appeals without an opinion on the authority of Pacific National Bank vs. Mixter; but it appears from an examination of the record in the former case that the bank was insolvent at the time the attachment was issued, and that the motion to vacate the attachment was made by its Receiver. The case fell clearly within the doctrine previously announced by the Court of Appeals in Raynor vs. Pacific National Bank (*supra*).

Under these circumstances the mere fact that the affirmance of the order vacating the attachment was placed upon the authority of Pacific National Bank vs. Mixter (*supra*) is no indication that the Court of Appeals intended to overrule its former decision and acquiesce fully in the broad construction of the statute by the Supreme Court of the United States. We have, therefore, no controlling precedent in this State since the Federal decision last mentioned. Our attention has not been called to any case arising since the decision of Pacific National Bank vs. Mixter (*supra*), where the highest court of any State has attempted to distinguish or refrain from following the opinion there delivered. We find on investigation that the question has frequently arisen since that decision, and the courts have universally adopted the opinion of the supreme court as an authoritative construction of the statute in question. (First Nat. Bank of Kasson vs. La Due, 39 Minn. 415 [1888]; Safford vs. First Nat. Bank of Plattsburgh, 61 Vt. 373 [1889]; Planters' Loan and Sav. Bank vs. Berry, 91 Ga. 264 ; 18 S. E. Rep. 137 [1893]; Freeman Mfg. Co. vs. Nat. Bank of Republic, 160 Mass. 398 [1894]; Garner vs. Second Nat. Bank of Providence, 66 Fed. Rep. 369 ; Rosenheim R. E. Co. vs. Southern Nat. Bank, 46 S. W. Rep. 1026 [Tenn. Ch. App. 1897]; Hazen & Quimby vs. Lyndonville Bank, 70 Vt. 543 [1898]; Dennis vs. First Nat. Bank of Seattle, 127 Cal. 453 [Jan. 1900].

The Revised Statues were approved on June 22, 1874. The provisions of section 5,242, except the clause prohibiting attachments, injunctions and executions, were a re-enactment of section 52 of the National Currency Act of 1864 (13 U. S. Stat. at Large, 115). The clause relating to attachments, injunctions and executions was first enacted by the act of Congress of March 3, 1873 [17 U. S. Stat. at Large, 603). By that act section 57 of the National

Digitized by Google

Currency Act of 1864 was amended by adding thereto the clause in question in the following form : "And provided further, that no attachment, injunction or execution shall be issued against such association or its property before final judgment in any such suit, action or proceeding in any State, county or municipal court." Said section 57, at the time this amendment was engrafted thereon, read as follows : "And be it further enacted, that suits, actions and proceedings against any association under this act may be had in any circuit, district or territorial court of the United States held within the district in which such association may be established, or in any State, county or municipal court in the county or city in which said association is located, having jurisdiction in similar cases: Provided, however, that all proceedings to enjoin the Comptroller under this act shall be had in a circuit, district or Territorial Court of the United States held in the district in which the association is located." (13 U. S. Stat. at Large, 116.)

It appears clearly that after this amendment and prior to the adoption of the Revised Statutes the State courts were absolutely prohibited from issuing an attachment, injunction or execution against a National bank prior to judgment, regardless of its solvency or insolvency. The subsequent enactment of this clause in section 5,242 was not intended to modify such prohibition. (Freeman Mfg. Co. vs. Nat. Bank of Republic, *supra ;* Planters' Loan and Sav. Bank vs. Berry, *supra ;* Pacific National Bank vs. Mixter, *supra.*)

It is conceded that section 5,242 has not been expressly repealed, but it is contended by the respondent that the clause under consideration has been repealed by implication by section 4 of the act of Congress of July 12, 1882 (22 U. S. Stat. at Large, 162), which provides as follows : "That any association so extending the period of its succession shall continue to enjoy all the rights and privileges and immunities granted, and shall continue to be subject to all the duties, liabilities and restrictions imposed by the Revised Statutes of the United States and other acts having reference to National banking associations, and it shall continue to be in all respects the identical association it was before the extension of its period of succession : "Provided, however, that the jurisdiction for suits hereafter brought by or against any association established under any law providing for National banking associations, except suits between them and the United States or its officers and agents, shall be the same as, and not other than, the jurisdiction for suits by or against banks not organized under any law of the United States, which do or might do banking business where such National banking associations may be doing business when such suits may be begun : And all laws and parts of laws of the United States inconsistent with this proviso be, and the same are hereby, repealed."

This statute is not inconsistent with the clause of section 5,242 prohibiting the issue of warrants of attachment, injunctions and executions against National banks by the State courts before judgment. The act of 1882 was intended to prescribe the forum for litigations by and against National banks, and does not relate to provisional remedies to be had in such actions. It was designed to prescribe the place where and the courts in which such actions may be prosecuted, but it was not intended to regulate the procedure in the actions when brought. (Raynor vs. Pacific Nat. Bank, 93 N. Y. 371 ; Petri vs. Com. Nat. Bank of Chicago, 142 U. S. 644; Freeman Mfg. Co. vs. Nat. Bank of Republic, *supra.*)

These views lead to the conclusion that the order appealed from should be reversed, with ten dollars costs and disbursements, and the warrant of attachment vacated, with ten dollars costs.

Patterson and McLaughlin, *JJ.*, concurred; Van Brunt, *P. J.*, and O'Brien, *J.*, dissented.

Order reversed, with ten dollars costs and disbursements, and attachment vacated, with ten dollars costs.

CONDENSED LEGAL DECISIONS OF INTEREST TO BANKS.

CORPORATIONS—TRUST COMPANIES—INSOLVENCY—PREFERRED CREDITORS—INTEREST ON CLAIM—SETTLEMENT—WAIVER—ATTORNEY'S FEES.

Where the charter of a trust company provided that on dissolution of the corporation debts due from it as trustee, guardian, Receiver, or depository of money in court, or Savings bank funds, should have a preference, the creditors so preferred are entitled to legal interest on their claims as against general creditors of the corporation on dissolution, though they received less than legal interest while the corporation was a going concern, though the application of the rule will exhaust the fund.

Where preferred creditors of a trust company, who were legally entitled, under the company's charter, to legal interest on their claims, have accepted and receipted for the principal of their claims, they are not thereafter entitled to interest thereon.

An attorney who has rendered general legal services for a corporation which has become insolvent is not to be treated as a preferred creditor, the service not being rendered in an action or proceeding, nor increasing the fund in the hands of a Receiver, nor being a lien on the fund.

People vs. American Loan and Trust Co. 73 N. Y. Supp. 584.

LIBEL—PUBLICATION BY ATTORNEY—EXCEEDING AUTHORITY—INSTRUCTION—PRIVATE BANKER—ACCEPTING DEPOSITS WHEN INSOLVENT.

Where the attorney for the creditors' committee of an insolvent bank was authorized to publish an expert's statement as to the condition of the bank, and in connection therewith he published alleged libelous matter, the committee will not be responsible for such libel, the publication not being within the scope of the attorney's employment.

In an action for libel for the publication of a statement that plaintiff had committed crimes in the conduct of a certain private bank, it was shown that deposits were received when the bank was known to be insolvent. The jury were instructed that plaintiff's alleged crime was defined by Pen. Code, Sec. 601, which provides that an officer, agent, teller, or clerk of any bank or banking association, and every individual who receives deposits knowing that such bank or banker is insolvent, is guilty of a misdemeanor. Section 609 prescribes that any person engaged in banking, not subject to the supervision of the Superintendent of Banks, and not required to report to such Superintendent, who uses an office sign indicating that such office is a bank, is guilty of a misdemeanor. *Held*, that section 601 relates only to a bank or banker

Digitized by Google

subject to the supervision of the Superintendent of Banks, and not to a private banker, and hence the instruction of the court was erroneous.

Hall vs. Baker, *et al.* 72 N. Y. Supp. 965.

NATIONAL BANKS—ATTACHMENT—FOREIGN CORPORATIONS—SOLVENCY—REPEAL OF STATUTE.

Rev. St. U. S. Sec. 5242, providing that all transfers of evidence of debt owing to a National bank; all assignments of mortgages, etc., in its favor; all deposits for its use or the use of a shareholder or creditor; and all payments of money to either, made after the commission of an act of insolvency or in contemplation thereof, with a view to prevent the application of its assets as prescribed, or with the view of a preference to a creditor, except in payment of its circulating notes, shall be void, and that no attachment shall be issued against such association until final judgment—prohibits attachments against such banks before judgment, whether solvent or insolvent.

Rev. St. U. S. Sec. 5242 was not repealed by implication by Act Cong. July 12, 1882 (22 Stat. 102), relating to the extension of succession of National banking associations, and declaring that they shall continue as the same association, provided that jurisdiction for suits by or against them, except between them and the United States, shall be the same as for suits by or against other banks not organized under any law of the United States, and which do, or might do, banking business where such National bank may be doing business when such suit may be begun, and declaring all laws inconsistent therewith repealed.

Van Reed vs. People's Nat. Bank of Lebanon, Pa. 73 N. Y. Supp. 514.

PLEDGE—CERTIFICATE OF STOCK—ASSIGNMENT IN BLANK—KNOWLEDGE OF PLEDGEE.

Where a Cashier obtained a loan from the bank, giving as security a certificate of stock indorsed in blank by the owner, without any notice to the bank of defect in the title of the Cashier to the stock, it obtained a good title as against the person to whom the certificate was originally issued, and who had lost the same.

Where a Cashier of a bank pledges a certificate of stock indorsed in blank to secure a loan to him, the bank was not chargeable with the knowledge of the Cashier that he had no authority to pledge such stock.

Brady vs. Mt. Morris Bank, 73 N. Y. Supp. 532.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B., Barrister, Toronto.]

PROMISSORY NOTE—HOLDER IN DUE COURSE—FORGED SIGNATURE OF MAKER—OBLIGATION OF ENDORSER.

CHOQUETTE vs. LE CLAIRE (Quebec S. C. Reports, Vol. 19, page 521).

STATEMENT OF FACTS: Choquette was the holder in due course of a promissory note for $250, made by Mme. M. Marquis *per pro.* G. Marquis in favor of S. D. Marquis and endorsed by the latter and by the defendant Le Claire. Suit was brought against Le Claire upon this note and he pleaded that he was merely an endorser for the accommodation of S. D. Marquis and that the signature of the maker was a forgery.

JUDGMENT: In an action at the instance of a holder in due course of a promissory note, an endorser is not permitted to question the validity of the note nor the regularity of the holder's title. In endorsing he engages to indemnify the subsequent holder and it is of no consequence whether he indorses for value or for accommodation. Endorsement is a guarantee of title to a subsequent holder although the endorser may himself be without recourse against a previous party to the note because of forgery or some other radical defect in the note. Judgment was given for the plaintiff for the amount of the note, protest fees, interest and costs.

BROKER AND CLIENT—BREACH OF CONTRACT TO CARRY OVER THE STOCKS—MEASURE OF DAMAGES.

MICHAEL vs. HART & CO. (1901, II K. B., Page 867).

STATEMENT OF FACTS: In April, 1901, the plaintiff opened an account with the defendants, who were stock-brokers, and employed them to buy certain stocks and shares for him, which when bought he deposited with them to secure any balance which might from time to time be due on account between them. On May 11 it was agreed that certain contracts for the purchase of various stocks which had been bought for Michael's account for the Stock Exchange settlement of the middle of May, should be held over until the next settlement on May 28, and 29. In breach of this agreement, however, Hart & Co. wrongfully sold the stocks on May 16 and closed their account with the plaintiff, in order, as they alleged, to satisfy a balance which they claimed to be due them. The plaintiffs thereupon brought action for breach of contract and claimed to be credited with the highest prices at which the said stocks could have been realized at any time up to May 29. The defendants, while admitting their legal liability to pay damages, claimed that these damages should be assessed either at the date of the breach of contract on May 16 or at the termination of the account on May 29.

JUDGMENT (WILLS, *J.*): The defendants wrongfully repudiated their contract, and as wrong-doers every presumption is to be made against them. On the cases, the plaintiff is entitled to all the advantages which might have been his had the contract been carried out, and among these advantages was the right to sell the shares held for him at any time he chose up to May 29. While it is hardly possible that the plaintiff would have instructed the selling of the various stocks at the highest prices obtainable up to May 29, the law has never shut out the possibility of his doing so where there has been a wrongful breach of contract, and the plaintiff is therefore entitled to damages assessed at the highest prices which were obtainable during the period during which he had the option of selling.

PROMISSORY NOTE—NECESSITY FOR PROTEST—NOTICE OF DISHONOR.

COUNSELL vs. LIVINGSTONE (C. L. J., Vol. 37, Page 824).

STATEMENT OF FACTS: Two of the defendants, being husband and wife, were sued as endorsers of a promissory note for $3,500. This note was not formally protested for non-payment, but on the day after its dishonor the following letter was sent addressed to the husband only:

Digitized by Google

"I beg to advise you that Mr. T. C. Livingstone's note for $3,500 in your favor and endorsed by yourself and wife and held by our estate, was due yesterday. As I have not received renewal, kindly see that same is forwarded with check for discount, as there is no surplus on hand."

JUDGMENT (FALCONBRIDGE, *C. J.*): Held, that this letter mailed the day following the due date was a sufficient notice of dishonor to the endorser to whom it was addressed and also to his wife, whose agent in the transaction he was shown to be.

BANK IN LIQUIDATION—LIQUIDATOR'S STATUS TO SUE IN HIS OWN NAME—RIGHT OF CREDITOR OF DEFUNCT BANK TO INTERVENE.

KENT, *et al.* VS. LA COMMUNANTE DES SŒURS DE LA CHARITE DE LA PROVIDENCE ET LES SŒURS DE LA CONGREGATION DE NOTRE DAME ET BASTIEN (intervenor).

STATEMENT OF FACTS: The plaintiffs were the liquidators of the insolvent Banque Ville Marie under an order of the court made on August 10, 1899, and brought suit against the defendants upon a promissory note for $20,000. This note was dated July, 1, 1899, payable one month after date to the Banque Ville Marie. The petition for the winding-up order was launched on August 8, after the maturity of the note and the order appointing the plaintiffs as liquidators was made on August 10.

This action was brought in the name of the plaintiffs as liquidators and not in the name of the Banque Ville Marie, and it was objected on behalf of the defendants that the plaintiffs had no status to bring the action.

JUDGMENT: The Dominion Winding-Up Act (R. S. C. Ch. 129) allows the liquidators appointed under it to sue the debtors of the bank or company in liquidation either in their own name or that of the bank or company upon obtaining the consent of the court to the proposed action. But here the right of action accrued to the bank before it went into liquidation and not to the liquidators, and they, occupying that position only for the ends of the liquidation, have no status to sue in their own name. The action ought to have been brought in the name of the Banque Ville Marie.

As to the intervention of Bastien the court held that the creditor of a bank in liquidation could intervene in an action commenced by the liquidators against a debtor of the bank by following up and continuing the action at his own expense where the plaintiffs neglect to proceed with diligence and to invoke requisite measures in the interest of creditors. But where the plaintiffs have asked for a dismissal of the action for special and sufficient reasons after having answered the defendant's plea, a creditor can not force the defendants to engage in another contestation by the same means and on the same subject-matter.

The intervenor's claim was dismissed on the facts of the case with costs.

PROMISSORY NOTE—APPLICATION FOR SUMMARY JUDGMENT.

FARMER VS. ELLIS (37 C. L. J., page 345).

STATEMENT OF FACTS: This was an application for summary judgment before trial on a promissory note. In answer to the application, the maker and one of the endorsers filed affidavits that they were induced to become parties to the note by the fraudulent misrepresentations of their co-defendants.

Digitized by Google

JUDGMENT: Under the authority of sub-section 2, section 30 of the Bills of Exchange Act these two defendants are entitled to unconditional leave to defend notwithstanding that the plaintiff has filed an affidavit that he was the holder for value without notice. Sub-section 2 reads as follows: "And every holder of a bill is *prima facie* deemed to be a holder in due course; but if, in an action on a bill, it is admitted or proved that the acceptance, issue subsequent negotiation of the bill is affected with fraud, duress, or force and fear, or illegality, the burden of proof that he is such holder in due course shall be on him, unless and until he proves that, subsequent to the alleged fraud or illegality, value has in good faith been given for the bill by some other holder in due course."

COMPANY—SUBSCRIPTION FOR STOCK—NECESSITY FOR ALLOTMENT BEFORE SUBSCRIPTION IS BINDING

THE NELSON COKE AND GAS COMPAFY vs. PELLATT.

STATEMENT OF FACTS: On September 1, 1899, the defendant subscribed for shares in the plaintiff company by agreement covenanting with the company and the directors to accept the same when allotted, and pay as calls might be made. This action was brought in respect of the said subscription for the sum of $10,000 due thereon. Several letters were sent from the plaintiff company to the defendant requesting payment of this sum, and the defendant kept putting off payment but never objected to pay, although he sent no reply to these several letters. On November 15 the defendant wrote to the company, saying: "I desire hereby to formally withdraw the offer which I made in the subscription book to take certain shares of the capital stock in your company." On November 28 the company, through its solicitors, wrote to the defendant demanding payment for the sum and threatened legal proceedings if not made. No notice either from the solicitors or from the company had been given that allotment of stock had been made and the company seemed to rely on the liability as one arising entirely out of the agreement. And it was proved to the satisfaction of the trial judge that up to November 15 there had been no allotment of shares.

JUDGMENT (LOUNT, *J.*): I am of the opinion on the authorities that until the allotment of shares in pursuance of the subscription the plaintiff had the right to withdraw such offer. That is, that the subscription for stock in the subscription book of the company amounts merely to an offer and is not a completed contract until shares have been alloted in pursuance of it. The ordinary principle of the law of contract applies that an offer may be withdrawn at any time until its acceptance.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement in back part of this number.

ISSUANCE OF BANK STOCK.

Editor Bankers' Magazine: JACKSONVILLE, Fla., January 15, 1903.

SIR: I have been sued as administrator upon a promissory note given by my intestate in payment for bank stock. The stock was purchased directly from the bank. It was transferred in accordance with the sale upon the books of the bank, but no certificate was ever issued to my intestate. The directors have exercised control of the stock, receiving dividends and paying taxes thereon until after my appointment. My defense for the estate to the note is want of consideration. Is it a valid defense? ADMINISTRATOR.

Answer.—No, we think not. The legal title to the shares, as evidenced by the books, being in the estate, their title was not changed by the mere fact that they were left in the control of the directors.

BANK'S LIEN ON STOCK.

Editor Bankers' Magazine: HARRISBURG, Pa., January 18, 1902.

SIR: My father was a stockholder in a bank located near here. At the time of his death in October last, he was an indorser on a note taken by the bank. The note did not mature till after my father's death, and then it was impossible to collect from the maker. The bank claims that under the provision of its charter it has a lien on my father's stock for the amount of the note. Can it maintain such a lien under the circumstances? J. L. B.

Answer.—There is no question but that it can. The indorsement of the note gave the bank an inchoate right to his stock, under the provisions of its charter giving a lien on its stock held by the debtor, though the pledge of it to the bank did not become absolute until the debt became payable.

CASHIER ESTOPPED TO DENY AGENCY.

Editor Bankers' Magazine: CARTHAGE, Mo., January 25, 1902.

SIR: Will you please answer the following question to settle a friendly dispute, involving a very small amount, but quite an important principle. Bonds are left with a bank to negotiate, the commission to be paid therefor being thoroughly understood. The Cashier while on a vacation negotiated the bonds and claims, as a matter of right, the commissions. Is he right? VICE-PRESIDENT.

Answer.—No; he is estopped from denying his agency, and as a mere agent, his principal is entitled to the profits.

CLAIM OF EXTRA COMPENSATION BY PRESIDENT.

Editor Bankers' Magazine: CAMBRIDGEPORT, Mass., January 2, 1902.

SIR: The directors of a bank at a regular meeting appointed its President, Cashier and a director a committee on alterations of a building bought by the bank. At a subsequent meeting, complaint being made that nobody was attending to the work, the President after consultation with the other members of the committee, and with knowledge of the director but without any other vote having been passed upon the subject, devoted all his time, except what was required for his duties as President, to superintend the work for a period of six months. If he had not done so, it would have been necessary to employ a superintendent. Can he recover for this extra work as a matter of law? M. F. C.

Answer.—No.

CONTRACT AS TO SALARY OF OFFICER.

Editor Bankers' Magazine: JACKSON, Mich., January 20, 1902.

SIR: The directors of a bank, by vote, fixed the salary of the President at $400 a year, for which he served for four years, then demanded an increase of salary, and verbally resigned the office. A committee of conference reported at a subsequent directors' meeting that he would not serve as President unless his salary was $2,000. After this report, the directors passed a vote fixing the salary at $400; and, at their next meeting, a vote was passed approving the record of the last meeting; plaintiff, in ignorance of these votes, came into the meeting and presided, saying: "At your request, and upon the assurance that the salary shall be arranged to my satisfaction, I withdraw my resignation." Nothing was said in reply by any of the directors; and the President continued to act as such four months longer, when, there having been no other vote taken fixing his salary, he resigned, and his resignation was accepted. Can he recover for the four months on the basis of $2,000, as he claims he understood the directors to agree to when he withdrew his resignation? INQUIRER.

Answer.—No; there was no mutuality to the contract to that effect. It takes two to make a contract.

Digitized by Google

LIABILITY OF DIRECTORS.

Editor Bankers' Magazine: NILES, Mich., January 9, 1902.

SIR: Since the disastrous failure here of the First National Bank there has been a constant turmoil, and directors and stockholders are threatened with all kinds of litigation. The Cashier had been keeping up the amount of assets in the bank by forging paper and this had been going on for more than a year. The directors received no pay, but conscientiously attended to their duties. As they suspected nothing was wrong, they made their investigations on the basis that the paper was as represented by the Cashier, their only seeming failure being that they did not carry their investigations outside the bank. Are the directors liable personally? FARMER.

Answer.—A director of a bank, whose services are gratuitous, and whose duties are to attend the bank once or twice a week to assist in discounting paper, to see how much money there is to loan, and to count the cash on hand, and examine the bills receivable and securities to see whether they correspond with the statements furnished by the officers, does not owe the creditors of the bank such care as a reasonably prudent man exercises in his own business, but is amenable only for fraud, or for such gross negligence as amounts to fraud.

AGREEMENTS TO TAKE STOCK.

Editor Bankers' Magazine: OAKLAND, Cal., January, 13, 1902.

SIR: Some time ago the depositors of a membership Savings bank, which was in need of funds, met and agreed to reorganize as a capital bank, whereupon subscription books were opened, the old depositors being preferred in the right to subscribe for stock, and their subscriptions being made payable by the funds in the Savings bank. A large amount of stock was taken in this manner, amounting nearly to the amount of the bank's deposits, and such subscribers before all of the stock was taken, incorporated and organized the bank, and proceeded to operate it. These subscriptions were unconditional in form, and soon thereafter the bank suspended, and turned over its assets to a board of directors for liquidation. The board collected the assets and proceeded to pay dividends on deposits, excluding such as had been applied in payment for stock. Eighteen months after this certain stockholders set up the claim that they made their subscriptions conditional on the subscription of the entire capital of the bank, and asked to be relegated to their rights as depositors. They had acted at stockholders' meetings on several occasions. Is their claim tenable? SUBSCRIBER.

Answer.—No; they have estopped themselves to set up any claim of this kind.

FRAUDULENT PREFERENCES BEFORE ASSIGNMENT.

Editor Bankers' Magazine: GATE CITY, Ga., January, 11, 1902.

SIR: About two hours before the making of a deed of assignment by the B bank, for the benefit of creditors, the Cashier gave orders for the transfer of moneys belonging to the bank to the W bank. This was done without any understanding with the W bank. About an hour afterwards and before the assignment, the Cashier transferred to the President of the W bank in person certain notes, and the latter was then informed of the proposed assignment. Acting for certain creditors I garnished the money in the hands of the W bank. On the trial of the case the Cashier testified that he considered the bank solvent at the time, and the consideration of these transfers was indebtedness of the insolvent bank to the W bank, but the Cashier could not give the amount of the debt, nor remember whether any balance was struck. There was a verdict by the jury against me and I have appealed. My contention is that under the facts as stated, and they are the substance of all that can be gleaned from the record as printed, that the court should have directed a verdict for my client. Can you cite me to any similar cases? I send you a copy of the record. G. N. C.

Answer.—No, we cannot, for the reason that digests are not easy to refer to in searching for given sets of facts. The question was whether such transfers were within the inhibition of your Code, Section 4429 providing that all conveyances of effects made by any bank in contemplation of insolvency, or after insolvency, except for the benefit of all the creditors, shall, unless made to an innocent purchaser for a valuable consideration, and without notice of

Digitized by Google

the condition of the bank, be void. We think the evidence was sufficient to take the case to the jury.

FORGED PAPER IN HANDS OF BONA-FIDE HOLDER.

Editor Bankers' Magazine: CARROLTON, Ill., January 7, 1902.

SIR: This bank issued a certificate of deposit to "James Freemann," receiving his signature, which was placed on its books. The bank mailed the certificate to the payee in Iowa, but it was received by another who forged the payee's name, and negotiated it to a *bona-fide* purchaser for value, and it was thereafter successively indorsed several times before its presentation to the bank. The last holder obtained payment thereof, the forgery being unknown. The forged name contained only one "n." Can the bank recover this money of the last holder? G. W.

Answer.—The last holder being a *bona-fide* purchaser for value, is not liable to refund the money to the bank.

QUESTION AS TO SPECIAL DEPOSITS.

Editor Bankers' Magazine: INDIANAPOLIS, Ind., January 28, 1902.

SIR: This bank is the depository of Receivers appointed for a certain railway company. The insolvent railway company deposited here before the Receivers were appointed, and the latter took over by order of the court the deposit remaining. By the order appointing the Receivers they are authorized and directed to carry on and operate the railway and the property thereof. Now, are these deposits special funds which the bank can only pay out on the order of the court? We have been paying out on the orders of the Receivers in the ordinary course of business the same as we did for the railway company. The question has been raised, and though no trouble is anticipated, we desire to know our legal responsibilities.

CASHIER.

Answer.—We should say you had been doing all right. The order contemplated that the carrying on of the railway business would require the handling, receiving and paying out of moneys, the payment and collection of bills, and the transaction of such financial business as would require the medium and accommodation of banks, and in the transaction of such business, such moneys are not deposited as special funds, but were deposited generally to the credit of the Receivers, and to be handled and used by the bank like deposits of its other patrons in a banking, loan and deposit business.

DEPOSIT BY PUBLIC OFFICERS.

Editor Bankers' Magazine: FARMINGDALE, N. J., January 18, 1902.

SIR: The county collector of this county deposited money with us as collector. After the expiration of his office he refused to transfer his account to his successor, and we have, to be safe, refused to pay except on his order. The board of chosen freeholders has brought a bill to have the deposit declared the property of the county, in which we as well as the depositor are named as defendants, and asks for an order directing the bank to pay the same to the county. Our policy is not to defend. Can we be held responsible for any of the costs of the litigation? J. M. PAUL.

Answer.—The implied contract arising from the contract was that the bank would pay out the money at the depositor's order. You therefore owe no legal duty, in this connection, to the county. You can not be mulcted in costs.

SETTING OFF DEPOSIT AGAINST UNMATURED NOTE.

Editor Bankers' Magazine: SANDUSKY, O., December 14, 1901.

SIR: I was a depositor in a bank, in this State, which failed some time ago. I also owed the bank on a note which was not matured at the time of the failure. Am I entitled to a credit on my note of the amount of my deposit at the time the bank failed?

DEPOSITOR.

Digitized by Google

Answer.—Although there are some authorities to the contrary, the great weight of authority is to the effect that the fact that a note held by a Receiver in insolvency proceedings does not mature until after his appointment does not prevent the maker, who has an adverse claim against the insolvent, from using it as a set-off, and such rule has the sanction of the Ohio courts (Armstrong vs. Warner, 49 Ohio St. 376.)

STATUTE OF LIMITATIONS.

Editor Bankers' Magazine: SYRACUSE, N. Y., January 18, 1902.

SIR: The A bank had a deposit with the B bank, and in 1890 drew a check payable to the order of H. The teller of the B bank certified the check, and on the following day the B bank paid it upon a forged indorsement of H's name. The amount was charged to the A bank, to which bank the check was delivered up as a voucher, and the pass-book was balanced. The A bank discovered the forgery in January, 1897, and in the following June tendered the check to the B bank and demanded payment, and during the same year brought suit which is now pending. The point insisted upon most strenuously by the defense is that the action is barred by the statute of limitations, more than six years having elapsed between the certification of the check and the demand. Is the defense good? TELLER.

Answer.—We think not, but that the statute began to run from the time of the demand in June, 1897.

CASHIER AS AGENT OF BANK.

Editor Bankers' Magazine: AUSTIN, Texas, January 27, 1902.

SIR: The owner of a note placed it for collection in the hands of the Cashier of the U bank. The Cashier was his intimate friend and he had unbounded confidence in him. The Cashier had the note renewed, placed the renewed note in the bank for collection as deposited for his own account individually, and used the proceeds personally. Though informed by the Cashier that the renewed note had been collected, the owner never demanded payment from the bank, or any one else except the Cashier, and never drew a check against the proceeds, or made any effort to get them. Years afterwards, when the Cashier had died, and during a temporary suspension of the bank, the owner brought an action against it for the proceeds of the note. Can he recover? CASHIER.

Answer.—We think that under the facts as stated any court would determine that the note was left with the Cashier for collection in his individual capacity, and not as agent for the bank, and of course, int hat case, he cannot recover.

LIABILITY FOR COLLECTION MADE.

Editor Bankers' Magazine: TROY, Ohio, January 20, 1902.

SIR: A sent to B for collection a bill due at sight, and drew sight drafts against the anticipated collection. B received for the bill the check of the drawee, credited the amount to A, and deposited the check in the bank in which he kept his account, where it was passed to his credit as cash. B stopped payment the same day without paying A's drafts, and being indebted to the bank for checks charged to his account, more than the amount of the remitted bill, the bank had not paid anything or given any credit because of the deposit of the check. Who is entitled to the check? C. S. R.

Answer.—The check when deposited belonged to A.

PAYING DRAFT BEFORE MATURITY.

Editor Bankers' Magazine: MILWAUKEE, Wis., January 9, 1902.

SIR: G discounted a draft drawn by B on C, and took as security for its acceptance and payment a bill of lading for a lot of flour belonging to B, which was shipped for and on account of G, to be held subject to the order of the Cashier of the P bank, which bank was G's collecting agent. G indorsed the draft to said bank, or order, and sent it, with the bill of lading to the bank for collection. C accepted the draft as an advance on the flour which he sold, before its arrival to the factories of B. On its arrival C could not get possession of the flour without the order of the Cashier, who claimed to hold it as security for the draft; and to get possession of the flour C paid the draft before due, deducting the interest of the remaining time; and the Cashier gave the order, and the flour was taken and sold by C and pay

Digitized by Google

received. Before the draft fell due, the bank failed, and G received no part of the proceeds of the draft. Can C be held on the draft, having paid it before maturity, and accepting the benefit of the interest for the term it had to run? BROKER.

Answer.—No. G must bear the loss occasioned by the failure of the bank alone.

TRANSFER OF BANK STOCK.

Editor Bankers' Magazine: INDIANAPOLIS, Ind., January 4, 1902.

SIR: If bank stock is bought from a party living at a distance from the bank a short time before the annual meeting of stockholders, would it be legal to make the transfer on the books of the bank before the arrival of the old certificate, in order that the stock may be voted at such meeting? DIRECTOR.

Answer.—The answer to this question must depend upon the facts of the case. The officers of the bank may not rightfully make a transfer upon the books without the authority of the registered owner of the stock, and a production and surrender of the old certificate. As long as the original certificate remains in the possession of such holder, the registry of the transfer would be obviously improper. (See Knox vs. Eden Musee Co. 148 N. Y. 441.) As soon, however, as the certificate, together with a proper power of attorney to make the transfer, is delivered to the transferee, the transfer may be entered upon the books, though, of course, no new certificate should be issued until the old certificate is surrendered and cancelled. The power of attorney in general use authorizes a substitution of attorneys to make the transfer, and this substitution may be made by another paper; and there seems to be no reason why, for example, in the case of an emergency, a telegram from the transferee to the proper officer of the bank may not be a sufficient authority. The question, so far as the officers of the bank are concerned, is only whether or not there is sufficient and satisfactory evidence that the certificate and a power of attorney with authority for substitution has been actually delivered to the transferee. But the officers of the bank are not *required* against their will to act upon any evidence less satisfactory than the actual production of the certificate and power of attorney for their personal inspection. And if the by-laws of the bank require this, the officers could not rightfully act upon any other evidence.

DRAWING AND DELIVERY OF CHECK AS ASSIGNMENT OF FUNDS.

Editor Bankers' Magazine: PHILADELPHIA, January 28, 1902.

SIR: In your January number, page 52, you say that in Illinois "the title to a deposit is transferred by delivery of a check therefor." How can this be unless the bank has knowledge that the check has been drawn? A man may draw the check for part or all his balance, checks subsequently drawn may be presented prior to it, which the bank pays if good, leaving "no funds." What becomes of the title transferred by the first check?

A SUBSCRIBER.

Answer.—The rule has long been established in Illinois that the drawing and delivery of a check drawn on funds in a bank is an appropriation of the amount of the check in favor of the holder thereof, in effect an assignment of the amout of the check. (Munn vs. Burch, 25 Ill. 35; Bank vs. Patton, 109 Ill. 479; National Bank vs. Indiana Banking Co. 114 Ill. 483.) But in all cases of assignment the rule is that the debtor of the assignor is not affected by the assignment until he has notice thereof, and hence a bank upon which a check is drawn is not affected by the assignment implied therefrom, until the check is presented for payment or certification. So far as the bank is concerned, it honors the checks in the order in which they are presented.

EDWARD B. JUDSON.

Digitized by Google

EDWARD B. JUDSON.

There is perhaps no name that has been longer or more honorably identified with New York State banking than that of the subject of this sketch. At the time of his death, January 15, 1902, Mr. Judson was one of the oldest active bank Presidents in the country, being in his eighty-ninth year. He was also eminently successful, having justly earned a high reputation as a business man.

Mr. Judson was born at Coxsackie, N. Y., in 1818, his parents being of sterling New England stock. Soon after leaving school he entered his uncle's bank at Coxsackie, learning the practical details of the business. When twenty-two years of age, he moved to Constantia, N. Y., and engaged in the lumber and iron manufacturing business with his brother; later they removed to Albany and opened an office for the sale of lumber on commission, continuing in this business for over twenty years.

At the age of twenty-six Mr. Judson entered the New York Legislature, and served during 1839 and 1841. At the time of his death he was the oldest surviving member of that body. His chief ambition was in the direction of business rather than politics, and believing that central New York offered good opportunities, he went to Syracuse in 1849, and on the organization of the Merchants' Bank in 1850 he became Vice-President, resigning two years later to become Cashier and director of the Salt Springs Bank. After six years' service he resigned to become identified with the Lake Ontario Bank, Oswego. During this time he kept up his connection with commercial enterprises, investing largely in the salt industry in particular.

In 1863 Mr. Judson was invited to Washington to confer with Secretary Chase in regard to the establishment of the National banking system. On his return he organized the First National Bank, which was number six in the system. It started with $100,000 capital, the present amount being $250,000, with $250,000 surplus and about $50,000 undivided profits. Mr. Judson was President of the bank from its foundation to the time of his death. He was also one of the original Vice-Presidents of the Trust and Deposit Co. of Onondaga, organized in 1869; was a trustee of the Metropolitan Trust Co., of New York; in 1870 one of the incorporators of the Syracuse Northern Railroad Co. and treasurer of the company; was director of the New York Central and Hudson River Railroad; was director and member of the finance committee of the American Express Co., and a director of the State Bank of Syracuse. He was one of the organizers of the American Bankers' Association, and served continuously for many years as a member of the executive council.

As a business man and a banker he was widely known for his ability, sound judgment and absolute fidelity.

His fortune was wisely used, and liberal contributions were made to worthy charitable and benevolent institutions, and his private benefactions were also large and generous.

In 1845 Mr. Judson married Sarah Williams, daughter of Coddington B. Williams of Syracuse, who survives. He is also survived by one son, E. B. Judson, Jr., who has been closely identified with his father in his business of late years.

CENTRAL RESERVE BANKS—ASSET CURRENCY—EMERGENCY CIRCULATION.

Three addresses were delivered at the last convention of the American Bankers' Association which attracted more than usual attention. This was not due to any novelty in the subjects discussed—on the contrary, the questions involved are as old as our Government itself; it was due to their importance at this time, when they have again become matters for public discussion, with a view to Congressional action, and to the prominence of the men who delivered the addresses.

It is possible that the three gentlemen may not be of one mind upon the two most important of the questions. Secretary Gage, in what he said, did not, in distinct terms, declare in favor of a central bank with branches so earnestly and vigorously supported by Mr. A. B. Stickney, President of the Chicago Great Western Railway Company, and the latter did not declare himself in favor of an asset bank-note circulation, which was favored by Mr. Gage. Hon. James H. Eckels, ex-Comptroller of the Currency, supported both propositions.

The paper of Mr. Stickney gives evidence of great care in its preparation. It is an exhaustive essay upon the subject of banking, and in it is announced a theory which he thinks is supported by the circumstances to which he refers.

The Medium of Exchange.

Mr. Stickney commences at the beginning of the money question by telling us that a medium of exchange is "an essential part of commerce as distinguished from barter." That the ultimate purpose of all commerce is to exchange "things for things." This is undoubtedly true as well as elementary. Something novel, however, is asserted when he goes on to say what constitutes the medium of exchange. It will be necessary to give a number of quotations to show clearly the views he maintains upon the subject.

"Money as a medium of exchange may be used as such, but as a matter of fact it is seldom, practically never, used as a medium of exchange except in petty transactions."

"The medium of exchange is credit."

"The merchant who creates a credit, deposits it in his bank and uses it first, then it is transferred by check time after time, effecting exchange after exchange, until it is finally redeemed."

"The few merchants who do not go in debt use credits which have been created by others."

"The increase of bank deposits simply means that conditions of trade are such that merchants have increased their indebtedness."

"It is an increase of indebtedness which is available as a medium of exchange, instead of an increase of money."

"The deposits in the main are produced by the so-called loans."

"The fact is that in most of the bank transactions there is no borrowing, or lending or depositing. They are simply credit transactions, a swapping of credits."

"Probably a majority of bank managers, who have not given the subject special consideration, believe that the withdrawal of balances by customers compels the banks to restrict their loans during commercial crises."

Digitized by Google

"While * * * a few withdraw money from the banks in time of panic, for the purpose of hoarding * * * an examination of the accounts of the National banks as compiled by the Comptroller is convincing that in the panic of 1893 such withdrawals were inconsiderable."

"The enormous decrease in so-called deposits was about equal to the decrease of the so-called loans, and was due to the refusal of the banks to continue swapping credits."

This last statement must have been a surprising declaration to the bankers who listened to the address, especially to those who had gone through a panic. If Mr. Stickney is correct, then those times which so tried men's souls were only a hideous mockery. The practice of a financial Christian science would have placed things in a different light and soon restored the normal conditions of health and quietude.

Mr. Stickney's experience, however, as a banker, as he states, was gained on the outside instead of the inside of the bank counter. Perhaps if these conditions had been reversed he would be as skeptical upon the subject as most bankers must be.

However, the statements made by him should not pass unchallenged—not only as to the asserted facts—but also the theories advanced to explain the facts.

What Constitutes a Medium of Exchange.

It is undoubtedly true that many things may be used as a medium of exchange. We know that by legal enactments, by the force of tradition, and by convention, many articles have been chosen for the purpose which were far from possessing the value such use of them would indicate. Even spurious and counterfeit coins and bills will do the service of the very best money if their spurious character is not known. It is not therefore impossible to conceive of some form of credit which might be used as a medium of exchange and would dispense entirely with money as we now understand it. But bank checks utilized in Mr. Stickney's theory of "swapping credits" could not of themselves become a medium of exchange.

Anything used as a medium of exchange, no matter what it may be, *belongs to and remains with neither of the parties to a trade.* The things traded for change possession, but the money itself is passed along to be used in numberless similar transactions.

When it ceases to circulate, and is itself the thing transferred, it assumes a form of far greater importance than a mere medium of exchange. It becomes what is called in political economy "a storehouse of value," but what would be more properly called "orders for things," instead of things themselves.

For this reason, the wisest and best thought upon the subject has led to the conclusion that the medium of exchange should be a money the best in existence. It should be fitted to perform not only that function, but also the other, which is the greatest that money possesses. Bank checks, even if it should be conceded that at times they seem to perform the service of a medium of exchange, could under no conditions fulfill the greater function of money. But they cannot serve as a medium of exchange except as the representatives of money deposited or supposed to be deposited in a bank.

It is altogether probable that too much credit is as a rule given to bank checks, in their ordinary use, for dispensing with money. It is doubtful if they dispense with a single dollar.

A bag of coins or a package of bank notes may be passed from hand to hand in the same manner that checks are exchanged, and used over and over again, but no one will say that this frequent use of the same money would increase in the slightest degree the volume of money in circulation; and why should such an increase be claimed for checks drawn and exchanged any number of times against the same bag or package deposited in a bank?

Digitized by Google

Checks are a convenience in the fact that they save the handling of money over and over again, and clearing-house transactions emphasize the economy their use produces, but there is a great difference between a method for using money and the money itself.

The Banking Function.

Mr. Stickney asserts that "swapping credits" is the function of a modern commercial bank. That a bank's "deposits increase when the loans increase," and to the same extent. That the deposits caused by the making of loans are the credits which the bank swaps, and that it was "the refusal of the banks to continue swapping credits" which caused the panic of 1893 and not the withdrawal of deposits.

I think he entirely misconceives the ordinary effect and character of a bank's loans, and greatly exaggerates what there may be in such transactions tending to the support of his views.

When a bank makes loans and credits the proceeds of them to its customers accounts, it is done with the expectation that the money represented in the entries will be drawn out at once, and not that the transactions will produce deposits which may be loaned again. In actual experience this expectation is nearly always realized.

It will be conceded that free loaning will induce the maintenance of somewhat larger balances on the part of borrowers than they would have if the loans were not obtained, but the extent of the increase could not be more than the difference between the balances in question. Under no circumstances could the class of deposits shown by the increased balances achieve the importance attributed to it by Mr. Stickney.

The true function of a bank is to loan *capital*, not credit.

The statement perhaps calls for an explanation of the means by which capital may be distinguished from money and credit.

A man may possess any quantity of money and yet have no capital of his own.

The money may be all borrowed.

On the other hand, he may have any quantity of capital and no money.

Capital actively employed in production or distribution, is manifested in the utilities employed for the purpose, and whatever money is required to run the business may be borrowed. Credit is merely a substitute for capital and is an increase of its power. It cannot be loaned or swapped any more than capital can be, unless it is first converted into money. Money is the tool for the effective work of capital just as it is a tool in the "mechanism of exchange." Every loan made by a bank must be from its own capital or the capital of somebody else, except when it is authorized to use and circulate a credit currency, which is not under consideration in this connection.

An illustration will better explain the bank transactions.

We will suppose that in some community savings have been realized to the extent of $100,000. This is capital, and the money representing it we will suppose to be deposited in a bank.

This bank, having no immediate use for the money, remits it to a correspondent, who in turn sends it to another, and in this manner it goes through ten banks, and the last one to receive it loans it out. The loans are apparently made from its own capital, but as a matter of fact the capital loaned is that of the community which earned it. The last bank is merely an agent of the owners of the capital and the other banks are sub-agents. The transactions have caused bank deposits to show as $1,000,000, whereas there are really only $100,000.

Mr. Stickney refers to the panic of 1893 and says "that the Comptroller's figures show the astonishing fact that at the pinch of the panic," when the deposits had declined $314,000,000, "the National banks possessed $26,000,000 more money than in 1892." The enormous decrease in deposits was about equal to the decrease in

Digitized by Google

loans and this, he says, was due "to the refusal of the banks to continue swapping credits."

Everyone who puts money into a bank does so with the knowledge that the bank will loan the funds. In thus depositing money and authorizing it to be loaned out, he does not part with his ownership of the capital, and this ownership follows in all of the bank's transactions. When the owners of the capital demand its return, the banks must respond, and to enable them to do so they must in turn call for it from the parties to whom it has been loaned. This is exactly what occurs during a panic. The cash in the bank's possession is depleted by this demand and the deposits correspondingly lowered, but the repayment of the bank loans will restore the cash and leave it what it was before the withdrawal commenced. The money brought to the banks may be the identical money taken from them, but this is not necessarily the case. There are other means for obtaining it.

Moneyed capital, like water, always seeks a level. When it is in greater demand in some locality or country, it will flow there from other localities or countries. It is a well-known fact that large sums of money were imported into the United States during the panic of 1893.

The money in circulation also furnishes a source from which increased supply may be obtained. The effect of a panic is to lessen the number of commercial trans actions. The same amount of money is not required as a medium of exchange and that portion released from this service is returned to its owners and by them it is either loaned to the bank borrowers or given to them in exchange for "things."

The withdrawal of deposits for the purpose of hoarding is a real fact, for a time to the extent perhaps of the total sum taken. The hoarding may not aggregate a large sum for any length of time, but whether this is the case or not there can be no great mystery concerning the return of the money to the banks to replace that withdrawn, and which return has been anticipated by the banks in the best manner they could devise.

Mr. Stickney's illustration from the Comptroller's figures in 1893 shows the process completed—the depositors paid off and the loans paid in—which left the cash on hand the same it was before the withdrawal commenced.

The Banking System.

Mr. Stickney's efforts are wholly directed to the purpose of demonstrating that our financial ailments are attributable to the "lack of a banking system," as he calls it. "The banks of this country," he says, "are not parts of a whole plan connected in such a manner as to create a chain of mutual support, but they are local and independent institutions."

This is certainly true. Our banking system does not possess the advantages which would come from a system of connected banks which in time of panic could combine their resources and thereby soon end it. It is also doubtless true that such a system, conducted by experienced and conservative bankers, would prevent the occurrence of panics. It is an excellent plan for creating a sound and substantial banking credit, but it would not follow that there would be an increased "swapping of credits" under such a system. The contrary would probably be the case, for banks managed and conducted as these would be more likely to restrict credits than to expand them. Their operations would be controlled by the available supply of actual deposits and not by the fictitious deposits to be obtained from an inordinate expansion of loans.

There are other things to be considered in connection with the adoption of a banking system than the mere creation of a sound and extensive banking credit. This, of course, is desirable, but the seeking for it must not be at the expense of the banking facilities now enjoyed in hundreds, perhaps thousands, of communities to

Digitized by Google

which the branch system would never be extended. Much more could be said along this line, but the obvious impracticability of the scheme renders further discussion useless.

An Asset Currency.

Asset currency is a much more dangerous scheme, for the reason that it is practicable, and has the support at present of a large and influential body of men who may continue the agitation until they succeed in obtaining it.

Many schemes have been proposed for a bank-note circulation based ostensibly upon commercial assets, but which would be practically unsecured bank notes. Secretary Gage, in his last report to Congress, discusses the subject at length. He refers to the proposals for a central bank and branches, but dismisses that question in the following words: "Argument has been put forward for a system which contemplates a large central bank with multiplied branches. * * * But the proposition for large central banks with broad powers for the establishing of branches offends the common instincts of our people and may fairly be looked upon as at present impossible of realization."

He suggests that the advantages of such a system may be gained in an entirely different form, and submits for this purpose his plan for an asset currency to the consideration of Congress. This provides that any National bank which shall deposit thirty per cent. of its capital in United States bonds and twenty per cent. in legal-tender notes, with the Treasurer as security, shall be entitled to issue notes to the amount of its capital. A guaranty fund is provided by the imposition of a tax of one eighth of one per cent. upon the capital stock.

In other words any bank which will issue fifty per cent. of its capital in notes secured as indicated, may issue another fifty per cent. without any security. As might have been expected, when coming from the sound banker and successful financier that Secretary Gage is, this plan is a conservative one, and is subject to fewer objections than may be offered against many others which have been put forward.

The unsecured circulation is limited and controlled in this plan by its connection with United States bonds and legal-tender notes, both of which, being limited in their quantity, would be an effectual check to an over-issue so long as this restriction existed. The objections, however, to an unsecured bank-note circulation are embraced in principles which apply equally to all such schemes.

Foreign Banking.

With the arguments advanced in its favor, an endeavor is always made to show that the system has worked well in other countries, and the impression has been created in the public mind that its non-existence in this country is an anomaly. Both Mr. Stickney and Secretary Gage refer to the systems of other countries, and Prof. J. Laurence Laughlin, in his report for the Indianapolis Monetary Convention of 1898, gives in detail the successful operation of the system elsewhere. The latter, however, admits that the conditions of European banking are entirely different from those that prevail here, and that no just conclusions can be reached from considering them; but he cites Canada as a conspicuous example of its efficiency and soundness. There are, however, only thirty-eight banks in Canada, excluding branches, and conceding that the banking system there may be all that is claimed for it, it is manifest that no just comparison can be made between it and our system, composed of thousands of independent banks.

Banking in Great Britain.

If the financial establishment of any foreign country is worthy of our emulation and imitation it will be admitted that Great Britain should have the first place. A currency based upon commercial assets is unknown in Great Britain. The Bank of

Digitized by Google

England, with the exeption of its fixed issues of £16,800,000 against Government securities, is not permitted to issue any bank notes except for coin and bullion deposited in its issue department. The private and joint stock banks of England and Wales are limited in their note circulation to the average amount outstanding in 1844, the date of the English Bank Act. As no additional charters of their character can be obtained, and defaulted and expired charters can not be extended or renewed, the amount of note circulation has dwindled to the small sum of £1,584,714 (1896) and at no distant date it will entirely disappear.

The Scotch and Irish banks are limited in their fixed issue to the average circulation in 1845. They may, however, issue in addition to the extent of the average amount of coin held by them, during the four weeks prior to the reports required. The average or fixed issue of 1845 was £9,441,703. The total average of both classes of circulation in 1896 was only £13,237,189.

This privilege to issue notes against coin on hand was given at a time when the banking business was based upon note issues and not deposits. The coin held was treated as available for the redemption of the notes authorized.

The coin basis is entirely different from a commercial asset basis. The theory advanced in favor of the latter is that it will expand to meet an increasing commercial demand for money, whereas a circulation issued against coin will contract instead of expanding when the demand for money reduces the coin reserves.

It will be seen from this that little or no encouragement is given in Great Britain to the plan of an unsecured bank-note circulation, and it exists nowhere else, except in countries where the banks are few in number and connected in chains or where they have the credit of their governments to sustain them.

Merits of the Question.

The question of unsecured bank-note circulation with us should, however, be determined upon its merits and not by the practice which may prevail in other countries whether favorable to it or not. If the issue of such notes can be shown to be for the best interests of the public, this fact would be sufficient to justify it.

Quality of the Notes.

The first consideration of the subject in connection with the public interest will be as to the character of the notes to be supplied. It is asserted for all the plans that the notes proposed will be absolutely good—that they will circulate with the same faith and credit now given to our present national currency. Some of the schemes will not stand criticism along this line, but it may be conceded that the currency which will finally meet with popular support and secure favorable legislative action will be of this description. In that case its goodness will condemn it.

Forced Redemption of the Notes.

In order to secure the elasticity which is the chief merit claimed for the currency and as a check to over-issue, the question of redemption becomes of the greatest importance. This has no reference to the ordinary means provided for redemption when it is demanded by the note holder, but to an enforced redemption under certain circumstances or at specified periods. Canadian bank notes are redeemed on an average once a month and Scotch bank notes are redeemed on an average twenty times a year. This frequent redemption of these bank notes is the result of a banking practice existing in those countries. It is a practice easily made effective there, with their limited geographical areas for commercial operations, and their fixed financial centers to which money naturally gravitates. It is not practicable in this country with its widely expanded commercial zones, numerous financial centers, and multitude of banks. A very small proportion of National bank notes finds its way to

Digitized by Google

their redemption agent aside from what goes there when uncurrent by reason of wear or mutilation. Even the small redemption which occasionally occurs would not happen if the discrimination was removed which is practiced against National bank notes by the New York Clearing-House.

In the many plans offered no suggestion has been made which would entail the kind of redemption here referred to, and it is not easy to see how any plan could be made to work automatically, even if one could be devised that would operate in some manner.

The notes proposed will become a part of our permanent or fixed money circulation, the same as legal-tender notes and National bank notes are now, and will carry with their issuance not the slightest apprehension for an early redemption. They will be received, stored and paid out as cash with no reference to the banks which issue them.

Nothing could affect them until an excessive issue should make itself felt at the gold-exporting port, and this kind of redemption would come too late to do any good; on the contrary, it might prove a signal for panic and ruin, just like that which came from the redemption of United States notes in 1893.

It is claimed by those who urge these plans, that the banks would guard their issues wisely and would not permit them to become excessive. Mr. Eckels in his address declared that there would be no fear of an over-issue, "because the business interests of the country will not take a single dollar more than is necessary to supply the needs of business interests."

He spurns the cry of "wild-cat" and insists that the question must not be measured by past traditions. Unfortunately for his argument it is not tradition which measures, but history, and there can be no better light for the future than that which is reflected from the past. Who is to decide what are business interests and what are speculations? Some banks would undoubtedly be conducted in a safe and conservative manner—there were good banks in "wild-cat" times—but we are considering provisions for a general system of free banking.

With a currency as good as that proposed, for instance, by Secretary Gage, redemption being infrequent, the banks would keep out all they would be allowed to issue, so long as there was any resulting profits.

This has been demonstrated in the case of our present bank-note currency. The sole question presented has been the profit to be realized, and slim as that profit is when bonds are high it has not deterred banks from availing themselves of the privilege. Reduction also has only occurred when it has been more profitable to possess the money represented in the bond investment than in that represented by the circulation.

Public Must Share the Benefits.

The profits accruing to banks from the issue of circulating notes can only be obtained through and by the aid of the public, and at its risk. The public, therefore, should acquire some material benefit from the issue, otherwise it should not be permitted.

In the case of our present bank-note currency, secured by a pledge of dollar for dollar of Government bonds, the profits to the banks have been minimized by reason of the premium upon the bonds and the public in their case runs no risk whatever of loss. On the contrary, it receives a substantial benefit from the enhanced value given to our Government bonds which has enabled the United States to practically refund its public debt at the low interest rate of two per cent. per annum at a time when some of the most powerful governments in the world are required to pay three per cent. or more.

But no such benefit would follow from the proposed commercial asset currency,

Digitized by Google

the profit—whatever it might be—would be for the banks alone and the risk of loss would be for the public. The only benefit to the public which can be urged would be upon the general proposition that the more capital employed in commercial transactions, the better it would be for all classes of the people.

The proposition as thus presented is not without its merits. It will depend, however, upon the economic conditions which prevail in the country in which it is proposed to issue the currency. Should trade and industry languish by reason of insufficient capital to prosecute them, the issue of a good currency would be an unalloyed blessing.

The Interest Rate.

There is an easy method for ascertaining whether additional capital is needed or not. It is found by considering the prevailing interest rate. If more capital is needed, the interest rate will be high, and money difficult to obtain; but on the other hand, if the rate is low and abundant and capital can be obtained to swing any legitimate enterprise, then there will be no excuse for increasing its supply by means of the issue of credit money.

This rule applied to the conditions prevailing in the United States would seem to settle the question so far as we are concerned. That condition is shown and emphasized in Mr. Eckels' question, "When was credit ever so cheap as it is to-day," which is only another way of saying "when was loanable capital ever so plentiful and cheap?"

The Natural Law of Money.

The issue of credit money must inevitably interfere with the natural law which governs money. The larger the supply of loanable capital, the greater will be the tendency to a low interest rate. When this rate is abnormally low in a country it will slowly but gradually and surely move to other countries where it is better recompensed. The money taken from the circulation for this purpose must necessarily be gold. This movement, continued unchecked in proper time, may reach proportions which will cause disaster and ruin to all commercial interests. The danger is recognized in all countries. In England the movement is arrested at an early stage by the Bank of England raising its interest charge. We have in this country no such universal and far-reaching banking influence as the Bank of England, and if the privilege is possessed by all banks of issuing credit money, an increase of the interest rate would tend to stimulate expansion rather than to reduce and restrict the circulation. No other conclusion can be reached but that a currency based upon commercial assets in the uncertain manner suggested would be an unwise expedient—that it would be fraught with danger and disaster, and that the public interest does not demand, nor is there anything in our financial and business establishment which calls for an aid of this character.

The Two Plans Contrasted.

The central bank plan and the asset currency plan may be compared in this manner. It is conceded on all sides that our banking system, as it now exists, however satisfactory it may be in most respects, is provided with no means of defense in time of panic or financial crises of any description. These plans are prescriptions for this system when it is in distress and not when it exists in sound health and vigor, for then it needs no doctoring. To effect its cure, the first plan would kill the patient at once and put another in its place. The other would administer a corrective in the homeopathic way—it would inject into it something which will be the cause of its trouble, when "under the weather."

An Emergency Circulation.

The defects in our banking system observed and commented upon by Secretary Gage and Mr. Stickney are real ones. We are rushing into an enormous expansion

Digitized by Google

of commercial enterprises under the most precarious of conditions. It cannot be said that this expansion is wild and visionary—on the contrary, it is fully justified by the remarkable position our country now holds with respect to the balance of the world.

It is true, as our lamented late President said in his last public utterance, that "we must not repose in fancied security that we can forever sell everything and buy little or nothing;" but there is nothing at present in our business horizon which portends any early change from this condition. We need, however, a safety valve for the possible irruption which experience has demonstrated may too easily occur. This can be supplied by the creation of some agency or resource which will replace for the time being the money taken from commercial uses by panic-stricken bank depositors.

Mr. Stickney's reference in his address to the experience of the Bank of England at a time of panic, when he says it stopped "swapping credits," is a curious presentation of the circumstance. He says that the English Bank Act "names a minimum of reserve to be held by the Bank of England against its outstanding notes." That "it required the Bank whenever that limit was reached to stop discounting." He then portrays the terrible results which were produced from the enforcement of this law, at the time referred to and the wonderful relief which followed when the Government suspended the act and permitted the Bank to resume its "swapping."

The Bank of England is not restricted in its loans by the requirement of any reserve against either its fixed circulation or its deposits. The figures given by Mr. Stickney show that it continued to pay out money at the time named until its cash was practically exhaused and bankruptcy was imminent. The suspension of the act gave relief, not because it authorized the resumption of suspended loaning, but for the reason that it supplied the Bank with a new and inexhaustible volume of money by permitting it to issue its bank notes without the requirement of a deposit of coin and bullion to correspond. The proceeding was called a loan to the banking department from the issue department, but it was in fact the issue of an emergency circulation.

A panic is a struggle for the possession of all the money in sight, it being well known that there is not enough of it to go round.

When this visible supply is enlarged in a substantial degree the desire to possess the money is removed and the panic subsides. It is a curious fact that in all the panics we have had in this country since 1857 the struggle has been to get any kind of money in circulation and not gold alone. The issue of an extra supply of currency at any of these panic periods would have restored confidence and ended the panic. What our banking system most needs is the power to procure an extra supply of money when it is required during a financial stringency, and not an expanded volume of bank notes, which will already have filled the channels of circulation when a panic occurs. That a satisfactory circulation of this kind can be easily supplied almost "goes without the saying."

Special Characteristics of an Emergency Circulation.

The privilege to issue emergency notes should not be general. It should be confined to bank organizations whose combined credit and capital would inspire confidence. In this manner would be obtained the sound banking credit which is the special merit claimed for a strong central bank with associated branches. The notes should be issued against commercial assets, but the assets should be specially pledged for their security. That their service should be limited to the special demand which would justify their issue, they should be taxed at a rate of not less than six per cent. per annum. They should be made available for bank reserves, in the same manner that coin certificates are now accepted.

Digitized by Google

Our commercial necessities have supplied us right at our hands with the very best agencies for the supplying of this currency. It is in cities that bank panics have their origin and work their most disastrous results. For this reason, and also because nowhere else could the privilege be so safely bestowed, the clearing-house associations of the various reserve cities should be authorized to issue these notes.

The separate banks in the associations joining in the guaranty for the goodness of the notes would be protected against loss by the pledge of commercial paper with which all would be acquainted, selected and approved by a proper committee and deposited with the clearing-house manager.

The currency here proposed would be an immense improvement upon the clumsy contrivance of clearing-house certificates, but would have all of the security possessed by them and the notes would be taken by the public as absolutely good.

The process seems so simple and the method so safe and so directly in the public interest that it would seem that the plan should meet with early acceptance on the part of our lawmakers.

The suggestion here offered is not novel. Substantially the same plan was embraced in a bill introduced in the Senate in 1893 by Senator Manderson, of Nebraska.

If banks would unite in favor of some measure of this character, with the earnestness and zeal they have displayed in favor of a so-called "commercial asset currency," there can be no doubt but what it would soon become a law, and there would be removed from our banking system its most prominent feature of weakness.

HENRY W. YATES.

OMAHA, Neb., January 25, 1902.

FORM FOR INDORSING PAYMENTS OF INTEREST AND PRINCIPAL ON PROMISSORY NOTES.

Editor Bankers' Magazine:

SIR: Enclosed please find sample of note, to which I desire to call attention to the spaces ruled off on the back of same for indorsements of interest and partial payments.

In my experience for many years as bank examiner, I have found a great lack of system by banks in making the endorsements, so that the balance due on principal of notes could be properly computed, the figures for credits of principal and interest being so mixed up as to make it almost impossible to distinguish one from the other.

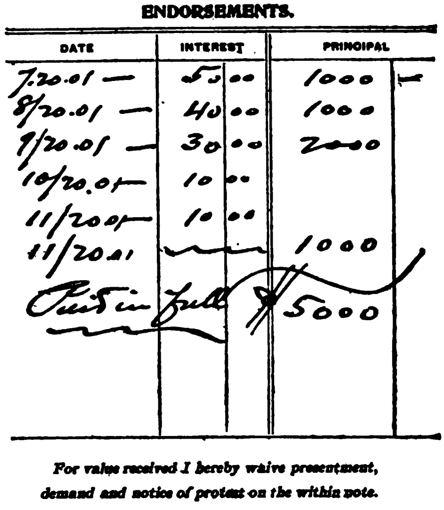
The ruling for endorsements will be found by banks in the West (where renewals are so often made merely by payments of interest) of great convenience, if once adopted.

Respectfully,

J. B. LAZEAR,

National Bank Examiner.

DENVER, Colorado.



ENDORSEMENTS.

THE CREDIT DEPARTMENT OF A BANK.

[Address delivered before New York Chapter American Institute of Bank Clerks by J. C. Emory, of the Credit Department of the Seaboard National Bank, New York city.]

The enormous expansion of banking transactions and the consequent multiplication of routine and the pressure of this routine upon the executive staff of the bank have created the necessity of delegating to the clerical force some of that superabundant detail which would otherwise quite overwhelm the officials of our large institutions and hinder them seriously in the discharge of the higher functions of executive management. Hence this new specialization, which is now an established feature in many of our New York banks, and I fancy it will ultimately find recognition in all important and progressive institutions. * * *

INDEPENDENT PERSONAL INVESTIGATION.

In the matter of our credit department we are not to trust to accident nor to good fortune for information that may vitally affect a bank's relation with a customer; neither should we rely implicitly on the service of a mercantile agency. The established agencies are by no means to be dispensed with; on the contrary, their reports have a distinct value. But the prudent banker to-day is not satisfied until he has confirmed and corroborated these reports by independent investigation—moreover, if we should call for an agency report to-day on an individual or firm, we may get the result of an investigation made two, four, or six months back—unless it happen that they have no report on file dealing with the individual or firm mentioned, when we must content ourselves with the reply, "nothing on file, will investigate promptly and report."

But, as already stated, the mercantile agency is only one of the channels through which we must endeavor to inform ourselves as to the position in the business world of those with whom the bank is dealing and to whom it is perhaps extending credit.

To make our reference files complete the duties of the credit man begin at the moment an account is opened. By starting out in a systematic way the path is made easier for the future both for the customer and the bank. A good understanding at the beginning, which includes a reasonably detailed statement from the customer as to himself and his affairs, will eliminate much of the uncertainty and perhaps distrust that might arise in the course of business dealings. This accomplished, the reputable and straightforward business man has placed himself in a position which entitles him to fair, considerate and courteous treatment. The bank should use the facilities of its credit department to fully satisfy itself upon these matters; and the responsibility of the new client ascertained, it is easy to regulate our attitude toward him in all business transactions.

The card upon which the customer's signature is taken outlines the record which is to be made and carefully preserved in our credit files for future reference. To every account is to be assigned an envelope and a sheet headed up about as follows:

Name...
Address...
Partners (where it is a firm account)..
Business..
Account opened...
Account formerly kept at..
Now keeps other accounts at...
Introduced by...

Digitized by Google

Every one of these questions ought to be satisfactorily answered on our reference sheet, and we can not deal intelligently with our customers until they are—yet I think we should not have to search very far for instances where some of these essential details are missing. In my own banking experience at least I have encountered many deplorable and exasperating cases where the sum total of information concerning a dealer consisted in his signature and his address. Nothing on record to show that a reference was ever asked for or given, and if a reference were mentioned no evidence found that it had been followed up.

Now, the credit department is intended for one thing to be a check upon such an obviously loose mode of transacting business. The executive officers are thus largely relieved of this class of detail, and while they secure more time to plan and deliberate upon the broader problems of policy and management, they may also have the satisfaction of knowing perhaps that the work delegated to a specially created department is more certain of being performed thoroughly.

Dealings with Corporations, Trustees, Executors and Administrators.

Referring again to the blank form on which I stated that the record of each new account is begun, I will say that in the case of corporations, trustees, executors, administrators, etc., it has been the practice in our credit department to see that the proper legal papers are filed by those opening such accounts. In the case of corporations it is usually desirable to have a copy of the resolutions of the board of directors appointing officers and defining their authority in dealing with the bank. In the case of administrators, executors and trustees certificates from the court should always be filed showing that the parties are legally empowered to act in these capacities. As the number of business enterprises carried on under corporate form is constantly increasing, it is well for the bank to have its own blank resolutions approved by counsel, and which corporate concerns have merely to execute and return to be filed with the bank.

From my point of view I should say let us have our data just as full and complete as possible, whether the case be a simple check and deposit account or whether it involves the granting of accommodation in the way of loans and discounts. The more we can learn about our depositors, big and little, the less friction, the fewer blunders and the minimum of wear and tear upon all from officers down. Besides, it is worth remembering that to accept accounts of strangers without inquiry is always a dubious and has sometimes proved a costly transaction. It may be that we are entertaining angels unawares; on the other hand, the sequel may remind us painfully of the oft-repeated fable of the wolf in sheep's clothing.

A startling example of this kind was recently in the courts of Pennsylvania. A very innocent-appearing individual strolled into a Philadelphia bank and hired a safety-deposit box. He concluded a little later to open a small deposit account. The bank went no further than to take his name and address. In the meantime he was working a bold fraud through a large land, title and guarantee company in another part of the same city. Having by a series of dexterous operations obtained a check for a large sum from the land title company, he negotiated the same through his little account in the other section of the city and quietly decamped with his plunder. It was shown at the trial that prudent inquiry on the part of the first-mentioned bank might have prevented the consummation of this particular rogue's operations.

From whatever point of view, it is good policy and in many ways desirable to become fully informed as to the antecedents, character, business capacity and connections of the small depositor. Many of this class have been known to develop into profitable and valued customers. We may eliminate with propriety the dead-beat class, but there is many a small dealer who is worth nursing along. * * *

Inquiries in Regard to Borrowers.

With reference to that class of dealers to whom a bank will be called upon to make advances, either in the way of loans upon collateral or of discounts, it is the function of the credit department to collect and present in clear and concise form the data which constitute the basis of credit. Let us see what some of the more important things are that the prudent banker must ascertain in regard to the borrowing dealer. The first point to engage his attention will be the character of the applicant for credit. His veracity, sobriety, general personal integrity and mode of life, in and out of business.

It may possibly impress you as being a very bold measure to scrutinize so closely as this the general morality and even the habits of those who come to us with the view of doing business. The test, however, is not unduly severe, and such lines of inquiry have come to be recognized as perfectly proper and legitimate ones, so much so in fact that I think I may say that character is regarded as a primary condition; the corner-stone, so to speak, of either banking or commercial credit. To arrive at correct estimates as to this important matter is frequently a difficult task, sometimes a delicate one, calling always for the exercise of good sense, tact and perseverance.

It will next be in order to ascertain and record the particulars which set forth the borrower's financial condition and business capacity, remembering that between these two things there is intimate relationship, for we not only want to be assured that a man is solvent to-day but that he has the business ability under normal conditions to keep himself so. On the latter will depend almost as much as on the former the punctual and complete performance of his business obligations. There are various means of arriving at fairly correct conclusions in regard to these matters. It is hardly possible to exclude completely the chance of error to which all human affairs seem to be inevitably exposed, but we certainly must not omit the plainest precautions if we hope for acquittal from blame in case of catastrophe. One of these precautions is to require from seekers of credit an intelligible statement of assets and liabilities; and a second precaution is that the bank which lends money seek to establish the correctness of these statements by independent inquiry. Nor should there be any hesitation in making these inquiries so thorough and extended as to bring out the necessary facts, with the understanding always that such investigations must be carried on with the utmost discretion.

Perhaps I should not omit to remind you that the credit department must have for convenient reference the statistical information contained in the records of the bank itself. This record will sometimes speak more eloquently than anything that may reach you from external sources. Let the credit man not only ponder the accounts, but let him also keep in touch with the various heads of departments who if observant will learn many little points about a customer's methods of doing business.

Such occurrences as overdrafts and any other acts of dereliction, departure from correct methods, or any signs of weakness, should be promptly noted and preserved in the reference files.

Statistical information is worked out in different banks with varying degrees of minuteness; in many institutions this work of analysis and tabulation constitutes a department of itself. Suffice it to say that besides the matters of character and financial condition the credit department should keep posted as to the following subjects: average balances, loans, nature of loans—time or demand, collateral or discounted bills receivable or single-name paper.

When we consider that the sum total of all these various items of information is to be taken as a basis for advancing to borrowers the bank's loanable treasure, I

Digitized by Google

need scarcely dwell upon the importance of alert, careful and thorough effort in investigation and the tabulation of results.

One thing in connection with this work that is worth noting is the co-operative spirit which prevails among banks generally on this subject. The credit information accumulated by each is a bulwark for all against frauds and ne'er-do-wells. A frank interchange of data and friendly comparison of notes is a salutary protective practice, which I have found very uniformly followed among our New York banks.

I will conclude by saying that a credit department will become the natural receptacle for the whole fund of general business news and information that can have any relation to the bank's dealings with the public. The state of trade, the course of the money market, important events in banking and mercantile circles, the launching of new enterprises, the decline of old ones, are all events that necessarily must command the attention of the up-to-date credit man. Indexes and scrap-books in connection with the current business history of the day may be kept to advantage.

Our department will be frequently consulted by customers and correspondents. Inquiries are continually reaching a New York bank from every point of the country, and we must be equipped to solve the knotty problems and answer a variety of questions in a manner that will do credit to ourselves as well as fulfill the requirements of clients. This phase of credit department work assumes considerable proportions with banks that have extended connections with interior institutions. Each day's mail will bring requests for service of this nature. It is quite a legitimate expectation that we should know something about the thousand and one schemes that are brought to life yearly—I might say monthly—in this busy centre. So this becomes an additional reason why the credit department should be fortified with a good knowledge of general business conditions and familiarity with the current events of the day.

THE ENGLISH BANKING SYSTEM.—In a lecture by F. E. Steele, delivered at the London Chamber of Commerce on "Some Tendencies and Some Weak Points in the English Banking System," and published by the London "Bankers' Magazine," appears the following in regard to the restrictions on the note-issuing privilege of the Bank of England :

"The question arises as to why a statutory power should not be given to the Bank of England, as it is to the Bank of Germany, which has adopted the 'elastic' system, to increase its issue of notes, in case of need, beyond the amount which it is authorized to issue in the ordinary course. The Bank of Germany, in times of pressure or of panic, increases its note issue, paying a percentage to the Government in respect of the excess. We dealt some evenings ago with the difference between the elastic system of Germany and our own 'cast-iron' system. You will remember that in the case of this country the Bank Act stipulates that only a certain amount of notes shall be issued against securities, and that beyond that amount every note put into circulation must have an equivalent sum in gold deposited against it. In Germany the legislature have arranged for an automatic arrangement, by which, should occasion arise, the Imperial Bank of Germany may issue further notes. This course, if adopted here, would serve to allay the apprehension as to whether there will be 'enough notes to go round,' since Bank of England notes are never discredited, even in the worst times, but are always taken as cash.

Why, it may well be asked, should the credit of the country be subjected to serious periodical strain when, by a comparatively simple statutory arrangement, the strain and anxiety could be obviated? The rigid, hard and fast rule of the Bank of England in regard to note issues seems a very weak spot in the banking fabric, and is one which only legislation can strengthen. If the banks will voluntarily keep larger reserves among themselves or with the Bank of England, and if Parliament will adopt the elastic limit system for the Bank of England note issue, then this anxiety as to the sufficiency of banking reserves will be allayed. It is not an untried remedy which is advocated. It is a remedy which has proved of the greatest benefit elsewhere."

*CHARLES A. CONANT.

THE NEW TREASURER OF THE MORTON TRUST COMPANY.

The new Treasurer of the Morton Trust Company, of New York, Mr. Charles A. Conant, comes to the metropolis with a record of some years as a financial student and economic writer. His position as correspondent for twelve years of the "New York Journal of Commerce and Commercial Bulletin" naturally required knowledge of financial subjects, but Mr. Conant has gone considerably beyond the newspaper field in his work. He published in 1896 a book entitled "A History of Modern Banks of Issue, with an Account of the Economic Crises of the Present Century," giving an account of the banking systems of all the leading nations. He also published in the autumn of 1900 another book entitled "The United States in the Orient: The Nature of the Economic Problem," which dealt with the necessity for colonial markets from the standpoint of the outlet afforded by such markets for the surplus capital of the advanced commercial countries.

Mr. Conant has been a frequent contributor to such publications as the "North American Review," "Forum," "Atlantic Monthly," "Review of Reviews," and "The World's Work," and also to the economic quarterlies. His work is well known to the readers of THE BANKERS' MAGAZINE, and it is understood that a number of his contributions to these pages on money and banking during the last few years are to form part of a systematic work on the theory of money and credit.

Mr. Conant's activity has not been limited to the realm of literature and theory. He has acted since the fall of 1897 with Mr. H. H. Hanna, Chairman of the Executive Committee of the Indianapolis Monetary Convention, in the effort to secure the positive affirmation of the gold standard by law and a more flexible bank-note currency. Several of the provisions of the gold standard law of March 14, 1900, were the result of his suggestions, and members of the Banking Committee have frequently sought his aid in the preparation of the bills and reports which have kept the subject of monetary reform before Congress.

The reputation made by Mr. Conant in the realm of finance led to his selection last summer by Secretary Root as a special commissioner to the Philippine Islands for the purpose of investigating coinage and banking conditions there. Mr. Conant was absent from the United States on this mission for about four months and submitted a report, which is now before Congress, in favor of a gold standard and a distinctive coinage for the Philippines and the extension of the American banking system to the Islands with important amendments. While abroad in 1899 Mr. Conant carefully examined the methods of the Bank of England and the National Bank of Belgium.

Mr. Conant was born in Winchester, Mass., on July 2, 1861, being a direct descendant of Roger Conant, who was acting Governor at Salem until the arrival of Governor Endicott in 1628. Mr. Conant entered newspaper work on the "Boston Advertiser" in 1880, becoming political writer on the paper and afterwards Washington correspondent of the "Boston Post" when it was under the charge of Mr. Edwin M. Bacon. Mr. Conant has taken some interest in politics, having been a

* A portrait of Mr. Conant, engraved expressly for the BANKERS' MAGAZINE from a recent photograph, is presented in this issue as a title illustration.

Digitized by Google

candidate for the Massachusetts Legislature in 1886; Secretary to the Postmaster of Boston in 1887; Democratic candidate for Congress in the Harvard University district in 1894; and delegate to the Gold Democratic convention of 1896 which nominated Palmer and Buckner. His strong sympathy with a resolute foreign policy in the Orient has led him of recent years to support President McKinley and President Roosevelt.

The selection of a man with the knowledge which Mr. Conant possesses of foreign banking is probably an indication of the far-reaching plans of Mr. Thomas F. Ryan, the Vice-President of the Morton Trust Company, who has done so much to extend its business and prestige. The company now has one of the largest lines of deposits in New York, and the close association of Mr. Ryan with some of the important enterprises of recent years is well known. Ex-Vice-President Morton is the President of the company, and among its directors are some of the leaders of modern New York finance, like William C. Whitney, Jacob H. Schiff, John Jacob Astor, James B. Duke, Henry M. Flagler and Joseph C. Hendrix.

Ownership of the Bank of England.—Lord Avebury (better known, perhaps, as Sir John Lubbock), in his inaugural address as president of the Royal Statistical Society, of London, delivered at the meeting of the society on November 19 last, in discussing matters relating to taxation, had the following to say in regard to the ownership of the shares of the Bank of England:

"No doubt the Bank of England is an institution of enormous wealth, and making large profits. But of what elements does it consist? When extra rates are thrown on the Bank of England, on whom do they really fall? Mr. Stutchbury, Chief Accountant of the Bank of England, with the consent of the Governor, has been kind enough to give me the following interesting figures: The total amount of Bank of England stock is £14,553,000. Of this £8,150,000, or fifty-six per cent., are in joint accounts, that is to say, is held by charities, marriage settlements, public institutions, etc.

Five million, two hundred and thirty-nine thousand pounds, or thirty-six per cent., are sole accounts, and of these over 4,600 are of £500 or less, and only 5,300 individuals hold over £500 of stock. Moreover, the holders of over £1,000,000 receive return of income tax as being persons of narrow means.

One million, one hundred and sixty-four thousand pounds, or eight per cent., are corporate accounts: viz., banks, £784,000; mercantile companies, £258,000; public institutions, £154,000; and charities (holding as corporations, the majority clearly coming under the above head of joint accounts), £18,000.

About twenty-three per cent. is held by women.

Instead, therefore, of being held mainly by rich persons, the great amount is either in the hands of trustees, of women, or of small holders, deriving £25 a year or less, and only about one-fifth belongs to private individuals holding over £500 of stock. I have no information how many of these belong to the city proper, or even to London, but the proportion is no doubt but small.

The shares of the banking institutions holding bank stock would again be distributed almost as in the case of the Bank of England stock itself."

Financial Committees of the Senate and House.

The committees of the Senate and House of the Fifty-seventh Congress, having in charge matters relating to finance, banking and currency, and coinage, weights and measures are as follows:

SENATE.

On Finance.—Messrs. Aldrich (chairman), Allison, Platt of Connecticut, Burrows, Platt of New York, Hansbrough, Spooner, Jones of Nevada, Vest, Jones of Arkansas, Daniel, Teller and Money.

HOUSE OF REPRESENTATIVES.

Banking and Currency. — Messrs. Fowler, Hill, Prince, Capron, Calderhead, Overstreet, Lovering, Smith of Iowa, Gill, Douglas, Foerderer, Talbert, Rhea of Kentucky, Thayer, Lewis of Georgia, Pugsley and Padgett.

Coinage, Weights and Measures.—Messrs. Southard, Minor, Hill, Boutell, Cushman, Bowersock, Hedge, Bates, Hanbury, Darragh, Woods, Cochran, Shafroth, Griggs, Gaines of Tennessee, Candler, Gooch and Wilcox.

CANADIAN BANKING, COMMERCE AND MANUFACTURES—QUARTERLY REVIEW.

A review of the banking, commerce and manufactures of the Dominion of Canada should always be of interest to the business and financial men of the United States, for the recent published trade returns show that not only does the Dominion form a greater market for United States products than all of the South American Republics put together, but she is the second largest purchaser of American manufactured goods outside of the British Empire, being exceeded in this respect by Germany alone.

During the last fiscal year approximately $120,000,000 of United States goods were sold into Canada, and there are many who look forward to an extension of this trade within the coming year. This most favorable showing, from the standpoint of the United States manufacturer, has given rise to much dissatisfaction in Canada, and there are many who are now urging upon the Dominion Government the adoption of a more aggressive trade policy with respect to United States goods entering the Canadian markets. It is the belief of many in Canada that, since the United States has so resolutely set her face against reciprocity, or in fact any reciprocal arrangement providing for fair exchange of products, the only course open is to increase the tariff wall in Canada. This feeling is rapidly growing, and within the next year or two will be one of the most important phases of Canadian political life. The great sale of United States products in Ontario, however, has not brought any depression in that country, as the rapid expansion of all lines of trade has afforded a wonderfully elastic market, and conditions were perhaps never more favorable for the future of Canadian development than they are to-day.

The flow of immigration has been much in favor of Canada, and indeed large numbers of Canadian farmers in the West have drifted over to the fertile lands in Canada and the Canadian Northwest. The whole of this tendency has given a buoyant tone to Canadian conditions, and on every side there is evidence of the extension of various lines of industry. Mercantile failures have been few in number and not formidable in extent. The numerous records of expansion go to show that a greater degree of prosperity now prevails throughout the Dominion of Canada than at any previous period of its career, and that this prosperous era is a normal conditition and not an activity excited by artificial stimulants.

Revenue and Expenditure.

The returns for the six months ended December 31 show that Canada's ordinary revenue amounted to $27,683,855, or $1,952,199 more than for the same period of last year, when the receipts were $25,731,656. The expenditure amounted to $19,082,231, so that there is an apparent excess of revenue amounting to $8,601,624. There was, however, an expenditure on capital account of $6,701,208, which reduces the surplus of revenue to $1,900,416.

The largest increase in revenue comes from customs, which furnish $1,393,209. The excise yielded an increase of $437,314; public works, $266,110, and post office, $90,763.

Miscellaneous receipts show a falling off of about $200,000.

The following table shows the details of revenue and expenditure:

Digitized by Google

Revenues:	*1900.*	*1901.*
Customs	$14,417,438	$15,810,647
Excise	5,850,643	5,787,957
Post office	1,594,237	1,685,000
Public works and railways	2,980,695	3,196,805
Miscellaneous	1,488,643	1,203,446
Total	$25,731,656	$27,683,855
Expenditures	$17,208,610	$19,062,231

The Census.

The Census Department has issued a statement of the population of Canada as completed and finally revised. From this it appears that the Dominion has a population of 5,369,666, as against 4,833,239 ten years ago, showing a gain of 536,427.

The Indian population within treaty limits shows an aggregate increase of 517 for the whole of Canada as compared with one year previous.

It is a marked feature of the new census that the increase in the population of Canada has been larger in the West, and the redistribution of seats in the Canadian Parliament will give further increased representation to Western farming provinces.

Canadian Trade.

The trade returns for the past six months, ended December 31, show that Canada's aggregate foreign trade, on the basis of imports for consumption and exports, is $13,605,000 ahead of the the same period in 1900.

The imports show an increase of $8,076,537, while the exports advanced $5,528,529.

Compared with the latter part of 1900, there was an increase of nearly two millions in exports of fisheries, of a million in animals and their produce, of over three millions in agricultural products, and of three-quarters of a million in manufactures.

The following is a detailed statement:

Imports for Consumption (Six Months).

	1900.	*1901.*
Dutiable goods	$52,558,450	$56,936,189
Free goods	36,208,909	38,627,997
Totals	$88,767,379	$95,564,186
Coin and bullion	818,933	4,098,663
Grand total	$91,586,312	$99,662,849

Exports—Domestic only (Six Months).

	1900.	*1901.*
The mines	$23,663,370	$21,770,198
The fisheries	6,504,357	8,302,501
The forests	19,666,158	20,375,117
Animals and their produce	36,973,989	37,919,390
Agriculture	13,088,932	16,385,584
Manufactures	8,063,312	8,796,750
Miscellaneous	42,915	19,225
Total, merchandise	$108,002,883	$113,568,760
Coin and bullion	149,983	....
Grand total	$108,152,866	$113,568,760

Agricultural Development.

The agricultural interests in Canada were never in a more prosperous condition than they are now, the returns for the past six months showing that the increase in that class of products was over four million dollars. This great increase is largely owing to the fact that in Manitoba and the Northwest the largest crop of all kinds of grain and other products of the ground has been grown and successfully harvested.

Digitized by Google

The farmers are reaping very substantial rewards, the money yield to them being about $50,000,000.

The official returns of the crop, which are as follows, show that the most sanguine forecasts have been greatly exceeded:

WHEAT.	*Bushels threshed.*	*Acreage.*	*Yield per acre.*
1901	12,676,843	508,564	24.92
1900	4,028,294	412,864	9.75
OATS.			
1901	11,118,066	229,439	48.43
1900	4,226,152	175,439	24.08
BARLEY.			
1901	736,749	20,044	36.75
1900	353,216	17,044	20.72

In hay and root crops, there has also been a great gain.

It is quite evident that the output of dairy products during the past season was greater than ever before. From May 1 to the close of navigation, namely, November 25, there were shipped from Montreal, 2,100,000 boxes of cheese and 410,893 boxes of butter.

The following statement shows the increases in some of the principal exports of farm produce:

	1896.	*1901.*
Eggs	$807,056	$1,691,640
Butter	1,052,089	3,295,663
Cheese	13,956,571	20,696,951
Bacon, ham and pork	4,446,884	11,829,820
Cattle	7,082,542	9,064,562
Beef	21,158	812,242

The growth of the export trade in bacon from Canada has been one of the features of commercial development of the past few years. A large portion of the increase has been from the Province of Ontario, the business being one of only small dimensions in the Province of Quebec, and as a number of packing houses cannot obtain nearly a sufficient supply of hogs to fill their orders or keep their works running, the Minister of Agriculture has given orders to start a campaign of education by holding a series of meetings in the Province of Quebec during the winter, with a view to giving farmers particular and helpful instruction in this business.

TRANSPORTATION INTERESTS.

Undoubtedly the last year was the very best one ever experienced by the railways of the Dominion. Partial returns give a total of $1,423,293,295 as gross earnings for 1901, an increase of 10.4 per cent. over 1900.

The Canadian Pacific and the Grand Trunk can both boast of large increases in gross earnings, which show to some degree the expansion of trade throughout Canada. The financial year of the two railroads ends on June 30, but for purposes of comparison the ordinary year may be taken.

The gross earnings of the Grand Trunk in 1900 were $28,993,687, an increase of $1,437,311. In the same period the Canadian Pacific showed gross earnings of $29,944,000 for 1900 and $34,053,000 for 1901, an increase of $4,109,000. The net earnings of the Grand Trunk are not available, but in the case of the Canadian Pacific they are for the eleven months of the last year and for the twelve months of 1900. During 1900 the net earnings of the road were $11,857,585, and for the eleven months of 1901 they were $12,151,893, so that leaving out the month of December, the net increase of the Canadian Pacific is $294,308 above 1900.

In connection with the earnings of the two companies, the Grand Trunk and the

Digitized by Google

Canadian Pacific, it is interesting to note that the former to-day operates directly 4,179 miles, and the latter 7,156 miles.

It is a significant feature of Canadian development that the special national highway of Canada, the Canadian Pacific Railway, has found it necessary to apply for an increase of $20,000,000 in its capital to provide for affording increased transportation facilities. The new facilities comprise, new rolling stock and locomotives, $9,000,000; double tracking, etc., west of Lake Superior, $6,000,000; new plants for construction of rolling stock, chiefly at Montreal, $1,500,000; new elevators, improvement of terminals, etc., $3,000,000; miscellaneous improvements, $500,000; total, $20,000,000.

A new development of great interest to Canadians has been the completion of the first section of the Canadian Northern Railway, which will afford a second outlet for western farm products, and give to the farmers of Manitoba and the Northwest Territories a strong competing line with the existing C. P. R. The Canadian Northern is rapidly extending northward across Canada, and will in the next three years provide for a second transcontinental Canadian railway.

The complicated problem of transportation is forcing itself on public attention in Canada, and the leading interests of the Dominion realize that important changes and improvements must be effected.

The Halifax Board of Trade has declared in favor of handing over the Intercolonial Railway to the Canadian Pacific Company to be managed and operated as a part of that system. The resolution makes the transfer conditional on the making of such arrangements as will retain Government ownership of the road, promote local traffic, and lead to the extensive development of Canada in export and import business through the ports of Quebec, St. John, Halifax and Sydney. The transfer would be a most important move, and an entirely different policy would be adopted on the Intercolonial if it should pass under Canadian Pacific management. The secret discriminations practiced extensively on all railways under corporate control would soon be felt. Services not profitable to the company would be discontinued without regard to the convenience of shippers or of the travelling public. The discriminations adopted to favor the boats of the company on the Upper Lakes might be used for similar purposes in the Maritime Provinces. In fact, the transfer of the road would put the Eastern Provinces completely under the domination of the Canadian Pacific Railway, and create that state of affairs which is causing serious dissatisfaction in the West.

The tonnage of vessels entering inwards and outwards (seagoing and inland navigation) exclusive of coasting was last year 26,029,808 tons. This is less by 884,287 tons than it was in 1900, the record year in the history of the Dominion, but is still five million tons greater than it was five years ago.

The tonnage of vessels engaged in the coasting trade entered inwards and outwards was last year 34,444,796 tons, which is considerably the largest Canada has ever known. It is 818,000 tons greater than for 1900, and seven million tons greater than it was five years ago.

The Canadian canal at Sault Ste Marie was open for navigation for 246 days last season, as compared with 238 days in the season of 1900. The number of vessels which passed through the canal in the period from April to December was 4,204, an increase of 1,123 over the previous season. The vessal tonnage amounted to 2,449,-748 tons, or 255,000 tons more than in 1900. The freight tonnage aggregated 2,820,-394 tons, being an increase of 748,717 tons.

Satisfactory Condition of Manufacturing.

The situation as regards manufactures still shows a continuation of activity and struggle to keep up with orders in almost every class of goods, except certain lines

Digitized by Google

which have been unfavorably affected by tariff changes. The foreign trade during the past six months, ending December 31, has greatly increased, and the growing preference for Canadian products is also marked.

In Northwestern Ontario there is unusual activity, and several enterprises in which many millions of capital have been invested are being brought to the point of production. These industries will mean, among other things, the manufacture on our Upper Lakes, on a large scale, of iron and steel, including steel rails (the capacity of the Algoma Steel Company being 1,000 rails per day) the working iron mines, the refining of nickel, ship-building, etc.

The general activity in industrial, commercial and agricultural interests continues responsible for the development of many incorporated companies.

The growth of sugar beets and the production of sugar will probably within a very short period be one of the largest industries of Ontario, as the trade conditions are such as to assure a steady and unlimited market.

Iron and Steel.

The development of the iron and steel industry in Canada is of the utmost importance. Iron and steel form the basis of practically all the manufacturing industries, and the developments which are now proceeding will give to the allied industries of Canada their raw products in the form of iron and steel at a cost that will enable them to compete with their finished production in any of the world's markets.

The production of pig iron amounted in the calendar year 1900 to 86,090 gross tons, in the first half of 1901 to 95,024 gross tons. Of the total production in the first half of 1901, 17,577 tons were Bessemer pig iron and 13,292 were basic pig iron, the remainder was foundry and forge iron.

Several steel-making enterprises are in a more or less forward state of completion at the present time, the most advanced of which is the open-hearth plant of the Dominion Iron and Steel Co., which is erecting at Sydney ten fifty-gross-ton open-hearth furnaces of the Campbell tilting type, at which both acid and basic steel will be made.

The money invested at the principal iron works in Canada is estimated at $24,500,000, which will be increased to $35,000,000 when the new plant now building at Sault Ste. Marie for making pig iron and steel rails is finished.

Favorable Condition of the Lumber Industry.

The outlook for the lumbering industry is very favorable. A vessel-owning trust to control the lumber carrying of the Great Lakes, to be known as the Lumber Transit Company, is now in process of formation. It will comprise at the outset from fifty to sixty ships, and will be capitalized at about $2,500,000. This movement is the outgrowth of unsatisfactory conditions in the lumber trade, by which vessel owners were kept away from the rich things that came from the boom in iron and steel.

One of the largest sawmills in Canada will probably be built in time for the opening of next season's business. It will be erected within a few miles of Ottawa, will have a capacity of between 40,000,000 and 50,000,000 feet of lumber and give employment to about 150 men.

It is estimated that the Canadian spruce forests will supply the world's demand for pulp-wood alone for 840 years on a basis of 1,300,000 tons annually of manufactured pulp. The extent of the spruce forests remaining untouched in the four provinces is as follows: Ontario, 52,818,420 acres; Quebec, 144,363,454; New Brunswick, 11,224,540, and Nova Scotia, 10,858,544. Out of five billion feet, board measure, of spruce timber consumed for all purposes in 1900, 180,400,000 feet, board measure, represented pulp-wood.

Digitized by Google

The capital invested at the present time (as distinct from paper mills) in Canada amounts to not less than $20,000,000. The total annual product of the mills is estimated at 300,900 tons of mechanical pulp, and 169,800 of chemical pulp, the former valued at $10 and the latter at $30 per ton, making a total value of over $8,000,000.

Banks and Banking.

A good indication of the prosperous condition of business throughout the country during the past year is in the report of the returns of the Canadian chartered banks, which show that they have been doing a good business, and that the coming year promises no contraction in operations of banking institutions.

The reports of the various banks have been, as a rule, highly satisfactory to the shareholders, and the result must be to materially enhance the confidence which outsiders have in the soundness of the Canadian banks and their ability to promote trade and commerce.

December Bank Statement.

The bank statement for December shows an increase of forty-four millions in the deposits payable after notice in Canada, as compared with the same month a year ago. Liabilities of the banks have increased by fifty-six millions, but the assets are sixty millions better than they were a year ago.

The following are the leading features of the statement as compared with the same month of 1900.

Liabilities.	*1900.*	*1901.*
Paid-up capital	$67,987,111	$67,591,311
Rest fund	34,501,349	37,364,706
Notes in circulation	50,758,246	54,372,788
Public deposits on demand	109,446,065	102,309,084
Public deposits at notice	188,479,500	233,431,229
Deposits outside of Canada	20,442,385	31,355,262
Total liabilities	$392,150,481	$449,091,985
Assets.		
Specie	$11,773,336	$11,571,337
Dominion notes	19,785,173	21,405,397
Deposits to secure note circulation	2,387,973	2,568,918
Notes and checks on other banks	16,401,559	16,993,896
Dominion or Provincial Government securities	12,451,142	9,768,701
Other public securities	12,290,984	14,528,036
Railway and other bonds, debentures and stocks	25,507,842	31,994,130
Call and short loans on bonds and stocks in Canada	33,981,478	37,651,941
Call and short loans elsewhere	27,234,789	45,263,961
Current loans in Canada	275,646,892	289,158,657
Current loans elsewhere	20,079,290	32,160,566
Total assets	$501,542,015	$562,077,793
Average amount of specie held during the month.	$11,790,040	$11,672,578
Average Dominion notes held during the month.	19,390,585	21,017,261
Greatest amt. notes in circulation during month.	54,460,818	58,650,297

The note circulation for December was $54,372,788, being an expansion of $3,614,542, compared with the same month last year. There was a decrease from November to December of $3,368,778; the decrease in the note circulation in 1900 from November to December was $1,189,023. The great expansion in the note circulation last fall, when the high water mark was touched, made the contraction which followed in December all the more marked. The heavy commercial and financial transactions of November made that month a remarkable one in that respect, and the decrease which followed was to some extent due to the tying up of produce through the inability of the railways to handle all the freight offering. Had it not been for that fact, the money circulation in the Northwest alone would have gone far towards making up for the contraction in the circulation experienced last month.

Digitized by Google

The increase in the public deposits continue to be a feature of the statement of the banks. The deposits during December show an increase in deposits on demand for December of $3,554,597, and those on notice increased $1,242,382. The public deposits on demand in Canada for last month show a decrease, compared with the same month of 1900, of some seven million dollars, but those on notice show an increase of about forty-five million dollars.

The demand for loans for manufacturing, mercantile and other purposes in Canada continues to show a large expansion. The activity in nearly all departments of trade and commerce, together with the increased call for funds in connection with the export trade in grain during the late months of the year, at times have called for a large amount of accommodation from the banks.

The current loans in Canada for December show an increase, compared with the same time in the previous year, of nearly fourteen million dollars.

The following abstract statement for December and November 1901, and also for December 1900, will be found interesting:

	Dec. 1901.	*Nov. 1901.*	*Dec. 1900.*
Note circulation	$54,372,788	$57,741,566	$50,758,246
Public deposits	102,809,034	98,754,437	109,436,085
Public deposits on notice	233,431,229	232,188,847	188,479,500
Public deposits elsewhere than in Canada	31,355,262	33,711,370	20,442,885
Balance due in United Kingdom	3,754,778	4,588,367	4,190,686
Balance due from United Kingdom	6,883,729	7,580,952	5,249,282
Balance due from foreign countries	11,456,756	14,010,463	11,677,099
Other liabilities	10,236,648	12,316,259	6,363,600

Total assets	563,077,793	566,367,315	501,542,015
Greatest note circulation	58,650,297	60,397,097	54,460,813

The prospectus of the new Sovereign Bank of Canada was issued on January 6. It will have $2,000,000 of capital, and the head office will be in Toronto.

The establishment of this new bank serves to show that there is still room for expansion in the banking world in Canada, and the facilities required by the growing and expanding trade conditions must either be met by the formation of new banks or increase of the capital stock of those already existing.

An estimate of the figures presented in the foregoing paragraphs would justify one in concluding that Canada's remarkably rapid progress in all lines of industry and commercial activity is sound and healthy. There are many conditions in Canada to-day which justify her public men in the belief that the country will continue to enjoy an era of prosperity which will not be seriously interfered with by any outside trade depression. The opening up of mines and forests and the filling up of the vacant farm lands of the West will provide an extended home market for her manufactures, and this in turn will call for other activity on the part of the railway and transportation interests, the banking and financial institutions, and the other armies of dependent interests involved. While there are those who have sounded a note of warning that a continuance of the present high pressure is impossible, still there are no signs which, at the present time, would lead anyone to suppose that a period of depression is possible in the near future.

UNITED STATES STEEL CORPORATION.

Under date of January 10 the United States Steel Corporation sent out to shareholders a report for the nine months of the calendar year ending December 31, 1901. We extract some important features of the report:

"This preliminary report covers only the first nine months of the corporation's existence, a period too brief to satisfactorily organize and systematize the business, and necessarily it lacks the fullness and definiteness of information which it is hoped will characterize future annual reports.

But the management feels fully justified in stating that much that at the time of organization was hoped to be accomplished in the way of avoiding wasteful expenditures for unnecessary enlargement of plants by various prominent steel companies, and of establishing harmonious co-operation among them has been successfully achieved. The several companies have effected many economies which have been attended with most satisfactory results, and the outlook for further improvement in this direction is most gratifying.

The business of the companies has been put on practically a cash basis. The losses actually incurred through bad debts have been very small, and little, if any, loss in the collection of accounts and notes receivable is anticipated. About seventy per cent. of the total current monthly accounts due from customers is now being generally collected within thirty days, and it is the effort of the several managements to maintain the businesses on a strictly cash basis.

The results of operations for the nine months are as follows:

NET EARNINGS.

Of all companies from operations for nine months ending Dec. 31, 1901..		$84,779,298
Less amounts set aside for the following purposes, viz.:		
Sinking funds on United States Steel Corporation bonds and bonds of subsidiary companies...............................	$2,263,292	
Reserve funds..	9,695,702	
		11,958,994
Balance..		$72,820,304
Nine months' interest on bonds..		11,400,000
Balance..		$61,420,304
Nine months' dividends on stocks, viz.:		
United States Steel Corporation:		
Preferred, 5¼ per cent. (7 per cent. annually).................	$26,752,894	
Common, 3 per cent. (4 per cent. annually)....................	15,227,812	
Total..	$41,980,706	
Outstanding stocks of subsidiary companies.................	25,101	
		42,005,807
Balance for nine months, applicable to additions to surplus, new construction, etc..		$19,414,497

From the foregoing statement, it will be seen that the net results from operations of the several companies for the first nine months (December being estimated) are as follows:

After charging to operating expenses, month by month, all current renewals and ordinary repairs for maintenance of plants, the net earnings of the several companies amounted to almost $85,000,000.

From this sum over $2,250,000 was set aside in a sinking fund to retire bonds of the corporation and its subsidiary companies; $11,400,000 was paid for nine months' interest on the corporation's bonds; dividends on the preferred stock at the rate of seven per cent. per annum were paid, amounting to $26,750,000, and dividends on the common stock at the rate of four per cent. per annum were paid, amounting to $15,227,000, making a total of over $53,000,000 paid out for interest and dividends on the bonds and stock of your coporation during this period.

Nearly $10,000,000 was set aside in various reserve funds to cover exhaustion of the ore properties, general depreciation of machinery and plants, and to provide for extraordinary

Digitized by Google

enlargements, after all of which there remained as the result of the above nine months' operations undivided earnings of over $19,000,000.

A satisfactory profit and loss statement showing in detail the earnings and expenses of the several companies cannot be given until their accounting systems are uniform, so that one consolidated profit and loss statement of all companies can be made. The foregoing statement, however, gives a substantially accurate account of the results of the business for the first nine months, except that the earnings for the month of December are estimated.

General Results in Organization and Manufacturing.

It was expected that by harmonious co-operation of the several companies great economies in manufacturing would be accomplished, and such expectations have been fully realized. Diversified management has been dispensed with as far as possible, and the several companies have endeavored to adopt similar methods as far as suited to their respective businesses. Great departments like ore mining, coal mining, manufacture of coke and lake transportation, have been thoroughly systematized, and the managements of the manufacturing plants in the same locality have been brought into closer relations.

The companies have endeavored to concentrate the manufacture of their various products at the point most favorable to their production, thus insuring to each ultimate economy in manufacturing costs and in the assembling of material. The effort also is made by the different companies to regulate their manufacture of various products so that the fullest advantage can be taken of the economical production of any special article and its cheapest distribution to the consumer.

While each of the above schemes of organization has effected great economies, yet in no direction has this result been more pronounced than in that of manufacturing itself. By frequent interchange of views and full information as to the results in the several companies, each is enabled to reap the advantage of any new economy practiced or discovered by any of the others, so that each company has the advantage of the combined experience of all. Methods of accounting are being made uniform as rapidly as possible so that comparisons may readily be made. In this way, the best result attained by any of the companies is taken as the standard and the other companies endeavor to conform thereto.

Economies in manufacturing thus far have been quite remarkable, but the end is not nearly reached, nor is it likely soon to be, for through the continuous efforts to co-operate and aid in bringing about the best results at each plant, it is certain that even more favorable results ultimately will be accomplished.

The Business Outlook.

The outlook for the year 1902 is very bright. Everything indicates that all of the facilities of each subsidiary company will be taxed to their utmost to supply the demand that is being made. The actual business now booked, and of which shipment is being called for faster than it can be supplied, amounts to more than half the total combined annual capacity of all the companies. The heavier products, like rails, billets, plates and structural material, are sold up to the productive capacity of the mills, until nearly the end of the year. In the more highly finished products, the consumption in each case is greater now than at the corresponding period in 1901, which, it should be remembered, was an abnormally heavy year. The expectation, therefore, of those closely connected with the manufacture and sale of these highly finished products, is for a demand even larger than that of 1901, and up to the limit of production.

Policy as to Prices.

The demand for the products of the several companies has been so great that prices could easily have been advanced. Indeed, higher prices have been voluntarily offered by consumers who were anxious for immediate execution of orders, but the companies have firmly maintained the position of not advancing prices, believing that the existing prices were sufficient to yield a fair return on capital and maintain the properties in satisfactory physical condition, and that the many collateral advantages to be gained in the long run by refusing to advance prices would be of substantial and lasting value, not only to the companies, but also to the general business interests of the country.

The strong position thus taken by the companies for stability in prices both of raw material and finished products, has had a reassuring effect on the trade, and has contributed greatly toward restoring confidence in the general business situation and creating the present large demand for steel products, by dispelling any doubt as to prices in the future.

The board takes pleasure in acknowledging the loyal and efficient services of the officers and employees of the corporation. By order of the board of directors.

STATE BANKS—REPORTS OF SUPERVISING OFFICERS.

STATE OF CONNECTICUT—BANK COMMISSIONERS' REPORT.

To His Excellency, George P. McLean, Governor:

The Bank Commissioners have the honor to submit their Annual Report, with the annual statements of the Savings banks, State banks and trust companies, showing their condition as of October 1, 1901.

The number of Savings banks has been increased to ninety by the addition of the Terryville Savings Bank, which was chartered by the General Assembly of 1901, and began business August 19, 1901.

The following statement gives an abstract of the assets and liabilities as compared with those of October 1, 1900 (cents omitted).

ASSETS.	*Oct. 1, 1901.*	*Oct. 1, 1900.*	*Increase or decrease.*
Loans on real estate	$69,425,229	$67,705,493	$1,719,736
Loans on collateral security	7,520,394	7,014,830	505,564
Loans on personal security only	3,621,869	3,477,245	144,623
Invested in United States bonds	311,700	1,268,200	*956,500
Invested in State, town, city, school district and corporation bonds and obligations	43,621,429	43,745,568	*124,138
Invested in railroad stocks and bonds	60,808,606	52,896,535	7,912,070
Invested in bank stocks	7,411,247	7,348,212	63,035
Real estate owned, including banking houses	3,612,334	3,290,655	321,679
Miscellaneous assets	2,045,188	1,308,973	736,215
Cash on hand and in banks	6,048,844	6,268,513	*219,668
Total assets	$204,426,844	$194,324,227	$10,102,617
LIABILITIES.			
Deposits	$193,248,909	$183,781,942	$9,466,967
Surplus	7,294,169	6,954,652	339,516
Interest and profit and loss	3,841,727	3,557,924	283,802
Other liabilities	42,039	29,707	12,331
Total liabilities	$204,426,844	$194,324,227	$10,102,617

* Decrease.

The tendency of the Savings banks has been to invest more extensively in railroad bonds, and dispose of United States and municipal bonds; the holdings of United States bonds having decreased $956,500, leaving only $311,700 now held; the holding of municipal bonds being $124,138 less than shown in the report of 1900, while the investment in railroad securities has increased $7,912,070. The increase of deposits for the year past has been $9,466,967, making the total deposits in the Savings banks of Connecticut, October 1, 1901, $193,248,909. The whole number of depositors is at date of this report 425,588, being an increase of 15,246. The average amount due each depositor is $454.07, being an average increase of $6.19 for each depositor.

DIVIDENDS.

The rate per cent. of dividends paid the past year is shown in the following table:

Number of banks.	*Rate per cent.*	*Amount of dividend.*	*Amount of deposits with dividends added.*
69	4	$5,779,083	$156,433,699
2	3¾	130,523	3,589,821
16	3½	1,098,145	32,764,400
1	1½	5,420	353,626
2	None	....	107,361
Total, 90	......	$7,013,173	$193,248,909

Largest amount loaned to one individual, company, society, or corporation	$300,000	$200,000	$100,000

* Decrease.

The Colchester Savings Bank is still enjoined from paying its depositors, except in such proportion as the courts allow. The last order, permitting a payment of fifteen per cent., will expire March 24, 1902. This makes a total of fifty per cent. of its deposits that they have been allowed to pay out, and at the expiration of the present order it is hoped that it will be safe to pay out a larger proportion than at any one time before, the policy of the directors being to liquidate as fast as the assets can advantageously be made available for that purpose.

At the expiration of the restraining order to the Thompson Savings Bank, the directors applied for an order allowing it to pay out twenty-five per cent. to each depositor and also to declare and pay dividends. Under this order, which was issued to continue for one year from February 27, 1901, the bank has paid all depositors that have called to the amount allowed, and also a dividend of one and one-half per cent. at its regular dividend day in August, 1901.

In July of the present year the depositors of the Stonington Savings Bank were drawing so heavily upon it that the directors were obliged to require the notice provided in its by-laws. Before the maturity of the first notices the amount called for had become so large that, in order to preserve the assets and protect depositors, the directors requested the Commissioners to apply for an order restraining it from paying out its deposits, which order was issued for the period of one year from October 3, 1901.

The directors of the Savings Bank of Stafford Springs applied for an order of restraint from paying out its deposits. After an examination the Commissioners were of the opinion that the bank was solvent and could pay its deposits as called for. The directors, however, deemed it best not to do so, and an order was issued restraining it from paying out its deposits for one year from October 15, 1901, but allowing it to pay its regular dividends. A dividend of one and three-quarters per cent. was declared payable October 15, and it is hoped that within the year the confidence of the depositors will be restored.

State Banks and Trust Companies.

The amount of capital of the State banks remains the same, but the capital of the trust companies is increased $177,100 by the organization of the Bridgeport Trust Company, which commenced business February 23, 1901, and the South Norwalk Trust Company, which commenced business April 15, 1901.

In considering the recommendation of the Governor to the General Assembly for a revision of the laws relating to banks and trust companies, the committee on banks deemed it advisable to avoid the delay and expense of a commission for that purpose, and if possible, prepare a bill to be enacted at that session which would accomplish the object. After full hearings a bill was prepared which resulted in the passage of Chapter 143, Public Acts of 1901. The main features of the law are the maintenance of a reserve fund for deposits, the limita-

Digitized by Google

tion of the liability of persons and directors, the prohibition of loans to the executive officers or clerks, and the calling for reports showing the condition on any past day specified by the Commissioners, with suitable penalties for violations of its provisions.

As the law did not go into effect until August 1, only one call for reports that could be included in this report has been made, which shows the condition at the close of business on September 30, thus making the statements uniform in date with the statements included in former reports.

The institutions are complying with the provisions of the law, so far as the contracts made previous to the passage of the law will allow.

Statements of the total assets and liabilities will be found below (cents omitted).

Assets.	*State banks.*	*Trust companies.*

Respectfully submitted,

CHARLES H. NOBLE,
GEORGE F. KENDALL,
Bank Commissioners.

HARTFORD, December 31, 1901.

STATE OF MAINE.

To the Honorable John F. Hill, Governor, and the Executive Council of the State of Maine:

In compliance with statute requirements I have the honor to submit herewith the forty-fifth annual report of this department, for the fiscal year ending December 1, 1901, containing a full exhibit of the general conduct and condition of all State banking institutions.

During the year all of these institutions have been duly examined, the statements of such examinations published and the usual returns obtained, all of which are included in this report, as required by law.

The number, classes and assets of these institutions are as follows:

Savings banks	51	$74,623,171
Trust and banking companies	18	15,207,325
Loan and building associations	34	2,865,380
Total	103	$92,695,877

This is a gain of two in the number of institutions reported, and of $5,462,084 in their assets, as against a gain of $4,984,627 in 1900. This increase in banking capital is much in excess of the average, even in the most prosperous years. As a matter of fact there is but one year in the history of these institutions in our State in which the gain exceeds that of the present year. The total increase in such assets during the past fifteen years has been $52,456,793, and the average annual gain during that time, $3,497,119.

In the following table are given the assets of each class of institutions, the total assets and the gain in assets in each year from 1887 to the present time (cents omitted):

Digitized by Google

YEAR.	*Savings banks.*	*Trust companies.*	*Loan and building associations.*	*Total assets.*	*Gain.*
1887	$41,283,614	$1,300,771	$96,613	$42,677,999	$2,438,914
1888	43,786,168	1,870,192	187,967	45,844,328	3,166,329
1889	47,030,526	2,765,862	319,042	50,115,431	4,271,102
1890	50,901,527	3,629,895	633,059	55,164,482	5,049,051
1891	53,550,871	4,279,477	1,032,301	58,862,650	3,698,167
1892	56,838,263	4,866,324	1,460,193	63,164,781	4,302,181
1893	56,701,437	5,175,032	1,830,159	63,706,628	541,846
1894	57,761,918	5,835,807	2,193,956	65,791,682	2,085,053
1895	59,365,755	6,641,586	2,469,884	68,477,226	2,685,544
1896	60,719,379	7,048,760	2,691,446	70,459,586	1,982,359
1897	62,826,303	7,513,403	2,912,963	73,252,670	2,793,084
1898	64,182,542	9,182,997	3,009,998	76,375,538	3,122,868
1899	67,521,197	11,802,252	2,975,716	82,299,165	5,923,627
1900	71,076,211	13,295,402	2,862,178	87,233,793	4,934,627
1901	74,623,171	15,207,325	2,865,380	92,695,877	5,462,084
Total	....	....	....	....	$52,456,793

The total assets of these State institutions make a per capita of $133.47 for each inhabitant of the State. The assets of the Savings banks and loan and building associations, which belong to depositors and shareholders alone, and the deposits in trust companies, make a *pro rata* to each of these patrons of $392.58. If the increase in assets had been derived wholly from the receipts from new depositors, the average to each would have been but $425.62. As the larger portion of this is the natural increase from earnings, it can be seen that the average amount received from new depositors is much less than the present average amount standing to the credit of all depositors. It follows then that the average amount from new depositors is much less than that naturally deposited by people of wealth, indicating that this increase could not have come from such source.

The depositors in Savings banks and trust companies and shareholders in loan and building associations now number 226,813, as against 213,980 last year—a gain of 12,833. Thus it appears that 12,833 more of the people of the State are beginning to accumulate a competence against times of need.

During the year the various kinds of State banking institutions have paid depositors and stockholders, in interest and dividends, $2,730,166 as against $2,617,613 last year. While this is a gain of $112,553 in the amount of profits distributed, it is proportionally less than heretofore. This result has been no different from what was expected, and predicted in previous reports of this department. As heretofore stated, this reduction in net earnings does not indicate any lack of prosperity in these institutions, but is simply the result of a general reduction in interest rates. * * *

It may be interesting to compare the profits distributed by the different classes of State banking institutions during the year. The average percentage of profits paid by Savings banks, based upon the total assets, has been 2.95 per cent.; that paid by trust companies 2.43 per cent., while that paid by loan and building associations has been 5.41 per cent. This comparison, so far as it relates to trust companies, is misleading, unless the demand deposits or current funds, upon which but little interest is paid, be eliminated. If this item, and the amount of interest paid thereon, be deducted, the percentage of profits distributed by that class of banks would be approximately 3.12 per cent. It thus appears that the net income in Savings banks and trust companies varies but little, while that in loan and building associations is far in excess of either. * * *

At the present time all classes of State banking institutions are required by law to set apart a certain portion of their net earnings as a reserve or surplus to insure their patrons against future losses and contingencies. They also have always on hand a certain amount of undivided profits. The total amount of their reserve and undivided profits is now $5,397,625, being a gain of $663,111 during the year. Their reserve or surplus fund alone, as set apart under the provisions of law, amounts to $2,911,416, showing an increase of $171,762. While this increase seems to be a large sum to take from the earnings in any one year, it is small compared with the total assets, being less than one-fifth of one per cent. Conservative banking requires at least this amount, and it is desirable that it be increased rather than diminished in the future. * * *

The State banking institutions are the banks of the people. Their capital is made up largely of the small contributions of farmers, mechanics, mill operatives and wage-earners generally, as well as of the women and children of the State. Principally from these sources comes this largest aggregation of capital in the State. Its increase necessarily indicates a prosperous condition among its contributors, and their confidence in the institutions which

Digitized by Google

hold these funds in trust. The withdrawal of these funds would likewise indicate the reverse condition of business affairs in the State, or a lack of confidence in the banks, or both.

Our purpose in advancing this proposition is not particularly to call attention to the prosperous condition of the State, as that is generally understood. It is rather for the purpose of showing the intimate relation these institutions bear to the business prosperity of our people. As well might the individual discredit his own business or contend against his own prosperity, as for the people of this State in any way to embarrass or disturb these institutions by following any prejudice such as now exists toward combinations of capital generally. Any course of this kind is simply an attack upon the small means of one-third of our people who are depositors in these institutions.

A statement of the resources and liabilities of the eighty-four National banks of this State on December 10, 1901, shows total assets $17,163,459, an increase of $1,176,071 in the assets of this class of banks during the year. The total assets of all kinds of authorized banks within the State is now $139,859,337, as against $133,221,181 at the date of the last report—an increase of $6,638,155 during the year. An equal distribution of this capital would give to each inhabitant of the State $201.39, a gain of $9.56 during the past year in this very material portion of our per capita wealth.

Private Banking.

In 1899 and again in 1900 attention was called in the report of this department to the fact that private banks and bankers were under no restrictions of law or supervision whatever. It was urged that some legislation was needed to protect the public in its dealings with such institutions. Attention was called to the fact that many depositors, especially of the class whose funds were usually termed "savings deposits," did not understand that these private banks were not regularly organized institutions subject to the regulations and restrictions which control Savings banks. The Legislature, however, failed to enact any provision regulating or supervising their affairs. Attention is, therefore, again called to this matter that our people may understand, when depositing therein, that they are giving credit to private individuals, the same as if they loaned their money upon ordinary notes of hand; and that they take the same chances and have the same security and remedy as upon ordinary personal loans. They have no protection beyond the liability of the individual or individuals conducting the business.

Savings Banks.

There are fifty-one Savings banks now doing business in the State. The following table shows their liabilities and resources on October 26, 1901, and a comparison with those of October 27, 1900 (cents omitted):

Comparative Statement.

Resources.	1901.	1900.
United States and District of Columbia bonds	$1,919,200	$4,449,750
Public funds in Maine	2,094,520	1,946,396
Public funds out of Maine	16,225,320	14,204,413
Railroad bonds in Maine	6,043,968	5,465,406
Railroad bonds out of Maine	23,658,742	20,089,028
Corporation bonds in Maine	3,912,841	3,710,126
Corporation bonds out of Maine	591,387	614,702
Railroad stock in Maine	767,621	784,909
Railroad stock out of Maine	459,484	525,609
Corporation stock in Maine	585,553	530,687
Corporation stock out of Maine	85,644	126,983
National bank stock in Maine	2,332,847	2,478,725
National bank stock out of Maine	94,051	112,500
Other bank stock in Maine	105,050	113,050
Loans on mortgages of real estate	7,991,937	7,811,047
Loans on collateral	2,986,635	3,129,164
Loans to municipalities	728,351	519,728
Loans to corporations	1,199,893	1,084,188
Real estate	1,023,706	1,029,735
Furniture and fixtures	36,182	36,005
Premium account	497,006	685,416
Expense account	32,520	30,567
Other resources	18,100	12,735
Cash	1,282,605	1,785,333
Total resources	$74,623,171	$71,076,211

Digitized by Google

LIABILITIES.	1901.	1900.
Deposits	$70,293,938	$67,240,439
Reserve fund	2,468,025	2,321,685
Special reserve fund	21,827	27,163
Profits	1,837,044	1,480,769
Other liabilities	2,336	6,154
Total liabilities	$74,623,171	$71,076,211
Number of depositors	194,923	186,327
Number of depositors whose balance is less than $2,000.	189,162	180,914
Amount of same	$55,864,292	$53,558,630
Number of depositors whose balance is $2,000, or more.	5,761	5,413
Amount of same	$14,429,645	$13,681,809
Average rate of dividend (approximate)	.0330	.0336
Amount of dividends paid	$2,204,022	$2,133,733
Municipal taxes paid	18,264	19,670
State tax	500,733	448,837

It appears from the above statement that there has been an increase of 8,596 in the number of depositors and $3,053,499 in the amount of deposits during the year, as against a gain of 8,733 and $3,231,052 in the corresponding items last year. The increase in their assets for the year has been $3,546,959, an amount which alone would give to each person in the State $5.10. All but two of the banks show an increase in the number of depositors and all but three an increase in the amount of deposits, the decrease in those being trifling and due entirely to local causes.

The amount deposited for the year, including dividends credited, has been $15,742,931. Deducting from this the amount of dividends gives $13,538,909 as the amount actually received from depositors. The amount of withdrawals during the same time has been $12,689,432. Thus it appears that the deposits actually received have been only $849,476 in excess of the withdrawals, dividends not included, while the corresponding amount for last year was $1,097,369. If this actual increase in deposits had all been received from the 8,596 new depositors, and none of it had come from additions to old accounts, these new deposits would have averaged but $98.82.

When we add to the $28,432,364 of receipts from, and disbursements made to, depositors, the investments not only of new funds, but the re-investment of receipts from maturing loans and securities, we begin to appreciate the magnitude of the business done by these institutions. It must amount to approximately fifty million dollars annually.

The average amount now standing to the credit of depositors is $360.62 as against $360.87 at the time of the last report. It thus appears that the average amount to each depositor is even less than last year, indicating that the individual deposits average smaller in amount than in 1900. The average to each inhabitant of the State is $101.22.

Whether the gain in deposits is a matter of congratulation depends upon the source from which it comes. The mere growth of Savings banks, by an accumulation therein of the money of those who have capital to invest, can be of no advantage to the public beyond the fact that it brings their property to light for taxation. On the other hand, such deposits, under the present conditions for investing, tend to reduce the benefits of these institutions to legitimate depositors by lessening the income they receive, and thus at the same time lessening their incentive to accumulate their savings.

The difficulty in investing new funds, and the fact that it is not possible to do so and obtain as good an income therefrom as they are receiving from investments already held, has led the banks, so far as possible, to eliminate from their receipts the larger deposits while they have continued to receive the small savings.

The statute law of the State limits ordinary deposits to not exceeding $2,000 to each depositor. Many of the banks, however, limit the receipts of deposits to much less than this. Some even limit the amount to $500 in all from any one depositor, while others limit the amount they will receive each quarter until the total reaches the statutory limitation. As an example, one of the larger banks pays interest only upon $300 additional for each quarterly period at which new deposits commence to draw interest. Under this regulation it would be more than two years before any one depositor could place $2,000 and receive interest upon the full amount. This provision confines the new deposits almost wholly to the small savings, as those with larger sums to invest do not care to place funds in such small amounts. When, therefore, we take into consideration the unusually large increase in the number of depositors, the reduction in amount to each depositor, and these regulations that are being enforced by the various banks to prevent accumulation of investment funds therein, we are confident that these institutions were never before so well serving the purpose for which created.

Digitized by Google

The total reserve and undivided profits on hand amount to $4,305,069, being a gain of $502,613 during the year, while the increase in reserve alone has been but $146,339. The law requires the banks at each dividend period to set apart a certain portion of their earnings as a reserve fund until it amounts to five per cent. of the deposits. The present average of this reserve is 3½ per cent., while the average of the reserve and undivided profits together is six per cent. of the deposits. The estimated market value of resources above liabilities, as shown by the various statements of the examinations made during the year, is $9,940,301. This is about fourteen per cent. of the deposits.

The percentage of this estimated value of resources above liabilities varies widely in the different institutions. It is more largely the result of an advance in the actual market value of the securities purchased in the past than of the amount of actual earnings received and set aside under the provisions of law for creating a reserve fund. As has already been suggested, these institutions are purely mutual. This surplus belongs to the depositors, and it is impossible for any one else to profit therefrom. The sharp advance in the value of securities during the past few years, resulting from improved business conditions, has materially increased their showing of market value above liabilities. Any depression in business that results in a depreciation in the value of securities generally, will materially reduce this amount. A portion of it is also being used each year in the way of accruing interest to pay the present dividends received by depositors. As the securities mature their market value must again approximate their par value.

The general condition is one, however, upon which the depositors are to be congratulated, and one which should lead them to still greater confidence in these institutions than ever before. While their receipts from dividends paid by the banks must necessarily be reduced from year to year on account of the general reduction in interest rates everywhere, they were never more certain of a return of their principal than now. We feel justified in urging those of small means to deposit with these institutions the small earnings they may be able to spare from their income. The exemption from municipal taxation and the safety of the original fund itself, together with the small dividends compounded semi-annually, will, in the end, give them better results than they can average to obtain by investing their money on their own account.

The following is an exhibit of the reserve, undivided profits and the estimated market value above resources, for each of the past five years, together with other totals necessary to show fully the general standing of the Savings banks and the gradual improvement in their condition during that time:

Table of Market Values.

	1897.	*1898.*	*1899.*	*1900.*	*1901.*
Estimated market value of resources above liabilities	$6,506,362	$6,863,882	$8,258,319	$8,916,887	$9,940,301
Reserve fund	$2,080,709	$2,079,261	$2,243,454	$2,321,685	$2,468,025
Undivided profits	1,088,801	1,202,818	1,233,605	1,480,769	1,837,044
Total book surplus	$3,169,510	$3,282,079	$3,477,059	$3,802,455	$4,305,069
Approximate market value above book surplus	$3,336,851	$3,581,802	$4,781,259	$5,114,432	$5,635,231
Total dividend paid	2,132,869	2,145,324	2,091,543	2,183,783	2,204,022
Deposits	59,598,348	60,852.557	64,009,386	67,240,439	70,296,938

Taxes.

The amount of taxes paid the State for the year has been $500,733, as against $448,827 in 1900—an increase of $51,905. This increase is due principally to the gain in deposits, and the very material reduction in amount of Government bonds held, which are exempt from taxation. It is also, to some extent, due to the gradual maturity and consequent reduction in the amount of investments out of the State "Acquired prior to Jan. 1, 1893." This latter condition results in a gradual though slight increase in the average rate of tax paid by Savings banks. Thus we have an increasing tax rate that comes by force of law.

Investments.

The following table shows the classes, amount and percentage of the assets now held by Savings banks, and a comparison with those of 1900. It also gives the percentages of investments in 1890. A comparison of the present assets with those held at this earlier date, will

7

Digitized by Google

enable one more fully to appreciate the gradual change that is taking place in the nature of the investments than such a comparison for succeeding years:

Resources.	1901.		1900.	1890.
	Amount of each class.	Percentage of each class.	Percentage of each class.	Percentage of each class.
United States and District of Columbia bonds	$1,919,200.00	2.57	6.26	1.66
Public funds in Maine	2,094,520.34	2.81	2.74	2.32
Public funds out of Maine	16,225,320.19	21.74	19.99	27.16
Railroad bonds in Maine	6,043,968.92	8.10	7.69	5.87

Furniture and fixtures	36,182.04	.05	.05	.05
Premium account	497,006.36	.67	.89	1.20
Expense account	32,520.24	.04	.04	.03
Other resources	18,100.51	.02	.02	.37
Cash	1,282,605.53	1.72	2.44	2.06
Total	$74,623,171.03	100.00	100.00	100.00

The only material changes in the classes of assets held are a reduction of $2,530,550 in the amount of Government bonds, and an increase of $3,619,714 in railroad bonds out of Maine and $2,020,906 in municipal bonds out of Maine.

In addition to the reinvestment of the usual maturities, the banks have, during the year, been obliged to invest this increase in assets, $3,546,959, and also reinvest the proceeds of the sales of Government bonds, par value, $2,530,550, amounting in all to $6,077,509. As before suggested, the increase of $5,640,620 in the holdings of railroad bonds and municipal bonds out of Maine accounts for the larger part of this fund.

When the banks, during the year, have sold their holdings of Government bonds the proceeds have been reinvested larely in high-grade municipal bonds out of Maine. This explains the unusual, and at the same time very satisfactory, increase in this line of securities.

The increase in railroad bonds out of Maine is very nearly the same as the increase in assets, and is much out of proportion to the increase in other classes, with the exception of that resulting from the exchange of Governments for municipals before explained. Attention has frequently been called to the matter, and the banks urged against acquiring too large a percentage of any one class of securities. We quote from last report relating to the increase in the holdings of railroad bonds: "The present difficulty in obtaining other securities that will yield the income necessary to net even the dividends now paid, has undoubtedly led to the very material increase in this class. Dividends should be reduced, and relief from taxation granted, to such an extent that the banks may be able to continue the diversity of investments which has been their source of strength in the past, and not feel obliged to further increase their percentage of holdings in this line."

Under present conditions railroad securities undoubtedly yield better results than can be obtained from any source. The unusually prosperous condition of the country, and the consequent enormous increase in transportation business, has resulted in a sharp advance in this class of securities, insuring at least temporary financial success of substantially all railroads. It is for this reason that this class of investments has, for a few years past, given the best of results, with few losses to investors. How far this condition would continue under a depression in business it is hard to conjecture. It is safe to say, however, that such a depression when it comes, as it must sooner or later, will materially reduce the income of this class of corporations, and thus lead to a depreciation in the market value and also to more or less losses on these stocks and bonds.

In times of great prosperity like the present, when earnings are large and losses are few,

Digitized by Google

banks should, so far as possible, prepare themselves for the times of depression that are sure to follow. Safety and prudence lead us to the conclusion that there should be no undue preponderance in any kind of investments. This is a matter of vital importance that should always be kept in mind by bank officials in making their investments. It is confidently believed that the next Legislature will reduce the Savings bank tax. This relief, together with a reduction in dividends paid, to an average of three per cent., would enable the banks to invest in the most conservative holdings. But however that may be, we advise only such investments.

Dividends.

The following table gives the amount and rate of dividends paid by Savings banks during the year covered by this report, and a comparison with those of 1900 (cents omitted):

Rate of dividends.	1901.		1900.	
	Number of banks.	Amount of dividends.	Number of banks.	Amount of dividends.
4 per cent. paid by	5	$76,730	5	$71,415
3¾ per cent. paid by	..	....	1	1,487
3½ per cent. paid by	20	1,559,347	26	1,767,088
3¼ per cent. paid by	3	93,823	3	26,989
3 per cent. paid by	23	474,620	15	261,807
2 per cent. paid by	..	....	1	5,508
3.30 average rate, 1901	51	$2,204,022	51	$2,183,783

The average rate of dividends has been 3.30, while that for 1900 was 3.36. This average rate is more than it was expected the banks could pay. The reduction has been less than heretofore from year to year. This cannot be explained upon the natural theory that the earnings of the banks have been more than was expected, as there has been no material change in interest rates since last year. It is true that, during the latter part of the year on account of the increased demand for money in business, there has been a slight improvement in the rates obtained upon loans, as well as a larger demand upon the banks in this direction. This has not, however, materially affected their earnings for the past year, but will increase their income somewhat during the first half of the ensuing year. As a matter of fact a comparison of the gross earnings with those of previous years shows the same gradual reduction as heretofore.

A careful examination of the situation leads to the conclusion that this apparent improvement in income and dividends results principally from the increase in market value of securities, and in the gradual use of "market value" above "book value," which would not show in the accounts or statements of the banks. This might be true even though, as appears, there has been a material increase in this item, resulting from the very material advance in prices on such securities. To make clearer the proposition, it is suggested that, if the banks could have realized on this advance in the value of their investments during the year, they might have paid even double the usual dividends. It seems necessary, however, to repeat here the proposition, so often stated, that this market value is not a real profit that should be used for the payment of dividends. If the banks continue in business and carry these securities to maturity, the market value above par value must gradually disappear, even though the present general high prices are maintained.

The fact that the banks have suffered few losses during the year may also to some extent account for the unexpected good showing in dividends. It does not follow from this that the banks are not likely to meet with losses upon some of the investments now held, or that all of them are beyond question. During times of prosperity few losses of this kind are likely to occur, as at such times nearly all corporations are able to meet their obligations. When depression comes, however, the test is applied and many of the weak ones fall out of line. The history of the investments in the Savings banks themselves demonstrates this proposition over and over again.

It would be impossible for the shrewdest investors in the country to handle the assets of our fifty-one Savings banks, and place them so that they would yield a reasonable income, without meeting losses. They are expected and even provided for by the statute requiring the accumulation of a reserve fund. During prosperous times, when these losses are not likely to occur, the banks should, therefore, not only add the required amount to the reserve, but should also gradually gather strength to meet the reverse conditions which are sure to follow.

As has been frequently said, profits coming from investments made years ago are not

Digitized by Google

earnings of present dividend periods, and should not all be used to increase the dividends of the depositors who happen to have their funds in the banks at any particular period. They should, to some extent, be held in reserve to meet future contingencies, insure the future of the institutions and keep them upon a more even basis as to dividends and general condition.

Again, as the classes of investments that under present conditions pay the largest rate of income are the very ones that are the more likely to be in default in the future, if all of the income of such investments is used to pay present dividends, it necessarily follows that the losses therefrom must fall upon future depositors.

Trustees should not attempt to place their funds so as to maintain present rates of dividends at the expense of the future strength of the institutions. Present conditions do not warrant the payment of more than three per cent. dividends by the most of the banks, after deducting the present rate of taxes to the State, and other necessary charges and expenses. If the banks will reduce their dividends to this rate, and by making only the very best investments, thus place their future stability beyond question, their deposits will increase and their general usefulness continue.

The gross earnings for the year have been approximately $3,570,266. If the profits accruing from the exchange of governments should be added the amount would doubtless be somewhat in excess of the figures given. This estimate, however, is even now believed to be in excess of the annual earnings of the banks from interests and rents collected in the ordinary course of business. It is certainly far in excess of any results that could be obtained from the present investment of these funds.

The following table gives the amount of deposits upon which the various rates of dividends have been paid during the year and the amount of same (cents omitted):

Rate of Dividends.	*No. of banks.*	*Amount of deposits.*	*Amount of dividends.*
4 per cent paid by	5	$2,137,205	$76,730
3½ per cent. paid by	20	47,792,489	1,559,347
3¼ per cent. paid by	3	3,030,292	93,323
3 per cent. paid by	23	17,333,951	474,620
3.30 average rate paid	51	$70,293,938	$2,204,022

Examinations.

The law requires the trustees, at least once each year, to thoroughly examine the affairs of the corporation, and report under oath to the Bank Examiner its standing, the situation of its funds and all other matters required, in the manner and according to the forms prescribed by this department. In most of the banks more frequent examinations are made than is required by this provision of statute. It seems advisable again to call attention to the fact that it is not only the duty of the trustees to do this, but that it is the only way in which they can obtain a full knowledge of the true condition and standing of their several institutions. If they attend to this duty they will have a better knowledge of the details of the business than it is possible for the public examiner, who can visit the institution but once annually, to obtain. No other person can judge so accurately of the general condition of their loan accounts as they. The Bank Examiner is necessarily a stranger to the most of their borrowers, and knows nothing of their credit or financial standing. If he makes inquiry of local parties, he obtains no reliable information, as the ordinary individual will not cry down the credit of his friends and neighbors. While the examiner is able to obtain reasonably accurate information as to the value of the securities held by the banks, he must necessarily rely upon the good judgment and faithfulness of the various boards of trustees to take care of the local loans and investments, and to see to the ordinary details in conducting their affairs. The trustees should give the matter strict attention, call at their respective banks often, examine the books and accounts and keep fully informed as to the details of all daily business transactions. If they will do this they will soon find the results most satisfactory. The experience and knowledge thus gained will enable them to give to the banks a more efficient service in the future. No one should accept a position on the board of trustees of a Savings bank unless so situated that he can give the bank and depositors the benefit of his best business judgment, which can come only when he acquires a thorough knowledge of its business affairs and of the laws governing such institutions generally.

Trust and Banking Companies.

There are now eighteen trust and banking companies doing business in the State, one having been added to the number during the year.

The Machias Banking Company, of Machias, chartered by the Legislature of 1901, commenced business on July 1, 1901, with a capital of $25,000 fully paid in. This bank succeeds to the business of a private company known as the Machias Bank. This most satisfactory change

Digitized by Google

to a chartered institution brings this capital within reach of taxation and places the business under official supervision.

In the following table is presented a statement of the resources and liabilities of the trust and banking companies, October 26, 1901, and a comparison with those for October 27, 1900 (cents omitted):

RESOURCES.	1901.	1900.
Demand and time loans	$6,461,048	$5,830,327
Mortgages of real estate	1,173,143	1,108,385
Stocks and bonds	4,966,345	4,058,312
Trust investments	130,211	98,131
Real estate owned	224,413	190,047
Due from other banks and bankers	1,096	981
Expense account	25,538	25,317
Furniture and fixtures	112,995	114,818
Cash on hand and on deposit	1,499,081	1,359,587
Other resources	613,451	509,492
Total resources	$15,207,325	$13,295,402
LIABILITIES.		
Capital stock	$1,626,800	$1,601,700
Surplus	881,100	863,000
Undivided profits	592,700	427,008
Time deposits	4,488,374	5,408,962
Demand deposits	6,447,628	4,070,918
Certificates of deposits	618,887	437,371
Trust department	131,709	101,042
Unpaid dividends	847	581
Deposits for coupons	19,095	19,465
Treasurer's checks outstanding	14,320	7,484
Due to other banks and bankers	33,015	18,609
Bills payable	115,500	184,600
Other liabilities	737,398	659,638
Total liabilities	$15,207,325	$13,295,402

This is an increase of $1,911,922 in the total assets, as against $1,493,150 last year. This gain is made up principally of an increase of $25,100 in capital stock, $18,100 in surplus, $165,692 in undivided profits and $1,642,565 in all kinds of deposits.

The increase in resources has been principally $908,033 in stocks and bonds, and $630,721 in demand and time loans.

The total number of depositors in these institutions is 23,817, while at the date of the last report they numbered but 19,589—a gain of 4,228. The depositors of time deposits and the holders of certificates of deposit now number 13,502, while at the date of last report they numbered 13,570.

The total profits distributed by these institutions to stockholders and depositors during the year has been $371,053.

The amount of dividends paid to stockholders has been $103,220. This is an average of 6.34 per cent. on all capital stock outstanding, while the average rate for the last year was 6.32. Three of the companies, with an aggregate capital of $150,000, have paid no dividends whatever to stockholders during the year. The average rate in those actually paying dividends has been very nearly seven per cent.

The amount of interest paid on all deposits has been $267,833, as against $217,708 in 1900. The amount of interest paid in the Savings departments alone has been $170,627, the average rate being approximately 3.41, while that for 1900 was 3.50.

STATE TAX.

The Legislature of 1901 in chapter 286, Public Laws, laid a tax upon the average amount of "all time interest-bearing deposits held by these institutions," of one-half of one per cent. annually. It requires the officers of each company semi-annually to make sworn return of the amount of such deposits to the State Assessors as the basis for the assessment of this tax. At the time this law was enacted it was expected it would yield about $25,000 in revenue to the State. This estimate was based upon the amount of time deposits as reported by this department for 1900. The total amount of the tax assessed for the year as appears from the Assessors' report has been $22,483.

Digitized by Google

Foreign Corporations.

Three foreign corporations were licensed under provisions of chapter 131, Public Laws of 1891, to do business in this State for the year ending December 1, 1901, viz.:

Iowa Loan and Trust Company of Des Moines, Iowa.

Middlesex Banking Company of Middletown, Connecticut.

Nebraska Loan and Trust Company of Hastings, Nebraska.

Respectfully submitted,

Fremont E. Timberlake, *Bank Examiner.*

Banking Department, Augusta, Dec. 1, 1901.

NEW YORK.

Annual Report of the Superintendent of Banks—Transmitted to the Legislature, January 1, 1902.

To the Legislature:

In July last I closed summarily the Niagara Bank of Buffalo and took possession of its business and property, because it had been found to be in an unsound and unsafe condition to do a banking business. This is the first bank so closed that I have had to report in five years, a record which is, I think, extraordinary; and it appears the more so when it is considered, first, that, though the bank's condition was not satisfactory, it might nevertheless have survived had it not been dragged down by the failure of a National bank with whose transactions its own were too intimately related; and, second, that almost within a month after I had taken possession arrangements had been effected with the Bank of Buffalo, with my approval and co-operation, for the immediate payment of the depositors in full, and also of all other liabilities, except those to stockholders, at their face, save as a portion of the creditors voluntarily relinquished a percentage of their claims.

The closing of the two institutions referred to was, of course, fruitful of many rumors directed against other banks in Buffalo, and the attendant excitement and distrust supplied the elements which might easily have generated a panic. But the Clearing-House Association of Buffalo was prompt to act, and by the assurance that its support would be given to any bank needing it, as well as by the calm and wise treatment of the situation by the newspapers, apprehension was quieted and confidence restored. The incident is recalled here because of the lesson it conveys. Those intrusted with the management of financial institutions do not generally need to be counseled that in a time of stress they can not afford to suffer competing banks not hopelessly insolvent to go down, for they are commonly ready enough in such crises to grasp the fact that their own safety and the solvency of customers may depend upon averting a panic; but the influence and power and duty of the press upon such occasions are less apt to be thought of. An impulsive and indiscreet reporter, eager for news, could easily excite alarm which might be fraught with dire consequences, or a temperate and thoughtful one contribute largely to re-establish sane conditions. Sensationalism in such circumstances might sell papers, but it should never be forgotten by publishers that it might also cause widespread business disturbance and bring ruin to many interests.

General Soundness and Prosperity of the Banks.

Notwithstanding twelve banks went out of the State system during the year, whose combined resources considerably exceeded those of the eight institutions organized in the sam period, the quarterly reports of the condition of the remaining banks submitted to this department in September showed an increase in assets as compared with the same month in the preceding year amounting to over fifty million dollars, and surpassing any aggregate, except that of June immediately preceding, which this class of institutions had reported since 1865, when the National banking system was beginning to take over many State banks by conversion the number decreasing in three years from between three and four hundred to barely sixty. This record, joined with the fact noted in opening this report, is more significant than any merely general statement could be of the average soundness and prosperity of the State discount banks of New York. If the practice prevalent in some localities of paying excessive rates of interest on deposits were to be corrected, still better conditions would obtain. This practice I regard not only as unnecessary, but also as ill-advised from any point of view. The competition for business between banks and between banks and trust companies may be waged upon a non-interest-paying basis, or upon the basis of allowing only a low rate on balances, with practically the same results as are realized by bidding in rates, which, in the nature of the case, means necessarily an ultimate adjustment of inducements upon the same plane of equality. Whatever rate one institution offers all are likely to adopt. A rate of

Digitized by Google

four per cent., which is sometimes paid, leaves little or no margin for profit when it is considered that, however good the demand for money, only ninety per cent. of a deposit can be loaned lawfully, or that, however careful and sagacious a management may be, it is certain to incur some losses. It would seem that bankers in any community might get together easily enough on this question by employment of the hard sense with which they are generally credited, and do away entirely with the abuse of surrendering the principal share of their profits to their customers.

Twelve State banks were closed during the fiscal year, and eight authorized. Besides the new organizations, banks already established in New York city opened ten branch offices in that city during the year "for the receipt and payment of deposits, and for making loans and discounts to the customers of such branch offices only." Of those which closed, one was closed by me. One individual banker was succeeded by an incorporated bank, two were merged with other State banks, four went into voluntary liquidation, and four went into the National system, directly or indirectly. One of the four which went into voluntary liquidation was succeeded immediately by a trust company.

The number of discount banks under the supervision of this department September 30 was one hundred and ninety-eight, of which, however, three had not begun business on September 12, as of which date quarterly reports were called for and submitted, and one closed at the close of business on the day named. The aggregate capital of the banks so reporting was $28,245,700, and their combined surplus and undivided profits were $29,176,768. The capital of the three banks which did not report on the date named was two hundred thousand dollars. The aggregate resources of the banks reporting were $408,477,311, which was a gain of $52,397,-059 from the corresponding date in 1900.

The Comptroller of the Currency has courteously supplied me with data from which I summarize a corresponding statement concerning the National banks in this State. The number of these institutions authorized in New York from October 1, 1900, to September 30, 1901, was sixteen, of which two were reorganizations, and the number closed was seven, of which one was by failure and the others by voluntary liquidation. These figures do not include the Seventh National Bank of New York, which appears to have been considered by the Comptroller as still in the system on September 30, though temporarily suspended. It is a somewhat curious circumstance that whereas five of the eight new State banks organized during the year are located in New York city, all but two of the sixteen new National banks are in small villages, one of the exceptions being a Plattsburgh and the other a New York city institution. The combined capital of the eight new State banks is $860,000, and of the sixteen new National banks only $750,000. The whole number of National banks in the State is three hundred and forty-one, having a total capitalization of $104,828,290, and a combined surplus and undivided profits amounting to $107,792,289. The aggregate of the resources of these institutions is $1,487,257,939, an increase of $174,387,727 from the corresponding date in 1900.

The Trust Companies.

There were sixty-one* trust companies September 30 under the supervision of the department. Five trust companies were authorized by me during the fiscal year, and a sixth a few days later. They are: The Mutual Trust Company of Westchester County, at Port Chester; the Genesee Valley Trust Company, at Rochester; the Poughkeepsie Trust Company; the Adirondack Trust Company, at Saratoga Springs; the New Rochelle Trust Company, and the Troy Trust Company. Not only was no organization certificate of a trust company filed with the Superintendent of Banks from the city of New York during the year, but in December of 1900 the Bankers' Trust Company of that city was merged with the Atlantic, and in the spring of 1901 the Trust Company of New York abandoned its business and instituted proceedings for dissolution. The Holland Trust Company, which has taken on little new business for several years past, is continuing the work of liquidation. The year's record in this respect is almost a duplication of that of the previous year. But while there seems to be little, if any, tendency to increase the number of trust companies in New York city, applications continue to be made for authorization of such institutions in cities of the third class and even in villages. The idea of such petitioners seems to be, in general, that a banking business under a trust company charter may be prosecuted more profitably, and with a wider latitude in its operation, than under a charter as a bank. It is true that under the law there is substantially nothing which a discount bank may do, except to issue circulating notes, that could not be done also by a trust company. But it cannot be doubted that it was not the legislative intent in the enactment of the law for the formation of trust companies, that such organizations should be in effect banks only, and it has been my disposition to refuse approval of a trust company organization certificate in every instance where it has appeared that

* Does not include the Trust Company of New York, in liquidation.

Digitized by Google

there was no likelihood that such an institution would be able to secure any considerable trust business to do, and where it was intended that it should operate almost or quite exclusively as a bank. The uniformity of basis for taxing trust companies and banks which was effected by the Legislature of 1901 modified one objection, and perhaps the most important, formerly existing to the authorization of trust companies in small cities. Many have suggested that a requirement should be imposed that such institutions carry some percentage of their deposits as a cash reserve. I am not prepared to recommend the enactment of such a requirement. While some considerations seem to demand it, others justify an omission of it. The entire capital of every trust company must be invested in securities which effectually guarantee its safety, and which, averaging about six per cent. of the companies' deposits, constitute of themselves, in a way, a reserve. In the larger cities, too, each trust company has, as banks do not, a local bank depository with which it carries a considerable deposit, and by which ordinarily its checks are cashed. To exact that the trust companies should hold in their vaults in cash some percentage of their deposits would be virtually to withdraw from active employment as many millions as the percentage might figure out, and lock them up in idleness. Assuming that the companies were to carry as a reserve only the minimum legal percentage required of banks, the money so withdrawn from circulation, reckoned upon their condition July 1, would be from ten to twelve millions of dollars. The amount would of course vary according to the demand for money. In ascertaining this amount, I of course take into consideration the amount now on deposit in other institutions to the credit of trust companies and the amount of cash held by them.

The latest figures available in regard to the condition and earnings of the trust companies are those reported by them July 1, 1901, when their aggregate capital was $47,450,000, and their surplus and undivided profits $98,341,728. The capital employed had decreased $800,000 from July, 1900, but was larger by $300,000 than on January 1, 1901, while the gain in surplus had been more than four and three-quarter millions in six months, and over eight and a half millions for the year. Their total resources July 1 were $966,528,398, and their deposits $802,518,096. Their earnings for the six months were $22,159,857, or $4,838,648 more than in the corresponding period in the previous year, and their expenses, including interest payments and taxes, $11,-828,398, which is an increase of only $1,956,038, showing the net earnings of the companies to have been $2,882,610 larger for the half year in 1901 than in 1900. The net profits for the half year amount to a fraction under twenty-two per cent. on the actual capitalization of the companies, or to a fraction over seven per cent. on their combined capital, surplus and undivided profits.

SAVINGS BANKS.

No new Savings bank was authorized during the year, and none closed, the number of these institutions being one hundred and twenty-eight. The law makes it the duty of the Superintendent of Banks before issuing his authorization certificate to a Savings bank to satisfy himself that greater convenience of access to such an institution would be thereby afforded to a considerable number of depositors; that the density of the population in the neighborhood designated for such Savings bank, and in the surrounding country, affords a reasonable promise of adequate support to the enterprise; and that the responsibility, character and general fitness for the discharge of the duties appertaining to such a trust of the proposed trustees are such as to command the confidence of the community where such bank is proposed to be located. When even the banks which have been long established, and which enjoy the advantage of having a considerable surplus and an experienced management, are compelled by reason of the high price of securities and the diminishing rates of interest which such securities bear to reduce their rates of dividends to their depositors, it will be readily understood that in ordinary cases a good deal of evidence would be needed to convince one conversant with the facts of the probable success of a new Savings bank. It is only a little more than thirty years ago that at least one Savings bank paid one dividend at the rate of ten per cent. to its depositors, and for a considerable period the rate of six or seven per cent., or even more, was not uncommon. Now only a few institutions, having a large surplus and an exceptionally fortunate line of investments, are able to maintain a four per cent. rate, while with most the rate is three and one-half per cent., and with some but three per cent. It would undoubtedly have been advantageous to the State if Savings banks had been organized and made successful in an earlier period in most of the counties which now have no such institutions, for in present conditions it will be recognized that to enter the unoccupied field in this direction would be a formidable undertaking even in peculiarly favorable circumstances. Indeed, only one organization certificate of a Savings bank has been filed in the Banking Department for several years past, and, with two or three exceptions, not even a proposition to so proceed has been laid before me. As one means of ascertaining the probability of the success of such a proposed institution, or at least the best local judgment on that point, I have made it my policy not to authorize any new Savings bank unless its proposed trustees executed an agreement to defray all of its expenses themselves until such time as its earnings

Digitized by Google

shall be sufficient to meet such expenses and also permit the payment to depositors of interest at a rate of not less than three per centum annually.

While present conditions may not seem to encourage the organization of more Savings banks, the continued prosperity and increase of business of the banks already established are confidently to be counted upon. Carefully and adequately restricted by law as to the investments they may make, it is all but impossible that their losses can ever be large, while the service they render, and the habits of economy and thrift which they stimulate, result in continually increasing deposits. From January 1, 1901, to July 1, these deposits increased $40,492,170, or nearly six millions more than in the corresponding period of the preceding year; and the gain for the year from July, 1900, to July, 1901, was $65,540,212, and this notwithstanding the heavy withdrawals during a few weeks prior to the Presidential election, due to apprehension regarding the possible result of that contest. As a rule the deposits aggregate more from January to July than from July to January, and in consequence it is not to be expected that the January reports, soon due, will show an increase for the year proportionate with that noted for the first six months.

By the tax legislation enacted in 1901 a new burden, amounting to six or seven hundred thousand dollars a year, was fixed upon the Savings banks, making their expenses about twenty-five per cent. more than before. While this enactment has been regarded by the officers of these institutions generally as unwise even from the standpoint of the State itself, and from their own as oppressive and unjust, it will not prove altogether a misfortune if it is accepted by the State, as it should be, as a final settlement of what is to be its policy regarding taxation of these institutions. Upon the other side, the banks should meet this tax in a spirit of fairness. It was deliberately imposed, after long consideration and exhaustive hearings, as a part of the State's system of taxation, and public spirit and the respect for law which belongs to good citizenship dictate submission to it, without undue effort to obstruct its enforcement, and without any attempt whatever to evade it. The narrower consideration of self-advantage counsels not less strongly in the same direction, for in seeking to avoid some portion of the tax there might be danger of provoking legislation still more stringent and onerous.

Banking Law Amendments.

There was in 1901 more than the usual volume of legislation affecting the institutions under the supervision of the Banking Department, and some of it of considerable importance.

Section 8 of the Banking Law was amended so as to give the Superintendent of Banks power to examine every agency located in this State of any foreign bank, for the purpose of ascertaining whether it has violated any law of the State, and for such other purposes and as to such other matters as the Superintendent may prescribe. The cost of such examinations is made by an amendment to Section 7 of the Banking Law a charge against the agencies examined.

Section 118 of the Banking Law was so amended as to add the bonds of railway companies in which a Savings bank may invest a portion of its deposits to the securities upon the pledge of which it may loan its available fund.

Subdivision 11 of Section 156 of the Banking Law, which theretofore prohibited absolutely a loan by a trust company to any of its directors, directly or indirectly, was amended so as to authorize such a loan, in amount not exceeding one-tenth of the company's capital stock, provided the consent be had thereto of a majority of the directors.

Section 161 of the Banking Law was amended to increase from twenty-four to thirty the number of directors which a trust company may have.

A number of restrictions upon the methods of business of some of the building and loan associations which had been recommended by me over and over again as vital to the welfare of the institutions in general, and imperatively needed for the protection of their shareholders, were embodied in an amendment of Sections 176, 179, 182 and 192 of the Banking Law. These amendments add to the statute these prohibitions: Against payment of "free withdrawals;" against the loaning of moneys by associations not theretofore engaged in such business upon second mortgage security, or the investment of their funds therein, and restricting the operations in this direction even of those associations to which it is not prohibited altogether; against speculative dealing in real estate; and against the amendment of the articles of association or by-laws of such an association except on adoption by a meeting of shareholders held upon due notice, and except also with the approval of the Superintendent of Banks, which that official is expressly authorized to give or withhold in his discretion, subject to review by the court. The practices thus inhibited are among those which have constituted the principal abuses in management of these associations, and have been the occasion of disrepute, danger and losses to them.

The act of 1893, amended in 1896, applying only to any trust company, organized under the Banking Law, having a certain prescribed minimum capitalization and also having its princi-

Digitized by Google

pal place of business within a county containing a certain stated maximum and minimum number of inhabitants, was further amended so as to reduce such stated minimum of population from one hundred thousand to sixty-five thousand, and also conferring the additional power upon any trust company of either of the classes defined to be appointed guardian, trustee or administrator, either singly or joined with any person so acting or entitled to such appointment.

Tax legislation was had in 1901 affecting the banks of deposit and discount, the trust companies and the Savings banks. The discount banks had long complained bitterly that they were subjected to great inequality of taxation not only as compared with trust companies, but also as compared with each other, since the rate of assessment placed upon these institutions used to vary from an absurdly low valuation in some localities to an excessively high one in others. The legislation of 1901 places them all on an approximately uniform basis, and also on an equality as regards tax burdens with the trust companies. The franchise tax laid upon Savings banks by the act of 1901 is as yet a matter of contention between the Savings banks and the State Comptroller as to the proper construction of what should enter into the calculation of the surplus upon par values of such an institution, and the question will probably go to the courts for a decision.

Roster of the Department.

The list of officers and employees of the department on October 1, 1901, with the rate of compensation of each, is shown herewith:

Frederick D. Kilburn, Superintendent	$7,000
William J. Youngs, Deputy Supt.	4,000
George I. Skinner, Chief of Foreign Mortgage and Building and Loan Bureau	4,000
Frederick J. Seaver, Private Secretary to Superintendent	3,000
John D. Moriarty, Chief Clerk and Examiner	$2,700
James S. Love, Clerk and Examiner	1,500
T. M. Romeyn, Clerk and Examiner	1,200
Helen C. Norton, Stenographer	1,200
A. I. Rand, Stenographer and Clerk	1,200
C. J. Wilkinson, Stenographer	1,200
Carrie M. Clancy	1,000

Examiners.	Per diem when actually employed.
B. S. W. Clark	$18 and railroad fare.
G. S. Leonard	18 " "
A. C. Judson	18 " "
E. H. Thompson	15 " "
M. W. Hutchins	15 " "
David O. Batterson	14 " "
Ezra White	12 " "
A. T. Campbell	12 " "
S. L. Slade	$10 and railroad fare.
H. J. Young	10 " "
C. W. Hermans	10 " "
W. S. Allen	10 " "
J. S. McMaster	10 " "
Julian T. Scott	10 " "
Perry B. Warner	8 " "
H. M. Wendell	8 " "

Total Resources.

The total resources of the institutions under the supervision of this department, as shown by their reports as of the dates stated, are as follows:

Banks of deposit and discount, September 12, 1901	$408,477,811
Savings banks, July 1, 1901	1,105,076,764
Trust companies, July 1, 1901	966,528,398
Safe deposit companies, July 1, 1901	5,475,091
Foreign mortgage companies, January 1, 1901	5,690,620
Building and loan associations, January 1, 1901	59,653,737
	$2,545,901,921
The gain over the previous year is	$283,899,506
And since January 1, 1896, the time I became Superintendent of Banks	$1,004,524,855

New Banks.

Eight new banks were organized during the fiscal year, as against only two in the previous year. They are as follows:

Name of Bank and Location.	Date of authorization.	Capital.
Fidelity Bank, New York	Oct. 20, 1900	$200,000
Varick Bank of New York	Jan. 17, 1901	100,000
Riverhead Bank, Riverhead	Mar. 13, 1901	60,000
The Jefferson Bank, New York	April 8, 1901	200,000
The Century Bank of the City of New York	May 6, 1901	100,000
Empire State Bank, New York	July 15, 1901	100,000
Mechanics' Bank of Groton	Sept. 12, 1901	50,000
Bank of Avoca	Sept. 12, 1901	50,000
		$860,000

Digitized by Google

* Closed Banks.

The banks which closed during the fiscal year number eleven, or one more than in the previous year. The list is herewith given:

Name of Bank and Location.	*Date of closing.*	*Capital.*
Union Bank of Rochester	June 8, 1901	$200,000
Bank of Monroe, Rochester	Oct. 19, 1901	100,000
Susquehanna Valley Bank, Binghamton	Mar. 23, 1901	100,000
Strong State Bank, Binghamton	Mar. 23, 1901	100,000
Bank of New Amsterdam, New York	April 8, 1901	250,000
Frontier Bank of Niagara, Niagara Falls	April 29, 1901	50,000
Schermerhorn Bank, Brooklyn	May 16, 1901	100,000
Niagara Bank of Buffalo	July 2, 1901	100,000
Metropolitan Bank, Buffalo	Aug. 10, 1901	200,000
People's Bank of Margaretville	Oct. 1, 1901	40,000
Howell M. Reeve, Banker, Riverhead	Mar. 18, 1901	5,000
Bank of New Rochelle, New Rochelle (a)	Sept. 30, 1901	100,000
		$1,345,000

(a) Succeeded October 1, 1901, by the New Rochelle Trust Company.

Assets and Liabilities.

The condition of the banks of deposit and discount as shown by their reports September 12, 1901, is herewith summarized in comparison with their condition as reported by them September 4, 1900.

Assets.	*1900.*	*1901.*
Loans and discounts, less due from directors	$201,578,995	$220,779,330
Liability of directors as makers	7,632,175	8,804,560
Overdrafts	193,639	172,083
Due from trust companies, banks, bankers and brokers	31,212,815	32,937,955
Real estate	10,831,746	11,239,914
Mortgages owned	3,888,103	3,935,028
Stocks and bonds	24,673,640	28,798,519
Specie	23,143,001	33,700,288
U. S. legal tenders and circulating notes of National banks	18,588,998	18,090,514

The changes in the aggregate capital of the State banks of deposit and discount on September 30, 1901, from the same date in 1900, appear in the subjoined table:

Amount of capital, September 30, 1900	$28,810,700
Capital of banks organized during the year	860,000
Increase of capital of banks previously organized	325,000
	$29,995,700
Decrease of capital of banks previously organized	405,000
	$29,590,700
Capital of banks closed during the year	1,345,000
Capital stock, September 30, 1901	$28,245,700
Capital stock, September 30, 1900	28,810,700
Decrease for the year	$565,000

Securities and Cash Held in Trust.

Securities and cash had been deposited with the Superintendent of Banks in trust by the several banks, individual bankers and trust companies, and were held by him at the close of the fiscal year, as herewith shown:

United States 2 per cent. bonds	$208,000.00
United States 3 per cent. bonds	14,000.00
United States 4 per cent. bonds	505,000.00
United States 5 per cent. bonds	2,000.00
New York State 3 per cent. bonds	2,000.00
New York county 3 3-10 per cent. bonds	50,000.00
New York city 2½ per cent. bonds	600,000.00
New York city 3 per cent. bonds	727,400.00
New York city 3½ per cent. bonds	3,180,000.00
Brooklyn city 3 per cent. bonds	220,000.00
Brooklyn city 3½ per cent. bonds	350,000.00
Brooklyn city 4 per cent. bonds	100,000.00
Niagara Falls city bonds	20,000.00
Rochester city 3½ per cent. bonds	50,000.00
Rochester city 6 per cent. bonds	30,000.00
Middletown city 3½ per cent. bonds	20,000.00
Bonds and mortgages	50,000.00
Cash	378.98
Total	$6,128,778.98

Recommendations.

The recommendation submitted a year ago is hereby renewed, that the Stock Corporation Law be amended so as not to require a banking corporation increasing or reducing its capital stock to file a certificate of such action in the office of the Secretary of State, there being no requirement of law that the original certificate of organization be filed in that office.

I also renew the recommendation, already several times submitted, that it be made by law compulsory upon the part of every board of bank directors to examine periodically, and as often at least as once in every six months, the assets and liabilities of their respective institutions, and report the result under oath to the Superintendent of Banks.

The convenient transaction of the business of the department would be greatly facilitated if it were provided with a second Deputy. The affairs of the bureau of building and loan associations and foreign mortgage comapnies are intrusted wholly, as respects all minor and routine procedure, to the clerk in charge, and the importance of the office and a regard for convenience and efficiency in administering it requires that the incumbent possess the powers of a Deputy. There would be no increase in expense therefrom, the present salary of the clerk being all that a Deputy would naturally receive.

Foreign Trust Companies.

A foreign trust company can not under the law transact business in this State which includes the taking of deposits or the discounting of notes and bills. The business which such a company may do in this State, if any, is nowhere defined by statute, and the Attorney-General has advised me that I have no power to grant permission or to issue a certificate to any foreign trust company to do business in this State. Nor is any official anywhere expressly charged with the duty of investigating as to whether the restrictions imposed by law upon such companies are regarded, nor do our statutes seem to contain adequate safeguards against comparatively easy offending in the direction suggested. A number of foreign trust companies are doing business of one kind or another in New York, and all of them without subjection to any official examination as to whether they are violating any law of the State. In my judgment all foreign trust companies should be expressly prohibited from coming into this State to do any kind of business without first obtaining the official consent of the Superintendent of Banks, who should designate in his authorization certificate the character of business which they may do, and who should be given power to examine them, as he may now examine the agencies of foreign banks located in this State, the charge therefor to be paid by the company or companies so examined.

* * * * * * * * * * * *

Respectfully submitted,
F. D. Kilburn, *Superintendent of Banks.*

THE NEW PRESIDENT OF THE CHICAGO CLEARING-HOUSE.

William T. Fenton, Vice-President of the National Bank of the Republic, is the newly-elected President of the Chicago Clearing-House Association. Mr. Fenton has been identified with banking interests during his entire business career. He also is President of the Chicago Bankers' Club.

Wm. T. Fenton.

Mr. Fenton was born in Madison, Ind., on June 2, 1848, and, after going through the public schools, entered the private banking-house of Fletcher & Sharpe in Indianapolis, and served as Cashier for several years. He then went to Chicago as discount-clerk for the Merchants' National, and went from there to Ottumwa, Ia., as Cashier of the First National Bank. He assisted in the organization of the National Bank of the Republic in Chicago in 1891, becoming Cashier. He was made Vice-President in 1897, continuing to hold the office of Cashier also until a few months ago, when he was relieved of the double duties, but as Vice-President taking an active share in the bank's management.

Since 1895 the surplus and profits of the bank have increased from \$108,587 to \$217,593; the deposits from \$2,461,808 to \$12,742,664, and the total resources from \$3,649,268 to \$14,721,467.

Mr. Fenton has been honored by his fellow bankers in Illinois by election as President of the Bankers' Association of Illinois. At the last convention of the Indiana State Bankers' Association he made a very interesting address on "The Banker," describing the rare and fast disappearing type of banker whose sole aim was to squeeze everything possible out of the community, and contrasted him with the modern progressive banker. This address was published in full in The Bankers' Magazine for December, 1901.

Appreciation from Australia.—G. M. Allard, Secretary of the Institute of Bankers of New South Wales, writes as follows, from Sydney, N. S. W., under date of December 13:

"While writing to you, I should like to take the opportunity of expressing our very high appreciation of your publication, The Bankers' Magazine, which we receive as an exchange. Our system and methods in banking differ very considerably from those on your side, but this, perhaps, even increases the interest with which we read your excellent magazine, and follow the proceedings of the various associations, as well as note the recent inception of the Educational Institute of Bankers in America."

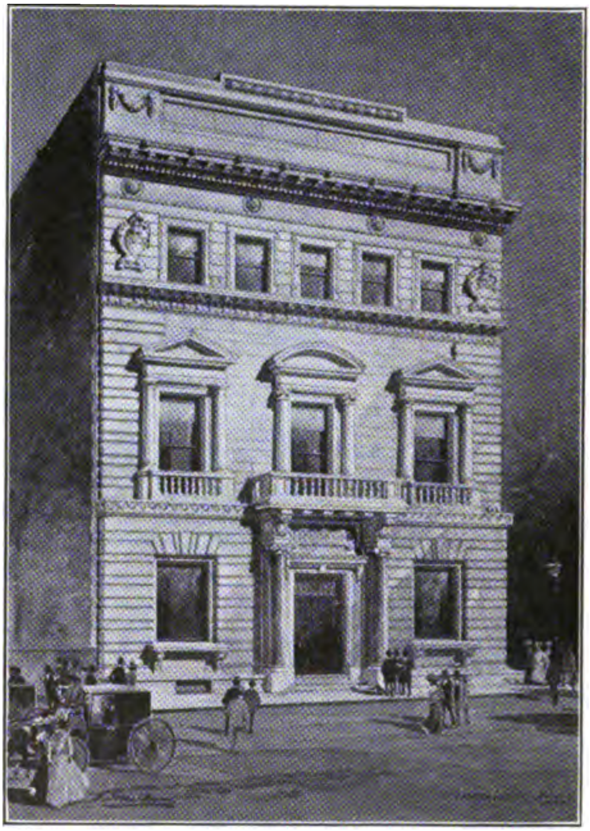
SPEYER & CO.'S NEW BUILDING.

Messrs. Speyer & Co.'s new banking-house to be erected on the north side of Pine street, just east of Nassau street, New York city, will be only three stories in height, being a departure from the present tendency to put up very high buildings in this part of the city.



MESSRS. SPEYER & CO'S NEW BANK BUILDING.

The architecture is of the Renaissance type, following very severe lines, and the front of the structure will be almost entirely free from any attempt at ornamentation with the exception of two escutcheons, one at either side about opposite the third tier of windows, bearing respectively the dates 1837 and 1902—the former marking the year of the foundation of the firm. The exterior of the building will be of either granite or marble.

The ground floor, which will be forty feet high, will contain a semicircular recep-

Digitized by Google

tion hall, a large banking room, and spacious offices for the members of the firm, their secretaries and stenographers. Above this there will be a mezzanine floor which will be given over to the Cashiers and clerks, and for which exceptional light facilities will be afforded by a large interior court or well-hole running up through the entire structure and covered by a glass dome. The interior fittings will be of marble, bronze and plate glass.

On the second story there will be a conference room twenty by twenty feet in size, with a domed ceiling seventeen feet high. In conjunction with this there will be a room where luncheon may be served, a pantry, wardrobes and bathrooms. There will also be on this floor three additional offices. The third floor will be devoted to the janitor's quarters and one or two rooms for storage or other purposes.

In the basement will be specially constructed safe deposit vaults, while the sub-basement will be occupied by the boilers and the machinery for lighting the building and operating the elevators.

The building has been designed by De Lemos & Cordes, and, according to their estimate, will cost $200,000.

The New Secretary of the Treasury.—On February 1 Leslie M. Shaw, former Governor of Iowa, succeeded Hon. Lyman J. Gage, as Secretary of the Treasury. It is interesting, in this connection, to note the changes in the Government finances since Mr. Gage took control of the Treasury. On March 1, 1897, the total interest-bearing debt was $847,364,950, the total debt, less cash in the Treasury, $1,012,600,454; net cash balance, $112,887,255. On January 31, 1902, the interest-bearing debt was $939,094,330, and the total debt, less cash in the Treasury, $1,005,926,898; net cash balance, $174,796,646. During this period $200,000,000 bonds were issued on account of war, and the gold reserve was increased from $100,000,000 to $150,000,000.

THE BRANCH BANKING SYSTEM.

As the subject of a centralized banking system, or a federation of banks, is at present attracting unusual attention, a comparison of the European system of branch banking with our American system, for the purpose of summing up the advantages of the former and of suggesting a method by which it may be readily introduced here, will not be amiss.

The principal advantages of the branch system seem to be the following:

1. A bank with a number of branches will necessarily have a large capital and can therefore command the services of the best managers in the country, and an able management, more than any other single factor, insures success to a business enterprise.

2. A bank with branches extended over a wide area gains in solidity. The volume of business will be more constant and uniform, a depression in one part of the country being counterbalanced by the prosperity of another section. An independent bank in a much depressed locality would probably be forced to suspend, while a branch bank would be upheld through the prosperity of the central bank in other sections.

3. Branches or agencies could be established at points where the volume of business would not support a solid independent bank, thus giving the whole country the advantages of the best banking facilities.

4. Facilities for the transmission of money are better under the branch bank system. Corporations with numerous branches or factories are able to deposit at any branch for credit at the head office, and *vice versa*; pay-rolls can be drawn at the branch nearest the factory where they are wanted, etc.

5. Perhaps the most important advantage of the branch system over our own is that loanable capital flows more readily to the parts of the country where it is most needed. At present it is not unusual for the interest rate in New York to be three per cent. or four per cent. lower than that prevailing in the newer sections of the country, thus greatly retarding their development—an evil which would be abolished by the branch system. The central bank gathers the surplus money of the country through some of its branches and lends in through others in the places where there is the greatest demand for it. Under the present system a bank having a larger deposit line than it can loan usually buys commercial paper in one of the money centres. Often the directors' knowledge of the names on such paper is very limited. On the other hand, a bank having a greater demand for loans than it can satisfy usually rediscounts some of its paper in New York or elsewhere. Both of these clumsy and objectionable methods are done away with by the branch system; capital flows from place to place naturally and easily, like water in connected pools, till a uniform rate of interest indicates that the demand has been equalized in all parts of the country.

6. A central bank with a network of branches covering the entire country has far better facilities for gathering information regarding the financial condition of borrowers than any independent bank can have; and its credit files are at the disposal of the smallest branch, thus reducing losses to a minimum.

Of the objections to the establishment of the branch bank system in this country two or three deserve particular notice. The size of the United States is sometimes said to be too great to admit of such a system. In England the daily reports of the branches at night are all in London the next morning; in this country the head office could not be thus promptly informed of affairs in distant branches. This difficulty can, I think, be overcome by placing the branches of each State under a central branch for that State, having them telegraph their daily reports to that branch, and having the central branch in each State compile these figures and telegraph the head office in New York or elsewhere. A system of private wires would probably soon connect the whole system.

It has been said that a central bank of the nature contemplated would neglect small and local interests and lend its influence, through loans and otherwise, to the great trusts and other large interests, to the great detriment, if not the ruin, of the smaller concerns. To this the reply may be made that, if the branches of the great banks discriminated thus against the local dealers, the latter would bank with the remaining independent banks or establish new ones, which would thrive at the expense of the branches of the central banks.

This is all very well in theory, it may be said, but our system of independent banks is so firmly established, so deeply rooted, that it would do infinite mischief to attempt to pull it up. I think that the branch system can be established in this country with as little economic disturbance as the consolidation in other lines of business is causing. The National Bank Act would simply need to be amended so as to allow National banks to have branches under proper restrictions, and the branch bank system would be evolved by economic forces now at work. These restrictions, I think, would be something like the following:

The banking capital must equal the amount of the capitals now required by law for independent banks at the points where branches are located.

A bank desiring a branch in any city in which there are now banks existing must buy a bank already established, either with cash or by the issue of its own stock for that of the absorbed bank upon an equitable basis. In case the local banks demand unreasonable prices, a new branch may be established.

And finally, these great branch systems should be permitted to have branches or connections in foreign cities the world over, to facilitate American commerce everywhere.

BROOKLYN, N. Y., Jan. 23. OSCAR NEWFANG.

BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—At the annual meeting of the National banks on January 14 a number of changes were made in the board of directors of several institutions. The First National added the names of J. P. Morgan, J. J. Hill, John A. McCall, D. Willis James, James A. Blair, John J. Mitchell and Wm. H. Moore.

Geo. F. Baker, President of the First National, was elected a director of the Chase National. Daniel Lamont was elected a director of the Manhattan Trust Co. and Geo. Gould and Gen. Louis Fitzgerald were elected to the board of the Western National.

The directorate of the Hanover National Bank was increased by the addition of three names, the new directors being Charles H. Marshall, formerly Vice-President of the Continental National Bank, which was absorbed by the Hanover; Cord Meyer, also a director of the Continental, and John H. Phipps, a son of Henry Phipps, the steel capitalist. All of the other directors were re-elected.

The National Citizens' Bank added the names of James Stillman, Augustus F. Libby, Robert B. Hirsch, William Halls, Jr., L. F. Dommerich, Daniel A. Davis and Francis M. Bacon, Jr., to its list of directors.

Most of the other banks re-elected their old boards, either as a whole or with one or two new members to fill vacancies.

—The following notice was issued by the New York Clearing-House on February 8:

"DEAR SIR: The attention of the committee has been called to the fact that items drawn on banks not affiliated with the New York Clearing-House and stamped 'payable, if desired, at ——— bank, New York,' are being paid through the clearing-house. The committee have decided that banks paying such checks through the exchanges are acting contrary to the provisions of the constitution governing relations between members of the association and others, and have directed that notice be given of the infringement. By order of

W. A. NASH, *Chairman of the Clearing-House Committee.*

WILLIAM SHERER, *Manager.*"

The scheme has been for the bank at the out-of-town point to allow its chief depositors to draw their checks on it, the printed indorsement being on each check, "Payable, if desired, at the —— —— National Bank, New York city," and when these checks came to this city they were put through the clearing-house, the check collection charges being thus avoided.

—Subscriptions were invited by a number of city banking houses for the new German three per cent. loan of 300,000,000 marks (about $72,000,000). The issue price was 89.80, and the amount subscribed in this country was very large—enough, in fact, to take the entire loan.

—Blair & Co. have purchased a site at the northwest corner of Broad Street and Exchange Place on which they will put up a large modern office building.

—Charles A. Conant was recently elected Treasurer of the Morton Trust Co.

—It is reported that prominent Chicago capitalists have obtained a controlling interest in the Continental Trust Co. of this city, and that the capital will be increased from $500,000 to $1,000,000.

—Messrs. Spencer Trask & Co., have just issued their Statistical Tables for 1902, containing information relative to American railroad and industrial companies and details of securities dealt in on the New York Stock Exchange. This booklet contains a large amount of condensed information in regard to railway and other securities and will be found valuable to bankers and others interested in investment securities.

—On January 22 the directors of the National Bank of North America elected the following officers: President, R. L. Edwards; Vice-Presidents, Charles W. Morse and Henry Chapin,

Digitized by Google

Jr.; Cashier, Alfred H. Curtis; Assistant Cashier, J. F. Sweasy. R. L. Edwards has heretofore been President of the Bank of the State of New York, and Mr. Morse and Mr. Curtis have been Vice-President and Cashier, respectively, of the same institution.

Warner Van Norden retires from the Presidency of the Bank of North America, and Mr. Chapin is promoted from the Cashiership. The consolidation of the Bank of the State of New York with the National Bank of North America has been completed, and the capital of the latter bank increased to $2,000,000 and the surplus to $2,100,000.

—The following resolution has been adopted by the New York clearing-house committee:

Whereas, The constantly increasing number of cases of mis-sent items through the exchanges having been brought to the attention of the clearing-house committee, and in view of the fact that the practice of missassorting exchanges is fraught with great risk and expense to the banks receiving such items; therefore. be it

Resolved, That on and after December 23, 1901, a fine of $1 be imposed for each mis-sent item, to be paid by the offending bank to the bank returning such item at time of presentation for redemption, provided, however, that $5 shall be the maximum amount which may be collected from any bank by any one bank on the same day, and the Manager is hereby authorized to add to the scales of fines accordingly.

—At a regular meeting of the board of directors of the Hamilton Bank, January 22, Frank W. Kinsman, Jr., was elected President and Frederick B. Schenck and Frederick D. Ives were elected Vice-Presidents. Edwin S. Schenck, formerly President of the Hamilton Bank, is now President of the National Citizens' Bank.

—The annual report of the Bowling Green Trust Company shows that the earnings for the year ending December 31, 1901, were $262,651, or 10½ per cent. upon the capital stock of $2,500,000. The deposits on that date amounted to $9,996,550, as compared with $8,266,979 on December 31, 1900.

—Samuel S. Conover, recently secretary and assistant treasurer of the American Cotton Company, has been elected acting Vice-President of the Irving National Bank, of this city. Mr. Conover is said to be the youngest bank Vice-President in New York.

—Papers of incorporation of the New York-New Jersey Trust Co., capital $100,000, were filed at Trenton, N. J., January 14. Among the incorporators are Alvah Trowbridge, A. B. Hepburn, and ex-Attorney-General John W. Griggs.

—Hon. Conrad N. Jordan was reappointed Assistant United States Treasurer at New York on January 8. Mr. Jordan is a Democrat, and was first appointed by President Cleveland in 1893 and reappointed by President McKinley in 1897. He began his banking experience in 1857, as a clerk in the Hanover Bank, becoming, in 1884, Cashier of the Third National Bank. In 1880 he became treasurer of the New York, Ontario and Western Railroad.

—The old quarters of the Ninth National Bank, 407 and 409 Broadway, are being remodelled and will soon be occupied by the National Citizens' Bank which recently absorbed the Ninth National. Since the absorption of the Ninth the Citizens' has added many additional valuable accounts. The capital stock of the National Citizens' Bank has been increased to $1,550,000, and the surplus now stands at over $800,000. The present deposits of the bank are over $7,700,000. The new directors of the Citizens' are: Francis M. Bacon, Jr., Daniel A. Davis, L. F. Dommerich, Robert B. Hirsch and Augustus F. Libby. Edwin S. Schenck is President; Ewald Fleitmann, Vice-President; Henry Dimse, Cashier, and Nelson A. Reynolds and Albion K. Chapman, Assistant Cashiers.

—An increase from twelve to fourteen was recently made in the number of directors of the Fourteenth Street Bank.

—In a case involving the right of the State to collect a transfer tax on the value of a Stock Exchange seat owned by a non-resident, the Appellate Division of the Supreme Court recently handed down a decision that the ownership of such a seat may not be personal property within the restricted meaning of the general tax law, yet it is undoubtedly capital invested in business. It has a market value, and can be bought and sold. There are restrictions as to conveyance and use of privileges, and these restrictions may add to or detract from the value, but they cannot change the essential character of the thing owned, which is certainly property. The order subjecting it to the provisions of the transfer tax law is affirmed.

—President John D. Hicks, in summarizing the recent annual report of the Bowery Savings Bank, said:

"The operations of the bank have been so largely extended, not only in New York city, but in distant States and Territories, that on January 1, 1902, the number of depositors was 133,869, and the amount of deposits $75,696,584. These figures represent gains over the previous year quite unprecedented in the history of the bank—an increase of over 9,000 in depositors and nearly $7,000,000 in deposits."

Digitized by Google

In outlining the policy of the bank, Mr. Hicks' report also calls attention to the fact that at the market value, which is the actual value of the institution's resources, the surplus is now $10,085,112, or thirteen per cent. of the deposits.

—Charles W. Morse, who has become prominent in local banking circles by acquiring stock in a number of city banks, made a statement a short time since explaining why he had made such purchases of bank stock. He said, in part:

"It was natural that I should be attracted by bank stocks as an investment. I believe that New York is destined to be the financial center of the world. The banks of New York are yet in their infancy. The rapid expansion of American foreign commerce will place this country in the front rank among the manufacturing nations of the world, as it already is the foremost among agricultural nations. On the other hand, the development of quick methods of transportation and communication is causing banks all over the country to keep their largest deposits here.

It is not true, as has been alleged, that National City Bank interests were behind me in these purchases. I am acquainted with Mr. James Stillman, President of that bank, and esteem him as a very able man. It was because of my confidence in him personally that I invested in the stock of his bank several years ago, and I have every reason to congratulate myself upon the purchase.

I very much regret the publicity which has been given to me personally in these purchases, for the Presidents of the banks are really the men on whom the responsibility rests, and they are entitled to the greatest honor for any successes that have been scored. I am only a stockholder, and my individual holdings of stock are smaller than those of many others.

The success of the banks in which I am interested has been due to the accommodations we give our customers. We strive to be up-to-date and accommodating. I have no idea of securing a string of banks, and you cannot be too emphatic in stating that each bank is absolutely independent and distinct in its own business transactions, confining its operations as far as possible to the locality in which it stands."

Speaking of the purchase of bank stock by syndicates, Mr. Morse said: "Each purchase has been separate and distinct and the banks are conducted independently of each other."

—Cornelius Vanderbilt is a new director of the National Park Bank; also of the United States Mortgage and Trust Co.

NEW ENGLAND STATES.

Boston.—A branch of the State Street Trust Co. has been established at 126 Massachusets avenue.

—The Old Colony Trust Co. will have a new branch at 52 and 54 Temple place.

—Attorney-General Parker issued an opinion on January 22 holding that under the law trust companies are permitted to establish branch offices.

—The officials of the Washington National Bank and the Suffolk National Bank have received the assent of more than two-thirds of their stockholders for a combination of interests. The two banks will be succeeded by a new bank under the name of the National Suffolk Bank.

—At a special meeting of the stockholders of the National Hide and Leather Bank, January 27, it was formally voted to go into liquidation and to turn the business over to the State National Bank, in accordance with the agreement heretofore made.

—There are several trust companies reported in process of organization—the Tremont, Adams, Huntington and Bowdoin.

Taunton, Mass.—The annual meeting of the Taunton Safe Deposit and Trust Co. was held January 15. Since April 1, 1901, when the company commenced business, there has been deposited $1,488,160; the amount loaned to individuals, firms and corporations on collateral or real estate is $599,090; invested in bonds, $401,295, and in stocks, $43,725. On January 1 the company paid its first dividend, being 2½ per cent. Gross earnings amounted to $30,597, which is considered very satisfactory for ten months' business. As an evidence of the high regard in which the company is held, it may be mentioned that it has just been selected by the Governor and executive council of Massachusetts as a depository for State funds.

Providence, R. I.—Edward P. Metcalf recently resigned as National bank examiner for Rhode Island and Connecticut, to accept the position of President of the Old National Bank of Providence.

MIDDLE STATES.

Pittsburg, Pa.—Wm. A. Carr, for a number of years Treasurer of the Union Trust Co., resigned on January 29 to enter the employ of H. C. Frick as confidential assistant. The directors of the company re-elected Mr. Frick chairman of the board; H. C. McEldowney,

Digitized by Google

President; A. W. Mellon, First Vice-President; J. M. Schoonmaker, Second Vice-President; H. W. Gleffer, Treasurer; James S. Carr, Assistant Treasurer; Scott Hays, Secretary; J. H. Evans, Assistant Secretary, and W. W. Smith, Second Assistant Secretary. Mr. Gleffer, who succeeds Mr. Carr as Treasurer, has been secretary of the company for several years, and Mr. Hays was his assistant.

—On February 1 the Real Estate Savings Bank was absorbed by the Pittsburg Bank for Savings.

—John A. Bell succeeds Major James P. Speer as President of the Freehold Bank, Major Speer retiring at the age of seventy-six years on account of declining health. Mr. Bell has been connected with the bank for eight years, and was formerly treasurer of Allegheny county.

Baltimore.—An offer has been made by the National Bank of Commerce for the stock of the Continental National Bank, and it is expected that the offer will be accepted.

—In its issue of January 9 the "Manufacturers' Record" says: "The soundness of the Savings banks in this city has done much to contribute to its reputation as one of the wealthiest communities in the United States; consequently the annual reports of the various institutions are of unusual interest, as they indicate any financial changes for better or worse.

The statements of the principal Savings banks emphasize the fact that the year 1901 has been very prosperous, for every institution not only exhibits an increase in its receipts, but an increase in the number of its depositors. A very gratifying feature is the reports of the various examining committees, all of whom are of the opinion that the investments of the several banks have been carefully and conservatively made in mortgages, bonds and other securities of the most approved character. This indicates that the various corporations are ably and judiciously managed. It might be stated that the books of each bank have been investigated by a committee of prominent citizens not interested in its affairs."

Scranton, Pa.—One of the highly successful financial institutions of Scranton is the Traders' National Bank, organized in 1890. Its progress and growth have been remarkable, as the figures furnished by the December reports made to the Comptroller of the Currency each year abundantly illustrate. The deposits on December 19, 1890, amounted to $257,346, and loans and investments to $456,413.

On January 2, 1902, the deposits in the Traders' National Bank footed up $2,022,055, and loans and investments $1,684,375, thus revealing that the institution entered upon the new year under prospects that indicate a greater increase of business in the future than in the past. The public favor that this bank is now enjoying is due in no small measure to the careful and conservative way in which it has been managed, and for this the officers and directors, well-known business men, are entitled to the credit. They are John T. Porter, President; W. W. Watson, Vice-President; E. P. Passmore, Cashier; E. W. Dolph, Assistant Cashier.

A feature of the management of the Traders' that appeals to the people is the courteous treatment they receive. The bank is open for their convenience Saturday evenings from seven to eight o'clock, and a special room is reserved for the exclusive use of lady depositors, of whom the bank has a large number. The building occupied is conveniently located, and is well adapted to the business for which it is used.

New York Savings Bank Tax.—A test case has been prepared to determine the validity of the tax on the surplus of Savings banks, provided for in a law passed by the New York Legislature in 1901.

The Savings banks raise four principal objections to the law, viz.:

1. The assessments are excessive.

2. The surplus invested in Federal securities cannot be considered in a measurement of the tax.

3. That in arriving at the par value of surplus investments, securities which are worth more than par must be taken at their face value, and securities worth less than par must be taken at the market value.

4. That the law is unconstitutional.

Newark, N. J.—Approval of the Comptroller of the Currency is said to have been secured for the consolidation of the National Newark Banking Co. with the Newark City National Bank.

Albany, N. Y.—At a meeting of the board of directors of the National Commercial Bank, January 14, the following resolutions were unanimously adopted:

"*Resolved*, That the resignation of Cashier Edward A. Grosbeck is accepted with regret. The faithful services given by him to this bank deserve recognition, and the board cheerfully puts on its records this tribute to him as a faithful, honorable and attentive officer, whose labors on behalf and in the best interests of the National Commercial Bank have been most loyally rendered for the period of nearly thirty-eight years.

Digitized by Google

Resolved, That Mr. Groesbeck carries into his retirement the best wishes of every officer and director together with cordial assurances of our personal regard and esteem. The substantial token of a year's salary, this day voted to him, is the practical expression of our recognition as representatives of this bank, and his election as director in this board will emphasize our appreciation of his knowledge and experience in banking affairs."

A Prosperous Country Bank.—The Swedesboro (N. J.) National Bank, which was organized in 1883, reports that it has earned and paid $51,410 in dividends; placed $85,000 in the surplus fund and has $6,461 undivided profits—a total of $92,871. The capital is $53,000. Swedesboro has but one manufacturing establishment, but is in the center of a fine agricultural district shipping large quantities of produce to New York and Philadelphia.

John C. Rulon has been Cashier of the bank from the first, and was one of the original promoters of the bank.

At the close of this year the bank expects to renew its charter for another twenty years.

Elizabeth, N. J.—The new Union Trust Co., which succeeds the First National Bank, has increased its capital from $100,000 to $200,000. Directors of the new company include several officers of the Equitable Life Assurance Society, of New York.

Interest on Public Funds.—The Fidelity Trust Co., of Newark, N. J., has announced that the company will pay interest at the rate of two per cent. per annum on all sums of $1,000 or over deposited by the State, county or city government. It was a voluntary concession because the trust company is a public depository handling funds of the State, county and city, and has for a long time been allowing interest to private depositors on the same terms. It is expected that the new move will force other banking institutions to make the same concession. It was announced that the company's action was taken in conformity with suggestions made in Gov. Murphy's inaugural address. It is the first bank to adopt the Governor's suggestion.

Good Price for Bank Stock.—On January 15 the executor of an estate offered at auction thirteen shares of stock of the Herkimer (N. Y.) National Bank. It brought $201 per share. This is the first sale of stock of this bank made in some time, and the price obtained speaks well for the bank's prosperity. The officers are: President, Chas. A. Millington; Vice-President, Robert Earl; Cashier, William I. Taber. Mr. Taber was formerly secretary of the New York State Bankers' Association.

SOUTHERN STATES.

Columbus, Ga.—Justly enough, the Third National Bank takes pride in the strong showing made in its cash funds—the amount on hand and due from banks being $425,235. Recently the bank increased its capital from $100,000 to $200,000, the stock being sold at $125 per share, thereby adding $125,000 to the assets.

Galveston, Tex.—R. Waverly Smith, President of the Island City Savings Bank, and a prominent attorney and business man, has acquired a controlling interest in the First National Bank.

North Carolina Banks.—According to the report of the North Carolina Corporation Commission the total resources of the State, Savings and private banks of North Carolina on December 10 last were $18,264,021.

Sherman, Tex.—The Merchants and Planters' National Bank, of Sherman, paid a cash dividend of twenty per cent. for the year 1901.

New Orleans, La.—In July last the capital stock of the Union National Bank was increased from $300,000 to $600,000, the additional capital being contributed by interests identified with the National Park Bank, New York, a number of prominent New York financiers becoming directors of the Union National Bank, the additions to the board including John Jacob Astor, August Belmont, Stuyvesant Fish, E. H. Harriman and Gilbert G. Thorne.

On June 29 the total resources of the Union National Bank were $1,995,371, and on December 31, 1901, they were $5,114,121. In the same six months there was a gain of $2,225,059 in deposits.

Opelika, Ala.—On December 31 last the First National Bank reported total resources of $512,251.30. These figures are not only the largest ever reported here, but are the largest recorded at any time in Eastern Alabama. Individual deposits on the above date were $281,069, and cash, due from banks and demand loans, $246,358.

A Useful Calendar.—The Waco (Tex.) State Bank sends out its usual maturity calendar, showing maturity dates of paper drawn for thirty, sixty and ninety days, also holidays, etc. It is very useful to banks, not only in Texas but throughout the country.

Digitized by Google

WESTERN STATES.

Chicago.—There are rumors of several new banking institutions to be established here. In the opinion of the promoters of these enterprises the number of banks in this city is far below the requirements, there being fewer banks than in several other cities of the country having less business and much smaller population.

—Interests representing the First National Bank, of New York, have acquired a considerable amount of the stock of the Commercial National Bank, of this city, of which ex-Comptroller James H. Eckels is President.

St. Louis.—It is announced that the Missouri Trust Co. will increase its capital stock from $2,000,000 to $4,000,000, the new issue to be sold at a premium of from $80 to $100 per share.

—On December 31 the Mechanics' National Bank reported $1,000,000 capital, $500,000 surplus, $106,052 undivided profits, and $9,881,077 deposits. Total resources were $12,507,659, including loans and discounts $6,820,548, and cash items $4,824,517.

Appended to the statement is the following, signed by Jones, Caesar & Co., chartered accountants:

"We have examined the above statement with the books and accounts of the bank, and we certify it to be a correct statement of the condition of the bank at the close of business on December 31, 1901. We counted the cash and verified all securities."

Detroit, Mich.—Fred. A. Smith succeeds M. L. Williams as Cashier of the Commercial National Bank, Mr. Williams becoming President. Mr. Smith was formerly Assistant Cashier of the Commercial National, retiring to go into the brokerage business. His banking experience is extensive, and includes prominent official connection with several successful Michigan banks.

Sale of a Kansas Bank.—Dr. W. S. Woods, President of the National Bank of Commerce, Kansas City, Mo., recently purchased the Bank of Colony, Kansas.

Kansas City, Mo.—According to "The Southwestern Banker" Kansas City bank clearings for 1901 amounted to more than 918 million dollars, an increase of 143 millions, or nineteen per cent., over the clearings of 1900. Since 1896 there has been an increase of 414 millions, or over eighty per cent. In other words, the business of Kansas City as represented by the exchanges through the clearing-house has almost doubled in five years.

The banks have had the most prosperous year in their history, not only in the volume of business handled, but also in the profits obtained and in the amount of deposits. The maximum deposits of the seven National banks were 74¼ millions. That figure was reached in September.

Total resources of the National banks have increased from $24,526,000 in 1895 to $77,125,-832, on December 10, 1901, and the deposits from $18,587,000 to $67,799,588. The capital of these banks is now $3,650,000 and the surplus $3,138,000.

Decorah, Iowa.—C. J. Weeser, President of the Winnesheik County Bank, reports that his bank has purchased the Bank of Ridgeway, Iowa, and the First City Bank, Fort Atkinson, Iowa. These banks will be conducted as branches of the Winnesheik County Bank.

Cincinnati, Ohio.—O. P. Tucker, National bank examiner for this district, has been elected Cashier of the Citizens' National Bank, succeeding G. P. Griffith, who retains the office of Vice-President, having formerly been acting Cashier also.

Cleveland, Ohio.—It is reported that the Century National Bank and the American Exchange National are to be consolidated, the former being merged with the latter. The American Exchange had $500,000 capital, and the Century $250,000, but when the union is consummated the capital of the American Exchange National Bank will be increased to $1,000,000.

A Share in the Profits.—In its issue of January 8, the Grand Rapids, Mich., "Evening Press" says:

"Every employee of the Kent County Savings Bank was made happy yesterday by being handed a check for ten per cent. of his yearly salary for the preceding year. This action was taken in compliance with a resolution of the board of directors of the bank, adopted a year ago, to the effect that as a return for the faithful services of the employees a sum of money amounting to three per cent. of the net earnings of the bank should be set aside each year and divided among the employees of the bank on or before January 15 of the succeeding year. The three per cent. of the earnings last year amounted to between nine and ten per cent. of the salary list and the employees were accordingly given a ten per cent. salary dividend as their share of the profits of the institution.

The Kent County Savings Bank stands alone among the banks of Michigan in this profit sharing with its employees and is one of the very few financial institutions in the country which have adopted the plan, only a few of the large banks in the financial centers of the Uni-

Digitized by Google

ted States pursuing this policy. It is designed to encourage devotion to duty and continu ance in the service of the bank and the bank officials are thoroughly in favor of the plan."

Condition of Wisconsin Banks.—The State, private and Savings banks of Wisconsin are shown to be in good condition by the annual report of State Bank Examiner Kidd, recently completed. The report is based on the statements made by the banks at the close of business December 10, 1901.

The gross increase in the number of State banks during the year ending December 10 last was seventeen. Ten new ones were organized and seven private ones were changed into State banks. During the year three State banks became National banks. The net gain in the number of State banks was fourteen, bringing the total up to 157. The gross increase in the number of private banks during the year was twenty-one.

Women as Bankers.—On January 14 Mrs. Sarah F. Dick, the only woman National bank Cashier in the United States, was elected Cashier of the First National Bank of Huntington, Ind., for the twenty-first consecutive term. Mrs. Dick succeeded her father, William McGrew, as Cashier, having served before as Assistant Cashier. She is the wife of Julius Dick, a wealthy merchant, and devotes all her time to the bank. Two women were elected directors of Wabash, Ind., banks, Mrs. Kate Busick being chosen to the Wabash National board and Miss Emma Dougherty to the First National directory.

Change in Bank Examiners.—E. M. Pope, Public Examiner of Minnesota, has been succeeded by A. T. Johnston, of Minneapolis.

A Growing Kentucky Bank.—Jo. C. Revill, Cashier of the Boone County Deposit Bank, Burlington, Ky., writes under date of January 21:

"This bank was opened for business February 1, 1886. Since then we have paid in dividends to shareholders $122 on each $100, and the surplus and undivided profits amount to $30,-600, on a capital of $30,000."

Ludington, Mich.—At the annual meeting of the First National Bank the old officers were re-elected. On account of the growing business of the bank it was decided to improve and enlarge the present building. These alterations will make it possible for the bank to provide the latest and best equipment and also to introduce improved methods in the administrative affairs, in line with the demands of increasing patronage and the progressive character of the management. Plans for these improvements have been carefully perfected by Cashier W. L. Hammond, whose banking experience extends over a period of twenty-five years.

CANADA.

Savings Bank Deposits.—The combined balances at the credit of depositors in the post-office Savings bank and the Government Savings banks on October 31 last were $56,464,271. This was an increase from October of last year of $2,476,908. The interest payable on these deposits is at the rate of three per cent. per annum, to which it was reduced on July 1, 1897.

Toronto, Ont.—It is expected that the new Sovereign Bank of Canada will commence business with $1,000,000 paid-in capital and about $250,000 surplus, the latter being obtained from the premium obtained on the stock. It is stated that Messrs. J. P. Morgan & Co. will act as correspondents of the new bank at New York, London and Paris. The Standard Trust Co. will also act as New York agents of the bank.

Montreal Bank Clearings.—An idea of the remarkable trade expansion in Canada may be obtained from the table recently issued by the Montreal Clearing-House Association, showing the bank clearings of this city for a number of years. In 1889 the clearings were $454,560,000, while last year they were $889,479,000.

Royal Bank of Canada.—The thirty-second annual statement of the Royal Bank of Canada made up to December 31 last shows net profits of $208,524, which is 10.42 per cent. on the paid-up capital. This sum has been appropriated as follows: Two half-yearly dividends at the rate of seven per cent. per annum, $140,000; transferred to pension fund, $10,000; $26,454 written off for expenditure on new bank premises at Sydney, C. B., and $32,070 added to the balance at credit of profit and loss, the amount of which carried forward is $91,882. The reserve fund stands at $1,700,000, which is eighty-five per cent. of the paid-up capital.

The Royal Bank enlarged its deposits on demand last year from $3,743,246 to $4,296,100, and those payable after notice from $8,140,049 to $8,929,276, the gross increase in deposits being $1,342,083.

Out of the $1,342,083 of extra resources provided by deposits $1,131,086 was devoted to the purchase of additional railway and other bonds, debentures and stocks, leaving $210,997 for other purposes. The balances held by agents in Great Britain and by agencies and banks in foreign countries were reduced by $654,008, which with the above sum of $210,997 made a total of $865,005, which was utilized in extending the call and short loans on stocks and bonds, which were increased last year from $1,211,960 to $2,294,907, an increase of $1,082,947. These

Digitized by Google

changes raised the immediately available assets from $6,701,108 to $8,386,195, which puts the Royal Bank in a distinctly strong position.

Canadian Bank of Commerce.—The thirty-fifth annual meeting of the shareholders of the Canadian Bank of Commerce was held in the banking house in Toronto January 14. For the half year ending November 30, 1901, the net profits, after providing for all bad and doubtful debts, were $477,595.32, which added to $117,876.08, the balance brought forward from previous year, gives a total of $595,471.35. This amount was appropriated as follows: dividend, seven per cent. per annum, $280,000; transferred to pension fund, $7,500; expenditure on bank premises, charged to profit and loss account, $56,923.51; balance carried forward, $251,047.84. Interesting addresses were made by Hon. Geo. A. Cox, President, and by B. E. Walker, General Manager.

FOREIGN BANKING AND FINANCIAL NEWS.

Germany.—The Imperial loan of 115,900,000 marks and the Prussian loan of 185,000,000 marks, subscriptions for which were opened January 22, were over subscribed fifteen times.

Many millions were subscribed for foreign account, including 300,000,000 marks for American account. The English subscriptions were comparatively insignificant.

M. Harjes Honored.—In the distribution of New Year's honors, M. Harjes, a member of the firm of Morgan, Harjes & Co., Paris, was decorated as an officer of the Legion of Honor.

Cuba.—The Banco Nacional de Cuba has paid out of the profits of the first six months of its existence, ended January 18, a semi-annual dividend of three per cent., transferred $100,000 to surplus account and still has about 10,000 in undivided profits.

Mexico.—The latest bank statement, embracing all the banks in Mexico, shows the total banking capital to be $80,300,000; note circulation, $82,676,626; reserves, $14,232,396, and deposits, $112,000,000.

Failures, Suspensions and Liquidations.

Georgia.—An application for a temporary Receiver was filed by the directors of the Commercial Bank, of Albany, Ga., on January 17. Liabilities are estimated at $123,000, and assets $191,000 in bills receivable and real estate.

—On January 23 a bill was filed asking for the appointment of a Receiver for the Bank of Commerce, Atlanta. The bank has not been doing an active business for several months.

Louisiana.—The Jennings, La., Banking and Trust Co. suspended recently.

Massachusetts—BOSTON.—Owing to the death of Mr. Schofield, the firm of Schofield, Whicher & Co. will liquidate its business. Considerable losses are said to have been sustained of late.

Missouri.—On January 17 the Commercial Bank, of Fulton, was closed by the State Banking Department. Assets are placed at $49,285, and liabilities—other than capital stock—$40,448.

Nebraska.—The Platte Valley State Bank, of Bellwood, was reported closed on January 20, and the Cashier under arrest. There is said to be a discrepancy of $45,000 in the bank's accounts.

Ohio—CLEVELAND.—The Euclid Avenue Trust and Savings Co. made an assignment January 10. It is said this step was taken to protect creditors, as assets could not be realized on rapidly enough, but that the assets will in time realize enough to pay all claims.

Tennessee.—The Bank of Charleston, which was moved several years ago from Charleston to Cleveland, Tenn., has gone into liquidation, and a new bank will be organized. The bank was organized at the close of the Civil War and had $100,000 capital. At the time of closing it had money enough on hand to pay all depositors.

Texas.—The Citizens' Bank, of Belton, assigned to D. R. Pendleton, January 20.

Deposit of Treasury Funds.—A bill introduced in the House by Representative Pugsley, of New York, authorizes the deposit of Treasury funds in excess of $50,000,000 with National banks having a capital of not less than $100,000 and a surplus to an equal amount, upon which the banks are to pay interest at not less than two per cent. The banks are not required to deposit United States bonds as securities and the deposits are not to exceed fifty per cent. of the combined capital and surplus of any one bank. The deposits are made a first lien on the assets of the banks.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, February 4, 1902.

CHEAPER MONEY AND A QUIET STOCK MARKET were the leading features of the first month of the new year. Very soon after the year opened money began to flow back to New York and loaning rates rapidly declined. Abroad also the money situation became easier, both the Bank of England and the Imperial Bank of Germany reducing their minimum rate of discount to 3½ per cent. shortly after the middle of the month.

Operations at the New York Stock Exchange took a very conservative tone. The month was in striking contrast with January a year ago, when sales of stocks were running up to 1,000,000 or 2,000,000 shares a day. Except on the first two business days of the month there were no million share days at the Stock Exchange last month. After the first week transactions frequently fell below 500,000 shares a day and as low as 300,000 shares were recorded for a full five-hour day.

The total sales of stocks in January were about 12,500,000 shares, as compared with more than 30,000,000 shares in January, 1901. Excepting the month of August, there was no month last year which showed a smaller volume of sales in the stock market than that recorded last month.

There was a very active bond market, the sales reaching $94,000,000, the largest amount for any month since May, 1901. The sales were slightly below the amount recorded in the same month last year, but exceeded the total for December by nearly $20,000,000.

As regards prices the stock market was very irregular and in some spots weak. Early in the month there seemed to be a prevailing disposition to be cautious. There was more or less disquieting talk about the railroads. Congress seemed to be disposed, at least was so reported, to give the Inter-State Commerce Commission increased power to "punish" the railroads. The Governor of Minnesota was also making trouble for the Northern Securities Company. Late in the month the Supreme Court heard argument on the application for an injunction preventing the transfer of the stock of the Great Northern and the Northern Pacific Companies to the Securities Company. Then unfavorable developments in the "industrial" field occurred. The Crube Rubber Company collapsed. The western trolley syndicate, which had been buying up lines in Cleveland, Detroit, Toledo and other places, was reported in difficulties, and that had the effect to increase timidity.

On the other hand, evidence of a favorable state of affairs so far as the general situation is concerned has been accumulating. The gross earnings of railroads operating 108,000 miles of road were shown by the "Financial Chronicle" to have increased during the eleven months ended November 30, 1901, $107,000,000 over the corresponding period in 1900, and the net earnings $49,000,000. The gain in net earnings is the more significant that it follows gains of from $20,000,000 to $30,000,000 yearly during the previous four years.

There is no doubt that the last five years have put the railroads of the country upon a sounder financial basis than ever before existed. Tending to prove this is the increase in the rate of the dividend declared by the Central Railroad of New Jersey, for which prosperity in the coal trade is in part accountable. The stock is

Digitized by Google

now an eight per cent. dividend payer, the highest rate in fifteen years, and just double what the road paid in 1898 and 1899.

The New York, Chicago and St. Louis Railroad has also given evidence of prosperity by increasing the dividend on its second preferred stock, which never paid a dividend until March last year, and then only two per cent. It has declared three per cent. now, and is paying five per cent. on the first preferred stock.

The anthracite coal trade has prospered beyond its ordinary experience even in good times. The shipments of anthracite coal to market last year exceeded 53,500,000 tons, an increase of nearly 8,500,000 tons over those of the previous year. Last year's shipments were the largest ever made in a single year, while prices have been good and strictly adhered to.

Bank clearings since January 1 have generally compared favorably with last year's records, which were without parallel in previous years. In New York the clearings for 1901 were nearly $79,500,000,000 as compared with $52,600,000,000 in 1900 and $24,400,000,000 in 1894. Outside of New York the clearings were $39,100,000,000 as compared with $33,600,000,000 in 1900 and $21,200,000,000 in 1894.

The completed records of our foreign trade for the year 1901 disclose the fact that the exports of merchandise were valued at $1,465,514,139. This indicates a decrease of $12,000,000 from the high record made in 1900, but this is accounted for by the exclusion from the statistics of 1901 of the shipments to Porto Rico and Hawaii, which in 1900 amounted to about $30,000,000.

The imports of merchandise last year, however, exceeded all previous records, and amounted to $880,405,846, the highest previous record being $830,490,141, made in 1892. The large imports caused a considerable decrease in the net balance of exports, which last year was $585,108,793. This was beaten only twice, in 1900 when the balance was $648,796,399, and in 1898 when it was $620,581,818. In the following table we show the net balances of merchandise, gold and silver yearly during the last twelve years, divided into two equal periods:

	Merchandise.	*Gold.*	*Silver.*	*Merchandise and specie.*

All indications of stringency in the money market passed away soon after the beginning of the year. Call money, which on December 31 reached fifteen per cent., was down to two per cent. at the close of January. Statiscally the country has an abundant supply of money. The amount in actual circulation is estimated at nearly $2,260,000,000, equal to $28.77 per capita. In one year the amount has increased $70,000,000 and the gain per capita has been about forty cents.

The Treasury has an additional sum of $290,000,000 in excess of all certificates and notes outstanding, making the entire stock of money in the country $2,544,000,000, equal to $32.46 per capita. The increase in a year has been $90,000,000.

Not only has the stock of money increased, but the gain has been steadily on the

Digitized by Google

side of gold, the stock of gold having increased from $1,112,000,000 to $1,181,000,000, a gain of $69,000,000. At the present time about forty-seven per cent. of our total money supply consists of gold, twenty-six per cent. of silver, thirteen per cent. of United States notes and fourteen per cent of National bank notes. If the present conditions are to continue the percentage of gold must increase. The increase in silver is limited by the seigniorage to be gained from turning the silver bullion in the United States Treasury into coin. There is now only about $37,000,000 of such bullion to be coined. The supply of legal-tender notes is limited by law to its present volume, $346,000,000, while National bank note circulation is again declining as Government bonds are being retired.

It is evident that the legislation of 1900 intended to expand bank-note circulation has spent its force. Whatever elasticity such circulation possesses is operative now only in the direction of contraction. Prior to the passage of the act the National banks of the country had $236,000,000 Government bonds on deposit to secure circulation, and about $205,000,000 of notes outstanding. By September 30, 1901, they had $329,000,000 bonds, an increase of $93,000,000 and $324,000,000 notes, an increase of $119,000,000. On February 1, 1902, the bonds to secure circulation had fallen to $324,000,000, a decrease since September of $5,000,000, and the notes outstanding had decreased about the same amount.

Once more the limit of the powers of the National banking system to provide currency has been reached although the growth of the system continues unchecked. The returns to the Comptroller of the Currency as of the date December 10, 1901, show that 4,291 banks were in operation at that time, an increase of seventy since September 30 last and of 687 since the law of 1900 was enacted.

The capital of the National banks increased nearly $10,000,000 since September, 1901, and $52,000,000 since February, 1900. The surplus and undivided profits, now amounting to $449,000,000, show an increase since September of $18,000,000, since December, 1900, of $45,000,000, and since February, 1900, of $85,000,000.

The individual deposits of the National banks now amount to $2,964,000,000, an increase in one year of $340,000,000, and of nearly $500,000,000 since February, 1900. The total resources amount to $5,722,000,000, an increase in one year of $580,000,000, and since February, 1900, of $1,048,000,000. These changes testify of the extraordinary vigor which the system possesses. In the following table are shown some of the principal items of each of the statements compiled by the Comptroller of the Currency during the last two years:

CONDITION OF THE NATIONAL BANKS OF THE UNITED STATES.

	Capital.	*Surplus.*	*Individual deposits.*	*Gold.*	*Silver.*	*Legal tenders.*

Nothing in the present era of prosperity has been more remarkable than the development of the iron industry. In other periods of activity in iron the important factor has been the rapid building of railroads. This time, however, there has been no such extension of railroads as was a part of the tremendous boom of the early eighties, but the production of pig iron in this country recently, and the consumption as well, has exceeded all previous records. Nearly 16,000,000 tons were

Digitized by Google

produced in the year, 1901, while the output during the last half of the year was more than 8,200,000 tons. The semi-annual production in the last nine years has been as follows:

	First six months. Tons.	*Last six months.* Tons.	*Year.* Tons.
1893	4,562,918	2,561,584	7,124,502
1894	2,717,983	3,939,405	6,657,388
1895	4,087,558	5,358,750	9,446,308
1896	4,976,236	3,646,891	8,623,127
1897	4,403,476	5,249,204	9,652,680
1898	5,869,703	5,904,231	11,773,934
1899	6,289,167	7,331,536	13,620,703
1900	7,642,569	6,146,673	13,789,242
1901	7,674,613	8,203,741	15,878,354

This extraordinary exhibit speaks for itself. Such an increase in output has never been equalled before while the total production is wholly without precedent. The consumption has kept pace with the output and the stocks of unsold iron are practically nil, while in 1896, when the production was only about one-half that of last year, the stock of iron unsold amounted to about 850,000 tons.

The railroads to some extent have contributed to the prosperity of the iron trade. The "Railroad Gazette" estimates that 342 companies built 4,518 miles of railroad in 1901, as compared with 4,804 miles built by 286 companies in 1900. It also estimates that 142,514 cars were built last year, the largest number ever built in a single year. There were 4,359 freight cars built for export.

More locomotives were also built in this country last year than in any other year. The number constructed was 3,384, as compared with 3,153 in 1900, and 2,473 in 1899, which years were both record breakers. In 1894 there were only 695 locomotives built.

The value of iron and steel exported from the United States in 1901 was less than in either of the two previous years. The exports in 1901 amounted to $102,500,000, as compared with $129,600,000 in 1900, and $105,700,000 in 1899.

THE MONEY MARKET.—The change in the local money market is fairly indicated in the drop in rates for call money from 15 per cent. on the last day of December to 2 per cent. on the last day of January. The situation as regards money is now one of ease and all present conditions are favorable to low rates for money. At the close of the month call money ruled at 2 @ 2½ per cent., most of the loans being made at 2¼ per cent. Banks and trust companies quote 2½ per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 4 per cent. for 60 to 90 days and 4½ per cent. for 6 months on good mixed collateral, and 3½ @ 3¾ per cent. on highest grade of railroad collateral. For commercial paper the rates are 4 per cent.

for 60 to 90 days' endorsed bills receivable, 4 @ 4½ per cent. for first-class 4 to six months' single names, and 5 @ 5½ per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—There has been a rapid return of deposits to the New York banks during the last month, but the increase falls considerably below the increase which occurred in January a year ago. This year the increase is $65,000,000, as compared with $115,000,000 in the first month of 1901. While therefore the deposits at the beginning of the year were $56,000,000 larger than on January 1, 1901, they were only $6,000,000 larger on February 1 this year compared with a year ago. The present amount is about $976,000,000 or within $37,000,000 of the highest record, which was made in March last year. The banks have gained in their reserves to a considerable extent, specie having increased $29,000,000 and legal-tenders $6,000,000, while the surplus reserve increased $19,000,000. Loans increased more than $31,000,000 in the month.

Money Rates Abroad.—The Bank of England reduced its rate of discount from 4 to 3½ per cent. on January 23, and the Imperial Bank of Germany reduced its rate from 4 to 3½ per cent. This is the first change for the former since October 21 and for the latter since September 24. The Bank of Bengal at Calcutta advanced its rate from 5 to 6 per cent. on January 9 and to 7 per cent. on January 16, and the Bank of Bombay advanced its rate from 5 to 6 per cent. on January 9. Open market rates at the principal centers are easy. Discounts of 60 to 90 day bills in London at the close of the month were 2⅞ @ 3 per cent., against 3¼ per cent. a month ago. The open market rate at Paris was 2¾ @ 2⅞ per cent., against 2¾ per cent. a month ago, and at Berlin and Frankfort 2 @ 2⅛ per cent., against 3¼ per cent. a month ago.

Gold and Silver Coinage.—The coinage executed at the mints of the United States during January amounted to $10,758,547, of which $7,660,000 was gold, $2,908,637 silver and $189,910 minor coin. There were 2,300,000 silver dollars coined.

Foreign Exchange.—The market for sterling exchange has been dull throughout the month. The supply of bankers' bills is small, while the demand for remittance has also been light. Rates are higher than they were a month ago but most of the advance was early in the month.

National Bank Currency.—Contraction in National bank circulation appears to have set in and there is no reason to expect expansion again under the present system, assuming that no further increase in the public debt is contemplated. More than $2,000,000 of Government bonds deposited to secure circulation were withdrawn last month, making a reduction of nearly $7,000,000 in the last four months. The total circulation is now $359,444,615, but only about $322,000,000 is secured by bonds while more than $37,000,000 is in process of retirement, lawful money having been deposited to provide for the cancellation of that amount of notes.

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents of 1907, $6,361,100; 5 per cents. of 1894, $400,000; 4 per cents. of 1895, $8,021,950; 3 per cents. of 1898, $6,737,900; 2 per cents. of 1900, $89,428,800; District of Columbia 3.65's, 1924, $965,000; a total of $111,914,650.

Digitized by Google

Government Revenues and Disbursements.—Another surplus of $8,000 000 is reported by the Government for January, making nearly $51,000,000 for the seven months of the current fiscal year. At the present rate the surplus revenues for the entire year will approximate $100,000,000. The customs receipts were $800,000 larger in January than in the same month last year, while the internal revenue receipts are $2,500,000 less. The total receipts decreased $1,000,000 but the expenses decreased $1,500,000. For the seven months the receipts are $8,000,000 less than in the previous year and the expenditures $32,000,000 less.

United States Public Debt.—The net public debt of the United States less cash in the Treasury was reduced $5,700,000 in January, bringing the total below $1,006,000,000. The interest-bearing debt was reduced more than $4,000,000 and the net balance in the Treasury was increased more than $3,000,000. That balance is now $324,796,646, or nearly as large as it was last November.

Money in the United States Treasury.—More than $18,500,000 was added to the stock of money in the United States Treasury in January, but an increase of $22,000,000 in certificates outstanding made the net cash decrease $3,500,000. Nearly

Digitized by Google

$30,000,000 of gold certificates were issued, causing a decrease in the net gold in the Treasury of nearly $24,000,000.

Certificates and Treasury notes represented by coin, bullion, or currency in Treasury are not included in the above statement.

FOREIGN TRADE.—The Bureau of Statistics has issued a statement of exports and imports for December, completing the record for the calendar year 1901. The exports in December fell nearly $9,000,000 below those of the same month in 1900 and were about $800,000 less than in December, 1898. The imports on the other hand were $11,000,000 more than in 1900 and $9,000,000 more than in 1899. For the year the exports amounted to $1,465,000,000, a decrease of $12,000,000 compared with 1900; the imports were $880,000,000, an increase of $51,000,000 and the net exports were $585,000,000, a decrease of $63,000,000. We exported net gold $3,000,000 and silver $24,000,000 in 1901, making the total net exports of merchandise and specie $613,000,000 against $662,000,000 in 1900.

MONEY IN CIRCULATION IN THE UNITED STATES.—The volume of money in circulation was increased last month $9,000,000, making the increase in the last twelve months $69,000,000. The gold coin and gold certificates now in circulation aggregate $942,000,000, or forty-two per cent. of the total money in the hands of the people. The per capita of circulation is now $28.77.

BANKERS' OBITUARY RECORD.

Adams.—George C. Adams, President of the Warren County National Bank, Belvidere, N. J., died January 15, aged sixty-nine years.

Ayer.—Nathan C. Ayer, ex-President of the Second National Bank, Bangor, Me., died January 16, aged eighty-two years. Since 1872 he had been actively engaged in the lumber business and was a director in a number of banks and other corporations.

Baker.—Geo. A. Baker, President of the Continental National Bank, St. Louis, Mo., and connected with other large business enterprises of that city, died February 3.

Barnes.—Major T. Attwater Barnes, President of the New Haven (Conn.) Trust Co., and one of the wealthiest and most prominent business men of that city, died January 27 at Los Angeles, Cal.

Bowen.—John Bowen, Vice-President of the Lehigh Valley Trust and Safe Deposit Co., Allentown, Pa., died January 12.

Brush.—James M. Brush, President of the Bank of Huntington, N. Y., died January 28, aged fifty-six years. He was a native of Huntington and had always resided there, the family from which he was descended having been among the original settlers of the place. Mr. Brush was prominently associated with numerous local business and benevolent enterprises. In 1899 he served as Chairman of Group VII of the New York State Bankers' Association.

Caldwell.—John Caldwell, Jr., President of the Allegheny National Bank, Pittsburg, Pa., died January 17, aged seventy-five years. He was a native of Pittsburg, and had always lived in that city and in Allegheny City, and was prominently connected in financial and business circles.

Farrington.—Dr. James Farrington, President of the Rochester (N. H.) National Bank, died January 18. He was born at Conway, N. H., in 1822. After studying medicine in New York and elsewhere, he located at Rochester and entered upon the practice of his profession, in which he continued until a few years ago. In 1891 he was elected President of the Rochester National Bank, and held that office at the time of his death.

Gilbert.—Oliver A. Gilbert, first Vice-President of the First National Bank, Montrose, Pa., and one of the best known business men of Susquehanna county, died January 5.

Harmon.——John Harmon, President of the Farmers' National Bank, Ashtabula, Ohio, died January 6.

Hinman.—Edward L. Hinman, President of the Columbus (Ohio) Savings Bank Co., and Vice-President of the Citizens' Savings Bank for over twenty-five years, died January 7. Mr. Hinman was born in Connecticut in 1825, and in early life was engaged in manufacturing in New York city. He removed to Columbus in 1856 and engaged in business there, becoming one of the wealthiest men in that city.

Howland.—Henry S. Howland, President of the Imperial Bank of Canada, Toronto, and largely interested in railway enterprises, died January 28. He was born in New York State in 1824, but had resided in Toronto since 1840.

Jasper.—Geo. F. Jasper, Cashier of the Quincy (Ill.) National Bank, died January 23. He was a native of Quincy, his father being the late Thomas Jasper, mayor of Quincy in 1861. He graduated at Heidelberg University, and in 1871 entered the First National Bank of Quincy as a clerk, remaining with that institution for twenty-nine consecutive years, until it was merged with the State Savings, Loan and Trust Co., remaining with the latter institution a short time, when he was offered the position of Cashier of the Quincy National Bank, which he accepted.

Laidlaw.—Henry B. Laidlaw, head of the banking firm of Laidlaw & Co., New York city, and former city chamberlain, died January 8 in his sixty-third year. Mr. Laidlaw was also a director of the Bank of New York National Banking Association.

Morrison.—S. A. Morrison, Assistant Cashier of the Fletcher National Bank, Indianapolis, Ind., died at Pasadena, Cal., January 15, aged thirty-one years.

Newman.—Hon. James W. Newman, President of the Central Savings Bank Co., Portsmouth, Ohio, died January 1. He was for many years prominent in Ohio politics, having served in both branches of the Legislature, and one term as Secretary of State.

Robertson.—Thomas D. Robertson, a pioneer banker and lawyer of northern Illinois, died February 5, aged eighty-four years. He was born in Scotland, and in 1838 he came to America and settled in Winnebago county, Ill. In 1843 he opened the first banking house in Rockford, and continued in that business, being President of the Winnebago National Bank at the time of his death. He was one of the founders of Beloit College and Rockford College for woman.

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SIXTH YEAR. MARCH, 1902. VOLUME LXIV, No. 3.

THE SAFETY OF AN ASSET CURRENCY is effectually demonstrated in an article which we publish in this number, entitled "Twenty Years of Bank Currency Based on Commercial Assets." Mr. L. CARROLL ROOT is the author of the article, which appeared first in "Sound Currency," the quarterly publication issued by the Reform Club, of New York city. Although the soundness of the State bank currency of New England has been known to all students of finance, the experience of that section of the country in issuing bank notes based upon commercial assets has perhaps never been set forth more clearly and in greater detail than in this paper by Mr. ROOT.

The most striking fact brought out by this investigation is that in a period of twenty years, with an average annual circulation of $33,148,000, the loss for the entire twenty years was only about $880,000, or an average of $42,000 a year. It appears that a tax of about one-eighth of one per cent. per annum upon the outstanding circulation would have met all deficiencies, even with the manifest imperfections of the system. The greatest loss that was sustained during the period under investigation—$200,000—was caused by over-issue, and would have been prevented if the present system of printing notes by some central authority had been in force. Not only did the banks have control over their issues, but as a rule the notes were not a first lien on assets, there was not in all cases double liability of shareholders, and the system of supervision was more or less imperfect. But with all these disadvantages the losses were trifling, and might have been covered by a tax one-eighth as great as the National banks paid on their circulation prior to the act of March 14, 1900.

After 1841 the annual redemptions at the Suffolk Bank never fell below $100,000,000, and in 1856 they amounted to $397,000,000. The annual average redemption under the National system has been about $44,000,000. Substantially, there is at present no commercial

Digitized by Google

redemption of National bank notes, most of the notes redeemed being those that are worn or otherwise unfit for circulation. Thus the proper criterion of a bank-note currency—the test of daily current redemption in standard coin—is not applied. It is interesting to note that the cost of redeeming the circulation under the Suffolk plan was ten cents per $1,000, compared with a cost of $1.29 per $1,000 under the National system. If, however, the cost of transportation be deducted from the latter estimate, as it does not appear to have been included in the former, the cost under the National system would be reduced to ninety-four cents per $1,000. These facts, together with many other interesting details in regard to New England State bank currency, are obtained from KNOX'S "History of Banking in the United States." They illustrate, incidentally, how much more expensive it is for the Government to do things that ought to be left to the enterprise of individuals or corporations.

Financial writers usually put much stress on the safety of National bank notes, and unquestionably the notes have been as good as the legal tenders in which they are redeemable; but the people have sustained great losses through the depreciation of the legal-tender notes, and during the era preceding resumption, when these notes were in discredit, the National bank notes were equally below specie value. It is hardly possible, if Mr. McCULLOCH had not been prohibited from retiring any more legal-tender notes by the act of 1868, that specie resumption would have been delayed by the banks until 1879. However, the discussion of this question is not of any practical moment now.

As said by Mr. KNOX in his "History of Banking" (p. 284): "At the very first and for almost the whole period of the existence of the National banking system lawful money of the United States, in which the National bank notes were legally redeemed, has been in excess of the National bank notes themselves. The result of this has been that from the beginning of the system there has been no true commercial redemption of the National bank note." It would be interesting to inquire what effect this has had on prices, and whether the present excessive cost of living is due to any extent to the large volume of silver, greenbacks and National bank notes, which, according to high authority, are not commercially redeemed. Although these various forms of currency are redeemable, either theoretically or practically, they are not in practice put to the test that was applied to the New England bank notes.

The currency system of the country would be greatly simplified if the Government restricted its financial functions to issuing standard and subsidiary coin, and permitted the banks to issue notes based on commercial obligations and redeemable in standard coin on demand.

Digitized by Google

The Government of the United States has departed most radically from these simple requirements of a safe and sound currency. There is but little hope that the banks can be induced in the near future to assume the responsibility of maintaining gold payments or that they will generally favor any proposal looking to the abolition of bond security for their circulation.

Mr. ROOT's investigations show that a currency based upon commercial assets can be made fully as safe as the present National bank notes. The conditions now prevailing generally throughout the United States are certainly as favorable as they were in New England from 1840 to 1860.

ILLEGAL CERTIFICATION OF CHECKS as a means of bank-wrecking is forcefully illustrated in the failure of the City Savings Bank of Detroit, Mich. It seems that FRANK C. ANDREWS, the Vice-President, obtained the certification of checks to the extent of $666,200 when in fact his account was overdrawn to the extent of $900,000. ANDREWS had procured large loans from some of the Detroit banks, depositing collateral security therefor. He took these certified checks to the banks from which he procured the loans, and with them discharged the loans and took up the collateral. What became of the latter does not appear.

This was a case where the Cashier seems to have been hypnotized by his superior officer, though not profiting by his misdeeds. As the Cashier of a bank is the officer clothed with authority to certify checks, both inherently and by prescription, as a rule, it is probable that the City Savings Bank will be bound by these checks, although the Cashier exceeded his authority in certifying them, as the drawer had no funds. It is also likely that the Detroit banks holding these checks will share with the general creditors, unless it can be shown that the banks had information that should have put them on their guard. Ordinarily the certification of a check by a duly authorized officer is sufficient, and one taking the check is not bound to inquire as to whether the drawer had funds, that fact being sufficiently shown by the certification. But, on the other hand, if the banks receiving these illegally certified checks knew that ANDREWS really had no funds to meet them, probably they could not hold the City Savings Bank liable. Some color is lent to the supposition that the banks accepting the checks had reason to question their regularity, for it is said that in some cases ANDREWS asked the holders of the checks not to present them for a few days. Still, it is inconceivable that the banks would have surrendered their collaterals unless they considered the certified checks undoubtedly good. Whatever opinions they may have formed of ANDREWS, they did not regard the bank as insolvent.

Digitized by Google

In the improbable event of the banks losing the entire amount of these checks the loss would not be a serious matter, as the amount appears to be divided among several strong institutions. It seems most likely that they will share in the assets with other creditors, in which case the losses will be still smaller.

Abuse of the directors in this case does not appear to be warranted, as the wrecking of the bank was done so expeditiously as to give little warning of the crash. There must be a delegation of power to some one, and there is always the possibility that the power will be misused. Fortunately, however, the great majority of bankers are faithful to their trusts.

This affair may lead banks to be more cautious in scrutinizing the certified checks of a bank officer. Should the President of a bank fraudulently certify his own checks the bank would not be bound; but either the President or Vice-President may obtain sufficient influence over the Cashier as to procure the illegal certification of their checks, and thus hopelessly involve the bank. The power of two officers, when evilly disposed, to contract an almost unlimited fraudulent indebtedness which the bank is bound to pay, is fraught with dangerous possibilities, as the Detroit failure shows. Whether it is practicable to place such restrictions upon the certification of checks as to prevent like occurrences is for the banks to determine.

Certified checks are of great convenience in business transactions, for being obligations of the banks they are substantially equivalent to cash. It is unfortunate that such useful instruments of trade should have been put to such bad use as in the case of the City Savings Bank of Detroit.

THE NATIONAL BANKS on December 10, 1901, held United States bonds to secure circulation, $324,507,180, and to secure public deposits $110,257,830; in all, to secure both circulation and deposits, $434,765,010. In addition they held other United States bonds amounting to $7,953,600. The total interest-bearing debt of the United States on the same date was $949,062,230. The banks therefore held and used for profit in their business nearly one-half of the interest-bearing debt.

It is easily seen, from these figures, that it would be impossible for the banks, even if they had possession of the whole bonded debt, to issue notes enough to supply the paper currency required in the United States, on a basis of United States bonds. They could not replace the legal-tender notes and silver certificates, let alone the gold certificates, if these forms of Government paper were retired. The increase in the amount of gold certificates, the only kind of paper

Digitized by Google

currency that is now increasing, indicates that there would be a field for the additional issue of National bank notes were there any profit on such notes at the present price of bonds. Gold certificates rose from 277 millions on January 1, to 307 millions on February 1, an increase of thirty millions in one month, and this is a very fair indication of the demand there is for additional paper money. If the banks were permitted to issue an asset currency, either as a substitute for or in addition to the present bond-secured notes, it is plain that the increase would be much more than thirty millions per month. Gold is forced into circulation through the issue of certificates of large denominations only because of convenience. If credit could be availed of for note issues, these issues would be used instead of gold certificates, and to a much greater extent.

The high price of United States bonds is largely due to their use as security for bank notes and deposits of public money. If the banks were permitted to issue an asset currency, and the bonds now held by them were thrown on the general market, there would be a fall in price. Too great a decline would cause serious loss to the banks and to other holders of these securities. It is easy to see therefore that a sudden change in the system of issuing bank notes, however desirable an asset bank-note currency might be when once established, would cause considerable loss to the banks. A gradual transition from one system to the other would probably maintain the price of bonds until those held by the banks could be absorbed by the general investment market.

It would seem, therefore, that the better way of introducing a credit bank currency would be by gradually raising the percentage of issue on the par value of the bonds. Of course the objection to this is that with every increase of circulation on a given amount of bonds the premium would rise. This would be the case were there no other limit on note issues. But when a bank has a supply of bonds sufficient to issue the full percentage to which it may be entitled on its capital, it would buy no more, and would soon begin to sell. As the bond basis required diminishes, the sales of the banks having an excess of bonds will supply the new banks. The premium would probably be subject to very slight changes if the process of change to an asset currency were conducted with due care. The premium, as the bonds were disposed of by the banks, would finally settle at a point determined by the general investment market. It would be an advantage to the Government in reducing the debt either by purchase or by refunding to have removed from the bonds the element of value arising from their use as security for bank notes and public moneys. This value was of advantage to the Treasury when it was making and funding the great loans of the Civil War, but it has now become an obstacle rather than a help.

Digitized by Google

Just how much of the premium the bonds bear in the market depends upon their use by the banks, would be difficult to determine exactly, as there are many other causes which go to make up the market value, and these causes have more or less force according to the changing conditions of the money market. The class of bonds chiefly held by the banks consists of the two per cents. These bonds have the advantage of a long period to their maturity, but at their present market price a lower rate is realized by the investor than on bonds of any other class. Out of a total of $324,031,280 of bonds held to secure circulation, $311,100,700 were two per cents, and $89,428,800 were deposited to secure public moneys, making a total of $400,529,-500 in two per cents held by the banks out of an aggregate issue, on February 1, of $445,940,750, or about ninety per cent. Of the fours of 1907 the banks held less than three per cent.; of the fours of 1925 less than two per cent. The premium on the two per cents is plainly due in great part to the bank demand. The defect in the realized rate as compared with other classes of bonds is made up by the profit on circulation and the use of public moneys.

It is probable that any sudden change from the present bank-note system to an asset currency would cause serious losses to the banks in their bond accounts.

THE DEPOSIT OF PUBLIC MONEYS in National banks without bond security is provided for in a bill which Hon. C. A. PUGSLEY, of New York, has introduced in the House of Representatives. This bill provides for the deposit of public moneys in excess of fifty millions of dollars, with National banks having a capital of $100,000, and a surplus of at least the same amount. In return for the deposits the banks are to pay interest of not less than two per cent., the deposits to be a first lien upon all the assets of the bank. The limit of deposit is to be fifty per cent. of the combined capital and surplus. This, in the case of a National bank with the minimum limit of combined capital and surplus, would be $100,000.

The interest rate in most parts of the United States would seem to insure the banks an ample profit on public moneys entrusted to them. It seems to be perfectly fair that in a bill of this kind there should be a provision approximately fixing the strength of the association to be entrusted with the public moneys, and taking the banks as they stand the accumulation of a surplus equal to the capital of $100,000 argues a long and careful management. The banks of smaller capital and surplus are not justly entitled to complain of their exclusion, because a limit of this kind seems to be absolutely necessary, and the bill puts it low enough if not too low. In fact the profit in sight from the use

Digitized by Google

of public moneys, if they could be obtained at two per cent., would in the sections where interest rates are high bring about the increase of capital and surplus for the very purpose of obtaining Government deposits, and this might lead to the deposit of public moneys in banks where it would not be convenient for the Treasury to avail itself of them. Of course under the bill the Secretary could control this matter by varying the rate of interest demanded according to the situation of the bank seeking to act as depositary. The consequence might be that there would be a bidding for the public moneys in which the highest rates would not always be offered by the most desirable institutions, in other respects. But any scheme that could be devised for using the National banks to relieve the Treasury from the accumulation of surplus currency must be open to complaints of insecurity or favoritism, to which there would be some degree of foundation. The only way in which insecurity could be avoided would be by confining the banks from which the Secretary might select depositaries to the strong banks in the money centers which guarantee each other mutual support. And to obtain security in this way would increase the complaints of discrimination. If all National banks, regardless of capital or surplus, were made equally eligible to be selected as depositaries according to their ability, there would be no foundation for the charges of discrimination, but the risk from insecurity would be increased.

It may be claimed that the deposit of public moneys with the banks of the centers would increase the accumulation of funds at those centers, already so great at times that dangerous speculation is encouraged. But this difficulty would probably not be much avoided by the distribution of deposits over a wider territory. The tendency of money to flow to the money centers would not be in any way affected by the wide distribution. The banks receiving the public moneys would send their reserves, as far as the law permits, and all temporarily idle funds to their city correspondents as they do now. The only way to prevent this would be to require the retention of a larger part of the bank's reserve in cash in its own vaults.

Perhaps a provision as to cash reserve would be a better criterion of the eligibility of a bank to act as a public depositary, than one of capital and surplus, alone; the capital and surplus might still be the criterion of the amount of the deposit. Thus it might be provided that any bank selected as a depositary of public moneys should keep, in addition to the required reserve on other deposits, the full amount of the required reserve on public moneys in cash in bank. The banks in the redemption cities of the first class now keep in cash reserves twenty-five per cent. of all their deposits, and under Mr. PUGSLEY'S bill they would keep one-fourth of the public moneys held by them in

Digitized by Google

cash. The banks in the redemption cities of the second class now keep in cash reserves twelve and one-half per cent. of all deposits in cash, and on public moneys they would retain one-eighth in cash as reserve. Banks outside of reserve cities now keep on hand in cash six per cent. of their deposits. On public moneys deposited with them they would retain only about one-sixteenth as a cash reserve. These figures are cited to show that unless some equalizing provision as to reserve were made, the fifteen per cent. reserve banks could afford to bid higher for public moneys than could banks in the reserve cities. Conversely, the banks in the reserve cities, although considered the stronger, could not afford to give so much for the public moneys as the banks generally considered weaker. If reserves on public moneys were equalized in the case of all banks, this discrepancy would be removed, and the banks having the greater real strength would have an advantage according to their strength. This would be to the advantage of the Treasury, and there could be no unfairness in requiring all banks to keep an equal reserve on public moneys.

As to the advisability of departing from the present requirement of bonded security, it is believed that it may be safely done, because it is probable that the percentage of loss of public moneys through the possible failure of some of the banks selected as depositaries would be more than offset by the interest received. It might possibly happen, or at least be conceived of so as to be urged as an objection, that after the Government had entrusted its funds to the banks, a panic might take place and temporarily deprive the Treasury of the use of its money. Most of the financial crises in recent years have been greatly aggravated if not entirely caused by the locking up of currency in the Treasury. This measure will remove that cause, and to that extent prevent the recurrence of money stringency. But under it also the Treasury still retains a working balance, too small to interfere with the free flow of currency, but large enough to meet a temporary emergency. The Treasury has also other resources, its large reserve funds of gold, which could be relied on in such a contingency.

THE EMPIRE OF JAPAN in shaping its financial system has tried many of the expedients in use in other countries, but after a short experience has either modified them greatly or discarded them altogether. Thus in turn Government paper money has given place to convertible bank notes ; the silver standard has given way to gold ; National banks (modelled on those of the United States) have been supplanted by a central bank of issue. The Bank of Japan is authorized to issue a large amount of uncovered notes, like the Imperial

Digitized by Google

Bank of Germany; but with this important difference: the tax on the excess issue in Germany is five per cent., while in Japan the tax is five per cent. or over. Thus if a five per cent. tax should not be sufficient to prevent an excessive issue, the Minister of Finance is given discretion to increase the tax to an extent that will prove effectual.

If an emergency circulation should ever be permitted in the United States, the tax might have to be adjusted to meet the varying interest rate in different sections of the country. A tax of five per cent. would no doubt cause the quick retirement of any excess in the Eastern States, but in some of the States where the normal rate of interest approximates ten per cent. it could not be very effective.

The objection, that a currency based upon commercial assets, or issued through clearing-houses on a deposit of such securities, would in ordinary times exhaust a resource that should be reserved for emergencies, can be deprived of most of its force by limiting the normal issue to fifty or seventy-five per cent. of capital, leaving a margin of twenty-five per cent. or more for emergencies. If this excess circulation were taxed on the Japanese plan, it would be retired in a reasonable time.

THE PROPOSALS FOR A CENTRAL BANK have never yet been put forth in definite form, most of the propositions that have been made being little more than tentative suggestions. It does not appear to be the intention of those who favor such a bank to have it modelled on the plan of the Bank of England. In fact, this ancient and respected institution, if it could be set down bodily in New York, would not do at all here. It has been strongly hinted by British authorities, too, that even in its own country the Bank of England is in some respects behind the times. A central bank in the United States on any such antiquated pattern could not succeed.

The banks of the United States meet every want of business here in ordinary times, and would do so at all times if they had the privilege of note issues. As banks of discount merely they have advantanges even over the boasted Scotch system, but these advantages of adaptability to their public under the various conditions arising in a developing country are offset by the fact that their small capital and want of firm bond of connection with each other make it dangerous to extend to them generally the privilege of an asset bank-note circulation. If an elastic note currency is to be realized, however, it must be based on assets and not on special security. It is not the large banks of New York and other money centres that stand in the way of improvement of the bank-note currency. They could be safely

Digitized by Google

enough entrusted with the privilege. The doctrine of equal rights for all banks under general banking laws stands in the way of giving the note privilege to some banks and withholding it from others, when they all alike are organized under the same law. In this dilemma a central bank has been suggested. As has been said, none of the suggestions have advanced to details. The idea, however, seems to be a bank which shall take up the business not now done by the existing banks. Holding Government moneys and issuing a note circulation for the whole country, as well as regulating the collection of checks in all parts of the country, are three things not accomplished by the existing banks. Another would be the regulation of gold exports.

Of course, no new institution can be conceived that might not interfere in some minor degree with existing business, and opposition from some quarter may be expected to any proposition that could be made. It is hardly to be expected that any central bank of this kind can be started except by legislative power. As there is as yet no proposition of this character before Congress it is plain the realization is yet distant. In the mean time the great city banks will no doubt continue to consolidate and join their forces to meet business wants as they arise, without the use of notes ~~based on assets~~.

If a great central bank should be established in the future, however, care should be taken to so limit its powers that it could in no sense become a monopoly or interfere with the existing independent banks, which, despite some imperfections, have been one of the prominent factors in the development of American enterprise. Experience seems to indicate that these banks are better adapted to the conditions prevailing in this country than a semi-monopolistic system of central banks with branches.

TRUSTS AND COMBINATIONS of capital are objects of popular dislike because of the general ignorance prevailing as to their character and objects. The veil of obscurity surrounding them is gradually being pushed aside, and as more light is thrown upon them the number of the citizens of the country who see in them a personal grievance calling for their abolishment by political methods is diminishing.

The formation of trusts undoubtedly threw out of employment a great number of men, and as this was done when times were hard, when new employment was difficult to obtain, a great outcry was the result. Many, if not most all of the trusts, were formed from motives of self-preservation on the part of the separate industrial plants entering into the combination. If they had not adopted this expedient these separate plants would many of them have perished and those

Digitized by Google

dependent upon them for employment would have been thrown out just the same. The formation of trusts, therefore, while the apparent cause of loss of work, was not so in reality. Back of this lay the lack of general prosperity which, unless the trusts had afforded some relief, would have brought about greater disaster in the labor market. This is beginning to be better understood, and with the increased demand for labor caused by better times there is not the same hostile feeling there was before. Politicians cannot secure as many votes on the trust issue as they could once. It cannot, however, be said that better times are altogether due to the trusts, with any more truth than it was said that the trusts were responsible for hard times. On the other hand, the general prosperity of the country has increased the competition which the trusts were formed to abolish, and it is from these new competitors that the continued hostility to these concerns chiefly arises.

To the great mass of people outside of those engaged in any one form of production, the competition between the trust seeking to control that production and competitors is a matter of little consequence. In so far as it has any effect the consumers of that product are benefited by lower prices. It is true that should the general prosperity diminish, the trust, having greater capital, could more easily destroy its competitors or absorb them. Nevertheless, the trusts do not desire hard times more than any one else, for although their endurance is greater, even their endurance has a limit, and necessity will compel them to endeavor to restore or at least wish for prosperity even if a new crop of competitors is started thereby.

It follows that a trust cannot raise prices beyond a certain limit fixed by the nature of the production and the natural laws and chance circumstances that surround it.

Another apprehension in regard to trusts is now springing up, and this is induced not by the fear that they will crush out competition, but that in their efforts to crush it they will overstrain even their great powers and perhaps collapse altogether, with widespread ruin to all who depend upon them and who have invested in their capital as a source of income.

It seems, therefore, that trusts are far from being the impregnable monsters they have been supposed to be, and that in a way they are subject to the same business vicissitudes as other smaller corporations. It would, however, be a great misfortune to the people of the United States, if through an ill-judged hostility to use of capital in this form, they should incite the powers of Government against them.

The United States has a great territory, and in many things it has been found of benefit to bring about equality of conditions in all parts of this territory. No greater boon to the people of the United States

Digitized by Google

was ever devised than the laws which insured that the paper currency should be of equal value in all parts of its boundaries. This currency may be imperfect in some respects, but its homogenity, as it is called, almost compensates for any other lack. In the same way it is of the very greatest importance that there shall be a virtual equality in the price of any given product of general consumption in every part of the United States. This insures an equal distribution of population and less crowding together at favored points than would otherwise take place, and makes it easier for every individual to earn a living. Without combinations of capital commensurate to the task, how could prices be as well equalized as they are? It is probable that consumers have been supplied with the articles they need through the trusts at prices which have but little change in any section. Without these combinations the distinction between rich and poor would have been much more pronounced than it now is. It is also not difficult to prove it was largely due to the trusts, after the panic of 1893, the country being full of manufactures, not to be easily disposed of at home, that foreign markets were found for these surplus productions, and our export trade built up within the last ten years to its present great proportions. It would have been impossible for individuals or for small corporations to have opened up these foreign markets within the time if they could have done so at all.

It is a mark of the effectiveness of the trusts in gaining and holding foreign markets, that they have excited the fears of foreigners lest the United States shall soon underbid them in their own markets. Our methods of production and distribution arouse not only fear but admiration, and France at least has sent men to study and learn them.

In fact, trusts, like all new devices, have wrought great changes, some of them at first sight seeming for the worse; but on the whole they have been necessary to the development of the country, especially to break the bonds which seemed to confine our industries to the home market.

If the United States takes the lead of other nations in the race for supremacy it will be largely by means of the concentration of her resources effected by the device of trusts. Too much interference by special legislation will in time restrict and ruin any industry. The publicity now advocated in regard to trust operations might safely be legally demanded when the prejudices against them are somewhat allayed. But publicity of incidents of trust management, in themselves innocent and necessary, at a time when the tide of popular prejudice against them was high and might easily have been augmented by the acts of demagogues, if enforced by law might have proved ruinous and postponed the prosperity of the last four or five years indefinitely.

THE CONDITION OF THE NATIONAL BANKS of the country on December 10, 1901, compared with the figures shown in September, and with those of December 13, 1900, indicates that the business of these institutions has greatly expanded during the last year—that the banks are evidently giving all the aid possible to the business interests, and that credit is freely extended. A comparison of the proportion of reserve to liabilities requiring reserves for several years shows that in December, 1896, the proportion was over thirty-two per cent., and it has diminished gradually until in 1901 it was about twenty-seven per cent. It is a natural but fallacious conclusion that the greater the proportion of reserve the stronger the banks. This proposition would be true only were a bank an institution merely for holding people's money until called for. Then it would be safer if it kept the money intact until it is called for. But as banks conduct all their operations on a basis of credit, the proportion of reserve is no real indication of the soundness of their condition. Should the reserves fall below the legal limit, while if this condition continued any length of time it would show that the provisions of the National Banking Law as to amount of reserve were violated, it would not even then show that business was unsafe. If loans were paid as they became due, and new and safe ones demanded further credits, the bank would still be safe enough. The live character of loans and the unchecked circulation of bank credits are surer signs of safety than the condition of the reserve.

In what are known as hard times, when credit is in abeyance, the proportion of reserves increases. In 1896, when recovery from the panic of 1893 had just commenced, the proportion of reserve was thirty-two per cent. With the advance of prosperity it has in five years diminished to twenty-seven per cent., and it will probably continue to decrease until it nears or even falls below the legal limit, as required in the several reserve cities. Nearing the legal limit means that the credit-issuing function of the banks as limited by law has been reached, and that if more banking facilities are required there must be new banks or increase in the cash resources of the existing ones. Panic and the locking up of bank facilities might as easily occur when reserves were in excess as when below the legal limit. The legal reserve would never save a bank were a run made upon it, nor would any reserve less than 100 per cent. In fact, the safety of the bank depends upon the condition of its loans.

But it must not be inferred that the legal provision requiring a cash reserve is not a very valuable one. If there were no such requirement it is greatly to be feared that the cash in many parts of the country would be reduced to such a low ebb that the movements of funds to move crops, etc., at special seasons would be more violent

Digitized by Google

than they now are. If banks were not required to hold a certain amount of cash, and to cease loaning unless this amount were held, much greater balances would be kept at the money centers and the danger of financial crises would be much enhanced. As it is this reserve requirement compels a much more even distribution of money in all parts of the country than there would be without it. Moreover, as the safety of the money market very often depends upon sentimental as well as on real conditions, the fact that a certain limit of reserve declared safe by law is not passed, is an assurance to the public that tends to prevent a diminution of confidence. The Comptroller of the Currency has recently expressed the opinion that as there have been several years of good business, a period of lesser activity must be approaching. This is a reminder based on the doctrine of chances, very proper in its place. Experience has shown that prosperity is followed by its reverse, but if men could be taught moderation, not to push things to extremes, these fluctuations could be very much diminished. At present it is apparent that the National banks are working as yet very well within their full power, and that they can go even further with safety, but it is just as well to exercise increased care with the increased speed.

WHAT IS THE SURPLUS FUND of a bank? This is a question of great importance in view of the tax imposed on capital and surplus by the laws of the United States. If this tax is repealed with the other war taxes it will still be necessary to have some authoritative definition of the term surplus in the law in order to settle in regard to the period the tax has been in force, whether the banks that claim that only the technical surplus distinct from undivided profits is meant, are right, or whether the claim of the collector of internal revenue, that the surplus subject to tax includes undivided profits also, is well founded.

In the case of the National banks at least it would seem that the law, not mentioning undivided profits, but surplus only, must have meant to tax the special surplus which a National bank is required to accumulate under the provisions of section 5199, of the Revised Statutes. Section 5199 provides that every National banking association may declare dividends semi-annually, but before the declaration of a dividend the bank must carry to surplus one-tenth part of its net profits for the preceding half-year, until by the accretion of these semi-annual installments the surplus shall amount to one-fifth of the capital stock. Section 5204 provides that if losses are experienced equal to or exceeding undivided profits then on hand no dividend shall be declared, and also that no dividend shall be declared from net profits until all losses and bad debts have been first deducted therefrom.

Digitized by Google

The item of undivided profits reported by banks represents usually the earnings of the period since the last dividend from which the expenses and losses of the same period have not yet been deducted. After these expenses and losses are deducted the item becomes net profits; out of these ten per cent. of the amount is carried to surplus, and from the remainder a dividend may be made. After the surplus reaches one-fifth of capi~~tal it need~~ not be further enlarged.

The National banking laws therefore specify undivided profits, net profits and surplus, and both net profits and surplus in excess of twenty per cent. of capital may, at any time the directors see fit, after deducting losses, be paid out in dividends.

It would therefore seem that to tax undivided profits of a bank, or even the surplus in excess of the maximum provided by law, would be the same as taxing dividends, and if it was desired to tax dividends the law would probably have so provided. It is, of course, true that as the section providing for semi-annual dividends is permissive only, many banks with the object of gaining strength voluntarily pass dividends and sometimes enlarge their surplus much beyond the maximum of twenty per cent. required by the Government. They sometimes merely let the item of undivided profits increase from year to year by declaring small dividends or none at all, merely charging off losses and bad debts semi-annually. This excess of surplus, as well as all net profits above losses and expenses and bad debts, the directors are at liberty to pay out in dividends, and they could avoid the tax by doing so.

The distinct terms in which surplus is defined in the National Banking Law, and the minute directions as to the use of undivided profits, and the further specification of net profits, would seem to make it certain that Congress, when it imposed a tax on surplus, had reference to the technical surplus defined in section 5199, which cannot be used for dividends. Of course, in the widest sense, the surplus of a bank means all its profits in excess of its capital stock, what would remain were the bank liquidated and its creditors, including stockholders, paid off; in other words, the rest, as it is called in English banking. But Congress has provided by law that a certain part of this rest shall be set apart by degrees until it equals five per cent. of capital, and like capital it cannot be diminished by dividends. This technical surplus virtually becomes the same as capital, and it is quite natural that when taxing capital the law should also tax this surplus, which is subject to the same rules as capital; that is, it can only be diminished by losses too great to be met by undivided profits, and when diminished below the twenty per cent. the building-up process must commence again before dividends can be declared.

In the case of National banks, therefore, the inference seems plain

Digitized by Google

that the undivided profits were not meant to be included in the taxation of capital and surplus, and no surplus in excess of the maximum of twenty per cent. provided for by law. In the case of banks other than National, what is meant by taxable surplus would depend upon the definition of surplus in the law under which those banks are organized.

THE LETTER OF SECRETARY SHAW in response to an inquiry from Congressman SULZER relative to the deposit of public money in banks furnishes a computation indicating that a change from the present system of requiring bonded security to one like that provided for in Mr. PUGSLEY'S bill, would result in a great gain to the Government. This computation is based on the experience of the Department under the National banking law. It was made by order of Secretary SHAW'S predecessor. If the Government had deposited all its surplus moneys, over $30,000,000, in the banks without bonded security, the first result would have been an accommodation to borrowers available to the banks of over $200,000,000. If interest at the rate of two per cent. in quarterly payments had been charged there would have been a gain of $32,000,000 to the Treasury. There seems to be one point on which the computation may be criticised. It is said to based on the assumption that the United States has a prior lien on the assets of a failed National bank for default in payment of public moneys. This seems to be incorrect.

The United States has a prior lien on the assets of a failed National bank to make good any deficiency in proceeds of bonds deposited as security for circulation, to redeem the notes outstanding, but the law provides for no other preference. This point was made clear in the case of the United States against the Receiver of the Cook County National Bank, decided by the United States Supreme Court in 1882. But after all it is of no importance, and we doubt whether the Government ought to have any preference over other creditors. The change suggested is merely from one form of security to another. The interest which the banks will pay under the changed system should be regarded as a safety fund from which such losses as may occur shall be made good. Under the old system the Government expected no profit, regarding the safety of the deposits as of supreme importance. Under the new system profit should also be regarded as of secondary importance, and the annual interest received should be invested in United States securities and held against possible losses. With this provision the change of system will be safe without any preference to the assets of the failed banks over ordinary depositors.

THE LEGAL-TENDER DECISIONS RECALLED.

The decisions of the United States Supreme Court in the legal-tender cases will probably be a topic of more or less continuous controversy; not that the constitutionality of the power of Congress to enact laws making paper money a legal-tender, either in peace or war, will be questioned. But the action of the court in first deciding one way and then immediately reversing its decision, has been the subject of so much unfavorable criticism, and the cause of so many conflicting reports, that differences of opinion as to the motives of this uncertain action will always exist.

To the straight-out advocate of a monetary system based on natural standards of value, the final decision of the court, that under some circumstances value can be given by a purely governmental fiat, is unorthodox and illogical; and that this can be done is apparently the outcome of the decision of the legal-tender cases. The decision, however, appears to have been necessary and unavoidable in 1872, although the subsequent decision as to legal-tender notes issued when the pressure of national necessity had passed does not seem so justifiable. At this late day and with the greater knowledge of monetary theory and practice in which the whole nation has been expensively educated, it can be conceived that the court might have reached a decision less sweeping in its character, that would have conserved the rights of contracts, prior to and during the war.

The aversion of sound money men to the decisions as they stand has been stimulated and enhanced because the doctrines enunciated by the Supreme Court have been used to bolster up and encourage the financial heresis of the past twenty years that have required so much effort and expense to counteract. Beyond doubt the arguments of the Supreme Court have given great aid and encouragement to the advocates of fiat money in all its protean forms. Many hard things have therefore been said about the legal-tender decisions. The tradition that they were brought about by a packed court will be more difficult to disprove than that the silver dollar was demonetized by the crime of 1873.

There has recently come to light interesting evidence in regard to the circumstances surrounding the reversal of the first legal-tender decision declaring the legal-tender laws unconstitutional. A memorandum signed by the five judges who reversed this first decision has just been published. Immediately after the legal-tender notes went into circulation they began to be tendered instead of gold and silver in settlement of contracts made when gold and silver coin was the only legal tender. These cases soon began to reach the Supreme Court, but the first one was not decided until the term of 1869-70. The court then consisted of eight members only, there being one vacancy. Of the eight judges one, Justice Grier, was old and infirm, and had in fact at the suggestion of his colleagues tendered his resignation in December, 1869, to take effect February 1, 1870.

There were several cases before the court involving the constitutionality

2

Digitized by Google

of the legal-tender acts. Even from the statement of the five judges mentioned, it seems more than probable that the parties to these cases were under an impression amounting to a belief, that the settlement of the question in one of these cases would be abided by in all, as ordinarily would be the result.

In some of these cases the United States was a party, represented by the Attorney-General, and therefore on the assumption that public policy required the constitutionality of the acts to be sustained, that officer was perhaps biased in favor of a rehearing.

The case of Hepburn against Griswold was the first decided. This was an appeal from the highest court of Kentucky deciding the legal-tender acts unconstitutional. The first vote in the conference of the eight judges, after three or four hours of discussion, stood four to four, which would have affirmed the Kentucky decision without settling the constitutional question.

After this vote the judges passed to the next case, also involving the legal-tender matter. Judge Grier, it seems, made some remarks, and in the discussion following became involved in such inconsistency with his previous vote that he was persuaded to change it. Having done so, the vote in Hepburn vs. Griswold stood five to three against the constitutionality of the legal-tender laws. The decision was announced February 8, 1870. In the meantime, on February 1, Judge Grier's resignation took effect, and on February 7 the names of Justice Strong and Bradley were sent to the Senate to fill the two vacancies in the court.

The circumstances of this change of vote by Justice Grier were strongly put in the rough draft of the memorandum prepared by Justice Miller, but a milder statement was substituted in the memorandum as signed by the five judges. In Justice Miller's statement there seems to be an insinuation that Justice Grier's impaired mental vigor was taken advantage of in some way to carry the decision in favor of the unconstitutionality of the legal-tender acts. Whatever may be thought of this, it seems plain from another part of the memorandum that Justice Grier had generally voted with the majority. It is recited that the minority—it must have consisted of Judges Miller, Davis and Swayne—had begged hard for delay in the decision of this case, until there could be a full court, but were voted down by the majority, which must have consisted of Justices Chase, Clifford, Field, Nelson and Grier. There was evidently some contention in the court, on the one side to gain by the position as it stood, and on the other to get strength from the filling of the vacancy. Messrs. Chase, Clifford, Nelson and Field would hardly have been so firm to have the case decided in the face of the protest of the minority if they had not counted on Grier's support. It is hardly to be doubted that both sides struggled for the political advantage. It is therefore probable that Grier was under some mental confusion when he made it a tie by his first vote, and that he really intended to vote the other way, that the subsequent discussion revealed his mistake, and that he then changed his vote, not on account of undue persuasion, but to correct his error. On any theory, however, the fact remains that his infirmity made him unfit to hold the casting vote on so important a question. Throwing him out altogether, the court stood four to three against the constitutionality of the legal-tender acts.

In a week after this conference, which appears to have taken place in December, every judge on the bench, so Justice Miller writes, authorized a committee to say to Justice Grier it was the unanimous opinion of his colleagues

Digitized by Google

that he ought to resign. Evidently the extent to which his age and infirmity told upon him was painful to his associates. What is surprising under this state of facts is not that a rehearing of the legal-tender question before a full court was deemed necessary by the minority, but that there should have been any opposition to this course on the part of the Chief Justice. It appears when the order allowing the legal-tender question to be heard, in other cases virtually amounting to a rehearing, was made by the full court after the nomination of Justices Strong and Bradley, the Chief Justice prepared a memorandum to file with the order, seriously reflecting, it is said, on the honor of the court. Hearing of this the five judges prepared the memorandum now published to file in refutation. Mutual knowledge of these preparations prevented the filing of either. After thirty-two years that of the five judges sees the light, although three of them only could have personally known what occurred at the conference when the case of Hepburn against Griswold was decided.

Perhaps the memorandum of Chief Justice Chase may, if resurrected, give some further particulars of this interesting episode.

The additional evidence furnished by the memorandum of the five judges will not convince to the contrary those who accept the tradition of the packed court, for there is enough to indicate that the filling of the existing and expected vacancy was kept well in mind by the whole bench. Both the majority and minority knew they would probably change places when the vacancies were filled. If Justice Grier could have been made to stick to his first vote, the minority would have gained all they sought to gain by delay.

In fact, until the other side of the story supposed to be contained in Chief Justice Chase's memorandum comes to light, it is impossible to say which side was most to blame in causing or accepting the bewilderment of Justice Grier.

MAINTAINING THE PARITY OF SILVER.—Hon. E. J. Hill, of Connecticut, has introduced the following bill, which has been favorably reported by the House Committee on Coinage, Weights and Measures:

A BILL to maintain the legal tender silver dollar at parity with gold, and to increase the subsidiary silver coinage.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized to coin the silver bullion in the Treasury purchased under the act of July 14, 1890, into such denominations of subsidiary silver coin as he may deem necessary to meet public requirements, and thereafter, as public necessities may demand, to recoin silver dollars into sudsidiary coin; and so much of any act as fixes a limit to the aggregate of subsidiary silver coin outstanding, and so much of any act as directs the coinage of any portion of the bullion purchased under the act of July 14, 1890, into standard silver dollars, is hereby repealed.

The Secretary of the Treasury is hereby directed to maintain at all times at parity with gold the legal-tender silver dollars remaining outstanding; and to that end he is hereby directed to exchange gold for legal-tender silver dollars when presented to the Treasury in the sum of five dollars or any multiple thereof; and all provisions of law for the use or maintenance of the reserve fund in the Treasury relating to United States notes are, in the discretion of the Secretary of the Treasury, hereby made applicable to the exchange of legal-tender silver dollars.

*THE PRACTICAL WORK OF A BANK.

BANKING RULES AND CUSTOMS.

IV.

The bank has certainly kept pace with the general march of improvement in the business world. To look back at some of the old ways of doing business, one wonders that the banks in former times succeeded as well as they did. Take, for instance, the old pigeon-hole arrangement of filing checks (and this is but one out of many cases) with the customers' names on the middle of a partition, deposit tickets on top and checks underneath. Now we have the modern metal boxes with partitions, which take up room only according to the number of checks you have, and not the number of checks you expect to have. With these partitions filled they take up only a third of the space of the cumbersome pigeon-hole rack.

A Word on Charging Checks.

In bookkeeping now most banks use the daily balance system. As the space allotted to each account is of necessity small, he is a good man, indeed, who can charge his checks each day, and be tolerably sure he has not made a mischarge. This is only one example of banking where a man has only his accurateness and keen eyesight to guard against errors. All banks desire to find their errors before being reminded of them by customers, and especially if the customer is a man with many sharp corners. The debits can be easily compared, and also the deposit tickets if each customer's tickets are kept by themselves. For this reason it seems to me that they should be so kept, rather than to band each day's tickets together as they are credited on the ledger. By comparing both, a mistake can easily be found, thus preventing any trouble that might arise over checks going back when the bank is in error.

Position of Banking Desks.

The banking desks should be arranged, of course, for convenience; but in the case of a country bank where the force is small, each bookkeeper's desk should be so arranged as to face the lobby. Let no man be out of sight. You never know when the crooks are going to pay you a visit, and the more men who can see customers enter, and those who are not customers, the wiser and better. Give a hasty glance at people entering, and if you are satisfied with their appearance, all right; if, on the other hand, you are not satisfied, keep your eye on them until they divulge their business. Being prepared for an emergency is nine-tenths of the battle.

The Receiving Teller's Cash.

If you are a receiving or paying teller, do not form the habit of allowing persons around your till. I know of a case touching on this point. One of

* A series of articles to be published in competition for prizes aggregating $1,050, offered by The Bankers' Magazine. Publication of these articles was begun in the July, 1901, number, page 18.

Digitized by Google

officers of a bank in —— had a friend that often came in to see him. One day a peculiar looking two-dollar bill came in over the counter; the teller was examining it, as to its worth. The young friend was standing near. That night his cash was two dollars short. Where the queer looking bill had gone nobody knew.

Another word in regard to the receiving teller's cash. I think this rule is in general practice; but knowing of one bank where it is not, I shall be justified in calling attention to it. The only safe way of counting deposits of actual cash running above two hundred dollars, is to cross the hundreds. Then when you have finished counting, run your fingers under each hundred, counting as you go. You are then absolutely sure you have the correct amount in hundreds. This leaves your bills in rather bad condition for banding; but it is better to spend a little more time and know you are right, rather than to throw out a hundred dollars in fives or twenty-five in ones, trusting to your ability to remember these.

Dealing with Stop-Payment Checks.

Too much care cannot be taken with memorandums stopping payment on checks. Have a small tablet, and enter on it all memorandums. Get a full description of the check as regards the number, amount, and to whom payable. Date each one when you receive it, so you can tell how long it has been before you. Six months is usually ample time to hold any memorandum. My experience has been that a very few checks of this description are ever presented.

The Petty Ledger.

I cannot recommend too strongly the practice of keeping a petty or inactive ledger. It relieves the depositors' ledger. Balance it once a month, at least. Carry an account in one of the depositors' ledger, debiting and crediting all the items. Foot up the petty ledger, and if the amount agrees with the depositors' ledger account, you have proved your work. Following is a sample sheet of the ledger:

Henry James Co

DATE	MEMO	DETAIL	DEBITS.	CREDITS	BALANCE.
Jan 2	Dep			1000	1000
5		500	600		400
8		100		700	1100
13			250		850

Notes Drawn with Interest.

Some tellers have a horror of seeing a note come in drawn with interest. It should be no harder to handle than if not drawn with interest. Simply add the amount of interest to the face of the note, and then deduct the discount. These notes are very few compared to the number that go through

Digitized by Google

a bank. They are almost always in payment of an actual obligation. Accommodation notes are seldom, if ever, drawn in this way. When days are to be considered, a little more time is necessary in figuring interest.

Importance of the Bookkeepers' Work.

The bookkeeper has a position ranking in importance next to the teller, but he has not the public to deal with as has the teller. He is the keeper of the records whereby the bank is to determine how much an account is worth. He is the keeper of the records that guide the bank in determining, to a great extent, how much accommodation a customer is entitled to. He is the keeper of the records that go a long way towards determining the personality, character, and business ability of the customer.

The bookkeeper should make it a point to become familiar with the customer's accounts. Watch his balance. Be able to tell whether it is small, or unusually large; or rather, be able to tell what his average balance is. Some people do not know how to do business with a bank. It becomes the bookkeeper's duty to look after a score of details, in the making out of checks, before charging. To know whether a certain check's signature is not a little different from usual, or in the case of one person keeping two accounts or more, and signing personally, where he should have signed company, or company, where he should have signed agent. He also has to keep an eye out for his own mistakes, as well as those of the bank's customers. I think it is an excellent plan to adopt some system of charging for keeping an account.

People do not realize how much work goes on inside of banks. They do realize how much more work an overdrawn account makes. In fact, there exists a great deal of hostile feeling, to-day, among the people of the United States, against banks.

Color, I think, is an important factor in regard to determining charging. Have no two customers heavily checking, near each other, using the same colored check. The larger variety of checks a bank has, within a reasonable number, for its customers to choose from, the better. I have known of wrong charges being made when the customer's check color has been changed, simply because the bookkeeper has associated a certain color, the color he has been used to, with a certain customer. The fact of his overlooking the different signature, shows how strongly the color idea was implanted.

A Universal Check.

I have always thought it would facilitate the exchanging of checks if banks would adopt a universal check, universal only as regards the position of the number and amount, size not making such a difference; but I think a limit should be put upon them in this respect. The best form for a check is shown on the following page.

This form, for convenience in charging, cannot be beaten. The amount and numbers can be seen by raising the top check and supporting it between the fingers, as is necessary in charging. Above all things, you would know at once where to look for the amount of each check, and I must confess that now-a-days, with our endless variety of checks, and check receipts, it takes some time to determine the amount.

We have no time in the banking business, or in any business, to be thrown away. As long as the world goes on, just so long will new forms for checks

appear. Perhaps there will be an improvement over our present check, but there will be one hundred failures to one good idea. The same applies also to check protection. It seems to me that danger from this source is somewhat magnified if a person uses care in filling out a check or draft. I recall an instance where only our own care probably saved us, or our New York correspondent, as the case may be, from loss. We gave a draft on New York to a stranger for one hundred dollars. We afterwards found out that the man was a crook, and had been getting checks in this way and raising them. He was not able to raise our check simply because we had used a stub in filling out the check. Simplicity won the day. The most simple things have revolutionized the world. During my experience of ten years, this comes the nearest to any of our checks being raised, and during this time none of our customers' checks have been tampered with.

To sum up, ordinary precaution, and the use of the perforator, I think sufficient. I think it is an excellent plan not to leave any blank checks on the public desk. Customers prefer to draw from their own check-book, and if a depositor wants to draw a check at the bank, and does not have his check-book, it is a simple matter to hand him a check. It is only throwing temptation in a man's way by keeping checks outside.

Regarding Cash Items.

Have as few of these on your cash book as possible. Protested checks have to be counted as cash very often; but if customers do not take care of them, charge them up after giving them a chance. I might make a suggestion that saves a great deal of time. When you have a great many cash items to be charged up, deduct all items not to be charged, from the footing, and transfer the amount to your listing-book. This saves listing a second time.

Regarding Deposit Tickets.

The deposit ticket plays a very important part in banking. Therefore too much care cannot be taken of it. It is the only evidence of credit a bank has. Therefore it should be filled out in such a way that there can be no question as to the amount, or to whose credit it should go. It is a good idea to check the silver. Silver of all items is very easily forgotten, or overlooked, being carried many times in a bag, or in the pocket, to the bank. If your silver is checked you know you have it. This will save much hunting in other places when one is short.

Digitized by Google

Mark the name of the towns opposite each check. This facilitates checking off, and at the same time is an excellent memorandum for a customer for future reference. Trouble is ever with us, and the fuller the memorandum so much easier will be the work of looking up items, in case of difficulty arising later.

IN REFERENCE TO SETTLEMENTS.

This is a question that has already attracted a great deal of attention. We want something more uniform than our present way of paying our indebtedness to other banks. The drift is all the while toward weekly settlements.

The time when this shall become general cannot come too quickly, in my opinion. As it is now most of us are being paid for our debits by the best arrangement we can make, or by the arrangements which we made ten to twenty years ago. Times have changed. The exchanges are much heavier now than then. The people generally throughout the country have more money to expend. This necessarily increases the banking business, and the old arrangements are becoming inadequate. Let us make modern arrangement in this direction, and I think it will be to the advantage of us all.

A NUTMEGGER.

BANKING RULES AND CUSTOMS.

V.

Vast were the improvements wrought in every field of operation during the century just closed. Fifty years ago our fathers and grandfathers were using the wooden plow and the reap-hook, whereas we have the steam cultivator and the self-binder. They had the flail and the treadmill; we have the electric separator and the great roller mills, with daily capacity of five thousand barrels. They used the hand-press; we have presses run swiftly by steam or electricity and the Mergenthaler machines for setting the type. And the sailing boats and steamers of a few decades ago were but as toys in comparison with our immense ocean liners.

But in no department of human effort has there been greater evolution than in banking practices and customs—not only as to the safe, expeditious and profitable conduct of the business, but as to the nature and volume of the transactions as well.

PROPER EQUIPMENT FOR EFFICIENT SERVICE.

Never in the world's history has there been as much stress laid on equipment as now; never were the managers of financial institutions so exacting as to the warp and woof and fiber of their office force; never were the habits, inclinations and characters of applicants for positions of trust as carefully analyzed. The time has come in fact when some of the greatest corporations on earth, employing thousands of laborers, absolutely refuse to employ men who are known to use ardent spirits as a beverage or tobacco in the form of cigarettes. Nineteen of the great railway systems prohibit drinking among their employees on or off duty. These and similar requirements were not instituted for the promotion of temperance societies, but business pure and simple was the object. Railroad officials have found that the man whose brain is filled with the effects of narcotics of any kind is not so safe and reliable as the one who does not indulge, other things being equal. Bank clerks and

Digitized by Google

officers should know these facts. They are elementary, to be sure, but the foundation must be solid if the building is to be secure.

Value of Character and a Good Name.

Character, then, is the substratum, the bed rock, the *magnum bonum*, without which no one can achieve success. The banker whose character is of the highest order, whose habits are in all things exemplary and who desires a good name rather than great riches, is on the royal road. Coupled with these traits, if he possesses the other attributes touched upon in this paper, and is withal not too proud to render to God the things that are His, then he is all right for this world, and for the life beyond, as well.

Bank Officers and Clerks Must be Educated.

What I have said as to equipment has been on the moral side, and that is indeed the greater side; yet I would in no wise minimize mental preparation. Without literary training one may creditably fill a position in an ore bank or coal mine, but not in a modern banking institution. It is almost superfluous to say that bank clerks and officers should be well educated. They should not only be familiar with the text-books, but should be also men of general information. The age in which we live and the advantages we have render ignorance inexcusable.

In an address delivered a short time ago in London by Mr. A. B. Hepburn, Vice-President of the Chase National Bank of New York, he stated that English is the language of commerce, and in this he is certainly correct. A classical education is not absolutely necessary to success in the banking business, but a thorough working knowledge of the King's English is indispensable. Good work demands good tools.

The David Harums Passing.

There have been, and are now, great bankers and financiers of limited education, judged by the standards of the college people, but when their intuition and keen insight into human nature are taken into account, they surpass many so-called professors of metaphysics.

But the banker of the David Harum type is passing, and twentieth century conditions are not favorable to the production of many such prodigies. David's moral courage and genuine antipathy to frauds and shams are commendable traits, but his buffoonery and horse-swapping proclivities and coarse jokes are not to his credit. His rugged honesty, however, and his helping hand to the down-trodden and oppressed cover a multitude of sins.

A Friend to His Bank.

When a banker is not a better friend to his own bank than to any other business institution on earth, his resignation should be handed in and will be, if he is an honest man.

Qualities That Make Up the Fully-Equipped Banker.

The qualities that go to make up the rounded banker are a part of his being, and come by growth and development in the field of action. They cannot be assumed or put on and taken off like a garment.

The successful banker is a freeman, is untrammelled and holds all people at a proper distance. He has but few "ifs" and "buts" in his vocabulary,

Digitized by Google

and has the back-bone to say no when it is necessary; makes few promises and fulfills to the letter every one made.

Indulgence in the frivolities of the day is not characteristic of the progressive banker. He has not the time nor the disposition to engage in wine-suppers, horse-racing, card parties and kindred amusements. Neither does he deal in futures nor participate in any other species of gambling. There may be successful men who do many of the things I have placed on the prohibited list, but the great bankers of the past and present have not been, and are not now, inclined that way. The custodians of the people's money must not only refrain from actual engagement in such practices, but must not cultivate a desire for such things.

The master of men and of finance must not weaken or yield to adverse influences, but must at all times be master of self and of the situation. And if the evil day comes, must still maintain his serenity of mind and steadfastness of purpose and be able to do the right thing at the right time. His latent powers must come into action and expand to meet the exigency.

But right at this point is the parting of the ways between the successful man and the failure. The one presses forward with all the energy of his soul, and rises in his might and overcomes the issues. The other weakens, falters and fails.

Each officer and clerk should know that his individual walk, his conduct in the bank and on the outside, his words, his deeds, his all, contribute and conspire to the making up of the bank's reputation and character.

Every-day Banking Law.

The bank is liable for damages if a customer's check is protested when he had funds in bank sufficient to pay same, but on account of error in posting or otherwise the bank's force had placed deposit to wrong account.

The bank is not liable for loss in paying raised checks where care was not exercised in drawing the check. Proper care is not used where checks are written with lead pencil.

The bank is liable for damage when it allows a note to be protested before maturity.

In finding date of maturity of a note drawn days after date, the actual days must be counted, and when drawn months after date, the time must be reckoned by the month.

Written words in the body of notes and checks prevail over written figures in margin.

Joint notes should read "we or either of us promise to pay," or "we jointly and severally promise to pay," etc.

Transferring or offering to transfer forged paper knowing it to be forged is a felony.

After maturity, all notes bear interest. Where a bill, payable after sight, is accepted by the drawee, its maturity must be reckoned from the date of acceptance, noted on the bill, and not from the date of the bill itself.

A check must be presented within a reasonable time after its issue or the drawer will be discharged from liability thereon to the extent of the loss caused by the delay.

Latest and Best Way of Doing Things.

The up-to-date banker is ever on the alert for improved methods. Labor and time-saving devices having merit soon find places in the progressive bank. Conservatism is one of the cardinal tenets of the profession, but there is no good reason why progress and conservatism should not go together.

With our present facilities for obtaining the best things the world has to offer, the bank that fails to keep step with the procession in point of modern conveniences will be lost in the fog.

Banking Practices Relating to Money, Negotiable Paper and General Dealings.

This comprehensive heading covers the banker's stock in trade, and would be an excellent text for a volume. But the average banker is not voluminous. The demands upon his time are many and inexorable. He is forced to concentrate. *Multum in parvo* is his motto.

Notes and Bills.

The vital part of a bank is its notes and bills, and this department demands and must have the most vigilant and constant care. Let it be taken for granted that every piece of paper in the bank has been carefully passed on by a trained and efficient discount committee, and such investigations made at the time of acquiring as were deemed necessary, yet as an additional precaution the bank with which I am connected has adopted the plan, even after notes have found lodgement in note cases, of sending out what we call verification notices. These notices are sent from time to time at the discretion of the Cashier, and it is probable that he will not think it worth while to send them on five per cent. of the paper handled. His good judgment must guide him here as elsewhere.

Verification Notice.

Dear Sir: We have received in regular course of business the paper listed below on which your name appears as indicated, and we would respectfully ask that you compare with your records, and if there is any disagreement in amounts, dates of maturity or otherwise, kindly advise us at once.

Date.	*Maker or drawer.*	*Payee or acceptor.*	*Maturity.*	*Amt.*
Sept. 6, '01............	John Doe	Sam'l Smith	Mar. 6, '02	$1,000
Sept. 20, '01...........	Wm. Lewis	John Doe	Apr. 4, '02	3,715

Very respectfully yours,

James Buchanan, *Cashier.*

Besides the bills receivable register, which must give a complete description of every item discounted, and the liability ledger, showing at a glance each customer's indebtedness, there are some minor points brought out in the illustration of John Rider's note (page 356), which are valuable aids to the Cashier and discount committee in determining what kind of treatment each individual maturing obligation should have. As will be noticed, the note is past due. The letter "B" on margin at upper left-hand corner indicates two renewals. If the letter "A" were there one renewal would be indicated, and "C" would show that paper had been renewed three times, and so on.

It is hardly necessary to speak of the importance of keeping track of the time notes have been running in bank, and the length of time can be pretty accurately approximated when the number of renewals is known. When ab-

No. 1714

Due Sept 3.

solute accuracy is needed, any item can be traced back through the records. But this cannot always be done at the time such information is wanted, and if it could be, much labor would be involved. The two small straight marks (") at lower right hand corner under the name of John Rider, Sr., indicate that two notices have been mailed. When a third notice is sent an additional mark is made.

Precautions to be Observed in Handling Money.

When a bank teller persists in carrying on conversations with customers on general matters while receiving or paying out money, he is ready for other work.

All funds and checks received by express or registered mail should be opened and checked off in the presence of two members of the bank's force. This is important.

General Dealings.

In the matter of general dealings arbitrary rules cannot be framed that will fit every case. The bank is a little world of its own and the inhabitants thereof must know their ground and be able to take care of the institution's interests, as cases arise. They must know what to do—and then do it.

There is much in knowing how to do things, but there is more in the ability to enforce and carry out what is known.

Points to be Observed to Safeguard the Bank's Interests.

Look out for forgeries, counterfeits, raised checks and suspicious characters, *and keep on looking out.*

If there is paper in the bank not collectible it must be charged off. It will not do to carry dead weight of any kind—neither in the shape of bills receivable, trifling clerks and officers nor otherwise.

When an item becomes worth less than one hundred cents in the dollar, it must be charged off. The records of the bank and the minute-book as well must show why such amounts were charged off, and later, if paid. The fact must be shown in the minutes at a regular meeting. This is much better than carrying a judgment account. It is not always practicable to avoid judgments, however.

There must be no appearance of littleness nor sharp practices in the bank's business. Everything should be open and above board.

Firmly but kindly refuse all demands or requests which you cannot feel safe in granting. Let prudence mark your every action.

Among the first things to learn is self-reliance. Props and supports cannot be depended upon. They only serve to make and keep one a helpless dwarf.

Date letters, checks, drafts, receipts, etc., on the day written. This rule to be invariable, for obvious reasons.

"Seest thou a man diligent in his business, he shall stand before kings."

James Buchanan.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

STOLEN PROMISSORY NOTE—RIGHT TO RECOVER ON.

Supreme Judicial Court of Maine, December 10, 1901.

SALLEY vs. TERRILL.

A negotiable security, stolen from the maker before it has become effective as an obligation by actual or constructive delivery, cannot be enforced by any subsequent holder, even though he acquired it in good faith and for value.*

STROUT, *J.:* This is an action to recover the contents of an order drawn by Charles E. Hurd upon the defendant, payable to the order of Harry Carter and by him indorsed to plaintiff. Plaintiff presented it to defendant for acceptance, which was refused. Defendant was engaged in a lumbering operation, and Hurd was in his employ. Among his duties was that of keeping the time of the men, and when one was discharged to draw an order on defendant for the amount due. Blank orders were furnished by defendant to Hurd for this purpose.

Plaintiff claims to hold defendant upon the ground that, as Hurd was the agent of defendant, authorized to draw orders of this kind, his signature was in law and effect the signature of defendant, and, thus being an order upon himself, it operated as an accepted order, or as a promissory note. That such would be its legal effect is conceded by counsel. (Bank vs. Joy, 41 Me. 568; Rev. St. c, 1, § 6, par. 21.)

Hurd testified, and his testimony is uncontradicted, that "he wrote the order simply as a matter of practice;" that he left it on his table at the camp "among some papers and other stuff;" that he was called away a few moments, and on his return he "took all the papers and everything, and burnt them up," and supposed the order was thus burned, but later, remembering the order, he asked Carter, who had been near when the order was written, if he had seen it while he was absent, and he said he had not; that the order did not represent the amount due Carter, and was not delivered nor intended to be delivered to Carter by Hurd, or by his authority. The inference is plain that the possession of the order by Carter was obtained wrongfully and by theft.

The order was drawn and dated November 14, 1898, and was purchased

---

*** This rule has probably been changed in those States which have adopted the Negotiable Instruments Law. That statute provides that "where the instrument is in the hands of a holder in due course, a valid delivery thereof by all parties prior to him so as to make them liable to him is conclusively presumed."**

Digitized by Google

by plaintiff December 17, 1898. Ordinarily, such lapse of time before presentation of a demand order would be sufficient to show that it was dishonored when plaintiff received it; but as it purported to be given to an operative in the forest, who might not be able to present it earlier, if there was evidence upon the point, the delay might not be regarded as unreasonable.

Waiving this point, the question recurs whether a negotiable paper, drawn and signed, but not delivered nor intended to be delivered to the payee, the possession of which is obtained by the payee by theft, can create a liability of the maker or drawer to a *bona fide* holder for value without notice. It is familiar law that one in possession of chattels by theft can convey no title to an innocent purchaser, but coin and bank bills are excepted from the rule. As to those, even if feloniously obtained, the holder can convey a good title to an innocent purchaser.

To favor commerce, the law makes an exception also as to negotiable paper, and permits the *bona fide* indorsee without notice to acquire title from a person who had none in himself. Where by fraud and without negligence one is induced to sign a promissory note under the representation and belief that it is a paper of another character, and delivers it to the payee, the innocent indorsee before maturity may recover of the maker. From the many cases supporting this doctrine that might be cited we refer only to Nutter vs. Stover, 48 Me. 166; Kellogg vs. Curtis, 65 Me. 59. So, when the maker of negotiable paper deposits it with a third party, to be delivered on a certain contingency, or for a specific purpose not apparent upon the paper, and such third party violates the trust, and wrongfully makes delivery, the *bona fide* indorsee before maturity, and without notice, may recover from the maker. But in all these cases the instrument was either delivered to the payee by the maker or by his agent, and came into his possession as a complete and executed contract.

In the case before us, where the order had never been delivered, and therefore had no legal inception or existence as an order, the question is whether there is any liability upon it to an innocent indorsee for value. As is said in Burson vs. Huntington (21 Mich. 415, 4 Am. Rep. 497): "The wrongful act of a thief or a trespasser may deprive the holder of his property in a note which has once become a note or property by delivery, and may transfer the title to an innocent purchaser for value. But a note in the hands of a maker before delivery is not property, nor the subject of ownership, as such. It is in law but a blank piece of paper. Can the theft or wrongful seizure of this paper create a valid contract on the part of the maker against his will where none existed before? There is no principle of the law of contracts upon which this can be done, unless the facts of the case are such that in justice and fairness, as between the maker and the innocent holder, the maker ought to be estopped to deny the making and delivery of the note." In that case the parties had partially agreed upon the sale by the payee of the note to the maker of certain territory under a patent right, for which a note was to be given with a surety. The note was made and signed in the maker's house in the presence of his sister. It was laid upon the table, the maker telling the payee not to touch it till he came back; and while he was gone the payee took the note, against the objection of the sister, and went off with it, without giving a deed of the territory or anything else for it, and negotiated it to plaintiff, before maturity, for value. It was held that plaintiff could

Digitized by Google

not recover. In District of Columbia vs. Cornell (130 U. S. 655, 9 Sup. Ct. 694, 32 L. Ed. 1041), negotiable certificates issued by the board of public works of the District had been redeemed and cancelled by the proper officer by stamping in ink across the face words stating such cancellation. They were afterwards stolen by a clerk, who had no duty or authority connected with their redemption or care, the marks of cancellation effaced by detersive soap and by pasting coupons over them, and then put in circulation. They were held invalid in the hands of an innocent holder. To the same effect are Cline vs. Guthrie (42 Ind. 227); Hall vs. Wilson (16 Barb. 548); Branch vs. Commissioners (80 Va. 427); Baxendale vs. Bennett (3 L. R. Q. B. 525). In the last case it is said that where the maker or acceptor has been held liable "he has voluntarily parted with the instrument; it has not been got from him by the commission of a crime. This undoubtedly is a distinction, and a real distinction. The defendant here has not voluntarily put into any one's hands the means or part of the means for committing a crime." That there must be delivery of the paper, either actually or constructively, is clear. Until then it has no existence as a contract. (Bank vs. Strang, 72 Ill. 559.)

Cases may be found apparently sustaining an opposite view, but an examination of them will show that peculiar facts existed, on which the decisions were based, and which do not appear here. Of such is Worcester County Bank vs. Dorchester and Milton Bank, 10 Cush. 490. There a bank bill, intended for circulation as money, and in a complete state of preparation for issue, had been stolen from the bank and the innocent holder was allowed to recover. But in the opinion it is suggested, though not decided, that a bank bill is not governed by the same rule as ordinary negotiable securities. Cooke vs. U. S. (91 U. S. 389, 23 L. Ed. 237), cited as an opposing authority, rests upon peculiar facts, unlike those presented here. Of this case, however, that court in a later case—District of Columbia vs. Cornell, *supra*—said, "We are not prepared to extend the scope of that decision."

We think that the weight of authority and the sounder reason is that a negotiable security stolen from the maker before it has become effective as an obligation by actual or constructive delivery cannot be enforced by any subsequent innocent holder.

It is urged that the case falls within the principle that, when one of two innocent persons must suffer by the act of a third, he who has enabled such third person to occasion the loss must sustain it. This maxim is mainly confined to cases where the party who is made to suffer the loss has reposed a confidence in the third person whose act has occasioned the loss, or in some other intermediate person whose act or negligence has enabled such third person to occasion the loss. It applies where the drawer or maker has intrusted the paper to a third person to be delivered in a certain event, not apparent on the paper, and it is wrongly delivered, or is sent by mail, and gets into wrong hands, as the party intended to deliver to some one, and selected his own mode of conveyance; or when the maker has himself been deceived by fraudulent acts or representations of the payee or others, and thereby induced to deliver or part with the note or indorsement, and the same is fraudulently obtained from him. And there may be such gross carelessness or recklessness of the maker in allowing an undelivered note to get into circulation as will justly estop him from setting up non-delivery,—as if he were knowingly to throw it into the street, or otherwise leave it accessible

Digitized by Google

to the public, with no person present to guard against its abstraction under circumstances where he might reasonably apprehend that it would be taken. Upon this principle Ingham vs. Primrose, 7 C. B. (N. S.) 82, was decided, where the acceptor tore the bill into halves (with the intention of cancelling it), and threw it into the street, and the drawer picked them up in his presence, and afterwards pasted the two pieces together and put them into circulation.

The case before us does not show negligence of this character. The order was drawn at the table of Hurd, and momentarily left there with other papers of his, to which no one had right of access, and from whence it could only be abstracted by a criminal act, which he could not reasonably anticipate.

Judgment for defendant.

BOND OF BANK OFFICER—DISCHARGE OF SURETY—FAILURE OF BANK TO NOTIFY SURETY OF OFFICER'S SPECULATIONS.

Supreme Court of the United States, January 6, 1902.

GUARANTEE COMPANY OF NORTH AMERICA vs. MECHANICS' SAVINGS BANK AND TRUST COMPANY.

Where the bond of a bank officer provides that the bank on becoming aware that the officer is speculating, shall at once notify the surety, a failure on the part of the bank to do so will release the surety from liability on the bond.

This was a bill in equity brought by the Mechanics' Savings Bank and Trust Company for the use of J. J. Pryor, assignee, against the Guarantee Company of North America, for an accounting and for a decree for the amount alleged to be due complainant on two bonds executed by the guarantee company to the bank, one insuring the latter corporation against such pecuniary loss as it might sustain by reason of the fraudulent acts of John Schardt, as teller and collector, and the other insuring the same corporation against pecuniary loss by reason of fraudulent acts committed by him in his office of Cashier.

One of the provisions in the bond was:

"That the employer shall at once notify the company on his becoming aware of the said employee being engaged in speculation or gambling, or indulging in any disreputable or unlawful habits or pursuits."

Mr. Chief Justice Fuller (omitting part of the opinion): The evidence showed that in the summer or fall of 1892 the Cashier of the bank was told that the teller was part owner in a concern engaged in speculative business; he at once informed the President of the bank, and also called Schardt's attention to the matter, who admitted that he had once been engaged in such a concern, but said he had sold out, and also that he had speculated to some extent, but had ceased to do so. The Cashier further testified that he afterwards received an anonymous letter that Schardt was speculating, and showed it to the President; that he spoke to Schardt about it; that the latter said he thought he knew the author, and asked for the letter, that he might bring the party before the Cashier and make him acknowledge that it was false. The letter was given him, but nothing came of it, although he was asked about it more than once. This conversation was reported to the President. A leading director and a member of the finance committee was shown by another director an anonymous letter to him, to the same effect, which

Digitized by Google

was reported to the President. The letter stated that Schardt was in partnership in a bucket shop. Schardt said it was a lie, and brought his partners before the President and the two directors, and they said that they had opened a brokerage association with Schardt, but that Schardt had sold out. This director subsequently heard again that Schardt was speculating and went to Schardt's house and interviewed him, and he said he did not own any stocks at all; he had sold everything he had. He heard this again shortly after the Cashier's bond was given, and Schardt again denied it. Complainant did not put the President of the bank on the stand.

In these circumstances was it the duty of the bank to notify the company of what it had heard?

In American Surety Co. vs. Pauly (170 U. S. 133, 144, 42 L. ed. 977, 982, 18 Sup. Ct. Rep. 552, 556), which was an action against the maker of a bond given to insure a bank against loss arising from acts of fraud or dishonesty on the part of its Cashier, the applicable rule was thus laid down:

"If, looking at all its provisions, the bond is fairly and reasonably susceptible of two constructions one favorable to the bank and the other favorable to the surety company, the former, if consistent with the objects for which the bond was given, must be adopted; and this for the reason that the instrument which the court is invited to interpret was drawn by the attorneys, officers, or agents of the surety company. This is a well-established rule in the law of insurance. * * * As said by Lord St. Leonards in Anderson vs. Fitzgerald (4 H. L. Cas. 484, 507) 'it [a life policy] is, of course, prepared by the company, and if, therefore, there should be any ambiguity in it, must be taken according to law, most strongly against the person who prepared it.' There is no sound reason why this rule should not be applied in the present case. The object of the bond in suit was to indemnify or insure the bank against loss arising from any act of fraud or dishonesty on the part of O'Brien in connection with his duties as Cashier, or with the duties to which in the employer's service he might be subsequently appointed. That object should not be defeated by any narrow interpretation of its provisions, nor by adopting a construction favorable to the company, if there be another construction equally admissible under the terms of the instrument executed for the protection of the bank."

But this rule cannot be availed of to refine away terms of a contract expressed with sufficient clearness to convey the plain meaning of the parties, and embodying requirements compliance with which is made the condition to liability thereon.

Whatever the common-law duty on the part of the employer to notify the guarantor of the fraud or dishonesty of the employee whose fidelity is guaranteed, the parties to this contract undertook to declare the duty of the bank to the company in certain specified particulars. It required that the employee should not have been guilty of previous default or dereliction within the knowledge of the employer. It provided for notification of any act of the employee which might involve a loss without unreasonable delay after the occurrence of the act came to the knowledge of the employer. And it required immediate notification on the employer becoming aware of the employee being engaged in speculation or gambling. The words "becoming aware" were manifestly used as expressive of a different meaning from having "knowledge."

Digitized by Google

In Pauly's Case, where the bond required that the company should be notified in writing "of any act on the part of the employee which may involve a loss for which the company is responsible hereunder, as soon as practicable after the occurrence of such act may have come to the knowledge of the employer," it was ruled that it had been properly held "that the surety company did not intend to require written notice of any act upon the part of the Cashier that might involve loss, unless the bank had knowledge, not simply suspicion, of the existence of such facts as would justify a careful and prudent man in charging another with fraud or dishonesty."

But the bond before us not only contained that clause, but the clause under consideration, which was a different and additional clause intended to secure the safety of prevention through timely warning.

It seems to us that the obvious meaning of "becoming aware," as used in this bond, is "to be informed of," or "to be apprised of," or "to be put on one's guard in respect to," and that no other meaning is equally admissible under the terms of the instrument. These are the definitions of the lexicographers, distinctly deducible from the derivation of the word "aware," and that is the sense in which they are here employed. It is used in the same sense in the Cashier's certificate on the renewals of the teller's bond.

To be aware is not the same as to have knowledge. The bond itself distinguishes between the two phrases, and uses them as not synonymous with each other. And, in view of the plain object of the clause, we cannot regard the words as equivalent to "becoming satisfied," though perhaps they may be to "having reason to believe." Even then these facts would have demanded investigation or notification, for we think the bank cannot be heard to say it did not have reason to believe that Schardt was speculating when it took his professions of repentance as sufficient assurance that he had ceased speculating, and turned its back on any independent inquiry or investigation. Our understanding of the provision is that what the company stipulated for was prompt notification of information by the bank in regard to speculation or gambling on the part of the employee. It was entitled to exercise its own judgment on that information, and had not agreed to rely on the bank's belief in that regard. It had the right to investigate for itself, whether the bank did so or not. Notification of the existence of reason for inquiry was exactly what the clause was intended to secure. The bank neither investigated nor gave the company notice of the information it had, and substituted its own judgment as to the value of that information for that of the company. In our view this conduct on its part amounted to a breach of the stipulation.

The Circuit Judge in his opinion said: "The language of the bond is that the employer shall report 'on his becoming aware of the employee being engaged in speculation.' Without now stopping to consider at length the meaning of the terms here used, I am of the opinion that, in the absence of fraud or bad faith, the failure to disclose the result of the inquiry made in this instance did not invalidate the bond as to the surety. Certainly speculation in a reasonable and substantial sense is meant, such in length of time or magnitude as would make it serious. This, when brought to the attention of the bank officials, was a past event and apparently in itself unimportant. The bank was under no duty by the contract or independently of it to actively institute or prosecute inquiries about Schardt, or to run down loose rumors or anonymous letters." (68 Fed. 459, 465.)

Digitized by Google

The circuit court of appeals said: "There is not the least evidence of any bad faith on the part of any of these officers of the bank, including Sykes, the old Cashier, in not making a disclosure of what was known, but only of bad judgment in not being more considerably affected by their information." (26 C. C. A. 161, 47 U. S. App. 115, 80 Fed. 781.)

These quotations show that the circuit court of appeals and the circuit court concurred in the opinion that if the President and directors had such confidence in Schardt that they did not feel called upon to make any investigation in view of the information that they had received, or to notify the company of that information, and were not guilty of intentional bad faith, then the bank could not be held to have violated the stipulations of the bond on its part.

As will have been seen, we are unable to accept this conclusion. The company's defense did not rest on the duty of diligence growing out of the relation of the parties, but on the breach of one of the stipulations entered into between them. The question was not merely whether the conduct of the bank was contrary to the nature of the contract, but whether it was not contrary to its terms. Engagement in speculation or gambling was what the company sought to guard against, because experience had admonished it of the probability that speculation or gambling would lead to acts involving loss of which it would be responsible. Bad faith, in view of the courts below, would not exist if the bank had such confidence in Schardt's integrity that it accepted his bare statement that he was not speculating as overcoming the weight of his admission that he had been. How anything but such a denial could be expected it is not easy to see, nor how careful and prudent men could have been justified in omitting independent inquiry.

The truth is that, in spite of strict supervision and the pursuit of the best systems of keeping accounts, there is always a risk of defalcation. The prevention of defaults or their detection at the earliest possible moment are of even more vital importance to financial institutions than to the guarantors of the fidelity of their employees. The provisions intended to protect the company in this case were not in themselves unreasonable, and, so far as they operated to compel the bank to exercise due supervision and examination and due vigilance, were consistent with sound public policy. We think it was the duty of this bank to have made prompt investigation, or, at all events, to have notified the company at once of the information that it had; and we decline to hold that the bank's misplaced confidence in Schardt affords sufficient ground for enforcing the liability of the surety company on the theory of good faith.

Our conclusion is that the failure of the bank in the particulars adverted to defeats a recovery on the teller's bond for defalcation after information of Schardt being engaged in speculation was received.

It also results that there can be no recovery at all on theCashier's bond. If the bank had observed the stipulation in the teller's bond to which we have referred, it is obvious that there would have been no Cashier's bond, and the question would not have arisen. But this it did not do, and the bond was given. The bond provided that the company covenanted with the bank in reliance on the statement and declaration of the President on behalf of the bank, and on the bank's strict observance of the contract; that any misstatement of a material fact in the declaration should invalidate the bond;

Digitized by Google

that the bank should use "all due and customary diligence in the supervision of said employee for the prevention of default;" "that any written answers or statements made by or on behalf of said employer, in regard to or in connection with the conduct, duties, accounts, or methods of supervision of the said employee, delivered to the company, either prior to the issue of this bond or to any renewal thereof, or at any time during its currency, shall be held to be a warranty thereof, and form a basis of this guarantee, or of its continuance."

Two of the questions and answers in the declaration were as follows:

Q. Have you known or heard anything unfavorable as to his habits or associations, past or present?—*A.* No.

Q. Or of any matters concerning him about which you deem it advisable for the company to make inquiry?—*A.* No.

In Pauly's Case the President and the Cashier were confederates in the dishonesty of the Cashier, for the purpose of defrauding the bank; and also it was held no part of the duties of the President under the circumstances there disclosed to certify to the integrity of the Cashier as he did. In this case the dishonesty was that of the Cashier alone; the statements were required to be and were made on behalf of the bank, and the President acted for the bank in so doing; and the bonds were procured by the bank, and the bank paid the premiums. There can be no doubt that the bank was responsible for the representations of its Cashier in the one instance and its President in the other in procuring these contracts of indemnity. The representations made in the declaration on which the Cashier's bond was issued were clearly misrepresentations. The teller's bond required notification if the bank were informed of speculation on Schardt's part. The President had heard of such speculation, and knew that speculating was something unfavorable as to Schardt's habits; and the President of course knew that the matters concerning him, of which he had heard, were such as it was advisable for the company to make inquiry about. True, the second question was if he had heard of matters about which he deemed it advisable for the company to inquire, and the word "deem" might be said to give a considerable discretion, but it was not a discretion to be abused. That the company would consider it advisable to make inquiry is too plain for argument. The whole tenor of the bond renders any other conclusion impossible.

We cannot regard the representations of the President as consistent with good faith, and he was not even called as a witness by the bank to explain his conduct, if he could have done so.

The decrees of both courts are reversed, and the cause remanded to the circuit court for further proceedings consistent with this opinion.

DEPOSIT OF TRUST FUNDS—PAYMENT OF TRUSTEE'S CHECKS.

Supreme Court of Pennsylvania, January 6, 1902.

PENNSYLVANIA TITLE AND TRUST COMPANY *vs.* REAL ESTATE LOAN AND TRUST COMPANY.

Where money is deposited in bank in the name of one person "as attorney for" another, the bank may properly pay out the funds on the checks of the attorney, unless it has notice from the beneficiary not to do so.

The judgment in this case was affirmed on the opinion of the court below, which was as follows:

Digitized by Google

McClurg, *J.*: The defendants in this case were doing a banking business, receiving deposits subject to check. Frank J. Fertig opened an account in the bank in the name of "Frank J. Fertig, Attorney for Anna Baumann." He checked against this account, signing the checks as the account was opened. The bank paid the checks, and the money in the account was thus paid out. After the death of Mrs. Baumann her administrator sued the bank, averring that the account as opened showed the money to be that of Mrs. Baumann, and that the bank had no legal right to pay it out on the checks of Fertig, attorney. The account did show that the money belonged to Mrs. Baumann. (Burger vs. Burger, 135 Pa. 499.)

It does not, however, follow that she alone had the right to check against it. The relation between a bank and its customer is that of debtor and creditor, but still it is not the ordinary simple case of one party owing another money. As is said in Patterson vs. Bank (130 Pa. 419): "A bank is an institution of a *quasi* public character, and when a bank, without legal cause, refuses to honor a check drawn upon it by a depositor, something more than a mere breach of contract is involved, and it is liable to the depositor for substantial damages. The agreement of the bank is to repay the deposits to the person who makes the deposit, or upon checks drawn by him. The bank can not set up an adverse title to defeat the claim of its own depositor." (Bank vs. Mason, 95 Pa. 117.)

When the law holds the bank to so strict a responsibility, it must, of course, adopt strict and certain rules by which the bank will know who is the "depositor." "A bank account, even when it is a trust fund, and designated as such by being kept in the name of the depositor as trustee, differs from other funds which are permanently invested in the name of trustees, for the sake of being held as such; for a bank account is made to be checked against, and represents a series of current transactions. The contract between the bank and the depositor is that the former will pay according to the checks of the latter, and when drawn in proper form the bank is bound to presume that the trustee is in the course of lawfully performing his duty, and to honor them accordingly." (Central Nat. Bank vs. Connecticut Mut. Life Ins. Co., 104 U. S. 54.)

It follows from this rule that in the present case Fertig was the depositor, and the bank, in the absence of notice of intended misappropriation, was bound to pay his checks, and hence will be protected in paying them. The designation of the party for whom the depositor is acting has its uses, as in case of an execution attachment, or an attempt by the bank to appropriate the money to the payment of an individual debt of the depositor. (See Bank vs. Mason, and Central Nat. Bank vs. Connecticut Mutual Life Ins. Co., *supra.*)

But, say plaintiff's counsel, under Kerr vs. Bank (158 Pa. 305), Mrs. Baumann was the depositor. We do not so understand the Kerr case. In that case the deposit was in the name of William Kerr, with the memorandum added, "by Varner Kerr." This indicated that William Kerr was both depositor and owner. In the present case the deposit is in the name of "Frank J. Fertig, Attorney for Anna Baumann." This indicates that, whilst Mrs. Baumann is the owner, Fertig is the depositor. Nor can it be said that, inasmuch as in each case a party not the owner actually opened the account, this is a distinction without a difference, or that there is nothing in it to put the

Digitized by Google

actual owner of the money on his guard. When one party intrusts another with money to be deposited in bank, we must assume that he will require the return of the pass book, showing the form of the deposit. In the Kerr case an examination of the pass book would have shown that the owner was the depositor, and that he alone had the right to check upon the deposit. In the case in hand an examination of this book would have shown that Fertig was the depositor, and, if the owner did not wish to trust him, it was her duty to have the form of the deposit changed, or at least to notify the bank not to pay Fertig's checks. A mere notice would have been effective, because the money was by the deposit identified as the money of plaintiff intestate. No notice was given that there was danger of misappropriation, nor does it even appear that there was any misappropriation.

RIGHT OF STOCKHOLDER IN NATIONAL BANK TO INSPECT BOOKS OF THE BANK—JURISDICTION OF STATE COURT TO ISSUE WRIT OF MANDAMUS.

Court of Appeals of New York, February 18, 1902.

IN THE MATTER OF THE APPLICATION OF GEORGE F. TUTTLE, *et al.* FOR A WRIT OF MANDAMUS TO ISSUE VS. THE IRON NATIONAL BANK OF PLATTSBURG.

The stockholders of a National bank in process of liquidation may in a proper case by writ of mandamus require the officers and directors to exhibit to them the books, papers and assets of the bank, and permit them to examine the same.

Such a writ may be issued by a State court.

PER CURIAM: This was an application by certain stockholders of the Iron National Bank of Plattsburg for the issuance of a writ of mandamus, directed to the said bank and to its board of directors and its officers, requiring them to exhibit to the petitioners the books, papers and assets of the bank, and to permit them to examine and to take extracts therefrom.

The application was opposed, and, after a hearing, the court at special term ordered that a peremptory writ of mandamus issue, requiring the President and Cashier of the bank in question to forthwith give a certified statement, showing the following facts, viz: "1. A description of all real estate owned or held by the Iron National Bank of Plattsburg, giving the location and a description of the title by which the said bank holds the same, with the place of record, etc. 2. A copy of all notes charged to the profit and loss account of said bank within three years last past. 3. A description of all other bonds owned and held by said bank. The above information to be furnished as herein required within five days after service of said mandamus."

Unless there be a question of the power of the court to grant the application, its discretion appears to have been lawfully exercised and will not be reviewed in this court. While the allegations in the petition, which bore upon the conduct, motives and management of the directors and officers of the bank, were denied in the answer made to the application, in full and express terms, certain of the allegations, with respect to the situation of the affairs of the bank and to the lack of definite knowledge concerning some material facts, were not put in issue. The charter of the bank had expired by limitation, and its affairs had been in the course of liquidation. Information as to the condition of the bank's assets and at the liquidation proceedings was refused, when requested by the petitioners, and they had no knowledge as to what had been done or was being done with the assets and property of the

Digitized by Google

corporation. The facts not in dispute were sufficient to justify the court in ordering the officers in charge of the bank's affairs to furnish information as to the description of the bank's assets to the extent set forth in its order. Such information was only what the stockholders were entitled to have in the situation of affairs. It could in nowise prejudice the liquidation of the bank, and its officers should not have refused to the stockholders the statements which they naturally desired and which, upon equitable principles, they were entitled to have concerning their distributory interests in the corporate properties.

With respect to the question of power, it might be sufficient to observe that no objection was made to the application upon that ground so far as the record discloses. Assuming, however, that the question is one that may be now raised, we think the jurisdiction of the court to have been ample for the purposes for which it was exercised. Under the National Banking Act (Sec. 4) National banking associations are "to be deemed citizens of the States in which they are respectively located, and in such cases the circuit and district courts shall not have jurisdiction other than such as they would have in cases between individual citizens of the same States." It has been held by this court, with respect to the question of jurisdiction over actions against National banks, that it has not been taken away from the courts of this State (Robinson vs. National Bank of Newberne, 81 N. Y., 385; Cooke vs. State National Bank of Boston (52 *ib.* 96–106.)

The principle upon which a stockholder is allowed access to the books of a corporation is as applicable to the case of a banking corporation as it is to any other kind of corporation. It is his common law right, and, unless restricted by law or by the charter, the exercise of that right will not be denied him, at a proper time and place, when the circumstances are such as seem to the court to make that right available. (Matter of Steinway, 159 N. Y. 250; Cockburn vs. Union Bank of Louisiana, 13 La. Ann. 289.)

The order appealed from should be affirmed, with costs.

LIABILITY OF DIRECTORS OF NATIONAL BANK—SUIT BY STOCKHOLDER—JURISDICTION OF COURT.

Supreme Court of Ohio, Dec. 3, 1901.

ZINN VS. BAXTER.

Where the directors of a National bank have violated the provisions of the National Banking Act, to the damage of the bank and its shareholders, and the bank fails upon request to bring an action against such directors for the recovery of such damages, an action may be maintained for that purpose by a shareholder.

Such action must be brought by such shareholder on behalf of himself and all the other shareholders, the bank must be made a party, the judgment must be in its favor, and the proceeds of such judgment will inure to the common benefit of all the shareholders alike.

Such action may be brought in a State court.

In such case a shareholder cannot maintain such action for his benefit alone while the bank is a going concern and has not been dissolved by proper action by the Comptroller of the Currency in a Federal court.

One who has been a shareholder in a National bank, but has parted with his stock, cannot maintain such action against the directors before the dissolution of the bank by proper proceedings in a Federal court.

Digitized by Google

BURKET, *J.* (omitting part of the opinion): It seems clear that the acts of omission and commission charged in the petition were in violation of the provisions of the National Banking Act, and sufficient to impose a liability upon such directors as participated therein or assented thereto, and that the plaintiff suffered loss by reason of such acts.

Whatever may be the case after a National bank has been adjudged dissolved by a Federal court, and gone into the hands of a Receiver, or after such Receiver has been discharged, it seems too clear for controversy that before such dissolution, and while the bank is open and carrying on its usual business, the loss caused by the wrongful acts of its directors is an asset of the bank, and that the bank may recover from such directors all damages which it may have sustained in consequence of such wrongful acts. Said section 5239 provides that, where the provisions of the act are knowingly violated by the directors, every director who participated in or assented to the same shall be held liable in his personal and individual capacity for all damages which the association, its shareholders, or any other person shall have sustained in consequence of such violation. As the directors are to be held liable for the damages which the association the bank, has sustained, it follows that they are liable to the bank for such damages, and that the damages are therefore an asset of the bank, and may be recovered by it in an action for that purpose; and if the bank brings its action, and recovers the damages, such damages inure to the benefit of all the stockholders by an increase in the value of their respective shares or the payment of increased dividends; and in such case the shareholders would have no right of action against the directors, for the reason that, while they may have been damnified in the first instance, such damages have been paid to their benefit, and they have no right to be compensated twice for the same injury; and the directors cannot be compelled to pay twice for the same wrong. In case the bank fails to bring an action against the directors for damages by it sustained, then, by the law of civil procedure, one or more of the shareholders may bring an action against the delinquent directors in behalf of himself and all the other shareholders, making the bank a party defendant. The action must be in behalf of all the shareholders, and not, as in this petition, in behalf of such shareholders as wish to become parties to the action. In such action the shareholder who sues cannot recover a separate judgment for himself for the damages he has individually sustained, but the judgment must be in favor of the bank for the full amount of damages sustained by all the shareholders combined; and the judgment when collected, must go to the bank, and inure to the equal benefit of all the shareholders, the same as if the action had been brought by the bank. (Smith vs. Hurd, 12 Metc. 371, 46 Am. Dec. 690; Allen vs. Curtis, 26 Conn. 456; Wallace vs. Bank, 89 Tenn. 630, 15 S. W. 448, 24 Am. St. Rep. 625; Thomp. Corp. §§ 4479, 7441, *et seq.*; Beach, Corp. § 587 *et seq.*; Mor. Corp. § 227 *et seq.*; Ang. and A. Corp. § 312; Smith vs. Poor, 40 Me. 415, 63 Am. Dec. 672; Craig vs. Gregg, 83 Pa. 19; Hodgson vs. Railroad Co. 46 Minn. 454, 49 N. W. 197; Southwest Natural Gas Co. vs. Fayette Fuel Gas Co., 145 Pa. 13, 23 Atl. 224; Pom. Eq. Jur. § 1095; Brewer vs. Boston Theater, 104 Mass. 378; Hersey vs. Veazie, 24 Me. 9, 41 Am. Dec. 364; Robinson vs. Smith, 3 Paige, 222, 24 Am. Dec. 212; Peabody vs. Flint, 6 Allen, 52; Greaves vs. Gouge, 69 N. Y. 154; Hawes vs. City of Oakland, 104 U. S. 450, 26 L. Ed. 827; Miller vs. Murray, 17 Colo. 408, 30 Pac. 46; Byers vs. Rollins, 13 Colo. 22, 21 Pac. 894.)

Digitized by Google

The above authorities are clearly to the effect that, while the bank is a going concern, and has not been dissolved, the action of a shareholder against the directors for damages for wrongful acts can be maintained only for the common benefit of himself and all the other shareholders, and that a single shareholder cannot maintain an action against such directors for his individual share of the common damages suffered by all the shareholders in consequence of the wrongful acts of the directors. And on principle the same rule must prevail when the action is brought, as this one was, under said section 5239. Whether a shareholder can maintain such action for his individual benefit after the dissolution of the association, need not now be decided, as the question is not involved in this case. As the action by a shareholder against the directors for damages before dissolution of the bank must be for the common benefit of all the shareholders, and as the judgment must be in favor of the bank for their common benefit, it follows that such action can be maintained only by a shareholder while he still owns his shares, because after he has parted with his shares he has no longer any interest in the proceeds to be derived from the litigation, as such proceeds must go to the bank for the common benefit of the then shareholders.

Counsel for plaintiff concede that, if the wrongful acts of the directors occurred before a particular shareholder obtained his shares, such shareholder cannot maintain an action against the directors for damages resulting from such acts; but they claim that a shareholder who has parted with his stock may maintain an action against the directors for damages arising from their wrongful acts while he was the owner and holder of his stock, and they cite a New York case to sustain their contention. The statute of New York under consideration in that case is different from said section 5239, in this: that it gives no right of action to the bank, but only "to the creditors and stockholders, respectively, of the corporation of which he shall be a director, to the full extent of any loss they may respectively sustain from such violation." This New York statute clearly gives a right of action against such directors to each creditor and to each stockholder for any loss that each one may sustain individually, and the judgment under that statute would not be in favor of the corporation, but in favor of the individual stockholder, and the proceeds would go, not to the bank, for the benefit of all the stockholders, but to the individual stockholder bringing the action, for his own benefit. The New York case—Mabey vs. Adams, 3 Bosw. 346—is therefore not in point. The same is true, and for the same reason, of Buell vs. Warner (33 Vt. 570).

But it is urged that at common law, and under the rules of equity, a shareholder may maintain an action against the directors for such damages as he has individually sustained by reason of the wrongful acts of the directors, even though the same acts damnified all the stockholders in the same degree as they did him, and even though the corporation is a going concern, and has not been dissolved. The error of this contention lies in supposing that the statute, the common law, and rules of equity may all be invoked in the same case, and that, where one may be found too narrow, the other may be called in to help out, and that the right of action is given partly by statute, partly by the common law, and partly by the rules of equity. The correct rule is that, as Congress has legislated upon the subject, and given and defined the right of action, the right thus given by Congress is the only right, and that the action must be maintained under the act of Congress or fail; and

Digitized by Google

that the liability of the directors of a National bank is measured by that act alone, and cannot be enlarged or changed by the common law or rules of equity.

In the case of Briggs vs. Spaulding (141 U. S. 132, 11 Sup. Ct. 924, 35 L. Ed. 662), which was a bill by a Receiver of a National bank against the directors for damages, as in the present case, the bill charged that, independently of the acts of Congress, the directors were liable as trustees for the bank, its stockholders and creditors, and upon the hearing this view was ably urged by counsel; but the Supreme Court of the United States ignored the claim, and disposed of the case in favor of the directors upon the provisions of the National Banking Act alone. The duty of directors being declared by that act, as well as their liability for the violation of that duty, it is competent to resort to the common law and rules of equity to ascertain whether such duty has been properly performed; and that was done in the above-cited case, but the court went no further. It is therefore clear that the common law and rules of equity cannot be invoked in opposition to the acts of Congress to enable a shareholder in an action like the one at bar to maintain such action against the directors after he has parted with his stock, and before a dissolution of the bank.

But it is further urged by counsel for plaintiffs that under the National Banking Act the plaintiff, having parted with his stock, is no longer a shareholder, and that he may now maintain his action against the directors in his capacity of "any other person," because the act provides that the directors shall be liable "for all damages which the association, its shareholders, or any other person shall have sustained," and that in an action by a person other than a shareholder the judgment must be in favor of such person, and not in favor of the bank, and the money, when collected, must be awarded to such person, and not to the bank. It is true that in an action by such person the judgment would be in his favor, and the money, when collected, would be awarded to him; and, if that was all, he might maintain the action.

But the words "any other person" in that section do not reach back and include shareholders, nor causes of action which have accrued to shareholders, but has reference to creditors and persons other than shareholders. And where a cause of action under that section has accrued to a shareholder in his capacity as such, and he has not availed himself of beginning an action against the directors before parting with his stock, he cannot thereafter change his cause of action from what it was when it accrued—a cause in favor of a shareholder—to a cause of action in favor of a creditor, or person other than a shareholder. The only cause of action against the directors which the plaintiff ever had was a cause as shareholder, and, having allowed that to go by without bringing his action, he now shows no cause of action in his favor in the capacity of "any other person." He slept on his rights until they were gone by reason of parting with his stock, and now his petition shows no cause of action in his favor.

It may well be doubted whether the demurrer, as to the first ground thereof, should have been sustained, because it is not a want of capacity in the plaintiff to sue, but the lack of a cause of action in him. We regard the principle stated in Buckingham vs. Buckingham (36 Ohio St. 68) as applicable. The principle is there stated as follows: "The objection that a cause of action for which the plaintiff sues was assigned before the commencement of the action does not relate to the capacity of the plaintiff to sue, but to the fact that the right of action sought to be enforced is not in the plaintiff. To warrant a recovery, the petition must show a cause of action in the plaintiff." It is clear, however, that the common pleas was right in sustaining the third ground of demurrer, as was also the circuit court in affirming the judgment.

Judgment affirmed.

TITLE TO DEPOSIT—REFUSAL TO PAY DEPOSITORS' CHECKS WHERE BANK HAS NOTICE THAT FUNDS BELONG TO ANOTHER.

Supreme Court of Illinois, December 18, 1901.

HANNA vs. DROVERS' NATIONAL BANK.

While, as a general rule, it is the duty of a bank to pay money on on deposit with it to the party in whose name it is deposited, yet where it has notice of the fact that the fund belongs to another, it may refuse to pay the same to the depositor.

WILKIN *C. J.* (omitting part of the opinion): This suit is in the nature of an action for slandering the credit of the plaintiffs as traders, and in order to maintain it they were required to prove that at the time the checks mentioned in the three first counts of the declaration were drawn and presented, they had on deposit funds belonging to them, unincumbered, out of which the checks should have been paid, and that the bank, by mistake or some other inexcusable conduct, refused to honor and pay the same; the theory upon which the right of action is based being that such conduct on the part of the bank would be calculated to bring into disrepute the credit and business reputation of the plaintiffs as trader.

No part of the fund in the bank upon which the checks were drawn belonged to plaintiffs. By their conduct in notifying the Iowa shippers to come on and claim the money which they admitted belonged to them, they refuted all right in themselves to draw checks upon that fund in favor of other creditors. Had the bank, with knowledge of the fact that the money belonged to Clemmer and others, paid it upon the checks drawn to Hess Bros. and others, it would have thereby aided and abetted the plaintiffs in perpetrating a fraud upon those parties; and whether it could have protected itself against liability for paying the money a second time or not is a matter of no consequence in this action.

It may be conceded that, as a general rule, it is the duty of a banker to pay money on deposit with it to the party in whose name it is deposited; but, where it has notice of the fact that the fund belongs to another, it may refuse to pay it to the depositor, and be compelled to pay it to the real owner. That is settled by our decision in the chancery suit *supra*. It was found in that decree (which finding was affirmed by this court) that all the material allegations of the bill and cross bills were proved; that the moneys there in question were trust funds, and the property of the complainants in that litigation; that the bank knew that fact; that the shippers were entitled to recover from the bank the total amount of said moneys deposited in the name of plaintiffs, with interest thereon.

The findings and decree in that suit are conclusive in this as to every material fact there found. "Whether the adjudication relied on as an estoppel goes to a single question or all the questions involved in a cause, the fundamental principle upon which it is allowed in either case is that justice and

Digitized by Google

public policy alike demand that a matter, whether consisting of one or many questions, which has been solemnly adjudicated by a court of competent jurisdiction, shall be deemed finally and conclusively settled in any subsequent litigation between the same parties where the same question or questions arise, except where the litigation is a direct proceeding for the purpose of reversing or setting aside such adjudication." (Hanna vs. Read, 102 Ill. 596, 40 Am. Rep. 608, and authorities on page 603, 102 Ill., and on page 612, 40 Am. Rep.)

If, at the time the bank refused to honor the checks and refused to pay over the balance on deposit to the plaintiffs, it had placed its refusal upon the ground that the money belonged to Clemmer and others, and that it was its legal duty to pay it to them, there could have been no possible grounds for the present action, because the decree in the court of chancery not only found that the money did belong to those creditors, but compelled the defendant bank to pay it to them.

We are clearly of the opinion that the fourth count presents no valid cause of action, in any view of the case. In the first place, as we have seen, the plaintiffs had no right to the money. Secondly, how this action can be maintained for a refusal to pay over the money on deposit upon a mere parol demand by the depositor, we are unable to perceive. The plaintiffs, it is true, might by such refusal sustain loss and be greatly embarrassed, but there would be no slander of their credit,—no publication of their drawing checks to customers when they had no funds on deposit, which is the gist of the action for a refusal to pay checks.

CONDENSED LEGAL DECISIONS OF INTEREST TO BANKS.

ACTION ON CHECK—LIABILITY OF BANK—ESTOPPEL.

In an action brought by the payee of a check against the bank on which it was drawn, and in which the maker had sufficient funds when payment was demanded, but which funds had been garnished in an action against the maker, it is held that on the admitted facts defendant bank is estopped to deny its liability for the amount of the check.

Rostad vs. Union Bank of St. Paul, 88 N. W. Rep. (Minn.) 848.

APPLICATION OF DEPOSIT.

A bank may appropriate money on deposit to the payment of a debt to itself by its depositor, where it holds from the depositor a special mandate to that effect.

Succession of Gragard, 30 So. Rep. (La.) 885.

CASHIER'S CHECK—COUNTERMAND—INDORSEMENT—CONSIDERATION—PAYMENT—GAMING DEBT—RECOVERY BY INDORSER.

A Cashier's check, being merely a bill of exchange drawn by a bank upon itself, and accepted in advance by the act of its issuance, is not subject to countermand, like an ordinary check, and the relations of the parties to such an instrument are analogous to those of the parties to a negotiable promissory note payable on demand.

Digitized by Google

Both under elementary principles of the law of contracts and by the provisions of section 59 of chapter 100 of the Civil Code (Rev. Codes 1899), the title of an indorser of a negotiable note is defective when the consideration for the indorsement is unlawful, or where the indorsement is procured by unlawful means.

Payment of a negotiable instrument, to effect a discharge, must be made to the rightful holder or his authorized agent; but the mere possession of such an instrument indorsed by the payee in blank is *prima facie* evidence of the holder's right to demand and receive payment, and payment to such holder will discharge the instrument, when made in good faith, and in ignorance of the facts which impair the holder's title.

Under the statutes of this State gambling is expressly prohibited. It is accordingly held, that the indorsement and delivery of a Cashier's check by the payee to a gambler in payment for chips to be used in a gambling game does not make such gambler a holder in due course, and his title so acquired is defective.

The rule that courts of law and equity will leave the parties to prohibited transactions where their unlawful acts have placed them, so far as the same are executed, does not authorize an indorsee, who has procured the indorsement of a negotiable instrument in a gambling transaction, to rely upon the indorsement so procured, either against the indorser or the maker of the instrument. Neither will prevent the payee of the instrument which has been so indorsed from enforcing payment against the maker, for the obvious reason that the contract which the latter enforces is not tainted with the unlawful transaction.

The plaintiff in this action seeks to recover on a Cashier's check issued to him by the defendant, which check he indorsed and delivered to a gambler in payment for chips to be used in playing a roulette wheel. The check was thereafter paid to the gambler by the defendant. We find there is substantial evidence in the record to sustain the finding of the jury that the defendant had notice of the defect in the gambler's title prior to making such payment, and therefore hold that it was not error for the trial court to overrule defendant's motion for a new trial, based upon the insufficiency of the evidence as to notice.

Drinkall vs. Movius State Bank, 88 N. W. Rep. (N. D.) 724.

CHECKS—OPERATIONS—PAYMENT—LIABILITY OF BANK—REVOCATION OF CHECK—BURDEN OF PROOF—RIGHTS OF PAYEE.

Where a bank or depositary pays a valid check by which a depositor assigns a portion only of his deposits, it is not liable to the depositor or to his administrator therefor.

A check given for a valuable consideration, and operating as a *pro tanto* assignment of the funds of a depositor, may be paid by the bank or depositary without liability to the depositor, either before or after the depositor has attempted to revoke the check and has given notice thereof to the bank, as such check cannot be revoked.

The banker, in case of payment after notice of such attempted revocation, has the burden, as against the depositor, of showing that the check operated as a valid assignment, though the check itself, before such notice, would be ample protection to the bank.

Digitized by Google

The payee of a check given for a valuable consideration, and operating as an assignment *pro tanto* of the defendant's funds, cannot impose on a non consenting depositary bank, by notice or otherwise, any duty to protect the payee's equitable rights, or prevent the bank or depositary from paying out the funds of the depositor, either in whole or in part, to others, as the depositary may refuse to consent to a partial transfer of the fund.

Raesser vs. National Exch. Bank of Milwaukee, 88 N. W. Rep. (Wis.) 618.

BANK DEPOSITS—FRAUDULENT WITHDRAWAL BY THIRD PERSON.

In an action by a bank to recover money withdrawn from a third person's deposit by defendant's intestate, the depositor denied intestate's authority. The Cashier testified that he did not remember the representations made by intestate; that intestate had the pass book, and receipted for the money. He and another witness testified to different conversations in which the depositor said that intestate could use his money, but these conversations were denied by the depositor. The bank's answer in a suit against it by the depositor averred intestate's authority to draw the money. Depositor could not read English, but could read certain numerals. He deposited money after the withdrawals by intestate, but denied having seen the charges against him on the pass book. Held, sufficient to show want of authority and fraud on intestate's part in drawing the money.

A Cashier and Assistant Cashier of a bank are not parties to an action by the bank against an administrator, within Code Civ. Proc. § 1880, subd. 3, so as to be incompetent as witnesses.

City Sav. Bank vs. Enos, 67 Pac. Rep. (Cal.) 52.

DEPOSITS—RIGHT TO CHECK.

Where F opened an account in the bank in the name of "F, attorney for B," he is the depositor; so that the bank may pay checks so signed by him without liability to B, having no notice of F's intended misappropriation.

Pennsylvania Title and Trust Co. vs. Real Estate Loan and Trust Co. 50 At. Rep. (Pa.) 998.

DIRECTORS OF NATIONAL BANK—VIOLATION OF NATIONAL BANKING ACT —ACTION BY SHAREHOLDER—PARTIES—JUDGMENT.

Where the directors of a National bank have violated the provisions of the National Banking Act, to the damage of the bank and its shareholders, and the bank fails upon request to bring an action against such directors for the recovery of such damages, an action may be maintained for that purpose by a shareholder; but such action must be brought by such shareholder on behalf of himself and all the other shareholders, the bank must be made a party, the judgment must be in its favor, and the proceeds of such judgment will inure to the common benefit of all the shareholders alike. Such action may be brought in a State court.

In such case a shareholder cannot maintain such action for his benefit alone while the bank is a going concern and has not been dissolved by proper action by the Comptroller of the Currency in a Federal court.

One who has been a shareholder in a National bank, but has parted with his stock, cannot maintain such action against the directors before the disso-

Digitized by Google

lution of the bank by proper proceedings in a Federal court. Whether he can do so after such dissolution is not involved in this case, and is not here decided.

Zinn vs. Baxter, *et al.* 62 N. E. Rep. (Ohio) 327.

DRAFT—FRAUD OF CASHIER—RECOVERY FROM PAYEE.

A Cashier of a bank under its by-laws had power to sign drafts in favor of the bank on its correspondent. There was no rule of the bank forbidding him to obtain drafts for his own use, and he had been allowed to overdraw his personal account. Held, that where he paid for personal property, when his account was overdrawn, with a draft on the correspondent of the bank, payable to the order of the vendor, and signed by him as Cashier, and fraudulently entered the draft at a sum much less than its face, the bank could not recover the difference from the payee of the draft.

Campbell vs. Upton, 73 N. Y. Supp. 1084.

INDIVIDUAL DEPOSIT—PARTNERSHIP DEBT TO BANK—SET OFF.

A bank may apply a deposit to the payment of a debt which it holds against a firm of which the depositor is a member, or may, when sued for the depost, plead the firm debt as a set-off.

Owsley vs. Bank of Cumberland, 66 S. W. Rep. (Ky.) 33.

LIABILITY OF BANK HOLDING DRAFTS FOR COLLECTION.

Where bills of lading for two cars of wheat were attached to drafts, and forwarded to a bank for collection, and paid, no liability attached to the bank where the quality of the wheat was found not to be as warranted.

Commerce Milling and Grain Co. vs. Morris, *et al.* 65 S. W. Rep. (Tex.) 1118.

MISREPRESENTATION—KNOWLEDGE OF FALSITY—EVIDENCE—SUFFICIENCY—LIABILITY OF BANK.

An insolvent engaged in a business supported by Government contracts was largely indebted to a bank, and the Cashier thereof, having knowledge of such facts, stated in reply to a request by plaintiff, who was contemplating selling goods on time to the insolvent, to enable him to continue business, that the contract of the insolvent was all right, and advised plaintiff to accept the insolvent's note, and stated that it would be paid. The Cashier afterwards made similar statements to plaintiff, both before and after the maturity of the note. The continuance of the insolvent in the business was apparently the only manner in which the bank could make its debt. Held, sufficient to warrant the inference that the representations were made by the Cashier for the benefit of the bank, as the plaintiff's action in acting on the representations would increase the assets of the insolvent.

The misrepresentations by the Cashier being for the purpose of increasing the assets of the bank's debtor, and thus to aid the bank in collecting its debt, the bank is liable for damages resulting to the plaintiff by reason of such misrepresentations, as the collection or securing of indebtedness due the bank is within the scope of the authority of the Cashier.

The fact that the sale of goods to the insolvent did not eventually result

Digitized by Google

in any profit to the bank did not relieve it from liability for damages resulting from the misrepresentations of the Cashier.

Taylor vs. Commercial Bank, 73 N. Y. Supp. 924.

PRESENTATION OF DRAFT—NEGLIGENCE—ACTION—AGENCY—EVIDENCE.

Where in a suit by partners against a bank to recover for bank's delay in presenting a draft, it appeared that the draft was drawn by the partners to the order of one of them, and indorsed by him individually for deposit in a bank which sent it to defendant for collection, and on its return unpaid the first bank charged it back to his account, and one witness stated that the bank to which the draft was first given was the agent for the partners, but his attention was not directed to the matter of ownership as between the firm and the individual partner, the evidence was insufficient to show plaintiffs the owners of the draft.

Where a draft payable to plaintiffs was indorsed for deposit and delivered to a bank, which then indorsed it to its own order "for collection," and it was sent to defendant bank, defendant bank could not be held for delay in presenting the draft, on the theory of an agency for plaintiffs, inasmuch as the first bank undertook the collection, and as between it and defendant the first bank was the owner, and the second its agent alone.

Morris, *et al.* vs. First Nat. Bank of Allegheny, 50 At. Rep. (Pa.) 1,000.

SURETY COMPANIES—CONSTRUCTION OF EMPLOYEE'S BOND—DUTY OF EMPLOYER TO NOTIFY COMPANY OF SPECULATION BY EMPLOYEE MISREPRESENTATIONS IN EMPLOYER'S DECLARATION.

The rule that two constructions of a bond executed by a guarantee company to secure a bank against defalcation by an employee, the one favorable to the bank, if consistent with the objects for which the bond was given, must be adopted, cannot be availed of to refine away terms of a contract expressed with sufficient clearness to convey the plain meaning of the parties, and embodying requirements, compliance with which is made the condition to liability thereon.

The failure of a bank, upon its officers being told that its teller was speculating, to notify at once the guarantee company which was on the teller's bond of such information as it had, will defeat recovery on such bond for defalcation after the information was received by such officers, where such bond provided that the bank should at once notify the company on its "becoming aware" that the teller was engaged in speculation or gambling.

Negative answers by the President of a bank to the questions in a statement or declaration, in reliance on which a guarantee company executed a bond insuring the bank against defalcation by its Cashier, "Have you known or heard anything unfavorable as to his habits or associations, past or present?" "Or of any matters concerning him about which you deem it advisable to make inquiry?"—when he had heard that such employee had been speculating, will defeat any recovery on such bond, which provided that any misstatement of any material fact in the declaration should invalidate it.

Guarantee Co. of North America vs. Mechanics' Savings Bank and Trust Co. 22 Sup. Ct. Rep. (U. S.) 124.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B., Barrister, Toronto.]

BILL OF EXCHANGE—SIGNATURE MADE UNDER MISTAKE—HOLDER IN GOOD FAITH.

BANQUE JACQUES CARTIER vs. LELANDE (20 Quebec S. C. R. page 43).

STATEMENT OF FACTS: This was a suit brought by the Banque Jacques Cartier against the defendant for the sum of $430.20 due on a bill of exchange at twelve months, accepted by the defendant, to the order of Mahan & Company and by them assigned to the plaintiff bank. The defendant pleaded in answer that he had never signed the bill sued upon, and if he had signed it he did so by mistake and intending to sign merely an order for agricultural implements.

JUDGMENT (Langelier, *J.*): The signature having been denied under oath by the defendant the onus is upon the plaintiffs to prove it affirmatively, and this they have not satisfactorily done. But the evidence leaves no doubt that the defendant if he signed this bill at all did so under mistake, and in the belief that he was signing an order to Mahan & Co. for the delivery of certain agricultural implements. In the conversation preceding the signing of whatever was signed there had been no mention of the defendant signing a bill, and he was not to assume any responsibility whatever; certain agricultural implements were to be sent to him on his order and he was to return those he did not wish to buy. This disposes completely of the plaintiff's case.

A bill of exchange is a contract and the consent of the parties is essential to it as to all other contracts. If by reason of mistake or otherwise a person who does not intend to sign a bill of exchange does in fact sign one, it is completely null and void—the contract is non-existent.

It was urged on the part of the bank that the defendant by negligently putting his signature to what was to all appearances a valid bill of exchange, made it possible to effect a fraud upon the plaintiff bank, and that he should be liable in an action in tort. It is unnecessary to decide upon this point, as the action is framed upon the contract and not in tort, and the moment the contract is shown to be void the action based upon it fails.

PARTNERSHIP—LIABILITY FOR CHECKS SIGNED INDIVIDUALLY.

RICHARDS vs. THE BANK OF BRITISH NORTH AMERICA (Vol. 8, British Columbia Reports, page 209). (On Appeal to the full court.)

This is an appeal from the judgment reported in THE BANKERS' MAGAZINE for January, page 46, where the facts are set out. On the appeal, however, the following further facts were submitted to the court. The account of Richards & Riley in the bank's ledger was headed as follows: "Richards & Riley, partners, Ernest Ward Richards and Molly Riley—both to sign," and the pass book for this account was headed "The Bank of British North America in account with Richards & Riley," and the deposit slips read, "Place to the credit of Richards & Riley."

JUDGMENT: From all these facts and those set out in the previous report of the case, the court concluded that there was no individual liability in the two partners who signed the checks individually, and that the whole course

4

of dealing was with the partnership only. The counsel for the bank argued that as by taking the proper steps to secure judgment they might issue execution against both Richards & Riley individually, they should be at liberty to set off the partnership debt against the account standing to the credit of Richards' account. The law of lien, however, does not give a banker a lien on the funds or securities of a partnership nor a debt due by a member of the partnership, and *vice versa* the bank cannot claim a lien on the funds of an individual member for the debt of the partnership. The principle of set off can be applied only where there are mutual debts, that is to say, debts between the same parties and in the same right. Inasmuch as the bank's error in crediting the partnership with $200 too much resulted in Richards individually paying partnership debts to that amount, the order of the trial judge by which the plaintiff was deprived of costs was varied—the appeal was dismissed with costs in the appeal and below.

BANKS AND BANKING—BANK ACT, SEC. 46—INSPECTION OF CUSTOMER'S ACCOUNT—EVIDENCE IN JUDICIAL PROCEEDING—PRIVATE LIABILITIES —IMPEACHING—COMSIDERATION OF PROMISSORY NOTE.

RE CHATHAM BANNER CO., RE BANK OF MONTEAL'S CLAIM (Divisional Court, Ontario Law Reports, Vol. 2, page 672).

STATEMENT OF FACTS: One N. F. Ford was the manager of the Chatham Banner Co. and he and the company had accounts in the same agency as the Bank of Montreal. A large number of notes were from time to time discounted by the bank, the proceeds of some of them being placed to the credit of Ford and of others to the credit of the company.

The company went into liquidation, the bank filing a claim for $1,335.36, which included a number of notes made by Ford and endorsed by the company. The liquidator showed that number of notes made by Ford and indorsed by the company had been charged at maturity to the company's account by the direction of Ford and that renewals of these notes formed part of the bank's claim. In order to get at the facts of these transactions, the liquidator desired to refer to Ford's private account with the bank, but the Master in Ordinary declined to allow him to do so under section 46 of the Banking Act of 1900. This was an appeal to the Divisional Court from that ruling.

JUDGMENT: In the opinion of the court the learned Master in Ordinary was in error. The section of the Banking Act referred to comes under the heading, "Annual Statement and Inspection," and reads as follows: "Books, correspondence and funds of the bank shall at all times be subject to the inspection of the directors; but no person who is not a director shall be allowed to inspect the account of any person dealing with the bank."

The intention of the clause was probably to do away with the right which a shareholder in the bank, as a *quasi*-partner might possibly have asserted under the general law of companies of inspecting the accounts of the banking company. But whatever its intention may have been, it certainly cannot enable the bank to refuse to disclose its transactions with one of its customers, when the propriety of those transactions is in question in a court of law between the bank and another customer who attacks them, and shows good cause for requiring the iuformation he seeks. The court had no doubt that the liquidator was entitled to a production of Ford's account with the bank

Digitized by Google

and to the documents and information necessary to explain the entries found in it so far as they bear on the claim of the bank against the liquidator.

With regard to the other questions, there is nothing to prevent the liquidator, who stands in the place of the company, from impeaching the consideration for the notes offered in proof by the bank, just as the company itself might have done, but no further.

Prima facie, the notes are evidence of a liability for their amount from the company to the bank, but this *prima facie* case may of course be impeached by showing defects to the knowledge of the bank, as by showing that the bank was aware that a note signed by the company and discounted by it was to be made by Ford to cover the amount charged to the company's account in respect of Ford's personal liability.

Periodical acknowledgments given by Ford as manager of the company of the correctness of the company's account, as set forth in the bank book, cannot be set up as a bar to an inquiry into the account, where specific errors are charged in it to the knowledge of the bank.

BILL OF EXCHANGE—CONDITIONAL DELIVERY—NOTICE—INNOCENT HOLDERS—BILLS OF EXCHANGE ACT, SEC. 21, SUB-SEC. 3.

ONTARIO BANK vs. YOUNG (Ontario Law Report, Vol. 2, page 761).

STATEMENT OF FACTS: This was a motion for judgment on a promissory note under the circumstances mentioned in the judgment.

JUDGMENT: The defendant in his examination admits the making of the note, and says that he made it and left it with the officers of the Consolidated Pulp and Paper Co. to be used by them in procuring an advance from the plaintiffs, the payees of the note, for the purposes of the company, and that the note was deposited with the plaintiffs by the officers of the company as security for past advances instead. It is not alleged that the defendant was induced by any fraud to make the note, or that the officers of the company acted fraudulently towards him. He alleges in his statement of defence only only that the plaintiffs took the note without consideration. He does not allege notice to the plaintiffs of the terms on which he delivered the note to the officers of the company.

In my opinion, no defence is shown to the note ; notice to the plaintiffs is not even alleged, and the onus of making out his defence is upon the defendant. Where a bill is no longer in the possession of a party who has signed it as drawer, acceptor or indorser, a valid and unconditional delivery by him is presumed until the contrary is proved.

There will be judgment for the plaintiffs for the amount of the note, with interest and costs, including the costs of this motion.

BILLS OF EXCHANGE—ALTERATION—JOINT AND SEVERAL LIABILITY—PRINCIPAL AND SURETY—JUDGMENT.

BANQUE PROVINCIALE VS. ARNOLDI (Ontario Law Report, Vol. 2, page 624.)
(In the Court of Appeal.)

STATEMENT OF FACTS : Appeal by the defendants other than King Arnoldi, from the judgment at the trial.

The defendants, E. C. Arnoldi, E. D. Arnoldi, and H. L. Bowie, who carried on business in partnership under the name of the Citizens' Exchange and

Digitized by Google

Loan Agency, discounted paper under that name with the plaintiffs to the amount of nearly $5,000. As collateral security for the accommodation a note for $5,000 was given to the plaintiffs, made by these defendants in their individual names and by the defendants H. W. Bowie, King Arnoldi, Kirby and St. Jacques. This note fell due on May 10, 1899, the debt of the Loan Agency to the plaintiffs being then $4,800, and a new note for that sum made by all the defendants except King Arnoldi, was then given to the plaintiffs. The plaintiffs contended that they had reserved all rights upon the $5,000 note, and claimed payment as against all the defendants. The defence was that the $5,000 had been made void by the insertion in it by the plaintiffs' manager without the knowledge and consent of the defendants, of the words "jointly and severally" before the words "promise to pay," though these words had afterwards been cancelled by him; that the $4,800 note was signed upon the condition known to the plaintiffs, that King Arnoldi should also sign; and, as to the defendants E. C. Arnoldi, E. D. Arnoldi, and H. L. Bowie, that the plaintiffs had taken jugdment against them for the same debt upon the note made by them in the partnership name.

The action was tried at Ottawa on October 31, 1900, before Street, J., who held that the $5,000 note had been made void by the alteration, but that the $4,800 note had been taken by the plaintiffs in good faith and without knowledge of the condition, and could be enforced against all the defendants except King Arnoldi. He also held that as to King Arnoldi the plaintiffs did not better their position by falling back on the original consideration, as that was a loan to the agency company only.

JUDGMENT: I am unable to agree with the finding of the learned trial judge that the manager of the bank at the time he took the $4,800 note made by all the defendants but the defendant King Arnoldi did not observe the absence of the defendant King Arnoldi's name from it, and that such absence was not called to his attention by the defendant E. C. Arnoldi from whom he received it, for I think that the weight of evidence is the other way, and I think the proper conclusion of fact to be that he was told by the defendant E. C. Arnoldi that the defendant King Arnoldi had not signed it, and that he was induced to take it by the assurance of the defendant E. C. Arnoldi that the defendant King Arnoldi would subsequently sign it.

Whatever may be thought of the evidence of the defendant E. C. Arnoldi in this regard standing alone, I cannot ignore the corroboration of it by the defendants H. W. Bowie and Kirby, more especially as the evidence of the defendant Kirby was not contradicted by the manager, and to this must be added the fact that the manager was taking this note as a renewal of the $5,000 note, which it would not have been without the signature of the defendant King Arnoldi.

This note, therefore, when given to the manager was, to his knowledge, an incomplete instrument, and being such no recovery could be had upon it by the bank, the defendant E. C. Arnoldi having no authority to deliver it to the bank until it was signed by the defendant King Arnoldi, it having been signed by the parties who signed it upon the distinct understanding that it was not to be used until all the defendants had signed it, and having been handed after it was so signed to the defendant E. C. Arnoldi upon that understanding. (Awde vs. Dixon, 6 Exch. 869.)

But even if this finding of fact by the learned judge is to stand, there-

Digitized by Google

could be no recovery upon this note against the defendants who were sureties, for the manager of the bank, when he took this note, took it not as an original note but as a renewal of the $5,000 note made by the defendants, of whom the defendants E. C. Arnoldi, E. D. Arnoldi and H. L. Bowie were, under the name of the Citizens' Exchange and Loan Agency, the principal debtors and the other defendants were their sureties, as the manager of the bank well knew, and in taking this note as a renewal of the original note the manager of the bank was bound to see that it was in truth a renewal of it, and that it had the signature to it of the defendant King Arnoldi; and having taken and used it as he did without his signature, the bank must suffer for his neglect and not the co-sureties of the defendant King Arnoldi, and it must be held that such his act and neglect released such co-sureties from their liability upon this note, and the bank cannot fall back upon the $5,000 note and recover against the defendants upon it, because as to the defendants King Arnoldi, Kirby, H. W. Bowie and St. Jacques the note had been avoided by alteration made in it by the plaintiff's manager, whatever his intention may have been in making that alteration.

CHECK—CONVERSION—CROSSED CHECK PAID INTO CUSTOMER'S ACCOUNT FORGED ENDORSEMENT—CREDIT GIVEN TO CUSTOMER BEFORE CHECK CLEARED—CHECK CROSSED BY COLLECTING BANKER—DRAFT BY ONE BRANCH OF A BANK ON ANOTHER

GORDON *vs.* LONDON CITY AND MIDLAND BANK (1902 2 K. B. 243).

STATEMENT OF FACTS: Plaintiff employed one Jones who had authority to open letters and put checks, etc., aside, but not to endorse them. Between August, 1895, and March, 1899, Jones stole from his employer's letters many checks and bank drafte which he endorsed with the plaintiff's name and his own, and paid into his own account at the Sparbrook agency of the defendants. Gordon kept his account at the Birmingham branch of the defendant bank. As soon as the checks were received by the defendants the amounts of them were placed to Jones' credit, and at the same time the defendants crossed the checks, "The London City and Midland Bank, Ltd., Sparbrook, Birmingham, to Head Office, London." The checks drawn on defendants' own bank were collected by the ordinary bookkeeping process of debit and credit at their head office.

The jury found against negligence on the defendants' part in taking the checks, and it was admitted that they acted in good faith.

JUDGMENT: The elaborate judgment of the court of appeal may be thus summarized:

Bankers are entitled to the protection of section 81 of the Canadian Bills of Exchange Act, 1890, reading as follows:

"Where a bank, in good faith and without negligence, receives for a customer payment of a check crossed generally or specially to itself, and the customer has no title, or a defective title thereto, the bank shall not incur any liability to the true owner of the check by reason only of having received such payment;" only in cases where they receive payment of a crossed check as agents for collection for a customer. They are not entitled to that protection where they receive the check under such circumstances as to constitute them holders of it on their own account. Therefore, where bankers

Digitized by Google

credit a customer with the amount of the checks and allow him to draw against the amount so credited before the checks are cleared, they are not entitled to the protection given by this section.

The section applies only to checks which are crossed before they come into the banker's possession, and the bankers cannot by afterwards crossing the check themselves become entitled to its protection.

A banker's draft addressed by one branch of a bank to another branch of the same bank is not a check within the meaning of the Bills of Exchange Act.

Payment to one branch of a bank by another branch of the same bank is sufficient to bring the case within section 78 of the Canadian act (sec. 79 of English act) which enacts that when a bank on which a check crossed generally pays the same otherwise than to a bank, it shall be liable to the true owner for any loss he sustains thereby.

In the result the defendants were held liable for such of the checks paid to Jones as were:

(a) Drawn on banks other than themselves to the plaintiff's order and not crossed when received by the defendants.

(b) Drawn on banks other than themselves payable to bearer and not crossed when received by them; and were not otherwise liable.

REPLIES TO LAW AND BANKING QUESTIONS.

COMPUTATION OF INTEREST.

Editor Bankers' Magazine: GRAND RAPIDS, Mich., February 18, 1902.

SIR: In 1890 I purchased a mortgage for $1,100, which had been running one year. It provided for annual payments on the principal of $100 and seven per cent. interest, payable annually. Payments were made promptly until the debt was reduced to $900. Then interest was kept up for the next year, and since then no payments have been made. The mortgagor is about to sell out and will want to pay me, but raises a point about computation of interest. Please tell me how interest should be computed. The mortgage originally was for five years, and has just been allowed to run. INVESTOR.

Answer.—You can compute interest on all unpaid interest up to the maturity of the mortgage note ; then all back interest, together with the principal, constitutes the debt due and owing, and on this amount you compute simple interest to the date of payment.

CASHIER'S AUTHORITY.

Editor Bankers' Magazine: CINCINNATI, O., February 16, 1902.

SIR: The President and Cashier were the active managers of the C bank. A debtor of the bank proposed a compromise to the Cashier, the debtor's other creditors, two banks, agreeing to compromise if the C bank would. The President consenting, the Cashier wrote to one of the other banks, stating that the C bank accepted the compromise. Soon afterwards the President and Cashier changed their minds, and, when the debtor tendered the indorsed note and check agreed upon, the Cashier refused to accept them, and repudiated the agreement. In the meantime the debtor had settled with the other banks. The question I desire to ask is, can the C bank be held to its agreement by the debtor and the other banks?

G. W. NEILSON.

Answer.—If there is no contention that the Cashier exceeded his author-

Digitized by Google

ity, his authority can be presumed, and the agreement is a valid composition agreement from which the C bank cannot retreat after the other banks have acted upon it.

FRAUD ON PART OF CASHIER.

Editor Bankers' Magazine: LOUISVILLE, Ky., February 12, 1902.

SIR: I left with a bank for collection a note payable by the Cashier of that bank. I afterwards wrote to the Cashier asking him to remit the amount by draft to my brother in New York, and to cancel the note. He remitted the draft, but instead of applying it in payment of the note he charged it to my account. I know that the President knew the contents of my letter, as well as that the Cashier sent the draft, and also that the Cashier had on deposit sufficient to cover same. I had no notice that the draft had been so charged until some time later when I left my bank book for posting. Now the Cashier is insolvent. Can I hold the bank liable for the amount charged to me? R. K.

Answer.—Yes, most certainly.

LIABILITY OF BANK FOR ACT OF TELLER.

Editor Bankers' Magazine: ELKHART, Ind., February 17, 1902.

SIR: I presented to the teller of E bank a check dated ahead. It was after banking hours. The teller who sometimes received deposits in the absence of the receiving teller promised to pay the check when due, and enter it as a deposit to my credit. The Cashier was in the bank at the time of the transaction and knew of the understanding. On the morning of the day the check was payable the drawer's deposit was sufficiently large to pay it, but was exhausted by the payment of other checks during the day, and the check I deposited was protested for non-payment. Am I obliged to take up this check and lose the deposit? PAYEE.

Answer.—No; the teller acted as agent for the bank, and the bank is liable.

BANK SECURITIES—ATTACHMENT.

Editor Bankers' Magazine: IOLA, Kansas, February 17, 1902.

SIR: Mine owners indebted to a certain bank made their note, and executed a deed of trust to the bank's Cashier, to secure the indebtedness. The note was not paid at maturity, and without the payment of any money to him or to the bank, and without authority, the Cashier released the deed of trust, and two other papers were executed between the parties. One was an absolute deed of the property to the Cashier; the other, an agreement whereby he was to work the mines till the indebtedness of the bank was paid from the proceeds, and certain amounts paid to the grantors, after which he was to become the absolute owner. Subsequently a creditor attached the property as belonging to the bank. Will the attachment hold? ADJUSTER.

Answer.—No, we think not. From what you say it is not conclusive that the bank adopted the contract of the Cashier, and, even if it attempted to do so, the agreement to operate the mines would have been *ultra vires.*

INDIVIDUAL INTEREST OF PRESIDENT IN LOAN.

Editor Bankers' Magazine: BELOIT, Wis., February 26, 1902.

SIR: The directors of a railroad company made their personal promissory note, payable to the order of J, who was one of the makers, and the president of the company, and was the President of the bank to which the same was transferred. The note was given in renewal of others upon which money had been obtained for the company purposes. By an agreement between said directors and a third party the latter agreed to pay this note and release the makers from all responsibility. J, the President of the bank, was present, and consented to such agreement. Under these circumstances has the bank released the directors so that it must look to the third party named for the payment of the note, alone? J. C. W.

Answer.—No; the bank is not affected by the agreement, the President being liable on the note could not act for the bank so as to release himself.

PRIVITY OF CONTRACT.

Editor Bankers' Magazine: EVANSTON, Ill., February 9, 1902.

SIR: A city bank, upon receiving a deposit for transmission to a country bank for the use of the depositor, transferred the same to the city correspondent of the country bank for ac-

Digitized by Google

count of the latter, but without stating that the same was to be credited to that bank for the use of the depositor. On the day of the deposit the country bank failed, and notified its city correspondent thereof. Was there such a relation between the depositor and the city bank to which the deposit was transferred as would allow a recovery by the former against the latter? SHIPPER.

Answer.—We think not.

DILIGENCE IN DETECTING FRAUD.

Editor Bankers' Magazine: KNOXVILLE, Tenn., February 15, 1902.

SIR: A customer intrusted funds to a bank's bookkeeper to be carried to the bank and deposited. The bookkeeper entered the amounts on the ledger to the customer's credit, but did not pay the money to the receiving teller, nor was the amount entered in the teller's cash book. When the customer's bank book was balanced the amount of the supposed deposit was entered therein, and checks against it were paid. Subsequently the bookkeeper absconded, and the bank claimed that he had never deposited the money, but had embezzled it and made a false entry in the ledger; and it thereupon brought suit for the money paid on overdrafts. Was the bank not so negligent in discovering the fraud as to release the customer from all liability? A. C.

Answer.—It does not appear from anything in your question but that all the usual and customary methods of detecting fraud were used, and these must be accepted as sufficiently diligent. The customer adopted an irregular way of making his deposits over which the bank was not bound to establish a special system of inspection.

REPRESENTATION OF BANK.

Editor Bankers' Magazine: AUGUSTA, Me., February 13, 1902.

SIR: M, the managing officer of a Savings bank, carried on a banking business in his own name in the same room with the bank, receiving deposits, etc. A deposited with M, receiving certificates of deposit in the name of M therefor. M failed and went into bankruptcy. A has proved his demand on the certificates against M's estate, and received a dividend thereon. He now desires to disaffirm his contract with M and recover the amount of the deposit from the bank. Can he accomplish this? DEPOSITOR.

Answer.—No, he has estopped himself from setting up any such claim.

TITLE VESTED IN BANK.

Editor Bankers' Magazine: SAVANNAH, Ga., February 27, 1902.

SIR: A regular customer of a bank deposits his draft payable to his own order, and indorsed, "For deposit to the credit of" the drawer, and the same is entered to his credit on the books of the bank, and forwarded by the bank to another bank for collection. By the course of dealing pursued between the bank and the customer, the latter had the right to check against such deposit, and did so, his checks being honored. In whom is the title to the draft? CLERK.

Answer.—In the bank. It has purchased the draft the same as it would other paper, and the title vests as soon as the deposit is entered.

PROPER PARTY PLAINTIFF.

Editor Bankers' Magazine: SPRINGFIELD, Ill., February 21, 1902.

SIR: B and T deposited with the U bank $1,182.30, with a deposit ticket which recited that such sum was "deposited with the M bank to the credit of the E Bank, by B and T for the use of D." On the same day the U bank delivered to the M bank a check, with a deposit ticket which showed that $1,182.30 of the amount of the check was for the account of the E bank, but did not show that such sum was for the use of D. Afterwards the E bank wrote the M bank that it could not receive the deposit of $1,182.30 for the use of D, as it (the E bank) had closed its doors before the deposit had reached the M bank, and directed the M bank to pay the sum to D. The M bank refuses to pay the money on D's order. In a suit therefor for money had and received who is the better party plaintiff, D or B and T? D.

Answer.—B and T, if such action is to be commenced.

FIDELITY INSURANCE.

Editor Bankers' Magazine: AUSTIN, Texas, February 21, 1902.

SIR: This company recently procured a bond indemnifying us against loss through dishonest acts of an employee acting as vice-manager of our business at this point. Our statement to the obligor company, and which was made the basis of the bond, provided that the employee would be authorized to draw checks to which no counter signature would be required. After the bond was delivered the indemnity company again requested answers contained in the statement, and we filled it out again, this time providing that our vice-manager would be authorised to draw checks, to which the counter signature of the bookkeeper would be invariably required, and that such statement should be in substitute of any prior statements. Now, the requirement for countersigning by the bookkeeper was not adopted by us as a precaution against loss, but merely as a double check system for convenience. What we desire to know is, are we indemnified on the basis of the first statement or the last, the bond having been issued before the last statement was made? MANUFACTURER.

Answer.—The furnishing of the new statement was an alteration of the contract, so that a new contract began at that time, the basis of which was the new statement.

WRONGFUL APPROPRIATION.

Editor Bankers' Magazine: SCRANTON, Pa., February 24, 1902.

SIR: A made certain contracts for the delivery of oil at his own option within a stated time. He deposited in a bank the counterparts of these contracts, and, as security for said contracts, also deposited the checks of H, who was a depositor in the bank. These checks were made payable to the Cashier of the bank, "for margin for oil sold as per contracts in the hands" of said Cashier. The counterparts of the contracts were indorsed by A to the effect that the margin was a guaranty for the fulfillment of the contracts, and with the further stipulation that, if more margin was needed, demand should be made on A, and if not met, the contract was to be sold. The Cashier also endorsed on the counterparts the receipt for the margins on the conditions therein set forth. Before the contracts matured they were settled, and the margins were carried by the bank to the credit of A, who drew them out by check. H has sued the bank for the margins. Is he entitled to recover? P. H. K.

Answer.—The checks operated as a specific appropriation, to the extent named therein, of the drawer's funds, to be applied by the bank solely to the payment of such sum as A might become liable to pay, on the event of his failure to comply with the contracts, and the bank, as custodian of the money for that specific purpose, had no right to appropriate it in any other way.

NOTICE TO THE BANK OF TITLE IN DEPOSIT.

Editor Bankers' Magazine: NEWBURG, N. Y., February 19, 1902.

SIR: A bank having on deposit funds of a corporation certified a check drawn by the treasurer of the corporation, for the amount thereof, payable to him as such treasurer. Before the check was paid, or had passed from his hands, an attachment was served on the bank for a debt of the corporation; and subsequently, but on the same day, said treasurer opened an account with the bank in his individual name, depositing this same check. The deposit was subsequently exhausted by such treasurer in paying debts of the corporation. If it can be shown that the bank knew of the pecuniary embarrassment of the corporation, will an action lie by the attaching creditor to recover the amount of the fund for which such check was drawn? Please cite authorities. BUILDER.

Answer.—Yes, if you have evidence sufficient to justify a finding that the bank had reason to and did believe that the fund when deposited by the treasurer was the property of the corporation, an action will lie and ought to be successful. (See Gibson vs. National Park Bank, 98 N. Y. 87.)

BAD FAITH OR NEGLIGENCE.

Editor Bankers' Magazine: HARTFORD, Conn., February 3, 1902.

SIR: The understanding between this bank and a co-operative association of which it was the depository, was that it could not withdraw funds unless a notice of ninety days was given. The trustees of the association signed a paper under seal, in the form of a check for $700, pay-

Digitized by Google

able to themselves, and gave it to their president, to be presented as notice. W agreed to let the president have $640, providing the bank would allow the $700 to be credited to him on his books. The $700 was then charged to the association in its pass books and on our books and credited to W. The president of the association absconded with the $640. It had been customary for him to draw the funds of the association. A movement is growing in the association to commence proceedings to the end that the bank may be held liable for the amount. What will be the outcome if this be tried? SAVINGS BANK.

Answer.—As the bank violated none of its rules and is certainly liable to W, we think there can be no possible liability to the association.

STATE BANK STOCK—TRANSFER OF PROXY.

Editor Bankers' Magazine: BUFFALO, N. Y., January 7, 1902.

SIR: If a blank for proxy should be filled out to an officer of a State bank, could he properly make it over to some other person, and have such stock represented by such person, the law being that no officer or employee can act as proxy? CASHIER.

Answer.—It is clear that the officer could not make over the proxy to another person, unless it contained a provision expressly authorizing him to substitute some one else in his place; and even in such case we think the power would be very doubtful; for the evil which the law has sought to prevent would be quite as great whether the officer himself acts as proxy, or selects the person to act as such.

PROMISSORY NOTES DATED ON A HOLIDAY.

Editor Bankers' Magazine: DENVER, Pa., February 10, 1902.

SIR: Are promissory notes dated on a holiday collectible?

ALVIN W. MENTZER, *Cashier.*

Answer.—Yes. At common law, contracts might be made on any day; but in some of the States there are statutes which declare that contracts made on Sunday shall be void. But no State has enacted that a contract made upon a holiday shall be invalid. A promissory note or other negotiable instrument may be made and delivered upon a holiday as well as upon any other day. The only mode in which holidays affect commercial paper is with respect to the time of payment. And even with regard to notes dated on Sunday, the rule is that the note is valid if the *delivery* is upon a secular day.

RATE OF INTEREST NOT STIPULATED.

Editor Bankers' Magazine: GLENS FALLS, N. Y., February 5, 1902.

SIR: Would you consider interest collectible on the following note:

$100. GLENS FALLS, N. Y., February 4, 1902.

One month after date I promise to pay to the order of John Doe, one hundred dollars, with interest at —— per cent. per annum, at first National Bank. Value received.

RICHARD ROE.

CASHIER.

Answer.—We think interest would be collectible at the rate of six per cent. per annum. The language is plain that the note shall bear interest, and the only omission is as to the rate. In such cases the legal rate prevails, and the effect is precisely the same as if the agreement were "with interest at six per cent. per annum."

TWENTY YEARS OF BANK CURRENCY BASED ON GENERAL COMMERCIAL ASSETS.*

L. Carroll Root in "Sound Currency."

Provision for the issue of bank notes without the deposit of bonds as security has been the fundamental idea in most of the recent proposals for a reform of our banking laws. It is very generally recognized that such a currency would be more responsive to commercial needs than is our present National bank currency. Most of the criticisms which have been brought against it relate to its supposed insecurity; and advocates of the proposed change have been asked to cite instances of the successful operation of such a system under conditions analogous to those prevailing in the United States.

A study of banking history does not furnish many examples of bank note currency which would be generally regarded as instructive for comparison with the present situation in the United States. It is true that the Bank of France and the Reichsbank of Germany issue notes secured, like their other liabilities, only by their general assets, and that neither of these institutions deposits bonds or offers other special security to note holders. Both these banks, however, are large institutions and are more or less subject to State control, and can therefore scarcely be cited as precedents for the thousands of independent banks of the United States.

Again, the six banks of Ireland, the ten Scotch banks, and the thirty-five Canadian banks, issue notes without bond security. But it is objected by the more critical that even in the case of these banks a comparison could scarcely be fairly instituted with the United States. For, in each of the countries referred to, the banking system consists of a few large institutions, with numerous branches, instead of a large number of independent banks.

It appears, then, that the investigator is limited quite narrowly to our own country in the search for examples of banking systems operating under conditions so similar to those which now exist here as to be available as analogous comparisons.

Nowhere, probably, in the whole range of the banking history of the United States can be found a more fruitful subject of study than the currency issued by the State banks of New England in the last two decades before the Civil War. It is admitted by all that this currency was elastic and adaptable to commercial needs—consequences which followed from the fact that it was based upon the general commercial assets of the issuing banks.

The relative success attending the New England currency system is particularly instructive because of the similarity between the conditions under which it operated and those which obtain to-day throughout the greater part of the territory covered by the National banking system.

(1) The first important point to be noted in the banking history of these twenty years is the number of the banks engaged in business. At the opening of the period, in 1840, they numbered some 300 and, at its close, over 500. Compared with population or with volume of business, this number is large. The population of New England varied, between 1840 and 1860, from 2,200,000 to 3,150,000, from which it appears that there was in operation one bank for every 6,000 or 8,000 inhabitants.

* I wish to express here my indebtedness to Prof. W. M. Burke and Mr. H. Parker Willis for their valuable co-operation in the preparation of this article.—L. C. R.

Digitized by Google

Proportionately, this is a much larger number than exist at the present day, when the total number of National and State banks and trust companies in the New England States does not average more than one institution to each 7,000 of population.

(2) Secondly, it should be observed that the banks of New England from 1840–1860 were for the most part of low capitalization. Of the 300 banks in existence in 1840, 159 did not possess capitals in excess of $100,000. Taking New England as a whole, the average bank capital was not more than $160,000 outside of Boston, and including that city not more than $206,000.

(3) The territorial distribution of the banks is worthy of attention. They were widely scattered throughout the whole area of the six New England States and were subject to but slight supervision or control.

Distribution of New England Banks According to Size, About 1840.

New England States.	$50,000 or less.		Over $50,000; less than $100,000.		$100,000.	
	No.	Amount.	No.	Amount.	No.	Amount.

a Exclusive of New Hampshire.

Digitized by Google

From this survey of banking conditions in New England, it will be seen that the banks of that region during the period selected for study may very properly be compared with those of the National banking system as it exists to-day. There are present in both cases essentially the same characteristics—wide and uneven distribution of institutions, independence of banks, relatively small capitalization, comparative freedom from Government control. The main difference lies in the fact that in New England these conditions were much intensified and appeared in extremer forms. If anything, therefore, the conditions for successful banking without loss on notes were much less favorable under the New England than they would be under the National bank system. Consequently, if it can be shown that the so-called New England system was a success and that the losses incurred under it were inconsiderable, an example will be furnished of a relatively safe currency, secured by general assets, issued successfully under American conditions, and there will be good ground for a confident prediction that the history of New England bank currency might be repeated under some system of banking not dependent upon bond deposits for security.

This study of the banking experience of New England during the twenty years before the Civil War, therefore, will deal mainly with the character and security of the note currency. The failures which occurred during the period under investigation will be enumerated, the circumstances of each case presented, and an attempt made to ascertain the loss which fell upon the note holders.

Features of the New England Banking System.

At the outset it should be clearly understood that the New England banking system, although in principle and nature a single system, was not homogeneous or uniform. No general act under which charters might be granted to all those complying with specified conditions existed. It was necessary to obtain a special charter in each individual case, although this was usually accomplished without difficulty.

While, however, the charters, as will be seen at a later point, differed much in detail, they were similar and uniform in the important fact that they permitted the issue of note currency without special security of any sort.* In most of the States the note holder did not have even a prior lien upon assets. All claims against the property of broken banks stood upon a footing of equality, and note holders were not preferred to depositors and other creditors. †

Finally, it deserves to be pointed out that the note issue was large in 1840 and that it increased proportionately faster than the number and capitalization of the banks, growing from $16,461,947 in 1840 to $44,653,095 in 1860.

The systematic character of New England banking as a whole, however, extended no further than to the mere plan upon which the notes were issued. There was no uniformity in any of the actual laws governing banks, either in regard to the relation between circulation and capital, stockholders' liability, or other elements of the system.

Relation Between Circulation and Capital.

The maximum limit to circulation was, in the early days of the New England banks, established by the State Legislatures in the case of each individual bank and

* In Vermont certain banks were chartered under a safety fund act, passed in 1831. Each bank was required to pay into the State Treasury 4½ per cent. upon the amount of its capital stock. This fund was to be kept intact by assessments on the banks, but such assessments should not exceed three-quarters of one per cent. in one year. Not more than half the banks of Vermont, however, ever came within the scope of the safety fund act, and the act itself was early superseded by other measures.

† In Connecticut the note holder had a first lien on the assets for notes of a smaller denomination than $100. Rhode Island enacted a law, in 1837, giving note holders a prior claim on assets.

Digitized by Google

varied widely not only from State to State, but also among the different charters in the same State. The differences between charters granted in the same State had, however, for the most part, been done away with before 1840, and between 1840 and 1860 the relation between circulation and capital was fixed in the New England States as represented in the annexed table:

	Per cent. of capital.
Massachusetts	125
Vermont, after 1840	200
New Hampshire	100 *a*
Maine, to 1846:	
Banks with a capital of $50,000 or less	100
Banks with a capital of from $50,000 to $150,000	75
Banks with a capital of more than $150,000	66⅔
Maine, after 1846	50 *b*
Connecticut, before 1855	150
Connecticut, 1855-1858	125
Connecticut, after 1858	75
Rhode Island:	
Banks with capital of $50,000 or less	75
Banks with capital of $50,000 to $120,000	65
Banks with capital of $400,000 to $500,000	20
Rhode Island, after 1859	65

a Less loans on pledge of the bank's stock.
b Plus specie held.

Redemption System.

It might seem that variations of this sort would result in great irregularity in the amount of issues in different States, and that in consequence the bank notes in some States might differ radically in the matter of security from those issued in other States. Nevertheless, this did not prove to be the case. As early as 1826 the banks of New England entered into arrangements with the Suffolk Bank of Boston, whereby the Suffolk virtually acted as a clearing-house for the notes of all New England banks. It was evidently directly to the interest of each bank to maintain as large an outstanding volume of notes as it could legitimately do. Hence, it was the effort of every bank so far as possible to pay out its own notes in preference to those of other institutions which might come into its possession. The notes of its rival were, of course, sent on to Boston for redemption, and this mode of competition for business resulted in an extremely active retirement and reissue of currency. Not less than one-eighth probably of the entire volume of note-currency in New England passed through the Suffolk Bank each week,* Every bank met its own weekly redemptions so far as possible by the use of the notes of other banks which had accumulated in the course of the week's business, and thus a regular outflow and inflow was maintained.

This feature of the system affords a most instructive lesson, inasmuch as it shows that it was the very freedom enjoyed in the issue of notes which rendered redemption active; while on the other hand the redemption system completely thwarted any efforts on the part of banks to increase their circulation unduly. By regular redemption, they were compelled, if they wished to continue in business, to limit their issues to the amount corresponding to their actual *bona fide* requirements. These,

* In some cases the redemption was even more rapid than this. Note, for example, the following from the report of the Connecticut Bank Commissioners for 1837:

"We have taken pains to inquire at each bank the average period of the circulation of bills, and find that so rapidly do their bills circulate and return for redemption, that, for the six months prior to the 1st of April last, about two-thirds of the bills of the Connecticut banks in circulation were redeemed once in thirty days, and the other third within about forty-five days from the time they were issued."

Digitized by Google

on account of the numbers of the banks and the consequent competition for customers, were relatively low. The legislative restriction upon circulation, therefore, was ordinarily so much higher than the amount of notes which could be kept outstanding as in itself to have little effect in limiting circulation. The real limitation was that imposed by the necessity of meeting the constant demands for current redemption.

It is true that in some few instances a special effort was made to circulate notes in the Western States, where they would not readily be presented for redemption. These cases, however, were not numerous, and where banks exceeded the legal limit of circulation the legal penalty was enforced. How generally it held true that the circulation of banks was far below the permitted maximum may be seen from the accompanying table, in which the capital and circulation of all New England banks are compared with the permitted maximum. From this comparison it appears that in none of the representative years taken was the aggregate circulation more than fifty per cent. of what might have been issued had commercial conditions been such as to call for the maximum circulation. In 1840 the percentage of actual to permitted circulation was about twenty-three per cent.; in 1850, forty per cent., and in 1860, thirty-six per cent.

*Actual Circulation Compared with Circulation Permitted.**

YEAR.	*No. of banks.*	*Capital.*	*Actual circulation.*	*Circulation permitted.*
1840	301	$61,142,482	$16,570,898	$70,823,000
1850	307	65,443,878	31,709,051	75,538,000
1860	506	125,315,148	47,589,877	131,310,000

While this redemption system was not legally compulsory, it was practically so, for whenever country banks refused to enter into the Suffolk redemption system they soon found that their notes did not circulate outside of their immediate vicinity. It, therefore, became necessary, after the establishment of the Suffolk Bank with its central redemption system, that country banks which wished to enjoy their proportionate share of circulation should arrange for the redemption of their notes in Boston, though it was by no means an evidence of insolvency when banks refused to enter the Suffolk system, as they were legally bound to redeem only over their own counters.

STOCKHOLDERS' LIABILITY.

Useful as was the actual working of the current redemption system enforced by the Suffolk Bank and its associates, it, of course, afforded no remedy to creditors of broken banks. It was, in short, precautionary and not remedial. Later banking experience suggests the necessity for some special safeguards to creditors. These, however, are found in New England only in fragmentary and incomplete form during the period now under consideration.

As late as 1849 Massachusetts, whose bank currency was soundest, made the stockholders liable only in case of proven fraud or mismanagement or upon the expiration of a charter, although in the year mentioned the provision for stockholders' liability was extended to all cases of failure irrespective of fraud or mismanagement. Maine, too, had only a law similar to that prevailing in Massachusetts prior to 1849, with the additional provision that in case of the expiration of a charter liability should be limited to two years.

Until the passage of the late law in Massachusetts just referred to, it was only in Rhode Island and New Hampshire that an unlimited liability was imposed upon bank stockholders. This was effected in Rhode Island by the act of 1833, which, however, added the limitation "provided that the corporation be first sued and the

* Report of the Monetary Commission, p. 306.

Digitized by Google

corporate property be first exhausted in payment of the debts of the corporation." Unlimited liability did not make its appearance in New Hampshire until 1846.

Vermont and Connecticut laid the responsibility for redemption upon the bank officers. In the former State, directors were made liable for the debts of their bank should excessive issues take place under their administration. Each director, too, was obliged to give a satisfactory bond, usually $8,000, as a guarantee of the faithful performance of his duties. In Connecticut the directors and Cashier were held liable as joint and several debtors should the debts of the institution exceed the amount specified in the charter. No other liability of stockholders seems to have existed.

The General Character of the Currency System.

The currency system of New England, as it developed along these lines, justly claimed the place of pre-eminence among the currency systems of the United States.

Because it was based on general commercial assets it was fully responsive to commercial needs. In the rural sections, where the habits of the people called for the employment of a note currency of larger proportional volume than in the cities, we find the local issue of bank notes proportionately greater. For example, in 1855 the banks of the distinctly rural States of New Hampshire and Vermont, with an aggregate capital of $8,150,000, were issuing $7,300,000 of bank notes; while the banks of Boston alone, with $32,700,000 capital, were issuing only $7,500,000 of notes, but were supplementing this by the use of some $15,000,000 of bank deposits a form of currency even then coming to occupy the first place as bank currency in the larger cities.

Lower Interest Rates.

The result of this extensive use of bank credit in the form of notes was practically to give to the citizens of those States the use of so much additional capital and thus, by making capital more abundant, to lower the rates of interest. This tendency of the system was so marked as to draw from the Connecticut Bank Commissioners in their report for 1844 the comment that—

"It has been impossible for the banks of discount to find use for all their means in discounting good paper; and some having the largest capitals have reduced the rate of discount, in a few instances, to five, four, and even three per cent."

That this must have been the effect will be apparent by making a simple comparison between the facilities for loaning which the system of note issue, based upon general commercial assets, afforded and the facilities which the same banks might have given if their notes had been based upon Government bonds, as at present required.

To use the illustration cited above, the condition of the banks of Vermont and New Hampshire, in 1855, was approximately as represented by the following balance sheet:

Assets.		Liabilities.	
Loans and discounts	$14,750,000	Capital	$8,150,000
Bonds	250,000	Surplus	750,000
Specie	450,000	Circulation	7,300,000
Notes of other banks	300,000	Deposits	1,450,000
Balances due from banks	1,900,000		
Total	$17,650,000	Total	$17,650,000

To enable these banks to earn six per cent. upon their capital stock, net earnings of $489,000 would have been required. If the expenses were half as much more, the gross earnings would have had to be $734,000 to permit a six per cent. dividend on the capital. Assuming that the bonds paid no more than two per cent. (the present income from Government bonds), the bonds they owned would have furnished only $5,000 of this, leaving $729,000 to be supplied by the interest on the loans, thus necessitating an average interest rate of only 4.8 per cent.

If, on the other hand, the banks had been obliged to invest in an amount of United States bonds equal to their circulation, as the National banks must now do, their condition would have been as follows:

ASSETS.		LIABILITIES.	
Loans and discounts	$7,700,000	Capital	$8,150,000
Bonds	7,800,000	Surplus	750,000
Specie	450,000	Circulation	7,800,000
Notes of other banks	300,000	Deposits	1,450,000
Balances due from banks	1,400,000		
Total	$17,650,000	Total	$17,650,000

Assuming that the expenses were the same, the amount required to earn a six per cent. dividend would have been $734,000, as in the other case. In this instance, however, since $7,800,000 is invested in United States bonds, where the net income is only two per cent., the amount to be earned by the loans is $588,000—or over 7½ per cent. upon the $7,700,000 of loans.

In other words, if our present system of bond-secured currency had been substituted for the system of currency based on general assets which they then had, the inhabitants of these States would have found that the amount of capital seeking investment in local loans was only about half as great as before, while the rate of interest was greatly increased.

UNIVERSAL SATISFACTION WITH THE SYSTEM.

From this comparison it will be easy to see why the borrowing element of the population (and this includes the agricultural interests as well as the mercantile, commercial and manufacturing interests) were so well satisfied with the New England experience with a system of bank currency based upon general commercial assets. But this feeling of satisfaction with the currency was not confined to borrowers alone, or to any one class; it was almost universal.

Perhaps the general sentiment in this regard cannot be better indicated than by citing the following from official reports—the most competent contemporary authorities:

The currency of this State is of the first order, and cannot be improved, being equal to gold and silver. This is strong language, we admit, yet perfectly true; for every bill holder can, on demand, convert his bills into coin.

The banking system in New England (though fraudulent practices, with their evil consequences, in a few instances, have been witnessed, and cannot, perhaps, be effectually guarded against) stands undeniably above any other in the United States; and the world can scarcely show a better system. Stockholders and the public find in the New England banks a safe guaranty for their future interests by referring to the past. Were the system perfect, it would be needless to discuss the subject; but general opinion is sustained by facts that abuses have been suffered; and the question is, how shall their evils be corrected? In the opinion of your commissioners, one important step is that of sustaining and giving greater efficacy to the arrangement for redemption, now known as the "Suffolk Bank System." This method has been salutary in its influence, and has tended greatly to produce a healthy state in all our Connecticut and New England banks. By some banks, however, this mode is considered oppressive, and, no doubt, contributions for its support are unduly apportioned. Although imperfect, the system should not be abandoned till a better is provided. The extent of failures that would have occurred, with their disastrous results, but for this conservative and regulating power, may be judged of, somewhat, by contemplating the present state of monetary affairs throughout the South and West. * * *

Any estate in the southwest part of Connecticut is now given for the bank issues of the opposite point with as much safety and readiness as though it was located at the door of the Receiver, the whole being at par at the Suffolk Bank: consequently with every bank redeeming there.—*Connecticut Bank Commissioners' Report, 1841.*

The commissioners, from the evidence they have, can say with entire confidence that all the banks in this State are in a sound and healthy condition, and the currency is of the first

Digitized by Google

order. And when we take into consideration the almost unexampled embarrassed condition of the monetary concerns of this country, growing out of the great revulsion of 1836–37, the immense amount of worthless paper put afloat by chimerical speculation, we may well say that our banks have done well to escape that general insolvency that has visited many of these institutions in several of our sister States.—*Connecticut Bank Commissioners' Report, 1845.*

It may be claimed that by increasing the banking capital greater inducements will be held out for the people to engage in improvident speculations and investments, and greatly endanger the sound and safe operations of business. If there was no check upon circulation there might be some danger. But the frequent redemptions at the Suffolk Bank, and the rapid communications between different parts of the country, will prevent any greater circulation than the natural business wants of the country will sustain. The moment any banks in New England are unable to meet their redemptions at that institution, their bills are thrown out, their credit is doubted, and they can do but very little business until they make their credit good again. Indeed, this system of par redemption seems to be a most perfect regulator upon all the New England banks. It would seem somewhat surprising that something has not been adopted in other parts of the country that should produce the same beneficial results. If there was, there would be but little necessity for brokers. The bank note of Ohio might be as good in New York, Boston or Philadelphia as at the counter from where it issued.—*Connecticut Bank Commissioners' Report, 1848.*

We believe there is not a more sound and safe currency in existence than that furnished by the banks in this State. We know of no better system of banking than ours. *Connecticut Bank Commissioners' Report, 1849.*

And first, we remark, that the currency of the Commonwealth, so far as it depends upon its banking institutions, is in a sound and healthy condition. The banks are, in the main carrying out the objects for which they were created, with fidelity to the public and to stockholders.—*Massachusetts' Bank Commissioners' Report, 1851.*

The failure of a bank is always to be regretted, but in this case (the Cochituate Bank) the public will be losers, if at all, to but a small amount. The fact is not a little gratifying that a failure of this kind has not before occurred in Massachusetts for many years.—*Massachusetts Bank Commissioners' Report, 1854.*

Your commissioners cannot refrain from remarking upon the very satisfactory condition presented by the banks of the Commonwealth, after the severe commercial crisis through which the community has just passed. Although driven into the suspension of specie payments through the action of foreign institutions, still they never for a moment lost the confidence of the community as to their soundness, nor did they fail, during the period of alarm, to furnish every accommodation to their customers which could justly be expected. In fact, some of our banks did not suspend at all, not even in form; and, with a large part of them, the suspensions were merely nominal; they occurred, as a matter of precaution, in the action of other institutions; but in very few instances was specie positively refused, when called for; on the contrary, the supply appears to have been sufficient for the demand, and, as a general thing, all reasonable requirements were satisfied.

That this confidence in the strength of our banking institutions was well founded, and also that their efforts in extending every possible aid to their customers were not ill-judged, is fully evinced by their prompt resumption of specie payments, and by the comparatively small amount of overdue or suspended paper with which they were burdened. There was reason to apprehend large losses on such paper, but we have been gratified to find it, with few exceptions, so protected that very little is set down, in the directors' estimate, as even doubtful. We speak of those banks which have been visited by us, situated, for the most part, in the country.

In this connection we would also remark that the amount of paper in the banks, issued by large manufacturing corporations which have suspended business, is far less than there was reason to fear. This paper is confined to a few institutions, and is not of an amount seriously to affect their soundness or to cripple their business.

These results cannot fail to inspire increased confidence in the banking system of the Commonwealth, as well as in the general ability, prudence and sagacity which characterize its administration.—*Massachusetts Bank Commissioners' Report, 1858.*

The banking institutions of the Commonwealth give satisfactory evidence of soundness and ability to meet the constantly increasing demands of the community for a safe and reliable currency.—*Massachusetts Bank Commissioners' Report, 1859.*

From a careful examination of the reports of other States, I have no hesitation in saying that the banks of Vermont will bear a favorable comparison with other institutions of the kind throughout the country; and, on review of the whole subject, we may justly flatter ourselves that our banks are as prudently conducted as sound in their condition, and afford as great facilities to our citizens, as those of any other State, and that no portion of the Union enjoys so good a currency as the New England States. * * *

Digitized by Google

The bills of any country bank, redeemed at par in any commercial city, will always be current throughout the extent of region whose business channels flow to that city. Hence New England money is worth more in the cities of New York and Philadelphia than the bills of their own country banks. Vermont bills have uniformly borne a premium in eastern cities without loss, while bills of their own States are at a heavy discount.—*Vermont Bank Commission's Report, 1852.*

Our banks have accomplished their great object, of furnishing a sound currency—sound, equal and uniform, in consequence of its redemption at par, in the great central market of the country (Boston). The bills furnish a most convenient instrument for exchanging the various commodities of commerce and agriculture, and go into wide circulation. * * * The system is admirable, and is, perhaps, without a parallel in the world; it leaves us nothing to desire, so far as an instrument of commerce is needed, within the circle of the Eastern States.—*Maine Bank Commissioners' Report, 1842.*

For the last eight or ten years, the value of our paper currency has been more uniform than during any similar period since the foundation of our Government, and there has consequently been greater security in all business operations. This fact goes far to show that our banking system has improved, and that our banks are well managed.—*Maine, Annual Report of Governor, May, 1850.*

The "Suffolk System," though not recognized in our banking law, has proved to be the great safeguard to the public. Whatever objections may exist to this "system" in theory, its practical operation is to keep the circulation of our banks within the bounds of safety. No sound bank can have any well-founded reason for refusing to redeem its bills in Boston, and a bank that is not sound cannot long do business under that system, and ceases to be in good credit when it is "thrown out at the Suffolk."—*Maine Bank Commissioners' Report, December 31, 1857.*

The Suffolk system (if we may so call that system which has obtained throughout New England), the distinctive characteristic of which was a central point of redemption, has given to New England as sound a currency as was to be found in any part of our country. Bank failures at the North have been rare, and the losses to stockholders or bill holders, when compared with the amount of capital invested, have been very trifling. It is by no means wonderful that a system which has stood the test of time, and struck its roots so deep as to have become incorporated with and formed a part of our banking system, should be abandoned with hesitation for one which is new and untried.—*Maine Bank Commissioners' Report, 1865.*

If, during the last twenty years, the period during which the charters now about to expire have existed, a sound currency has been secured, is it the part of wisdom to change the laws, and overturn the arrangements, by which this result has been produced? The charters of the banks have been renewed. If the laws by which they are constituted the agents of the people to provide a currency, and by which their faithfulness in the discharge of the duties of such agency is secured, remain unchanged, there is every reason to believe that the currency of Massachusetts will be for the next twenty years what it has been for the twenty years past, as perfect as any in existence—as perfect as in the nature of things it can be. No reasonable man, no practical man, no man who is not bound hand and foot in the fetters of mere theory, can desire for the people a currency better adapted to meet all the circumstances of a business community, than that which has been furnished by the banks of Massachusetts for the last quarter of a century.—*James B. Congdon, Cashier Merchants' Bank, New Bedford, in Memorial to Governor of Massachusetts, 1851.**

The anomalous feature of the case is, that the well secured and bond-protected bank issues of New York are at a greater discount at this point than the apparently unsecured circulation of New England, including places hundreds of miles off, and inaccessible, in a measure for compulsory redemption. * * *

We said that the Massachusetts currency was apparently unsecured. In reality, their bank paper is well secured. The experience of the last fifteen years has demonstrated that the losses from bank issues in the State of New York are four or five times greater than in Massachusetts. The system of the latter is better than our own.—*New York Courier and Enquirer, 1854.*†

In conclusion, the following quotation from a Massachusetts report of 1865 may be permissible, voicing, as it does, sentiments then common to all New England:

"The State parts with these objects of her care and solicitude with many regrets, but with a just pride in their career inspired by the belief that their capital has been highly instrumental in promoting the prosperity of the State, and that they have furnished as good a paper currency, based on individual credit, as any part of the country has ever enjoyed."

Bank Failures and Losses to Note Holders.

Although the system of bank currency employed in New England in the period under investigation proved eminently successful, as shown above, it is nevertheless true that there were failures and that in the case of a number of them the note holders were obliged to suffer more or less serious losses. It remains for us to consider bank failures in New England from 1840 to 1860.

Failed Banks in New England from 1840 to 1860 Inclusive.

Capital	$6,295,301	Value of assets (nominal)	$11,157,973
Circulation	3,536,350	Estimated loss to note holders	877,827
Deposits	1,691,554		
Liabilities to public	5,312,816	Number of failures	47

[The author then proceeds to analyze in detail the results of the liquidation of each of these forty-seven institutions.]

Some Defects and Their Remedies.

Among the defects in the banking system contributory to the losses sustained during this twenty years' experience may be mentioned the following, the most of which are such as have been more or less effectually remedied by subsequent developments in banking legislation and practice.

(1) Fictitious or unpaid capital.

The danger from this source has been practically eliminated in the case of our National banks by the strict requirements as to the subscription and actual payment of capital stock and as to the subsequent maintenance of the capital unimpaired, as well as by the prohibition against a bank's making loans on the pledge of its own stock.

(2) Overissue of circulation.

The benefits to be derived from a central agency for the printing and registry of bank notes have been fully impressed on all careful students of the question. As early as 1843 the State of New York had fully developed a system of registry similar to that now in use in the National banking system, though not including the feature of uniformity in design of notes. But in New England each bank was left to control its own note printing, and was permitted to have on hand as many of its notes as it chose to have printed. This left a wide loop-hole for fraudulent overissue of circulation. In the case of a considerable number of the failures noted above, where a loss to note holders actually occurred, there would have been no such loss except for the over-issue of bills, which could not have occurred under any adequate system of printing and registry of notes. The largest item of loss in the entire experience covered by this investigation—$200,000 in the case of the Shipbuilders' Bank, at Rockland, Me.—was made possible solely by this lack of Governmental registry.

Then, too, the danger of loss from counterfeiting, of which no account has been taken here, is minimized by the uniform printing of notes, especially if this be accompanied, as in the case of our National bank currency, by the use of more elaborately engraved designs than any single bank would probably feel able to afford.

(3) Lack of adequate stockholders' liability.

In the case of most of the New England States, as noted above, there was not the same double liability of stockholders that characterizes all our best systems of to-day; and even where some provision existed, the measures for enforcing it were too imperfect to permit satisfactory results to be obtained. It is quite probable that some of the losses enumerated in the table may have been made good by suits against individual stockholders in those States where such suits could be brought; but official record of such actions not being at hand, it is impossible to say how far the losses

Digitized by Google

noted may thus have been made good to the note holders. But there can be no question but that our present system of stockholders' liability would have accomplished much more than was done.

(4) Temporary depreciation of notes.

Even where the assets of an insolvent bank were sufficient to provide for the ultimate payment of all notes in full, there was naturally, in many cases, a temporary depreciation of the notes upon the announcement of the failure. This accounts for the quotation of notes from time to time in the "Bank Note Reporter" of that period at a discount of ten or twenty per cent., even when the records show that the Receivers ultimately paid them in full.

One of the strong points in favor of the "guaranty fund" which is made a prominent part of nearly every proposition for the issue of notes against general commercial assets, is that such a fund is not merely a source from which the notes may be ultimately met in case the assets should be insufficient to provide for their full payment; it is a reservoir from which they can be immediately redeemed, thus effectually guarding against even a temporary depreciation.

(5) Requirement of prompt presentation of claims.

A portion of the amounts included as losses to note holders in the table above were such simply because the notes were not presented for payment within the time limit fixed by law. It is now generally recognized that as the notes enter into circulation at a long distance from the place of issue, their holders should not be compelled to be on the lookout for the failure of the bank of issue; but that adequate provision should be made for the payment of all the notes, even if they should not be presented for years. As a matter of interest in this connection it is worth noting that between October 31, 1896, and October 31, 1900, there were presented for payment at Washington no less than $8,309 of notes of National banks which failed prior to October 31, 1876, or more than twenty years before the notes were presented.

If the other four States in New England had followed the example of Connecticut and Rhode Island, and given note holders a paramount lien on the assets of the banks, the losses to this class of creditors would have been much less than they actually were.

From the memoranda which have been given above as to the circumstances in the case of each failure, it will be apparent that the difficulties in the main were not those properly chargeable to the fact that the notes were secured only by general commercial assets. They were incidental to an early stage of banking experience when practice had not fully developed the details of financial administration and control. They would not exist to-day under any plan for "asset currency" to any greater extent than they do under our present system; while every advance in the means of communication and transportation puts the possibility of their recurrence further from us. Little attention, therefore, need be paid to them in this connection, except to bear in mind that they are doubtless responsible for many of the failures included above—all of which might not improperly be omitted from the account in comparing the relative advantages of a bond-secured currency with one based on general assets, as illustrated by actual experience.

THE LOSSES SUMMARIZED.

It appears from the table which has been given above, that the total losses to note holders in the twenty-year period under discussion were about $880,000—an average loss of $42,000 a year. The average circulation during the same period was $38,148,000. It appears, therefore, that a tax of about one eighth of one per cent. per annum upon the outstanding circulation would have met all the deficiencies, even as the system stood. Thus the burden of the guaranty fund which would have

Digitized by Google

amply protected the note holders from every loss they actually suffered would have been barely felt, being, in fact, only one-eighth the Federal tax our National banks have paid for years past on their circulation.

This investigation also throws light upon the amount of the guaranty fund which would have been required to properly care for the possible failures. In the panic of 1857 (one of the worst in the history of New England, and a year in which occurred over one-third of all the failures of the period) there were sixteen bank failures. The aggregate circulation of these banks, according to the latest prior returns, was $1,567,230. A guaranty fund of five per cent. of the outstanding circulation at this time would have been $2,747,000. So that even if all this circulation had been promptly presented, and if none of the assets of the banks had been readily available, the total sum to fall on the fund in this panic year would have been less than two-thirds of a five per cent. fund. Therefore, considering that it is not possible to secure the immediate presentation of all the notes, and that it is equally impossible to conceive of any considerable number of failures so absolute that something would not be realized from the assets within a few months, it is apparent that a guaranty fund equal to five per cent. of the outstanding circulation would be ample for any possible, or at least probable, contingencies. And, as shown above, the actual experience of New England banks with a currency based upon general commercial assets, running through a period of two decades embracing a severe financial panic, makes it clear that this guaranty fund would in the end require for its maintenance only the most moderate contributions from the banks in the system.

RETIRING CIRCULATION.

As many National banks are now retiring circulation, the following will be found of interest:

Editor Bankers' Magazine: MUNCIE, Ind., February 21, 1902.

SIR: I have taken THE BANKERS' MAGAZINE for about one year, and have never seen the following question discussed: "B is a National bank in a certain city with one hundred thousand dollars circulation. The directors wish to sell the bonds and retire the circulation. An officer of the bank writes the Comptroller of the Currency to this effect. When does the Comptroller surrender the bonds, and how does he proceed to call in the outstanding notes of the bank?" Yours truly, JOHN ALLEN.

Under section 4, act of June 20, 1874, any National banking association can deposit lawful money and retire in whole or in part its circulation and withdraw the United States bonds, except it must keep on deposit with the United States Treasurer one-fourth of its capital stock in bonds (the maximum requirement as to bond deposits being, however, $50,000).

The practice of the Department to carry this object into effect is as follows: A National bank desiring to retire say $50,000 circulation and take from deposit with the United States Treasurer a corresponding amount of United States bonds, must make application to the Comptroller of the Currency by forwarding a resolution of the board of directors authorizing the withdrawal, together with a certificate of deposit of lawful money and the Treasurer's duplicate receipt for the bonds to be withdrawn. The resolution of the board of directors must state the kind of bonds to be withdrawn and some authority for some one to assign the same.

The bonds are then withdrawn from deposit with the United States Treasury and forwarded to whom the bank may direct in the resolution above referred to.

The circulating notes of this bank are redeemed in the usual manner and charged against the lawful money deposit until the same is exhausted. A sum equal to the average cost of National bank-note redemption for the preceding year is assessed against the bank to meet the cost of transporting and redeeming the notes.

AUDITING THE INDIVIDUAL LEDGER.

The conscientious bank auditor must always dread an examination of the individual ledger, and even after the most rigid scrutiny he can not give a certificate entirely free from "ifs" and "buts"

I once had the task of examining a set of books that had been more or less skillfully "manipulated," and upon concluding it, I was more strongly convinced than ever before that we need a much more perfect system of auditing in that department. Periodical examinations are good only in one way; the bookkeeper knows his work will be examined and he does not know when. The examiner may possibly happen to discover some small irregularity which may lead him in the right direction. For these reasons if a *dishonest* bookkeeper is timid he *may* not try to steal; if he is not timid he will be more careful when and how he steals, and if he is reckless he will take chances and be caught after he has gone on for a month, a year, or a generation, as the case may be.

Let us see what are some of the requirements of a perfect system.

First, it must be practical; that is, it must not interfere with the bookkeeper in his daily work, and must not involve too much extra work or expense.

Second, it must be thorough, and include the smallest as well as the largest accounts.

Third, it must be as applicable to one system of ledgers as to another, for many banks are now changing from the old style or mercantile to the Boston system or one of its variations.

Fourth, it should be one that would, as far as possible, spare the feelings of the bookkeeper. No honest man should ever object to having his books examined by one who has the right to do so, but it is hard that a hundred honest men should be treated as possible thieves because one of them may not be all that he should be.

With these and many other considerations in view, I have worked out the following system. I have not hesitated to appropriate ideas I have found already in use. Some I have kept as they were, some I have changed more or less to suit circumstances, and in some instances I have introduced ideas that (as far as I know) are entirely new.

According to this system the ledger should be kept by one man and the pass-book or statement of account should be made up and balanced by another. The work of each should be entirely independent of the other, except that the balance as shown by the pass-book or statement should in all cases be compared with the balance in the ledger, and the ledger balance, so proven, should be checked or brought down, as the case may be.

Let us see how this can be done. The debits on an individual account come from three sources: First, checks drawn by the depositor; second, notes or acceptances made payable at the bank by him; third, checks drawn against his accounts by the Cashier or some authorized officer of the bank. In all cases the charges are made by vouchers. These vouchers should be turned over to the clerk who writes up the pass-books and statements (whom we will call the balance clerk). These he files in regular check-files, which remain under his charge. Just here let me say one word. Do not buy cheap files. They are used every day and all day, and the best you can get are the cheapest in the end, to say nothing of the extra work and unnecessary worry involved in makeshifts and imitations.

Digitized by Google

The sources of credit are as follows: First, deposit tickets, which are in most cases made out by the depositor himself or his clerk, and country tickets, which are made by the receiving teller or his assistant.

In no case should a bookkeeper be allowed to make out a ticket, except to correct an error; and even in that case it would be far better to let him take the matter to the balance clerk and have him make out the ticket and state all the circumstances; second, the discount books or the proceeds of notes, etc., discounted by the bank for the depositor; third, the blotter, or notes, etc., held by the banks for collection and paid through the note teller for the credit of the depositor; fourth, the journal or notes, etc., payable out of town, which have been reported paid by some correspondent of the bank, have been charged to him and placed to the credit of the depositor.

Let the balance clerk take the journal blotter and discount books every day and make off tickets like the deposit tickets for each depositor. (I would use paper of a different shade), making each ticket show the name, amount, source of credit and date. Some banks have tickets of this character made out by the clerk who makes the original entry. In such cases of course those tickets would be used by the balance clerk.

These tickets may be called back with the cash books of the individual bookkeepers, or with the ledgers, and they may be proven by addition of totals, and with the deposit tickets should be placed in a suitable file (similar to the check-file) by the balance clerk. The bookkeeper should never be allowed to make out a credit ticket. If the bank has an adding machine the balance clerk can satisfy himself each day that all credit tickets have been made out and that the bookkeeper has given him all of the deposit tickets. It would also be well for him, once in a while, and at irregular times, to list all of a day's checks and see that all are turned over to him. At the proper time for writing up the pass-book of an account, he should get out checks and tickets from the files, and starting with the first credit, he can make up a statement of an account without reference to the ledger.

After the pass-book or statement has been found to agree with the ledger and has been balanced, he should make out a balance ticket. I should make them of a third tint and heavier paper than the deposit tickets or credit tickets, and let them show the following facts: Name of account, date and amount of balance (Dr. or Cr.), whether the statement is in pass-book or on sheet paper. The ticket should have below the following, on separate lines:

Statement delivered........ mailed........ filed........ in vaults........

This ticket should be held on the desk of the balance clerk as long as he holds the corresponding statement. When he disposes of the statement or pass-book he should get out the balance ticket and by one print of a date stamp on the proper line he can have a record of when and how the statement was disposed of. If it is thought desirable the person to whom the pass-book is delivered may be required to sign the balance ticket. The balance ticket should then be placed in the ticket-file and become the first credit (or debit) for the next statement. This ticket serves two additional purposes: first, it is a separate record, and serves as a check on the bookkeeper if he should attempt to alter the balance after a pass-book has been proven and delivered; second, it saves the trouble of looking through the account in the ledger to find when the account was last balanced, and the amount of the balance. With daily balance ledgers, this is sometimes quite difficult. The old checks should be carefully mutilated and delivered with the statement while the old credit and deposit tickets should be filed.

A good way to do this is as follows: Provide a number of stout envelopes (one for each account) slightly larger than the credit tickets (the kind used for cabinet photos is very good), write on the back of each the name and say credit tickets

Digitized by Google

from...... to....... The envelopes can be filed in drawers made for the purpose, two or three rows to the drawer, and a case of moderate size will hold a great many of them. The first space should bear the date of the first deposit or balance, and each envelope can be left open and more tickets added from time to time until it is full. It should then be sealed and the last date supplied, and another envelope with the name on it placed in front of it in the file to receive the next batch of tickets. When the case is full, some of the oldest envelopes may be taken out and filed in boxes, or a new case may be started. In this way we have all of a depositor's tickets in one place. In one envelope if he has only a few, or in several arranged one behind the other in case he has more. While the balance tickets, which are of course filed with the others, show on what dates statements were made out, the balances, and what was done with each one.

Statements should be made off at regular intervals for every account, and when the bookkeeper opens a new ledger the old one should be turned over to the balance clerk, who should write up any accounts that have not been balanced and take off a balance sheet. He will have only proved balances to deal with, and if it agrees with the balance on the general ledger he can be pretty well satisfied that everything is correct. The bank may also have balance sheets taken off by an examiner from time to time and may also make a practice of changing bookkeepers as is done in some places.

Advantages of this System.

Now, let us see how far this system will fill the requirements which were stated to begin with.

First, it is practicable, does not interfere with the bookkeeper, and does not involve much extra work. If the bank is so small that one man can do all the work of the bookkeeper's desk, it does seem absurd to employ two; but it must be remembered that each of these cán do other things in the bank if his whole time is not taken up with this work. The only time the balance clerk can possibly interfere with the bookkeeper is when they compare balances, and if both are accurate in their work the interference would not be worth talking about. In larger banks I am satisfied that the arrangement would be found economical in the long run. The history of manufacturing or indeed of civilization shows us that as employments become specialized results improve; that is, as men have fewer different duties to perform they accomplish more. I am sure that three bookkeepers and one balance clerk (if that should be found to be the proper proportion) will do far more work than four bookkeepers.

Second, thoroughness. Each statement is made up from debit vouchers and credit vouchers. The credit vouchers are in most cases original documents and more certain than any book in the bank, and in the case of tickets made out by the balance clerk, almost as certain as the book of original entry. It is true that the clerk may make out a ticket wrong or may misplace one, and the bookkeeper may post an entry wrong, but the chances are very small that the two men will make the same error in the same entry. (One man making the entry in both places would be far more liable to have both wrong than two men working independently would be.)

Third, it is manifestly as well adapted to one system of bookkeeping as to another, because it is operated without reference to the bookkeeper, except to compare balances. In fact, with the daily balance system something like this is almost a necessity. A small account running through two or three ledgers is as much trouble to write up as a large one, because each day must be examined to pick up the credits, and after they are found they must be checked back with the books of original entry to be sure that they belong to the accounts to which they are posted.

Fourth, the bookkeeper can understand that it is not his business to make up statements and write up pass-books, and he will hardly be placed in a position to

Digitized by Google

have his feelings hurt unless he walks into such a position with his eyes open, and then he would have only himself to blame.

Some of the additional advantages of this system are obvious. Suppose we wish (as is often the case) to look over the tickets of a certain depositor. Under the old system of filing tickets we should have to make out a list of dates and pick out his tickets one by one from bundles.

One has to do this to appreciate the time and trouble it takes. When we are through, it is almost as much trouble to replace the tickets as it was to get them out. Under the new system we would have to get the tickets from the ticket-file and if they did not cover enough ground, get one or two envelopes from the case, and we have all we want. To replace is a matter of a few moments.

Again, it often happens that we wish to be perfectly certain that a particular balance as shown by the ledger is correct beyond question. We can prove the checks and possibly all additions, etc., in the account, but can we be sure that no credit, that should have been posted to the account, is posted on some other instead? With the new system the checks and tickets can be gotten out in a moment, and, no matter how large the account, they can be added and a balance be determined. If this balance agrees with the ledger we can be practically certain that it is correct.

As was said before, both men can make mistakes, but that both (working independently) should make the same mistake is a possibility that can safely be disregarded in practice.

Again, it often happens that the depositor has failed to have one or more credits entered on his pass-book. In this case all the credits must be checked with the ledger until the missing ones are located. (This is a serious job with the daily balance ledgers.) They must then be entered on the pass-book and the book of original entry hunted up that the items may be compared.

Under the new system the credits can be checked back in a few moments. If the omitted credits are deposits, we have the original document (the highest possible authority) in hand. If it be a discount journal or blotter entry, we have the entry taken off by the bookkeeper and the ticket made off (independently) by the balance clerk, and this is practically as good a proof as a reference to the original book would be.

These are some of the most important and obvious advantages, but many others will appear from time to time as the system becomes more familiar by use.

Now, a few words in regard to the system as a whole. No matter how good a system may be it can never be automatic, and to get the best results it must be applied with energy and regularity. It should be remembered that the balance clerk is more than a mere machine for writing up pass-books. He is also to some extent an auditor and as such is responsible for the correctness of the bookkeeper's work. He should be a man of energy and capacity and one who thoroughly understands the whole system of bank bookkeeping, and who takes a lively interest in the perfect working of his department. His position should not be inferior to that of the bookkeeper; and he should be given cheerfully and promptly whatever assistance he may need in his work. It will not pay to so crowd him with the filing and listing of checks and tickets that he has no time for the higher duties of his office.

I am thoroughly satisfied, in addition to this, that the system will have a strong tendency to promote accurate work. If a bookkeeper knows that his work is to be proven by some other person and all of his errors found, natural pride will make him take care to make as few as possible.

It will be noticed that the system makes no provision against collusion between the bookkeeper and the balance clerk; but I frankly confess that I have never seen a system in this or any other department that would prevent loss when the examiner and the clerk are both dishonest. But the fact that we can not secure absolute perfection should not deter us from making every possible effort in that direction.

The history of many defalcations in the bookkeeper's department would show that the trouble started with some error of the bookkeeper's which remained undetected long enough for a depositor to overdraw his account. Upon finding the mistake the bookkeeper—ashamed to confess—carries it on in the hope of being able to have the amount replaced, until it gets beyond his reach, and he yields to the temptation of getting something for himself out of his disgrace. Suppose these errors are in every case detected by the balance clerk, and the state of affairs is thus known to two men in the bank instead of one, are the chances then as great that fraud will be used to cover up error? CHAS. A. PEPLE.

AN OBSTACLE TO BANKING REFORM.

THE RELATION OF COUNTRY BANKS TO CONGRESS.

Editor Bankers' Magazine:

SIR: While visiting Washington recently, I had a long conversation with an old friend of mine who is now a member of the House. We discussed the proposition to establish a central bank, also the branch-banking system, asset currency and other matters. Thinking that what he had to say might interest your readers, I have set down the substance of our conversation as well as I could remember it. Picking out some letters from a large pile lying upon his desk, the Congressman said:

"Here are a lot of letters from constituents I wish to show you. They will probably bore you some; they do me in a way. Still, from one point of view at least, they are exceedingly interesting. Representatives are laughed at and berated because they do not at once make an end of important questions, of which the solution seems easy when common sense and reason are applied. This correspondence is about this question of banking reform. I don't know that a mere consumer of the fruits of the earth like you, whose father has left him enough so that he need not work or even think except for amusement, is aware that this banking business has been as thoroughly studied and is as well understood as the multiplication table or the rule of three. Since the United States commenced its career, the general principles of the art of banking have been applied and misapplied with various results to our glorious country, until it would seem that the wayfaring man, though a fool, would perceive what ought to be done. In the last few years Congress has investigated and investigated and piled up libraries of interviews with experts, and reports; sound money clubs and monetary commissions have resolved, formulated and reported, and have collected and spent money in promulgating their literary expositions of results by the ton, showing what should be done or avoided. The measure which is now on the anvil in the House is, in my poor judgment, an excellent measure. It is simple and would seem to accomplish what all experts have agreed upon as desirable. In fact, it seems to be the very quintessence of all the projects the intelligent agitation of banking reform has evolved during the last decade. You know, or perhaps you do not, that almost every banking expert and financial writer, every ambitious banker, very many editors, Senators and Representatives, and even literary men who generally treat only of love and glory, as well as others not easily classified, have been attracted by this subject of banking reform, and have each and all devised infallible plans for its accomplishment. The banking methods of all nations have been investigated, even those of the Chinese and Siamese. If you don't know all this, where have you been? This measure is as near as may be the best conclusion that has yet been reached from all this study and experience, and as I imagine fairly boils it down and applies it to the present requirements of the people of the United States. I would like to vote for it and there are many others of my mind, but—"

"Well, why don't you vote for it then," I enquired.

"Why don't I vote for it? Read these letters from constituents of mine, mostly bankers and capitalists, and perhaps you will understand."

The Representative with whom I was conversing came from a district in Ohio, containing no great cities, but several large and thriving towns, full of intelligent

Digitized by Google

and well-to-do citizens. These citizens were engaged in farming, manufacturing, banking and commerce. The district abounded in schools and contained an important higher institution of learning. Born on a farm he was a studious boy; had graduated with honor at the high school, and then studied law in the chief town of his native county. He had won friends and clients, not however so many of the latter that they prevented him from helping to run the political machinery of the party to which he belonged like many others, by inheritance. He did not find it difficult to express his ideas in public, and by practice in the courts on public occasions, in political conventions, at farmers' institutes and in Sunday schools, he acquired a facility that gave him a reputation as an orator. Being much in the eyes of his fellow citizens, his fine personality and oratorical skill caused him to be elected first district attorney, then State representative, and in due course to Congress, where he was now serving a second term. He was a very honest man, though he did not carry his heart on his sleeve, having learned the value of silence as well as of speech. He had grown in the knowledge of men, especially of those men who exercised the greatest control of the ideas and votes of the constituency be represented.

Continuing his remarks, he said: "All the bankers in my district are good men; there has never been a failure. You see while our section is not startlingly rich, all the people are comparatively well to do, property values are well settled, and everything is carried on in moderation. I really don't think it makes much difference how banking is carried on there, I mean on what system. We have National, State and private banks, and they seem to thrive alike and benefit the various lines of business. Even in such a land of Beulah there is competition, and ambition to surpass others and take the lead. There are consequent jealousies, which show themselves when any measure like this, possibly affecting their business, is being discussed. All sections are not like ours. There are places where bankers have to struggle for patronage and build up business with a good deal of heart burning. In the big cities, to which capital gravitates, competition becomes even fiercer from the low rates that money brings. Moreover, banking is a very honorable and easy business, and tempts all who can to undertake it.

From my standpoint it is this way. I am not destitute of ambition, and I want to be re-elected. I can conscientiously say I have endeavored to work for the best interests of my constituents. I have looked after the welfare of every postmaster and pensioner in my district. I take an interest in the affairs of every school district and voting precinct and distribute seeds and documents with due energy. I have obtained places for many, both in and out of the classified service. Generally I have helped where I could do so. I think my experience renders me of more value in getting a fair share of appropriations than a new man would be for some time. But this makes no difference. I could not help making some enemies. There are men who want to succeed me, and I do not say they are unfit. Nevertheless, I am as yet much in the lead, but if I give umbrage to influential citizens, of whom the bankers are easily the chief, my opponents, not to say enemies, will at once turn any coolness to account. This is what is troubling me about this measure. Not one of these men appear to want it. Now, here is a letter from the President of one of our National banks:

"LAKEVILLE, February 24, 1902.

"DEAR SIR: In reply to your favor asking my opinion in regard to the proposed bank bill, I am opposed to it. I think it has many good features, but I fear it will make such a radical change in banking methods as to put us all at sea. I believe it will especially injure the National banking system.

I know there are grave theoretical objections to the greenbacks and other Government notes, and I appreciate the advantages of what is called an elastic currency. I have no doubt the institution provided for in the bill might furnish an elastic currency. But we bankers have to look at new banking projects from our individual standpoint. In this town as else-

Digitized by Google

where we have had good and bad times, but under the law as it now stands we have always managed to meet our engagements.

It would be perfectly safe for the Government in the case of our bank to let us issue promissory notes on our credit, but there are many National banks, and many more that would be organized were this permission granted that are not and would not be strong enough, in my estimation, to be trusted with such a power. Moreover, with this privilege granted, a lot of State and private banks would enlist under the National law and what little advantage a National bank now has would be taken away, and competition, now severely felt, would be much increased. Our dividends would, I think, be lessened by such a measure and our stock depressed in value.

As to the proposal to create a great bank to which shall be relegated the creation of bank notes, there may be some advantages, but we are strongly advised to oppose it by our city correspondent, and if we neglect this advice our long and highly-prized relations with this correspondent might be shaken. I therefore advise strongly against passing this measure or in substituting for it the bill creating an asset currency to be issued by the National banks. Nor do I want branch banks, although our city correspondent favors these.

It seems to me that we had better let well enough alone. If bad times come, we can, I think, take care of ourselves. We have gone through many panics, and always with safety, and usually came out with increased strength and resources. Our charter expires soon. Please look out for the bill extending the corporate existence of National banks. Very truly yours, etc."

"Intensely conservative, you see," said the Representative. "It is hard for him to look outside of the narrow pale that surrounds his own business. The only ray of light he admits shines from his city correspondent. He even differs from this correspondent on branch banks, in regard to which their interests are opposed."

"There is," I replied, "justice in the standpoint of both. Every man hates to have the comfortable surroundings he has built up and become accustomed to disturbed. He dreads the exertion necessary to readapt them. His present experience enables him to provide very fairly for anything that may happen under existing conditions. If these conditions are changed he will have to acquire new experience; otherwise to learn more when he thought his education complete, and this is painful. Let me hear what the President of the State bank has to say. I recognize the letter-head."

The Representative then read the following letter:

"MY DEAR SIR: I am somewhat puzzled how to reply to you, as to the proposition likely to come before Congress for a regulating bank, which is the embodiment of the suggestion made by Mr. Gage when Secretary of the Treasury. I think, however, my interest as a banker warns me against it. This bank, working under the liberal banking laws of the State of Ohio, enjoys many advantages, and is subject to hardly any restriction, other than those a good banker imposes always on himself. It has been long established, and with our large line of deposits and our excellent customers, we have so far been able to meet all competition. The money now furnished by the Government, in our case at least, meets all requirements. It passes equally well in all parts of the country. I cannot understand this desire to substitute a bank-note currency. I know formerly the State banks issued such a currency, and it was the cause of many disasters. That was before my time. Since I have been in the banking business we have got along very well with greenbacks, National bank notes, secured by bonds, silver certificates and coin, when we could get it. The National bank notes were never of much service. Some people complain of silver dollars. We like them because the Government sends them to us free of all transportation. You ought to introduce a bill to have the Government pay transportation on all currency sent out. If it would do so I do not think there would be so many complaints of the accumulation of surplus money in the Treasury. Such a bill, would, I think, be a more practical measure than any now under discussion. Would the great bank pay transportation on the notes it put in circulation? Perhaps this might make bankers more favorable to it. I am afraid it would become a monopoly, or, being created by the Government, would show more favors to National banks. As to the National banks being permitted to issue notes on the credit of their general assets, I am opposed to any such plan. They already have advantage enough. By the way, you must vote against the extension of charters of National banks. If their charters are not renewed, they would gradually disappear. State banks meet local wants better than National banks, and with greenbacks, silver certificates and coin we could get along. If there were no National banks, and all the business was in the hands of State banks, I might see the use of a great bank just

Digitized by Google

to issue currency. As to allowing National banks to establish branches, no! no! this would be the worst thing that could happen; true it would abolish all the little National banks, but the little State banks would have to go also. A few big National banks would monopolize all the business in the United States by means of their branches, just as a few big banks have already in Canada. Let things stay as they are, dear sir; don't vote for any of these bills. If our throats must be cut, don't have it said that we committed suicide. Please keep me advised as to the state of these bills from time to time. If they are likely to pass, I can stir up opposition to them in other parts of the State. Cordially yours, etc."

"Here is another letter from a man who runs a private bank in an agricultural district. His father founded the bank and the son has now a very fine business. All the farmers down there, and they are mostly well off, leave their money with him. I do not believe that section would have been as prosperous as it is if it had not been for that bank. He, like his father before him, has always advanced money in agricultural enterprises, and that country has been developed as a consequence. I do not believe he now has much capital of his own in the bank, although he has a great deal of property of various kinds which, of course, is regarded as security. A private bank being subject to no special banking laws can loan to those who could not get loans from other banks, and can do a great deal of good. Are they safe? Well, when managed by the right kind of man they are as safe as any bank. You may say also that any bank, under whatever restrictions of law, is not safe unless run by the right kind of man. My correspondent, however, is the right kind of man. If he were dishonest he could probably tie up his property so that it could not be reached, before he failed. With the private banker everything depends upon the character of the man. It is to so tie up a certain amount of property that in case of failure it can be reached by creditors, regardless of the dishonesty or incapacity of bank managers, that these special banking laws are devised. This is the object of bond deposits, of the liability of stockholders and of other restrictions. As I said, I have great confidence in my correspondent's honesty and experience as shown by his record. Here is what he writes:"

"DEAR SIR: Your letter as to banking measures in Congress and particularly in regard to a great central bank to furnish a bank-note currency, was duly received. You must excuse this delayed reply. As a private banker I am less hampered perhaps by certain views in regard to banking, apt to be taken by men who work under restrictions imposed by special banking laws. These restrictions are frequently mistaken for the real essence of the business, and they often obscure principles which I shall not bore you by attempting to specify. I have no objections *per se* to an asset currency, knowing it to be a legitimate use of bank credit. It is, however, rather a ticklish experiment in a country of small isolated banks like the United States to grant the privilege of using bank credit indiscriminately in this way. In truth, there is great difficulty in knowing just what credit these small banks are entitled to. A general law equalizes the credit of them all, when in fact their credit is by no means equal. It is like fixing the value of silver by statute to say that the credit of all these banks with the same capital is equal. The safety fund provision, of course, reduces this objection, but it really only pushes back the difficulty, as it supports the fictitious credit of some at the expense of the real credit of others.

The statistics of failed National banks from the reports of the Comptroller of the Currency seem to me a little beside the point, as they are based on the operations of a system so restricted that there were not the same temptations to fraud as there would be, in my opinion, under a system having so much freer circulation privilege.

Therefore, if we need a bank currency, and I believe it would be an advantage to substitute bank notes for the present Government notes, it should only be issued by large city banks closely affiliated in clearing-house associations, or by a bank like the one proposed, specially chartered for the purpose. I myself would under no circumstances wish to take this risk with my small bank, but should prefer to use the notes of the well protected large banks. I can get along very well under present conditions, and there is much in letting well enough alone, for those situated as I am. If I was sure that the powers of a great bank could be so confined that it would not be possible for it in any way to compete or interfere with the ordinary business of existing banks, I would be inclined to believe it a solution of the question of banking reform in this country. But I must confess I am not certain on this point.

As to branch banks, I do not much care. My bank is a sort of close corporation in which the interests of myself and depositors are mutually and peculiarly interwoven. I know every

Digitized by Google

one of them personally, and each one of them knows me. This is the acquaintance of a lifetime grafted on the previous experience of my father. I do not think any other bank could seriously interfere with my business, as it has been built up and is now conducted. Still, unless you can settle the point I have made about the powers of the great bank, I would advise going slow. Very truly your friend, etc."

"There, you see," said the Representative, "are three bankers each representing a different line of banking. I do not think any one of them properly appreciates the national importance of this banking question. There are other letters, but these are sufficient to show what I mean. The private banker seems to have a wider view than the others; at least he is less opposed to new measures. Even his appearance of greater fairness arises chiefly from indifference. He thinks his peculiar position impregnable.

Now, I apprehended as little about the situation as any of them seem to before I came here; but, lifted above the provincial standpoint by the accident of my position, I can see how for the whole nation some banding together of the banking power is necessary and how it would benefit all the banks in the end. Their objections to branch banking are not unreasonable; those to an asset currency have some real basis, but least reasonable of all are their objections to this measure for a great regulating bank. While it may not be possible so to restrict its powers that it will not interfere with the ordinary business of all existing banks, it can certainly be so restricted that it will not interfere with that of banks like those in which our three friends are interested. It will probably interfere to some extent with the correspondent business of the larger city banks, but not so much as they perhaps fear.

But what can I do? My constituents who should be most interested are either opposed or indifferent. If I vote for the measure it may cause me to lose my nomination. If the law be enacted the realization of its benefits will come too late to save me. If the bill is defeated I would be looked upon as unsafe in bank matters. My condition is no different from that of many other Representatives. We are in the same boat. In most districts the bankers and capitalists can and do exercise great influence on the financial machinery. If they were united they could secure the enactment of this measure, but it seems impossible to secure their agreement. The difficulty is greater in prosperous and wealthy districts than in those less so, as the inertia of indifference is greater."

To this I replied that the Congressman perhaps exaggerated the effect the opposition of these men will have in any future canvass he might make. "If the measure prove beneficial," I said, "as you seem to believe, to general business prosperity, the end would so justify you in the eyes of the mass of voters that it would influence even the bankers and capitalists in your favor. You Representatives are indeed timid folks when the preservation of your fences is concerned, but probably not more so than those you most seem to fear. However, I have often wondered why it is so difficult to obtain banking legislation of the first importance, and this talk with you partially enlightens me." WESTERN BANKER.

A DENUNCIATION OF GAMBLING.—Rev. M. J. Savage, pastor of the Church of the Messiah, New York city, in a recent sermon said:

"The spirit of gambling is unsocial, it is anti-human; it makes a man live with his hand against every other man. There is hardly any other vice so utterly and hopelessly inhuman as gambling; most vices you share with somebody, even if you injure them by so doing, you at least share a momentary satisfaction with them; but in gambling everybody is your enemy, and you are seeking to get out of them what they possess without doing them any good. It is opposed to the world's business, to the world's prosperity in every direction, and it dries up in a man the fountains of love and tenderness that bind him to his fellows and makes him the enemy of mankind."

CLEARING-HOUSES AS ISSUERS OF BANK NOTES.

Editors Bankers' Magazine:

SIR: The bill for improvement of the bank currency introduced by Mr. Pugsley, of New York, has two objects in view, both of them very desirable—first, to enable the banks to furnish an elastic currency, and, second, to prevent periods of stringency in the money market caused by the accumulation of revenues in the Treasury. To accomplish the first object the bill undertakes to utilize the clearing-house system by organizing the banks throughout the country into clearing-houses at prominent points. These associations of banks for mutual support are to guarantee the notes issued by each of the banks on asset security.

If the clearing-house associations proposed in the bill could be organized, the result desired of security for a note currency that would possess the desirable property of elasticity, would no doubt be successfully attained. The second object in view of affording at all times an outlet for surplus moneys temporarily collected would also be attained by this use of clearing-house associations. The bill proposes that on the security afforded by the mutual support of the banks forming the association, the Government may deposit public moneys with any or all of them without as now requiring a bond deposit. The banks thus receiving these deposits would pay interest upon them. Under present law when public moneys are received by a National bank depository no interest is paid, the Government sacrificing the possible gain from interest in return for the security afforded by the special bond deposit.

The general principle of obtaining security for banking operations, either in whole or in part, by the association of banks for mutual support, is an old one. It was the basis of the old safety-fund system of New York State, and was there applied simply to the support of the bank notes issued by the banks contributing to the safety fund. The affiliation of the banks was the slightest possible and amounted only to a mutual contribution to a safety fund. This contribution was enforced by the power of the State and not by the power of the banks. Owing to circumstances unconnected with the principle involved, this system did not work very well in practice. The complaints against it came from the banks themselves. Being more or less competitors the strong banks could not see why they should contribute of their strength to build up weak competitors to their own business disadvantage. With a system of independent and isolated banks such as has grown up in the United States, and which possesses many advantages under the business conditions prevailing here, this objection will always arise to any plan of so-called association for imparting to each bank the strength of the whole. The power of Congress can no doubt enforce association of any kind, but as the bankers are a strong part of the Congressional constituency, their opposition to association would probably defeat legislative action. The opposition to forced association in any form would be greater the object of association being to make the strong banks guarantee not only the bank notes but also a portion of the deposits of those regarded as weaker competitors.

The proposition to employ the clearing-house machinery as a method of association for effecting objects outside of those for which the clearing-house was originally designed, was some years ago suggested by Edward Atkinson. His idea was to issue clearing-house loan certificates, a device used in emergencies, in ordinary times in the form and denominations of bank notes. The objection made to this at

Digitized by Google

the time was that it might be unwise to exhaust such a strong emergency resource, in ordinary business operations, and leave the banks unprotected when an emergency did arise. The clearing-house was devised first as a mutual convenience and left each bank participating in its benefits perfectly independent. The principle of association crept in later as a mutual safeguard against outside competitors, but did not at first call for any mutual support. Such mutual support as did arise under association was forced by the danger threatening all in times of panic. In ordinary times and business the banks in existing clearing-house associations are still virtually as independent of each other as they ever were.

If clearing-house associations were forced by Federal law, they would become something very different from what they now are. Probably they would be incorporated and thus become amenable to processes of law to which they are not now subject. Every bank in such legalized associations would assume new responsibilities to each other and to the public. If the resources of the banks were made the common security for the notes and a portion of the deposits of all, if an emergency arose, the usefulness of clearing-house associations as they now are would be very much impaired. The principle of association is one thing, but there is much difference to the banks whether this principle is acted upon voluntarily by them, or whether it is forced upon them by legislative power.

The clearing-house associations already formed indicate the extent to which the banks have adopted the principle of mutual support by their own free will. Possibly favorable legislation by Congress might induce the banks to adopt it to a still greater extent for the very purposes Mr. Pugsley's bill attempts to accomplish. Perhaps the fault with the bill in the minds of bankers is the probability that it would force mutual support along the wrong lines. Why should locality enter into the formation of association for mutual support, and why should these combinations be called clearing-house associations? Let the present clearing-house associations alone, and pass a law permitting such banks as desire to associate or affiliate to do so regardless of locality. When a sufficient number of banks, with specified resources, have bound themselves voluntarily to support each other in the issue of circulation to specified amounts, and to mutually redeem at any bank counter the circulation issued by any one, then grant the banks concerned the privilege of issuing notes. These associations, like clubs, would only admit banks that were satisfactory to all. The banks in any such association might be located all over the country and would probably consist of such as do not now regard each other as competitors, but as correspondents and feeders. Such an association would be on the natural lines of the banking business, but to force the association of all banks within certain territorial lines which might be enemies and competitors, could only produce a dislocation of natural business lines. There are indications that these free associations of banks for mutual support are already progressing. The law should take cognizance of this new evolution and not work contrary to its spirit.

BROOKLYN, N. Y., March 8. EX-BANKER.

DEMONETIZATION OF PERUVIAN SILVER SOLES.—Mr. Neill, secretary of the legation at Lima, under date of January 18, 1902, transmits copies and translations of a decree of January 17, authorizing 500,000 soles to be smelted into silver bars at the Lima mint and directing that said bars be exported to Europe and sold for the purpose of buying gold, according to the decree of December 14, 1901, which says:

"The President shall exercise his judgment in smelting to the amount of 1,000,000 silver soles, the value of which shall be replaced by Peruvian gold pounds."

Southern Pacific's Reduced Rates.—The Southern Pacific Company, by agreement with their connections, will put in effect daily during March and April colonists' one-way second-class rates to California, as follows: From Chicago, $33; from St. Louis and New Orleans, $30; and from the Missouri River, $25, thus reducing the regular rates from eastern points nearly fifty per cent.

BANK BOOKKEEPING.

[An address delivered before Alexander Hamilton Chapter American Institute of Bank Clerks, New York city, by John Bambey, President Washington Bank.]

Bank bookkeeping is a hard field to cover in a single hour; but perhaps we can arrive at some adequate comprehension of what it means by considering the matter under two headings, into which the subject seems naturally to divide itself:

First, how does bank bookkeeping differ, if it differs at all, from mercantile bookkeeping?

Second, what books are ordinarily used in bank bookkeeping?

Essential Features of Bank Bookkeeping.

The essential features of bookkeeping are the same everywhere, and the maxim "debit what we receive, and credit what we give," is of universal application. The only difference between the bookkeeping of a bank and that of any mercantile concern is that incident to the different character of the business. If the business involves the handling of a large number of different articles, and the conducting of many joint ventures, or trades, it is correspondingly more complex in its features than if only one article is dealt in. Banking deals with only one article—cash (unless we consider that credit is a separate and distinct species of commodity.)

A bank has been aptly defined by Horace White in his "Money and Banking" as "a manufactory of credit and a machine of exchange." Both of these features involve considerable bookkeeping, but generally bank bookkeeping is considered the simplest of any known kind; and probably this is true so far as the individual ledger bookkeeper is concerned. He has to do only with crediting the deposits, and charging the drafts on the customers' accounts. He gets but a one-sided view, however, if he knows and thinks only about his own ledger.

Let us see how the principle we begin with, "debit what we receive and credit what we give," will apply to the individual or dealers' ledger. When we receive a deposit it is credited, and when we pay a check it is charged on that book. That seems to be rather a reversing of the principle stated. It will, perhaps, be made clearer if we say debit the custodian of the particular article when we receive some of it, and credit the custodian when we give some of it out. So when we receive a deposit we receive cash or its equivalent, and must charge the custodian of the same (say the Cashier) with the amount received, at the same time crediting the person who deposited the cash with the amount, because we are his debtor to the amount so deposited. Conversely, when we pay a check we part with cash, and must credit the custodian of cash with the amount, while at the same time we must see that our debt to the depositor, as evidenced on the dealers' ledger, is correspondingly reduced.

Now, this is all fundamental, and to one who has kept the general ledger, and has a broad conception of bookkeeping, may appear too elementary to speak about at such length. But were I to submit the general trial balance sheet to the bookkeeper who has kept only an individual ledger, or note book, or some one or more of the other numerous books of a bank, I think he would have quite a problem ciphering out its meaning, and he could not do it at all without some knowledge of double-entry bookkeeping beyond what is required for the keeping of a dealers' ledger. This daily trial balance with the omission of those accounts which represent earn-

Digitized by Google

ings or loans, or rather with their consolidation into the profit and loss account, becomes the balance sheet of the institution of whose books it is an abstract.

It may be well made the basis of the answer to our our second question, what books are ordinarily used in bank bookkeeping?

In the first place it is evident that we must have what is called a general ledger. This contains accounts with all the items of business done by the bank, debiting what the bank receives to the account with that particular thing (or with its custodian if you prefer), so that we may require an accurate account of all that we have received; as, cash, cash in banks, loans, discounts, etc., and on the same principle also debiting expense, interest and kindred accounts with what we pay for services represented in that way, received by us, and entering finally into profit and loss.

We credit what the bank gives to the account which we keep with the thing given out (or with its custodian). When we receive a deposit of money or checks we charge cash, or the Cashier, for what we receive, and credit the individual depositor on the dealers' ledger, because we give him an evidence of the indebtedness in the shape of a pass book or a certificate of deposit which he can call upon us to redeem on demand. If the deposit is in the shape of the proceeds of a loan or discounted note, we give him a credit, and charge loans or discounts. For the money received as interest or discount we charge cash and credit an account called interest or discount, to the imaginary custodian of which we have given a claim on our cash account for the amount received.

Of course the bank is the real custodian and owner of that claim, and when we come to a point when we wish to ascertain the result of business for a certain period, we set the amount paid for salaries and other intangible things received, and which stands on the debit side of the ledger, over against the amount which our earning accounts have a right to claim from our assets, as to which they stand as creditors, and the result is a net profit (it might be a loss if the balance were on the wrong side, but of course no banker ever shows a loss as the result of the quarter's business).

In getting the many transactions of a day into such shape that each one can properly be debited and credited to the general ledger, a cash book, on one side of which are entered all receipts of cash or credits representing cash either in detail or in total. On the other side are entered all payments, including credit given customers as of cash, and deposits made in other banks either in detail or total.

At the close of the day the total receipts are posted to the debit of cash in general ledger, and the total payments posted to the credit of cash; the difference between the debit and credit sides of this account should be the amount of money in the bank (and by money of course I mean both currency and checks representing currency).

Many other subsidiary books or journals are necessary, and in order to keep each one of them in proper articulation with the ledger, a bank clerk should have a thorough knowledge of the principles I have hurriedly outlined, otherwise he will be likely to make many blunders.

First in importance of the subsidiary books comes the individual or dealers' ledger, because in this are kept the accounts with the public; and every bookkeeper knows how easy it is for a careless man to involve the bank in serious loss by overdraft, by crediting a deposit to the wrong account, or else in taking his balance off wrong, to say nothing of the bank losing accounts of dissatisfied customers, whose checks may have returned marked "N. G." owing to a bookkeeper's error.

The next step below the dealers' ledger, in some banks, is a balance book or duplicate ledger kept to show only the actual daily change in the balances. The accounts which do not change are brought forward daily and the total footings should represent the amount credited to individual ledger, as it appears on the daily trial balance. The checks paid and deposited received are first sorted alphabetically and

Digitized by Google

then listed and recorded in some manner, separating the accounts into groups, and if more than one division of the ledger is used, so as to get a correct total for posting to the general ledger.

Some other books which are used in banking, and their purposes, are:

THE DISCOUNT REGISTER.

This is a book of original entry, and becomes the basis of all transactions involving bills discounted. It contains a complete record of all paper discounted by the bank, which record is made at the time the paper is discounted. This book is ruled with columns as follows: For whom discounted, maker, endorser, date, time, when due, amount, discount, exchange, proceeds and general remarks. All entries are numbered consecutively, and the paper is then classified with reference to its maturity.

THE DISCOUNT TICKLER.

In this book all the notes discounted are entered according to their maturity, so as to be always under the watchful eye of the discount clerk, to insure the presentation of the paper at the proper time.

DEALERS' BILL BOOK.

The dealers' bill-book is designed to show in convenient form the amount of discounted paper carried by the bank for each customer. A title-page is given to each dealer, and the record is compiled either from the paper itself or the discount register.

COLLECTION REGISTER.

This contains a record of all paper left at the bank for collection. It is a book of original entry. The paper is recorded by consecutive numbers, and the facts of maker, time, amount, payment or dishonor, etc., are carefully noted for future reference.

COLLECTION TICKLER.

Like the discount tickler, all entries are arranged according to the date of maturity, and from a record of all paper left with the bank for collection.

CERTIFIED CHECK BOOK.

This contains a record of all checks certified by the bank. When a check is certified it is charged at once to the depositors' account, and then credited to certified check account, the check thereby becoming a liability of the bank, and the money being held in reserve to pay it on presentation. When the certified check is presented for payment it is charged to the certified check account. This book is balanced daily, the balance shown being the amount of certified checks outstanding, and agreeing with the ledger.

LOAN BOOK.

Herein is kept a record of all loans upon collateral made by the bank. The collateral which secures the loan is carefully examined to make sure that the proper forms of assignment have been complied with, and is then recorded at its present market value. From time to time it is "put to market," or in other words the value is changed to agree with the market rates. This is done to insure a sufficient margin of safety, the margin required in ordinary times being from twenty to twenty-five per cent. above the amount of the loan.

In a large institution many other subsidiary books are used, but the ones enumerated are, in my estimation, the most essential, and by the use of these any ordinary bank can conduct its business conveniently.

A COLLEGE EDUCATION AND COMMERCIAL PURSUITS.

The benefits of a college education to young men who have to earn their living in commercial pursuits are considered in a pamphlet recently issued by R. T. Crane, a Chicago manufacturer. Mr. Crane sent out a large number of letters to universities, college graduates and business men making inquiry, among other things, as to the success achieved by college graduates in business, also as to whether business men regarded a college education beneficial, and if they gave preference to young men so educated in selecting their employees. From the graduates themselves the replies received were hardly sufficient to afford a basis for forming a conclusion, the replies generally, however, seeming to favor the college course.

The business men consulted, with few exceptions, replied that they believed that a college education was highly desirable; but Mr. Crane shows that the practices of these business men in selecting employees belied their words—that they did not give preference to college-trained men. For instance, the first vice-president of the New York, New Haven and Hartford Railroad Company writes strongly commending a college education for railroad men. Upon further inquiry he admitted that none of the 900 station agents of the company were college graduates. Many other similar cases were developed by the inquiry.

It may be of some interest, perhaps, to summarize that part of the inquiry relating to banking. Regarding this branch of the subject Mr. Crane says:

"As an example of the conflicting opinions held by men in the same line of business, with regard to the benefits of a college education in a commercial life, I quote from letters received from two students who are now engaged in banking.

The first upon leaving college became connected with a bank which his father (who received only a common school education) had already built up into a successful concern. This young man says:

'Whatever success I may have received, I attribute entirely to my course at college, where I learned to judge human nature in a way I could never have acquired elsewhere; also the methods used to learn the college lessons, I have been able to apply to other things and arrive at a rapid and accurate conclusion. I was also taught self-reliance, and to stick to a thing until it was accomplished.'

His opinion of what his position would be to-day, had he started in business at the time he entered college, is expressed as follows:

'I would have been an undeveloped narrow-minded bank clerk, and would never have achieved any of the success I may have done. College taught me to judge human nature, the most important thing in banking.'

It would seem that this gentleman has rather over-estimated the benefits that he has derived from his college education, for inquiry does not show that he has made any remarkable success in his business.

The other banker says: 'I unfortunately work in my father's bank, holding a position my education did not especially fit me for. Had I foreseen a business career, I am certain the college education I received could have been combined with other work that would have been of immense advantage to me. A literary and scientific education does not compensate me for the lack of practical knowledge.'

In regard to the question whether a college education has been a benefit to him in the performance of his duties, etc., he says: 'No and yes—my general information has helped me, but my lack of special and local knowledge has hurt.'

With regard to his probable position had he not gone to college, he says:

'In a country bank thorough knowledge of local conditions and acquaintance with people, with proper clerical experience, is everything. I would be better off in this respect if I had staid at home.'

Digitized by Google

Mr. James B. Forgan, President of the First National Bank, Chicago, takes the ground that: 'More depends on the man than his early education. A man's schooling is after all the smallest part of his education,' and it seems to be his rule to look to the man rather than to his education.

He has taken considerable pains to ascertain the proportion of college men in his bank, and finds that it is from three and one-half to five and one-half per cent.

He says that they do not give preference to nor do they avoid college men; that they do not find that such men show greater mental ability or advance more rapidly than persons of about the same caliber who have not received a college education.

While his answer to the question 'will not the work and experience a young man obtains in any line of business develop the mental qualities required in that business fully as much as would a course in college,' is in the affirmative, and while he also says that he would not advise a young man who had only $5,000 to spend it for a college education, if he intended to enter upon a business career, he still thinks that there is need of more than a grammar school education in a general business life.

Edward Townsend, Cashier Importers and Traders' National Bank, New York, says: 'Of our entire force of over one hundred clerks, we think we have but two college graduates, and they passed through one of the smaller colleges many years ago, and finished the course at a very early age.

Our method, when we need to increase our force, has been for many years to take in boys just from school, of about sixteen years of age, without any previous business experience and train them in our own methods, promoting them from time to time as the opportunity presents itself. This plan has worked very satisfactorily with us. We have found that the best material for our purpose has come from the middle class, young men who have to work to make a living. Other things being equal, we, of course, in selecting young men, take into consideration the education they have received, but at the age they enter our employ, they are usually too young to have completed a college course.'

Mr. A. H. Wiggin, Vice-President of the National Park Bank, New York, says they have no college men in their employ.

Mr. F. H. Peabody, of Kidder, Peabody & Co., Boston, writes: 'The chance of getting himself successfully established in business seems to me better for a young man who goes into a business establishment on graduating from school, say at the age of seventeen or eighteen, than that of a man who spends the four years from seventeen to twenty-one in college, and the chances of being efficient, up to a certain point, seem to me better than those of the college student. Coming to a higher grade of work, the chances seem to me about equal.

Probably the management of our railroads illustrate as high a grade as any of business and executive ability, and the greatest managers of railroads in this country are men who, I believe, never had any college education. Edgar Thomson, President Roberts, Cornelius Vanderbilt, James F. Joy, C. P. Huntington, Mr. Plant and James J. Hill are instances, and Mr. Schwab, of the Steel Trust, I believe to be another in a different line.

But, if a man has the qualities which carry him up to the top in business, the college education seems to me likely to give him a line of valuable acquaintances, more tact in dealing with his fellow men, and more capacity for enjoying the intellectual part of life, than if he had grown up without it.'"

Mr. Crane comments as follows on the letter of Mr. Edward Townsend, Cashier of the Importers and Traders' National Bank, New York:

"I regard the letter from Mr. Townsend as being the most business-like of all the replies received, and believe it will be found that the method which he says is followed in his bank is the custom of practically all business men—that is, that they take boys about sixteen years of age who have attended the lower schools and then train such help in their own methods, advancing them as they prove worthy and the business requires."

Mr. Crane thinks that a course in college has a tendency to make a young man conceited and impractical. Perhaps it might be retorted that those who have gained their education in the school of experience are disposed to look with condescension on the man trained in the colleges. True education, wherever obtained, ought to render a man humble instead of conceited. As "Touchstone" says: "The fool thinks himself a wise man, and the wise man knows himself a fool."

Mr. Crane seems rather too anxious to prove his case against the colleges, and some more extensive data are desirable on which to base a conclusion.

The disposition of the colleges to change their curricula to meet the great commercial demands of the present times shows that they realize the tendency of the times.

George Eliot tells in "The Mill on the Floss" how poorly Tom Tulliver's study of Latin verbs equipped him for keeping the books and managing the affairs of the mill, when these responsibilities were thrust upon him by his father's death.

Mr. Crane states what is a striking fact when he says:

"The great majority of our strongest and most successful men in the country to-day came from farms and villages and obtained very little education."

While this is doubtless true, it does not follow as a corollary that the young man who would succeed in a commercial life should be content with a very little education. The requirements of a successful career are not unvarying, and perhaps the man of college training may be more in evidence before the close of the twentieth century than he is at its beginning.

FINANCIAL AND COMMERCIAL AFFAIRS IN JAPAN.

The "Financial Annual of Japan" for 1901 contains a large amount of statistical information in regard to the finances and commerce of that Empire.

A striking illustration of Japan's growth in recent years is to be found in the very large increase in the revenues, the ordinary receipts rising from 85,888,080 yen in the financial year 1893–94 to 207,540,670 yen in 1901–02. The national debt increased from 261,187,822 yen in 1893 to 518,764,195 yen in 1901.

The total ordinary and extraordinary revenues and expenditures together with the surplus or deficit for a series of years are shown in the table following. It may be noted that the extraordinary revenues include proceeds derived from loans, from the Chinese indemnity, etc.:

FINANCIAL YEARS.	*Revenue.* Yen.	*Expenditure.* Yen.	*Surplus.* Yen.
1892–93	101,461,911	76,734,740	24,727,171
1893–94	113,769,380	84,581,872	29,187,508
1894-95	98,170,028	78,128,643	20,041,385
1895-96	118,432,721	85,317,180	33,115,541
1896–97	187,019,423	168,856,508	18,162,915
1897–98	226,390,123	223,678,844	2,711,279
1898–99	220,054,128	219,757,568	296,560
1899–00	254,254,582	254,165,588	88,994
1900–01	254,549,818	257,930,417	*3,380,599
1901–02	277,497,003	275,928,645	1,568,358

* Deficit.

Following the war with China there was a considerable expansion in all lines of trade and industry, as shown by the following table, showing the number of companies engaged in agriculture, industry, commerce, railway enterprises and banking, together with their paid-up capital, for a series of years:

YEAR.	*No. of companies.*	*Paid-up capital.* Yen.
1895	2,107	268,635,810
1896	3,821	506,500,031
1897	4,634	655,619,090
1898	5,122	770,986,351
1899	5,543	878,154,396

The number of railway companies reported in 1894 was twenty-nine, with paid-up capital amounting to 63,928,649 yen; in 1900 the number of companies had increased to fifty-five and the paid-in capital to 185,207,296 yen. For the same period the number of companies engaged in banking rose from 869 to 2,356 and the paid-in capital from 101,408,881 yen to 327,742,296 yen. There were 501 industrial companies reported in 1895 and 873 in 1899. In the same time the paid-up capital of these companies rose from 44,755,567 yen to 123,715,719 yen. The number of companies engaged in commerce in 1895 was 440 and their paid-up capital 16,092,657 yen. Sixty-nine companies were reported engaged in agriculture in 1895 with paid-up capital amounting to 1,207,807 yen. In 1899 sixty-three companies were reported with paid-up capital amounting to 1,568,460 yen.

BANKS AND BANKING.

The capital of the Bank of Japan increased from 10,000,000 yen in 1894 to 30,000,000 yen in 1899. There was also an increase in the capital of the Yokohama

Digitized by Google

Specie Bank from 4,500,000 yen to 12,000,000 yen. In 1895 the capital of the National banks reached its highest point, amounting to 48,951,100 yen. By 1899 these institutions were superseded by ordinary banking firms. In 1894 the number of ordinary banks reported was 700, with paid-up capital amounting to 37,410,781 yen. The number had increased to 1,561 in 1899 and the capital to 209,973,431. From 1895 to 1899 the Savings banks increased in number from 92 to 531, and their paid-up capital from 1,889,355 yen to 19,979,151 yen.

Circulation of Specie and Paper.

The circulation of Government paper money in Japan reached its maximum in 1878, when the amount outstanding was 139,418,592 yen. After January 1, 1886, the Government paper was gradually converted into metallic currency, until its circulation came to an end on December 31, 1899. In 1893 there were 52,124,353 one-yen coins in circulation. After 1897 these coins also disappeared from the circulation. In 1879 the National bank notes in circulation amounted to 34,426,351 yen. By a law put in force in 1896 these notes were withdrawn from circulation on December 9, 1899.

Stock of Money in the Country.

The amount of specie in the country and the amount of paper money issued are given below:

Years.	*Specie.* Yen.	*Paper.* Yen.	*Total.* Yen.
1894	91,926,819	185,000,043	276,926,862
1895	95,689,066	212,262,825	307,951,891
1896	102,538,771	224,187,957	326,726,728
1897	156,438,787	238,704,885	395,143,672
1898	146,454,979	204,678,190	351,133,169
1899	165,475,085	255,669,431	421,144,516
1900	127,494,866	230,821,779	358,316,645

In the period covered by the foregoing table the stock of gold coin increased from 11,957,378 yen to 52,930,394 yen, while the one-yen silver coins decreased from 46,292,212 in 1894 to 31,048,987 in 1897, disappearing entirely after the latter date. There was an increase of about 2,000,000 yen in the stock of subsidiary coins from 1894 to 1900, the total on the latter date being 17,446,096 yen. Government paper decreased from 13,404,547 yen to 1,767,814 yen in 1900, and National bank notes decreased in the same time from 21,781,796 yen to 483,933 yen. Convertible bank notes increased from 149,813,700 yen in 1894 to 228,570,032 yen in 1900. The total stock of specie and paper in 1900 was 358,316,645 yen; deducting the reserve against convertible bank notes, amounting to 35,367,842 yen gold, and 2,666,668 yen silver, the amount of money in actual circulation was 320,282,135 yen.

The Increase in Bank Clearings.

There was an enormous gain in the volume of checks and bills cleared at the various clearing-houses from 1894 to 1900. Below will be found returns from several of the most important cities, by two year periods, 1894 to 1900:

	1894.	*1896.*	*1898.*	*1900.*
	Yen.	Yen.	Yen.	Yen.
Tokio	185,597,497	417,425,507	790,247,456	1,405,449,664
Kyoto	....	....	69,084,038	167,566,438
Osaka	67,543,807	188,409,838	226,980,828	528,552,745
Yokahama	....	....	....	348,806,775
Kobe	....	....	100,848,120	168,238,769

Digitized by Google

Interest rates are rather high in Japan, but appear to be gradually tending lower. For 1900 the highest rate on loans was 14.10 per cent., and the lowest 11.50 per cent.; on fixed deposits, highest 7.50 per cent., lowest 6.80 per cent. The highest rate on discounts was 14.60 and the lowest 12.23.

Foreign Trade of the Empire.

The imports and exports of commodities, specie and bullion for the years 1898, 1899, 1900 and for the eleven months ended November, 1901, were as follows :

Year.	Commodities.		Specie and Bullion.	
	Exports.	*Imports.*	*Exports.*	*Imports.*
	Yen.	Yen.	Yen.	Yen.
1898	165,753,758	277,502,157	86,987,481	42,563,781
1899	214,929,894	220,401,926	11,178,247	20,163,501
1900	204,429,998	287,261,846	56,707,063	11,517,835
*1901	228,091,113	238,961,184	13,765,780	10,446,158

* Eleven months.

For 1898 the exports of specie and bullion exceeded the imports by 44,423,700 yen, and the excess of exports for 1900 was 45,189,228. The excess of imports of the precious metals was 27,543,324 yen in 1896 and 62,247,550 yen in 1897. It should be stated in this connection that from 1888 to 1897 the value of gold coin was calculated on the basis of the silver yen, and after 1898 on that of the gold yen.

For the eleven months of 1901 the gold coin and bullion amounted to 11,317,852 yen and the silver coin and bullion to 2,447,928 yen, while the imports for the same time were: gold, 10,177,400 yen ; silver, 268,758.

In 1895 the exports of commodities were 6,851,600 yen in excess of the imports, but for the subsequent years up to and including 1900 there was a large excess of imports, the total excess in this period being 310,049,696. For the eleven months months ended with November, 1901, the excess of imports was only 10,870,071 yen, compared with an excess of 58,831,713 yen for the year 1896, 56,165,695 yen for 1897, 111,748,404 yen for 1898, 5,472,032 yen for 1899 and 82,831,852 yen for 1900.

Perhaps the wonderful growth can not be more graphically illustrated than by giving the imports and exports of commodities for periods ten years apart. They were as follows :

Exports and Imports of Commodities, 1880, 1890 and 1900.

Year.	*Exports.*	*Imports.*
	Yen.	Yen.
1880	28,395,387	36,626,601
1890	56,603,506	81,728,581
1900	204,429,994	287,261,846

The successful conclusion of the war with China, and the receipt of a large indemnity from the latter power, was followed by a period of considerable extravagance in public and private expenditure. However, as a large part of this expenditure has gone into productive enterprises, the results in future will undoubtedly be more favorable. The financial reforms introduced within the last few years are such as will promote public and private credit. The trade returns show a marked tendency toward retrenchment, the effect of which will also shortly appear in the amount of home capital available.

The Late Crisis and the Outlook for the Future.

In an address delivered before the Osaka Bankers' Club on November 18, Mr. Tatsuo Yamamoto, Governor of the Bank of Japan, gave the following account of the late financial crisis, and expressed a hopeful view of the future. He said :

Digitized by Google

"The financial crisis which prevailed from last year to April or May of this year is still very fresh in our memories. Happily, the difficulties have been overcome without very disastrous results, on which fact we are to be much congratulated. It is well known that the crisis originated in the boom which came after the war with China. The capital of various business companies (banks excepted) invested in machinery and other immovables stood at the enormous sum of from 60,000,000 yen ($29,880,000) to 90,000,000 yen ($44,820,000) in the years 1896-97. The Government drew up a financial scheme for the next ten years, which suddenly expanded the annual national expenditure by a large amount. The money required was to be drawn chiefly from the increase of taxation, the issue of bonds, and the indemnity received from China; while the fund for the extension of telephone and telegraph systems, the railway and the establishment of the iron foundry was to be raised chiefly by issuing domestic bonds. For this purpose, it was proposed to raise the sum of 270,000,000 yen ($134,460,000). This proposal in itself seriously affected business. Such a radical expansion of the country's finances soon brought about a reaction, and the aim of the Government—which was practically to distribute the indemnity money received from China among the people, thus giving them wider scope in their business and at the same time enabling them to subscribe to the bonds—was defeated. The money spent by the Government on public works chiefly found its way into the pockets of the laboring classes, not to return easily to the Government. The prices of articles rose, the imports exceeded the exports, and business circles were placed in a most trying position. The people began to complain of the Government scheme, all hope of the proposed domestic loan being raised was abandoned, and the Government was finally compelled to modify its financial proposals. Taxation had to be increased again and again, and arrangements made to raise a foreign loan instead of the domestic loan before proposed.

Laws were amended to meet the change in the scheme, and bonds to the amount of 42,000,000 yen ($20,916,000) were placed on the foreign markets, and some 100,000,000 yen ($49,800,000) was also raised from abroad, by means of which the Government managed to carry out its scheme to the present year. Yet scarcity of money in business circles increased day after day, with the result that there was a contraction in business enterprise. The total amount of the paid-up capital of commercial companies, which stood at some 90,000,000 yen ($44,820,000) some years ago, fell to about 21,000,000 yen ($10,458,000) last year and to 19,000,000 yen ($9,462,000) this year. This, however, meant that the demand for money had returned to its normal level.

Order having now been restored in the finances of the country, in my opinion it has become necessary to cut down the public works within the limits of the country's financial ability. Last year I urged the Government authorities to follow this policy. The last Cabinet fell on account of financial troubles, and the present Cabinet, finding a deficit of 50,000,000 yen ($24,900,000) in the revenue, entered into negotiations for a foreign loan. Happily or unhappily, the negotiations failed, and I do not think we need be disappointed that they did fail. Indeed, the failure of the negotiations will be productive of good in Japan. It has led the Government to make up its mind to postpone or suspend a part of the projected Government works and to readjust or economize expenditure. The only course now left for the Government to take for raising the necessary funds is to count on the Bank of Japan, no loan being otherwise possible at home or abroad. It is impossible for the Bank of Japan to make limitless advances even to the Government. When the negotiations for the foreign loan failed, the bank made inquiries of the Government as to the repayment of the advances now standing, and was assured that of the amount of the loans made by the bank, which will equal some 40,000,000 yen ($19,920,000) at the end of the present year, 20,000,000 yen ($9,960,000) would be repaid about February next, by disposing of the bonds now kept in London by the Government and of the silver seized in China. The whole amount it is proposed shall be repaid in July next, when the half-yearly balance is made. With this assurance the bank has agreed to make further advances, and the issue of the notes of the bank beyond the legal limit will probably amount to some 30,000,000 yen ($14,940,000). There being good prospects of the money so advanced being easily recovered, the financial position will not be much affected.

The financial prospects are very promising. In particular, the rice crop has proved to be exceptionally successful, and the export trade has much improved, the raw-silk market being particularly active. There is, therefore, every hope of improvement of trade in the future."

The wonderful increase in the foreign trade must be taken as an indication of a great gain in the producing and consuming power of the inhabitants of the Empire, rather than greater requirements following an addition to the number of inhabitants. In the past quarter of a century the population has gained only a little more than 10,000,000. The total population in 1872 was 33,110,798; in 1889 it was 40,453,461, and 43,761,723 in 1898. This comparatively small increase in the population makes the wonderful achievements accomplished by the Japanese people in the fields of trade and industry all the more remarkable.

DEATH OF FREDERICK D. TAPPEN.

Frederick D. Tappen, who was the oldest bank President, in point of service, in the city, and one of the country's ablest and best-known financiers, died February 28. At the time of his death he was President of the Gallatin National Bank, and had occupied that position since 1868. He was four times elected President of the Clearing-House Association, and was several times chairman of the clearing-house committee, holding that position at the time of his death. He was a member of some important committee almost continuously from 1869. His services as chairman of the clearing-house committee won him special distinction in the several financial crises through which the country has passed. For many years his name has been more prominently associated with clearing-house affairs than that of any other bank officer in the city. His work in the 1893 panic was attended with particular success, and in token thereof his banking associates presented him with a silver tankard, which had been presented to Sir John Houblon, 200 years before, to commemorate his services as first Governor of the Bank of England.

Mr. Tappen was born in New York, January 29, 1829. He graduated from the New York University in 1849, and entered the service of the National Bank (now the Gallatin National) as specie clerk. He was rapidly promoted, becoming Assistant Cashier, October 20, 1857, and Cashier the following day. On July 1, 1868, he was elected President and director.

On November 12, 1900, Mr. Tappen completed fifty years of continuous service with the bank, the occasion being commemorated by the presentation of a gold loving-cup and an address from the directors, officers and employees.

A portrait of Mr. Tappen, accompanied by a biographical sketch, appeared in the MAGAZINE for December, 1900.

Retiring the Greenbacks.

Editor Bankers' Magazine:

SIR: The majority of the students of finance believe that the legal-tender notes were a mistake in the beginning, and the history of these notes seems to warrant that conviction. It is believed the notes are now inimical to the stability of business, though the extremely strong condition of the Treasury at present arouses no immediate concern.

The champions of these notes are many, but perhaps they might be induced to make a compromise. Could not the threatening influence of the legal-tender notes be lessened by retiring them at the rate of, say, \$2,000,000 a month until they are reduced to \$150,000,000, the amount of the gold reserve fund, without injuring the money market? An increased National bank circulation could supply the place in the circulating medium of the country left vacant by their withdrawal.

When the amount of outstanding legals is reduced to \$150,000,000 the retirement should cease as long as the gold fund remained intact, but if the fund were impaired, then the legals should be reduced to a like amount.

Would not that endless chain effect be destroyed, and the burden that the fund must carry be lessened by such a scheme? If the Government were forced to issue bonds to strengthen the gold reserve it could restore the legals after the danger was over.

This scheme may be impracticable, and I should deem it a favor if you would point out to me wherein is the weakness. ALBERT S. COX.

NEW YORK, March 3.

Answer.—The "impracticability" of the scheme lies in the fact that Congress shows no disposition whatever to retire the greenbacks. If the legal-tenders when redeemed were reissued only in exchange for gold, the "endless chain" would not give anybody further concern. This proposal was made by John Sherman some twenty or thirty years ago. Its adoption would make the greenbacks gold certificates. But the greenbacks cannot well be retired until the silver dollars or certificates are taken care of, and provision made for gold redemption by the banks of the notes issued by them.

A BANKERS' MONEY ORDER.

Below will be found a facsimile of a bankers' money order in use by the Fargo (North Dakota) National Bank. It is somewhat reduced in size, the original measuring 8⅜ by 3½ inches (outside border). The following is in regard to the order kindly furnished by Wm. C. Macfadden, Cashier of the bank:

"We find these money orders very convenient in issuing in small amounts, and already have quite a demand for them, although we have used them but a short

time. They are especially convenient to be carried for use when traveling, the payee being required to insert his signature in the body of the order when they are issued, furnishes a means of identification which is very convenient. They are more easily drawn than a draft, for the reason that we do not insert the name of the payee.

As we draw these orders, we credit them on our books to 'money order account,' and, as the statements from our correspondents come in on the first of each month, we credit each correspondent with the orders paid by them, and charge the total amount back to 'money order account,' which keeps our books straight.

We make the same charges for these orders which are made by express companies for money orders issued by them, thus meeting the competition in that line which has always been so annoying to bankers."

SOUTHERN MONEY IN BANKING.—Mr. James H. Eckels of Chicago, ex-Comptroller of the Currency, finds gratification in the fact that the South is acquiring greater and greater bankable wealth. "The increase of bank facilities in the South," he writes in the Twentieth Anniversary Number of the "Manufacturers' Record" of Baltimore, "has another feature about it which is not alone a source of congratulation to the people of that section, but to the whole country. That feature is that it is Southern wealth developed in the South and largely owned by Southern men which is doing this thing. The noticeable defect in not a few banks in suddenly-developed and over-boomed Southern cities prior to 1892 was that they were promoters' banks, organized with borrowed money, with local interests not too deeply interested in their lasting and success. The result of all this was easy borrowing, unwise speculation, accumulated debt and ultimate widespread disaster. The lesson then learned has not been forgotten, and no section of the country to-day presents better illustration of progressive banking methods, coupled with conservative soundness, than the South."

THE UNITED STATES TRUST COMPANY.

MR. GAGE TO SUCCEED MR. STEWART AS PRESIDENT.

At a special meeting of the trustees of the United States Trust Company, of New York, held February 18, the following communication was read from President John A. Stewart:

Lyman J. Gage.

John A. Stewart.

"Owing to my advanced years, I have for some time been seriously contemplating the importance of installing a suitable successor to myself in the Presidency of the company; but until very recently I have been unable to suggest any one for the position. Within the past few weeks, however, it occurred to me that possibly the Hon. Lyman J. Gage, the late Secretary of the Treasury, might be available for the position, and it affords me great pleasure to state that after correspondence and personal conference with him, he has been prevailed upon to signify his willingness to accept the Presidency should it meet with the entire concurrence of the board. I am convinced that Mr. Gage is admirably fitted for the place, and believe that under his guidance the prosperity of the company will continue in increasing measure.

The steps which I had assumed the liberty of taking in this matter have met with the approval of every member of the executive committee, and will, I trust, have your unanimous approbation."

Mr. Gage has signified his acceptance of the position, and will probably assume the duties of his office about May 1.

John A. Stewart, who retires from the Presidency of the United States Trust Company, was one of those who organized that corporation in 1853. He became Secretary, and continued to hold that position until 1864, when he became Assistant

JAMES S. CLARK.

United States Treasurer at New York. In 1865, on the death of Joseph Lawrence, President of the company, Mr. Stewart was chosen as his successor, and has held the office since that time.

Lyman J. Gage, Secretary of the Treasury under President McKinley and President Roosevelt, and formerly for many years President of the First National Bank, of Chicago, comes to the duties of his new office with a reputation and a record second to that of no other financier in the country.

The United States Trust Company is the largest corporation of its character in the United States, having total resources exceeding $89,000,000.

Another officer of the United States Trust Company who has served the corporation for many years with fidelity and rare ability is James S. Clark, the Vice-President, whose portrait is presented herewith. He became connected with the company as a clerk in 1864, and was promoted to be Assistant Secretary and later Secretary. For the last twenty years he has been Vice-President. Mr. Clark will continue as heretofore to take an active part in the management of the great interests committed to the company's care.

Return of Papers with Imprinted Stamps.—The following resolution was passed by the House of Representatives January 15:

House joint resolution 88, authorizing the Commissioner of Internal Revenue to return bank checks, drafts, certificates of deposit, and orders for the payment of money, having imprinted stamps thereon, to the owners thereof, and for other purposes.

"*Whereas*, By the act of Congress approved March 2, 1901, entitled "An act to amend an act entitled 'An act to provide ways and means to meet war expenditures, and for other purposes,' approved June 13, 1898, and to reduce taxation thereunder," the internal revenue tax imposed upon bank checks, drafts, or certificates of deposit not drawing interest, or orders for the payment of any sum of money drawn upon or issued by any bank, trust company, or person or persons, companies or corporations, at sight or on demand, was repealed on and after July 1, 1901; and

Whereas, Many thousands of bank checks, drafts, certificates of deposit and orders for the payment of money have been imprinted with necessary stamp and were unused on July 1, 1901; and

Whereas, The Commissioner of Internal Revenue is authorized to redeem stamps imprinted on said instruments, and which instruments are required by existing laws to be filed with the claims for said redemption of said stamps; and

Whereas, The owners of same are extremely desirous that said checks, drafts and other papers above mentioned, should be returned to them after the cancellation of the stamps imprinted thereon: Now, therefore,

Resolved, *etc.*, That the Commissioner of Internal Revenue be, and is hereby, authorized to return said imprinted instruments to the owner or owners thereof, where said return is demanded, within one year after the passage of this act, after the redemption and cancellation of stamps imprinted thereon; and said cancellation and return to the owner or owners shall be made in such manner and under such regulations as may be prescribed by the Commissioner of Internal Revenue and approved by the Secretary of the Treasury. All such checks, drafts, etc., remaining unclaimed by the owner at the expiration of one year after the passage of this act shall be destroyed in such manner as may be prescribed by the Commissioner of Internal Revenue and approved by the Secretary of the Treasury."

TO TEST THE TAX ON UNDIVIDED PROFITS.

A. B. Hepburn, Vice-President of the Chase National Bank and chairman of the clearing-house committee on taxation, has issued the following statement relative to the tax on the undivided profits of banks:

The present Commissioner of Internal Revenue recently reversed the ruling of his predecessor and held that undivided profits, as well as capital and surplus, were liable to a tax of $2 per thousand under the Internal Revenue Act. A committee representing the clearing-house associations of St. Louis, Chicago, Baltimore, Philadelphia, New York and Boston, of which J. B. Forgan, of Chicago, was chairman, Stephen Baker, representing New York, called upon the commissioner representing the interests of the banks. An agreement was reached with him not to enforce the tax pending a judicial construction of the statute, the commissioner in the meantime requiring the banks to make a return of the amount of their undivided profits under the statute, under protest, leaving the payment of the tax in abeyance pending the decision of the courts.

None of the suits already pending involved either a National or State bank. It was desirable, therefore, to have some bank pay this tax under protest and bring suit to recover the same, in order to obtain a judicial construction which would apply to the banks of the country as a whole. Myron T. Herrick, President of the American Bankers' Association; F. G. Bigelow, President of the First National Bank of Milwaukee and chairman of the executive council of the American Bankers' Association, and A. B. Hepburn, chairman of the committee on taxation, were called in consultation. It was determined that insomuch as the question at issue involved all the banks of the country, it was proper and right for the American Bankers' Association to assume the responsibility and expense of this litigation. The Leather Manufacturers' National Bank of this city, being one of the oldest, strongest and most conservatively managed institutions, was deemed a desirable bank to bring this action. The officers of this association, being called upon, very kindly and patriotically consented to do so in the interests of the banks of the country as a whole. Mr. Yerkes, the Commissioner of Internal Revenue, was consulted and conferred with, as well as Collector Treat of New York city. Gifford, Stearns & Hobbs were retained as attorneys, and under their counsel and direction return of the undivided profits of the Leather Manufacturers' National Bank has been made, the tax thereon paid under protest, proper demand for its repayment made and suit will immediately be commenced. This suit will involve all questions at issue and it is expected that the Government authorities will facilitate its trial and determination.

The blank form of return furnished by the Commissioner of Internal Revenue, literally complied with, would necessitate the banks swearing to the amount of their undivided profits and in addition thereto that such undivided profits were liable to taxation under the terms of the Internal Revenue Act. The form of return which follows was prepared by Gifford, Stearns & Hobbs, to be posted on to the blank form furnished by the commissioner. This form of return is unobjectionable from the standpoint of the banks and is understood to be acceptable to the Department at Washington.

Form 457. Bankers 12 months $.................
United States Internal Revenue.

ADDITIONAL BANKER'S RETURN OF SPECIAL TAX.

To be made in duplicate to the Collector of Internal Revenue for the district in which the banker is located, and the tax (and penalty, if any) paid to such collector.

State of..............................County of..
The undersigned...being duly sworn according to law, declares that the undivided profits of..............................designated as "Profit and Loss" on the books of said bank, held, used or employed in the business of banking during the fiscal year ending June 30, 1901, amounted to the sum of $................. and that the sum total of these undivided profits claimed by the Commissioner of Internal Revenue to be liable to special tax under Paragraph 1, Section 2, of the Act of June 13, 1898, as amended by Act of March 2, 1901, is $......................; and no other funds belonging to this bank (excluding capital and surplus) have been set apart either by law or by the action of the bank authorities and used in carrying on the general business of the bank, and that the tax claimed by said Commissioner of Internal Revenue to be due on said profit and loss or undivided profits for twelve months ending June 30, 1902, amounts to the sum of $....

The foregoing return is made in obedience to demand made on the part of the Collector of Internal Revenue of the......................District of......................and threat to enforce payment of said sum by distraint and sale of the property of plaintiff or by other legal proceedings, against which demand and the obligation on the part of said bank to make this return, the said bank hereby protests, claiming that said bank is not liable on the said sum of $......................representing profit and loss or undivided profits, or on any sum representing undivided profits, and said bank makes said return under protest, in obedience to said demand and for the purpose of preventing said distraint, sale, or other legal proceedings as aforesaid.

STATE BANKS—REPORTS OF SUPERVISING OFFICERS.

NEW YORK.

ANNUAL REPORT OF THE SUPERINTENDENT OF BANKS, RELATIVE TO SAVINGS BANKS, TRUST COMPANIES, SAFE DEPOSIT COMPANIES, AND MISCELLANEOUS CORPORATIONS.

To the Legislature:

The reports of the Savings banks and trust companies to the Banking Department as of January 1, 1902, disclose a continuation of the marvelous growth which has distinguished these institutions during the past few years. The increase in the resources of the Savings banks for the year 1901 is shown to have been $65,545,408, and of the trust companies $171,410,131. In the six years covering my incumbency of the office of Superintendent of Banks, constituting a natural period for comparison, the Savings banks have gained $348,486,043 in resources, or a larger amount than in the previous fourteen years, and the trust companies $576,763,598, which is nearly one and a half times their entire combined accumulations for all the years prior to 1896! That these stupendous increases have not been made at the expense of other banking corporations is evidenced by the fact that the National and State discount banks in the State have increased their resources in the same time by about eight hundred million dollars! The present total assets of these three classes of institutions approximate four thousand millions of dollars, over forty per cent. of which has been accumulated in six years. Of course rediscounts, funds carried with reserve agents and deposits with other banks and trust companies, contribute to some duplication of values in this astounding statement, but it is none the less undoubtedly the truth that never before in the world's history have such statistics unfolded a story of equal development and prosperity in so brief a time. It is testimony to the energy, enterprise and sagacity of the "great captains" of trade and industry in the Empire State and to the thrift of the mass of the people; but without the laws enacted at Washington and Albany, the one establishing a stable money standard and a fostering revenue system, and the other safeguarding the operations of our domestic moneyed corporations—thus creating and justifying confidence—no such results would have been possible. It should be the care of our legislators and of the people themselves to permit no step to be taken which could threaten a reversal of the present policies or any lessening of the sense of security that now obtains.

THE SAVINGS BANKS.

The number of active Savings banks on the morning of January 1, 1902, was 128, the same as a year before. The total amount deposited in these institutions during the year was $286,155,826, and the amount withdrawn $252,549,176. The former item is nearly eighteen million dollars, and the latter twelve and a half million dollars, larger than in the previous year, making the net gain over the record for 1900 approximately five and one-half millions. The increase for the year in the amount reported due depositors, including interest credited, was $67,176,219, which is, I think, with one exception, the largest ever made in one year. It exceeds that for the year 1900 by seven and a half millions, but is four millions under that for 1899. The increase belongs in the proportion of three-fifths to the first half of the year, and two-fifths to the last half, a rate which has prevailed as between the two periods of the year with but slight variation for some time past.

The total resources of these institutions January 1, 1ist, were $1,131,564,624, which are itemized as $1,014,305,857 due depositors, $503,773 other liabilities, and $116,754,992 surplus on market values. The last mentioned item represents a decrease during the year of $1,584,681, of which $1,134,452 was occasioned by a reduction by the banks in their estimated market value of their banking houses, and the balance results from several causes, including the market depreciation of stocks and bonds, a reduction in the estimated value of other real estate, and, to a slight extent, to losses on loans and to the payment of dividends to depositors beyond current earnings. The surplus computed by considering stocks and bonds as an asset only at their par value appears to have decreased $7,549,384, but this shrinkage is in the main nominal only, and is explicable by a change in the form of reporting which was instituted January 1. That change consists in considering the interest which would pass with a sale of the stocks and bonds, and also the interest on such securities which is due but uncol-

Digitized by Google

ected, as a part of their market value instead of carrying it, as formerly, in a separate item. This interest approximates five million dollars, making the reported market value of these securities larger by that sum than it would have appeared under the old form of report, in which case such interest entered into the calculation by which the par value surplus was ascertained, and so made such surplus larger by that sum than by the present method. The diminished value of real estate and the payment of premiums on the unusually large purchases of bonds made during the year cover the decrease not thus accounted for.

For the benefit of those who examine these figures with reference to the question of taxation, it needs to be stated that the tax to be paid by any bank is in no way determined by the report submitted by it to this Department, but by its report to the Comptroller, together with the decision of that official and the court upon any controverted point. Consequently any showing made by this report as to this matter is not to be taken as in any way affecting the amount of the revenue likely to be derived by the State from the tax on Savings banks.

The number of open accounts in the Savings banks is 2,174,511, or 102,821 more than at the corresponding date in 1901, and a larger increase by 11,502 than appeared in 1900.

The condition of the Savings banks in the aggregate, as of the morning of January 1, 1902 is shown by a compilation of their reports (cents omitted):

RESOURCES.

Bonds and mortgages		$461,563,821
Stock and bond investments:		
	Par value.	
United States	$37,609,299	
District of Columbia	5,076,350	
New York State	1,618,000	
Bonds of other States	59,448,547	
Bonds of cities in other States	91,888,672	
Bonds of cities in this State	151,601,678	
Bonds of counties in this State	24,428,344	
Bonds of towns in this State	7,899,215	
Bonds of villages in this State	11,448,589	
Bonds of school districts in this State	3,417,733	
Railroad mortgage bonds	124,789,419	
Total par value of stocks and bonds	$518,725,800	
Amount of stocks and bonds at cost	560,837,006	
Estimated market value of stocks and bonds		572,935,016
Loans upon pledge of securities		3,483,298
Banking houses and lots, estimated market value		10,963,058
Other real estate at estimated market value		4,234,717
Cash on deposit in banks and trust companies		62,909,867
Cash on hand		9,389,268
Collectible interest		5,583,215
Other assets		602,865
Total resources		$1,131,564,624

LIABILITIES.

Amount due depositors	$1,014,305,857
Other liabilities	503,773
Surplus on market value of stocks and bonds	116,754,992
Total liabilities	$1,131,564,624
Surplus on par value of stocks and bonds	62,468,983

STATISTICS.

Number of open accounts	2,174,511
Number of accounts opened or reopened during the year	488,657
Number of accounts closed during the year	381,675
Total number of deposits received during the year	3,260,027
Total number of payments to depositors during the year	2,463,428
Amount deposited during the year, not including interest credited	$286,155,826
Amount withdrawn during the year	252,549,176
Amount of interest credited and paid during the year	33,620,964
Salaries paid for the year	1,916,754
Expenses other than salaries for the year	1,419,564

The items of expense for salaries, rent, repairs on bank buildings, taxes on real estate State franchise tax, etc., etc.—in a word, the entire administrative cost of the institutions—

7

Digitized by Google

reach a total of $3,336,318, or $607,921 more than for the year 1900. But the franchise tax, which the banks paid last year for the first time, $705,333, or nearly one hundred thousand dollars more than the increase in expenses. Making allowance for this new item, the cost of administration is seen actually to have fallen, though the gain in resources and in the number of deposits was so large.

By reason of the imposition of the tax in question the percentage of cost of administration to the total resources of the banks has increased from $2.56 per thousand dollars in 1900 to $2.94 in 1901, but, excluding that item from the sum of expenses, the rate would be but $2.32 per thousand dollars, a very creditable decrease of thirty-two cents as compared with the same items for 1900, which would be the largest decrease made in any one year for a considerable period.

Institutions Subject to the Supervision of the Banking Department.

The total amount of resources of each of the classes of institutions below mentioned, subject to the supervision of this department on January 1 in each of the last eleven years, is shown by the following tabulation (cents omitted):

Total Resources.

January 1.	*Savings banks.*	*Banks of deposit and disconnt.*	*Trust companies.*	*Safe deposit companies.*†
1892	$675,987,634	$271,830,699	$300,765,575	$4,870,117
1893	718,454,662	295,459,929	335,707,779	5,045,787
1894	704,535,118	*271,496,822	341,466,011	5,025,769
1895	735,863,598	284,911,681	365,419,729	5,102,689
1896	783,078,580	285,407,997	392,6[illegible]0,045	4,517,699
1897	812,173,632	280,691,855	396,742,947	4,677,825
1898	869,751,344	324,766,619	483,739,925	5,116,362
1899	923,420,861	355,485,972	579,205,442	5,197,996
1900	1,000,209,099	366,304,182	672,190,671	5,269,271
1901	1,066,019,216	380,711,930	797,983,512	5,255,452
1902	1,131,564,624	421,616,408	969,393,644	5,663,016

* November 28, 1893; the other reports called in December.

† The Buffalo Loan, Trust and Safe Deposit Company and Rochester Trust and Safe Deposit Company are not included, as they are given under the head of trust companies.

The total gain in resources of these four classes of institutions during the year 1901 was $278,267,581.45, or, $72,270,698.91 larger than that made in 1900. The increase in the past six years, or since I became Superintendent, has been $1,062,608,370.76.

The Trust Companies.

Six trust companies were authorized by me during the calendar year 1901, three already engaged in business increased their capital in December, 1901, or January, 1902, and eight companies are at present in the course of organization. The companies authorized are the Mutual of Westchester County, at Port Chester; the Genesee Valley, at Rochester; the Poughkeepsie; the Adirondack, at Saratoga Springs, which, however, did not begin business until after January first; the New Rochelle, and the Troy. The combined capital of these companies amounts to $1,075,000, and they have also subscribed and paid in surplus aggregating $365,000. In addition, the Troy Trust Co. is now increasing its capital from $150,000 to $200,000. The Salamanca Trust Co., with a capital of one hundred thousand dollars and a paid-in surplus of ten thousand dollars, was authorized by me February 14 of the current year. This institution displaces a National bank at Salamanca, at which place, though containing a smaller population than any other village in the State having such an institution, there seem to be exceptional reasons for the establishment of a trust company. The older companies which have recently increased their capital are the American Deposit and Loan Company, the Continental Trust Co. and the Fifth Avenue Trust Co., all of New York city, and in each case the increase is from half a million to one million dollars. The companies which are at present in process of organization, and which will probably add eight or nine million dollars in the way of capital and surplus to the investment already existing in companies of this class, are:

Guardian Trust Co., Borough of Manhattan, New York city; McVickar Realty Trust Co., Borough of Manhattan, New York city; Mutual Alliance Trust Co., Borough of Manhattan, New York city; Schenectady Trust Co., Schenectady; Security Trust Company of Troy, Troy; Trust Company of the Republic, Borough of Manhattan, New York city; Union Trust Company of Albany, N. Y., Albany; Van Norden Trust Co., Borough of Manhattan, New York city.

Digitized by Google

The only company which discontinued business during the year was the Trust Company of New York, which had an active existence of only about a year. It reported as of the first of January, but it had not been active since the previous May.

Resources and Liabilities of Trust Companies.

Sixty-two trust companies, comprising all except the Adirondack that are included in the foregoing list, filed reports in this department in January, and a summary of such reports herewith appears in comparison with their statement of the year before (cents omitted):

Resources.	*1901.*	*1902.*
Bonds and mortgages	$40,730,575	$45,483,009
Stock investments	196,852,582	190,822,965
Loaned on collaterals	387,911,414	540,208,706
Loaned on personal securities, including bills purchased.	39,840,066	41,907,300
Overdrafts	39,106	52,290
Due from banks and brokers	2,829,876	5,978,925
Real estate	9,456,991	10,747,440
Cash on deposit in banks or other moneyed institutions	96,337,244	111,187,084
Cash on hand	9,365,171	9,858,702
Other assets	14,620,981	18,147,207
Total resources	$797,983,512	$969,393,644
Liabilities.		
Capital stock paid in, in cash	$47,150,000	$49,125,000
Surplus fund	76,123,783	64,796,907
Undivided profits	17,479,821	39,882,284
Deposits in trust	245,367,995	352,213,121
General deposits	392,753,774	440,718,602
Other liabilities	19,108,687	22,657,728
Total liabilities	$797,983,512	$969,393,644
Supplementary.		
Debts guaranteed and liability thereon	$500	$1,000
Interest, commissions and profits received during the year	33,992,377	44,973,187
Interest paid and credited to depositors during the year.	14,244,490	18,878,383
Expenses for the year	5,044.794	5,917,141
Dividends on capital declared for the year	5,555,338	6,806,000
Taxes paid during the year	695,460	1,934,100
Deposits made by order of court	2,861,199	8,723,740
Total of deposits upon which interest is allowed at this date	589,722,276	721,614,435
Amount invested in bonds and mortgages during the year	34,478,760	56,480,417
Amount received from bonds and mortgages paid or sold during the year	31,805,509	51,726,242

The more striking changes shown in this table are the increase of $1,975,000 in capital, of $11,076,087 in surplus and undivided profits, of nearly eleven millions in gross earnings, of four and a half millions in interest paid to depositors, of a million and a quarter paid for taxes, and of $152,297,291 in loans on collaterals. The considerable decrease in surplus and the yet larger increase in undivided profits represent a curious shifting, which it has been intimated is due to a contention that under the United States Internal Revenue Laws the latter is not taxable, while the former is. In view of the more than doubling of taxes paid by these companies during the year it is not remarkable if they press this point to the uttermost. The vast sums on which interest is paid, constituting over nine-tenths of the entire deposits, may doubtless be taken as explaining to a considerable degree the wonderful growth which these companies have had, and their net earnings, equivalent to thirty-seven per cent. upon their actual capitalization, or to nearly twelve per cent. on capital, surplus and undivided profits combined, is suggestive of the reason for the widespread eagerness just now so manifest to organize trust companies rather than banks. It may be wise, however, to reflect that profits from reorganization enterprises may not always be as handsome as they have been latterly, and that large earnings from all sources may not be as sure in villages and small cities as at the financial center of the continent.

Digitized by Google

SECURITIES DEPOSITED.

The securities held in trust by the Superintendent of Banks under the law for the protection of depositors with and creditors of the several trust companies on the first of January, 1902, are shown in the following table:

	Jan. 1, 1902.
United States 2 per cent. bonds......	$402,000
United States 4 per cent. bonds......	45,000
New York county 3.3 per cent. bonds.	50,000
New York city 2½ per cent. bonds...	500,000
New York city 3 per cent. bonds ...	612,400
New York city 3½ per cent. bonds..	3,510,000
Brooklyn city 3 per cent. bonds......	220,000
Brooklyn city 3½ per cent. bonds....	350,000
Brooklyn city 4 per cent. bonds......	100,000
Rochester city 3½ per cent. bonds...	50,000
Rochester city 6 per cent. bonds.....	30,000
Niagara Falls city 4 per cent. bonds..	20,000
Middletown city 3½ per cent. bonds..	20,000
Bonds and mortgages.................	50,000
Total............................	$5,959,400

RECOMMENDATIONS.

MISCELLANEOUS.

Section 159 of the Banking Law, relating to trust companies, reads as follows:

"*Investments of Capital and Deposits.*—The capital of every such corporation shall be invested in bonds and mortgages on unincumbered real property in this State worth at least double the amount loaned thereon or in the stocks or bonds of this State, or of the United States, or of any county or incorporated city of this State duly authorized by law to be issued.

The moneys received by any such corporation in trust may be invested in its discretion in the securities of the same kind in which its capital is required to be invested, or in the stocks or bonds of any State of the United States, or in such real or personal securities as it may deem proper. No such corporation shall hold stock in any private corporation to an amount in excess of ten per cent. of the capital of the corporation holding such stock."

I have ascertained that several trust companies in the State are holding or have held stocks in private corporations in excess of ten per cent. of their capital, and in each case have directed the companies to reduce their holdings to an amount not to exceed ten per cent. of their capital. Some companies, however, contend that the section above quoted, as indicated by its caption, treats only of the investment of capital and deposits, and that, therefore, a company's surplus may be wholly invested in stocks of a private corporation. In several instances they have fortified this contention by opinions of eminent authorities. I suggest that this section be amended so as to make its meaning plain. I am of the opinion that no element of unsafety would be added to the transactions of the trust companies if the limitation were made to permit such holding to the amount of ten per cent. of a company's combined capital and surplus.

Section six of the General Corporation Law prohibits the use of certain words, including the word "loan," as part of the title of any corporation not formed under the banking law or the insurance law. The exception should be broadened by adding, "or under chapter 326 of the Laws of 1895, as amended." The suggested change would enable companies for loaning money on the pledge of personal security to employ the word "loan" in their corporate title, which is properly descriptive of the character of their business, and in such connection it would not be misleading or mischievous.

FOREIGN TRUST COMPANIES.

Further reflection but strengthens my conviction that the character of the business which a foreign trust company may transact within this State should be defined by statute, and that some reasonable provision should be enacted for ascertaining whether such corporations transgress our laws. Our own trust companies are subjected to official examination at least once in every year. The Superintendent of Banks possesses and exercises the power also to examine the agency of every foreign bank in this State "for the purpose of ascertaining whether it has violated any law of the State, and as to such other matters as the Superintendent may prescribe." It is difficult to conceive any good reason why outside trust companies should be exempted from requirements imposed upon our own and upon all other like classes of institutions. Moreover, it is desirable that there be somewhere an authoritative list of foreign trust companies maintaining offices and doing business within the State, and that the obligation be devolved upon some official to see to it that our laws are not violated by such companies. To that end there should be a statutory requirement that no foreign trust company shall transact any business in New York without having first obtained from the Superintendent of Banks a license therefor, and that the Superintendent examine such companies

Digitized by Google

at least annually, the cost of such examinations to be a charge against the company or companies so examined.

THE SAVINGS BANKS.

In my judgment the two exigent problems in the Savings bank situation are how to regulate investments by the banks so that, without surrender of a single existing element of safety, there may not be a continuing decrease in the rate of income which the banks derive from that source, and how to confine these institutions yet more distinctively than is now the case to the service and benefit of the wage earner, the widow and orphan, and those who are untrained in business, or the sum of whose savings is too small for independent investment. The one requisite which must always be supreme is that there be preserved certainty that every dollar deposited in a Savings bank be recoverable in full, and, in ordinary conditions, at the pleasure of the depositor. Restrictions as to the securities which these institutions may purchase must never be relaxed to the degree that there could arise the remotest likelihood of losses by depreciation, default or repudiation which would jeopardize the principal of a deposit. New York's system of Savings banks is the best in the world, and it should be our pride and care to so maintain it. But with deposits increasing at the rate of sixty or seventy million dollars a year, if the field for investment were held unchanged, there would follow of necessity an appreciation in the price of such securities until in time it became prohibitive. At present, however, it is the opinion of those best qualified to judge that relief is required only to the extent of legalizing for investment a slightly larger percentage on the value of premises to be mortgaged and also the bonds of a few additional railroads of a standard character, and I commend for passage the bill so providing which is now pending in the Legislature. It is conservative, has had the careful consideration of the Savings Banks Association and its counsel, and is approved as safe by that body. Beyond this step, however, I do not deem it wise at present to extend the scope of investments which Savings banks may make.

An abuse of the Savings bank system is the advantage taken of it by investors whereby they put upon these institutions not alone the burden of caring for their large deposits, but the embarrassment and injustice of causing them to be more or less regarded as depostaries for these classes and as agents to aid them to escape taxation. The Savings banks were not designed to serve people of means, and when they so act they prejudice the interests of those who have the right to claim and to enjoy their beneficent care. The mere popular conviction that they are thus perverted from their legitimate functions tends also to discredit and so injure the system. I have directed special effort for several years past to remove occasion for this criticism wherever a state of facts has been disclosed which could justify it, and in many instances I have found not only ready but zealous co-operation on the part of the officers of the Savings banks. There is, however, reason to apprehend that in some quarters the ambition to take rank as large banks, or the disposition to oblige, leads some managers to accept and continue accounts which ought to be refused. The trust companies afford a natural, safe and proper field for such depositors, with the opportunity to realize nearly or quite as large returns as are to be had from the Savings banks, and I am convinced that it is time to adopt stringent measures for excluding large funds of an investment character from the latter class of institutions, or at least for limiting the conditions under which they can be deposited, in order that it may not be the fact that many men carry for themselves, or in the names of various members of their families, a number of accounts, all of them to the legal limit, in each of many banks. A regulation which it would seem would be effectual to this end was suggested in my report of two years ago, and is herewith renewed: "Fix the limit which any one person may have on deposit in a single bank, or the aggregate he may carry in two or twenty or all of them, and then require that any one offering at any bank a deposit exceeding some sum to be specified in the law shall subscribe an oath that the deposit so offered will not make his aggregate of deposits in all banks more than this limit. Prescribe that false swearing in such cases shall constitue perjury."

The enactment of some such restriction seems to me important, if not imperative, if the Savings banks are to be preserved to their full possible usefulness and to the enjoyment of popular support and approval. The average amount to the credit of each account in these institutions increased $9.39 during the year, and a similar increase has occurred annually since 1894. The entire increase since that date has been $75.95. I am disposed to believe that a considerable part thereof is due to the larger accumulations which full employment and prosperity have enabled artisans and clerks to lodge with the Savings banks, and examination of the books and conferences with the officers of a number of banks confirm that view. It does not, however, explain all of the increase in the average, and the part not so covered deserves no consideration or exemption from exclusion by the Legislature or by the management of the banks themselves. I trust, therefore, that a bill embodying the suggestion here submitted may be presented and become law.

Digitized by Google

FOREIGN BANKING FACILITIES.

European capital and organization have hitherto practically monopolized control of international banking facilities in the Orient and also in South America, to the prejudice of all effort to extend and develop American commerce and industrial enterprises in those quarters. There has long been an importunate desire on the part of American manufacturers, export and import houses engaged in the Asiatic and South American trade, and companies and individuals holding valuable concessions in other American countries and in China, for the establishment there of American banks of exchange, and if this country is to realize its hopes for a great expansion of its commerce in these directions this want must now be supplied. One of the trust companies in New York city has already amended its charter in order to acquire the right to establish and maintain branches at Manila, Hongkong and Shanghai, and recently a corporation amply capitalized, and vested with a wide scope of powers, was organized under the laws of the State of Connecticut to conduct banking operations, and perhaps also to exploit quite other interests, in any part of the world. It will not be gainsaid that if there is here an inviting field for such undertakings every proper facility for its occupation by New York capital should be afforded by New York laws. So far as I am informed all competent testimony is to the effect that banking operations in China particularly have been remarkably profitable, and unquestionably our business and national interests alike require that American banking institutions be situate there to afford convenient channels for exchange, to act as fiscal agents in a multiplicity of matters, and to finance many enterprises.

Respectfully submitted,

FREDERICK D. KILBURN, *Superintendent of Banks.*

FEBRUARY 25, 1902.

NOTICES OF NEW BOOKS.

THE A B C OF BANKS AND BANKING. By GEORGE M. COFFIN. New York: S. A. Nelson. Price $1.25.

Mr. Coffin was for some years Deputy Comptroller of the Currency, and is now Vice-President of the Phenix National Bank of New York city. In this volume he has condensed very much interesting information about banks and their management and operations. The matter relating to the practical details of banking will be found especially helpful to the younger bankers, and the book may be read with profit by anyone connected with or interested in banking.

POOR'S MANUAL OF THE RAILROADS OF THE UNITED STATES, 1901. New York: H. V. & H. W. Poor.

To make any reference to this work as a compendium of railway information—statistical and otherwise—would superfluous; but it ought to be commended to bankers especially for its value in fixing the worth of railway bonds and stocks. The banker who loans money on this class of collaterals, or who buys them as investments, needs to know more than their current quotations on the exchanges. He should know the actual condition of the properties the securities represent. This knowledge may be obtained from Poor's Manual.

CURRENCY AND BANKING IN THE PROVINCE OF THE MASSACHUSETTS-BAY. By ANDREW MCFARLAND DAVIS. New York: The Macmillan Co.

This work is in two parts, Part I dealing with Currency, and Part II with Banking, and treats exhaustively of the various New England currency issues and banking schemes prior to the Revolution. From it many instructive lessons may be derived, and much valuable information obtained in relation to currency and banking matters during this epoch. The author has expended a large amount of careful labor in bringing together the material comprised in the two volumes, and has conferred a substantial benefit on all who wish to investigate the early financial history of the country.

MASSACHUSETTS SAVINGS BANKS.

Under date of January 18 the Board of Commissioners of Savings Banks of Massachusetts presented the twenty-sixth annual report of the commission, to the Senate and House of Representatives.

On October 31 last there were 186 Savings banks in operation with assets of $596,094,818; thirty-six trust companies with assets of $189,769,619. There were also three Savings banks in the hands of the courts, and one trust company in the hands of a Receiver.

In the past year the total amount of dividends declared was $19,318,792, an increase of $646,-465 over the amount declared in the previous fiscal year; the average rate for the year was 3.75 per cent., compared with 3.81 the previous year.

The following shows the decrease in the rate of dividend in the last five years:

	1896.	*1901.*
Banks paying less than four per cent. per annum	10	98
Banks paying four per cent. per annum	157	88
Banks paying over four per cent. per annum	19	0

The number of open accounts on October 31 was 1,593,640, an increase of 58,631 over the previous year; the average amount to the credit of each account was $351.84, a decrease of twenty-one cents compared with the average on October 31, 1900. The amount deposited during the past year was $96,531,498 and the withdrawals $95,535,702. Compared with the previous year the figures show an increase of $3,431,874 in the amount deposited and an increase of $6,-011,102 in the amount withdrawn. Although there was a slight increase in expenses, the ratio remains at less than one-fourth of one per cent. of the deposits.

Aggregate Statement of Assets and Liabilities.

Showing Increase or Decrease, as compared with the Year ending October 31, 1900 (cents omitted).

Assets.

LIABILITIES.

	Amount Oct. 31, 1901.	Increase.
Deposits	$560,705,752	$20,802,066
Guaranty fund	24,764,818	1,188,362
Undivided earnings	10,818,633	296,137
Due on incomplete mortgage loans	213,949	59,200
Sundry liabilities	92,165	11,812
Total	$596,094,818	....

As the charters of many National banks are soon to expire, the commissioners suggest the inquiry whether the present would not be an opportune time to consider if it is desirable to have a system of State banks in the Commonwealth. It is pointed out that many of the trust companies recently incorporated are misnamed as they are in fact simply State banks.

The thirty-six trust companies of the State transacting business on October 31 held deposits in their banking departments of $142,629,778, with other liabilities amounting to $31,575,546, and total assets of $174,205,325. Of the thirty-six trust companies fifteen have established trust departments, the liabilities in which were $15,564,294.

NOTE.—The compensation of the Comptroller of the Currency is $5,000 per annum, and of the Deputy Comptroller $2,800.

Failures, Suspensions and Liquidations.

Georgia.—The Bank of Warrenton made an assignment February 15 to James A. Anderson.

Illinois.—J. A. Hamann, a private banker doing business at Warren, is reported as having disappeared. The Citizens' Bank, which he owned, is closed.

—The Bank of Elkhart closed March 3, and the Cashier, Frank W. Cottle, is reported to be short $32,000. Deposit liabilities are placed at about $80,000.

Ohio—CLEVELAND.—Appraisers of the assets of the Euclid Avenue Trust and Savings Co. filed a report on February 17 placing the total value at $1,505,894. Liabilities (mostly deposits) are $1,414,368.

—On February 25 the Comtproller of the Currency placed James W. De Lay in charge of the First National Bank of Belmont, Ohio. Liabilities are $363,596, of which $251,596 are individual deposits.

Michigan—DETROIT.—On February 10 the City Savings Bank passed into the hands of the State Bank Commissioner. Frank C. Andrews, the Vice-President, is charged with having fraudulently secured from the bank a sum in excess of $1,000,000. His overdrafts are placed at over $900,000, and in addition he is said to have procured the certification of his checks for $662,000. Liabilities of the bank to depositors are $3,369,317. There is an additional contingent liability of $662,000 on the Andrews certified checks. Total resources are $3,597,816, including overdrafts of Andrews amounting to $911,000. The capital is $150,000, and the surplus and profits $74,668.

Texas.—W. H. Westfall's private bank at Burnet was reported closed on February 25, with deposit liabilities amounting to about $100,000.

BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—The International Banking Company of New York city, capital $100,000, was incorporated at Albany February 28, and authorized to do a banking and discount business in this State. Its directors are Thos. H. Hubbard, Valentine P. Snyder, James H. Hyde, Edward F. Cragin and Jno. J. McCook, all of whom are directors of the International Banking Corporation, recently incorporated in Connecticut. The New York company was formed so that the business carried on in this State may be in accordance with New York laws.

—On February 24 a prospectus of the New York and London Trust Company was issued. This company is organized under a special charter of the New York Legislature, with an authorized capital of $500,000. It is the intention to sell the stock at $120 a share, which will provide a surplus of $100,000. Ultimately it is the intention to increase the capital and surplus to $5,000,000. Under the terms of its charter and the general trust company laws the company is empowered to perform many important functions, and is also authorized to establish branch offices and agencies at such places as the directors may deem necessary. The company's temporary office is at 64 Cedar street.

—At the meeting of New York Chapter of the American Institute of Bank Clerks, to be held at 72 Fifth avenue on the evening of March 27, the following subject will be debated:

"*Resolved*, That the modern economic conditions require a central bank."

The affirmative of this proposition will be taken by the New York Chapter and the negative by Alexander Hamilton Chapter. Three prominent bank presidents are to act as judges.

At the following meeting on April 10, Hon. Charles N. Fowler, Chairman of the Committee on Banking and Currency, will speak on "The New Financial Bill."

—Robert M. Pettit and Wm. Heydt are new members of the firm of Winslow, Lanier & Co.

—On February 18 Revenue Agent F. G. Thompson received instructions from the Commissioner of Internal Revenue in Washington that all certificates of stock deposited or hypothecated with banks or trust companies as securitity for loans or for the future payment of money must be stamped at the rate of two cents per hundred dollars of par value of the stock. Any stocks substituted for those first given as security must also be stamped.

—Wm. B. Potts has been admitted as a member of the firm of J. W. Davis & Co.

—More than $600,000 has now been subscribed to the capitalization of the Consolidated National Bank being organized by President Mortimer H. Wagar of the Consolidated Stock Exchange. A lease has been arranged of portions of two floors at 57 Broadway. It is expected to have the bank in operation within three months.

—The new Trust Company of the Republic will have $1,000,000 capital and $500,000 surplus. D. Leroy Dresser will be President, and Alex. Greig, Vice-President. Among the directors are Perry Belmont, Stuyvesant Fish, James McMahon, Daniel G. Wing, Ex-Comptroller Eckels, and many other well-known bankers and capitalists.

—It is estimated that the new ten-story building now being erected for the Irving National Bank, at West Broadway and Chambers street, will cost $500,000. It will be one of the fine buildings of that district of the city.

—For the use of its City Hall branch the Williamsburgh Trust Co. has acquired the property at 391 and 393 Fulton street, Brooklyn, comprising two large buildings, which will be completely remodelled for banking purposes.

—The National City Bank, of Manhattan, and the Brooklyn Trust Co., of Brooklyn Borough, have been designated as the principal clearing depositories of the city.

—A. M. Townsend, agent for the Hong Kong and Shanghai Banking Corporation at New York, has been appointed joint Manager in London for that bank, and has been succeeded here by J. P. Wade-Gardner, Manager of the bank's Shanghai branch.

—A new two-story building, to be erected by the Washington Life Insurance Co., at 139 Broadway, will be occupied entirely by the Liberty National Bank under a lease for forty years.

Digitized by Google

—After fifty years' service in the National Citizens' Bank, during which time he was promoted through the various positions to the office of President, David C. Tiebout has been retired by the board of directors, at the age of seventy-seven years.

—The International Banking Corporation now occupies temporary offices at 71 Broadway. The company will remove to the building 1, 3 and 5 Wall street as soon as the banking room is fitted up.

The officers of the company are: Valentine P. Snyder, Acting President; Edward F. Cragin, Vice-President; John Hubbard, Treasurer; James H. Rogers, Secretary, *pro tem.*; J. B. Lee, General Manager; W. H. Macintyre, Assistant Manager. The capital is $3,000,000 and the surplus $3,000,000.

—Mutual Life Insurance Company interests are reported to be organizing the Mutual Alliance Trust Company, to be located near Broadway and Canal street.

NEW ENGLAND STATES.

Portland, Me.—About forty bank officials and employees were present at the annual meeting and banquet of the Portland Bankers' Association, at Riverton Park Casino February 8. After the banquet the business meeting was held and these officers chosen: President, Thomas H. Eaton, Cashier Chapman National Bank; vice-president, Geo. W. Leighton, of the National Traders' Bank; secretary, Carl D. Moody; treasurer, F. A. Weber.

A pleasant musical entertainment followed the business meeting.

Boston.—A bill providing for the physical separation of Savings banks and National banks recently passed the lower House of the Legislature by a practically unanimous vote.

—Hearings were recently given before the Committee on Banks and Banking of the Legislature upon the recommendation of the Savings Bank Commissioners for the enactment of a general banking law, one of the effects of which would be "to prevent the continued application for the incorporation of trust companies in the smaller cities and towns," and for legislation affecting foreign banking corporations doing a general banking business in this State. This suggestion is based upon an opinion addressed by Attorney-General Knowlton to the Commissioner of Corporations, in the course of which he said: "Whether a law should be permitted to continue upon our statute books which is inoperative so far as it relates to domestic corporations, but which may be taken advantage of by foreign corporations, is a question for the determination of the Legislature."

—A pamphlet has been issued by the Boston Safe Deposit and Trust Company containing suggestions relating to transfers of stock. These rules are designed to make such transfers conform to legal requirements, and to facilitate the orderly transaction of business.

MIDDLE STATES.

Paterson, N. J.—On February 8 this city was visited by a fire which destroyed a large part of the business district of the city, including several bank buildings. The large manufacturing establishments, which are the city's main reliance, were unharmed. Rebuilding of the burned section is proceeding rapidly, and though outside help was freely tendered it was declined. Whatever loss the banks may have sustained on their buildings beyond the amount of insurance carried, will be readily met, as their condition is especially strong, and in a short time it is expected that they will all be better housed than ever.

Pittsburg, Pa.—The seventh annual meeting of Group VIII Pennsylvania Bankers' Association was held at the Hotel Schenley, Pittsburg, Pa., February 20, 1902. Ninety-four members were present, thirty-eight city and fifty-six country banks being represented.

The following officers were elected to serve for the ensuing year: Chairman, W. W. Ramsey, Cashier German National Bank, Pittsburg; vice-chairman, C. C. Johnston, Citizens Trust Co., Cannonsburg; secretary, R. J. Stoney, Jr., banker, Pittsburg; treasurer, C. M. Hughes, Beaver National Bank, Beaver. Executive committee, A. C. Robinson, Pittsburg; P. J. Pierce, Wilkinsburg; C. C. Law, Pittsburg; S. F. Jones, Belle Vernon, and W. J. Cassidy, Oakdale.

Following the meeting an informal reception was held after which the members sat down to a banquet in the ball-room of the hotel; many ladies were present as guests of the association. The toastmaster of the occasion, Mr. W. R. Thompson, was introduced by C. L. Snowdon, the retiring chairman. The first speaker was Willis F. McCook, Esq., who spoke on "No Usury." This was followed by an able address by Hon. Josiah Cohen, judge of the Orphan's Court, Allegheny county. The last speaker on the programme was John Jarrett, who made an address on "Labor and the Pay-Roll."

The meeting was the largest and most successful in every way of any yet held.

—The City Trust Co. has added to its realty holdings in Sixth avenue by the purchase from William E. and F. G. Stieren of the lot adjoining its property at the southeast corner of Sixth avenue and Smithfield street. The lot has a frontage of twenty feet on Sixth avenue and a depth of sixty feet. The lot is improved with a four-story brick building, which will

Digitized by Google

be torn down by the trust company, to begin the erection of a new bank and office building. The new building will front on Smithfield street and will be one of the finest buildings of its kind in the city.

—It is reported that the Colonial Trust Co. has absorbed the Freehold Bank, and that it will also organize a number of institutions throughout the State to be affiliated with the company's office in this city.

Baltimore.—Work is progressing favorably on the addition to the Citizens' National Bank building, and the bank will occupy the new room early in the coming fall. The room is to be finished in marble and bronze, and when completed will be one of the handsomest banking rooms in the city.

—A special meeting of the shareholders of the First National Bank will be held on March 31, to vote on a proposition to increase the capital stock from $555,000 to $1,000,000.

A Branch Banking Enterprise.—It is said that the Interstate Trust Company, recently incorporated at Trenton, N. J., will acquire a number of banks throughout the country with the view to inaugurating a system of branch banking. The capital is only $100,000, but there is to be a paid-in surplus of $2,500,000.

Philadelphia.—At the annual meeting of the Philadelphia Stock Exchange, March 3, W. H. Lee was elected President to succeed Beauveau Borie, who declined re-election. The other officers were all re-elected.

Troy, N. Y.—The Security Trust Company is being organized here with $200,000 capital and $200,000 paid-in surplus. Representatives of practically all the banks are among the incorporators.

Reading, Pa.—On February 8 the Citizens' Bank was consolidated with the Second National Bank.

SOUTHERN STATES.

New Orleans, La.—An institution which will probably be called the Southern Trust Company is reported in process of organization here with a capital of $1,000,000, and the same amount of surplus. Prominent connections are to be established with banks in New York, Chicago and other leading centres.

New West Va. Bank.—The Putnam County Bank at Hurricane, West Va., opened for business February 20. Its subscribed capital is $25,000, of which $10,000 is paid in.

A Progressive Bank.—The Farmers and Merchants' Bank, of Bells, Texas, opened for business in the latter part of September, 1901, and has prospered from the start. It is expected that the bank will take possession of its new building some time this month. The building is a very neat and substantial structure, and is equipped with a safe of the latest pattern, safe-deposit boxes and other things necessary to insure the safe and convenient dispatch of business.

S. D. Simpson, Cashier of the bank, is an energetic and capable young banker, and is justly proud of the favorable progress of his institution.

WESTERN STATES.

Kansas City, Mo.—The State bankers' associations of Kansas and Missouri will hold a joint convention in this city on May 13 and 14, and will have for their guests the bankers' associations of Oklahoma, Colorado and Indian Territory. Among the subjects to be discussed are branch banking and asset currency, and several prominent speakers will participate in the discussion. An interesting meeting and a large attendance are assured.

Chicago.—To meet the demand of those who wish to open small savings accounts the Merchants Loan and Trust Company has opened a savings department, receiving deposits of one dollar and upward and paying three per cent. annual interest. It is said that the savings deposits in this city have increased from $22,000,000 in 1893 to $70,000,000 at the present time.

—The safe-deposit vaults of the Chicago National Bank were recently opened, and they prove to be in keeping with the taste and solidity which characterize the building throughout. These vaults and boxes not only approach the absolute so far as safety is concerned, but are handsome in appearance, and embrace many new devices. Adjoining the safe-deposit boxes are a number of coupon-rooms, thoroughly equipped for convenience and safety.

—The salary of John J. Mitchell, President of the Illinois Trust and Savings Bank, was increased at a recent meeting of the board of directors to $40,000 a year. This is believed to be the second highest salary paid to a bank officer in this country. Mr. Mitchell began his career as a banker in 1873 as assistant teller, at $35 a month, in the bank of which he is now at the head.

—The Corn Exchange National Bank and the Merchants' National Bank are in process of consolidation, according to a programme agreed on at meetings of the directors of both institutions. The merger will be completed as soon as stockholders' meetings can be held. The present name, management and situation of the Corn Exchange National Bank will remain unchanged, but the capital stock will be increased to $3,000,000 by issuing $1,000,000 additional stock.

Digitized by Google

—Deposits of the National banks on February 25 were $284,214,534, a gain of over $23,000,000 since December 10, 1901.

—A permit was recently issued for the construction of the great bank and office building to be erected by the First National Bank, at a cost of $3,000,000.

—The Western State Bank will increase its capital from $300,000 to $500,000, the new stock to be offered to present holders at 110.

Sioux City, Iowa.—The Twentieth Century edition of the Sioux City "Tribune," recently issued, reports that the deposits of the National banks of this city have increased from $1,186,296 in December, 1896, to $7,556,000 in December, 1901. The clearings rose from $24,994,985 in 1896 to $38,406,587 in 1901. There are at present six National and two Savings banks doing business in the city.

Plenty of Money in Nebraska.—Deposited in the State and National banks of Nebraska is $87,072,436, an average of $79.16 for each man, woman and child in the State. These are the figures recently made public by Secretary Royse of the State Banking Board. In the 439 State banks 95,052 depositors have $31,315,633. In the National banks is $55,756,808. There is an increase in deposits over one year ago, notwithstanding the drought and corn crop failure, of nearly $12,000,000.

Secretary Royse says that Nebraska never had so much money before in her banks and that at least twenty-five per cent. of the loans and discounts represents money loaned in the East. Farm loans have dropped to five per cent. and low interest rates have caused great industrial activity and have led to large increases in land values.

St. Louis.—Three St. Louis banks will pay interest on daily deposits hereafter.

The Franklin Bank and the German Savings Institution will pay two per cent. The State National Bank will pay interest on daily balances on certain kinds of accounts to be determined by the officers of the bank.

The trust companies are responsible for these announcements. Depositors have been attracted to the trust companies by two to four per cent. interest paid on current accounts. The President of a St. Louis bank states that the deposits of the St. Louis trust companies have increased 150 per cent. in a certain period, while the bank deposits have increased only ten per cent.

President G. W. Garrels, of the Franklin Bank, is quoted as follows:

"The trust companies have invaded the banking field and are doing a large quantity of business that was formerly done by the banks. We wish to secure deposits now going to trust companies, and so we come out openly and offer to pay interest on daily deposits, the same as they do. The trust companies have invaded the banking field under a decision of the Supreme Court, which says that if a trust company pays interest on deposits it may enter the banking business. The combined capital of the trust companies in St. Louis is now double the combined capital of the St. Louis banks."

Milwaukee, Wis.—On April 1 the capital of the First National Bank will be increased from $1,000,000 to $1,500,000, the suplus and profits aggregating $750,000 additional. H. G. Goll was recently elected an Assistant Cashier of this bank.

Iowa Bankers' Association.—The next annual convention of the Iowa Bankers' Association will be held at Des Moines, May 21 and 22.

A fund of $5,000 has been raised by the members of the association for the family of an officer who lost his life in attempting to arrest two bank robbers.

Cleveland, Ohio.—On February 18 the deposits of the Century National Bank, amounting to nearly half a million dollars, were taken to the Colonial National Bank, and the Century Bank will go into liquidation. Cashier T. W. Latham, of the Century Bank, will be found at the Colonial to assist in turning the deposits over to the latter institution. The Colonial National thus gets the good will of the Century National.

PACIFIC SLOPE.

Tacoma, Wash.—The Fidelity Trust Company reports several changes in its officers. Owing to ill health, Col. C. W. Griggs resigned the office of President and was succeeded by J. C. Ainsworth, President of the Ainsworth National Bank, of Portland, Ore. Col. Griggs retains his interest in the bank.

P. C. Kauffman, who has been Cashier of the Fidelity Trust Company since January, 1892, was promoted to the office of Vice-President, succeeding Leonard Howarth, who retires to give closer personal attention to other business interests. Mr. Kauffman's promotion is considered as a just recognition of his ability. He is widely known through his addresses at bankers' conventions, and is now representing his State as a member of the executive council of the American Bankers' Association.

Arthur G. Prichard succeeds Mr. Kauffman as Cashier, and Forbes P. Haskell, Jr., is promoted from the position of teller to be Assistant Cashier.

The statement of condition of the Fidelity Trust Company February 8 showed: Capital, $300,000; undivided profits, $41,405; deposits, $852,952; total resources, $1,194,358.

CANADA.

Montreal.—The paid-up capital of the Banque d'Hochelaga will be increased from $1,500,000 to $2,000,000, the full amount authorized. Present shareholders will be given an opportunity to take the additional shares at 125, the premium being added to the rest, which is now $750,000.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report. Names of officers and other particulars regarding these new National banks will be found under the different State headings.

NATIONAL BANKS ORGANIZED.

6106—First National Bank, Salisbury (P. O., Elk Lick), Pennsylvania. Capital, $50,000.
6107—First National Bank, Memphis, Texas. Capital, $25,000.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, March 1, 1902.

THE PROPOSED SUIT OF THE ATTORNEY-GENERAL against the Northern Securities Company was the principal matter of interest in financial circles last month. The announcement came late in the month and at a time when Wall Street operations had again become active. It was generally assumed that the application of the State of Minnesota to the United States Supreme Court to interfere would be denied, and this turned out to be the case, but not until after the Attorney-General had decided to proceed.

The ground of the action that is to be instituted is the alleged violation of the Sherman Anti-Trust law. Legal opinions on the question are in conflict, but financial men generally seem to think that the Attorney-General will fail to carry his point. The news, however, caused a break in prices of securities and has brought some uneasiness where there had been previously only confidence and courage.

The organization of the Northern Securities Company has certainly given a new inspiration to Wall Street. Its success it is believed would encourage the organization of many similar securities companies, and there would be a very active business in buying up properties that could be used as a basis of creating these new investment companies. It has been common talk in brokers' offices in Wall Street for some time past that if the Northern Securities Company goes through all right, there will be the biggest kind of a boom in Wall Street. If it does not go through it is not clear just what will happen.

Aside from this one event of the month the conditions generally have continued very favorable. The money market has been easy and the New York banks are again reporting deposits and loans exceeding the totals of all previous periods. The Government through its Sub-Treasury system is again absorbing funds, and that is the one doubtful factor in the present favorable situation as far as money is concerned.

There probably never was a time when there was a larger investment demand for securities yielding a low rate of interest than now. This is indicated to some degree in the subscriptions to the bonds offered by the City of New York. The bonds bear 3½ per cent. interest and run part of them nearly fifty years and the remainder forty years. Only $3,000,000 were offered, and yet the subscriptions aggregated nearly $26,000,000. The city obtained on the bonds sold an average price of 107⅛.

While the trading is stocks is not up to the 2,000,000 to 3,000,000 shares a day record of last year, and the total sales a day frequently fell below 1,000,000 shares, the bond market has been very active, the transactions being at the rate of $20,000,000 or more a week.

Attention has been directed to the extraordinary advance which occurred in the price of New York Stock Exchange seats since the great rise in the stock market began. While in the 1880–81 boom the price rose to $27,000, it was down to $16,000 in 1895, and in 1897 was only $20,000. Two years later the price had doubled and in 1901 it reached $80,000, that being the figure at which a seat was transferred last December. Last month, however, a sale was made at $70,000, and the question naturally suggests itself, is there to be a further decline? However, the Stock Ex-

Digitized by Google

change is likely to be a busy place for some time whatever course the values of securities may take.

A statement prepared by the Bureau of Statistics shows the progress of the United States in its area, population and material industries by ten-year periods from 1800 to 1900. The facts presented are a startling revelation of the growth of the country, particularly in the last ten years of the period covered. The growth since 1900 has been still more rapid. A few only of the most striking comparisons can be given here, and we shall not go further back than 1860. First we present the figures relating to population and wealth:

	1860.	*1870.*	*1880.*	*1890.*	*1900.*
Population........	31,443,321	38,558,371	50,155,783	62,622,250	76,303,387
Wealth............	$16,159,616,000	$30,068,518,000	$42,642,000,000	$65,037,091,000	$94,300,000,000
Wealth per capita	513.93	779.83	850.20	1,038.57	1,235.86
Circulation.......	435,407,252	675,212,794	973,382,228	1,429,251,270	2,055,150,998
Circulation pr cap	13.85	17.50	19.41	22.82	26.93
Dep. in Sav. banks	149,277,504	549,874,358	819,106,973	1,524,844,506	2,449,547,885
Dep. in Nat. banks	....	507,368,619	1,006,452,853	1,485,095,856	2,508,248,558

The population has increased nearly 43,000,000, or 140 per cent., since 1860, and 14,000,000 since 1890, while the total wealth increased $78,000,000,000, or nearly 500 per cent., since 1860, and $29,000,000,000 since 1890. The average wealth per capita has inereased from less than $308 in 1850 and $514 in 1860, to nearly $1,236 in 1900. The money in circulation is nearly five times what it was in 1860, and the circulation per capita is nearly double. The improved condition of the wage-earning classes is attested by the increase in deposits in Savings banks from about $149,-000,000 in 1860 to $2,449,000,000 in 1900, an increase of $2,300,000,000, or nearly $60,-000,000 a year. In the last ten years the increase was $925,000,000. National bank deposits have increased five-fold since 1870, and more than $1,000,000,000 since 1890.

In our foreign trade and in our production of various commodities the same remarkable growth is observable. This is shown in the following comparisons:

	1860.	*1870.*	*1880.*	*1890.*	*1900.*
Imports of mdse....(dolls)	353,616,119	435,958,408	667,954,746	789,310,409	849,941,184
Exports of mdse....(dolls)	333,576,057	392,771,768	835,638,658	857,828,684	1,394,483,082
Exports of mfrs.....(dolls)	39,803,080	68,279,764	102,856,015	151,102,376	433,851,756
Production of gold..(dolls)	46,000,000	50,000,000	36,000,000	32,845,000	79,171,000
Production of silver(dolls)	150,000	16,000,000	39,200,000	70,465,000	74,533,495
Production of coal..(tons)	18,513,123	32,863,000	63,822,830	140,866,931	240,965,917
Production of ptlum(galls)	21,000,000	220,951,290	1,104,017,166	1,924,552,224	2,661,233,568
Production of pig irn(tons)	821,223	1,665,179	3,835,191	9,202,703	13,789,242
Production of steel..(tons)	....	68,750	1,247,335	4,277,071	10,188,329
Production of wheat(bush)	173,104,924	235,884,700	498,549,868	399,262,000	522,229,505
Production of corn.(bush)	838,792,742	1,094,255,000	1,717,434,543	1,489,970,000	2,105,102,516
Production of cotton(bles)	4,861,292	3,114,592	5,761,252	7,311,322	9,436,416
Railways............(miles)	30,626	52,922	93,262	166,654	194,321

In all these items is shown the remarkable advancement which this country has made since 1860. Imports have more than doubled in value, exports have quadrupled and exports of manufactures have increased more than ten fold. Gold and silver production have reached the highest points ever known. Iron and steel production has grown from almost nothing to more than 10,000,000 tons a year for steel and nearly 14,000,000 tons for iron. The production of coal has increased more than fourteen fold, and of petroleum one hundred fold. Wheat and corn production has increased three fold, and the area of production has moved a thousand miles westward in the last forty years. The cotton crop has doubled, while railway mileage is six times what it was in 1860.

In all particulars the year 1900 is without parallel in previous years. It seems as

Digitized by Google

though every thing joined in making the country to prosper as it never had before. Of course there must come a reaction and depression. Financial men are looking into the future and expressing conservative views even while looking for a continuance of good times for a while yet.

A change has begun in our foreign trade already. It is rapidly reducing the tremendous balance of trade which for five years has been beyond all previous records. The net balance was nearly $18,000,000 less in January than for the same month last year, and nearly $100,000,000 less in the seven months ended January 31 than for the same period in 1900–01.

There is a double cause for this, for while exports are showing some falling off, imports are showing a large increase. In January exports declined nearly $8,000,000 and imports increased $10,000,000, while in the seven months of the fiscal year exports decreased nearly $30,000,000 and imports increased $67,000,000.

The situation is by no means discouraging; on the contrary the increase in imports is indicative of the increased wealth of the country. Official statements from Washington show that in 1901 the United States led all other countries in the volume of its exports, which averaged $119,840,333 per month as compared with $113,753,987 for Great Britain, $90,242,000 for Germany and $66,929,329 for France. Those three countries beat the United States as to imports, however, the United Kingdom leading with a monthly average of $211,786,669, while Germany exported $111,646,000 per month, France $75,483,423 and the United States $73,368,421.

One fact which admits of no dispute and one which all investors must realize is that the railroads of the country have been experiencing a prosperity beyond anything in their previous history. Railroad securities have reached an exceptionally high standard of value and are in far better repute than they were twenty or even ten years ago.

The Inter-State Commerce Commission has issued its report on the income account of the railways during the fiscal year ended June 30, 1901. The statistics are of very great value and exceptionally interesting at this time. The gross earnings on 192,193 miles of road during the year were $1,578,000,000 as compared with $1,487,000,000 on 192,556 miles in the previous year, a gain of $91,000,000 on a mileage somewhat smaller than was reported in 1900, the full returns for 1901 not yet being compiled. The net earnings were $555,000,000 as compared with $519,000,000 in 1900, an increase of $36,000,000.

These are very favorable results indeed and the improvement extends to the dividends paid stockholders. The income other than from operation was more than $65,000,000, making the total net income $620,000,000. From this payments for interest, taxes, etc., to the amount of nearly $422,000,000 were made and $121,000,000 was paid out in dividends as compared with $108,000,000 in the previous year.

A very interesting table in the Commissioners' report shows the gross and net earnings per mile of line for each on the last nine years. We reproduce the figures as follows:

YEAR ENDED JUNE 30.	*Miles of line operated.*	*Gross earnings per mile.*	*Operating expenses per mile.*	*Net earnings per mile.*
1893	169,780	$7,190	$4,876	$2,314
1894	175,691	6,109	4,163	1,946

The gross earnings per mile in 1901 were the largest recorded since the Inter-State Commerce Commission was created, and were $489 more than in 1900, and $2,161 more than in 1895. The operating expenses were exceptionally large, due in part to the increased traffic, and also to the more liberal expenditures by the railroads for betterments which were charged to expense account. For some years the railroads curtailed every expense even to the extent of impairing their property, now they are getting their property into better shape than it ever was before. Even with the increased expenditures the net earnings per mile are larger than for any previous year, exceeding 1900 by $159 a mile and 1894 by $942 per mile. The latter difference, on the basis of the present mileage, would mean an increase in the net income of the railroads as compared with seven years ago of more than $180,000,000.

A highly interesting exhibit of the development of wealth is to be found in the annual report of Frederick D. Kilburn, the State Bank Superintendent of New York. The report shows an extraordinary growth in the resources of the banking institutions of the State. During the past year the resources of the Savings banks have increased $65,000,000, of the State deposit banks $41,000,000, and of the trust companies $171,000,000. The figures for the last eleven years are given on another page of this issue.

The iron industry continues to present the most remarkable features. With production of pig iron again exceeding all previous records, it seems to be impossible to keep pace with consumption. In January it is estimated that 1,450,000 tons of iron were produced, yet "the stock held by others than furnaces serving steel plants," the "Iron Age" says, "declined from 180,000 tons on January 1 to 122,000 tons on February 1. There is an absolute scarcity of steel, while the complaint is everywhere heard that enough iron cannot be had. The estimated output of the furnaces in blast on February 1 was 340,612 tons per week, an increase since January 1 of 42,152 tons. Compared with a year ago the increase is more than 62,000 tons, or at the rate of over 3,000,000 tons a year.

THE MONEY MARKET.—Rates for money continue low and the supply has been rapidly increasing. At the close of the month call money ruled at 2 @ 2½ per cent., most of the loans being made at 2¼ per cent. Banks and trust companies quote 2½ per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 3½ @ 4 per cent. for 30 to 90 days and 4 @ 4½ per cent. for 5 to 6 months on good mixed collateral. For commercial paper the rates are 4 per cent. for 60 to 90 days' endorsed bills receivable, 4 @ 4½ per cent. for first-class 4 to 6 months' single names, and 5 @ 5½ per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—The accumulation of funds in the local banks as indicated by the deposits has been very rapid since the first of the year. On the other hand loans have increased still more rapidly, at least in the last month. Both deposits and loans have increased beyond all previous records.

FOREIGN TRADE.—The statistics of our foreign trade for the first month of 1902 show a decrease in exports of merchandise and also in the net balance of trade. The total exports were $128,789,000 or nearly $8,000,000 less than in January, 1901, and more than $8,000,000 compared with December last. The imports of merchandise were slightly less in January than in December, but they were $10,000,000 more than in January, 1901. They amount to $79,426,000 for the month, leaving the net exports $49,363,000, or nearly $18,000,000 less than in 1901, and $8,000,000 less than in either 1898 or 1899. The exports for the seven months of the fiscal year were $872,-000,000, a decrease of $30,000,000 compared with the exports of the same period last year, but in excess of any other year. The imports were $526,000,000, or $67,000,000 more than in 1901 and $186,000,000 more than in 1898. The net exports for the seven months are about $346,000,000, or $97,000,000 less than in the previous year.

BANKERS' OBITUARY RECORD.

Billard.—John D. Billard, President of the First National Bank and the City Savings Bank, Meriden, Conn., died February 1, aged eighty-three years. He was born in New York in 1819, taking up his residence in Meriden at the age of twenty years. By his own efforts he amassed a large fortune.

Carter.—James S. Carter, Vice-President of the Silver City (N. M.) National Bank, died February 13. He was born in St. Louis in 1856.

Coggin.—M. J. Coggin, senior member of the firm of Coggin Bros. & Ford, Brownwood, Tex., died February 8.

Colwell.—John A. Colwell, President of the Farmers' National Bank, Kittanning, Pa., died February 4, in his eighty-fourth year. He came from Ireland at the age of fourteen and

Digitized by Google

began life as a clerk, later learning the iron business. He finally became a manufacturer and accumulated a large fortune.

Depuy.—Bert B. Depuy, Cashier of Peter Depuy's Banking House, Nunda, N. Y., died February 10, aged twenty-seven years.

Foster.—William Hammond Foster, one of the old school of New York city bankers, died in Petersham, Mass., on February 16, in his ninety-fourth year. He organized many banks before the Civil War period, and among those now in existence are the Central National Bank of New York, and the National Bank of Commerce of Boston. Later he became a member of the Wall street firm of Leonard, Sheldon & Foster. In 1880 Mr. Foster retired from active business and returned to Petersham, his birthplace.

Harrison.—Geo. W. Harrison, Vice-President of the First National Bank, Birdsboro, Pa., died February 22, in his sixty-ninth year.

Higginbotham.—J. M. Higginbotham, President of the Citizens' National Bank of Lancaster, Ky., from its organization in 1882, died February 5. He served two terms as sheriff of the county.

Hedekin.—Thomas B. Hedekin, Vice-President of the White National Bank, Fort Wayne, Ind., died February 1, aged sixty-four years.

Hopkins.—Joel W. Hopkins, President of the Peru (Ill.) National Bank, and also President of two State banks, died February 16. He was a native of Ohio, and went to Illinois in 1834.

Kerr.—Charles L. C. Kerr, director and Cashier of the National Bank of Newburgh, N. Y., died February 9, aged forty-five years.

McBride.—Wm. B. McBride, President of the Farmers and Merchants Bank, Centralia, Mo., died February 10, aged sixty-seven years.

Myer.—Dr. Jesse Myer, President of the State of New York National Bank, Kingston, N. Y., and a wealthy and prominent physician, died February 17, aged eighty years.

Lindsay.—Ernest Lindsay, Vice-President of the St. Joseph Stock Yards Bank, South St. Joseph, Mo., a director of that institution and closely identified with its management from the time of organization, died January 13.

Naffziger.—Louis A. Naffziger, Cashier of the Bank of Dwight, Ill., with which institution he had been connected for fifteen years, died February 1.

Orton.—James Douglas Orton, President of the Second National Bank, and a director of the Dime Savings Institution, Newark, N. J., died February 22, aged seventy-nine years. Early in life Mr. Orton became identified with banking institutions in Newark and New York city, and in 1864 assisted in organizing the Second National Bank of Newark, of which he became President.

Perkins.—Henry Bishop Perkins, President of the First National Bank, Warren, Ohio, and one of the wealthy and well-known citizens of the State, died March 2. Mr. Perkins was born in Warren in 1824 and had always lived there. He inherited a large property to which he added considerably, his wealth being estimated at $3,000,000 at the time of his death. He had been a Presidential elector and a member of the Ohio Senate, besides holding other important positions.

Rose.—Geo. W. Rose, President of the First National Bank, Highland, N. Y., died February 21, aged sixty-five years.

Sheridan.—Capt. John Sheridan, President of the Grafton (W. Va.) Bank since its organization, and successfully connected with railway and coal mining enterprises, died February 4.

Skinner.—De Forest L. Skinner, President of the First National Bank of Porter County, Valparaiso, Ind., and a former member of the Indiana State Senate, died February 21. He was born in Vermont in 1835, but had resided in Indiana since 1846.

Vernon.—John W. Vernon, Cashier of the Merchants' National Bank, Providence, R. I., died February 24. He was born in Bristol, R. I., in 1833, and graduated from Brown University in 1854. He entered the Providence Institution for Savings, and became Assistant Treasurer. After engaging in business for awhile in New York, he returned to Providence and became Cashier of the Merchants' National Bank.

Wait.—Wm. H. Wait, President of the Farmers and Merchants' Bank, Watkins, N. Y., died February 15, aged sixty-one years. From 1888 to 1891 he was county treasurer, and a member of the Assembly in 1892 and 1893.

Wheat.—Benoni Wheat, President of the Citizens' National Bank, Alexandria, Va., and prominently associated with other important business enterprises in that city, died February 24.

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-SIXTH YEAR. APRIL, 1902. VOLUME LXIV, No. 4.

THE CURRENCY AND BANKING BILL reported to the House by Mr. FOWLER, chairman of the Committee on Banking and Currency, is published in full in another part of this issue. It provides for the assumption by the National banks of the redemption of $130,000,000 of United States notes, and for the gradual introduction of an asset currency. It limits the silver certificates to denominations of five dollars and less, increases the coinage of subsidiary silver coin, provides for the exchange of gold for silver, and for the payment of interest on deposits of public moneys as a substitute for bonded security for such deposits, and all public moneys in excess of $50,000,000 are to be deposited with the banks. The bill also permits National banks to establish branches anywhere on the continent, in the insular possessions and in foreign countries. The Comptroller of the Currency is to be superseded by a Board of Control, consisting of three members, who shall perform the duties now vested in the Comptroller as well as other duties created by the bill.

The measure is a sort of omnibus bill and has brought together in one enactment the features of banking reform which have up to this time received the greatest share of popular recognition; viz., asset currency, redemption of United States notes, restriction of silver certificates to small denominations, outlet for the stock of silver by means of subsidiary coinage, amendment of independent Treasury defects, redemption of silver coin in gold, and branch banks.

Although there is some difference of opinion, it will probably be generally conceded that most of these reforms are desirable. With the exception of the proposal for branch banks, the main principles embraced in the bill have been advocated by THE BANKERS' MAGAZINE for many years. It is well, however, that the branch banking proposition has been embodied in the bill, as it assures a thorough discussion of the branch banking system and its real or supposed advan-

Digitized by Google

tages over our present system. Whatever criticism the measure will call forth must be directed chiefly against the methods to be used in working out the principles contained in the bill, and of these we shall speak further on.

While Mr. FOWLER can hardly hope to get his bill through the present session of Congress, he has achieved a substantial advantage to the cause of banking reform in getting the Banking and Currency Committee to report so comprehensive a measure for the consideration of the House. When even a majority of the committee can agree upon a banking bill, it shows that some progress is being made. Heretofore, every member was believed to have a scheme of his own, and outside of Congress may be found a host of bankers, financial experts and others who are certain that they alone are competent to outline financial legislation. To the thoughtful it must be apparent, however, that if anything is to be accomplished concessions must be made in regard to details.

In any plan providing for the issue of an asset currency, one of the most important things to be kept in view is the method of redeeming the notes. Should the system of redemption be imperfect, inflation would not only result but the notes would gravitate to the financial centers as the legal-tenders do now, thus engendering speculation at those centers while depriving local interests of an adequate supply of money. The provisions in Mr. FOWLER's bill seem to make it sure that when the notes get to the financial centers they will be forced back to the districts whence they were issued for redemption. It was the lack of proper means of redeeming their notes that tended to depreciate the old State bank currency; but Mr. FOWLER has effectually guarded against this defect and has provided an adequate and scientific method for ensuring the ultimate and current redemption of the notes.

Our banking system, so far as note issues are concerned, is dependent upon the public debt. The debt is decreasing in volume and the bonds appreciating in value, thus narrowing the basis of circulation, although business is expanding enormously. Similarly, there is a lessening incentive for banks to deposit bonds as security for public funds. The necessity for some legislation that will alter these conditions is becoming apparent. To rally all the conflicting elements to the support of any measure is a task requiring great skill, patience and wisdom.

In considering a bill for the reconstruction of our banking and currency system, the main question is, Will the measure tend to promote the general business prosperity of the country? If the principles of Mr. FOWLER's bill conform to this requirement the details may be regarded as subsidiary, and upon these details there is bound to be a

Digitized by Google

wide difference of opinion. It is essential, first, to secure agreement on the substantial aims of the bill—the retirement of the greenbacks, the issue of bank notes not secured by bonds, etc. When there is a united opinion on these matters the rest should be easy.

The chairman of the Banking and Currency Committee has done a great public service in bringing the whole banking question up before the country for discussion and settlement.

THE FOWLER BANKING BILL is being received with more or less approval, but each of its features except that relating to the maintenance of the silver coinage at par in gold, is opposed with vigor in some quarters. The opposition to single points of the bill is more apt to unite to defeat the whole measure than are the influences which favor these same points. There are many who favor an asset currency, but who are opposed strenuously to branch banks, for instance.

The newest feature in the bill is the provision for a Board of Control in place of the Comptroller of the Currency. This is taken from a banking bill introduced by Mr. FOWLER, the chairman of the committee, some years ago. Whether there is any advantage in dividing the responsibility of the supervision and execution of the National banking laws, among three heads, over the present plan, may be a matter for great difference of opinion. No one can doubt that division of the labor of executing these laws is necessary and proper, or that each branch of the business is by its importance entitled to management of a superior rank. But although Congress should recognize this by creating the necessary offices, with salaries sufficient to attract the required ability, yet the whole bureau would seem to be more effective under one head responsible and supreme over the whole, than under three of equal rank. There should perhaps be several deputy or assistant Comptrollers appointed by the President, instead of the present Deputy Comptroller, but the Comptroller ought to be at the head of them all.

The bill, notwithstanding the correct principles which lie at the foundation of its various features, is too complicated. The redemption and cancellation of the legal-tender notes is very much to be desired, but if it be determined that the Government is to be relieved of this portion of its debt, why set about it by so indirect a process? If this process in any way disguised the result aimed at so as to overcome the sentimental opposition to the retirement of the greenbacks, it might have its value. But opposition to the retirement of the greenbacks through the banking machinery will be as great as to their retirement and cancellation by direct redemption in gold, or by refunding in bonds. In fact, probably greater, because it affords demagogues the

Digitized by Google

opportunity to claim that the banks gain some advantage that by direct redemption might accrue to the Government. An analogous criticism arises as to the method of introducing asset currency. The main objection to asset currency is that its safety is not assured under the American system of small isolated banks. The slow, indirect introduction of an asset currency under this bill does not increase its safety. There will be the same temptation to the abuse of the privilege by weak institutions as there would under a more direct law. Moreover, it seems doubtful whether the banks could issue enough under the provisions of the bill to supply business demands. The limits to the issue fixed in the measure have no reference to the needs of business. For the first seven years after the passage of the bill, the issue of asset currency would go on in small instalments which may or may not correspond with these needs. The retirement of Government notes going on simultaneously, it will be difficult to tell whether the result at any point of time would be contraction or expansion. At all events, at the end of the seven years, the country will have its isolated banks issuing an asset currency, and be exposed to all the dangers which the opponents of that currency insist upon.

The provision for branch banking renders it still more difficult to determine what the results of the bill may be. If, as is insisted by the opponents of branch banking, the effect of this provision will consolidate the banking capital in a few great institutions, the safety of asset currency, issued only by such institutions, will no doubt be enhanced; but a great revolution in all banking methods will have been accomplished. The opponents and the advocates of branch banking agree that it will put an end to the present system of small banks, and pave the way for unlimited consolidation of banking capital. This consolidation will probably go very far in this country because the checks imposed in other countries are lacking. In fact, in no country in the world has there been any precedent to show what would be the result here, if the existing checks to consolidation of banks are removed by the provision for branch banking. Consolidation in other lines of business has gone further here than elsewhere. The reason is to be found in the great extent of territory and the immense natural resources in process of development. The experience in branch banking in foreign countries, even in Canada, affords no criterion as to what might result from it here. These are the views of those who dread this new departure, and according to these, the FOWLER bill, or any other bill containing a provision of this kind, might just as well drop all other provisions as mere surplusage

Unlimited branch banking will give the consolidated banking strength that would render objections to an asset currency childish. Similarly, the objections to depositing public moneys with the banks

Digitized by Google

would be removed. In fact, with the strength given by the consolidation of the isolated banks of the country into a few great banks, with innumerable branches, all the petty difficulties arising from the comparative weakness of individual banks would be removed. The finances of the Government itself would be second to those of some of these institutions rendered possible by branch banking.

Whether this possible consolidation will have advantages over present conditions sufficient to warrant the change, is another question, and is the one really to be discussed with reference to this bill. These criticisms are made in no hostile spirit. But in the face of the hostility due to conflicting interests, and the great diversity of opinion, it will be difficult to carry any banking bill whatever through Congress. This difficulty will be increased, if not rendered insuperable, if the bill is not so simple and direct that its aims and operations can be readily made plain to those whom the measure most directly affects.

It is evident, from the contraction of the present National bank currency, and the periodical sufferings of the money market from Treasury operations, that there will soon be a basis for a popular outcry for more money. It will be pointed out that there is now no source from which additional currency can be supplied. The silver coinage source has been sealed up, the Government notes are stationary. The reduction of the bonded debt is causing the ebb of National bank currency. Gold certificates to some extent furnish a resource, but these would cease to be available with any reduction in the gold reserves by a foreign demand for our gold which may be brought about unexpectedly by changes in commercial conditions. If the bank-note question is not settled the greenback may again be called on to save the country and even a recrudescence of the silver question is possible. Another alternative is State bank notes, although the possibility of this is more remote.

Therefore it is to be hoped that the bill introduced by the committee will receive the consideration it deserves. For the purposes of discussion of the whole question, it is well that it contains provisions covering the whole field, contradictory as some of them seem to be to each other.

THE NEW YORK CHAMBER OF COMMERCE has adopted resolutions approving the measure introduced by Representative HILL for authorizing the redemption of silver dollars in gold. That this bill should be approved by the leading commercial organization of the country is not at all remarkable, but that out of the other proposed measures for improvement of currency conditions this one alone should be so conspicuously approved is worthy of consideration. There were two other bills referred to the Committee on Finance and

Digitized by Google

Currency, of which Mr. J. Harsen Rhoades is chairman, both of them providing for a greater use of the banks as depositories of public moneys, but no report was made on this important subject.

It would be of great value to the business community throughout the country to have the New York Chamber of Commerce express its opinion upon all the financial measures introduced in Congress. Probably, however, in regard to these measures generally there is so much diversity of interest and opinion among the members of this great commercial body, that it would be impossible to arrive at a conclusion representing the belief of anything like a majority of the members. In other words, the membership of the New York Chamber of Commerce is probably as much divided by conflicting interests as are the great aggregate of bankers, made up of State, National and private bankers, with the addition of Savings banks and trust companies.

The bill which has received the approval of the Chamber of Commerce effects no perceptible change in banking and financial conditions. It merely substitutes a permanent foundation for the temporary device by which the parity of the silver dollars with gold has heretofore been maintained. This improvement is, of course, of the very greatest value, but it was not this fact alone that enabled it to receive the approval of the Chamber of Commerce. The fact that no business interest will by it gain any advantage, real or apparent, over any competitor recommends it to all. It is the neutrality of the measure, added to its intrinsic merit, that enables every intelligent business man to look on it without disapproval.

The difficulty with the bills for more specific features of currency betterment is that it is almost impossible for them not to interfere more or less with established ways of carrying on financial and banking business. Even bills for the deposit of public moneys with the banks, such as the Pugsley bill and the Sulzer resolution, are opposed to the interests of those financial institutions which are able to adapt themselves to present conditions, and thus exercise a virtual monopoly. Bills that deal with the issue of circulation by the banks, and which threaten changes in the details of the banking business, arouse the opposition of still larger numbers of those affected by them.

The passage of a measure for any serious change in the details of the banking laws will be delayed indefinitely, if Congress looks for the support of the bankers. It may be said that the law of 1900, increasing the percentage of circulation issued on bonds, was not opposed by the banks. No new principle was, however, involved in it, and banks, other than National, could take advantage of its provisions if they chose to do so.

Bankers generally understand the bounds and limits of a note

Digitized by Google

issue based on bonded security, its effects on business, its relations to competition, and the profits to be derived from it, both from the use of circulation and the premium increment of the bonds held. They do not understand the proposed asset currency in the same way. They are doubtful about its limits and its dangers. In the same way branch banking is looked upon with suspicion. No one is sure how far it will go. It is probably true that if the bankers of the country could unite on any measure, its passage by Congress would be assured. To secure this unity, however, the proposition must be of the simplest character and in strict line with existing conditions. Thus it would be more feasible to enact a law increasing the percentage of circulation issued on bonds, than to do away with bond circulation altogether. If any radical change is made in the method of issuing bank currency, it will be done when Congress becomes impressed with the belief that the great masses of the people demand or would be content with the change. Both in England and the United States, important changes in banking law have been made without the support of the banks and, to some extent, in opposition to their wishes.

The New York Chamber of Commerce embodies in its membership representatives of all shades of banking opinion. If every important financial measure, advanced for the consideration of commerce, could be passed on by the Chamber, and either approved or disapproved, or at least criticized, the results of this consideration would be a pointer of how the proposition would affect financial interests.

Apparently to avoid the check collection charges fixed by the banks of the New York Clearing-House, some out-of-town banks, having for their New York correspondents banks in that city not actual members of the clearing-house association, but only affiliated with it, have been stamping their depositors' checks, payable if desired by their correspondent in New York city.

The banks in New York city affiliated with the clearing-house but not members pay $500 a year for the privilege of having some actual member of the clearing-house association clear for them. They have used this privilege to clear the checks of their out-of-town correspondents made payable at their counters. It is plain that by this practice these affiliated New York banks, in the competition for outside accounts, placed themselves on an equality with the banks full members of the clearing-house association. The affiliated banks, as stated, pay $500 per annum to the association for the privilege of having some member clear for them. How much in addition they pay the member of the association for actually doing the business does not appear.

Digitized by Google

It seems that the clearing-house association construes the privilege purchased to extend only to checks drawn directly on the affiliated bank, and not to checks drawn on their correspondents, although the affiliated bank apparently agrees to accept such checks.

There seems on its face to be hardly any difference between a check drawn on a bank directly, and a check accepted by it though drawn on another bank, if there are credits to meet the check in both cases. The explanation given that a distinction is made because the clearing-house has a right to examine into the affairs of the affiliated bank which has purchased the clearing privilege, but cannot examine the affairs of the non-affiliated correspondent, is rather outside the point. If the affiliated bank is good and virtually accepts the checks of its unaffiliated correspondent, the power to determine the condition at any time of the affiliated bank would seem to answer every necessary purpose. Nothing is said as to out-of-town correspondents of the New York banks members of the clearing-house, whether they stamp checks of their depositors or not. They probably do. The entire matter therefore is one of the extent of privilege to be allowed to what are called the affiliated New York banks, and seems to only indirectly involve the question of charges for check collection. If the depositors of an out-of-town bank desire the advantage of having their checks drawn on their home bank payable at par in New York, they must, under this order of the clearing-house, have them stamped payable at a clearing-house bank, that is an actual member and not a bank that is merely affiliated with the clearing-house. This will tend to make their home bank change its account to a member of the clearing-house unless the affiliated bank, by increasing its fee to the association, can secure the privilege on this point accorded to full members. Indirectly the associated banks will thus obtain pay for collecting country checks.

The controversy shows, as was pointed out when the collection charges were first insisted on, that the effect of these charges will be to force country banks to provide for the payment in New York of checks drawn on them by their depositors. Bank depositors all over the country are demanding that their checks shall be accepted at par wherever sent. Banks desiring to retain and increase their business will have to accede to this demand and of course will endeavor to do so in the line of least resistance. The clearing-house banks have special advantages and have a right to make out of them all they can, either as a help to competition or by receiving adequate payment for sharing them with non-member banks in the same place. The homogeneousness of checks is such a great advantage and convenience to the business public that the struggle for it will never be given up. While no just complaint can be made of banks that from the advan-

Digitized by Google

tage of their position extract profit from the country check, yet on the other hand it is for the advantage of the banking interests of the country that the banks should generally strive to secure the free handling of all checks at par, wherever drawn or wherever presented within the limits of the United States. It undoubtedly costs them something, but this cost is made up to the entire banking community by the consequent increase of deposits. Many who never would use banks at all deposit with them because of the convenience of the use of checks that will pass at par anywhere. This is the true way for banks to compete successfully with express companies and other corporations that now trench on their remittance business. The increase of the use of checks means an increase in deposits.

The present condition of check circulation, superior as it is to that of former times, can be much improved on and conducted at much less expense to the banks.

A LEGAL RATE OF INTEREST fixed by statute is perhaps necessary to serve as a standard in cases where the rates for the use of money is not otherwise fixed. As law in the ideal sense is the recognition of the customs of the people, by constituted authority, there ought perhaps to be a statute fixing as nearly as possible the prevailing average rate of interest at any given period.

With the increase of capital in proportion to the population, the average charges for the use of money become less and less; but still, under changing conditions of the money market, the rates may vary from charges almost nominal to those that are practically prohibitive. In actual business the statutory interest rate is a mere point, like the zero mark on a thermometer, by which it can be told how hot or cold the demand for money is at any time. Generally, it has never been determined with scientific accuracy any more than the thermometric zero; but it serves all practical purposes, and as it was first fixed by custom, it tends to perpetuate that custom.

The further effort of law to impose penalties for interest charges exceeding the statutory rate has generally proved futile. These penalties are extremely difficult of enforcement. On reading the decisions of the courts in cases where redress is sought for usurious interest paid or withheld, one cannot fail to be struck with the endless refinements and distinctions by which the judges nullify the manifest injustice of the legal penalties in the great majority of cases. There are, of course, instances of real extortion practiced under the pretext of interest charges, but there is very little of this in the usual lines of active business. In fact, in most usury cases it is not difficult to see that the alleged victim was charged no more than the prevailing

Digitized by Google

rates, or at least was in the position of a bidder for money with the intention of prevailing over competitors. If his enterprise had been successful no complaint of usury would have been made. It is to reduce or avoid debt after disaster has occurred through misfortune or bad judgment that usury complaints are commonly made. It is their sense of equity that leads judges to refine away the penalties for technical usury.

The reduction in charges for money going on with the increase of capital leads to the reduction of the legal rate by legislation. In some States the legal rate has been placed as low as five per cent., and for a number of years there has been a proposition before the New York Legislature to adopt this rate instead of the present rate of six per cent. The indifference shown to this measure does not indicate any want of perception of the general decline of the earning power of money. It merely indicates that the legal rate is of very little practical importance to any one, and that usury laws are in reality dead letters. It may be argued that cases arise where some fixed rate is necessary, such as judgments, and other decrees of the courts, and governing the official use of money. In these cases there might be a rate fixed from time to time by legislative or judicial action, without applying to the general public. The abuses of interest charges might be dealt with under the head of extortion much more equitably and effectually than they now are under usury laws.

On the whole, it is perhaps better, as the capital of a country increases and its earning power diminishes, that legal interest rates and penalties for usury should be permitted to fall into desuetude rather than to give them additional life by seeking to revise them.

RETIRING THE GREENBACKS WITHOUT CONTRACTION of the currency would seem to be possible in the present condition of the Treasury. On March 1 the amount of gold held in the division of issue and redemption for the redemption of United States notes was $150,000,000, this specific sum being set aside and its maintenance required by the act of March 14, 1900. There was, on March 1, additional gold in the general fund of the Treasury amounting to $88,821,000. If this be added to the $150,000,000 reserve fund, the total is $238,821,000. This sum could be applied to the conversion of an equal amount of United States notes into gold certificates. This could be done without making any difference whatever in the volume of currency, the outstanding United States notes merely being replaced by gold certificates, the gold remaining in the Treasury as now. The total of United States notes in existence when their further retirement was prohibited by Congress in 1878 was $346,681,000. Deducting

Digitized by Google

the $238,821,000 which would be converted into gold certificates under the above plan, there would remain $107,860,000 of the legal tenders nominally in existence; but it is certain that several millions of these notes were destroyed in the great fires in Boston and Chicago, and probably a considerable amount has been lost or destroyed in other ways. It may be safely asserted that the amount of notes left after the conversion above suggested would therefore fall much below $100,000,000. This amount would be permanently held in the National banks as a reserve, but the current redemption of such sums as might be presented could be provided for out of the general funds of the Treasury, the redeemed notes to be cancelled or otherwise disposed of as Congress may determine. It is improbable, however, with the volume of legal tenders reduced to $75,000,000 or $80,000,000—the only legal-tender paper money there would be—that anybody would want the remaining notes redeemed.

JOHN SHERMAN suggested many years ago that the greenbacks be converted into gold certificates, and Secretary GAGE, in the last annual report he made to Congress, said that if certain steps were taken the greenbacks would become what they should be in reality—gold certificates. Perhaps since the days of HAMILTON and GALLATIN no men who have directed the Government finances have been better qualified than Mr. GAGE and Mr. SHERMAN to speak with authority on financial matters. Their words are entitled to sober consideration.

If it is the desire of the party in power to retire substantially all the greenbacks without issuing bonds or decreasing the volume of money, an opportunity is now presented that may not be offered again, for with the falling off in revenues consequent upon the repeal of the war taxes the gold in the general fund will decrease, and it may even become necessary to sell bonds to keep up the $150,000,000 reserve.

It is difficult to see why there should be any concealment of purpose or circumlocution in carrying out a reform so obviously in the public interest. As GREELEY said, "The way to resume is to resume;" and the way to retire the greenbacks would seem to be equally plain.

MR. HEPBURN, OF THE CHASE NATIONAL BANK, and ex-Comptroller of the Currency, recently delivered an address before the Academy of Political Science, of Columbia University, in which he discussed the plan of a great central regulating bank, suggested by ex-Secretary GAGE. The objection to the plan which Mr. HEPBURN laid most stress on was that it amounted to a practical consolidation of the banks, and he thought the interest of the country in banking

Digitized by Google

as in all other business will be best conserved by a wholesome rivalry and competition. Mr. GAGE's plan for a central bank included the subscription of the stock by the National banks of the country, so that the bank would be the creature and, in some respects, under the control of the National banks. MR. HEPBURN thinks that rivalry among the banks for accommodations, as well as the necessity the bank would be under of loaning a large part of its funds upon quickly convertible securities of the business centers, might make the institution a disappointment to the rural interests of the country.

It may be conceded that such a central bank as this would not be very desirable. It would, in the first place, be a competitor of the great banks existing in the money centers, and would in the long run deprive them of many of their correspondents, perhaps of a majority. If the central regulating bank, which Mr. GAGE seemed to think was necessary to bind together the scattered powers of the banking institutions of the country, is to be merely a creature of the National banking system and is to have the power of competing with existing banks in the reception of deposits, it would in a short time develop into a system before which the present system of banks would gradually disappear.

It is believed, however, that there is ample room for a central institution, the powers of which will be limited to a field not occupied to any great extent by any of the existing banks. Its powers should be confined to receiving Government moneys, issuing circulating notes, regulating foreign exchange, buying and selling coin and bullion at home and abroad. It should also have power to make loans to other banks on securities offered by them, but not to receive deposits from other banks or corporations or individuals in the ordinary way. The capital stock should be offered for subscription to the general public, including banks, not National banks or other banks exclusively. Most of its loans would probably be made, as Mr. HEPBURN suggests, on the quick collaterals of the great money centres.

The central bank would first help out the banks of the money centres and put these banks in a condition to extend aid to their country correspondents. If any country bank could not obtain help from its city correspondent, it could offer its collateral direct to the central bank. As a rule the banks of the money centres would prefer to help their correspondents rather than have them appeal to the central bank. The central bank should be chartered by Congress and subjected to periodical examinations by Government experts. Its notes should be printed and furnished by the Government as those of the National banks now are. It should be required to keep a reserve of forty per cent. in gold on its note issues and also to receive country checks at par.

Digitized by Google

The Government deposits and capital should be kept in gold as far as possible and form the basis of note issues. The bank should also be allowed to redeem its notes in silver dollars or silver certificates, legal-tender notes, or National bank notes as long as any may remain in circulation, at the option of the holder of the notes of the central bank. Thus such a note holder could demand gold, but if silver or paper was just as convenient, the bank could use it in making redemptions. The notes, however, would seldom be presented for redemption unless gold was needed.

Such an institution would do away with the necessity of issuing clearing-house certificates, or if the banks of the money centres still deemed it best to pool their assets in this way, the clearing house certificates could be changed for notes of the central bank, instead of putting up the securities on which the clearing-house certificates are based.

Although some of the arguments used by Mr. HEPBURN seem to be against a central bank, he suggests that the time has gone by when clearing-house certificates may be safely availed of in the city of New York. He appears to believe that the necessity of using this expedient in the past was an injury to the credit of New York city, and would in the future work greater injury in this respect. But what is to be done if circumstances which formerly necessitated clearing-house certificates should again arise? The deposits of the great financial centre are made up of accounts from all over the United States. The use of the power of the associated banks has each time that clearing-house certificates were issued stopped the spread of panic more rapidly with each successive case. It is true that the principle was similar to that on which the sixty-days' notice in the case of Savings banks works, but it was effectual.

Something must be invented to take the place of the clearing-house certificate, before resort to this proved device is abandoned. Mr. HEPBURN may think that some of the existing banks have attained to a degree of strength which would enable them to meet all engagements of their own whatever might happen to some of their colleagues. But perhaps he has in view the note-issuing power in the hands of a central bank as a substitute for clearing-house certificates. At least his whole argument seems ingeniously constructed to suggest, whether he so meant or not, a properly organized central bank as a means of superseding the use of clearing-house certificates. There are, undoubtedly, great difficulties in the way of obtaining the necessary legislation for establishing a central bank, but as far as that is concerned they are no greater than in the case of any other banking measure before Congress. Mr. HEPBURN'S address will revive interest in this method of securing an elastic currency.

Digitized by Google

IT IS PLAIN THAT PRESENT CONDITIONS cannot last. When even a two per cent. United States bond commands a premium that makes it unprofitable as a basis for circulation, it would seem that the last ditch of bank issues based on United States bonds had nearly been reached. There are three alternatives; one to admit State, municipal and railroad securities as a basis of circulation, or through one or more banks to issue an asset circulation, or to return to issues of Government notes. Any one of these alternatives would, if adopted as a substitute for the present bank currency, reduce the premium on the bonds now held by the banks as security for circulation. This reduction of premium will be rapid or gradual according to the sudden or gradual adoption of the substitute for present bank-note issues. It is therefore the part of wisdom for the banks to obtain the present premiums as quickly as they can even if they have to retire their circulation. It is probable that if no longer required as a basis of circulation the two per cent. bonds, now held chiefly by the banks, would not bear a market value much above par. The same consequence, a fall in bond premiums, will result upon a change of the independent Treasury system. The necessity for bond purchases to relieve periodical stringencies in the money market will be obviated. Purchases will no doubt be made from time to time to carry out the policy of reducing the debt, but the hand of the Government will not be forced by supposed necessity, and low prices can be arrested.

Some change in the currency system is imminent. All the conditions now force up bond prices. These prices force bank currency contraction. This will soon become so noticeable in its effects as to raise a popular outcry for more currency. This must be furnished either by the banks or the Government. Whatever plan is adopted, the bonds are likely to fall in market value. Of course the premium would be kept up by permitting bank issues to the market value of the bonds, but this plan would meet with serious objection, as it would be difficult to set a limit to the height to which premiums might rise. But in view of the uncertainty of the future the banks can hardly do otherwise than contract their currency, in order to avoid prospective loss on their bonds. They are not responsible for the defects in the monetary laws by which they are forced into a position apparently antagonistic to the Treasury.

Every one knows that the independent Treasury system is at the root of the trouble, which is of course more or less aggravated by a bank circulation based on bonded security. The accumulation of surplus revenue in the Treasury and the consequent contraction of circulating medium can only be relieved by the deposit of public moneys with the banks, or by the purchase of United States bonds. Each of these remedies tends to diminish and neutralize the effect of the other.

THE PURPOSES OF THE NEW CURRENCY BILL.

On another page of this issue will be found the complete currency and banking bill prepared by the Banking and Currency Committee of the House of Representatives. The Washington correspondent of the MAGAZINE sends us the following digest of the report which will accompany the bill:

The Banking and Currency Committee have prepared a measure for the reform of our monetary system, and a report was submitted by Mr. Fowler, the chairman, which for subtle analysis of the situation and a comprehensive grasp of our needs will prove a signal contribution to the literature upon the subjects of finance and currency. That your readers may fully appreciate the significance of the work of the committee it may be well to suggest the vital points they evidently had in mind in framing this important measure.

First, they have sought in a direct way to make our standard of value unequivocal in making every form of Government currency redeemable in gold coin. By providing that the Secretary of the Treasury shall exchange gold coin for silver dollars they have removed the last vestige of doubt with regard to the Government's relation to silver and eliminated every reason for any discrimination on the part of the public against this portion of our currency.

To remove every conceivable danger growing out of this step, provision is made whereby the National banks will find it to their advantage to assume the current redemption of $130,000,000 of United States notes, the Government at the same time redeeming and cancelling $65,000,000 more of them, leaving a balance of only $151,000,000, which will be more than covered by the gold in the reserve fund, since it is known that several millions of the notes have been lost and will never be presented for payment. More than this, the National banks shall hereafter redeem their notes in gold coin. Thus the Government will be immediately relieved of demand obligations amounting to nearly $700,000,000. Another wise precaution is taken in having no silver certificate of a greater denomination than five dollars, and permitting no gold certificate or bank note of any denomination below ten dollars.

Second, Mr. Fowler has pointed out with remarkable clearness that the gold in the general fund of the Treasury can, in no sense, be regarded as a part of our reserve, because it may be dissipated during the present session of Congress by the passage of appropriation bills. He further asserts that the gold coin held by the banks as a part of their required reserve cannot be considered under present conditions as a part of the economic gold reserve of the country, because at the approach of every contraction of credit and suggestion of panic the banks "hoard and hug" their gold, seeking to increase it by presenting such demand obligations of the Government as they have at hand. He argues with force that to make the gold coin held by them available as a part of the economic reserve of commerce, the banks should be required by law to prove their credits by paying out gold coin in the current redemption of their notes.

Digitized by Google

He further points out with clearness and great force that the gold in the reserve fund of the Government was placed there primarily to guarantee the United States notes, and that the amount was fixed at a hundred million dollars because it was a reasonable reserve against three hundred and forty-six million dollars of notes, and that when by the act of March 14, 1900, the amount was increased to one hundred and fifty million dollars, it was made the Government reserve to protect in addition about one hundred million dollars of Treasury notes. He asserts that while this gold reserve in the Treasury was only intended to protect these demand obligations of the Government, it is now looked upon and treated as the economic reserve of our commerce, although it has no direct or natural relation to it. He declares that this is undoubtedly so because it does not rise and fall with the quantity of commercial credit as the reserves do in the banks of France, Germany and Great Britain; but that it is fixed by law, and whether it shall prove at any given time under any given strain to be adequate will be determined wholly by the caprice of the Secretary of the Treasury who may, as he says, balance business interests on the one side and political expediency on the other, and as a patriot or a politician act or fail to act, even after incalculable ruin has been wrought. With this thought clearly in mind the measure seeks to transfer from the Government to the banks of the country the entire responsibility of maintaining an adequate gold reserve and furnishing whatever gold may be necessary for export or other purposes, practically eliminating the Government from all future relation to our commerce quite as much as any State government or municipality.

Third, he calls attention to the fact that the quantity of our present bank-note currency depends entirely upon the profit or loss there is in holding Government bonds, pointing out that it was $320,200,069 in 1880, $122,928,084 in 1890, $200,345,560 in 1899, and $323,863,597 at the present time, and that the banks are now retiring their circulation as fast as the law will permit, viz., at the rate of $3,000,000 per month because there is no longer any profit in holding the bonds.

He argues from a wealth of fact that a proper bank currency should be as directly and naturally related to the business of the country as checks and drafts, and by illustration proves conclusively that where no unwise law contravenes, the practice and habits of the people will determine whether they will use more bank currency than checks or more checks than bank currency. He asserts that there is not the slightest difference between an obligation in the form of a note and a credit upon the books of a bank subject to check, pointing out that the Bank of France had on January 30, 1902, only $157,377,340 of deposits and outstanding credit notes amounting to $814,441,268, and that on October 19, 1901, ten Scotch banks which enjoy the privileges of a credit currency had only $40,435,110 notes out, but had $536,735,750 of deposits.

He demonstrates that the deposit of bonds to secure currency makes that instrument of trade the most expensive, and that such deposit is wholly unnecessary as a matter of safety. He calls attention to the fact that $325,000,000 of bonds now deposited to secure currency, if left with the banks, might not only be loaned out directly but held as a reserve against loans of at least four times that amount, or $1,298,028,720, an amount nearly equal to one-half of all the loans and discounts now held by the National banks. Again,

Digitized by Google

much pains is taken to demonstrate that the exchange by a bank of its bond-secured notes for the obligation of a customer calls for two distinct and justifiable charges; first, a charge for the use of the capital represented by the notes, and second, for insuring the credit of the borrower, and alleges that if the use of capital were worth four per centum per annum and the cost of insuring the credit of the borrower was worth two per centum per annum, the interest rate must necessarily be six per centum; while, as a matter of fact, if the bank were issuing its credit notes its legitimate charge would be only that for the insurance of credit.

To prove that the deposit of bonds is wholly unnecessary in order to secure a safe currency, he has obtained from the Comptroller's office certain deductions that would seem to conclude all further discussion upon the question of the safety of a credit currency. Beginning at the inception of our National banking system in 1863 and coming down to January 1, 1902, the Comptroller discarded every dollar invested in Government bonds to secure National bank notes as if they had been stolen or lost, and that in accordance with the provisions of the bill the bank notes had been a first lien upon the assets of the respective institutions which had failed. The result shows that there were only thirty failures in which the notes had not been paid in full out of the assets, and that it would have required an annual tax upon the outstanding bank notes of only eight one-thousandths of one per centum to pay the balance. In other words, if the history of our National banks is to repeat itself, the five per centum guarantee fund which the bill proposes would be sufficient to pay all the losses on National bank notes for six hundred and twenty-five years, and a single tax of one-quarter of one per centum would be sufficient to cover the losses for thirty one years.

It is his contention that wherever a financial institution does not possess within itself the inherent power to survive all commercial panics and political convulsions and we are compelled to deal with the inherent weakness of a multitude of small institutions, we should apply the principle of insurance which is founded upon the law of general average and that nowhere can more definite, complete and satisfactory data be obtained than from the records of our National banking system during the last forty years. To support his contention he cites with peculiar point and force the Suffolk system whose record from 1840 to 1860 has not been surpassed by any banking system in the world so far as its mechanical operation and test of credit were concerned; the only element lacking being the principle of insurance as applied to its note issues to have made it an ideal system. He calls attention to the fact that while they were without railroads, the telegraph, or the telephone; that each bank got its charter from the Legislature of its own State; that there were no uniform laws or supervision; that there was practically no limit on the issue of notes and that each bank wrote out by hand or had its notes printed at the nearest printing office; and yet that a tax of one-eighth of one per centum on the notes outstanding would have paid for all the notes of the failed banks.

Fourth. The remaining significant thought and important purpose of the measure is the mobilization of the loanable funds of the country. He calls attention to the fact that the banking of to-day is almost exclusively a matter of credit; that what we call deposits and loans are simply expressions of credit; that bankers are merchants in credit; and that credit is one of the

Digitized by Google

most potential factors in modern civilization; that banking in its present form is evidence of a high order of civilization, for it carries with it universal confidence which must rest upon universal honesty. One of the greatest blessings in any community is an institution that will gather together all the savings of the people, helping them to save more, encouraging industry and thrift on the part of the depositors, and encouraging ambition, purpose and enterprise upon the part of the hopeful and aspiring young men, and assisting merchants and manufacturers to carry on their operations which call for labor and thus make the most out of every dollar, as well as out of every energy within the radius of its influence.

He then asserts that what is true of each individual community is equally true of the whole United States, and that there is no reform in our monetary system more important than the development of this same principle upon a national scale. He claims that nothing will contribute more to the general prosperity of our country than such a system of banking as will take the unused and idle capital from one community, where not wanted, and transfer it to another community where most needed.

He claims with much reason that a system which will always keep the deposits of the people in active use and their credits employed will greatly reduce and perfectly equalize the rates of interest throughout the United States except so far as the cost of transportation and widely divergent conditions may require. He summons to his support and prints in full in his report a letter written by E. S. Clouston, Esq., the President of the Bankers' Association of Canada and Manager of the Bank of Montreal, in which these statements are found:

Referring to branch banks he says:

"They equalize the rate of interest, and the establishment of a branch bank in a country town means that the borrower obtains his loans at a rate not much above the city borrower. In outlying districts, owing to difficulties of transportation, increased cost of living, inferior security, there is sometimes a difference of one or two per centum. There can be no doubt also that to a depositor, a class that the Government aims to protect, the security of a bank with the large capitalization necessary to do the branch bank business is much greater than the local bank with a petty capital of $25,000 or $50,000."

* * * * * * * * * * *

"Mr. Walker's fear that the customers of a country bank will in times of stringency be sacrificed to the necessity of the parent institution is also a phantom of his imagination, for the loans of a branch being less liquid the knowledge of the difficulty of realizing them and the small proportion they bear to the whole amount leaves them practically undisturbed in the acutest panic, and their only knowledge of a stringency is imparted through the medium of newspaper articles."

* * * * * * * * * * *

"The entire Dominion is dotted with branches of what Mr. Walker terms city banks. These branches are established in agricultural, mining, ranching and fishing districts as well as the centers of trade and manufacturing industries, and they of necessity are accomplishing the purpose which Mr. Walker states local, independent banks are alone qualified to effect. In fact the branches of Canadian banks are doing the very work which he fears might be

Digitized by Google

prevented with the same system introduced into the United States. They are putting within reach of those with no capital but enterprise and energy, the capital of the wealthier classes."

* * * * * * * * * * *

"Equally fallacious is the statement that no independent local bank can exist in a town after the establishment in that town of a branch of a larger bank. Many Canadian instances could be cited to prove the contrary, and local banks exist and flourish in the Dominion as next-door neighbors of branches of the largest banks in Canada."

It is now five years this very month since THE BANKERS' MAGAZINE took up for discussion Mr. Fowler's first important banking bill which contained these propositions:

First. To establish the gold standard.

Second. To retire the demand obligations of the Government.

Third. To fund the National debt into two per cent. gold-coin bonds.

Fourth. To establish a system of credit currency.

Fifth. To establish a system of branch banks.

It must be most gratifying to him to-day to recall that some of the things he has so long advocated have been partially accomplished at least, and that now all of them are incorporated in a measure reported by the committee of which he is a most worthy and distinguished chairman.

What the MAGAZINE said in April, 1897, might be repeated now with added force: "It is a comprehensive plan for reforming the laws of the United States relative to the issue of currency of National banks." * * * "It is hardly possible that any commission that may be appointed can evolve any better plan than that which has been elaborated by Mr. Fowler. It will be profitable to the banks, the Government and the people of the country to have it put into operation."

It is a most encouraging and happy omen that practically all the leading papers of the country to-day, Democratic as well as Republican, are united in saying, "this is the time, and this the measure; let it become a law."

THE PROPOSED EXTENSION of the public debt maturing in 1904 and 1907 into thirty-year two per cent. gold bonds, authorized by the act of March 14, 1900, seems to be ill-advised. On February 1 last the amount of the four per cents. due in 1907 still outstanding was $237,971,600, and of the fives due in 1904, $19,726,350, or a total of $257,697,950 for the two classes of bonds. The purchase of these securities to the amount of $50,000,000 annually for the period to intervene from now to their maturity would practically extinguish the debt. With the large net balance in the Treasury and the prospect of a surplus of nearly $100,000,000 for the present fiscal year, it seems probable that it will be possible to cancel the entire amount of these bonds at maturity. At all events there is no apparent necessity for postponing the payment of these obligations for thirty years. If the bonds bearing four and five per cent. had a long time to run to maturity, the argument in favor of refunding them into long-time low-rate obligations would have some force; but as they will all mature within two to five years, the wisdom of conversion is very doubtful. It should be the policy of the Government to pay off the debt as rapidly as circumstances will permit, not to perpetuate it.

THE REDEMPTION OF BANK NOTES.

L. Carroll Root's article pulished in the March number of the MAGAZINE, showing how successfully an asset currency was maintained for twenty years in New England, seems to prove that a rigid system of redemption of notes is the main factor in rendering such a currency safe. Where note issues depend upon the discretion of the separate banks, the greatest danger arises from over issues, not perhaps in violation of the law, but in excess of the real demands of business. The bias of the bank is to get as much profit as possible from circulation, and to extend loans beyond the legitimate market demands.

The Suffolk Bank forced redemptions by taking advantage of the accumulation of New England bank notes in Boston, gathering them up and sending them to the issuing banks for redemption in specie. This process entailed expense. The Suffolk Bank, however, contrived to make the banks whom it subjected to its system pay these charges. They submitted to this at first because they could not very well help themselves, and after the system was inaugurated they considered the protection they received from it as a sufficient compensation. They got their money's worth.

If the Government had inaugurated a similar system at that early period, it would have been regarded as a tyrannical exercise of power, and have been defeated by political combinations. The Suffolk Bank was at times roundly abused for making itself the disciplinarian of the country banks. The system was started because the Boston banks found they could not keep their own notes in circulation, in the face of the superabundance of country bank notes pouring into Boston. In fact, as Mr. Root said, the prime motive that insured the success of the redemption, when once the plan was inaugurated, was the desire of each issuing bank to keep its own notes in circulation and suppress those of its rivals. If there had been no possibility of issuing more notes than business required there would have been no forced redemption. The law imposed no limit on the aggregate volume of circulation, and the limits imposed on each individual bank were very liberal, allowing in the case of the majority of the banks issues in excess of capital stock. Each bank then was trying to get out as many of its own notes as the public would take and to repress the issues of its rivals by using the machinery furnished by the Suffolk Bank. This machinery, started in Boston to protect the notes of the Boston banks, was taken up by the country banks to protect their own notes in a similar manner. It was based on the principle of competition, and the banks therefore willingly paid the expense.

As was remarked last month, there is no similar redemption of National bank notes based on bonds nor has there ever been. National bank notes were not issued on the discretion of the banks. They were so secured that they were just as good or even better than the money in which ostensibly they were redeemable. Every one knows just how many dollars each National bank had issued or could issue. These notes could be held or hoarded like gold. There was no motive for their real redemption. There must appar-

Digitized by Google

ently be some feeling of uncertainty at the base of every true system of redemption, some doubt of the soundness of the judgment of the issuing banks. Therefore if an asset currency shall be adopted to succeed the present National bank note, and it is expected to make such a currency safe by insuring perfect redemption such as was carried on under the supervision of the Suffolk Bank, some latitude of discretion must be allowed to the banks of issue. If the law restricts them by the aggregate volume they may issue, or by a narrow percentage of capital in the case of each bank, the motive for redemption is thereby weakened and the principle of elasticity is impaired. The banks composing the system issuing a credit currency know generally that the business of the country requires a volume of notes varying from time to time. Each of them, according to its ability as judged by its managers, desires to issue as much of this volume as it can. It therefore pushes into the redemption mill as many of the notes of its rivals as it can. All being actuated by this motive, the total issues are kept down to the demands of legitimate business, but at the same time the eagerness of each bank to keep its own notes out prevents there being any deficiency. But if the discretion of the managers of the banks is interfered with by legal restrictions and the issue of notes confined to an arbitrary minimum, the whole principle is vitiated. The arbitrary minimums fixed by the laws of the New England States were so liberal, so much above the demands of business, that they cut no figure. In fact it was the same as if there had been no minimum restriction at all. If every New England bank had been permitted to issue notes *ad libitum* the result of the Suffolk system would probably have been the same.

As far as the results of the Suffolk Bank redemption operations afford a precedent for the present, they prove that if an effective redemption was provided for by the Government or otherwise, the tax on State bank circulation might be removed with safety. Of course there are other objections to the revival of the State bank notes. The diversity of the banking laws of the States, the imperfect supervision in many cases, and the consequent lack of uniformity in their note issues, would militate against any such revival. But with banks organized under a uniform National law, subject to rigid supervision as to the payment of capital and exercise of their other powers, the experience of the Suffolk system shows that their circulation, limited to an amount equal to paid-in capital, would be kept safe and elastic by a system of redemptions.

If, however, such a system be inaugurated by the Government, for the whole country, there are still many difficulties in the way. It must be remembered that the success of the Suffolk system was largely due to the fact that Boston was the natural center to which all the notes of the New England banks freely flowed. They went there before the system was started, and this was the cause of the inauguration of the operations of the Suffolk Bank. The question arises, Is there in the United States any center to which the notes of all the banks in the United States would flow in the same manner as the notes of the New England banks flowed to Boston. The great extent of the United States would seem to preclude the selection even of New York city as the only place of redemption. The single banks forming the system require the quick return of their redeemed notes, so that they may be prepared to meet local demands for them. The cost of transportation would be a very important item if the notes of the whole country had to be returned to each

Digitized by Google

bank from New York, and with a homogeneous note system, where the notes of any bank might find their way to any part of the country, would see mto preclude the establishment of redemption points equally convenient to all. Even if each bank had a convenient center for redemption some of its notes would be redeemed at other centers. The difficulty might be overcome by each bank keeping on hand a large supply of notes which would be ready for issue, when notifications were received of the redemption of outstanding notes at different redemption points. One great redemption center could in this way carry on the redemptions of the whole country. To increase the redemption points unduly would require the keeping of too many accounts, since each bank must be prepared to meet its notes at each point selected. But if such a system is to be adopted it will be for Congress to devise the details. It is sufficient to show that it will be difficult to devise a system of redemptions for all the banks of issue in the United States on lines analogous to the Suffolk banking system.

Another question is that of expense. This would have to be paid by the banks as it is now by the banks to the national redemption bureau at Washington. But perhaps a better way of meeting the expense might be devised that might prove less burdensome to the banks, and that might at the same time accomplish other useful results. In place of all other United States taxes on circulation, a tax of one-sixteenth of one per cent. might be imposed on the notes of all issuing banks paid out by any National, State or private bank. This tax would further stimulate sending in notes for redemption, but would not be sufficient to prevent their use if they were required for business. The proceeds of the tax would pay the expenses of redemptions and transportation and probably be sufficient to form a safety fund. The reports necessary for the collection of the tax would give an accurate showing of the movement of the currency throughout the country.

COST OF THE BOER WAR.—According to the London "Bankers' Magazine" the war in South Africa has cost Great Britain about $800,000,000 up to the close of March, 1902, and it is estimated that there will be a further expenditure of $200,000,000 for the year ending March 31, 1903, making the total $1,000,000,000.

The past expenditures have been met by adding $635,000,000 to the floating and permanent debt, by taking about $45,000,000 from the sinking fund, and $143,750,000 from revenues derived from increased taxation.

FREE REMITTANCE OF FUNDS.—In the March number of the London "Bankers' Magazine" appears a review of the Imperial Bank of Germany from 1876–1900. One of the interesting features of this bank is the method of remitting money from one place to another, which is thus referred to in the article mentioned:

> "The advantage resulting to business has been extraordinary from the convenience thus given in remitting money through book entry from one part of the Empire to another; for example, if A B in Leipsig wishes to make a payment to C D in Berlin, he can pay the amount into the office of the Reichsbank at Leipsig, and on the following day the amount is credited to C D on his current account in Berlin. The person making the payment need not have an account at the bank. The transfers are carried on without charge."

This branch of the bank's business increased tenfold between 1876 and 1900.

*THE PRACTICAL WORK OF A BANK.

BANKING RULES AND CUSTOMS.

VI.

Banking Law and the Card-Index.

Every bank should have some card-index system, and every progressive bank officer should know how to use this modern device for the economizing of space, time and money, and for the saving of mental and physical wear and tear. It is now possible to buy a card-index, in a paste-board box, for less than a dollar, and from this up to the costly cabinet of oak or mahogany, with its capacity of tens and hundreds of thousands of cards, there are degrees of elasticity which adapt the system to almost every need and requirement where it is essential that there should be both accuracy and facility. There are all kinds of cards and all manner of rulings. The guides are arranged alphabetically, numerically, chronologically and in blank. They will fit any work in which absolute completeness of systematic detail is important, and where is this more so than in the conduct of the banking business?

In one particular instance the card-index has been quite generally adopted by banks; that is, for their signature records. The success which has attended its introduction in this, one of the most important of the routine details of practical banking, makes it fairly safe to predict that its value would be quite as great in the other departments of banking, both special and general. Most banks have some kind of a library, and how much more helpful and accessible it would be if there was a card-catalogue by means of which any book could be found in a few seconds. Government reports, pamphlets and public documents, which drift into the banks in considerable numbers, could be used when wanted, and found almost in the twinkling of an eye, were they filed and catalogued by the card-index. The bank's own books, papers, documents, letters, etc., could be produced in the shortest possible time, when wanted, if they were card-indexed when they ceased to be of use on the counters and in the active files of the bank. Every banker, especially every country banker, knows of the great amount of time wasted in hunting for old books and papers which have been filed away with little or no regard to system. A few minutes' time spent on a card-index would make those old books, etc., almost as accessible as are those used in the daily business of the bank.

These general observations on the value, use and adaptability of the card-index in a bank bring me to the special use where I find that such a system is of incalculable benefit, and that is in following the points of banking law, in keeping track of the cases and decisions as they are decided by the courts, in

* A series of articles to be published in competition for prizes aggregating $1,050, offered by The Bankers' Magazine. Publication of these articles was begun in the July, 1901, number, page 18.

Digitized by Google

following the acts of the Legislature and of Congress relating to banking, and in utilizing the questions of law and practice which are raised in the banking publications, not to mention the questions raised by one's own customers, and other miscellaneous related questions, all of which are right at one's finger-tips if they are properly and thoroughly card-indexed. I am writing from the standpoint and from the experience of a country banker, but judging from my own experience I am confident that, just as the card-signature file is adapted to both large banks and small, and to the country banks as well as to the city banks, so I feel that my ideas on the use of the card-index as the simplest, surest, and handiest method of acquiring and using a knowledge of banking law are adaptable both to the country banker and to the heads of departments in the large city institutions.

A Card-Index of the Negotiable Instruments Act.

In all States where the Negotiable Instruments Act has been adopted, obviously the most natural thing to do is to begin by indexing that act. The act as it is passed by the State Legislatures is not indexed, although the marginal notes in editions issued by some of the clearing-houses are helpful. Still, unless one is prepared to devote a great deal of study to this law, the plan of indexing it by means of the card-system will commend itself, for it immediately places all its salient provisions right at the tip of one's fingers. One or two illustrations are given here, selected almost at random:

CHECK, POST-DATED.

Valid if not for illegal or fraudulent purpose (Sec. 12, N. I. A.).

Title acquired on date of delivery.

By means of the cross-reference plan precisely the same entry is made under "P," the head-line being "Post-dated Check." By having the same reference in more than one place one is more apt to find it readily. Supposing this question comes up at the bank window. The card-index is at the teller's right hand. It is the work of but a few seconds to run the fingers over the cards, either under "C" or under "P," and there is the law, read with a swift glance and in infinitely less time than it would take to look it up in the act itself. One other simple case is as follows:

PROTEST.

Failure to Pro. foreign bill discharges drawer and indorsers.

Pro. unnecessary for domestic bills (Sec. 152, N. I. A.).

May be made by notary or any respectable citizen with two witnesses (Sec. 154, N. I. A.).

This still leaves several blank lines on the regular card for the addition of new points as they are made by the decisions of the courts or by amendments to the act by the Legislatures. The same entries, by the way, should be made under "Foreign bills" and "Domestic bills."

The Negotiable Instruments Act embodies the latest and most comprehensive law on the subject, but, of course, it is not effective except in those States where it is in force. For those States where it has not yet been adopted a good plan would be to take a copy of the act as a pattern and then to bring all the provisions of the laws of the State on this subject under the same general headings and into the same general form. Having done this it will then be easier to index the law on negotiable instruments by the card-system. Another advantage will be the comparison of the provisions of the

Digitized by Google

laws relating to negotiable instruments in one's own State with those in the States where the act is in vogue. In fact, those whose duties required some knowledge of the laws of other States, such as the collection clerks of banks with large connections, will do well to make a card-index of the laws of the States where their correspondents are, arranging them both by States and by subjects.

After the card-index has been made, either from the Negotiable Instuments Act or in some such method as that suggested for those States where it has not been adopted, one has the nucleus for a quick, accurate and handy reference upon banking law; but this is only the beginning of the uses and advantages of the system. It is a good plan to read the Negotiable Instruments Act, periodically, not with the intention of memorizing it, but with each reading some new point will fix itself in one's mind, which had escaped it in previous readings. In this way, and by the act of writing the brief outlines of the law on the cards, the points of the act become more a part of one's self, like the alphabet, for instance, than if it were memorized, section by section.

We have reached that point, however, where we have the Negotiable Instruments Act, or the law corresponding to it in States where it is not in force, indexed on cards, with cross-references, in a metal or wooden case or drawer on the desk at the teller's window. Suppose the cards used were white. Now, it is perfectly feasible to use the same receptacle and the same guides for other and related things. For instance, suppose blue is the color chosen for the cards upon which memoranda for "stop-payments" are made. One card under "S" should be headed "Stop-Payments" and upon this should be noted the description of checks upon which payment had been stopped. As in course of time more than one card would be filled up, there could be several cards under the same heading numbered consecutively. In addition to this list the stop-payments should also be in the index on a blue card under the name of the drawer. If for any obvious reason the card became "dead" in the index it easily could be taken out, and filed away for precaution in the event of lawsuits in another place. This also applies to the card-index in general. It contains only that matter which is alive, usable, and required at the present time. There is no waste space and no dead matter or pages as there are in any ordinary indexed memorandum book.

Index of General Banking and Financial Subjects.

Another and more general use to which this same card-index may be put includes the recording, where they may be consulted on the instant, of those questions relating to the general subject of finance, banking and taxation which are continually asked at the bank window. For instance, the date of the Attorney-General's recent decision to the effect that the internal revenue tax on the transfer of stock applied to collateral, together with a few words of statement of the case, jotted down on, say, a red card, is placed within reach of the finger-tips along with the other matters which have been outlined. Every banker knows what it is to read something like this in the newspaper and then have a question relating to it come up at the bank counter two weeks afterward, but with the paper mislaid and with memory only to rely upon for the date of it, the point either remains unsettled or is settled after a trip to the newspaper office or some library where a file is searched until the decision is found and the question cleared up.

Digitized by Google

This, in turn, leads to another and related suggestion of having a scrap-book or envelope-file for clippings like that of the Attorney-General's dealing upon the tax on the transfer of collateral. A minute or two with the scissors in that fugitive but accurate transcript of the world's daily record—the newspaper—will also be found to be a great convenience and a great time-saver in the end. This decision, for instance, should be either pasted in the scrap-book or filed in a labelled envelope and in addition to the reference which I have already indicated for this red card there should be another reference to the page in the scrap-book or to the number or letter of the envelope where the decision might be found in full. I have a collection of sixteen large scrap-books filled with clippings upon financial, banking and related topics and any one of those thousands of clippings is before my eye in a few seconds by means of the card-index system.

One further use of the card-index, in this general connection, suggests itself, and that is in following bills relating to finance and banking introduced in either Congress or the State Legislatures. Take Congressman Hill's bill permitting National banks to establish and maintain branches. Most bank men have read of it in the newspapers. There have, in fact been several references to it since it was introduced, but how many bank men, after the matter has got by a few weeks or so, can tell exactly its status? This, to be sure, is not nearly as essential to the practice of banking as the other illustrations which have been given, but it is one of the theoretic points which a banker intent upon acquiring a broad and general knowledge of his profession will strive to inform himself about. Congressman McCleary's bill looking toward an amendment to the National Bank Act providing that banks may lend money upon real estate. Congressman Hill's act providing for the interchangeability of the silver dollar with gold, and Congressman Lovering's bill for a limited trial of asset currency, are instances which may be easily and accurately followed in their course through Congress by means of the card-index.

Other uses of this same card index will suggest themselves to all those who have had any practical experience at the bank counter. Just as it is convenient and adaptable to the recording of these matters which have been outlined, so it may be for the making of memoranda about new and dangerous counterfeits, lost or stolen bonds, bank notes, and so on. The main thing is to get a system started and it will grow to new uses and to meet new needs as one becomes adept in developing it. In addition to the advantages which have already been suggested and enumerated there is the broad and lasting benefit which will come to the person who arranges and uses the index, in that it will tend to make him think methodically and act systematically, both of which conduce to a calmer mental state and to less physical and nervous waste.

One who is not naturally methodical and systematic will have to acquire the taste and the habit of using the card-index, but once the thing is learned it will prove its value in many respects—almost too many to mention.

I have already stated that while this is written by a country banker, primarily for those who like myself are called upon to perform nearly all of the duties of a bank, from Cashier down to messenger, the idea nevertheless easily lends itself to adoption and enlargement by the city banks with their large and varied departments. The President would have his own card-

Digitized by Google

index, kept, say, by his private secretary or some junior clerk, containing only those matters in which he was personally and especially interested. The Cashier would have his special card-index, and the discount clerk, the tellers, the bookkeepers and the collection clerks, not to mention the rest, each having a system especially adapted to the needs of the department. It would not be wise to have all the systems of the different departments wholly unlike, although from the very nature of the case they would have to be somewhat so. For instance, the "stop-payments" cards should be made in triplicate, one each for the paying teller, the receiving teller and the bookkeeper. The note teller's department would have a much more complete index of the law upon notes than it would on checks. In the tellers' department it would be just the opposite. Each department would complete, amplify and develop its card-index along the lines of its own special work and activities.

Whatever else I may say would be largely of a cumulative nature. I have written enough, I assume, to show the advantages of the idea, and to prove that the card-index system is admirably adapted for the multitudinous details of practical banking; that it is fitted for banks, large and small; that it will bring an incalculable return upon the investment of time, money and labor in perfecting and developing it; and that a card-index simplifies and systematizes all the work and effort to which it is practically applied.

RETLAW.

BANKING RULES AND CUSTOMS.

VII.

In these days of keen competition that bank succeeds best which serves its customers with liberality and at the same time conservatively. No class is more useful than bankers and none more dependent. Confidence is the basis upon which all business is transacted and nothing should be done to lessen it.

QUALIFICATIONS OF EMPLOYEES.

In the selection of clerks, the best is none too good. High moral character, strict honesty and conscientiousness are essential above everything else.

Many men enter upon banking as a profession, who in reality have no taste for the business and can never hope to make a success in it.

Not long ago it became necessary to employ a clerk, temporarily, to fill the position of assistant bookkeeper, in an emergency, when one of the regular clerks was suddenly taken ill. This man had been a clerk for about twenty years in a city bank, evidently doing his work in a machine-like way. His utter lack of interest in the work and usefulness was deplorable. His answer was when asked to do anything except the most simple work "Oh, that was n't in my department; some one else always attended to that."

In a small as well as a large institution every one is dependent upon every one else, so far as their entries in the different books are concerned, hence how necessary for each man to be careful, accurate and methodical.

THE MESSENGER.

Strange as it may sound, it is an extremely hard thing to find a really satisfactory messenger—one who is painstaking and reliable. Generally they are just from school, with no business experience, amid entirely new surroundings.

Digitized by Google

Addition should be practiced at every leisure moment by a young man at the start; and though it looks simple, it takes months, and sometimes years, before one is absolutely sure of himself and rapid at the same time. Most schools spend far too little time on such work.

A messenger should be told explicitly what to do and to do it as he is instructed and not as his own ideas might suggest.

What confusion could be made by a messenger leaving a bill of lading and being told, "We will pay it to-morrow." Such a case could easily happen and might turn out all right and again might involve the bank in no end of trouble and litigation.

A young man shows before he has been in the bank long whether there is any materal in him to be developed. He should study whenever he has an opportunity, learn everything he can regarding notes, drafts, checks, etc., why it is necessary to protest notes and checks. When drafts are accompanied by bills of lading he must see that the papers are correctly made out and that the documents are to be kept by the bank until payment of the draft. If such papers are due Saturday or Sunday or on a holiday it is well to state the fact, and that they may be paid the next business day. If such work is done and he keeps constantly alert, advancement is certain.

The Bookkeeper.

The next step a messenger takes is usually as an assistant on the books, either with the individual bookkeeper or collection clerk. With the individual bookkeeper his first work would probably be to sort checks and familiarize himself with the depositors' names and signatures, after that to extend the balances and later to post checks and deposits. Time and the experience of each day's work increase his value greatly. Here his care and painstaking as early messenger begins to show itself, as an error in crediting a deposit may cause serious trouble to both the depositor and the bookkeeper.

Much has been said and written about the drudgery of bookkeeping and how many fall into the ruts and stay there. One can get into a rut in any position if he does not look beyond at all. Work can be done thoughtfully, guarding against forgeries, raised amounts, overdrafts, etc., or it may be done in a thoughtless, machine-like way simply to get it done.

The bookkeeper is the one to see and report "kiting" or swapping checks.

In a large bank it is somewhat of a safeguard to change the books about at unexpected times, simply to prove each other's work and prevent collusion between tellers and bookkeepers.

The Discount Clerk.

As the name signifies the discount clerk has charge of the loans, and it is from his figures that the earnings and profit and loss are obtained. The position is one requiring long experience and skill and accuracy and rapidity in figuring interest.

The principal source of income is interest, either on notes discounted or from bonds and securities owned. To be able to figure interest quickly is an accomplishment that every one in the bank should acquire, as it is brought into requisition in every department.

There are a great many fixed rules, but a busy man soon finds he is beyond rules and has a system of his own, by which he can arrive at results which oftentimes startle one not accustomed to such work.

Digitized by Google

A few short methods given below may be found valuable in saving a little time. The great secret is familiarity with the different combinations.

For every-day business 360 days to the year is in almost universal use:

Rate per cent.	*360 days.*					
4	90	9000	900	90	9	1
4½	80	8000	800	80	8	1
5	72	7200	720	72	8	1
6	60	6000	600	60	6	1
7½	48	4800	480	48	8	1
8	45	4500	450	45	5	1
9	40	4000	400	40	4	1
10	36	3600	360	36	6	1
12	30	3000	300	30	3	1

At six per cent., as everyone knows, the interest is obtained by simply sliding the point two or three places to the left for sixty or six days. Precisely the same thing is done at 4½ per cent., only instead of sixty days take eighty as a basis. 8000, 800, 80, 8 days. Very often the work can be simplified by reversing the time and the amount; thus $600 for five months and fourteen days, or 164 days, is the same as $164 for 600 days, or $16.40.

Banking Safeguards.

Many methods are pursued by different banks regarding examinations, and one that seems to find favor with many is to have an examination by a public expert accountant at least once a year. The regular bank examiner appointed by the Government is necessary to see that the banking laws are lived up to satisfactorily, and the directors' semi-annual examinations are too hurried and seldom go into details, as they frequently are not sufficiently acquainted with the methods of bookkeeping to be competent examiners. An expert going slowly step by step will show any irregularity should any such state of affairs exist. Beyond these examinations the question boils itself down to honesty among all of the employees. Among the thousands of officers and clerks in the country, the proportion who do wrong is infinitely small, but if the habits are watched by the directors wrong-doing could be stopped before a loss was sustained.

Profits Increased by Advertising.

Judicious advertising now-a-days is demanded in up-to-date institutions. There was a time when banks could wait for their business to come to them, but as in everything else the profits have been reduced and competition extended on all sides, and it has become necessary to hold out inducements to the public and to keep the name of the bank prominent. Some banks have been established so many years, and have such enviable reputations, that they look at the first cost as considerable compared with what the returns are thought to be.

There is no denying the fact that trust companies, although doing a similar and yet a different work than National banks, take a very large sum in deposits and it is certainly an important duty to hold our old business as well as to attract new accounts.

Digitized by Google

A booklet in as condensed a form as possible, gotten up on good paper and with good printing, covering the scope of the business, with a description of the different features, safe-deposit boxes, if any, storage for silver and valuables, if the vault is of sufficient size, should be mailed to a carefully selected list of individuals and should bring in satisfactory results.

The board of directors and officers of a bank, if they are well and favorably known, usually gives prominence to an advertisement, a large surplus and deposit adding greatly to the favor in the public eye, especially where it is known that the bank is progressively conservative.

The financial journals and magazines offer a good medium, for frequently they are referred to in sending collections to a new town or city.

A card in the local paper, well worded and displayed, will serve to remind many of our existence, and if we have anything to offer better than our competitors may bring in a few good accounts.

Programmes and such things do not as a rule amount to anything more than downright charity.

NEW ACCOUNTS.

It is probably unnecessary to say that new depositors should always be introduced either personally or by letter, that confidence may be established without question.

It is well for some officer to come in personal contact with as many customers as possible and find out how their business is being conducted, both by observation and by inquiry from other dealers, and at the same time let them realize that an interest is taken in their welfare. Satisfied customers are the best advertisement any business can have, and as the merchant and farmer and corporation prosper the bank is benefited in the same proportion.

SEVEN-THIRTY-ONE.

NATIONAL BANK STATEMENTS.—The Comptroller of the Currency, Wm. B. Ridgely, has mailed to all the National banks a duplicate set of blanks for report of condition, with a circular letter requesting them to preserve the blanks for use in forwarding their reports immediately upon notice through the press that a call for a report has been made by the Comptroller, without awaiting the receipt of the usual notice and blanks by mail.

Heretofore it has taken the Comptroller's office about five weeks from the date the call was issued to get out a summary of the reports of the banks, and complaint has been made that this delay destroys in a measure the usefulness of the figures for statistical purposes. The fault, however, the Comptroller says, has not been with the office, but has been due to the failure of a few banks to forward their reports promptly, thereby preventing the completion of the abstract until the delinquent reports were received.

The usual notice and blanks will be sent by mail to all the banks and by the prompt use of the extra blanks on hand when a press notice of a call is given, several days' time will be saved in the forwarding of reports, especially of those banks farthest distant from Washington.

The principal sources of delay in forwarding reports of which the Comptroller complains, in his circular letter to the banks, are the withholding of reports for publication in a local newspaper, and the securing of the signatures of the attesting directors.

To obviate this delay, the Comptroller requests the banks to send in their reports without awaiting publication, and to forward proof of publication as soon thereafter as possible, and where to secure the signatures of the requisite three directors would materially delay the forwarding of the report, to forward it with such signatures as can be obtained, and this informality can be corrected later.

The Comptroller expresses the hope that this arrangement will expedite the work of summarizing these reports, and enable the office to get out the total sheet earlier than heretofore.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Court of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

NATIONAL BANK—ACTION BY RECEIVER AGAINST STOCKHOLDER—STATUTE OF LIMITATIONS.

Supreme Court of the United States, February 3, 1902.

JOHN W. McDONALD RECEIVER, ETC. vs. DAVID E. THOMPSON.

The liability of a shareholder of a National bank under Rev. Stat. U. S. 5234, is not based upon "a contract or promise in writing," but upon an "implied contract," or is a "liability created by statute," and hence in the State of Nebraska a suit to enforce such liability cannot be brought after four years from the time the cause of action accrued.

In the case of a suit brought by a Receiver to enforce an assessment made by the Comptroller of the Currency the statute of limitations commences to run from the time the assessment is made.

This was a bill in equity originally filed May 20, 1898, in the circuit court for the district of Nebraska, by Kent K. Hayden, Receiver of the Capital National Bank of Lincoln, Nebraska (of whom the present appellant is the successor in office), against David E. Thompson, to recover defendant's proportion of an assessment upon the stockholders of the bank to the amount of the par value of their shares. The bank failed on January 23, 1893, and a Receiver was shortly thereafter appointed. On June 10, 1893, the Comptroller of the Currency ordered the assessment, which was made payable July 10, 1893.

The bill alleged Thompson to have been the owner of 210 shares of the capital stock, which he had acquired upon subscription to such stock and as a part of the original issue; that he, knowing the bank to be in a failing condition and practically insolvent, and in anticipation of its approaching failure, had sold and caused such stock to be transferred to certain irresponsible parties, and that such transfer was made with intent to defraud the bank, its depositors and creditors.

Defendent demurred upon the ground that it appeared by the bill that the cause of action was barred by the statute of limitations. The demurrer was sustained, the bill amended, another demurrer interposed and sustained, and the bill dismissed. An appeal was taken to the circuit court of appeals, which affirmed the judgment of the circuit court.

Mr. Justice Brown delivered the opinion of the court:

This bill is founded upon Rev. Stat. Sec. 5151, which declares that "the shareholders of every National banking association shall be held individually responsible, equally and ratably, and not one for another, for all contracts,

Digitized by Google

debts, and engagements of such association, to the extent of the amount of their stock therein at the par value thereof, in addition to the amount invested in such shares," etc. By Sec. 5234 the Comptroller of the Currency is authorized to appointed a Receiver of insolvent banks, who "may, if necessary to pay the debts of such association, enforce the individual liability of the stockholders."

The case turns upon the applicability of the State statute of limitations, which, so far as it is material, reads as follows:

"Sec. 5. Civil action can only be commenced within the time prescribed in this title after the cause of action shall have accrued.

Sec. 10. Within five years, an action upon a specialty, or any agreement, contract, or promise in writing, or foreign judgment.

Sec. 11. Within four years, an action upon a contract not in writing, express or implied; an action upon a liability created by statute other than a forfeiture or penalty."

As the cause of action in this case accrued on July 10, 1893, when the assessment was made payable (Hawkins vs. Glenn, 131 U. S. 319; Glenn vs. Marbury, 145 U. S. 499; Thompson vs. German Ins. Co. 76 Fed. 892; Van Pelt vs. Gardner, 54 Neb. 701), and the action was begun on May 20, 1898, more than four but less than five years thereafter, the case really turns upon the question whether the action is upon a "contract or promise in writing," or "upon a contract not in writing, express or implied," or "upon a liability created by statute." If the cause of action be upon a written contract, the action was brought in time. If upon a contract not in writing, or a statutory liability, the statute of limitations is a complete bar.

Used in this connection and as distinguished from a contract not in writing, express or implied, we think it entirely clear that Sec. 10 contemplates an action between the immediate parties or their privies to a written contract, and that the only contract covered by that definition in this case is the one arising from the allegation of the bill that Thompson was the owner of 210 shares of the original capital stock, and "that he acquired the same upon subscription to such capital stock," and by a receipt of certificates for such shares. The only contract to be gathered from this allegation is one between the bank on the one hand and the defendant on the other, by which the latter agreed to take and pay for a certain number of shares, and the former agreed to issue certificates to him for the same. Had the action been brought upon this contract—as, for instance, by the bank to recover an unpaid assessment upon the original shares—the case would have fallen within Sec. 10, and the suit might have been brought within five years.

But there was no contract in writing with the creditors or depositors of the bank, and none with the bank itself, to which the Receiver could be said to be a privy, except to pay for the stock as originally issued. Granting there was a contract with the creditors to pay a sum equal to the value of the stock taken, in addition to the sum invested in the shares, this was a contract created by the statute, and obligatory upon the stockholders by reason of the statute existing at the time of their subscription; but it was not a contract in writing within the meaning of the Nebraska act, since the writing—that is, the subscription—contained no reference whatever to the statutory obligation and no promise to respond beyond the amount of the subscription. In none of the numerous cases upon the subject in this court is this obligation treated

Digitized by Google

as an express contract, but as one created by the statute and implied from the express contract of the stockholders to take and pay for shares in the association. (Carrol vs. Green, 92 U. S. 509, 512; Terry vs. Little, 101 U. S. 216; First Nat. Bank vs. Hawkins, 174 U. S. 364; Matteson vs. Dent, 176 U. S. 421; Whitman vs. National Bank, 176 U. S. 559.)

While Sec. 10 does not use the words "express contract," but the words "contract or promise in writing," we think that, taken in connection with Sec. 11, which is confined to contracts not in writing, express or implied, express contracts are primarily and principally intended by the earlier section. These are defined to be those contracts in which the terms of the agreement are fully and openly incorporated at the time the contract is entered into, while implied contracts are such as arise by legal inference and upon principles of reason and justice from certain facts, or where there is circumstantial evidence showing that the parties intended to make a contract. (2 Bl. Com. 443.) As contracts for subscription to stock contain no stipulation with reference to the rights of creditors and depositors, it is clear that such rights can only be asserted upon the theory that the subscriber impliedly bound himself to respond to any liability arising indirectly from his contract of subscription.

Whether the promise raised by the statute was an implied contract not in writing or a liability created by statute, it is immaterial to inquire. For the purposes of this case it may have been both. The statute was the origin both of the right and the remedy, but the contract was the origin of the personal responsibility of the defendant. Did the statute make a distinction between them with reference to the time within which an action must be brought, it might be necessary to make a more exact definition; but as the action must be brought in any case within four years, it is unnecessary to go farther than to declare what seems entirely clear to us, that it is not a contract in writing within the meaning of Sec. 10 of the Nebraska act. (Hawkins vs. Iron Valley Furnace Co. 40 Ohio St. 507.)

Plaintiff, however, insists that defendant's contract here sought to be enforced was not entered into between him and the bank, but between him and the creditors of the bank; that the order of the Comptroller of the Currency for the assessment of the shareholders did not create a cause of action or set the statute of limitations running, nor in any way affect the validity or duration of the right which belongs to the creditors to have this liability enforced; and that the action not being upon the contract of subscription, but upon the contract of the shareholder with the creditors of the bank, entered into by himself with the creditors through the agency of the officers of the bank, different considerations apply, and the statute of limitations does not operate as a bar so long as there are any outstanding claims against the bank.

In support of this proposition we are referred to Sec. 2 of the act of June 30, 1876 (19 Stat. at L. 63 chap. 156), which declares "that when any National banking association shall have gone into liquidation under the provisions of Sec. 5220 of said [Revised] Statutes, the individual liability of the shareholders provided for by Sec. 5151 of said statutes may be enforced by any creditor of such association, by bill in equity in the nature of a creditor's bill brought by such creditor on behalf of himself and of all other creditors of the association against the shareholders thereof," etc.; and we are cited to several cases holding that claims against shareholders under similar statutes do not become

Digitized by Google

barred until the expiration of the time at which the claims against the corporation also became barred.

There are several answers to this position. Section 5220, to which the second section of the act of June 30, 1876, is supplementary, contemplates only a voluntary liquidation, providing, as it does, that "any association may go into liquidation and be closed by the vote of its shareholders owning two-thirds of its stock" (Richmond vs. Irons, 121 U. S. 27, 47.)

Now, the Capital National Bank did not go into voluntary liquidation, but, as averred in the bill, "the Comptroller of the Currency of the United States became and was satisfied of the insolvency of the said Capital National Banking Association," and thereupon appointed a Receiver. In other words, the proceedings were taken under Section 5234 as supplemented by Section 1 of the act of June 30, 1876, authorizing the Comptroller of the Currency to appoint a Receiver when the association had refused to pay its circulating notes and is in default, or he is otherwise satisfied of its insolvency.

But it is also sufficient to say of this that the action is not brought by the creditors under the second section of the act of June 30, 1876, but by the Receiver under Rev. Stat. Section 5234. In such cases no debt becomes due to the Receiver as such until a deficiency has been ascertained and an assessment made, when the statute begins to run. (Scovill vs. Thayer, 105 U. S. 145; Hawkins vs. Glenn, 131 U. S. 319.)

Upon the theory of the plaintiff, if the statute of limitations were pleaded, it would become necessary for the Receiver to show that there were outstanding claims against the bank which were not barred by the statute, and therefore that the bill might be maintained. This would involve a departure from the whole theory of the bill in this case, which is based upon the allegation that the Comptroller of the Currency made an assessment upon the stockholders June 10, 1893, payable July 10, from which latter date plaintiff claimed interest. Defendant demurred to this upon the ground that the bill set forth a cause of action barred by the statute, and plaintiff went to a hearing upon this demurrer and was defeated. Obviously he can not now set up a right to recover, if the creditors had brought a bill under another statute, to which no allusion is made in the bill in this case, and which provides for a wholly separate and independent remedy.

Plaintiff's final contention, that no cause of action arises until a demand has been made, is also fully met by the allegation of the bill that on June 10, 1893, the Comptroller of the Currency made an order in which he declared that he had made an assessment and requisition upon the shareholders, "and that he did thereby make demand upon each and every share of the capital stock of the said association," and directed the Receiver to take proceedings by suit to enforce the individual liability of the shareholders. Having made this allegation himself, we do not understand upon what theory the plaintiff now assumes that no demand was made.

In the view we take of the statute of limitations, we have not thought it worth while to consider the points made by the defendant, that the action should have been at law, and that the bill is defective for the want of proper parties.

There was no error in the decree of the court below, and it is therefore affirmed.

POWER OF NATIONAL BANK TO TAKE LEASE OF REAL ESTATE.

Circuit Court of the United States, District of Colorado, December 30, 1901.

BROWN *vs.* SCHLEIER.

A National bank may purchase and hold such real estate as may be necessary for its immediate accommodation in the transaction of its business, and this power includes the right to take a lease for a term of years.

Even if the taking of a lease for a term extending beyond the period of its corporate existence, as for example, a lease for ninety-nine years, is beyond the power of a National bank, such lease is not absolutely void, but only voidable at the suit of the Government.

This was a bill in equity brought by the Receiver of the People's National Bank of Denver against George C. Schleier and the bank for the purpose of following certain moneys expended by the bank in the construction of a building. The bank has entered into a lease with the defendant Schleier for certain lots in Denver for the period of ninety-nine years from November 1, 1890, with an option to extend the lease for a further period of fifty years, at an annual rental of $13,975, to be paid in twelve equal monthly installments. In addition to the payment of rentals, the bank agreed to remove at its own cost and expense the store rooms and building located on the ground, and within eighteen months from February 1, 1890, at its own cost and expense, to erect thereon a good, substantial building, not less than four stories in height, and to cost not less than $100,000. The bank further agreed to keep the building and improvements erected on the land leased in good order and repair, at its own cost and expense. The bank entered into possession of the premises under the lease, and thereafter removed the buildings then upon the ground, and proceeded with the construction of the new building, at a cost of $305,725.39. The building contained not only necessary offices for the use of the bank in conducting its banking business, but also six store rooms and a number of office rooms, which the bank rented to parties not connected with it either as stockholders or otherwise.

RINER, *District Judge* (omitting part of the opinion): The general rule undoubtedly is that the powers of a corporation are such, and such only, as are conferred by the law under which it is incorporated. The charter is the measure of the powers of every corporation, and this rule applies to National banks as well as to other corporations, and is the test by which every corporate act is to be tried. It must be understood, however, that this rule necessarily concedes the usual proposition applicable to every legislative act; that is to say, that what is fairly implied is as much granted as if expressly enumerated. The National Banking Act expressly empowers a National banking association to purchase and hold real estate for certain specified purposes. Thus it may purchase and hold such real estate as may be necessary for its immediate accommodation in the transaction of its business, and this power unquestionably includes the right to take a lease for a term of years. It cannot be said therefore, that there was an absolute want of power in the bank to take a lease for the purpose of securing to itself a banking house wherein to transact its business. The most that can be said is that in taking a lease for a term extending beyond its corporate franchise it acted in excess of its powers. But this question cannot be litigated in this suit. The bank is expressly authorized to acquire and hold title to real estate for certain purposes and to a certain amount, and the question whether or not the particular

Digitized by Google

real estate in controversy here was acquired for the purposes authorized, or in excess of the bank's powers, can only be raised by the United States.

In Bank vs. Matthews (98 U. S. 628), it was held that, even where a corporation is incompetent by its charter to take title to real estate, a conveyance to it was not void, but only voidable, and that the sovereign alone could object. "It is valid," said the court, "until assailed in a direct proceeding instituted for that purpose." And in Silver Lake Bank vs. North (4 Johns. Ch. 370) the bank was a Pennsylvania corporation, and had taken a mortgage upon real estate in New York; and the defense to a bill to foreclose was that, by the act of incorporation, plaintiffs were not authorized to take a mortgage, except to secure a debt previously contracted in the course of its dealings, and the money in that case was lent after the bond and mortgage were executed. In disposing of the case, Chancellor Kent said:

"Perhaps it would be sufficient for this case that the plaintiffs are a duly-incorporated body, with authority to contract and take mortgages and judgments; and, if they should pass the exact line of their power, it would rather belong to the government of Pennsylvania to exact a forfeiture of their charter, than for this court, in this collateral way, to decide a question of misuser by setting aside a just and *bona fide* contract."

The fact that the bank could not personally enjoy the interest granted by this lease, after the expiration of its franchise, would not have the effect to cut down the estate granted. The bank had the power of alienation, and there is no reason why this lease could not be disposed of the same as real estate held in fee, or as any other asset of the bank. Express power is conferred upon the bank by the terms of the lease to assign and transfer its interest in the leasehold estate. A lease is property, and not a mere evidence of liability, and I can see no valid objection to a corporation making a lease which runs beyond the term of its corporate existence. Even if it be admitted that the lease between the bank and the defendant Schleier created an indebtedness in excess of its powers as prescribed in the National Banking Act, yet I am inclined to the view that the lease must be held valid. The statute does not in terms declare void the debt or liability so incurred. "The remedy," said the court in the case of Sioux City Terminal Railroad & Warehouse Co. vs. Trust Co. of North America (27 C. C. A. 73, 82 Fed. 124), "for the violation of this statute, is not the destruction of the contracts which evidence it, but the ouster and dissolution of the corporation at the suit of the State. The State alone can complain of it, and the debtor cannot usurp its functions."

SET-OFF—RIGHT OF BANK TO APPLY BALANCE OF INDIVIDUAL PARTNER TO FIRM'S OVERDRAFT.

Court of Appeals of Kentucky, January 14, 1902.

OWSLEY vs. BANK OF CUMBERLAND.

Where a bank has an account with a firm, and also with an individual member of the firm, it may apply a balance standing to the credit of the latter to the payment of an overdraft by the firm.

BURNHAM, *J.:* This suit was instituted by appellant, W. F. Owsley, against the appellee, the Bank of Cumberland, to recover a balance of $3,975.09, a deposit alleged to be due him from appellee. He says that he had on deposit with appellee to his individual credit on May 3, 1899, $10,254.97; that

Digitized by Google

on that day appellee paid to him $6,279.88, leaving due to him a balance of $3,975.09, which it failed and refused to pay to him. The bank answered the plaintiff's petition in three separate paragraphs. In the first it admits that plaintiff had on deposit with it to his individual credit the amount claimed; but it alleges that on May 3, 1899, it paid to him on demand $6,279.88, and on the same day it paid to him $3,975.09, being the full amount of his deposit—and that he accepted the payments in satisfaction and settlement of the amount due him. In the second paragraph it alleges that appellant and his son, W. F. Owsley, Jr., were running a large stock farm as partners under the firm name of W. F. Owsley & Son, and that the firm kept an account as depositors with the bank; and that on May 3, 1899, the account of the firm with appellee was overdrawn to the amount of $3,975.09; and that on that day it transferred that amount of the funds of appellant on deposit with it to his individual credit to the credit of the firm, and charged appellant's account with the amount so appropriated, and had in this way settled the alleged balance due appellant from it. In its third paragraph it pleads that in the event the court should be of the opinion that it had no right, under the law, to transfer the $3,975.09 of appellant's individual funds on deposit with it to the payment of the amount due by the firm of W. F. Owsley & Son, as set forth in the second paragraph, it then pleads the amount of the firm's indebtedness to it as a set-off against the demand sued for. Appellant filed a general demurrer to the entire answer, and to each paragraph thereof, which the court overruled; and appellant refusing to plead further, and electing to stand by by his demurrer, the court rendered judgment dismissing his petition. The only question before the court on this appeal is the right of the bank to set off against the individual demand the debt due to it by a partnership.

It is a well settled rule of pleading under the common law that an individual demand cannot be set off against a joint demand, nor a joint demand against an individual demand; and this rule prevailed in this State before the adoption of the Code of Practice, and still prevails in those States of the Union where common-law pleading still prevails. But this system of pleading has been long since abolished by the adoption of the Code of Practice. Section 26 of the Civil Code is as follows:

"Persons severally liable upon the same contract, and parties to bills of exchange, to promissory notes placed upon the footing of bills of exchange, or to common orders and checks, the sureties on the same or separate instruments may all, or any of them or the representative of such as may have died, be included in the same action at the plaintiff's option."

And section 27 of the Civil Code provides: "If two or more persons be jointly bound by contract, an action thereon may be brought against all or any or them at plaintiff's option. If any of the persons so bound be dead, the action may be brought against all or any of the survivors with the representatives of all or any of the decedents or against the latter or any of them. If all the persons so bound be dead the action may be brought against the representative of all or any of them. An action or judgment against any one or more of several persons jointly bound shall not be a bar to proceedings against the others."

Under these provisions of the code, appellee could have sued appellant alone for the overdraft due it by the firm of which he was a member, if it had so elected; and it necessarily follows that, when it was sued by him to recover

Digitized by Google

an individual demand, it could plead by way of set-off to his demand the indebtedness of the firm of which he was a member. (See Waits vs. McClure, 73 Ky. 764, and Williams vs. Rogers, 77 Ky. 776.)

It also had the right to appropriate his funds on deposit with it to the payment of any indebtedness due to it by him, whether as an individual or as a member of a partnership. (See Purcifull vs. Banking Co. 97 Ky. 154, 30 S. W. 203, 53 Am. St. Rep. 409.) We are of the opinion that each paragraph of appellee's answer sets out a good defense to the plaintiff's petition, and that the lower court properly overruled the demurrer.

Judgment affirmed.

MUNICIPAL BONDS—WHEN NEGOTIABLE—PROTECTION TO BANK MAKING LOANS UPON.

Court of Appeals of New York, February 25, 1902.

THE MANHATTAN SAVINGS INSTITUTION vs. THE NEW YORK NATIONAL EXCHANGE BANK.

The bonds of a municipal corporation, issued by it in blank, are payable to bearer. They retain the character of negotiability until the name of a payee is filled in; and this is so even though they passed through the hands of one who was not a *bona fide* holder.

A bank, therefore, which has received the bonds in good faith, while in blank, as security for a loan will be protected to the extent of the amount advanced by it on them, notwithstanding they had been stolen by the pledgor from the original owner.

An account opened by a depositor with a bank, adding to his name the word "trustee," does not call upon the bank to make an investigation, in its dealings with him, concerning his authority to act as trustee, nor necessarily import that he was acting as trustee for others.

This action was in replevin for the recovery of ten bonds claimed to be the property of the plaintiff and to be wrongfully detained by the defendant. The answer set up, as an affirmative defense, that the bonds were negotiable securities and had been pledged to the defendant as collateral security for a loan of money.

All of these bonds were alike in tenor and recited that the "City of Yonkers * * * is justly indebted to ———, or——— in the sum of $1,000, * * * which the said City of Yonkers promises to pay at the office of the city treasurer of the City of Yonkers on April 1, 1899, with interest," etc. They further referred to the act authorizing their issue, and stated that they were "registered in the city clerk's office." They were coupon bonds, each bond having attached to it coupons, payable to the bearer, in the amount of the semi-annual interest, as it accrued.

In October, 1878, these bonds, with a very large amount of other securities and of cash, were stolen from the vaults of the plaintiff, as the result of a burglary. Notice was widely given of the loss, and descriptions of the stolen securities were published at the time, but these bonds were never traced nor heard of until they were discovered in the possession of the defendant in April, 1896. It had then received them from George H. Pell, one of its customers, who had pledged them as collateral security for the loan to him, upon his note, of $7,500. At the time of the making of the loan only $9,000 in amount of the bonds had been pledged.

With respect to the tenth bond, no question was made by the defendant as to the right of the plaintiff to recover it, inasmuch as it was received after knowledge that the bonds had been stolen. It appeared from the evidence

Digitized by Google

that Pell had been a convict and was of bad reputation; but the fact was unknown to the defendant, which had several transactions with him as a depositor and in legitimate ways.

GRAY, *J.* (omitting part of the opinion): That bonds whether issued by a municipal corporation under its seal, or issued by any other corporation, may be negotiable instruments must be regarded as not open to discussion (Bank of Rome vs. Village of Rome, 19 N. Y. 20; Brainerd vs. N. Y. & H. R. R. 25 *ib.* 496; Chase Nat. Bank vs. Faurot, 149 *ib.* 532).

That the omission to insert the name of a payee is not a feature, or a defect, which affects their negotiability, seems to be, also, well settled by authority. These bonds were issued and delivered for use in their present form intentionally, and, therefore, their incompleteness in nowise constitutes any defense to their payment, nor could prevent the character of negotiability from attaching. Their inception as commercial instruments was valid, and the effect of the omission to name a payee was to invest any *bona fide* holder with the authority to fill the blank left for that purpose by the obligor. They were payable to the bearer, until restricted in their currency as negotiable instruments by the insertion of the name of some particular payee (Ledwich vs. McKim, 53 N. Y. 307; Dinsmore vs. Duncan, 57 *ib.* 573; White vs. Vermont, etc., R. R. 31 How. U. S. 575; Angle vs. N. W. Life Ins. Co. 92 U. S. 330; Cruchley vs. Clarence, 2 M. & S. 90; Daniel on Neg. Instruments, Sec. 145).

Indeed, this rule of law is not disputed by the appellant; but it is contended in its behalf that the authorities upon which the general rule rests go no further than to hold that any *bona fide* holder, "in the regular chain of *bona fide* holders," has the implied authority to fill the blanks left in the instrument by the makers. The authority, it is said, to fill the blanks runs primarily to the person to whom the instrument is delivered, and he, in turn, when transferring in that condition, is held likewise to authorize his transferee, and the authority thus passes to the last *bona fide* holder; but if the instrument is stolen from its owner in that condition no subsequent *bona fide* holder can derive authority from the thief to fill in the blanks.

The reasoning is ingenious; but I think it disregards the fundamental principle of the negotiability of instruments. The original intention, by issuing the bonds in blank, must have been, obviously, to make them negotiable and payable to any holder in good faith, as the bearer. The character of negotiability having once been, voluntarily, conferred upon the instrument by the maker, it cannot be destroyed, except by the act of a holder in limiting its payment, by proper insertion, to himself or to some other person. It was delivered for use by anyone into whose hands it might come, and the right of the holder cannot be disputed, except upon grounds which relate to the manner of his acquiring its possession and not to the form of the obligation. The principle of liability, however variously stated, is the same. By sending the instrument into the world, in its imperfect form, the maker is estopped from urging, as against a *bona fide* holder, who has received it of anyone having it in possession, a defect of title; and the holder, though without title, has capacity to give a title, because he is the apparent owner of the instrument. As every person possessing himself of the instrument may fill in its blank space and make it payable to himself, through the voluntary act of the maker, the holder is presumed to be the owner. In such a case the title and the

Digitized by Google

possession are inseparable and the legal presumption attaches that the party in possession holds the instrument for value until the contrary be made to appear (Cruchley vs. Clarence, *supra;* Van Duzer vs. Howe, 21 N. Y. 531; Ledwich vs. McKim, *supra;* Colson vs. Arnot, 57 N. Y. 253; Goodman vs. Simonds, 20 How. U. S. 365).

The principle of negotiability is in the instrument having a circulating credit and in its being transferable by indorsement and delivery, or by delivery merely. To import into the general rule a term, or an element of duty, which requires of a purchaser, taking in good faith and for value, that he investigate the *bona fides*, or the title, of previous holders in the chain of title, would be inconsistent with the feature, or quality, of negotiability. There is no middle term between negotiability and non-negotiability, and if, before acquiring a good title to negotiable instruments, it would be necessary for a person to make inquiry of everyone "in the regular chain of *bona fide* holders," as the appellant would have it, in order to be assured of his having an undisturbed current of authority to fill in the name of a payee, where would be the negotiability?

The theory of negotiable instruments and of their currency from hand to hand, like bank notes, rests upon the proposition that they appear to belong to the person having them in possession and to no one else. In the present case, the bonds were payable to anyone who took them in good faith; because his authority to fill in the name of a payee was derived, not from Pell who presented them, but from the City of Yonkers, which, as maker, sent them forth with a general warrant to any *bona fide* holder to make himself their payee.

* * * * * * * * * *

The only other question which I deem it at all useful to discuss, is whether there was anything in the facts and circumstances, as disclosed upon the trial, which required the learned trial judge to submit to the jury the question of the right of the plaintiff to the bonds or the question of the defendant's good faith.

This ground is well covered in the opinion delivered below at the Appellate Division. The appellant enumerates the facts that the payee was blank; that the bonds declared that they were registered; that Pell borrowed upon them as trustee; that the corners were burned, and, lastly, that Pell was, in fact, an ex-convict and a notorious person. Nothing in the evidence tended to show that the defendant had any knowledge of Pell's previous conviction, or that he was a notorious person. Its dealings with him had extended over some time, had been commenced, and were continued, in ordinary and legitimate ways. He was well connected and introduced, and no fact is shown which should have induced the defendant to look upon him with any suspicion. His account was opened in the name of "George H. Pell, trustee," in June, 1895, and down to April, 1896, when this transaction occurred, all of his monetary transactions were through that account. Coupling the word "trustee" with his name as a depositor was not an unusual or peculiar circumstance; nor, necessarily, imported that he was acting as trustee for others. It simply distinguished or described the account which he opened in a particular way, satisfactory to himself, and did not call for any investigation on the part of the bank into his authority as trustee. At no time, so far as the record shows, was there any transaction through that account, or

Digitized by Google

otherwise, with the bank, in the interest of persons, for whom he was acting as their trustee.

The bank has every right to assume, as to the bonds offered to it as collateral security by a customer, who had the account with it, that he was acting in good faith and within his lawful rights, and the fact that he was borrowing upon city bonds in nowise affected the bank's right to indulge in the assumption (Am. Ex. Nat. Bank vs. N. Y. & P. Belting Co. 148 N. Y. 698).

FORGED CHECK—LIABILITY OF DRAWEE BANK.

Supreme Court of Georgia, February 6, 1902.

WOODS, *et al.* vs. COLONY BANK.

The rule that a drawee paying a forged check cannot dispute the genuineness of the drawer's signature is absolute only in favor of one who has not by his fault or negligence contributed to the success of the fraud or to mislead the drawee.

The rule does not apply where a bank cashing a check is guilty of negligence in failing to require any identification of the person presenting it, and in failing to ascertain whether or not the signature of the drawer is genuine.

The petition in this case alleged, in substance, that a draft for $150, payable to A. W. Hodge or bearer, and purporting to have been drawn by Jacob Dorminy upon Woods & Malone the petitioners, was cashed by the defendant bank and transferred to it by the person then having it in possession. At the time of cashing the draft the bank was guilty of negligence, in failing to require any identification of the person presenting it, and in failing to use any diligence to ascertain whether or not the signature of Jacob Dorminy was genuine. The bank indorsed the draft, and in due time it was presented to the drawees for payment, and they, in the exercise of all due dilligence, and believing the paper to be genuine, paid it, and charged the amount to the account of Dorminy; the defendant receiving the sum thus paid. Subsequently the signature of Jacob Dorminy was discovered to have been forged, whereupon Woods & Malone credited Dorminy's account with the amount with which it had been charged, and promptly notified the defendant that the paper was a forgery, and demanded the return of the money paid it by them, which demand was refused. The payment of the amount of the draft by petitioners was made under a mistake of fact as to the genuineness of the signature of Jacob Dorminy, and petitioners were guilty of no negligence in the matter. They sued to recover back from the defendant the money paid on the draft, with interest. To this petition the bank demurred.

LEWIS, *J.* (omitting part of the opinion): It is a rule of the common law that the drawee of a bill of exchange is presumed to know his drawer's signature, or at least is presumed to know it better than a stranger; and hence it was held that, if a drawee innocently pays a forged bill to one who has bought the paper *bona fide*, he cannot recover back the money so paid upon discovery of the forgery. The leading English case on this subject is Price vs. Neal, 3 Burrows, 1,354, which has been cited approvingly and followed by many of the courts of this country. (See Bank of U. S. vs. Bank of Georgia, 10 Wheat. 333, 6 L. Ed. 334; Bank of Commerce vs. Union Bank, 3 Comst. 230; Goddard vs. Bank, 4 Comst. 147; National Park Bank vs. Ninth Nat. Bank, 46 N. Y. 77; Bernheimer vs. Marshall, 2 Minn. 78 [Gil. 61], 72 Am. Dec. 89; Bank of Boutell [Minn.], 62 N. W. 327, 27 L. R. A. 635, 51 Am. St.

Rep. 519; Deposit Bank of Georgetown vs. Second Nat. Bank of Lexington [Ky.], 13 S. W. 339, 7. L. R. A. 849, Bank of Belmont vs. First Nat. Bank of Barnesville, 58 Ohio St. 207, 50 N. E. 723; Stout vs. Benoist, 39 Mo. 277, 90 Am. Dec. 466; Bank of St. Albans vs. Farmers and Mechanics' Bank, 10 Vt. 141, 33 Am. Dec. 188; Commercial and Farmers' Nat. Bank vs. First Nat. Bank, of Baltimore, 30 Md. 11, 96 Am. Dec. 554; First Nat. Bank of Marshalltown vs. Marshalltown State Bank [Iowa], 77 N. W. 1,045, 44 L. R. A. 131).

Allen, *J.*, in the case of National Park Bank vs. Ninth Nat. Bank, *supra*, asserts that "the rule extends as well to the case of a bill paid upon presentment as to one accepted and afterward paid," and adds, "A rule so well established and so firmly rooted and grounded in the jurisprudence of the country ought not to be overruled or disregarded;" while the Missouri case of Stout vs. Benoist, *supra*, lays down as the reason of the rule that "where persons are equally innocent, and one is bound to know and act upon his knowledge, and the other has no means of knowledge, it would be unjust to burden the latter with a loss for the purpose of exonerating the former." Some of the cases cited carry the rule to its farthest limit, and hold that under no circumstances (except, of course, where the purchaser of the bill has participated in the fraud upon the drawee) will the drawee be allowed to recover back money paid under a mistake of fact upon a bill of exchange to which the name of the drawer has been forged. This doctrine, however, has been freely criticized by eminent authorities. (See 2 Morse, Banks, §§ 463, 464; 2 Daniel, Neg. Inst. § 1361.)

Mr. Daniel says: "When the holder has received the bill after its acceptance, the acceptor stands towards him as a warrantor of its genuineness, and, receiving the bill upon faith in the acceptor's representation, there is obvious propriety in maintaining his right to hold the acceptor absolutely bound. Indeed, the acceptor, being the primary debtor, stands just as the maker of a genuine promissory note. But when the holder of an unaccepted bill presents it to the drawee for acceptance or payment, the very reverse of this rule would seem to apply; for the holder then represents, in effect, to the drawee, that he holds the bill of the drawer, and demands its acceptance or payment as such. If he indorses it he warrants its genuineness, and his very assertion of ownership is a warranty of genuineness in itself. Therefore, should the drawee pay it or accept it upon such presentment, and afterward discover that it was forged, he should be permitted to recover the amount from the holder to whom he pays it, or as against him to dispute the binding force of its acceptance, provided he acts with due diligence."

The case of Canal Bank vs. Bank of Albany, 1 Hill, 287, upon a state of facts quite similar to those set up in the petition in the present case, held that, although the holders were innocent of any intended wrong, they had obtained money of the plaintiffs on an instrument to which they had no title, and were therefore bound to refund; and this though notice of the forgery was not given until more than two months after they had received the money. In view of the later New York cases cited *supra*, however, the case last cited would seem not to state the rule prevailing in that State. In the case of McKleroy vs. Bank, 14 La. Ann. 458, 74 Am. Dec. 438, a forged draft was accepted by the plaintiffs after it had been paid by the holder, who was a *bona fide* and innocent purchaser of the instrument. It was paid by the

Digitized by Google

drawees upon maturity, and the fact of the forgery discovered some weeks later. They immediately notified the bank which had cashed the draft, and brought suit to recover the money paid by them. The Court ruled: "The acceptance of a bill of exchange admits the genuineness of the drawer's signature, and where an acceptor has paid to a *bona fide* holder of a forged draft or bill, having no notice of the forgery, he cannot recover back the money paid. But where a party becomes the holder of such a draft before it has been accepted, and when the loss had already attached it was accepted and paid, and the acceptors, immediately upon ascertaining the fact of the forgery, gave notice of this fact to the holders; *held*, that such a case is an exception to the general rule, and the acceptors are not estopped from proving the forgery and recovering the money they paid through error." This, it may be observed, is a leading case in this country, and has been cited with approval by many of the best authorities.

The rule that a drawee is presumed to know his drawer's signature, or at least that he is presumed to know it better than a stranger, is founded on sound reason, and is predicated upon the further presumption that the drawer is a customer or business associate of the drawee, and that their business relations have been such as to insure such knowledge on the part of the drawee. But in determining the relative rights of a drawee who, under a mistake of fact, has paid, and a holder who has received such payment upon, a draft to which the name of the drawer has been forged, it would seem to be only fair to consider the question of diligence or negligence of the parties in respect thereto. If the holder has been negligent in paying the forged paper, or has by his conduct, however innocent, misled or deceived the drawee to his damage, it would be unjust for him to be allowed to shield himself from the results of his own carelessness by asserting that the drawee was bound in law to know his drawer's signature. Of course, the drawee must, in order to recover back from the holder, show that he himself was free from fault. An examination of the case of Price vs. Neal, *supra*, which is cited with confidence by counsel for the defendant in error, will show that the underlying principle of the decision was the negligence of the drawee. Says Lord Mansfield in that case: "The plaintiff lies by, for a considerable time after he has paid these bills, and then found out that they were forged, and the forger comes to be hanged. * * * Whatever neglect there was, was on his side. * * * It is a misfortune which has happened without the defendant's fault or neglect. * * * If there was fault or neglect in any one, it certainly was in the plaintiff, and not in the defendant." It will be observed that this statement of facts is very different from the one set up in the petition of the plaintiff in the present case. It will also be found upon examination that, in all of the well-considered cases which hold that the drawee cannot recover back money paid upon a forged draft, there exists the same element of negligence upon the part of the drawee; he had not been diligent in notifying the holder when it was discovered.

The case which to our minds most clearly states the true rule upon the subject under consideration is that of Bank vs. Bangs, 106 Mass. 441, which rules that: "The responsibility of the drawee who pays a forged check for the genuineness of the drawer's signature is absolute only in favor of one who has not by his own fault or negligence contributed to the success of the fraud or to mislead the drawee; and if the payee took the check drawn payable to

Digitized by Google

his order, from a stranger or other third person, without inquiry, although in good faith and for value, and gave it currency and credit by indorsing it before receiving payment of it, the drawee may recover back the money paid." The court in that case cites the case of Price vs. Neal, *supra*, and recognizes the presumption that the drawee is presumed to be familiar with the signature of his drawer, as giving rise to a responsibility on the part of the drawee which will ordinarily prevent him from recovering back money paid upon a forged check or draft on the ground of mistake of fact. It adds, however: "But this responsibility, based upon presumption alone, is decisive only when the party receiving the money has in no way contributed to the success of the fraud, or to the mistake of fact under which the payment was made." This language seems to us to state clearly the true law upon the subject, and to be peculiarly applicable to the case at bar.

Tested by what has been said, the petition in the record before us measures fully up to the requirements of law. According to it, the defendant bank was grossly negligent in paying out money to a man of whom it knew nothing, upon a paper as to the genuineness of which it knew nothing, and in failing to take any precautionary measures to obtain information in regard to either. Its Cashier then indorsed the draft and sent it forward for collection. Whether this be considered as an indorsement transferring title to the paper and warranting its genuineness, or merely as an indorsement for collection, it was such an act as was likely to throw the plaintiffs off their guard, and mislead them, on account of the channels through which it came, into the belief that the paper was what it purported to be. (2 Daniel, Neg. Inst. § 1,361.) And it is to be observed that, if the allegations of the petition be true, the plaintiffs have done nothing to change the status of the defendant to its injury, and a recovery by them would not in any way affect the position of the bank. The loss attached when the bank cashed the forged draft. If that loss was due to the negligence of the bank, it should fall upon its shoulders, and not upon those who have acted innocently and without negligence. At any rate, the petition set out a good cause of action, and the question of negligence should have been submittted to a jury.

CONDENSED LEGAL DECISIONS OF INTEREST TO BANKS.

CONVERSION—DAMAGES—TITLE ACQUIRED.

The amount of damages for the conversion of a Savings bank book is the actual damages sustained, and not the amount of the deposit shown by the book.

A party who converts a Savings bank book obtains no title to the deposit and the true owner may sue to recover the money deposited.

Newman vs. Munk, 74 N. Y. Supp. 467.

DEPOSITS—PAYMENT.

Where a bank deposit book stated that all payments made to persons producing the book should be deemed valid as to depositors, who alone were responsible for the safe-keeping of their books; that no withdrawal would be allowed without the book, and the book was the order of withdrawal; and plaintiff testified that a few days after she received the book she allowed her

Digitized by Google

husband to take possession of it, and, on his afterwards telling her that he lost it, she gave no notice to the bank; and orders signed, or purporting to be signed, by her were produced, together with the book, at the time disputed payments were made—there was nothing in the circumstances to put the bank on notice requiring it to exercise more diligence regarding such payments than in cases where only the book was produced.

Winter vs. Williamsburgh Sav. Bank, 74 N. Y. Supp. 140.

DISCOUNTING OF NOTE—NOTICE OF DEFENSES—PARTNERSHIP—POWER TO BIND FIRM AS SURETY—NOTICE OF SURETYSHIP.

A bank entitled to discount a negotiable note so that it may be placed upon the footing of a foreign bill of exchange is not required to exercise care to learn whether there are equities or defenses thereto.

Though it may be beyond the scope of a partnership business to execute notes as surety, yet the mere fact that a partner signed the firm name to a note under his own name was not sufficient to charge a bank discounting the note with notice of the fact that the firm was surety merely, and, in the absence of any other evidence that the bank had notice of that fact, a peremptory instruction to find against the firm should have been given.

Warren Deposit Bank vs. Younglove, 66 S. W. Rep. (Ky.) 749.

FORGED DRAFT—PAYMENT BY DRAWEE.

The rule that a drawee is presumed to know his drawer's signature, and hence can not recover back the money paid, through a mistake of fact, upon a bill to which the drawer's signature was forged, is not available in favor of a holder who by his own negligence contributed to the success of the fraud practiced, and whose conduct had a tendency to mislead the drawee, who was himself free from fault.

Woods, *et al.* vs. Colony Bank, 40 S. E. Rep. (Ga.) 720.

PAYMENT OF BOND—TRANSACTIONS—WHETHER PAYMENT OR SALE.

Where the holder of a bond received the amount of the bond from one whom he had reason to believe was making payment for the obligor, there was a payment, and not a sale of the bond, as there could be no contract of sale without a meeting of the minds of the parties.

Judah vs. Kentucky Trust Co. *et al.* 64 S. W. Rep. (Ky.) 607.

PRINCIPAL AND AGENT—BANK CHECKS—FRAUDULENT INDORSEMEN—NOTICE—NEGLIGENCE—DUTY OF PRINCIPAL—DEPOSITOR—RELATIONSHIP—WHEN EXISTING—FRAUD OF AGENT—LOSS TO INNOCENT PARTIES.

Where a dealer in corn arranged with a bank to cash the checks of his purchasing agent, such checks to be sent to the dealer from time to time with drafts for the amounts thereof, and such agent drew and had cashed at such bank checks purporting to but in fact not representing any purchase of corn, and indorsed by himself, and bearing the fictitious indorsement of the pretended payee, if the indorsement by such agent was irregular it was the duty of such dealer, on the first of such checks being sent to him by the bank, to have notified the bank of such fact, and until so notified the bank was not negligent in receiving and paying such checks.

Digitized by Google

Where a dealer in corn arranged with a bank to cash the checks of his agent given for the purchase of corn, and each check bore a memorandum of the amount purchased, the truthfulness of the memoranda could at any time have been tested by such dealer by inspecting the corn in the cribs, but it was no part of the duty of the bank, and it could not be held responsible if some of the checks so drawn and cashed by it did not represent actual purchases.

Where a dealer in corn made an arrangement with a bank to cash the checks of his agent given for the purchase of corn, the bank to be repaid the amount so advanced from time to time on drafts on the dealer, and at the time of making such arrangement he deposited a small sum in the nature of indemnity against its advancements, such deposit did not create the relationship of banker and depositor between them.

Where a dealer in corn arranges with a bank to cash the checks of his agent given for the purchase of corn, and such agent issues checks purporting to but in fact not representing such purchase, and the bank in good faith cashes such checks, and there is no negligence on the part of such banker, the loss must fall on the dealer, who, by his selection of such agent, made the loss possible.

Armour vs. Greene County State Bank, 112 Fed. Rep. (U. S.) 631.

GIFT—DEPOSIT IN BANK—ESTOPPEL—JOINT TENANCY—TRUST—EVIDENCE.

A mother gave her only daughter an order directing a Savings bank to pay a deposit therein. After the mother's death the daughter drew the deposit out, as administratrix, without producing the order or mentioning the gift. *Held*, not to make her chargeable with the money as belonging to the estate.

Where a mother and daughter deposit their money in a Savings bank in their joint name, on the death of the mother the daughter is entitled to the deposit as the survivor of a joint tenancy.

Where a daughter deposited her money in a Savings bank in the name of her mother, but retained the bank book and made the deposits for her own convenience, the presumption of a trust was rebutted.

In re Barefield, 74 N. Y. Supp. 472.

RECEIVER OF A NATIONAL BANK—AGENT—ACTION IN STATE COURT.

In an action by a Receiver of a bank to foreclose a mortgage to secure an indebtedness to the bank and for the conversion of the mortgaged property, the evidence of the statement of the mortgagor, after the execution of the notes, in the presence of the President of the bank as agent of the Receiver, that the debt shown by the notes was fictitious, was not objectionable as the declarations of a maker of a note after its execution impeaching the consideration.

In an action by a Receiver of a bank to foreclose a mortgage to secure an indebtedness to the bank and for conversion of the mortgaged property, the testimony that a third person, employed by the agent of the Receiver to procure the mortgage, stated to one of the debtors that if his firm executed an assignment all their property would go to their creditors; but if they gave a mortgage they might pull through, the bank resume business, and they be

Digitized by Google

enabled to sell their property, was admissible as tending to show a fraudulent purpose in executing the mortgage, and its knowledge by the Receiver's agent.

A Receiver of a National bank is bound by the acts and knowledge of his agent within the scope of the agency.

A Receiver of a National bank coming into a State court to enforce a mortgage executed to him to secure a pre-existing indebtedness to the bank is subject to the laws of the State relating to mortgages executed in fraud of creditors.

Watts vs. Dubois, *et al.* 66 S. W. Rep. (Tex.) 698.

SLANDER TO CREDIT—DEFENSE—RES JUDICATA—INCONSISTENT RULINGS —COMPLAINT.

In an action against a bank for damages for injuring plaintiffs' credit by refusing to pay their checks when they had money to meet them on deposit, defendant filed the general issue, and pleaded a judgment in an action between plaintiffs and another adjudging that all the money deposited with defendant by plaintiffs when payment of the checks was refused belonged to such customer, and was held by plaintiffs in trust for him. Plaintiffs' demurrer to such plea was sustained. Defendant then filed a notice of defense setting up the same judgment. On the trial the court admitted such judgment in evidence. *Held*, that, in the absence of anything to show on what ground the demurrer was sustained, it does not necessarily appear that such rulings were inconsistent.

Where a banker has notice of the fact that money deposited belongs to another than the depositor, it may refuse to pay his check and be compelled to pay the real owner.

An allegation that plaintiffs had money on deposit in defendant bank, including money belonging to their customers, and that they demanded such money and were refused, does not state a cause of action for slander to their credit.

Hanna, *et al.* vs. Drovers' Nat. Bank, 62 N. E. Rep. (Ill.) 556.

SURETY ON BOND—RELEASE—BREACH OF BOND.

An agent gave a bond to account for property delivered to him, and to assign the invoices for sales thereof, with a provision therein that the obligee should deliver bills of lading to the obligor only in trust—he to act as agent to receive and make a sale of the property thereunder—and that the invoices should be immediately assigned to the obligee. *Held*, that the proceeds of the sales were to be collected from the purchasers by the obligee, and where it subsequently authorized the obligor to hold the property in trust for the purpose of selling it, on his promise to immediately deliver the proceeds of the sales, it is such an enlargement of the risk as would relieve the surety in case of breach of the bond.

Tradesmen's Nat. Bank of City of New York vs. National Surety Co. 62 N. E. Rep. (N. Y.) 670.

FRADULENT PREFERENCES—INTEREST OVER SEVEN PER CENT.—ADVANCES ON GOODS, WARES AND MERCHANDISE.

ADAMS AND BURNS vs. BANK OF MONTREAL AND OTHERS. (British Columbia Reports, Vol. 8, page 314. Sections 64 and 80 of the Bank Act.)

STATEMENT OF FACTS: The Kootenay Brewing, Malting and Distilling Company, Limited, had been doing business with the Bank of Montreal and in the fall of 1897 were indebted to them in the amount of about $40,000. In September, 1897, upon the application of the bank they made a mortgage to them of their real and personal property to secure their indebtedness. In October of the same year they gave to the bank an assignment by way of security of all their book debts, and in December, 1897, they suffered a judgment to be entered against them for the sum of $31,908 at the instance of the Bank of Montreal. At the time that the mortgage was given the mortgagor company was to the knowledge of the bank in insolvent circumstances. It was further to be noted that the rate of interest charged upon the advances to the company was at the rate of ten per cent. In December, 1897, the bank entered into possession of all the assets of the company under their various securities and sold them to one Myers, a defendant herein, for the sum of $25,800. In the month of December Adams and Burns were execution creditors of the company to the extent of some $13,000 and brought this action to set aside the sale of the company's assets by the bank.

JUDGMENT: The plaintiff's contentions were three in number. First, that the mortgage given to the bank in December, 1897, was a voluntary and fraudulent preference obtained by collusion and was void under the Statute of Elizabeth. It was found, however, to the satisfaction of the trial judge that the mortgage had not been made voluntarily but after pressure by the bank upon the company to furnish them with security and the principle applied, "Where there is pressure on the part of a creditor seeking payment for a debt honestly due, there can be no fraudulent preference."

Second, an assignment of book debts was attached as being void under section sixty-four of the Bank Act which provides "A bank shall not either directly or indirectly lend money or make advances upon the security of any goods, wares and merchandise." Under the decision of Humble vs. Mitchell in 11 A. & E. 205, "goods, wares and merchandise," do not include choses in action, and while it was argued that there was no power in the bank to lend even on choses in action, the company could not come to the court and ask it to direct the bank to reassign the book debts unless the company did equity, and as they had obtained a further advance of $4,000 upon such assignment and the bank had only realized $800, the court would not direct a reassignment until the balance so advanced was paid, and

Third, judgment was attacked on the ground that as the rate of interest charged upon the advance was ten per cent. the whole proceeding was void under section eighty of the Bank Act, which provides "That the bank may stipulate for, take, reserve or exact any rate of interest or discount not exceeding seven per cent. per annum, and may receive and take in advance any such rate, but no higher rate of interest shall be recoverable by the bank."

Digitized by Google

After a careful review of the cases, the trial judge was of the opinion that a transaction whereby a bank loaned money at a higher rate than seven per cent. was not void, that the section merely prohibited the bank from recovering any excess of interest over seven per cent.

This judgment was affirmed by the Appeal Court of British Columbia and later again affirmed by the Supreme Court of Canada.

PROMISSORY NOTES—ENDORSEMENT BY SURETY BEFORE ENDORSEMENT BY PAYEE—INTEREST—CORROBORATION.

SECOR vs. GRAY, (3 O. L. R., page 34).

STATEMENT OF FACTS: This was an action against the executors of the will of the late Jane Cleghorn, deceased, to recover a sum of $1,800 loaned under the following circumstances. Jane Cleghorn and her son were engaged together in a business under the firm name of J. Cleghorn & Company, and in the year 1897 borrowed from the plaintiff the sum of $1,000, and later the sum of $800. Some time after the loans were made two notes were given for the sum of $1,000 and $800 respectively made payable to a third party and endorsed by Mrs. Cleghorn before endorsement by the payee. The defence on behalf of the executors was that the notes having been endorsed by the deceased before endorsement by the payee, the note when delivered was invalid and could not be recovered upon, relying upon the case of Canadian Bank of Commerce vs. Pearen (31 O. R. 116), and Robinson vs. Mahon (2 O. L. R. page 65).

JUDGMENT: The note made by Thomas Cleghorn and endorsed by Jane Cleghorn, his partner, was, as I find, received by the plaintiff as evidencing the firm's debt to the plaintiff and as collateral security therefor. Had the plaintiff sued Jane Cleghorn on the note only endorsed as it was by her previous to its being signed by the payee, he could not have recovered; but unless he took the note in payment of the claim against the firm of Jane Cleghorn & Company he could recover against her for money loaned to the firm of which she was a member. The action having been brought not upon the note but upon the original consideration therefor, the plaintiff is entitled to succeed. On the question of interest the plaintiff said that it was referred to at the time the money was loaned and Thomas Cleghorn said he had no recollection of it being mentioned. As there is corroboration as to the main fact, that is, of the borrowing, that corroboration is, I think, sufficient to entitle the plaintiff to recover interest also.

EXECUTION—SEIZURE BY SHERIFF—BANK NOTES PAID IN A BANK—PROPERTY IN THE MONEY.

HALL vs. HATCH. THE BANK OF MONTREAL vs. HATCH, *et al.* (3 Ont. L. R. p. 147).

STATEMENT OF FACTS: One Hall was a superannuated civil servant entitled to receive the sum of $63 per month from the superannuation fund payable through the Bank of Montreal, and was indebted on an execution to Walter Hatch, such execution being then in the sheriff's hands. On May 27, 1901, Hatch went to the Ottawa office of the Bank of Montreal and presented to the paying teller the usual superannuation declaration. After examining this the teller counted out the sum of $63 in notes and placed them upon the ledge in the wicket which communicates between the teller's box and the outer office of the bank where Hall might take them up. After the teller

Digitized by Google

had removed his hand from the notes and before Hall had touched or handled them, they were seized by a sheriff's bailiff under the aforesaid execution. The moneys were claimed by the Bank of Montreal and also by Hatch and Hall. The sheriff obtained a direction to have the issues between these parties tried in an interpleader, which was heard before the Master at Ottawa.

JUDGMENT: The Master made a careful review of the authorities and found that at common law the sheriff had no authority to seize money, but Sec. 18 of the Execution Act of Ontario provides as follows: "The sheriff or other officer having the execution of a writ against goods shall seize any money or bank notes belonging to the person against whose effects the writ of execution has issued."

The question then is, to whom did the property in the notes belong at the moment they were seized by the sheriff?

In the case of Chambers vs. Miller (13 C. B N. S. 125) Chief Justice Earle said: "When a check is presented at the counter of a banker, the banker has authority on the part of his customer to pay the amount therein specified on his account. The money in the banker's hands is his own money. In case the banker's clerk goes through the process of counting out the money and passing it to the presenter of the check, he has done all that in him lay to pass the property in the money to such holder, it no longer remained a matter of discretion or choice whether he would pay the check or not.

Byles on Bills, 15th ed. p. 305, states the law to be as follows: "Money laid down on the counter by a banker's Cashier in payment of a check cannot be recovered back by action, though it were handed over under a misapprehension of the state of the drawer's account. A banker's counter is in the nature of a neutral table, provided for the use of both banker and customer. As soon as the money is laid down by the banker upon the counter to be taken up by the receiver, the payment is complete."

I am asked here to carry the law one step further and say that the property passes even before the holder of the check, or in this case, the superannuation declaration, takes the money into his physical control. While this goes beyond the actual decision in Chambers vs. Miller, it is not, I think, contrary to it. It is, on the other hand, directly supported by the dictum already quoted of Mr. Justice Byles, and the statement in "Byles on Bills." Moreover, it is, I think, sound in principle. That which, after all, must govern is the intention of the parties, to be gathered from their actions. Let us see then what takes place here.

Hall goes to the bank with his superannuation declaration intending to draw the sixty-three dollars due to him. He presents the declaration to the paying teller, and the latter, acting for the bank, examines it, and finding it to be in proper form, decides to pay it. For this purpose he counts out sixty-three dollars in bills and places them on the counter in front of Hall for him to take up. The teller has then, for the bank, done all in his power to pass the property in the bills to Hall. Hall has all along had the intention of receiving the money from the bank, since that was his very purpose in going there, and as he sees the teller count out and place on the counter certain bills, his intention evidently is to receive those very bills, subject, perhaps to his counting them, but certainly subject to nothing else. Apart from the possibility of the amount being incorrect, or some of the bills not genuine, circumstances which it follows from Chambers vs. Miller will not alone prevent the

Digitized by Google

property in the money from passing, what conceivable reason could there be for Hall's not accepting the money he went to the bank to draw? At the moment, therefore, that the bills were placed on the bank counter, the minds of Hall and of the bank, represented by the teller, were at one. The latter intended to pass the property in those very bills to the former, and the former intended to receive them. The transaction would, therefore, appear to be complete.

I therefore hold that when the sheriff's officer seized the bills now in question, they were the property of the judgment debtor Hall.

Counsel for the bank contended that even were the payment complete, as between the bank and Hall, at the moment of the seizure, yet the former had still an interest in the money, in the nature of a lien, sufficient to entitle it to prevent its seizure. No authority was cited in support of the existence of this supposed right, and I can see no reason for holding that it does exist. It was argued, that even if the money was Hall's money when seized, the bank had still a right to have it counted; but it is plain from the language of the judges in Chambers vs. Miller and would seem to be clear law, apart from that decision, that the bank has no right whatever to compel the payee of a check to count money paid to him.

There will be judgment for the execution creditor with costs, and the claim of Hall against the bank will be dismissed with costs, payable by Hall to the bank. There will be the usual order as to the sheriff's costs.

An appeal was taken from this judgment to Falconbridge, C. J., who dismissed the appeal and upheld the judgment of the Master.

ENDORSEMENTS BY BANK MESSENGER.

Editor Bankers' Magazine: BALTIMORE, Md., February 10, 1902.

SIR: In the case of a runner or collection clerk presenting a check or checks to a trust company for payment, and said checks not being endorsed by his bank, will his endorsement as collection clerk be as binding on his bank as the regular stamp endorsement used by the banks ("Rec'd payment. First National Bank")? In the case of a prior endorsement being irregular, will the guarantee of said endorsement by the runner in his official position be as binding as the regular guarantee by stamp done within the bank before starting on his daily round? Should the runner receive a check in payment of a draft, said check being made payable to his bank or Cashier, would the teller of a trust company on which it is drawn be doing right to pay such check to the runner if endorsed by him in his official capacity?

H. F. SWOPE, *Teller.*

Answer.—As the messenger of a bank has authority to receive payment of paper held by his bank and given him for collection, he may bind the bank by a receipt for the money paid to him; and his receipt would be just as effective as the regular stamped indorsement "Rec'd payment. First National Bank," which is not an "indorsement" in the legal sense, but a mere acknowledgment of payment. But he has no authority to "indorse" for the bank, in the commercial acceptation of the term, so as to transfer the title to paper held by the bank, and subject the bank to the liabilities of an indorser.

Digitized by Google

He would, therefore, have no authority to indorse paper payable to the bank, nor guarantee prior indorsements; and hence the teller should not pay to him checks drawn payable to the bank, and indorsed by him.

ATTACHMENT OF DEPOSIT.

Editor Bankers' Magazine: LINCOLNTON, N. C., February 28, 1902.

SIR: Will you please give us your opinion as to the following: A sends us a deed from Texas for real estate purchased by a railroad, and upon payment of certain sum deed is to be delivered to B, attorney for the railroad. B presents the New York draft of the railroad for many times more than amount deed calls for, but we immediately deduct the amount of deed and *send our New York draft* to Texas to A, making no entries upon our books. This letter with draft was deposited in the post office about ten minutes before the sheriff came in with a summons and a few minutes later with a writ of attachment on the property of A that we were supposed to have. We claim the debt was paid when letter was placed in the post office, but they wish us to (and, in fact, *demand*) that we stop payment on our New York draft. This we refuse to do. Can we stop payment on it? A.

Answer.—It is well settled that as soon as a check or draft is deposited in the post office addressed to the payee or indorsee, the delivery is complete, and the title vests in him. (Barrett vs. Dodge, 16 R. I. 740; Mitchell vs. Byrne, 6 Rich. Law [S. C.], 171; Kirkman vs. Bank of America, 2 Caldw. 397.) When, therefore, in the case stated in the inquiry, the draft on New York was placed in the post office, it became the property of A, and constituted a payment of the debt to him; and when the writ of attachment was served the bank was no longer indebted to A, and there was nothing upon which the attachment could operate. Nor should the bank stop payment of the draft; for since the indebtedness had been discharged before service of the attachment, the attachment would afford no defense to the bank if sued by A upon the draft. (See Myers vs. Beeman, 9 Iredell [N. C.], 116; Osmond vs. Maye, 11 Iredell, 564; Schuler vs. Bryson, 65 N. C. 201.)

INTEREST ON NOTE PAYABLE ON DEMAND.

Editor Bankers' Magazine: BURLINGTON, Ky., February 28, 1902.

SIR: (1) A executes to Bank B his note for $1,000 payable on call, with interest from *maturity*. Can A come at any time he chooses and pay off the note: if not, has he any option as to the time of payment, or is that matter at the option of the bank, and does it draw interest from date, or from demand. (2) The same question, only that the note reads: "Ten days after demand." J. C. REVILL, *Cashier*.

Answer.—(1) By the terms of the instrument, it is to bear interest only after *maturity*. But the authorities differ as to the time of maturity in the case of a note payable on demand, or what is the same thing, "on call." In some cases, it has been decided, that the paper does not mature until actual demand, while in other cases, it is held that demand must be made within a reasonable time after the paper is issued. (See Merritt vs. Todd, 23 N. Y. 28; Pardee vs. Fish, 60 N. Y. 265; Paine vs. Central Vermont Railroad Co. 118 U. S. 152; Hayes vs. Werner, 45 Conn. 252.) The question therefore might be determined variously according to the court before which it should come. But if the maker should tender payment at a reasonable time after the issue of the note, and the bank should refuse to receive the same, it would lose the interest for any subsequent time, for should the court hold that the note matured then, the tender would stop the running of interest, and if it should hold that demand was necessary, then interest would not begin to run until that time. (2) In this case, interest would not begin to run until ten days after demand.

BANK NOTES SIGNED WITH A RUBBER STAMP.

Editor Bankers' Magazine: SYRACUSE, N. Y., February 25, 1902.

SIR: Is there any law against a President or Cashier of a bank signing the bank bills with a *facsimile* of signature rubber stamp? CASHIER.

Answer.—The language of the statute is that the circulating notes are "to be signed by the President or Vice-President and Cashier, in such manner as to make them obligatory promissory notes." It would seem to be sufficient, therefore, to affix them in any mode which would bind the bank. The rule of law is that a person may become bound by any mark or designation he thinks proper to adopt, provided it be used as a substitute for his name and he intends to bind himself. (Brown vs. Butchers and Drovers' Bank, 6 Hill, 443; Baker vs. Dening, 8 Adol. & Ellis, 94; Harrison vs. Harrison, 8 Ves. 186; Addy vs. Grix, 8 Ves. 504; Geary vs. Physic, 5 Barn. & Cress. 234; George vs. Surrey, 1 Mood. & Malk. 516.) Under this rule there appears to be no reason why a bank officer may not affix his signature to the obligations of the bank by a stamp as well as in his own handwriting. But as the manual signatures of the officers are a protection against forgery, the Comptrollers of the Currency have discouraged the use of stamps, and from a practical standpoint this policy is a wise one.

DOUBLE TAXATION OF SAVINGS DEPOSITS.

Editor Bankers' Magazine: SAN LUIS OBISPO, Cal., March 3, 1902.

SIR: A person residing in Minnesota deposits money in a Savings bank in California. Under the California laws the bank is required to pay the taxes on the savings deposit, and the depositor is exempt from taxation. Under the Minnesota laws, the local assessor claims that the depositor is liable for taxation on "all goods, chattels, moneys, credits and effects wheresoever they may be," and therefore claims a right to assess this deposit for taxes, although the California laws specifically exempt such deposit. This is in effect a double taxation on this money. What, if any, is the remedy? D. D. BARNARD, *Cashier.*

Answer.—Unquestionably a State may impose a tax upon its residents for all intangible property owned by them, such property, in theory of law, having its *situs* at the domicile of its owner. A bank deposit, being a mere debt due from the bank to the depositor is of this character, and is taxable in the State where the owner resides, though the bank is located in another State. (San Francisco vs. Mackey, 22 Fed. Rep. 602; Horne vs. Green, 52 Miss. 452.) Hence, in the case stated in the inquiry, the depositor may be taxed upon the deposit in Minnesota, provided the statutes of that State authorize such taxation, and his only remedy would be such as the laws of that State afford him. The policy of the State of California in exempting such deposits from taxation does not deprive the State of Minnesota of the power to tax the owner thereon, he being a resident of that State.

LIABILITY OF BANK FOR COLLECTION.

Editor Bankers' Magazine: BOSTON, Mass., March 22, 1902.

SIR: A deposits to his credit in bank B check for $100 on bank C. B sends check for collection to bank D; D sends it to E, and E sends it to F; F sends it to G, and G sends it to C. C pays check and remits to bank G. The latter bank suspends. Who stands the loss? (C and G are both in the same town.) CASHIER.

Answer.—This question would be decided variously by different courts. In Massachusetts it is held that where the employment of a correspondent or other agent is necessary or customary, the duty of the collecting bank is fully discharged if it exercises reasonable care in the selection of such correspon-

Digitized by Google

dent or other agent, and that when the paper has been duly transmitted, with the necessary instructions to a suitable agent, the bank will not be liable for its neglect or default. (Dorchester Bank vs. New England Bank, 1 Cush. 177.) This rule also prevails in Connecticut (East Haddam Bank vs. Scovill, 12 Conn. 303); Illinois (Ætna Ins. Co. vs. Alton City Bank, 25 Ill. 243); Iowa (Guelich vs. Nat. City Bank, 56 Iowa, 434); Wisconsin (Stacy vs. Dane County Bank, 12 Wis. 629); Missouri (Daly vs. Butchers and Drovers' Bank, 56 Mo. 94); Tennessee (Bank of Louisville vs. First Nat. Bank, 8 Baxter, 101) and Nebraska (First Nat. Bank vs. Sprague, 34 Neb. 318).

On the other hand, the rule in the Federal courts is that in the absence of an express or implied contract varying such liability, the collecting bank is liable for the neglect or default of any correspondent or other agent to which the paper is transmitted. (Exchange National Bank vs. Third Nat. Bank, 112 U. S. 276.) This is the rule also in New York (Allen vs. Merchants' Bank, 22 Wend. 215; St. Nicholas Nat. Bank vs. State Bank, 128 N. Y. 126), Ohio (Reeves vs. State Bank, 8 Ohio St. 465), Michigan (Simpson vs. Walby, 63 Mich. 479), Minnesota (Steeissguth vs. Nat. American Bank, 43 Minn. 50), Montana (Power vs. First Nat. Bank, 6 Mont. 251), and in England (Van Wart vs. Woolley, 3 B. & C. 439; Mackersy vs. Ramsays, 9 Cl. & F. 818).

Under the Massachusetts rule, the undertaking of the bank first receiving the paper is not absolutely to make the collection, but merely to perform properly such duties as banks in like cases usually perform themselves, and to select suitable sub-agents to perform those further duties which, from the necessities of the case or the custom of banks, it is expected will be committed to others. In other words, the contract is only for the immediate services of the bank and for its faithful conduct in selecting suitable sub-agents for its principal, the owner of the paper.

Under this rule, each of the banks to which the paper referred to in the inquiry was remitted became the sub-agent of A, the owner of the paper, and their only liability to him was for the exercise of reasonable care in selecting other sub-agents. As the default occurred with G, the only question can be whether in selecting that bank F exercised reasonable care. This is a question of fact which must depend upon all the circumstances of the case, and if suit were to be brought, must be decided by the jury.

PAYING CHECK SECOND TIME.

Editor Bankers' Magazine: PIONEER, Iowa, March 11, 1902.

SIR: How much of a necessity or duty does a bank owe to stamp "Paid" on all checks on itself that it pays? In other words: A draws check on bank in favor of B, who gets cash at said bank on the check. Bank does not stamp it "Paid" and turns it over with other vouchers to A. A loses said check after a few months and B finds it and obtains cash at said bank a second time on said check, and check is charged a second time to A. Must A lose amount of check or must he look to bank for it or to B? T. A. GREINER.

Answer.—Where a check has once been paid by the bank on which it is drawn, it is discharged, and even assuming that it may be reissued by the drawer, it has no validity until actual delivery by him a second time. In the case stated in the inquiry, there was no such delivery by the drawer, and as the check had once been discharged, no delivery could be presumed. Nor could the drawer be held upon any theory of negligence, for the proximate cause of the loss was the negligence of the bank itself, in paying the check a second time. The bank, therefore, would have no right to charge the amount of the second payment to the drawer, but must bear the loss itself.

CHECK AS ASSIGNMENT OF DEPOSIT—REVOCATION OF CHECK BY DEATH.

Editor Bankers' Magazine: BURLINGTON, Ky., March 20, 1902.

SIR: The Kentucky courts hold that a check operates as an assignment of the drawer's deposit to the extent of the amount called for by the check and that the holder may sue and recover the amount from the bank provided the drawer has that amount to his credit when the check is presented and payment refused by the bank. Suppose the holder gives the bank notice that he has the check, is the bank under obligation to hold the money to meet it when presented, or can it pay it out to the first check of the drawer presented for payment, knowing the other check is still out and unpaid and is older in date and delivery than the one presented for payment? Does the death of the drawer of a check in Kentucky on a Kentucky bank revoke it where the bank has notice of the check? Does death of drawer revoke a check at all in Kentucky? Cannot the holder of the check even after the death of the drawer and notice of that fact to the bank compel the bank to pay it if it holds sufficient funds of the drawer? I refer to Kentucky law only. F. RIDDELL, *President*.

Answer.—In a case recently decided it was held by the Court of Appeals of Kentucky that the drawer of a check may stop payment thereof at any time before the bank has incurred liability thereon, and that the death of the drawer operates as a revocation of the authority of the bank to pay the check. (Weiland's Admr. vs. State National Bank, BANKERS' MAGAZINE, February, 1902, p. 212.) In earlier cases in the same court it seems to have been settled that a check is an assignment of the funds of the drawer to the amount of the check, which assignment is complete upon the presentation of the check, and that if the bank improperly refuses payment, the holder may sue the bank. (See Tramell vs. Bank, 11 Ky. Law Rep. 900.) The later ruling, it is plain, is not entirely harmonious with the former decision, and indicates a disposition on the part of the Kentucky court to escape from the practical inconvenience which a logical adherence to the theory of an equitable assignment must produce; and while it is difficult to conjecture what a court will do in any given instance, it seems reasonable to assume that the Kentucky court will not extend the doctrine of equitable assignment beyond what has already been decided, and will require that in order to make the assignment complete the check shall be actually presented to the bank for payment, and that until such time the bank may pay checks in the order in which they are presented, notwithstanding it may have information that a check of an earlier date is outstanding, and there is not sufficient money on deposit to pay all.

A FORM OF GUARANTY.

Editor Bankers' Magazine: DES MOINES, Ia., March 8, 1902.

SIR: C bought a draft drawn by A on B, for the price of a carload of oranges sold by A to B, on receiving D's guaranty in the words, "Will guarantee B's draft for car of oranges from A," and took the bill of lading which was made out in A's name and attached to the draft. There was no actual or constructive delivery of the oranges to B, and he did not accept the draft. Under the wording of the guaranty is D liable? BROKER.

Answer.—We think not. The liability of D under the guaranty depends on B's liability on the draft and, no liability having arisen against B, we think B would not be bound.

SURETIES FOR A GUARDIAN.

Editor Bankers' Magazine: LOUISVILLE, Ky., February 28, 1902.

SIR: A guardian deposited a portion of her ward's funds in a bank in her individual name. Afterwards she executed a new bond, and the sureties on her old bond were released, and subsequent to such release she converted to her own use the bank stock and the bank deposit. The first sureties are irresponsible, can the second sureties be held liable for the conversion? INQUIRER.

Answer.—The second sureties could have traced the assets of the ward when

Digitized by Google

they qualified if they had tried to do so, and their not making the necessary investigation was negligent. We think there is no question as to their liability.

HOMESTEAD EXEMPTION.

Editor Bankers' Magazine: HOUSTON, Tex., March 13, 1902.

SIR: X has a lot distant three or four blocks from his homestead proper, which he uses for stabling his cow and for the purpose of a wood-yard in connection with his business, dealing in coal and wood. Can he successfuly claim it as an exemption under the laws of this State? R. C. W.

Answer.—No; not if, as we understand your question, he carries on his business at still another place.

BROKER'S FAILURE TO ACT.

Editor Bankers' Magazine: TROY, N. Y., March 6, 1902.

SIR: Brokers in Troy, through New York Stock Exchange brokers, bought stocks for a customer and agreed to carry them for him on margin. The exchange brokers carried them for their general account with the Troy firm, they and the customer being mutually ignorant of each other. The latter ordered certain shares sold at a price which could then have been realized, but the Troy firm failed to transmit the order. After the price had declined, they rendered him a statement showing that they still had the shares for him, and five weeks later failed, whereupon the exchange brokers sold at a loss, without the customer's knowledge, and when he was not in default to the Troy firm. After receiving the statement, the customer did not acquiesce in the violation of his orders nor did he notify his brokers that he would hold them responsible. Who must bear the loss? A. M.

Answer.—The brokers in Troy, and the measure of damages is the difference between the price named in the order and that for which the stock was sold.

A QUESTION OF REMEDY.

Editor Bankers' Magazine: SPRINGFIELD, Mass., March 17, 1902.

SIR: While A and B were partners in business, B fraudulently made a promissory note in the name of the firm and delivered it to C, who had knowledge of the fraud. The firm was afterwards dissolved and a Receiver appointed. The note is past due, and no demand for payment has ever been made. For private reasons A does not desire to commence a criminal action, even though he could do so. He would like, however, to dispose of the note, that is, have it destroyed, and does not care to await C's movements in the matter. What can he do? F. P.

Answer.—He can commence proceedings to have the note cancelled.

TRANSFER OF STOCK.

Editor Bankers' Magazine: WORCESTER, Mass., March 3, 1902.

SIR: The owner of stock in a corporation transferred it to a trustee, to whom a new certificate was issued, in which the stock was declared to be transferable only on the bank's books on surrender of the certificate. The bank had no notice of the trust. The trustee indorsed on the certificate an assignment to the owner delivering it to him. The stock continued in the name of the trustee on the bank's books, and he voted on it, and received the dividends, paying them to the owner. The trustee became insolvent and an assignee in insolvency was appointed. The stock had been previously attached by a creditor of the trustee. The owner offered to surrender the certificate, and demanded a transfer of the stock to himself. The company's by-laws provide that the stock shall be assignable only on its books. Under this state of facts is the owner entitled to the transfer he insists upon? CREDITOR.

Answer.—Yes.

OVERVALUATION WHEN ISSUING BONDS.

Editor Bankers' Magazine: NAPANEE, IND., March 20, 1902.

SIR: H agreed with his creditors to extend and improve a railroad owned by him; to organize a railroad company and transfer to it such railroad; to cause the company so formed to issue bonds, and to deliver a certain amount thereof to said creditors in payment of their respective claims against him. In pursuance of such agreement H, with others, organized a

Digitized by Google

railway corporation, he subscribing for a large number of shares, and the others, persons in his employ and acting under his direction and control, subscribing for one share each. At a meeting held by them immediately thereafter, a board of directors, consisting of all of them except H and another, was elected, and at the same meeting H proposed to sell his said railroad to the corporation for a sum greatly in excess of its value, payable in the bonds and stock of the company, including the subscriptions previously made. The proposition was unanimously accepted by the directors and their action was subsequently ratified by the stockholders. After the issue of such bonds and stocks to him, H transferred the stipulated amount of bonds to his creditors, who were ignorant of the facts relating to the organization and sale. The creditors afterwards recovered judgments on the bonds against the corporation, but were unable to satisfy them, and the company became insolvent and abandoned its charter. Is there any remedy on the part of the creditors against H personally?

BONDHOLDER.

Answer.—Most certainly. The overvaluation of the property at the time of issuing bonds clearly establishes a case of fraud.

AN UNPAID CHECK.

Editor Bankers' Magazine: BALTIMORE, Md., March 20, 1902.

SIR: The drawer of a check had a deposit more than sufficient to pay it when drawn. Before it was presented the bank had assigned for the benefit of creditors, as had also the drawer of the check, and payment was refused. The assignees of both the bank and the drawer have successfully contested proof of claim on account of the check against their respective insolvent estates. Hasn't the drawee some remedy? PUZZLE.

Answer.—Yes. This claim should not be proven against either set of assignees. Strictly it is a claim against the insolvent drawer personally, but it is a lien on the money deposited in the bank at the time of the latter's assignment and the requisite steps should be taken to intercept any dividends on account of the deposit before payment to the drawer's estate. This can only be done by proceedings in chancery.

LIABILITY ON INDORSEMENT.

Editor Bankers' Magazine: WALDEN, N. Y., March 11, 1902.

SIR: B was first indorser on all paper of A. C was second indorser on a portion only of the same paper. A became insolvent, and B and C signed an agreement that, in consideration of having transferred to them certain property of A, they would assume the payment of "all paper of A indorsed by us." Under this agreement is C liable on paper indorsed by B but not by himself? B thinks he is, and claims he entered into the agreement with that understanding. ATTORNEY.

Answer.—To answer your question requires a knowledge of all the facts and circumstances, as there might be that in connection with the agreement which would sustain B's contention. On the face of the meager information given B is wrong. We should say that under the agreement neither B nor C is bound by the agreement to pay any paper on which they are not both indorsers.

RELEASE OF INDORSERS.

Editor Bankers' Magazine: BIG RAPIDS, Mich., March 26, 1902.

SIR: An accommodation note being over due, and the holder pressing for payment, A at the request of the maker, and in consideration of the assignment to him of a bond and mortgage given by the payee of the note as security on the accommodation, agreed with the holder to purchase the note, securing the purchase by his own note, all the papers in the transaction to remain in the hands of an attorney till the maturity of A's note, to be delivered to A on payment thereof, but, if not paid, the accommodation note to be returned to the holder, and the bond and mortgage to the maker thereof. This arrangement was carried into effect; A paying his own note at maturity, and receiving the deposited papers. Can A hold indorsers on the accommodation note? AGENT.

Answer.—No. The extension of the time of payment and the suspension of the right to bring suit would operate to release them.

AUTHORITY OF ASSISTANT TELLER.

Editor Bankers' Magazine: COLUMBUS, Ohio, March 13, 1902.

SIR: A package of money was received at the express office directed to the Cashier of B E bank. The delivery clerk of the express office took it to the bank, and, the receiving teller being temporarily absent, delivered the package to S, who was and had been for some time, assistant receiving teller, and who at the time was at the receiving teller's desk. The package was never delivered by S to the Cashier, and the money never came into the possession of the bank. Was the express company so negligent as to be liable for the amount?

MESSENGER.

Answer.—No. Since the bank placed S at the receiving teller's desk and permitted him to act as receiving teller, it thereby held him out as authorized to receive the package, and the bank is liable for the loss.

RECEIVING CHECK FOR COLLECTION.

Editor Bankers' Magazine: CHAMBERSBURG, Pa., March 19, 1902.

SIR: A depositor brought to this bank a check which, simply from its amount, and not from any appearance of fraud, I advised him not to take, as it might be raised, and suggested it could be deposited for collection, and, if it was not returned, we would suppose it all right. It was left, and I credited it to the depositor, who, two days later, without making any further inquiry, completed the sale in which it was offered in payment. Our correspondent in Philadelphia credited us with the check, but about a month later returned it to us, it having been returned by the bank on which it was drawn as being raised. It was charged to our account and we in turn charged it to the depositor. The depositor is now seeking to recover of us on the ground that we had accepted it in crediting it to his account. Can he do so?

CASHIER.

Answer.—Not under your statement, as it was only credited conditionally, and the conditions mutually understood.

PRESENTATION OF DRAFT.

Editor Bankers' Magazine: PETERSBURG, Va., March 28, 1902.

SIR: X drew a draft, "without protest," on his debtor, payable at sight, and inclosed it to the C bank for collection, without instruction as to presentment. The drawee lived in the country, some distance from the bank, which on the day of the receipt of the draft notified him by mail, as was the custom of banks in the place, unless specially instructed. A week later the drawee called at the bank, said he would pay the draft the next week, and accepted it. On the same day X was notified by letter that the draft was payable the following week, and later he sent his clerk to inquire about it. No further instructions were given, and a few days afterwards X wrote, asking if the drawee had made arrangements for payment, thus recognizing what the bank had done. About two weeks after accepting the draft, the drawee filed a petition in voluntary bankruptcy. Was the C bank guilty of negligence?

STOCKHOLDER.

Answer.—No. X had notice of what course was being taken, and by inquiring as to its progress, acquiesced in same.

MARKING NOTE PAID BY MISTAKE.

Editor Bankers' Magazine: FRANKFORT, Ky., March 24, 1902.

SIR: A note was discounted by the B bank, and sent to the A bank, where it was payable, for collection, and there marked "Paid," by mistake, the discovery being made later in the same morning, that the maker of the note had no funds in the bank, and at once the B bank and the indorsers were notified, and that note duly protested. A contention took place between the banks as to whether, under the clearing-house rules, the note not having been returned to the B bank before a certain hour of the day, it became the property of the A bank, but the dispute was settled by the payment of the amount of the note to the B bank, the payment being expressly made without waiver of any legal rights. The B bank disclaims any title to the note. What are the legal rights of the A bank? CLEARING-HOUSE.

Answer.—The A bank has title in the note sufficient to maintain an action against the indorsers, and they can not successfully avail themselves of the clearing house rules and claim that the note was paid.

THE NATIONAL BANKING SYSTEM.

[An address delivered at the meeting of the New York Chapter American Institute of Bank Clerks, February 27, by R. W. Jones, Jr., Vice-President Seventh National Bank, New York city.]

Mr. President, and Gentlemen of the American Institute of Bank Clerks—When invited to address your body, I felt reluctant to accept; but my interest in the movement in which you are engaged proved the stronger, and I trust, out of an experience extending through service in every position in a bank, I may say something which will prove encouraging and helpful.

The subject I have chosen is not a new one. At the moment much is being written of its defects and their remedies. My hope is not so much to present to you any new phases of the National Bank Act, as to treat it in a manner personal and interesting to yourselves.

To students familiar with the early financial history of our Government, it is obvious that the National Bank Act was the result of successive experiments, up to the time of its adoption February 25, 1863, as the National Currency Act. It was the result of gradual evolution, and in principle a most natural product of our form of government.

Since its adoption remarkably few changes have been made in its provisions, but the great growth of the past few years has, however, brought about much discussion of the system, and criticism of its divorcement from the Treasury, and the lack of flexibility of the circulation provided for. The first growing principally out of a new condition, an overflowing Treasury, and the absorption by it of the circulating medium when most needed for carrying on the trade, and effecting the exchanges of the country; and the latter, by a lack of small currency to supply an urgent demand at certain seasons, and in certain localities, for crop-moving purposes.

I shall not burden you with figures, but an examination of the exports and imports of ten years ago, and a comparison of these with those of the year ending December 31, 1901, together with the bank deposits and clearings for the same years, will give you some idea of the development which has taken place. These, as stated, undoubtedly have their bearing upon the present discussion.

The banking system should most assuredly not be a cloud upon the financial horizon, nor a clog to the wheels of commerce. It should meet the financial requirements of the Government and the people, affording the greatest possible safety and economy in the transaction of all business.

The suggestions of Secretary Gage on the points referred to, have been read with unusual interest, and are familiar to you all. The establishment of a great central institution, having for its principal object the handling of the Government finances, could only be accomplished by special and exclusive charter; otherwise, it would be entirely feasible to establish any number of such institutions, which would render their operation for the Government clumsy, if not altogether impracticable.

The legislation would necessarily be special, providing for the abolishment of the independent Treasury, and delegating to this institution the financial operations of the Government, if the Treasury is to be put entirely out of the banking business, and the surplus accumulating placed at the disposal of the business world.

Past Experience with Central Banks.

The suggestion of a great central bank brings to mind the establishment, by special and exclusive charter, of the First Bank of the United States in 1791, and

Digitized by Google

the Second Bank of the United States in 1816. These institutions have left their indelible impress upon our present system and a brief *resume* of their history may be interesting.

There was strong opposition by Madison and others to the establishment of the first Bank of the United States. The national need was so great, however, it was chartered, though the plan was repugnant, as contrary to the spirit of American institutions. The affairs of this bank were wisely administered, resulting in profit to both the Government and its individual stockholders. It met the need of the hour admirably, but notwithstanding was defeated when it applied for recharter in 1811.

No system of banks existed from 1811 to 1816, when the second Bank of the United States was chartered. The State banks in existence, however, supplied the needs so poorly that some of the most prominent and strongest opponents of the recharter of the first Bank of the United States were supporters of the second, and it received its charter April 10, 1816.

The history of the second bank was somewhat checkered, but under the guidance of Mr. Langdon Cheves, who was chosen President March 6, 1819, it was put upon a good basis financially, and rendered most valuable services until the administration of Jackson.

The campaign between Adams and Jackson, in 1828, was one of the bitterest in the history of the country, with the Bank as the principal issue. The election of Jackson brought about its ultimate defeat for recharter.

The two banks mentioned are the only two National banks which have been chartered by this Government, enjoying special and exclusive privileges. Each was made a political issue, and was not, for that reason, perpetuated. The independent Treasury, as proposed by President Van Buren, was the result, and I might add, of the present National Bank Act.

The Use and Abuse of an Asset Currency.

These same periods of history furnish us with very interesting facts regarding the use and abuse of asset currency. From 1811, when the liquidation of the first Bank of the United States took place, until the establishment of the second Bank in 1816, the number of State banks multiplied rapidly, and the redemption of their notes being no longer required, their circulation expanded more than 400 per centum. Speculation was unnaturally stimulated, and great financial distress was the result.

History repeated itself after the failure of the second Bank of the United States to secure recharter. The Government funds were deposited in the State banks, and they increased their circulation in the seven years that followed from sixty-one millions to one hundred and forty-nine millions.

In addition, the number of banks was greatly multiplied, and when the crash came so unexpectedly in 1837, very few were able to stand the test. The losses to the Government and the public were enormous.

Thus I have hurriedly reviewed those periods of our financial history bearing upon the proposed changes. You will observe that the idea of a National bank, under special charter, to act as fiscal agent of the Government, is not a new one, nor untried. In the past it was strongly opposed as contrary to democratic institutions, and it is to be doubted whether the suggestion would now meet with popular favor, for we have certainly lost none of our confidence in nor affection for those principles.

Plans proposed to take the place of our monetary system, based upon the experience of other nations, are not always applicable under the conditions, social and economic, existing in the United States.

A Government bank, if chartered now, would be made, as in the past, a political issue, and nothing could be more harmful to the institution itself, or to the public interests.

Digitized by Google

The problem of providing a safe, flexible bank circulation is certainly a most important and interesting one. Even the most pessimistic admit, if privileges were given the banks, under proper conditions and at proper times, to issue circulating notes based upon their assets, this privilege, if properly used, would prove a great safeguard.

The experience of the past, however, should make us slow to undertake the establishment of such a currency provision, to be carried out by banks operating under the present independent system, and such widely varying conditions. If, however, such restrictions were imposed as to make the issue of asset currency for profit impracticable, but an emergency provision, solely, would it not only be relieved of its objectionable features, but add to the strength and efficiency of our present system?

The multiplication of credits must be carefully guarded if we would have safety.

The question of practical importance to us is, Does the present system of banks meet the requirements of our advancing civilization and increased commerce, and if not, can it be so modified or changed as to do this?

In this connection, let us get clearly before us the functions of a bank and its purposes. Are they not to collect, transfer, distribute and trade in credits, and receive therefor compensation commensurate with the service and risk involved?

Undoubtedly, the operations of the independent Treasury are, under the present conditions, clumsy, and might become, in the hands of a Secretary of the Treasury inexperienced in finance, a menace to the business interests.

The present Comptroller of the Currency, in his recent report, recommends the modification of the laws regulating the deposit of Government funds in the National banks. This suggestion, if put into effect, with proper safeguards and the employment of the accumulating funds to discharge the national debt, should relieve the Treasury of its burden, and restore the accumulating money to the channels of trade.

Strength of the National Banking System.
