Where the solvency of a National bank was accompanied by a conveyance of its assets to a trustee, and a pledge thereof for the benefit of creditors, and this was followed by affirmative proceedings in liquidation, authorized by law, and the selection by the shareholders of the same trustee as their liquidating agent, such agent held the assets under an express trust for the benefit of creditors.

Where a contract by which a National bank assumed all the obligations of an insolvent bank in contemplated liquidation was fully explained at a meeting at which 1,665 out of 2,000 shares were represented, and after the contract was executed it was ratified by a vote exceeding the proportion of stock specified by Rev. Stat., Secs. 5220, 5221, the stockholders were not thereafter entitled to claim that such contract was ultra vires.

Where a National bank assumed the debts of an insolvent bank contemplating liquidation, in consideration of a transfer of certain of the bank's available assets, and certain notes for the balance, such notes represented the "contracts, debts, and engagements" of the insolvent bank in equity, for which its stockholders were liable, as provided by Rev. Stat., § 5151.

These were appeals from a decree of the Circuit Court of the United States for the District of Nebraska enforcing the liability of the appellants as shareholders of the American National Bank of Omaha. In December, 1895, the managing officers of that bank anticipated the withdrawal, about the first of the following year, of a large amount of deposits. The condition of the bank was such that it had not available funds sufficient to meet the expected demands and to thereafter continue in business and comply with the requirements of the National Banking Act. Consequently, on December 21, 1895, a contract was entered into with the Union National Bank of the same city, the terms of which, so far as need be recited, are as follows:

The Union National assumed the payment of the liabilities of the American National to its depositors and on account of bills payable, and in return was to receive its cash, cash items, and such bills receivable as the former was willing to accept at par and without recourse. The difference between the aggregate of the amounts so received and the gross amount of liabilities assumed was to be represented by three non-negotiable promissory notes of the American National, the payment of which was to be secured by a pledge of all of its remaining assets to Thomas L. Kimball as trustee.

This contract was carried out. The Union National moved into and took possession of the quarters of the retiring bank. It was ascertained that the total indebtedness of the American National on account of deposits, demand and time certificates and bills payable, which were assumed by the Union National, amounted to $289,097.30; that the cash, cash items, and bills receivable taken without recourse by the Union National aggregated $88,097.30; that a balance of $201,000 remained. To evidence this balance the President and Cashier of the American National executed to the Union National three non-negotiable promissory notes, each for $67,000, payable, respectively, in one, two, and three years from their date, December 23, 1895.

In accordance with the contract the remaining assets of the American National were placed in the hands of Thomas L. Kimball, the President of the American National, as trustee for the contracting parties and for the protection of their respective rights under the contract. Kimball as trustee retained possession and controlled the collection of them until his death, which occurred during the pendency of the complainant's suit, when his successor, James Burness, was appointed and thereafter continued in the performance of the trust duties.

The assets which were pledged to the Union National, although of large amount in face value, were found to be of little actual worth. The execution of the contract of December 21, 1895, by the President and Cashier of the American National, was directed by resolution of the board of directors of that bank. On January 14, 1896, an annual meeting of the shareholders of that bank was held, at which were represented 1,665¾ shares out of a total of 2,000. At this meeting a resolution was adopted instructing the directors to take action looking to the liquidation of the bank. On February 25, 1896, another meeting of the shareholders was held, at which were represented 1,696 shares, and at which a resolution for the voluntary liquidation of the bank was adopted by an affirmative vote of 1,639¾ shares. Thomas L. Kimball, theretofore appointed as trustee of the remaining assets of the bank, by the contract of December 21, 1895, was designated in the resolution as the agent and trustee of the shareholders in the liquidation proceedings. All of the subsequent proceedings provided by law for voluntary liquidation were thereupon duly adopted. The Union National fulfilled its obligations under the contract, having taken up the liabilities assumed by it. It being found that the trustee was meeting with little success in the collection of the assets, and that the principal of the note first maturing had been but slightly reduced, this suit was instituted August 8, 1898, by Sumner Wallace, a citizen of New Hampshire, as the assignee of the note, against the Union National, Thomas L. Kimball, trustee, and the American National and its stockholders, including the appellants. By an amended bill the complainant sought, on behalf of himself and all of the other creditors of the American National, the winding up of the affairs of that bank, the determination of the amount due him upon his note, the subjection of the remaining assets to the payment of his claim, the ascertainment of all the creditors and the amounts of their claims, and the enforcement of the liability of the stockholders. The complainant had not reduced his note to judgment prior to the institution of the suit. During the progress of the suit the uncollected assets were sold by order of the court and the proceeds accounted for. Upon final hearing a decree was entered ascertaining the amounts due the complainant and the Union National after the application of all credits, the number of shares of stock held by each shareholder of the American National, and against each defendant shareholder for $97.23 per share of stock held by him. The amount of the recovery was appropriately apportioned between the two creditors. From this decree the appeals were prosecuted.

Before SANBORN, THAYER, and HOOK, Circuit Judges.

HOOK, *C. J.*: The complainant, a citizen of New Hampshire, sued as the assignee of a non-negotiable promissory note. His assignor, the payee of the note, is a National bank located in the State of Nebraska, and is therefore to be deemed a citizen of that State so far as concerns the question of jurisdiction. Most of the appellants are also citizens of Nebraska. This being so, some ground of Federal jurisdiction other than diversity of citizenship must be found to exist to justify the maintenance of the suit against them. May it be found in the provisions of the acts of Congress relating to cases for the winding up of the affairs of National banking associations and to enforce the liability of shareholders of such associations as may have gone into voluntary liquidation? It is obvious that any case of such a character would be one arising under the laws of the United States of which, in the absence of some specific limitation of the general grant of jurisdiction, a Circuit Court would have cognizance irrespective of the citizenship of the parties.

The statutes which are pertinent to this question are as follows:

"Any [National banking] association may go into liquidation and be closed by the vote of its shareholders owning two-thirds of its stock." (Section 5220 Rev. St. [U. S. Comp. St. 1901, p. 3503].)

"That when any National banking association shall have gone into liquidation under the provisions of section five thousand two hundred and twenty of said statutes, the individual liability of the shareholders provided for by section fifty-one hundred and fifty-one of said statutes may be enforced by any creditor of such association by bill in equity, in the nature of a creditor's bill, brought by such creditor on behalf of himself and of all other creditors of the association, against the shareholders thereof, in any court of the United States having original jurisdiction in equity for the district in which such association may have been located or established." (Act of June 30, 1876, c. 156, § 2, 19 Stat. 63 [U. S. Comp. St. 1901, p. 3509].)

That the jurisdiction for suits hereafter brought by or against any association established under any law providing for National banking associations, except suits between them and the United States, or its officers and agents, shall be the same as, and not other than, the jurisdiction for suits by or against banks not organized under any law of the United States which do or might do banking business where such National banking association may be doing business when such suits may be begun: and all laws and parts of laws of the United States inconsistent with this proviso be, and the same are, hereby repealed." (Proviso to section 4, Act of July 12, 1882, c. 290, 22 Stat. 163 [U. S. Comp. St. 1901, p. 3458].)

That all National banking associations established under the laws of the United States shall, for the purpose of all actions by or against them, real, personal, or mixed, and all suits in equity, be deemed citizens of the States in which they are respectively located; and in such cases the circuit and district court shall not have jurisdiction other than such as they would have in cases between individual citizens of the same State. The provisions of this section shall not be held to affect the jurisdiction of the courts of the United States in cases commenced by the United States or by direction of any officer thereof, or cases for winding up the affairs of any such bank. (Act of Aug. 13, 1888, c. 866, § 4, 25 Stat. 436 [U. S. Comp. St. 1901, p. 514].)

Section 2 of the act of June 30, 1876, was not repealed either by the act of July 12, 1882, or by the judiciary act of August 13, 1888. The former authorizes suits against shareholders for the enforcement of their statutory liability, while the two latter relate exclusively to suits by or against the banking associations themselves. These subject-matters, while closely related, are in a legal sense quite different. But even if the later acts could be said to cover in a general way the purpose of the first, nevertheless, under well-known rules of statutory construction, the law prescribing the special remedy in a particular case would stand unrepealed. That it is still in force and operative has been judicially recognized. (Commercial Nat. Bank vs. Weinhard, 192 U. S. 243, 250; McDonald vs. Thompson, 184 U. S. 71, 75; King vs. Pomeroy, 121 Fed. Rep. 287, 58 C. C. A. 209; Williamson vs. Bank, 115 Fed. Rep. 793, 52 C. C. A. 1.)

Prior to the act of July 12, 1882, relating to National banking associations, the Circuit Courts of the United States had general cognizance of suits by or against National banks, but by the proviso of section 4 of that act such banks were placed, for purposes of jurisdiction, in the category of domestic corporations of the States in which they were respectively located, with an exception as to "suits between them and the United States or its officers and agents." This proviso was excerpted from the act of 1882, and embodied, with some change of phraseology, in section 4 of the judiciary act of March 3, 1887, and of the corrective act of August 13, 1888, the exception being expressed as follows:

"The provisions of this section shall not be held to affect the jurisdiction of the courts of the United States in cases commenced by the United States or by direction of any officer thereof or cases for winding up the affairs of any such bank."

Cases of the latter character were not in terms excepted from the prohibition of the act of 1882. It seems clear that section 4 of the act of 1888 was intended to displace and to be a substitute for the proviso of section 4 of the earlier act.

It was not the purpose of Congress, by either of these acts, to wholly deprive the circuit courts of jurisdiction of suits by or against National banks arising from the subject-matter thereof. A suit which may be brought in a circuit court by or against a citizen of a State because it arises under the Constitution, laws, or treaties of the United States may for the same reason be brought in such court by or against a National bank located in the same State. (Petri vs. National Bank, 142 U. S. 644, 647.) All that was intended was that jurisdiction should no longer be asserted solely on the ground of the Federal origin of such banks—merely because of the source of their incorporation. In respect of jurisdiction they are to be considered as though they were organized under the laws of the States in which they are respectively located.

So far, therefore, as the case at bar may be considered as one to enforce the liability of the stockholders of a National bank which has gone into voluntary liquidation, the jurisdiction of the circuit court is sustained by section 2 of the act of June 30, 1876.

But a broader and more satisfactory ground may be found in the provisions of the act of August 13, 1888. Section 1 of that act in general terms confers jurisdiction of causes arising under the laws of the United States, while those which are brought to wind up the affairs of National banks are expressly excepted from the prohibitions of section 4.

A suit against an insolvent National bank which has gone into voluntary liquidation to enforce a specific lien, or to enforce and judicially administer a trust previously created by contract, or to enforce and judicially administer the trust arising from the insolvency and proceedings in liquidation, is a suit arising under the laws of the United States. It is also a suit to wind up the affairs of such bank. The same is true of a suit to enforce the liability of the stockholders of such a bank.

In Guarantee Co. vs. Hanway, 104 Fed. Rep. 369, 44 C. C. A. 312, it was held by this court that an action to recover a judgment against an agent selected by the stockholders of a National bank to succeed a receiver appointed by the Comptroller of the Currency, and to enforce the same against the assets of the bank, is in effect a case to wind up its affairs, under section 4 of the act of 1888. This case was followed in International Trust Co. vs. Weeks (C. C.) 116 Fed. Rep. 898, a suit to recover on a covenant in a lease from an agent appointed by the stockholders of a National bank to close its affairs. On appeal the jurisdiction of the court was upheld by virtue of section 4 of the act of 1888. (Weeks vs. Trust Co., 125 Fed. Rep. 379, 60 C. C. A. 236.) See, also, Snohomish County vs. National Bank (C. C.) 81 Fed. Rep. 518, which was a suit to enjoin the stockholders' agent, engaged in winding up the affairs of the bank, from proceeding further, and to procure the appointment of a Receiver to take charge of the remaining assets.

The tangible assets of an insolvent National bank which is in the process of liquidation constitute, in the hands of the liquidating agent, a trust fund for the primary benefit of creditors, and so of the liability of the shareholders of a bank similarly circumstanced.

In King vs. Pomeroy, supra, it was said that the enforcement of the liability of the stockholders of a National bank in process of liquidation and the distribution of the proceeds "is as much a part of the liquidation of the debts of the bank as the collection and distribution of the proceeds of its bills receivable or any other of its assets."

There is no sound reason why, at the suit of one or more creditors on behalf of all for the winding up of the affairs of the bank, there may not be had, if so desired, a complete judicial administration of the affairs of the bank, an ascertainment of the valid and subsisting claims against it, an enforcement of the trusts in respect of both the assets and the capital stock, and, finally, the distribution of the avails. Nor would a bill for such comprehensive relief be multifarious. (Richmond vs. Irons, 121 U. S. 27.) All of these results are accomplished in an involuntary proceeding in liquidation under the direction of the Comptroller of the Currency, which is said to constitute but one continuous transaction; and, as was observed by the Supreme Court:

"When in the case of voluntary liquidation the proceeding is instituted by one or more creditors for the benefit of all, by means of the jurisdiction of a court of equity, there seems to be no reason why the nature of the proceeding should be considered as changed. * * * The two subjects of applying the assets of the bank and enforcing the liability of the stockholders, however otherwise distinct, are by the statute made connected parts of the whole series of transactions which constitute the liquidation of the affairs of the bank." (Richmond vs. Irons, supra.)

* * * * * * * * *

It is contended that in making the contract, executing the notes, and transferring its assets the American National transcended its corporate powers, and that no debt was thereby created which could be enforced against its shareholders. (Ward vs. Joslin, 186 U. S. 142.)

We may at the outset omit any consideration of what might be the case were these transactions dependent alone upon the authority of the officers and board of directors of the bank, for the evidence shows clearly that what was done by them was ratified and confirmed by the shareholders. The contract of December 21, 1895, was executed by Thomas L. Kimball as President of the American National pursuant to the instruction of a resolution of its board of directors. At the annual meeting of the shareholders held January 14, 1896, at which 1,665 out of a total of 2,000 shares of stock were represented, the contract was read, and an explanation made by the President of the condition of the bank which led up to and made its execution necessary. This was followed at the same meeting by the adoption of a resolution, by the votes of those representing more than 1,600 shares of stock, instructing the directors to take action looking to the liquidation of the bank. Pursuant to this resolution another meeting of the shareholders was held February 25, 1896, 1,696 shares being represented, at which a formal resolution for liquidation in accordance with sections 5220 and 5221 of the Revised Statutes was adopted by a vote of those owning 1,639¾ shares, being some 300 more than were necessary under the law. In this resolution it was provided that "Thos. L. Kimball be and he is hereby appointed the agent and trustee of the shareholders of such bank to effect such liquidation."

The significance of this appointment is apparent when it is recalled that Kimball was also designated as the agent or liquidating trustee in the contract of December 21, 1895. Another shareholders' meeting was held January 12, 1897, at which 1,531 shares were represented, and at this meeting there was presented a comparative statement over the signature of Thomas L. Kimball, trustee, showing the condition of the bank on December 21, 1895, when the contract was made, and on January 1, 1897. It included an account of transactions during the progress of the liquidation, and an expression of views as to the best course to be pursued with reference to the remaining assets. Reference was definitely and explicitly made in this statement to the Union National and to the payment to it of proceeds of collections which had been made by the trustee. It was ordered to be spread upon the records of the bank.

Shortly after the execution of the contract of December 21, 1895, and before the adoption of the resolution for liquidation, a writing containing an express ratification of the action of the directors in respect of the contract between the two banks was executed by the owners of more than two-thirds of the stock of the American National. At no meeting of the shareholders, so far as the record shows, was there any word of criticism or objection to the transaction with the Union National except so far as it may be gathered from the mere fact that a small number of shares were voted against the resolution for liquidation. When it is considered that the Union National was engaged in carrying out its part of the contract, was disbursing its funds in taking up and caring for the contracts, debts, and engagements of the American National, the duty of the shareholders of the latter in meeting assembled to then repudiate the transaction, if they ever desired to do so, was imperative. Instead of so doing they supplemented the transaction with the Union National by proceedings in voluntary liquidation adopted by a vote largely in excess of that required by law and conducted such liquidation in connection with and as part of the performance of the contract of December 21, 1895. Every consideration of equity, good conscience, and justice leads to the conclusion that the shareholders should be held to have ratified and approved of what was done and what was then being done.

So far as the Union National was concerned the transaction between the two banks was in the exercise of its ordinary powers as a banking association. (Schofield vs. Bank, 97 Fed. Rep. 282, 38 C. C. A. 179.) When the contract was entered into the American National was confronted by an emergency. A withdrawal from the bank of a large amount of deposits was anticipated, and it had not the money or available cash resources to meet it and thereafter continue business. At the time, as subsequent experience demonstrated, the bank was in fact hopelessly insolvent. But in the light of the conditions which were known it was within the power of the officers and directors of that bank to make the contract of December 21, 1895, with the approval of the shareholders owning a larger proportion of the capital stock than was necessary under the law in case of a voluntary liquidation.

The expression "usual course of business" as one of limitation upon the powers of a corporation is generally referable to the activities of a going concern, and has little, if any, application to one which is upon the threshold of liquidation because of insolvency. In the latter condition the managing officers of a corporation, with the approval of the shareholders, may make any fair and equitable disposition of its assets which, not being in violation of any provision of law, will insure the payment of all of its debts and is reasonably calculated to preserve the largest equity for its shareholders. In such an emergency a corporation should not be held to be helpless and incapable of an act of duty to creditors, and of preservation of the interests of its shareholders merely because it may be outside of the usual routine or course of its business.

In the case at bar all of the obligations of the American National to the government were fully performed, no duty was omitted which called for the interposition of the Comptroller of the Currency, and no Federal statute was violated. Upon insolvency and the institution of proceedings in liquidation the assets of a National bank stand pledged by law to the payment of the debts, and the surplus, if any, to a ratable distribution among the shareholders. The contract which is attacked by the appellants was intended to accomplish nothing substantially different. Instead of many creditors to be dealt with, it was arranged that there should be one whose demands should embrace those of all of the others. And in considering the relation of the Union National and the complainant, its assignee, to the American National, we need not stop at the three notes which they hold. In the same sense that a shareholder may go behind a judgment recovered against his corporation to show the character of the indebtedness which it represents, so in a case like the one in hand may a creditor, holding a note of the bank, show, if necessary, the nature of the debt which is evidenced thereby. In equity the claims of the complainant and the Union National represent the "contracts, debts, and engagements" of the American National for which the stockholders of the latter are responsible in accordance with the provisions of section 5151 of the Revised Statutes (U. S. Comp. St. 1901, p. 3465).

The complaint made on behalf of some of the appellants on account of the computation of interest upon the claims of the creditors was not made the subject of an assignment of error, and is therefore not considered.

The decree of the circuit court is affirmed.

COLLECTIONS—NOTES PAID WITH MISAPPROPRIATED FUNDS—RECOVERY THEREOF.

Supreme Court of Indiana, June 30, 1905.

PORTER *vs.* ROSEMAN.

Where a note lodged with a bank for collection is transmitted to another bank for this purpose, payment to the latter constitutes payment to the holder.

Where the maker of a note misappropriated his employer's money, and used the same in taking up the note which had been transmitted by the payee to a bank for collection, the payee acquired no title to the money, although he received the same in innocence and good faith, and without knowledge of its source, and although it was impossible to trace the identical money from the bank into the payee's possession.

This was an action upon open account for goods sold and delivered. The defendant interposed a set-off based upon the following facts:

Prior to the commencement of this action there was owing the plaintiff (appellee), a resident of New York, from the appellant, $249, for goods sold and delivered. There was also owing the plaintiff from one William Mount, a former merchant of Elwood, for goods sold and delivered prior and subsequent to June 10, 1897, $432. On said June 10, 1897, Mount was in the employ of the defendant, and had charge of the defendant's jewelry store in Elwood on a fixed salary.

On the latter date the plaintiff's agent, knowing that Mount had no interest in the defendant's said store except as salesman, called upon Mount therein for a settlement of his indebtedness to the plaintiff, and during the call assisted Mount in making sale of a diamond belonging to the defendant, and received $35 of the proceeds which he credited to the account of Mount, and turned it over to the plaintiff. The balance of the account was arranged by Mount executing to the plaintiff and delivering to said agent his notes for the amount, payable in monthly installments of $20 each, beginning October 31, 1899. The notes were delivered to the plaintiff in New York, and, as they severally became due, were placed by the plaintiff in a bank in New York for collection, and by that bank forwarded to a bank in Elwood, at which latter bank eight of said notes first maturing were paid by Mount from money belonging to the defendant, which he had received from sales made from said store.

The plaintiff had no knowledge of the ownership of the money used in the payment of his notes. As they were paid the Elwood bank remitted a like sum of money to the New York bank, where it was credited to plaintiff's account, but there was no evidence that any part of the identical money paid by Mount was remitted to New York or received by the plaintiff.

HADLEY, *J.* (Omitting part of the opinion): The conclusion of law is that the defendant is entitled to a set-off for the $35 knowingly received by the plaintiff's agent from the sale of the defendant's diamond, and that the plaintiff is entitled to recover the balance of his claim. The facts pleaded as an answer and equitable set-off are substantially the same as those found to be true in the special finding, and the exception reserved to the conclusion of law raises the question, do these facts show appellant to be entitled to set off against the claim of appellee an amount equal to the sum of appellant's money found to have been converted and used by Mount in payment of the latter's debt to the appellee? The $35 received directly by appellee's agent from the purchase money for the diamond, with knowledge that it was appellant's money, was allowed by the court as a proper set-off, but the sum converted by Mount in the payment of his notes to the bank, to wit, $160, was disallowed, presumably, because (1) the identical money converted was not traced to appellee; and (2) when received appellee had no knowledge of the conversion. Was the conclusion of law right?

One of the facts found is that Mount wrongfully converted $160 of appellant's money and delivered it to appellee in discharge of a debt. It is true, the immediate delivery of the money was to the bank at Elwood, which bank transmitted it to the bank in New York, where it was credited to appellee. These banks constituted the agency selected by appellee for the collection of his notes, and in every proper sense a payment to the bank was payment to appellee. (Jones vs. Kilbreth, 49 Ohio St. 401, 413; Bank vs. Union Trust Co. 149 Ill. 343, 351.)

It is plain that Mount acquired no title by the conversion, and that he transferred to appellee no better title to the money than he himself possessed. (Alexander vs. Swackhamer, 105 Ind. 81; Shearer vs. Evans, 89 Ind. 400; Breckenridge vs. McAfee, 54 Ind. 141.)

Appellant's money, having reached the possession of appellee without authority or right, remained as much his property in the hands of appellee as it was in the hands of Mount (Shearer vs. Evans, 89 Ind. 403); and this, too, without reference to whether appellee at the time of his receipt did, or not, know whose money it was. He received it from one who had no authority to dispose of it, and its appropriation to his own use was conversion. (Alexander vs. Swackhamer, supra; Harlan vs. Brown, 4 Ind. App. 319, 323.) Appellee's innocence and good faith afford no protection against the rightful owner who has been tortiously dispossessed. (Breckenridge vs. McAfee, 54 Ind. 149.)

To charge appellee, it is not essential that appellant shall trace his identical money into the possession of appellee. It is sufficient to show that it went into his bank account. (Pearce vs. Dill, 149 Ind. 136, 143, and cases cited.)

DEPOSIT—WHEN GENERAL AND NOT SPECIAL.

Supreme Court of Kansas, July 7, 1905.

STATE, *ex rel.*, COLEMAN, ATTORNEY GENERAL, *et al. vs.* DICKERSON, *et al.*

When a deposit is made under such circumstances that the only duty resting upon the bank is to pay in money on demand, the deposit is general and not special.

BIRCH, *J.*: The question in this case is whether a certain bank deposit is general or special. The plaintiff in error, a woman, left money at a private bank, stating to the banker that she believed she would leave it for a few days, and that she wanted him to keep it for a few days. The money consisted of a roll of bills, neither wrapped nor tied, and not inclosed within any bag or box or other kind of receptacle. Upon the delivery of the money she was given an ordinary pass book in which the transaction was entered as an ordinary deposit. No request was made that the money be kept apart from the funds of the bank, no special agreement was made as to the character of the deposit, and ordinary deposit slips were prepared at the time, from which the books of the bank were afterwards written up. The bank failed, and a receiver was appointed to take charge of its affairs.

Upon the hearing of an application for an order upon the receiver for a return of the deposit to the plaintiff in error, she testified that when the deposit was made she did not expect a return of the identical roll of bills; that she knew her money would be handled, maybe, several times before she would get it out again; and that it made no difference to her whether she received gold or silver or paper, so she got it. No attempt was made to identify in the Receiver's hands the bills which had been deposited. Under all the authorities these facts show a general deposit. (Plano Mfg. Co. *vs.* Auld [S. D.] 86 Am. St. Rep. 775, note; Zane on Banks & Banking, §§ 129, 136, 162; 3 A. & E. Encycl. of L. [2d Ed.] 827; 5 Cyc. 513.)

When the deposit was made the plaintiff said she did not want a check book, because she intended drawing all the money in a few days, and that it was not necessary that she have a bank book. But these facts did not change the essential character of the deposit. She did take a bank book, and the money was subject to check for any amount whenever she saw fit to demand it. She further said she did not want to become a regular depositor at the bank. But this observation could mean no more than that she did not contemplate making a practice of leaving money there. At the time the deposit was made the banker remarked that he understood she was going to build, and she then explained to him something of her plans with reference to the use of the money when she should withdraw it. But this fact did not change the legal relation of the parties. The only duty resting upon the bank was to pay in kind, on demand, whatever the purpose of the withdrawal might be. The plaintiff in error was the only witness in the case, and in view of her conduct and admissions, her declaration at the hearing that she did not intend to deposit her money was, of course, nugatory.

In the application to the court, facts were alleged tending to show a right in the plaintiff in error to rescind the deposit and charge the bank as a trustee ex maleficio, but no evidence concerning them was offered. It was not necessary that the receiver should deny the charges of the motion in order to put the plaintiff in error upon proof of them.

The judgment of the district court having been rendered in accordance with these views, it is affirmed. All the justices concurring.

CREDIT GIVEN BY TELEGRAPH—REVOCATION OF.

Supreme Court of Idaho, May 19, 1905.

BRINTON *VS.* LEWISTON NATIONAL BANK.

Where the bank of C wired the L. N. Bank that the Alamance Mining Company had deposited with it for credit of L. N. Bank, for use of Brinton, $1,000, which telegram was received after banking hours, and the order countermanded by wire the following day before credit had been given thereof, and before any rights or liabilities of B or other parties had been incurred in regard thereto; held, that the L. N. Bank was not liable to B for such deposit.

SULLIVAN, *J.*: This is an action to recover $1,000, with interest thereon, alleged to have been deposited in the appellant bank to the credit of the respondent.

The following among other facts appear in the record: On the 12th day of June, 1900, the respondent, for Thomas W. Jones, entered into a contract with John N. Ward for the sale to said Ward of the Republic and the Republic No. 2 mining claims situated about three miles from Elk City, Idaho County, for the sum of $15,000, payments to be made as follows: $3,000 on or before April 1, 1901, $3,000 on or before November 1, 1901, $3,000 on or before February 1, 1902, $6,000 on or before June 7, 1902; and promissory notes were executed in the usual form of negotiable notes, with interest at the rate of 7 per cent. per annum, payable semi-annually. Ward, the second party to said contract, agreed to do certain work on said mining claims and erect certain machinery thereon and a mill in connection therewith.

It is not necessary for a decision of this case to set out the full terms of said agreement. It appears that said Ward proceeded and complied with the said agreement up to a certain date, and the mill erected thereon was destroyed by fire; and thereafter a supplementary agreement was made between said parties, whereby they stipulated that in case $9,000 were paid as specified in said contract, that sum was to be taken as a full and complete discharge and satisfaction of all demands that said Jones had against Ward arising out of the transaction referred to in said contract. It was provided, among other things, in said supplementary contract, that if the said sum of $9,000 ($2,000 of which had been paid on the day of execution of the contract, leaving a balance of $7,000) was not paid at the time specified, then the promissory notes and other documents executed in connection therewith, which had been deposited with the Lewiston National Bank in escrow, were to be delivered as follows: The deed deposited in escrow was to be delivered to J. N. Ward or his agent; the notes of $15,000, or the mortgages securing the payment thereof, were to be delivered to Thomas W. Jones, or his authorized agent, and were to be of full effect except as to the payments made thereon. And it was provided that the execution of said supplementary agreement did not affect the liability of Ward to Jones to the full extent of $15,000, unless the $9,000 referred to were paid at the time and in the manner specified. All payments thereon were to be made to the Lewiston National Bank, deposited there to the credit of Caleb Brinton, as attorney in fact of said Jones. It was expressly stipulated that time was of the essence of said agreement, except that, if the performance of any act required under this agreement was prevented at the time specified therein by either (1) the act of God, (2) the elements, or (3) unavoidable delay in the transmission of the money called for, or any part thereof, or of the machinery and necessary appurtenances to erect and operate the mill called for therein, that such matters so happening should operate to excuse the non-performance of such agreement for the period of five days only.

It appears that when the note of $3,000 due November 1, 1901, became due, payment was not made; that on November 15, 1901, the Bank of California wired the Lewiston National Bank as follows: "San Francisco, November 15, 1901. Lewiston National Bank, Lewiston, Idaho. Alamance Mining Company has deposited with us, for your credit, for use of Caleb Brinton, one thousand dollars." Said dispatch was received by the Lewiston National Bank at 4:50 o'clock p. m., which was after banking hours. Before the books of the First National Bank were written up on the 16th, and before any credit of said sum was made, and on November 16, 1901, at 11:40 o'clock a. m., a telegram was received by the Lewiston National Bank ordering the credit of said $1,000 canceled, and no credit was entered on the books of the First National Bank in favor of said Brinton or Jones. In the telegram directing the cancellation of said credit the Bank of California requested the First National Bank of Lewiston to wire it if the request was complied with, and the bank at Lewiston wired them immediately that the request had been complied with. The question arises, on the above stated facts, as to whether the appellant bank is liable. There has been considerable controversy, as shown by the record and briefs of counsel of the relations existing between the various parties, and especially Ward and the Alamance Mining Company. But we think it is sufficiently shown by the record that the Alamance Mining Company was the assignee of the contract between Ward and Jones, and we think that the record clearly shows that the Lewiston National Bank sustained the relation to the parties of the holder of the escrow agreement and other papers executed in connection with said transaction.

It further appears that neither the Alamance Mining Company nor Ward paid said $3,000 note when it became due on the 1st of November, 1901. Time was made of the essence of the contract. In case such payments were not made as stipulated, the deed of said property was to be delivered to Ward or his agent, and the promissory notes and other papers were to be delivered to Jones or his agent. That being true, the escrow holder had no authority to receive any payments, after such time had transpired, without the consent of both parties. That point, however, we do not consider vital to this case. It clearly appears from the record that the secretary of said mining company made the deposit of said $1,000 on the 15th of November, 1901, with the Bank of California,.and requested it to wire the Bank of Lewiston to that effect. That wire was received by the bank at Lewiston after banking hours, and the next morning, before the credit had been entered on the books of the bank, the Bank of California requested the bank at Lewiston not to give said credit, and the Bank of Lewiston immediately wired back that the request was granted.

It appears from the record that soon after the secretary of said mining company had made such deposit with the Bank of California the president of said company and one of the directors ascertained that said deposit had been made without their knowledge or consent, and at once went to the Bank of California, and requested to withdraw said deposit, as we think they had a right to do. And Brinton, the attorney in fact for Jones, had not been informed of the receipt of said telegram, and no one had incurred any loss or damage or had assumed any new rights or liabilities because of the first telegram above referred to. And we are of the opinion that the Bank of California, or, through it, the Alamance Mining Company, had the right to countermand said order for credit before any rights or liabilities had been incurred or losses sustained in consequence of it by either Brinton, as attorney in fact, or any third parties. (See Second National Bank of Baltimore vs. The Western Nat. Bank, 51 Md. 128, 34 Am. Rep. 300. The First National Bank of Lewiston received no money from the Bank of California.)

The above stated facts show how the transaction occurred; that it was impossible to transmit the money itself from San Francisco to Lewiston in the space of time that occurred between the two telegrams; and, even if it had actually received the money, and the depositor had appeared and requested that the instructed credit be not given, before any rights or liabilities or losses had been sustained by any one in consequence of it, they would have the right to recall the credit.

The judgment of the court below is reversed, and the cause remanded, with instructions to enter judgment in favor of the appellant. Costs are awarded to the appellant.

CHECK AS PAYMENT IN FULL—EFFECT OF ACCEPTANCE OF.

United States Circuit Court of Appeals, First Circuit, November 2, 1904.

UNITED STATES BOBBIN & SHUTTLE COMPANY *vs.* THISSELL.

The plaintiff, being in the defendant's employ at a disputed rate of wages, the defendant sent him a statement showing the rate at which the wages were computed, a check for the sum so ascertained, and a receipt in full to a date named, to be signed and returned. The plaintiff used the check, but did not sign the receipt. Held, that this was an accord and satisfaction of the claim, and also was an acceptance of wages at that rate during the continuance of the employment.

LOWELL, *District Judge*: This is an action at law to recover the balance of wages due upon an account annexed. The jury returned a verdict for the plaintiff, and the defendants exceptions are before us. We need consider but one question.

The plaintiff was in the defendant's employ at a rate of wages in dispute between the plaintiff and the defendant. The defendant admitted that it owed the plaintiff a certain sum. The plaintiff contended that the debt was larger. Under these circumstances the defendant wrote the plaintiff as follows:

"Dear Sir: Referring to yours of the 17th, calling our attention that you had not drawn full amount of salary at hand. We are enclosing statement made up by our bookkeeper, and he understands you have drawn only thirty dollars ($30.00) per week since September 1, 1900. We are also enclosing our check No. 6151, payable to your order for four hundred sixty-four dollars and twenty-two cents ($464.22) which is in full settlement for balance of your salary up to and including September 7, 1901. Unless you find above correct, you will return our check and statement. In future you will please draw full amount due you weekly."

An account was inclosed, and a receipt as follows:

"$464.22 Check No. 6151 No. ———.

"Received from U. S. Bobbin & Shuttle Co., Four hundred and sixty-four 22-100 Dollars, being balance of salary due to and including week ending Sept. 7, 1901, as per statement rendered."

To this the plaintiff replied as follows:

"Dear Sir: Your several communications of the 20th inst. with two checks, respectively for $464.22 & $376.71, are received. I have deposited the checks. When I have time and opportunity affords the privilege, I will examine the communications and if found correct, they shall receive proper attention."

The receipt was neither signed nor returned.

The defendant moved that the jury be instructed to return a verdict for the defendant on the grounds:

"(5) That it appears that there was an accord and satisfaction of plaintiff's claim to September 7, 1901, and that from said September 7, 1901, the rate was fixed by the then acceptance of the check sent to plaintiff September 20, 1901, at $1,800 a year, and that plaintiff has been fully paid at said rate.

"(6) That on the whole testimony the jury should be instructed to return a verdict for the defendant."

This motion was refused, and the defendant thereupon requested the following instructions:

"(5) That the plaintiff, by accepting and cashing the check inclosed in the letter of September 20, 1901, from the treasurer of the defendant corporation to him, and in which was also inclosed the statement showing that the wages or salary of the plaintiff were computed at the rate of eighteen hundred dollars ($1,800) per year from October 11, 1899, became entitled to be paid thereafter for his services at the rate of only eighteen hundred dollars per year.

(7) That the acceptance and cashing of the check sent to the plaintiff in the letter to him of September 20, 1901, from the treasurer of the defendant corporation, with the acts of the parties, was an accord and satisfaction of the claim of the plaintiff against the defendant for salary from the time when he commenced working for the defendant corporation, down to September ,7 1901.

(8) That on all evidence in the case the plaintiff is not entitled to recover, and the verdict must be for the defendant."

These requests were refused by the learned judge, who charged the jury:

"(3) That it was for the jury to determine whether the correspondence of September 20 and 21, 1901, and the acts of the parties thereunder, were an accord and satisfaction."

The plaintiff did not sign the inclosed receipt, and his letter shows that he wished to keep the matter open. Notwithstanding this, we are of opinion that his appropriation of the check, under the circumstances stated, was an acceptance of the terms upon which payment was offered. The weight of authority is to this effect. (Nassoiy vs. Tomlinson, 148 N. Y. 326; Talbott vs. English, 156 Ind. 299, 315; Neely vs. Thompson [Kan. Sup.], 75 Pac. 117; Ostrander vs. Scott, 161 Ill. 339; Hull vs. Johnson, 22 R. I. 66; McDaniels vs. Bank of Rutland, 29 Vt. 230.) Some of these decisions have been approved by the Supreme Court in Chic., Mil. & St. Paul R. R. vs. Clark, 178 U. S. 353, 367. There are, indeed, decisions to the contrary (see Day vs. McLea, 22 Q. B. D. 610; Rosenfield vs. Fortier, 94 Mich. 29; 17 Harv. Law Rev. 459, 469), but the great weight of authority is with the defendant.

It follows that the seventh instruction requested should have been given, and that the third instruction given was erroneous.

If the plaintiff's cashing the check above mentioned was conclusive evidence of an accord and satisfaction, it amounted also to an acceptance by the plaintiff of wages at the rate of $1,800 a year. We find no evidence of a contract to increase the rate of wages after the date of the defendant's letter. It follows that the learned judge should have directed a general verdict for the defendant. We have thus disposed of the whole case, and need not consider the defendant's other exceptions.

The judgment of the circuit court is reversed, and the plaintiff in error recovers its costs of appeal.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B.A., LL.B., Barrister, Toronto.]

DISCOVERY—CORPORATION—EXAMINATION OF OFFICER—DUTY OF OFFICER TO SUPPLY HIMSELF WITH INFORMATION.

CLARKSON VS. BANK OF HAMILTON (9 Ontario Law Reports, page 317).

STATEMENT OF FACTS: This was an action brought by the plaintiff as liquidator of an insolvent company to set aside a chattel mortgage given to the bank, on the ground that it was an unjust preference over the other creditors. Ordinarily only one officer of the corporation may be examined before trial by the opposite side. This motion was for an order permitting the examination under oath before trial of a third officer of the defendant bank. The General Manager had been examined and found to have no personal knowledge of the transaction; similarly with the inspector. It was now sought to examine the Manager of the branch at which the insolvent company had the bank.

JUDGMENT: Where a corporation or other company is a party to an action, it would seem reasonable and convenient that the company should suggest for examination the officer or servant best qualified to give all the information to which the opposite party is entitled. Such officer should prepare himself by obtaining full knowledge of all relevant facts so that the examining party may be in as good a position as if he were contending with an individual. The cases show that this is no more than is required by rules of court.

BANK IN LIQUIDATION—WINDING UP ACT—SECTIONS 72 AND 73—COMPENSATION—SET-OFF.

LA COMMUNAUTE DES SOEURS DE LA CHARITE DE LA PROVIDENCE VS. KENT, *et al* (Quebec Reports, 13 K. B. 483).

After a bank has suspended payment and its insolvency is notorious, compensation of a debt due to the bank cannot be effected by a transfer to the debtor of debts due by the bank to third parties where such transfer has been made to the debtor after the suspension and within thirty days prior to winding up proceedings under the "Winding-up Act."

This rule is not affected by the circumstance that the moneys offered in compensation consisted of moneys deposited with the bank by such third parties for the special purpose of aiding the debtor to meet his indebtedness to the bank but not transferred to the debtor until after the suspension of payment.

STATEMENT OF FACTS: On July 25, 1899, the Banque Ville Marie closed its doors and from that date ceased to do any banking business. Two days later the newspapers of Montreal announced the suspension of the bank, and one journal, "La Presse," published an interview with the President, in which it was stated by the President that he did not expect the bank ever to resume business. On August 9 following an order was made by the court declaring the bank insolvent and directing a liquidation under the Winding-up Act. On August 21 Kent and his associates were named as liquidators of the bank.

The defendants had discounted with the bank a note for twenty thousand dollars dated July 1, 1899, and payable one month after date. On November 29, 1899, the defendants commenced this action to recover the said sum of $20,000 and $383.33 interest since maturity.

La Communauté des Soeurs de la Congregation de Notre Dame de Montreal, who were a branch of La Communauté des Soeurs de la Charité de la Providence, had on deposit at various branches of Banque Ville Marie sums amounting to $15,000. During July they had been advised by the parent society that a sum of $20,000 would be required early in August, and had agreed to make up as much as possible of that sum. Apparently on August 1 the Soeurs de Notre-Dame had drawn checks on the various branches of the bank in which they had deposits for the full amount of their deposits, and had endorsed them over to the parent society, and not content with this transfer by endorsement they had on August 2 made a notarial transfer of all the said checks before a Notary. On August 4 the officers of the Soeurs de la Charité went to the bank and tendered in payment of their note for twenty thousand dollars all the said checks and a further sum in money sufficient to make up the twenty thousand dollars, which tender was refused by the officials of the bank. Later in the same day a formal tender was made by the attorney for the bank which was also refused on the ground that they could not accept as a set-off against the debt due to the bank the moneys on deposit which had been transferred to the maker of the note.

After the action had been commenced, the defendants paid in with their defence all the checks referred to and a sufficient sum in money to make up the sum of $20,000, and alleged that they took the assignments of these checks in ignorance of the insolvency of the bank. The liquidators alleged knowledge on the part of the society of the bank's insolvency sufficient to invalidate the transfer under the Winding-up Act.

JUDGMENT (ROBIDOUX, *J.*): The first question which the court is called upon to decide is whether on August 4, 1899, the defendants could rightfully offer in compensation to the bank the different checks which had been transferred to them by the Soeurs de Notre Dame.

The first section of the Winding-up Act which deals with set-off is section 57 in these terms: "The law of set-off as administered by the courts, whether of law or equity, shall apply to all claims upon the estate of the company and to all proceedings for the recovery of debts due or accruing due to the company at the commencement of the winding-up in the same manner and to the same extent as if the business of the company was not being wound up under this act." This is the general principle which regulates set-off where companies are in liquidation.

In the case of Vanier vs. Kent the Court of Appeal applying this section has held that set-off operates to the full extent between a deposit made in a bank and a debt due to the same bank by the depositor even up to the day upon which the bank went into liquidation; but this case is different from the one now before us. There was in it no question of a set-off effected by means of a transfer made by a depositor to a debtor of a bank after the bank had suspended payment. In this case the liquidators relied upon the exception created by section 73 of the Winding-up Act. It is declared by that section that set-off cannot be allowed where the person who claims the right of set-off has become a creditor of the insolvent company only by the transfer of a claim made to him in order that he may set it up as compensation for his debt and at a time when he had reason to believe the company of which he was a debtor to be insolvent.

Section 73 reads as follows: "When a debt due or owing by the company has been transferred within the time and under the circumstances in the next preceding section mentioned, or at any time afterwards, to a contributory who knows or has probable cause for believing the company to be unable to meet its engagements or in contemplation of its insolvency under this act for the purpose of enabling such contributory to set up, by way of compensation or set-off, the debt so transferred, such debt shall not be set up by way of compensation or set-off against the claim upon such contributory."

Section 72, referred to, provides: "Every payment within thirty days next before the commencement of the winding-up under this act by a company unable to meet its engagements in full, to a person knowing such inability, or having probable cause for believing the same to exist, shall be void; and the amount paid may be recovered back by the liquidator, etc."

From these sections it follows that a debt due to a bank cannot be paid by a set-off of a debt due by the bank which has been transferred to the bank's debtor within the thirty days before its liquidation if the debtor knew or had probable cause to believe such bank incapable of fulfilling its engagements at the time such transfer was made.

The question then is, Had the Soeurs de la Charité at the time when the Soeurs de Notre Dame transferred these checks to them knowledge or probable cause to believe that the bank was incapable of fulfilling its engagements?

It was shown that the representatives of both societies had seen the papers announcing the closing of the bank's doors, and had read the interview with the President, published in "La Presse"; they had presented their checks for payment on August 4, and they had been refused: in the notarial transfer it was recited that the parties had been unable to obtain payment of their checks by the bank and a provision was made in the agreement whereby any legal expenses incurred by the transferees in obtaining payment was to be borne by the transferrers. In view of this evidence, it is not possible to conclude that the two societies did not believe it probable that the bank could not at that time fulfil its engagements.

What is to be understood by the word "probable" in section 73 of the act? It is that which is probable in general; that which has an appearance of truth; that which is founded in reason; that which is reasonable to suppose, to conjecture; that which is plausible.

When a bank closes its doors and suspends its operations, is it more reasonable to suppose or to conjecture that it will be able to fulfil its obligations? Has it not a greater appearance of truth, does it not appear more reasonable and probable, that the bank will not be able to carry out its engagements? It appears to me that in the case when a bank suspends its operations and closes its doors (without some cause apart from its own affairs, sudden and unforeseen) in the middle of the normal pursuit of its business, the probabilities are strongly that it will be incapable of resuming business.

I do not forget that in the case of the Banque de Peuple vs. Langois, the Court of Appeal has held that a claim by the bank was set off by an accepted check and a deposit receipt issued by it at the very time when the bank suspended payment; but I consider the present case presents many differences from that one.

The Banque de Peuple it is true had suspended its operations on July 15, 1895, without having been forced to do so by any violent external cause; the check which was offered in set off was accepted by it on September 3, 1895, while the deposit receipt was issued on November 1, 1895, and the two were accepted as a set-off. The presumption of the insolvency of this bank which would have resulted from the suspension of its operations was overcome by the declarations of the directors of the bank that they would be able to pay the entire amount of the money which they had received on deposit. On these declarations and the general confidence of the public that the bank would pay everyone in full the trial judge allowed the set-off and the Court of Appeal confirmed this judgment.

The probable cause for believing in the insolvency of the company which exists in this case did not exist in the case of the Banque de Peuple vs. Langois. I therefore hold that the defendants have no right of set-off in this action.

From this judgment an appeal was taken and was heard by the Court of King's Bench (Bosse, Blanchet, Hall, Ouimet, *JJ.;* and Charbonneau, *J. Ad Hoc*). The judgment in appeal was delivered by Hall, *J.*

In a very elaborate and carefully-considered judgment, the learned trial judge, Mr. Justice Robidoux, reached the conclusion that the closing of the bank's doors and the cessation of payments on July 25 were legal and sufficient evidence of the bank's insolvency, and that payments could not have been legally enforced nor even voluntarily made after that date; that the transfer of depositors' funds by means of checks or otherwise to debtors of the bank, and their application to the liquidation of maturing liabilities of such debtors, would be equivalent to payment by the bank, and therefore prohibited by the statute. He made a distinction between deposits thus attempted to be transferred by others, and the application of the debtors' own deposits in compensation pro tanto of their own indebtedness. He held, therefore, that all the checks tendered by the appellants toward payment of their note were ineffective for that purpose, except the one for $314.57, drawn upon their own funds previously deposited in the bank to their credit, and maintained the action for the balance of the note, with interest and costs.

There is not, after all, much difference between the parties in their appreciation of the facts of the case, and it is only as to their application that we are seriously called upon to interfere. The closing of the bank's doors and the cessation of payments on July 25 are admitted, and the superior officers of the appellants' community admit their familiarity with the newspaper comments succeeding that event, and specially with those of "La Presse," which they regularly received and read. Now, it is significant that there appeared in that very newspaper, on the day succeeding the bank's stoppage of payments, an article on the subject, advising the holders of the bank's bills not to part with them at a discount, as they would certainly be redeemed in full, but adding this ominous remark, which must have attracted the attention of all, who, like the appellants and their sister communities, were interested in the question of the deposits: "The depositors, unfortunately very numerous, are in danger of losing a portion of their capital." All this class of creditors, including the appellants, must have felt, from the first, the great uncertainty of being able to recover the amount of their deposits. With the bank's doors closed, none could have presented a check at the bank's counters on or after July 25 with any expectation of being paid; but there was the hope—the natural and honest hope—that the benefit of these deposits might be secured, indirectly, by their transfer to persons, like the appellants, actually indebted to the bank, and actually engaged, as the appellants had been, prior to July 25, in securing funds with which to meet their indebtedness; but that such hope was mingled with serious doubt as to the result is evident from the notarial transfer previously mentioned, executed by the appellants at the time of the transfers.

Admitting, as the appellants must, that the makers of the checks could not have themselves presented and cashed their own checks on or after July 25, how can they expect that greater rights could be secured by a transfer of the checks than by their use by those to whom the funds actually belonged? Clearly they could not convey to others greater rights or more effective privileges than they themselves possessed. In the face of the Winding-up Act, compensation of debts due to the bank could not be effected, after the bank's stoppage of payment, by transfer to such debtors of debts due by the bank. Section 73 of the act is explicit in this respect. Compensation of a debt actually and directly due to the debtor by the bank is legitimate, and admitted in the present case in regard to the appellants' check of $314.57, but this results from the operation of law and not from the intervention or act of the parties.

CONTRACT—DEBENTURES—RIGHTS OF HOLDERS OF DETACHED COUPONS.

THE LEVIS COUNTY RAILWAY COMPANY *vs.* FONTAINE. (Quebec Reports 13 King's Bench, p. 523).

STATEMENT OF FACTS: This was an action to recover the sum of $500 brought by Fontaine as the holder of twenty coupons.

The railway company had issued a series of five hundred bonds for $1,000 each, payable to bearer, in the body of which bonds reference was made to a debenture mortgage given to secure bonds. The attached coupons were in the following words: "The Levis County Railway will pay to bearer at the office of the New York Security & Trust Company in the city of New York $25.00 in gold coin of the United States of America on the ——— day of ———, being semi-annual interest on its first mortgage gold bonds."

As a defence to Fontaine's action the company set up that the debenture mortgage expressly provided that any action to enforce payment on principal or interest could be brought only by and in the name of the New York Security & Trust Company, and that Fontaine was bound by this stipulation.

The Superior Court rejected this defence and gave judgment for the plaintiff. An appeal was then taken in the Court of King's Bench, whose judgment was delivered by Blanchet, *J.*

JUDGMENT. (SIR ALEXANDRE LACOSTE, *C.J.*; BOSSE, BLANCHET, HALL, and OUIMET, *J.J.*): The Superior Court had decided that, even admitting that the mortgage gave to the trustee the sole right of action to recover capital and interest, this stipulation could not bind Fontaine, because the coupons in his possession stated on their face that they were payable to bearer, without any condition or restriction; and in the second place that the clause relied on did not have the meaning sought to be given it by the company and meant only that if the capital and interest of the bonds became exigible before maturity, or if it became necessary to act upon the mortgage the trustee alone could take the necessary proceedings.

It is not denied that the holders of the bonds are bound by the terms of the debenture mortgage and that the trustee has the sole right to take proceedings as provided by the mortgage. They are in fact presumed to have accepted these conditions and to have renounced their right of action in their own name.

The legality of this term cannot be denied because the Legislature, which has exclusive jurisdiction in the matter, has validated this agreement; and as the object of the agreement is to limit the costs of action and to ensure that the security will be realized upon and evenly distributed among all those interested, the courts ought to give it a liberal interpretation having in view the object aimed at by the parties to it.

The plaintiff contends that this clause ought to receive a restrictive interpretation, because it takes away from creditors a certain and absolute right of action to recover a debt due to them. I would be of this opinion if it were a law or statute which we had to interpret; but we have here an agreement consented to and accepted by both parties, both of whom have received a sufficient consideration and in such a case a liberal interpretation should be placed on the document.

From this point of view I must conclude that the trustee is alone authorized, to the exclusion of creditors, to bring action on the securities where proceedings become necessary either before or after maturity. Moreover, the wording of the clause is not exclusive, but inclusive, and it follows that all proceedings must be taken by the trustee in its own name. It would be strange if it were otherwise, because to obtain the double object which was in view; that is to say, the protection of the company against a multiplicity of actions which would affect its credit and to preserve the security to be evenly distributed among all those interested, it was necessary to give to the trustee the exclusive control of proceedings to recover either capital or interest.

Another objection is raised on behalf of Fontaine. It is contended that the words, "any proceeding for the purpose of enforcing the payment of the principle and interest of said bonds," did not affect this action, which is to recover interest without principal.

This distinction does not appear to us well founded. The word "and" has frequently been interpreted to mean "or"; and as ordinarily no proceedings to recover the principal could be brought until after thirty years, while interest becomes due every half-year, it is fair to suppose that, in the intention of the contracting parties, the word "and" had the effect of a disjunctive participle. Therefore, as the recovery of interest independently of principal is a right which arises from the bond and the debenture mortgage, it must be enforced by the trustee alone.

It was held in the court below that the coupons being made payable to bearer became, as soon as they were detached from the bond, independent and distinct from the security of which they formed a part, and that those who became the purchasers were no longer bound by the terms attaching to them while they formed part of the bond. This contention does not seem to us to be better founded than the former.

It must not be forgotten that at the date when the company stipulated that the trustee alone should have the right to enforce payment of the bonds and interest, the coupons formed part of the bond, and that those who have since purchased the bonds have received them with the coupons which were then attached, and are accordingly bound by this condition. Can they, in transferring the coupons alone to third parties, give to such third parties greater rights than they themselves had? This question has been decided in the negative by several judgments in the United States, which have declared "that a detached coupon though having many of the incidents of commercial paper is still subject to the covenants contained in the bond."

A simple reading of the coupon advises the reader of the existence of a debenture mortgage made between the Railway Company and the Trust Company, and he ought to know that this mortgage would contain the terms and conditions under which the bonds were issued and which are ordinarily found in such contracts. Ordinary prudence would counsel him to become acquainted with the contents of this agreement, and if he had done so he would have bought the coupons at his own risk, and he is now presumed to have accepted all the terms which are contained in that agreement; among others that of not being able to bring an action to recover payment of the coupons without the interposition of the trustee. He finds himself therefore in the same position as a purchaser of a bond before the coupons were detached.

The appeal is therefore allowed and the action dismissed.

A PRACTICAL TREATISE ON BANKING AND COMMERCE.

ELEMENTS OF SUCCESSFUL BANKING.

WHY A BANKER COMES AFTER A MERCHANT AND MANUFACTURER—PRIMARY ELEMENTS OF SUCCESS—CAPITAL—ITS MINIMUM—HOW DISPOSED OF—LOCATION AND STYLE OF OFFICE—OFFICERS AND CLERKS—THE MACHINERY OF THE OFFICE—ULTIMATE END AND SUMMING UP OF WHAT A BANKER SHOULD BE.

In a treatise on banking and commerce it is perfectly in accordance with the reason of things that the successful merchant and successful manufacturer should be treated of before the successful banker. There must be merchants and manufacturers before there can be a remunerative business for the banker; and unless there are successful men in these callings, a banker, though he may take care of the surplus money of the community, will find it dangerous to lend money amongst them.

He will be pressed to do this beyond doubt, and every kind of influence will be brought to bear upon him to induce him to comply. He will, for example, be told that he must do his duty as a citizen. The town supports him, and he ought to support the town. It is a matter of plain obligation to help its industries along, for these, it will be said, are the very foundation of his own business. So the people will say, and what they say is sufficiently plausible to make a strong impression. But many a banker has had to suffer severely for listening to such representations. In such circumstances, that is, when there are few desirable customers in the locality, the banker will be offered high rates of discount. From some of the applicants he knows that he could take, practically, whatever he pleased; and from the best of them, or those who seem so, he will be offered rates such as he might think would enable him to provide a safety fund. But on the supposition that the business of the town is in such a state that there are as yet few or no successful men in it, high rates of interest will be no protection. No safety fund can be built up that is large enough to offset the losses which will inevitably ensue. The successful merchant and the successful manufacturer therefore must come in order of time before a banker can do a successful business.*

---

*It may be said that such a state of things as has been imagined thus far is impossible. But experience refutes this opinion. A case is known to the writer in which in the collapse in a certain town of a remarkable "boom" every single storekeeper in it, except one, failed. The town itself became bankrupt and could neither pay interest nor principal on its indebtedness. Its population decreased from 3,500 to 700, its main streets became grass-grown, and handsome buildings became tenantless. Of the money lent by a branch bank in that town more than three-fourths was lost. If the banker had been a private individual, he would have gone down in the crash and been ruined beyond redemption.

This case was in Manitoba, but even in Ontario the writer can recall instances almost equalling it in disaster. During a period of heavy collapse

But now on the supposition that in a certain locality sufficient savings have been accumulated to give business to a banker, and also that there are a number of prosperous men of business in the locality; what are the elements that make a banking enterprise successful?

(1) CAPITAL is certainly as much a necessity for a banker as for a merchant; for, speaking of him in this personal style, no man can expect a community to trust him with the care of their money unless he has shown ability to take care of his own.

(2) But how much capital ought a banker to have? What is reasonable in the case?

Putting aside for the present the private banker, it may be noticed that the legislatures both of Canada and the United States have dealt with this question in their banking laws.†

In Canada where the system of chartered banks *issuing circulation* is firmly established, the Bank Act provides that no bank shall possess a *smaller paid-up capital* than $250,000. This sum is certainly small enough for a corporation which has the power to issue notes for circulation—which notes, are, in effect, guaranteed by the whole body of the banks of the country.

In the United States, however, every banking office is owned by a separate corporation and some of them, owing to the absence of branch system, are permitted to be organized on a capital of only $25,000.

This must be conceded to be running near the danger point. It certainly imposes upon a bank of such small dimensions the duty of incurring only the most moderate risks, and confining the business within limits more like those of a storekeeper than a banker.

England has no legal requirement of minimum capital in banking; and the tendency from the beginning has been for banks in England (as distinguished from Scotland) to have a smaller capital in proportion to the business done than is common in Canada; the Bank of England alone excepted.

The reason for this is twofold: First, the branch system, until lately, has never been developed in England to the extent that it has in Scotland and in Canada. The banks of England, as a rule, do a much more localized business than those of Scotland and Canada. Secondly, but a more important and pertinent reason is, that business conditions in Great Britain are so much more settled that banks may safely work on a smaller relative capital than is necessary in this country.

Beyond the minimum required by the Banking Act the members of each corporation in Canada decide for themselves what the capital shall be. It depends largely on the sphere they intend to occupy, and how far they mean to extend it.

---

the losses suffered by banks in certain towns have amounted to a large percentage of their assessed value.

†There are no laws, properly speaking, in Canada, on the subject of private banking, though, as experience has shown, some regulations might have been embodied in specific legislation with advantage. The only provisions affecting this class of bankers are contained in two clauses of the General Banking Act, viz., one to prohibit them from issuing circulating notes; the other to prohibit them from assuming a corporate name, such as that of the "Iroquois Banking Company." These provisions are obviously reasonable.

A few Canadian banks have their headquarters in small towns, and some have no branches. For these the minimum of $250,000 is sufficient.

At the other end of the scale is an immense corporation like the BANK OF MONTREAL, with its head office in a large commercial centre, branches all over the Dominion, agencies in the United States and England, and doing business not only with the mercantile community but with governments and great railways.

An institution like this can well employ such a capital as $14,000,000 or more.

Between these limits are banks with capital ranging from $250,000 to $8,000,000.

Tracing now the business of a bank from its origin, the first consideration will be *in what form* shall the capital be held before business is actually commenced. Our Bank Act answers this question by requiring that a joint stock bank before commencing business under its provisions shall have the whole amount of its capital in cash. To ensure this it is required that the cash shall be placed in the hands of the Government, and that no business shall be done before an authorization is issued.

A bank before opening for business in Canada will need to arrange for correspondents in England and the United States. Much will depend upon a proper choice and satisfactory arrangements in these matters. It will also be prudent, as soon as possible, to invest some portion of the capital in realizable securities, and not hold the whole amount for discounting. Such bonds would form part of the reserve against the liabilities which the bank would begin to incur to depositors and noteholders, and yet bear a moderate interest. They are useful also to further needful arrangements with English correspondents. Moreover, the holding of such securities strengthens the position of the bank, and its credit with the public.

THE ARRANGEMENTS OF THE OFFICE.

In the choice of an office, two questions arise, the first of which will be its *locality;* a matter of as much importance to a bank as to a merchant. It should, if possible, occupy a corner, for the sake of light. It should be in the wholesale quarter of the city, or if there be no such quarter, then not far from other banks if there are others, not far from the post office; near the market, or the exchange, or board of trade; and also, if possible, near to the retail shops.

A building will naturally be *rented* at the outset, for it would be imprudent to devote capital to building at so early a stage, and one should be sought that is substantially built, a good fire risk, with other good buildings about it, and with a lofty main floor to give the bank a respectable appearance.

As to the internal economy of the office, *convenience for doing business* should be the dominant consideration, and not show or ornament; too much of which displays bad taste, though the fittings should be solid and as good as money can buy.

Light should be carefully studied in the internal arrangements, for it is of the utmost importance both to those who handle money and those who keep books.

A bad bill, or forged paper, may be discovered in a good light, where it would be passed when light is dim. A mistake also in bookkeeping which would be readily apparent in a good light may easily be passed by when light is insufficient.

The next important element is a judicious choice of *officers*, who should be men who understand their business, and display civility and attention to customers and the public. The subject of officers, the division of their work, their duties and qualifications will be fully discussed later. It will be sufficient to note here that upon a proper selection of officers, a convenient arrangement of their work, and an efficient system of check and supervision no little of the success of a banker depends, especially in times of competition. Without going into detail as to what constitutes the special qualification of each, let it be noted that there are certain qualities which are essential to the success of any of them.

A bank officer should be of good character, honorable and trustworthy in the instincts of his nature; in fact he should be what is generally understood as "a gentleman" not in outward manners merely, but in character. He should have a good natural aptitude for *arithmetic* and have been well trained therein. No matter how intelligent and well educated a young man may be in other respects, a want of aptitude for arithmetic will prove a fatal bar to progress.‡

A bank officer should write a good plain hand and make plain figures. Many a mistake, costing the labor of scores of hours of officers to find out, has been occasioned by carelessly-formed figures. He should have a good general education. What is known as a good English education may be said to be essential. Some drilling in mathematics, as distinct from arithmetic, will be found highly useful as a young officer advances in his profession. A university education is not necessary in the case of a young banker; indeed, it is rather undesirable than otherwise, for to acquire it a young man will be carried too far on in years before the long course of training begins to fit him for the work that is to occupy his life.

Bank officers, like other employees, require to cultivate habits of civility and patience. All sorts of people are to be found at the counter of a bank. Some of them are ignorant, who want much telling what to do; some are impatient and unreasonable, who are nevertheless good customers. A bank officer who is fretful and impatient will drive away both classes of customers. He will need also to cultivate a habit of *reticence*. It is a cardinal rule in all banks that clerks and officers must never talk outside of what they see or hear inside. The whole business is confidential. A banker who is master of his business will, amongst other things, sufficiently understand human nature to gather about him such men as are here indicated. One by one, and during a considerable time, he will pursue this end, selecting and training his officers until they are thoroughly efficient. With such men about him, a banker can carry on his business satisfactorily so far as its internal economy is concerned, and fulfil the purpose for which the business was commenced.

Thus far with regard to a banker's staff and machinery. A banker, how-

---

‡A former General Manager and President of the Bank of Montreal was well known to have an extraordinary faculty for arithmetical calculations. To this he owed all his early advancement, and some of his later remarkable success. He had, of course, other prominent qualities which would have made him a notable man in any sphere. But it was his arithmetical faculty that laid the foundation of his success as a banker.

ever, may carry on every department of his routine business efficiently, and yet fail in the essential object of doing well for himself. He may fail so far as not only to lose part or the whole of his own capital, but a part also, or even the whole, of the money deposited with him. These, unfortunately, are not suppositions and possibilities only; they have become in not a few instances very exasperating facts; causing distress in thousands of households, and embarrassment to men in business. Success, then, to the banker is primarily what it is to the merchant, viz., that he should continue to fulfil his functions and meet his daily obligations to the end, preserving his own capital intact, to say the least, but adding to it from time to time in prosperous seasons until he accumulates a reserve fund to provide for contingencies. For, as a merchant desires to increase his capital until it amounts to a competence, so a banker, with equal propriety, desires to accumulate such a surplus, after a reasonable distribution of profits, as will amount to a reserve sufficient to render impairment of his capital impossible. But to attain this he must be thoroughly *au fait* in the art of lending money and avoiding losses. A summing up of what the banker should be himself, may be indicated as follows:

(1) A successful banker, like a successful merchant must not only understand the theory and practice of his business and the laws with which it is carried on, but must, as a rule, have gone through such a preparatory training in the office as will enable him to see that every part of it is carried on with economy and efficiency.

(2) He must possess a sound judgment, and be able to discern between good loans and bad, desirable accounts and undesirable, and such a knowledge of human nature as will enable him to know whom to trust and whom to avoid.

(3) He must possess, and keep himself possessed, of a good stock of information, well-sifted, and kept up-to-date.

(4) To enable him to make a right use of these qualities, he must have a well-balanced character, viz., a due combination of caution and enterprise, and neither of them in undue measure. Excess of caution will prevent him from taking up accounts and transactions that are safe, for to the over-cautious man risks loom up in unreasonable proportions.

On the other hand, if a banker has an excess of enterprise he will take up accounts that are undesirable, enter upon lines of operation that will result in lock-ups or losses; and so conduct his business with regard to reserves as to endanger the bank's very existence. The over-cautious banker may lose opportunities of business, but the interest of depositors and stockholders will always be safe in his hands. The over-enterprising banker will always have a tendency to enlarge his business beyond safe bounds, and possibly place himself in the position of being compelled in a time of pressure to ask assistance from his more prudent neighbors.

(5) The banker should have firmness and strength of character, combined with good will and courtesy.

Of these the first are by far the more important. While a banker, in his intercourse with men, is bound, like other men, to be courteous, he has to beware of being what is generally known as "*a good-natured man.*" For a man whose predominant trait is good nature and benevolence runs great risk of becoming the prey of schemers or enthusiasts. If he is a banker on his own account, he will almost certainly ruin *himself*. If he is an officer in charge of the general business of a corporation, he will almost certainly bring it into embarrassment.

On the front page of the New York BANKERS' MAGAZINE there used to appear the following motto: "*Favor and benevolence are not attributes of sound banking. Strict justice and the fulfillment of contracts* are its essential elements." This witness is true.

It is the commonest of truisms that a banker must be able to say *no*, and stick to it; but, on the other hand, a banker who is always saying no, will drive away good business. If a banker gets a reputation for being crusty and sour-tempered, people who have desirable business to offer will avoid him. Such a reputation will not drive away men of the *un*desirable sort; for, as a rule, they care nothing about the reception they get, if they can only get the money. But men of standing and position, who know that what they propose is reasonable, will not put up with surly criticisms.

The old Latin motto, *Suaviter in modo, fortiter in re*, exactly expresses the combination of temper needful to a banker. *Courteous in manner*, he will give even a negative answer without giving offence; firm in his position, he will maintain it in spite of all the importunities of customers if what is asked is undesirable.

(6) A banker should have a shrewd judgment as to subordinates. Men have various capacities; and to know how to put "the right man in the right place" is all-important. Especially is this the case under a banking system like that of Canada, where branches are put under charge of men who exercise almost all the powers given to the corporation. On the exercise of a sound judgment in this respect, a large part of the success of a joint-stock bank with branches depends.

Finally, it should be said, that a banker especially in the highest post, needs to be a man of considerable "nerve." There always have occurred, at times, and always will occur, crises, times of difficulty, emergencies that could not be foreseen, and sometimes startling events that come like "a bolt out of a clear sky," sufficient to try the nerves of the strongest man.

A great bank suspends payment: confidence in all banks is shaken, depositors and noteholders crowd round the counter all day long, and for days together. In these circumstances a banker needs to keep his head cool, and will not only avoid yielding to panic himself, but will be a centre of strength and confidence to others.

Two instances of this kind of courage and coolness may be given.

On the occasion of the failure of the Commercial Bank of Canada, some thirty years ago, a panic seized upon the public of Toronto, and a severe run set in on the banks having their head offices in Ontario. Their counters were crowded with an excited multitude for several days, and one of the banks had to be supplied with gold by its strong neighbors. There was excitement in Montreal, too, and on the third day a telegram was received from a well-known public man there stating it as the opinion of some prominent financiers, that a general suspension of specie payments by the Western banks should take place. This advice was under consideration by bank Presidents and directors in Toronto, and some were so alarmed that they recommended its acceptance. But the Cashier of one of the banks, a young man, strenuously opposed such a humiliating course, and declared that so far as his bank was concerned, his advice would be to stand out to the last dollar. This counsel prevailed, and the banks were saved from a step which would have damaged their credit beyond recall. Shortly afterwards, a step was taken by the Government which stopped the panic.

The other case was that memorable action of the Governor of the Bank of England on the occasion of the crisis which had overtaken the great firm of Baring Brothers. This is referred to elsewhere, but may be briefly noticed here. Had that house suspended, some eighty million dollars of bills would have gone to protest, followed by an incalculable number of failures in all parts of the world. The prospect of a world-wide financial panic was sufficient to shake the strongest nerves. But the Governor of the Bank was equal to the occasion. He clearly perceived it was a case for the co-operation of the whole banking interest of the United Kingdom, and called on every bank of importance to join in taking the risk of paying this enormous amount of bills on the security of the assets of the house. The call was responded to at once. The risk was divided amongst the banks without difficulty; whereupon the Bank of England made it known that arrangements were made to pay the bills, and the whole financial world in every quarter of the globe breathed a sigh of relief. The courage and coolness of one man saved the situation.

G. H.,

Former Gen. Manager Merchants' Bank of Canada.

Meaning of Dollar and Peso.—According to a ruling which was recently made by the department of finance of Mexico, the word dollar is equivalent in meaning to a dollar American gold, whereas the word peso means the Mexican silver dollar.

This decision is of great importance to Americans, especially because by it, the order is included that in the writing of checks, the word peso must be written in every case where Mexican silver is intended, else the cashier will pay gold values for the check.

Not long ago an American made this error and the check was taken to a Tampico bank, where the cashier paid out the sum in gold values, where the drawer of the check only intended that silver should be paid.

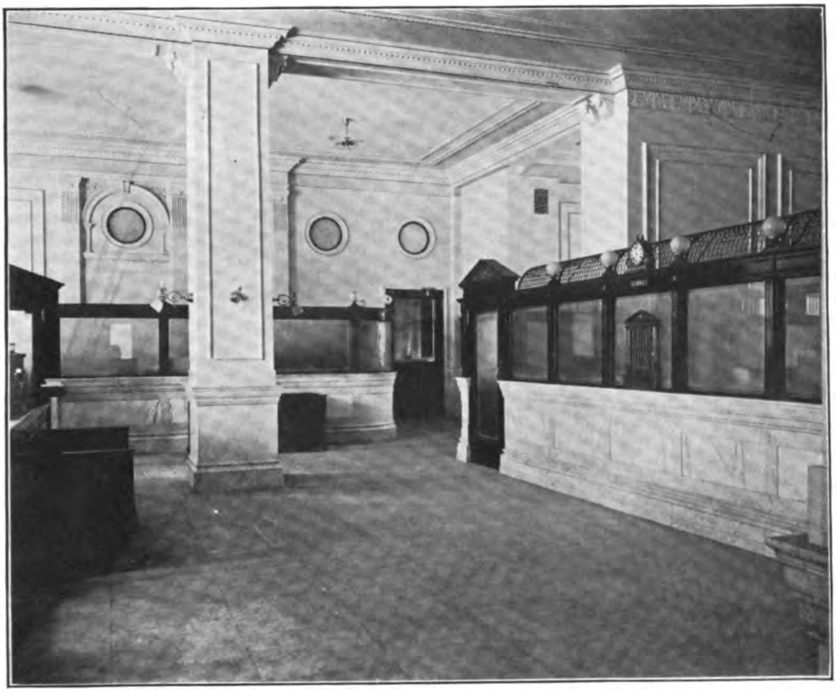
The matter was taken up with the authorities, but the drawer of the check lost, on account of the recent ruling by the finance department. It was shown that Americans and others should be more careful to specify peso where they meant silver values, as otherwise gold would be paid on all checks reading dollars.

This ruling refers as well to all documents, notes, drafts, etc., etc., made after its taking effect.—*Bulletin of the International Financial Association, Mexico.*

Insurance of Bank Deposits.—John Schuette, President of the Manitowoc, Wis., Savings Bank, sends to the Magazine a plan for insuring bank deposits, of which he writes as follows:

"I am pleased to notice that depositors' insurance, for which I agitated over twelve years, has at last brought forth favorable discussion in financial circles and in the public press generally. I am confident that if the public once more fully understand the plan it will become so popular that Congress will be compelled to adopt it.

If after another bank panic the depositors are not insured, I am sure the plan will be a plank in one of our national platforms."



GUARANTY TRUST COMPANY OF NEW YORK.—VIEW IN MAIN LOBBY.

GUARANTY TRUST COMPANY OF NEW YORK.

The swift and sure advancement of the United States toward a position of supreme industrial and commercial power, the growth and diffusion of wealth, accompanied by a rapid and steady increase of population, have demanded a perfection of the instrumentalities employed in carrying on the financial transactions without which this marvelous development could not have taken place. Not only has wealth grown enormously, and been more widely distributed than ever before, but the changed conditions under which industry is carried on have called imperatively for financial institutions combining large and varied powers, with a capital equipment adequate to the successful handling of enterprises of the largest magnitude.

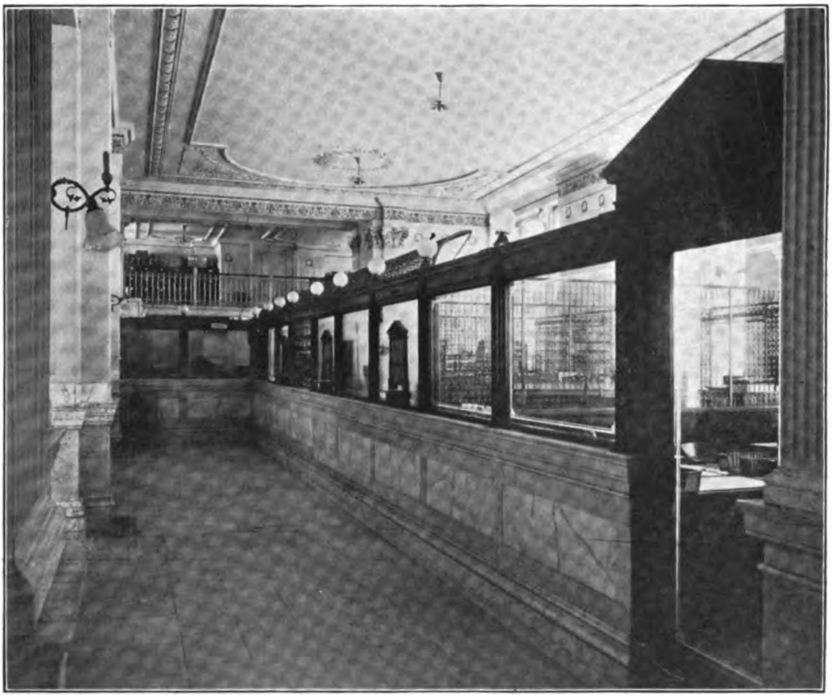
The modern trust company is not a sudden creation, however, born of the exigencies of the present era of unexampled development. It is a growth springing up from roots firmly planted and carefully nurtured by the State. When the necessities of modern finance became evident, it was seen that the trust company was perfectly equipped to meet them—having the strength, the skill and the authority requisite to care for the accumulations of the past and to extend judicious and effectual aid to the advancement of worthy enterprise.

Twentieth century progress has been quick to recognize the value of the trust companies and has made use of them, to the advantage of the commerce and industries of the country, and to the greater security of invested funds.

The remarkable record of growth made by the trust companies has been due to an intelligent foresight in providing the means for taking

JOHN W. CASTLES,

President Guaranty Trust Company of New York.



GUARANTY TRUST COMPANY OF NEW YORK.—REGISTRAR AND TRANSFER DEPARTMENT.

proper care of the accretions to the country's wealth, and to the high standard of fidelity to their trusts which has characterized the management of the majority of these institutions.

New York as the financial centre of America has naturally witnessed the greater increase in the number and resources of these companies, and notwithstanding the large number of companies and the stupendous totals of their deposits, no depositor has ever lost a dollar by the failure of a New York trust company. This has been due to intelligent and careful management, and to the wise laws and careful supervision under which the companies operate.

How firmly the trust company is establishing itself in the public estimation is shown by the unequalled growth of the business of the Guaranty Trust Company, of New York.

On April 13, 1904, John W. Castles became President, the deposits of the company at that time being about $43,000,000, while on June 30, 1905, they amounted to $67,966,612.14. A still better idea of the progress of the company may be gained from the following comparative figures:

RESOURCES.	June 30, 1895.	June 30, 1905.
New York city and State bonds..........	$1,179,054.20	$7,673,621.26
Other bonds and stocks..................	4,127,693.33	12,616,679.76
Loans—demand and time................	4,868,965.13	35,881,779.18
Bills purchased...........................	33,621.40	5,019,010.14
Bonds and mortgages.....................	95,000.00	
Real estate...............................	100,159.33	
Cash on hand and in bank................	4,583,343.08	9,447,617.34
Foreign exchange.........................		3,881,999.55
Due from banks and bankers..............		997,794.44
Accrued interest and accounts receivable..	59,824.72	360,776.62
Total	$15,047,661.19	$75,879,278.29

OSCAR L. GUBELMAN,

Vice-President Guaranty Trust Company of New York.

LIABILITIES.		
Capital	$2,000,000.00	$2,000,000.00
Surplus	1,500,000.00	5,500,000.00
Undivided profits	402,919.97	209,817.57
Deposits	11,123,406.61	67,966,612.14
Accrued interest payable	15,334.61	28,848.58
Reserve for taxes	6,000.00	74,000.00
Quarterly dividend, five per cent		100,000.00
Total	$15,047,661.19	$75,879,278.29

This is a remarkable demonstration of the results possible to a combination of energy and experience, in conjunction with a known degree of solidity and strength—the prime requisites of the success of a bank or trust company.

The Guaranty Trust Company has reached a leading place among the trust companies of America by no adventitious circumstances. Its success may be ascribed to the following sources:

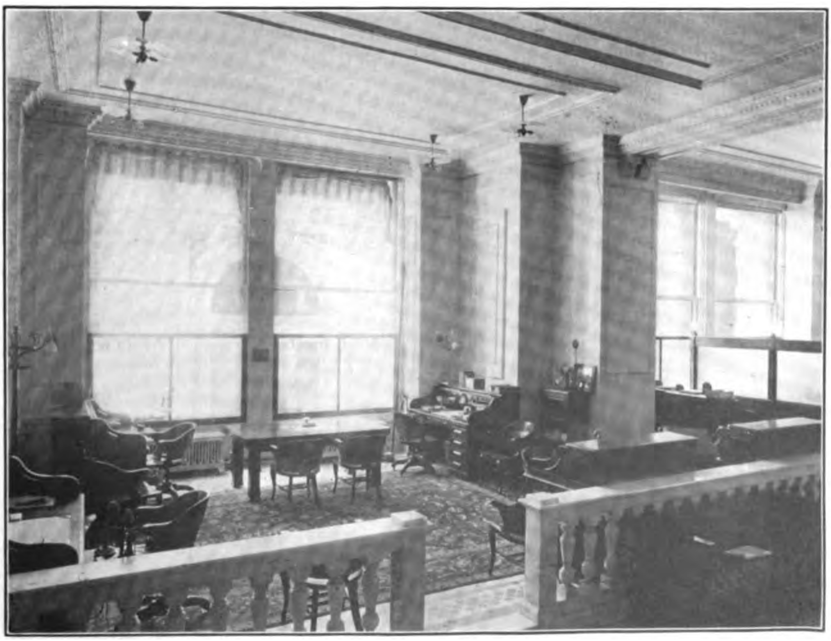
(1) Its capital, surplus and profits and large resources are an assurance of great strength, and of ability to successfully carry through large undertakings.

(2) The officers are men of known and proved integrity and capacity.

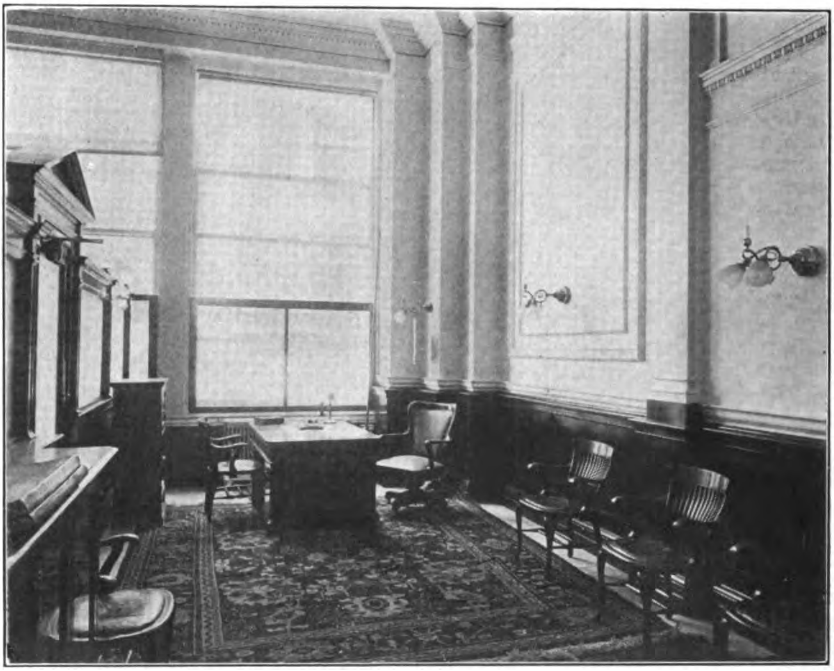
(3) The Board of Directors embraces some of the leading financiers in the United States, constituting a controlling influence that inspires absolute confidence and respect.

(4) In all the numerous functions that may be exercised, the Guaranty Trust Company offers in its several departments the very best facilities that experience and diligence can procure.

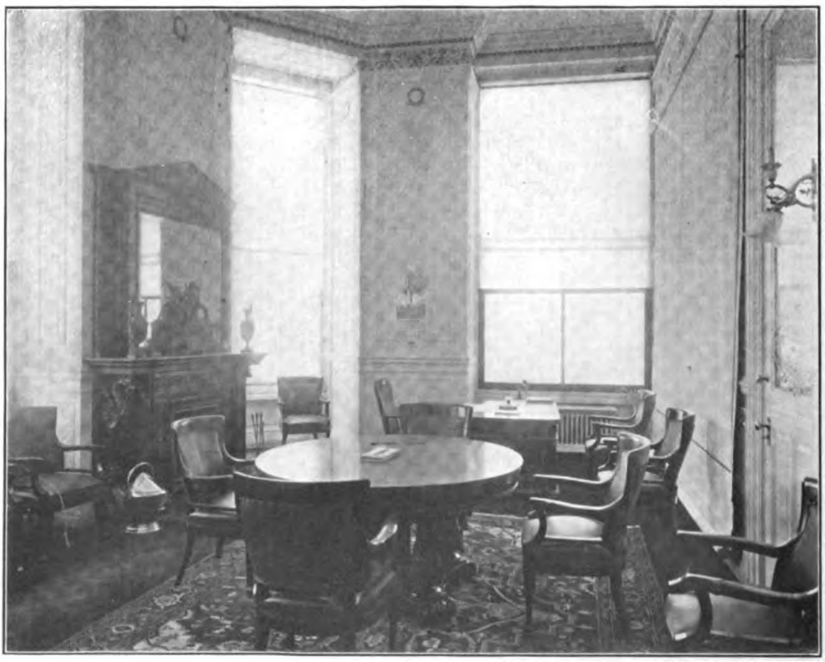
In point of responsibility, strength and trained equipment alone the position of the Guaranty Trust Company is such as to commend its services to the most discriminating, whether such services be the financing of an



GUARANTY TRUST COMPANY OF NEW YORK.—PARTIAL VIEW OF OFFICERS' QUARTERS.



GUARANTY TRUST COMPANY OF NEW YORK.—PRESIDENT'S OFFICE.



GUARANTY TRUST COMPANY OF NEW YORK.—DIRECTORS' ROOM.

enterprise of the first magnitude, or investing the funds of a modest estate, or discharging any of the duties of corporate trusteeship.

By the very nature of its organization and the character of its transactions the Company has become expert in all matters relating to investments, and as National and State banks and Savings banks are placing their funds more and more in such securities, they will find this service of the highest value.

As a depository for banks the Guaranty Trust Company has established a very large connection, based on a practical understanding of the requirements of out-of-town banks.

With the strides being made in our foreign commerce and the increased demand for international remittances, the banks of the country are finding it advantageous to give closer attention to the possibilities of profit by dealing in foreign exchange, furnishing letters of credit, etc. The Guaranty Trust Company has exceptional means of supplying the wants of American banks, having a branch office in Lombard Street, London, and close connection with all the world's great centres of money and trade.

The complete list of officers and directors of the Company follows. Officers: John W. Castles, President; Oscar L. Gubelman, Vice-President; A. J. Hemphill, Vice-President; Max May, Manager Foreign Department; Wm. C. Edwards, Treasurer; E. C. Hebbard, Secretary; F. C. Harriman, Assistant Treasurer; R. C. Newton, Trust Officer. Directors: Walter G. Oakman, Chairman; George F. Baker, Geo. S. Bowdoin, John W. Castles, Frederic Cromwell, Walter R. Gillette, E. H. Harriman, G. G. Haven, Edwin Hawley, Charles R. Henderson, Adrain Iselin, Jr., James N. Jarvie, Augustus D. Juilliard, Richard A. McCurdy, Levi P. Morton, Oscar G. Murray, Norman B. Ream, Daniel G. Reid, Henry H. Rogers, James Speyer, H. McK. Twombly, Frederick W. Vanderbilt, Harry Payne Whitney.

The Company's London offices, at 33 Lombard Street, are under the direction of the London Committee, composed of Arthur John Fraser, Donald G. Haldeman and James Tyhurst.

COST OF LIVING IN FRANCE.—The "Economiste Francais," of Paris, says that the cost of living abroad, especially in France, is a subject upon which wide variance of opinion exists. There is no doubt that the English, on the average, have one-third more to spend than the French, and, all things being equal, more money is earned in England than in France. Further, the cost of life in England is far less than it is in France. The contrary was true in former days, but now the high tariff in France and free trade in England have produced their results.

Butter in France costs thirty to sixty cents per pound, Swiss cheese twenty-five to thirty cents per pound, and fowls thirty to fifty cents each. Milk is ten cents per quart, bread four cents per pound, and meat thirty to fifty cents per pound. Fruits, which are grown abundantly in France, cost twice as much as they do in England; bananas and oranges, which Algiers exports by millions, cost four cents each. Coffee is fifty to sixty cents per pound, tea as much as $1.40 to $1.80 per pound, and sugar ten to twelve cents per pound. Coal in Paris is worth $14 per ton, and in many houses heat is a great rarity. In London two boxes of matches are given for one cent, but in France each box costs two cents and the matches are bad. Drugs are almost prohibitively expensive.

M. de Foville says that it "lies in the innate inclination, one might say the passion, for economy. With a few francs the little Parisian, who may be hungry many days during the year, is able to make herself a hat and frock which many wealthy women might well envy. And it is with the table as it is with the toilet. The art of utilizing the remnants is an art essentially French, whether the subject be ribbons or ragouts. The spirit of economy is as common in our country as it is rare in England. Fathers and mothers in France consider themselves the debtors of their children, and even the bachelors think they should leave something behind."

THE BURGLAR-PROOF SAFE.

The first consideration in fitting up a banking building or room must always be the means which are to be provided for safeguarding funds and valuables. Protection must be afforded both against fire and attacks by burglars and mobs. The former danger is not difficult to meet in properly constructed buildings; for if the banking room be upon the ground floor, a brick vault, with a fireproof door and proper air spaces, affords the necessary security, and in instances where such a vault is impossible a well-constructed fireproof safe, of which there are many on the market, will guard against the destroying element.

A much more difficult problem is presented in the task of securing valuables against felonious attacks. It seems a far cry from the primitive chest of one hundred years ago, made of wood and secured by steel bands and a massive key lock, to the latest design of burglar-proof safes, but the evolution may be easily traced and the development of bank safes has, generally speaking, kept pace with the discoveries of commerce and science. Increased facilities in handling metals resulted in an iron safe instead of a wooden box. With the advance in the science of explosives, safes which had previously been considered invulnerable to lawless attack became susceptible of easy destruction, thus making necessary corresponding progress in safe construction.

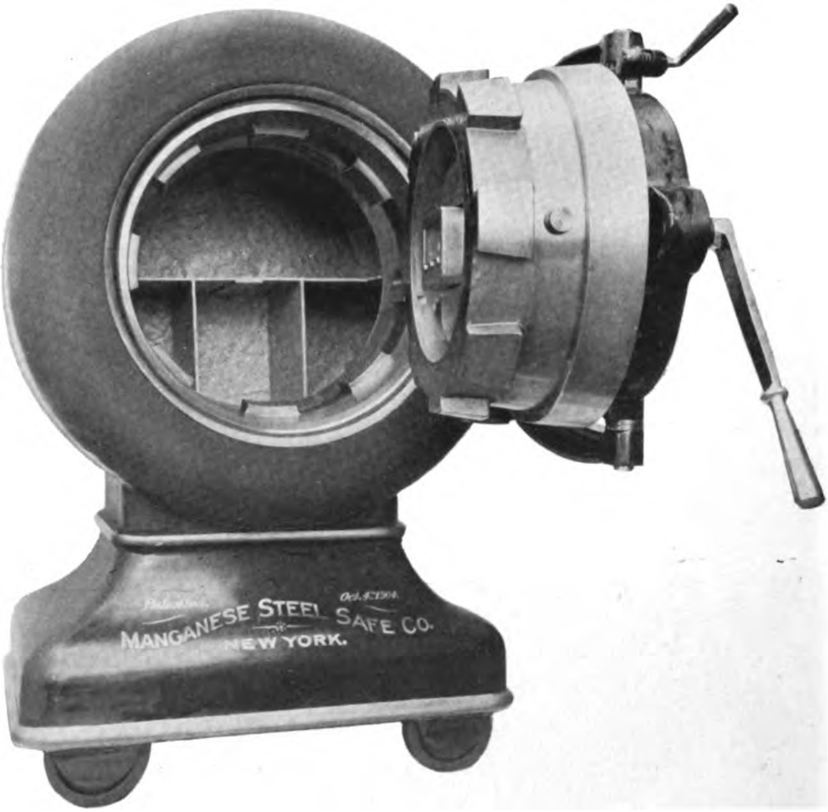
Protection against burglarious attack is commonly afforded either by a vault or safe. The former consists practically of a room, having solid steel walls and massive doors sufficiently strong to defy assault. An illustration accompanying this article shows a vault in process of construction. Its walls, of solid steel three inches thick, are being joined by shrinking on red hot steel links around each pair of lugs on the adjoining plates.

The cost of a vault, however, is usually so great that few banks of limited capital feel justified in incurring the expense and rely for protection on burglar-proof safes.

The term "burglar-proof" is frequently misunderstood and is often construed to mean a safe or vault which cannot be forcibly opened. Manufacturers of safes are in a large measure to blame for this misconception by permitting their over-enthusiastic salesmen to make extravagant claims for their manufacture. No safe ever has been, could or ought to be made which could not be opened under any circumstances. Such a receptacle would be too dangerously secure to use with safety. Accidents will happen to the best mechanism, and no safe should be beyond the power of experts to open under orderly circumstances. But the conditions which surround a burglarious assault are such as to place a decided limit on the means of attack employed. The necessity for secrecy and haste and a regard for the security of the building in which the safe stands, make the operation a very different one from the legitimate operation of opening a safe accidentally locked out. The aim therefore of every manufacturer is to make a safe which will withstand any unlawful attack upon it by burglars or mobs and yet leave possible the opening of the safe in case of accident.

Burglarious attacks are made in two ways: by mechanical means and by the use of explosives. The facility acquired by the light-fingered gentry in mechanics practically drove from the market safes built up of a number of separate pieces. These are known as plate or laminated safes. The weakness of this safe consisted in the fact that whatever could be put together could be taken apart, and an hour or two with wedges, chisels and "jimmies" sufficed to rip open a plate safe without noise or danger. If the burglar was so situated as to permit the use of a small quantity of nitroglycerine in the joints of these safes, the operation of opening them was practically instan-

MANGANESE STEEL SAFE, CLOSED.



MANGANESE STEEL SAFE, OPEN.

taneous. It was early seen that a solid safe alone would remedy this defect.

The advent of the solid safe cast in one piece obviated the possibility of working upon the safe body by mechanical means and remitted the burglar to the use of dynamite or nitroglycerine. Then it was found that the safe-makers had placed themselves in a serious dilemma. If the metal used was sufficiently hard to resist the action of a drill, it was so brittle that a shock from dynamite would crack it in pieces.

This fact prevented the general manufacture of solid safes; and, unsatisfactory as they were, manufacturers continued to place plate safes on the market, in the construction of which they could use alternate thin layers of metal, some of which were hard and some tough, thus accomplishing the desired double result.

It was not until Robert Hadfield, of Sheffield, England, discovered the alloy known as Manganese Steel, in the year 1883, that a solution of the difficulty was promised. His first experiments developed the fact that the introduction of Ferro-Manganese into steel resulted in a material of extreme hardness and yet, when properly treated, of such toughness as to be practically unbreakable. This metal possessed a natural temper which could not be taken away by reheating or other means. His discovery was almost immediately patented in England and subsequently in the United States, in the expectation that it would prove of great commercial value.

This expectation of general commercial utility was not, however, fulfilled; for it was found that castings of Manganese Steel manufactured in accordance with the original patents and processes could not be made of a greater thickness than one inch, without serious danger of effecting a change in the metal which radically impaired its strength. A number of manufacturers in succession were granted provisional licenses in the United States and one by one abandoned the attempt to utilize Manganese Steel for general commercial purposes. In 1891 Hadfield canceled all existing licenses and granted an exclusive right to the Taylor Iron & Steel Company of High Bridge, N. J., to use Manganese Steel in the United States. This company entered upon a course of exhaustive experiment and development which ultimately resulted in the discovery of a new method of treatment which obviated the difficulties previously experienced and made it possible to obtain large and intricate castings of Manganese Steel which possessed the qualities of the small specimens. This process was patented in the year 1895. Manganese Steel manufactured under this patent became commercially known in the United States as Hadfield-Taylor Manganese Steel, and is to-day recognized as a standard commercial product.

Among other uses for the new metal was the manufacture of solid safes and vaults. For this purpose was formed the company now known as the Manganese Steel Safe Company, which entered into a long term contract with the Taylor Iron & Steel Company for the exclusive use of Hadfield-Taylor Manganese Steel in the manufacture of safes and vaults.

It was at once recognized that solid safes made of Hadfield-Taylor Manganese Steel were practically secure from attack unless the locking mechanism could be destroyed. So far as is known, no person has ever successfully attempted to penetrate the body of this safe; and although several

severe attacks have been made upon the safe by burglars, the attempt has never been successful. For some years the Manganese Steel Safe Company had no competition and the demand for their safes exceeded the possible output of the factory. In the year 1898 the original patent granted to Robert Hadfield expired, and the way was thus opened to competitors to place upon the market safes made of metal containing more Manganese than ordinary steel, which were styled Manganese Steel safes.

The subsequent treatment patents granted to Hadfield and the Taylor Iron & Steel Company under which the commercial use of heavy Manganese Steel castings was made possible, are still in force and exclusively at the disposal of the Taylor Iron & Steel Company and the Manganese Steel Safe Company.

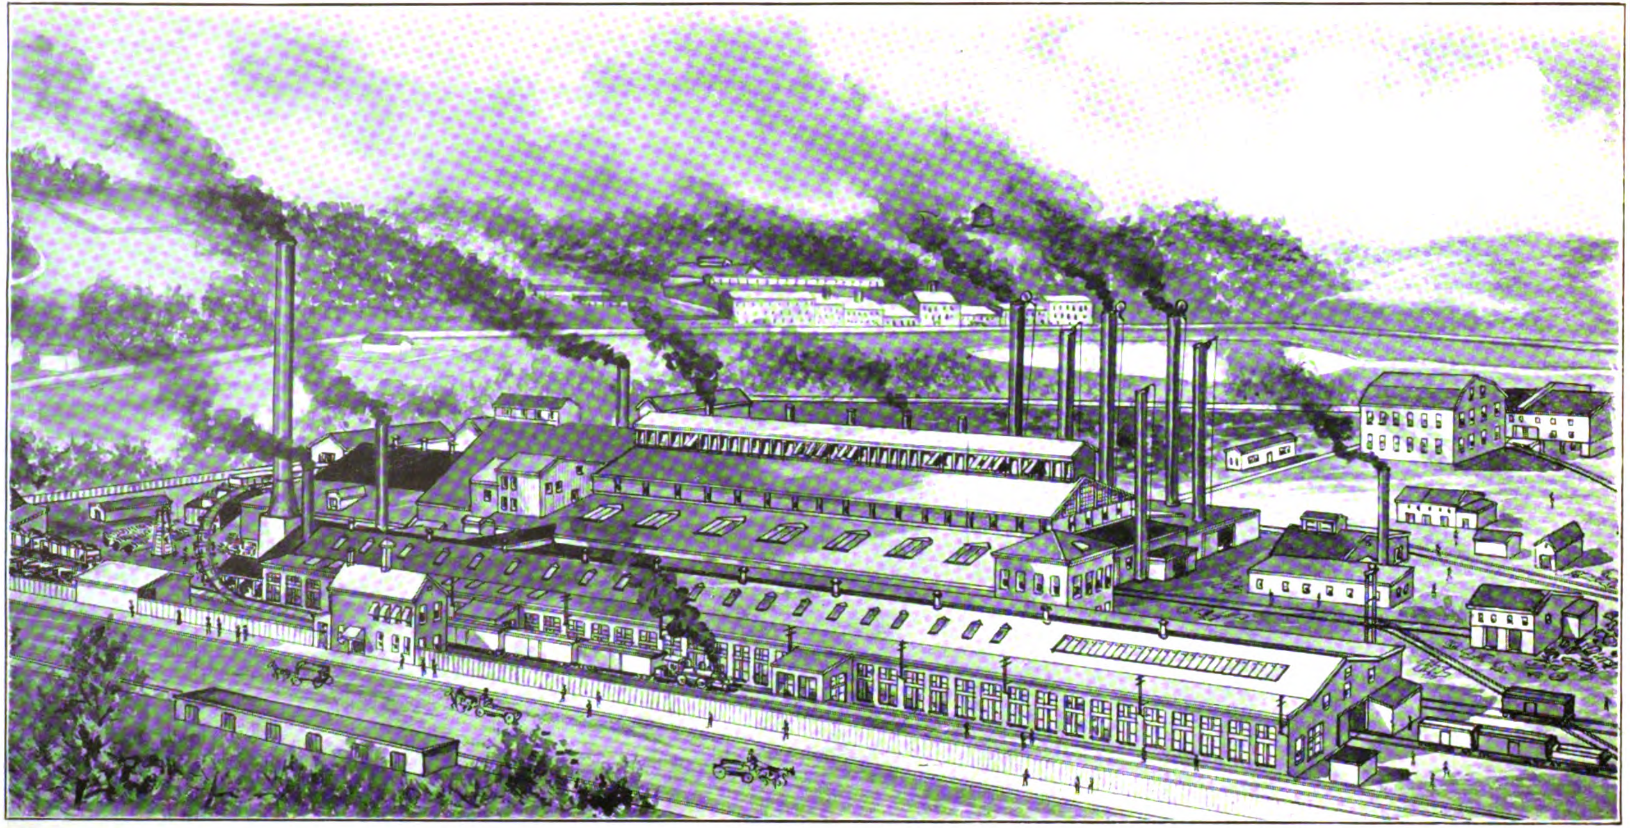
This article is illustrated with cuts of the latest safes manufactured by the Manganese Steel Safe Company, the illustrations being presented through the courtesy of that company, which, as already noted, originated the use of Manganese Steel in the manufacture of safes, and is responsible for introducing a change in safe material and construction which practically obviates the danger of burglarious attack by any methods now employed by burglars. Furthermore, by reason of the connection of this company with the makers of the standard Hadfield-Taylor Manganese Steel, it is presumably best equipped to put upon the market Manganese Steel safes possessing the requisite attributes of hardness and toughness.

The contention of this company is that the safes sold by its competitors which purport to be made of Manganese Steel lack the quality of toughness, and under shock show the same tendency to crack which made the original solid safes unsatisfactory. Without endeavoring to pass upon this question, it may be said that in the opinion of experts the highest type of burglar-proof safe now made is a solid safe of Manganese Steel, provided that metal is both hard and tough. Unless it possesses this latter attribute it is rather more vulnerable than the old style plate safes.

The safes shown in the illustrations are of a type recently adopted by the Manganese Steel Safe Company and known as the "Bayonet Joint" safe. The novel feature of this safe consists in the method by which the door is secured to the body. Reference to the picture of the open-door safe shows that a part of the body casting of the safe consists in lugs which project slightly into the door opening, these lugs being so spaced as to permit the passage between them of similar lugs which form a part of the casting of the door. The safe being closed, the system of lugs upon the door passes through these openings to a point behind the lugs attached to the body. The entire door is then mechanically rotated on its own axis for a distance of approximately four inches. This brings the lugs upon the door immediately back of the lugs attached to the body and for all practical purposes the door has become an integral part of the body of the safe. To hold the door in this locked position two steel bolts 1¼ inches in diameter are screwed out from opposite sides of the door into two of the body lugs. These bolts have no function to perform in withstanding a strain tending directly to remove the door from the safe, but prevent its rotation to a point where the door lugs cease to engage with those attached to the body. The door of the Manganese Steel safe fits so closely into the opening prepared for it that the joint between the body and door is practically invisible. This result is accomplished in much the same way that a metal valve is made. The door and jamb are first ground to an approximate fit by emery wheels. The adjacent surfaces are then coated with a mixture of oil and abrasive material and the door is replaced in position. It is then mechanically rotated until it is ground to such an accurate fit that the introduction of a piece of paper will prevent its closing. By similar means the spindles used in this safe are so accurately fitted that the insertion of a hair will prevent their proper adjustment.

When the door of this safe is once closed and the lugs placed in engagement, it is claimed by the makers that the door cannot be removed unless the entire safe be shattered, a result which it is said has never been accomplished.

In attacking a safe of solid construction a burglar's only chance of success lies in slightly opening by mechanical means the joint surrounding the



Plant of Taylor Iron and Steel Co., High Bridge, N. J.—Manufacturers Hadfield-Taylor Manganese Steel.

door. He then inserts in this opening a small quantity of nitroglycerine and by successive charges seeks to enlarge it until the door is finally forced outward. This result cannot be attained unless the construction of the safe is such that the nitroglycerine so introduced can be closely confined and the full force of the explosion utilized. If the expanding gases have free access either into the interior of the safe or outward into the open air, the force of the explosion is largely lost. The manufacturers of the safes illustrated herein claim for their safe that the construction of the door joint is such that it is impossible to confine the force of the explosion. The instant the joint between the door and the body is in the slightest degree enlarged, a channel is opened which permits the escape of the force generated by any explosion, into the interior of the safe. The wider the crack the less the chance of utilizing the explosive force. To accomplish this result the manufacturers state that they refused to adopt a door screwed into position in a continuous thread, which necessarily affords a receptacle to confine the explosive and make possible the exertion of its full force.

A test was recently made upon a safe of this type by the Marietta Torpedo Company, experts in explosives, at the request of the Manganese Steel Safe Co. The attack lasted from 9 A. M. to 4 P. M. and involved the explosion of sixty-four ounces of nitroglycerine in charges which varied in amount from one-quarter of an ounce to sixteen ounces. The safe remained intact and could not be opened. The attempt was finally abandoned as useless.

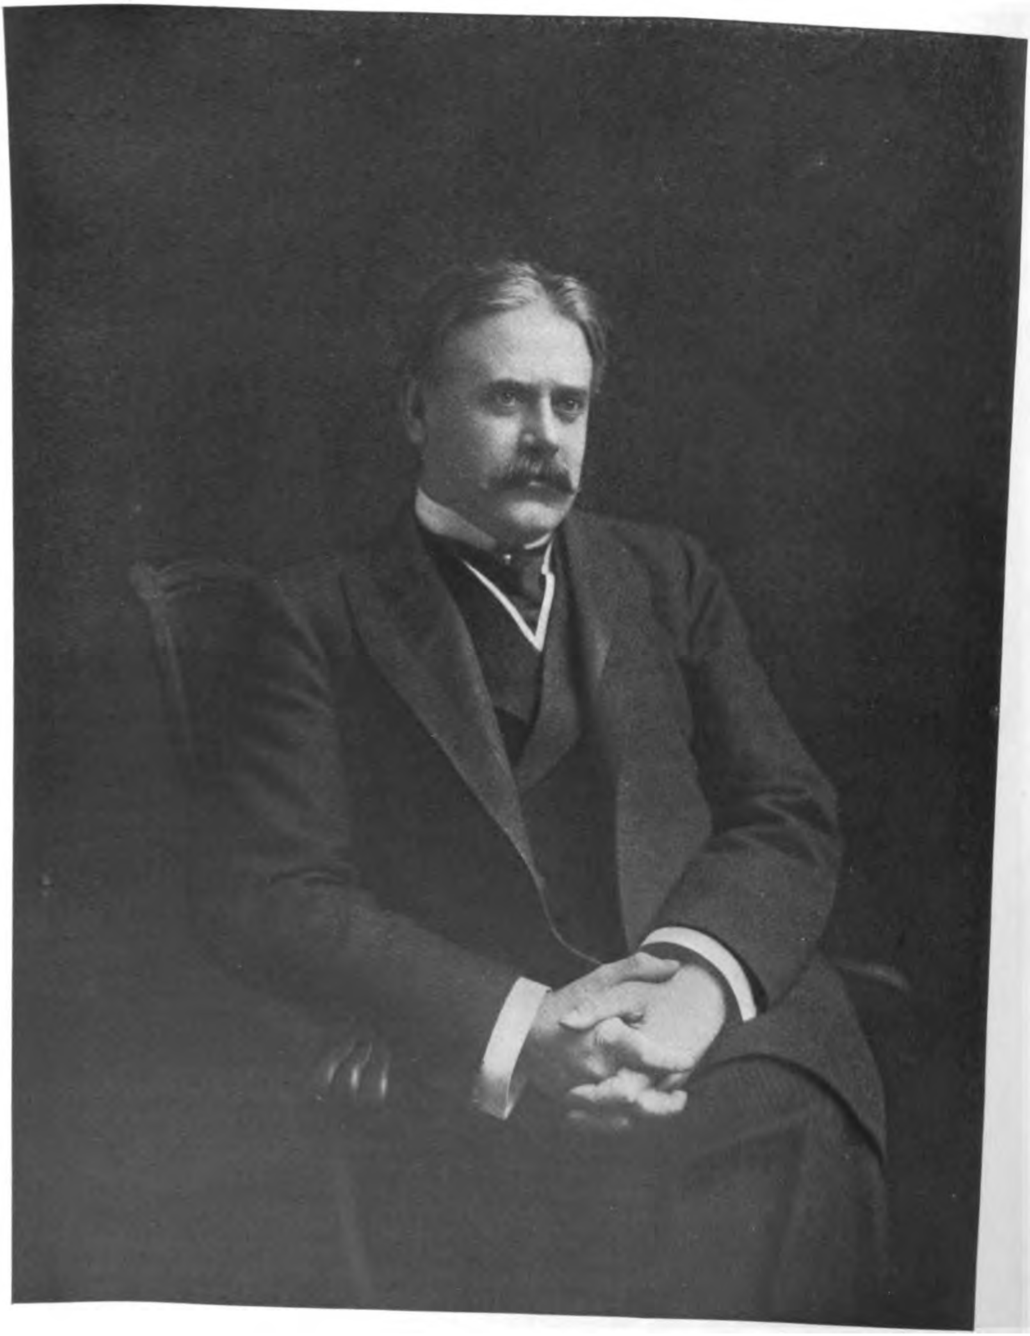
It will be of interest to note that in the manufacture of a Manganese Steel safe the metal is so hard that it is impossible to work upon it with steel tools. The entire process is effected by the use of emery or corundum wheels, revolved at high speed.

The custom of manufacturers who encourage public competitive tests of safes is strongly condemned by many of those familiar with such contests. These exhibitions, it is believed, prove little or nothing as to the practical merits of the safes exhibited, for the conditions are so radically dissimilar to those of an actual burglarious attack that no light is shed upon the burglar-proof qualities of the safes in question. Such tests, however, do serve to educate the lawless element in the community to a dangerous degree of proficiency and beget a feeling of uneasiness and uncertainty among bankers which is totally without justification. Many of the reputable companies are showing a strong disinclination to participate in such exhibitions. The bankers who encourage them should realize that they are permitting themselves to be used by rival safe manufacturers as a means of commercial advertisement.

THE BANKS OF SCOTLAND.—Consul Fleming, of Edinburgh, sends the following information in regard to the banks of Scotland:

There are ten banks in Scotland, having an aggregate of 1,132 branches, or one office to each 4,000 inhabitants. The present amount of paid-up capital is $45,268,183, to which there attaches an uncalled liability of $96,517,294.50, of which liability $22,595,159.50 is callable for the purposes of business and $73,881,835 reserved for liquidation only. The average market value of the paid-up capital during 1904 was $152,204,644, as against $155,114,811 in 1903. The average holding per shareholder was $2,086 in 1894 and $1,724 in 1904. The reserve funds were $27,245.931 in 1894 and $36,040,699 last year.

The total value of real estate held by the banks is $21,208.932. The note circulation last year was $36,484,150; in 1902 it was $38,192,292. The total amount of deposits in 1904 was $497,808,784, considerably less than the deposits in 1902, when the figures were $521.294,716. It is believed that the shrinkage was due principally to the competition of municipal corporations for temporary loans at rates higher than the banks are willing to pay. The total profit declared for 1904 was $7.939,115 against $8.268,932 for 1903, a decrease of $329.817. The dividends paid for 1904 ranged from 7 to 20 per cent., averaging 14.58 per cent.



GEORGE W. YOUNG.

GEORGE W. YOUNG & CO.

With the growth of New York in financial importance, the field of private banking—already occupied by some of the strongest houses in the monetary world—becomes more and more attractive. Freedom from the restrictions of State and Federal banking laws affords a wider field of operations and greater possibilities of profits, without implying any necessary relaxation of the rules always imposed by considerations of safety. For, primarily, safety in banking is not a matter that can be assured by law. It depends chiefly upon the character of the management.

The head of the new private banking firm of Geo. W. Young & Co., New York city, has justly earned a reputation for financial sagacity. His achievements are of a kind entitling him to rank among the most successful bankers of the country. That these are not mere random statements is amply shown by the history of the United States Mortgage and Trust Company, of New York, under his management. From 1893 to the close of 1904, under his direction, the deposits increased from $3,228,658 to $30,269,789, and surplus and profits accumulated to the extent of $4,072,734. During Mr. Young's management the earnings of the company were in excess of $6,250,000; of this amount $2,250,000 was paid in dividends and $4,000,000 added to surplus account.

Mr. Young has had such a notably successful business career, that a brief record of it will be found interesting.

He was born of Scotch-Irish parentage in Jersey City, on July 1, 1864, and attended the public schools of that city, afterwards taking the evening scientific course at Cooper Union.

At the age of thirteen, he entered the employ of the law firm of L. & A. Zabriskie as an office boy, and subsequently, for a time, studied law.

Shortly after, he secured a position in the Hudson County Bank, of Jersey City, and when only eighteen was promoted to the position of receiving teller. At this time he successfully passed a competitive examination for a cadetship at West Point, and received his commission from President Arthur; but the death of his father rendered necessary his retaining his position in the bank.

When barely past his majority, he became Secretary and Treasurer of the New Jersey Title Guarantee and Trust Company. At twenty-eight he was elected Second Vice-President and Treasurer of the United States Mortgage Company (now United States Mortgage and Trust Company), and at the age of twenty-nine was chosen its President; commanding recognition at once as not only one of the youngest but one of the most able New York leaders in the world of business and finance.

The results of his management of this company have been referred to above.

On March 30, 1905, Mr. Young resigned as President of the United States Mortgage and Trust Company, to found the banking house of Geo. W. Young & Co. He continues, as chairman of the board of directors, to give the company the benefit of his knowledge of investments and his wide experience in financial affairs. On his resignation as President, the board of directors of the United States Mortgage and Trust Company adopted the following:

"*Whereas*, Mr. George W. Young, who for the past ten years has been President of this company, now declines to be a candidate for re-election, we desire to spread the following resolution on the minutes:

Resolved, That we recognize the exellent, energetic and intelligent services which Mr. Young has rendered the company during his incumbency, and we feel that the high position which the company has attained has been in large measure owing to his earnest efforts and untiring devotion.

Resolved, That in recognition of his services to this company, he be elected chairman to preside at the meetings of the board for the ensuing year; also, *Resolved*, That we tender Mr. Young our best wishes for success in the banking firm which he has established."

The estimation in which he was held, not only by his official associates but by the employees of the company, was evidenced by the presentation to him of a handsome chiming clock, every one in the service of the company uniting in the testimonial. At a dinner, given by Mr. Young, about one hundred officers and employees were present to express their good will.

In addition to being so long at the head of the company named, Mr. Young was instrumental in the formation and successful establishment of The Audit Company of New York, Commercial Trust Company of New Jersey, Jersey City Trust Company, Perth Amboy Trust Company and the Windsor Trust Company; and, in addition to being a director in these and in his own company, serves as a director in the following corporations: National Bank of Commerce, Acker, Merrall & Condit Co., Anacostia & Potomac River Railroad Co., Atlantic Securities Co., Bayonne Bank, Brightwood Railway Co., Buffalo Hump Mining Co., Casualty Company of America, City and Suburban Homes Co., City and Suburban Railway Co., Clarksburg Fuel Co., Columbia Railway Co., Continental Investment Co., Eastern Steel Company, Empire State-Idaho Mining & Developing Co., Fairmont Coal Co., Federal Mining & Smelting Co., Georgetown & Tennallytown Railway Co., Interborough Rapid Transit Co., Lawyers' Surety Co. of N. Y.; Mechanics' Trust Co. of Bayonne; Metropolitan Railway Co., Washington, D. C.; N. J. & Hudson River Railway & Ferry Co., N. Y. Dock Co., Northern N. J. Land Co., O'Rourke Engineering Construction Co., Potomac Electric Power Co., Rapid Transit Subway Construction Co., Registrar & Transfer Co., Somerset Coal Co., Third National Bank, Jersey City, N. J.; Trinity County Gold Mining Co., U. S. Fidelity & Guaranty Co., U. S. Safe Deposit Co., Washington Investment Co., Washington Railway & Electric Co., Washington & Rockville Railroad Co., Wolff National Chemical Co.

Mr. Young is a member of the Country Club of Lakewood, Deal Golf, Downtown, Lawyers', Manhattan, Maryland, Metropolitan of Washington, Players', Racquet and Tennis, Riding, and Rockaway Hunting Club.

In November, 1889, Mr. Young married Miss Natalie Bray, of Jersey City, and their children are Dorothy and George Washington, Jr.

Besides their New York residence, they have a charming summer home, "Oakwood Farm," adjoining the Deal Golf Club at Deal Beach, of which club Mr. Young is President.

When Mr. Young established the firm of Geo. W. Young & Co. he purchased the Stock Exchange seat of Bayard Dominick, Sr., paying $83,000 therefor.

It may be regarded as certain, in view of the honorable and successful record already made by Mr. Young, that his firm will become among the strongest and most successful in the city.

Matawan, N. J., August 24, 1905.

Editor Bankers' Magazine:

Sir: As a subscriber, may I have an answer to the following: Is this indorsement a restrictive one, viz.: "Pay to the order of the Seaboard Nat. Bank, New York, for deposit"? HAROLD POWELSON.

Answer.—As the words "for deposit" in the indorsement indicate that the paper has been transferred to the bank for a particular purpose, viz., to give the indorsee credit for it in his deposit account, it is properly a restrictive indorsement. If the bank should fail to treat it as a deposit, then the title would not pass to the bank, and this fact, that the title is not to vest under any and all conditions, imposes a restriction upon the use of the paper, and makes the indorsement restrictive. The statute provides that "An indorsement is restrictive which * * * vests the title in the indorsee in trust for or to the use of some other person" (Negotiable Instruments Law, sec. 66, N. Y. Act); and where paper is transferred to a bank to be credited to the account of the indorsee, it is for his *use*.

THE VALUE OF INDEPENDENT EXAMINATION OF BANKS.

[Paper read before the convention of the Wisconsin Bankers' Association, by Seymour Walton, C. P. A.]

As strong as the force of gravitation in the physical universe is the force of habit in the moral and mental world. Men are constantly running into grooves or ruts in all their activities, whether social, religious or business. This is especially true of their business lives and arises partly from insufficient time, partly from disinclination to exert themselves and very often from lack of knowledge of anything more desirable. While these facts are true of persons engaged in any business, they are especially so in the banking profession. The work of one day is so much like that of another that the tendency to fall into routine habits is almost irresistible, and there seems little or no opportunity for originality. Yet there are few places where originality is more needed and where a proper use of brains is more valuable than behind the counter of a bank.

The great difficulty in most banks, especially in the large cities, is that the banker is so constantly occupied that he has no time to develop any ideas if he has the foundation for them. He is too busy to study the details of the bank's business in such a way as to discover the evidences of irregularities even when they would seem to have been very apparent, judged in the light of after events, or to make the proper deductions in regard to the real condition of its customers, even if he knows that a careful scrutiny of their accounts will often reveal very interesting facts. For instance, he does not take the trouble to ascertain the relations between a customer's total yearly sales and the amount of his bank movement during the same time. Yet there is no more valuable information in regard to a borrowing customer than the fact, if it exists, that his total deposits, excluding his single name paper, are considerably in excess of his total sales. The excess is suspicious, to say the least, as it must consist of items that are of a kiting nature, or otherwise illegitimate. It is far easier for the credit man of the bank to make a few preliminary investigations, accept the customer's own statement of his net worth, grant him a line of credit and then drop quietly and easily into a rut and stay there until he is rudely jostled out of it by a bankruptcy notice.

Opportunities for Misapplication of Bank Funds.

In the same way the officers of a bank acquire the habit of implicitly trusting their clerks and their fellow officers. Each one of them, working in his own particular groove, soon becomes satisfied if his own department is correctly handled and pays no attention to any one else, except when his groove happens to meet or cross that of another. As long as everything is properly adjusted to meet the requirements of his own particular balance, he pays little attention to how the adjustment is effected. In the nature of things he cannot be expected to concern himself with anything outside of his own department, and certainly is not called upon to investigate the intricacies of his neighbor's special province.

But it is this very habit of confining each man to his own peculiar rut that offers the opportunity for the misapplication of funds, when temptation assails a man too weak to resist it. Some banks attempt to obviate this difficulty by a constant exchange of duties on the part of their working force. This plan unquestionably takes the men out of their grooves and is an absolute preventive of trouble, but it is open to the objection that customers do not like to deal with different persons when they have become accustomed to having their affairs satisfactorily looked after by those who know and respect their various peculiarities. Other institutions have a general clerk or auditor whose duty it is to check up each department, but the auditor himself is liable to get into a groove and to perform his duties in a perfunctory manner. He is also subject to limitations when the irregularity that he may detect is the work of an officer of the bank, whom he does not dare to criticise unless the fault has already amounted to criminality.

Superficial Examinations.

The only other protection now employed by the majority of banks is afforded by the infrequent visits of the official examiner, whose time is too limited and whose examination is too superficial to detect any but the most glaring irregularities. As long as the requirements of the banking law as to reserves, the ten per cent. limitation on loans and other specific legal demands are satisfactorily met, his duty is fulfilled. Any ordinarily well-covered irregularity is sure to escape his attention, and he should not be blamed if it does. It is the duty of the directors to see that the officers are properly discharging the functions of their respective positions and of the officers to properly supervise the work of the employees. It would be difficult to find a case in banking history where a defalcation would not have been prevented if all the officers had been properly alert in their attention to facts whose significance became apparent after the discovery of the shortage, but which had been overlooked in the hurry of daily work or ignored because the surface routine had not been disturbed by the malign forces at work underneath.

It is hardly fair to blame very seriously the bank officers for their neglect to cover all the points at which an attack may be made on the defenses of the bank against manipulation of the accounts. They have usually enough to do to protect themselves from assault by outside enemies, the danger from which is more apparent and also more frequent than that from traitors inside their own walls. Constant intercourse with their daily associates makes the idea of any treachery on their part almost an unthinkable proposition. The universal exclamation when the wrong is discovered is: "I would as soon have thought of suspecting myself." It is natural that this condition should exist, and it would be a very unfortunate thing if this mutual confidence and esteem were broken up and each man in a bank were to be an Ishmael with "his hand against every man, and every man's hand against him." Each would feel that his neighbor was a spy and every little suspicious circumstance would be exaggerated into a crime. Yet between this impossible condition and the indifference which results from the inertia of routine habit, there seems no middle course possible to those inside the walls of the bank.

Remedy Must Come from Outside.

We are then forced to the conclusion that if any remedy is to be found it must be looked for outside of the bank itself. The present Comptroller of the Currency has already suggested this in his able address to the Illinois bankers last October, in which he said, "In addition to such exhibitions as are made at regular meetings, the directors should have frequent thorough examinations by committees of the board or experts employed for the purpose. These should be made independently of the active officers of the bank. Every clerk and every officer of the bank should be examined and checked up as thoroughly as possible, and required to show the examining committee or auditor just how the matters in his charge stand. No man who is in a position of trust has any right to resent such an examination and one who has a proper appreciation of the relations he bears to those who have reposed trust and confidence in him will welcome such an opportunity to show that he has been faithful and efficient."

With such high authority in favor of the outside auditor no argument should be needed to demonstrate his value. A word may be said about the auditing committee of the board of directors. In connection with the value of the contents of the portfolio their advice is probably the best obtainable. They are in a position to know the financial condition of their borrowing customers as well as it can be ascertained in any way, except by requiring periodical statements made by an outside trained accountant. But when it comes to the intricacies of the accounts, it is a rare thing to find on the board of any bank a director who is qualified by experience to understand them sufficiently to detect any but the most glaring irregularities.

The ordinary board of directors is composed of busy men who have time to give only the most cursory attention to the affairs of the bank. The officers and clerks have grown up perhaps from boyhood under their eyes and for many long years have faithfully executed the trusts confided to them. It is no wonder that the directors learn to rely upon them implicitly, even to the extent of refusing to appoint an examining committee when requested to do so by some officer who desires to force them into taking their just share in the responsibility of the active management.

With the directors deep in the rut of absolute confidence in the officers and the officers equally deep in their own rut of perfect reliance on the clerks, it is easy for a designing man to find an opportunity to take advantage of the situation, knowing that he will be secure as long as he does not allow any of his operations to encroach on any one's else particular rut.

In such a condition of affairs, not by any means an uncommon condition, as every banker knows, there would seem to be no possibility of protecting the bank from the unlooked-for traitor by any means now in common use. The profession which I represent asks you to consider the claim of the certified public accountant to be the best person to offer protection to the bank, as he has for years successfully given it to the merchant and manufacturer.

It is only within the last few years that the profession of the public accountant has been brought into prominence, and it is still not as well understood as it should be by those to whom his services are of value. He is a man whose training is entirely along the lines of the scientific investigation of accounts, which is a very different thing from the mere verification of their mechanical accuracy. A number of the States have recognized the new profession by passing laws allowing the title of Certified Public Accountant to be borne only by those who are able by long experience or by passing a severe examination to demonstrate their fitness for the work required of them. As their clients are found in all lines of business they are constantly brought in touch with an infinite variety of accounts and are therefore in little danger of falling into ruts or grooves, and being independent of any special influence they are not liable to favor even the higher officers if there is anything that needs criticism or reform.

Their training teaches them to simplify accounts as far as possible and at the same time to make all the departments of an office fit into each other so as to make a harmonious whole, each part so closely related to every other that an irregularity in one place will throw the machinery in another out of gear. They may be said to put interlocking switches at the points where one groove crosses another, which will to a certain extent automatically prevent trouble in either.

It is difficult to formulate a universal system applicable to all officers, even in the same line of business, and while banking accounts are as simple as any, no one institution is so precisely like another that it would be safe to say that the same methods would exactly fit all cases. Each individual bank must be studied to ascertain just what its particular needs are, and how best to meet them. And where loose and slip-shod habits have been broken up, there must be constant vigilance to prevent their return or the adoption of equally dangerous new ones. The contention of the public accountants is that the most effective vigilance can be exercised by those who are fitted by their whole training to discover and remedy flaws in method and who approach the task of a periodic audit with minds free from prejudice or bias, and with sufficient time at their disposal to give the subject the attention it deserves.

The saying that each man thinks all men mortal but himself can be paralleled by the virtual certainty that each banker has that his particular office contains none but men of the most sterling integrity. Each one things that auditing precautions are excellent for every bank but his own, but is so sure of his own associates that he does not need anything of the kind himself.

To the credit of human nature it may be said that he is usually right. The vast majority of men are honest. If it were not so, the record of financial delinquencies would be far longer than it is, for there is no question but that the opportunities for wrong doing are almost limitless. The honest man, however, does not object to a proper supervision of his work, and should welcome it as a protection against the weakness of his own human nature. For nearly every case of shortage is accurately described by the phrase—"a good man gone wrong." It is very seldom a case of deliberate dishonesty. The man is usually a really good man in his intentions and his natural tendencies, but he is weak and unable to stand the temptation that comes in subtle guise when he thinks he sees an absolutely sure way to make considerable sums if he only had sufficient capital to start with. He is so sure of his calculations that he feels justified in temporarily using the funds of others, expecting to return them in a short time, after having caused them to earn a fortune of more or less magnitude for himself. It can never be known how many men have been successful in these calculations and have since returned to the straight and narrow path. We hear only of the failures and not all of them, for a very considerable proportion are hushed up for fear of the disastrous effects on the credit of the bank.

As a means of justifying the confidence of the general public in the correct management of the bank it would be a great advantage to have it known that it has adopted the precaution of having a thorough examination made by an unprejudiced and competent accountant. If his certificate, worded in general terms, were exhibited in the public banking room and with it there appeared another certificate signed by a committee of the directors, or better still by a committee of stockholders, not officially connected with the bank, that they had examined the discounted paper on hand and considered it good, the confidence engendered by the willingness to submit to this test would probably far more than pay for the expense of the examination by the additional business it would bring to the bank. This plan would also have a good effect on the directors themselves, who might be prevented from making some questionable loan, for fear it would not pass the scrutiny of the committee, and would certainly have a deterrent effect on the conduct of those bank officials whose directors allow them to have full control of the management of the bank.

The professional accountants of the country commend the subject to the careful attention of the banks, confident that a proper study of the situation will develop plans that will render less frequent the distressing occurrences that have recently shocked the financial world.

Life Insurance Investments.—In his recent testimony before the legislative investigating committee, Vice-President Geo. W. Perkins, of the New York Life Insurance Co., said:

"I believed I was working out a condition where our company, the New York Life, could get closer to the original purchaser. And I want to say, Mr. Hughes, something in relation to your inquiry the other day, when you asked why it was that the life insurance companies could not buy directly from the seller, but should suffer the intervention of the bankers. We couldn't go to the railroad company—that is, the New York Life could not. The New York Life could not take a fifteen-million-dollar bond issue and say to the railroad company: 'We will take that bond issue of you and market part of it,' because the New York Life would thus assume the moral responsibility for the validity of that bond issue and all that went with it. This company cannot go into that. These banking houses go into that; they have their organization and they put their guarantee on those bonds, and that guarantee to a reputable house means very much, and by doing that they make it possible for those life insurance companies to join them. When I was a boy the New York Life had to buy its bonds of second, third and fourth parties, but we have gradually moved up closer to the seller. I may suggest that these three greatest insurance companies should ultimately come to a point where they will be in a better control of the financial situation."

AMERICAN BANKERS' ASSOCIATION.

THIRTY-FIRST ANNUAL CONVENTION, TO BE HELD AT THE NEW NATIONAL THEATRE, WASHINGTON, D. C., OCTOBER 10, 11, 12 AND 13, 1905.

Delegates and Visitors will please register at the Secretary's temporary office, at the New Willard Hotel.

ORDER OF PROCEEDINGS.

(Subject to change by vote of the Executive Council, or by vote of the Convention.)

FIRST DAY, WEDNESDAY, OCTOBER 11, 1905.

Convention called to order at 10 o'clock, a. m., by the President, Mr. E. F. Swinney.

Prayer by Bishop Henry Y. Satterlee.

Roll Call.

Address of welcome by Hon. Henry B. F. Macfarland, President of the Board of Commissioners of the District of Columbia.

Address of welcome to the American Bankers' Association by Mr. John Joy Edson, President Bankers' Association, District of Columbia, in behalf of the Bankers of the District of Columbia.

Address of welcome to the American Bankers' Association and foreign visitors by a Representative of the United States Government.

Reply to address of welcome, and annual address by the President, Mr. E. F. Swinney.

Annual report of the Secretary, Mr. James R. Branch.

Annual report of the Treasurer, Mr. Ralph Van Vechten.

Report of the Auditing Committee.

Report of the Executive Council by the Chairman, Mr. G. S. Whitson.

Report of the Protective Committee by the Secretary.

Report of Committee on Currency by the Chairman, Mr. James M. Donald.

Report of Committee on Uniform Laws, by the Chairman, Mr. F. E. Tracey.

Report of Committee on Bureau of Education by the Chairman, Mr. J. B. Finley.

Report of Committee on Cipher Code by the Chairman, Mr. F. F. Blossom.

Report of Committee on International Form of Money Order by the Chairman, Mr. R. L. Crampton.

Practical Banking Questions.

(Discussion limited to thirty minutes for each topic; open to all delegates under the five-minute rule; time to be extended by unanimous consent.)

1. ADDRESS.—Mr. Frank A. Vanderlip, Vice-President National City Bank, New York.

2. THE EXAMINATION OF BANKS.—Hon. Wm. B. Ridgely, Comptroller of the Currency, Washington, D. C.

Sec. 2. Immediately after the first adjournment that occurs in the session of the annual Convention, the delegations from each State and Territory shall meet, at which several meetings the respective Vice-Presidents of the States and Territories, if present, shall preside, and these meetings of representatives from the States and Territories shall each select a member, who shall, with others so selected, constitute and be a Committee on Nominations. The Committee may make its report at any subsequent session of the Convention, but its nominations shall not exclude the name of any person otherwise nominated in the Convention. The delegates from the several

State Banks and Bankers' Associations shall assemble and meet apart after the first adjournment, and in such manner as they may determine, shall nominate to the Convention five names for members of the Executive Council, who shall be members of this Association, provided that no State Association shall thus be represented by more than one member of the Executive Council. No delegate from any State Association, shall, however, be eligible unless he is a member of the American Bankers' Association. The elections for President, First Vice-President and for five members of the Executive Council to be chosen by the Association shall be by ballot unless otherwise ordered.

SECOND DAY, THURSDAY, OCTOBER 12, 1905.

Convention called to order at 10 o'clock, a. m., by the President, Mr. E. F. Swinney.

Prayer by Rev. Teunis S. Hamlin, D.D.

Announcements.

Practical Banking Questions.

(Discussion limited to thirty minutes for each topic; open to all delegates under the five-minute rule; time to be extended by unanimous consent.)

3. COMMERCIAL EDUCATION.—Prof. Jos. French Johnson, Dean New York University School of Commerce, Accounts and Finance, New York.
4. THE SCOTCH SYSTEM OF BANKING.—Mr. Robert Blyth, General Manager Union Bank of Scotland, Limited, Glasgow, Scotland.
5. PRACTICAL BENEFITS OF MEMBERSHIP IN THE AMERICAN BANKERS' ASSOCIATION.—Mr. Walker Hill, President Mechanics-American National Bank, St. Louis, Mo.

CALL OF SECTIONS, NORTH, SOUTH, EAST AND WEST.—Statements limited to five minutes by bankers on the general condition of business in the various parts of the country from which they come.

THIRD DAY, FRIDAY, OCTOBER 13, 1905.

Convention called to order at 10 o'clock, a. m., by the President, Mr. E. F. Swinney.

Prayer by Rev. D. J. Stafford, D.D.

Practical Banking Questions.

(Discussion limited to thirty minutes for each topic; open to all delegates under the five-minute rule; time to be extended by unanimous consent.)

6. OUR COMMERCE.—Mr. Harvey L. Goulder, Cleveland, Ohio.
7. ADDRESS.—Hon. Leslie M. Shaw, Secretary of the Treasury, Washington, D. C.

Continuation of Discussion of Practical Banking Questions.

Unfinished Business.

Report of Committee on Nominations. Elections.

Installations of Officers elected.

Attention is called to the following: Article VII, Section I, of the Constitution, reads as follows:

Section 1. Resolutions or subjects for discussion (excepting those referring to points of order or matters of courtesy) must be submitted to the Executive Council in writing at least fifteen days before the annual Convention of the Association; but any person desiring to submit any resolution or business in open convention may do so upon a two-thirds vote of the delegates present, the resolution or business may be referred to the Executive Council to report upon immediately; provided that this shall not apply to any proposed amendment of the Constitution.

TRUST COMPANY SECTION.

The Convention of this Section and its headquarters will be at the New Willard Hotel; the Convention begins at 10 o'clock, a. m., October 10, 1905.

SAVINGS BANK SECTION.

The Convention of the Savings Bank Section will be held in the Shoreham Hotel at 10 o'clock, a. m., October 10, 1905. Headquarters will be on Mezzanine Floor of the New Willard Hotel.

ORDER OF PROCEEDINGS.

(Subject to change by vote of the Convention.)

1.—Meeting called to order at 10 a. m. by the Chairman, Col. Charles E. Sprague.
2.—Prayer by Rev. J. M. Schick, Pastor Grace Reformed Church.
3.—Address of welcome by B. F. Saul, Esq., President Home Savings Bank, and Chairman Savings Bank Committee of Washington Bankers.
4.—Reply to address of welcome, and annual address by the Chairman.
5.—Informal address by Hon. Leslie M. Shaw, Secretary of the Treasury.
6.—Report of Chairman of Executive Committee.
7.—Report of Secretary.
8.—Informal remarks by Hon. W. B. Ridgely, Comptroller of the Currency, on the subject of Bank Supervision; discussion to follow.
9.—PROPOSED BANK LEGISLATION IN OHIO.—Address by N. Henchman Davis, Esq., President Central Trust & Safe Deposit Co., Cincinnati, Ohio.
10.—ACCOUNTS OPENED IN TWO NAMES; report of Committee.
11.—SAVINGS BANKS PRINTED FORMS.
12.—MONTHLY REPORT OF DEPOSITS AND WITHDRAWALS.
13.—NOMINATIONS AND ELECTIONS: (A) Chairman; (B) Vice-Chairman; (C) Three members of Executive Committee to serve three years.
14.—INSTALLATION OF OFFICERS ELECTED.

REGISTRY ROOMS.

Members of the Local Committee will be in constant attendance. Also for the convenience of the members, competent stenographers, well informed clerks and a corps of messenger boys will be provided.

Arrangements have been made with the Western Union Telegraph, Postal Telegraph, and the Telephone Companies. Long distance telephone to be placed at the headquarters of the Association at the New Willard, and to be used at the different stations throughout the city, free.

ENTERTAINMENTS.

Tuesday, October 10, 1905, at 7:30 p. m., a banquet will be given to the general Officers and Council at the New Willard Hotel.

WEDNESDAY.

On Wednesday afternoon the President will give a reception to the delegates and their ladies at the White House (the hour to be fixed hereafter).

The Trustees of the Corcoran Art Gallery will give a reception at 8 o'clock, p. m.

Secretary of the Treasury, Leslie M. Shaw and Mrs. Shaw will give the delegates and their ladies a reception on Wednesday evening at the Arlington Hotel, at 8:30 o'clock.

THURSDAY.

An excursion will be given down the Potomac River in the afternoon.

An excursion will be given to Fort Meyer and Arlington in the afternoon. At Fort Meyer an exhibition drill of cavalry and artillery will be given. These drills are extremely interesting, giving an exhibition of expert horsemanship and precision in movement.

The memmbers and their ladies will be entertained at the New National Theatre and at Chase's Opera House in the evening at 8 o'clock.

FRIDAY.

A second excursion will be given down the Potomac River in the afternoon.

A second excursion to Arlington and Fort Meyer, with exhibition drill will be given in the afternoon.

Note.—Two excursions to Fort Meyer are given for the reason that only nine hundred can be admitted to the barracks at once. Those who attend the excursion down the Potomac River Thursday can visit Fort Meyer on Friday, or vice versa.

At 8 o'clock in the evening a formal reception will be given by the Bankers' Association of the District of Columbia, to the American Bankers' Association, in the Assembly Rooms of the New Willard Hotel.

Arrangements have been made at the Congressional Library to have the same illuminated on Friday evening. All delegates will have an opportunity to inspect this beautiful building, and a corps of guides will be on hand to show them around the edifice.

Tickets will be issued to all members and ladies to visit Mt. Vernon. These tickets can be used on any trip on the trolley cars or by steamboat. Special arrangements have been made with the authorities at Mt. Vernon to see that those wearing badges of the Bankers' Association receive proper attion and courtesy.

REDUCED RAILROAD RATES TO THE CONVENTION.

Reduced rate of fare and one-third has been granted on the certificate plan, *i. e.*, full iare going and one-third fare returning, by the following Passenger Associations:

New England Passenger Association, Trunk Line Association, Central Passenger Association, Southeastern Passenger Association, Southwestern Excursion Bureau and Western Passenger Association.

PROPOSED AMENDMENTS TO THE CONSTITUTION,

offered by Committee appointed to recommend changes therein to read as follows:

ARTICLE II, SECTION I.

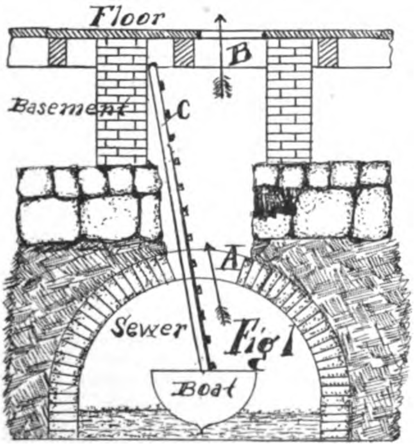
Any National or State Bank, Trust Company, Savings Bank or Banking Firm may become a member of this Association upon the payment of such annual dues as shall be provided by the By-Laws, and may send one delegate to the annual meetings of the Association; and any member may be expelled from the Association upon a vote of two-thirds of *The Executive Council.*

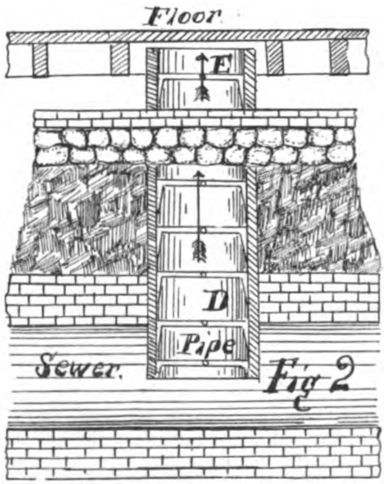
ARTICLE IV, SECTION III.

Said Committee, or a member of the American Bankers' Association, is prohibited from compromising or compounding with parties charged with crime, or with their *agents or attorneys, a Case once committed to the Association, which results in the apprehension of the criminal.*

BANK ROBBERS AND UNDERGROUND EXCAVATIONS.

Bank robbers have taken advantage of underground passages in cities to force entrance into banks for years. One of the greatest problems with which the police of Paris and many other foreign cities have had to contend with has been the plan adopted by burglars to enter buildings by means of sewers, tunnels, pipes, etc., below the buildings; thus in some of the cities of this country, objections are being made against the net-working of systems of tunnels and underground passages in general from the standpoint of the facility given the bank-breaker. The writer has been speaking with detec-

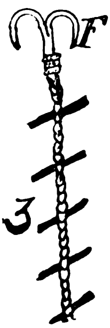




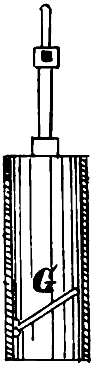
tives, ex-bank-breakers, engineers, and others, and has gathered the information herewith given from these sources. I was told of a gang of bank robbers who for months sought an opportunity to gain access to the lower floor of a certain bank building. For weeks the members of the gang worked in an underground passage just below the basement of the bank building. The burglars had access to the sewer by means of a boat, which boat had to be started from the water front and forced inward against the flow of the current, to the point below the bank building. The grated bars which had been adjusted across the outlet of the sewer were removed and tossed into the river bottom.

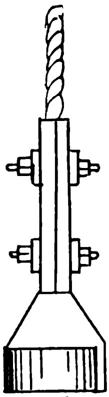
The boat was kept moored just inside the sewer, away from view. The method by which the man worked is illustrated in the sectional diagram in Fig. 1. A ladder had to be carried in the boat each trip. There were also a complete outfit of masonry tools, boring and chipping devices and bars for prying. First the burglars got their bearings in the sewer by a system of measurements and then they proceeded to remove particles of the masonry forming the sewer. An excavation was made at the top, as at *a* in the cut, and then the process of removing the earth just above commenced. The passage was continued upward through the wall work of the building, to *c*, where an entrance was gained to the basement of the bank. There remained only the flooring to cut through on the final break. A ladder (*c*) was employed all the time, and the base of this ladder rested in the boat. The floor hole was made the last night of the break as at *b*. This admitted the burglars to the interior of the bank building. Their scheme failed, however, as the watchman was alert, and the bank-breakers fled.

In another case that comes to mind, a regular system of pipe was employed for the purpose of installing a passage leading from the underground way to the basement of the bank building above. In Fig. 2 I give the diagram of the conditions that existed. The burglars had to force a way through the sewer under the most trying circumstances. The entrance was effected in this case by removing the metal lid of a street air-shaft, and



3



4


5

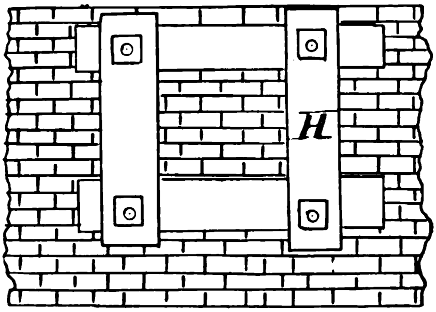


Fig 6

the men went through this place by means of a rope ladder, down to the level of the sewer line. Then upon each trip a section of pipe was carried, the interior of which was of ample dimensions to warrant the passage of a man. These sections of pipe had to be laboriously taken down to the sewer each trip, and connected up and fitted to the bore the men were making from the base of the sewer to the bottom of the bank building. In the illustration is shown the sewer line, and the pipe as it was finally set to extend upward. The sections of pipe were bolted as fast as placed. Then, in order to afford means for ascending and descending the interior of the pipe, some cross-braces were introduced. These pieces were made of hardwood, hinged in the center. The outer ends were fitted with drop pieces as shown, and these drop pieces formed the means for getting a frictional grip

Fig 7

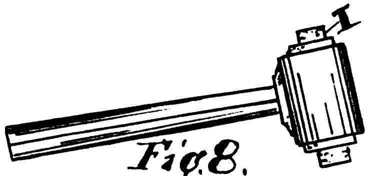

Fig. 8.

upon the sides of the pipe. Thus steps were made from the bottom up. Hence the men could enter the pipe at *d* and ascend upward to *e*, at which point the floor was reached, and entrance forced by cutting out a section. The bank-breakers in this case secured considerable money by blowing open a safe. I was interested in some of the instruments utilized by the bank-robbers, as seen upon different occasions.

Fig. 3 is a drawing of one of the types of handy rope ladders used by the profession. This form of ladder can be made very strong, light and handy. Usually strong cotton rope is used, although I have seen silk employed. The cross pieces are of hard wood, and are adjusted to form the steps. There are two hooks fixed at *f* and therefore the ladder can be used by connecting to the upper part of a ledge or projections. The processes of boring are conducted in various ways. Sometimes the bank robber devotes much time and labor to the excavation of earth to make an entrance. Then again he employs modern tools. In one case a regular sand-pump was found in service, a sketch of which is shown in Fig. 4. This is composed of a ten-inch cylinder, made of steel, with sharpened lower edge, and about three feet long. There is a lid or valve near the base, and when the contrivance is forced down into the sand, the sand enters the tube, and is held in by the lid, which drops as the pump is raised. Thus a quantity of sand is obtained and dumped each time. Fig. 5 is a sketching of one of the edge tools used for the same work. The chisel edge is caused to drop on the earth base of the bore repeatedly by lifting and releasing the rope. Thus the chisel edge pulverizes the sand or earth, making it easy to remove the same in buckets. In cases in which an entrance is made through a brick wall, various plans are adopted. Where concealment is necessary, the workers sometime arrange a wood frame like that in Fig. 6 at *a*. This frame is adjusted to the wall work by means of bolts. Then when the square of masonry is carefully loosened by chiselling out the mortar, the entire loosened section is carefully removed so that this section is like that in Fig. 7. Hence the section can be replaced at will and the freed masonry hardly detected. One of the forms of hard rubber-tipped hammers is exhibited in Fig. 8. The rubber tip is marked *i*. With this tool, the cracksmen are able to deliver blows upon masonry, metal or wood, with a softened sound.

AN OBSERVER.

Beaver Dam, Wis., September 23, 1905.

Editor Bankers' Magazine:

Sir: One of our patrons recently sent some shares of mining stock to the Western Bank, of Denver, Colorado, to be delivered to the purchaser upon receipt of the purchase price. The bank returned their draft on New York, which with due diligence was presented for payment, and refused, as the Denver bank had made an assignment. Is not the owner of the protested draft entitled to preference in dividing the assets of the Denver bank?

J. E. McCLURE, Cashier.

Answer.—In this case, the Western Bank, of Denver, was acting as agent only, and the title to the money received by it did not, as in the case of an ordinary deposit, pass to it, but belonged to the seller of the stock. He, therefore, has a right to claim the money as a trust fund, and is not required to claim as a general creditor of the bank. (National Bank vs. Insurance Co., 104 U. S. 54; People vs. City Bank of Rochester, 96 N. Y. 32; McLeod vs. Evans, 66 Wis. 405.) Nor is this right affected by the fact that the Western Bank remitted its draft for the amount; for the draft, having been dishonored, did not discharge the obligation. In Hoder vs. Western German Bank (reported in THE BANKERS' MAGAZINE for June, 1905, p. 732), the United States Circuit Court of Appeals, speaking of a similar instance, said: "The Florida Bank was an agent in making the collection. When it had made the collection, it held it in trust. If it mingled it with its own funds, the trust attached pro tanto to the funds. (National Bank vs. Insurance Co., 104 U. S. 54, where the principle vindicated in Knatchbull vs. Hallett, 13 Ch. Div. 696, by Sir George Jessel, M. R., is fully confirmed.) When it sent its own draft as the remittance, it did not operate as a satisfaction of its obligation, unless the draft should be paid, there being no agreement to receive the draft as payment. This would be so in the case of a common debt. And certainly the reasons for the same rule are not less where an agent transmits to his principal his own note or draft to provide means for the satisfaction of a trust obligation on account of funds received for his principal."

POLITICAL AND OTHER CONTRIBUTIONS BY LIFE INSURANCE COMPANIES.

President John A. McCall, of the New York Life Insurance Company, has sent out to all agents of the company the following circular relating to his testimony on the subject of contribution by the New York Life to the Republican campaign funds in the last three Presidential campaigns:

"Referring to my testimony before the Legislative Committee of the State of New York, now investigating life insurance as practiced by all companies doing business in the State of New York, I desire to call your attention to the following statement, made, of course, under oath before the committee:

'I was a Democrat up to the nomination of Bryan when he adopted the free silver platform in 1896. I made up my mind that I would do all in my power to defeat that candidate and that platform, and I did it with my heart and soul. I had no idea in my mind about politics at all, but I had a duty and a trust regarding New York Life policy-holders, and I felt that if free silver coinage was going to prevail and Bryan was going to be elected President of the United States that we might put up our shutters on the New York Life doors. Knowing that and believing it in 1896, I consented to a payment to defeat free silver—not to defeat the Democratic party, but to defeat the free silver platform—and I thank God that I did it.'

In other portions of my testimony I stated the contribution of 1900 was made for the same reason, and that the contribution of 1904 was made because the convention which nominated the candidate of one of the parties refused, by a vote of two to one, to incorporate in its platform a gold plank, while the opposition party adopted a gold plank.

My testimony shows further that this company has never, within my knowledge, except in the three instances named and for the reasons and purposes stated, contributed a dollar to any campaign fund of any party in any election, general or local.

It goes without saying that the business of this company is not politics under any guise. The contributions made in the years in question had no reference whatever to politics. They were made through a political party solely because it was not possible otherwise to reach the danger that menaced our assets.

If you ask me whether I think it right to take insurance moneys and devote them to political campaigns, I answer, 'No, a thousand times no.'

Now, as to the future: The gold standard has been irrevocably adopted. Therefore, the question of similar contributions cannot arise again during this or any subsequent administration of the New York Life.

However, in order definitely to express the company's position, I shall ask the board of trustees, at its next regular meeting, to pass a resolution which will make it clear to every policy-holder and to the public that the New York Life will never contribute to any political organization for any purpose whatever."

Col. J. J. Hayes, chairman of the Vicksburg, Miss., committee of health, has written to President McCurdy, of the Mutual Life Insurance Company, in acknowledgment of a contribution to the fund being raised to fight yellow fever in Vicksburg. Col. Hayes says that Mr. McCurdy's contribution was all the more acceptable because several of the large life insurance companies declined to give on the ground that they did not feel it proper to use the company's funds for such a purpose. The loss of the smallest policy-holder, says Col. Hayes, would cost any company much more than the subscription which was asked for. As a business investment he believes that the companies could do nothing which would advance their interest more than to help stamp out an epidemic of yellow fever. He says that there is every prospect of holding the epidemic in check.—*N. Y. Sun.*

REPUTATION AND CHARACTER.

Men of reputation but without character were denounced by Dr. Nicholas Murray Butler, President of Columbia University, in his address to the students at the opening of the one hundred and fifty-second academic year on September 27. He said:

"May I detain you a moment to point out one fundamental fact? Diverse as our intellectual interests here are, and various as are our daily tasks, there is one aim which all faculties and schools, all teachers and scholars, have in common—the building of character. Whether we pursue the older liberal studies or the newer applications of knowledge or some one of the learned professions, we are all concerned, first and foremost, with the forming of those traits and habits which together constitute character. If we fail in this, all our learning is an evil.

Just now the American people are receiving some painful lessons in practical ethics. They are having brought home to them, with severe emphasis, the distinction between character and reputation. A man's true character, it abundantly appears, may be quite in conflict with his reputation, which is the public estimate of him. Of late we have been watching reputations melt away like snow before the sun; and the sun in this case is mere publicity. Men who for years have been trusted implicitly by their fellows and so placed in positions of honor and grave responsibility are seen to be mere reckless speculators with the money of others and petty pilferers of the savings of the poor and needy. With all this shameful story spread before us it takes some courage to follow Emerson's advice not to bark against the bad, but rather to chant the beauty of the good.

Put bluntly, the situation which confronts Americans to-day is due to lack of moral principle. New statutes may be needed, but statutes will not put moral principle where it does not exist. The greed for gain and the greed for power have blinded men to the time-old distinction between right and wrong. Both among business men and at the bar are to be found advisers, counted shrewd and successful, who have substituted the Penal Code for the moral law as the standard of conduct. Right and wrong have given way to the subtler distinction between legal, not illegal, and illegal; or better, perhaps, between honest, law-honest, and dishonest. This new triumph of mind over morals is bad enough in itself, but when, in addition, its exponents secure material gain and professional prosperity it becomes a menace to our integrity as a people.

Against this casuistry of the counting house and of the law office, against this subterfuge and deceit, real character will stand like a rock. This university, and all universities, in season and out of season, must keep clearly in view before themselves and the public the real meaning of character, and they must never tire of preaching that character and character alone makes knowledge, skill and wealth a help rather than a harm to those who possess them and to the community as a whole."

OUR "COLOSSAL IMMORALITY."

President Schurman, in his address at the opening of the thirty-seventh year of Cornell University, September 29, denounced "the colossal immorality in the management of public trusts."

"An event has occurred during vacation," he declared, "which has attracted all eyes at home and many abroad, and is still attracting them. It is in regard to the management of public funds and trusts, and the manner in which trustees are dishonestly, and I may say criminally, using the funds of widows and orphans in all parts of the United States. This colossal immorality in the management of public trusts has brought forth just and severe criticism. Nothing will come of this outburst of indignation unless it makes each one of us feel that there is something wrong in the public spirit of the country.

We have in this country during the last twenty years accumulated colossal fortunes. In the gift of acquiring money the American people have far outrun any other people. We are continually using money and the money of others to make more. Consequently, there is before our young men a distorted view of the end of life and a laxity in regard to means which may be adopted in attaining this false end.

I believe that we need to go back to the old ground that a man's life consists, not in attainment of this world's possessions, but in the development of the best character and power that is in him. I believe that human beings, the highest as well as the lowest, are bound by the same moral laws, and these laws are as inevitable as the physical laws of the universe.

Recently eminent men in the financial world have become mere notorious characters. We are criticising them severely; but, I repeat, this criticism will come to nothing unless it reacts upon ourselves and individually gives us saner views as to the chief good of life and the way to walk to attain it."

Resumption of Refunding.—On September 27 the following was made public:

The Secretary of the Treasury makes the announcement that on the second of October next he will resume refunding operations under the Act of March 14, 1900, receiving four per cent. bonds of the funded loan of 1907 and three per cent. bonds of the loan of 1908-1918, at a valuation equal to their present worth, to yield an annual income of 2¼ per cent., and issuing in place thereof two per cent. bonds, consols of 1930, at 101, subject to discontinuance at any time without notice.

The Secretary announces that his purpose is not to stimulate circulation, but to gradually reduce the amount of indebtedness maturing in 1907 and 1908. He deems it better to get some of the present indebtedness out of the way before any great volume of Isthmian Canal bonds are issued.

Pity for John D. Rockefeller.—In his old age the richest man in the world finds his greatest satisfaction not in the contemplation of his vast possessions and power, but in the visit of respect paid him by a body of his old friends and associates in the city where he has made his home. There is something pathetic in the eagerness with which Mr. Rockefeller greeted these neighbors and associates of his business life. His $500,000,000 or more have brought him—what? Great power, no doubt, but power which is accompanied by the fear of millions, the hatred of multitudes, fierce attacks upon his character and public record. The methods by which he has acquired this wealth have been called into question and even the money which he has bestowed in charity has been spoken of as "tainted." There is not in the United States to-day a man of standing who is held in less general esteem than John D. Rockefeller. That is what his money has earned for him. It has put him in a solitary place of power and left him there, as in a pillory where everybody may throw stones at him. The mere fact of his enormous wealth, regardless of the methods of its acquisition, has brought him this burden of loneliness, distrust and envy.

No wonder he turns to the business men who called upon him in Cleveland Tuesday, with eager gratitude for their sympathy, and said that mere money getting is not all there is in this world. "Turn your thoughts," he said, "to higher things." Mr. Rockefeller's life points an impressive moral, but is it not about time to stop throwing stones at him. Attack his system of financial concentration, if you please, but let Mr. Rockefeller alone with his millions. Further attacks upon him will appear in the nature of persecution, and will make him an object of sympathy.—*Wall Street Journal.*

A Noted Forgery.—A case of forgery that bids fair to rank among the largest of such transactions in recent times was brought to light in New York city recently. The facts in connection with the case are thus reported:

Messrs. Pearl & Co., a firm of brokers, obtained from the National City Bank a loan on some securities valued at $300,000 deposited as collateral. This loan was made at 4½ per cent., but by what appears to have been a mistake the rate was entered as 4¼ per cent. on the firm's books. On September 27 a messenger presented to the City Bank a certified check on the Hanover National Bank for $300,037.50, in payment for Pearl & Company's loan, and received the stocks and bonds deposited as collateral. The check was a forgery. As the transfer agents have been notified, it is thought that the loss will be slight. Whatever it is will be met by the bank. The forgery of the check is pronounced an exceedingly clever one—the check being one of the same blank form as those used by the bank on which it was drawn, and having the name of Pearl & Co. printed in one corner.

It is regarded as a peculiar feature of the case that the amount of the check should have been exactly the sum required to take up the loan at the bank's rate; but it is said to be the custom to write on the envelopes containing the collateral the facts in regard to such loans, and it is thought possible the forger may have obtained the information by looking over the shoulder of the messenger who brought the securities to the bank when the loan was negotiated.

Banks in Great Britain.—Commercial circles in Great Britain are much interested in recent consolidations of banking institutions in the United Kingdom. On this subject Consul Stevens, of Plymouth, writes:

"In banking and commercial circles much interest has been excited by the recent amalgamation of the Consolidated Bank of Cornwall and the great London banking house of Barclay & Co. The high position which the Consolidated Bank of Cornwall holds among provincial banks and the prestige of Barclay's make the union of interests one of the most important that has taken place in recent years.

The amalgamated concern with its headquarters in London has 382 branches throughout the country and an authorized capital of £8,500,000, with assets close to £46,000,000. It thus becomes one of the largest and most powerful banks in England.

This case of consolidation furnishes the latest instance of what has become an inevitable tendency in the banking world. Each succeeding year witnesses a diminution in the number of independent provincial banks by the process of absorption and a corresponding enlargement of the great London institutions. Doubtless the fusion of interests which is continually going on in this way adds to the strength and solidity of the banking resources of the country, besides furthering in many ways the convenience of the mercantile community. These consolidations receive the hearty support of the British press and public."

A Good Word for High Finance.—At the recent opening of the New York University School of Commerce, Accounts and Finance Chancellor MacCracken and Dean Johnson made addresses. Dean Johnson had this to say about high finance:

"Our latest craze is the notion that every rich man has acquired his wealth by dishonest, if not illegal, methods. Things have come to such a pass that no university that wishes to escape criticism can afford to be without a sort of psychologico-financial microscope in order that it may be sure there are no microbes on any dollars that are offered it. Just at present the managers of our great insurance companies are undergoing the test. The popular craze on this subject, I am told, is so great that people are ready to cry 'stop thief!' at every manager or director.

There is no evidence yet at hand warranting pessimism with regard to the prevailing standard of morality and integrity in our world of business and finance. Certain trustees may have abused their trust and have exceeded their prerogatives, but we must beware of assuming on that account that all our great captains of finance and industry are moral freebooters.

Personally, I believe in the honesty and integrity of our successful men, and I will not surrender that belief until I have been convinced by facts which are irrefutable. We must not let isolated cases betray our judgment into general conclusions. We must not condemn the motives of men, whether we are preachers, teachers or students, unless we have a full statement of facts on both sides. This popular readiness to suspect and condemn the methods of our successful men can be corrected by only one remedy, and that is by a more general education in the laws and phenomena of the business world."

LET US TAKE LEAVE OF HASTE.

By Clinton Scollard.

Let us take leave of haste awhile,
And loiter well content
With little pleasure to beguile,
And small habiliment—

Just a wide sweep of rain-washed sky,
A flower, a bird-note sweet;
Some easy trappings worn awry;
Loose latches for our feet;

A wheaten loaf within our scrip;
For drink the hillside spring,
And for true heart companionship
The love of loitering.

We want so much, and yet we need
So very slight a store,
But in the age's grip of greed
We hurry more and more.

The woodland weaves its gold-green net;
The warm wind lazes by;
Can we forego? can we forget?
Come, comrade, let us try!

—From The Outlook.

BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—Owing to the increase of its business the Bankers' Trust Company has been obliged to enlarge its offices at 7 Wall street, and to take a large amount of space on the ground floor. A recent report of the company to the Superintended of Banking shows undivided profits of about $276,000, and deposits of $25,436,000.

—The Dime Savings Bank of Brooklyn is to erect a new building at DeKalb avenue and Fleet street, which will be its future home. The lot fronts sixty-two feet on DeKalb avenue and 114 feet on Fleet street. The building will be finished within a year.

—Marcel Kahle, President of Messrs. Geo. Borgfeldt & Co., importers and commission merchants, has been elected a director of the Citizens' Central National Bank.

—The People's Bank, of Brooklyn, will shortly open a branch at 1550 Broadway, Brooklyn—the first branch to be established by this bank.

—On September 29 the Windsor Trust Company opened a downtown branch in the Mutual Life Building, Nassau and Cedar streets.

—A correspondent, in the following letter, calls attention to a matter of interest to the city banks:

"The use of the word 'Greater' as a part of the title of New York city is practically obsolete. Even the names of the boroughs, 'Brooklyn,' etc., are being abandoned except for political purposes. It is, therefore, important that as few names as possible be duplicated in the city. This is especially true of banks. Numberless mistakes are being constantly made over the duplication of the names of the banks of the city. They are the First National, Merchants', Mechanics', National City, Nassau and People's. Of course, the banks located in the Borough of Brooklyn usually have the name of the borough printed on their checks, etc., but practically all their larger depositors, for business reasons, have the date line New York city. It will probably be a slow and expensive operation to change the name of these banks, but it will have to be done sooner or later, as the legal complications, the errors of bank clerks, wrongly delivered mail and the troubles in the clearing-house will sooner or later make the change absolutely necessary. Why not start in at once to bring about the change?"

NEW ENGLAND STATES.

Holyoke, Mass.—The Holyoke National Bank's statement of August 25 shows surplus and undivided profits of $194,453, all of which has been earned, not paid in by stockholders. Besides this $194,453 over $50,000 has been earned and charged off in bond premiums, real estate and furniture improvement, etc., in the last twenty years. Also in that same period $360,000 has been earned and paid in regular nine per cent. dividends. These figures are evidence of good management and safe banking. The Holyoke National makes its customers interests its own, cheerfully extending in good times and bad all the accommodation consistent with sound banking.

Boston.—An illustrated booklet has been issued by the Bay State Trust Company telling "How to Keep a Trust Account." It will be found full of useful suggestions to depositors who keep their funds with trust companies.

—The Boylston National Bank recently acquired the business of the

Mount Vernon National Bank, and the latter institution will go into liquidation.

MIDDLE STATES.

Baltimore, Md.—The Commercial and Farmers' National Bank lately issued a pamphlet containing a fine full-page portrait of Cashier Harry M. Mason. A detailed analyzed statement of the resources and liabilities of the bank is also presented. Deposits increased from $386,000 in January, 1904, to $3,467,000 in August of the present year.

New York Bankers, Group IV.—The members of Group IV. of the New York State Bankers' Association met in annual session at Oswego, September 28, and discussed a number of banking topics.

The following officers were chosen for the ensuing year: E. S. Tefft of Syracuse, chairman; Luther W. Mott of Oswego, secretary. Executive committee: N. P. Wardwell of Watertown, E. Alley of Cortland, A. Youmans of Fulton, L. F. Burdick of Tully and George L. Bradford of Utica.

SOUTHERN STATES.

Louisiana and Arkansas Railway.—Satisfactory results attended the operation of the Louisiana and Arkansas Railway during the fiscal year ending June 30, 1905. The gross earnings increased from $704,000 to $844,000, the gain amounting to twenty per cent. Operating expenses and taxes were only seven per cent. while net income was almost forty per cent. greater than in the previous year.

The average length of road operated was 167.48 miles as compared with 147.77 miles in 1904. An extension of about forty miles from Winnfield to Jena, La., was added to the operated mileage during the year.

WESTERN STATES.

St. Louis.—Festus J. Wade, President of the Mercantile Trust Co., recently returned to this city after a six weeks' absence in Europe. Mr. Wade stated: "I have succeeded in establishing agencies and foreign connections throughout Europe for our institution and found that the trade position of this country is becoming stronger and stronger abroad. Conditions not only here but through Europe seem to be very promising. The attitude of foreign investors toward American securities I found to be very favorable indeed and this to my mind, is an exceptionally hopeful sign."

Shenandoah, Iowa.—President Thomas H. Read, President of the First National Bank, denies that his bank has sustained a loss of $40,000, or any other sum, through the operations of a forger, as recently reported in the press.

The First National Bank has $50,000 capital, $50,000 surplus, $16,850 undivided profits and $498,088 deposits—a very strong showing.

Valparaiso, Ind.—A very handsome and substantial structure has been erected for the State Bank and the Thrift Trust Company. It is a fire-proof building, constructed of Bedford stone, and equipped with modern safe-deposit vaults.

South Bend, Ind.—On March 28, 1904, the American Trust Company commenced business, with 100 accounts and $104,676 deposits. At the end of six months the number of accounts had increased to 737 and the deposits to $354,-779. On July 10, 1905, the company had 1627 accounts and deposits amounting to $559,997.

Indianapolis, Ind.—At a special meeting of the shareholders of the American National Bank on September 13, it was voted to increase the capital stock from $1,000,000 to $1,500,000. The new issue will be used to purchase the building formerly used as the post office, to which the bank will be moved.

Chicago.—This city is to have an "organized labor" bank—the Commonwealth Trust and Savings Bank, capitalized at $2,000,000, the par value of shares being $5.

Kokomo, Ind.—The Kokomo National Bank occupies one of the finest banking rooms in the State. Its furniture is solid mahogany, and grille work of bronze, with tile floor and steel ceiling. Improved vaults also comprise an important part of the equipment.

La Porte, Ind.—Extensive alterations have been made in the exterior and interior of the building of the La Porte Savings Bank, a considerable addition being made to the rear in order to give room for the new vaults.

Ohio Bankers' Association.—Members of the Ohio Bankers' Association met in their fifteenth annual convention, at Cleveland, September 27 and 28, C. A. Hinsch, President of the Fifth National Bank, Cincinnati, presiding. There was a large attendance. Addresses were made by Governor Herrick and Secretary Shaw, the latter favoring an emergency circulation issued by National banks to the extent of fifty per cent of their bond-secured circulation and subject to a tax of five or six per cent.

Harvey D. Goulder, of Cleveland, delivered an address on foreign commerce. Others who spoke were James R. Branch, Secretary of the American Bankers' Association, whose subject was "The American Bankers' Association's Money Order"; Geo. Guckenberger, Cincinnati; R. W. Firestone, Lisbon, O., and W. A. Graham, Sidney, O. Various reports were submitted and acted upon.

The convention elected the following officers: T. C. Stevens, Toledo, president; Thos. H. Wilson, Cleveland, vice-president; H. C. Herbig, Coshocton, treasurer; S. B. Rankin, South Charleston, secretary, and S. C. Arbuckle, South Charleston, assistant secretary.

The executive council will later elect a new chairman to succeed A. B. Voorheis, of Cincinnati, who has resigned. The convention voted not to recommend for passage by the next Legislature a new banking law providing for the inspection of all banks, both State and private.

Evansville, Ind.—On October 1, the American Trust and Savings Bank, which began business December 1, 1904, with $200,000 capital stock ($100,000 of which was paid up), moved into the company's own building, at Sixth and Main streets. This location is in the jobbing, manufacturing and retail center and is one of the best in the city. The building is of Bedford stone, is three stories high, and has a front of seventy-five feet on Main street and 150 feet deep on Sixth street. The bank occupies the corner rooms, which have been fitted up with everything necessary to the safe and convenient transaction of business.

Peru, Ind.—An evidence of the progress of the Citizens' National Bank is afforded by the recent improvement made in the bank's premises, which have undergone extensive alterations and improvements, a new and up-to-date vault having been built. The fixtures are of cherry, marble and bronze, and the floor of interlocking tile, making on the whole a very pleasing effect.

PACIFIC SLOPE.

San Francisco.—The American National Bank, which aims to be an exponent of conservatism combined with enterprise, is meeting with marked success in following this policy, deposits having grown from $387,728 on March 8, 1902—the date of the change in management—to $5,066,660.78 on September 15, 1905. Capital, surplus and profits amount to $1,289,811

The officers of the American National Bank are: President, P. E. Bowles; Vice-Presidents, Francis Cutting and E. W. Wilson; Cashier, Geo. N. O'Brien; Assistant Cashiers, E. J. Broberg and O. D. Jacoby; Manager Foreign Exchange Department, H. de Saint Seine.

—The San Francisco National Bank has purchased the property on California street formerly occupied by the London and San Francisco Bank. On July 1 of the present year the San Francisco National Bank increased its capital stock from $500,000 to $1,000,000. James K. Wilson is President, F. W. Wolfe, Cashier, and C. L. Davis, Assistant Cashier.

CANADA.

Sovereign Bank of Canada.—Through the courtesy of Duncan M. Stewart, second Vice-President and General Manager of the Sovereign Bank of Canada, of Toronto, we have received the third annual report of the bank. Assets of the bank now amount to $11,669,905.58—an increase of $3,065,831.49 over last year's report. Net profits for the year ending April 29, 1905, were $133,975.67.

NEW BANKS, CHANGES IN OFFICERS, ETC.

Stoughton—State Bank.

The West's Financial Power.—A Chicago correspondent of the New York "Journal of Commerce and Commercial Bulletin" gives the following account of the financial growth of the West:

"A few years ago James H. Eckels, former Comptroller of the Currency, now President of a Chicago bank, predicted that Chicago would become the financial centre of the United States. As an indication that the prophecy is in process of fulfillment it is interesting to note that the reserve accounts of Chicago banks have increased 168 per cent. in six years, as compared with thirty-eight per cent. in New York banks. Kansas City and Minneapolis banks have more than doubled their reserves in six years. Boston has gained ten per cent. in ten years. The banks west of the Mississippi carry more than $700,000,000 in individual deposits, a gain of 139 per cent. in six years. In the same period their loans and discounts increased 133 per cent. The National banks of all the rest of the country gained sixty-five per cent. in loans and discounts and seventy-two per cent. in deposits in the same period. The territory west of the Mississippi is tributary to Chicago."

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

New York, October 2, 1905.

Higher rates for money here and abroad were the dominating influence late in September. Bank reserves began to fall off in New York at the beginning of the month. Currency was being withdrawn to be used in moving the crops, while the completion of certain syndicate operations also called for the temporary use of bank funds. Call money in New York did not get to four per cent. until about the middle of the month, but gradually advanced thereafter until it touched seven per cent. on September 29.

Money also became dearer in the principal European markets. The reserves of the Bank of England fell partly through engagements of gold in New York and also through shipments to Egypt. On September 12th $1,275,000 gold was engaged in London to be shipped to New York; on the 19th, $2,275,000 and on the 25th, $1,800,000.

The Bank of England undertook to protect its reserve by increasing the price of bar gold and American eagles, by three successive advances, from 77s. 9d. to 77s. 9¾d. The rate of discount was also advanced on September 7 to three per cent., from 2½ per cent., the rate which had been maintained since March 9. This was followed by another advance to four per cent. on September 15. This is the highest rate named since February, 1901, The Bank of Germany also advanced its rate of discount on September 11 from 3 to 4 per cent. and a further advance early this month is looked for.

It is not an unusual thing for the Bank of England to advance its rate of discount at this season of the year, although last year a three per cent. rate was maintained from April until the close of the year. In 1903 a four per cent. rate was made on September 3, in 1902 on October 2, in 1901 on October 31, and in 1900 on July 19. The changes in the Bank of England rate since 1894 are shown as follows:

Date.	*Per cent.*	Date.	*Per cent.*	Date.	*Per cent.*
Feb. 22, 1894	2	Oct. 13, 1898	4	Feb. 21, 1901	4
Sept. 10, 1896	2½	Jan. 19, 1899	3½	June 6, "	3½
" 24, "	3	Feb. 2, "	3	" 13, "	3
Oct. 22, "	4	July 13, "	3½	Oct. 31, "	4
Jan. 21, 1897	3½	Oct. 3, "	4½	Jan. 23, 1902	3½
Feb. 4, "	3	" 5, "	5	Feb. 6, "	3
Apr. 8, "	2½	Nov. 30, "	6	Oct. 2, "	4
May 13, "	2	Jan. 11, 1900	5	May 21, 1903	3½
Sept. 23, "	2½	" 18, "	4½	June 18, "	3
Oct. 14, "	3	" 25, "	4	Sept. 3, "	4
Apr. 7, 1898	4	May 24, "	3½	Apr. 14, 1904	3½
May 26, "	3½	June 14, "	3	" 21, "	3
June 2, "	3	July 19, "	4	Mar. 9, 1905	2½
" 30, "	2	Jan. 3, 1901	5	Sept. 7, "	3
Sept. 22, "	3	Feb. 7, "	4½	" 28, "	4

The local money situation is not such as to cause apprehension. The advance in money to seven per cent. was not wholly unexpected. The usual quarterly payments of dividends and interest about October 1 would tend to stiffen the money market, while the customary call upon this center to supply funds for the crop movement has a stimulating effect upon rates for money.

There is this fact, however, to be noted: the reserves of the banks are $46,000,000 less than they were a year ago and have fallen $38,000,000 since the close of July. The wide fluctuations in the cash reserves of the banks are not easy to account for. As compared with January 28 last, the reserves on September 23 showed a decrease of $48,000,000. The following table shows for each year since 1890 the extreme changes in the total cash reserves and also in the surplus of the banks:

Year.	Total reserve.		Surplus reserve.	
	Largest.	Smallest.	Largest.	Smallest.
1890	$121,565,600	$91,801,400	$15,081,650	*$3,306,925
1891	133,306,600	102,658,200	24,089,775	3,102,750
1892	164,046,800	115,580,500	36,020,900	539,050
1893	207,424,600	76,505,500	80,815,150	*16,545,375
1894	249,575,100	172,528,100	111,623,000	32,902,650
1895	186,040,800	139,135,500	45,880,450	13,413,450
1896	161,172,200	119,996,500	40,182,425	8,228,550
1897	202,998,000	165,983,200	59,148,250	11,523,450
1898	249,532,200	182,257,300	62,206,200	4,240,400
1899	286,360,000	183,411,300	43,933,725	*2,788,950
1900	252,950,200	198,995,000	30,871,275	2,686,425
1901	269,011,100	231,809,400	30,799,450	5,211,525
1902	270,622,600	219,612,500	26,623,350	*1,642,050
1903	260,825,500	215,744,700	27,880,775	666,975
1904	381,005,700	231,086,600	58,613,075	8,381,375
1905†	324,436,700	276,034,000	26,979,550	4,635,300

* Largest deficit. † To October 1.

More than $21,000,000 cash disappeared from the clearing-house bank in the first three weeks of September as indicated by the weekly statements. Nor has the disappearance of this large sum been satisfactorily explained, any more than the anomalous increase of $1,500,000 in the last week. But there are many features of the bank statements which are not explained by the statements themselves.

The large reduction in loans by the New York banks were of so exceptional a character that inquiry as to the cause was only natural. It is generally believed that to the trust companies may be traced many of the inexplicable changes which the weekly statements of the clearing-house banks show. Whatever may have been the influence it is a fact that the reduction of $30,000,000 in loans in the week ended September 9 was the largest ever recorded in any week.

Until recent years it was seldom that a single week's contraction in loans reached $10,000,000, but of late it has been a frequent occurrence. Making due allowance for the increase in magnitude of all banking transactions, there is still room to question the legitimacy of the frequent wide swings in loans and deposits. In the following table we show every weekly increase in loans exceeding $10,000,000 reported since 1878, covering a period of nearly twenty-eight years. In the first twenty years it will be observed that only six times did the reduction in loans amount to as much as $10,000,000 in a single week. In the remaining eight years there have been forty-nine weeks with a loan contraction exceeding that sum. The table follows:

Week ended		Week ended		Week ended	
August 23, 1879	$10,740,900	April 13, 1901	$13,484,600	March 21, 1903	$12,953,000
March 15, 1881	18,099,000	May 18, 1901	24,204,800	June 13, 1903	11,776,100
May 24, 1884	13,461,800	May 25, 1901	14,639,500	November 7, 1903	11,413,000
December 28, 1895	11,180,100	June 29, 1901	10,374,000	November 14, 1903	10,240,500
January 4, 1896	12,885,800	July 13, 1901	21,001,500	May 21, 1904	22,375,100
March 5, 1898	13,622,000	July 20, 1901	12,266,900	May 28, 1904	16,070,100
March 12, 1898	10,392,400	Sept. 7, 1901	10,040,800	October 15, 1904	11,975,800
March 19, 1898	10,585,100	Sept. 14, 1901	12,879,700	November 12, 1904	14,789,600

April 6, 1901	12,449,300				

The largest reduction in any week was that of September 9, this year, exceeding $30,000,000. The largest weekly contractions were: May 18, 1901, $24,200,000; May 17, 1902, $22,900,000; May 21, 1904, $22,300,000; December 17, 1904, $22,000,000; July 13, 1901, $21,000,000, and September 16, 1905, $20,400,000. The reduction in loans in the first three weeks of last month aggregated $60,000,000 and there is no parallel for this in any of the previous records. In ten weeks in the spring of 1884 there was a reduction of $55,000,000 in loans and for a simular period in 1898 of $76,000,000. There was an $80,000,000 reduction in the autumn of 1899, but that extended over thirteen weeks. In ten weeks in the autumn of 1902 there was a reduction of $63,000,000 and in seven weeks in the last part of 1904 of $82,000,000, but all of these movements have been dwarfed by the record made last month.

It is possible, however, to attach too great a significance to the changes now reported in the bank statements, particularly as regards the loans. Many new methods have been adopted in banking, and there is a great deal of shifting of loans in accounts which, while it may not change the amount of loans actually outstanding, nevertheless does materially change the item of loans in the bank statement.

In spite of dear money the stock market continued strong throughout the month with very little reaction. There is practically a universal report of prosperity. In the West, Northwest and Southwest the most hopeful views are expressed, not only as to the immediate future but extending over a twelve-month. The largest yield of grain ever known combined with the promise of a good demand at satisfactory prices, makes a substantial basis for prosperity. The total winter wheat yield for the country is estimated at 424,400,000 bushels and spring wheat at 280,047,000, a total of 704,447,000 bushels—the largest since 1901. The corn crop is estimated at 2,717,000,000 bushels, the largest ever raised; while the oats crop is estimated at 930,000,000 bushels, which is very nearly the largest.

The report on September 5 of the condition of cotton on August 25 made a more favorable showing than was expected, the average being 72.1 as compared with 74.9 on July 25, and with 84.1 a year ago. Last year's cotton crop was the largest ever produced, nearly 14,000,000 bales, and the yield this year is expected to be between 10,000,000 and 11,000,000 bales.

An important gain from our increased production of grain is expected to show in our foreign trade. The exports of wheat in August were 1,074,008 bushels, as compared with 216,469 bushels in the same month in 1904. In August, 1903, the exports of wheat, however, were in excess of 6,000,000 bushels, and in 1901 nearly 27,000,000 bushels. While there is a substantial gain over last year therefore, the movement is still far below that of previous years.

Exports of corn in August were 4,830,975 bushels, against 3,084,490 bushels in 1904, and were the largest for that month in any year since 1900, when they were 14,000,000 bushels. The cotton export movement was exceptionally large, aggregating 321,816 bales, against 109,832 bales in 1904 and 31,151 bales in 1903.

A large movement of grain and cotton will have a very important effect upon our foreign trade balances. The August exports of breadstuffs aggregated in value $7,826,335, a gain of nearly $2,500,000 over August, 1904. Exports of cotton were valued at $17,232,269, an increase of $11,000,000. The value of domestic exports of products of agriculture in August was $54,082,020 as compared with $36,527,505 in 1904 and $42,350,675 in 1903. Our manufactured exports are also increasing; the net result is an increase in total exports of more than $25,000,000 in August.

The railroads are confident of a very large grain traffic during the coming year. At the same time it is believed that activity in all kinds of business will prevail. Large orders for steel rails and equipment are being placed and the iron trade is again showing the effects of prosperous conditions.

There were few important events during the month. The Secretary of the Treasury has announced that he will resume, October 2, the refunding of the three per cent. bonds of 1908 and four per cents. of 1907 into the new two per cent. bonds of 1930. The result of this operation will be a further broadening of the basis for bank-note circulation. The necessity of further inflating the bank-note currency is not, however, conceded by all financial authorities.

A report of the Director of the Mint is a further reminder of the enormous increase that has taken place in gold production. The Director estimates that 3,904,986 ounces of gold was mined in the calendar year 1904, having a value of $80,723,200. This is an increase of $7,131,500 over the yield of 1903. There was $57,786,100 fine ounces of silver produced, having a commercial value of $33,515,938.

The investigation of life insurance was begun by a committee of the New York State Legislature and has taken something of a sensational turn. The enormous influence of the large life insurance companies in the financial world has been clearly set forth by the testimony.

THE MONEY MARKET.—Money in New York became dearer as the month progressed, and finally touched seven per cent. on call. A large demand for currency to move the crops and the usual October 1st disbursements affected the market. At the close of the month call money ruled at five to seven per cent., averaging about six per cent. Banks and trust companies loaned at 4½ per cent. as the minimum. Time money on Stock Exchange collateral is quoted at 4¼ @ 4½ per cent. for sixty days, 4½ per cent. for ninety days, and 4½ per cent. for four to six months on good mixed collateral. For commercial paper the rates are 4½ @ 5 per cent. for sixty to ninety days' endorsed bills receivable, 4½ @ 5 per cent. for first-class four to six months' single names, and 5½ @ 6 per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—There were violent changes in the condition of the New York Clearing-House banks as reported weekly in the past month. Deposits decreased $41,000,000 in the first week, $29,000,000 in the second week, and $13,000,000 in the third week. For the month there was a decrease of $86,000,000. The banks report $122,000,000 less deposits than were held last February. Loans decreased $30,000,000 in the first week, and $20,000,000 in the second week, the decrease for the month being $65,000,000. Since August 5, when the high record was made, loans have been reduced

FOREIGN EXCHANGE.—The sterling exchange market was weak under the influence of higher rates for money in New York and the free supply of bills against grain and cotton. Some gold was engaged in London for shipment to New York, but foreign exchange is not yet low enough to justify imports at a profit.

MONEY RATES ABROAD.—All the money markets abroad were stronger and rates have advanced. The Bank of England advanced its rate of discount from 2½ to three per cent. on September 7, and to four per cent. on September 28. The Bank of Germany advanced its rate from three to four per cent. on September 11. Discounts of sixty to ninety day bills in London at the close of the month were 3⅜ @ 3½ per cent., against two per cent. a month ago. The open market rate at Paris was 2¼ per cent., against 1⅜ per cent. a month ago, and at Berlin and Frankfort 3½ @ 3⅝ per cent., against 2⅝ @ 2¾ per cent., a month ago.

Fine gold bars on the first of this month were at par to ¼ per cent. premium on the Mint value. Bar silver in London, 28d. per ounce. New York market for large commercial silver bars, 60⅝ @ 62¼c. Fine silver (Government assay), 60¾ @ 62¾c. The official price was 60½c.

NATIONAL BANK CIRCULATION.—The amount of National bank notes outstanding was increased $4,131,873 in September, making the total $516,352,240, of which $481,688,526 is based on bonds and $34,663,714 secured by deposits of lawful money. There were $2,600,000 of Government bonds deposited to secure circulation, about $1,700,000 of which were two per cents. and the remainder divided between the other classes of bonds. The bonds deposited to secure public deposits were reduced nearly $1,000,000.

Total	$468,066,940	$476,938,290	$482,198,090	$484,810,890

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, $8,971,900; 4 per cents. of 1895, $5,414,700; 3 per cents. of 1898, $5,943,500; 2 per cents. of 1930, $35,387,900; District of Columbia 3.65's, 1924, $1,332,000; Hawaiian Islands bonds, $1,038,000; Philippine loan, $5,892,000; railroad and other bonds, $2,135,500; a total of $66,110,300.

GOVERNMENT REVENUES AND DISBURSEMENTS.—The receipts of the Government exceeded the expenditures in September nearly $9,000,000. Deducting this from the previous deficit, leaves a deficit for the first quarter of the fiscal year of nearly $9,600,000. In September last year there was a surplus of about $6,000,000. Custom receipts were $4,000,000 larger than a year ago and internal revenue receipts $850,000 larger. Total receipts increased $3,900,000 and expenditures $900,000.

UNITED STATES PUBLIC DEBT.—Except the increase in the cash assets of the Treasury, which amounted to $10,000,000, there were no changes of any significance in the public debt statement for September. There was a reduction in gold certificates of $2,000,000 and an increase in silver certificates of $3,000,000. The aggregate debt increased $1,000,000. The cash balance in the Treasury increased $9,000,000 and amounted to nearly $287,000,000 at the end of the month. The net debt less cash in the Treasury was reduced nearly $9,000,000 and is now below $997,000,000.

UNITED STATES FOREIGN TRADE.—The exports of merchandise reached $117,453,581 in August and imports $95,826,548, making the net exports $21,627,033. Exports increased $25,000,000 over the preceding year, imports $8,000,000 and net exports $17,000,000. Both exports and imports are the largest ever reported in August. There is an increase in grain and cotton shipments which is helping to enlarge the total movement. For the eight months of the fiscal year the exports exceed $966,000,000, an increase of $115,000,000 over last year, while the imports are $770,000,000, an increase of $103,000,000. There is excellent promise of a very large export movement for some time to come.

MONEY IN CIRCULATION IN THE UNITED STATES.—The increase in amount of money in circulation in September was $2,500,000, not sufficient to prevent the average per capita from declining from $31.40 to $31.39. There was a reduction in gold circulation of $20,000,000 which was more than offset by increases in other forms of currency.

MONEY IN THE UNITED STATES TREASURY.—The Treasury increased its net stock of money last month $9,800,000. The total cash, however, was reduced $4,400,000. A decrease of $14,200,000 in outstanding certificates accounts for the increase in net cash.

BANKERS' OBITUARY RECORD.

Bartlett.—Frank Bartlett, President of the Auburn (Me.) Savings Bank, died September 10, aged seventy-nine years.

Bates.—Joseph M. Bates, President of the First National Bank, Attleboro, Mass., died September 7. He was born at Wickford, R. I., August 2, 1833.

Carey.—J. H. Carey, President of the Jesup (Iowa) State Bank, died September 16, aged sixty-four years.

Claflin.—Charles L. Claflin, President of the Hopkinton (Mass.) National Bank, and a trustee of the Hopkinton Savings Bank, died September 3. He was born at Hopkinton March 16, 1851.

Duncan.—Thomas Duncan, Cashier of the Elling State Bank, Virginia City, Montana, died September 21. He was born in Edinburgh, Scotland, in 1851.

Dusenbury.—George A. Dusenbury, President of the Exchange Savings Bank, Mount Pleasant, Mich., died September 22. He was born at Marshall, Mich., in 1845. In 1881 he went to Mount Pleasant and engaged in banking.

Gates.—Lyman J. Gates, President of the First National Bank, Kalamazoo, Mich., died September 14, aged seventy-three years.

Greenwood.—Marcellus B. Greenwood, Vice-President and Manager of the Daly Bank and Trust Co., Anaconda, Mont., died September 16. His death occurred at Minneapolis, Minn., and while he was on his way to visit his former home at La Crosse, Wis.

Halsey.—Meline W. Halsey, Secretary and Treasurer of the Union County Savings Institution, Elizabeth, N. J., died September 24.

Haviland.—F. C. Haviland, Cashier of the Farmers' National Bank, Hudson, N. Y., and connected with that institution for forty years, died September 28.

Howe.—Alden A. Howe, Treasurer of the Newton (Mass.) Savings Bank, died September 24.

McGahan.—Thomas R. McGahan, President of the Exchange Banking and Trust Co., Charleston, S. C., and former president of the chamber of commerce and of the cotton exchange, and for thirty-three years president of the board of health, died September 26. He was born at Madison, Ga., in 1825, locating at Charleston in 1853.

McGinniss.—R. P. McGinniss, President of the Owensville (Ind.) Banking Co., died September 18, aged sixty-three years.

Parsons.—Charles Parsons, President of the State National Bank, St. Louis, Mo., died September 16. Mr. Parsons was born at Homer, N. Y., in 1824. He was formerly President of the American Bankers' Association, and was one of the oldest and best-known bankers in the West.

Peabody.—Francis H. Peabody, head of the well-known banking firm of Kidder, Peabody & Co., Boston, died September 22, at the age of seventy-four years.

Sheets.—Philip Sheets, President of the Shelby County Bank, Botkins, Ohio, died September 16.

Smart.—D. C. Smart, President of Los Nietos Valley Bank, Downey, Cal., died September 16, aged sixty-five years.

Weston.—Hon. J. B. Weston, President of the Beatrice (Neb.) National Bank, and formerly State Treasurer of Nebraska, died September 15, aged eighty years.

Wood.—W. G. Wood, Manager of the Bank of Toronto, at Oakville, Ont., died September 20.

Woods.—John Woods, President of the Wauneta Falls Bank, Wauneta, Neb., died September 7.

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-NINTH YEAR. NOVEMBER, 1905. VOLUME LXXI, No. 5.

THE SECRETARY OF THE TREASURY, in his address before the convention of the American Bankers' Association, departed somewhat from his printed speech, which related almost entirely to our marine commerce. After concluding this part of his address, the Secretary proposed that the National banks be permitted to issue "not asset currency, or emergency currency, but additional currency (as he understood it), equal to fifty per cent. of their present bond-secured circulation, and subject to a tax of five per cent." The only change in the present form of note suggested was that the words "secured by United States bonds" should be erased. As the Secretary very justly observed, these words are no longer necessary to give credit to the National bank notes.

As usual with most suggestions for giving elasticity to the currency, Secretary SHAW begins with a proposal to issue additional currency, instead of devising a plan to increase redemptions and retirement of notes, and thus provide a margin for additional issues when needed. There is no doubt, however, that if his plan were carried out some relief would be afforded by the additional circulation, though the fixing of an arbitrary limit would deprive the issue of the power to render any effectual assistance in times of panic. The imposition of a tax of five per cent. added to the bank's charge for interest, would make the additional currency rather expensive, and if a bank could import gold at a less expense it would hardly resort to the emergency issue, especially as the gold, by adding to the bank's reserve, would increase its lending powers in at least a fourfold ratio. When the additional notes came to be redeemed, the banks would have to take from their reserves to make deposits of lawful money with the Treasury for the redemption of the notes. Whether they would find the added notes a sufficient source of profit to justify their issue, is open to question.

Of course, the Secretary's "additional" currency is merely asset currency under another name, although the dose he prescribes is somewhat homeopathic. We should greatly have preferred to see the distinguished head of the Treasury go the whole length of his convictions, and recommend a complete cutting loose from a bond-secured currency. That is the only solution of the question that will ever prove satisfactory to the interests of the banks and the welfare of the people. We have reached a point where the public debt is being perpetuated largely for the purpose of furnishing a basis for the issue of bank circulation. When that fact becomes fully recognized, the party responsible for it will be given a very bad quarter of an hour by the voters of the country. Besides, on any ground, such a policy is indefensible. It is hoped that Secretary SHAW may yet signalize his connection with the Treasury Department by inaugurating the work of scientific currency reform.

SECRETARY SHAW'S PLAN for an emergency circulation, like other plans for promoting the elasticity of the currency, seems to be based upon the assumption that the amount of National bank notes now in circulation is no greater than it should be. The Secretary therefore proposes to make the circulation elastic by allowing the banks to issue fifty per cent. more circulation than they now have outstanding, the additional issue to be subject to a tax of five per cent.

To provide for elasticity by expanding the present volume of notes rather than by resorting to contraction is, of course, calculated to win the approbation of that very large body of citizens who desire "more money," even if they have to pay a costly tax to get it. But if there were some provision of law that would curtail the present volume of bank notes, leaving a reserve for issue to meet temporary or exceptional demands, and operating to reduce this extra issue whenever the emergency had passed, this would insure elasticity quite as effectually as the Secretary's five per cent. emergency circulation.

The issue of an emergency currency, under Secretary SHAW'S plan, or any other proposal of a similar nature, does not go to the root of the difficulty. An elastic currency presupposes an elastic basis of issue, the demand for currency itself furnishing the security on which the notes shall be issued; and, conversely, the disappearance of the demand causing the withdrawal of the security and therewith the cancellation of the notes. Within the limits of a single season, or of a year or a series of years, when there are great fluctuations in the amount of business to be done, the supply of bonds, which now constitute the only basis for bank circulation, may not be changed at all; or, on the other hand, the supply may increase in periods of dull business, causing inflation, or may decrease in brisk times, resulting in stringency. All this is a matter of common observation.

If there were no other currency save gold coin and certificates (leaving the subsidiary coins out of consideration), our currency system would be much more elastic than it is now. Expansion would come from the increasing supply of gold from our own mines and the attraction of gold from abroad, when needed, by a rise in the interest rate; an exportation of gold, on the other hand, would contract the circulation to the extent of the coin exported, the certificates being cancelled concurrently with the withdrawal from the Treasury of the gold which they represent. Even this slight possibility of elasticity is interfered with by our bond-secured bank circulation. When gold goes out, the hiatus thereby created is filled up with bank notes. If the notes were issued against commercial credits, and furthermore if the banks were compelled to keep substantial gold reserves for the redemption of their notes, there would be a contraction both of note issues and of credits when gold was exported; and when gold was imported the other element of elasticity—expansion—would be supplied.

It is idle to talk of elasticity of the currency until the problem is dealt with frankly from an economic standpoint. Political paltering with the currency question has produced serious evils, and will cause others yet more harmful unless a different course is pursued. If Secretary SHAW had made a direct appeal to the intelligence and common sense of the people, by pointing out the real defects in our currency system and plainly stating the only permanent cure for them, he would have rendered a substantial service to the business interests of the country, and would have strengthened the confidence of the people in his ability to measure up to the requirements of the Presidency.

THE DEFECTS OF OUR CURRENCY SYSTEM and the remedy therefor were aptly stated by G. W. GARRELS, President of the Franklin Bank, St. Louis, in an address before the convention of the American Bankers' Association lately held at Washington.

After some preliminary observations regarding money and the duties of the Government thereto, Mr. GARRELS declared our present currency system an inheritance of the Civil War, consisting of "a patchwork of political compromises," and also said that the pledge made to retire the greenbacks had not been kept. He condemned the so-called National bank note as a delusion, being no bank note at all, inasmuch as it does not circulate on the credit of the bank of issue; and, furthermore, that it does not appear when trade needs it, nor does it disappear when it has done its duty and is no longer needed. "It is," he said, "simply an artificial way for the Government to borrow money cheaply. It is forced into circulation, after the Government has been in the market to sell bonds, without regard to a reserve of gold, of which every good paper money is a representative, and in which it must be easily redeemable to remain good. The National bank note is issued without regard to the needs of trade, for the benefit of which bank notes were invented. It does not go out of circulation until it has done all possible harm by congesting the money market and demoralizing interest rates. Abnormally low interest rates in turn promote non-dividend-paying enterprises, inflate prices of securities, cause relaxation of the rules for doing a safe banking business, induce merchants and manufacturers to spread out beyond the safety limit, cause them to allow their assets to become slow and fixed, and promote gambling on the exchanges of the country."

This is a strong arraignment of the present system of issuing National bank notes, but nevertheless a true one. The remarkable fact about it is that the organized bankers of the country do not work more definitely and earnestly for a better system.

Mr. Garrels called attention to the fact, first pointed out by The Bankers' Magazine some months ago, that the issue of bonds on account of the construction of the Panama Canal would probably result in a large addition to the permanent paper currency of the country. On this point he said:

"An enterprise like the Panama Canal calls for loanable capital; or, in other words, for the savings and accumulated wealth of the nation. Only a small portion of this loanable capital will consist of the idle money seeking investment. The greater portion will be furnished by the products of our farms and of our mines, by the contents of our elevators, and of our warehouses, and the products of our factories and other forms of our wealth. The money used for this transformation as medium of exchange will be only needed temporarily and under a good currency law would disappear after it has done its service.

Under our present currency law it may happen that our circulation is increased by the full amount of the Panama Canal bonds to be issued. You are aware that trust companies and State banks use National bank notes without discrimination as reserve for deposits. You are also aware that large deposit accounts are created by loans made to customers. The increase of National bank notes of, say, $200,000,000, may, when digested by the banking mechanism, thus furnish loanable funds to an amount of nearly a billion dollars, and this without any regard to the loanable capital in existence.

Will not this be inflation against which our honorable Secretary of the Treasury has so earnestly cautioned?"

Considering the long time that will be required in building the canal, and taking into consideration that the present Federal taxation is very light, there seems to be no valid reason why the construction expenses of this enterprise should not be met by additional taxation, thus saving an enormous amount of interest and preventing an inflation of the currency that may prove dangerous.

A SCIENTIFIC BANK CURRENCY was provided for in a plan which Mr. GARRELS submitted to the convention. The notes to be issued under this plan are to be based on the general assets of the issuing bank, against which they are a preferred lien. They are secured further by a district-safety fund and a general guarantee fund, created out of the tax on circulation, and also by a gold reserve of thirty per cent. which each bank is required to hold for the redemption of its circulation. In case of a bank failure, the outstanding bank notes of the bank that failed are at once redeemable out of the general guarantee fund, which is later reimbursed as a first preferred creditor out of the assets of the bank that failed up to the full amount of the outstanding bank notes. In case the assets of the bank that failed are not sufficient to cover its circulation, one-quarter of the loss is made good by the district safety fund, and three-quarters by the general guarantee fund.

A Deputy Comptroller is to be appointed for every reserve city, and he is to have supervision over bank examinations and the issue of notes in his district. Each bank is to be allowed to issue notes to an amount equal to 150 per cent. of its capital. The method of redemption is as follows:

"Every bank of issue in the district designates one bank in its redemption city as its redemption agent. Whenever any bank note reaches the counter of any bank in a redemption city, it ceases to be money. It has to be redeemed.

If the bank note to be withdrawn from circulation originated in the redemption city, it is paid by the bank of issue, canceled and delivered to the Deputy Comptroller for credit on his books. If the bank note to be withdrawn from circulation did not originate in the redemption city, but in the same district, it is redeemed by the redemption agent in gold or through the clearing-house. It is charged to the bank of issue by the redemption agent and delivered to the Deputy Comptroller against his receipts.

The redemption agent advises the bank of issue of the denominations and numbers of the notes redeemed. The Deputy Comptroller cancels the notes, credits the bank of issue, and also advises the latter of the denominations and numbers of the notes redeemed.

If the bank note to be redeemed originated in another district, the said bank note is delivered by the receiving bank to the Deputy Comptroller against his draft on the redemption agent of the bank of issue in the redemption city of the district in which the note originated. A schedule of the denominations and numbers of the notes redeemed is delivered in duplicate with the bank notes to the Deputy Comptroller. A third copy of such schedule is attached to the draft, to be finally forwarded by the redemption agent to the bank of issue. An exchange charge is established for the drafts of the Deputy Comptroller, graduated according to the distance between the place of payment and the redemption city. This is allowed to the receiving bank, and is payable by the bank, the bank notes of which have been redeemed. The Deputy Comptroller cancels the bank notes and forwards them, with a copy of the schedule, to the Deputy Comptroller of the district in which the bank notes originated.

The Deputy Comptroller has charge of a sufficient supply of blank bank notes for each bank in his district, and delivers the same upon the application of any bank of issue entitled to them. If the Deputy Comptroller has on hand an application for additional circulation by a bank of issue at the time when clean, serviceable notes come in for redemption, he may reissue such bank notes instead of new ones.

Every one of the associated National banks is entitled to issue bank notes equal to one hundred or one hundred and fifty per cent. of its paid up capital. Each bank pays taxes on its outstanding bank notes at the rate of one-half per cent. on the first forty per cent., one per cent. on the next ten per cent., two per cent. on the next ten per cent., and so on, the rate of tax gradually increasing. The taxes received on circulation are set aside by the Government as a general guarantee fund until the amount received is equal to five per cent. of the maximum previous circulation. Whenever the income from this source is in excess of five per cent. of any previous maximum circulation, the excess is to go to the Government."

As will be seen, the method of redemption, which is a vital point in securing an elastic currency, has been carefully worked out.

If the banks availed themselves of the full limit of circulation allowed, they could, on the basis of their present capital, issue about $1,200.000 of notes; but this would be the maximum issue possible, and it is not likely, considering the provision requiring a reserve of thirty per cent. in gold, and with the strict redemption requirements, that the notes outstanding in ordinary times would approximate any such figure as above stated.

If the issue of bank notes is to be continued at all—the desirability of which is not indisputable—some basis other than United States bonds will have to be found, sooner or later. The suggestions of Mr. GARRELS are in line with the best thought on the subject of currency reform and are worthy of careful study.

THE WORLD'S GOLD PRODUCT for 1904, according to an estimate recently issued by Mr. ROBERTS, the Director of the United States Mint, amounts to $347,150,700, or a gain of about $25,000,000 over the figures for 1903.

This constant gain in the output of gold would seem to point to the wisdom of using a larger proportion of gold, or its paper representative, as a circulating medium. Although the stock of gold held in the United States has enormously increased in recent years, but little gold is seen in actual circulation. It is no doubt true that there is a popular preference for paper as against coin. But the paper in actual hand-to-hand circulation does not consist of gold certificates, the latter not being issued in denominations below $20, but of legal-tenders, National bank notes and silver certificates, the latter apparently predominating. Of course, where large payments are made, a greater proportion of gold certificates will appear.

The use of gold coin as a circulating medium results in some loss, owing to the abrasion of the coins; and since the "limit of tolerance" of abraded coins is a narrow one, this further tends to make gold unpopular. In communities where gold coin is more largely used than in the part of the United States west of the Mississippi River, there is perhaps less of a disposition to be on the lookout for light-weight pieces. Where the habits of the people have accustomed them to the use of paper, this form of money is doubtless preferred to the coin, on the score of convenience.

But good reasons can be adduced to show that all paper money should be a title to an equal amount of the standard coin, and directly convertible into such coin. In fact, with the large supply of gold now available for monetary use, it is becoming an open question whether it would not be better to have but one kind of paper money—gold certificates. These could be issued in denominations to suit the public convenience.

Objection has been made to the use of a gold currency as being too costly; but experience seems to indicate that this is a case where the best is the cheapest. Our silver certificates are used as a reserve by both the National and State banks, though they represent dollars of a much smaller intrinsic value than gold dollars. Moreover, as pointed out by Mr. GARRELS in his admirable address before the recent convention of the American Bankers' Association, the State banks and trust companies use National bank notes as a reserve. It is also suspected that some of the National banks do the same thing.

But our banking system will approximate an ideal standard of safety only by adhering strictly to the use of gold coin or gold certificates for reserve purposes.

Viewed from the narrow standpoint of profit—which, however, is very important to the shareholders in banks—it is probable that more satisfactory results could be obtained by using only gold or its paper representatives as bank reserves and as a circulating medium. The issue of $500,000,000 of National bank notes, it has been assumed, displaces an equal amount of gold from the circulation. But it does more than that. It diminishes the lending power of the banks very materially. If they held the $500,000,000 in gold, they could lend four times that amount in the case of reserve banks, or six and two-thirds times for country banks. Under the present law, which virtually compels a National bank to lend its capital to the Government, the power of the bank to lend to the business community is greatly curtailed. It must be conceded that the real purpose of banking is to aid in carrying on business transactions, rather than to provide funds to meet deficits in the Government's income. There is some evidence tending to substantiate the belief that the present system of issuing bank notes reduces banking profits by interfering with the primary purpose of banking—the lending of credit facilities to the business community.

Subsidies to American shipping were favored by the recent convention of the American Bankers' Association. Following an able address by Secretary Shaw in behalf of a revival of American shipping, the subsidy resolution, presented by Col. Lowry, was introduced and passed—only one member speaking against the resolution. It is considered remarkable, in a convention composed of men of such diverse political views, that so little of opposition should have been manifested against a proposal to take money out of the Treasury and bestow it upon private corporations. Perhaps there were many delegates opposed to such a policy, but deemed the time inopportune for expressing their views.

The real reason that American capital does not embark more largely in the building and operating of ships must be that it can find more profitable employment elsewhere. This being true, there is considerable doubt of the wisdom of using the public funds as a bounty to force capital to engage in lines of activity where it seems indisposed to enter of its own free will. There might be some excuse for such a policy if it could be shown that American trade is languishing for lack of adequate facilities for over-sea transportation; but this does not appear to be the case. On the contrary, our foreign trade is expanding more rapidly than ever before. If we were paying exorbitant rates to foreign steamship companies for carrying our products to the world's markets, or if the aggregate of freight charges paid for this service were as great as has been assumed, it is reasonably certain that American capital would not be indifferent to the opportunities thus presented. As a matter of fact, there is already more American money invested in shipping enterprises than might be inferred from the limited number of merchantmen flying the Stars and Stripes. The law denying American registry to foreign-built ships compels our capitalists who desire to engage in shipping to take refuge under foreign flags. So long as it is cheaper to build ships abroad, they will be built there, just as water will continue to run down hill until the law of gravitation is reversed.

But notwithstanding what has been said, there is a rising sentiment in favor of the restoration of our maritime interests to a position at least as relatively great as they were before the Civil War, and it was perhaps more a desire to recognize this sentiment and to show sympathy for it, than any liking for the subsidy policy in itself, that caused the American Bankers' Association to approve with practical unanimity the granting of subsidies to American steamship lines.

THE NEW YORK BANK STATEMENT is being severely criticized for its failure accurately to reflect the banking situation and the conditions affecting the money market. As is well known, the statement published on Saturday is an average showing of the condition of the banks for the week. If the report was an actual transcript of condition on a certain day in the week, there is no doubt there would be a general scramble for cash on that day, or an indulgence in what has come to be known as "window dressing." It is related that in the days of State bank notes, it used to be the custom of some of the banks in remote districts to pass around the coin that was held against note reserves. Thus, an examiner would call at a bank and find the proper reserve in coin. After the examination was completed, the bags containing the coin would be passed on to the next town ahead of the examiner. This plan had the somewhat doubtful merit of economizing the use of specie, though considerable difficulty was experienced whenever there was a run on a bank that did not have the bags of coin on hand at that particular juncture in its affairs. The necessity for all such shifty expedients has long since disappeared; nevertheless the banks are still anxious to make a good showing in their published reports. It is surmised, despite the fact that National and State banks are supposed to report on a date not previously fixed, that by a little quiet calculation the banks can tell, approximately, when they will be called on to report to the Comptroller, in the case of National banks, or to the State authority, in the case of State banks. Nor is it easy to prevent this by any practicable plan.

But, so far as the New York banks are concerned, it would seem to be feasible to have a statement that would be an accurate reflection of their condition. This could be attained by having the statement published daily, thus obviating the objections against the average system and furnishing a fresher and truer exhibit of the local banking situation. At the present time the fear of a "bad" statement by the banks often causes a disturbance disproportionate to the real importance of the changes of condition that are shown when the statement finally comes out. Moreover, stock exchange operations and other transactions are carried on practically in the dark, so far as any light is afforded by the week-old statements of the clearing-house banks. The uncertainties as to what the character of the statement will be are frequently productive of considerable harm. The present weekly report is of little value except for historical purposes. It is possible that some of the banks might demur at first to having their actual condition set before the public every day, but no doubt in the course of time this objection would disappear. A daily bank statement would be of great value as an indicator of the probable course of the money market, and would also be an incentive to the banks to make a strong showing every day in the week.

Of course, the objections urged against a daily statement are well known; but when boiled down they amount to this: that a statement of this character would show too much. This objection is sound enough if the real purpose of the statement is concealment instead of publicity.

THE AMERICAN BANKERS' ASSOCIATION has grown to be the largest and wealthiest financial organization in the world. Those who fear the power of concentrated wealth might consider the association objectionable, on the ground that it represents so large an aggregation of money. But a knowledge of the character of the association will speedily show such fears to be groundless.

As a matter of fact, the American Bankers' Association is not, broadly speaking, a compact organization. Within the ranks of the members there is great diversity of opinion, and complete freedom of action, on most of the subjects brought before the association. Indeed, there is such a spirit of independence among the members that the association finds its activities circumscribed within very narrow limits. Included in the membership are National banks, State banks, private banks, Savings banks and trust companies. These numerous institutions are further divided into large and small, city and country, to say nothing of sectional affiliations, which, though less sharply defined than formerly, must still be reckoned with in marking out the work to be done.

Taking into account all the heterogeneous elements comprising the membership, the wonder is that the association has been able to accomplish so much in behalf of the banking and general business interests of the country.

Without reviewing in detail the work done by the association, attention may be called to some of the more obvious benefits conferred by the united efforts of the bankers of the United States. Of primary importance is the undoubted advance of the *morale* of banking in this country. There is an unmistakable tendency toward a higher standard, among all classes of banks and in every section. An example of this is shown in the discussion of the question of insuring bank deposits. Whether such insurance is feasible or not, its discussion shows that there is a realization of the necessity for reducing the losses by bank failures to the lowest possible minimum. The interest in the subject of bank examinations, and in the matter of enforcing directors' responsibilities, also points in the same direction. The uniform Negotiable Instruments Act and the protective work are substantial evidences of the practical usefulness of the American Bankers' Association.

When the contest was raging over free silver, the association took firm ground in favor of the gold standard and exercised great influence in bringing about a right settlement of that question. It is to be regretted that work of a similarly positive character has not been done in behalf of a more scientific bank currency. That is a matter that deeply concerns every member of the American Bankers' Association as well as those who are engaged in business other than banking. To bring about earnest co-operation in behalf of currency reform among all the different elements comprising the association would require not only great ability and force of character, but rare tact. The endeavors to stimulate interest in the currency reform question have of recent years lacked vigor, and the report of the currency committee at the Washington convention, while containing much sound doctrine, is open to the same criticism. Most of the proposals are too vague to be effective, and at least one of them is wholly impracticable. Mr. PUGSLEY's report declared in favor of retiring the greenbacks by the issue of "a long time bond, payable at the pleasure of the Government, bearing an exceptionally low rate of interest, to be used specifically for bank circulation and public deposits." To test the popularity of this suggestion Mr. PUGSLEY—who is not only a successful banker, but an effective speaker and an experienced politician—should go as a delegate to the next National convention of his party and present a resolution embodying the above plan for retiring the greenbacks. The enthusiasm which such a resolution would evoke may be more easily imagined than described. Nor would the party now dominant take more kindly to a suggestion of this character.

There is only one practicable way to retire the legal-tenders, and that is gradually to convert them into gold certificates, as they are redeemed, using for that purpose the unpledged gold in the Treasury. This could be done without any appreciable contraction, and with no increase in the bonded debt.

The idea that more bonds must be issued, either to furnish security for circulation or public deposits, is one to which many bankers cling with great tenacity. This is not surprising, in view of the fact that the great majority of those engaged in the banking business have grown up under the present system. The payment of checks drawn against deposits brings greater and more immediate pressure on a bank's funds than the payment of its notes or its Government deposits, and yet no one seems to think that ordinary depositors must be secured dollar for dollar by a pledge of United States bonds.

While the proposals of the currency committee of the American Bankers' Association do not appear to be as definite as could be wished, and are further, in some respects, impracticable, the concluding paragraph of Mr. PUGSLEY's report strikingly epitomizes the principles that should be kept steadily in view. He said:

"In any discussion of currency reform it should be remembered that the banks are the servants of the people, not the masters, and that reform should not be in the interests of the banks alone, but in the interests of all the people. We should desire and expect the American dollar to be the world's standard of value, and our currency system to equal or surpass that of any other nation on the face of the globe, but only by the most conservative legislation can this be accomplished. Public opinion in this country should be so strongly and so thoroughly grounded in the great foundation truths of finance and currency that we should not only be right but stay right. These problems are well worthy the consideration of this convention, representing so largely the banking, financial and commercial interests of the country. A sound, stable and responsive currency is one of the greatest bulwarks of national greatness, glory and power, and one which will prove of inestimable value to its business interests."

THE LESSON IN BANKING which, according to his own story, the young financier attempted to give the New York banks by showing how easy it was to rob them, seems to have failed to make any great impression on those institutions. LEONARD undoubtedly proved, in this case, that it was possible to secure some $350,000 in securities by presenting a forged check to the bank where the securities were deposited as collateral for a loan. He derived no benefit from the transaction, but did get put in jail for it. His defense was that the whole thing was merely a harmless practical joke, designed to show a big bank how simple a thing it is to get possession of its funds without giving an equivalent therefor. But the officials of the bank in question evidently have not a sufficient sense of humor to enable them to see the matter in that light. If a highwayman points a gun at you, pulls the trigger, and the discharge of the weapon results in blowing your head off, you might be excused for not being in a position to have a thorough appreciation of this delicate exhibition of playful humor; nor would your enjoyment be increased by the further assurance that the intention was merely to show you how easy it was to fire a gun, and what disaster might ensue from this facility when the weapon was aimed at your own head.

Most people do not need to be told that it is easy to lie, to steal and to swindle. Those who are disposed to crime will find no effective barriers to stay their downward progress. Any bank and every bank can be looted whenever a sufficient number of the officers decide upon getting money in that way. It is impossible to devise a practicable system of checks and safeguards that will withstand all attacks. The only absolute guaranty of safety, in the hurry of modern banking, lies in the honesty of those who manage the business of the banks, supplemented by the honesty of those who deal with the banks. That this safeguard is effectual in practically all transactions is well known.

But without particular reference to the incident under consideration, it may be said that no bank should neglect any reasonable precautions, consistent with the despatch of business, to prevent the misappropriation of its funds by officers, employees or others. Failure to take such precautions not only subjects the cash and securities of a bank to unnecessary risk, but also puts a premium on crime, placing temptation in the way of the weak and the vicious.

LEONARD seemed to be filled with the idea that in unlawfully getting so much property away from the biggest bank in the country, he was doing something very smart; but the sequel proved that he only demonstrated his own folly.

Faith and trust are indispensable in conducting the banking business, and must continue to be so. Every possible check against dishonesty may be, and ought to be, employed; but in the long run somebody must be trusted or all the banks in the country would have to quit business. The fidelity to their trusts displayed by the great majority of bank officers and clerks shows that there is a proper sense on their part of the obligations of the responsible stations which they fill. Incidentally, it also shows that human nature is not quite so untrustworthy as many would have us believe in these carping times.

TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.*

BOOKS, RECORDS AND FORMS FOR THE TRUST DEPARTMENT —*Continued.*

SUNDRY FORMS FOR THE CORPORATIONS DIVISION, TRUST DEPARTMENT.

In addition to the forms for the record of transactions involving cash, the trust department has need of numerous other forms and records. Of great importance is the Tickler of this department, upon which a memorandum is made of every matter that will require attention at any future time. It is not safe to leave wholly to the memory of any individual or individuals the

responsibility of attending to any of the details of business so important. Aside from the fact that memory is not always reliable, especially when the number of details is large, is the fact that the man upon whose memory depends attention to any matter may be away or sick or dead when the time comes for such attention. The only safe plan is to have a tickler entry made of every matter that must be attended to, including those which recur at regular intervals. The form of the Tickler is not of prime importance, so long as it serves the purpose of a reminder of the business to be done at the time it is to be done; but the Tickler entries ought to be plain enough to be understood by others than the one who makes the entries.

The responsibility of seeing that the business called for each day by the Tickler is attended to should rest upon one man, who will of course distribute memoranda to other workers as the circumstances require.

For those who prefer a Tickler in book form, that given in the Book of Forms issued by the Trust Company Section of the American Bankers' Asso-

FIG. 24.—TICKLER CARD FOR GENERAL USE.

ciation is good. It is shown in Figure 23. The book may be either bound or made on the loose-leaf plan. If bound it is made to last for one year, one leaf for a day, and is indexed for months and days. If made on the loose-leaf plan, it may be indexed for years as well as for months and days, space for new leaves when needed being found by removing dead matter.

The use of cards instead of books for Ticklers is rapidly growing. The cards are placed in a case which fits into a cabinet in the vault, and is brought out each morning. It is provided with index cards for years, months and days. The case may be provided with a locking device to prevent the cards from slipping out accidentally or in the event of the case being overturned.

The card form of Tickler has many important advantages over the book form, among which are these:

For matters requiring attention at regular intervals (monthly, quarterly, semi-annually, etc.), but one card need be used for each item. When the

FIG. 25.—TICKLER CARD.

business is adjusted for one period, the card is moved forward to the next period. Where a book is used, separate entries of the memorandum must be made for all of the periods, which in the case of a monthly item would mean twelve entries each year for perhaps a number of years. If it be urged against the card plan that the clerk entrusted with the duty may neglect to forward the card, or may misplace it, it may be urged that he may also neglect to write the memorandum in each of a number of necessary places in a book Tickler, or may write it in the wrong place.

Where preliminary attention is to be given a matter some days or weeks before final attention is called for, the card is placed under the first date, and when attended to is moved to the second date. Thus, an item due on the 20th of the month may require notification on the 6th. In such case, with a book Tickler two entries are necessary.

FIG. 26.—TICKLER CARD.

Where an item of business called for by the Tickler of to-day is for any reason not completed, it is only necessary to move the card forward to the next day in the Tickler, instead of writing a new entry in a book.

In trust work, items often need to be "tickled" years in advance. This is done easily with a card Tickler, less easily with a loose-leaf book; and is practically impossible with a bound book, without a separate book for each year, requiring a number of volumes on hand.

With the card system each item or group of items may have a separate card, which is a great advantage over the book system, where several dozen items occur on one page. There is much less liability of overlooking any item where each has a separate card than where there are a number of items on a page, some of which may be "dead" items.

The card Tickler is expansive. If a day's work involves need for two or three hundred items, the card-case will hold the cards. If a day occurs on which but one item is to be ticklerized, but one card need be inserted.

The most obvious objection to the card Tickler is the possibility that a card may be lost. The possibility of such a thing can hardly be denied; but

its danger is often overestimated. The best testimony to the safety of the system is the fact that many companies which have used the card system for years have found it safe, and are wedded to the system.

In Figure 24 is shown a Tickler card for general use. It has no printing —simply lines for writing, as the character of the memoranda to be made varies so greatly that printed headings are not useful. There are certain classes of items, however, that recur so frequently that special forms may be desirable. Figures 25 and 26 illustrate two such forms, that shown in Figure 25 being for Coupons Due, and that shown in Figure 26 for Insurance Expirations.

FORMS FOR THE TRANSFER OF STOCK.

When a stock certificate is brought to a transfer agent for transfer, a receipt for same is given to the person who brings it. Figures 27, 28 and 29 show different forms for this receipt. The receipt shown in Figure 27 is provided with a stub. In the use of the two others, a copy is made by means of a carbon sheet, the copy being taken on paper of a different color from the original. These receipts are for temporary use only, and are to be surrendered when the new certificate is delivered. The new owner of the stock is then to sign the receipt on the stub of the certificate book. It very often happens, however, that the owner does not himself come for the certificate, but sends a messenger. In such case, the messenger's receipt is taken, and with the certificate is sent a receipt to be signed by the owner. Forms for

FIG. 33.—TRANSFER REGISTER.

The transfer clerk now cancels the certificate handed in for transfer, after satisfying himself that the transfer is properly authorized, issues a new certificate or certificates, and makes the proper entries on the Stock Transfer Book, a common form of which is shown in Figure 32. Some companies have this book bound in permanent form with an index either in the book or in separate form. Others use the loose-leaf plan, which is better, the index being in the shape of tabs on the edges of the leaves. The record of transfers for any number of companies—up to the capacity of the binder—are thus kept under one cover. But the plan is sometimes followed of having a separate Stock Transfer Book for the stock of each concern for whom the company acts as transfer agent. The general form for the pages in such case does not differ materially from that shown in the figure.

Figure 32 illustrates a customary way of making the transfer entries. The first entry shows the cancellation of certificate No. 619 for fifty shares in the name of John Doe, and the issuance of certificate No. 2214 for the same number of shares in the name of Richard Roe. The record of the new certificate is entered opposite that of the old one cancelled. The second entry shows the cancellation of a certificate for 100 shares, and the issuance of two new certificates for fifty shares each. The third entry shows the cancellation of three certificates for a total of 100 shares, and the issuance of one certificate for the 100 shares. The fourth entry is a little more intricate. Cer-

below." The actual attorney for the transfer in each case is the clerk who does the work, and who signs his name in the space headed "Attorney for Transfer," opposite the entry of each transfer.

The transfer books used by various companies show some slight changes from this form. Some omit the column for the "Date of Old Certificate," since such date may be easily found if wanted, by turning back in the Register to the place where the issue of the certificate is recorded in numerical order. Some omit the column "Date Registered." Some add, at the right of the page, a column for the addresses of the persons in whose names the new certificates are issued; but it is more common to enter these addresses on the stubs of the certificate book, whence they are copied into the ledger.

There is a difference of opinion as to whether the form of assignment at the top of the page, and the signature of the clerk who acts as attorney for the transfers, really add anything in the way of legal safeguard.

This book should be made with four blanks to a page, each form to be numbered from 1 upward.

FIG. 37.—STOCK LEDGER.

The form used by a Registrar to register transfers of stock is very similar to the Stock Transfer Book, as will be seen by an examination of Figure 34, which shows a usual form of the Register. With the exception of the dates of the old certificates (which some companies omit) and the signatures of the attorney for transfer, the entries in Figure 32 are reproduced in Figure 34. In the last column in Figure 34, headed "Date of Cancellation," is entered opposite each certificate the date when it is cancelled—if it is cancelled. Some Registrars, however, prefer to keep a stock ledger just as the Transfer Agent does. In such case, the column for "Date of Cancellation" is not needed, and is omitted on the Register. The essential function of the Registrar being to see that there is no over-issue of stock, it is important that the footings of the columns headed "Shares" be well kept up, and that the difference between the footings be never greater than the number of shares of

FIG. 38.—STOCK LEDGER (CARD).

the stock that should be outstanding. After the full amount of the stock has once been issued—as is supposed to be the case in the figure, 50,000 shares being outstanding—over-issue may of course be guarded against by the balancing of the debits and credits of each transfer, as explained under Figure 32.

It will be seen that the Stock Transfer Book is of the nature of a journal, giving an account of the changes in the ownership of the shares of stock. As the Transfer Agent must be in position to know at any time the present owners of the stock, and the exact number of shares owned by each, it is necessary to keep a stock ledger, four different forms of which are shown in Figures 35, 36, 37 and 38. The forms shown in Figures 35 and 36 are used in bound books, each corporation having a separate book. That shown in Figure 37 is made on the loose-leaf plan. That in Figure 38 is a card ledger form. These forms, all of which are in actual use to-day, illustrate the different methods of different companies. Two of the forms provide for information as to the person from whom shares are transferred and as to the person to whom they are transferred. The other forms leave this information to be obtained when wanted from the Stock Transfer Book. Two of the forms provide for balance columns, which is a great convenience. In the use of the card form, Figure 38, a case is provided for the ledger cards of each trust, with index cards, and the accounts of shareholders are thus kept in alphabetical order, a thing which can be done only approximately in bound ledgers. Figure 35 provides for four accounts on each page; Figure 36 for but one account. Four accounts may be carried in Figure 37, or the whole page may be used for one or two accounts, as circumstances require. In the card form, Figure 38, there is of course one account to a card, and a second card may be added when needed. The use of the card form is growing rapidly. The book form shown in Figure 35 has been widely used in New York and elsewhere.

CLAY HERRICK.

(*To be continued.*)

THE TYPICAL BANKER.—The retiring president of the Illinois Bankers' Association, in his address to that organization at Bloomington, hotly denounced the reckless falsehood of a New York financial journal which recently characterized bankers as "corrupters of Legislatures." His indignation was fully justified. The great—the overwhelming—majority of bankers are not in any sense that kind of men. There are bankers, it is true, who are not above trafficking in legislation for personal profit, just as there are bankers who seek to thrive by persuading people that they can by adding $2 to $2 make the sum of $5. There are also bankers who put on long coats and white ties and sit on platforms at political meetings, and who think they are winning success as bankers when they sit at the right hand of the toastmaster at banquets and get their names on first pages of newspapers in display type. But these kind of bankers are really an inconsiderable minority.

The typical banker is the man whose life is devoted to safely keeping and prudently increasing the money intrusted to him, and to paying 100 cents on the dollar under any and all circumstances. The typical banker knows that the final test, under which his life will be crowned with success or branded with failure, is simply this: That whenever any just demand is made upon him he pays 100 cents on the dollar.

Succeeding in that aim and meeting that test, the typical banker goes to his rest at night, and to his final repose, with an easy conscience and with a pleasing consciousness of duty well done and well rewarded, both in material ways and in the solid respect which he receives and deserves from his community as a strong pillar upholding the fabric of business, society and civilization.

That is the typical American banker.—*Philadelphia Commercial List and Price Current.*

CIRCULATION OF DIRTY BANK NOTES.—For some months past there has been a noticeable diminution in the proportion of filthy bank notes in circulation. This is undoubtedly due to a growing popular aversion to such notes, an aversion that has expressed itself in an increased demand on the Treasury Department for the redemption of soiled notes. This is said to have proved somewhat embarrassing to the Department and to the banks, and we are glad to be told that increased facilities for the redemption are to be supplied, but we hope that the embarrassment will in no degree be met by "refusing notes for redemption which are considered still durable," as if the possiblity of their enduring a while longer were the criterion of their fitness to circulate among decent persons. Let the people keep on demanding redemption if they wish to avoid the danger—and certainly it is a real danger—of contracting disease from the circulating medium. —*New York Medical Journal.*

A PRACTICAL TREATISE ON BANKING AND COMMERCE.

THE BANKER'S INFORMATION AND OTHER ELEMENTS OF SUCCESS.

INFORMATION NECESSARY TO SUCCESSFUL BANKING—CHARACTER AND CAPACITY OF BORROWERS—FAILURES IN BUSINESS—AMOUNT OF CAPITAL—FAMILIARITY WITH BANKING LAWS—DEALING WITH EMBARRASSED BORROWERS—KNOWLEDGE OF SECURITY VALUES—CREDITS—MERCANTILE AGENCIES—EXCHANGING INFORMATION.

Though a banker has proceeded so far as to have adequate capital, due authorization, suitable correspondents, and well-equipped office and staff, he will find himself utterly unable to proceed in the way of making profit, without an adequate stock of *information*.

If a young banker has passed through the grades of a banking office, and acquired proficiency in counting money, keeping books and handling securities, he may fancy he is well equipped for business, but this is only one-half of a banker's business, and by far the easiest half. It is when persons come with proposals for *Loans*, or for the *Discount* of business bills, that the banker finds the necessity of another sort of stock than money; and another sort of capacity than handling it.

A person, for example, comes into the office, with a proposal for a loan. The banker has funds, and he would be glad to employ them. But he is at once confronted with the question, who and what is the person proposing to borrow? Who and what is his proposed endorser? What is the real value of the security he offers?

The primitive banker, sketched in the beginning of this treatise, a wealthy and successful man of business and long established in the community, knows everybody in it, and *has* already this valuable stock of information at command. He can proceed safely enough in the business of lending. But woe to the unfortunate banker who would attempt to do a loaning business without information.

Information, then, being essential to successful banking, and to successful trading too (for banking and commerce in this respect are closely connected), it is proposed, at this time, to enter more fully than heretofore into a consideration of the whole subject.

There are four general heads under which may be grouped all the information a banker needs as to the *persons* who propose to negotiate loans or discounts with him; viz.—

1st Antecedents.
2d Character.
3d Means.
4th Experience.

Each of the above heads of information has peculiarities of its own, and each of them ramifies into numerous particulars.

For example, with respect to Character (for the above need not be taken in their order), the most essential quality is obviously honesty and uprightness; that is, that a man can be depended upon to *perform his promises*, to speak the truth and attempt nothing unfair.

It is not generally appreciated as it should be, that all the dealings of a banker in the way of lending money are based on *promises; i. e.*, the notes a merchant offers for discount, the acceptance of another merchant to bills of exchange, the endorsements on which so many millions of loans rest, even the contracts contained in debentures, are nothing but *promises* in writing. They all depend for their value on the character of the person promising. They are capable, indeed, of enforcement by law, but they would lose all negotiable value unless they could be depended upon without law. It is one of the marvels of modern banking that so many millions of assets consist simply of pieces of paper on which is written, either *I promise to pay*, or *I will see that some other person* fulfils the promise he has made to pay. Even such securities, so called the bonds of governments, or other corporations, are nothing but promises to pay certain moneys after a term of years, which promises may be kept or broken as circumstances develop. Such promises to the amount of millions have been broken (the bonds go into default, as the phrase is), and bond-holders on endeavoring to enforce performance by law, have repeatedly found themselves baffled and disappointed.

Certainty of performance, therefore, is the foundation of all dealing in promises; and it is only when a high degree of reliability is reached amongst any circle of customers that a banker can carry on business with success.*

But reliability as to *statements* is almost as important as reliability as to promises; inasmuch as a banker's business is largely founded on the *representations* made to him by his customers. There are degrees of reliability in men. One will make mis-representations, deliberately, from unscrupulousness, another from a sanguine temperament, and then from simple carelessness. Some men will tell a banker what they know to be false, though it is rare for men to go so far, unless in an extremity. Others (or the same man at other times) will color representations, diminishing some things, and exaggerating others, making the favorable points too prominent and keeping back those that are unfavorable; the effect being that a false impression is produced, although no direct falsehood has been spoken. Beyond all this lies the terrible region of fraud and forgery where a borrower brings promises to pay for discount, of which the supposed promiser never existed, or, if he exists, that he never saw.

When a man has gone so far as this, he has put himself out of the pale of bank dealings. His proper place is in the criminal dock.

Varying Degrees of Reliability and Capacity.

But apart from such a case as this—between the man of absolute honesty who can be relied upon to perform his promise, no matter what it may cost him, and the men whose word cannot be relied upon at all, there are many degrees

*It is generally known to bankers that the degree of reliability as to performance of promises is very high in the course of banking business of England. A protested bill is nothing but a broken promise, yet some banks doing a large business in England have so seldom had bills protested, that they looked upon such a case, when it did happen, to be almost as disgraceful as forgery.

of reliableness. Men there are, who on all ordinary occasions tell the truth, but whose moral courage fails them in an emergency. There are others who have a character for making misstatements to their neighbors, who never try to deceive their banker. The banker learns by experience how to balance conflicting reports. He will note whether statements may be made from personal prejudice, trade rivalry, or political antagonism. Equally will he guard against being misled by statements of a favorable nature that circumstances do not justify; for this is the more dangerous of the two. The one would lead to loss of business, whereas the other would lead to a loss of money. And, as Mr. Gilbart has well observed in his Treatise on Banking, when a banker has a written report on a customer before him, he will note as much what is omitted, as what is said. A man may be eminently honest and truthful, yet it might be very undesirable to lend him money. There are honest simpletons and truthful visionaries.

There are men who while scrupulously careful as to *performing* promises, are rash and sanguine in making them.

There are men who enter upon business operations who are foredoomed to failure from the outset. A banker, therefore, in the course of his loaning operations must direct his attention not only to honesty but to *capacity*.

This quality, like honesty, has many degrees and varieties. It is a composite quality, made up of various elements which are to be found in various combinations in different individuals.

Some of these are essential, such as good judgment, and common sense, together with a due combination of caution and courage; not an over-developed cautiousness, for in this case he would be afraid to run reasonable risks, nor an overweening courage, for in that case he will venture into rash operations. Capacity such as will make a man a desirable borrower is a sum of desirable qualities well and reasonably combined. For example, no man can be a desirable borrower from a bank who is not able to put forth strenuous exertions in emergencies; for such contingencies occur in every business; and if he cannot meet them he will be overthrown.

If a man is given to pleasure, and spends too much time in the enjoyments of the table, especially in drinking, he will prove to be a very undesirable customer for the banker. It need scarcely be said, except as a passing allusion, that all vicious pleasures must be shunned by every man who values his business character. Amongst these gambling and betting must be included.

A banker, then, has all the foregoing points to consider in their place and order. How, for example, can it be safe to extend credit to a man who is capable and economical, if he is not honest? Or, honest and industrious, if he has no ability? Or, capable and economical, if he has an idle disposition? Or, honest and capable, if he is a drinker or a sensualist? A perfect character can never be looked for, but it is certainly necessary to take the foregoing points into account.

The *Antecedents* of a man are generally more easy to ascertain than his real character, especially when his life has been spent in the neighborhood. When, however, a considerable part of a person's career has been spent in a distant locality, it is sometimes difficult to arrive at the truth. Enquiries as to antecedents obviously gather about several leading points. The first is, whether he has or has not been successful? Has he ever failed? If he has failed, then under what circumstances? Was it at a time of general depression, when the strongest firms could scarcely hold their own, or, was it when affairs in the commercial world were working smoothly? And what was the *reason* of his failure. Was it incompetency, idleness or extravagance? Did he over-trade or speculate, or neglect to insure? Was he carrying on a business of which he knew nothing? Was he foolish in crediting, and did he let every shiftless fellow in the community take advantage of him? Was he living in too fine a house, making too great a show, perhaps building, or buying property when he ought to have kept the money in the business? Prudent bankers will endeavor to ascertain in addition whether he got a settlement, and how he got it. Also what did his creditors think of it, especially what did his banker think? Particularly, was there any suspicion of *fraud* about his failure, or any attempt to take advantage of the easy provisions of the Bankrupt Act and make money by declaring himself, or by collusion, being declared, insolvent?

A banker might indeed save himself the labor involved in inquiries of this kind, by making it a rule never to lend money to any man who has failed under any circumstances. It would, perhaps, work to his disadvantage at times, for a man who had learned lessons from experience may be conducting a prudent and prosperous business. But it is certain that one who has failed is apt to fail a second time. When times of difficulty come, a person who has once failed, is strongly tempted to give up the struggle even when really solvent.

A banker may also reasonably enquire whether the man has had fair *success* in business, whether he "got on" as the phrase is. One who has barely kept his head above water, may sometimes prove an undesirable borrower. But such a man may have had to struggle with unusual difficulties, and yet have paid his way, and maintained an honorable reputation. Such men, although they do not accumulate money, are, sometimes, the very "salt of the earth," and among the safest of a banker's customers.

Amount of Means or Capital.

The third matter respecting which information will naturally be sought is as to a proposed customer's means, *or capital*. Some men who lend money would say that this is the only thing worth enquiring about. Without going so far as this, common prudence suggests that a man's capital is a matter of the first importance. Yet it is extremely difficult to get accurate information about it. Men almost invariably consider themselves worth more than they really are, hence it is necessary to criticise all statements of assets with a view to correcting over-valuations. But there are men in business and desiring to be customers of banks, too, who never make out a balance sheet at all, contenting themselves with mere lists of accounts due to them, and now and then estimating the value of their stock by guesswork.

If they own real property, they generally consider it worth its cost. Of liabilities they rarely keep an accurate account, except possibly of notes they have signed. Thus, judging both their assets and liabilities by guesswork, they estimate their means by guesswork too; guessing themselves to be worth one or more thousands of dollars, they claim credit accordingly.

But a banker would be simple, indeed, who would be satisfied with this. He will ask for what is generally called a "statement," which statement, for obvious reasons, should be in writing. Yet a prudent banker will rarely act upon a written statement without a conversation with the party who has submitted it. Such conversation will often bring out points that a bare statement leaves unrevealed, and will prove, if carried out judiciously, of great value to the party concerned, as enabling him to understand his real position. Moreover, in many cases, this will afford a fair index to the borrower's habit of mind, and show how far he is to be trusted in any future representations he may make.†

With regard to the *Experience* a proposed borrower has had in the business he is carrying on, it is a comparatively simple matter to ascertain it. If he has always carried on business in the same town or neighborhood his experience will be a matter of notoriety.

If it has been gained in some distant place the information received as to antecedents will cover the point.

But now supposing that the banker has acquired a sufficient stock of information to justify him in commencing to deal with borrowers, he must not imagine that he is exempt from the troubles of making future enquiries. Changes are constantly taking place, and it is necessary for a banker to keep his information abreast of the times. Last year's reports are not a safe foundation for this year's business.

Premonitory symptoms of coming trouble are of the first importance for a banker to consider. Especially such as come under his own observation. He will, however, take care that his observations are accurate and his information to be relied on. He will constantly be coming into contact with the better informed class of the community and have the opportunity of separating the chaff from the wheat. He will always be on the look-out for information, even when transacting ordinary business, but he will beware of encouraging his customers to gossip to him. This is particularly the case needful in country towns where a banker has farmers for customers.

In seeking information a banker will be careful not to waste his customer's time by asking too many questions. If he gets a reputation for what is called "pumping," he will be avoided. The time of mercantile customers is probably as valuable as his own, and while the information he may receive will have a direct monetary value to him, it is no benefit to him who imparts it.

In large cities there are generally to be found persons who have a sort of faculty for acquiring information. They pick it up on 'Change, or at the club, or at Board of Trade meetings, or in travelling. They have often a kind of instinct for discerning the quality of information and know what is worth talking about and what is not. Acquaintance with a man of this class is invaluable to a banker.

The knowledge to be acquired through Mercantile Agencies is dealt with further on.

There are, however, other things that claim the attention of a banker besides information as to the people with whom he is likely to do business. The first of which is a knowledge of the laws under which he does business. Later on in this work there is given a synopsis of the law relating to joint-stock banking in Canada and the United States. As by far the larger part of the banking of the country is carried on under this law it will be assumed

†There is, however, a mode of giving information which may be more valuable even than a written statement. When a merchant lives in a distant town and his banker casually calls upon him, the merchant may then take him into his office and open the private ledger containing his last stock-taking and statement of profit and loss. It is impossible for this to have been made up for the occasion, and the very act of doing so will tend to inspire confidence.

that a Canadian banker has become familiar with its provisions, especially with those relating to his function as a money-lender and the securities he can take therefor. He will learn from thence what he has power to do, and what he is prohibited from doing, what are his powers and limitations regarding real estate and fixed property, also as to security in the shape of warehouse receipts, bills of lading, liens, hypothecations, and other matters. Along with this he will learn what the law allows in dealing with depositors of various classes; also what are his obligations toward the Government itself. The provisions of the Bank Act should be so familiar that it will become practically impossible for him to incur any of the penalties providing for violating them.

Besides this special knowledge of the banking law, a banker will need a general acquaintance with the law of bills of exchange, and promissory notes; what constitutes their validity, and negotiability, also recourse upon endorsers, policies of insurance, guarantees, mortgages on real estate, chattel mortgages, how to proceed to enforcement, and other matters relating to securities. A banker need not be a lawyer to have such knowledge of these things as is necessary to conduct his daily business, and give instructions to his clerks. There will, however, arise at times questions regarding particular points of procedure respecting which he would do well to consult his lawyer. But, as he proceeds, a banker will gradually become as familiar with what he has power to do and what he has not as a merchant is with the tariff.

With regard to cash reserves and investments a banker should not only understand what is the proper proportion to be observed, but be possessed of sufficient skill and firmness to guide his discounting operations so as to maintain them.

An important qualification of a successful banker is the faculty of dealing with customers who fall into embarrassment, and of realizing securities to the best advantage. In spite of all a banker's caution he will find himself compelled at times to deal with embarrassed customers (embarrassed through no fault of his), and compelled also, much as he may dislike it, to devote time and skill to the working out of Insolvent Estates. Times of difficulty recur periodically in the commercial world, when insolvencies rise far beyond the usual average. It is in these difficult times that a banker's judgment and skill are severely tried; not only in making the best of securities, but in considering that most difficult question, Shall he support his customer, and nurse him into a safe position, or shall he refuse further advances and let matters take their course? Which of these lines to take is generally a perplexing question to answer. Either of them may lead to loss, if a mistake is made. The customer's business may be too deeply embarrassed to permit of its recovery; in that case additional advances will only lead to additional loss. On the other hand, if it is not too far gone, a little timely help may tide a worthy and capable man over temporary difficulty and preserve him as a good customer to a future time.

To refuse help altogether, would lead to certain loss. There is thus the alternative of certain loss on the one hand, of possible avoidance of loss on the other, with the other alternative that the help may prove insufficient, and the loss be increased. The only safe course to follow in such cases is this: if the party is honest and has the capacity to succeed if help is rendered—*then* care should be taken to ascertain, by the banker's own examination, whether the party is really solvent; and, next, to require such additional security as the law will allow, and as will not prejudice the customer's position. If the debtor is thus kept on his feet, it is not unreasonable to require that the banker should have some supervision over the business until such time as circumstances prove to be unnecessary. If such a step is taken, the banker will, of course, carry it out prudently, and not give the customer reason to complain of inquisitorial prying, or of unreasonable interference with his business.

It is, at all events, certain that this course has been more than once tried, and with the best results.

A banker will not have proceeded far in the way of his discounting before he perceives the importance not only of information respecting his immediate customers but of the persons with whom they deal. He will find it necessary also if he is doing business in a city to become acquainted with the various classes of *securities* that are offered for Loans, or which it may be desirable to purchase for investment. It will be well also that he should become acquainted, in some degree, with the staple *products*, which, under our banking law can be transferred to him as security, and with the prices current from time to time, and the condition of the trade in general.

A banker should be sufficiently well informed to be able to advise an importer, let us say, to moderate his purchases, giving reasons therefor; or an exporter whether to warehouse and hold for a time, or to engage all freight possible and bring his goods to market. This by no means implies that he shall acquire such technical knowledge as would enable him to either buy or sell the commodities. No banker could pretend with any reason to discuss the quality of a piece of cotton goods with a merchant, or to criticize the workings of the gangs in a sawmill with the owner. But he should know enough, let us say, of the trade of a wholesale merchant to judge whether he was carrying a reasonable or unreasonable amount of stock, as bearing on the amount of the credit such a merchant might apply for. Similarly, with regard to a flour mill, a banker should be well enough informed about the business to judge whether a proposed credit would be difficult. He should also have such a general knowledge of the timber business in its financial aspects as would enable him to judge whether the scale of his customer's operations was in proportion to his capital, and whether his credit was being used economically. He should know how much lumber a given expenditure ought to produce, and be able to judge whether the business was well managed or otherwise by the working of his customer's bank account.

And so with every leading line of business in which his customers are engaged. It tends to establish good relations between the banker and the merchant, when a man of business finds his banker well enough informed to be able to discuss the financial aspects of his business. From such a banker a merchant will more readily take, not only pertinent hints and ordinary advice, but those checks and refusals which at times are necessary to sound banking.

It is not only, however with regard to general lines of credit to the customer himself, that the banker's information is important, but also with regard to the credit that his customer gives to those who buy from him. A banker should be sufficiently informed to be able to say to a wholesale merchant who offers bills for discount, "You give a large line of credit to such a one. Probably you suppose you have his whole account. But I may tell you in confidence that you have not. He buys the same kind of goods to my knowledge, from another house, and my judgment is that both of you are giving him more credit than is desirable."

A merchant would be foolish indeed who did not take such a hint in good part and profit by it.

The conversation may take the shape of a criticism of the standing of a wholesale house. This house buys goods from a manufacturer, who is wise enough to consult his banker about credits. It would suit the manufacturer to sell the merchant a larger line of goods, but he does not know enough about him to take the risk. Here the banker may feel justified in giving his manufacturing customer the benefit of confidential information. In doing this he will consider well the kind of man to whom he is speaking, and what use he is likely to make of the opinion expressed.

Exporters are increasingly in the habit of attaching bills of lading to the bills they draw. These are commonly directed to be held until the bill of exchange is *paid.* But there are exceptions. It is in regard to these that a banker's information might be all important. Some merchants in Great Britain will not accept bills at all unless the bills of lading are given up; or they may require that bills shall be surrendered to a certain amount, and in some lines of export business it is not customary to attach bills of lading at all. In such cases the exporter has to rely altogether on the standing of the foreign house; and a well-informed banker can render his customer invaluable service. The banker may possibly express his opinion rather in acts than in words. He will not take the bill except with documents attached; or, if the documents are attached, he will not consent to their being surrendered before payment.

A Canadian banker will therefore take means to keep his information well up as to changes in foreign firms.

In the commercial centres of Great Britain the facilities for speculation are so multiplied as to constitute a positive temptation. A shipowner in Liverpool may be drawn into dabbling in cotton; a Glasgow grain merchant may try his luck with iron. As to London the opportunities for speculation are infinite, and embrace everything going on in the business world.

It is therefore of high importance to an exporter and a banker who deals with exporters to keep his information up to date.‡

Mercantile Agencies.

Mercantile agencies have been so remarkably developed during the last thirty years that they are indispensable to all who give credit, either in the shape of goods or money. The information they place at the service of their clients goes much beyond mere books of reference, and embraces detailed reports covering all four of the points referred to in an earlier part of this treatise.

Such reports, too, are often accompanied by balance-sheets, so that a banker has furnished to him what are practically a number of business histories condensed into a small compass and so methodically arranged as to be accessible with the smallest trouble.§

‡See the chapter on commercial bills drawn in sterling money.

§The records hitherto published by one great agency in Great Britain are of exceptional value, being arranged on scientific principles, and enabling every leading circumstance affecting credit to be taken in at a glance. It is well known in banking circles that the conductors of this agency have been men of remarkable information and sound judgment.

A banker, however, will find it prudent to bring a critical judgment to bear on such reports, for a mercantile agency makes mistakes, as well as their clients. It can only report what is reported to it; and its reporters, though generally well-informed men, do not, and cannot, know everything that is occurring.

In examining these reports it is always important to note the difference between *facts stated* and *opinions expressed.*

With regard to the balance-sheets in such reports, it should be remembered that they are communicated by the party himself. A banker, of course, will compare such balance-sheets with any that have been rendered to him.

But these reports are not the only reports that mercantile agencies publish. An important part of their business is to collect information of the *changes* that occur, especially those of an unfavorable character. Thus they furnish their supporters with lists of *suits* that are taken, and what is more important, of *chattel mortgages*, *bills of sale*, *judgments*, *executions*, and *insolvencies*. Partnerships also come within their purview; those formed or dissolved, together with information as to *death* of partners, which, of course, ends the partnership. The lists containing such information are long and the task of examining them laborious. But no banker who does an active business with the mercantile community can afford to pass them by, or to look over them in a perfunctory manner. An omission to notice some single unfavorable particular, may cost a banker or his customers thousands of dollars, especially if it relate to a foreign firm.

Bankers at times ask information of *one another*. Formerly there was scarcely any other source of information available, and much correspondence was formerly carried on between them on the subject. But time has brought new developments. Bankers do not now correspond as much as they did formerly respecting their customers, though they do occasionally compare notes in confidence. There are considerations as to such information that do not apply to any other mode of obtaining it. For example, let us suppose that a banker desires of a confrére information as to one of his customers. If the customer is in a good position and doing well, there is little difficulty in answering. But if the contrary is the case, what then? The account of such a customer may be one that the other banker is carefully "nursing," getting increased security whenever he can; hoping all may be well, yet being by no means sure.

Is he to damage his customer's credit by telling a confrére this? If he does, he may bring about a stoppage, and ruin his customer. On the other hand, if he conceals the real position and gives a favorable opinion, he will violate the confidence which ought always to exist between bankers.

The result usually is this: As bankers never care to give an unfavorable opinion, while a favorable one may be unjust, and as the declining to express an opinion would be construed unfavorably, they seldom or never ask one another at all, that is, as to their own respective customers.

A banker in Canada who buys a large amount of bills upon houses in centres of British trade, will find it advantageous to visit such centres occasionally, and compare notes on the spot, with his banking correspondents. In so doing he will learn many things which would never be communicated to him in writing, and which no mercantile rating would give him any idea of. There is this reason for taking such a course, that English bankers never commit themselves in writing except to very guarded statements. They are in the habit of stating that such and such a firm is "*considered to be worth*" say, a hundred pounds, or it is "good for engagements."

Such reports generally fail to meet the need of the enquirer. To say that a firm in Britain is good for a few hundred pounds, when the banker on this side knows that they are making purchases amounting to many thousands, is obviously insufficient. And to say that such a one is "considered" to be "good for his engagements," if the statement is taken literally, is simply to suggest that he has no capital at all.

If specific information is wanted, the better course is to ask specifically, giving exactly the point to be covered. When the question is put in a vague and general form, "What is the standing of such a one?" it will bring as a rule, only a vague and general answer.

But if the querist puts such a question as this: "Would it be safe for our customer here to ship such a firm two thousand pounds' worth of merchandise without security?" he is likely to get a much more specific answer, guarded though it may be.

The last remaining source of information arises in the daily intercourse of a banker with his customers and the public. This has been referred to already, but it may be desirable to observe that a banker, even while transacting routine business with customers, or mingling with his fellows in the club or elsewhere, will note anything affecting his interests; and by practice will acquire the art of doing this even when least appearing to do it. A casual remark dropped in conversation across the table, or a query addressed to him in a chance meeting with an acquaintance, may give to a quick intellect a clue which, if followed up, will lead to most important consequences.

Almost every particular in this and the preceding chapter has an application to Commerce as to Banking. The wholesale merchant with his large circle of customers is under the same pressure to keep up information as is the banker. Both mainly rely on the same sources of information and their interests, as regards information, are identical. They cover the same ground, and are subject to the same conditions. Both are dispensers of credit, the one in money, the other in goods, and the same general laws of credit are applicable to both bankers and merchants. G. H.,

Former Gen. Mgr. Merchants' Bank of Canada.

SOUTHERN BANK DEPOSITS.—The deposits of the National banks in the South, according to the report of the Comptroller of the Currency, aggregate about $450,000,000. If Missouri, Oklahoma and the Indian Territory are included, the total is nearly $600,000,000. The increase of deposits in the last two years was over $80,000,000. Florida in the last two years gained 45.4 per cent. and Arkansas nearly as much. The average gain in the South was 21.8 per cent. Maryland's deposits in 1905 were $61,985,715, Virginia's $42,277,158, West Virginia's $24,848,176, North Carolina's $14,056,820.—*Baltimore Sun.*

MARYLAND BANKERS' ASSOCIATION.—The annual convention of the Maryland Bankers' Association in session at Annapolis, October 6, elected the following officers for the ensuing year: David Sloan, President Lonaconing Savings Bank, president; Charles Hann, Cashier National Mechanics' Bank, Baltimore, secretary.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

CHECK—FORGED INDORSEMENT—RIGHT OF DRAWEE BANK TO RECOVER FROM INDORSER.

Supreme Court of Kansas, July 7, 1905.

WELLINGTON NATIONAL BANK *vs.* ROBBINS.

When an indorsement upon a genuine bank check is forged, or the name of the payee is placed thereon without authority, and the check is transferred and paid by a bank not the drawee, which bank in turn indorses it and collects it from the drawee bank, the drawee is under no obligation to inquire as to the genuineness of the first indorsement, but the latter indorser guarantles the genuineness of the prior indorsement.

In such case, if the payee brings suit against the drawee and recovers a judgment for the whole or a part of the amount of the check, and the drawee gives notice to its immediate indorser, and requests it to assume the direction and control of the defense, which it neglects to do, and the drawee employs counsel and defends the action in good faith, and judgment is rendered against it for a portion of the claim, and it pays such judgment, the drawee is entitled to recover of its immediate indorser the amount of the judgment so paid, together with all necessary and reasonable attorney's fees and expenses incurred in such defense.

(Syllabus by the Court.)

On September 5, 1898, Kettering & Sons were indebted to Parkhurst-Davis Mercantile Company in the sum of $249.71, and had on deposit in the plaintiff bank sufficient funds to pay said sum, and on that date drew their check on plaintiff for that sum,and delivered the same to one F. H. Teale, a salesman of the mercantile company. Teale indorsed the check, "Parkhurst-Davis Merc. Co., per F. H. Teale, Salesman," and presented the same to the defendant bank, and received from said bank $32 in cash and a draft for the balance of the check payable to the order of the mercantile company. Teale forwarded the draft to the mercantile company with instructions to credit it on two other accounts than Kettering & Sons, and converted the $32 cash to his own use. The defendant indorsed the check, "The Farmers Bank, Wellington, Kansas, paid September 6, 1898," and delivered the same to the plaintiff, and received full payment thereof.

The mercantile company, after learning of the transaction, claimed that the indorsement of the check by Teale was a forgery, that he was not authorized to indorse any check payable to them, and demanded full payment of the check from the plaintiff bank, and, upon refusal, brought suit against the plaintiff for the sum of $249.71. The plaintiff bank informed the defendant of the bringing of the suit, and requested it to come in and defend, to which the defendant paid no attention. Plaintiff defended, and the action resulted in a judgment in favor of the mercantile company against the plaintiff for the amount embezzled by Teale, with interest, $39.47, and costs, aggregating $85.12. The plaintiff paid the judgment of the mercantile company, and demanded payment from the defendant, which was refused, and thereupon brought this suit for the amount so paid and $50 attorney's fees, aggregating $135.12.

C. A. SMITH, *J.*: Under the agreed statement of facts in this case the defendant was responsible to the plaintiff for the money he paid out upon the check with the forged indorsement.

The rule as laid down in People's Bank vs. Franklin Bank, 17 Am. St. Rep. 898 (note), reads: "Money paid upon a forged indorsement of a check or draft may be recovered back. The bank or drawee is not bound to know the signature of an indorser. And the holder, whether he indorses the instrument or not, warrants the genuineness of all prior indorsements. If, therefore, a check or draft upon which the name of a prior indorsee has been forged is paid, the amount may be recovered back from the party to whom it has been paid, or from any party who indorsed it subsequent to the forgery."

The case of the Corn Exchange Bank vs. The Nassau Bank, 91 N. Y. 74, cited by the defendant, sustains this doctrine; but in that case it was held that the payee bank was not entitled to recover the expenses of a suit, for the reason that it had not discharged its duty to the defendant bank as a depositor. In the case at bar, however, the plaintiff, upon being sued for the entire amount of the check, notified the defendant in writing, and requested the defendant to assume and take charge of the case. This it was the defendant's duty to do, and it neglected to do it. The owner of the defendant bank, however, testified as a witness in that suit and had every opportunity to have any defense made that it could have made, if it, in fact, had been a party. It was the duty of the defendant bank to see the plaintiff harmless on its contract of warranty that the indorsement of the mercantile company on the check was genuine, and it ill becomes the defendant in this case to say that when the plaintiff was sued it should have paid the full amount claimed and then sought to recover it of the defendant. The plaintiff defended in good faith, employed counsel in good faith and at an agreed reasonable price, and saved the defendant over $200, and it is entitled to recover the full amount claimed.

The agreed statement of facts embraces every question material to the determination of the case, and the evidence offered and introduced by the defendant devolved neither upon the trial court nor upon this court the weighing of evidence to determine the facts. In the case of Bank vs. Williams, 62 Kan. 434, 63 Pac. 745, the court quotes from Sutherland on Damages (2d Ed.) § 58, as follows: "If one's property is taken, injured, or put in jeopardy by another's neglect of duty imposed by contract, or by his wrongful act, any necessary expense incurred for its recovery, repair, or protection is an element of the injury. It is often the legal duty of the injured party to incur such expense to prevent or limit the damages, and, if it is judicious and made in good faith, it is recoverable, though abortive." The act of the plaintiff in defending the action of the mercantile company was in good faith and was not abortive, but resulted in great good to the defendant. By so much more ought it to recover.

The judgment of the district court is reversed. The case is remanded with instructions to enter judgement for the plaintiff below for $135.12, with interest at the rate of 6 per cent. per annum from November 19, 1901, with costs. All the justices concurring.

PROMISSORY NOTE—PROVISION FOR DEDUCTING A DISCOUNT—NEGOTIABILITY.

Supreme Court of Minnesota, June 2, 1905.

LORING *VS.* ANDERSON.

It is an essential condition of a promissory note that there be no uncertainty as to the amount of money that it calls for at any particular time, but, if the promise be to pay a stated sum of money, plus or minus a definite amount or discount, the amount called for by the note is certain.

A written instrument whereby the maker promised to pay on October 1, 1903, to the order of the payee, $250, with interest—a discount of 6 per cent. to be allowed if paid on or before October 1, 1903,—is not uncertain as to amount, and it is a promissory note, and therefore negotiable.

The evidence herein justified the trial court in directing a verdict for the plaintiff on the ground that she was an indorsee of the note in question before maturity, for value, and without notice of any defense thereto.

(Syllabus by the Court.)

START, *C. J.*: The plaintiff, as indorsee before maturity, for value, brought this action upon a written instrument which is in these words:

"$250.00. October 1st, 1903 after date I promise to pay to the order of the Maplebay Wind Stacker Company of Crookston, Minnesota Two Hundred & Fifty and 00-100 Dollars.

Value received, with interest before and after maturity at the rate of 10 per cent. per annum until paid.

A discount of 6 per cent. to be allowed if paid on or before Oct. 1, 1903.

Payable at Christine State Bank, Christine, N. D. Anton Anderson.

Sec. Twp. Range.

P. O. Comstock.

This note is given for one Maplebay Wind Stacker No. 940."

The answer admitted the execution of the note, denied that it was indorsed for value, and alleged that it was given for a Maplebay Wind Stacker, which was warranted; that the defendant complied with the warranty on his part, but there was a failure of the warranty on the part of the payee of the note, and thereupon it was mutually agreed between the parties that the sale of the stacker should be rescinded, and the note returned to the defendant; and, further, that the defendant complied with the terms of such agreement on his part, but the payee refused to return the note. The new matter in the answer was put in issue by the reply.

The cause came on for trial by a jury, and at the close of the evidence the court, on motion of the plaintiff, directed a verdict in her favor for the amount of the note. The defendant appealed from an order denying his motion for a new trial.

The plaintiff introduced in evidence the note, with the indorsements thereon, showing that it was indorsed by the payee to the Scandia American Bank, and by it to the plaintiff. The evidence shows that the plaintiff purchased the note before maturity, in the usual course of business, and for value, without notice. The note was given for a stacker, as alleged in the answer; and the defendant gave evidence tending to show a warranty of the stacker, and a breach thereof by the payee of the note, and the agreement to rescind the sale and return the note. The defendant claims that the evidence also tends to show facts sufficient to take the case to the jury on the question of the bona fides of the several indorsees in acquiring the note. It is immaterial whether the bank was a purchaser without notice, if the plaintiff was such purchaser.

We have considered the record with reference to the question whether the plaintiff was an indorsee of the note before maturity for value, and without notice of any defense thereto, and find that the evidence was practically conclusive that she was such an indorsee. It follows, then, that, if the instrument sued on be a promissory note, the trial court did not err in directing a verdict for the plaintiff. The contention of the defendant is that it is not, because the amount thereof depends upon a contingency.

It is an essential condition of a promissory note that there be no uncertainty as to the amount of money it calls for at any particular time. Thus an instrument whereby the maker promises to pay to the payee or order or bearer a definite sum plus or minus a definite amount or discount is a promissory note, and hence it is negotiable; but, if the promise be to pay a stated sum of money plus or minus an indefinite amount or discount, it is not a negotiable instrument. (Smith vs. Crane, 33 Minn. 144, 22 N. W. 633; 1 Daniel, Neg. Instruments, § 53; 4 Enc. of Law, 96.)

Within which of the two suggested classes does the instrument in question fall? This is a question of some difficulty. The case of Mansfield Savings Bank vs. Miller, 2 Ohio Civ. Ct. R. 96, cited by counsel for the plaintiff, is the only one that we have been able to find touching the question. In that case the note contained this provision: "If this note is paid in full when due a discount of $39.78 is to be made from the amount then due." It was held that this provision did not render the note uncertain as to the amount thereof, for the reason that "the presumption is that parties will perform their obligations, rather than break them, and therefore, in the commercial world, if this note should be offered for negotiation, the amount at the time of payment would be known with certainty. While the note is undishonored and has any standing in the commercial world, the amount is definitely fixed. If any uncertainty could in any way arise, it is only when it becomes dishonored and ceases to have any standing as commercial paper." This reasoning is applicable to the note here in question, for, in legal effect, it is a promise to pay October 1, 1903, $250, with interest at the rate of 10 per cent. per annum, less a discount of six per cent. if paid on or before maturity. If the note were not paid when due, there could be no uncertainty as to the amount recoverable on it, for such amount would depend not upon any contingency or question of fact, for the law would determine the amount due on the note from its terms. (See Smith vs. Crane, 33 Minn. 144.)

On the other hand, while there is a contingency before the maturity of the note as to whether the maker will pay it at maturity or before, there is no contingency or uncertainty as to the amount to be paid in full discharge of the note at maturity or at any time before, if the maker elects to pay before. The amount is $250, with interest, less a discount of six per cent.—a matter capable of being made certain by computation. The result of such computation would give the exact amount due on the note at its maturity, and the exact amount which the maker was required to pay in full discharge of the note at any time before October 1, 1903, or at any time on that day, and the exact amount called for by the note at all times until it became dishonored by non-payment.

We therefore hold that the instrument which is the subject-matter of this action is a promissory note, and that the trial court did not err in directing a verdict for the plaintiff. Order affirmed.

NOTES GIVEN FOR PATENT RIGHTS—STATE STATUTE REQUIRING STATEMENT OF CONSIDERATION.

Supreme Court of Arkansas, May 6, 1905.

JOHN WOODS & SONS *vs.* CARL.

A State statute declaring void all notes given in payment for patent rights, unless they show upon their face that they were given for such consideration, is not in conflict with the constitution of the United States.

This was an action by John Woods & Sons against Frank Carl to recover upon a negotiable promissory note executed by the latter to the Human Gas Company, and which said payee, for a valuable consideration, assigned to plaintiffs before maturity. The defense was that the consideration of the note was the sale by the Human Gas Company of a certain patented medicine, and the right to the patent thereof in Arkansas, and the said note, not being executed in the form required by law, is absolutely void. The Human Gas Company, a partnership composed of C. G. Human, Chas. Herberer and J. W. Hansell, were the owners of the right to manufacture and sell in the State of Arkansas and other states a patented machine, known as the Human Automatic Acetylene Gas Generator, used for the purpose of generating gas; and in consideration of the note sued on, and the payment of the sum of $200, executed to appellee a written contract reciting that they "have sold, and by these presents do sell, to Frank Carl, of Little Rock, Ark., party of the second part, an undivided one-half interest in our business to be known as the Human Gas Company of Arkansas for the sale and manufacture of the Human Automatic Acetylene Gas Generator in the said State of Arkansas."

The court instructed the jury as follows: "If you find that this note was given for a patent right machine, or territory, you will find for defendant; if not, you will find for plaintiff." To which instruction plaintiff excepted. The jury returned a verdict for the defendant, and the plaintiff appealed.

McCulloch, *J.* (after stating the facts): The note sued on does not conform to the provisions of the act of April 23, 1891 (Kirby's Dig. §§ 513-516), in that it does not show upon its face that it was executed in consideration of the sale of a patented article or patent right.

The statute in question is as follows:

"Section 513. Any vendor of any patented machine, implement, substance, or instrument of any kind or character whatsoever, when the said vendor of the same effects the sale of the same to any citizen of this State on a credit, and takes any character of negotiable instrument, in payment of the same, the said negotiable instrument shall be executed on a printed form, and show upon its face that it was executed in consideration of a patented machine, implement, substance or instrument, as the case may be, and no person shall be considered an innocent holder of the same, though he may have given value for the same before maturity, and the maker thereof may make defense to the collection of the same in the hands of any holder of said negotiable instrument, and all such notes not showing on their face for what they were given shall be absolutely void.

Sec. 514. The foregoing section shall also apply to vendors of patent rights, and family rights to use any patented thing of any character whatever.

Sec. 515. Any vendor of any patented thing of any character, or any vendor of any patent right or family right to use any patented thing of any character whatsoever, who shall violate the provisions of section 513 shall upon conviction be punished by a fine of not more than three hundred dollars.

Sec. 516. This act shall not apply to merchants and dealers who sell patented things in the usual course of business."

Appellant contends, in the first place, that the contract in evidence shows neither a sale of a patented article nor a patent right, but we think it is quite clear that the contract must be construed as a sale of a patent right. It in express terms conveys to appellee an undivided one-half interest in the business of manufacturing and selling a patented machine in the State of Arkansas for an unlimited time, and provides that "in the event the net earnings of the Human Gas Co. has not been sufficient to cover the amount of the said Frank Carl's investment by January 1, 1902, then the Human Gas Co. hereby agree and bind ourselves to relinquish all of our right, title and interest in and to the said State of Arkansas * * * and give said Frank Carl a good deed and manufacturer's right in and to the said State of Arkansas for the sale and manufacture of the Human Automatic Acetylene Gas Generator."

A conveyance of an interest in the right to sell a patented article in a given territory is as much a sale of a "patent right" as a conveyance of the entire right to sell in the territory. No distinction can be made between the transactions in this regard. (New vs. Walker, 108 Ind. 370; Pinney vs. First Nat. Bank [Kan. Sup.], 75 Pac. 119.)

It is urged by appellants that this statute is in conflict with section 8, article 1, of the Constitution of the United States, giving to the Congress of the United States the power "to promote the progress of science and useful arts, by securing, for limited times, to authors and inventors the exclusive right to their respective writing and discoveries."

In the case of Tilson vs. Gatling, 60 Ark. 114, this court had under consideration the act of April 9, 1891 (Kirby's Dig. § 512), changing the rules of the law merchant concerning commercial and negotiable paper, so as to permit the payee or drawee of such paper executed in payment of a patent right, or patent right territory, to make all defenses against the assignee or holder of such paper that he could have made against the original payee or drawee, whether such paper be assigned before maturity or not; and that statute was held not to invade the power of Congress to create patent rights, etc.

It is difficult to perceive any distinction between the validity of the two statutes in that regard, for, if the Legislature had the rightful power to pass one of the statutes, it had also power to pass the other. If the jurisdiction of Congress over the subject of patents and patent rights is so extensive as to exclude the power of a State to declare void, unless made in certain form, written obligations given in consideration of sales of patent rights or patented articles, then it also follows that the State is powerless to alter the established rules of the law merchant so as to permit defenses, not applicable to other negotiable paper, to be made to such paper given in consideration of sales of patent rights or patented articles.

The argument of learned counsel for appellants that such legislation is an improper "discrimination against patented articles, by imposing upon their sale conditions and restrictions not placed upon the sale of other similar articles," is as cogent against one of the statutes on the subject as against the other.

In Wyatt vs. Wallace, 67 Ark. 575, the precise question was presented there as presented here, and the court held that there could be no recovery upon the note sued on. We are asked by counsel to review the question, inasmuch as in the last named case the alleged conflict between the statute and the constitutional power of Congress on the subject was not discussed either in the argument of counsel or the opinion of the court. This question was before the Supreme Court of Tennessee in a recent case (State vs. Cook, 107 Tenn. 499), and that court held that a statute similar to our own was valid and not in conflict with the Constitution of the United States. The reasoning of that court, in the very lucid opinion by Judge Caldwell, where all the authorities are carefully reviewed, is, to our minds, conclusive of the proposition that such legislation by the States is not in conflict with the Federal Constitution. In Tennessee, as in Arkansas, the Legislature first enacted a statute permitting the same defenses against negotiable paper in the hands of any holder or assignee as while in the hands of the original payee, and, later, another statute was passed declaring it to be unlawful to accept a note given for the sale of a patent right unless it shall appear upon the face of the note that the same is given in the purchase of a patent right.

The learned judge, in the case cited, said: "The two statutes are to be construed together as different parts of the same legislative scheme. Their combined effect, when each is strictly observed and enforced, is simply to prevent written obligations for the purchase of patents or interests therein from being negotiable in the highest sense, and to subject them, in whosesoever hands, to all defenses available to the maker against the original payee. So construed, neither act by itself, nor the two combined into a single scheme, can be truly said to contravene any provision of the Federal Constitution and statutes in reference to patents, or to restrict or impair the right of sale guaranteed thereby. * * * These statutes are also sustainable as valid police regulations, having been passed in good faith for the real promotion of the public welfare, and being well calculated to accomplish that end through the fair and much-needed protection thereby afforded against imposition and fraud, so often and so easily perpetrated in the sale of the peculiar incorporeal right or intangible property contemplated."

This view is sustained by the following decisions of the courts of last resort of other States: Sandage vs. Studebaker, 142 Ind. 148; Hankey vs. Downing, 116 Ind. 118; New vs. Walker, 108 Ind. 370; Union National Bank vs. Brown [Ky.], 41 S. W. 273; Mason vs. McLeod, 57 Kan. 105; Pinney vs. First Nat. Bank [Kan. Sup.], 75 Pac. 119; Tod vs. Wick, 36 Ohio St. 370; Haskell vs. Jones, 86 Pa. 173; Patterson vs. Kentucky, 97 U. S. 501.

The Kentucky Court of Appeals, in passing upon a similar statute, said: "The right to prescribe regulations for the protection of its citizens against fraud and imposition is not taken from the State by the Federal Constitution or by any national statute. On the contrary, it may be considered as having been authoritatively settled that the national Government cannot exercise police powers for the protection of the inhabitants of a State. These are local matters, and must be governed and regulated by the State." (Union National Bank vs. Brown, supra.)

In New vs. Walker, supra, the Supreme Court of Indiana said, concerning a statute on this subject: "As the Federal Legislature cannot enact police regulations which will yield the citizens of the State just protection, it must be that the State Legislature may enact such regulations, or the citizens be left without protection. We are unwilling to declare that vendees of patent rights cannot be restrained by reasonable police regulations, and we do therefore declare that the provisions of the statute under immediate mention, being in the nature of police regulations, are constitutional and valid." The contrary view is expressed, with more or less directness, in the following cases in State courts: Hollida vs. Hunt, 70 Ill. 110; Cranson vs. Smith, 37 Mich. 309; Wilch vs. Phelps, 14 Neb. 134; Crittenden vs. White, 23 Minn. 24; and in the following Federal cases: Ex parte Robinson, 2 Bis. 309, Fed. Cas. No. 11,932; Woollen vs. Banker, 2 Flip. 33, Fed. Cas. No. 18,030; Castle vs.

Hutchinson (C. C.), 25 Fed. 394; Reeves vs. Corning (C. C.), 51 Fed. 774, and Pegram vs. Am. A. Co. (C. C.), 122 Fed. 1000.

We have no hesitancy in reaching the conclusion that those cases are best supported by reason which hold to the doctrine that such statutes as that now under consideration do not amount to an interference with or impairment of the rights conferred by the patent issued by the Federal Government, nor to an invasion of the constitutional authority of Congress. We therefore adhere to the rule announced by this court in Wyatt vs. Wallace, supra, and Tilson vs. Gatlin, supra, that the statutes in question are valid.

It is urged by appellants' counsel in argument that the last clause of the act of April 23, 1891, exempting from its operation "merchants and dealers who sell patented things in the usual course of business," violates that clause of the fourteenth amendment of the Constitution of the United States guarantying to all persons within the jurisdiction of a State "the equal protection of the laws," and renders the entire act void. Our attention is cited by counsel, among other authorities thought to sustain their contention on this point, to the opinion of Judge Rogers in the recent case of Union County National Bank vs. Ozan Lumber Co. (C. C.), 127 Fed. 206, but we do not find it necessary to review these authorities, nor to pass upon the question now, as it is not essential to a decision of this case. The exemption in question applies only to the sale of "patented things" in the usual course of business, and not to the sale of patent rights. If it be conceded that this exemption be an improper discrimination (which we do not decide) as to those who sell patented articles, and renders the act void as to its application to all sales of patented articles, it leaves the act unimpaired in its application to the sale of patent rights. The act may be unconstitutional and void as to its application to part of the subject-matter and valid as to others, and we think this rule preserves unimpaired the provisions of the statute with reference to notes given for the sale of patent rights. (Leep vs. Railway, 58 Ark. 407; State vs. Deschamp, 53 Ark. 490; L. R. & F. S. Ry. vs. Worthen, 46 Ark. 312; State vs. Marsh, 37 Ark. 356; Union County Bank vs. Ozan (C. C.), 127 Fed. 206; Cooley's Const. Lim. [7th Ed.], pp. 246-250.)

Though section 1 of the act applies primarily only to the sale of patented articles, and even if it be held to be void as to its application to those articles, it will yet be retained so as to carry the application of the second section to it as to the sale of patent rights.

It is further contended that the cause should be reversed because the court erred in submitting to the jury the question as to whether or not the note was given for sale of a patented machine, when there was no evidence of such sale. The instruction was erroneous in this respect, but no harm resulted, as the facts were undisputed, and upon proper construction of the contract, and applying the law as herein declared, the verdict was right.

Affirmed.

TAXATION OF NATIONAL BANK STOCK—RES JUDICATA—RETROACTIVE STATUTE.

Supreme Court of the United States, April 17, 1905.

CITY OF COVINGTON *vs.* FIRST NATIONAL BANK OF COVINGTON.
FIRST NATIONAL BANK OF COVINGTON *vs.* CITY OF COVINGTON.

In Kentucky an adjudication that a bank has a contract exempting it from taxation is not effectual to protect such contract rights as to taxes for years other than the one directly involved in such adjudication, and in a case arising in that State the Federal court will follow the same rule.

The Kentucky statute of 1900 imposing taxes upon National banks is void, in so far as it lays a tax for past years upon stock held without the State, and which before the act of 1900, it was not required to return.

This action was brought to enjoin the assessment or collection of taxes on certain shares of capital stock of the First National Bank of Covington for the years from 1893 to 1900, inclusive, and to enjoin the arrest of the President and Cashier of the bank for not listing such shares, and for a decree adjudicating the same not liable to taxation up to the time of the expiration of the charter of the bank on November 17, 1904.

The principal grounds alleged and relied upon were that, by reason of the acceptance of the terms of the act of the General Assembly of Kentucky, passed in 1886, known as the Hewitt law, an irrevocable contract had been made between the bank and the State, whereby the former was to pay to the State taxes at a certain rate on its stock, surplus, undivided profits, which, when paid, were to be in full of all other State, county, or municipal taxes, except those levied on the bank's real estate.

It was averred that complainant had regularly paid such taxes up to and including those due July 1, 1900. That the fact that the bank had such irrevocable contract had been adjudicated and finally determined by a decision in the Court of Appeals of Kentucky in a litigation wherein the State and the City of Covington and the bank were parties. The bill further set up that an attempt was being made to compel the complainant to list for taxation its shares of stock under an act of the State of Kentucky, passed March 21, 1900 (Session Acts 1900, p. 65).

It was also averred in the bill that the act of March 21, 1900, which undertakes to impose taxes for the years 1903 and following, is unconstitutional and void, and operates to discriminate against the complainant, in violation of § 5219 of the Revised Statutes of the United States (U. S. Comp. Stat. 1901, p. 3502).

The defendants having filed a plea to the jurisdiction and a general demurrer to the bill, upon motion for a temporary injunction, attempt to enforce taxes levied or assessed upon the shares of capital stock at any time previous to March 21, 1900, were enjoined.

Mr. Justice Day delivered the opinion of the court:

That the acceptance of the provisions of the so-called Hewitt law did not constitute an irrevocable contract, releasing the bank from taxes upon compliance with its terms, has been settled. (Bank Tax Cases, 102 Ky. 174; Citizens Savings Bank vs. Owensboro, 173 U. S. 636.) Reference is made to the various cases leading up to this result in Deposit Bank vs. Frankfort, 191 U. S. 499, 508. We are therefore left upon this branch of the case to consider the effect of the judgment of the State court of Kentucky, set up in the complainant's bill as an adjudication of the rights of the parties and a final determination that the acceptance of the Hewitt law had the effect of a valid contract. When this case was before the circuit court for the second time (129 Fed. 792), Judge Cochran, after an elaborate review of the Kentucky cases, reached the conclusion that, as the taxes involved in the case in which the adjudication was had were for a different year than those involved in this suit, the former judgment did not have the effect of an estoppel between the parties, being only conclusive, under the Kentucky decisions, as to taxes in the years involved in the suit in which the judgment was rendered. We do not doubt that this is the settled law of the Supreme Court of Kentucky. Nor does it make any difference, in the view which the court takes of the matter, that the adjudication as to the right to collect the taxes involved the finding of an exemption by contract, which included, not only the taxes for the years in suit, but all taxes which might be levied under the authority of the contract. The ground upon which the court based its decision with reference to the effect of such adjudication is stated in the case of Newport vs. Com. 106 Ky. 444, as follows:

"The only question remaining for decision is upon the plea of *res judicata*. The plea in this case avers that the subject-matter of the former suit was identical with that involved in this action, and that the facts were the same in both actions, except that the former action attempted to collect a tax for the year 1893, and the present action was attempting to collect a tax for the year 1894.

The authorities seem to hold that when a court of competent jurisdiction has, upon a proper issue, decided that a contract, out of which several distinct promises to pay money arose, has been adjudged invalid in a suit upon one of those promises, the judgment is an estoppel to a suit upon another promise founded on the same contract. But taxes do not arise out of contract. They are imposed *in invitum*. The taxpayer does not agree to pay, but is forced to pay, and the right to litigate the legality of a tax upon all grounds must of necessity exist, regardless of former adjudications as to the validity of a different tax.

It is unnecessary to cite the cases; they will be found in Judge Cochran's opinion. It is sufficient to say that, if this case had been decided in the State court of Kentucky, the adjudication pleaded herein, not involving taxes for the same years as those now in controversy, would not avail as an estoppel between the parties. It is true that a different rule prevails in the courts of the United States. The reasons therefor were stated in an opinion by Mr. Justice White, speaking for the court, in the case of New Orleans vs. Citizens' Bank, 167 U. S. 371, and in cases in a Federal jurisdiction the doctrine therein announced will doubtless be adhered to. The learned counsel for the plaintiff in error refer to the decision of this court in Deposit Bank vs. Frankfort, 191 U. S. 499, as authority for the doctrine that, where a contract right had been adjudicated which involves an exemption from all taxation, such adjudication will conclude the parties as to the right to legally tax for other years, although the particular year was not directly involved in the suit in which the adjudication was made. But in that case the court was dealing with the effect to be given to a judgment of a Federal court in which such contract right had been adjudicated, when the Federal judgment was set up in a State court; and in that case it was recognized, in the opinion of the court as well as in the dissenting opinion, that the courts of Kentucky, in giving effect to the judgments of their own courts, were guided by a different rule, and in that State an adjudication involving taxes for one year cannot be pleaded as an estoppel in suits involving taxes for other years. (191 U. S. 514, 524.)

The case of Deposit Bank vs. Frankfort was only concerned with the effect to be given to a Federal judgment adjudicating a contract right, when pleaded in a State court. We are now dealing with the weight to be attached to a State judgment when pleaded *res judicata* in a Federal court. That was the very question decided by this court in the case of Union & Planters' Bank vs. Memphis, 189 U. S. 71, wherein it was held that the Federal courts were not required to give to such judgments any greater force or effect than was awarded to them by the courts of the State where they were rendered. Upon this branch of the case the question then is, What effect is given in the courts of Kentucky to such pleas of estoppel? As we have seen, it is there settled that the judgment would not be effectual to protect the alleged contract rights of the complainant as to the taxes involved for years other than the one directly involved in the adjudication set up. We therefore find no error in the judgment of the circuit court refusing an injunction upon the ground of an estoppel by judgment.

As to the taxes for the years prior to the passage of the act of March 21, 1900, it is argued by the bank that to give this retroactive effect to the law will be to deprive it and its stockholders of their property without due process of law, and will be in violation of § 5219 of the Revised Statutes, prohibiting discrimination against National banks and their stockholders.

The act of March 21, 1900, as stated in the preamble, was passed because of a decision of this court holding prior legislation of the State undertaking to tax the property of National banks unconstitutional. Owensboro National banks vs. Owensboro, 173 U. S. 664. In the Owensboro Case it was held that §5219, Rev. Stat. U. S., was the measure of the power of the State to tax National banks, their property, or franchises, which power was confined to the taxing of the stock in the name of the shareholders and the assessment of the real estate of the banks, and that taxation under the laws of the State of Kentucky upon the franchise of the bank was not within the purview of the authority conferred by the act of Congress, and was therefore illegal. Section 5219 of the Revised Statues of the United States is as follows:

"Sec. 5219. Nothing herein shall prevent all the shares in any association from being included in the valuation of the personal property of the owner or holder of such shares, in assessing taxes imposed by authority of the State within which the association is located; but the Legislature of each State may determine and direct the manner and place of taxing all the shares of National banking associations located within the State, subject only to the two restrictions, that the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State, and that the shares of any National banking association owned by non-residents of any State shall be taxed in the city or town where the bank is located, and not elsewhere. Nothing herein shall be construed to exempt the real property of associations from either State, county, or municipal taxes, to the same extent, according to its value, as other real property is taxed."

Under the new taxing law (act of March 21, 1900), it is declared to be the purpose to require the bank to return the shares of stock for the years prior to 1900, and since the adoption of the revenue law of 1892, with the privileges and deductions stated in § 3 of the act. Notwithstanding the prior revenue law had been held invalid, and there was no statute specifically taxing these shares of National bank stock on the statute books of Kentucky, prior to the passage of the act of March 21, 1900, the Supreme Court of Kentucky, in the case of Scobee vs. Bean. 109 Ky. 526, 59 S. W. 860, has held that there was ample statute law in that State for the taxing of shares in National banks under the laws of that State providing for the taxation of real and personal property of every kind, and that the provision that the individual shareholder in a corporation shall not be required to list his property therein so long as the corporation pays the taxes on its property of every kind, impliedly requires the individual to list his shares and pay the tax in the absence of the return required by law of the corporation.

In that case the court held that there was nothing in its decisions running counter to § 5219. (These views were further enforced in Com. vs. Citizens' Nat. Bank, 25 Ky. L. Rep. 2100; London vs. Hope, 26 Ky. L. Rep. 112; Citizens' Nat. Bank vs. Com. 25 Ky. L. Rep. 2254.)

Following the State court in the interpretation of its own statutes, it may be said that, as to shareholders residing in Kentucky and over whom the State has jurisdiction, the Supreme Court of that State has construed its statutes as requiring shareholders in National banks for the years 1893 to 1900, inclusive, to return their shares for taxation; and if they did not make the return the duty was required of the corporation. In this view of the law it may be that, as to local shareholders, the act of March 21, 1900, as held by the Supreme Court of Kentucky, created no new right of taxation, but gave simply a new remedy, which by the law is operative to enforce preexisting obligations. It may be admitted that § 5219 permits the State to require the bank to pay the tax for the shareholders. (First Nat. Bank vs. Kentucky, 9 Wall. 353; Van Slyke vs. Wisconsin, 154 U. S. 581; First Nat. Bank vs. Chehalis County, 166 U. S. 440.)

But there is nothing in the general statutes of Kentucky before the act of March 23, 1900, specifically requiring National banks to return shares of stock in the corporation when such shares are held by persons domiciled beyond the State. This situs of shares of foreign-held stock in an incorporated company, in the absence of legislation imposing a duty upon the company to return the stock within the State as the agent of the owner, is at the domicil of the owner. (Cooley, Taxn. 16.) It is true that the State may require its own corporations to return the foreign-held shares for the owner for the purposes of taxation. (Corry vs. Baltimore, 196 U. S. 466, ante, p. 297.) Section 5219, Rev. Stat., authorizes the State to tax all the shares of a National banking association, including those owned by non-residents, as well as those owned in the State, in the city or town where the bank is located; but this section does not itself impose the tax; it is authority for State legislation to thus tax National bank shareholders. And this statute is express authority to the State by appropriate legislation to make the bank the agent of the shareholders for the purpose of returning the shares and paying the taxes thereon.

In Com. vs. Citizens' Nat. Bank, 25 Ky. L. Rep. 2100, 80 S. W. 158, the Kentucky Court of Appeals seems to have held that a National bank might be required, under § 4241, Ky. Stat. 1903, to return the shares held in it for the years 1893 to 1900, inclusive, as omitted property. In that case it is said: "It was held under the previous statute that the shares of stock in National banks might be assessed to the shareholder by the assessor, and should be given in by the shareholder in the list of his personal property. (Scobee vs.

Bean, 109 Ky. 526.) The act of March 21, 1900, did not [it was held], therefore, make that taxable which was not taxable before, but simply provided another mode for the assessment of the shares of stock and the payment of the taxes. It was the duty of the assessor to make the assessment. It was also the duty of the resident and Cashier of the bank to list the shares of stock with the assessor; but when the assessment was not made the property was simply omitted from the tax list, and the sheriff is authorized by § 4241, Ky. Stat. [1903] to institute the proceeding to have any omitted property assessed." And the court further held the bank liable for the penalty imposed for not listing taxable property. The ground upon which this judgment rests is that shareholders were bound to return the shares in the years from 1893 to 1900 under the then existing State law, and the act of 1900 made the bank the agent of the shareholders, and did not require a new duty, but only imposed the duty upon the agent as a means of making effectual the former obligation of the shareholders. None of the Kentucky cases deals with the effect of the requirement under the act of 1900, that the bank return the shares of stock held by foreign stockholders, who clearly were not required, under the previous laws of that State, to return shares of stock when neither the shares nor the owners were within the State.

Section 5219 requires that a State, in taxing National banks, shall be subject to the restriction that the taxation shall not be at a greater rate than is assessed upon other capital in the hands of the individual citizen. Neither this section nor § 5210 of the Revised Statutes (U. S. Comp. Stat. 1901, p 3498), requiring a list of the shareholders to be kept by the bank, has the effect to levy taxes. It is a limitation upon the right of the State, and the State must not discriminate against National banks by the use of methods of taxation differing from those in use in taxing other moneyed capital in the hands of individual citizens.

It is averred in the amended bill, and, the answer having been stricken from the files and the case submitted upon the plea to the jurisdiction and general demurrer, it must be taken as true, "that during said years [1893 to 1900] many of its shareholders were non-residents of the State of Kentucky, who, in many instances, have sold and transferred their shares of stock during said time."

The statutes of the State of Kentucky, which have been construed by the Supreme Court of that State in the cases cited, to require the payment of taxes by the shareholders or by the bank for its shareholders, can have reference only to shareholders within the jurisdiction of the State. Whether the system operates as a discrimination against National banks within the prohibition of § 5219, involving, as it does, a right of Federal creation, must be ultimately determined in this court.

The act of March 21, 1900, imposed upon the bank a liability for taxes assessed upon its shareholders, whether within or without the State. This liability did not exist before the passage of the act, and in Com. vs. Citizens' Nat. Bank, 25 Ky. L. Rep. 2100, the Court of Appeals of Kentucky held that the statutes of the State made the bank liable for a penalty of twenty per cent. for the years 1893 to 1900, inclusive. It seems to us that to permit the statute to require the bank to return the shares of such foreign-held stock, and be subjected to a penalty in addition, is imposing upon National banks a burden not borne by other moneyed capital within the State.

In support of the equivalency of taxation, which it is the purpose of § 5219 to require, this court said, in Owensboro Nat. Bank vs. Owensboro, 173 U. S. 664, 676: "The alleged equivalency, in order to be of any cogency, must of necessity contain two distinct and essential elements,—equivalency in law and equivalency in fact."

Without considering the question of constitutional power to tax non-resident shareholders by means of this retroactive law, it seems to us that, in imposing upon the bank the liability for the past years, for taxes and penalty, upon stock held without the State, and which before the taking effect of the act under consideration it was not required to return, there has been imposed upon National banks in this retroactive feature of the law a burden not borne by other moneyed capital in the State. This law makes a bank liable for taxes upon property beyond the jurisdiction of the State, not required to be returned by the bank as agent for the shareholders, by a statute passed in pursuance of the authority delegated in § 5219; thus imposing a burden not borne by other moneyed capital within the State.

We think the Circuit Court was right in that part of the decree which enjoined the collection of taxes against the bank for the years 1893 to 1900, inclusive.

As to the alleged discrimination against shareholders in National banks because the assessment of the property of State banks is upon the franchise, and not upon the shares of stock, there is nothing in the bill to show that this difference in method operates to discriminate against National bank shareholders by assessing their property at higher rates than are imposed upon capital invested in State banks. And, as to the deduction of the value of real estate and other deduction allowed to State banks, the Supreme Court of Kentucky has held that all deductions allowed to State banks must be allowed in like manner in assessing the property of shareholders in National banks. (Com. vs. Citizens' Nat. Bank, 25 Ky. L. Rep. 2100.) Nor does the allegation that in cities of the first, second, and third class State banks are assessed upon their shares for city taxation, but upon their franchises and property for State and county taxation, in the absence of averments of fact showing that thereby a heavier burden of taxation is imposed upon National than State banks in such cities, warrant judicial interference for the protection of shareholders in National banks. (Davenport Nat. Bank, vs. Board of Equalization, 123 U. S. 83.)

Judgment affirmed.

PROMISSORY NOTE—IRREGULAR INDORSER—PAROL EVIDENCE.

Supreme Court of Nebraska, April 19, 1905.

HORNETT *vs.* HOLDREGE, *et al.*

Persons who write their names in blank on the back of a promissory note payable to the order of the maker, which is endorsed by such maker and afterwards delivered to a third person, in the absence of any special agreement to the contrary, become liable thereon as indorsers and not as joint makers, and their liability cannot be varied by parol evidence.*

Parol evidence of a custom or course of dealing previously pursued by the maker with regard to other notes of a like character is not admissible for the purpose of showing inferentially that the indorsers were joint makers, and thus change and enlarge their liability.

BARNES, *J.*: When this case was before us the first time it was heard by Department No. 2 of the Commission, and an opinion was written (and approved by the court) affirming the judgment below. (Neb. Unof., 97 N. W. 443.) A rehearing was allowed, and a reargument had before the court. On such rehearing some fault was found with the statement of facts contained in our former opinion. However, the principal criticism was that the indorsement, "For value received we hereby guarantee the payment of the within note, and waive presentment for payment, demand and notice of protest," was stamped twice on the $2,000 note in suit, and only once on the one for $5,000; yet such indorsement appeared twice on the copy of the $5,000 note which is set out in the opinion.

While the point appears to be well taken, a re-examination of the notes shows us that the indorsement appears on both notes under the name of the maker, the payee, and above the signatures of the defendants, F. I. Foss, G. W. Holdrege, and J. W. Deweese, who are the only ones sought to be held liable in this action. It would therefore seem that the variance is not only

*By §114 of the Negotiable Instruments Law (New York Act) it is provided: "Where a person, not otherwise a party to an instrument, places thereon his signature in blank before delivery, he is liable as indorser in accordance with the following rules:

1. If the instrument is payable to the order of a third person, he is liable to the payee and to all subsequent parties.

2. If the instrument is payable to the order of the maker or drawer, or is payable to bearer, he is liable to all parties subsequent to the maker or drawer.

3. If he signs for the accomodation of the payee, he is liable to all parties subsequent to the payee."

immaterial, but is extremely trifling. This explanation, taken with the full and complete statement contained in our former opinion, to which reference is hereby made, renders any further statement unnecessary for a proper understanding of the present decision.

Counsel for the plaintiff in error vigorously assail that part of our former opinion which holds that the defendants above named were liable only as indorsers of the notes in question, for the reason that the liability incurred by them is the pivotal question in this action. It is conceded that if they are to be treated as indorsers, then our former opinion should be adhered to, and the judgment of the district court must be affirmed. Plaintiff insists, however, that they are not indorsers, but are joint makers of the notes, and should be held liable as such. To sustain this contention, counsel point to the statement contained in the amended petition "that the defendants borrowed the money" (sought to be recovered herein) "from the plaintiff's intestate on said notes." No other facts are alleged in the amended petition from which such a liability can be inferred, and it may be stated, in passing, that the evidence not only fails to sustain the allegation, but it would seem that the corporation, the maker of the notes, borrowed the money and received the proceeds of the transaction. In fact, it is alleged in the original and amended petitions that the South Fork Irrigation & Improvement Company made the notes, and the defendants Foss, Holdrege and Deweese wrote their names on the back of those instruments; and both petitions charge them with the liability of indorsers in clear and explicit terms, even to the proper allegation of demand, protest, and notice of protest.

So we will again consider the question as to what was the liability assumed by the defendants by writing their names on the back of these notes. It must be remembered that they were made by the South Fork Irrigation & Improvement Company (a corporation) payable two years after date to its own order, and indorsed as follows: "The South Fork Irrigation & Improvement Co., By G. W. Holdrege, Pt., By A. L. Emerson, Sec'y & Tr." Then follows: "For value received, we hereby guarantee the payment of the within note and waive presentment for payment, demand and notice of protest. F. I. Foss, C. H. Peck, A. L. Emerson, G. W. Holdrege, W. L. Matson, J. W. Deweese." It is claimed by the defendants that the waiver above quoted was not on the notes when they indorsed them, and that such waiver was placed there, after they signed their names thereon, without their knowledge or consent; that the notes and their liability thereon were thus materially altered and changed, and were not the contracts signed or indorsed by them.

After an examination of the evidence, we are unable to say that it is insufficient to support this claim. No evidence was offered by the plaintiff tending to prove his allegations of demand, protest, and notice of protest, and, as we are required to hold that no waiver was established, the case must turn on the nature of the liability of the defendants, under the facts above stated.

It is perhaps well to state that while the South Fork Irrigation & Improvement Company, Fayette I. Foss, W. L. Matson, Geo. W. Holdrege, A. L. Emerson, C. H. Peck and Joel W. Deweese were all alleged against in the petition, yet the case proceeded against the defendants Foss, Holdrege and Deweese alone.

One of the earliest cases in which the question of the liability of one who signs his name on the back of a promissory note made payable to the order of the maker, indorsed by him, and delivered to a third person, arose, was Lake vs. Stetson et al., decided by the Supreme Judicial Court of Massachusetts (13 Gray, 310, note).

In that case it appeared that one Stetson made a note payable to his own order, on which one Bates had written his name, after which Stetson indorsed it and delivered it to the plaintiff, Lake. The trial court rejected the evidence offered by the plaintiff that the note was given by the defendants Stetson and Bates as a part of the consideration of a joint purchase by them, and that the note and all of the signatures thereon were made at one interview, and before the delivery of the note, in order to charge both defendants as joint makers. A verdict was given for the defendant Bates, and the plaintiff prosecuted his exceptions, which were overruled by the Supreme Court.

The question next came before that learned court in the case of Biglow vs. Colton, 13 Gray, 309.

The following is a copy of the note sued on: "Great Barrington, July 18th, 1857. Two months after date I promise to pay to the order of myself, $250.00 at the Mahaiwe Bank, for value received. Edwin Hurlbut." Upon the back of the note was the signature of Hurlbut, and under it that of Colton.

At the trial it appeared that both names were signed before the delivery of the note to the plaintiff, the signature of Hurlbut being made first. At the trial the judge ruled that the defendant could not be held as a maker, and directed a verdict for him, which was returned, and the plaintiff alleged exceptions. The Supreme Court affirmed the judgment, and held that one who puts his name, before delivery, on the back of a promissory note payable to the maker or order, and indorsed by the maker, is an indorser and not a joint maker, and his liability cannot be varied by parol evidence. We quote from the opinion as follows: "A promissory note payable to the order of the maker, and by him indorsed, is in legal effect a note payable to bearer. By placing his name on the back of the note the maker agrees to pay it to whomsoever may be the holder thereof. (Story on Notes, §§ 16-36a.) Although a note payable to bearer is transferable by delivery, it may also be transferred by the indorsement of any holder. In such case the indorser incurs the same obligations and liabilities as an indorser of a note payable to order, and is entitled to demand and notice. (Story on Notes, § 132.)"

In Clapp vs. Rice, 13 Gray, 403, 639, Lake vs. Stetson and Biglow vs. Colton, supra, were followed, and it was held that parties who indorse their names on a promissory note before its delivery, for the benefit of the maker, are not liable as joint makers if the payee afterwards indorses his name above theirs before the note is delivered, and other parol evidence is inadmissible to show that they were joint makers. We append the following quotation from the body of the opinion in that case: "When this note was first passed to any holder for value so as to make it a valid contract, it was indorsed by 'W. T. Davis, Treas.,' to whose order it was payable. It was therefore never a contract by which the plaintiffs were holden to Davis or the railroad company. Their names were put upon it with the obvious understanding and expectation that it would be indorsed by Davis before it should be negotiated. By his indorsement above their names it was made, in form and effect, an indorsed note, with successive indorsements following. The bank took it in this form, complete and effectual, when it first had any validity; and it has been settled in the recent case of Prescott Bank vs. Caverly, 7 Gray, 217, that under such circumstances it is not competent for the person whose name appears upon the note as an indorser to show by parol evidence that his contract was different from that which such signature ordinarily imports."

About the same time the question was before the Supreme Court of Maine, where the same rule was announced. (Smalley vs. Wight, 44 Me. 442.) The question was again before the Supreme Court of Massachusetts in Dubois vs. Mason, 127 Mass. 37, 34. The court followed the cases above cited, and held: By the law of this Commonwealth, one who puts his name on the back of a promissory note, payable to the maker of the order, before it is negotiated, and before it is indorsed by the maker, is an indorser, and not a joint maker, if, when negotiated, the maker's name appears first on the back of the note.

We quote from the opinion: "The liability of a party whose name appears on the back of a negotiable note is determined by the position of his signature with reference to other parties at the time when the note first takes effect by delivery. When a note is payable to the maker's own order, it can take effect only when indorsed and delivered by him. The fact that the defendant put his name on the back of the note before it was indorsed by Shurtleff does not make him a joint promiser, because he then knew that it must be indorsed by the maker before it could be negotiated, and the implication is that he intended to be liable only as indorser."

The question came before the Supreme Court of Illinois in Bogue vs. Melick, 25 Ill. 91, where it was held that a promissory note, payable to one of the makers, while in the hands of the payee is a nullity, and can never become operative except by indorsement of the payee, and that the position of the names of the parties on the back of the note will be notice to any one purchasing the same of the extent of their rights and liabilities. It was further held that one who writes his name on the back of such a note incurs the liability of a second indorser.

In Blatchford vs. Milliken, 35 Ill. 434, we find the following: "It is the settled law of this State that a person who is not a party to a promissory note, which is to become a valid obligation against the maker upon its delivery to the payee, by writing his name in blank on the back of the note is presumed to assent to the obligation of a guarantor. But where the note creates no valid obligation against the maker, and can create none until it is indorsed and transferred by the payee, the presumption is that a person writing his name in blank upon the back of the note assumes the obligation of an indorser. Inasmuch as the note can never have any validity until the name of the payee appears upon it as an indorser, the person writing his name in blank upon the note understands that when the note takes effect his name will appear upon it as a second indorser, and it is reasonable to conclude that such was the position which he intended to occupy. All persons receiving a note thus payable and so indorsed are apprised of the apparent obligations of the indorsers, and, if they rely upon any other obligation, it is their duty to ascertain whether or not it exists. Any other obligation is dehors the instrument. An authority to fill out an undertaking over a signature is to be exercised consistently with the nature of the instrument and the intention of the parties. From the nature of a note payable to the maker's own order, it is known what the law will presume was the intention of the parties in indorsing it in blank; and, if any agreement is written over the signature inconsistent with such presumption, it is the duty of the persons receiving the note to ascertain how, and by what authority, it was written there."

In Kayser vs. Hall, Adm'r, 85 Ill. 511, it was held: "Where a promissory note made payable to the maker is indorsed by him, and another person indorses his name just following the first, and the note is then negotiated, the person last indorsing will assume the liability of second indorser, and not that of guarantor. A promissory note payable to the order of the maker has no liability until it is indorsed and transferred by him."

In Heidenheimer Bros. vs. Blumenkron, 56 Tex. 308, it appeared that a promissory note was made by Blumenkron payable to the order of himself, and indorsed by one Hirsch and others, and it was held that on the face of the note, as indorsed and delivered, Blumenkron was the maker, and Hirsch and the others were the indorsers. It was said: "The fact that Hirsch became a party to the note in its inception, and for the accommodation of Blumenkron, did not make him liable otherwise than as an indorser. Nor is parol evidence admissible to show the intention with which he signed."

The question was again before the Supreme Court of Texas in Williams, et al. vs. Bank, 67 Tex. 606. It appears that Williams made a promissory note for $12,500, payable to the order of himself at the office of the Gainesville National Bank, with interest from maturity, until paid at the rate of twelve per cent. per annum. The note was signed by Williams, indorsed by him, and delivered to the Gainesville National Bank, after it had been indorsed by one Washington. In a suit in which it was sought to hold all the parties as joint makers, it was held: "The names of the third parties appearing after the payee, it must be presumed that the indorsers signed after the payee had indorsed, and parol evidence cannot be admitted to vary the plain terms of such a contract."

In our former opinion the case of the First National Bank of St. Charles vs. Payne, 111 Mo. 291, was made the leading case for comment, and that decision has been vigorously assailed by the plaintiff. A re-examination of the opinion in that case impresses us with the learning and ability of the Supreme Court of that State. The decision is in line with the other decisions of that court on the same question, and follows the early Massachusetts cases, and others from which we have so liberally quoted. This rule has also been recognized in Little vs. Rogers, 1 Metc. 108, and in Claflin vs. Freibelman, 44 La. 524, and seems to be the rule adopted by the English courts. (Hooper vs. Williams, 3 Exch. Rep. 20.) Indeed, this rule is so well established that it is stated without qualification in Daniel on Neg. Inst. §§ 130 and 707a, in Tiedeman on Com. Paper, § 20, and in 2 Parsons on Notes & Bills, c. 11, p. 122. It is approved in Burton vs. Hansford, 10 W. Va. 486, and by the Supreme Court of the United States in Rey vs. Simpson, 22 How. 350.

Plaintiff has failed to call our attention to a single case in which any court has held that one who signs his name in blank on the back of a promissory note made payable to the order of the maker, and which is afterwards indorsed by the payee and delivered to a third person, is liable as a joint maker. And after the most thorough research we have been unable to find but one such case, to wit, Ewan vs. Brooks-Waterfield (Ohio) 45 N. E. 1094, which seems to support plaintiff's contention.

As opposed to the authorities above cited and quoted from, plaintiff cites Salisbury vs. First National Bank of Cambridge, 37 Neb. 872, and insists that that case, with a long line of decisions from other States, together with Good vs. Martin, 95 U. S. 90, hold a contrary doctrine.

An examination of Salisbury vs. The Bank discloses that the note there sued on was as follows: "Omaha, Nebr., Feb. 15th, 1889. $2500.00. Ninety days after date, we, or either of us, promise to pay to the Bank of Omaha, or order, Twenty-five hundred and no/100 Dollars, for value received, payable at the Bank of Omaha, Nebr., with interest at the rate of 10 per cent. per annum from maturity until paid. Signed C. H. Sloman." Across the back of this note was written the names of J. G. Salisbury and S. A. Sloman, and before maturity it was indorsed and transferred by the Bank of Omaha to the Bank of Cambridge. In a suit against the maker and indorsers it was held that they were liable as joint makers. It is only necessary to compare the notes in question in this case with the one just quoted to show that Salisbury vs. The Bank is not authority in this case. A careful examination of Good vs. Martin, supra, and the whole list of twenty-odd cases cited by counsel, shows that the notes in question therein were made payable to third persons, indorsed in blank, and afterwards indorsed and negotiated by such third persons; and in none of the cases, so far as we have been able to ascertain, was the note in suit made payable to the order of the maker himself.

So we conclude, not alone from the weight of authority, but from all of the authorities on the question in this country, that the defendants Foss, Holdrege and Deweese, must be held to have assumed the liability of indorsers only, and that under the issues in this case, and according to the principles above discussed, parol evidence cannot be received to charge them with any other or an enlarged liability. It follows, then, that the district court did not err in excluding the evidence by which it was sought to show, inferentially, by a custom or course of business on the part of the maker in regard to other transactions, that the defendants were not indorsers, but were joint makers of the notes. A re-examination of the pleadings convinces us that our former holding as to their legal effect, and the issues raised thereby, is correct, and we decline to give that matter any further consideration.

It is again urged that in any event judgment should have been rendered against the defendant Holdrege; and this contention is based on the fact that he was not present at the trial in person, and did not testify in his own behalf. This point does not merit our serious consideration. It is sufficient to say that the evidence of his codefendants made at least a prima facie defense for him, which was not assailed or overthrown by the plaintiff.

For the foregoing reasons, our former opinion is adhered to, and the judgment of the district court is affirmed.

CERTIFICATE OF DEPOSIT—WHEN DUE—STATUTE OF LIMITATIONS.

Supreme Court of Iowa, June 7, 1905.

ELLIOTT VS. CAPITAL CITY STATE BANK.

An ordinary deposit of money in a bank is not, in the legal sense, a loan to the bank.

A certificate of deposit payable "on the return of this certificate properly indorsed," is not due until presentment is made and payment demanded, and hence the statute of limitations does not begin to run until such demand is made.

This was an action upon a certificate of deposit as follows:

"$1,500.00, Des Moines, Iowa, March 23, 1885. Capital City Bank. Mary J. Penrose has deposited in this bank fifteen hundred dollars, payable to the order of herself on the return of this certificate properly endorsed, with four per cent. interest, per annum. A. W. Naylor, President, No. 15,108."

A demurrer was sustained on the ground that the cause of action was barred by the statute of limitations.

SHERWIN, *C. J.*: The trial court evidently sustained the demurrer on the authority of Mereness vs. First National Bank, 112 Iowa, 11, and, under the rule there announced, its decision was right. The decision in the Mereness Case, however, was planted on the ground that a general deposit of money in a bank is a loan of the money to the bank, and that an ordinary certificate of deposit is nothing more or less than a promissory note, to be governed, with certain exceptions, by the rules governing such notes.

If it be true that a deposit in the usual course of business is a loan to the bank of the money deposited, then it may consistently be said that a certificate representing such loan is a promissory note; but the fundamental error in the Mereness Case, and in the cases on which it was based, was the holding that an ordinary deposit of money in a bank is a loan thereof to the bank. (See Lowry vs. Polk County, 51 Iowa, 50; Long vs. Emsley, 57 Iowa, 11.) In the later cases of Officer vs. Officer, 120 Iowa, 389, and Hunt vs. Hopley, 120 Iowa, 695, we distinctly held that an ordinary deposit is not a loan to the bank, and in the latter case we expressly overruled Lowry vs. Polk County, in so far as it so held.

With this conclusion, and the arguments on which it is based in these cases, we are content, believing it to be sound and in accord with the great weight of authority. The conclusion in the Mereness Case having been predicated on false premises, it follows that it must fall with its foundation, unless there be some other sufficient reason for holding that a demand certificate of deposit should be treated as a demand promissory note, so far as the statute of limitations is involved. We do not believe that any sound reason for so holding exists. It is undoubtedly true that such certificates have many of the incidents of promissory notes, and that they are often classed as such, but it is equally as true that a certificate of deposit represents a transaction entirely different from that represented by a note. A promissory note ordinarily represents a loan or its equivalent, and it is generally the duty of the debtor to seek the creditor and pay him, and it was for the protection of the debtor that demand notes were originally held to be due at once.

Deposits are made in a bank in accordance with the universal commercial usage, which becomes a part of the law of the transaction. They are neither loans, nor bailments in the strict sense of the term. A deposit is a transaction peculiar to the banking business, and one that the courts should recognize and deal with according to commercial usage and understanding. The primary purpose of a general deposit is to protect the fund, and some of the incidental purposes thereof are the conveniences of checking and transacting large business interests without keeping and handling large sums of money. The transaction is in reality for the benefit and convenience of the depositor, and while the relation of debtor and creditor exists, and the bank has the use of the money for commercial gain, it assumes no further obligation than to pay the amount received when it shall be demanded at its banking house. (Girard Bank vs. Bank of Penn Township, 39 Pa. 92.)

A bank may receive or decline deposits, and do business with whom it pleases. It may receive a general deposit to-day, and to-morrow, for reasons of its own, it may return the amount deposited, and refuse absolutely to transact business further with such depositor. (See 5 Cyc. and cases cited.) But unless the banker desires to return the deposit, he is under no obligation to seek his creditor for the purpose of making payment. If no actual demand be necessary to mature the debt created by a deposit, then depositors may sue at once upon leaving the bank, and a transaction intended to be for the mutual benefit of both may become one of oppression and wrong to the bank, and this the law should not tolerate.

That a certificate of deposit is distinguishable from a demand promissory note, we think clear. (Morse on Banks and Banking [3d Ed.] § 298;

Smiley vs. Fry, 100 N. Y. 262; In re Hunt, 141 Mass. 515; Murphy vs. Pacific Bank, 130 Cal. 542; Bank vs. Bank, 40 Vt. 377; Officer vs. Officer, supra; Hunt vs. Hopley, supra.) And that it is not due and payable until demand is made, we think is held by the overwhelming weight of authority. (Morse on Banks and Banking [3d Ed.] § 301; Merchants' National Bank vs. State Bank, 10 Wall. 604, followed by the same court in later cases; Cottle vs. Marine Bank, 166 N. Y. 53, and New York cases therein cited; Dickinson vs. Leominster Savings Bank, 152 Mass. 49, Miller vs. Western Natl. Bank, 172 Pa. 197; McGough vs. Jamison, 107 Pa. 336; Girard Bank vs. Bank of Penn. Twp., supra; Brahm vs. Adkins, 77 Ill. 263; Long vs. Straus (Ind. Sup.); Bellos Falls Bank vs. Bank, 40 Vt. 377; Tobin vs. McKinney [S. D.] 88 N. W. 572; Citizens' Bank vs. Fromholz [Neb.] 89 N. W. 775.)

The decisions of many of the other States are to the same effect, but we need cite no further authority on the proposition. Furthermore, the certificate in issue provides that it is payable on presentation properly indorsed, and its express language repels the thought that it is payable otherwise than on actual demand. (Morse on Banks and Banking, § 302; McGough vs. Jamison, supra; Cottle vs. Marine Bank, supra; Girard Bank vs. Bank of Penn. Tp., supra.) And the principle is also analogous to that of a bill payable on or after sight, which is not due until it is presented and payment demanded (3 Randolph on Com. Paper, 1608).

We think there is no merit in the appellee's contention that, if an actual demand is necessary to mature the certificate, such demand must be made within the period of the statute of limitations. The parties may contract as they will. The depositor having the right to demand the amount due him at any time, and the bank having the right to pay at any time, there can be no extension of the statute of limitations by either party, nor any laches on the part of either.

The demurrer should be overruled, and the case is reversed.

Reversed.

Mexican Bank Notes Restricted.—The circular just issued by the Secretary of the Treasury to the Government interventors in the thirty-two chartered banks in the Republic, shows clearly the determination of the department to restrict the issue of bank notes to the amounts stipulated in the primitive charters and in cases where banks ask the official approval of a proposed increase of capital, such approval will not authorize a corresponding issue of additional notes.

This very wise resolution of the Government will cool the ardor lately manifested by some state banks to increase their capital by the issue of an additional number of shares to be sold for cash, and at the same time authorize the issue of an additional amount in notes. The approval of the treasury when given will be limited to the issue of shares representing the cash capital. The probable effect of this circular will be to weaken the price of many bank shares, which in some cases are hardly warranted by the dividend power of the institution.

The Bank of London and Mexico lately increased its capital from $15,000,000 to $21,500,000. The Treasury department approved the issue of $6,500,000 represented by shares, but limited the total issue of bank notes to $20,000,000, though the share increase is to $21,500,000. Its bank note circulation on August 31 was $18,796,053. There remain therefore $1,203,947 to reach its limit of bank note issue.

The National Bank of Mexico circulation of notes on August 31 was $24,982,049. Its actual authorized capital is to-day $26,000,000. Its charters authorize the issue of notes to three times the amount of the cash in its vaults. On August 31, it had $29,112,570.27 in specie on hand and $2,045,092.17 cash reserve, and debtor accounts available at any moment to $24,036,176.82.

These are the two principal banks authorized to issue notes.

The total of bank notes in circulation in the whole country, including all the thirty-two city and State chartered banks on June 30 was $89,454,255. The total authorized capital of these banks on that date was $120,600,000. —*Mexican Herald.*

THE CAPITOL, WASHINGTON.

AMERICAN BANKERS' ASSOCIATION.

THIRTY-FIRST ANNUAL CONVENTION, WASHINGTON, D. C., OCTOBER 10, 11, 12 AND 13, 1905.

WASHINGTON gave the American Bankers' Association a most delightful welcome, and fully justified the wisdom of selecting that city as the meeting-place of the thirty-first annual convention. There was a large attendance of delegates, members and visitors, and the programme was one of exceptional interest, including addresses by the Secretary of the Treasury and the Comptroller of the Currency.

To an American no city in the world is so attractive as Washington. Its historic memories and rare beauty proved of unfailing interest and charm to everyone who attended the convention. Besides, the arrangements made by the local committee representing the Bankers' Association of the District of Columbia were so complete as to leave nothing to be desired. The reception by the President and Mrs. Roosevelt, by Secretary and Mrs. Shaw, by the Trustees of the Corcoran Art Gallery, and by the Bankers' Association of the District of Columbia, trips to Mount Vernon, Arlington and Fort Myer—all these constituted a programme of social enjoyment that was thoroughly appreciated by all. Visits to the various public buildings—especially to the Treasury and the Library of Congress, where special courtesies were shown—were also interesting and instructive.

The officers of the American Bankers' Association and the Bankers' Association of the District of Columbia are to be congratulated on the great success of the Washington convention.

PROCEEDINGS OF THE CONVENTION.

FIRST DAYS' PROCEEDINGS.

The convention was called to order by the President, E. F. Swinney, at 10 o'clock a. m.

PRAYER BY THE REVEREND RANDOLPH H. MCKIM.

Almighty God, we invoke Thy presence and benediction in the exercises of this hour and upon the deliberations of this convention. It is meet and right, O Lord, that we should thank Thee for Thy abundant kindness and Thy gracious providence over us, Thy servants, and over all this people that we represent. Thou hast given us, O Lord, a land which is the glory of all lands, a land of abundance and of plenty; a land out of whose hills we have taken coal and iron and silver and gold; a land whose plains and valleys O Lord, a great place among the nations of the earth. Thou hast given us oh Lord, a great place among the nations of the earth. Thou hast given us liberty, and justice, and freedom, and opportunity in this great land; and Thou hast set us on high among the peoples of the world to execute Thy trust and to do Thy will. Thou hast given us a ruler wise and brave and strong. Through his instrumentality this nation has become the peacemaker among the nations of the world, saying to those who are at war one with another, "Sheathe the sword and let there be peace and harmony."

For all these, Thy blessings, Almighty God, we praise and thank Thy holy name. May we never forget that all that we have has to be given us by Thee, and may we use Thy blessings and all these opportunities for the honor and glory of Thy name; and to our thanksgiving, Almighty God, we add the confession of our sin. Many of our people have set at nought Thy laws; they have broken Thy Sabbaths; they have despised Thy Word; righteousness has been in many places set aside; we have seen corruption in municipal life, corruption in commercial life, corruption in political life, corruption in buiness life; we have seen the rights of the widow and the orphan set aside, set at nought, trampled under foot. For these, our sins, Almighty God, we make our humble confession before Thee, and we supplicate Thy forgiving mercy and grace.

And now we ask for Thy blessing upon this people; may it be a wise and understanding people recognizing its position and its part and its duty and fulfilling the trust which Thou hast committed unto it. May this great nation seek to understand Thy will and to remember that all its blessings come from Thy hand and all its mercies flow from Thy loving providence. And may it seek not only to be great and strong but to be wise and humane and generous and gentle among the people of the world. We pray, Almighty God, that there may be high aims and noble endeavors among our people in all classes, in all ranks and all conditions of men. We pray that these people may be bound together not only by a common interest, but by a common noble aim which may lead them like a pillar of cloud by day, a pillar of fire by night, through the ages.

And now, O Lord, in particular we invoke Thy blessing upon this convention here assembled. Grant, we pray Thee, Almighty God, that it may recognize its responsibility; that it may realize its power; that it may see its opportunity; that it may be led on from one height of endeavor to another, ever setting before it the noblest, the highest and the purest aims. May it seek to be the protector of the poor and of the weak, of the widow and of the orphan. May its great power be exercised always for righteousness for uprightness, for integrity and for the common weal. May its temples of business be also temples wherein righteouness and justice and kindness reign and rule supreme. May all of us, we beseech Thee, Almighty God, live according to Thy will; whether we eat or drink, whether we buy or sell, may we do all to the glory of God. May we serve God not only on Sunday, but on all the days of the week. May we recognize that the spirit of religion must be over all we do, in commercial life, in business life, as well as in our religious life. And so may this great body here assembled be a great power for righteousness, for good and for truth in this land. Grant these things, we beseech Thee, Almighty God, and pour out upon us the spirit and wisdom and understanding that all things may be ordered and settled in this land upon the best and purest foundations, so that peace and happiness, truth and justice, religion and piety, may be established among us for all generations.

These things we ask in His name, who has taught us to pray and say, Our Father Who art in Heaven, hallowed be Thy name. Thy kingdom come, Thy will be done, on earth as it is in Heaven. Give us this day our daily bread, and forgive us our trespasses as we forgive those who trespass against us. And lead us not into temptation, but deliver us from evil, for Thine is the kingdom, and the power, and the glory, forever and forever, amen.

THE PRESIDENT: The bankers of Washington City have been saying to us that they were glad to see us. They will now tell us how glad they are to see us, through Mr. John Joy Edson, President of the Bankers' Association of the District of Columbia.

Address of Welcome by John Joy Edson, President Bankers' Association of the District of Columbia.

Mr. President and Members of the American Bankers' Association—The American Bankers' Association has held thirty annual conventions since its organization, and this is the first time the City of Washington has been selected as a place of meeting. You have generally selected financial, commercial and manufacturing centers, which, no doubt, have proven attractive and instructive as well as pleasurable.

We of Washington are extremely gratified that this year we have the pleasure of receiving and entertaining the members of the Association at the national capital.

While you are the special guests of the Bankers' Association of the District of Columbia, the citizens of Washington all unite with us in extending to you an earnest and cordial welcome.

Although commerce and manufacturing will not appeal to you here, there are other features, not existing in other cities, that will attract your attention.

Washington has become a center of art, literature, schools and universities, including all the departments of science; and above all, it is the seat of the Government of the greatest republic in the world. Students in the various educational institutions are furnished unsurpassed opportunities to study the science of government—legislative, executive, judicial and diplomatic. Their instructors are largely those holding high positions in all branches of the Government, which fact is a distinctive practical advantage. Moreover, students generally have an excellent opportunity of observing the organization and operation of the Government.

Washington also has become preëminently attractive as an ideal residential city. You will find much that is unique and instructive, and in which you as citizens of this country have taken a personal interest and pride, not only in what already exists, but in what is further to be promoted on national lines as the best and most appropriate for the beauty and dignity of the nation's capital.

The Bankers' Association of the District of Columbia was organized June, 1901, and has a membership consisting of twelve National banks, four trust companies, four Savings banks, and five private banking firms, in all numbering twenty-five. We have found the organization productive of great good, not only in banking methods and procedure, but in individual association and in the establishment of cordial intercourse between its members. While we are fair, straightforward rivals, we are all friends. By reason of this association, we entertain for each other a higher respect; we sympathize with each other in mishaps, and glory in each other's progress and prosperity. We know that the success of each institution insures for all the highest confidences and the best attainable service for the community.

In 1861 the population of the District of Columbia was 75,000. By the police census taken in April of this year is shown an increase of 248,000, and a total population of 323,000.

The National Currency Act was passed in 1863. In 1866, immediately after the war, there were in this city five National banks with a capital of $1,350,000, deposits of $1,448,000, and surplus and undivided profits of $259,000, with resources and liabilities of $7,131,000. In September, 1905, this year, in the last reports called for by the Comptroller of the Currency, it is shown that we had twelve National banks and four trust companies with a total capital of $11,527,000, individual deposits of $40,000,000, surplus and undivided profits of $6,500,000, with resources and liabilities amounting to $70,000,000. These figures do not include Savings and private banks, which do not report to the Comptroller of the Currency and which, if taken into account, would add to the sum of deposits several millions of dollars.

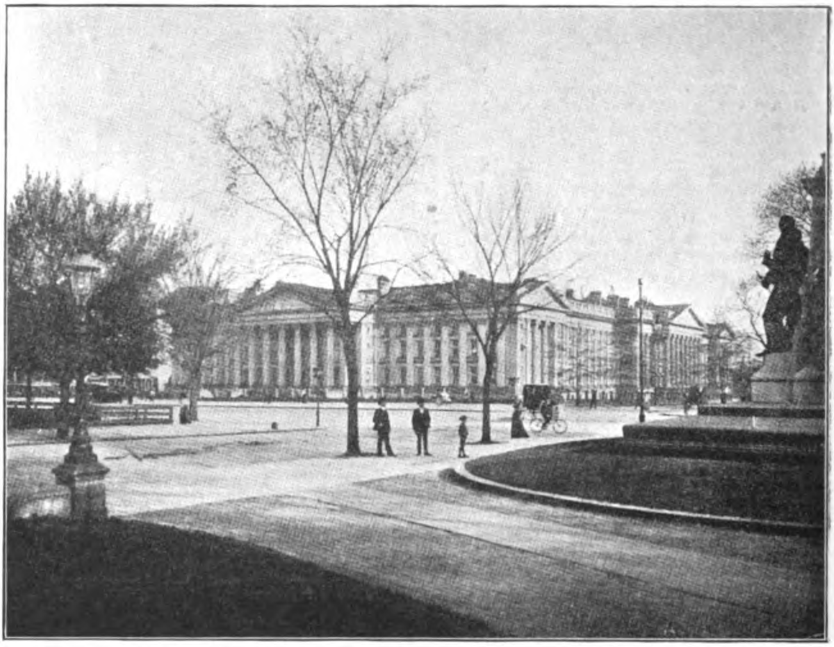
The first trust companies were organized in 1889. There are four now doing business in the District of Columbia. They are the only trust companies in the United States organized under the laws of Congress, and which are placed under the supervision of the Comptroller of the Currency. Reports are called for not less than five times a year as required for National banks. This relation to the national Government is of great advantage to the companies and to the public.

We believe that while a considerable portion of the increase in the volume of deposits is attributable to an increase of all branches of business, it is certain from an analysis of the figures given that it is due also to a large increase in the percentage of population which has acquired a knowledge of and confidence in banking sufficient, at least, to open accounts and do a checking business.

Valuable Work of the American Bankers' Association.

The results attained by the American Bankers' Association have long since proved the wisdom of its foundation. The consideration and adoption of measures that tend to the best banking methods and involve the highest principles of banking, and lessons learned from addresses and papers by members of the association and others eminent in finance, have increased public confidence and accuracy in transacting business.

This year some of the subjects on the programme for discussion are "Practical Banking Questions," "The Examination of Banks," "Our Commerce," "The Currency Question," "The Scotch System of Banking," "Accounts Opened



THE TREASURY, WASHINGTON.

by two Persons," "The Growth and Status of Trust Companies in the United States," "Relations between Banks and Trust Companies," and "Trust Company Loans and Investments." These subjects illustrate the scope and character of the instruction given to the general public, and particularly to those interested in the management of financial institutions.

The meeting of the members and the acquaintanceship formed at these annual conferences have been also a great factor in establishing and increasing confidence and good banking.

THE FINANCIAL POWER OF NEW YORK.

The last report made by the Comptroller shows that over one-sixth of the total individual deposits in National banks in the United States, including Hawaii and Porto Rico, were held by banks in New York city; and that over one-fifth of total deposits and amounts due to banks and trust companies combined were also held in that city.

This statement, among other things which might be mentioned, clearly demonstrates that New York city is the financial center of the country. Its weekly statement of the condition of National banks in New York is the financial barometer that is regularly looked for and carefully examined throughout the country. It is a good indicator of the general financial situation and a reliable guide.

I deem it also fair to say that there are no abler bankers or more patriotic citizens than the Presidents of the National banks in New York.

CLEAN RECORD OF THE BANKS.

While of late, unfortunately, wrong-doing has been discovered to some extent in Federal, and to a startling degree in municipal affairs, and in corporations in some lines of business, in banking, there has never been a period in our history, so far as I am aware, when fewer errors and less misconduct have been committed, or more universal confidence prevailed. Of course, this statement is made taking into full consideration the vast increase in the volume of banking business and in the greater number of men engaged as officers and employees in positions of absolute trust.

As a logical outcome of this favorable banking condition and of the good work of the American Bankers' Association and the high estimate we place upon the integrity, ability and cautious action of our leading bankers, what twenty-five or forty years ago would inevitably impair confidence and cause a panic, would to-day only create a ripple on the financial surface with no serious consequence. Let us hope that no act of any man or set of men will be done to impair in the least degree this most desirable situation in the banking world.

In closing I wish to assure you one and all of the happiness it affords us to welcome you here and to contribute in every way in our power to your entertainment, comfort and pleasure. We hope that every moment may be enjoyable, and that you may, at the end of your visit, have a safe return to your respective homes and share with us in future the pleasant memories of your brief sojourn as our guests in Washington.

THE PRESIDENT: We will next have an address of welcome on behalf of the Board of Commissioners of the District of Columbia by its President, Honorable Henry B. F. MacFarland.

ADDRESS OF WELCOME BY HONORABLE HENRY B. F. MACFARLAND, PRESIDENT OF THE BOARD OF COMMISSIONERS OF THE DISTRICT OF COLUMBIA.

The national capital most heartily greets you. You are welcome personally and as the representatives of our leaders in material progress. Your indispensable and honorable service to our country, through its financial and commercial interests, entitles you to the hospitality of its political center.

Here at the home of the national Government, in sight of the Treasury Department, the heart of its financial system, you can fittingly survey the splendid record of the bankers in deeds, as well as in words, which again and again have sustained the national life in struggles and crises. Here, too, has been enacted the financial legislation under which you have done your work, and here is the headquarters of that supervision over the National banks which has been of inestimable value to them as well as to the public. Here the great waves of financial heresy have broken against the rock of public credit which has been maintained, ever since it was set up by George Washington and Alexander Hamilton, by the best of our statesmen, and always with your support. What if it was self-interest which first prompted that support? Happy are they whose self-interest coincides with the interest of the republic, and whose self-service becomes patriotism. As yet no monument has been raised in the parks of Washington to the men who have saved the country by saving its honor, and the credit without which it could not have lived. Among the soldiers and sailors whose statues abound even near the Treasury Department Alexander Hamilton should stand in enduring bronze, and Robert Morris, and John Sherman, and others like them of either century should have such honors here. But meanwhile their results speak for them and the intelligence of the nation delights to honor them.

As you go about our beautiful capital, yours as much as ours, with all its memories of great men and great acts, you will see frequent evidences of what financiers have done for their country, just as you will see here as elsewhere how financiers have contributed with public spirit and philanthropy to the highest interests of the community in which they live. Our Rock Creek Park and our Corcoran Gallery of Art are but two of the visible proofs of the civic service of Washington bankers.

You will all share our desire, the desire of our country, that the national capital should be made in every respect the most beautiful in the world.

THE COUNTRY'S FINANCIAL PROGRESS.

When the Pilgrims set foot on Plymouth Rock modern banking was just beginning. The seed of freedom in three centuries has reached no greater growth than the seed of finance. Those who planted both seeds were men of faith who taught by example that men should walk by faith rather than by sight. They were practical men who knew that sentiment rules the world. The marvelous commercial organization which is the characteristic feature of our civilization absolutely depends for life upon the sentiment of credit. Its gigantic achievements, undreamed of in the older time, are possible only because of the network of banks, which is the nervous system of commerce, and which has knit all peoples together with invisible bonds stronger than any that can be seen. You have taken every invention that quickens communication as well as every form of human ability as your servant in the task of making money, which consciously or unconsciously is the task of making the world move forward to greater things. By conservative innovation you have brought the nations to mutual efficiency, mutual acquaintance and that far towards mutual good will. Wars cannot be made without you, and you are recognized as the great peacemakers. International justice is to be established as the substitute for war by you quite as much as by statesmen and jurists. You control an unequaled force in the affairs of men. It is our highest honor that, making all due allowance for exceptional cases and individuals, it can be truthfully said that your mighty power is in general used for the advancement and enrichment of mankind.

Your power and your character and your record naturally suggest that you should have a leading part in that moral renovation in the business world, especially with reference to fiduciary relations, which recent revelations make imperatively necessary. Once more, but in a new way, you must restore impaired confidence to the people, this time by convincing business men of other minds not only that honesty is the best policy, but that integrity is more precious than money, and vital to the republic. The old-fashioned commercial honor, finer than that of any chivalry, must be re-enthroned, and you are the men to do it. In such an effort, as in your patriotic endeavors of every kind and in your zeal by international peace through international justice, for international welfare, you will have the inspiring leadership of the foremost American, the chief pride of the national capital, Theodore Roosevelt, President of the United States.

Reply to Address of Welcome by E. F. Swinney, President of the American Bankers' Association.

On behalf of the American Bankers' Association I beg to make grateful acknowledgment of your cordial welcome to this capital city. While it is your personal home, and its large hospitalities are peculiarly in the keeping of yourself and other residents of the District, in the broader sense of our national life we feel at home in Washington City. To the politician it is the temple of fame that shines afar in his imagination and ambition. It is the Mecca toward which he ever looks with longing eyes. Some of us so-called "men of affairs" doubtless have felt the yearning that our constituents might have the appreciative sense of merit to send us here at the public expense, or that the President might have the wisdom to invite some of us to come hither to take charge of the reserve fund in the Treasury. Despairing of that, we have taken advantage of reduced rates, and come at our own expense to tell Congress, Secretary Shaw and the Comptroller of the Currency how to run the Treasury and take care of the finances of the nation. If, at the conclusion of this convention, the republic is not safe, we will return to our respective homes with the firm conviction that our suggestions have not been heeded.

Of one thing we are glad, and that is that Congress is not in session, as thereby we attract more personal attention, and more largely share the unappropriated hospitality of the city, and have freer access to its accumulated "refreshments."

We do not crave the freedom of the city, or care to have its keys delivered over to us. Where there is too much liberty, indulgence may take the place of healthful restraint, and if anything should be missed while we are here it might be attributed to the men who carried the key. We prefer to trust ourselves as guests to the safer guardianship of your well-known discretion in dealing with untamed Congressmen and untrained statesmen.

President's Address by E. F. Swinney, President of the American Bankers' Association, and President of the First National Bank, Kansas City, Missouri.

The conventions of this association have been held in the cities of the East, West, North and South, but prior to this, never before in the nation's capital. We have been entertained by the princely hospitality of the world's greatest metropolis and the Golden Gate has swung wide to bid us welcome, but to-day for the first time we meet at the fountain-head of this great Government. The heart of every true American swells with justifiable pride when he reflects on the history of this city. A little more than a hundred years ago it was but a barren place; less than a hundred years ago it was sacked and burned in war. To-day no capital in the world is a more potent force for peace and none more feared in war; none more beautiful in its arrangements and architectural adornment. It is the city of our fathers, of ourselves and of our children. Here no narrow sectional lines divide us into parties or factions; no borders of States make us New Yorkers, Kentuckians or Oregonians, but we are all Americans. We realize, as never before, that this Government of ours is indeed a national government and not the weakly governmental force of separated and jealous States. We have a common pride in the names of Jefferson and Jackson; of Lincoln and Grant and Lee and of that splendid galaxy of other distinguished statesmen, soldiers and patriots who have builded these United States on such everlasting foundations.

Washington's Relation to the Banks.

To bankers is Washington of especial interest. The whole financial history of the country is closely interwoven with it. Here the country's financial laws are enacted and from here enforced. It was the seat of the first great bank of the United States, and is to-day the headquarters of the largest banking institution in the country—the Treasury of the United States. The National banks of the country look to Washington for their legislation and largely for their government. The man of all men who comes nearest being the arbiter of their destinies, the Comptroller of the Currency, issues his orders from here. It is therefore more than an ordinary honor and one of which any should be proud to be called upon to preside over this, the thirty-first convention of the American Bankers' Association, in the great City of Washington.

The Progress of Banking.

The purposes and objects of our gathering are too well known for me to dwell upon. In the technical sense of the term, our association is not "organized for pecuniary profit," and yet in a broad sense it leads to that end. By the interchange of ideas, by listening to the speeches and papers, by the meeting of the brighest and best bankers and learning their manner and methods of banking, each of us returns to his place of duty better qualified to conduct his business for the benefit of stockholder and depositor. The day has passed when a successful banker can be a man who rests content to be merely acquainted with the highest interest rates obtainable in his given locality and the financial responsibility of his neighbors. Time was when banks and bankers were merely thermometers registering the local financial atmosphere of the country, but to-day in the larger sphere of business undertakings they largely create that atmosphere. No better illustration of this can be given than the attitude of the bankers during the period of the disastrous silver craze. To the American bankers more than to any other class of business men is due the fact that the country did not go irredeemably astray on the question of the monetary standard. Largely by reason of national and State associations, the bankers were better acquainted with the question than any other class of men and acted more nearly as a unit in its correct solution. And in the bringing about of such a happy result these meetings have been of tremendous aid. I cannot too much disparage the too prevalent notion that our meetings and conventions are merely the assemblages of good fellows for a good time and are not of practical benefit. They are practical and of widespread benefit.

WORK OF THE AMERICAN BANKERS' ASSOCIATION.

The business of the association during my term of office will be given you in detail through the reports of the secretary, treasurer and the various committees. When elected president a little more than one year ago, I asked and expected the loyal support of every member and officer of the association. The success or failure of the year's work depended on this. It is a great pleasure at the year's end to state that such support has been faithfully and loyally given. I would bespeak my thanks, and those of the other members of the association, to the secretary and executive council for their work so faithfully and conscientiously done; work that will be more fully appreciated when the detailed statements of such work are laid before you.

A TRIBUTE TO THE LATE HON. JOSEPH C. HENDRIX AND HON. CHARLES PARSONS.

Since our last convention, death has been amongst us and there have gone to the great beyond two men often honored and now highly revered by this association, Hon. Charles Parsons, of St. Louis, and Hon. Joseph C. Hendrix, of New York. Mr. Parsons was born in New York State, but hardly before attaining his manhood saw the advantages of the then far West for a young man with no capital but an honest determination to build for himself a name. He settled in St. Louis in the early sixties, and for almost forty years has been at the head of one of the most solid institutions in that place. He was one of the original number of bankers who met at Saratoga and organized the American Bankers' Association, being chosen president of the association a few years later. He died only a few weeks ago, leaving a name that will be honored as long as history tells of the men who aided in building and maintaining the high standard of men in that great Western city.

Since my boyhood I had known Joseph C. Hendrix. He attained his fame and reaped his honors in the East, but we of the West are proud of him as a Western product, for it was in the West that he was born and spent his early days. When scarcely more than a boy he left his native State of Missouri and sought fortune in the activities of New York. His first work there was as a reporter on one of the leading dailies, and it was done so well that he was gradually advanced to the position of night editor. He left his newspaper career to become secretary of the Brooklyn Bridge Company, then to be postmaster of the City of Brooklyn. His sphere of usefulness widening, he was elected a member of Congress, where, in Washington, as in Brooklyn, he measured up to the full standard of a statesman. Some of the leading financiers of New York saw and appreciated his sound financial ideas and business methods, and he was called upon to become the head of the second largest banking institution in America. He was long a member of the association and its executive council and served one term as its president. Without disparagement of any man, it can be said that no man ever contributed more materially to the success of our association than our deceased ex-president. In business he was regarded as a man of cold, calculating facts, but no one could ever have any dealings with him without appreciating his high business ability and his utter contempt at all times for any of the little things so often found, unfortunately, in men holding the highest positions. We recall with pleasure his ready wit, appropriate anecdotes and forceful talks made at our annual conventions and at council dinners. His life and career will spur many a young man on to success and forever give the lie to that false notion so many have that in this age that merit is not fully rewarded and no great success can be attained without "influence," for Joseph C. Hendrix attained for and by himself a name and fame that will not soon perish; his own individual efforts and abilities were the only influences he possessed.

I wish I could say such words of praise of another one recently honored with the presidency of the American Bankers' Association or could refrain from speaking of him at all. I cannot, in justice to the truth, do the former, and cannot, without a sense of cowardice, do the latter. I think I ought to voice the deep sense of chagrin and shame that every member here feels at the disgrace brought upon the high office of president of the American Bankers' Association, the banking profession in general and good citizenship everywhere by the felony of one who was so honored by us, held in such esteem and now justly occupying a prison cell. By his own voluntary act he stabbed in the back the financial institution of which he was the head and exchanged an honored career for a criminal record.

The lives of the men to whom I have referred serve to "point a moral or adorn a tale." The former as a model and an incentive; the latter as a warning and an admonition.

Prosperity of Banking and of General Business.

We have cause to congratulate ourselves upon the abundant evidence that the past year has been, in the main, marked by prosperity in all lines of business, and comparatively few bank failures have occurred. All such periods have, however, produced a feeling of over-confidence and led to the floating of unsound industrial enterprises.

Changes in the Banking Laws.

The few bank failures of the past year are mostly traceable to excess loans made to such enterprises or their promoters. The present statutory provisions of the National Bank Act limiting loans to any one individual, firm or corporation to ten per cent. of the capital stock of the lending bank, seems to be inadequate. I would recommend a change in the banking laws permitting banks to loan one-tenth of their combined capital and surplus to one individual, firm or corporation, and provide suitable penalties for any bank violating the law. At the same time I would recommend that any funds passed to surplus be reported to the Comptroller of the Currency and be not thereafter allowed to be in any way impared, under the same penalties and conditions as now prescribed for impairment of capital stock. These amendments would tend to remove the incentive to excess loans and also provide a larger loaning power to the banks. Similar provisions in State laws could and doubtless would be enacted. A much more serious abuse lies in the not infrequent acts of managing offices of banks making large discounts to themselves out of the bank's funds. It is an observable fact that in a great number of bank failures there have been found among their assets the worthless notes of high officers of the bank, for large loans, frequently without any security at all or with "straw" security, which proved to be absolutely worthless. This is a most flagrant and reprehensible violation of law, to say nothing of business efforts. It is the essence of personal dishonesty; it is a wanton disregard of the fundamental conceptions that such officers are the chosen guardians of a trust fund. It opens wide the door to speculation and fraud, and it is a travesty upon a legitimate banking. We should urge Congress to deal rigorously with these abuses by pronouncing them as felonies, with extreme pains and penalties; and we should urge this association and the State bankers' associations to take this matter before their respective State Legislatures, so as to compel protection where there is wanting official integrity and a proper sense of propriety.

The Country's Currency System.

On the ever-present question of the country's currency system, this association spoke at San Francisco two years ago. The recommendations of the currency committee are as applicable to-day as when approved, and this association should see that these recommendations are carried to speedy success. We all agree that quality and not quantity comes first. Largely through the influence of our association, and as I have already pointed out, quality has been forever assured. No currency in the world rests upon a more firm and solid foundation to-day than does ours. On the question of quantity your voice will be no less potent and eventually decisive. Financiers differ as to the proper method of assuring at all times a currency ample but not redundant, elastic but not capable of ulterior manipulation. "Asset currency" and "emergency currency" are terms not yet capable of an exact definition. It has been said that "Fools often rush in where angels fear to tread." In considering this question let us not emulate the former nor arrogate to ourselves the wisdom of the latter, but as conservative, patriotic business men may we solve the question aright and having once made up our minds have the courage to enforce our convictions.

In conclusion, gentlemen of the association, I wish in the most appropriate of words to voice the sentiment which all of you must feel of good will and wishes for the President of the United States, who, in the high office which he fills with distinguished abilities, brings to bear upon questions of public moment a profound sense of patriotism and sincere desire for the nation's and the individual's good. I am sure I utter your thought in hoping for him continued health and strength and unmeasured success in his high endeavors.

We congratulate him upon the happy and successful outcome of his long, wise and patient labors to bring peace to our unhappy and warring neighbors and we express the hope that our country and our country's power and greatness may ever find its high field of usefulness in promoting the arts and splendors of unbroken peace.

The President: I believe for the first time in the existence of the American Bankers' Association we have with us the representative of a foreign nation, engaged in the banking business. I would ask Mr. Blythe, Manager of the Union Bank of Scotland, to come upon the stage.

Mr. PUGSLEY: Mr. President, an event of transcendant importance, not only to humanity but to the financial and commercial interests of the world, has recently transpired in the little town of Portsmouth. Through the initiative of the President of the United States, through his wisdom, counsel, and splendid efforts, an honorable peace has been secured to Russia and Japan; a peace which means to this nation and to all civilized countries, I believe, a new era of prosperity and commercial advantage and a new incentive for the nations to submit their grievances to arbitration. I believe, Mr. President, that when a man has wrought a great deed in a great way, he is deserving of great credit, and I believe it is eminently fitting that this convention should pause in its deliberations to express its appreciation of the magnificent work of President Roosevelt in the interests of peace.

I move you, therefore, Mr. President, the adoption of the resolution that I am about to read:

Resolved, That the American Bankers' Association, assembled in its thirty-first annual convention, extends its thanks to the President of the United States for his untiring efforts and eminent services in the interest of humanity and civilization, which were so abundantly crowned with success in the honorable treaty of peace at Portsmouth, and that this association expresses its appreciation of the President's unselfish action and courage in taking the initiative to restore to Russia and Japan those peaceful relations that must of necessity make for a greater and higher development of civilization and for the betterment of mankind.

Mr. JENNINGS, of Florida: Mr. President, coming from the far South, I want to reiterate and emphasize the feeling that has been presented in the resolution we have just heard read. Coming as I do from the Southland, we all love peace, and we love the President of the United States. I would not feel satisfied to remain silent here and hear the words of patriotism that thrill all Americans without arising to second the resolution.

THE PRESIDENT: You have heard the resolution, and I think in a matter of this kind we should take a rising vote.

The resolution was unanimously adopted, by a rising vote.

THE PRESIDENT: We will now be favored with an address by the Secretary of the Treasury, Honorable Leslie M. Shaw.

TRADE EXPANSION.—ADDRESS OF HON. LESLIE M. SHAW, SECRETARY OF THE TREASURY.

The nations of earth sell to each other $10,000,000,000 worth of merchandise per annum, one-eighth of which originates in the United States, and one-ninth of this grand aggregate finds our ports for ultimate consumption. Within the last half century the United States has not only assumed importance among commercial countries, but in the last decade she has become the greatest commercial nation of the world. Not only do her exports exceed those of any other country, but her domestic commerce is two and one-half times as large as the aggregate international commerce of the round earth. While the eighty and more commercial countries are selling, the one to the other, merchandise worth $10,000,000,000, the American people sell to each other merchandise worth practically $25,000,000,000. These stupendous and incomprehensible figures make some of us proud, some arrogant. They should make us all thoughtful, and prevent any of us from becoming recklessly critical.

We point with pride to our export trade of a billion and a half, and with our thumbs in the armholes of our waistcoats we contemplate our skill and foresight and our ability as international merchants. Will I be pardoned if I suggest that this export trade is due in no very large degree to our skill either as international bankers or as international merchants?

We grow three-fourths of the cotton of the world, and there being no other limitless supply the world comes to us for it. It comes willingly and it comes in its own ships.

The world never has six months' food in store. If harvests should cease to follow seedtime for six months, the world would starve. Again, the United States is fortunate, for her farms annually yield largely in excess of what eighty million people can consume, and, as in the days of Joseph, a starving world goes to Egypt, or to the United States, or wherever there is an excess of corn or other food, and now, as then, it provides its own conveyances. It requires no international merchant to sell raw cotton to countries which grow none, or food products to people who produce less than they consume.

We produce 400,000 tons of copper per annum—more than half of the world's aggregate. Of this we consume somewhat over 200,000 tons and export nearly as much. This being the source of greatest supply, the world again comes for our surplus, and comes in its own ships. It requires no international merchant to sell copper.

We produce seventy-three per cent. of the world's supply of refined petroleum. It would seem to require neither an international merchant nor a merchant marine to market our surplus petroleum. The Standard Oil Company, however, in its international business has found it convenient to provide ships.

Of our aggregate exports, about $1,000,000,000 consists of raw cotton, food products, petroleum products, crude copper, lumber, and other raw materials and crude articles, of which we produce a surplus, which the world not only needs but must have.

The time is coming, gentlemen—with our increasing population more largely urban than ever, with factories multiplying more rapidly than farms, with limitless manufacturing resources, and matchless aptitude for production—when the United States will need new and important markets. The world may come to us in its own ships for the products of our farms and the raw products of our mines, but it will not come in its own ships for the finished products of our factories. The time is coming when we will need international bankers and international merchants and an international merchant marine.

Revival of American Shipping.

I am well aware that this is not supposed to be a popular theme, but I did not accept your courteous invitation for the purpose of discussing subjects on which all good men agree. I accepted for the purpose of bringing to your consideration questions which public speakers usually avoid, to the end that you may think them over, talk them over by your firesides and in your places of business, in the hope that we may some time, and as soon as possible, agree upon some course, some policy, that will restore our flag to her deserved place on the seas and give to American enterprise its share of the carrying trade of the world.

I am well aware that there are some, and they are not confined to any one party or to any one locality—they are prominent in both parties, and are found on the shores of New England and on the prairies west of the Mississippi—who urge that we need do nothing more than gracefully surrender a portion of our $25,000,000,000 of domestic commerce, and then, by a logic which I do not understand, we will get so much larger share of the world's $10,000,000,000 export trade as to fully compensate ourselves, and that in addition we will make the world happy. I quite agree with them that it would make our competitors happy. But I will not discuss that question. I desire to confine my remarks to the importance of a merchant marine.

Over one hundred years ago Congress passed an act giving to the American shipbuilder and the American shipowner a monopoly of our coastwise trade. Since then political parties have passed into forgetfulness and others have come and gone. Administrations have changed again and again, but that old law remains intact. It has been often assailed, but no party has dared to repeal it. It, therefore, has the stamp of non-partisan approval. As a result we have the largest and cheapest coastwise trade in the world. The Detroit River floats more tons of American freight than all the foreign commerce that enters London, Liverpool and New York city combined, and under every ton is a ship built of American materials, by American workmen, owned by American capital, operated by American enterprise, and over every pound floats the Stars and Stripes. This country certainly possessed some measure of statesmanship in the days of James Madison, and wisdom did not die with the fathers, or the law ere this would have been repealed.

Practically a half century ago the present minority party inaugurated, and the present majority party adopted, a policy of liberality to the promoter. It gave subsidies of money, or subsidies of land, or both money and land, to encourage the construction of trans-State and trans-continental railways. The Union Pacific, the Southern Pacific and the Northern Pacific railroads each received Government aid. These roads opened an empire of matchless resources, and here our ever-increasing population found ample room and abundant opportunity. They improved farms, developed mines and builded States yielding a commerce which has made these roads in turn self-supporting, so that no county, State, or the general Government, longer grants aid to new roads. We not only have the largest and best railroad system in the world, but the cheapest rates in the world.

Not only has the general Government subsidized domestic commerce by direct appropriations from the public Treasury in aid of railroads, but it annually subsidizes commerce, both domestic and foreign, by large appropriations for the improvement of rivers and harbors. No difficulty is ever experienced in passing a river and harbor bill if its benefits are sufficiently distributed.

The Government is now enlarging not only the scope but also the amount of its bounty. It has paid fifty millions for the right to dig a ditch in aid of international commerce, and proposes to pay two hundred millions more, or five hundred millions more, if necessary, in the construction of that international ditch, other millions in its maintenance, and no end of millions, if necessary, in its defense. Then after all this outlay we are under contract to grant its use, for all time, to all the world, on the same terms as to the people of the United States. At first blush one might expect partisan opposition instead of non-partisan co-operation. But so manifestly wise is the enterprise, so abundantly able is the Government to bear the expense, and so many are the advantages to be derived therefrom, that throughout the length and breadth of the nation no voice is heard against it.

You may find it necessary to glance at the map before you appreciate that it is about the same distance from the principal ports of Europe to San Francisco via Cape Horn as from New York to the same port. It is also about the same distance from the principal ports of Europe to San Francisco via the

Suez Canal as from New York to the same destination via the Straits of Magellan. Cut the Isthmian Canal and it will be about the same distance from New York to Hongkong via Panama as from Liverpool to Hongkong via Suez. The completion of the canal will move the line of equal distance from the eastern to the western shore of the Pacific. Have no fear, brethren, we will get the worth of our money, provided we place ourselves in position to get our share of the use of the canal.

The markets of South America, South Africa and the adjacent islands are just being developed. The eyes of the world are upon them. The merchant nations of Europe know where they are located, and they are establishing banks and warehouses within them, and they have already established regular and fast lines of steamers to them. The United States has neither banks, nor commission houses, nor warehouses in these ports, nor has it means of communication with them, except through old, worn-out, dilapidated ships, sailing under foreign flags and making eight or ten knots an hour.

The United States imports a million dollars' worth per day of tropical and semi-tropical products. It sends to Europe, in excess of everything we receive from Europe, a million a day in raw materials and food products such as I have described; and Europe in turn sends a million a day to the ports of South America, South Africa and the islands adjacent. I do not need to tell you of the great number of ships that sail the triangle. They start from home with a cargo of finished products which they leave in those southern ports, then load with coffee, rubber, hemp, sisal, mahogany, dyewoods and fruits for the United States, then take a load of our raw materials, cotton, copper, petroleum and food products, back to Europe.

I have been many times taken to task for remarks like these. I have received letters, for instance, from certain commercial associations, the principal officers of which are interested in foreign steamship lines, calling my attention to the fact that means are at hand for carrying to these southern ports all the merchandise that America sends thither. Gentlemen, I have never taken the position that what goods we ship to South America do not ultimately reach those ports. I have sometimes called attention, however, to the fact that the quickest way to go to South America, or to send mail to South America, or to ship freight to South America, and the most usual way, is to send first to Europe and thence to the ports of destination. A large share of our paltry commerce with those countries does actually go by way of Europe, rather than in these old scows; owned by the men who take the position that because there are ways in which goods can be sent thence, therefore no occasion exists for improving the means of communication.

Iowa was dotted with settlements long before railroads tapped the Territory. In those days some grain was grown, and the little that was grown was hauled in wagons, frequently a hundred miles and sometimes more. A few cattle were fattened, and they were driven sometimes four hundred miles to market. There were trails, even then, and sometimes roads. Some hogs were fattened. These were killed, their carcasses frozen, and hauled to market—a process which consumed sometimes weeks and frequently entailed an expense exceeding the value of the freight carried. But in those days Iowa did not contribute very much either to inter-State or to international commerce. Not until railroads, encouraged by Government aid, were built, did her commerce multiply, and not until these became of the best did she take rank and contribute abundantly.

I am also aware, for my attention has been called thereto repeatedly by letter, and more frequently still by editorial comment, that a representative of the Department of Commerce and Labor, sent to South America for the purpose of investigating this subject, has reported that there are means of communication between the United States and South America. I have read his reports, and I beg my critic's pardon, for the distinguished college professor does not take the position assumed by the steamship companies, that existing means of communication are satisfactory, or that they should not be improved. Permit a few extracts from Professor Hutchinson's report:

"Suffice it to say that the service from Europe is carried on by large and fast steamers, thoroughly equipped in every way for freight, passenger and mail business, running on accurate schedule time, and giving regular communication between Brazil and Europe, in each direction, at least six times per month, while the steamers from the United States are small and slow, have only inferior accommodation for passengers, and, with the exception of a single sailing each month, are more or less irregular as to time of departure and arrival. It is thus often possible to get much quicker delivery of an order from England or Europe than from the United States."

After expressing the opinion that this inferiority of American service does not seriously affect large wholesale dealers in standard grades and sizes of goods, because the cables run independently of the mails, he adds:

"With smaller dealers and smaller orders, as well as in all larger orders, where full and specific instructions have to be given as to sizes, shapes, weights and grades of goods, the mails must be used, and I have met with many complaints as to the inadequacy of the service. I have heard of instances in which it took twice as long to get such orders from the United States as from Europe."

In speaking of the flag as a means of advertising he says:

"At present our flag is never seen here except on an occasional warship, or private yacht, or an out-of-date sailing vessel. The mass of the people scarcely know that such a country as the United States exists, and those who do know it, most of them, have but the dimmest notion of the vast economic activities of our people. This is a market peculiarly sensitive to notions of fashion and prestige. Most of the population, all except the very few who have traveled in the United States, have exalted ideas as to the greatness of England, France and Germany, and the 'fashionableness' of using commodities produced in those countries. There is not the slightest question that these impressions are deepened by visible illustration of the superiority of European merchant marine in Brazilian ports."

These instances are from the one expert quoted by the owners of foreign ships and by the press as having reported that the means of communication with South America are ample for the amount of commerce that now exists.

Transportation Companies as Agents of Commerce.

But suppose that were true, gentlemen. There are no such agents of commerce as the representatives of transportation companies. Senator Proctor once told me that his company had a large Australian trade in marble, but he said it was through no skill or foresight of the company. A line of steamships had begged that instead of going back empty after having brought southern products to the United States, or of going to Europe for a cargo, they might be permitted to carry some marble to Australia. Thus, through the skill and enterprise of a foreign transportation company, so large a trade in marble was established that the company is now compelled to have representatives down there. I have never heard of any manufacturers of cotton goods or of household utensils, or of anything else produced in competition with Europe, to whom the owners of European steamship lines have offered any special advice or encouragement.

One great difficulty in getting a foothold in these markets is to get our producers interested in the subject. For this purpose the Government goes to great expense in getting consular reports on conditions in these foreign ports. These reports are regularly published in pamphlet form for general distribution. Quantities of them go to Europe, however, and are furnished, not as we furnish them, to whomever asks them, but they are sent direct to the firms engaged in the trade at the ports whence the report is made. These reports are full of statements to this effect. I quote again from Professor Hutchinson, he being the principal authority of those who oppose every means for the creation of a merchant marine. He says:

"As I came south I found conditions much more encouraging, and here in Rio de Janeiro and in the neighboring State of Sao Paulo, I have been deeply impressed with the possibilities which are awaiting development. It is pleasant to note an undercurrent of friendliness toward the United States, and a seeming willingness to meet any advances our people may make at least half way. There is a great field awaiting development if our exporters can be made to believe that it is worth while to employ the right methods."

Does any one doubt that an American line of steamships making regular trips to Rio de Janeiro, the Government paying the loss until the trade is established, would knock at the door of every factory in the United States, submit samples of the goods consumed by the people, and beg their production and the privilege of carrying them? In the same report Professor Hutchinson says:

"New lines established now would have to run at a loss for a very considerable time. Of this there can be no doubt."

In the same trade report in which Professor Hutchinson's oft-quoted article appears is an article by A. T. Wills, who was sent abroad by the "New York Commercial" to inquire into trade conditions, from which I quote:

"The Germans are especially aggressive, and many of the German houses are doing the business we ought to be doing. If they see that American goods are in demand they get samples of them, send them home and invite the manufacturers to imitate the articles, even if they are inferior, and thereby get the trade. This is not difficult, for there is no representative of the American interests on the spot to defend our goods."

Does any one doubt that an American line of steamships, in part dependent upon the traffic, would see that our goods were defended? He further says:

"Spain has the East India and Egyptian cotton market to draw upon as well as ours, has good shipping facilities, and, more important than all this, turns out goods which the Spanish-speaking people all over the world want. It gets the trade, because its manufacturers turn out goods to meet the requirements, rather than, as we do, try to educate their customers to take what they produce."

The reports are literally full of specific instances where our manufacturers have refused to change their patterns to meet the conditions of South American trade, or where they have abandoned a trade partly established whenever there has been a local demand sufficient to keep their factory employed. Does any one doubt that the representatives of American transportation companies would do much toward correcting these defects?

Possibly some one will say, "Who cares particularly for the American manufacturer? It is his business, not ours." Yes, but it is my business also. I own some farms in Iowa and I want my tenants to feed the men who manufacture for these markets. I am selfish. In fact, I am so selfish that I desire every industry under our flag to prosper, and I hope I am wise enough to know that no one class of American people ever did prosper except when all our people prospered. I hope I am wise enough to know that the prosperity of any one class means the prosperity of all.

The United States is the owner of the Philippine Islands, and these possessions, plus the Panama Canal, plus a merchant marine, would insure to the American people somewhat more than their present ten per cent. of the one thousand millions of trade washed by the shores of the Pacific.

We occupy the best position on the map. We have the safest and the most convenient form of money in the world. We speak the language of commerce. Our farms produce more than the farms of any other country. Our mines yield gold literally by the carload, silver by the train load, and there is unloaded on the shores of a single commonwealth more iron ore than any other country produces. Our forests yield one hundred million feet of lumber for every day of the calendar year. Our factories turn out more finished products than all the factories of Great Britain and Germany combined by more than three thousand millions every twelve months. We transport this matchless product of farm and factory, forest and mine, from the interior to the sea at one-third what similar services cost anywhere else beneath the skies. We carry it from point to point along the coast in better vessels, on quicker time, and at cheaper rates than others. But at our coast line we are brought to an abrupt halt. Here we are no longer independent. Our foreign commerce is four times as large as forty years ago, but we carry in our own ships only one-third as many gross tons as forty years ago. We have protected and encouraged every interest but our merchant marine, and every protected interest has flourished. We have every facility for international commerce except international merchants, international bankers, and an international merchant marine. Shall we not have these? I am not urging ship subsidies. I am speaking of results, not of methods. If we will but take advantage of our opportunities we will send these products of farm and factory under every sky and into every port, and make our financial centers the clearing-houses of at least a fraction of the world's trade.

THE PRESIDENT: The next is the report of the secretary.

SECRETARY'S REPORT.

September 1, 1905.

To the American Bankers' Association.

Gentlemen—For two years the work of the protective committee has been conducted through the secretary's office with a reduction of expenses. During the past fiscal year, ending August 31, 1905, the Pinkerton National Detective Agency has obtained splendid results towards suppressing crime for the Association. They have captured sixty-two professional bank criminals, thirty-five of whom have been convicted. The total amount of their sentences aggregate eighty-four years. This does not include nine indeterminate terms; and nineteen of those arrested are now awaiting trial. William Rudolph, who, with George Collins, robbed the Bank of Union, Union, Mo., and later on killed Detective Schumacher, was executed May 8, 1905, at Union, Mo. The protective work of the association last year cost $26,031.61, while for the year ending August 31, 1904, it cost $34,282.44, a decrease of $8,250.83, although the membership is larger now than ever before. The expenses of the protective committee and the results of their work for the last five years are as follows:

	Paid members.	Cost per member.	Total expenses.	Arrests.
1901	5,392	$5.56	$29,973.20	54
1902	6,204	5.28	32,781.11	56
1903	6,943	5.93	41,145.61	50
1904	7,563	4.53	34,282.44	75
1905	7,677	3.39	26,031.61	62

The committee adopted this year a plan of issuing monthly reports to members and the press of the country, thus calling the attention of criminals to the fact that the committee is relentless in its pursuit of depredators who operate against members. The protective committee is a secret one, and a large part of the growth, prestige and importance of the association is due to its labors.

Sincere thanks are due its members for their earnest, painstaking and important work; their names being unknown, the only reward they can receive for difficult and regular labors is the knowledge that their duties are well performed and appreciated by other members of the association.

EDUCATION.

The committee on education has organized thirty-seven chapters, an addition of twelve during the last year. The efforts of this committee have been towards elevating the standard of educational work to even a higher plane than it has occupied. The total membership of the chapters is 5,350, being an increase of over one thousand in twelve months. Fifty-one students have already passed preliminary examinations in practical banking, eight in commercial law and thirty-six in political economy there are 299 applications for preliminary examination in practical banking, 178 in commercial law and 199 in political economy. The promotion in the banks in which they are employed of many clerks who have taken an active interest in the work of these chapters, shows that they are not only improving themselves, but that the work of the committee on education is being recognized by the banks of the country.

UNIFORM LAWS.

The committee on uniform law, has helped towards the adoption of the Negotiable Instruments Law by States who have not already taken it up.

Kansas, Michigan, Missouri and Nebraska have adopted it during the past year, making a total of twenty-nine States now having this law on their statutes.

BANK MONEY ORDERS.

Over six hundred members of the American Bankers' Association are now using the form of order adopted a year ago by the Association. One member, The American Bank, Manila, P. I., failed while sixteen money orders, amounting to $1,175.00, were in transit. These orders were promptly paid upon presentation by the American Surety Company, who guaranteed them, for the profit obtained by selling orders at the rate of $5.00 per $1,000. This company is now selling orders to members of the association which can be filled in up to an excess amount of $100.00 each, where formerly the limit was $25.00. During the past year twenty-one State Bankers' Associations have endorsed the order and recommended its use to their members.

THE CIPHER CODE.

The Cipher Code Committee appointed at the last Convention are entitled to the thanks of the association for their laborious and excellent work in compiling the best secret code yet devised for the use of banks and bankers. The need of the code was recognized by the chairman, Mr. F. F. Blossom; he compiled it and presented the result of his labor to the Association. Under the direction of the committee numbered codes have been issued to every member of the American Bankers' Association; numerous letters received show that the code is filling a long-felt want, and is daily growing in importance.

THE SECTIONS.

The Trust Company Section is still advancing, and its membership has increased from 566 to 632.

The Savings Bank Section during the same period has increased from 616 to 735 members.

ROUTINE WORK.

During the fiscal year ending August 31, 1905, 7,900 special letters and 111,000 circulars and reports have been issued from the Secretary's office.

The membership and resources of the association have increased as follows:

	Paid membership.	Annual dues.
September 1, 1875	1,600	$11,606
September 1, 1885	1,395	10,940
September 1, 1895	1,570	12,975
August 31, 1905	7,677	127,750
Interest on $10,000 Government Bonds of 1925		400
Making the total income		$128,150

During the past year 1,038 members were lost through failure, liquidation, consolidation and withdrawal from the association. This reduced the membership September 1, 1904, to 6,525. One thousand one hundred and fifty-two members have joined since that date. More members joined the association last year than ever before in the history of the organization. Their aggregated capital, surplus and deposits now amounts to $11,460,875,527.

In closing my tenth consecutive term as your secretary, I wish to thank most sincerely the officers, active committees, members and the clerical force in my office for their earnest and cheerful co-operation, without which such progress would have been an impossibility.

Respectfully submitted,

James R. Branch, Secretary.

THE PRESIDENT: We will now listen to the report of the Treasurer, Mr. Ralph Van Vechten.

Mr. Van Vechten read the following report:

TREASURER'S ANNUAL REPORT.

Financial statement of the membership account from September 1, 1904, to September 1, 1905:

September 1, 1904. To cash—	
Standing protective committee	$26,031.61
Committee on education	8,085.93
Committee on fidelity insurance	1,082.50
Committee on bank money orders	271.17
Committee on cipher code	2,144.15
Committee on uniform laws	54.00
Savings Bank Section	3,189.97
Trust Company Section	4,240.34
Executive council meeting, New York, May 3, 1905	2,853.66
Salaries	19,528.82
Expenses of convention	1,163.10
Proceedings, 1904	6,103.89
Distributing Proceedings, 1904	1,794.67
Rent	3,099.99
Postage	1,421.00
Printing, stationery, etc	709.24
Sundry expenses	414.06
New York Telephone Company	258.18
20,000 programmes—convention of 1904	225.60
Frames and inserts for 1905 and 1906 and pulp board	2,369.52
Typewriter in exchange	72.50
Travelling expenses of secretary	252.25
Premium on officers' bonds	56.25
Dues returned to two members	30.00
Dues paid to 1906, returned to trustee of M. L. Stewart & Company, Owosso, Mich	10.00
Petty cash	100.00
Amount transferred to Northern Trust Company, Chicago	45,000.00
926 drafts charged back account dues, 1904 5	12,795.00
Four drafts charged back account dues 1905-6	100.00
Balance, August 31, 1905	142,674.00
Total	$286,125.85

September 1, 1904. By cash—	
Balance, Sept. 1	$102,397.74
Interest on $10,000 Government bonds, 1925	400.00
Proceeds, sale of 4 copies of Trust Company forms	48.00
Proceeds, sale of Trust Company Section proceedings, 1896-1903	663.75
Amount paid account Dr. G. Marsland rebate account bill of Stumpf & Steurer, and stenographer and typewriter	591.77
Amount transferred from Northern Trust Company, Chicago, to National Bank of Commerce, New York city	45,000.00
Dues, 1,152 members, 1904-5	15,851.39
Dues from 1,582 old members paid in advance to September 1, 1906	27,440.00
5,764 bills for membership dues for ensuing year deposited with Commercial National Bank, Chicago, subject to deduction of unpaid bills	93,675.00
Total	$286,125.85

Balance, August 31, 1905 .... $142,674.00

National Bank of Commerce, New York city, holds for account of the American Bankers' Association, $10,000 U. S. registered 4 per cent. bonds of 1925, at a market value of $13,400.00.

Respectfully submitted,

RALPH VANVECHTEN, *Treasurer*.

THE PRESIDENT: I will also ask Mr. Van Vechten to read the report of the protective committee.

MR. VAN VECHTEN: The standing protective committee is a secret committee; and not being a member of it, I am requested to submit the report of that committee as follows:

REPORT OF STANDING PROTECTIVE COMMITTEE.

The Standing Protective Committee of the American Bankers' Association respectfully submits the following report:

The detailed financial statement of the Committee for the year ended September 1, 1905, is as follows:

Detailed Financial Statement of Standing Protective Committee.

Receipts.

Date			
1904.			
Sept. 1.	By balance		$3,761.64
" 16.	Appropriation of executive council at New York		20,000.00
1905.			
May 3.	Appropriation of executive council at New York		20,000.00
			$43,761.64

Disbursements.

Date			
1904.			
Sept. 1.	Pinkerton National Detective Agency	$25,871.03	
	20,000 Rules of Protective Committee	10.00	
	7,500 pamphlets	64.00	
	Second National Bank, Brownsville, Pa., refund case, forger A. E. Smith	86.58	
			26,031.61
Aug. 31, 1905.	Balance		$17,730.03

	Paid members.	Cost per member.	Total expenses.	Arrests.
1901	5,392	$5.56	$29,973.20	54
1902	6,204	5.28	32,781.11	56
1903	6,943	5.93	41,145.61	50
1904	7,563	4.53	34,282.44	75
1905	7,677	3.39	26,031.61	62

The meetings of the committee have been regularly attended by each of its members, and over seven thousand reports and communications have been considered during the past year.

It has been the purpose to conduct its operations at the least possible cost to the association consistent with accomplishing satisfactory results.

The committee asks the co-operation of the members of the association in an endeavor to secure an amendment to the penal codes of each State providing for the more severe punishment of the "yegg" burglar, as this class of criminal is the severest menace to the members of the association distant from the centres of population.

The committee recommends the adoption of the amendment to the constitution prohibiting the compromising of a crime either by the committee or a member of the association.

Realizing the advantage to the association of an adequate knowledge on the part of criminal classes of your probability of prosecution for attack on member banks, your committee has endeavored to give the largest possible publicity to the successful results of its operations. We take this occasion to thank the press of the country for its aid, and we ask the co-operation of the members in carrying out this policy.

The committee takes this occasion publicly to acknowledge the conscientious and laborious work of the secretary in the faithful performance of his arduous duties in connection with the protective work of the association.

The committee desires to express its appreciation of the untiring efforts and effective work of the Pinkerton National Detective Agency in the interest of the association. Their report of the details of operations during the past year is submitted in printed form.

Very respectfully,
Standing Protective Committee.

On motion of Mr. Mulvane the above reports were referred to the auditing committee.

THE PRESIDENT: The report of the executive council will be read by Mr. G. S. Whitson.

Mr. Whitson read the portion of the report relating to proposed changes in the constitution.

[For these proposed changes, see report of executive council, page 6‸7.]

THE PRESIDENT: You have heard the report of the executive council regarding the proposed changes in the constitution. It takes a two-thirds vote to change the constitution. What shall be done with the recommendation.

On motion the proposed changes were agreed to.

THE PRESIDENT: A committee, of which Mr. Robert J. Lowry is chairman, was appointed to draft memorial resolutions on the death of one of our members. I will ask Colonel Lowry, chairman of the committee, to read that memorial.

Mr. LOWRY: I will ask the secretary to read it.

The secretary read the following:

MEMORIAL AND RESOLUTIONS ON THE DEATH OF HON. JOSEPH C. HENDRIX.

Gentlemen of the American Bankers' Association—We are annually reminded that one or more of our worthy members have passed away, and that we will see their faces, shake their hands, and listen to their voices and their wise counsel no more.

It is the sad duty devolving on your committee to announce that since our last annual meeting the grim reaper has claimed our esteemed friend and co-worker, Honorable Joseph Clifford Hendrix, of New York, of whose death you have all heard. Your committee in making this announcement deem it proper to make mention of some of the principal features of the life of our late distinguished friend, and that proper resolutions of regret be passed by your body.

Honorable Joseph Clifford Hendrix was born in Fayette, Missouri, May 25, 1853, being the third son of Adam Hendrix of that place. He was only in his fifty-third year when he died, but into his active life he had crowded many important things, and, aside from being a prominent banker, he had distinguished himself in many ways.

At Fayette, Missouri, where he was born, he attended the Central College and finished his education at Cornell University, Ithaca, New York, his father being quite an advocate of liberal education. As an alumnus of Cornell Mr. Hendrix afterwards became a life trustee of that famous university and as such was ever enthusiastic for its welfare and watched its good work with deep interest and modest pride.

Mr. Hendrix developed early in his career a strong desire to enter the field of journalism. In 1873, when he was but twenty years of age, he left the West and went to New York, where he entered journalism. He was soon assigned to Brooklyn as a representative of the New York "Sun" there, and henceforth Brooklyn was his home. His remains now lie in beautiful Greenwood Cemetery in that city, which had been his home for thirty-one years, and with so many of whose institutions he was permanently identified.

In 1881 Mr. Hendrix became a member of the Brooklyn Board of Education, and five or six years later was made its president. His interest in educational matters never lagged, and from the day he entered Cornell University to the day of his death he was the champion of education, first, last and all the time.

Among the important offices he held during his life were Secretary of the Brooklyn Bridge Company, postmaster of the city of Brooklyn, as well as Congressman from the Brooklyn district. He was also a director of the Fifth Avenue Trust Company, and President of the Kings County Trust Company, which latter company he organized.

While the Honorable Mr. Hendrix was a member of Congress, he was offered and accepted the Presidency of the National Union Bank, of New York. This bank was later consolidated with the National Bank of Commerce, Mr. Hendrix remaining President of the consolidated bank until its consolidation with the Western National Bank of New York about a year before his death.

In 1895 Mr. Hendrix was elected chairman of the executive council of this association. In 1896 he was elected vice-president, and in 1897 he was elevated to the presidency of the American Bankers' Association, and all of these positions, being the most responsible within the gift of this body, were filled with the ease, grace and dignity, as well as the efficiency which characterized his conduct in every office he filled during his life. Not only was he efficient as an officer of this association, but as a member of the association he was ever ready to do whatever was assigned to him as duty, and would lend his wise counsel and suggestions at any and all times for the good of the association and its work. His devotion to the association was unselfish, his acceptance of its honors was with becoming modesty, and his efforts in its behalf were characterized by an interest scarce surpassed.

Socially, it was difficult to find a more genial and courtly gentleman. He was generous to a fault, kindly, courteous, patient and tolerant. He was always attentive, cheerful, bright and interesting. He was a member of quite a number of prominent social organizations both in New York and out at Bath Beach, where he frequently went to take a few days' rest from his strenuous duties, and the noise and traffic of the busy city.

The influence and example of such a man are of inestimable value. Every member of this association who has come in contact with him, will bear witness to his unfailing courtesy and watchful kindness. He was perfectly sincere, and his straightforward integrity impressed all that had relations with him, and his high-toned truthfulness inspired entire confidence; therefore, be it resolved by the American Bankers' Association:

1. That the death of Honorable Joseph Clifford Hendrix has brought to this association and its members deep sorrow and regret.
2. That our association has lost one of its most useful and honorable members, and each of us a devoted, loyal and faithful friend.
3. That the purity and excellence of the character of the deceased are an example to the young men of the banking profession worthy of emulation.
4. That the several institutions with which he was connected at the time of his death have suffered great loss in being deprived of his wise counsel and zealous advocacy.
5. That a page of our minutes be set apart for a permanent record of these resolutions as a token of the esteem in which he was held by the members of this association, and that a copy of the preamble and these resolutions be furnished to the family of our deceased member and friend.

Your committee respectfully recommend the adoption of the above.

Respectfully,

Robert J. Lowry, Chairman; M. M. White,
Myron T. Herrick, Logan C. Murray, Committee.

On motion the resolutions were agreed to.

THE PRESIDENT: The committee of which Mr. Walker Hill is chairman was appointed to draft resolutions on the death of Mr. Charles Parsons. I will ask Mr. Hill to read those resolutions.

Mr. Hill read as follows:

Whereas, the American Bankers' Association has heard with profound regret of the death, September 15, 1905, of Charles Parsons, President of the State National Bank in St. Louis; therefore, be it

Resolved, That the following tribute to his memory be spread upon the minutes of this convention, and a copy be engrossed and forwarded to his family.

Charles Parsons was one of the founders of this association at Saratoga in 1875. He served as President in 1890-91, and at the time of his death was ex-officio member of the executive council.

After an honorable military career during the Civil War Mr. Parsons entered the banking business in St. Louis, where for nearly forty years his name has stood for all that is wisest and best in his chosen field of labor, and not only will his influence and character be missed by those who held the privilege of his friendship, for it is well known that his record and attainments had achieved for him a national repute, and had he so desired he might have been honored high in the service of his country.

To those who knew him, his life will ever be a sacred lesson, as that of one who by his learning, his wisdom, his integrity, and his purity has achieved the highest ideal in a vocation which will ever demand the best in heart and brain.

Walker Hill, Dumont Clarke,
Jas. B. Forgan, R. H. Rushton,
F. P. Neal,
Committee.

On motion of Mr. Mulvane the resolutions were agreed to.

THE PRESIDENT: The reading of the balance of the report of the executive council will be postponed until to-morrow. We will now have an address by Mr. Frank A. Vanderlip, Vice-President of The National City Bank, of New York.

Mr. Vanderlip delivered the following address:

ADDRESS OF FRANK A. VANDERLIP, VICE-PRESIDENT NATIONAL CITY BANK, NEW YORK.

With almost unmixed satisfaction the members of the American Bankers' Association may contemplate the progress of financial events during the year which has elapsed since their last meeting. Little short of bewildering is the array of statistics which could be presented to demonstrate the rapid growth, sound development and satisfactory progress made in the commercial, financial and industrial fields. It is safe to assert that never before was our population so fully employed. Never before was the general level of wages so high, never before has the aggregate volume of industry been as great as it is to-day, never was the future of industrial activity so fully assured by advance orders. Never was the measure of commercial activity so large, and never before did such bountiful harvests meet such eager markets.

The total value of the agricultural crop of the United States will this year exceed by $500,000,000 the average value of that crop during the last ten years. The money value on the farms of this season's crop will reach the staggering total of $3,000,000,000. You of the West and South are close to the true meaning of these figures. To eastern bankers such statistics are merely figures. Their aggregate is so vast that it is difficult to comprehend their true import. You who are closer to the fields, the granaries and the cotton presses, you who with your own eyes see the direct results of this flood of wealth, are more competent to comprehend its significance.

BROADENING OF THE INVESTMENT MARKET.

Under the influence of harvests less bountiful than this, following one another with providential regularity, in the last half dozen years, you have seen whole communities change in character. People whose only acquaintance with finance was their knowledge of mortgage payments made to absent creditors, have been converted into commonwealths with surplus capital and investment capacity.

The whole great Mississippi Valley gives promise that at some day, distant perhaps, it will be another New England for investments. There is a developing bond market there which is of constant astonishment to eastern dealers. You have seen the farmer in these half dozen years discover the uses of a bank account, deposit his income, pay off his mortgage, accumulate a surplus and actually become an investor in corporate securities. You have seen that sort of thing multiplied and repeated until the aggregate wealth of the Western and Southern States has become astounding, even to you who have taken an active part in its growth.

Now on top of these succeeding years of good harvests, good prices, intelligent liquidation of debts and thrifty accumulation of surplus, comes the unprecedented figures of the value of this season's yield. Surely America is a country blessed.

PROSPERITY OF THE COUNTRY GENERAL.

The feature of agricultural life in these recent years has been great income, diminishing liabilities and the provision of ample working capital, with all the economies and advantages which ample working capital provides. These conditions have worked marvels in the way of prosperity for the agricultural communities. But prosperity is not confined to the farms. These same influences, large income, diminishing liabilities and the provision of ample working capital, have been factors in the industrial field as well; we can find as great prosperity under shop roofs as in the fields. The days when industrial competition commonly reached a point of destructive severity are largely past. The days when narrowness of outlook and lack of co-ordination led to the wasteful duplication of plants and a vast unproductive expenditure of capital, have given way to more intelligent management. That destructive competition, that duplication of unproductive expenditure, led with unerring economic force to the industrial combinations which marked the last years of the century recently closed. The forces which led to these combinations were so irresistible that some industries were swept together under hastily considered plans. Combinations were made that were properly open to criticism. Heterogeneous elements were united in ways that meant inevitable friction. Diverse interests were brought together but could not in a day be harmonized. For a time there was doubt as to whether or not true wisdom had been shown by the men who formed these great industrial combinations.

Economies Resulting from Combinations.

Evidence has now accumulated, I believe, to warrant an answer to that question. We anticipated economies when these combinations were made, but we are only just beginning to understand something of the full advantage which may result from the national organization of certain industries. It took a little time to get these organizations running smoothly. It was not easy to find men with the broad economic insight which the management of such great enterprises required. When a nation meets a crisis men seem to be raised up ready for the tasks. When this country faced war we produced great military generals. To-day, when the crisis in the management of vast industrial combinations is upon us, we are producing great captains of industry. These managers are not all great administrators any more than the war officers were all great administrators, but I believe the world has never seen the parallel of the business genius which is coming into the work of organizing some of these great industrial combinations. Economies are being brought about that were not conceived of when these organizations were formed. The co-ordination of a whole field of industry, the organization and distribution of plants so that the industry is working under the least possible disadvantage in respect to transportation charges, the combination into such aggregates that expenditures may be made to effect small savings, or in introducing mechanical aids which would be impossible in small plants, but which on a large scale effect remarkable economies—all these developments are answering the question as to the wisdom of these combinations. The results are beginning to appear in the income accounts and balance sheets. The improvement there foreshadowed is, I believe, but an indication of what may yet come.

With the aid of a wealth of raw material and a genius for mechanical manipulation, we developed a few years ago a capacity for industrial competition which startled the world. England, whose supremacy had been of such long standing that she rested in serene assurance, was crowded out of some of the international competitive markets. She was crowded to second place by America and then to third place by Germany. Our exports of manufactures doubled and doubled again and we had to be reckoned with in every international market.

Then came a halt. Europe awoke to the situation. She bought samples of our tools and duplicated them. She sent an army of investigators to study our methods. She arrested us in our commercial conquest. That halt is proving to have been only temporary. Again we are showing unexampled totals in our exports of manufactures. The present figures are substantially exceeding the totals which we made at the time Europe coined the phrase, "a commercial invasion." The reason for this late improvement, this regaining of ground temporarily lost, this making of new records, lies in the perfection of industrial organization which has been made possible by the great combinations. I believe we are just started on a new "commercial invasion." We have the cheapest raw material, the most efficient labor, a pre-eminent ability in the adoption of mechanical aids, and all that is combined with what I believe to be transcendent genius for economic organization. The combination of these forces will, I conceive, be well nigh irresistible. The logic of this combination spells for us an unexampled development of foreign trade. All we need is intelligently to foster the possibilities. I am not giving rein to imagination. The cold figures of Government statistics show the beginning of this new industrial conquest. Comparisons of manufacturers' cost sheets reveal the possibilities of future successes. Our own homogeneous domestic market, as great as that of half of Europe, contrasts strikingly with the tariff-hampered field of European manufacturers. Our foreign competitors meet at every turn the obstacles of customs restrictions, of racial differences and national jealousies. This great homogeneous market of ours makes a solid foundation upon which our industries can stand while they reach out successfully into competitive fields.

The conquest of foreign markets will not be an easy one, however. We are likely to meet with defeat and failure at some points caused by our failure to give proper attention to the business—and there are many examples of that in the past—or caused by a combination of obstacles which we cannot overcome. Perhaps we may see an example of the latter situation in the Far East. It is by no means certain that Japan is to stand courteously at the open door of Oriental trade and permit us to enter. We have seen in China what a racial boycott can do in interfering with trade totals. Oriental trade is not something won, but something to be striven for and there will be difficulty, defeat, disappointment and discouragement. Nor is the trade of Europe to be ours for the asking. The obstacles of tariff walls grow higher with every meeting of Continental Parliaments. The ability to compete with us increases as our methods are better comprehended. Germany has gone so far ahead of us in the proper education of the industrial classes that we may lose at times from that cause alone.

A Solid Basis for Business Expansion.

I do not mean that advantage is to come to us through disaster to others. We have perhaps more than our just measure of prosperity, but there seems, at the moment, to be good measure throughout the world. The world has withstood the financial strain of a war which cost the combatant nations two billion dollars. It has withstood that strain so easily that one is led to inquire how it has been possible that such a disaster should have produced no more unfortunate results. I believe the answer to that should be looked for in a quarter to which our academic friends have been giving some attention, but which has not as yet come to excite very great interest among practical financiers. It is not alone to the raisers of grain that nature has been bountiful of late. The mines of the world have been yielding treasure as lavishly as have our fields. In every day of this year, nineteen hundred and five, work days and feast days, holidays and Sundays, there will be drawn from the ground a million dollars of new gold. And then when the total is finally cast up there will be a number of odd millions to spare above that average. The mines of the world will produce this year $375,000,000 of gold. The final figures for the production of gold in 1904 have recently been made and they footed $347,000,000. We may reasonably look forward in the near future to an annual average output of $400,000,000 of new gold for at least a considerable number of years. When we remember that in 1885 the production of gold was but $115,000,000, we begin to get a comprehensive view of the significance of this increase. When we remember further that the entire monetary stock of gold in the world is about $5,700,000,000 we can calculate that the output from the mines in the next fourteen years promises to equal a total as great as the present monetary stock of gold. These figures are startling. They perhaps suggest the possibility of a disturbance of values. It does not follow, of course, that with the production of $400,000,000 of gold per annum the monetary stocks will be increased by that amount. The uses of gold in the domestic arts draw off at least $75,000,000 a year, but that will leave over $300,000,000 a year to add to the gold reserves. So eminent an economist as Leroy-Beaulieu has estimated that the monetary stocks of the world will be doubled in twenty-five years. In the light of recent statistics of the output of production I have no doubt that he would modify that estimate and incline to the view that the monetary stocks will be doubled in twenty years.

What is this to mean to the business situation? What is to be its influence upon prices? What effect will it have upon money rates? These are no longer academic questions. They are practical considerations which need to be taken into account by business men. The great increase in gold production which has been in progress since the close of the Boer War has, in my opinion, been a factor in the rapid recovery from the depression of three years ago. At that time, through financial excesses and indiscretions, we had been led into a dangerous position. In Europe also the chilling effect of the great destruction of capital, occasioned by that war, was everywhere manifest. This new gold production pouring itself into the bank reserves of the world has been an influence in bringing about the quick recovery from depression and in withstanding the shock of the further destruction of capital which the Russo-Japanese War entailed.

The classical economists, Ricardo, Adam Smith and Mill, evolved the quantity theory of money. They held that the prices of things would vary with the quantity of money in existence. If the money stock were doubled, prices would be doubled; if the money stock were halved, prices would be cut in two. That theory has been proved to be inadequate. There are many other interfering circumstances and modifying conditions. Nevertheless there is economic truth and force in it. It is within the intimate knowledge of all of us that if our bank reserves are increased we are moved to increase our loans. A pressure to increase loans tends to reduce interest rates. Lower interest rates enhance the price of income-paying securities. I think every one will accept, subject to important modifying conditions, the statement that an increase in the monetary supply has a tendency to advance prices. There may be other influences that will counteract in the final result. There can be no doubt, however, that with every million dollars of gold added to the bank reserves of the world, there is a disposition to increase credit lines. That increase in credit lines in turn has its influence on the side of advancing prices. As a practical matter, however, I do not believe we are facing any economic revolution as a result of this influx of gold. We must remember that the growth of business may keep pace or even run ahead of the substantial growth in the gold reserve so that in spite of actual increase the relative percentage of gold reserves to credit demand would leave prices unchanged.

The subject is a fascinating one, but at the outset it must be admitted that it is not one for accurate calculation and definite conclusion. There are a few considerations, however, and some popular misapprehensions in regard to it concerning which it would be well to have clear thinking. For example, it is rather commonly said a great increase in the gold supply will bring us to a permanently lower interest basis. This is a misconception. It is true that the first effect of gold additions to a bank reserve will be to lower the interest rate. That effect, however, is temporary. When the money supply has reached a permanent level, no matter how great the increase in it has been, the interest rate, other things remaining unchanged, will find its regular level. Interest is but a payment in kind. If the value of money depreciates, the value of interest payment depreciates as well. We need look for no permanently lower interest basis as a result of an increase in the money stock, but while that increase is in progress, the reserves are being constantly augmented and the tendency would be toward lower rates.

There is another consideration which we should have clearly in mind. Disregarding for the moment all other influences, we may lay down the principle that an increase in the supply of money will tend to advance the price of real property, but the price of an obligation repayable in money will not tend to advance. That is to say that real estate and all forms of property, including shares of corporate stock, which represent an ownership in real property, would advance, but bonds, which represent only the right to demand a payment in money, would not advance. All persons having a fixed income would find the purchasing power of that income reduced. The return from mortgages and bonds would have a reduced purchasing power. Persons receiving fixed salaries and wage earners generally would be at a disadvantage, for their incomes would not tend to increase as rapidly as the purchasing power of their wages decreased. Under such a set of circumstances there would be constant pressure from wage earners in order to increase their incomes so as to keep pace with the advanced cost of living. Is not that exactly what we have been seeing and are we not likely to see more of that same pressure to advance wages as the cost of living advances?

These are tendencies which would become sharply manifest if there were not counteracting influences opposing them. That there are sure to be such counteracting influences goes without saying. I recall a conversation which I once had with the great German financier, von Siemens, the creator of the Deutsche Bank. The balances of trade in our favor had been climbing up from $400,000,000 to $500,000,000 and then had gone well beyond $600,000,000, and it looked as if we might drain Europe of her whole monetary stock if that sort of thing was to go on. I asked Herr von Siemens what was to be the outcome for Europe. He replied with a well known German phrase, "A tree never quite grows to heaven." Events soon proved that this tree of favorable trade balances could not quite grow to heaven, although for the moment it did look as though it were likely to. And so with this increased production of gold which gives promise of doubling the monetary stock of the world in the next score of years. We might expect, if the theories of the classical economists held good, that with a doubling of the gold stock would come a doubling of prices. We can, however, be very certain that the theory will not entirely hold good. There will be counteracting influences. While there will undoubtedly be a tendency to advance prices as a result of this influx of gold into the bank reserves of the world, I do not believe the gold production is likely to become a serious menace. I do not believe that it will so disturb those business relations that are based upon the terms of money, as to cause any vital derangement of affairs.

What I do believe is that there is likely to follow just what followed in the two former periods of the world's history when there was an extraordinary production of gold added to the monetary stocks. One of these periods followed the discovery of America, when the treasures of Mexico and Peru were exploited. The other was in the years following the discovery of gold in California and Australia. In each case a mighty impulse was given to the exploitation of virgin fields of development. It seems to me not improbable that the next few years will witness the expansion of the field of commercial enterprise into new places. Countries that are commercially and industrially backward will yield to this new influence. It seems to me that one of the direct and important effects of this great production of gold will be to give an impulse to the development and industrial exploitation of South America, Africa, Asia and eastern Europe. At our own hand is South America on one side and China and Japan on the other. We are rapidly awakening to the commercial possibilities within these countries. If we are to have an influx of gold more than ample to sustain the credit operations for our domestic affairs, that fact will tend to lead our interests into these new fields of exploitation. Then, in turn, a wider use of credit which these new fields will develop and the increased reserves which that wider use of credit will make necessary, will probably absorb the increasing gold stock in beneficent uses, preventing it from ever becoming a serious menace to business organization.

Our Illogical and Unscientific Currency System.

The outlook is surely bright. What can hurt us? What dangers are ahead? With bountiful harvests, with lavish mineral production, with increasing financial strength, with wonderfully improved industrial organization, with a sound banking position, and with an impulse already given to every form of commercial activity, what is there to fear in the future? Is it clear sailing? Can we make commitments without fear for the future? Is the whole outlook into a cloudless financial horizon? An optimist might be forgiven for thinking that it ought to be. We have a good many elements of a firm foundation under our feet but again we might quote the German phrase, "A tree never quite grows to heaven." Sure as we are of many of the substantial foundation stones upon which to rear a structure of prosperity, we may be quite as sure that there are dangers lurking in the situation. Some may be avoided, others will not. Some it is possible to foresee, others we will fail to recognize until we see their evil effects. Among those which we know exist, there comes first to mind our illogical and unscientific currency system. We know that this system may at any time breed us trouble. We know that there is not a European financier of broad intelligence who, looking dispassionately from without at this currency system of ours, does not feel that it has in it dynamic possibilities for trouble even if other conditions are favorable.

Indeed it is when all other conditions are most favorable that the danger is the greatest. Now, in the very fullness of the prosperity that we have, there might be a pitfall for us in that quarter. A strain is on our currency system. With our usual good luck we may avoid disaster but it is the sort of time, nevertheless, when we ought clearly to see that we have a system which might endanger our banking position and retard most seriously our commercial development. We know that we are threatened by great social disorders; that the edict of a labor leader might change a cloudless outlook into an uncertain one. We know there is a disregard of law in labor unions and in corporation offices alike, which is threatening to our welfare. We can, at the moment, clearly see that however prosperous conditions may appear, this prosperity might receive a severe check should a speculative fever begin to rage. Should a stock market speculation start from the present high level of prices in the face of the extraordinary demand for capital and money which crops and business alike are making, the result might easily be temporary disaster.

I have been emphasizing some of the bright sides of the picture but there are shadows. In a gathering like this Jeremiahed songs are not pleasant, but there are some that might be sung which would not be out of harmony with true conditions. Never was there a better time to preach conservatism; never perhaps was it easier to be carried away by some of the obvious features of prosperity and to forget some of the dangers which in the end will be quite as potent in shaping the ultimate result. "A tree never quite grows to heaven." Although there may be many favorable features to the outlook, it is no time for prudence to be cast to the wind; no time for speculative commitments which would yield disaster if temporary reverses came; no time for laxness in any of the forms of business prudence and conservatism.

The president announced that the National Theater would not be available for the subsequent sessions of the convention, and stated that two places might be secured; one, the large hall on the tenth floor of the Willard Hotel, and the other the Columbia Theater.

On motion the Columbia Theater was chosen for the further sessions of the convention.

THE PRESIDENT: Some of you may not be personally acquainted with the next speaker. National bankers however are pretty well acquainted with his signature, attached to communication calling their attention to too large overdrafts, past-due paper, and section 5200 of the Revised Statutes of the United States. I beg to introduce to you Mr. W. B. Ridgley, Comptroller of the Currency, who will address you upon the subject of examination of banks.

BANK EXAMINATION AND SUPERVISION.—ADDRESS OF WILLIAM BARRET RIDGELY, COMPTROLLER OF THE CURRENCY.

After a careful study of the cases which have come under my observation during the past four years, I am firmly convinced that no system of bank examination or supervision from the outside of the bank can absolutely prevent fraudulent bank failures. The more thorough and efficient the supervision, the more surely and quickly frauds will be discovered and the more fear of detection will tend to prevent them, but they cannot be surely and in every case prevented by any practical means outside of the bank.

I am also equally convinced by the same experience that with careful and efficient work on the part of the examiner, aided by intelligent and thorough letters of criticism based on the examiner's reports, any board of bank directors of fair intelligence, with an honest desire to obey the law, can, by co-operating with the examiner and the Comptroller, make the failure of their bank practically, if not absolutely, impossible. Even if the whole board or a majority of it are not doing their duty in this respect, a respectable minority, or even one or two determined and honest men, can, if they will, secure for their shareholders and creditors this protection to which they are entitled.

I am sure that in this direction, the co-operation between the directors of a bank and the supervising authority, lies the best hope of decided and permanent improvement in the supervision of banks and the reduction of bank failures to a minimum.

No outside supervision can supply honesty or brains for the management of a bank, or take the place of either when it is lacking. The best it can do is to discover acts of dishonesty or bad errors of judgment, after they have occurred, and to some extent prevent illegal acts by fear of their discovery and punishment. If bank officers are honestly and in good faith doing their best, though with bad judgment and without ability, the advice of an examiner may often be of great assistance in judging of credits and preventing the increase of loans on weak lines, and the restrictions of any good banking law are of incalculable value to well-meaning, though weak or incompetent management. In most banks there is an honest desire to comply with the law and conduct the business safely, and legal restrictions have saved many such banks from trouble, if not failure. When, however, the officers of a bank are reckless, incompetent or dishonest, and sometimes they are all of these, the bank is in great danger of failure, in spite of any supervision which can be given it from the outside. In some such cases, an appeal to the directors may result in a change of officers and policy in time to save a bank, and I have known one good strong man to conduct a campaign almost alone among the stockholders, convince them he is right, and save a bank which had been brought very near to failure.

It is generally the case, however, when one bad man, or a bad crowd, get possession of a bank, and have large ownership of its stock, it sooner or later comes to grief, in spite of everything the examiner and Comptroller's office can do, unless they get honest assistance from some officer or director inside the bank.

An examiner always works under one great and unavoidable disadvantage. He can do little or nothing until after the law has been violated and much, if not all, of the harm is done. If the trouble is a bad, excessive or fraudulent loan, it has been made before he can act. If there is a shortage in the cash, through a defalcation or robbery, the money is gone before he can know it, and often with little or no chance for its recovery. A good examiner does his whole duty in the discovery of such a case. It is not reasonable to ask him to prevent it. Only so far as the fear of discovery deters bank officers from fraudulent acts can any supervision, short of frequent and complete auditing, prevent their occurrence.

Causes of Failures Deep-Seated.

A bank does not often fail suddenly. The condition which leads to it is apt to be of comparatively slow growth. Far the most frequent cause of failure is a large line of loans to some concern or group of concerns in which the officers are interested, or to the officers themselves. When the loans are new they look all right, and frequently are good. But if things go wrong and this outside venture loses money, the loans begin to increase, and soon good money begins to go after bad with the inevitable result. It is surprising to see in how few cases men who may have been theretofore honest and square, have the honesty and moral courage to face the failure of their bank when due to bad judgment or incompetency, without resorting to frauds of some kind. It is extremely rare to find a bank has failed without some of the officers committing fraudulent or illegal acts to hide it.

Every examiner, however, has many cases to report which are taken up and corrected, sometimes, after they have become very bad. There are a great many such cases where a bank gets into more or less serious trouble and yet is saved, where one goes on to failure. I believe there is seldom a day in the Comptroller's office, when we do not have pending a case of a bank which is found, not necessarily from frauds or always violations of law, but from bad banking, in a condition which, if allowed to go on, would lead to serious trouble, but which we are able to have corrected on the examiner's report and advice. We always have a list of those we are watching, and a very large percentage come out all right. They almost invariably do when the management is honest, and tells us the truth. It is very hard to tell when a bank is beyond hope and really is insolvent. The hard cases are where the officers are dishonest and untruthful, and perpetrate all kinds of frauds to conceal the condition. A common device is to put forged notes into the bank, ostensibly signed by people of good credit. Another is to fail to cancel and deliver to customers notes which have been paid, and to keep them in the bills receivable. One can readily see how hard it is for an examiner to discover such frauds, when they are perpetrated by shrewd scoundrels who have every advantage of being in the bank all the time, while the examiner comes only twice a year.

Difficulties Confronting Examiners.

After a bank fails and disclosures of dishonesty are made, it is wondered why such things could go on undiscovered so long. The examiner is blamed and abused, with or without reason. In some cases he is very much to blame, but in those which I have had occasion to investigate, this has not very frequently been found to be true. It must be remembered that these frauds and deceptions are, in most instances, being carried on by men of unusual ability—men who stand very high among their neighbors, not only in business, but also in social, religious and political matters. Almost invariably they deceive the whole community, their business associates, their friends, and even their families. It is frequently an astounding revelation to all of these, that the banker who has failed, defaulted and perhaps absconded, or killed himself, is not a man of wealth as well as the ideal of honor and business integrity. It is only the men who establish such reputations that have the opportunity to betray large trusts, and of these, only those with skill and shrewdness and the peculiar courage it takes to face unflinchingly such situations, can carry them on for any length of time without discovery. However his suspicions may be aroused, the examiner is, as I have said, under the great disadvantage of only being able to act after the crime is committed. He can discover them, but he cannot surely prevent such frauds.

Good Record of the National Banks.

Our system of National bank examinations is much the most extensive which has ever been undertaken by any country or government, and the experience accumulated during the forty-two years of its operation covers almost every conceivable trouble or complication into which the affairs of a bank may be brought, either by dishonesty, incompetency or neglect. The methods of examination, reports and criticisms based on them, have, of course, been a gradual growth. In spite of certain defects and weak points, some of them serious and now needing improvement, it has worked very well. In the main, the examiners have been faithful, competent men, doing conscientious and good work. The record of the National banks in regard to failures is better than any other banks we have ever had in the United States, or those of any other country, under at all similar conditions.

Of the seven thousand nine hundred and thirty National banks which have been organized four hundred and thirty-eight have failed, or five and one-half per cent. of the whole number, as against about seventeen and one-half per cent. of banks other than National in the same period. The National banks which have failed have paid their creditors over seventy-eight per cent. of the amount due them, while the other banks have paid only about forty-five per cent. Of the billions and billions of dollars they have had on deposit, the National banks have lost for their creditors in the whole period of their existence only about thirty million dollars.

These records in favor of the National banks are mainly, if not entirely, due to the wise provisions and restrictions in the National Bank Act and examination and supervision by the National authority. The examination provided in the Bank Act from the first, and in this it has never been changed, contemplated the examination of a bank by a single man and, except in the large cities, only provided such pay for it as would cover one or two days' fair pay, including expenses. This is not sufficient examination, no matter how efficient and careful the examiner, to infallibly detect, much less prevent, fraud and dishonesty. It does detect much of it—perhaps most of it—but not by any means all. I am more often surprised at what is detected by shrewd examiners, and upon what slight clews, than at what escapes them.

Examiners Should Receive Salaries.

The weakest feature of the present system of examination is that the examiners are paid by fees instead of salaries. I believe every Comptroller of the Currency has advised a change in this system; certainly all those of recent years have done so. The examiners as a whole are a fine body of men—faithful, industrious and attentive to their duty. But unfortunately this is not true of each individual, and the circumstances of their work being away from the observation of the office makes it difficult to check them up and see that all the work is well done. The temptation to slight it is sometimes too great, and this should be removed as far as possible by changing the basis of their remuneration. It is not reasonable to expect a complete audit of the books of a bank and the checking up of every department in it for a fee of sometimes only twenty dollars. If one were to employ a professional accountant to do such work it would cost many times this amount. This, in a large bank, is the work of many days or weeks. Perhaps it is not practicable nor advisable to have such complete service as this by officers of the Government. It is more a matter for the directors of a bank. It is now being done very thoroughly by an increasing number of the best banks, and it is a matter that every board of directors should give the most careful consideration. No bank should be without a good system of this kind.

The Government can, however, and should by all means, improve the service by paying the examiners salaries and greatly increasing their number, so that a man would have time, and take time, to go into matters throughly as is necessary to get at the real condition of the bank. The men ought to be paid good salaries—large enough to attract and hold good men. It is one of the difficulties of the present service that it is hard to keep a good man. Just as an examiner gets to know his district well, and becomes really efficient, he is apt to be hired by some bank looking for an officer. I see no way to altogether prevent this, but the salaries should be enough to keep men fit for the service in it. It is easy enough to get ambitious young men who are thoroughly competent to go into the service for the experience and acquaintance it gives them. It is more difficult and more important to keep them after they have been trained to the work.

Co-operation Between Directors and the Comptroller.

As I said in beginning, the direction in which we can look for the greatest improvement in bank supervision is in the co-operation between the directors of the banks and the supervising authority. The Government supervision can and should be improved, both by change in system and better administration, and it can do a great deal to help the directors realize their responsibilities and do their duty. For some months past, there has been a most determined effort on the part of the Comptroller's office to fix the responsibility of bank management on the directors of the National banks, and especially to see that the directors are promptly informed of what the bank examiners find in the condition of the banks which calls for criticism and needs correction. All letters of criticism from the office are addressed to the President of the bank, and are generally answered by the President or Cashier. Until recently nothing was done to call these letters to the attention of the directors, except when there was very serious criticism and a bank was in a critical condition. As a result of the former system, banks were often found in a very bad condition, without any effort having been made to advise the board of directors of the facts of the case, and it was a common complaint from directors that they had never been notified of things going on in the bank about which the officers had been written repeatedly. Under the new system every letter which contains any serious criticisms at all closes with a paragraph requesting the directors to join in a letter saying they have received the lettter from the Comptroller, and advising the office what steps will be taken to correct the matters complained of. During the short time this plan has been tried its good results are very apparent. It has resulted in many boards of directors making inquiries into the business of their institutions and bringing to light transactions of which they would otherwise have never known, although it was not only their right, but their duty, to know all about them. It has led to some complaint, and has been resented by the officers of some banks, who felt that it was in some measure a reflection not only upon their management, but upon their character as well. Careful consideration, however, of the proper relations which should exist between the directors of a bank and its executive officers, and especially their legal and moral responsibility to their shareholders and creditors, should convince the bank officer who desires to conduct the business of his bank as he should, that this is a measure looking only to more careful and better administration.

No bank officer who is running his bank properly should have any fear of his directors, and they have a right to know in what respects he is subjecting their business to the criticism of the Comptroller, and, above all, if he has been found violating the law. I feel that this is a most important improvement in the administration of the Comptroller's office, and have perfect confidence that when understood it will meet the approval of every bank officer who wants to run his bank as it should be, and every director who accepts the duties and responsibilities which his oath and the law wisely and properly place upon him. As long as I am Comptroller, I propose to assume, without evasion, my responsibility and to see, as far as I have power to do so, that the directors of the National banks and their officers accept theirs.

The bank examiner and the Comptroller's office have certain duties which they must perform and for which they are responsible, and it is no excuse for them to put blame for their failure to do so in any way upon the directors of the bank. On the other hand, the directors also have independent duties which they must bear and which they cannot shift to the examiners. It is no answer to a charge of neglect of these duties to criticise or complain of the bank examiners. The Bank Act provides that "the affairs of each association shall be managed by not less than five directors," and that "each director, when appointed or elected, shall take an oath that he will, so far as the duty devolves on him, diligently and honestly administer the affairs of such association, and will not knowingly violate, or willingly permit to be violated, any of the provisions of this title." No man is fulfilling the obligations assumed in this oath who accepts an election as director of a bank and then allows the officers to manage all its affairs without really letting him know what is going on in the bank at all, as is too often the case.

The duty of a bank director, if he would fulfill the obligation imposed by his oath and protect the interests of the shareholders for whom he is a trustee, and the creditors, to whom he is under even greater moral obligations, requires that he should know positively that the affairs of the bank are being properly managed. Meetings of the directors should be held regularly and frequently, and be well attended by all the members of the board. At these meetings the officers should be required to make full, complete and intelligent reports in such form and detail as to be easily understood by the directors. All loans and important transactions should be reported and passed upon, and especially all notes and securities should be submitted for the personal inspection of the members of the board who are not active officers. All loans to officers and directors should be more closely scrutinized and examined than any others, and the amount of their total liabilities clearly understood. In addition to such exhibitions as are made at regular meetings, the directors should have frequent thorough examinations made by committees of the board, or experts employed for the purpose. These should be made independently of the active officers of the bank.

Every clerk and every officer of the bank should be examined and checked up as thoroughly as possible, and required to show the examining committee or auditor just how the matters in his charge stand. No man who is in a position of trust has any right to resent such examination, and one who has a proper appreciation of the relation he bears to those who have reposed trust and confidence in him will welcome such an opportunity to show that he has been faithful and efficient. If all the boards of bank directors would do their full duty in the way here outlined, bank failures would almost come to an end. Banks would, of course, make losses, and occasionally one might fail, but it would be rare, and the result of very unusually bad judgment and incapable management. We would very seldom have such sudden and sensational failures of banks, looted from the inside by men who have stood high in their communities, and even thought to be models of honesty and trustworthiness.

Directors are Responsible for the Bank's Management.

The point I wish to emphasize is that the responsibility for bank management is by law placed upon the board of directors. By accepting a place on a bank board and taking the oath of office, a man accepts this responsibility and swears he will diligently and honestly administer the affairs of the association. He is under every moral and legal obligation to perform this duty fully and completely. It is certainly not asking too much of men who accept such trusts that they simply do their plain sworn duty and obey the laws.

This would seem to be a particularly opportune time for a vigorous self-searching among the directors of the banks of the country, as well as all other men who are in places of financial trust and responsibility.

Recent disclosures of the most disgraceful betrayal of trusts by men in the highest positions and the use of these very positions for private gain at the expense of those whom it was their sacred duty to protect, have put the American financier on trial before the country and the world. Not only those who usually are interested in such matters, but all the people of the country, are asking: "If these men are not to be trusted, who is?" "If this much is true, how much more must there not be?" It is only a natural inquiry, whether in the contest for wealth and power the American financial conscience has become deadened and the old ideals of honor and truth have given way to a newer code.

It is a shame, a disgrace, a national misfortune, that such things could have happened when and where they did, but it is a great good fortune that through a quarrel over the spoils, the knavery has been discovered. Unknown, or only suspected, such things are the greatest danger, but their discovery and exposure make it possible to reform them. The more complete the exposure, the more certain the reform. A director or officer of any bank, no matter how small or obscure, holds the same relation to his trust that these men held to theirs, which differ only in size. There is probably not a man here, certainly no member of the American Bankers' Association, who is not the guardian of some trust reposed in him by those who thus depend on his honor and fidelity. We are all responsible in some degree. It is not enough that we cry out for the punishment of those who have been caught in the act. Our duty lies in the faithful discharge of the obligations resting upon us. The upholding of the reputation and character of the banking institutions of the country is in our care and depends on each man doing his full duty.

The President: Before adjournment we will have time to listen to the report of the committee on uniform laws.

The secretary read the following:

Report of the Committee on Uniform Laws.

The committee on uniform laws begs leave to report that during the past year four States have been added to the roll of honor of States with the Negotiable Instruments Law on their statute books; namely, Kansas, Michigan, Missouri and Nebraska. In each of these States the history of success is practically the same—a united effort on the part of the State bankers' association, together with the strong undivided efforts of a few leading bankers. In other States, just as strong efforts were made, and in some the seed has been planted which will unquestionably bear fruit at the next session of the Legislature. In some, almost unsurmountable difficulties were encountered and it will take hard and painstaking work to wear these away. It is sincerely hoped by this committee that the different State associations will keep hammering away, educating the people and Legislatures until the merits of this law will become so clear that in the length and breadth of our beautiful land there can be but one construction of a piece of negotiable paper. In the different States whose Legislatures met during the past year, a brief notice of the reports may be of interest.

In New Hampshire it appears the State association has been disrupted through differences over local matters, and as this committee can only act through State associations, nothing was done there.

In Indiana a strong effort was made to pass the bill both by the bankers' association and by the bar association, but they could not get any intelligent consideration of it.

In Illinois about the same opposition was encountered. The chairman of this committee was one of a committee which laid the matter before the Governor and Speaker of the House, but in each instance the opposition, which was more negative than positive, was such that no effort was made to pass it. The feeling of the State association is such, however, that we know they will not quit until the law is considered on its merits.

In Georgia the State association carried matters along nicely and the bill would have unquestionably passed had it been reached on the calendar. There seems no doubt of its passage at the next session.

In Arkansas the State association made a thorough canvass of the Legislature and found such strong opposition that it was decided best to drop the matter for this session.

In California, South Dakota and Minnesota no efforts whatever have been made.

It is urged by this committee that each State association should take hold of this matter long in advance of the session of the Legislature in order that each member may be properly approached.

The following States are now acting under the Negotiable Instruments Law:

Connecticut,	New Jersey,	District of Columbia,
Florida,	Montana,	Oregon,
Maryland,	Idaho,	Washington,

Virginia,	Kansas,	North Dakota,
Wisconsin,	Michigan,	Arizona,
Tennessee,	Nebraska,	Ohio,
Utah,	Colorado,	Pennsylvania,
Rhode Island,	New York,	Kentucky,
Iowa,	Massachusetts,	Louisiana,
Ohio,	North Carolina,	Missouri.

Frank E. Tracy, Chairman; Homer A. Miller, J. D. Powers, Committee.

Thereupon the convention adjourned until October 12, at 10 o'clock a. m., at the Columbia Theater.

SECOND DAY'S PROCEEDINGS.

COLUMBIA THEATER,
WASHINGTON, D. C., October 12, 1905.

The convention was called to order at 10 o'clock a.m., by the president, Mr. E. F. Swinney.

PRAYER BY THE REVEREND T. S. HAMLIN.

Almighty God, we thank Thee for the beauty and glory of the morning, for the rain that Thou didst send to refresh the thirsting ground, and for the sunshine that this morning gladdened our eyes. We thank Thee for rest of the night; for health, and all the blessings with which the morning is crowned, and we entreat Thy blessing upon these men who have gathered for the business of this day. Grant that all their councils may be overruled by Thee, and that they may so deliberate and plan and execute as to promote the interests of those for whom they stand as representatives. We recognize as from Thee that great and permanent measure of integrity and honor that has marked the financial institutions of our country, and while we deplore all lapses from this high standard, we entreat Thee that Thou shalt so instruct and so strengthen the will that men may be able to execute trusts committed to them with perfect fidelity, that those who trust the institutions of the country in which they place their earnings may receive the due return for that which they deposit, and that there may be throughout all our banks, and trust companies and institutions of every sort where the financial interests of the nation are placed that complete integrity and high honor which shall safeguard all interests. Be with the families of those who are gathered together here as our city's guests; those who are absent from those whom they love, and grant that upon all this gathering in its remaining here and its departures, and in the homes, in the cities and towns of our land and other lands that are represented here, there may abide the blessings of our heavenly father. Forgive our sins, and receive us into the covenant of His love and mercy in His name who has taught us to pray, Our Father who art in Heaven, hallowed be Thy name. Thy kingdom come, Thy will be done, on earth as it is in Heaven. Give us this day our daily bread, and forgive us our trespasses as we forgive them who trespass against us. And lead us not into temptation, but deliver us from evil; for Thine is the kingdom and the power and the glory for ever and ever, Amen.

THE PRESIDENT: We will proceed with the report of the executive council, Mr. Whitson, chairman.

REPORT OF THE EXECUTIVE COUNCIL BY THE CHAIRMAN, G. S. WHITSON.

Mr. President, and Members of the American Bankers' Association—While it has been the custom of my predecessors to make the report to the association at its annual meeting, it is not my intention to burden you with the details of the work which have been or will be covered by the full reports submitted by the various committees. The past year has been a most successful one. Each and every committee has not only cheerfully assumed, but faithfully carried out, the duties imposed upon it, notwithstanding their laborious nature in many instances; and I thank them for it.

The association has added largely to its roll, and our expenses have increased in consequence thereof, but the net result on the credit side of the ledger is about $40,000—the largest, I believe, in the history of the association.

Inasmuch as the constitution will not permit the names of the protective committee being made public, I think it but just that attention should be called to the work that they have accomplished; and notwithstanding the increase in membership and labor in consequence thereof, the amount expended is some $8,000 less than the preceding year. A committee appointed by the chairman in accordance with the resolution passed September 16, 1904, to revise the constitution and report at the next meeting of the council recommends the following changes, which are respectfully submitted:

Article 2, Section 1. Omit the words "those present at any regular meeting," and insert in their place "the executive council."

As the constitution stands at present there is no way to discipline a member or erase his name from the rolls of the association except by a two-thirds vote of the convention. The above change would delegate this authority to the council.

Article 4, Section 3 reads, "Said committee (protective committee) is prohibited from compromising or compounding with the parties charged with crime, or with their agents or attorneys."

The committee recommends that same be changed to read as follows:

"Said committee, or a member of the American Bankers' Association, is prohibited from compromising or compounding with parties charged with crime, or with their agents or attorneys, a case once committed to the association, which results in the apprehension of the criminal."

There is nothing in the constitution to prevent members of the association from making compromises of the above nature, and such action on the part of members on several occasions has seriously interferred with the work of the committee. Would it not be a good thing to insert a clause in the constitution not only prohibiting the protective committee from compromising or compounding with parties charged with crime, but also members of the association, after once having turned a case over to the protective committee for its investigation?

A committee composed of Messrs. Robert J. Lowry, chairman, and Myron T. Herrick, M. M. White and Logan C. Murray, was appointed to draft memorial resolutions relative to the death of the Honorable Joseph C. Hendrix, a former president of this association. Colonel Lowry, chairman of the committee, will read the memorial.

[This memorial will be found in the report of the first day's proceedings, page 676.]

A committee composed of Mr. Walker Hill, James B. Forgan, Dumont Clarke, R. H. Rushton, and F. P. Neal was appointed to draft memorial resolutions relative to the death of the Honorable Charles Parsons, former President of this association.

Mr. Walker Hill as chairman of the committee will read the memorial.

Mr. Hill read as follows:

[This memorial will be found in the report of the first day's proceedings.]

Mr. Whitson (continuing):

The council refers the following communication from Mr. Allen Ozburn, Cashier of the First National Bank of Pinckneyville, Illinois, to the convention, with the recommendation that it be referred to the new executive council.

Real Estate Loans by National Banks.

"Pinckneyville, Illinois, October 5, 1905.

The American Bankers' Association, New York:

Gentlemen—We have a law in the United States Revised Statutes prohibiting National banks loaning on real estate security. There may have been a time, no doubt was, when such legislation was deemed necessary in order to protect depositors to that extent who dealt with National banks. But that time has passed. There is no better security than real estate, neither indeed can there be, and National banks that are restricted in such a manner are put to a great disadvantage in that their competitors, State and private banks are not subject to the law. The fact is that ninety-five per cent. (estimated) of the National banks either evade or violate the law to the knowledge of the department, which proves the imbecility of the law. We believe all National banks outside of the reserve cities would hail with delight the repeal of this law and we feel sure would coöperate to secure this result if your good offices could be secured to champion their cause.

We believe you as an association are interested in securing legislation favorable to your members, and are no doubt just as desirous of having unfavorable legislation repealed. This could be done, we believe, with no injustice to the banks not affected, and we would consider its accomplishment the greatest single service you could render at this time to that class of your members who are under the ban.

We would thank you for your views on the subject, stating the conditions under which you would undertake the task, promising our assistance in arranging any preliminary.

Very truly yours,

ALLEN OZBURN, Cashier, First National Bank."

The President: If there is no objection the communication will be referred to the incoming council.

Mr. Whitson (continuing): The council refers the following communication from Mr. Myron Campbell, Cashier of the South Bend National Bank, South Bend, Indiana, to the convention, with the recommendation that it be referred to the new executive council.

The Secretary read as follows:

South Bend National Bank, South Bend, Indiana, October 3, 1905.

J. R. Branch, Secretary, New York:

Dear Sir—Referring to my communication of August 29, I feel so certain that the third item, protection for bank depositors, will not meet with general favor that I think it better not to ask the executive committee to consider it at this time. I therefore enclose substitute resolution, with this item omitted, which you may, if you please, offer for consideration in place of the original.

Yours very truly,

MYRON CAMPBELL.

"Resolved, That Congress be asked to pass in substance the following amendments to the National Bank Act.

1st. Whoever, with intent to defraud, shall by false or incomplete statement of the resources and liabilities, direct and indirect or contingent, of any firm, company or corporation, body politic or individual person or persons, or by color or any false token or writing or any false pretense, obtain from any National bank association, either directly or through any commercial agency or broker or dealer in commercial paper, any money or credit, or the transfer of any bond, bill, receipt, promissory note, draft or check, or anything of value, whereby such National banking association shall suffer any loss, shall be deemed guilty of a misdemeanor, and on conviction thereof shall be imprisoned for not less than five years nor more than ten years.

2d. It shall be unlawful for any insolvent National banking association to receive deposits, and every President or Cashier who, knowing such association to be insolvent, or who having good cause to know or believe it insolvent, shall with intent to defraud, receive a deposit, or permit to be received a deposit from any person or persons, firm, company or corporation, or from any agent thereof, not indebted to such association, any money, check, draft, bill of exchange, stocks, bonds, or other valuable thing which is transferable by delivery, whereby the deposit so made or any part thereof, is lost to the depositor, shall be deemed guilty of a misdemeanor, and on conviction thereof shall be imprisoned not less than five nor more than ten years.

The failure, suspension, or involuntary liquidation of any such association within fifteen days from and after the time of receiving such deposits shall be prima facie evidence of an attempt to defraud on the part of such President and Cashier.

3d. So amend section 5,137 that National banking associations may accept as security on original loans, mortgages on unincumbered real estate."

Mr. Burns, of West Virginia: I move that we refer the resolution to the executive council.

The motion was seconded; and the question being taken, it was agreed to.

Mr. Whitson (continuing): The council refers to the convention without recommendation a communication from N. B. Van Slyke, President of the First National Bank, of Madison, Wisconsin. As Mr. Van Slyke is attending the convention, we will be pleased to have him read his paper or explain his resolution.

Mr. Van Slyke, President of the First National Bank of Madison, Wisconsin, read as follows:

Address of N. B. Van Slyke.

Mr. President and Gentlemen of the Convention—The purpose of presenting this paper is to secure an expression of the association in reference to the need of amending an act which, since its passage, the banking interest has in some respects outgrown, and in order to bring out a free discussion of any objection that appears, the following is respectfully offered for consideration:

This thirtieth year of our association as a national body of bankers has clearly demonstrated the wisdom of organization, of concerted action to secure the success we have in our undertakings, and while very much good has already thereby resulted to the commercial and financial interests of the country through such combined efforts, there still remains opportunity for further improvement, both in our methods and laws governing the same.

I beg, therefore, as briefly as possible, to ask your consideration of what may be deemed advantageous to adopt.

Whether National, State, Savings or private institution, banks, in the estimation of the general public, are classified as one; and whenever a failure occurs, from whatever class, great or small, "It's another bank failure!" which for a time more or less affects the character of all, and touches that important element of banking capital—public confidence—creating distrust, and is harmful to every class; hence all banks are interested in the passage of restraining laws to protect their own stockholders, no less than the security of their patrons; laws admittedly just and reasonable, such as will be enforced when enacted. We have too many laws, and too little enforcement, and the popular tendency prevails to restrict, if not prohibit, many lines of perfectly legitimate trade.

Laws unreasonable in their requirements tend to disrespect and consequent disregard; this we too often see in the daily non-observance of municipal, State and Federal acts; when considered of minor importance, we are apt to overstep the line between a questionable compliance and open violation, begetting a certain spirit of lawlessness of greater or less consequence.

There should be no occasion for disobedience.

Owing to the lack of uniformity in State banking laws, only the National Bank Act will here be referred to as subject to amendment, though the States are conforming their respective laws more and more to the National Act, and are alike interested in improvement.

Conditions have materially changed in the past forty years, and what may have been prohibited has become a banking necessity to now adopt, as being especially applicable to the class of country banks now being organized.

Of Loans on Real Estate.

In all other cases, notes and bonds secured by mortgage on real estate are legally denominated "personal" property, but by implication alone, courts have construed mortgages held by National banks as real estate.

Section 5,137 of the U. S. Revised Statutes—the National Bank Act—says: "A National banking association may purchase, hold, and convey real estate for the following purposes, and for no others, etc." * * * "such as shall be mortgaged to it in good faith by way of security for debts previously contracted; * * * but no such association shall hold the possession of any real estate under mortgage, of the title and possession of any real estate purchased to secure any debts due it, for a period longer than five years." The holding of a mortgage on real estate does not constitute possession of the real estate until purchased. It is difficult to understand the difference between the bond of a railway company secured by mortgage on real estate (which banks are permitted to take) and the land mortgage given by an individual to secure his note or bond; however, such has been the ruling, intended no doubt to guard against too permanent investments in other than strictly commercial paper. This may be well for the large banks in the so-called commercial centers—the redemption points—but for the country bank the law is prejudicial both to the borrower and the lender. There is no better asset for a country bank to hold, in a limited proportion, than loans secured by real estate mortgage. Country banks at least should therefore be privileged to accept mortgage security, say not to exceed twenty per cent. of their loans, especially so since the only collateral a country borrower can well give is a mortgage.

Of Excessive Loans.

Attention is also called to the provisions of Section 5,200, U. S. Revised Statutes, so often quoted as limiting a certain class of loans to one-tenth of a bank's capital stock, an unreasonable restriction in many instances, and so frequently disregarded that it needs amendment. Were the limitation one-tenth of the actual unimpaired capital employed, the law would be respected; now it is not.

As the law stands, and with the disposition of banks to increase their surplus, rather than their capitalization, the limit becomes more and more disproportionate to the bona-fide capital, between which and its nominal capital stock there often exists such wide difference.

Other corporations are justly measured by their actual capital invested, regardless of their capitalization; why not banks in like manner?

I, therefore, offer the following:

1. Resolved, That this association earnestly requests Congress to amend section 5,137, U. S. Revised Statutes, so as to enable or permit banks located outside of the so-called redemption cities to accept of real estate mortgage security not to exceed twenty per cent. of the loanable funds.

2. Resolved, That to encourage the accumulation of surplus and undivided profits of banks, it is the opinion of this American Bankers' Association that Section 5,200 of the U. S. Revised Statutes, restricting loans to individuals, firms, and so forth, to one-tenth of the capital stock, should be so amended as to allow such loans to the extent of one-tenth of their actual unimpaired capital employed, irrespective of the nominal capitalization.

Mr. Hamilton: I move that this excellent paper be published and that the resolution be referred to the committee on financial legislation when organized. I think that there is a great deal of good in that paper, and I know that there are other questions of as equal importance coming before the association along the same line which should be embodied with that.

The motion was seconded, and the question being taken, it was agreed to.

Mr. Whitson (continuing): The following communication was received from the Association of American Railway Accounting Officers, and the council refers it to the convention for discussion.

The secretary read as follows:

Association of American Railway Accounting Officers, Chicago, Sept. 19, 1905.

Mr. James R. Branch, Secretary:

Dear Sir—Under another cover I am mailing you this day a copy of the twentieth report of this association, and beg respectfully to refer you to page 196 thereof, whereon are set forth two resolutions (No. 1 and No. 2) adopted by this association at its last annual meeting in regard to form of drafts.

Under the terms of resolution two you will notice that I am directed to call the attention of the bankers' association to the action of this association and to invite the coöperation of the bankers' association in the establishment of uniform standards for drafts.

The previous action taken by this association, and which was affirmed by resolution one, is set forth in memorandum attached to this letter.

I shall esteem it a kindness if you will take such action in this matter as will meet the desire of this association as outlined in resolution two above referred to.

This is signed by C. G. Phillips, secretary.

Memorandum: The form of draft recommended as standard by the association embodies the following characteristics:

(1) The number shall be in or near the upper right-hand corner.

(2) The amount in figures shall be at or near the extreme right center, followed on the next line by the amount in words.

(3) The name of the bank or individual on whom the draft is drawn shall be in or near the lower left-hand corner.

(4) The size of the draft shall be eight and a half by three and a half inches.

(5) This does not preclude the addition of a statement of accounts within the size named.

THE PRESIDENT: If there are no objections, the communication will be filed.

There were no objections, and the communication was accordingly filed.

Mr. Whitson (continuing): The council refers to the convention a communication received from Mr. G. W. Garrels, President of the Franklin Bank of St. Louis, Missouri, and as Mr. Garrels is attending the convention, we will be pleased to have him read his paper.

Mr. Garrels read his paper as follows:

RESOLUTION IN REGARD TO CURRENCY REFORM AND SUGGESTIONS FOR A PERMANENTLY SOUND AND ELASTIC CURRENCY SYSTEM, OFFERED BY G. W. GARRELS, PRESIDENT OF THE FRANKLIN BANK, ST. LOUIS, MISSOURI.

RESOLUTION.

Resolved, To appoint a committee to wait upon Congress, or the proper committees, and to ask that a commission be selected of members of Congress, professors of political economy, and practical bankers, whose duty it shall be to consider, determine, and report upon:

1. The nature of money, its functions, and scientific classification;
2. The duties of the Government in regard to money, and the limitations of the powers of the Government by natural, moral and commercial laws:
3. What can be considered a modern, practical, and elastic currency system, which will stand the test of panics, wars, and political changes, and is suitable for an advanced commercial nation opposed to privileged monopoly, without regard to the system now in existence?
4. To recommend such laws as will be necessary to change gradually from our present currency system to the one agreed upon by the commission.

CURRENCY REFORM.

Reform of currency is an intricate and delicate question, as currency is the life-blood of commerce, the arteries of which are so spread and interwoven with all phases of life in the modern system of exchanges of goods and services that a well-regulated currency is one of the causes of general contentment and welfare. History teaches us that erroneous currency laws have caused innocent sufferers untold hardships, unbearable wrongs, and general misery.

In opening a discussion of currency reform, it would be desirable that bankers, professors of political economy, and statesmen should first come to a full understanding and agreement concerning the following cardinal points:

1. The nature of money, its functions, and scientific classification;
2. The duties of the Government in regard to money, and the limitations of the powers of the Government by natural, moral, and commercial laws;
3. What can be considered a modern, practical, and elastic currency system, suitable for an advanced nation opposed to privileged monopoly, without regard to the system now in existence?

After an agreement has been reached on these points, it will be comparatively easy to find ways and means of gradually approaching this desirable currency system.

Our present currency system is an inheritance of the Civil War, and consists of a patchwork of political compromises. For sixteen years during and after the Civil War this system caused the nation to suffer under the curse of irredeemable paper money. The Legal Tender Act was only justified before the Supreme Court of the United States as a desperate war measure, occasioned by a war of such vast proportions and intense energy as to cost for five consecutive years, annually, a ten years' income.

The incorrect principle of endowing due bills of the Government with the function of money showed itself in what followed the excessive issue of such bills. In accordance with the Gresham law, the good money left the country. Gold and even fractional silver coins became articles of trade, and disappeared from circulation. The circulation soon consisted entirely of enormous issues of paper money, based on the credit of the Government. All values fluctuated with the fortunes of war. Defeats of the Union armies influenced public opinion to such a degree that the consideration of the possibility of final repudiation at one time placed a paper dollar at a discount of sixty per cent. as compared with gold. These bills had to be and were redeemed at par. Thus this incorrect policy more than doubled the cost of the war. Had the war been conducted on a gold basis, as was the essence of the advice given by New York bankers, and as was lately done by the Japanese, these enormous losses could have been avoided.

The power of coining money is forbidden by the Constitution of the United States to the States, and is granted to the United States.

The power over tender is forbidden to the States, and not granted to the United States.

The power of Congress to make Treasury notes legal tenders has been sustained by the United States Supreme Court on such slim grounds, as that the said power is incidental to the following powers:

1. To declare war;
2. To raise and support armies;
3. To provide and maintain a navy.

When the first legal-tender law was enacted Congress promised its abolishment at the close of the war. Forty years have since passed, but this pledge remains unredeemed.

We have in our currency about $500,000,000 of overvalued silver dollars. This is merely token money. As this is largely in excess of the demand for such coins, representatives of this token money are forced into circulation in the shape of silver certificates calling for forty-five cents value and for fifty-five cents trust. This subtle trick is ridiculous and degrades the dignity of one of the foremost nations of the globe by covering up an indebtedness of nearly $300,000,000 of the Government. This amount, representing fifty-five per cent. trust, does not appear as debt in the financial statement of the Secretary of the Treasury. In fact, when the silver was coined, sums aggregating about $130,000,000 were accounted for as extraordinary income, on the false assumption of seigniorage. The balance of about $170,000,000 represents the loss in the market value of the silver since it was bought by the Government.

The National Bank Note a Delusion.

We all know that the National bank note is a delusion. It is no bank note at all. It does not circulate on the credit of the bank of issue. It does not appear when the trade needs it, and it does not disappear when it has done its duty and is no longer needed. It is simply an artificial way for the General Government to borrow money cheaply. It is forced into circulation, after the Government has been in the market to sell bonds, without regard to a reserve of gold, of which every good paper money is a representative, and in which it must be easily redeemable to remain good. The National bank note is issued without regard to the needs of trade, for the benefit of which bank notes were invented. It does not go out of circulation until it has done all possible harm by congesting the money market and demoralizing interest rates. Abnormally low interest rates in turn promote non-dividend paying enterprises, inflate prices of securities, cause relaxation of the rules for doing a safe banking business, induce merchants and manufacturers to spread out beyond the safety limit, cause them to allow their assets to become slow and fixed, and promote gambling on the exchanges of the country.

Interest rates are indications of healthy or unhealthy business. Too high rates and too low rates indicate sickness in the commercial, industrial, financial, or political world. Countries with an elastic currency watch with anxiety their stock of gold on which their bank notes are based and protect the same by raising the rate of interest, which in turn is a signal of warning to every intelligent business man to contract his enterprises. The people of the United States have no such tocsin, which is due to their faulty currency system.

Bonds Issued for the Panama Canal Will Inflate the Currency.

The Government will need $200,000,000 or more for the Panama canal and will issue $200,000,000 or more in bonds. This will form the basis for $200,000,000 in bank notes. Forced into circulation, this addition of bank notes will first demoralize the interest rate and then drive out $200,000,000 in gold in accordance with the Gresham law. If we had a scientific currency law the result would be opposite. The large demand on the loan market would have the tendency to raise the interest rate, which in turn would encourage the importation of gold.

An enterprise like the Panama canal calls for loanable capital; or, in other words, for the savings and accumulated wealth of the nation. Only a small portion of this loanable capital will consist of the idle money seeking investment. The greater portion will be furnished by the products of our farms and of our mines, by the contents of our elevators and of our warehouses, and the products of our factories and other forms of our wealth. The money used for this transformation as medium of exchange will be only needed temporarily and under a good currency law would disappear after it has done its service.

Under our present currency law it may happen that our circulation is increased by the full amount of the Panama canal bonds to be issued. You are aware that trust companies and State banks use National bank notes without discrimination as reserve for deposits. You are also aware that large deposit accounts are created by loans made to customers. The increase of National bank notes of say $200,000,000 may, when digested by the banking mechanism, thus furnish loanable funds to an amount of nearly a billion dollars, and this without any regard to the loanable capital in existence.

Will not this be inflation against which our honorable Secretary of the Treasury has so earnestly cautioned?

All of our currency, excepting gold and gold certificates, is based on the credit of the Government. Hence, when money rates have hardened, in consequence of over-speculation, of over-trading, and over-production, the Government is looked to for help. It is expected to keep the money market easy in order to prevent disasters. It is often blamed for a depression of business, which is only the natural reaction, and often the proper correction, of over-trading. In fact, the Government is expected to put every business which is out of joint in good running order by distributing deposits of money amongst the banks. The Government should be relieved of this burden. It should be taken out of the banking business, and the currency out of politics. As long as the Government is a competitor in the banking business there can be no good financial legislation and no good banking.

Other enlightened nations have separated the credit of their Government entirely from their currency, and the time seems favorable for a similar separation of the credit of our Government from our currency system, and the building up of a new elastic currency system comprising gold and representative money readily and automatically redeemable in gold.

MONEY.

Barter has preceded trade.

Purchase and sales came into existence only where communities had singled out a general commodity which served as a common denominator, and as a medium of exchange, by comparison with which the values of other goods, or services, were measured. Cattle, shells, beaver skins, tobacco, iron, copper, tin, silver, gold, etc., have served at different times as such general commodities.

Gold, as the survival of the fittest, is now the standard of value of the civilized nations, and the medium of exchange in which the balances of international commerce are settled. Gold money, which as such a general commodity, completes an exchange fully, and gives value for value, is therefore the only real money, and is the basis of all substitute, representative, or token money.

THE DUTIES OF THE GOVERNMENT.

The Government is properly entrusted with the charge of assaying the gold, of weighing it, and of placing its stamp upon it as a certificate of correctness of the fineness and weight, but it should not make its coinage a source of profit.

There has been hardly a government in existence which has not abused this trust. History shows us how in ancient times, in the middle ages, and in modern times, governments have committed knowingly, and unknowingly, crimes by reducing the weight of coins, or debasing the alloy. The weight of the Roman as, which was originally twelve ounces, was repeatedly reduced until it was finally equal to five-twenty-fourths of an ounce. You all know how little is left of the pound sterling silver and the pennyweight silver in the English pound and the penny of to-day, respectively.

Levying a seigniorage in excess of the actual cost of coinage is immoral, and ought to be below the dignity of the Government. The sovereign prerogative of levying a disguised tax under the designation of seigniorage, which was formerly claimed by the rulers of the different countries, is mere stealing, and the holder who uses the coin in international settlements is the loser. The coinage laws of almost all civilized nations have now recognized this principle.

The issue by the Government of its own paper money with a legal-tender quality violates the theory that money is a commodity or its representative. The United States notes are not representatives of money, but certificates of indebtedness. A limited amount does circulate at par as long as such notes are redeemed in real money. Lack of redemption and excessive issues soon bring losses to the holders. These notes will then pass at a fraction of their face value only, proportioned to the probability of their final redemption. History teaches us that United States notes declined to forty cents on the dollar during the Civil War, and notes issued by the Continental Congress during the Revolutionary War declined to nothing, although the latter were finally redeemed at one cent for one hundred cents face value.

Successive bad crops, an extended civil or foreign war, extravagance in appropriations by Congress, may again cause an excessive issue of paper money by the United States, unless our currency system is put on a scientific basis, and is separated entirely from the credit of the Government.

The foremost European nations have left the issue of paper money entirely to banks, because they have found that credit is extremely sensitive, and that in bad times, when redemption of paper money, for which the Government is responsible, is in doubt, the money itself may become the explosive which may eventually shatter the foundations of the Government.

Is it not wise to divorce the money question entirely from politics?

European governments, in chartering national banks of issue, have created privileged monopolies. That such institutions could permanently exist in the democratic atmosphere of the United States is doubtful. History shows us that the two United States banks were dragged into the whirlpool of party politics and had to go out of existence, probably at the time to the detriment of commerce and of the people of the United States.

Co-operation of corporations created under general laws will give strength without monopoly, and this seems to be the proper solution of this question for the United States.

All paper money ought to be under strict control of the Government, but the burden of its redemption, with the exception of gold certificates, should be entirely removed from the United States Treasury.

As gold money is subject to wear in circulation, it should be the duty of the Government to facilitate and enforce the withdrawal of light-weight gold pieces.

It is the duty of the Government to provide subsidiary or token money, coined of less valuable metals, like silver, copper, or nickel, with a limited legal-tender quality, for circulation in the home country only. This should be coined in quantities sufficient to satisfy the demand fully, but not in larger quantities. The Government ought to provide for a ready distribution and redemption of subsidiary coins.

A Simple Elastic Currency System, Providing for Bank Notes Redeemable in Gold.

Gold: Gold, by its inherent qualities, has become, with all civilized nations, the measure of value, the medium of exchange, and the general commodity in which the balances of all commercial nations are settled. Even in silver-using countries the value of goods which are exportable, and of all merchandise which is imported, is measured by gold, though prices are expressed in silver. But these prices go up and down in sympathy with the price of silver in gold. Gold has gained this position in accordance with the natural law of "the survival of the fittest."

Gold Certificates: The object of gold certificates is: To make the payment, handling, and carrying of large amounts more convenient; to save in the expense of shipping and to reduce the shipping risk.

Subsidiary Coin: Subsidiary coin is made of sundry metals other than gold, and is of limited legal-tender quality, intended only for home circulation, and therefore has less intrinsic value than its face calls for. It should not be coined in excess of the home demand for its circulation.

Bank Notes: The loss which gold coins suffer by circulation, the inconvenience which the transfer of large amounts occasions, the ease of increasing the circulation whenever the trade demands it, by the use of paper money, has caused all civilized nations to use substitute or representative money in the shape of bank notes.

The essential qualities of good bank notes are:—

(1) Absolute safety under all circumstances;
(2) Ready redeemability in gold;
(3) Elasticity.

By elasticity I do not mean merely increase in the amount of bank notes in circulation whenever commerce demands such an increase, but also automatic disappearance from circulation when the representative money has served its purpose. The want of a provision for a contraction of the volume of bank notes after the necessity for their use has ceased brings about a congestion of the money market, which encourages an inflation of values, unreasonable speculation, and an unsafe extension of business, often leading to a financial crash.

How Bank Notes are Secured.

Bank notes are secured:

By a first lien on the assets of the bank of issue;

By a district safety fund and a general guarantee fund, created by taxes on the circulation;

Jointly and severally by the combined capital of all of the associated National banks of issue of the United States;

By a qualified guarantee of the United States of America, inasmuch as the Treasurer shall receive at par all such bank notes in payment to the Government, and that he shall not pay them to its creditors except with their consent;

By a reserve of gold, or gold certificates, to be held by each bank of issue equal to thirty per cent. of its outstanding bank notes, four-fifths of which is to be held with its redemption agent, the said reserve being held exclusively for the redemption of bank notes;

By a prohibition against including bank notes as any part of the legal reserve to be kept by a bank;

By an amount equal to the amount of circulation outstanding of easily convertible bonds, or well secured short notes not running in excess of thirty days.

The Redemption of Bank Notes.

Every reserve city is made a redemption city, and a certain adjoining district is attached to it and forms one banking district. If one such district is too extended, it is subdivided and an additional redemption city is created.

An office of Deputy Comptroller is established in every redemption city. The Deputy Comptroller issues bank notes to the different banks entitled to them in his district upon application; keeps the books for his district; and supervises the redemption of bank notes, and bank examinations of his district.

Every bank of issue in the district designates one bank in its redemption city as its redemption agent. Whenever any bank note reaches the counter of any bank in a redemption city, it ceases to be money. It has to be redeemed. It is cancelled and withdrawn from circulation. If the bank note to be withdrawn from circulation originated in the redemption city, it is paid by the bank of issue, cancelled and delivered to the Deputy Comptroller for credit on his books. If the bank note to be withdrawn from circulation did not originate in the redemption city, but in the same district, it is redeemed by the redemption agent in gold or through the clearing-house. It is charged to the bank of issue by the redemption agent and delivered to the Deputy Comptroller against his receipts. The redemption agent advises the bank of issue of the denominations and numbers of the notes redeemed. The Deputy Comptroller cancels the notes, credits the bank of issue, and also advises the latter of the denominations and numbers of the notes redeemed.

If the bank note to be redeemed originated in another district, the said bank note is delivered by the receiving bank to the Deputy Comptroller against his draft on the redemption agent of the bank of issue in the redemption city of the district in which the note originated. A schedule of the denominations and numbers of the notes redeemed is delivered in duplicate with the bank notes to the Deputy Comptroller. A third copy of schedule is attached to the draft, to be finally forwarded by the redemption agent to the bank of issue. An exchange charge is established for the drafts of the Deputy Comptroller, graduated according to the distance between the place of payment and the redemption city. This is allowed to the receiving bank, and is payable by the bank, the bank notes of which have been redeemed. The Deputy Comptroller cancels the bank notes and forwards them, with a copy of the schedule, to the Deputy Comptroller of the district in which the bank notes originated.

The Deputy Comptroller has charge of a sufficient supply of blank bank notes for each bank in his district, and delivers the same upon the application of any bank of issue entitled to them. If the Deputy Comptroller has on hand an application for additional circulation by a bank of issue at the time when clean, serviceable notes come in for redemption, he may reissue such bank notes instead of new ones.

General Guarantee Fund.

Every one of the associated National banks is entitled to issue bank notes equal to one hundred or one hundred and fifty per cent. of its paid up capital. Each bank pays taxes on its outstanding bank notes at the rate of one-half per cent. on the first forty per cent., one per cent. on the next ten per cent., two per cent. on the next ten per cent., and so on, the rate of tax gradually increasing. The taxes received on circulation are set aside by the Government as a "general guarantee fund" until the amount received is equal to five per cent. of the maximum previous circulation. Whenever the income from this source is in excess of five per cent. of any previous maximum circulation, the excess is to go to the Government.

District Safety Fund.

An assessment of one-half per cent. per annum is collected in each district on outstanding circulation to form a district safety fund until the same reaches two per cent. of the maximum previous outstanding circulation of the district. In case of impairment of said fund, or increase of the outstanding circulation, pro rata assessments are made to maintain the fund in the same proportion.

In case of a bank failure, the outstanding bank notes of the bank that failed are at once redeemable out of the general guarantee fund, which is later reimbursed as a first preferred creditor out of the assets of the bank that failed up to the full amount of the outstanding bank notes. In case the assets of the bank that failed are not sufficient to cover its circulation, one-quarter of the loss is made good by the district safety fund, and three-quarters by the general guarantee fund.

The object of the district safety fund is simply to promote watchfulness, which can be exercised more easily near by than at a distance.

The clearing-house of the redemption city appoints a committee, which assists the deputy-comptroller in the supervision of the banks of the district, and has power to examine any member of the associated bank of issue of the district. If an examination shows a bank to be in a failing condition, it can be closed at once with the assistance of the Deputy Comptroller.

The average circulation under the Suffolk redemption system amounted to about forty per cent. of the maximum circulation allowed, and under the proposed system would probably not exceed this rate. The graduated tax would make a high issue unprofitable, and one-half of the amount of circulation allowed would probably seldom be exceeded, except in times of stringency, when money commands sufficiently high rates of interest to enable the bank of issue to pay the higher rates of taxation.

In the foregoing I have outlined a scheme for a permanently sound and elastic currency system, in which prompt redemption prevents by itself any inflation and which is liberal enough to provide for any emergency.

The emergency circulation suggested by our honorable Secretary of the Treasury has some good features, but it is only an addition to a currency system built up on wrong principles. The want of publicity taints the whole class of this money to the whole extent of the permissible issue and deprives bankers of an indication on which to base their judgment.

I do not ask you to endorse this scheme, but I do ask you to support me in the following assertions:

1. Our present currency system is faulty;

2. The present time is opportune for considering its improvement;

3. In considering this matter of a sound and elastic currency system, the aim should be to create a scientific currency system which will be free from the faults of the present system, will stand the test of panics, wars and political changes, will stand comparison with the best system in existence, and will be worthy of one of the foremost commercial nations of the world.

Mr. Whitson (continuing): The following resolution offered by Mr. Lewis E. Pierson, of the New York National Exchange Bank, is offered for the consideration of the convention, with the recommendation from the executive council that it be adopted:

Resolved, That the President appoint a standing law committee of five members, to whose attention shall be brought all decisions and laws on banking matters, which are now or shall hereafter be at variance in different States.

This committee shall be instructed to provide ways and means to bring about uniformity in all matters of this character and be authorized to employ necessary counsel to properly prepare and carry through its plans.

Its expense shall be limited to such appropriations as may be made by the executive committee, to whom all reports of expense and progress shall be rendered.

On motion of Mr. George, the resolution was adopted.

Mr. Whitson (continuing): The following communication from Mr. Pierson is referred to the convention, without recommendation from the council:

The secretary read as follows:

"Resolved, That the president appoint a committee of five to confer with the joint committee of shippers and carriers now considering the adoption of a new uniform bill of lading."

A Member: I move the adoption of that resolution.

The motion was seconded, and the question being taken, it was agreed to.

Mr. Whitson (continuing): The following communication from Mr. E. P. Kuhl, Cashier of the Lincoln National Bank, of Lincoln, Illinois, is referred to the convention, without recommendation from the council that it be adopted.

The secretary read as follows:

Lost Gold Certificates.

"Whereas, Under the act of Congress of March 14, 1900, the Treasurer and Assistant Treasurers of the United States are authorized to issue 'gold certificates of deposits' payable to order of any bank or banker making deposit of gold; and

Whereas, the convenience of this method of storing gold is recognized and taken advantage of by banks and bankers all over this country,

Wheras, the Honorable Secretary of the Treasury under date of June 21, 1905, advised a member of this association 'that there is no authority of law for the issue of duplicates in lieu of lost gold certificates'; be it therefore

Resolved, That the attention of Congress be called to this state of facts, and that it be asked to pass such laws as will enable the Secretary of the Treasury, in the event of a gold certificate of deposit becoming lost or destroyed, to issue a duplicate therefor under the usual restrictions governing the issue of a duplicate for a lost or destroyed U. S. Registered Bond; and be it further

Resolved, That recognizing the importance of such an act to all banking institutions of this country, the secretary of this association is hereby instructed to send copies of the above preamble and resolution to all Congressmen, recommending the passage of a law that will relieve this condition of affairs."

The President: I am sure the members of this association will concur in this resolution.

On motion the resolution was agreed to.

Mr. Whitson (continuing): The following preamble and resolution offered by Mr. Robert J. Lowry is presented to the convention, without recommendation from the council.

The secretary read as follows:

Subsidies to American Ships.

"Whereas, the export trade of the people of the United States is annually on the increase, and in the years to come will necessarily increase in a greater ratio than it has in the past; and

Whereas, the percentage of foreign freight carried in our own American ships has decreased until, compared with the gross amount of our exports, it is ridiculously small; and

Whereas, this is to the great disadvantage of the people of the United States from the viewpoint of proper economy in the conduct of business, besides greatly detracting from our national prestige and pride; and

Whereas, the opening of the Panama Canal will be of the greatest importance to the commerce of this country, and will render even more necessary than at present the building of more ships to carry our freight to the Oriental and other markets of the world; and

Whereas, the passage of a ship subsidy measure on the part of this Government would be a substantial encouragement to ship-building, and be a long stride toward the upbuilding of a strong American merchant marine to carry our freight and mail direct from all our ports to foreign ports; and

Whereas, it is necessary for the maintenance of our national prestige among the civilized nations of the world that we do not allow our flag on merchantmen to become well-nigh extinct upon the seas; and

Whereas, the building of ships, thus encouraged by Government subsidy, would mean employment to skilled labor, as well as common labor, and would give a healthy impetus to internal trade in the purchase of all supplies necessary for the building of these ships; therefore, be it resolved by the American Bankers' Association in convention assembled:

1st.—That the members of this association are deeply interested in any measure which will promote the interests of the whole country industrially and commercially, and especially with reference to our foreign commerce.

2d.—That we favor and most respectfully urge the passage by Congress of some measure to foster and encourage the upbuilding of our merchant marine, and give us back the prestige upon the high seas which we once enjoyed.

3d.—That we favor the ship subsidy measure, which has received consideration at the hands of our Congress, which we think would tend to restore our flag upon the seas, and build up our merchant marine to the extent that the necessities of our trade now and in the future may demand.

4th.—That we recommend that our Senators and Congressmen favor some just and equitable measure, that will bring about the results, and afford the relief above suggested.

5th.—That through our legislative committee we memorialize the Senate and House of Representatives of the United States with a copy of these resolutions.

Mr. Low, of Maine: As a member of the association from Bath, Maine, where these ships will be built, I wish to second the motion.

Address of Robert J. Lowry.

Mr. Robert J. Lowry, of Atlanta, Georgia: Mr. President, I know of no proposition ever coming before the association of greater importance than the one just read. Commodore Maury, way back in older times made a chart, and in his day every ship that plied the ocean sailed by his chart. He was an able officer, and we are proud of him. I have been thinking that if those routes traversed by ships in those days could be filled up by debris, or something of the kind for want of use, that they would have been filled up long ago if the keeping of them open depended upon the ships from the United States. Foreign nations' ships are carrying the commerce that ought to be carried by our own ships.

When I presented this to the executive council and they referred it to your body, I expected it to come up on yesterday, when the Secretary of the Treasury said so many good things and appropriate things upon the same subject. I do not believe it is worth my while to say another word in behalf of this proposition. I would like to see our flag on a thousand merchantmen carrying our products to every part of the globe, and the only way to do it is to let people understand that if they will build the ships we will give them some encouragement. We built railroads across the continent by aid from the Government, and we can take our stuff to the port now, but we have no ships to carry it from the sea ports.

I do believe, gentlemen, that it is our duty to have some act of this kind passed. There are no people anywhere more interested in it than the bankers of America. The commerce of the country is what we make our money out of, and if the country does not prosper we do not prosper, and we should do everything in the world we can on this line, giving prosperity to the whole country, and in that way we reap benefit ourselves.

It is not from a selfish standpoint at all, because I always have held, and I hold now, that the patriotism among bankers is as great as is to be found in any other vocation in the world.

I hardly think it is worth while for me to say anything further, but I do sincerely hope that you will pass this resolution, give it your approval, or give your approval to some other proposition.

Edward J. Parker, of Quincy, Illinois: Mr. President, I am glad that Colonel Lowry has had the courage and practical good sense to introduce this resolution in the convention. I rise to support the resolution and wish to state a few things in that connection. It was Commodore Perry who opened up the ports of the world under the American flag. In this day our ships have almost disappeared from the seas. Within a few years I have seen in Japan on an inland sea fifteen or twenty ships lying at anchor, illustrating what her commerce is, and what war costs in the diversion and waste of commerce.

Some of you are anxious that our navy should be enlarged. Some object to the expense. I wish to make a point here. Some of the best naval officers in the navy have said to me (and this, mind you, after the Spanish War and the use of steamships which were purchased or leased in order to act as scouts), that although we might have subsidy laws passed by Congress, yet the expense of those appropriations would be very considerably held down if we would follow England and Germany and Japan in granting modern subsidies, but at the same time controlling the construction of these fast cruisers. Think for a moment of that great act of Great Britain in transporting to the Cape in a few weeks, under such regulations of construction of her mercantile marine, hundreds of thousands of men. We have purchased Alaska, but she is isolated. We have an extra Hawaiian Island; we have taken possession of the Midway Islands; by war we have acquired the Philippines. Whether or not you think we ought to be a world power, we are a world power and we cannot help it. Now, in case of war in this country we need those vessels as much as Great Britain and Germany to protect our isolated possessions. It is said that commerce follows the flag. We must make it do so, and Congress can begin by extending by moderate and safe subsidy acts relating to trade with South America and Asia. We are handicapped in this way. We cannot manufacture a ship in competition with Great Britain, Germany or Japan for the reason that we have a high protective tariff and we have to pay so much for our labor. We pay forty to fifty per cent. more. Japan or England or Germany can put a steamer on the ocean and save $20,000 or $30,000 in salaries to officers alone, and when it comes to seamen there is still greater difference. So, I say we are handicapped in that respect.

(Cries of "question, question.")

JOHN G. FLETCHER, of Little Rock, Arkansas: Mr. President, I had no idea of saying a word here. I fully endorse everything that Colonel Lowry has said except one thing, and that is the matter of a subsidy. I am opposed to subsidy for anything. Talk to me about handicap! This great American republic of ours has more free men, free labor and better wages than any other place on the face of the earth, and I think we are able to compete with the world in everything. I do not admit that any man has more veneration for the flag of this country than I have. And yet I am opposed to subsidies for anything. I come from the Southwest, west of the Mississippi River, where men with strong arms and brave hearts have hewed down the forests and built up a gigantic country. Why should we pay a few ship-builders to build our ships? We are building a navy to compete with the world; we are building a navy that will whip any country on the face of the earth, if necessary. I occupy a peculiar position, probably, in this convention. Probably there are not half a dozen other men in this convention that served in the Confederate army. I did. I do not deny it. But no man has any greater veneration for the stars and stripes and the honor and standing of this country than I have. I surrendered with General Johnston in North Carolina. I was met by the Federal army. They said, "What are you going to do?" "I am going back home where I live." And I went home and pulled off my coat and rolled up my sleeves and went to work as all of us did to build up our Southern country. There is no man who fought on the Union side who will do more to build up this country than I will. But I say to you, gentlemen, let us not grant any subsidies. Our men are energetic and live enough to compete in any line of business, and when capital gets so surfeited in these big markets that they cannot loot any insurance companies any further, then they will probably go to ship-building or something else that will pay. I say all this with due respect to my friend Lowry, but I hope that you will vote against the resolution.

Mr. Babcock, sitting in the gallery, said a few words in favor of the resolution of Mr. Lowry.

(Cries of, "question, question.")

The question was taken and the resolution was agreed to.

THE PRESIDENT: The next is the report on uniform laws. This report has been printed. The chairman was not here and he forwarded it and it was printed in the proceedings of yesterday.

Mr. FINLEY: I move that there be a committee appointed by the Chair on uniform laws.

Mr. GEORGE: I second the motion.

The question was taken and the motion was agreed to.

Mr. EVANS: I move that discussions on the floor be limited to two minutes.

The motion was seconded, and the question being taken it was agreed to.

THE PRESIDENT: The next is the report of the committee on bureau of education, by Mr. Finley.

REPORT OF THE AMERICAN BANKERS' ASSOCIATION COMMITTEE ON EDUCATION.

To the American Bankers' Association:

The effort of your committee on education during the past year, in connection with the American Institute of Bank Clerks, have been directed toward the elevation of the standard of educational work and the consequent assurance of its permanence rather than to the increase of the number of individual students and chapter members.

The study courses, consisting of standard text-books and collateral exercises and examinations covering the subjects of practical banking, commercial law and political economy, have appealed alike to practical educators and employing bankers as well as to ambitious and industrious students in both city and country.

The association of students in chapters in the larger cities affords opportunity to add lectures and class-room methods to individual study of text-books. In several places where university schools of finance and commerce exist chapters have organized classes under the direction of experienced professors in which superior educational results are accomplished. It is the purpose of the institute to extend such university alliances as far as possible.

To show the character of the preparatory work in connection with the study courses in practical banking, commercial law and political economy, the preliminary exercises and examination questions are submitted herewith:

PRACTICAL BANKING.

The student who takes up the study of banking must have a threefold purpose: (1) To acquire familiarity with banking methods, forms and accounts as now practiced; (2) to get an understanding of the principles involved in various banking transactions; (3) to get some knowledge of the development of banking institutions in this and other countries. There is no single text-book from which all this knowledge can be obtained. On account of the broad scope of banking interests, a student who would understand the business must know much more than the routine of a banking office. Knowledge of routine is the beginning and not the end of banking education.

The course of study here outlined is intended to give the student a clear idea of the work actually done by a bank, of the risks to be avoided and of the relation of banking to industry in general. The text-books are F. A. Cleveland's "Funds and Their Uses," Horace White's "Money and Banking," C. F. Dunbar's "Theory and History of Banking," either A. R. Barrett's "Modern Banking Methods" or A. K. Fiske's "The Modern Bank." Students should also read with care the articles on banking subjects published in The Bulletin.

Answers to all questions in the following preliminary exercise should be worked out by the student, but written answers to only twenty-five of the questions are required to be submitted for purposes of examination. Each candidate should tell briefly what experience he has had in a bank and what books he has read relating to banking and finance. Number answers to correspond with questions.

1. What are the distinctive functions of a bank, a trust company and a savings institution?
2. What are the preliminary steps in the organization of a National bank?
3. What are the relative advantages and disadvantages of national and State charters?
4. Name and describe the principal provisions of the National Bank Act.
5. What are the reserve requirements under the National Bank Act and under the laws of your State?
6. Describe the different classes of loans made by National banks, and tell why they are restricted from loaning upon real estate.
7. In the calculation of a National bank's reserve, how are the net deposit liabilities computed? In this computation, what is done with the following items: Due from other banks, due to other banks, notes of other banks, certified checks, National bank-notes outstanding, redemption fund, exchanges for clearing-house?
8. Make a working plan of any bank with which you are familiar and describe the duties and responsibilities of directors and various officers and employees.

9. What information is essential in accepting the deposit account of an individual, corporation, trustee, executor, administrator or agent?
10. How may an account be analyzed so as to show whether it is profitable or unprofitable to a bank?
11. Name and describe the different books used in any bank with which you are familiar, and suggest improvements.
12. What in your judgment, is proper identification of persons presenting checks for payment?
13. In connection with negotiable instruments, define drawer, drawee, payer, payee, indorser, indorsee, pledger, pledgee, consignor and consignee.
14. What is restrictive indorsement and indorsement without recourse?
15. What is essential in bank examination to show actual condition?
16. Make a typical report of condition and explain the principal items.
17. Describe effective and legitimate methods of building up the business of a bank.
18. What is the effect of certification?
19. Show that a bank deals in credit rather than in money.
20. Exactly what is the meaning of "money" in the saying that money is tight?
21. A bank receives interest on the notes it issues, whereas a private individual pays interest on his promissory note. How is the exaction of interest by the bank justified?
22. Show that the deposits of a bank may increase as the result of two entirely different transactions.
23. What is meant by the phrase "expansion of bank credit"? What fixes the limit to which a bank may expand its credit? Illustrate with concrete case.
24. Describe the utility or advantages of bank-notes, and show in what respect they are superior to Government notes. (Do not limit your answer to National bank-notes.)
25. Explain clearly the following: Exchanges for clearing-house, accommodation paper, acceptance, bill of lading, letter of credit, lawful money, certificate of deposit, check, certified check, draft, promissory note, collateral note, bill of exchange, power of attorney, warehouse receipt, Cashier's check.
26. What is the "surplus" of a bank? How large a surplus must a National bank accumulate? To whom does it belong? Why should a bank be required to have a surplus?
27. Explain how settlements are effected at a clearing-house. How are balances paid at the New York Clearing-House?
28. Discuss the present need for reform of banking laws in the United States.
29. What is a clearing-house loan certificate? What use has been made of it in the past? Show that its use in a panic is equivalent to a pooling of bank reserves.
30. With respect to the issue of bank-notes, distinguish clearly between the "currency principle" and the "banking principle."
31. What is meant by "elasticity of the currency"? What are its alleged advantages? Why do not checks supply sufficient elasticity?
32. Upon whose recommendation was the first bank of the United States established? What privileges was it granted? Show why it was called the regulator of the currency. When did its charter expire, and why was it not renewed?
33. On what grounds did Jackson attack the Second Bank of the United States? How did he cripple it?
34. Describe the Suffolk banking system. Show that the Suffolk was organized solely for the purpose of profit, and yet that it performed an excellent service for business interests in New England. Before the Suffolk bank was organized, why were the Boston banks unable to keep their own notes in circulation within the city?
35. Describe the so-called safety-fund system of banking. In what State was it first introduced?
36. When and by what State was the so-called free banking system first adopted? Why did this system fail in the first year of its trial?
37. During the panics of 1837 and 1857, in what city did banks longest maintain specie payments? Why did specie flow toward that city away from other cities?
38. What is meant by wildcat bank-notes? Show why the notes of many banks were at a discount before the Civil War.
39. Describe the organization and operations of the State Bank of Indiana and discuss White's statement that it illustrates sound rules of banking.
40. Tell the story of George Smith's "money" and show why it was elastic.
41. Show that the National banking system was adopted in order to provide a market for Government bonds. What legislation was necessary with regard to the issue of notes by State banks in order to stimulate the organization of National banks?
42. What part of the capital of National banks must be invested in Government bonds? Under what conditions may a National bank issue bank notes? Why did the notes of National banks increase between 1867 and 1880 and decrease between 1880 and 1890?
43. What are the duties of the Comptroller of the Currency?
44. In a five per cent. market, what profit does a National bank make on its circulation if it succeeds in keeping all its notes outstanding? (Assume that its notes are secured by deposit of Government 2's.)
45. Why should a National bank not desire to take out more notes than it can keep in circulation?

46. What changes, with regard to the issue of notes by National banks, were made by the law of March 14, 1900?
47. With respect to their reserves, into what three classes are National banks divided?
48. Are the notes of National banks elastic? Give reasons for your answer.
49. When and why was the Independent Treasury established in the United States? To what extent may it aid or injure the operations of banks?
50. Describe the Bank of Amsterdam and outline its history.
51. What are the principal features and functions of the Bank of France?
52. Describe the Bank of England and its relationship to the Government.
53. Explain the position of the Bank of England as a reserve agent for other banks. How does it seek to attract gold to England or prevent its exportation? Why is its policy often effective?
54. What are the characteristics of the Imperial Bank of Germany and its points of resemblance to the Bank of England?
55. Discuss the Canadian banking system with respect to (a) steps necessary to get a charter, (b) paid up capital, (c) reserve requirements, (d) the issue and the redemption of notes, (e) safety fund.

Commercial Law.

The student of commercial law is advised to begin with White's "Business Law." At this stage the purpose is simply to get a general view of the nature of law, and to add to this general view some knowledge of the more elementary doctrines as to contracts, sales, bills and notes, common carriers, agency, partnership and corporations.

After the student has gained an elementary knowledge of business law, he should make a special study of the law of commercial paper. For this purpose he is advised to study carefully either Bigelow on "Bills, Notes and Cheques," or Norton on "Bills and Notes." The banking law articles in "The Bulletin" should be carefully followed.

Finally, after the student has studied carefully one of the suggested treatises on commercial paper, he must familiarize himself, by thorough and repeated study, with the statute entitled the Negotiable Instruments Law, which has been adopted in many States and can be found near the end of the latest edition of either of the books named in the preceding paragraph.

The following preliminary exercise gives the student, to some extent, the option of pursuing elementary topics, advanced topics, or both. The first part is composed of general questions on elementary business law, divided into groups of five. The second part is composed of practical problems on elementary business law. The third part is composed of general questions on commercial paper, including the Negotiable Instruments Law, and is divided into groups of five questions each. The fourth part is composed of practical problems on the topics covered by the third part. The student should master all the questions and problems, but in submitting written answers for examination twenty general questions and five practical problems should be chosen, and no more. For this purpose all the four parts are available, with the restrictions that not more than two of the twenty general questions selected should be taken from the same group of five, and not more than ten from the third part. The answers should be clear, accurate and full, giving history, distinctions and reasons as well as mere statements of rules and of definitions. In other words, the answers should resemble explanations prepared for the instruction of intelligent persons not yet acquainted with the topics discussed.

(First Part: General Questions on Elementary Business Law.)

1. What is municipal law?
2. What are statutes?
3. Explain how law has grown through decisions.
4. What is substantive law?
5. What is a crime?
6. What is a tort?
7. What is a court of equity?
8. What is a contract?
9. What are the essential elements of a contract?
10. Do you know when infancy ceases in your State?
11. What is the effect of an infant's contract?
12. What is the effect of a lunatic's contract?
13. What is meant by a contract under seal?
14. Do you know the effect of sealing a contract in your State?
15. What is delivery in escrow?
16. Describe an official bond.
17. What is the statute of frauds?
18. What contracts come within the English statute of frauds?
19. Do you know what contracts come within the statute of frauds of your State?
20. Distinguish between penalty and liquidation damages.
21. How may a right of action for breach of contract be discharged?
22. Do you know what are the times fixed by the statute of limitations in your State?
23. Distinguish between sale and bailment.
24. When does title pass in case of sale?
25. What is a warranty?
26. What is a lien?
27. What is the stoppage in transitu?
28. What is a negotiable instrument?
29. What is a promissory note?
30. What is a bill of exchange?

31. What is an acceptance?
32. What is an indorsement?
33. What is protest?
34. What is acceptance supra protest?
35. What is accommodation paper?
36. How does a check differ from a bill of exchange?
37. What is the responsibility of a common carrier of goods?
38. Who is liable upon a contract made by an agent in behalf of his principal?
39. Who is liable for an agent's torts?
40. Who is liable for an agent's crimes?
41. What is a partnership?
42. To what extent is a partner liable for the firm's debts?
43. To what extent can a partner bind a firm?
44. How is a partnership dissolved?
45. What is a corporation?
46. In your State, what are the steps that must be taken in order to form a corporation for business purposes?
47. To what extent is a stockholder liable for corporate debts.
48. Do you know what is a stockholder's liability in your State?
49. Do you know what is the liability of a stockholder in a National bank?
50. What is the liability of a corporation from ultra vires acts?

(Second Part: Practical Problems on Elementary Business Law.)

1. Parsons writes to Bishop: "I offer you 10,000 bushels of wheat for $7,500, you to pay as much cash down as you choose, and the remainder in thirty days, with interest at six per cent." Bishop writes: "I accept." Are the parties bound?

2. I send you an offer by mail, and you send me an acceptance by telegraph, but the acceptance is lost by the messenger. Are we bound?

3. I send you an offer, saying that it will remain open a week. The next day I tell you that I find the property offered has already been sold by one of my agents. The next day you find that I was mistaken, and you accept the offer. Am I bound?

4. Your father promises to pay you $100 if you will write this exercise successfully and if you receive a promotion in one year. Both events happen. Must your father pay?

5. In your State, is it of consequence that the promise described in the preceding problem was signed and that after the signature was placed a wafer?

6. Bishop owes Parsons $1,000. Bishop, being insolvent, asks Parsons whether he will not accept $600 in full payment. Parsons assents, receives the $600, and afterwards brings action against Bishop for the other $400. Who will succeed?

7. Is it of consequence that the debt in the preceding problem was not yet due when the payment was made?

8. In the same problem, is it of consequence that, although the debt was due, the agreement for part payment was part of an arrangement whereby three separate creditors of Bishop made the same agreement with him and with one another?

9. I sent to a painter an offer of $1,000 if he will paint a certain house. He paints the house, but does not tell me that he will do so, and does not communicate with me until six months after the work is finished. Must I pay?

10. Parsons has a claim against Bishop for $1,000. Parsons calls Bishop's partner, Dane, by telephone and offers to give Bishop sixty days longer time if Dane will promise to pay in case Bishop does not. Dane telephones his assent. Is Dane bound?

(Third Part: General Questions on Commercial Paper.)

1. What is the law merchant?
2. What are some of the peculiarities of the law merchant as distinguished from the common law?
3. What is negotiability?
4. What is the distinction between negotiability and assignability?
5. What are the features necessary in order to render paper negotiable?
6. Who are the parties to a promissory note?
7. Who are the parties to a bill of exchange?
8. Discuss delivery.
9. At what time can suit be brought on negotiable paper?
10. What are the essential features of a bill or note, whether negotiable or not negotiable?
11. Discuss the result of designating a payee by a fictitious name.
12. Discuss the negotiability of instruments payable in instalments.
13. Discuss the negotiability of instruments payable on or before a certain date.
14. Discuss the negotiability of instruments payable with current exchange.
15. What is legal-tender money?
16. Discuss the negotiability of instruments payable in current funds.
17. Discuss the negotiability of instruments payable in foreign money.
18. Discuss the negotiability of instruments containing a power to confess judgment.
19. What is a joint note?
20. What is a joint and several note?
21. What power has the representative of an estate to execute negotiable paper in the name of the estate?
22. As to negotiable paper, what is the liability of an undisclosed principal?

23. What is the result of executing a bill or note without a date?
24. What is grace?
25. What is the effect of inserting or omitting "value received"?
26. Who can accept a bill of exchange?
27. Must an acceptance be unconditional?
28. Can an acceptance be revoked?
29. Must an acceptor receive consideration?
30. May an acceptance be written upon another paper?
31. May an acceptance be oral?
32. What time is allowed a drawee for acceptance?
33. What is an acceptor's liability?
34. Discuss acceptance for honor.
35. Compare acceptance and certification.
36. Compare the drawer of a bill and the maker of a note.
37. What is the liability of a drawer?
38. When is presentment for acceptance necessary?
39. What are the essential features of presentment for acceptance?
40. Must notice of non-acceptance be always given to the drawer.
41. What are the formal requisites of indorsement?
42. What are the liabilities of an indorser who is in the chain of title?
43. What are the liabilities of an indorser who is not in the chain of title?
44. What is the effect of transferring without indorsement paper payable to order?
45. What power has the representative of an estate to indorse commercial paper owned by the estate?
46. What is a special indorsement?
47. What is an indorsement in blank?
48. What is a restrictive indorsement?
49. What is a qualified indorsement?
50. What is a conditional indorsement?
51. Distinguish between presentment and demand.
52. At what place must paper be presented for payment?
53. At what time must paper be presented for payment?
54. In your State. what is the law as to grace?
55. How is presentment affected by the loss or destruction of the paper?
56. In what instance is notice of dishonor necessary?
57. At what time must the notice of dishonor be sent?
58. By whom must the notice of dishonor be sent?
59. To whom should the notice of dishonor be sent?
60. Should notices of dishonor be sent by mail?
61. What kind of paper must be protested?
62. By whom may protest be made?
63. What facts excuse presentment, protest or notice?
64. What is the liability of an indorser without recourse?
65. What is the liability of an accommodation party?
66. State some absolute (or real) defences.
67. State some personal defences (or equities).
68. How are absolute (or real) defences effected by estoppel?
69. What is the effect of alteration?
70. Against whom do personal defences (or equities) prevail?
71. Is a holder for a past consideration a holder for value?
72. To what extent does negligence serve as the equivalent of notice?
73. How is a negotiable instrument discharged?
74. How is a person secondarily liable upon a negotiable instrument discharged?
75. When was the Negotiable Instruments Law adopted in your State?

(Fourth Part: Practical Problems on Commercial Paper.)

1. "500. Albany, N. Y., August 19, 1905. Thirty days after date please pay to Henry Wheaton five hundred dollars out of any money in your hands belonging to me. To Messrs. Peters & Co., New York, N. Y. Joseph Story." Give all arguments tending to show that the above paper is or is not negotiable.

2. "Philadelphia, Pa., Sept. 1, 1905. I. O. U. fifty dollars. Joseph Story." Suppose that on September 1, 1905, the above paper is handed to Henry Peters by Joseph Story, and is indorsed by Henry Peters to William J. Wallace for a consideration of fifty dollars. If the above paper was without consideration, are there any circumstances in which Wallace can sue Story upon the paper? Give all reasons.

3. "Baltimore, Md., Sept. 1, 1905. Three years after date I promise to pay to Williams & Co. one thousand bushels of A No. 1 hard wheat. C. H. Johnson." If Williams & Co. obtained the above note from Johnson by fraudulent representations, and if it reached the hands of an innocent purchaser before due, what reasons can be urged to show that Johnson will or will not have to pay it?

4. Wheaton wrote a note to the order of Peters and locked it in his own desk. Wheaton bribed a clerk to let him have access to the desk, and took out the note, and before it was due indorsed it for value to Howard, who knew nothing of the facts. Would Howard be able to hold Wheaton?

5. Wheaton wrote a note payable to bearer, and gave it to a boy to play with. The boy dropped it in the street. It was picked up by Peters. Could Peters recover on it? If Peters sold it before maturity to Howard, who knew nothing of the facts, could Howard recover from Wheaton? How would the answer be modified if Howard took the paper after maturity?

6. "Chicago, May 1, 1905. One year after date I promise to pay to the order of Henry Peters one thousand dollars, and if suit be brought hereon, I promise to pay a reasonable amount as attorney's fees. Henry Wheaton." If

the above note be stolen while indorsed in blank, will an innocent purchaser for value before maturity get a good claim against Wheaton?

7. "Chicago, May 1, 1905. Ten years after date we promise to pay to bearer one thousand dollars at Bankers' Trust Co., New York City. At the bearer's option, payment will be made in London. The Wheaton Construction Co., by Henry Wheaton, President." If there were no consideration would a purchaser without notice from a holder of the above paper get a good claim against the makers?

THE PRESIDENT: The next is the report of the committee on currency. Mr. James M. Donald, the chairman, is not here, and Mr. Pugsley will submit the report.

Mr. Pugsley submitted the following report:

REPORT OF THE CURRENCY COMMITTEE.

To the American Bankers' Association—The currency committee has questioned the advisability of presenting a report, owing to the absence in Europe of the chairman of the committee, Mr. James M. Donald, of New York. Public sentiment, however, as expressed by individuals and through the banking journals of the country, seems to demand that the question of currency reform should be presented at this great convention, especially as it convenes in the capital city, the seat of all Federal legislation.

THE QUESTION OF REFORM.

It is an exceedingly intricate problem and yet one upon which the bankers of the country should be willing to give an expression of opinion. Experience as a member of the banking and currency committee of the House of Representatives has led to the belief that if the bankers of the country could agree upon some definite, sound, practical plan of currency reform, and unitedly and strenuously urge it upon the members of Congress, favorable and desirable legislation might be secured.

RETIREMENT OF UNITED STATES NOTES, OR LEGAL TENDERS.

If practical, United States notes, or "legal tenders," should be retired. Borrowing on demand, either by the individual or by the Government, unless there are resources immediately available, is fraught with danger to both Government and individual. It cannot be justified in any country, except in such emergencies as led, possibly, to the original issue of the legal tenders, or "greenbacks." It is obvious that they are debts of the Government payable on demand. A strong, prudent Government should avoid the danger arising from pressure and panic by providing that all obligations, as far as practicable, should be, not on demand, but on time. It would seem the part of wisdom to retire the legal tenders when the country is prosperous, rather than in the throes of panic, when the danger of such a currency and the necessity for its retirement are, possibly, more apparent. It may be that heroic treatment will be needed, and that a long time bond, payable at the pleasure of the Government, bearing an exceptionally low rate of interest, to be used specifically for bank circulation and public deposits, shall be issued to provide for their retirement. "The way to resume, is to resume." The way to retire, is to retire.

INTERCHANGEABILITY OF SILVER AND GOLD.

It is not even probable that any future Secretary of the Treasury will depart from the policy of his worthy predecessors, who have so ably maintained the parity of all forms of money coined or issued by the Government, although no express statute existed or now exists for the interchangeability. But if the silver certificates, silver dollars or silver coin are to be kept interchangeable with gold under all conditions that may arise, a sufficient reserve fund should be set aside to provide for the redemption in gold of about $600,000,000 of silver outstanding. If the silver certificates are not issued in larger denominations than five dollars, it would seem that a reserve fund of $100,000,000 in gold should be sufficient to protect the Treasury. Provision should be made so that no one could question at any time the value of any dollar issued or coined by the Government of the United States.

SURPLUS FUNDS IN THE UNITED STATES TREASURY.

The Secretary of the Treasury should have discretionary power to deposit in the National banks such portion of the surplus funds in excess of $50,000,000, whether derived from customs receipts or internal revenue, as he may deem proper, to prevent absorption of money by the Treasury. Such deposits should be guaranteed by United States bonds, or other securities acceptable to the Secretary of the Treasury. No reserve should be required against Government deposits in our banks, as they are secured by the pledge of United States or other bonds. If practical, interest should be allowed the Government upon these deposits.

CONTRACTION AND EXPANSION OF THE CURRENCY.

We complain about the rigidness of our currency system, and yet we have a cast-iron rule or law that will not allow National bank circulation to contract or expand, except within the most prescribed limits. There should be an early amendment or repeal of the present limitation of $3,000,000 per month upon the withdrawal of circulation, and either no limitation should be placed upon the withdrawal or the limit should be increased to $6,000,000 or $10,000,000 per month, so that expansion and contraction might, in a measure, be automatic.

SUPPLEMENTARY CURRENCY.

An additional or supplementary currency, other than that secured by United States bonds, might be issued in times of great financial stress along the lines suggested by Secretary Shaw, so as to appear identical with the present National bank note, but heavily taxed to insure its retirement when the conditions which brought it into existence had passed. As the Honorable Secretary has said, we should not inject into our circulating medium any new form of money that might become an element of alarm, neither should we advertise its existence nor our extremity. Such a currency, in consideration of the heavy tax laid upon it, should be guaranteed by the Government, and the usual five per cent. fund should be maintained, as provided in the present law. If banks holding fifty per cent. of their capital in Government bonds were allowed to issue a limited amount of supplementary currency it might prove a desirable remedy in time of panic. Its redemption could be accomplished by the individual bank depositing in any sub-Treasury an equal amount of lawful money.

It may be questioned whether the time has come in this country for any departure from our present system of National bank circulation, although a supplementary currency might be made perfectly secure and a valuable addition to our system, as suggested by Secretary Shaw.

The enormous output of gold, amounting throughout the world to about $1,000,000 per day, the major part of which the United States undoubtedly receives from its own mines and trade relations, provides for an increase in the circulating medium, which, while it may not eliminate the necessity for a supplementary currency, may in a measure lessen the demand.

In any discussion of currency reform it should be remembered that the banks are the servants of the people, not the masters, and that reform should not be in the interests of the banks alone, but in the interests of all the people. We should desire and expect the American dollar to be the world's standard of value, and our currency system to equal or surpass that of any other nation on the face of the globe, but only by the most conservative legislation can this be accomplished. Public opinion in this country should be so strongly and so thoroughly grounded in the great foundation truths of finance and currency that we should not only be right but stay right. These problems are well worthy the consideration of this convention, representing so largely the banking, financial and commercial interests of the country. A sound, stable and responsive currency is one of the greatest bulwarks of national greatness, glory and power, and one which will prove of inestimable value to its business interests. Cornelius A. Pugsley.

THE PRESIDENT: **The next is the report of the committee on Cipher Code.**
Mr. Blossom submitted the following report:

REPORT OF COMMITTEE ON CIPHER CODE.

To the Convention of the American Bankers' Association—Upon the recommendation of the executive council the convention held in New York in 1904 instructed the President of the American Bankers' Association to appoint a committee with power to act on a resolution filed with the executive council for presentation to said convention, having for its object the establishment of a cipher telegraphic code for the exclusive use of the members of this association. Acting under the authority thus delegated to him, the president, chosen to office in New York, appointed as the members of said committee, Mr. James G. Cannon, of New York; Mr. W. T. Fenton, of Chicago and Mr. Frederick F. Blossom, of Peoria. Immediately upon its appointment the committee began its labors and after a very careful consideration of the subject arrived unanimously at the conclusion that the creation of a cipher code for the purposes and in the manner set forth in the resolution aforesaid, was feasible and desirable and would be beneficial to the American Bankers' Association and to its membership.

The committee then proceeded to construct a code sufficiently broad and comprehensive for the general and probable uses of the association, omitting such material as was deemed unnecessary for a code of the character and scope contemplated. Having finished the task set for it, the committee on February 28, 1905, filed the following statement with the secretary of the American Bankers' Association, to wit:

"We, the undersigned members of the committee, with power to act, appointed by the president of the American Bankers' Association, under the authority of the annual convention of said association, held in the city of New York, September 14 to 18, 1904, do hereby submit the annexed cipher telegraphic code and recommend its distribution to the membership of said association for the purpose of such use thereof solely as an instrument of convenience and economy and without responsibility on the part of the said American Bankers' Association as each member may for itself determine to make under the rules, regulations, and restrictions therein contained and hereby made a part thereof, and we further hereby direct and authorize the secretary of the said association to have ten thousand (10,000) copies of said code printed and bound in suitable form, and also further direct and authorize the said secretary to furnish a copy of said code as thus printed and bound to each member of the American Bankers' Association in the manner specified in a certain resolution relative to the preparation of a cipher telegraphic code presented to the executive council of the American Bankers' Association at its session in the city of New York, Tuesday, September 13, 1904; and we further hereby request and authorize the said secretary to make certain changes of the key words at such intervals as his judgment may direct according to the manner specified in certain of the instructions aforesaid accompanying said code which have already been made a part thereof, as above stated."

As the delegates to the convention are aware, the code has been published and distributed by the secretary in accordance with the directions of the committee. In concluding its report the committee takes the liberty of emphasizing the following propositions relative to the code, namely:

1. The code is furnished to members by the association simply as an instrument of economy and convenience, and without responsibility on the part of the association.

2. The code is designed particularly for use between members having no established code connections together, and is not intended in any way to supplant private codes in use between banks and their correspondents.

3. Inasmuch as the code is standard as between members having no established relations together, it is to be assumed by members receiving cipher messages from other members of this association, with which they have no regular connection, that said messages are to be translated in terms of the association code. Should members, however, occasionally desire to communicate, by means of the code, with other members of the American Bankers' Association with which they additionally have private code connections the fact that the code of the American Bankers' Association is to be employed in translation in such instance may be particularly designated by the sender of the dispatch in such manner as circumstances may at the moment seem to render most desirable.

In order that confusion may be avoided and that no unnecessary delay may ensue in translation, it is hereby suggested, in all cases in which members of this association communicate in any other cipher telegraphic code, except that of the association with other members, with which they have no regularly established code connections, that senders specifically designate the code (Lieber, Western Union, State association and so forth) used, by the employment of some "indicator" (either word or phrase) at the beginning of the message. By means of this "indicator" the receiver of said message can readily determine what code is to be employed for the purpose of translation. Members of the American Bankers' Association in communicating with one another by means of the official code may likewise employ an indicator of their own choosing, if they deem such action desirable.

As already stated, however, the official code of the American Bankers' Association is to be regarded as standard at all times as between members having no regularly established connections together, and on that account, after careful consideration of the matter, it has been decided that it is unnecessary and further that it would be unwise, to create an indicator to be employed in connection with messages written in terms of the official code of the American Bankers' Association.

Respectfully submitted,
F. F. Blossom, James G. Cannon, W. T. Fenton.

The President: It affords me great pleasure to present to you Mr. Robert Blythe, Manager of the Union Bank of Scotland.

The Scotch System of Banking.—Address of Robert Blythe, Manager Union Bank of Scotland.

For the proper understanding of the characteristic features of the Scotch system of banking, a short historical record is almost essential. It will, in this paper, be condensed within the narrowest limits.

In the beginning of the eighteenth century, when Scotchmen had been provided with their first bank, and had no experience to guide them in its management, the country was not only poor; the population was also small. It probably did not exceed 1,000,000. The city of Glasgow had a population of 12,500. Now it is three-quarters of a million. The trade of the country was insignificant. Money was scarce; it is thought that there was not half a million of coin in the whole country. For the first half of the eighteenth century, poverty and lack of enterprise on the part of Scotchmen left some of the chief trade in the hands of foreigners. It was not until after the middle of the century that Scotch industries were developed and the national revenue increased.

Merchants, who traded in many kinds of goods, sometimes traded also in money; they took it on deposit, in limited amounts and for fixed periods at agreed upon rates of interest, and they had customers to whom they lent it at higher rates. This was all that Scotch traders had in the way of bankers up to the close of the seventeenth century. It was in the year 1695 that the Scotch Parliament granted to the Bank of Scotland, which was founded in that year, power to borrow and lend money at interest. Its business was to be restricted solely to dealing in money; it was prohibited from trading in goods. Its right to issue notes was implied, rather than expressed. Its charter gave it a monopoly for twenty-one years. Its paid-up capital was only

£10,000. The Royal Bank of Scotland, the next bank founded, was incorporated in 1727. During the eighteenth century there was only one other bank incorporated by charter, the British Linen Company; this was in the year 1746. These three banks have made various attempts to establish branches in the provinces, but it was after the middle of the century before they succeeded. There are now ten banks in Scotland. About nine-tenths of the business, however, is done by the seven large banks whose head offices are in Edinburgh and Glasgow.

One-Pound Notes Issued by the Scotch Bank.

The chief characteristic feature of the Scotch system of banking is the right of issue of the one-pound note. Before the Bank of Scotland was founded, there was no paper currency. It began to issue notes forthwith for £100, £50, £20, £10 and £5. Nine years afterwards it issued one-pound notes for the first time, but prior to the union of England and Scotland under one Parliament in 1707, the amount of these notes in circulation was not great. The privilege of the right of issue has always been recognized.

One of the outcomes of the great panic of the year 1825 was the abolition in England, in 1826, of the one-pound note. But the old note of Scotland was so dear to the people, and their demand for it was so clamant, the Government abandoned its resolution to extend the abolition to Scotland. Sir Walter Scott fiercely attacked the proposal to steal from us our right to our paper currency. To him, probably more than to any one, we are indebted for our small note.

The committee of both houses of Parliament in 1826 appointed to enquire into the matter of the bank failures, of which there had been a long and dreadful catalogue, and which were attributed to the issue of one-pound notes by the country bankers in England, reported in favor of the abolition in England, and against the abolition in Scotland. "With respect to Scotland," said the report of the Lords, "it is to be remarked that during the period from 1766 to 1797, when no small notes were by law issuable in England, the portion of the currency of Scotland, in which payments under five pounds were made, continued to consist almost entirely of notes of £1 and £1.1.0., and that no inconvenience is known to have resulted from this difference in the currency of the two countries. * * * The banks in Scotland have for more than a quarter of a century exhibited a stability which the committee believes to have been unexampled in the history of banking. * * * They supported themselves from 1797 to 1812 without any protection from the restriction by which the Bank of England, and that of Ireland, were relieved from cash payments; there was little demand for gold during the late embarrassments, and in the whole period of their establishment there are not more than two or three instances of bankruptcy. As during the whole of this period a large portion of their issues consisted almost entirely of notes not exceeding £1 or £1.1.0., there is the strongest reason for concluding that, as far as respects the banks of Scotland, the issue of paper of that description has been compatible with the highest degrees of solidity; and that there is not, therefore, while they are conducted upon their present system, sufficient ground for proposing any alteration, with the view of adding to a solidity which has been so long sufficiently established." The report of the Commons was also adverse to any legislative interference with Scotch banking.

Differences Between the Scotch and English Systems.

Prior to 1826, the difference between the English and Scotch systems arose mainly out of the comparative wealth and poverty of the two countries, and in the adoption in the poorer country of the cash credit substitute for the want of capital. But after 1826 there is a new element of difference. At first sight it is inconceivable that the systems of banking should be as greatly affected as they have been by the abolition of the use of one-pound notes in England. It is, nevertheless, a fact that since 1826 the main currency of England has been metallic; in Scotland it has been a paper currency, with little gold in circulation.

Our present system of banking, so far as the right of issue is concerned, dates back sixty years. The Act of 1845 continued to Scotland the one-pound note, and it provided that the amount of paper note money not represented by coin or bullion should be fixed, and that every note issued above the limit assigned to the existing banks, should be represented by coin or bullion. In England legislation had taken a different course; the note issues of the country banks were rigidly fixed—there was to be no further issue, no matter how much coin or bullion was held. This, then, was the difference. The issue of notes by the Scotch banks was to be without limit, so long as the excess of the authorized limit was represented by bullion, the authorized limit in England was not to be exceeded in any circumstances whatever. The authorized circulation granted by the Act of 1845 to the banks then existing was based on the average circulation for the year ending May 1, 1845. After that no other bank might issue notes. As a check on the true amount in circulation a certified account had to be sent to the Government Commissioners of Stamps and Taxes, weekly, distinguishing notes of five pounds and upwards from notes of one pound. The certified account had to include a note of gold and silver coin held. Every four weeks a note must be sent of the average circulation, and average coin held. The silver coin must not exceed one-fourth of the gold coin. By this act notes for less than twenty shillings are not negotiable.

Our system of note issue has not been altered since 1845. The aggregate circulation depends upon the public demand for this form of paper currency.

There is an elasticity in our circulation which the National banks of America must envy. We have no artificial, objectionable, and, we venture to think, quite unnecessary limits, as to the gross circulation, the proportion of small notes and large, or the withdrawal of circulation. During the last thirty years it has fluctuated between five and eight millions sterling. The note issue is not secured by the purchase of Government bonds, nor in any other way. Nor are we compelled, as the Bank of England is, to keep our issue department separate from our banking department. In the event of the bankruptcy of the bank the holders of notes have no priority over ordinary depositors.

The thirty-four private and joint stock banks in England have authorized fixed issues of £1,755,952. The ten joint stock banks in Scotland have an authorized issue of £2,676,350. But now comes the striking difference between the two countries. The English banks do not appreciate the value of the right of issue—and provincial issues are likely to become extinct—the Scotch banks do. In England the average circulation of notes, exclusive, of course, of Bank of England notes, is only about £590,000; in Scotland it is about £7,500,000. The average circulation in 1904 was £7,643,000, of which about seventy per cent. were one-pound notes, and thirty per cent. were large notes. In England the average circulation is not one-half of the authorized issue; in the case of private banks, not one-third. In Scotland, on the other hand, the average circulation is more than three times the amount of the fixed issues. Now, wherein do Scotch banks find the value of the one-pound note? Many people say that the mere cost of the paper and the printing of the notes is so small an item in the expenses of the management, the banks make a considerable profit from the interest earned on the amount of notes in circulation. But this is a mistake. In the first place the cost of the note issued is greater than is supposed. It is not merely a matter of paper and printing, there is the Government duty, and there is also the Government license required to be paid in respect of every "place" where bank notes are issued, and there are other charges affecting the circulation. It is in another quarter altogether that the Scotch banks find the value of the one pound note. It is the unissued notes, in the tills of the branch offices, forming the till money at more than one thousand branches, wherein the real value lies. Without them the banks would require to keep eight or ten millions of gold coin, not as a reserve, but as till money. It is these one-pound notes which have enabled branch offices to be planted in every part of the country. There is no such network of branch banks in any other country in the world. It is at these offices that we have collected the savings of the country from hundreds of thousands of small depositors. With a metallic currency and Bank of England £5 notes, branches could not have been profitably established in country districts. The cost would have been prohibitive. It is the one-pound note which has enabled the banks to go right down among the masses, and make banking possible to the greatest number. It is the one-pound note which has brought the offices to their doors, and tempted them to go in with their savings and deposit them securely and at interest. The aggregate deposits placed with the ten banks in Scotland now amount to more than £100,000,000 ($500,000,000.) It is not the poor country it was; it has grown rich by saving, and the system of planting branches has fostered the saving.

In Scotland, at an early period, the discovery was made that a great number of small accounts formed the basis of a much more valuable business than a small number of large accounts. Branches of banks were opened in small towns and villages, with a view, primarily, to collecting the savings of the people over a wide area, and secondarily, to assisting small traders, and fostering small struggling industries, in districts which wealthier England would not have thought important enough for a bank's consideration. The Scotch, I venture to think, have in this matter been wiser than the English, and wiser than our neighbors on the continent of Europe. The deposits collected in country places and in the outskirts of cities, have quite warranted the existence of the bank's branches.

The Cash Credit Accounts.

I have perhaps enlarged overmuch on the value of the right of issue, but it is to be kept in mind that down to 1826 the issue of notes was regarded as the essential of banking business in Scotland. The amount of notes issued is now only 7½ per cent. of the amount of deposits.

Another chief characteristic feature of the Scotch system of banking is what is known as cash credit accounts. They date back to early in the eighteenth century; they were peculiarly suitable to a poor country where capital was not available in its ordinary form, such as coin, or tangible and readily convertible securities. The idea at the basis of a cash credit account is this: a trader or a manufacturer has insufficient capital for the profitable conduct of his business; he has friends willing to help him temporarily; they are not required to give this help in the form of coin, or a check, nor or they asked to part with their securities; they give him the use of their names; they become responsible along with him to the bank for an agreed-upon amount; they sign along with him a cash credit bond. As soon as the bond is executed and returned to the bank, the trader or manufacturer, or other person who is to have the benefit of the cash credit, is entitled to cash checks on the account up to, but not exceeding, the amount stated in the bond. He gets the money from the bank just as he needs it; he is not obliged to take the full amount as a loan, and to pay interest on the full amount. It is not a loan, it is an operative account, bearing interest from day to day on the amount drawn from the bank. It is simply an ordinary deposit account reversed; the bank has become the creditor, not the debtor. The customer instead of receiving interest on the daily balance at his credit, pays interest on the daily balance at his debit. And, inasmuch as it is not what is called an overdrawn account, but a secured account, the borrower gets the benefit of a reduced rate of interest. This system of lending money to the manufacturing and trading cummunities was found to work so well, it was adopted by all the banks. Their balance-sheets showed that their loans upon cash credit bonds formed a large part of their business. No one will deny that the industries of the country would develop by these cash credit arrangements. It needed capital to sink its coal pits, to build its factories, and its furnaces, to finance its imports and it exports, to build ships; in a word, to create and develop industries which are now the source of the country's wealth. "Cash credits are applicable to a class of transactions totally different from those which give rise to bills of exchange; one difference being that bills of exchange arise out of the transfer of commodities and are payable in one sum at a fixed date, while cash credits are not issued on the transfer of commodities, or on any previous transactions, and are not repayable in one sum at a fixed date, but are a continuous working account."

There is no doubt that in Scotland the old cash credit account, guaranteed by two or more good names, is not so extensively used now as formerly. It has been, to some extent superseded by other forms of credit. And this characteristic feature of our system of banking has also been adopted, in modified forms, by English bankers. I am not aware that it has been adopted, pure and simple, by any English bank. The result of my enquiry rather tends to show that in England there are stipulations and conditions and annual charges attached to personally guaranteed accounts, which are wholly unknown in Scotland.

The chief characteristic features of Scotch banking, then, are (1) its right of issue, (2) its branch system, made possible by the one-pound note, and (3) its mode of making advances on what is known as the cash credit account.

Owing to there being only ten banks in Scotland, they have another distinctive and very important feature; they have a fixed tariff of charges for interest, discount, and commission. They agree among themselves to charge uniform rates, which vary with the Bank of England official rate. This the English banks (or American National banks), from their very number could never do. There are many minor differences between English and Scotch banking.

There are 1,136 branch banks in Scotland, for a population of four and a half millions; that is, a bank office, established for every 4,000 of the population. In England it is a bank for every 7,300 of the population. A quarter of a century ago the difference was much greater. The Scotch banks and their many branches are all managed from ten head offices. This has made it possible for them to act together, and conduct their general business on similar lines, throughout the whole of Scotland. The knowledge circulated among the banks by mutual co-operation has been of great value in checking undue speculation and the discount of fictitious bills.

In Scotch banking there is no special feature so far as the discounting of bills is concerned, or the granting of advances against security, or giving of unsecured overdrafts.

How Runs on the Banks Are Prevented.

It may be well to explain how we provide against a sudden and unexpected withdrawal of deposits, or extraordinary presentation, in time of panic, of our note issue—in short, a run on the bank. First of all there are the gold sovereigns in the bank's own safes, which may amount to £8,000,000, held against the notes in question, but not legally hypothecated. Secondly, the Scotch banks all keep large balances at the Bank of England, and with other London bankers. Thirdly, they lend large amounts to London bill brokers, at call, or at three or four days' notice, and in security of these loans they hold batches of bank bills duly endorsed, or a mixture of bank and trade bills, the latter being approved, or in other words the best paper of its kind. Fourthly, the banks lend large sums also to London stock brokers from account to account, that is for periods of fourteen days, and in security there are held stocks and shares duly transferred to the banks, and greater in value than the amount of the loans.

In addition to these four lines of defence, all the banks have large holdings of British Government and other gilt-edged and immediately realizible securities, realizable on the London market on a day's notice. It may probably be taken as approximately correct to say that the Scotch banks have about fifty per cent. of their whole liabilities covered by the five lines of defence just mentioned. The other half of their deposits, capital and reserve funds, is lent out on bills discounted, cash credits, overdrafts with or without security, and loans to customers on stock exchange or other securities.

We have seen that the Scotch banks have done much for the development of the industries of the country. They have also done well for their shareholders. Their paid-up capital in 1904 was £9,302,000; their surplus reserve funds £8,021,000, that is eighty-six per cent. of their capital. After deduction of four per cent. interest on capital and reserves, the banks earned a further profit of fully ten per cent. on their capital, or about eighteen shillings, seven pence per cent. on their deposits. In the matter of market values, too, the shares stand relatively high; those of the Scotch banks last year stood, overhead, at 234 per cent., as against English joint stock banks 222 per cent. and Irish banks 196 per cent.

During the last half century there were two bank failures, the Western

Bank of Scotland in 1857 and the City of Glasgow Bank in 1878, both owing to reckless departure from the recognized rules of banking. The shareholders suffered very seriously, but the depositors and holders of notes were paid in full.

OLIVER S. BOND, of Toledo, Ohio: Mr. President, I move that the thanks of this association be extended to Mr. Blythe for his most excellent address.

The motion was numerously seconded, and the question being taken it was unanimously agreed to.

THE PRESIDENT: We will now have the pleasure of listening to an address on Practical Benefits of Membership in the American Bankers' Association, by Mr. Walker Hill, President Mechanics' American National Bank, St. Louis, Missouri.

THE BENEFITS OF MEMBERSHIP IN THE AMERICAN BANKERS' ASSOCIATION.—ADDRESS OF WALKER HILL, PRESIDENT MECHANICS-AMERICAN NATIONAL BANK, ST. LOUIS.

Mr. President and Fellow Members of the American Bankers' Association—In considering the benefits of membership in the American Bankers' Association it is proper to inquire into the origin and purposes of the association—its daily work and the character of its membership; and there is no more appropriate place to consider the origin and purposes of the American Bankers' Association than the city of Washington, the Federal capital of the country, for one of the principal purposes had in view in organizing the association in 1875, was to aid the Federal Government in resuming specie payments; and it is not claiming too much to say that the association gave most valuable aid to the Government in putting its currency on a gold basis. Thus at the very beginning of its career this association set before itself a wise and patriotic purpose, and from that day to this, it as a body, and its members as individuals, have given freely to the Government valuable assistance in carrying out every financial measure which the Government has undertaken. Indeed, the aid which the members of this association has given to the authorities officially charged with the financial interests of the country, has been not only frequent and valuable, but in many instances that assistance has been practically indispensable, for had not the Government's proposals met with the approval of the American Bankers' Association and most of its members, those proposals would have been so discredited, both in this country and abroad, that they would have been incapable of execution. This association, therefore, has not only an honorable origin, but it has ever since taken a creditable part in the financial problems of this country. Indeed, there are few, if any, other similar associations that have rendered more continuous and valuable services to the Government. Think for a moment how much simpler and more successfully met would have been the problems of that greatest of Treasury Secretaries, Salmon P. Chase, if he could have called to his assistance an organization such as is the American Bankers' Association of to-day. The daily work of this association is of practical benefit to its members, though it may be impossible to measure that value in dollars and cents. But that the services of the association in detecting and capturing criminals who prey on banks, and thus deters crimes against banks, is of substantial pecuniary benefit to the members of this association, must be admitted. Those members who are the victims of some crime, and find the cost of running down and prosecuting the criminal borne by this association, have a keen appreciation, which can be measured in dollars and cents, of the value of the membership in this association.

But that those members who are not thus made to realize the value of their membership are nevertheless directly benefited through their membership, there can be no question. The report of the protective committee leaves no doubt of the fact that membership in the American Bankers' Association protects to some extent against the criminal classes.

There may be some members who find in the work of the protective committee the principal value of their membership; but not all are of this opinion. That the work of this committee may be, and often is, of very great pecuniary value to individual members, is a feature of membership in the association that all appreciate; but I believe that most of the members feel that if this committee were abolished and the work that it does altogether abandoned by the association there would still remain important work for it to do, and a material advantage in its membership.

Our friends, the lawyers, do not maintain bar associations to protect themselves against wrongdoers, but to elevate the standards of their profession and compel its members to observe their obligations to clients and their duties to the courts. And so the members of the American Bankers' Association must not consider the sole advantage of membership in it to lie in such protection as it may afford against the criminal classes. The standing committees on uniform laws, currency legislation, bankers' money orders, and education, as well as the protective committee, do work of pecuniary value to the members of the association.

If the American Bankers' Association had not originated in a patriotic purpose, and had no proud past, and its day-to-day work were of no value, membership in it would yet be a distinct and positive advantage, for it must be worth a great deal to any man engaged in important work requiring intelligence and broad views, to be associated with his successful fellow-workers, for in work of the kind referred to—and banking is of that kind—there is much of importance that can only be learned by association with those of character and ability who are engaged in the same work; and I venture to say that there is no association in this country of the same general character as the American Bankers' Association whose members stand higher in point of character and ability, and have a better knowledge of their business and the conditions which affect it favorably or unfavorably, or who are actuated by a more patriotic spirit when their work affects the public, than the members of the American Bankers' Association. I am equally positive in declaring that mere membership in any body composed of such men must be a distinct, if not a measurable, benefit to each member and each member of such an association should realize that he is benefited and should cultivate a feeling of pride in his membership.

The work of the American banker is extending farther and farther every day, and becoming more and more of public importance, as the railroads bring all parts of the country closer and closer together, and our flag rises here and there in far-away countries; and each day the need of the American banker for a better knowledge of distant peoples and more accurate information as to their ways and commercial needs, and the routes of commerce and its laws, increases; and membership in the American Bankers' Association will afford a means by which many of these needs can be easily acquired, for its members include many who know most about these things and are doing successfully the banking business of this country; and to whom else could one turn with more likelihood of receiving valuable aid in these matters?

But although you may not feel the need of that protection which the American Bankers' Association undoubtedly affords its members, nor attain through it a broader and a better view of the commerce of the country, it should give you a proper pride of caste, for when you consider the origin of the association, the honorable part in the history of our country which bankers have played, and the number and character of the members who now compose this association, you may properly feel that banking as conducted in the United States is a creditable calling and worthily represented by the American Bankers' Association; and feeling this, who can deny you the pride which such reflections justly bring?

For these reasons and because the honorable and important business of banking in the United States should continue to be fittingly represented among the commercial bodies of the world, let us maintain the character and importance of the American bankers' Association as evidenced by its origin, its history and the character and number of its members.

CALL OF SECTIONS, NORTH, SOUTH, EAST AND WEST.

JOHN G. FLETCHER, of Little Rock, Arkansas: Mr. President, I had no idea of saying a word here to-day, but when the South is called I want it distinctly understood that your humble servant is present and always has a good word to say for that section. I hate a man who does not love his own native soil, I hate a man that does not admire his own people. I hail from the South. I had not a moment's notice that I was going to be called on, and if any one else from the South had responded before me I would have had nothing to say.

We live in the land of cotton. We live in a land where God Almighty has given us sunshine and rain, and I can say also reasonable prosperity. We live in peace down there. As you all know, we have had a terrible time there in the last fifty years, but we are now coming to the front. We are progressing now. When people imagine that the negroes of the South are idle and the whites are in turmoil, they are mistaken. We live down there in peace with our former slaves, former masters and slaves now work side by side for the upbuilding of that country and the advance and prosperity of this great republic of ours.

Last year we raised over 14,000,000 bales of cotton. In the days of slavery we never raised over 4,000,000 bales. See what free labor is doing for that country! That 14,000,000 bales of cotton was worth over $700,000,000 in gold. The seed from that cotton was worth more than $70,000,000. So you see the seed that comes out of the cotton is worth more than the gold that is dug from any State in this Union. As a matter of fact, cotton does more for the human family in the way of giving employment than any other commodity on the face of the earth. From the time that the plow starts in the spring employment is given through the summer, during its cultivation and during picking time, until it is finally ginned and shipped to all the world. It not only gives employment to the workers in the field, but it gives employment to workers on the steamboats and the railroads, and then, later, when the cotton arrives in England, or wherever it is manufactured, it gives employment to the mill workers there. But we are manufacturing cotton goods in the South now. Just think, over 2,000,000 bales of that cotton is now spun in the Scuth, as against 2,000,000 bales of it spun in the North. So in our entire country we spin over 4,000,000 bales of cotton. Sixty-one per cent. of that cotton is shipped abroad. That means $300,000,000 of money. That attends to our balance of trade and the exchanges between Great Britain and the United States.

THE PRESIDENT: The gentleman's time has expired.

MR. FLETCHER (continuing): Gentlemen, my time is up; I have been called down. I did not tell you all I wanted to about the South, but the cotton question is a great question in this country.

THE PRESIDENT: The gentleman's time has expired.

MR. FLETCHER (continuing): I simply want to add that the South is in the Union and she is there to stay. When this country is invaded, remember what I say to-day, you will see the men of the South rallying around the flag, as they did in Mexico and at New Orleans.

THE PRESIDENT: The gentleman's time has expired.

MR. FLETCHER: I beg your pardon for trespassing, but coming from the South I felt it incumbent to say one word. Let me tell you—

MR. BENNETT, of Boston: Mr. President—

THE PRESIDENT: Mr. Bennett is recognized.

MR. BENNETT: I have some diffidence in speaking because I am simply a delegate coming here as a director in a small-sized bank in the city in which I live. Some of the gentlemen here are not accustomed to think, even, in less than millions of dollars; but I felt I must get up and assure you that Boston is still on the map.

MR. FLETCHER: Just one minute. I have a boy at Harvard College to-day. I am not boasting, but it shows you the feeling we have in the South. We love this country because it is our country. I am glad to see my friend from Boston get up. Let me tell you—

THE PRESIDENT: The gentleman is out of order—

MR. FLETCHER: Let me tell you—anything I can say or add to the comfort and pleasure of this convention I will do it. I do not believe in belonging to a crowd that says "aye" to everything. I did not agree with the gentleman from Georgia in his resolution—

THE PRESIDENT: The gentleman's time has expired.

MR. FLETCHER: I am done. I thank you for your kind attention.

THE PRESIDENT: The gentleman from Boston is recognized.

MR. BENNETT: I am very glad to listen to the gentleman from Arkansas; and, like most of the speakers here, at some time during the course of his remarks he gets around to Plymouth Rock or the Pilgrims, of Boston. I am a director in an institution in Boston and I had not taken very much interest in it, but since hearing the address of the Comptroller of the Currency yesterday I have concluded to take an interest in it. In fact, my case is very much like that of one of two drummers who met upon the street, and one said to the other, "Tom, how is business?" Tom said, "Pretty good; I have an interest in the business now." "I congratulate you," said the other. "When did it happen?" "Yesterday the boss called me into the office and he said, 'Tom, if you don't take more interest in the business I will discharge you.'"

Now, when I took some stock in the bank to please a friend I supposed I was purely ornamental, but I find the rugged and wholesome utterances of the Comptroller of the Currency and the bank examiners have put a different interpretation upon it, and I propose to take an interest in it.

Boston does not always get the credit that it deserves. When I first began to know about business matters, about twenty-five or thirty years ago, there were fifty-two National banks in Boston. Now there are but thirty National banks. But you notice when Mr. Vanderlip was talking yesterday and wished to place the highest enconium upon the Middle States, he said that some time or other the Middle States would be as important an investment center as Boston.

In Government reports and printed books the population of Boston is 500,000 or 600,000. As a matter of fact it is a million and a half. I went to Chicago with some gentlemen once and somebody assured us that our welcome was 120 miles long and ten miles wide. Boston has not taken in suburbs to that extent. There have been differences of opinion as to the ringing of the curfew bell and as to the issuing of liquor licenses and so on, and so the individuality of the little municipalities around about has been maintained; but in ten miles around Boston there are a million and a half of people, and there is more wealth per capita than in any other city in the United States.

I am aware that the bank deposits accumulate in New York city, and one of the most amazing things that was told us yesterday by the Secretary of the Treasury was that the commerce passing by Detroit is greater than the commerce of New York, London and Liverpool combined. Another thing which I notice particularly about that is that the commerce passes by, it does not stop there. And so with the deposits in New York city, as compared with the wealth of Boston.

So, Mr. President, I wish to tell you that Boston is still on the map, and the things which we are particularly proud of are not that it is near Plymouth Rock and Bunker Hill alone, not that it has Harvard College, to which my friend refers with pride as the place where his son is; not that it is the greatest investment center in the United States, but that it is in the same country which contains New York, Chicago, Detroit, Little Rock, Arkansas, the same country which is becoming the greatest nation on the face of the earth.

THE PRESIDENT: I hope the members will understand that we are glad to hear from all of them, we are glad to hear from any member present as to the business conditions in their respective sections of the United States.

MR. CAMPBELL, of Illinois: Mr. President, I come from a State which I feel proud of; a State which gave the nation Lincoln and I live a little south of where Grant lived. John A. Logan also came from our State and many other distinguished men whom you all know of. We are proud of them. They are now dead and gone, but we have about 5,000,000 left. Perhaps the great majority of them are good and sturdy farmers. While we do not raise cotton, we do raise corn and hay and stock, and we are being heard commercially in that way. I am glad to say that our crops this year are very flourishing and our State generally is in a most flourishing condition. I simply want to give you this report from Illinois.

O. H. HAVILL, President Merchants' National Bank, St. Cloud, Minnesota: Mr. President, from the rolling prairies of her southern boundaries to the evergreen forests of her northern line, the hum of the wheels of her manufacturing plant, and the lowing of kine ascend to Heaven a powerful anthem, indicative of the happiness, prosperity and gratitude of the people living in Minnesota, the bread and butter State.

We are a State of diversified industries, a State of no total failures. We will ship products from our State this year ranging from catnip leaves to 21,000,000 tons of iron ore. Cattle bred within our State in competition with the world capture the first prizes. The Father of Waters rises within our State and it and other streams turn the wheels of manufacture, furnishing cheap power and creating innumerable industries which, in turn, dispense immense sums to their employees. Our farmers raise and market almost all the products of an American farm. We are a State that is an empire within ourselves, not dependent on any State or country for our maintenance; we can furnish the necessities and most of the luxuries of life, and also confer culture and intellectual development if necessary for a complete existence, from the cradle to the grave. A child born in the State of Minnesota may be nourished upon the purest milk in the world, coming from the product of 2,000,000 dairy cows. As he grows older that child's life will be sustained on edibles produced in the State of Minnesota, from breakfast foods to moose meat; he will be clothed in clothing manufactured from the fleece of Minnesota sheep; he will be educated from our sixteen million dollar public school fund; he may be enrolled in our College of Agriculture and associated there with people who come from all over the United States, from Maine to California, and from foreign countries. He may become one of the princes of humanity, and care-free, a Minnesota farmer. At our university he may imbibe of any profession which he may choose, or he can enter many successful manufacturing industries now established in the State, which build anything from a fish-hook to a whaleback vessel. We can furnish him a help-meet from among the fairest women of the Union; he can spend his days in a land fanned by the health-giving breezes which filter through our pine forests, and when he has passed away we will erect upon his grave a monument of time-enduring granite.

THE PRESIDENT: The gentleman's time has expired.

MR. HAVILL (continuing): In conclusion I want to say that the demand for mechanics and laborers was never so great or wages so high as now in Minnesota; that a large percentage of the working men own their own homes. These being facts, it necessarily follows that the banking business is pleasant and profitable. The North Star State sends her sister States a greeting. She hopes you are all enjoying the same prosperity.

MR. MOSES, of Kansas: Mr. President, the West is naturally modest, being composed of the children of the East and South and North sent west to open up that once uninhabited territory, to carve out an empire greater than any in the world. What she has done is a matter of history. Over twenty-four States and Territories now exist in that section, and in agriculture and minerals and cattle the West is now equalling or exceeding the East.

In my own State, a small part of the "Great American Desert" we have to-day 489 State banks, eighteen private banks, and 171 National banks, with a capital of over $20,000,000. We have deposits over $118,000,000, with loans over $89,000,000, an increase in loans of over $8,000,000 last year, and with over $47,000,000 in cash—over thirty-nine per cent. of the deposits.

Kansas is now in a normal condition; her pulse beats regularly and her people are happy. For the past seven years she has made more progress than in any fourteen years previously. Kansas has always been loyal, it has always been a foremost State in the progress of civilization and the rights of all mankind. She stands to-day as the beacon light and the tower from which springs all of the good, and I might say all of the evil, which in the end is sifted out and is for the betterment of mankind. She contributes liberally to everything for the advancement of the East, not only in insurance, but is willing at all times to give to all of these institutions enough for them to live upon well, but she is opposed to any one hundred thousand dollar banquet or million dollar summer residence of any presidents of insurance companies.

MR. BURGWYN, of North Carolina: Mr. President, twenty years ago it was my fortune to attend a meeting of the American Bankers' Association. It was then in order for the call of sections to be made as now, and I sat there representing a bank in North Carolina, and listened, among other speeches, to a speech from a gentleman from Massachusetts and heard him say what that State was, that it really comprised more wealth than was embraced in eight or ten of the Southern States; and I felt, sir, that it was proper for me on that occasion to remain silent. Twenty years from that time, to-day, I feel differently about it. I can say to the delegates present here to-day that our Southern land in the last four years has increased its taxable property $225,000,000 a year. It is not only locality and our material progress that we are proud of, but we are proud of the character of our population, of our people down there. We have down there, sir, men who work hard, live quietly and unostentatiously, and die poor. But, sir, although they do not leave legacies large in the way of money, they leave valuable legacies in the way of character, and that is better than the accumulation of money.

As our friend from Arkansas has said, we of the South are devoted to the Union, no longer is there any North and South, East and West; in spirit, we are one people. But I differ from our friend from Arkansas in one thing he said. I am a democrat, and always have been, but if the question were to come before me I would vote for a subsidy from beginning to end. We have to protect our foreign possessions, and how can we do it without ships and sailors? In case of a foreign war how could you get the men on the Philippine Islands or on Hawaii or our other foreign possessions unless we had the ships? I am in favor of subsidizing them and making us a great country—

A Union of hearts, a Union of hands,
A Union of States no one may sever,
A Union of thoughts, a Union of men,
The American Union forever.

MR. LIVINGSTONE, of Michigan: Mr. President and Gentlemen of the Convention—I am not going to occupy your time at this late hour with a lengthy speech about the wonders of Michigan. You will probably remember what has been said about Michigan—"If you want to see a beautiful peninsula, look around you." I will not occupy your time in telling you about our wonderful copper mines, which exceed all others in richness and value. What I want to do is to extend an invitation to the American Bankers' Association here assembled to meet in the city of Detroit in 1907.

I had hoped to come here and extend an invitation to you to meet with us next year, but unfortunately, on account of some complications which have arisen in our hotel facilities, a number being under construction, and it not being certain exactly when they will be completed, we have thought it advisable, in order to be absolutely sure to be able to take care of you all, to invite you to meet with us in 1907 rather than next year. I want to extend this invitation as a caveat, to forestall any others that may come in for that particular year.

I assure you that the bankers of the State of Michigan and the city of Detroit, those of us who live there, and who think it is the most beautiful city in the United States, will do their best to entertain you and make your stay there pleasant if you honor us with the convention. We certainly have a hospitable people, and my friend Russel, sitting back there on the platform, at one time said that we have the most beautiful women in the United States. Each and all of us extend to you a hearty invitation and assure you that all the hospitality for which Michigan is noted will be extended to you in 1907 if you will kindly consider our request to hold your convention in Detroit at that time.

I thank you very much for your attention.

A DELEGATE: Mr. President, may I make a response of one minute in behalf of a gentleman from Spokane, Washington?

THE PRESIDENT: We will be glad to hear you.

THE DELEGATE (reading): Response by D. W. Twohy, President of the Old National Bank of Spokane.

Washington is the richest State in the Union. We have the most productive soil—which will grow sixty bushels of wheat to the acre—finer fruit than New York—and all agricultural products in abundance. Our fisheries supply a large portion of the country. We have more timber than Michigan, Wisconsin or Minnesota ever had, and are only just beginning to manufacture it. We have more coal than Pennsylvania, more iron than Minnesota; forty per cent. of the lead produced in the country comes from the Coeur d'Alene District of Idaho, 100 miles from Spokane. In the production of precious metals we will soon outstrip Colorado. We are doubling our population every five years, and hope to do better.

MR. THATCHER, of Denver, Colorado: Mr. President, Colorado is far away from these old States. We have been hearing about their advantages, and I would be glad to make a few remarks in behalf of Colorado. We have had some trouble in our State in the last year or two. We have been cursed with labor troubles and damned by politics, but we are all right now. Our Supreme Court has taken jurisdiction of things; in fact, has taken jurisdiction of everything from a dog fight to an election, and has settled affairs, so that we now have peace and prosperity.

I want to say a word about our products and resources, something that all bankers want to hear about. You may talk about your cotton and your corn and everything else, but you have to find a market for all of these things, and you over-produce them at times. But you do not over-produce gold, and that is our main product. This year, 1905, will be a banner year with us. We are producing now in three-quarters of the year passed at the rate of over $30,000,000 of gold per year, to say nothing of other minerals such as copper and zinc and lead. You observe that I have not mentioned silver, because I do not want to cause a panic in the convention, although we produce a little silver too.

Outside of that, gentlemen, I wish to call your attention particularly to the fact that we are not exclusively a mining country; we are now engaged largely in the production of sugar beets. Less than five years ago there was not a sugar beet planted in the State of Colorado, to-day there are 50,000 acres of beets planted, and our products from sugar beets range from $12,000,000 to $14,000,000 this year. From that you can see that we are not entirely a mineral State.

I wish to state to you bankers who occasionally take a vacation, when you cannot find anything better to do, that we will be glad to see you in Colorado; we will be glad to have you follow the example of our worthy and honored President and come out and hunt for bears or any other kind of game, and you will find that it is less dangerous than going to Wall street.

MR. COOK, of Hawaii: Mr. President, I want to speak for the western West, one of the United States' insular possessions, although we did not come into the Union through blood, but by annexation.

We have a country that is only a little larger than the State of Connecticut, about 6,000 square miles. We are 2,000 miles from the western coast. We have four banks there that are all members of the American Bankers' Association, that many in Honolulu and also three banks on other islands. I cannot boast of minerals for Hawaii, I cannot boast of great capital there, but I can boast about one thing, and that is our sugar. Our production of sugar amounts to almost 400,000 tons; it has doubled since annexation took place. Before annexation was a reality our people were loyal. I was not born in Boston or Massachusetts or Connecticut, but my mother came from Massachusetts and my father came from Connecticut. I was born in the Islands. My father and mother went out there as missionaries.

The hospitality which Washington has given to us is more, probably than I can offer in the Hawaiian Islands, although we would like to have you come out there.

I have been glad that so much has been said about American shipping. I would like to invite the American Bankers' Association to meet in Hawaii, but we will have to postpone that meeting there until you build more ships, because the laws of the United States will not allow you to travel on half a dozen foreign ships and you could not leave the Islands without taking passage on an American ship. We have had some dozen ships carry our sugar and corn, because the Panama Canal is not yet completed. We were obliged to make a contract for American ships to carry our sugar to the ports in Mexico and then cross by railroads, and then on to New York in vessels. The company has agreed to deliver it in thirty-five days from the Islands. We have been obliged in the past to ship overland in that way, and it is expensive to send our sugar over the land at the rate of $11.50 a ton.

I hope very much that the American Bankers' Association will at some time in the future, however, meet in Honolulu. We can offer you a climate, if we cannot offer you anything else. We can also offer you beautiful scenery. We may not be able to offer you such hotels and modern improvements as you have here. But we hope to see you there sometime.

MR. BAILEY: Mr. President, I wish to extend my sympathy to my friend here who has not been born in Massachusetts or New York or Connecticut, and therefore needs to be born again. I come from that region which Lincoln used to call the State of Allegheny. We make the iron mines of our friends from Michigan. That is we make the machinery to develop them, and we develop the gold mines of Colorado. We make electrical equipments used all over the United States, and we build bridges across the rivers of the world; we build the electric roads that run in London. So if you want to find the hub, that is the real center of all these industries that have been mentioned here, come to Pittsburg. If you come after night you will likely feel very much like the Irishman did who had just come over from the old country. Two Irishmen came to this country, and in the morning one got up a little ahead of the other. There was a fire and the fire engines were going past, and the Irishman says to his friend, "Mike, Mike, get up, they are moving hell, and two loads have already gone by." So that is the way Pittsburg looks after night. If you want to get to the middle of things, as it were, come down to Allegheny.

THE PRESIDENT: The convention will stand adjourned until to-morrow morning at 10 o'clock.

Accordingly, at 1:30 o'clock p. m., the convention adjourned until Friday, October 13, 1905, at 10 o'clock a. m.

THIRD DAYS' PROCEEDINGS.

COLUMBIA THEATER,
WASHINGTON, D. C., October 13, 1905.

The convention was called to order at 10 o'clock a. m. by the President, Mr. E. F. Swinney.

PRAYER BY THE REVEREND DR. D. J. STAFFORD.

Almighty and Everlasting God, we lift our hearts in gratitude to Thee. We thank Thee for that great national prosperity and for all the graces and favors which Thou hast showered down upon us. Protect us in the hour of our triumph as Thou didst in the hour of our danger. Save us from the dangers of riches. Give us the grace to use our great resources and our great wealth for works of humanity, charity and philanthropy, that in all things we may glorify Thee, through Jesus Christ our Lord, Amen.

THE PRESIDENT: We will now be glad to hear from any delegates present on practical banking questions.

INSURANCE OF BANK DEPOSITS.—ADDRESS OF C. F. ALLIS.

Mr. President and Gentlemen of the Convention—I appreciate most thoroughly the honor of addressing the national convention of the American Bankers' Association, an association that has done so much, directly and indirectly, to establish the present high credit of our National Government.

The subject upon which I wish to say a word is the insurance or guaranty of National bank deposits.

The suggestion of insurance when applied to bank deposits has a taint, a suggestion, a presumption, that is not pleasant to any of us. Our banks are solvent, our deposits are as safe as those in the Sub-Treasury; but, on the other hand, we must all recognize the widespread, almost universal, distrust that, whether expressed or not, lies deep down in the hearts of the average depositor. A stranger coming to your town with $1,000 in his pocket will carry it several days, if not weeks, all the time enquiring which is the safest bank, the strongest and best managed. This distrust should not exist. National banks, as their name implies, should be as strong as the nation; their solvency should not be questioned.

Our Government has protected the bill holder absolutely, why should it not protect the depositor?

The present generation know nothing of an unsecured currency, it is to them ancient history—but we older bankers recall the time when every five hundred dollars of miscellaneous currency had one or more counterfeit or raised notes in it, or others below par or worthless because the bank had failed.

The National Currency Act changed this over forty years ago and not a dollar has been lost since.

Now, I would have the Government go a step farther and make the deposits in all National banks absolutely secure from loss, and it can be done without any new machinery and at a very small cost. This is no dream, no sentimental theory that would be fine if it were feasible. It is as simple as the insurance of your house or your life. As officers and directors we are all under a great responsibility and I think that we should "reason together" and ask ourselves what legislation can be enacted that will confer the greatest good upon the greatest number.

This is not a new subject to me. In 1897, eight years ago, I addressed our group convention upon this question, and believe that this convention can do no greater service to the country at large than to secure the insurance of National bank deposits.

From a selfish point of view, it would pay. The National banks would attract deposits that would much more than repay the small tax upon them. The National system would stand out as the only system of banking in the world (as far as I know) where the bill holder and the depositor were protected from loss.

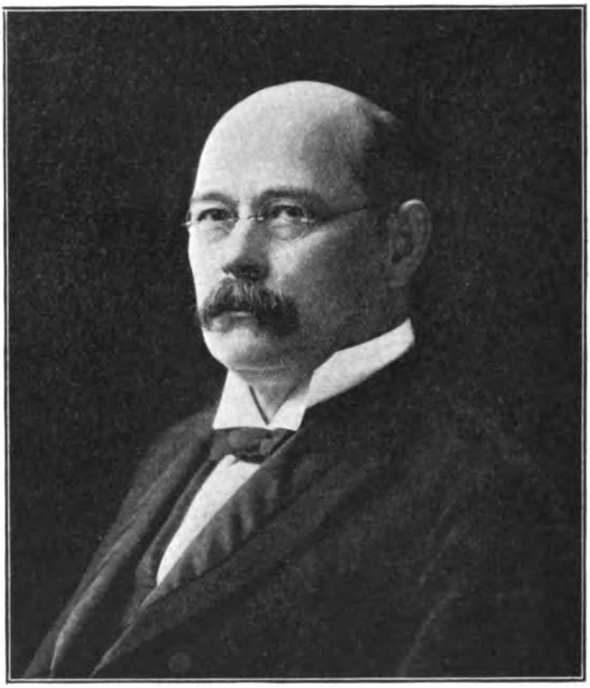
Many bankers object to insurance of deposits; they don't believe in the principle; they say that the strong banks would be called upon to protect the weaker ones. My answer is that some of our strongest banks have been the victims of senseless runs which have taxed their resources for days, even when assisted by directors and friendly competitors. There would be no runs if deposits were guaranteed by a fund in the hands of the United States Treasurer.

WOULD NOT ENCOURAGE RECKLESS BANKING.

Others say it would encourage reckless banking. This could not be, for the Receiver must collect the assets, and assess the stockholders one hundred per cent. if necessary; the banker loses his bank and his reputation besides, but the deficit comes out of this guarantee fund.

Without further preliminaries let us get down to business. How much money will be required, and what will it cost the banks?

In the last report of the Comptroller we learn that the aggregate of



JNO. JOY EDSON,

Chairman Executive Committee on Arrangements for Convention.

claims proven during the last forty years has been in round numbers, $105,-000,000; upon these claims the Receivers themselves have paid 78-11 per cent. The loss therefore to depositors was an average of 21.89 per cent., or about $575,000 annually. This we all think has been a great loss, an awful loss, and so it is; but let us analyze these forty years.

Forty years ago we had just emerged from a civil war that for four years had taxed the resources of the North until our national debt exceeded 2,000 millions. Business in every line was demoralized by fictitious profits, inflated currency and fabulous prices.

The National banking system was established that our Government might find a market for her bonds. To-day we pay 103½ for a two per cent. bond and get par in currency. Then we paid par or less for a six per cent. bond and received ninety per cent. in currency, but the six per cent. interest was payable in gold, and the gold we sold for a premium of from two to three per cent. to nearly three for one, or twelve to fifteen per cent. on the cost of the bond.

I speak of this only to show how attractive the system was, and many an inexperienced group of men organized a National bank. Under such conditions the losses would of necessity be large and the risks unwarranted.

Then during these forty years we have had four years of heavy losses on account of special depression, 1867, 1873, 1892, 1893. If we deduct the losses of these four years and make an average for thirty-six years, and we have an average loss of $440,000 instead of $575,000.

Now, let us take the last five years. During the years 1900-1-2-3-4, the Receivers have in some cases paid the depositors in full and the stockholders a small percentage on their stock, but they have paid the other depositors 97.69 per cent. In other words, the depositors have lost an average of 2.31 per cent. of their money.

Upon this basis (the losses of the last five years) the average loss of forty years would have been only about $52,000 per annum.

Let us look at the last five years from another point of view. In 1900, while there were only three banks placed in the hands of a Receiver, the claims proven were over $4,800,000, but the deposits were all paid by the Receiver, one hundred per cent. and a small dividend to stockholders.

In 1901 four banks failed, but the loss was only 11.41 or $63,404. In 1902 three banks failed, but the loss was only 13-100 of one per cent.—$518.98. In

1903 and 1904 one each year, the Receiver paid depositors in full 100 cents. A total loss to depositors in five years of only $63,922.98.

I have given you an idea in a general way as to the amount of money required. Now what will it cost?

Mr. James C. Hallock, of Brooklyn, in a recent article suggests that the tax now paid upon circulating notes shall be used by the United States Treasurer (after paying the expenses of the Comptroller's Department) to create a fund which shall be held by the Treasurer as a guaranty of deposits.

This had never occurred to me, because I thought it impracticable to ask that the Government do more than act as custodian of the fund, subject to the drafts of the Comptroller after the Receiver of a failed bank had exhausted the assets and the stockholders' liability.

Let us see for a moment what $100 contributed by each bank annually during the last five years would have done in the way of protecting depositors.

In 1900 there were 3,606 banks in active operation; $100 contributed by each would have amounted to $360,600, but there was no loss to depositors, the receivers paid them in full. In 1901 there were 3,981; $100 each would have brought in $398,100. The losses this year were $63,404. In 1902 there were 4,337 banks, and $100 from each would have brought $443,700, but the losses were only 13-100 of one per cent.—$518.98. In 1903 there were 4,756 banks; $100 from each would have brought $475,600, but there were no losses. In 1904 there were 5,184 banks; $100 from each would have brought $518,400, and there were no losses.

At $100 from each bank an aggregate of $2,186,400 would have been contributed, against which we have a loss of $63,922.98 in the five years, a net gain of $2,122,477.

An annual assessment of $250 upon each bank during the last forty years would have more than paid the average annual loss to depositors.

I believe I have proven to your satisfaction that it is not a difficult matter, this insurance of National bank deposits, nor would it be an expensive luxury.

I have given this subject quite a little study, and my suggestion is that the National banks ask of Congress for the enactment of a law instructing the Comptroller to assess and collect from every National bank in January, 1906, the sum of $100, and every six months thereafter the sum of $50, the money so collected to be placed in the hands of the United States Treasurer and subject to the drafts of the Comptroller of the Currency.

In case of failure a Receiver will be appointed and will realize for the depositors all that is possible out of the assets and from the stockholders, the same as now; but the deficit, if there should be any, would be paid from this fund by the Comptroller.

There would be some delay in payment, but a Receiver's certificate would not be much below par, and could be sold.

If these assessments should not be sufficient to pay the losses, I would have further authority given the Comptroller to assess and collect a tax of 1-100 of one per cent. on the deposits (the average for the preceding six months), not more than two assessments to be made during any calendar year. The aggregate of all deposits in National banks—individual, due to banks, United States Government, etc., exceeds $5,000,000,000, and this small tax, 1-100 of one per cent. would yield over $500,000 each assessment. A bank having a deposit of $1,000,000 would pay $100.

The assessment of $150 upon each bank in 1906 would bring $863,550, and $100 in 1907, and thereafter would bring not less than $575,000.

It would seem, therefore, that the first assessment suggested, or $100 per annum for each bank after 1906, would be more than enough. At least the experience of the past five years would lead us to think that in a few years there would be from three to five millions in this fund, and I would have the Comptroller invest practically all of it in Government bonds, with power to sell as needed.

It will be noticed at once that all banks, large and small, pay the same amount—$100 each, after 1906. Some may object to this, but the insurance is richly worth $100 to the smallest bank and the smaller the bank the more valuable this protection is to them.

Statistics show that the smaller banks when placed in the hands of a Receiver pay a less percentage of their deposits than the larger banks.

There is one restriction that to my mind must become a part of the proposed amendment, and that is, there should be a limit to the rate of interest which National banks should be allowed to pay on deposits.

Some will consider this an unnecessary interference, a reflection upon our ability to manage our respective institutions, but from my point of view it is a very important provision.

Inexperienced bankers would be inclined to bid higher for deposits than their more conservative neighbors would think profitable or even safe, and we all know what follows the continued payment of too high a rate of interest on deposits.

I would advise that the limit, the maximum rate, should be three per cent.

In conclusion I would emphasize the following advantages of the amendment:

1st.—It would pay a profit above the tax under present conditions, and when fully understood by the people, millions of hoarded money would be released and be available for business. Don't forget this.

2d.—The National banking system would lead the world in protecting absolutely from loss both the bill holder and the depositor.

3d.—If the past five years are any guide, the cost distributed among 5,700 banks would not be worth mentioning.

I thank you all for your courteous attention.

Mr. SUPPLEE, of Baltimore, Maryland: Mr. President, I ask to be permitted to add a word to what the gentleman has so well said, showing to the convention the necessity of action in this matter.

There is now great difficulty in the National banks and trust companies obtaining what is called depository bonds. This was shown after the failure of the First National Bank, of Milwaukee. Immediately, with due prudence and foresight, the Northwestern Mutual Life Insurance Company desired depository bonds on about $8,000,000 of its deposits. It was necessary to place a bond of $1,200,000 on the First National Bank, of Milwaukee. That bond was placed with the company I have the honor to represent after some re-insurance, but it was not an easy task, and it has not been an easy task in several other cases that I might mention. There are insurance orders that have $3,000,000 of depository bonds, and I might go over the list until your patience would be exhausted. It is found in the surety business that with $25,000,000 sureties the company is now unequal to the task of taking care of the public bonds, and the gentleman's point is exceedingly well taken. He fails to state to you that in the excellent report of Comptroller Ridgley, which he has quoted, the State banks, trust companies and so forth, failures are not figured; but I figured them the other day, and I found they only pay fifty per cent. in liquidation.

If you ask what is the remedy, I will say that the remedy has been suggested by the gentleman, except I differ with him as to an arbitrary and fixed sum for a bank. If one one-hundredth of one per cent. or one-tenth of a mill was taxed on the deposits, great and small banks alike, the fund to be handled by the Comptroller of the Treasury, it would make our National bank note and every National bank deposit equally good. It was Macbeth who said, "I will make assurance doubly sure, and take a bond of fate." Our advice is, do not take a bond of fate, but take a surety company bond if you can get it.

C. N. EVANS, Southern National Bank, Wilmington, North Carolina: Mr. President, I say let us keep the American Bankers' Association out of the insurance business. The gentleman from Erie made some excellent suggestions. At the same time it seems to me this is an individual question. If the bank wishes to absolutely assure to the community that its deposits are safe and sound and available, let that bank pay for its own insurance. Let them go to this company and say, "Gentlemen, we have a line of deposits at five million dollars. We desire a policy protecting our deposits to the sum of $5,000,000, and we will pay the premium on that." And so let us keep the bankers' association out of that business.

It seems to me that the point we want to reach is this: We do not want to go into this business of insuring and not trouble the Government in regard to guaranteeing our deposits further than to supervise us, as they are doing now very carefully; but let us go to the men who cause these failures. We have in our section of the country, in the South, some excellent industrial corporations. But despite our vigilance, occasionally we hear of a big crash. We see an assignment has been made way up in the millions of dollars by a concern that stands well, or has stood well, officered by men of high character and reputation. We have their statements, and they look good, but we wake up in the morning and find that there was nothing in that statement but a lot of falsehood. That bank has gone. A few big slumps will materially affect small banks, of course. Let us do this. Let us create a bureau of audit and have this bureau of audit employ the finest expert accountants that can be gotten. Have it understood that any member of this association can request from this bureau of audit a financial report upon any corporation, firm or individual in which his bank is interested. If such a request is filed and placed with the bureau it then becomes the duty of the bureau to notify this firm, corporation or individual, that some one of its members (of course that would be private) desires a special report or special examination of its affairs. Now, it is up to you gentlemen to give this report or not. If you give it, well and good. If you do not give it, the members of the American Bankers' Association will be advised. Now, you say that is a big expense. It costs hundreds of dollars, perhaps a thousand dollars in some cases, to have a corporation examined, maybe more, and who is going to pay it? Let the banks themselves pay it. Let the bank which applies for this report pay its part of it. If they call for another report on this same concern; I mean if some other bank or creditor desires a report, let them pay their proportion of it. It may be that a large corporation borrowing $500,000 or $600,000—large to us in our section of the country—may be the subject for an examination; maybe there are ten or a dozen banks interested in that large concern. Then those banks can pay for their proportion of that report. That, it seems to me, is a more practical plan for us to pursue, and have it go out to these industrial corporations, "Gentlemen, we do not question you at all, not in the slightest; we think you are honest, but we want the reports you make to us certified as the National bank reports are certified by the bank statements."

MYRON CAMPBELL, of South Bend, Indiana: Mr. President, I presume that there are as many schemes for bank protection as there are States in the Union. I do not care to offer any scheme, but I wish to offer two reasons why I think the gentleman has not suggested a practicable scheme.

In the first place, I think that Congress has no power to levy a tax for individual protection. It has the power to levy a tax for Government protection and for Government purposes, but I do not think it could levy a tax on bank capital or bank deposits, and enforce the collection of it without an amendment to the Banking Act to which the bank would subscribe. I think to undertake to make an amendment which would apply to banks already in existence would result in not being able to enforce it.

The next objection would be to an unlimited security. I don't think it practical to say that we will undertake to protect deposits in full. That will enable a $25,000 or $50,000 bank to go to a $100,000 or $200,000 depositor and say: "Our bank is as safe for you to deposit in as the $500,000 or the $1,000,000 bank."

My impression is if there could be an agreement on a plan by which an assessment would be made, and insure to each depositor, say $2,000 or $3,000, in case the bank's reserve had been exhausted, that that would go a long way towards eliminating the danger of panics and runs on banks. If we could say to depositors, we will guarantee your deposits up to $3,000, that would take ninety-five per cent. of the depositors in the rural sections of the country—ninety-five per cent. numerically, at least.

I think these are two objections which ought to be considered in connection with what has been suggested here.

W. C. ROBINSON, President First National Bank, Winfield, Kansas: Mr. President, it seems to me there is no practicable way of insuring deposits of our banks, and it occurs to me that we are fooling away our time in discussing a question that so little appeals to us. It occurs to me now that the deposits of the National banks of the United States are to-day practically safe. There has been but a small loss since the organization of the National banks, and I believe that if we follow the recommendation of our present Comptroller of the Currency and the recommendations that have heretofore been made to increase the number of bank examiners, and let every National bank—I speak of National banks because I am more familiar with them—as far as possible adhere to the National Banking Law, and avoid excess loans, that we will do as much as we can expect to do along this line. I understand that excess loans cause the bulk of our failures. Let us avoid as far as possible excess loans. Let us do our business from this time on as prudently, if not more so, than we have in the past. Let every bank stand upon its own foundation and upon its own reputation. It seems to me that that is all the security that our depositors need and all that they demand.

Mr. HILL, of Bath, Maine: Mr. President, our last speaker has said that you can not insure your depositors. I wish to say that our bank insures their deposits by putting away a reserve of $4,000 a year. We can to-day, with cash on hand and bonds at fifty cents on the dollar, pay every depositor and have our loans intact.

THE PRESIDENT: Mr. H. L. Goulder, President of the Merchant Marine League, will address us now, his subject being "Our Commerce."

OUR COMMERCE.—ADDRESS OF H. L. GOULDER.

Transportation, its availability on equal terms to every one, its extension by every legitimate means, is one of the great questions. It would be idle to raise wheat or corn or cotton or to mine ore and copper, raise cattle or bring

8

forth any of the products of the forest, the farm or the factory, without that exchange which depends primarily, almost absolutely, on transportation. Broadly speaking, commerce is transportation. Within our own country, we are solving, and there are signs that as a people we are going on to solve honestly, courageously and for abiding good those problems of transportation which grow more difficult, require more earnest attention, demand greater courage as we advance from crude, elemental conditions. We in the Great Lakes region boast cheapest carriage in ships which bear comparison with any in the world, with credit of being the finest working fleet afloat; and this beyond fair argument has come through direct government support of the coasting laws and money to so improve our channels that a modern freighter carries in a trip what her prototype carried in an eight months' season of navigation. But this is not all. Our ship is aided by terminal facilities to load her ten or twelve thousand tons in a couple of hours and unload it within five hours, or, speaking of ordinary practice, to load in a few hours and discharge within a day. So has come an output of nearly thirty-five million tons of iron ore, eighty to eighty-five per cent. in the production of the pig iron of the country this year, which will exceed that of England, France and Germany combined; but with this has gone the opening of the great harvest fields which in thirty-five years have, with advantage of freight rates, increased their lake shipment from 12½ to over 300 million bushels, with corresponding movement of coal and other products. But transportation, commerce, intercommunication, collocation of business, have made it so that there can be no partial, local thrift while we do these things on the Lakes, the South produces and manufactures from cotton; timber grows throughout the country; wheat in the Northwest is matched by corn in the Southwest; manufactures extend through the land; our interests so intermingle that even the question of tariff may hardly in any sense now be local in effect; everything bearing on the commercial life of this people is so coming to be of general consequence, that a man may no longer expect to be heard with patience on the merits, wants or demands of any section without full regard to its general effect. He is narrow indeed who cannot look out over our common heritage and realize that there could be no such prosperity, none of the good things doing in any part, except the people of a common country, following out their particular opportunities, are doing well.

Great results are seen on other internal waterways to which attention of the people will be directed until equal or even greater benefits may be shown. Our railroads, hauling freight at less than half the cost of any other country, are improving their service by reducing grades, and, so far as possible, taking out the crookedness of the tracks, and the American people are going forward in determined spirit with President Roosevelt and the Congress to remove, so far as possible, any other crookedness.

We have a home market in which figures go almost beyond understanding, but it is no longer possible to stop at the confines of our own country. While in the beginning we imported manufactured goods and sent out rudimental products, more and more we are using raw materials in manufacture; 35 per cent. of our population is urban, and it is an open prediction that in a few years the United States will not produce food stuffs beyond the needs of our own people; while steadily our more distinctly world competitive manufactures are increasing in the export list.

We have pacified Cuba; Secretary Taft believes that the Philippines must be a charge for a generation; we are starting to build a world canal at the Isthmus; our President, with general acclaim, has been drawn into the settlement of one of the great wars of history and therein reflected honor and glory upon the nation. We have a great and growing navy, for which the nation can afford to furnish money almost without stint, but embarrassed in finding officers and men, because while ships can be built to order as money is available, sailors require time in their training. We have come to be a truly great nation, ready, able and withal willing to take first place in the world markets, but deserving and requiring from a purely economic standpoint an efficient system of delivering our goods abroad; and yet we remain dependent on rivals in trade to carry our world competitive goods abroad for introduction and sale, while the overwhelming testimony of business men all over the United States is that this is poor trade policy; that our trade is seriously handicapped and many producers have abandoned the foreign field because of unreliable and unsatisfactory service and discouragement of American goods.

Government Aid Necessary.

That satisfactory service will or can come without some form of government aid cannot longer be claimed with any show of fairness. According to official figures, the carrying capacity of ships in the world between 1890 and 1904 increased from under forty-four millions to seventy-six and a half million tons. In this interim, England increased from twenty-four to thirty-eight and a half millions; Germany from three and a third to nearly seven and two-third millions; France from two and a quarter to three millions; Norway from two to three and a third millions; Japan from 150,000 to 390,000 tons. Statistics before me give tonnage in custom-house measurement for the United States, which may be a little more than doubled to get actual carrying capacity. These show that we had (custom-house measurement) in 1861 two and a half millions in foreign trade, which had run down in 1890 to a million tons, and in 1904 to 888,000 tons. Despite any argument to the contrary, the other countries, aside from the facts of cheaper construction and operation through cheaper labor, have given definite aid in their foreign shipping, and it is incorrect to say that this has been confined to mere mail carriage.

On the other hand, our coasting enrolled tonnage, which has had the support of the coasting laws, has increased from three and a third millions in 1890 to five and a third millions in 1904. To this may be added that on the Great Lakes, where increase of size and draft has been made possible by Government improvement of channels, the tonnage (custom-house measurement) increased from 1,000,000 tons in 1890 to 2,000,000 tons in 1904, and there are now building and under contract for this trade more and better ships than ever before in the United States for any trade. And there is not, and for months has not been, a single ship of any considerable size or description building in the United States for foreign trade, where the American people pay nearly two hundred million dollars annual freights against a quarter of that sum on the Great Lakes, and the only contract let in four years is for the four ships of the Ward Line to replace the four taken over by the Government for Pana service.

Our Dependence Upon Foreign Shipping.

We are so abjectly dependent on foreign rivals in trade, that our flag has almost disappeared from the ocean. Only through apathy of our people, unmatched and not rivaled in world history, nourished and lulled into soft acquiescence by specious argument of our opponents in the shipping interest, can it be that, when the United States shall have spent a possible five hundred millions for a commercial canal at the Isthmus, our flag shall go through that canal only on an occasional man-of-war or millionaire's yacht.

In wars between maritime powers an important duty of the navy has been to convoy merchant ships. If we let things go on as they are, we certainly will not have enough merchant ships to go around for this purpose.

Our league opposes this condition, and any argument, thoughtless or intentional, tending to such consummation.

There are those who, in apparent sincerity, say that the carrying of a nation's goods and the building up of its merchant marine are matters of price simply, and that it is better to get the work done at the cheapest rate, taking our chances in time of need upon our ability to pay any price exacted; and these advocates point also to the fact that already American capital has been invested and the avenue of investment is open in foreign ships to be operated under a foreign flag with foreign officers and men. This may redound to the advantage of some who have the money to invest, but it is destructive of the entire theory that our government exists for the whole people. While opponents of an American merchant marine are saying this, we see each year that we pay over to foreigners about $180,000,000 in freights, of which a good share should be circulated in this country, as are the freights paid in the internal land and marine commerce of the United States. Passing through the builder, the operator, the repairer, the furnisher of ships, and all the allied branches of industry and their employees, it should go into the commercial strength of the nation, and the ultimate argument of our opponents is that this cannot or should not be done because that involves conditions and wages of American citizens, which are better than those abroad. Even in this they ignore the fact and reasonable hope that with American wages and conditions of living, shown in internal transportation on land and water, we have the cheapest transportation in the world, and may, with fair encouragement and a proper start, do this again on the seas, and so lay forever the ghost of "subsidy."

Humiliating as it is to our national pride; opposing all commercial history; costly as the experience has proven of dependence on the foreign rival for introduction of our products abroad, there might still remain some shred of argument based on cheapness at expense of progress in trade, if the question could with semblance of propriety be permitted to revolve around and turn upon this single element in a complex problem.

This country has not only to admit that following consistently a system of protection in trade, it has neglected the shipping industry, which should have prospered with the rest and has been prevented by discrimination, however induced; but that this has been done against the example of free trade nations who uniformly have selected the shipping interests for reasons of far-reaching national importance, as the one single interest to be maintained and encouraged at any proper cost by that country which can have a merchant marine and would keep its place on the seas.

Adam Smith, in his "Wealth of Nations," said:

"There seems to be, however, two cases in which it will generally be advantageous to lay some burden upon foreign, for the encouragement of domestic, industry. The first is, when some particular industry is necessary for the defense of the country. The defense of Great Britain, for example, depends very much upon the number of its sailors and shipping. The act of navigation, therefore, very properly endeavors to give the sailors and shipping of Great Britain the monopoly of the trade of their own country, in some cases by absolute prohibitions, and in others by heavy burdens upon the shipping of foreign countries."

John Stuart Mill, another world-renowned writer on free-trade and economics, says:

"The navigation laws were grounded, in theory and profession, on the necessity of keeping up a 'nursery of seamen' for the navy. On this last subject, I at once admit that the object is worth the sacrifice; and that a country exposed to invasion by sea, if it cannot otherwise have sufficient ships and sailors of its own, to secure the means of manning on an emergency an adequate fleet, is quite right in obtaining those means, even at an economical sacrifice in point of cheapness of transport. When the English navigation laws were enacted, the Dutch, from their maritime skill and their low rate of profit at home, were able to carry for other nations, England included, at cheaper rates than those nations could carry for themselves; which placed all other countries at a great comparative disadvantage in obtaining experienced seamen for their ships of war. The navigation laws, by which this deficiency was remedied, and at the same time a blow struck against the maritime power of a nation with which England was then frequently engaged in hostilities, were probably, though economically disadvantageous, politically expedient."

Great Britain's Bounties to Her Ships.

In 1890 there was what the "North American Review" described as a duel between Mr. Gladstone and Mr. Blaine, one for free trade, the other for protection. On page forty-nine of the January number of that magazine, Mr. Blaine uses this language, and I may be pardoned for quoting at some length:

"Mr. Gladstone, however, commits himself to the principle that 'all protection is morally bad.' If this has been his belief ever since he became an advocate of free trade, his conscience must have received many and severe wounds, as session after session, while Chancellor of the Exchequer, he carried through Parliament a bounty—may I not say a direct protection?—of one hundred and eighty thousand pounds sterling to a line of steamers running between England and the United States—a protection that began six years before free trade was proclaimed in England's manufactures and continued nearly twenty years after. In the whole period of twenty-five years an aggregate of many millions of dollars was paid out to protect the English line against all competition.

It may be argued that this sum was paid for carrying the Anglo-Saxon mails, but that argument will not avail freetraders, because steamers of other nationalities stood ready to carry the mails at a far cheaper rate. Nay, a few years ago, possibly when Mr. Gladstone was Premier of England, public bids were asked to carry the Anglo-Indian mails. A French line offered a lower amount than any English line, but the English Government disregarded the French bid and gave the contract to the Peninsular & Oriental Line, owned by a well-known English company. Still later, the German Lloyd Company contracted to carry the Anglo-American mails cheaper than any English line offered, and the German company actually began to perform the duty, but Englishmen did not want that kind of free trade, and they broke the contract with the German line and again gave protection to the English ships. Does not this justify the opinion that the English policy of free trade is urged where England can hold the field against rivals, and that when competition leaves her behind she repudiates free trade and substitutes the most pronounced form of protection?"

I have it from the management of the "North American Review" that Mr. Gladstone never in any manner answered the challenge, but the English nation has responded in the contract provision for the new Cunard steamers. When metal shipbuilding came in vogue, and the United Kingdom could produce more cheaply than anywhere, the free ship policy was adopted in that country. Germany has been going forward in shipbuilding and operation in a wonderful degree, and it has come to be a question with the balance somewhat favoring Germany, whether it is cheaper to build the so-called ocean grey-hound in Germany or in England. When the British Government, therefore, two years ago entered into a contract with the Cunard Line to furnish thirteen millions of dollars to build two ships and give a subsidy of over a million dollars a year for their operation, the British Government, for the first time in fifty years, stipulated that these ships should be built in the United Kingdom.

An English writer, member of Parliament, Mr. J. Henniker Heaton, speaking of the British practice, said:

"For many years the American mails (as well as American goods) were carried to Europe almost exclusively in British vessels. Early in the century, the British Government adopted the sagacious policy of subsidizing the shipping companies which ran vessels to the colonies and the foreign countries. Infant settlements like those at Port Jackson and Sydney or the Cape, could not, of course, supply trade enough to make the voyages remunerative, and now that such settlements have shot up into rich and powerful colonies, the subsidies are continued on a more lavish scale on two conditions: First, that the subsidized vessels were constructed so as to be easily converted into cruisers in case of war; second, that they shall carry the mails. This policy of State aid was so brilliantly successful in developing trade and maintaining the supremacy of the British mercantile marine, that it was adopted in turn by all the great powers, with the single exception, until quite recently, of the United States. As American ships were not subsidized, their vessels could not compete with the Cunard and other companies, the art of shipbuilding languished and the American carrying trade was transferred to foreign bottoms. In 1891, only thirteen per cent. of the exports from the United States were carried in American ships, which at one time had engrossed ninety per cent. As a consequence of refusing five million a year in subsidies during thirty years to native ship owners, or $150,000,000, the United States had to pay in the same period no less than $3,000,000,0000 for freights, while their mercantile marine dwindled into insignificance. The fact that the country bore this heavy drain upon its earnings so long without feeling it—as if it had been a flea-bite—affords the highest possible proof of its amazing vitality and vigor. At the same time, one is puzzled to understand why the proverbial shrewdness of the American unfailingly exhibited in his private affairs, was missing for more than a generation in this important section of national business."

Captain Wilmot, of the Rbyal Navy, writing in 1892, said:

"When we passed from the old irregular method of manning the fleet, and adopted the continuous service system (under which seamen enter for ten years, with the option of continuing at its expiration for a further similar period, followed by a pension), coupled with the entry and training of boys, a complete revolution was effected in this portion of the naval service. The delays of manning in peace time disappeared, and all uncertainty in the matter, when hostilities are apprehended, is removed. For a reserve in time of war we rely on 20,000 merchant seamen (now 30,000), who, though they have never served on board a man-of-war, are annually drilled to guns and small arms at various depots round the coast. How far the comparatively small number of highly trained seamen we maintain, together with this somewhat uncertain reserve, would supply the requirements of a protracted maritime war, it is difficult to say. The waste, from many causes, would be very great, if the struggle were severe, but seeing the number of men this country possesses who are, or have been, connected in some way with the sea, and who would be of great assistance when acting with trained seamen, I do not think that in this respect our resources will prove inadequate."

Without stopping to give the expression of other American Presidents and publicists, may I not reproduce the language of an official report of Thomas Jefferson over one hundred years ago, which has lost none of its force:

"Our navigation involves still higher considerations. As a branch of industry, it is valuable, but as a resource of defence, essential.

Its value, as a branch of industry, is enhanced by the attendance of so many other branches on it. In times of general peace, it multiplies competitors for employment in transportation and so keeps that at its proper level; and in times of war—that is to say, when those nations, who may be our principal carriers shall be at war with each other, if we have not within ourselves the means of transportation, our produce must be exported in belligerent vessels, at the increased expense of war freight and insurance, and the articles which will not bear that must perish on our hands.

But it is as a resource of defense that our navigation will admit neither neglect nor forbearance. The position and circumstances of the United States leave them nothing to fear on their land board, and nothing to desire beyond their present rights. But on their seaboard they are open to injury, and they have there, too, a commerce which must be protected. This can only be done by possession of a respectable body of citizen seamen, and of artisans and establishment in readiness for shipbuilding."

A recent consular report gives account of changes in British and German tonnage in the past twenty years, and this succinctly is the record of British companies; one increased from 174,000 to 446,000 gross registered tonnage; another from 58,000 to 388,000; another from 175,000 to 326,000; another increased seven-fold to 321,000 tons; another from 96,000 to 298,000; another from 53,000 to 261,000; another from 51,000 to 254,000; another from 68,000 to 203,000. For the Germans one line increased from 60,000 to 719,000, and another from 103,000 to 573,000.

From the general experience it may be taken that a foreign merchant marine is an essential element in rounding out the affairs of a nation which has seacoast and possibilities of foreign trade. We have a greater navigable seacoast than any other country in the world, and the greatest foreign trade of any country, and a growing necessity for introducing our world competitive products. We have the humiliating spectacle that while in foreign bottoms we import more products from South America than they sell elsewhere, we have no adequate means of shipping to them the things which we have and should sell in exchange. To the best customer in South America we have to send by way of Europe, and when any of us visit South America, convenience requires that we go to Europe and from there to our near neighbor. Let us leave those gentlemen who either are content with this condition of things or think they will remedy themselves in some undefined way.

Discussion of Proposed Remedies.

Now, as to the remedy: It must be understood that in our league there is absolutely no interest in favor of any particular remedy; that our purpose is the finding of a remedy and the best one. So, therefore, we are ready and willing and desire to approach this question of remedy without predilection in favor of particular means without fear of words or definitions. Many people in this great country shiver and would have the nation hesitate and stutter over the word subsidy. We have gone through a lot of definitions since the constitution was adopted, and it must, out of the reason of things, come to be a mere weakness for any man to say or write that he is opposed to subsidy per se. Among the remedies that have been suggested and perhaps including all, are free materials for shipbuilding, free ships, discriminating duties and direct aid.

There are afloat in the country to-day those who say that our problem would be solved if the materials for building ships for foreign trade were admitted free and point to ship plate being sold for delivery abroad cheaper than at home and who invoke the aid of tariff reform without appreciating that for some fifteen years all material for building, furnishing and repairing any ship for the trade has been entirely free of any duty. This plan has so been thoroughly tried and is exploded. Free ships, the right of going abroad and purchasing a ship wherever it might be built cheapest does not seem to promise anything. Until foreign countries shall raise their wages and conditions of living, or we shall, by some general process, reduce ours, it must be that wages and cost of operation of American ships, regardless of the percentage of Americans to be employed, shall be greater. If we can purchase ships abroad cheaper than in this country, it is only so far as the labor in their construction costs less abroad. Here let it be said that by reason of the stifling of coast shipbuilding in this country, shipyards are not able to standardize and so put into vogue those practices which in other lines of work have enabled us in this country to pay higher wages with better conditions and yet produce more cheaply, as our railroads under our conditions carry freight more cheapily than abroad. There seems no warrant in experience, analogy or acceptable argument for asserting that free ships would solve the problem. But by reason of the assertion, the Congressional Commission made special inquiry upon this subject, and the universal testimony of men interested directly in shipping and the operation of ships was against and overwhelmingly against the proposition that this could afford relief. Discriminating duties in the beginning of this country doubtless aided very much at a time when we were an importing nation, exporting only food stuffs and raw materials which other countries required. Now we have gotten into a position and condition where practically half of all that comes into this country is on the free list. There is no export duty. And when we come to consider South and Central America, our nearest neighbors, barely ten per cent. of what comes to us now in foreign ships pays any duty. To you, who, in dealing with general questions of business, appreciate the absolute necessity of correct detail, I put the question: How would the plan of discriminating duties work out? In the first place, consider that anything shipped out of this country does not have any duty about it and the plan could not be applied there. In the next place, consider that two ships might load at a foreign port, one largely with dutiable goods, the other largely with goods free of duty; how would it be worked out in such a case? Not to detain you too far with detail, take the further case that in respect of goods which are dutiable one ship hauls 15,000 miles and another ship 1,500 miles; how is this to be worked out? I lay aside the political question of disturbing thirty-two working commercial treaties, and ask you gentlemen when you go home to take up the question of discriminating duties as a purely business problem, and see if with no duties on exports, with ninety per cent. of our goods coming in free from South and Central America, half our goods from all over the world coming in free, with the duties laid precisely the same regardless of the distance traveled by the ship, how a system of discriminating duties could be devised which would be workable.

Our league has been in existence nearly a year. It was not formed to support the action of the Congressional Commission. In its first statement, made in advance of any report, we expressly reserved the right to criticize anything which might be put forward by that commission. But we find ourselves really in the condition of mind of the majority of the commission, with perhaps a little more freedom of expression. That commission went all about the United States, invited expression from every one willing to come before them, sifted it all and reached the conclusion unanimously that we need a merchant marine possibly less for the purpose of introducing trade abroad, important as that is, than for general safety of the country in having a fleet of our own to carry our goods independent of foreign complications, reliable for the continuance of our trade under suitable naval protection in case we might be involved in war and furnishing those adjuncts of the navy which every nation in the history of the world has found to justify all the other expense of a navy, that is to say, auxiliary ships and a sufficient resource for seamen when the test should come.

Time does not permit my going into the details of the bill proposed by the commission. Your Congressmen can furnish you with a copy or you can obtain it otherwise readily. Suffice it to say that the commission apparently regardful of the hobgoblin of subsidy, have provided for only a few lines and these only to South America, and to the Orient. But they have heeded the cry which went over this country when other projects were before Congress, that what we most need is the delivery wagon style of ship and provided a general subsidy, and I use the word "subsidy" because it is the familiar term and we should not fear definition, but hold to substance.

The question of expense is of greatest importance, but most important as related to probable results. This country is now paying for rural free delivery \$13,000,000 a year; for 1906 the appropriation is nearly double this sum, and for city free delivery, \$21,000,000 a year. This is for convenience of the people. A fraction of that sum would solve the problem of our foreign marine and supply a conceded necessity. Putting it another way, the price of a single battleship for the navy would more than meet the expense of a thorough experiment in rehabilitating our foreign merchant marine. Compared with the expenses which we are approving in connection with the Philippines, for our navy and army establishments and in the building of the world canal, the cost of a thorough test might be described as a "drop in the bucket."

I wish I might detain you with a discussion of the bill and of every feature of the bill. I would be glad if some one could present a better bill, but the sole point has been to lay this matter before this national body in the hope that you will go home thinking of the subject, believing that it is one of the most important subjects before the American people, and that you, through your large influence upon affairs in your homes, will be willing to aid in bringing the subject forward to help speed that day when our American trade shall go abroad under our flag, peaceful emblem of excellence, of honesty, of fair dealing in trade and of manful, considerate power when needed, and all in the spirit of the toast.

> The union of lakes, rivers and lands.
> The union of States none can sever;
> The union of hearts, the union of hands,
> And the flag of our Union forever.

THE PRESIDENT: The next is a continuation of the discussion on practical banking questions.

The next is unfinished business, and the Chair recognizes Mr. J. D. Powers, of Louisville, Kentucky.

MR. POWERS: Mr. President and Gentlemen of the Convention—I desire to offer a resolution, simple in character but important in giving expression to our personal feelings, as I hope.

Free from all commercialism and without taint or selfishness, the members of the Bankers' Association of the District of Columbia have without stint provided for the comfort and pleasure of the American Bankers' Association, its officers and members and visitors, the most delicate, agreeable, and delightful reception and entertainment, filling full the measure of expectation and realization during our stay in Washington, our country's great capital city, for which the association tenders profound and grateful thanks.

I move the adoption of the suggestion as embraced therein.

The motion was seconded and the question being taken, the resolution was unanimously adopted.

THE PRESIDENT: The Chair recognizes Mr. Logan C. Murray.

LOGAN C. MURRAY: Mr. President and Gentlemen—There have been constantly in the last twenty years publications made throughout the country in different newspapers who are not familiar, possibly, with this association, to the effect that the American Bankers' Association pays noted forgers, in some cases, salaries not to commit forgeries. I have here a newspaper extract to the effect that Karl Becker, "the forger most feared by the bankers of America," is said to receive a salary from a number of leading banks on condition that he will commit no more forgeries. For many years we have had trouble with this sort of thing. I desire now to introduce a resolution, that the American bankers of the country will not under any circumstances compound such a thing, and that the newspapers hereafter will not print such stuff as that. It is a libel upon this association to suggest that any member would make any such compact with a forger. I therefore hope that this association will vote unanimously now, and strongly say that it will be hereafter understood by every newspaper in the country that this association under no circumstances, and no honorable member of it, will for one moment have any such compact with any such man. I move that this association distinctly say this now, so that it may be heard by every newspaper.

The motion was seconded, and the question being taken, was unanimously agreed to.

THE PRESIDENT: The incoming council will meet immediately after adjournment on the tenth floor of the New Willard Hotel.

The next in order is the report of the auditing committee.

REPORT OF THE AUDITING COMMITTEE, BY J. R. MITCHELL, CHAIRMAN.

Mr. President—The committee appointed to audit the accounts of the association beg leave to report that they have verified the expense vouchers with the statements submitted.

The rapid growth of the American Bankers' Association in the past few years has made it practically impossible, within the time alloted, for the auditing committee to make as intelligent and thorough an audit of the affairs of the association as the volume of business warrants, and we therefore suggest that future audits of the accounts of the association should be made by a firm of chartered accountants, or an audit company, and their reports submitted to the executive council.

Respectfully submitted,
J. R. Mitchell, Chairman; Luther Drake, C. B. Mills.

Upon motion, the report was received and filed.

The nominating committee submitted their report as follows:

[A complete list of the new officers of the association will be found on a subsequent page.]

During the reading of the foregoing report, the following occurred:

Mr. EVANS, of North Carolina: I move that the secretary be directed to cast the vote of the association for Mr. John L. Hamilton as president.

The motion was seconded by several delegates.

THE PRESIDENT: It is moved that the secretary be directed to cast the vote of the association for Mr. John L. Hamilton for president. Is there objection?

There was no objection, and the secretary accordingly was directed to cast the ballot of the convention for Mr. Hamilton for president.

THE SECRETARY: I take pleasure in casting the ballot of the convention for Mr. Hamilton for president.

Mr. MULVANE, of Kansas: Mr. President, I move that the secretary be directed to cast the vote of the association for Mr. Whitson for first vice-president.

The motion was numerously seconded.

THE PRESIDENT: Is there objection? (After a pause.) The Chair hears none, and the secretary is directed to cast the vote of the association for Mr. Whitson for first vice-president.

THE SECRETARY: The secretary takes pleasure in casting the vote of the association for first vice-president.

CHARLES E. SPRAGUE, of New York (at the conclusion of the reading of the nominations for members of the executive council for a term of three years): Mr. President, I believe that while not very usual, nominations other than those of the nominating committee are in order under our rules. Am I right?

THE PRESIDENT: Yes, sir.

Mr. SPRAGUE: Those nominations are before you, doubtless of worthy and estimable candidates; but I feel it my duty, not merely as a delegate, but as representative of 734 of the members of this association, to place in nomination for election as a member of the executive council a distinguished representative of our section, Mr. Edward E. Duff, of Pittsburg, Vice-President of the People's Savings Bank, a gentleman eminently qualified by ability, by character and by attainments to fill the position, and a gentlemen whose qualifications have been attested by our electing him day before yesterday as chairman of the Savings bank section. And I will state the reasons, Mr. Chairman, which have compelled me, reluctantly, to violate the usual ease and harmony with which our elections have been conducted by introducing a nomination out of the regular order of things.

The Savings bank section, as you know, is an important section. I venture to say that its work has been as aggressive as that of any other portion of the bankers' association. During the last year it has added 118 members to this association through its direct work. By that you will see that except for the work of the Savings bank section in the way of securing new members, we would almost have had a shrinkage in our membership. We feel, therefore, that the committee, unintentionally probably, has committed a grievous oversight in neglecting to give us a direct representative on this council. The Savings banks, we feel, are preëminently entitled to a representative on the council. We pay our dues exactly like any other members. But, gentlemen, so far as we are Savings bank men we are not bankers, we are, on the other hand among your largest customers; we are not your rivals. But here we find ourselves subjected to, at least, neglect; some of our members go so far as to call it slight. However, that may be, the fact remains that we have not been given one representative, although we were led to believe that we would be allowed one. For some reason or other we have not been favored. We have not in the past and we do not in the future intend to obtain representation on this council by means of lobbying, by soliciting votes or by canvassing. We shall not use any such means as that. We shall with manly dignity present our claim, and that is the reason I am presenting the name of this gentleman to-day—because I feel that the membership of this association at large will support us, and that the executive council—the two classes now remaining in power—will also support us; that all right-minded men, whether they are bankers, Savings bank men or trust company men, will support us, that they will see that our cause is just; and, to say the least, we have not been treated with that respect with which an organized section of this association should be treated.

These are the reasons, gentlemen, why I feel it incumbent upon me as a duty, a disagreeable duty, to make a counter nomination, instead of acquiescing in the usual perfunctory ballot. Gentlemen, it is unpleasant, for more reasons than one, but it is necessary, for us to select one of the names on the ticket presented to be displaced by our representative; the task is an unwelcome one. Far be it from us to desire that any one there should be displaced, but that is the only effective way—to withdraw one of those names. We can do it, we have the votes in this house, so that if I name the person who is to be excluded, in favor of our man, we can carry the election. I do not wish to do anything of the sort. I merely wish to bring before you our rights and our wrongs, lest it be said that we submitted tamely to neglect and oversight and sat still and allowed people to walk upon us without making a move.

Gentlemen, having accomplished the purpose of this nomination, I now withdraw it.

THE PRESIDENT: I believe Mr. Sprague's speech is for the good of the association. While it may be out of place for me to say so, it seems to me that we are getting to have too much politics in the affairs of the convention.

What shall be done with the nominations for members of the executive council?

Mr. MULVANE, of Kansas: I move that the secretary be directed to cast the ballot of the convention in favor of the gentlemen whose names we have heard read.

Mr. SPRAGUE: I second the motion.

There was no objection, and the secretary was accordingly directed to cast the ballot of the association for the gentlemen whose names were read, as members of the executive council.

THE SECRETARY: I take pleasure in casting the ballot of the association for Mr. George M. Reynolds, Mr. Milton E. Ailes, Mr. J. L. Edwards, Mr. H. B. Wilcox and Mr. J. J. Sullivan for members of the executive council for three years.

(The reading of the report of the nominating committee was then concluded.)

On motion of Mr. Mulvane, the secretary was directed to cast the ballot of the association for the gentlemen named by the nominating committee as vice-presidents.

The secretary cast the ballot for the gentlemen named in accordance with his instructions.

THE SECRETARY: Here is an additional report from the nominating committee:

Washington, D. C., October 12, 1905.

To the Chairman and Members, American Bankers' Association:

The nominating committee, composed of delegates from the several State associations, desires to present the names of the following gentlemen for membership in the executive council of the American Bankers' Association:

Lewis E. Pierson, President New York National Exchange Bank, New York, N. Y.

A. G. Lupton, Cashier Blackford Company Bank, Hartford City, Ind.

Joseph Chapman, Jr., Cashier Northwestern National Bank, Minneapolis, Minn.

J. G. Brown, President Citizens' National Bank, Raleigh, N. C.

H. P. Hilliard, Vice-President Mechanics' American National Bank, St. Louis, Mo.

George F. Orde, Secretary.

Mr. EVANS: I move that the secretary be instructed to cast the ballot of the association for the gentlemen named.

There was no objection, and the secretary, accordingly, cast the vote of the convention for the gentlemen named as members of the executive council of the American Bankers' Association.

THE PRESIDENT: The chair recognizes in the rear of this room a bashful young man, and we would like to have him come forward. I call for Mr. John L. Hamilton, of Hoopeston, Illinois.

(Mr. Hamilton came forward.)

THE PRESIDENT: Mr. Hamilton, the American Bankers' Association has been very fortunate in selecting you as their president. It has been to a certain extent an idea among the members of this association that no one could be elected to this place unless he lived in a large city and represented a large bank. You do not come from a large city and do not represent a large bank, comparatively speaking; but you do represent a large majority of the members of this association, and now they cannot say that this office must go to a large city. I congratulate you and wish you great success in your administration of the office of president.

Mr. HAMILTON (taking the chair): Ladies and Gentlemen of the Convention—I think I voice the sentiment of this convention when I say that it is unfortunate that our worthy president cannot be continued another year under the constitution. I realize that this is the greatest honor that can be given to any man at your hands. I realize that the American Bankers' Association is the strongest financial institution in the world. It has a grand mission to perform, and I think it is the duty of this association to labor for the promotion of the welfare of this great country regardless of any individual interests. This association has several important standing committees that are doing excellent work. They have one or two committees that are dead. I am opposed to any man accepting a position on any committee in connection with this association who is not willing to work for the interest of this association.

We have long since passed the stage in our work where we need ornaments. I think that there are many important features that can be pushed forward by your aid, and when the individual member receives what appears to be a circular letter, remember that it is really an individual communication from the committee sending it, hoping to get an expression from you, so that they may be able to formulate a report in accordance with the wish of the members of this association.

It shall be my endeavor in fulfilling the duties of this position to put forth my best efforts in your behalf. Gentlemen, I thank you for this great honor.

THE PRESIDENT (Mr. Hamilton): Is Mr. Whitson present? If so, I will ask him to please come forward.

(Mr. Whitson came forward.)

THE PRESIDENT: Mr. Whitson, you have been selected for the distinguished office of vice-president of the American Bankers' Association. It is an honorable position that is extended to you on account of your work and merit and in appreciation of the work you have done for the association. I now present you with your badge. Gentlemen, your vice-president, Mr. Whitson.

Mr. WHITSON: Mr. President and Members of the American Bankers' Association—We are told that brevity is the soul of wit. I am certain that you are weary of speech-making. Consequently I believe that I will carry out your views in making my remarks brief. I appreciate the honor which you have conferred upon me and ask your assistance and co-operation in carrying out the duties pertaiinng to the office to which you have elected me.

THE SECRETARY: There is a telegram which has been received from the Sturdivant Bank, which I will read:

The secretary read as follows:

Cape Girardeau, Mo., October 11, 1905.

E. F. Swinney, President American Bankers' Association, Washington, D. C.:

Col. Robt. Sturdivant, the pioneer banker of southern Missouri, died at Tallapoosa, Ga., yesterday morning, aged eighty-eight years.

THE PRESIDENT: I understand that Mr. Hill, of St. Louis, has something to present to the convention.

Mr. HILL (coming forward and placing a large silver bowl on the president's table): Mr. President, and Gentlemen of the Convention—I have been selected to present to Mr. Swinney, the retiring president, a little pig in the bag. Why I have been selected for this pleasant duty I do not know, unless it is that Mr. Swinney and your humble servant were both born in that State which feeds on peanuts and past recollections—recollections that can only be appreciated by men who have left the grand old Commonwealth of Virginia. We have both gone to that State which has the reputation that before any one can get into their hearts there, and into their pockets, he has to "show them." Mr. Swinney went to that State and by perseverance and pluck won his way, and he, as president of the American Bankers' Association, has shown you the greatest year in the history of the association. If you come West you will find on the western border of Missouri a bank which has been built up by him and him alone, as far as we know, that has no superior for strength and conservatism in this country. He will show to any one who comes there who does not know him—and to those who know him it is not necessary—that he is a man and gentleman, and when you say a gentleman that is all you can say of any one.

I wish to say in the name of the association, "Well done, good and faithful servant." Instead of taking the cake, take the bowl.

Mr. Swinney: I wish I had words capable of expressing my appreciation of this token of regard. I will take this bowl with me to my Western home, and ever keep it and point to it with the greatest pride as a token of having been honored by the greatest financial association in the world.

In closing my official career with you I want to again thank you, this convention, for the many acts of kindness shown me, and will close by saying that:

> In future years
> Should thou perchance
> To other scenes cast a glance;
> Think kindly of me,
> As I ever shall of thee.

The President: Is there any further business to be brought before the convention?

Mr. Reynolds: In pursuance of the resolutions heretofore adopted, I move that a committee of five be appointed by the Chair, of which the president shall be one, to act as a committee on bank legislation.

The question was taken and the motion was agreed to.

Mr. Russel, of Detroit: Mr. Chairman, Ladies and Gentlemen—A self-constituted committee has placed upon me the very pleasing duty of making another well-deserved presentation. This self-constituted committee really consists of the Old Guard, and I might sum it down to almost one member of the Guard, in the message that was conveyed to me. Walker Hill has just told you that he was elected to make the other presentation speech. Now, gentlemen, I want to give you a little inside information. Mr. Hill came to me last night and said: "Russel, if you will select me to make a presentation to the president I will select you to make a presentation to the secretary."

Gentlemen, this token of our regard for our most efficient secretary is made upon the anniversary of his ten years' service. It happens to be an anniversary to me also. Ten years ago I first joined your association at Atlanta, and I had there one of the pleasantest times of my life. At that first meeting I had the distinguished honor of being elected to the council, and have served continuously ever since. In the eleven conventions that have been held, beginning with that one, and ending with this most delightful convention, I have been present nine times; I was prevented from being present the one time I was absent on account of my health.

A reviewal from me of the growth of the association in these ten years seems to be in place. We then had a membership of barely fifteen hundred, and Colonel Branch was chosen secretary. Another curious fact in connection with that convention which I now recall, is the fact that at a little table in a room off of the reception room at Atlanta, our old friend, Bob Lowry, gathered promiscuously from an attendance of several hundred, six gentlemen to dine with him. Of course he had the most beautiful ladies of the State of Georgia there also. You would expect that, naturally. As it so happens, five of those six gentlemen that set at that table successively became president of your association—Mr. Pullen, of sainted memory, I might say, because he was a grand old man; Bob Lowry, whom we will always have with us; Hendrix, than whose record none is brighter; the less said about Russel the better; and Hill, the ubiquitous and always talking. Now, this looks like a put-up job; but, gentlemen, politics then had not crept into the association, I assure you. We could have planned for five years ahead, while under a better constitution we can only set up the job for three years. But I am getting off the subject, I am dwelling on my own recollections and not doing my duty here.

It is my pleasant duty to present to Mr. Branch, from the association, a little token of regard and esteem and appreciation of his services during the past year. Presidents have come and gone, but Jim runs on forever. Our membership of fifteen hundred, which is what it was ten years ago, has been increased to seventy-seven hundred, over five times the number we had ten years ago. And we must allow that this increase in membership is largely due to our secretary. He has worked indefatigably, and in the last two years there has been more accomplished than ever. So that in his services, experience and education, we have a secretary who is more than ever fit to perform these duties for another decade. Jim is a good fellow, but not entirely without—I will not say without enemies—but people who think they could fill his place better. There are always such men in the world. But we do not want to make any more experiments in that line. A little story occurs to me which has been told to me since I reached this stage, of a gentleman presiding over a very large church, a minister. There was a little growing disaffection among some of the congregation, and one of them hinted it to the sexton. "Yes, I know that is what some of you think; but then," he says, "remember the past experience of this church. Reverend so and so had been with us now for ten years, and the church work depends largely upon its revenue. Are not the pews full? Has not our membership increased satisfactorily, and are not things running smoothly?" I think that speaks for itself.

We give to our secretary a bowl. What uses it may be put to I cannot tell. We have not made it large enough for him to get into, but it is of capacious size, and I am sure that in his big generous heart he will ask you in other meetings of this convention to take from it, not forgetting himself. Gentlemen, I am sure that I speak for the whole convention in conveying to Colonel Branch this token of your esteem and appreciation.

Secretary Branch: Mr. Russel, and Members of the Association—This is one of the proudest moments of my life. I have served for ten years as your secretary, and through the assistance and hearty support that I have always received from every one upon whom I have called, the association has grown to its present size. No one man on earth could have accomplished any such growth. It has been the result of active committee work. It has been the support of numerous officers who have come and gone. The secretary has been able to call the attention of bankers all over the country to the good work being done by the association, and they have come in by tens and hundreds, and to-day we have an organization representing more wealth than any other organization on earth.

I have given you my best efforts. I fear in the opinion of a good many that my best has not been as good as it might have been. I can only say to you, gentlemen, that I have done my best, and any errors made have been from the head and not from the heart. I thank you sincerely for your continued confidence, as shown by re-election nine times, and I trust if in the future I serve as your secretary I can, when I step out of office, feel as I do now, that I have never intentionally neglected any duties imposed on me.

Upon motion, the thanks of the convention were extended to the newspapers of Washington.

The President: Mr. Whitson has requested me to announce that the executive council will meet immediately after the adjournment, on the tenth floor of the New Willard Hotel.

I now declare the thirty-first annual convention of the American Bankers' Association adjourned.

OFFICERS OF THE ASSOCIATION.

President.

JOHN L. HAMILTON, Jr., Vice-President Hamilton & Cunningham, Hoopeston, Ill.

First Vice-President.

G. S. WHITSON, Vice-President National City Bank, New York, N. Y.

Treasurer.

RALPH VAN VECHTEN, Second Vice-President Commercial National Bank, Chicago.

Secretary.

JAMES R. BRANCH.

Assistant Secretary.

WM. GORDON FITZWILSON.

Office of the Association, Hanover Bank Building, New York, N. Y.

Executive Council.

Chairman, J. D. Powers, President United States Trust Co., Louisville, Ky.

* MEMBERS EX-OFFICIO.

John L. Hamilton, Jr., Vice-President Hamilton & Cunningham, Hoopeston, Ill.
G. S. Whitson, Vice-President National City Bank, New York.
Lyman J. Gage, President United States Trust Co., New York.
Logan C. Murray, President American National Bank, Louisville, Ky.
R. M. Nelson.
M. M. White, President Fourth National Bank, Cincinnati, Ohio.
Jno. J. P. Odell, Jno. J. P. Odell & Co., Chicago.
Robert J. Lowry, President Lowry National Bank, Atlanta, Ga.
George H. Russel, President State Savings Bank, Detroit, Mich.
Walker Hill, President Mechanics' American National Bank, St. Louis, Mo.
Alvah Trowbridge, Vice-President Commonwealth Trust Co., New York City.
Myron T. Herrick, President board of trustees Society for Savings, Cleveland, O.
Caldwell Hardy, President Norfolk National Bank, Norfolk, Va.
E. F. Swinney, President First National Bank, Kansas City, Mo.

MEMBERS FOR ONE YEAR.

James K. Wilson, President San Francisco National Bank, San Francisco, Cal.
J. D. Powers, President United States Trust and Vault Company, Louisville, Ky.
J. R. Mitchell, Vice-President Winona Deposit Bank, Winona, Minn.
James B. Finley, President Fifth National Bank, Pittsburg, Pa.
Stephen M. Griswold, Union Bank, Brooklyn, N. Y.
†W. K. Coffin, Cashier Eau Claire National Bank, Eau Claire, Wis.
†H. R. Dennis, President Sioux Falls Savings Bank, Sioux Falls, So. Dak.
†C. M. Sawyer, President First National Bank, Norton, Kan.
†Mills B. Lane, President Citizens' Savings Bank, Savannah, Ga.
†William Livingstone, President Dime Savings Bank, Detroit, Mich.

MEMBERS FOR TWO YEARS.

Clark Williams, Columbia Trust Co., New York.
E. A. Potter, President American Trust and Savings Bank, Chicago.
John Perrin, President American National Bank, Indianapolis, Ind.
Grier Hersh, President York National Bank, York, Pa.

WYOMING... ....J. Clay, Jr., President Stock Growers' National Bank, Cheyenne.
CUBA................E. G. Vaughan, President National Bank of Cuba, Havana.
HAWAII... ....Charles M. Cooke, President Bank of Hawaii, Ltd., Honolulu.

NINTH ANNUAL MEETING, TRUST COMPANY SECTION.

NEW WILLARD HOTEL,
WASHINGTON, D. C., October 10, 1905.

The meeting was called to order by the president, Mr. E. A. Potter, President of the American Trust and Savings Bank, Chicago, at 10.30 o'clock a. m.

Prayer by Reverend Robert M. Moore.

THE PRESIDENT: I take great pleasure in introducing Mr. Stellwagen, of Washington.

ADDRESS OF WELCOME BY E. J. STELLWAGEN, PRESIDENT UNION TRUST COMPANY, WASHINGTON, D. C.

Mr. Chairman and Gentlemen: Hospitality, it seems to me, should impress itself by deeds rather than by words, and a true and heartfelt welcome needs no formal phrasing. Assuredly "it goes without saying" that an association of men brought together to consider questions affecting the advancement, direction and security of the great financial institutions of the country, is welcome, thrice welcome, to the nation's capital.

It is your right to be here; and it is, it seems to me, our right to have you. Because the capital is here, and because here at the capital is, and must always remain the inspiration, direction and control of our great national system of finance, Washington should in my opinion, be the permanent place for the annual meetings of the American Bankers' Association; but, however, this may be, the fact that you are with us for this ninth annual meeting of the Trust Company Section, is a source of exceeding pleasure and gratification, not only to those of us who are connected with local financial institutions, but to all of our people in whose name it is my privilege to bid you welcome.

May I detain you long enough to express the hope that among the useful subjects to be considered by our Trust Company Section, the question of protective laws and measures may receive positive and particular consideration—and by protective laws and measures, I mean those which are at once protective to the companies and their clients and depositors.

GROWTH OF THE TRUST COMPANIES.

The growth and successful development of trust companies in this country is almost marvelous. In a comparatively few years they have entrenched themselves firmly in the confidence of the public and its favor. They have rapidly broadened the scope of their operations, each year entering upon new fields of enterprise and endeavor, and adding new departments for the simpler and safer administration of the affairs of men.

With this rapid growth and development in number, in scope, in favor, in influence and in wealth, has come a corresponding increase in responsibilities, in temptations, and in dangers, which are so unfortunately emphasized in recent disclosures of corrupt and corrupting practices connected with some corporate institutions and their management.

Notwithstanding the rapid advancement in heretofore untried fields of corporate development, the ease with which charters may in some localities be obtained, the small capital required, and the sometime absence of protective provisions, the record of trust companies for stability, conservatism and integrity in management, is good and clean, and their immunity from disaster and scandal is rightfully a matter for pride and congratulation. But, gentlemen, we must not rest content with that record, excellent though it be. Our increasing success and development creates new conditions which bring with them new dangers, and these require better methods, stronger safeguards and stricter scrutiny and care. Let us then by raising our standards, safeguarding our investments, favoring charter requirements and restrictions (perhaps along the lines of the provisions of the National Banking Act) endeavor earnestly to make it impossible for disaster, born of carelessness, fraud or corruption, to overtake trust companies.

I had intended calling attention to some of the provisions of the Trust Company Act under which the corporations of the District of Columbia operate, which seem to us of peculiar force and value; but I have already, I fear, trespassed too long upon your time and patience, and will leave the further discussion of the important subjects to be considered by our section to my more experienced associates.

Again, gentlemen, I bid you welcome to our beautiful city of Washington, our city, which is your city, for none of you shall be as strangers within our gates.

Reply by E. A. Potter, President of the Trust Company Section.

For many years the American Bankers' Association has held its conventions in one of the great industrial cities of the country where commercial strife, enterprise and business activity have been the predominating influences and spirit of the locality. And while appreciating the place which Washington holds in the business world, it is a special pleasure to us to assemble on this occasion in this, the beautiful capital of the nation, a center of art, literature and politics. Every citizen of the United States feels a certain sense of proprietorship and pride in Washington, which is admitted to be the most beautiful city in America, and will be still further beautified when the plans which the District Commissioners have in hand are fully developed and carried out.

Washington is rich in historical interest; her galleries and public buildings contain the portraits, and her parks the statues of illustrious statesmen, soldiers and sailors, who have been such important factors in shaping our past history, and while justly proud of those great men and of their achievements, we have reason to congratulate the country, and in view of more recent events, the whole world, upon the personnel of our present administration, whose executive head is a man endowed not alone with remarkable physical force and courage, but that higher attribute, great moral courage. A man of a mentality so virile, distinctive and illuminating, that its influence is felt not only in this country, but throughout the world. A man of strong convictions, with the courage of his convictions, quick to see the right, and prompt to act without fear or favor, making new precedents whenever occasion demands, enjoying to an eminent degree the confidence of the whole people irrespective of party, with the result that as a nation we are harmonious and prosperous at home, and respected abroad.

Rigid Supervision of Trust Companies.

The material development of this country is the wonder of the age. Her fields, her factories and her natural resources are putting forth their products in such quantities as to excite the admiration of the world. Along with this development must, and has naturally come, a more extensive development of our financial necessities and institutions, and in no direction has this been more marked than in the trust companies whose rapid growth has brought them prominently into public notice. Much has been said and written of late about placing the trust companies under Federal supervision. The Honorable Secretary of the Treasury, in his last report to Congress, recommended legislation that would enable trust companies to incorporate under Federal laws. While I do not care at this time to express an opinion on this subject, I do want to go on record as advocating frequent and rigid official examinations, whether State or Federal.

There should be no theory about administering affairs of trust companies, other than that which applies to every business; namely, the administering them upon broad, deep principles of conservatism, honor and integrity.

The citizens of Washington have demonstrated their faith and confidence in trust companies to a greater degree than have those of any other city in the entire country; for, according to the report of the Comptroller of the Currency, the deposits of the trust companies of Washington exceed those of her National banks by about seventy per cent. Surely the members of the Trust Company Section of the American Bankers' Association have fallen among friends, and on their behalf I thank you for your most cordial, hospitable and gracious welcome.

THE PRESIDENT: The next order of business will be the roll call; and as that is rather a tedious proceeding, unless there is some objection, we will omit it.

There was no objection, and the roll call was omitted.

SECRETARY'S REPORT—TRUST COMPANY SECTION.

New York, September 1, 1905.

To the Members of the Trust Company Section:

Receipts.

1904.		
Sept. 1.	By balance	$812.05
" 16.	By appropriation of executive council	1,000.00
1905.		
May 3.	By appropriation of executive council	1,500.00
	By sale of four Trust Company Forms at $12	48.00
	By sale of Trust Company Section Proceedings, 1896-1903	663.75
	By debit balance	216.54
		$4,240.34

Disbursements.

1904.		
	Proceedings, 1904	$574.75
	Proceedings, 1896-1903	1,273.51
	Expenses executive committee meeting, New York, May 2, 1905	884.30
	Salary	837.50
	Stationery, printing and postage	580.28
	Expenses of Convention in New York	90.00
		$4,240.34
1905.		
Sept. 1.	To debit balance	$216.54

At the close of the fiscal year, August 31, 1904, 566 members had paid their dues, but, owing to withdrawals and liquidations, sixty-eight were dropped from membership, leaving 498. One hundred and forty having been added to the rolls since September 1, 1904, the present membership is 638, the largest in the history of the section.

Respectfully submitted,

Jas. R. Branch, Secretary.

Upon motion, the report of the secretary was received and filed.

REPORT OF THE EXECUTIVE COMMITTEE, BY THE CHAIRMAN, FESTUS J. WADE, PRESIDENT MERCANTILE TRUST COMPANY, ST. LOUIS.

The executive committee of the Trust Company Section of the American Bankers' Association respectfully submits the following report.

The membership in the section during the past year as reported by the secretary shows a gratifying increase. The continued organization of new trust companies in the different States justifies the belief that our membership may still be largely added to and the influence of the section strengthened, particularly through the work of our vice-presidents by bringing to the attention of these newly-organized companies the advantage of membership in the section.

To this end each vice-president will be given a list of the trust companies in his State not members of the association and during the coming year it is hoped that by direct effort on the part of these officers the membership in the section may be largely increased.

The regular meeting of your executive committee was held in New York on May 2, at which there were thirteen members in attendance. At this meeting the committee on protective laws made its report, a synopsis of which it was requested to present at this meeting of the section.

The committee on "the classification of legal decisions relating to safe deposit companies; duty and liability to box-holders; and a compilation of the rules and forms of typical companies" also made its report and by vote of the committee was requested to submit the same together with the report of last year in printed form at this meeting of the section.

Pursuant to the action taken at the last meeting of the section, the address delivered at that meeting by Mr. Jordan J. Rollins on "the protection of trust companies acting as transfer agents and registrars" was printed in pamphlet form and sent to every trust company in the country.

In accordance with the further action of the section, the executive committee referred to a sub-committee the general subject of the protection of trust companies acting in these capacities, with the suggestion that proper forms for the use of trust companies in the registration and transfer of securities and as trustee under corporate mortgages be submitted to the section at its coming meeting. This sub-committee was also charged with the duty of ascertaining the average fees for the performance of these services. The report of this sub-committee is given in full.

The undersigned, as a sub-committee appointed by the executive committee of the Trust Company Section of the American Bankers' Association, to consider the recommendations contained in a paper upon transfer agent and registrar, read at the last meeting of the Trust Company Section, and to make report thereon to the executive committee, do hereby respectfully report:

I. That while the trust companies do not admit that in acting as transfer agent or registrar they assume any such measure of responsibility as that suggested by articles read before the convention at various times, it would be desirable to eliminate absolutely the opportunity for any claim that the trust company serving in either capacity is liable save as an ordinary agent. Obviously, there are but two ways in which liability can be defined in advance: either by agreement between the principal and agent or by legislation. The latter was recommended in the article under consideration, since a statute would as clearly affect the investing public as the company issuing the stocks transferred or registered. The form proposed for New York was as follows:

"Section 156.—Powers of Corporation.—Upon the filing of any such certificate of authorization of a trust company, the persons named therein and their successors shall thereupon and thereby become a corporation which in addition to the powers conferred by the general and Stock Corporation Laws shall have power:

1. To transfer, register and countersign certificates of stocks, bonds and other evidences of indebtedness of corporations, with liability to such corporations and to the owners or holders of such certificates of stock, bonds or other evidences of indebtedness solely for the negligence or willful misconduct of its officers in reference to such certificates of stock, bonds or other evidences of indebtedness, or in the appointment, or employment of its agents, clerks or employees dealing therewith.

2. To act as the fiscal or transfer agent of any State, municipality or body politic."

It was suggested, also, that there should be some statutory provision making the limitation of liability apply to trust companies existing at the time of the adoption of the statute, whether incorporated under general laws or special acts. Thereby trust companies would be precluded from undertaking on any terms a form of contingent liability, which is more properly an insurance risk.

II. If in any State it shall not be possible or convenient to obtain legislation of the character indicated, then such protection as may be afforded by the adoption of appropriate endorsements is recommended.

As regards the transfer agent, the form may be:

"Countersigned:
....Trust Company, as Transfer Agent.
By..................................Secretary."

As regards the Registrar, the form may be:

"Registered this .... day of ....
Trust Company, as Registry Agent."

Or,

"Registered this .... day of ....
Trust Company, as Registration Agent."

In the form now commonly employed, the signature of the trust company is followed simply by the word "Registrar," but this form does not as clearly show that the registrar is an agent as do the other forms suggested.

III. As regards bonds, the committee recommends the adoption of the following endorsements:

"It is hereby certified that this bond is one of the series of bonds mentioned and described in the mortgage or deed of trust within referred to.
.... Trust Company, as Trustee,
By .... Secretary."

There also may be inserted in the mortgage some such protective provision as the following:

"As a condition precedent to the acceptance of the said trust by the trustee, it is further stipulated and agreed by and between the parties hereto and all present, or future holders of bonds secured by these presents, that the trustee shall not be answerable for any act, default, neglect or misconduct of any of its agents, representatives or employees, by it appointed or employed in connection with the execution of any of the said trusts, nor in any other manner answerable or accountable under any circumstance whatsoever, except for gross negligence or bad faith; that the recitals contained herein, or in the bonds as to priority of lien, due authorization or any other matter whatsoever, are made by and on the part of the company, and the trustee assumes no responsibility for the correctness of the same; also, that it shall be no part of the duty of the trustee to file or record this indenture, mortgage, deed of trust, assignment or other instrument whatsoever that may be delivered to it under the terms of this instrument as a mortgage, deed of trust, or conveyance of real estate, or as a chattel mortgage or conveyance of personal property, or to renew such deed of trust or mortgage, real or personal, or to procure any further, other or additional instrument of further assurance, or to do any other act which may be suitable and proper to be done for the continuance of the lien or charge hereof, or for giving notice of the existence of such lien or charge, or for extending or supplementing the same; nor shall it be any part of its duty to effect insurance against fire or other damage on any portion of the premises or property hereby mortgaged, or to renew any policies of insurance, or to keep itself informed as to the payment of any taxes or assessments, or to require such payment to be made; but the trustee may do any or all of these things.

The trustee shall not be compelled to take any action as trustee under this mortgage unless first properly indemnified to its full satisfaction, nor shall it be chargeable with notice of any default on the part of the company except upon delivery to it of a distinct specification in writing of such default by some person or persons interested in the trust, whose interest, if the trustee shall require, must be proved to the reasonable satisfaction of the trustee.

In case at any time it shall be necessary and proper for the trustee to make any investigation respecting any fact or facts preparatory to taking or refraining from taking any action, or doing or not doing anything, as such trustee, the certificate of the company under its corporate seal, attested by the signature of its president or secretary or the affidavit of one or more directors, shall be conclusive evidence of such facts to protect the trustee in any action or position that it may take or assume by reason of the supposed existence of such facts.

It is further covenanted and agreed that the trustee under this deed of trust is, and shall be, entitled to reasonable compensation for all services rendered hereunder, or in connection with the trust, which compensation, together with any and all necessary and reasonable expenses, charges, counsel fees and other disbursements incurred by the trustee in the discharge of his duties as such, shall be paid by the company or out of the trust estate upon which they are hereby made a lien and charge superior and prior to those of the bonds secured hereby.

The trustee shall be protected in acting upon any resolution, notice, request, consent, certificate, affidavit, voucher, bond or other paper or document believed by it to be genuine and to have passed or signed by the proper party.

Every trustee hereunder may at any time resign from the trust by mailing at least sixty days before such resignation shall take effect a duly addressed notice in writing to that effect to the company and to all bondholders who may be known to the trustees to be such and whose addresses shall likewise be known to it."

The committee, however, does not intend to suggest that the inclusion of such a protective provision as that quoted above would do away with the necessity for the employment of counsel by a trust company in accepting a corporate mortgage trusteeship.

As to fees, the chairman of your executive committee, in carrying out the wishes of the last convention, addressed a letter to many trust companies in various parts of the country, and the replies thereto point to a practical unanimity on this subject. Charges for acting as trustee under corporate mortgages are based on so much per bond, usually $1.00 each for small issues, the term "small" being relative, conditions, localities, and legal and other services to be taken into consideration and charged accordingly. The larger companies, in paying coupons, make no charges when the money is deposited with them at least ten to thirty days in advance of payment; otherwise, a charge of one-quarter or one-eighth per cent. is proper. Except as to the general principle, that a transfer agent should be paid twice as much as a registry agent, it is difficult to formulate any definite rate for these services, charges depending upon the capitalization and activity of the stock to be transferred and registered, as well as various other considerations which will occur to every one. Your committee can only point out that the charge made for such services should not by any means cover the entire profits to the trust company in rendering these various services. Establishing friendly relations with a corporation as its trustee, transfer agent or registrar, should lead to closer relations in the various lines of trust company activities, and the profits resulting therefrom must be kept in mind in considering the initial charge.

The committee desires to express its appreciation of the valuable assistance of Mr. Jordan J. Rollins in connection with the legal questions involved in its work.

Respectfully submitted,

Phillip S. Babcock, Festus J. Wade, Clark Williams, Committee.

As the dangers to the legitimate financial and fiduciary institutions are involved by the improper use of other descriptive terms in corporate titles beside the word "trust" such as "bank," "saving," "security," etc., the executive committee by resolution has instructed the representatives of the Trust Company Section to lay the matter of the enactment of general protective laws before the executive council of the American Bankers' Association, with the suggestion that the proper legal committee co-operate with the section in the future.

The committee calls attention to the fact that the proceedings of the Trust Company Section from its inception including 1903 have been published in one volume, and it is believed that the addresses, papers and discussions contained therein will be of great value to the trust companies throughout the country. This book is on sale in the registration room at a price to cover the cost of its publication by the section and may be had on application to the secretary of the association.

The members are also reminded that a number of typical trust companies in different parts of the country have furnished blank forms of all characters used in their different departments, which are lodged with the secretary at No. 11 Pine street, New York city, for the use of members of the section.

Your committee is of the opinion that the largest benefit of these meetings is derived from the discussion of practical subjects and the interchange of views upon matters of vital importance to trust companies of the country. The members are therefore particularly invited to participate in such discussions.

Respectfully submitted,
EXECUTIVE COMMITTEE,
Festus J. Wade, Chairman.

On motion, the report of the executive committee was received and filed.

THE PRESIDENT: The next order of business is the report of the committee on protective laws.

REPORT OF THE COMMITTEE ON PROTECTIVE LAWS, BY THE CHAIRMAN, CLARK WILLIAMS.

To the Members of the Trust Company Section of the American Bankers' Association—Your committee on protective laws respectfully reports as follows:

As the result of the action taken at the last meeting of the section a standing committee of three was appointed, to be known as "the committee on protective laws," and was charged with the duty of accomplishing two specific objects:

1st. To determine the present condition of the different States as to the supervision of trust companies by the proper State officials and to endeavor to secure, where necessary, the enactment of laws providing for such State supervision.

2nd. To endeavor to secure in the different States the enactment of laws prohibiting the use of the word "trust" in the corporate title of any corporation not a moneyed corporation and chartered to do a trust company business.

As the work possible of accomplishment in one year was necessarily limited, it seemed wise to your committee to direct its attention to the States having the largest number of trust companies. On the basis of the last accurate list of the trust companies of the country as of July 1, 1904, there were twenty-five States having more than ten trust companies. Of these States the following have laws providing for supervision, which with but few exceptions are thorough and satisfactory:

Alabama, California, Connecticut, Georgia, Illinois, Indiana, Massachusetts, Missouri, New Jersey, New York, North Carolina, Pennsylvania, Iowa, Kentucky, Louisiana, Maine, Maryland, Rhode Island, Vermont, West Virginia, Texas.

In the following States there is no supervision of trust companies, although in several cases periodical reports must be made to the State:

Arkansas, Ohio, Tennessee, Virginia.

On the basis of the last accurate list of trust companies above referred to, in the twenty-one States having laws providing for State supervision, there were 751 trust companies, and of these 452 are members of the section. In the four States having no supervision there are 112 trust companies, and sixty-seven members of the section. Seventy-six per cent. of the trust companies of the country were under State supervision.

As to the restriction of the use of the word "trust," the following States now have laws providing for such restriction:

Indiana, Massachusetts, New Jersey, New York, California, Maine, Rhode Island, Texas, West Virginia.

In the case of the five States last mentioned this law was passed at the recent meetings of their respective Legislatures.

There were 316 trust companies in these nine States of which 207 are members of the section.

The laws enacted, in almost every instance, have been along the lines suggested and in several cases the exact wording of the bill recommended by your committee has been used.

The co-operation of the vice-presidents of the section in the different States has been of the greatest advantage in accomplishing definite results. In many States in which there were no meetings of the legislative body during the past year, the interest of the vice-presidents may be relied upon in securing the enactment of the desired laws during the coming meetings of the several Legislatures.

The committee is of the opinion that only by continued effort from year to year can the ends desired by the section be accomplished, and its members bespeak for their successors in the work the hearty co-operation of all concerned.

Respectfully submitted,
E. A. Potter, Festus J. Wade, Clark Williams, Committee.

On motion the report was received and placed on file.

THE PRESIDENT: The next is the report of the committee on classification of legal decisions relating to safe deposit companies; audit, and liability to box-holders; and a compilation of the rules and forms of typical companies. We have not received this report.

The next is an address, "Benefit of a Real Estate Department to a Trust Company," by L. E. Anderson, Vice-President of the Mercantile Trust Company, of St. Louis.

THE BENEFIT OF A REAL ESTATE DEPARTMENT TO A TRUST COMPANY.—ADDRESS BY LORENZO E. ANDERSON, VICE-PRESIDENT MERCANTILE TRUST COMPANY, ST. LOUIS.

The trust company, in many States of the Union, on account of its liberal charter, is authorized not only to do a general banking business, but also to do everything or anything else where bonds, stocks, mortgages, or real estate enter into or are part of the transaction, and from my observation, very few transactions of any magnitude are negotiated without real estate being one of its important factors. Take one of the most important departments of a trust company, namely, the trust department. I say "most important" because it is the department where trust in its truest sense should be exemplified, as it has the management of estates for widows and orphans, and it frequently happens that the largest portion of such estates consist of real estate. Then it is that the real estate department is of inestimable value to the trust company, as every well equipped real estate department should have experienced appraisers, salesmen and rent collectors, of whose integrity and ability there is no question and the company thus avoids the necessity of seeking outside assistance in the management of the real property belonging to such an estate.

And it is through the real estate department, in a majority of cases, that it is possible for the trust department to secure the management of such estates, because when a person makes his will, and is possessed of considerable means, his first consideration is to name as executor of his estate, some individual or corporation in whom he has the greatest confidence, and the fact that the trust company has managed his real estate affairs satisfactorily and successfully during his lifetime, and is thoroughly familiar with all the details of his property, influences him to a great extent in selecting such company to handle his estate after his death.

The financial department of the trust company is benefited in many ways by the real estate department. For instance when money is easy and the financial department has a surplus of idle cash on hand, the real estate department can be called on to procure for it investments in the form of real estate loans, and as these loans are made only on a conservative basis, after the property has been inspected by men experienced in that line and approved by the officer in charge of the real estate department, they can again be disposed of through that department without any difficulty in case it becomes necessary or desirable to do so.

The real estate department is also the medium through which the financial department secures a number of depositors. Take the case of an individual whose property is sold through the real estate department. He comes into the office to close up the transaction and the consideration is paid to him in cash, or part cash, and the remainder by deed of trust and notes. It is frequently only necessary to make the suggestion to him that he open an account with the company with the proceeds of the transaction and it is very seldom that one will leave the office without doing so. It is not an uncommon occurrence in the real estate department for a buyer to make the cash payment on a real estate deal by a check drawn on the company and for the seller to open an account with the company by depositing the same check, the company thereby making a commission on the sale of the real estate and securing a new depositor on the same transaction.

If, however, the person desires to convert the proceeds of a real estate sale into an investment other than real estate he is referred to the bond department, where he will undoubtedly invest the money in securities which that department offers. Thus the bond department is provided with a new client, who, if it were not for his dealings with the real estate department, might never have transacted business of any character with the company. The deposits of a successful real estate department are in themselves a considerable item, if it has a large rent roll.

In ninety per cent. of all real estate transactions only a part of the consideration is actually paid in cash, the balance being secured by deed of trust and notes on the property sold. The seller, therefore, after the sale has been consummated, has on hand a number of valuable papers, which he will desire to place in a safe repository, and as the safe deposit department of the company is so convenient, he is certain to rent a safe deposit box from that department. As the notes become due they are placed with the collection department and the proceeds deposited to his account. In this manner the customer is enabled to transact all the details of a real estate deal with one company, making it convenient for him and profitable for the company.

Then again a large number of people have occasion to visit the real estate department. Some of them come in to rent a house, others to pay rent or purchase property and some to enquire about real estate. Many of them may not transact any business at the time, but there is a possibility of each person becoming a customer at a later date, by reason of their remembering the former visit. Again, if one takes into consideration its value from an advertising standpoint, he can readily see how beneficial it is to an institution to have a great many people constantly entering and leaving its building.

It also benefits the trust company from an advertising standpoint, by continually keeping the name of the company before the public, through the medium of the newspapers, sign boards and rent bills which are scattered throughout the city. In the case of the Mercantile Trust Co. (I mention this company because of my knowledge of its affairs), one cannot visit any portion of the city of St. Louis without seeing its name on some sign announcing property for sale or lease, and every day in the year its name will be found in the newspaper for a like purpose. It is needless for me to comment on the advantages of such extensive publicity, as it brings the company in touch with every man, woman and child in the community who may some time have occasion to transact business with a trust company.

It may not be out of place here to say that the real estate department, besides being advantageous to the company of which it is a part, contributes in a manner to the prosperity of the city in which it is located, by promoting syndicates for the conducting of large real estate enterprises. The real estate department of the company with which I am connected has organized corporations and promoted deals aggregating millions of dollars. For all of these corporations it simply acted as agent, not being interested in any of them as a stockholder. In other words, in the promotion of the syndicates the real estate department, or the trust company, had no direct interest whatever in the corporations, apart from acting as agent for the sale of property owned by them for collecting rents on same, or performing the duties of manager of construction of office buildings or commercial structures being erected by the syndicate, for which services it receives commissions and fees. In addition to this it has the placing of insurance, letting of repairs and payment of taxes on all such buildings, making it necessary to handle large sums of money and transact business with a great many people, and as a result of these dealings a large portion of these individuals subsequently become regular patrons of the institution.

In the affairs of a community, the real estate agent ranks next in business importance to the banker. Real estate from time immemorial has been the foundation of all values and has furnished more business for different lines of trade than any other commodity. The iron foundries, brick manufacturers, lumber merchants, certain professions and all mechanics are prosperous when the real estate business is good. The real estate agent is the herald of progress, the maker of villages, towns and cities, and his efforts mark the advancement and progress of municipalities, and any trust company is indeed fortunate to have among its departments, a well equipped and properly conducted real estate department.

In order to be valuable, a real estate department must be progressive, must be competent to cope with and carry to successful issue enterprises and deals of any magnitude. To do this it must necessarily attract capitalists and capital seeking this avenue of investment, and it is a well known fact that many of the most prosperous citizens of large cities invest only in real estate. Real estate is the investment which is sought by many who have made their money in other channels and who, desiring to convert their funds into an investment which they know to be safe and which will net them a good return, naturally turn their thoughts to real estate. The trust company, by reason of its prominence and reliability, having attracted their attention, it is through it that they make investments of this character, if the company has a real estate department, and it thus secures a class of investors it would not otherwise have obtained.

In summing up the advantages accruing to the trust company from a real estate department, I would say that it not only benefits all other departments, but is in itself profitable. As an individual department, the real estate department of the Mercantile Trust Co. is operated as a separate and distinct branch—that is, it pays for all its own advertising, pays the salaries of the officers of the trust company, who have charge of the department, as well as of all the employees connected with the department, and defrays all the other expenses incurred in the conduct of the department. It also makes a monthly statement to the company, at the same time turning over to it the net results of the month's business, which, in the case of the institution with which I am associated, has always been of such a satisfactory nature that I am inclined to believe that the real estate department is one of its most valuable assets, as it is not only unnecessary for the company to invest any of its capital in any transactions of that department, but that it is self-sustaining and profitable. In my opinion no trust company is complete without a real estate department, because the object of a trust company should be to take care of everything that comes its way. In other words, it should let nothing escape that may result in a commission or a fee, and it is my firm belief that a company is not in a position to do this unless it has a real estate department as one of its departments. Therefore, I unhesitatingly say that every trust company should have a real estate department if for no other reason than that it will pay, if properly conducted.

THE PRESIDENT: The next is a statement of the "Growth and Present Status of Trust Companies in the United States," by Mr. Edward T. Perine, General Manager of the Audit Company of New York.

STATEMENT OF THE GROWTH AND PRESENT STATUS OF TRUST COMPANIES IN THE UNITED STATES.—ADDRESS BY EDWARD T. PERINE, GENERAL MANAGER, THE AUDIT COMPANY OF NEW YORK.

Mr. Chairman, Ladies and Gentlemen of the Trust Company Section of the American Bankers' Association—Comprehensive statistics, regarding trust companies throughout any number of States, do not appear to have been assembled earlier than December, 1875, when, in the annual report of the Comptroller of the Currency of the United States, a tabulation was presented with reference to thirty-five companies. These were located in four entire States, and reports from Philadelphia companies were also included.

These trust companies of thirty years ago comprised:

New York, twelve companies with total resources of sixty-nine millions of dollars.

Massachusetts, five companies with total resources of nine millions of dollars.

Rhode Island, one company with total resources of six millions of dollars.

Connecticut, ten companies with total resources of five millions of dollars.

Philadelphia, seven companies with total resources of thirty-one millions of dollars.

A total for the thirty-five companies of 122 millions of dollars.

The principal items of resources were, sixty-five millions of dollars of loans and discounts, thirty-nine millions of securities, three millions of real estate, and nine millions of cash. Among the liabilities, capital stock aggregated twenty-one millions, surplus funds and undivided profits seven millions, and deposits eighty-five millions.

The New York State companies having, as has been shown, sixty-nine millions out of 122 millions of dollars of total resources, led, then as now, the other States in respect of trust company wealth. Philadelphia's seven companies, however, with their thirty-one millions of resources, are worthy of notice, particularly when it is seen that the two groups taken together, even at this early date comprised over 100 millions of aggregate resources.

An interesting note accompanied this tabulation of the Comptroller, containing the unofficial fact that the "Chicago Tribune" had reported as of June 30, 1875, five trust companies in the city of Chicago having capital $2,500,000, surplus $725,000 and deposits of between five and six millions.

It is not to be understood that the Comptroller's tabulations in this or in later years could have been made to cover trust companies everywhere, but a steady growth is apparent year by year from about 1879. In that year, reports were tabulated from thirty-two companies with 111 millions of resources, and during the next few years, while there was no great increase in the number of companies, their resources were largely added to.

In 1884 the tabulation showed thirty-five companies with 239 millions of resources. Of these thirteen New York State companies had 155 millions.

By 1889 the number of companies reporting had increased to 120, and their total resources were 441 millions. At this time, and it should be remembered that it was but sixteen years ago, the total resources were less than one-eighth of the present volume of trust company resources, and the number of companies only about one-tenth of the total number of our present companies.

Before considering current figures, however, it will be of interest to look at some details of the Comptroller's tabulation for 1889.

In Maine there were six companies with about two millions of resources.

In New Hampshire there were four companies with about three millions of resources.

In Massachusetts, there were thirteen companies with about sixty-three millions of resources.

In Rhode Island there were two companies with about twelve millions of resources.

In Connecticut there were eight companies with about five millions of resources.

In New York there were twenty-five companies with about 236 millions of resources.

In Illinois there were six companies with about seventeen millions of resources.

In Pennsylvania there were seventeen companies with about sixty-nine millions of resources.

In Iowa there were seven companies with about nine millions of resources.

In Minnesota there were five companies with about four millions of resources.

In Missouri there were six companies with about ten millions of resources.

In Kansas there were eleven companies with about four millions of resources.

In Nebraska there were six companies with about five millions of resources.

In Dakota there were four companies with about one million of resources.

The figures from the smaller States were given as being unofficial, but would appear to have been gathered with considerable care, and the noticeable facts at this point—sixteen years ago, as stated—are the continued growth of New York companies' resources to the sum of 236 millions, the substantial amount reported for Pennsylvania companies, over sixty-nine millions, and the closely equivalent showing of Massachusetts with its sixty-three millions. After these, no one State, not even Illinois, Rhode Island or Missouri, has as much as twenty millions of total resources, while the other States reporting in no one case had as much as ten millions of resources.

In the early nineties, began the real growth in numbers of trust companies, the Comptroller's report for 1894 showing 224 companies with 705 millions of total resources, while according to another summary, made by the author of this present paper, upon the basis of total resources one year later, or in 1895—gathering the figures from certain State reports, and in other cases from details contained in the "American Bank Reporter" of November, 1895—it appears that the trust companies of ten years ago this fall numbered 569, or about one-half the present number. For some of these, no figures were available, but as to 533 companies located in forty-two different States and Territories, and in the District of Columbia, the total resources were approximately 962 millions of dollars. At this time there were sixteen companies in California, twelve in Connecticut, eighteen in Georgia, twenty-six in Illinois, twenty-nine in Iowa, sixteen in Kansas, sixteen in Kentucky, twenty in Maine, thirty-five in Massachusetts, fifteen in Missouri, fifteen in Nebraska, twenty-three in New Jersey, thirty-eight in New York, fourteen in Ohio, eighty-three in Pennsylvania, nineteen in Tennessee, eighteen in Vermont, sixteen in Virginia, and fifteen in the State of Washington, while in each of the other States, and in the District of Columbia, there were less than ten companies.

Closely succeeding years saw a phenomenal growth among trust companies, both in numbers and in wealth. The fact of this growth during the closing years of the nineteenth century is well recognized, but becomes more apparent when it is stated that, during the five years from 1899 to 1903 inclusive, the popularity of trust companies was marked by the organization of practically five hundred new companies, or as many as had been formed during the entire preceding three-quarters of a century.

As of June 30, 1903, recognizing the need of more adequate statistics than had been previously available, the company with which the speaker then had the honor of being identified, namely the United States Mortgage and Trust Company of New York city, prepared a list of trust companies everywhere in the United States and sent out requests for their statements of condition, which when received were arranged alphabetically by States to the number of 912 companies. These statements, comprising a more comprehensive collection of trust company facts than had been previously gathered in a single volume, were issued in 1903, and were collected again last year and this. These collections have been valuable as books of constant reference for those interested in trust company matters and have also afforded a basis for certain tabulations of trust company resources and liabilities throughout the entire country, the nature of which, as relating to current conditions, and in particular to the growth of the past three years, are now briefly presented.

The 912 companies whose statements were published under date of June 30, 1903, had total resources and liabilities of two billions 910 millions of dollars; their loans aggregated one billion 463 millions; their stocks and bonds 627 millions; their cash on hand and in bank 435 millions; their mortgages 173 millions; the aggregate value of their real estate and banking houses 74 millions. Offsetting these, their capital stock amounted to 317 millions; their surplus funds and undivided profits 362 millions; their deposits, including amounts due banks and bankers, two billions 183 millions.

By June 30, 1904, eighty-two other companies had been added to the previous total, and the resources and liabilities of the 994 companies reporting, reached an aggregate of three billions 140 millions. A tabulation of the principal liabilities of these companies of one year ago, shows that their capital stock amounted to 330 millions; their surplus and undivided profits to 379 millions; their deposits, general and in trust, to the sum of two billions 315 millions; their outstanding certifications ten millions; their balances due banks and bankers fifty-five millions. An interesting fact, because of the smallness of the item, is that re-discounts as reported by the entire 994 companies, amounted to less than two millions of dollars.

The trust companies having thus passed the three billion dollar mark in 1904, a remarkable result was next secured by tabulating the number of companies reporting, and their liabilities, as of June 30, 1905. The totals are, 1,115 companies having capital stock of 349 millions; surplus funds and undivided profits 425 millions; deposits two billions 847 millions; certified checks fifteen millions; due to banks and bankers 107 millions; re-discounts two and one-half millions; the present total of liabilities, and corresponding resources, amounting to the remarkable sum of three billions 802 millions of dollars.

Even in this total, are not included the figures of some 334 companies not reporting on June 30, last, which with eighty-eight new incorporations since that date bring the entire number of American trust companies up to 1547.

With reference, however, to the 1115 statements which have been tabulated, it appears that in each of eight States there are upwards of 100 millions of resources, these eight being—

Rhode Island, nine companies, 113 millions.
Missouri, twenty-seven companies, 141 millions.
New Jersey, sixty companies, 162 millions.
Ohio, forty-seven companies, 173 millions.
Massachusetts, forty-two companies, 220 millions.
Illinois, forty-nine companies, 353 millions.
Pennsylvania, 237 companies, 621 millions.
New York, seventy-eight companies, one billion 510 millions.

This last aggregate, may be best interpreted by the fact, that the growth in New York State for the first six monhts of this year has been over 100 millions of dollars, and that in ten years it has been approximately one billion of dollars.

Much might be said regarding the strength of companies in other States as well as New York, particularly with reference to the amounts and proportions of aggregate capital stock as compared with aggregate surplus and undivided profits.

In New York State, sixty-two millions of capital stock accounts show 160 millions of paid in and earned surplus and undivided profits.

In Pennsylvania, ninety-two millions of capital stock accounts show 110 millions of surplus and profits.

In New Jersey, twelve millions of capital, show twenty millions of surplus and profits.

In Missouri, twenty-one millions of capital, show twenty-five millions of surplus and profits.

In Rhode Island, six millions of capital, show nine millions of surplus and profits, it being a fact, that in each of these States, and in several others, the book value of trust company shares, is in excess of 200 per cent. of par, while the average for the entire country is an approximate book value of 221 per cent.

Referring again, to New York State's one billion 510 millions of total resources, it may be of interest to present the fact, that as late as October in the year 1870, the total resources of 1,615 National banks, throughout the entire United States, did not exceed this sum. As compared with the present trust company aggregate for the entire United States, three billions 802 millions, it appears that not until the year 1897 did the country's 3,607 National banks hold the equivalent in total resources, of the amount of total resources now held by our 1,115 trust companies.

It should be remembered, that to-day there are 5,757 National banks, with no less than seven billions 472 millions of dollars of total resources; but it is also interesting to calculate that this sum is only about twice the amount of the 1,115 trust companies present three billions 802 millions of resources; also that the averages obtained, by dividing the number of National banks and the number of trust companies into these respective aggregates, show that the average resources of each National bank are a shade under one million 300 thousand dollars, while the average per trust company is slightly in excess of three millions 400 thousand dollars.

What the true meaning is, of such a sum as these three billions 802 millions of trust company resources, may be best appreciated by a contrast or two, based upon some large aggregates found in other recent statistics.

The total assets of active life insurance companies in the United States, at the beginning of the present year, were less than two and one-half billions of dollars, or one billion 300 millions less than the resources of American trust companies. The total currency in the United States, on July 1, last, was two billions 885 millions, practically one billion dollars less than the amount of total recources of the trust companies. The estimate of the Comptroller of the Currency for last year, regarding Savings banks, was that 1,157 of these institutions had three billions 175 millions of total resources, or practically 600 millions less than those of the trust companies. According to Census Bulletin Number 21, which has just been issued, the commercial value of steam railways in the United States is given as eleven and one-quarter billions of dollars, a sum only about three times the total resources of our trust companies; it being a fact, that in point of steam railway wealth, the four leading States, Pennsylvania, New York, Illinois and Ohio, appear as having three billions 814 millions of commercial value, an amount almost exactly equivalent to the aggregate assets of our 1,115 trust companies.

A single illustration more. The Comptroller of the Currency estimated last year, that the banking power of the world—that is, bank liabilities—excepting balances due other banks—consisted of:

Banking power of the United States and island possessions, thirteen billions 826 millions; banking power of foreign countries, nineteen billions 781 millions; a total estimate throughout the world of thirty-three billions 607 millions.

Will you in conclusion and with thanks for your kind attention to all of these remarks upon the growth and status of American trust companies, permit, as a final thought regarding these thirty-three billions of banking power, that our trust companies, with their present liabilities of over three and three-quarters of billions of dollars—comparatively little of which is of the nature of moneys due other banks—offer as their contribution, to the vast total of banking power, a volume of credits, which may be fairly said to constitute one-tenth, and even upwards of one-tenth, of the aggregate banking power of this and other countries, the world over?

THE PRESIDENT: I think the excellent paper which we have just heard ought to impress upon us the importance of the business we have in hand and that the Trust Company Section should become a homogeneous body and work to a uniform system. I won't say the same as the National bank system but certainly a uniform system, with protective laws in every State.

The next is a statement of the "Purposes and Scope of the Banking Publicity Association of the United States," by Frederick Phillips, Secretary of the Lincoln Trust Company, of New York.

BANKING PUBLICITY.—ADDRESS OF FREDERICK PHILLIPS, SECRETARY LINCOLN TRUST COMPANY, NEW YORK.

The economic, political and social development of our country has been necessarily accompanied by many changes in the forms of business and in the methods of conducting business. So rapid, however, has been the development during the past twelve or fifteen years and so radical have been the changes in that time that a comparison of old with new methods would seem to show a revolution. Question the merchant, the manufacturer, the lawyer, the doctor along these lines if you require testimony, although none realize these changed and still changing conditions in every field of business, in every walk of professional life, more thoroughly than the moneyed institutions. We are, then, at the present time working under conditions in business not only not known to the fathers of the younger generation, but unfamiliar to any of us a few years back. I venture to suggest that the chief factor in these changes has been modern scientific competition. However that may be, it is beyond question that these new economic conditions have created an imperative demand for new facilities in banking, for the fiduciary services of trust companies, for the privileges afforded by the Savings banks, for the insurance issued by surety and casualty companies, for the investments offered by banking firms.

Now these facilities and services are as truly merchandise commodities as are corn, coal or dry goods. The banks sell credits; the trust companies sell services. We are on the same plane with the merchant in his warehouse.

Conceding, then, if you will, that the business of the moneyed institutions is commerce in every sense, although along highly developed lines, conceding that we all have our stock in trade as any business has, you must also concede that we can successfully avail ourselves of honorable and appropriate commercial methods of procuring business. In other words, a bank or a trust company needs depositors, customers, clients, patrons, whatever you please to term them, in the same degree as any other business, and of all means of procuring business the most effective is publicity. I use the word in its most modern sense, that of making public the merits of an article with a view to creating for it a market.

The purpose of this proposed association, then, is to promote banking and trust company publicity to the end that we may promote our business; and while we are all doing something in the way of publicity—for publicity is accomplished in divers ways, as by a handsome edifice, a reputation for courtesy, a favorable report in the community—but few of us have fully availed ourselves of the supreme methods of publicity—printers' ink, both in the form of the newspaper advertisement and advertising literature.

The most successful publicity of this kind, and this kind of publicity is the most successful, is based upon education. The public is being daily educated to buy this and that brand of breakfast food, shoes, soaps, tooth powder; it is being educated to travel and care for its health by recreative sports; it is being instructed commercially, morally, politically by advertising publicity. Why shall it not, therefore, be liberally educated to the discriminating purchase of our commodities—to the use of the facilities of our banks, and the services of our trust companies?

But let us go farther, mark you, for while making public our own excellence, let us seek to teach the public to eschew all practices opposed to conservative banking; to avoid all financial traps, pitfalls and schemes; and to divest itself of all the risks and responsibilities attaching to personal and individual administration of fiduciary offices, the care of estates and the investment of funds. Our public is already a highly educated one, in that it knows a little something of everything, but if there are any things of which it posseses less real, serviceable and valuable knowledge than of anything else, it is of the business of banking, and the services of the trust company and the benefits and advantages of the various classes of moneyed institutions.

It was many years before the public learned to use the Savings banks, and even to-day the Savings banks are not understood as they should be for the welfare of the vast wage-earning class. On the other hand, our Savings banks, I refer particularly to the mutual Savings banks, carry many millions of money, much against their will, if I understand the matter rightly, money which they would prefer elsewhere than in their own institutions. So with the trust companies. How little are these admirably organized and thoroughly equipped institutions understood, although it is gratifying to note that day by day the public is more fully employing their powers. In short it is a fact that what the National, State and Savings banks and trust companies can do to-day for the public, and how they do it, is far beyond the public's knowledge.

As stated, then, the primary object of this association is the systematic education of the public to the discriminating use of these institutions, and to inform it of the particular advantages of each.

It is hoped to accomplish these ends in part by the interchange of ideas, information and methods of publicity. It is proposed further to have local or district headquarters in each of the large cities, with a manager whose duty it shall be to keep in touch by correspondence with members throughout his district; to procure from them such literature, business forms, advertising matter, samples of soliciting and advertising letters, as may be obtainable, together with such statement, comment, remark or information as may prove useful for the guidance of members of the association; each manager to be required to send to the secretary one or more copies of all such literature, letters, etc., received by him; requests for information or specimens of such literature, etc., from member institutions to be addressed to the secretary and to be answered and, if possible, granted by that officer.

There has been some misapprehension of the exact purport of this paragraph. It is not asked that members shall give up any trade secrets or private matters pertaining to the conduct of their business, but merely that they shall look at the plan in a broad way, and part with such of their printed matter, etc., as they believe will be useful for the purpose. Those favoring this association must of course be of the mind that this interchange will not be the giving of something for nothing, but a quid pro quo, and that what in this instance is to the benefit of all must be to the benefit of the individual.

Finally it must be that the coming together from time to time of the members of this association must be productive of good. At all events, such an association as this, once organized and prepared for activity, will prove a useful instrument in proper hands and a power for good to the community in general and the banking world in particular in ways and along lines that may not yet have occurred even to us.

At a meeting held in Washington on October 10 in conjunction with the American Bankers' Association, the Banking Publicity Association of the United States was formally organized, by-laws adopted and the following officers duly elected:

President, Harold A. Davidson, Secretary Home Trust Company of New York, Brooklyn; First Vice-President, D. C. Wills, Cashier Diamond National Bank, Pittsburgh. Vice-Presidents: Pierre Jay, Vice-President Old Colony Trust Company, Boston; James E. Brock, Secretary Mississippi Valley Trust Company, St. Louis; E. G. Tillotson, Treasurer Cleveland Trust Company, Cleveland; Herbert P. Wenig, Auditor Windsor Trust Company, New York; C. E. Woodside, Manager Bond Department, Los Angeles Trust Company, Los Angeles, Cal.; Charles Moore, Secretary Union Trust Company, Detroit; C. J. Craft, Secretary Central Trust and Savings Company, Philadelphia; C. G. Ellsworth, First National Bank, Chicago; Stephen Appleby, Assistant Cashier Pacific National Bank, Tacoma; Robert J. Lowry, President Lowry National Bank, Atlanta; George W. White, Cashier Commercial National Bank, Washington, D. C.; Treasurer, Edward F. Feickert, Assistant Treasurer Plainfield Trust Company, Plainfield, N. J.; Secretary, Frederick Phillips, Secretary Lincoln Trust Company, New York.

THE PRESIDENT: It is certain that the relations between banks and trust companies ought to be of the most friendly character, and perhaps there is nothing more to be said on the subject. In New York city they are certainly very close. If there is nothing to be said on the subject, we will pass to the second topic, "Value of a Bond Department to the Trust Company."

Mr. CAULDWELL, of Chicago: Mr. President, I do not think this subject ought to go by without the section hearing from some representatives present who are conducting bond departments in connection with trust companies. I know I came into the section this morning hoping to hear something on the subject. As I came in I asked the President if I might have a seat with the other delegates and he said, "yes." I said, "I am interested in the value of a bond department in connection with the trust company." He said, "I can answer that the value is in the profit you are able to turn in." That answer is not inconsistent with the man or with the spirit of the trust company business. As I take it, that is not the whole value of a bond department to any well-organized trust company, however. It is now common in the West and Central West for nearly all the trust companies, at least in the larger States, to have an organized bond department. I presume most of them have been organized to supply a demand that has grown up with the growth of those companies by reason of the fact that people come to the officers of those companies with annoying questions in regard to investments that they desire in the form of bonds. I believe that the trust companies generally, by reason of the character of their business, have been largely forced into the establishment of bond departments to supply not only their clients but themselves with all the information and data that they may collect regarding the investments which they are called upon to make. It is this feature, therefore, that is important, quite as important as the profit, to the trust company itself. All trust companies invest more or less in bonds, and of a general character, varying more or less with the character of their business, and the bond department of nearly all the institutions with which I am familiar, is charged very largely with making those investments for the company itself.

There are other matters; for instance, the matter of loans, and the matter of dealing with syndicates on the outside, and the preparation of syndicates on the outside in which money can be safely invested. Those things have to be very carefully done and done with a great deal of discrimination; and, because of that fact, you will always find—those of you who have bond departments can verify what I say—that the information you get through your bond department, both statistical and as to the market and where and when to sell, is of great value to the banking side of the trust company in the matter of investments.

MR. WADE: Mr. President, referring to the value of a bond department connected with a trust company, I assume that many of us are not familiar with such value, and that as we are seeking information in order to make these meetings profitable, we should get up and discuss those points.

My experience in the conduct of the office that I hold in the trust company, is that a well-regulated bond department is almost as essential to a live, active trust company as is a properly conducted trust department. In the management of trust estates it comes to pass that you are to be the custodian of the money of widows and orphans and you are also to become the custodian of diverse and sundry bonds which without the knowledge, the technical knowledge, necessary to possess in the investment of money in bonds you are liable to make a serious mistake. Therefore a well regulated bond department is of material value to the trust department.

To the financial department of the trust company there is no more profitable way of investing your surplus money than through the medium of a bond department. Again, in the financial department there is no better way to replenish your cash, your reserve if you please, than through the medium of a well-regulated bond department, by selling bonds at a time when money is most active to be loaned out to your customers. Every private individual invests his surplus either in real estate or in stocks or bonds. Every well-regulated bank invests in bonds; every trust company is bound to do the same thing; and where the trust company can afford it, whether equipped with all the knowledge that is to be required, so that when they become executor or administrator of an estate they are capable of handling that business without going outside the door.

There are so many things that I will think of to-morrow that I would like to tell you about the bond department, that I cannot now recall; but I would like to hear the question discussed generously here. Many of us are a thousand miles or two thousand miles from home, and if these propositions are suggested and not discussed there is hardly any use of our coming here.

H. C. HARVEY, Cashier American Banking and Trust Company, Huntington, West Virginia:

Mr. President, in our section of the country, and I suppose all over the country, one of the functions of a trust company is to register and certify bond issues, thereby putting a safeguard around them that will prevent forgeries. The best article I have read upon this subject appeared in the American Bankers' Magazine from the pen of that able writer Clark Williams, of the United States Mortgage and Trust Company, New York, on March 25 of this year.

I would like to see this association appoint a committee of not less than three to compile literature, as the gentleman from Oregon has just said, literature which is to the point, and to educate the people, especially in the municipalities, in our counties, upon the necessity of having bond issues registered and certified by a reputable trust company before they are offered to the public. That literature ought also to be disseminated through the banks of this country.

I find, gentlemen, that National bankers are not posted on the bond question as they ought to be. A bank in my neighborhood took a county bond as collateral security that was not registered and certified by a trust company; they took that as collateral security, and it was renewed time after time and they carried it for three years on renewals. At the end of three years they found that it was a forged bond and not worth the paper it was written on. The article written by Mr. Clark Williams will show you how those forged bonds have reached your own city of New York. One bank there was caught for $145,000, money loaned on an issue of $155,000 of forged bonds.

Every safeguard ought to be placed around these bonds if possible to prevent forgeries. If a bond is registered and certified by a trust company, we placing our certificate upon the back of that bond, under the seal of our corporation, and cutting the end of that bond with the protectograph the size of the bond to prevent it from being raised, we throw a safeguard around it that helps to prevent its being forged. Not only that, but the income from registering and certifying bonds is quite an income to the trust company. I would like to see this association take the matter in hand to try and educate the people up, the municipalities and so forth, to having their bonds registered and certified by a trust company.

In one of the municipalities in our locality not long ago one of these so-called bankers came out and called upon the mayor and clerk and told them that it was not necessary to have them register and certify the bonds and pay the little fee required for that work, but stated that he would take those bonds without being registered and certified and would give them as much as anybody else would give. Who knows but what they may have ten times the amount necessary printed upon that plate, and with the signature of the mayor and clerk? And so I would like to see you take some steps to throw a safeguard around the bond issues.

Educational Work to Demonstrate the Superiority of the Trust Company in Fiduciary Capacities.

Benjamin I. Cohen, President Portland (Ore.) Trust Company: This subject, gentlemen, is one which is very dear to my heart, and I will have to allude to my own institution in order to show the work we have done. Up to this time in this direction we are a small concern, with total assets of about a million and a quarter. We have no laws authorizing us to act as executors or administrators, and so our trusts are private agreements; in cases where people wish to make us testamentary trustees, which is allowable, we usually have one of our officers appointed temporarily to act in any capacity necessary, doing all the work, however, through the machinery of the trust company. Now, I recognized in the first instance that in order to educate the public we had to attract the personal attention of the individual. I therefore, being somewhat fond of literary work, wrote two little books, one about three years ago, which we call our "Book of Illustrations," and the other very recently, entitled "What is a Trust Company?" They are small and can be read in ten minutes. They are neatly printed and nicely put together. The "Book of Illustrations" we desire to attract money, the idea being by attracting money we would be in a position to conduct trusts, and as some speaker has said, if a man puts his money in with you he generally wishes you to conduct other business for him. The "Book of Illustrations" therefore was written in what I call the telegraphic style; it is short and pithy and each illustration is to the point. We advertised in the paper three times a week, making our advertisement short and direct, usually with some catchy heading and always ending by saying "Please call or send for our little Book of Illustrations." Then when it is sent for it is accompanied with a pleasant little note, and we are pretty sure he is going to read every word of it. If he calls at the bank he is received courteously by one of the officials and if his business seems to be of sufficient importance he is shown into my room, and if he comes into my room his doom is sealed; my rule is not to let him get away with any more money than is necessary to pay his carfare home.

The particular branch of our business which this book illustrates has grown enormously in three years. Less than three years ago we had deposited in the department to which that book refers about $85,000; to-day we have about $550,000. We have gotten no end of business for every department of our company besides that and in connection with that, and the little booklet has paid for itself a thousand times over.

In doing this work, in directing the attention of the public we were frequently approached with the question, "What is a Trust Company?" A friend of mine once remarked to me, "There are millions of people who never heard of Pears' soap," and there are untold millions of people who have never heard of a trust company. So I looked around for a book that told what a trust company was. The best kind of a little book of that kind I found was one issued by the Union Trust Company, of Detroit, but the trouble with that was that it was too elaborate; their book was one for a student rather than for a business man. The next best to that I found was a book by Mr. Harris, of the Mercantile Trust Company, of St. Louis, used by the students of the Missouri University, I think, which is admirable; but it lacked facts in reference to the State of Oregon, and so I wrote this little book, "What is a Trust Company?" It is not intended for general distribution. I do not think it would do any good to send it out broadcast as we would a leaflet or anything like that, but it is meant to answer the ordinary questions which the average man wants to know. For instance, we state exactly that the trust company has nothing to do with trusts like the Standard Oil and such. We also state something like this. I say, in regard to just plain, every-day honesty, no glittering array of assets, no high-sounding names, will avail unless the public has learned by long years of attention that the trust company can be trusted and, like Caesar's wife not only be above reproach, but the trust company must be above suspicion. It is my idea to adopt the same course with this second booklet that we did with the first, to try to induce the individual man on the street to ask for a copy, and adopt what the old Romans called the *argumentum ad hominem*. Never mind whether he does not give you business to-day or to-morrow, it will come, if not this year then next year; it will come eventually. I have tried to make this second little booklet different from the first, with no attempt at fine writing in it, but conversational in tone—a plain talk, a heart-to-heart talk, and it is astonishing the good that it is doing. It has only been out a couple of months, and we are getting returns already.

Therefore I suggest that this plan can be adopted with profit by trust companies generally; if they would have their booklet describing their departments of work and then use newspaper advertising to induce people to apply for those booklets, I think the money expended would show better results than money expended in almost any way for advertising. The public can be reached in this way better than any other way I know of. That is my experience lasting over eighteen years in this work. I thank you, gentlemen.

F. G. HOBSON, Norristown, Pennsylvania: Mr. President, the question we are discussing is educational work to demonstrate the superiority of the trust company in fiduciary capacities. That is, especially in relation to trusts, as executor, guardian, administrator, etc. I take it that the best way to educate the public in this way is to compel the public themselves to be your bankers.

One or two homely illustrations may explain what I mean. In several accounts that our trust company has recently filed in our Orphan's Court as guardian of minor children we have demonstrated that not only did the wards receive the interest on their money but every time there was sufficient amount of interest we reinvested that as a new principal. So that our orphan's court of our county and our judge in the adjudication of those accounts has commended the work of our company. Now, we see that those opinions are printed throughout the country, and the judge of our orphan's court is our best advertiser, because he has said that our trust company is doing the very best for the wards under our care.

No one ever heard of an account being filed by an individual in which compound interest was allowed to the ward. The trust companies do that work, and we want to let the public know it.

Another illustration: A short time ago our company was appointed the executor of a man who was conducting a mercantile business for a long time in our city, a man who was extremely honest but very careless in collecting his bills, and there came into the hands of the executors many bills and notes, many of which were outlawed according to the statute. One of the wealthy men of our town was appointed as the appraiser of that estate, and after going over the list of claims and notes very carefully, he presented to the court the list of the claims that were supposed to be good, certain sums. He came in and said to me, "I have often heard of trust companies, and I want to see whether they can settle an estate as well as an individual; I have put down there what ought to be collected, what I consider good, and I want to see whether you will fall below that. If you do, I do not think you are doing your full duty, and I will believe you cannot do as well as an individual. If you collect more than that I will have great faith in trust companies."

I am very anxious when that good man cashes in his checks that he also will make the Norristown Trust Company his executor, and he has put us on our mettle to do our best. We have already passed the mark as to what he considered were good claims. Therefore, I say the best way we can give publicity to the fact that fiduciary relations can be better conducted by trust companies than individuals is to prove in individual cases that the trust company can do better than the individual, that it does better than the individual, that it is a saving in money over the individual trusteeship, and that in all ways we can do better work and more cheaply, and to the better advantage of the estate, and then let us see that we are not too modest to let the public know of such individual cases.

Trust Company Loans and Investments.

The President (after a pause): As there seems to be no one who desires to speak on this topic, the next topic is

Institutions and Practices Within the Trust Companies in the Interests of Employees.

I will ask Mr. Tillotson, of the Cleveland Trust Company, of Ohio, that he tell us something of interest on the subject.

E. G. Tillotson: Our company has not done very much yet along this line. We have on our payroll, 139 employees, men and women. We have made no provisions yet for pensions. We have had several on half pay, men who were retired for illness (in one case for old age), and after death we have continued half pay to their widows.

We have a little monthly publication, a paper that is edited by 139 editors, in other words, every one of the employees is supposed to be one of the editors. The publication would be of no interest to anyone except the employees of the Cleveland Trust Company, because, as you would readily understand, it contains principally personal allusions. But the real editors, our advertising manager, and our Assistant Secretary, are endeavoring to elevate the tone of the publication a little, and have asked various men among our directors, and outsiders, to write serious articles in order that the paper may be of actual benefit to the employees. We have had one very interesting article from one of the directors who spent the summer in Europe, who gave us an article on the branch bank system, as he had seen it over there.

We have dinners once a month, where the President and other officers meet with the employees, and we discuss informally the progress of the company, and put the different departments on a competitive basis. We also offer prizes based on increases of business, percentage of increase of business. This year our prizes will aggregate about $3,500, and it is quite possible for some of the employees to win about $500 in prizes.

There are other companies represented here that have done so much more for their employees that I feel somewhat embarrassed to be called on for this discussion. But we have found by experience that this prize money and all we do for our employees is money well expended. It creates a loyalty and enthusiasm, and to emphasize this I will tell you that for three periods of six months past one of the prize winners has been a porter in our employ, earning $60 per month and has won prizes for bringing in new business. Of course his acquaintance was among working men, but in his enthusiasm he has been able to win one of the prizes for three periods of six months each. We have had another fellow, an employee who gets higher wages who has confined his work almost exclusively among Germans (he speaks German), and the interest, the ratio of profit figured out at one and a quarter per cent. of the accounts that man has brought in in the last two years have more than paid his salary and the prize money.

So you see it is actually money well invested, better than a great many forms of advertising, and better than all, it gives them an opportunity to participate in the profits, if you please, and to show them that their efforts are appreciated; it has also called to the attention of the board of directors men who have merit in them, men who ought to be promoted and who may be officers some day. And it looks to me that they are going to make, a good many of them, better officers than some we have now.

I think all of you can be of great help to your companies if you adopt some plan that will make your employees feel that they are just as much a part of the company as the officers themselves. You will be surprised to find how some of the most lowly employees, so to speak, can bring you a great deal of business if they are properly encouraged.

EDMUND D. FISHER, Secretary Flatbush Trust Company, Brooklyn, N. Y.: Mr. President, there is a very simple device which I found to be of great value, and to which I want to refer under the head of "Practices within the Trust Companies in the Interests of Employees." We have a small company, but it is rapidly growing, and there have been recently quite a number of young clerks put on with the result that I found a short time ago a greater number of errors than was desirable, and I instituted a little schedule, which I put in charge of what I called the officer of the day (the company being small a chief clerk was hardly practicable, but the officer of the day), one of our five most experienced men, followed the next day by the second, and so on, to the fifth, making one man practically a week, responsible, and not burdening him too much, and this man would take this schedule. I have jotted it down in memorandum form, because I thought it might be of benefit in the managing department of small banks or trust companies. For instance, we open at eight o'clock. We do not want a time arrangement exactly, as the manufacturing establishment has, as the clerks would probably resent it. So the first item, clerks arriving after 8 o'clock a. m.; clerks absent, and the reason; the reading of the time of striking, and of course the signature of the officer reading the time. Time that the exchanges were received. The number of differences or errors, and the clerks making the same. And, by the way, a prize is offered to be given the first of January to the clerk that made the fewest errors, and the clerk that made the greatest progress in errors; in other words, the clerk that now makes the most errors will probably win that prize the next time. Then the time of striking, the time of the operation and the differences, if any.

In the bookkeeping department the schedule of the number of ledgers and the difference, if any; the number of pass books received during the day, the number of pass books balanced, the number of pass books held over one day. Our theory is that a pass book should not remain longer than the following day after it is received. When I started this, sixty pass books were on hand. My schedule yesterday showed one pass book held for some reason over one day. The final reading and the time of the clerks, and the signature of the clerk or officer reading it. The comparison of the reading in the morning and the reading in the afternoon by the officer of the day, thus catching any error, making three men really involved in the reading of the time clerk. The vault closed, and the time, and the reply from police headquarters. The officer of the day signs it with his signature, and it is presented to me the next morning. So I have an automatic and very simple way of taking the entire work of the institution.

Of course it is applicable to ourselves. A similar schedule, amplified or reduced, as might be necessary, would be, I think, very useful to all, except where there is a chief clerk actually in charge of this every day in the week—although I really believe that an officer of the day, a man changing from day to day, having only one day a week of it, is a better man than to have a chief clerk in charge of it all the time. What is the result of this? The day before this was instituted there were fourteen errors in exchanges and in checks and credits, aggregating probably a thousand items altogether. The day following they struck the first time; of course each clerk took care, he went over his additions before submitting it for the final proof. During the last six weeks I do not think it has exceeded three errors, and as a rule the tellers and the credit men prove the first time; but of course the bookkeeping department, with a thousand items a day, involves a good deal of work; and, as I say, frequently young boys are on the blotters there, and there is a big chance for error.

Further than that we get the clerks to come once a month to the financial library that is primarily supposed to be for the benefit of the outsiders, for our customers to come and look over financial literature; but really the chief benefit derived is by the clerks. We have the leading banking magazines there and we recommend to them special articles that we think will be of interest and value to them. They come once a month, as I say, and talk over these various matters, with the result that it tends to a greater efficiency of our force.

There is another plan I have in mind for our next meeting, which was suggested by a little schedule, I think in the September number of "Success." It suggested a card on which was to be written what you would call a man's personality, taking a man's character and analyzing it. I propose to use that in my next lecture—personal neatness, pleasantness, if you will, many things that will stimulate the clerk to improve his efficiency and his personality. This simple schedule, I think you will recognize, will be of some value if put into effect.

The day following this we saved one hour and a half in the time of proving, and consequently in the time of the clerk in his active service in the bank.

The President: The next and last item on our programme is suggestions of members as to the work of the section. (After a pause.) As nobody seems to be prepared or ready to give suggestions along this line, I would like to speak of an experience, which is not new, but which after all seems to be the important thing that trust companies have to deal with. As we have seen from Mr. Perine's figures, the assets of the trust companies of the United States are almost $4,000,000,000 (four thousand million dollars.) Now, that is easy to say; but it is a vast sum of money, and growth of the trust companies has been such that while this section which began a few years ago, as I remember, in a very small room, and with very few persons present has grown to its present proportions, if the growth of trust companies continues in the future at anything like the ratio it has been in the past, it will not be many years before the aggregate figures will outstrip those of the National banks. The National banks are, as we all know, controlled by the Federal Government, and have a uniform system, and a rigid and exacting system of examinations. Trust companies in some of the States—and I am happy to say in the State in which I live—have equally as good a system. We are there accountable to and examined by the Auditor of Public Accounts, and I believe our examinations are as thorough and as rigid and the exactions as great as those of the Government. We are also required by the rules of our clearing-house to carry a very adequate reserve. But there are many States, as I understand it, where trust companies have no accountability, or practically no accountability, to the public in the way of examinations and reports. Now, we are all interested in the reputation and good character, and high standing of our fraternity, and a mishap to one means perhaps disaster to many, and I think that you gentlemen here, gathered from the different parts of the country, can do your business of trust companies no greater service than to work with your Legislature for the enactment of such laws as will safeguard your companies to the greatest possible degree. I want to impress that upon you, and I think a model law has been suggested at some previous meeting of this association and section.

Festus J. Wade, of St. Louis: We have within our company an organization which I regard as being most valuable to promote the welfare of the institution and to protect the integrity of every man or woman employed in that organization, and at the same time benefit the employees. It is a corporation organized under the laws of the State of Missouri, known as the Employees' Association of the Mercantile Trust Company. The employees are invited to join after they have been with the company three months. The invitation is extended to them as a privilege. There is nothing whatever compulsory about it, and they are told that it matters not the slightest whether they go into that organization or not. They are asked to contribute if they join, and they must contribute if they join, five per cent. of their salary—no more and no less, no matter what the salary may be. The elective officers, and the executive officers, cannot be members of the organization, and if an employee be elevated from what we call employees to executive officer he must sell his stock in that organization and cease to benefit by its operation. This organization has its board of directors, consisting entirely of employees. They have absolute control over their own funds, except they cannot buy anything in the way of investment without the written approval of the company. That is put there for the purpose of eliminating speculation, and the officer is prohibited from participating in the Employees' Association, because it is supposed to be his purpose to encourage the organization in every way possible. Whenever we are fortunate in making a substantial sum of money at the end of three, or four, or five or six months, as the case may be, the executive officer of our establishment will recommend a donation to the Employees' Association. If we receive an underwriting of two or three million bonds below the market, for instance, as in the case of Japanese bonds, we will set aside $15,000 or $20,000 of that underwriting for the Employees' Association. They invest their money in it. The result has been that out of 175 employees we have in our establishment there is not one man or woman who is not a member of the association, and I am happy to say that they have made thirty per cent. per annum for five years on their investments. When they get a surplus for investment they invest it in the stock of the corporation. It makes every man and woman in the employ of that company a check upon his fellow employees, a check upon his officer, because if I as an officer of that organization should do something irregular I not only strike the pocket-book of the depositor and stockholder but I strike the pocket-book of that individual employee.

Again, along the line that our president has so aptly suggested, we go probably to extremes in the matter of examinations of our company. We claim the strength of our organization lies in the confidence of our stockholders and the confidence of our directors and depositors. Therefore, we undergo a State examination twice a year. It is compulsory. We undergo an expert accountant examination once a year by certified public accountants. And then we have, in addition to all of that, a flying auditor, a man who has an order that he can go into any cage or any department in any hour of the day or night, take possession and make examination and report the result to the executive of the establishment. Those are the things that will make a trust company. The trust companies are bound to supersede the National banking system of the United States of America if the gentleman belonging to this section will look after his trust company as he would look after his private fortune of his family.

The President: Gentlemen, the entire programme has been finished, and unless some member on the floor has some topic or anything pertaining to the business of the section to suggest, we will proceed to the nomination and election of officers. I would be very glad, if any gentlemen present have anything to present to the meeting, to hear them.

Mr. Tillotson: May I say another word? It occurs to me that one of the weaknesses of this section is the unwillingness of the members to speak. You can all see, of course, in about half a minute, that I am not accustomed to talking in public, but there are men all around me that could discuss these subjects with the greatest advantage to all of us. One man here I see is President of two National banks and President of a trust company. Is there anybody better able to discuss the questions before us? There are gentlemen here from Cincinnati and Chicago who could discuss the value of a bond department to a trust company. I could not say anything, because we haven't got a bond department in our company; but there are many here who could say much of interest and value to us all.

The educational work could have been discussed by all of you. There are attorneys here who have given the matter great consideration, not only from a legal standpoint, but from a trust company standpoint.

The trouble is we all get in here and most of us keep quiet and don't say anything. We don't get acquainted. We all know Mr. Wade and we know Mr. Williams and Mr. Gibson and the members of the executive council, and we are very glad to have them and hope to have them again and will vote for them, but there are a lot more members here who are brimful of wisdom and enthusiasm, and we would all be benefited and delighted if they would get up and say something. There is a man I see now from Cleveland, a man right in front of me, a man who knows more about the trust company business in a minute than I do in a year, and he has not said a thing.

Mr. Gibson, of Denver: Mr. President, I am very glad Mr. Tillotson has made the remark that he has made. There are only two of us present at this meeting to-day, I think, who were present at the organization of the section—Mr. Holliday and myself. This section was organized nine years ago. We did a great deal in the old days; we read papers and so on, and we think it is time now for some of us to take back seats and hear from some of the new members.

If I may be allowed to make this suggestion, it seems to me it would be well to have our programmes given out some considerable time before the meetings. I dare say that few of us would desire to get up and discuss any of these important subjects without having given some thought to them beforehand. Although I am a member of the executive committee I did not happen to receive my copy of the programme until en route to the convention, in Chicago, and naturally I am not prepared to give any light on any of these questions. I merely offer that as a suggestion, so some of us will be better prepared at the next meeting to talk about these subjects that are suggested here.

RALPH W. CUTLER, President Hartford Trust Company, Hartford, Conn.: Mr. President, I have been extremely interested in what Mr. Wade has said in regard to the interior workings of his trust company. I am not chock full of wisdom, and have not very much to say; but I do want to say just this. That it seems to me we all want to enlist the attention of our employees in the work in which they are engaged and that there are two ways in which to do it. The first is to persuade the young man to become a member of the American Institute of Bank Clerks, which it seems to me is a very valuable organization, and in our case every single employee of the Hartford Trust Company is a member of that institution. And the other thing is to give the young men a capital interest in the stock of the concern itself. We encourage our young men to buy one or two or five shares of the stock of our corporation, and it works wonders, I assure you. We do not carry out so elaborate a system as Mr. Wade has explained, but the executive officers of the institution can sleep nights more securely because those young men are our stockholders.

Upon motion a nominating committee of five was appointed by the president, as follows:

John Skelton Williams, Richmond, Virginia; E. G. Tillotson, Cleveland, Ohio; L. E. Anderson, St. Louis; A. J. Hemphill, New York, and F. B. Gibson, Denver.

THE PRESIDENT: I would suggest that while this committee is out, the delegates from the various States which are eligible to have a vice-president should have a little caucus. We will therefore take an informal recess for a few moments in order to enable them to make nominations for vice-presidents.

In order that you may know what States are eligible, I will state the by-laws provide that every State which has ten trust companies, members of this section, is eligible to have a vice-president. They are as follows: Alabama, Arkansas, California, Connecticut, Illinois, Indiana, Kentucky, Maine, Maryland, Massachusetts, Missouri, New Jersey, New York, North Carolina, Ohio, Pennsylvania, Rhode Island, Tennessee, Vermont, Virginia and West Virginia.

I believe the custom is in the case of the president and vice-president for nominations to be made from the floor. I would like to have some gentleman who was present last year enlighten me if I am not correct.

A VOICE: That is correct.

(Thereupon an informal recess was taken for five minutes.)

The nominating committee made their report as follows:

The committee has unanimously agreed upon the following names which we desire to present to your consideration for election to office for the ensuing year.

For president of the section, Mr. Clark Williams of New York city.

For vice-president, Mr. Festus J. Wade, President of the Mercantile Trust Company of St. Louis.

For the five members of the executive committee, the following names: W. L. McDonald, Vice-President of the Commonwealth Trust Company of St. Louis; H. P. McIntosh, of the Savings and Trust Company, Cleveland, Ohio; Joseph E. Otis, President of the Western Trust and Savings Bank, Chicago; Mr. Lynn H. Dinkins of the Interstate Trust and Banking Company, New Orleans, and Mr. J. F. Thompson, Vice-President of the Bankers' Trust Company of New York city.

Upon motion the secretary was directed to cast the ballot of the section for the officers named.

The secretary accordingly cast the ballot of the section for the gentlemen named.

THE PRESIDENT: I will appoint Mr. Jay, of Boston, and Mr. Gibson as a committee to find Mr. Williams and bring him to the rostrum. I will appoint as a committee Mr. Hart and Mr. Cohen to find Mr. Wade and bring him forward.

THE PRESIDENT: Nomination for the offices of vice-president are now in order.

The following gentlemen were nominated for vice-president from their several States:

Alabama: A. C. Daniels, President Central Trust Company of Mobile.

California: J. C. Drake, President Los Angeles Trust Company.

Connecticut: Ralph W. Cutler, President Hartford Trust Company.

Illinois: H. L. Edmunds, Secretary Northern Trust Company, Chicago.

Indiana: John H. Holliday, President Union Trust Company, Indianapolis.

Massachusetts: N. W. Jordan, President American Loan and Trust Company, Boston.

New Jersey: Alexander C. Wood, President of the Camden Safe Deposit and Trust Company, Camden.

New York: Gates D. Fahnestock, Vice-President Franklin Trust Company, Brooklyn.

North Carolina: George Stephens, President Southern State Trust Company, Charlotte.

Ohio: E. C. Tillotson, Vice-President and General Manager Cleveland Trust Company, Cleveland.

Pennsylvania: David McKinney Lloyd, President Safe Deposit and Trust Company, Pittsburg.

Vermont: H. L. Ward, Treasurer Burlington Trust Company, Burlington.

West Virginia: F. M. Staunton, Vice-President Kanawha Banking and Trust Company of Charleston, West Virginia.

On motion the secretary was directed to cast the ballot of the association for the vice-presidents so nominated.

The secretary cast the ballot accordingly, and the gentlemen named were announced elected.

THE PRESIDENT: I want to thank this section of the American Bankers' Association for having honored me by election to the office of president. I was not present at the meeting in New York last year in which I was elected. I am informed that this was the largest meeting that the section has ever held. This, I think, is the next largest. As I have said very early in the meeting, I think the importance of the trust company men of this country getting together, becoming a homogeneous body and working under uniform laws and uniform customs and practices is most important, and I predict that the day is not far distant when the trust companies of this country will, many of them, if not all, be under the supervision of the Federal Government. I think it is as inevitable as that the sun rises and sets. And before that time we can do much for our cause by coming under uniform laws and getting our house in order. I thank you most cordially, gentlemen and on my own behalf I want to thank the bankers and citizens of Washington for the hospitality which they have so generously extended to us and which we are enjoying to the full.

Mr. Williams, it is with peculiar pleasure that I transfer from my breast to yours this badge, as president of the Trust Company Section. You, sir, have done more than any other member of this association, more effective work than any other member I know, and you richly deserve this honor, and I know you will fill the place with credit to yourself and gratification to all.

Mr. WILLIAMS (upon taking the gavel as president): There is nothing which I can say which will adequately express my deep appreciation of the honor you confer upon me. I feel that only an expression of this kind is necessary at the present time. You must look to me for such good works as I am able to contribute during the coming year for the benefit of the Trust Company Section as your presiding officer. Before we adjourn, however, I would suggest that a motion be formally made from the floor, telling of the sentiments which have been so well expressed by Mr. Potter, thanking the generous trust company officials of the city of Washington for the entertainment they have provided for us.

Mr. FAHNESTOCK: Mr. President, I take great pleasure in moving that the thanks of this section be extended to the trust company officials of Washington who have so handsomely and generously entertained us while here.

The motion was numerously seconded and the question being taken was unanimously agreed to.

THE PRESIDENT: May I ask the vice-president, just elected, to come to the platform.

Mr. Wade came forward.

THE PRESIDENT: It gives to me the greatest pleasure to present to you the emblem which represents the confidence which this section has in your ability to carry on its affairs. I take great pleasure in pinning on you the emblem of first vice-president of the Trust Company Section.

MR. WADE: Mr. President and Gentlemen—This is indeed a delightful honor, particularly because you have a president who will do all the work, and I expect to draw all the honors and the salary for the balance of the year. I thank you for this evidence of good will and confidence and I will do all I can in my power to aid the Trust Company Section and the trust company business in the United States of America.

THE PRESIDENT: Before adjourning I would state that the executive committee has the power to fill vacancies in the offices of vice-president from States entitled to them where they have not been filled by nomination from the floor.

Thereupon, at 1.25 p. m., the section adjourned.

SAVINGS BANK SECTION.

The Savings Bank Section of the American Bankers' Association met in fourth annual convention at the banquet hall of the Shoreham Hotel, Washington, D. C., Tuesday, October 10, 1905, and was called to order at 10:30 a. m. by the President, Charles E. Sprague, of New York city.

Reverend J. M. Schick, Pastor of Grace Reformed Church, Washington, D. C., offered the following prayer:

PRAYER BY REV. J. M. SCHICK.

Almighty and Everlasting God, by Whose blessing all our doings must be sanctified, and unless Thou build the house, they labor in vain that build it, we implore Thy presence and Thy benediction with us at this time, so that in all our works, begun, continued and ended in Thee, we may glorify Thy holy name. With a realizing sense of our responsibility to Thee, enable us to enter upon the transactions of this meeting, knowing that every right work is Thine and every right cause is of Thine appointing. We praise Thee for that Thou hast used us so largely concerning the gathering of those who otherwise would have been unable so to do, in guiding the savings of the weaker and the poorer, turning them to good account, using us thus in Thy service; for every service that helps our fellowmen is, when rightly understood, Thy service. Therefore, we lift our hearts unto Thee in grateful recognition of the blessings Thou hast bestowed and the mercies Thou hast showed and the favors Thou hast imparted to the institutions which we represent, to the institutions here gathered together in this association. And we humbly pray Thee further to continue Thy blessings unto each and all, and to this association collectively, so that with an eye single to Thy glory, in full consciousness of the responsibility resting upon us, we may have continually the Divine presence in all our work.

Shield us from the temptations to selfishness which are so abundant. Deliver us from the evils that at times may be so near, and before which so many have fallen; and make us conquerors over self and selfishness and the world, and enable us, in that right altruistic principle of life which marks the deed of every right man, to use the opportunities Thou art giving us in such a way as to be helpful to those for whom we act, and with whom we serve Thee; to the end that, strengthened with Thy might, made more prosperous with Thy blessing, we may ourselves, having been blessed, prove a blessing to others as Thou hast blessed us. And unto Thy name shall be given the praise, through Jesus Christ, our Lord, amen.

THE PRESIDENT: **An opportunity will now be given to you, gentlemen, to hear from Mr. B. F. Saul, Chairman of the local committee on arrangements of the Savings Bank Department of the Washington Bankers' Association.**

ADDRESS OF WELCOME BY B. F. SAUL.

On behalf of the Savings Bank Committee of the Washington Bankers' Association I extend to you all a hearty welcome. The Savings banks of Washington welcome you not only to this city but to their institutions, and hope that you will visit them during your stay here.

I presume those delegates from the larger cities, where the strongest Savings banks are located, will be surprised to find that the Savings banks of Washington are small institutions; but most of the large Savings banks of the country are old institutions, a great many being more than fifty years old, while the oldest Savings bank in our city was organized in 1891, only fourteen years ago.

Ten years ago the total assets of the Savings banks of Washington were less than $250,000; five years ago they had increased to $1,000,000; and to-day the total assets of the Savings banks are more than $4,000,000. In the past the persons who would ordinarily be Savings bank depositors have had to place their savings with the trust companies and the building associations. From the above figures it can be readily seen that the age of the banks is the principal reason they are not among Washington's larger financial institutions.

But there is another reason, and that is that we have no Savings bank law or supervision in this District, but we hope before another winter passes that Congress will enact a law which will place the Savings banks of this city under the supervision of the Comptroller of the Currency, as the trust companies have always been, and we hope at this meeting to have your co-operation by recommending to Congress such legislation. However, we are proud of our young and growing institutions, and I am sure if you find time to visit them you will be pleased at the results we have attained; but of course, the most interesting bank in Washington to you will no doubt be our National Treasury.

Washington is not a commercial city, and the points of greatest interest will probably be the public buildings.

The members of this committee desire to place themselves at the disposal of the delegates, and will be pleased to render them any possible service during their stay in this city.

And in conclusion, I again extend to you a most cordial welcome, and hope this meeting may prove the most successful in the history of the Savings Bank Section.

ADDRESS OF THE CHAIRMAN, CHARLES E. SPRAGUE, PRESIDENT UNION DIME SAVINGS INSTITUTION, NEW YORK CITY.

The Savings Bank Section of the American Bankers' Association accepts with cordial appreciation your efforts and your generous hospitality. We already know that you have made the most lavish preparations for our entertainment. We all of us have emerged from the tenth story of the New Willard Hotel, staggering under a double weight of pasteboard and of grateful obligations. We are to be your guests by land and by sea, in peace and in war. Our patriotism will be evoked by a visit to Mt. Vernon. We shall perhaps have our envy excited by a trip through the United States Treasury, and by the sight of the vast amount of funds therein, which we cannot have under our control. You have provided for us in every possible way. The well-known hospitality of the sunny South, added to the metropolitan spirit which pervades the national capital, has caused you to more than outdo yourselves, and we only hope that the prosperity of your institutions, to which you have alluded, may continue, and that we in our various small ways, in the remote haunts of men from which we hail, may be able to recompense you at some time by giving you in our own peculiar way the kind of good time which we are able to give you. We thank you.

It now becomes my very pleasant duty and most honorable duty to open the proceedings of the fourth annual convention of the Savings Bank Section of the American Bankers' Association. In future times we or our successors will look back to this as one of the early meetings, one of the beginnings of great things. When in future years this organization has fulfilled the promise which its vigorous youth gives forth, those who follow after us will look back to this old society with grateful spirits as having inaugurated a movement of great advantage and benefit to the country and to its industrial classes, and to the general welfare. On an occasion like this it is customary to make a retrospect and a prospect, to look over the work of the past, and to consider what it is best to undertake for the future. In other words, we inquire, in the first place, in the classical phraseology which I believe is used in this section, "where are we at?" Secondly, we inquire why are we here, and thirdly, what we are going to do about it? Where we are at, is satisfactorily answered by the large number of attentive and interested listeners who are present. Why we are here, is a little more difficult of comprehension. Why is it thought necessary for those of the American Bankers' Association who are particularly interested in savings to create a separate department? Why have they taken the trouble to start at least twenty-four hours ahead of the time which otherwise would have been necessary, in order to attend this meeting as well as the proceedings of the association proper?

It is not for protection of your valuables against fraud and deceit. That is amply cared for by the parent association. It is not to consider the future of the currency of the country. It is not to consider the advantages of adopting systems of money orders or discussing State and national supervision of State and National banks. Nearly all these subjects are covered by the American Bankers' Association.

Why do we have a Savings Bank Section, and why do we need it? As bankers we do not, but I hold that we are something different, something distinct, or at least distinguishable from bankers; that those who are purely and simply bankers have not honored us with their presence to any great degree. We are something else, although organized under a great diversity of law and customs, organized in almost as many different ways as there are States in the Union, and unorganized in some of the States, we all have one common purpose, which is the safe-keeping of the economies of the industrial classes of society, of those who, as will always probably be the case, are obliged by the circumstances in which they live to sell their services, whether it be as a university professor or as a day laborer, to someone who can contract for and pay an appropriate stipend. The only safety for those classes is to have some depository which they can absolutely trust, and the only hope for their old age is in present self-denial, which in future will soothe and alleviate the distress of their declining years.

The Purpose of Savings Deposits.

I take it that the purpose of banking proper is the facilitation of business. The business man does not accumulate his money by putting it into any kind of bank and letting it increase. Very likely as his business itself increases his cash account may safely be lessened. He desires to make his real investment in the machinery of the business in which he is engaged. His cash account, which is practically his bank account in these modern times, is simply a facilitation, simply a buffer for the purpose of smoothing over the interval between production and collection, and also the machinery for the purpose of collecting what is due him and for the purpose of liquidating at the least possible expense what is owed by him. But the accumulator, the Savings bank depositor, has no such purpose to look forward to. His object is not to do with as little cash balance as possible, but to increase that cash balance, while it shall be in a form not only realizable in cash upon proper procedure, but shall by its increase measure his prosperity. The point of view therefore is quite different. The banker employs the money of himself and his several fellow shareholders so as to give the greatest returns. It is true he looks after the welfare of his depositors, but his primary duty is to his shareholders. He is amenable to them. The depositor is a customer who may come and go, but the shareholder is not a creditor, properly speaking; he is a proprietor, and he is entitled to the proper use of his money in such a way as shall be profitable, and the attitude towards the depositor is secondary. With us who are not so much bankers as savings keepers, the attitude is reversed. Our primary duty is to those who cannot look out for themselves. We set ourselves up in that capacity. We hold ourselves forth to the world as being ready to safeguard the surplus which economy and self-denial accumulate among those classes who are properly intended to confide in our care. We therefore must hold, and we must remember in our discussion here, that we are something other than bankers. It is true that the bankers allow us in their ranks. Some of us are bankers and savings keepers, and some of us are savings keepers and bankers. Some of us are solely keepers of savings and not in any proper sense bankers. It is true that the Bankers' Association allow us to participate on equal terms, and even allow us to contribute the usual dues just as if we were money-making institutions. This is kind on their part, but they should recollect in fixing these dues that we are not bankers, but are the bankers most stupendous depositors. Savings banks taken collectively deposit more money in the National and State banks than probably any other one class of institutions, unless it be the gigantic industrial corporations.

This is a great country for experimentation. Having the great number of Commonwealths that we have, united under one great Commonwealth, there is an opportunity for testing methods in every walk of life. Now, in the Savings banks, as I said, there are a large number of diverse methods of organization. Other methods have been tried in Europe and perhaps will be tried here. None of us, to speak in homely fashion, knows it all; each of us can learn something from his neighbor, and I myself do not admire the Pharisaic attitude that would impel people in one State in our walk in life to say to those of another State, "they are not Savings banks at all; put them aside, they are not to be mentioned in the same paragraph with ourselves; we are the elect." I do not believe in anything of the sort. I believe that we should come together; and if you can convince us that your method, allowing for the difference in our environment and our situations, is superior to ours, we should give you the floor and let you prove it to us. And you, on the other hand, should allow us to prove to you, if we can, that our methods are worthy of commendation and emulation.

Various Kinds of Savings Banks.

Now, there has been the Governmental Savings bank, an institution carried on by the Government or by the Municipality. I believe our advocates of municipal ownership have not yet reached that stage. Then there is the semi-Governmental or postal Savings bank, carried on by a department which was organized for a totally different purpose, and not for banking, which it does through money orders, which I consider inappropriate for a Government department; and although I am open to conviction, I consider the carrying on of a Savings bank by a department of the Government to be equally inappropriate. Then there is the type of Savings bank which is a capitalized concern and which has stockholders. Doubtless in those localities where it has grown up, that may be the best. We are glad to be instructed as to what point. We are glad to know what the difficulties are; glad to know whether there is that temptation to deviate from altruistic principles which we heard referred to this morning; whether there is not a temptation to set the stockholder up as superior to the depositor instead of second to him, as he should be. We must consider that. We are open to conviction on all these points. There are also those, generally the same kind, who not only are capitalized as savings keepers, but also bankers in the same building and over the same counter. Whether there is practically any danger from temptation to vary from altruism, is another point that we will ultimately discuss.

When there are in the older parts of the Union the old-fashioned original so-called mutual Savings banks, which have no shareholders. The history of these Savings banks has been reasonably prosperous, I believe, and we number very many of the oldest, soundest and most reputable institutions of that kind in our ranks. I am sorry to hear sometimes of that spirit which I have ventured to call Pharisaical, which would endeavor to separate institutions of this kind into a province of their own, and will not admit that anything can be learned from them.

Practical Character of the Savings Bank Section.

But we have not come yet to the time for considering these broader questions of organization. We have commenced in the right way. We have not begun with words of ten sylables, but we have commenced with the alphabet of the Savings bank business. We have commenced by endeavoring to ascertain the best methods as to the details of business, and in those branches where we come in contact with the depositors. We shall reserve for a future time consideration of those broad questions of whether we shall be capitalized, whether we shall be purely Savings banks, whether we shall be mutual. We will defer those questions. We do not propose to take them all up at present. We have commenced with some comparatively minor but really vital questions. During the past year we have commenced the collection of a complete and thoroughly classified set of forms by which the business of a Savings bank is conducted. The hard and skillful work in making this collection has been done by our efficient secretary, Mr. Hanhart. A set of forms will give you almost a photographic view of the methods and purposes and general trend of the business of the Savings bank. By examining the collection which is now on view at the Willard Hotel, every one of us, I think, will find something that he has not thought of before, something which he can with advantage either avoid or adopt. If we find anything worthy of adoption, it will interest and help us. If we find anything to avoid, it is a simple matter to avoid it; and it may remind us of some of the dangers of which we should beware. A large part of the work of this section—and this is a working section—has been devoted to the compilation of these forms. We have, however, several other questions in reserve, which will hereafter be presented. One of these, rather a minor point, but one which seems to have acquired a good deal of importance, is the question of the treatment of certain accounts, wherein proprietorship would seem under various laws and conditions to be somewhat doubtful, the so-called two-name accounts that on their face purport to be the property of more than one person. This is an intensely practical question. We propose to begin with intensely practical questions, and from them gradually build up to the broader questions, such as the methods of organization, the question of supervision, how far and in what way should the State or National Government intervene for the public good; how far should paternalism be extended, so as to interfere, or intervene, rather more or less in the conduct of these corporations.

Then we have been considering another question which will also be a subject of discussion to-day, probably, that is the formulation and possibly the adoption of a plan by which statistics of the savings of the country may be more accurately ascertained than they ever have been. It is well known that the published statistics of this kind are very unreliable and not based on actual figures. This section is representative. It does not contain by any means all of the Savings banks of the United States, but it is so representative in its character, its members are so scattered from Maine to California, it embraces institutions of almost every kind and class which can be brought under this act, so that a report given out anonymously as to institutions and solely by aggregates as to States and sections would be exceedingly representative. The question has been before our executive committee as to whether we ought not to have such statistics as that filed and circulated among our own members only, in order that we may learn the trend of things, in order that from the reasoning developed from these figures we may improve on past history. Those are among the subjects that are before us to-day.

We also are to listen to several gentlemen who will address us or read papers on various subjects.

Having said a very few words, and having minimized the annual address of the president, to which I know members on occasions of this kind always look forward to with fear and apprehension, I will pronounce the fourth session of the Savings Bank Section of the American Bankers' Association open for business.

I will explain to the session that through the unfortunate circumstance of a cabinet meeting being called at this hour, Honorable Leslie M. Shaw, Secretary of the Treasury, will probably be unable to address you to-day, as he had expected. But another eminent gentleman who is on our programme has arrived, and we shall take preat pleasure in listening to him. I now introduce to you Honorable W. B. Ridgely, Comptroller of the Currency of the United States.

Laws Regulating the Operations of Banks.—Address of Hon. Wm. B. Ridgely, Comptroller of the Currency.

Mr. Chairman, Ladies and Gentlemen—I was not fortunate enough to be here at the beginning of your president's remarks, to hear all that he said; but I was greatly interested in what I did hear, and especially in his conclusions in regard to Governmental regulation of banks, and to the very apt distinction which he made between interference and intervention. I do not believe in interference with banks, but I do think it is to the interest of the banks as well as to the interest of the depositors and the general public, that there be some Governmental intervention.

No one will question the desirability, if not necessity, of laws regulating the organization and the operation of banks.

If we are to have such laws, it is the most logical consequence that the law should not only regulate their methods of operation, but provide a system of examination and supervision to see that the creations of the law observe its provisions during their life as well as at their birth. It will also be found necessary to follow them after death, and to provide for the administration of banks which fail or go into liquidation. In fact, the administration of insolvent banks is a very important part of any system of State regulation, and one in which the difference between good and bad or indifferent administration is very serious in its consequences.

If the State gives a charter to a certain number of men, authorizing them to establish the business of banking, and making certain conditions as to the paying in of capital in cash, and the other ordinary requirements of such an organization, it thereby assumes a responsibility for the parentage of the new corporation. It has given it life and power, and a certain standing and dignity by reason of its State charter. It is only its plainly logical duty to continue its care and supervision throughout the life of the institution, not only for the protection of the bank itself, but the people who transact important business with it, by virtue of this law-given life and power. This is no invasion of the rights of the incorporators or shareholders; it is only what they should expect and a most reasonable concession from them for the privileges which are granted to them by law. They have no natural right to incorporate. It is all given them by statute. In return for the franchise given them, they should willingly submit to any reasonable regulation and supervision which the law imposes to safeguard and protect the public.

Probably a very large majority of the people who organize banks and those who are given charge of their management, are acting in perfect honesty and good faith. My experience and observation lead me to believe that most banks are honestly managed, and most of these are also conducted with good judgment and ability. It may be and doubtless is true, that such banks do not need any outside supervision. The officers and directors of any bank can, if they will, make far better examinations and exercise much more efficient supervision over the affairs of their bank than any official of the Government possibly can. Unfortunately, the directors and managers of all banks do not fully discharge their duty in these respects. Some of them do not know how to conduct or supervise the business; some who do know how, neglect their duties; and others have neither the honesty nor intelligence needed. It is such banks as these that need State examination and supervision. No one is more interested in seeing that this is thoroughly given them than the people who are managing their banks honestly and well, strictly in accordance with the law. It is greatly to the interest of the man who is so conducting his business to see that his competitor is, as far as possible, compelled to do the same. Not only does it make the competition more fair, and gives him a better chance for the business, but it reduces the risk to him from the failure of his neighbor, which may so upset the business of his whole community that there is danger to all its banks, no matter how well and prudently conducted.

Good Record of the Savings Banks.

I believe that what I have just said is especially true of Savings banks. The record of the American Savings banks for honesty of management will certainly compare favorably with that of any other class of banks, especially in those States which have mutual Savings bank laws, and real Savings banks. From the nature of the business, the character of your investments, and the people you have for depositors, there is more to be feared from anything which destroys the confidence of your people. This makes it more necessary for you to see that you are not placed in competition with banks less ably and less honestly conducted.

Over no other banks has there been for so long a period such a complete and thorough supervision as has been given the National banks of the United States. The Bank Act itself contains many severe restrictions. The examinations and reports of condition are frequent and comprehensive. The good results shown by the National banks are largely due to this supervision. During the more than forty years' operation of the law, the failure of National banks have been much smaller in proportion to the whole number in operation than those of the banks other than National. The National banks have paid their creditors a far larger percentage of their claims, and the cost of liquidation per one thousand dollars collected has been very much less.

The system of examination can be and should be improved by paying the examiners' salaries instead of fees, and in some other ways, but on the whole, it has worked well; certainly well enough to demonstrate that it pays and is much better than no supervision.

Some of the States have very good banking laws, especially in regard to Savings banks, and good State supervision. Some have fair laws, and some poor laws, with little or no supervision.

It certainly will be an improvement if something like uniformity could be brought about, and especially if the States with no system of supervision would adopt some good plan for bank regulation. A State which creates a banking corporation, and gives it authority to conduct the business of banking, whether it be commercial banking, a Savings bank, or a loan and trust company, owes it to its people to see to it, as far as supervision will do so, that such a bank conducts its business honestly and according to law, and it owes it to the banks which are well and ably managed, to protect them from the dangers and competition of those which are run in violation of law by men who are lacking in honesty or ability, or both.

Mr. Latimer: Mr. President, I offer the following:

Inasmuch as there is now no law in the District of Columbia giving any Government officer supervision over Savings banks, it is hereby declared the sense of this meeting of the Savings Bank Section of the American Bankers' Association, assembled at their annual convention in Washington, that such a law should be introduced in Congress and passed at the earliest opportunity giving such supervision, preferably to the Comptroller of the Currency, and the Savings Bank Section hereby pledges all its aid and influence towards the passage of such a law.

The President: Gentlemen, you have heard the motion. It seems especially appropriate at this time that we should take action on this question, after the remarks to which we have listened.

The motion was seconded.

Mr. Rother: Mr. President, we are acting here in the eyes of the whole country. What impression will such a resolution, applying to the District of Columbia, make upon the country if we ignore those States that have no laws? Or is it considered that because this is the seat of government and under the control of the Congress of the United States, that we are at liberty to make an exception? It seems to me it is well to consider whether such is the case. We have a number of States that have no Savings bank laws, as we all know. Maryland, the State from which I come, is one of those States. Now, I repeat, what impression will an action of this kind by this session make on the States that have no laws, when we consider only the case of the District of Columbia?

Mr. Smith, of Washington, D. C.: Mr. President, this is a subject which very appropriately comes before us now, for two or three reasons. First, we have struggled through a term of fifteen years since the first Savings bank began here, not only without any supervision, but without any Savings bank law. At the time of the organization of the Union Savings Bank, with which I am connected here, we absolutely had no law under which we could get a charter. We had to go either into Virginia, across the river, or up into West Virginia, or to Delaware or New Jersey to get a charter at all, and the Union Savings Bank operates to-day under the laws of West Virginia. That is certainly an anomalous situation, that a Savings bank chartered by another State should have its home office here. Yet, that is the existing situation. And while we have to-day a law which was passed as a part of a very minor chapter in the code, under which we might incorporate, we do not dare incorporate here, because of the provisions of that law, or rather the lack of provisions of the present law. It is always difficult to get any local proposition through Congress. We need all the help we can get to put through the law which is going to be introduced this winter. Comptroller Ridgley has been very much interested in this matter, and has prepared a bill which he is going to introduce, and we are all going to try to help him get it through. I think it is not only entirely appropriate but very desirable that that law should receive the sanction of the Savings Bank Section of the American Bankers' Association.

Mr. Rother: I do not want to be understood as opposing this proposition. I simply desire to call attention to the weight that it may have all over the country if we simply take up the District of Columbia and take no action with reference to the various States that now have no laws on this subject.

Mr. Greer: Mr. President, it is a fact that the Bankers' Association of the State of Ohio have for several years past been trying to get together on the subject of an adequate banking bill looking to State supervision and examination. They have been unable to agree, and on the occasion of the recent State convention in Cleveland a bill that had been prepared with great care was tabled in the latter part of the session. It would be very neighborly and kind if the Savings Bank Section of this association would lend any possible aid in its power to our good friends of the District of Columbia to further such legislation as they desire; but if the bankers of Ohio cannot agree as to what they desire in the way of bank legislation, and if some other States are in the same predicament, as I believe they are, I think this association will be going rather beyond its power and arrogating to itself duties which are rather inconsistent, to place itself on record as to what the bankers of the District of Columbia ought to have.

Mr. Smith, of Washington, D. C.: I think the resolution offered contains merely a suggestion that it meets with the approval of the Savings Bank Section that there should be some supervision, and that is all it says, adding the further paragraph that it is hoped Congress will give us a law. Perhaps all objection could be removed if it was stated that this resolution was introduced at the request of the local element here, and that we want to aid them.

The President: I should like to ask for the information of the section whether this proposed enactment has or has not received the unanimous approval of the local bankers' association. Some gentleman from the District of Columbia can no doubt answer that question.

Mr. Smith: I think it has received the sanction of the local bankers, as far as it goes. We hoped it would go further.

Mr. Mills: Mr. President, if it is in order, I should like to know how far this proposed law intends to go. I come from Maryland the same as Mr. Rother, and we should like to know the scope of the law.

Mr. Griswold: Mr. President, perhaps it would save the time of the convention if you would include the other States that have no laws on the subject, but which desire that the convention should take action in that direction.

The President: Replying to the next to the last speaker, as the Chair understands the purpose of the resolution, it is merely to put on record the sentiments of this section on the general subject, without regard to particular ways and means, and in reply to the last gentleman the Chair thinks such an amendment would not be germane to the present question, which relates solely to the District of Columbia, which is the one spot on this habitable earth with reference to which this Savings Bank Section of the whole United States has any right to express an opinion. We are all in one sense residents of the District of Columbia. It is our property; but it seems to me that it would be foreign to the purpose of this occasion to censure or praise the State of Maryland for having no Savings bank law, which I know her Savings bank officers desire. While perhaps the embracing of the different States would not be positively out of order, yet it would not be germane to the present discussion. The question is, Do we or do we not approve of this resolution, which we have heard read, and upon which we have heard very able remarks?

Mr. Greer: Mr. President, perhaps it would be well to have the resolution read again.

The resolution was read again by the secretary.

The question being called for, the resolution was agreed to.

The President: The next in order is the report of the chairman of the executive committee of the section, Mr. Latimer.

Mr. Latimer read the following report of the chairman of the executive committee.

Report of the Chairman of the Executive Committee.

Your executive committee has held four meetings since the last convention —September 13 and 14; December 20, 1904, and May 2, 1904.

At the September meetings but little important business was transacted besides organizing.

At the meeting held December 20, the matter of printed forms was discussed, and resulted in a call being made for forms in use by all the Savings banks throughout the United States; the result of which is the compilation of forms on exhibition here to-day. In collecting these forms much time and some expense has been incurred, which, of course, will not happen again, but for the benefits to be derived from this collection we felt justified in going to the expense. Perhaps some action might be taken whereby a reproduction of these forms may be made and offered for sale to our members only, and in that way we may be reimbursed for the cost of production. Owing to the vast amount of time required of our secretary in this work, your committee has recommended a small salary to be paid him for his services.

The meeting of May 2, 1905, was attended by nearly all the members, as well as the only two ex-officio members of the committee, the Hon. Myron T. Herrick, Governor of Ohio, and Mr. A. C. Tuttle of the Naugatuck Savings Bank.

At this meeting the question of the interchange of monthly reports of the deposits and withdrawals was discussed and received the commendation of the committee, and resulted in having the question brought before this convention for action.

Our membership has materially increased since our last convention, a report of which will be given in full by our secretary.

The work of some of the State delegates has been most gratifying and has resulted largely in accomplishing this increase, and I think the appointment of State delegates to look after our interest in legislation, as well as the increase in our membership, ought to be continued.

Our expenses have been somewhat larger the past term than usual, owing to the collection of forms and the large amount of circularization done. Most of this it will not be necessary to duplicate.

Any appropriation asked for our use has been cheerfully granted by the executive council, and we have a small balance to our credit at this time.

Contrary to the original intention of having our officers (except the secretary) act for one year only, I have been elected for the past three years as chairman of the executive committee. This was thought best at the time, owing to the many things in connection with the organization of the section, and now that we are thoroughly and successfully organized and I am to retire, I want to thank those of you who have given me their assistance, and hope that the same pleasant relations existing between the members and myself will be cheerfully accorded to my successor.

(Signed) G. Byron Latimer.

The President: Gentlemen, you have heard the report of the committee. What is your pleasure?

On motion the report was accepted.

On motion the thanks of the convention were tendered Comptroller Ridgley for his able address.

The President: Mr. Ridgley, it becomes my pleasant duty to convey to you the thanks of this association, and we compliment you on the style of your paper. In its admirable epigrammatic brevity it is a little classic, which contains much in small compass. The thanks of this section are hereby conveyed to you.

The next thing in order is the report of our Secretary, Mr. Hanhart.

The secretary read the following report:

Report of Secretary Hanhart.

Mr. Chairman and Gentlemen of the Savings Bank Section—I am pleased to report a substantial gain in the membership of this section since our last convention in New York in October, 1904. We then had 616 members, whilst our membership at this date is 734. I take this occasion to thank many of the State delegates, who have unselfishly given considerable time in their endeavors to increase our membership.

The amount of our expenses of this year is heavier than usual, one of the reasons being that some of the items, such as rent, etc., include expenses incurred prior to the beginning of the present fiscal year, but not paid then; they also include expenses incident to the collecting, arranging and casing of the printed forms, which you have all seen on exhibition at our headquarters.

Stationery, printing and binding	$412.13
Postage stamps	188.00
Typewriting and stenography	446.00
Rent and telephone (two years)	607.54
Expenses of executive committee meeting in May last	133.81
Convention expenses (badges, programmes, etc.)	89.00
Salary of secretary	400.00
Expenses of proceedings, etc., of last convention (sent to members and paid by Secretary Branch)	606.46
Sundries	138.65
1,500 copies of convention proceedings sent to non-members	168.38
Total	$3,189.97

In explanation of the items of $168.38 for convention proceedings, I will say that it was decided last year, as an inducement to the non-member Savings banks to join the association, to send them a complete report of the proceedings of our last convention. This expense, of course, will not be incurred again, being now unnecessary, as our section is well known throughout the country.

Respectfully submitted,
Wm. Hanhart, Secretary.

On motion it was ordered that the report be accepted and placed on file.

THE PRESIDENT: It is appropriate for me to say again, as I have already said, that the vast amount of work performed by our able secretary, to which he has modestly made no reference in his formal report, is work of a kind and amount which none of us can realize except those of us who have been at work near him and in touch with him, and have witnessed his faithful and unsparing diligence and attention to business.

You will observe that on our programme there is an address on a very interesting subject, proposed bank legislation in Ohio, which was to have been read by N. Henchman Davis, President of the Central Trust and Safe Deposit Company of Cincinnati, Ohio. Although the State of Ohio has not such a busy banking law as we would like it to have, yet Mr. Davis lives in a very busy State. He has found it impossible to be with us in person, but he has sent to us a very carefullly-prepared essay on this subject, which I am sure will be listened to with great interest, as the eyes of the civilized world are largely on Ohio, a place from which our great men are very apt to come, and then after they have come from it, to stay away from it.

I will ask the secretary to be kind enough to read this essay of Mr. Davis, and I am sure he will do full justice in the reading of it.

The secretary then read the following paper:

PROPOSED BANK LEGISLATION IN OHIO.—PAPER BY NATHANIEL HENCHMAN DAVIS, PRESIDENT CENTRAL TRUST AND SAFE DEPOSIT CO., CINCINNATI.

Mr. Chairman and Gentlemen—The general condition of the laws of Ohio in relation to financial institutions which has led to the present movement in favor of an entire revision and codification of the laws relating to all classes of banks, and to the work of the committees of the Ohio Bankers' Association, the Ohio State Board of Commerce and other leading conservative representatives of the various banking interests of the State, including commercial banks, both private and corporate, Savings banks, safe deposit companies, trust companies, etc., can be very briefly stated.

You will not be interested in the details of the present situation and, therefore, it will suffice to state that the laws of Ohio relating to these institutions are in a decidedly unsatisfactory, and rather uncertain condition, which has arisen from the fact that no uniform system of laws for the creation, limitation, regulation and government of these institutions has ever, except within the past two or three years, been carefully considered or formulated. The many statutes governing these financial institutions have been enacted from time to time, through a period of many years, as occasion and special needs have arisen, or the exigencies of business, or the desires of groups of individuals, have made additional powers, or changes in the laws, seem desirable, in fact various laws, sometimes inconsistent and usually lacking in completeness, are now scattered through the volumes of the Revised Statutes of Ohio, often in the appendix, and these laws have never been brought together and separately arranged and indexed until the publication this month of the pamphlet entitled, "The Laws Relating to Banks, Banking, Savings and Loan Associations, Savings Banks, and Safe Deposit Trust Companies, in force July 1, 1905," which has just been arranged and compiled under the direction of the Ohio State Board of Commerce and the Ohio Bankers' Association, by Drausin Wulsin, Esq., of Cincinnati, counsel to the committee.

The confusion mentioned above has been intensified by some recent decision of the Supreme Court of Ohio holding that some of the laws heretofore enacted are invalid as being "special legislation"; that is, confined to cities and towns of certain grades and classes and not general in application.

The present laws do not provide for any State examination for any of these institutions, nor for any practical regulation by the State.

THE EFFORT FOR BETTER STATE REGULATION OF BANKING.

The bill which has just been prepared under the direction of the subcommittee of the joint committee of the Ohio Bankers' Association and the Ohio State Board of Commerce is entitled, "A Bill to regulate commercial banks, Savings banks, Savings societies, societies for savings, savings loan associations, safe deposit companies, trust companies, and savings and trust companies," practically all financial institutions in the State receiving money on deposit, except building associations.

You will be interested only in the salient features of this bill, and changes in existing laws, and not in details regarding the steps of organization, usual powers, etc.

The bill provides for a State Superintendent of Banks, to be appointed by the Governor, who is charged with the execution of the law in relation to all these institutions, and is provided with suitable assistants. It is provided that these institutions shall not make less than five reports of their condition, under oath, each year to the superintendent at such times as the superintendent shall require, which reports shall also be published in a newspaper, and that the superintendent, his assistant, or an examiner appointed for that purpose, shall thoroughly examine, at least once each year, every such institution now doing business in the State, or that may hereafter be organized under this law. The superintendent and his assistants are put under bond, and are bound by oath under severe penalties to keep secret all facts and information obtained in the course of such examination, except in so far as the public duty of such officers requires report upon the same, or official action taken in regard thereto.

In addition to the examination by the Superintendent of Banks it is provided that a thorough examination shall be made of each institution each year by a committee of three of its directors or stockholders who shall be appointed annually by the board of directors, and shall report the result of their examination to the board.

The provision requiring five reports each year to the Superintendent of Banks will have the effect of keeping these institutions well in line under the law, and it is also expected that the superintendent will call for these reports at the same time reports are called for from the National banks. If this is done the actual condition of finances in the State will be more accurately shown.

Although members of the committee having in charge the drafting of this new law were in favor of somewhat more radical and conservative clauses—for example, in relation to the minimum limitation of capital of certain institutions, the powers, and combinations, of some of the classes of banks created, the restriction of the use of the words "bank," "bankers," "Savings banks," "trust company," etc.—than now appear in the draft of the bill, it was thought advisable to allow rather liberal provisions, because of the many small banks, trust companies and Savings banks already organized throughout the State, and the necessary limitations to the advantageous use of their funds caused by their location in small towns, also because of the number of excellent and long-established private banks.

The draft of the bill provides that "every corporation or association" receiving money on deposit shall be subject to the examination and regulation provided for in the bill, but does not otherwise affect existing institutions. Firms and individuals are not specifically mentioned. It provides, however, that all existing institutions may, under certain simple proceedings, come under the operation and obtain the advantages offered by the new law, and its is believed that the confusion existing in the old laws, and the many advantages offered by the proposed new laws, including the higher standing, credit and stability, will induce every banking institution, private and corporate, to voluntarily come under its provisions as soon as some prejudices are overcome and the advantages are thoroughly understood and appreciated. It is also believed that the measure will be decidedly "popular" in the community at large, not only because of the confusion that has heretofore existed, but also because of the recent serious troubles and failures of banks in various parts of the State, brought about through laxity of methods, and especially because of the entire absence of any State examination or regulation. The proposed new law requires all companies (banks, etc.) incorporated thereunder to use the word "incorporated" on all letter-heads, drafts, certificates of deposits and pass-books.

PROVISIONS OF THE PROPOSED BANKING LAW.

The proposed new law permits the organization of commercial banks having a capital of not less than $25,000; of Savings banks having a capital of not less than $50,000; of safe deposit companies of not less than $25,000 and of trust companies having a capital of not less than $100,000. It also permits, under certain conditions, the combination of any, or all, of these institutions provided the capital of a combined commercial bank and safe deposit company shall not be less than $25,000; of a combined commercial bank and Savings bank not less than $50,000; of a combined Savings bank, commercial bank and safe deposit company not less than $50,000; of a combined trust company and safe deposit company not less than $100,000, and of a combined trust company and Savings bank not less than $150,000 and of a combined trust company Savings bank, commercial bank and safe deposit company not less than $150,000. Trust companies are also required to deposit $100,000 with the Treasurer of State.

The bill further provides, however, that in case of any of these combinations the funds and accounts of each department, that is, commercial, savings, trust, etc., shall be kept separate and apart from the funds of any other department of the combination.

Provision is also made for the creation of a surplus of not less than twenty per cent. of the capital in all cases.

Before any of these institutions can commence business the entire capital stock of the corporation has to be subscribed and at least fifty per cent. thereof paid in, and the remainder of the capital stock must be paid in in monthly installments of at least ten per cent. each. The approval and authorization of the Superintendent of Banks has also to be obtained.

Loans can be made, under certain conditions, up to twenty per cent. of the paid-in capital and surplus, to one individual or company, and loans upon real estate can be made up to sixty per cent. of capital stock, surplus and deposits, provided a resolution authorizing the same be adopted by a vote of two-thirds of the board of directors; such loans not to exceed sixty per cent. of the actual value of such real estate including improvements, which must be insured.

The provisions governing loans are somewhat similar regarding all classes of financial institutions mentioned in the bill, but the necessary brevity of this paper will not permit of entering into these details. Clauses provide at length for the investment of the funds of these various institutions, and Savings banks and trust companies are permitted to make certain loans and investments when the same are authorized by an affirmative vote of not less than two-thirds of the entire board of directors; for example, trust companies, in addition to the investments usually recited, are authorized to invest in certain other "stocks and bonds"—when the same are authorized by an affirmative vote of not less than two-thirds of the entire board of directors of such company—"and the promissory notes of individuals, firms or corporations, when secured by a pledge of any of the aforesaid securities"; also to invest in ground rents, provided such investment is authorized by the unanimous vote of the board of directors. Savings banks and trust companies are not permitted to invest more than twenty per cent. of the capital and surplus in one security or loan, except in providing a suitable building. Commercial banks are given more general and extensive powers relating to commercial paper, business and loans. Savings banks and trust companies are given the usual powers, and the funds held by the latter in trust shall not be liable for any general liability of the company, nor shall such funds be mingled with the investments of the capital stock or other moneys or property belonging to the company.

The provision of the National Banking Act prohibiting overcertification of checks is incorporated in the bill.

All these institutions, except trust companies, are permitted to make loans to their officers and members of their board of directors. Trust companies are prohibited, both under existing laws and in the proposed new law, from making loans to officers, directors or employees, and it is thought by members of the committee that this prohibition should also extend to the Savings banks.

In addition to the restriction upon loans and investments referred to in a general way above, each institution is required to have an executive committee to consist of at least three members of its board of directors; that that committee shall meet at least once each week and shall pass upon all loans and investments; that minutes shall be kept of the meetings of such executive committee, including records of all loans and investments, and be submitted to the board of directors for approval at each meeting of the board.

The reserves to be maintained by each of these institutions or by any combination thereof, are as follows: "at least twenty per cent. of their total demand deposits, and fifteen per cent. of the total of their time deposits. At least five per cent. of such demand and time deposit shall be kept on hand in cash in the vaults of such banks; the balance of such reserve which may not be kept on hand in cash, shall be kept subject to demand in National banks of the United States, or any banks, Saving banks, trust companies, or other banking institutions in States where such institutions are subject to State supervision and to examination by a Superintendent of Banks or bank examiners provided for in such States."

This is a very brief summary of a draft of a very long bill, which has required an amount of detail work, and an expenditure of time, that cannot be realized by any one who has not actively engaged in a similar task. Almost all details have here been omitted, and it is more than possible that many matters of special interest have not been mentioned regarding which some of you may desire information. A copy of the bill is here and it will be a pleasure to answer any questions.

The committee having the drafting of this bill in charge fully realize the magnitude and importance of the work undertaken, and the imperfections that, doubtless, exist in the measure they have prepared; but it is the sincere desire of every member of the committee to have the State of Ohio enact laws governing all its financial institutions that will place these institutions, and their credit, and the financial standing of the State as represented by them, upon the very highest plane.

The committee recognize, however, that many prejudices have to be overcome, and though agreed that in some respects the bill could be improved from a conservative point of view, believe that the enactment of the bill into law would be a very long step in the right direction—an improvement of almost incalculable value upon the existing conditions, and will, by accustoming the financial institutions of the State to supervision, examination and regulation, lead to further improvement in the law, while a more stringent measure might encounter serious opposition.

The draft of the bill as now prepared has been approved unanimously by the sub-committee of the Ohio Bankers' Association and the State Board of Commerce, and will be presented, for approval, at the meeting of the Ohio Bankers' Association to be held on September 27. When it has received the approval of the Ohio Bankers' Association, copies of the bill will be forwarded to every member of the Ohio State Board of Commerce, which is thoroughly representative of the business interests of Ohio, having a very large membership extending into every county in the State. So it is expected that when the final draft of the bill is presented to the Legislature for enactment into law it will have received the approval of not only the banking interests, but also of, practically, the entire business community.

THE PRESIDENT: Gentlemen, you have listened to this very interesting paper, which will take the usual course and be printed in our transactions. A question has occurred to me which perhaps our secretary can answer, and which may be of interest to others. That is as to what will become of the few non-capitalized Savings institutions now existing in the State of Ohio, in the event of the passage of this proposed legislation?

THE SECRETARY: There are, as I understand it, four Savings banks in Ohio that are mutuals, that were organized long previous to the present legislation. As I understand it they will not be interfered with, with the exception that five times a year, like all financial institutions, they will have to make reports to the Superintendent of Banks. They are not interfered with otherwise. Their investment and organization will remain the same as at present.

THE PRESIDENT: But they will come under the examination of the Bank Superintendent?

THE SECRETARY: Yes.

Thereupon the section adjourned until 2 o'clock p. m.

AFTERNOON SESSION.

THE PRESIDENT: At the time of the adjournment we were considering the address of Mr. N. Henchman Davis, of Ohio, on the subject of proposed legislation in the State. Is it proposed that any action be taken, or is any debate or interrogation desired on that subject before passing to the next order of business? We wish everything to be as fully discussed as possible, but if no one has anything to say we will pass on. The essay is a very exhaustive one, and doubtless has placed the matter in as good a shape as it can be at present.

The next order of business is the report of our special committee on accounts opened in two names. That committee consists of Mr. B. W. Johnson, of Albany; Mr. J. H. Johnson, of Detroit, and Mr. W. W. Cloud, of Baltimore. The chairman of that committee being absent, I will call upon Mr. J. H. Johnson, of Detroit, to read the report.

MR. JOHNSON: Mr. President, the committee having made a complete report, and copies of it having been furnished to all the members of the section, I would suggest that the reading of the report be waived.

THE PRESIDENT: And that it be accepted as printed and laid before us.

MR. JOHNSON: Yes.

THE PRESIDENT: You have heard the motion, gentlemen? Is it seconded.

The motion was seconded, and it was ordered that the report be accepted as printed.

ACCOUNTS IN TWO NAMES—REPORT BY THE COMMITTEE APPOINTED FOR THE PURPOSE.

Report of committee appointed in pursuance of the following resolution adopted at the convention of the Savings Bank Section of the American Bankers' Association in New York, September 13, 1904:

"Resolved, That the chairman appoint a committee of three to consider the question of a form of uniform law regulating the accounts of depositors opened in two names, and report at the next meeting."

The committee will preface their report with the following communication from Mr. Thomas B. Paton, honorary counsel to the section, received in reply to a request that, for their information, he should draw up a tentative form of statute in regard to two-name accounts:

"New York, April 6, 1905.

Mr. William Hanhart, Secretary Committee on 'Two-name' Accounts,
Savings Bank Section,
American Bankers' Association, New York, N. Y.

My Dear Sir—In pursuance of your request, following the action of the convention of the Savings Bank Section last September, that I draw up a tentative form of statute to apply to the joint and trust accounts and which could be adopted in all the States of the Union, for submission to the committee on 'two-name' accounts, would say:

I have given the subject due consideration and have prepared two forms of statutes, which I send you herewith.

The object of the proposed act conferring upon a depositor the power to nominate another to whom the balance, or any portion thereof, due by the bank at the time of his death, shall belong and be payable, is to enable a depositor, while retaining full ownership and control during his life, to prearrange a disposition of the same when he dies. It has the same effect as if he made a will bequeathing the amount to the nominee or nominees, and obviates the preliminary trouble and expense of will making and the subsequent probate proceedings. In the case of a multitude of small depositors their Savings bank accounts are substantially their all, and by legalizing this method of testamentary disposition it confers a real benefit upon a numerous body of depositors who otherwise would not take the precaution of making a will and who often, by attempting to make a testamentary disposition by some form of trust or joint account, have their intention frustrated by some legal ruling that what was plainly their own property, owned and controlled by them during their life, cannot be disposed of at their death in such manner.

Concerning the other act as to joint accounts, or accounts which are put in two names and often made payable to either or the survivor, it does not seem advisable that legislation should attempt to regulate titles during lifetime of the parties by providing that ownership vests in the two parties jointly. Sometimes when these accounts are created both parties have property rights therein; more often one owns the account and puts it in a joint form that the other, generally a relative in whom he has confidence, may have the power also to withdraw during his lifetime should occasion arise, and shall take by survivorship in case he dies first. In such cases the original owner practically retains control. Legislation which would give the other party property rights in the account, when one was intended during the lifetime of the original owner, would in many cases frustrate the design of such accounts and be unjust. The limit to which legislation may appropriately go, it would seem, would be to provide for or regulate payment by the bank of such accounts during the lifetime of the parties and where they are made payable to the survivor protect the bank in paying the latter.

The form of act submitted regulates payments of these accounts during lifetime of the parties and further, where there is a 'survivor' provision, provides that upon the death of one the money shall be payable to the survivor. This will protect the bank in making payment to a survivor as against representatives of a decedent who may claim he never parted with ownership during life. It is doubtful whether legislation should go further and ordain that the term "survivor" should carry the property to the latter. Doubtless it is the intention in the large majority of savings accounts payable to A or B or the survivor that, upon the death of one, the survivor shall become sole owner; but there are cases where such is not the intent. The act as submitted is tentative and designed to bring up this question for full consideration. If thought best that the term 'survivor' should at death have property-conveying force, the act could be changed to read 'Upon the death of one the moneys due upon such account shall belong and be payable to the survivor.'

The proposed legislation has been drafted in two separate acts, regulating respectively accounts having nominees and joint accounts. If thought desirable both might be incorporated in a single act. They are submitted for consideration of the committee. Very truly yours,

(Signed) Thomas B. Paton."

"An act to confer upon depositors in Savings banks power to nominate the person or persons to whom any sum due by the bank at the death of depositors shall belong and be payable.

Be it enacted, etc.:

1. Any depositor in a Savings bank may by writing, executed as provided in this act, delivered at or sent to the office of the bank, nominate a person or persons to whom any moneys due by the bank to such depositor at his or her decease or any portion thereof, shall belong and be payable; and may from time to time revoke or vary such nomination by writing similarly executed and delivered.

2. Such nomination shall be subscribed by the depositor in the presence of a witness, who must be some person other than the nominee, but may be an officer or employee of the bank; and such witness must also sign in that capacity and add his or her address to the signature.

3. It shall be the duty of the bank to which a nomination, as above, is delivered, to preserve the same and make such entries on its books or records as are requisite to clearly evidence the fact of such nomination. And upon delivery to it of a revocation of such nomination, or of a new nomination in change or variance of a former nomination, the bank shall preserve the same and make entries or records accordingly.

4. Any such nomination, or any revocation thereof, shall take effect from the time of its delivery to the bank. The effect of an unrevoked nomination shall be that upon the death of the depositor making it the moneys due by the bank to such depositor, or such amount thereof as is specified in the nomination, or where the entire amount due by the bank is less than the amount stated in the nomination, then such entire amount shall immediately be and become the property of the nominee or nominees therein specified, and payable by the bank to such nominee or nominees upon satisfactory proof of death and evidence of identification. But money acquired by nomination shall be subject, in the hands of the nominee, to the lawful claims of creditors of the depositor, and to inheritance tax, where the same is imposed by the law of the State.

5. A nomination is revoked by the following acts or events:

(1) Delivery of revocations as above provided;

(2) Delivery of a new nomination in change or variance of a former nomination;

(3) By the death of the nominee in the lifetime of the depositor, save when the nominee is the child or other issue of the depositor, and dies leaving issue, and any such issue is living at the death of the depositor. In such case the nomination takes effect as if the death of the nominee had taken place immediately after that of the depositor, unless a contrary intention appears by the nomination.

The making of a will by, or subsequent marriage of, a depositor does not revoke a nomination; nor is a nomination revocable in any other manner than as above prescribed.

6. The following are appropriate forms of nomination and of revocation, but these forms are not exclusive of any other forms which substantially comply with the provisions of this act:

Form of Nomination.

(Address of bank.)

I hereby nominate..............................of.....................to receive at my decease the whole (or any designated amount) of the amount then due me by (name of bank) upon deposit No....... (or any other sufficient description of the account or accounts).

Dated.......................... (Signature of depositor.)

In presence of..........................

(Signature and address of witness.)

Form of Revocation of Nomination.

(Address of bank.)

I hereby revoke the above nomination.

(Dated, signed and witnessed in same manner as above.)

Form of Revocation on Separate Sheet.

(Address of bank.)

I hereby revoke nomination executed by me on (insert date and description of nomination) which was delivered to (name of bank) on

(Dated, signed and witnessed in same manner as above.)

7. Where a nomination or revocation is executed in any other State or country the witness must be an officer qualified to take the acknowledgment or proof of a deed of real property situated in this State.

8. Wherever a depositor making a nomination cannot write, the witness must sign the following certificate:

'I certify that the foregoing nomination has, before being made by the depositor, been first audibly, clearly and distinctly read over to him (or her) in my presence and hearing, when the depositor appeared perfectly to understand the same and made his (or her) mark thereto in my presence.'

(Signature and address of witness.)

This act shall take effect.........................."

"An act concerning the payment of joint accounts in Savings banks.

Be it enacted:

When an account in a Savings bank is opened in the names of two persons jointly, or an existing account in a single name is changed to the names of two persons jointly, without in terms being made payable to either, such account shall be paid only upon the joint order of such persons. If to such account is added the words 'or survivor,' upon the death of one, the moneys due upon such account shall be payable to the survivor.

When an account is opened in a Savings bank to the credit of two persons, or to an existing account in a single name is added the name of another person, and the account is, by its terms, made payable to either or the survivor, the bank may, during the life of both persons, pay either, and upon the death of one the moneys due upon such account shall be payable to the survivor."

Joint accounts in Savings banks are usually opened for the convenience of customers who desire that during the lifetime of two depositors either one may draw the funds on presentation of the pass book, and that at the death of either the balance standing to the credit of the account shall be paid to or be subject to the order of the survivor without the cost and formalities of probating a will, or applying for letters of administration. The effect of these accounts is that the survivor takes, and that in the meantime either of the two parties may withdraw part or the whole of the amount. The real ownership of the money when first deposited, or of any subsequent deposit, is never inquired about or questioned by the bank; the property is held in joint tenancy, the survivor taking.

Some Savings banks accept these accounts without asking any questions and require no declaration or agreement, it being understood with the depositors that the bank will pay either of them on presentation of the book.

The majority of Savings banks, however, require the depositors to sign some form of declaration reciting that the account is held for both of them and authorizing the bank to pay either of them or the survivor of them. This declaration, when signed by both depositors on opening the account, is called a simultaneous declaration. It varies considerably in form, but practically all have the above matter embodied in them.

We have carefully considered the proposed statute suggested by Mr. Paton as a means to effect the purpose intended by these accounts.

At first glance it certainly would appear to be very desirable to have such a law provide for a legal form to be complied with in opening an account in two names or in adding a name to an existing account, and then having that action on the part of the depositor or depositors decisive and not capable of review by the courts, except of course on the legal grounds upon which any legal instrument can be attacked. We must, however, consider this question in all its bearings; it is really twofold.

1. Is such general legislation practicable and is it capable of adoption in all the States?

2. Admitting such legislation to be feasible, would it be really desirable and would it accomplish the desired results?

Answering the first question, this committee entertain strong doubts as to the practicability of obtaining general legislation on the subject that could be passed and enforced in all the States; for any legislation to attempt to regulate such property rights, which of their nature are very diverse and complicated, would, we believe, be hardly possible, and we also fear that in many instances, such legislation would defeat the intent of these accounts as they are now opened; moreover, the judicial decisions in the several States regarding these accounts are so very conflicting that even if a general statute could be devised and adopted it would, after all, in many instances, be reviewed by the courts according to the special conditions existing in the different cases, and this would often defeat their purpose.

In addition we would say that the conditions are so different in the several States, both with regard to existing laws and to the character of the institutions, that in our judgment no satisfactory statute of this character would have any prospect of passage; aside from that, a very large expense would be involved for which the return, even if the efforts were successful, would be entirely disproportionate.

We have now to consider whether such legislation would be desirable at all, and we have no hesitation in answering this question in the negative for the following reasons:

It must first be admitted that the actual property rights involved in the joint accounts of Savings banks are practically far beyond the knowledge of the banks. We take it that a bank, willing as it is to accommodate its depositors by opening joint accounts, must, as a paramount condition, consider its own safety, as well as protect its customers in making payments. If this safety and protection can be secured, not by general legislation, which will at all times be reviewable by the courts and give endless trouble both to the depositors and to the bank, but by the adoption of some standard form or declaration to be signed by the depositors when opening the account or by the original depositor when adding a name to his account, the object will be realized in a greater measure and in more satisfactory way. It appears to us to be possible to devise such forms of declaration as would make the matter plain to the depositors, secure the bank in paying either or the survivor of them, and at the same time not attempt the impossible task of regulating present and ultimate property rights of which the bank really knows nothing and desires to know nothing.

To show how difficult this matter is becoming we would mention that an amended Inheritance or Transfer Tax Law, lately passed by the New York Legislature, compels the banks, under a penalty of $1000, to give the State Comptroller ten days' notice of intention to pay or transfer to the legal representatives of the decedent, or to the survivor, any deposits standing in the joint names of a decedent and one or more persons. This dangerous statute disregards the fact that a Savings bank in most cases has no means of knowing whether one of the parties named in a joint account is dead or not, but, according to the law, the penalty could be enforced just the same.

Under this law, although as a matter of fact in at least seventy-five per cent. of all cases arising there is no contention that any tax could really be assessed, the bank must notify in each case or suffer the penalty. It is incumbent upon the bank to know, whenever an attempt is made to withdraw a two-name account, whether both the persons named are still living, which it can be readily seen would be an absolute impossibility in any bank having a large number of depositors scattered all over the country. If this law is to be strictly enforced, and its repeal cannot be secured, the ultimate result will be the abandonment of two-name accounts in New York State Savings banks. These accounts were used in one form or another long before there was any thought of a succession tax and were intended to enable the account to continue and be withdrawn without any formality in the event of the death of one of the persons named in the account, and as incident to this form of account, though not its only intent, the cumbersome and expensive proceedings of administration were avoided.

The committee believe that two-name accounts meet a great need, particularly with depositors of limited means, and should be encouraged whenever they are not made impossible by adverse legislation such as above mentioned.

After due consideration and deliberation this committee reports that they do not consider that general legislation regulating joint accounts in Savings banks is either practicable or desirable, and believe that the ends desired can be more easily and effectually accomplished by the adoption of suitable forms for all two-name accounts, and suitable blanks to be used by Savings banks. Owing to the differences in the practice of Savings banks in the several States, and also the varying decisions of the courts, the committee believes it unwise at the present time to suggest any uniform form for use by all the Savings banks.

In conclusion this committee beg to state that they do not consider they have a right to go behind the strict letter of the resolution in pursuance of which they were appointed, and therefore they have not considered the matter of trust accounts referred to in Mr. Paton's communication, especially as their inclusion would tend greatly to complicate a matter already sufficiently confused.

Respectfully submitted,

Benj. W. Johnson, Chairman; J. H. Johnson, W. W. Cloud, Committee.

THE PRESIDENT: A number of gentlemen desire to be heard on this question, and it seems appropriate that the discussion should be opened by the counsel of the executive committee, who has studied this subject more thoroughly than anyone else. I should like to hear from Mr. Paton, of New York.

MR. PATON: Mr. President and Members—Gibbon, in his admirable history of the decline and fall of the Roman Empire, tells us that after five centuries the number and weight of the laws became so numerous that the proposer of any new law stood among the people with a cord around his neck, and if the law was rejected, he was immediately strangled. Now, gentlemen, having been the counsel who drafted the proposed laws which are rejected, so to speak by the committee, I am very glad indeed that we do not live under any such conditions.

The origin of this matter of the regulation of two-name accounts began in a discussion of the last meeting. The proceedings of that meeting are of record, and there is no necessity of going into detail as to them. It is sufficient to say that a committee was appointed with the request that they consider the framing of a uniform law to regulate the subject of two-name accounts. That committee honored me with the request that I draft such laws. I drafted two laws, one covering trust accounts, the idea being a law which would supplant the attempts of people to make a will by putting money in trust for another, by a form of declaration or nomination, rather. It is fully set forth in this report, and you have all read it doubtless. The other law which I drafted was a proposed law to protect the banks in paying joint accounts to the survivors. The committee have absolutely excluded from consideration the trust law as being beyond their province, and have confined their report to the law regulating joint accounts. In their report they reached the conclusion that it regulates property rights. It was not intended to do any such thing, and I do not think a reading of the law will so indicate. It simply protects the banks in paying to the survivor. The committee in their report say that legislation regulating joint accounts is neither practicable nor desirable, and they recommend a standard form of declaration, uniform terms to be adopted by the banks for the regulation of these accounts. Now, we all know that joint accounts are in great variety of forms. It will not do to say that they are numberless, for even the hairs of our heads are all numbered, and I have heard some gentlemen say that they wish they had a few of the back numbers.

But our industrious secretary has collected a large number of these forms which have been devised doubtless by attorneys for the banks in different States, in an endeavor to conform to conditions as developed by decisions of the courts in those States. We all know that the decisions governing these joint accounts are conflicting in the different States, and that they will continue to conflict.

Now, the problem which this report of the committee presents to us to-day is this: You evidently are dissatisfied with existing conditions. You want some method of regulation. The question is, Will you adopt legislation protecting the banks in paying joint accounts to the survivors, or will you leave things as they are? It seems to me that it will be impracticable to adopt any standard form of joint account as recommended by the committee, with all due respect to that committee, unless it is backed up by legislation. Take any form that may be submitted, Will the banks in that State adopt it, knowing that the courts in that State may differ in their construction? It seems not. It seems as if the only practical way to regulate that subject at all is to adopt a statute which will protect the bank in paying to the survivor. Of course, this is simply my individual opinion. You all may differ with me. This proposed statute will protect the bank, so that it will not be put in the dilemma, as it often is, of interceding between the parties or paying when it is unsafe to do so.

Why is not such a statute practicable? We recollect that banks, with reference to a form of account in trust, felt unsafe in paying to the beneficiary on the death of the trustee, and statutes have been enacted in at least a dozen States permitting the trustee, in the absence of notice of any other conditions of the trust, to pay to the beneficiary. That statute does not regulate the title, but it protects the banks. Now, why cannot the same thing be done, and why is it not the best thing? It is for you to discuss the enactment of such a statute.

Now, the proposed Ohio legislation that was made the subject of an address this morning, in section 33, contains just such a provision. It is brief and I will read it.

"Whenever a joint deposit is made to the account of two or more persons, with an agreement that such deposit is to be subject to the check of either party, and that it shall continue so notwithstanding the death of anyone or more of the persons, making such joint deposit, such account shall continue to be payable on the check of the survivor, and death of anyone or more of the persons making such joint account shall not revoke the power of the survivor to check on such account; and no recovery shall be had against such company for amounts so paid on the checks of such survivors or survivor and charged to such account."

That is simply in another form of language providing as is provided in this proposed Act.

When an account is opened in the Savings banks by two persons, or to an existing account in a single name is added the name of another person, and the account is by terms made payable to either or the survivor, the bank may, during the life of both persons, pay to either, and upon the death of one the moneys due upon such account shall be payable to the survivor.

I do not understand that the words "shall be payable" regulate any property rights. If there is any question about it change them, and let it read "may be paid to the survivor." That is as far as legislation should go, and it seems to me that it is much the better and wiser and simpler and more practicable way of regulating the subject of joint accounts than to adopt any standard form which will not be adopted in all the States in view of the conflicting constructions which the courts in the future will put upon it. These are my views with reference to joint accounts, and the other subject not being within the province of the committee, according to its report, I will not assume to discuss that now.

THE PRESIDENT: Gentlemen, I wish to call attention to what seems to me to be one misapprehension on the part of the committee. Only one member of the committee was present at the meeting of last year, and he was not the chairman of the committee. It was distinctly understood then that two-name accounts included trust accounts, because the trust account of necessity has at least two names on it, one the trustee, and the other the *cestui que* trust. I raised that question myself, not thinking at first that the expression "two-name" was susceptible of that interpretation, but immediately it was definitely stated that two-name accounts were intended to include the trust accounts. Therefore I should rule that the discussion on trust accounts is perfectly proper under this report, although the committee has been under a misapprehension in believing that this was not intended to be part of their sphere. I shall be glad to hear any other remarks on the general subject.

Mr. JOHNSON, of Detroit: This is a rather difficult subject to take up, and I have found that the more I attempted to learn the less I know.

I think you will have to divide the subject, with all due regard to the President. I think we shall have to keep the subject of the joint accounts separate from the trust accounts, because I think the legal propositions are different. I am not an attorney, but it occurs to me that they are. The conflicting laws of the various States, and the different conditions, make it extremely difficult to pass any law that could be used generally, as I have been told by several prominent attorneys, and they told me, too, that a simple form of declaration in the making of the deposits would cover the banks fully. If you are careful to avoid any reference or condition which indicates that either party draws by virtue of a power of attorney, then the bank is fully protected by this simple form of declaration. I have looked over the various forms of contracts which are signed and executed and made a part of the deposits, but unfortunately I have not had an opportunity to consult with our chairman, and have consulted for only a few moments with the other members of our committee. It is only my individual opinion, that the simplest and best form I have found in the various two dozen or more that the secretary has selected for us, is the simple declaration "payable to both or either, or the survivor," and stop right there.

Now, I have here the legal opinion of our attorneys on the subject, and they rule against Mr. Paton and his proposed draft of a law. I also have the opinion of a very prominent firm of attorneys in our city, holding that the law is not necessary, but that such a simple clause as I have suggested, will fully protect the banks. If you have the time later I shall be glad to read those letters to you, but I do not want to occupy your time unless you are so disposed.

Mr. Rother: Mr. Chairman, I believe this question of two-name accounts has been a trouble to the Savings banks ever since they were in existence, and I do not believe more trouble has been caused in any State than in Maryland by this question. On last Saturday a case came to my notice where a gentleman deposited $3,000 in his own name and the name of a lady, subject to the order of either and the survivor. We have any number of decisions in the State of Maryland that if the bank knows of the death of either of the parties it pays the money at its peril. In this case to which I refer, the bank book was given to the lady after the deposit was made. After the death of the gentleman she went to the bank and withdrew the account and deposited it in her own name. The attorney for the heirs, learning of the deposit, has entered suit against the administrator. I have consulted with three different attorneys and each one of them tells me that the heirs will get the money.

This shows that the proposition made by Mr. Johnson does not cover the case, because the intention of the depositor is that the money shall go to the survivor and not to the heirs.

Now, ten years ago, in order to bridge over this difficulty, our attorneys in Baltimore of all the Savings banks had a consultation on this point, and they devised a form which has been adopted, as far as I know, by all except two of the Savings banks, and which has stood the test of the courts. That is, creating a trust: John Jones, in trust for himself and Mary Jones, subject to the order of either, the balance at the death of either to belong to the survivor. That is a form that I understand will hold in Maryland. Why should not that also hold in other States? The decision of the courts in the State of Maryland have held unanimously that the placing of additional names in a Savings bank book is not a gift, because it can be revoked. It is a gift with a string to it, and in the eyes of the law no gift at all. That is why at the death of either of the parties the money goes to the estate; whereas, by creating a trust, in the manner I have suggested, it is out of the reach of the administrator. That is the practice in Maryland. I believe that would apply to other States. Of course, not being a lawyer, I cannot tell certainly; but it does hold good in Maryland.

Now, coming back to Mr. Paton's proposition, by the Act that he proposes, if it were adopted by the Legislatures of our various States, I see no reason why that should not control, certainly to the satisfaction of the banks, because it would give the banks a complete discharge. According to my opinion it would also comply with the desires of the depositors, because that is what we want. We know from experience that the desire of the depositor is to have his money go to the other depositor named in the bank book, and to avoid the expense and trouble of proceedings in the orphan's court. Besides that it may be a special fund which had been intended for a certain party, as was the fact in the case that came to my notice last Saturday. This woman had boarded the old gentleman for five or six years at about ten dollars a month, and he told her, "I have $3,000 in the Savings bank, and that is deposited in your name with the provision that when I die that money will belong to you." Now, here is a case where under ordinary circumstances we would recognize the fact that that money belonged to that woman, but under the form as proposed here by Mr. Johnson it would go to the estate. It appears to me that the trust account is the only one to overcome the difficulty, if that is good in other States.

The President: I would like to have the gentleman who has just spoken give us the literal words of that declaration, as it is very important that we should know exactly the words used.

Mr. Rother: I can give the exact wording of it: "John Jones, in trust for himself and Mary Jones, joint owners, subject to the order of either, the balance at the death of either to belong to the survivor."

Mr. NIEMEYER: I would like to ask the gentleman a question in the case. Is the administrator in possession of the money?

Mr. ROTHER: The bank has the money.

Mr. NIEMEYER: The bank has not paid it out yet?

Mr. ROTHER: The money is in the bank.

Mr. NIEMEYER: I thought the bank had paid it out.

Mr. ROTHER: No, sir. It was transferred to another account, but it was still in the bank. If the bank had paid it out, there would have been no redress against the bank in Maryland, but as the money was left with the bank in the name of the devisee, it can be traced.

Mr. HANHART: Mr. President, with your kind permission, I will say a few words in relation to accounts opened in Savings banks by one person in trust for another. The committee on two-name accounts in their reports have confined themselves to the question of joint accounts, and have come to the conclusion that, in their opinion, general legislation for such accounts is neither practicable nor desirable, in which opinion I heartily join; although I believe that a general form of declaration to be signed by both parties at the time of opening these accounts could be devised, and successfully adopted by Savings banks in all the States of the Union; but for the present I will confine my remarks to the question of trust accounts as considered in Mr. Paton's communication.

It is with considerable diffidence that I venture to differ with the honorable counsel of this section, and before stating my views I will say that I take off my hat to Lawyer Paton, than whom no better man exists, to clearly and understandingly state the different points relating to any legal question affecting banks. He is an honor to our section and my very good friend.

Mr. ROTHER: If our secretary will permit me to interrupt him, I wish to say that this declaration was made in one instance, and signed by the depositor, and yet the courts decided that it did not hold good. The only way in which it could hold good would be if it had two witnesses, taking the place of a will, and then it would have to go through the orphan's court. A declaration such as you speak of, signed by the depositor, stating, "I desire that at my death this money be paid to Mary Jones," that statement being signed by him, the court said that notwithstanding that, it belonged to the estate.

Mr. HANHART: I am trying to cover this point, if you will have patience with me for just a few moments. Of course, my views are from a banker's standpoint. I am no lawyer. I am only a layman.

In stating my views I desire to say, first, that they are altogether from the banker's standpoint, as I am no lawyer. I am, of course, quite willing to take Mr. Paton's statement of the law itself; but after all, I think that being in business we should do business in a businesslike way, with the sole view of furthering and increasing this business, not forgetting that we are dealing with depositors many of whom are uneducated. We must endeavor to make our transactions with them as plain and easy as is consistent with safety.

The statute proposed by Mr. Paton is very thorough, and it seems to cover the ground entirely; but my first objection to it is that I doubt if such a statute could be universally adopted by the Legislatures of the several States, without being amended here and there, and it would thus lose much of its usefulness. In my opinion it is too particular and too minute.

Apart from this general objection, there are several others that strike me very forcibly. The first and the greatest is that it attempts to make people nominate their beneficiaries by a specified instrument in writing, instead of merely opening an account in the old-fashioned way which for years has been used by hundreds and thousands of depositors in the East, and which I understand is also generally used in the West; and that is, for a depositor when depositing his or her money, to state that it is in trust for a certain beneficiary.

This proposal of nomination would also complicate matters materially, in so far that not only would a nomination in each case have to be signed and witnessed according to a given form, but when made outside of the State it would have to be certified by a person authorized to take acknowledgments relating to real estate. Many deposits are nowadays received by mail, and should the depositor reside without the State it would be an additional expense to him, when opening the account and also whenever he would change his beneficiary.

This proposed, so-called, nomination is copied from the English custom, where it worked very well, but the conditions are very different as between England and the United States. In England, the Government is supreme, and having once adopted this system of nomination it could enforce it without trouble. In this country, I fear that these nominations would frequently be set aside by the courts as clashing with the statute of wills; aside from this consideration why, may I ask, is it necessary to adopt this English system of nomination When a woman deposits $100, stating that she would like to have her son Johnnie's name added to the account, so that at her death it would go to him, why is this not sufficient, or could it not be made sufficient by a short statute legalizing this trust, declaring the account to be a tentative trust, to become legal and valid only at her death?

Similar legislation exists in several States of the Union, amongst others my own State of New York, where the statute permits payment of such accounts in Savings banks to the beneficiary at the death of the trustee. An objection to this, however, seems to be that the statute is merely permissive, and whilst it safeguards the bank in making such payment, it does not declare that the balance on hand at the death of the trustee belongs to the named beneficiary; it merely permits payment to him, but does not settle the ownership.

Taking it altogether, I must say that I am not in favor of such a radical change as the one proposed, and consider that a short form of statute following along the lines that we have always been used to, and merely legalizing this matter, would be more satisfactory to the bank as well as to the depositor.

Savings banks are recognized as among the most conservative forces in our financial system, and should be loath to introduce new systems as long as the old ones are fairly satisfactory, or could be made so by a short enactment.

I now beg leave to offer you the following form of statute, based on a recent decision of the Court of Appeals of the State of New York, and which statute I believe could be adopted in every State of the Union:

"A deposit in a Savings bank by one person of his own money, in his own name, as trustee for another, is a tentative trust only, revocable at will; at the death of the depositor before the beneficiary and without revocation, an absolute trust is then created as to the balance on hand, which shall immediately become the property of the beneficiary, and payable to him by the bank."

Being only a layman, I quite realize that the phraseology of this proposed statute may be considerably improved, and therefore I merely offer it to this convention as a suggestion of what would, I think, thoroughly cover the ground relating to trust accounts, legalize the whole matter, and at the same time make no change whatever in the usual methods of handling these accounts. It would merely confirm what is the general use, and make it plainer, safer, and legal.

A Member: How about the property rights of creditors, under that proposed statute?

Mr. Hanhart: This proposed legislation would put the property rights of the creditor out of the question. It would make it a tentative trust, becoming legal at the death of the trustee, and creditors would have no interest in it. They may have an interest in it until the trustee dies, but at his death it turns the account into a legal and valid trust.

Mr. Rother: Mr. President, is not that an entirely and distinct thing from the proposition of Mr. Paton? Mr. Paton's proposition for an enactment covered accounts that had not been made trust accounts, while Mr. Hanhart's proposition covers accounts that have been made trust accounts. I believe if we want to cover the ground it would be necessary to recommend that both forms of account be recommended to the section for consideration. I would like to have the views of Mr. Paton on that.

Mr. Paton: Mr. Chairman, I beg pardon for appearing twice, but in my former remarks I simply confined myself to joint accounts, as that was the only subject taken up by the committee. In drawing these two forms of laws, one the nomination law, which Mr. Hanhart confines himself to exclusively in his paper, and the other the joint account law, I had in mind the regulation of the two subjects. In the trust law, or nomination law, my object was to make a will to regulate title. In the joint account law my object was simply to protect the bank.

Now, we all know that the numerous forms of deposit, A in trust for B, have been construed differently in the different States. The decisions to which Mr. Hanhart refers, settle the law in the State of New York, and if that law was universal in every State, we would have no further trouble. Under that judicial law in New York you can make a will by putting an account in trust for another. The Court of Appeals declares that it is a tentative trust. It is revocable at will. It is a will or it is not a will; you have it or you do not have it until you die, and then what is left goes absolutely to the beneficiary. That is nothing more nor less than judicial legislation, and if the courts of the other States were to adopt the same view the matter would be regulated; but no later than last July the Court of Chancery of New Jersey had the same kind of a case before it, of a deposit by one person in trust for another, and nothing appearing as to the intention of the depositor. The depositor died and the contest before the court was between the beneficiary and the estate of the depositor. Under the decision of the Court of Appeals of New York, the beneficiary would have been entitled to that. The New Jersey Court of Chancery in a voluminous decision, criticised the Court of Appeals of New York and declared it to be judicial legislation, holding that it is against all established legal principle, that such matter is for the Legislature and not for the courts, and that is the law in New Jersey, that the money under those circumstances belongs to the estate. Now, see the conflict of authority. In New Jersey in order to effectuate the intention of the depositor it is necessary to make a will; because under the law of wills, if property is to go in a different channel from what the law provides on the death of a person, it must be according to the law of wills, with witnesses and all the formalities connected with the making of a will, including the probating of the will.

Now, it is universally recognized that it is desirable, in the interest of the small army of Savings bank depositors, to simplify that matter in the case of small accounts. The amounts might be limited. Therefore it would seem that legislation in this direction is desirable. The courts in their opinions admit that. The question is what form of legislation shall we have. I looked at the English legislation, and saw that there they have a system of nomination by which a person desiring to own their money in the Savings bank as long as they live, but desiring it to go to another specified person upon their death, could by writing in several forms say, "I nominate so-and-so to take the whole or any part of the amount due me by the bank at my decease." That would be in reality a will. The form which our honorable secretary suggests is to enact a statute in conformity with the decision of the New York Court of Appeals, to the effect that when a deposit is made in trust for another, and no other declaration is made, it is a tentative trust, revocable at will, and at the death the balance remaining shall go to the beneficiary. Now, that will be very nice and very simple. Such a form of legislation would cover accounts not intended to be made wills. You know better than I do whether there are not many accounts put in trust for another, where there is no intention of making a will, where there is no intention of the money going to the beneficiary, but for convenience, to evade some rule of the bank, or for some other purpose, where the depositor expects the money will go to his heirs on his decease. Now, such a form of statute as that would confer the title upon the beneficiary contrary to the intention of the depositor, and in reality is not a trust at all. When a man puts money in trust for another, but intending to have it as long as he lives, and to take it out and use it if he likes, it is not a trust. A revocable trust is no trust at all. He does not hold the title in trust, but holds it for himself. It is really the making of a will, and it seems to me that the transaction which conforms most nearly to the actual intention is this one of nomination. That is the way it occurs to me. Others may think differently.

Now, you may punch a lot of holes in this statute. I am not sure myself but what I could improve it. It was drawn just tentatively, to be brought up for discussion. I refer to this nomination statute. It may well be that it ought to be limited in amount. There have been suggestions made that it does not sufficiently provide for the claims of creditors of the deceased, that the money might be paid over to the nominee and the nominee might spend it before the creditor knew that his debtor had died. Well, is not that done now by the trust accounts in New York? Where does the creditor come in in that case? A makes a deposit in trust for B. A dies and B gets the money. It is the same thing. Of course in a regular form of will, the probating of the will is notice to the creditors, and they are protected, but it is otherwise with these trust accounts in New York at the present time under this decision of the Court of Appeals, where the beneficiary gets the money without any such formality or without any such provision for creditors. Very often in a joint account where money goes to the survivor, the survivor gets it under the decisions where it appears that the intention was to give him the money, and it was given during life, and that joint account was created. This nomination statute, as I say, may be subject to criticism, and it may be improved, but it strikes me that the general principle is the right one with reference to the trust accounts.

Now, with reference to the joint accounts, I think that subject has been pretty nearly all covered by what I said before. The gentleman from Baltimore (Mr. Rother) shows us very conclusively why the form of declaration, payable to A or B, or the survivor, would not do for a standard form of declaration for this association. I recall that the Supreme Court of Rhode Island recently had a case where A gave the bank book to B before he died, and the court held that the survivor took the money. There was another case before the same court where A never gave the book to B and B knew nothing about it, and in that case the survivor did not get the money, but it went to the heirs of the estate.

In every State you will find the courts so conflicting in their views as to the effect of the account of A for B or the survivor, or any similar form of account. For that reason it seems to me that some simple form of statute, not regulating property rights, but protecting the bank in paying to the survivor, would cover the case, and the statute itself would make one uniform form.

THE PRESIDENT: Before Mr. Paton takes his seat I should like to have him enlighten us upon one point in the project of Mr. Hanhart. In his draft of a proposed law, as I remember it, the expression is used "a deposit in a Savings bank by one person of his own money." Now, I should like to know whether in your opinion that is a dangerous phrase to introduce, and upon whom the burden of proof would rest of its having been the depositor's own money.

MR. PATON: Would you read that over again.

MR. HANHART: I am no lawyer, and I said the phraseology might be improved. The language I used was:

"A deposit in a Savings bank by one person of his own money, in his own name, as trustee for another, is a tentative trust only, revocable at will; at the death of the depositor before the beneficiary, and without revocation, an absolute trust is then created as to the balance on hand, which shall immediately become the property of the beneficiary, and payable to him by the bank."

MR. PATON: Would a person deposit any except his own money?

THE PRESIDENT: He might deposit the money of a *cestui que trust*. How are we going to know which it is?

MR. PATON: Suppose I go to the bank and deposit money in my name in trust for John Smith, and I do not know John Smith, and I intend that the money shall be mine, but it is done for convenience. Is not that very frequently done?

THE PRESIDENT: Frequently.

MR. PATON: Under that very statute would not that money go to John Smith, instead of going to my heirs?

THE PRESIDENT: But suppose it was your son's money, derived from some other source, for instance from his grandmother, and you wished to put the money in the bank, your son being too young to transact the business, or not a proper person. What would be the effect of that statute in that case?

MR. PATON: It might change the effect, so that instead of his getting it at twenty-one, when he was entitled to it, he would not get it until I died. That might be. I cannot answer these questions offhand, without thought and reflection.

THE PRESIDENT: Would not the bank have to inquire into the question whether it was his own money, under such a statute?

Mr. PATON: I think it would. I think it would be necessary to confine the deposits in that form to money belonging absolutely to the depositor, concerning which he intended to make a will, and would exclude all other classes of deposits, or exclude the use of that form for all other classes of deposits.

Mr. HANHART: I fail to see where the question of a will comes in. If a short statute is adopted, declaring the conditions of certain trusts; that is, for instance, these trust accounts in a Savings bank, why should it clash with the statute of wills? It is a trust. You are not leaving your money by will, but you are starting a trust, which under the statute would be declared a tentative trust only, revocable at will. Also under the statute it is declared that it only becomes a legal and valid trust at the death of the trustee. It seems to me you are making no will, that it does not clash with the statute of wills, and that it is simply a form of regulating a certain kind of trust, and that is this very form of trust in a Savings bank. I admit that they are very peculiar forms, but these accounts have been opened by thousands, and you might say by millions of depositors in the East. They have given a little trouble once in a while. Occasionally there is a contest after the death of the trustee. The legal representatives of the trustee will try to get the money from the bank but if you legalize the way we have always been accustomed to, which is to pay the beneficiary at the death of the trustee, I think you will be rendering a service to thousands of depositors in the Savings banks of this country. You are legalizing these semi-tentative trusts. You are putting them under the protection of the law. The law will declare that they are only tentative, that you can revoke the trust at any time you are alive, but that the very moment you die, the balance on hand goes as a legal and valid trust fund and belongs to and is payable to the beneficiary. We must try not only to protect the banks in these trust accounts. The bank is fairly protected to-day. Under the statutes of many of the States of the North and East, the banks may pay the beneficiary at the death of the trustee. The bank may pay. That is the language of the law; the banks may pay the beneficiary at the death of the trustee; but if it is desirable to regulate the matter, I say that a short form of statute would probably legalize it better and also cover that point which is not covered, as I understand, in any of the statutes now in force, that is the question of the ownership of the funds on the death of the trustee. It is not only that the banks may pay the beneficiary, but the statute will declare that it becomes a legal and valid trust, and that the money belongs to the beneficiary, and therefore that the banks may pay.

Mr. ROTHER: I must apologize for rising again—

THE PRESIDENT: We are very glad to hear from you.

Mr. ROTHER: As Mr. Hanhart proposes to have a law passed regulating the trust declaration, what objection has he to having a similar law passed regulating the joint account? The one is as important as the other, and I do not believe I am at all wrong when I say that there are more Savings bank joint accounts than there are trust accounts. That is my experience of thirty years behind a Savings bank counter, so I believe it is just as important to regulate the one as the other. I heartily approve of the suggestion made by Mr. Hanhart, but I also approve of the suggestion of Mr. Paton that both should be regulated by law, and not give the courts an excuse to say that that is something for the Legislatures to regulate, and not the courts. Our object is to avoid trouble, to create as little trouble as possible for the depositor, and also to protect the banks. Now, how do we arrive at that? By the enactment of these propositions, the one by Mr. Paton and the other by Mr. Hanhart. Perhaps the phraseology should be changed, but undoubtedly that is the clearest way to arrive at that point. How far we will succeed in having it enacted by the various Legislatures, of course is a question to be determined by the future. We cannot prophesy as to that, but I do not think we ought to come back here and simply accept the report of the committee and let the matter stand where it is now. If we do we will be exactly where we were ten years ago. I believe the report of the committee ought to be rejected, and that the propositions of Mr. Paton and Mr. Hanhart ought to be adopted.

Mr. HANHART: The gentleman asks why I believe that the law should not interfere with joint accounts. I think that question can be answered easily. The trust account, legalized by law by a short statute, and carried on in the way we have always done, is all right. The joint account is a very different thing. I do not see how any law will ever decide the question of ownership of joint accounts. That involves property rights that we cannot enter into. In the case of a joint account, on the death of one of the parties, the question is to whom does that money belong, and I do not believe any agreement entered into beforehand will settle the ownership of the deposit. It may relieve the bank of liability in paying, but a joint account is a very different thing to a trust account. It involves property rights that I do not think we can enter into, and I do not believe you will ever get a statute passed to settle the status of a joint account. Neither the bank nor anyone else can determine beforehand the relative rights of the joint depositors. We do not know whose money it is. Does it belong to one man, or does it belong to another, or does it belong jointly? Does half belong to one man and half of it to the other? We can never settle that question. The question of trust accounts is a very much easier one than the question of joint accounts.

Mr. ROTHER: I am not prepared to say whether this can be legally enacted, but if we look at the desire of the depositor we will have it enacted. We know what the depositor wants when he deposits the money. We know that he wants it to go to the survivor, because he tells us so. Why can we not have laws passed to make that good? Of course if it cannot be done; that ends it; but it appears to me that if we can do the one thing we can do the other, and that one is as necessary as the other, and that they can be reached by similar legislation, because the intent of the depositor is exactly the same in each case. We create trust estates, because we advise the depositor to do it. We know that the other will not hold under the law of Maryland, and that is why we advise them to create trust estates. It seems to me we ought to cover both points.

Mr. SMITH, of Washington, D. C.: While you are on this subject I wish to say that at the last meeting of the executive committee there was a suggestion made by Governor Herrick, of Ohio, as to how this matter of joint accounts is handled in the Cleveland Savings Society. He said that whenever an account was opened, a two-name account, that the teller was directed to hand to the depositor a short form, four or five lines of a will, and he was asked whether it was not his intention that after his death this money was to go to the second party absolutely, and if so that he sign the will; and with all their joint accounts practically they have what is in effect a legal will under the laws of the State of Ohio. Under such a method as that of course the bank settles the matter without any necessity for any statute.

Mr. ROTHER: Does this deposit go through the orphan's court or has the Savings bank the right to pay it to the nominee?

Mr. SMITH: They have the right to pay it to the nominee.

Mr. CREER: I beg pardon, the gentleman is in error.

Mr. ROTHER: That would not go in the State of Maryland.

Mr. CREER: It seems to me we are drifting from the original intent of this discussion, and that the Treasurers and Secretaries and Presidents of the various Savings institutions represented here are not so much interested in the form of an enactment as in some method, whether it be by agreement or by statute, which will enable their institutions to pay money upon deposit without entailing any liability thereafter.

I beg to differ with the report of the committee. Such an agreement would not hold in the State of Ohio for a moment. You could drive a six-mule team through it. The will referred to by the gentleman from Washington (Mr. Smith) in the Society for Savings in Cleveland must become a matter of record in our probate court. The law in each State defines certain methods by which property may pass from one to another, and when you come to make legislation for the passage of money you are making legislation for the passage of property from one to another, and there are already basic laws which affect that. Take it for instance in our State, we have an inheritance tax. The passage of any such law as Mr. Hanhart suggests would drive around the law of the inheritance tax. We are also blessed or cursed with a tax inquisition in Ohio. My friend here had a run on his institution a while ago which served as a good advertisement for the strength of the Savings banks.

One man had some money on deposit there, and after loafing around the corridor half the forenoon he was called in the bank and requested to take out his book. The book was taken and he was given the money for his account, and told that thereafter he must deposit his money somewhere else. He went out on the street and thought it was something wonderful that they should call him in and force their money on him. The tax inquisition got hold of it and it cost him $325 for back taxes on his $2,250 that he had on deposit.

Another case in point. The Vice-President of the institution with which I have the honor to be connected was appointed administrator of an estate of a man who was very careful of his personal affairs, who did not even divulge to his wife the amount of his estate. I happened to be one of the appraisers of that estate. He had more than $50,000 on deposit in various Savings banks, besides $50,000 in his commercial account. My friend was very careful to make a settlement with the tax authorities before he filed that inventory, and he was very glad to pay a fee of $5,000 for a receipt in full of all taxes that had not been paid for five years previous.

Now, you can see, gentlemen, what will be the effect of this proposed action. Not so much the effect of legislation, because that would be threshed out, and in some way or other a method will be made clear by which we can pay the money; but such an agreement as is here suggested is one of great peril in a majority of the States. New York is the most liberal in her construction of this law. A recent decision says that the gift of a bank book, the mere turning over of a bank book to another person is an evidence of gift, and that the money belongs to that person. The State of Massachusetts, to which we look for safe and conservative laws, both in banking and in insurance, holds the reverse on that subject, diametrically opposed to that ruling of the New York court. Now, let us out of this matter of agreement and legislation, and find something that will enable us to pay an account without subsequent risk. We realize that if a man draws a check on his commercial account and he dies before that check is presented and knowledge of the fact of his death comes to the bank, the check will not be honored. Now, the man has the money on deposit, he drew the check, he intended that the money should go to the person in whose favor the check was drawn, but the bank pays it out at its peril if it pays the check after notice of the man's death. Now, I cannot conceive that the form of agreement suggested here by our committee can change the law with reference to these trust accounts. I hold that the only safe way is that which Mr. Paton has laid the lines for. It may not be in just the most desirable form. Mr. Hanhart and Mr. Paton are a unit in their intention and the only difference is in the question of phraseology. I think the only safe way is along that line.

Mr. Wilcox: Mr. President, I do not think we can agree upon a form of phraseology which can be made effectual in the same sense in every State. In the first place we should have to agree upon the form of phraseology, and then we should have to make sure that the interpretation of the words we agreed upon would be the same in all the courts of the different States. We see how the courts have construed the ordinary trust account differently in different States. I think the most that can be accomplished is perhaps a resolution that each one shall try to have enacted in his own State exactly what he is advised can be put into effect in that State. I do not think we can get any uniform action. Perhaps in this connection a little experience will elucidate the subject. The Philadelphia Saving Fund Society, chartered in 1819, has to-day 249,000 open accounts on its books. In its charter there is a provision for a book of appointments, which the court has upheld as perfectly valid, and yet to-day it is practically out of use. We have had no occasion to use it. The trust accounts have taken its place. In Pennsylvania an ordinary trust account, A B in trust for C D, is held as a revocable trust during the lifetime of the trustee, and the fund is payable to the *cestui que* trust on the death of the trustee. Of course, that is a very simple matter, but you cannot get the courts in the different States to construe it in the same way. Neither can you get the courts to construe any form of language which may be adopted here so as to meet every requirement of the Savings institutions or of the depositors in the same way in the different States.

As to the joint accounts, of course we have found it advisable in our business to discourage that as much as possible. At the same time we find that it is necessary to use those accounts, and we have used the simplest form that we could find, which is an account in the name of A and B subject to the order of either, that is, either to draw, and to the survivor. The courts have upheld that as being perfectly valid, only in the event of the death of one, while the survivor can withdraw it, it falls upon the court finally to determine the ownership of the fund. The survivor can withdraw it, but he has no right to say that it belongs to him. That must be determined by the court. That protects the bank. Of course, the bank wants to be protected, but we want to accommodate the depositor as much as we can. But that raised the question at least how far we ought to go outside of the ordinary forms of law in trying to accommodate depositors. The first thing is to see that the bank is protected. The second thing is to see that the depositor is accommodated in so far as he can be accommodated without loading down the bank with too much responsibility or surrounding the matter with too much difficulty. I have very grave doubt whether the form suggested by the gentleman from Maryland, Mr. Rother, would be practicable in Pennsylvania, or would be upheld, because that is just a trust which is not a trust. It is a trust fund in the name of somebody or his trustee, subject to the withdrawal of either the *cestui que* trust or the trustee. I do not believe our courts would uphold that for a minute. I do not think it would be either flesh, fish, fowl or good red herring. It would not be anything. So my conclusion from this discussion is that we are surrounded by too many limitations as to the construction that should be placed upon the words that we would adopt, to obtain a uniform form in the different States. I think we must make up our minds to that conclusion.

THE PRESIDENT: This is all instructive, and tends to teach us gradually the methods of protecting ourselves, and what I believe to be of equal importance, the protecting of our depositors, and arranging that upon the death of a depositor, that shall be done with the funds which he wished to have done. We shall be glad to hear from other gentlemen from other parts of the country on this subject.

Mr. MITCHELL, of Richmond, Virginia: I have been trying to ascertain whether the intention of the gentleman who drafted that resolution was to free this deposit from any liability for the debts of the deceased. I listened to the gentleman from Baltimore (Mr. Rother), and I was very much interested in what he said. To some extent the law of Maryland is the same as the law of Virginia, and your distinguished secretary, Mr. Hanhart, has absolutely covered this question when he says that there can be no legislation that will interfere with property rights. You would have to repeal the statutes of Virginia in order to make effective any such nomination as that specified in that form there. It would not be worth the paper on which it was written and while, as was said, in his State you could drive a six-mule team through the law, in Virginia you could drive a twelve-mule team through it. It would upset everything, and it is utterly impossible for you to fix up any form of agreement that would enable you to pay a joint account in the way suggested, without doing so at your own risk. We know very well that where there are millionaires you cannot draw a will that will hold. It seems utterly impossible, in some States at least, to make a valid will where you have anything to will away. Now, in Virginia the law will hold, but it does not hold against your creditors. If you owe a man anything, you may leave what you please to your wife, or your heir, and all your wife or your heir will inherit will be what is left after the creditors get through shooting at it and taking slices out of it.

Now, in Virginia when you have a joint account, the question as to who put the money in the bank is a secondary question. The first question is to whom does the money belong, whose money is it? And then if you can trace the money that was deposited in a bank, to ownership in any person, if you can prove that that money belongs to that person, even though the bank was not so informed, the court of equity will set aside the deposit and pay the money where it belongs, and will give the person who really ought to receive the money the benefit of the deposit.

So I say it is utterly impossible in the State of Virginia to pass such a proposition as that. It is very much like the case which was referred to here by the gentleman who spoke a few moments ago, when he said that if the bank paid a dollar of money it paid it at its own risk, and the heirs would come in, and before the heirs came in the creditors would come in. The creditors are God's chosen people in the State of Virginia. To give you a case in point, I hope you will pardon a little digression. A case occurred where they had a chance to grab after a man's life insurance money. I will tell you how it occurred. In our State the law requires two or more witnesses to a will, provided the person does not write the will himself; but if you can prove by testimony that the entire will is written in the handwriting of the deceased, then it is a legal and valid will, regardless of the legal form and the cumbersome propositions of the attorney. Now here was a case in which there was insurance. You can will your insurance money to any of your heirs and it is free of any encumbrances. I mean to say by that that if you insure your life for $10,000, you may owe a million dollars but not one dollar of that insurance money will go to pay your creditors, unless you should happen to lose your wife to whom you will this money and get a new wife. Then if you attempted to will this insurance policy to your new wife, if you owed any money between the time that you lost your one wife and got a new one, the court would rule that the insurance money in that case would go not to the new wife but to the creditors. They would step in and wipe out your insurance money. Now that is a technical way of ruling, and of course these are legal technicalities; and when I see you business gentlemen staggering around on legal questions, and when I even see lawyers disagreeing on it, it is a source of amusement to me. I suggest that you follow what we have found to be a very safe rule, which we always follow down in our country. That is, when you don't know what to do, do nothing.

Mr. Teter: I suggest that the only thing we can do is to do what our brother from Virginia has suggested, and that is that we do nothing this afternoon on this proposition. We have had a very beneficial discussion on this question, but it seems to me we have too much before us to attempt to settle it to-day, and I was going to suggest, and perhaps I may as well put it in the form of a motion, that we continue this committee, or have a new committee perhaps on broader lines, to go on with this work. I will make the motion that the chairman appoint a committee to continue the work of reaching a satisfactory solution of the trust and joint account questions, and that the principal duty of this committee be to confer with members in the different States in assisting them and in urging them to bring about such legislation in their respective States as will be satisfactory, and to come before this section next year and report the States that have made progress. Let us keep this up until we have it all satisfactorily adjusted. New York seems to be all right, and Philadelphia reports progress. Perhaps some of the rest of us can do something in the next year.

The President: There was a previous motion upon the accepting the report of the committee. Perhaps the more proper motion would be to receive it and place it on file, and then the motion of Mr. Teter would then be in order.

Mr. Creer: I make that motion, to receive it and place it on file.

The motion was agreed to.

Mr. Teter: I now renew my motion.

The President: It has been moved that the chairman appoint a committee of three whose duty it shall be to collect information during the coming year as to practical methods of remedying the defects in existing laws in the different States on this question.

Mr. Rother: I suggest that the committee be composed of five members instead of three.

The President: Is that acceptable to the movers?

Mr. Teter: And is it understood that it includes both trust accounts and joint accounts?

The President: Both trust and joint accounts.

Mr. Teter: A committee of five is satisfactory to me if it is to the seconder of my motion.

The President: Then the question is on the appointing of a committee of five, having within its scope both joint and trust accounts.

Mr. Hanhart: Before adopting this motion I would like to say that a committee of five would probably consist of members from different States at a great distance from each other, which would make the meetings of the committee a difficult proposition to handle. Would it not be wiser to appoint a committee of three? My experience in these matters is that it is very difficult to secure a meeting of a larger committee.

Mr. ROTHER: That is satisfactory to me, and I believe that objection is a valid one.

THE PRESIDENT: Our experience in this organization is that a small committee is more desirable. Of course that is subject to the views of the section.

Mr. TETER: I made the original motion because my experience was in the same direction, but I always defer to the views of others. I now renew my original motion for a committee of three.

THE PRESIDENT: If there be no objection, it will be understood by unanimous consent that the motion is for the appointment of a committee of three. The chair will suggest that it is impracticable to select a committee offhand, and doubtless it will be acceptable that the incoming chairman under whose administration this committee will perform its duties, shall designate the committee. Are you ready for the motion?

The motion was agreed to.

THE PRESIDENT: Another subject which we have on our programme this afternoon is that of Savings Banks Printed Forms. As I have before stated, our secretary has been most industrious and efficient in the collection of these printed forms, and he will make a statement in reference to them.

THE SECRETARY: This collection which you have all seen at our headquarters is not complete by any means. We have received reports from about 350 Savings banks, or less than one-half of our members, but these forms I think may be considered fairly representative in their character. I would ask those of you who have not sent your printed forms to send them to me without delay.

I have tried to get some estimate as to the cost of reproducing these forms, and I find it impracticable to reproduce them because it would cost too much money and probably would not be quite satisfactory in return for the outlay. But I would suggest this to you, that you name a committee to pass upon these forms and to select from them say two or three of each kind relating to each subject matter, and that these selections be then reproduced and printed in a book, and that book be for sale to our members and to others if you choose. In that way I think you will get the best of those forms, by printing two or three or four or five of each kind. The Trust Company Section some five years ago prepared a book of that kind, of forms which they sold to their members, and this publication I think has been very satisfactory. We have a great many more forms than the trust companies had then or even have now. Still, I think after the committee have made their selection the forms which they would select could be printed at a cost that would probably allow us to sell the book to our members for perhaps $12. It is very hard to say exactly what the cost would be, but I think such a price as that ought to cover the cost I have prepared a short form of resolution and perhaps you would like me to submit it to you to bring this matter into concrete form.

Mr. DUFF: I move that this matter be placed in the hands of a committee of three to make a selection from the forms submitted, to select such forms as in their opinion are good ones, and to devise some means of getting them before the members of the section.

Mr. FLACK: I second that motion, and I should like to see Mr. Hanhart, our secretary, made the chairman of that committee.

Mr. DUFF: I would make that a part of the motion, that Mr. Hanhart be made chairman of the committee.

MR. HANHART: I thank the gentlemen very much, but will you permit me to offer my resolution as an amendment or a substitute for this? I will read the resolution as I have written it. Of course you can change it.

RESOLVED, That the matter of reproduction of a selection of the best printed forms for Savings banks, included in the collection now on exhibition at this convention, for sale to our members and others, be referred to the executive committee with power.

If you leave the matter to the executive committee, they will see to the naming of the committee. You see this question of the naming of the committee is a little difficult. You cannot name a committee the members of which are too far apart. The committee has to meet, and if the members reside a thousand miles apart, that will not do. I think the executive committee can handle this matter very satisfactorily, and it will carry out Mr.

Duff's idea if the whole matter is referred to that committee with power. Then they can arrange such details as to ways and means as may be necessary. It will require some thought and consideration on their part.

Mr. DUFF: That motion will be acceptable, except that I thought it might be advisable to have some of the members who are not on the executive committee taken into this matter in order to get the benefit of their views. The executive committee could work with them. I would like to leave it to the sense of the meeting. If they think the executive committee is the proper committee to handle the question, I am perfectly satisfied.

Mr. HANHART: I would also say to Mr. Duff that the executive committee might turn it over to a committee composed of other members as he suggests, the gentlemen who are not members of the committee, but who would be willing to undertake this work. I will tell you frankly that it is a work of considerable magnitude and will require considerable time.

Mr. DUFF: That will be acceptable.

Mr. HANHART: Then my motion covers the question practically, as I understand it.

Mr. DUFF: Yes.

THE PRESIDENT: If Mr. Hanhart's version of the motion is acceptable to the mover and seconder, that will be the question before the house. I have no doubt that the words "with power," being as broad as they are, would include the delegation of power, the appointing of a committee from the general body if that was found convenient. That will be the interpretation of it unless the section desires otherwise. You have heard the motion, which is to refer the matter of the printed forms to the executive committee with power. Are there any other remarks?

Mr. TETER: There is just one disadvantage always in referring matters that come up in a general way to a committee, that those who have to do with the executive committee are deprived possibly of the benefit of so much in the way of suggestions that we might get from other members. At the same time I do think it would be a splendid thing for us to have at least a few words from several of the members with reference to their ideas about these forms. I believe that the collection of forms which has been exhibited here has been one of the most attractive things in connection with this meeting of our section. We hear of it on all sides, and I believe it would be a good thing to hear a few words about these forms, and some suggestions from the different members, as to the best way to handle them.

THE PRESIDENT: That would be perfectly in order and very desirable. Are there any remarks from any of the members present as to these forms which are before you? I would be very glad to hear from every one who desires to speak on the subject.

Mr. FLACK: I wish to say that I have received considerable benefit from an inspection of these forms, and I would like to see them printed, or such of the best ones as the committee may select.

THE PRESIDENT: I would suggest that perhaps Mr. Flack means the most typical forms, because it is very hard to say which are the best. There are so many requirements from the different environments, owing to the difference in laws and so forth, that I should think it would be a better guide for the committee to select those which they consider most typical of the different methods of business. To say which of the forms are best would be rather invidious.

Mr. McKAY: I beg to offer a suggestion, and that is that the excellent work done by our secretary in connection with these general forms might also be extended to the different forms of declarations in the different States, for joint and trust accounts.

THE PRESIDENT: I think we are particularly rich in that matter.

Mr. McKAY: The suggestion was that that collection be placed at the disposal of this committee that is to be appointed, together with such legal information as can be gathered from the several States, regarding the validity of the different forms there used.

THE PRESIDENT: That is an excellent suggestion. I believe our friend from Virginia, Mr. Mitchell, has not filed any declaration. Yet he apparently is in a state of despair as to the situation there in the Old Dominion, where a man's life, his property and even his wife seem to be in great peril from any attempt at legal forms. If he devises a satisfactory form, I hope he will favor us with it, as well as any others. The question is on referring this matter to the executive committee with power. Are you ready for the question?

The motion was agreed to.

THE PRESIDENT: There is another subject on the programme to-day, and that is the question of Monthly Reports of Deposits and Withdrawals by all the Savings banks of our section, it being believed that if all could unite in this, at some little expense, which probably would be cheerfully borne, the results being tabulated by States, but anonymous as to the banks, and no separate amount being given out as to banks, the statistics thus obtained would be a valuable indication of tendencies, throughout the country, which would be important for all the members to possess. I do not say that is so, but that is the opinion of many members of the association. In canvassing the matter we did not receive by any means unanimous support for the project. The question is whether that project shall be taken up for discussion, whether it shall be put into effect in some partial and experimental form, or whether we shall decide that the time is not yet ripe and that we will await further developments. That question is before you for any motion, and by unanimous consent for any remarks if no motion is made. It would be appropriate to hear first from those gentlemen who favor this plan and who can state some of the advantages of it. Perhaps Mr. Hanhart will state to us more precisely than I have stated what in general the plan is, as it has not been discussed in the open section.

MR. HANHART: I do not want to detain you, gentlemen; but if you will give me a few minutes I will tell you what the proposition consists of. We propose to call for reports of cash deposits received, and cash withdrawals made each month, these reports to be sent to the secretary, who is to collate them, not giving the amounts for any one bank, but merely tabulating the total. This is to be sent back before the tenth of each month to every member of this association, so that in this way we can watch the trend of prosperity or otherwise in the United States. It involves an enormous amount of work every month. The secretary will receive some fifteen hundred reports, collate them and send them forward. This proposal if carried into effect will necessitate a great deal of work. I am sorry that the proposer is not here, but he was unable to come. He seems to think very highly of the plan. There is no question but that it is advisable, that it be done in some shape.

Regarding the value of statistics, I would like to tell you of an incident that happened a few years ago in my own city. At the time our worthy and beloved Executive, Theodore Roosevelt, was Commissioner of Police in New York he made a strong attempt to enforce the Sunday closing law relating to saloons; this attempt was successfully carried out for a limited period.

At about that time a reporter called on the President of a large Savings bank and asked him if he had not observed an increase in the deposits on Monday mornings since the enforcement of the closing law. The President, who is a very bright and observant man, replied, "No, I have not remarked anything of the kind"; the reporter, however, insisted and asked him to make a comparison with the amount of Monday deposits as compared with the other Mondays previous to this period. The President, therefore, had a statement made up making such comparison, and found that ever since the enforcement of the Sunday closing law, the deposits on Monday morning—a large proportion of these being from the wage-earning classes—had shown a very decided increase as compared with the previous Mondays, fairly good proof that many of the wage-earners deposited that part of their wages which otherwise would have been spent in the saloons and drinking shops.

I think there is often a lesson to be learned from statistics, and I believe that if some man should come to you and would say, "What will you give me if I supply you on the tenth of every month with accurate figures as to the total receipts and withdrawals in all the Savings banks of the United States for the last month," I think you would give some of your good money for it. The matter is before you, gentlemen, if you would like to try it. Or you might, for instance, collate on the first of January next the total receipts and withdrawals for the past year and send them to us, and we might try it for one year. To-day we have no accurate knowledge as to how much money is deposited in the Savings banks in the United States during the year. You get it occasionally in a few States, but you do not know how much is deposited in all the United States.

Mr. WOODRUFF: Can you tell me what proportion of the Savings banks of the United States are represented in this section?

Mr. HANHART: The Comptroller of the Currency estimates the total savings in the United States at a little over three thousand million dollars. I have computed the total deposits in the banks that are members of our section, and I make the amount within two million, I think, of $2,250,000,000. Therefore, we may say that we represent about seventy per cent. of the total deposits.

A MEMBER: When you sent out your circular on this question, how general a response did you receive? What proportion of the membership seemed willing to furnish these reports?

Mr. HANHART: The proportion was about two-thirds who were in favor of it and a third who were either not in favor of it, or a few actually opposed to it. One banker told me that the counsel of his bank told him they had no right to give these figures except to the Bank Superintendent. As long as this thing is not unanimous here, we cannot carry it out. The reports should be from all of them.

The cost of this would not be great. It would amount practically only to the postage, or only a few hundred dollars.

Mr. HAMMOND: Is it not true that there is a constantly increasing proportion of Savings bank deposits in the United States which are going into trust companies, and into the savings departments of the National banks, which would not be reached by any such inquiry?

Mr. HANHART: We have in our membership 153 banks that are trust companies and Savings banks also, and they would report to us only their savings deposits in those banks. I would ask them to give the figures of the savings department only, and not of their general commercial business.

Mr. HAMMOND: In Michigan a great many National banks are putting in savings departments, and we would get no report of that.

Mr. McKAY: Inasmuch as two-thirds of the members of the section seem to have expressed an interest in this matter, I move that the secretary be instructed to put this plan into operation in an experimental way, and that if after the experiment has been tried to a reasonable extent it does not seem to be successful, that it then be dropped.

Mr. FLACK: I would like to second that motion.

THE PRESIDENT: I would like to have the gentleman supply one blank in his proposition. Is this experiment which is proposed, to be monthly, or quarterly, or annually?

Mr. McKAY: My idea was for monthly reports. I have been considering whether the quarterly reports might not answer the requirements fairly well. Still, I am inclined to think monthly reports would be better.

THE PRESIDENT: Of course the information would be fresher.

Mr. PARKER: It seems to me it would be well, if the project is carried out, that you should go back and include the deposits and withdrawals for the past year, month by month. I can see that the statistics would be of value in this regard, that they would prove the movement of money in and out of Savings banks during years of prosperity and in the time of financial crises, and in years subsequent to a monetary revulsion. Our panics are more frequent, expensive and disastrous than those in any other country under the sun, and these statistics would prove at least to some extent the cost to the small depositor, then out of work, and also prove the accumulation under prosperous conditions.

Mr. CREER: In order to make the tabulated statement as valuable as possible, I wish to suggest that there be included in it not only the deposits and the withdrawals by the month, but the total deposits of the institution at that time, and the number of accounts, that giving us the amount deposited, the amount withdrawn, the total amount on deposit at that time and the number of depositors, and therefore giving us the amount deposited per capita in each of the States.

THE PRESIDENT: This suggestion will doubtless be utilized by the committee which has the project in charge.

Mr. FOWLER: I do not think you will find very many people who will doubt the value of these statistics. When we stop to consider the great amount of money that the Government expends in getting up weather reports and crop reports and various statistics of this kind, it is certainly more essential that we should know the condition of things that produces the crops and how they grow. In reference to the time when these reports should be published, it might be wise to start out with quarterly reports, and then if members contribute liberally to the support of the project, and if the information is found to be thoroughly desirable, then there could be monthly reports. It would be more in the nature of an experiment, the first three months possibly, and then it might be made monthly afterwards.

Mr. LATIMER: I offer the following:

Resolved, That the secretary be instructed to forward to each member of the section in December next, a printed blank form asking for the following information from their bank: Total deposits and total withdrawals for the years 1903, 1904 and 1905; amount of deposits held by the bank on December 31 of these years; rate of interest paid depositors, and such other information as the executive committee may deem appropriate; these figures to be collected by the secretary in totals for each State, groups of States, and total for the United States, and forwarded to the members for their information. The executive committee to have power to require such statements at intervals, as they may deem advisable.

Mr. CREER: Are we to understand that the motion of Mr. Latimer is a substitute?

THE PRESIDENT: It is a motion in the nature of an amendment.

Mr. HAMMOND: Is this to be confined to members of this section?

THE PRESIDENT: I think the understanding is that it is to be confined to them, that the information is to be communicated to them.

Mr. HAMMOND: Would it not be better to ask for information from other Savings banks, or from trust companies that receive savings deposits, and from National banks that receive savings deposits?

THE PRESIDENT: If they are members of this section, they will be reached and they will receive the information; but if they have not interest enough to do that, then we doubt whether we could ever interest them in this project. No doubt some of them will join for the very purpose of getting these statistics, and that will be desirable.

Mr. WOODRUFF: Several institutions have been spoken of which are both Savings banks and trust companies. I should like to inquire whether those are to be included, or whether those only are included which have straight savings accounts.

THE PRESIDENT: I think that would be left to the discretion of the institution to decide what proportion of their accounts were bona-fide savings accounts.

Mr. TAYLOR: In some States a bank can be organized under the trust company laws, to do a Savings bank business also, and in that case the savings accounts are savings accounts pure and simple and have nothing to do with the trust company accounts, being kept entirely separate.

THE PRESIDENT: The question is on the substitute offered by Mr. Latimer.

The substitute was agreed to.

THE PRESIDENT: The question now is on adopting the resolution which has been substituted, or in other words on the proposition as amended.

The motion, as amended by the substitute of Mr. Latimer, was agreed to.

THE PRESIDENT: Is there any other business to come before the section previous to the election of officers?

Mr. BURNS: I offer the following:

Resolved, That the thanks of this convention be extended to the officers of the section for the efficient and faithful way in which they have discharged their duties.

THE PRESIDENT: Will Mr. Burns please put that motion?

The motion was seconded, and the question being put by Mr. Burns, it was unanimously agreed to.

Mr. TAYLOR: I offer the following:

Resolved, That the thanks of this convention be tendered to the Washington bankers for their very courteous reception and entertainment.

The motion was unanimously agreed to.

Mr. HOYT: Mr. President, I offer the following nominations for the ensuing year:

For chairman, Edward E. Duff, Vice-President People's Savings Bank, Pittsburg, Pennsylvania; for vice-chairman, G. Byron Latimer, Secretary Irving Savings Institution, New York; for three members of executive committee to serve three years: C. Colesbury Purves, President Philadelphia Saving Fund Society, Philadelphia, Pennsylvania; John F. Flack, President City Savings Bank, Omaha, Nebraska; J. H. Johnson, Cashier Peninsular Savings Bank, Detroit, Michigan.

THE PRESIDENT: You have heard these nominations. The newspaper reporters have heard that there was going to be a fierce contest for the offices of this association. I will explain the absence of the name of your present chairman from the list by saying it is simply because he could not be elected. It is not because of any lack of ambition or desire on his part. Our constitution makes your present chairman ineligible as a candidate, and I beg to thank you for the provision of the constitution which relieves me from the cares of this office for the following year. What is your pleasure as to these nominations? Shall the nominations be closed and a ballot be taken?

Mr. HULBERT: I move that the secretary be instructed to cast one ballot for the officers nominated.

THE PRESIDENT: That motion requires a unanimous vote. One negative vote will make it necessary to take a ballot.

The motion was unanimously agreed to, and the secretary cast the ballot as directed.

THE PRESIDENT: Gentlemen, I take pleasure in introducing to you Mr. Duff, your president-elect, who I am sure will fill the office with great credit to himself and benefit to the section.

PRESIDENT DUFF: Members of the Savings Bank Section—I am not going to make a speech. I simply want to thank you for the honor conferred upon me, which I consider a very great one. Although I have a good many gray hairs, I think that an older member of the association in point of years should have been honored with the office. I will, however, endeavor to perform the duties of the office to the best of my ability with the assistance of the other members, and our able secretary. Is there any other business to come before the association? Mr. Secretary, have you any other business to present?

THE SECRETARY: No, Mr. President, the secretary knows of no other business to present.

THE PRESIDENT: We have been requested to pose for a photograph of the members of this section immediately after its adjournment. If there is no other business we are ready for a motion to adjourn.

On motion, at 4.15 p. m., the Savings Bank Section adjourned.

JOHN L. HAMILTON, President.
Vice-President Hamilton & Cunningham, Hoopeston, Ill.

G. S. WHITSON, Vice-President.
Vice-President National City Bank, New York.

JAMES R. BRANCH, Secretary.

W. G. FITZWILSON, Assistant Secretary.

T. L. MacGachen, Manager Merchants' Bank of Canada, Medford.

BANKING AND FINANCIAL NEWS.

NEW YORK CITY.

—The Guaranty Trust Company has issued An Index to the Mortgage Tax Law, which furnishes a convenient synopsis of the new statute.

—J. P. Morgan, Jr., has been elected a director of the Northern Pacific Railway to fill the unexpired term of the late Daniel S. Lamont.

—At the annual meeting of the New York Clearing-House Association, October 31, the following were elected members of the clearing-house committee: William H. Porter, President Chemical National Bank; Valentine P. Snyder, President National Bank of Commerce; James Stillman, President National City Bank; J. Edward Simmons, President Fourth National Bank; Richard Delafield, President National Park Bank.

Clearing for the past year amounted to $302,234,599.89—the largest total ever reported.

Wm. A. Nash, President of the Corn Exchange Bank, offered the following resolution, which was unanimously adopted:

"Resolved, That the clearing-house committee be required to consider the relations of the clearing-house and the trust companies to the end that harmonious relations may be renewed on a basis that will insure their right to the clearing-house either as members or through representative banks."

MIDDLE STATES.

Buffalo, N. Y.—The Union Stock Yards Bank, which opened for business November 10, 1904, with $150,000 capital, has been remarkably successful, deposits increasing from $187,784 on March 1, 1905, to $518,420 on July 1, and continuing to increase largely since the last-named date.

The bank is located in the Live Stock Exchange Building, in the heart of Buffalo's live stock market, and was organized for the benefit of the live stock commission merchants, manufacturing and business houses in the live stock section. Results show that the location was well chosen.

The office furnishings and vault equipment are up to the best modern standards. Officers of the bank are: President, Hiram Waltz; Vice-Presidents, Alonzo C. Mather and George Bingham; Vice-President and Cashier, Irving E. Waters.

WESTERN STATES.

Peoria, Ill.—About the first of next year the Dime Savings and Trust Co. will move into its new building, next door to the bank's present location. The new building is reported as being one of the finest in the State, outside of Chicago.

Dwight, Ill.—The First National Bank, successor to the Bank of Frank L. Smith, will open January 1 in its new building, now in course of construction. The new structure is of Bedford stone, and the building and the equipment are in the best modern style.

Paris, Ill.—The First National Bank, established in 1865, recently increased its capital from $108,000 to $150,000. A special dividend of 125 per cent. was declared, which after the increase in stock still leaves $90,000 surplus and profits. For twenty years the annual dividend rate has been ten per cent. A. J. Baber is President; Wm. J. Hunter, Vice-President; R. G. Sutherland, Cashier, and A. H. Cline, Assistant Cashier.

—On November 1 the Edgar County National Bank moved into its new building, which has just been completed. The building is of imposing appearance, being built of Bedford stone. It will be occupied exclusively by the bank. The fixtures are of mahogany and bronze, and the banking room is made attractive by tile floor and ornamented glass ceiling, all of original design by the officers of the bank.

Chicago.—A novel form of bank advertising is shown in a booklet recently issued by the Royal Trust Company Bank, entitled "Animals That Save." It teaches the lesson of saving through the medium of a pleasing and scientifically correct lesson in natural history. Both the illustrations and the descriptive matter are interesting and instructive.

—Isaac N. Perry, formerly President of the National Bank of North America, is at the head of the New Federal National Bank, which commenced business October 16 with $500,000 capital, which will later be increased to $1,000,000. An eligible location has been secured at Madison and La Salle streets, formerly occupied by the Metropolitan Trust and Savings Bank.

Mr. Perry will be President of the Federal National Bank, and J. L. Kressman, Cashier.

—On October 9 the new Citizens' Trust and Savings Bank opened for business at Garfield Boulevard and State street, with $50,000 capital and $5,000 surplus. The new bank's quarters are well fitted up with the best of furniture and equipment, including a burglar-proof vault. Officers of the bank are: President, Oliver F. Smith; Vice-Presidents, Frank J. Willoughby and Jos. W. Kobbe; Cashier, Walter D. Rathje. They are well known as men of wide experience in business and banking.

—The new Mutual Bank, which commenced business on October 2, received 1,000 accounts the first week. It is the intention of the bank to pay three per cent. on savings deposits, and two per cent. on commercial deposits. After these payments stockholders will be entitled to three per cent., and any additional earnings will be divided equally between stockholders and depositors. Lawrence Heyworth is President, F. H. Gausberger, Secretary, and Edgar F. Olson, second Vice-President and Cashier. Mr. Olson was with the First National Bank of Englewood for twelve years. The directors include a number of well-known and successful business men of Chicago.

NEW BANKS, CHANGES IN OFFICERS, ETC.

FLORIDA.

Ocala—Central National Bank; Geo. H. Ford, Cashier in place of F. L. Watson; J. B. Brooks, Assistant Cashier.

GEORGIA.

Dublin—First National Bank; W. S. Phillips, Vice-President in place of J. E. Smith, Jr.

HAWAII.

Honolulu—First National Bank; L. T. Peck; Cashier in place of W. G. Cooper.

IDAHO.

Pocatello—Bannock National Bank; G. H. Olmstead, Vice-President in place of E. C. Manson.

ILLINOIS.

Aurora—First National Bank; F. B. Watson, Cashier in place of T. H. Day.
Eldorado—First National Bank; Wm. M. Gregg, President in place of A. H. Kinsall; Roy Gregg, Cashier in place of M. J. White.
Georgetown — Georgetown National Bank; James H. Hewit, President in place of R. H. Lewman; no Vice-

President in place of W. V. Jones; O. P. Clark, Cashier in place of Gordon Grimes.
La Salle—La Salle State Bank; John Stuart, President, deceased.
Westville—First National Bank; O. P. Clark, President in place of Geo. G. Robertson; A. L. Somers, Cashier; J. Frank Haworth, Assistant Cashier in place of A. L. Somers.
Windsor—First National Bank; A. T. Collison, President in place of John Moberley; J. A. Duncan, Vice-President in place of F. D. Hennigh; A. C. Crays, Cashier in place of J. W. Moberley.

INDIANA.

Fort Wayne—Old National Bank; C. E. Bond, Vice-President; G. A. Schwegman, Cashier in place of C. E. Bond; W. H. Rohan, Assistant Cashier in place of G. A. Schwegman; Stephen Morris, Second Assistant Cashier.
Lawrenceburg — People's National Bank; P. C. Braun, Cashier in place of Peter Braun; C. O'Brien, Assistant Cashier in place of P. C. Braun.
Lowell—State National Bank; Albert Foster, President in place of John E. Davis, deceased.

INDIAN TERRITORY.

Durant—First National Bank; D. Morgan, Vice-President in place of A. C. Risner.
Fort Gibson—First National Bank; J. L. Landwirth, Vice-President in place of Joe Mayer.
Holdenville—National Bank of Commerce; I. B. Martin, Assistant Cashier.
Madill—City National Bank; Tom Hollingsworth, Cashier in place of F. S. Vaden; S. L. Chowning, Assistant Cashier.
Pauls Valley—National Bank of Commerce; Lorenz Eodke, Vice-President in place of J. F. Meyers; Charles S. Smith, Second Vice-President.
Vinita — Cherokee National Bank; Charles H. Collins, Cashier in place of C. C. Roberts; no Assistant Cashier in place of Charles H. Collins.

IOWA.

Hartley—First National Bank; E. F. Broders, President in place of E. E. Hall.
Waterloo — First National Bank; Frank J. Fowler, President in place of C. O. Balliett; F. J. Eighmey, Vice-President in place of Frank J. Fowler.
Winterset—Madison County Bank; capital increased to $70,000; E. E. McCall, President; Nelson Bertholf, Cashier.

KANSAS.

Osborne—Farmers' National Bank; J. F. Irey, President in place of W. H. Smith.
Topeka—Central National Bank; no Vice-President in place of C. S. Downing; S. S. Ott, Cashier in place of Edwin Knowles.

KENTUCKY.

Beattyville—National Bank of Beattyville; G. S. McDonald, Vice-President in place of Theo. B. Blakey; Monroe McGuire, Cashier in place of Pope McAdams; Logan Thomas, Assistant Cashier in place of Monroe McGuire.
Louisville—Western National Bank; in hands of Receiver August 21; resumed business October 16; T. L. Jefferson, President; E. C. Hegan, Vice-President; Lewis Metz, Cashier.—Third National Bank; W. H. Netherland, Cashier in place of James Gayle.

LOUISIANA.

Jeanette—First National Bank; A. Cousin, Jr., Cashier in place of M. B. Tarleton.

MAINE.

Bangor—Veazie National Bank; Chas. V. Lord, President, deceased.
Belfast—Belfast Savings Bank; Wilmer J. Dorman, Treasurer in place of William H. Quimby, resigned.
Gardiner—Oakland National Bank; Freeman Patten, Vice-President.

MARYLAND.

Baltimore—Maryland National Bank; J. C. Fenhagen, Cashier in place of Jos. A. McKellip.—Provident Savings Bank; John R. Cary, Secretary; G. Herbert Boehm, Treasurer.

MASSACHUSETTS.

Boston — Boylston National Bank; Charles W. Bailey, Assistant Cashier.—National Bank of Commerce; William Endicott, Jr., Vice-President.—National Union Bank; Henry S. Grew, 2d, President in place of James R. Hooper.
Gloucester—Cape Ann Savings Bank; John E. Somes, Vice-President, deceased.
Natick—Natick National Bank; A. L. Potter, Cashier instead of Acting Cashier.
Salem—Asiatic National Bank; E. L. Millett, Assistant Cashier.
Waltham—Waltham Trust Co.; Frank E. Morris, Treasurer, resigned.

MICHIGAN.

Detroit—Dime Savings Bank; capital increased to $250,000.

MINNESOTA.

Breckenridge—First National Bank; Howard Dykman, Vice-President in place of Ezra G. Valentine; no Second Vice-President in place of Howard Dykman.
Cass Lake—First National Bank; no Assistant Cashier in place of B. W. Lakin.
Luverne—First National Bank; A. D. La Due, President in place of Wm. Jacobsen, deceased; O. P. Huntington, Second Vice-President; Wm. Jacobsen, Jr., Cashier in place of A. D. La Due; D. M. Main, Assistant Cashier in place of Wm. Jacobsen, Jr.
Red Lake Falls—First State Bank; C. L. Hanson, Assistant Cashier in place of Ralph Wyer.
Wadena—First National Bank; W. B. Jackson, Assistant Cashier in place of J. W. Austen, Jr.
Wheaton—Gary-Wheaton Bank; Wm. E. Gary, Cashier in place of Wm. L. Gary, deceased; William H. Darling, Assistant Cashier.

MISSOURI.

Carthage—Carthage National Bank;

R. E. Frey, Cashier in place of Oscar Wells.
Macon—First National Bank; R. A. Guthrie, Cashier in place of Raymond E. Frey; J. D. Fleming, Assistant Cashier in place of R. A. Guthrie.
Rocheport—Rocheport Bank; W. R. Wilhite, President, deceased.

MONTANA.

Butte—State Savings Bank; Sellers Largey, President in place of John A. Creighton; E. P. Chapin, Cashier.
Great Falls—Daly Bank & Trust Co.; Edward Bowman, President and Manager in place of M. B. Greenwood, deceased.

NEBRASKA.

Arlington—First National Bank; J. T. May, President in place of J. H. Pratt; L. C. Weber, Vice-President in place of J. T. May; G. I. Pfeiffer, Cashier in place of A. H. Sander; no Assistant Cashier in place of G. I. Pfeiffer.
Beatrice—Beatrice National Bank; D. W. Cook, President in place of J. B. Weston, deceased; no Vice-President in place of D. W. Cook.
Edgar—State Bank; sold to J. O. Walker and H. C. Hart.
McCook—First National Bank; B. M. Frees, President in place of A. Campbell, deceased; H. P. Waite, Vice-President in place of B. M. Frees.
Osceola—Bank of Polk County; sold to First National Bank.
Wahoo—First National Bank; Oscar Hanson, Cashier.

NEW HAMPSHIRE.

Lakeport—National Bank of Lakeport; C. L. Pulsifer, President in place of Henry J. Odell.

NEW JERSEY.

Newton—Sussex National Bank; Theodore Simonson, Vice-President in place of Wm. McDanolds.

NEW MEXICO.

Tucumcari—First National Bank; Earl George, Assistant Cashier in place of W. S. Hodges; no Second Assistant Cashier in place of J. R. Daughtry.

NEW YORK.

Buffalo—Central National Bank; A. M. Le Messurier, Assistant Cashier.

TEXAS.

Austin—City National Bank; in liquidation September 15; absorbed by Austin National Bank.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, November 2, 1905.

LOCAL POLITICS, LIFE INSURANCE INVESTIGATION AND THE RUSSIAN DISTURBANCES provided the sensational features of the month. It may be doubted, however, whether any of them had any influence upon either prices or sentiment. As a factor in finance, the first-named feature may be dismissed without comment. If the disclosures regarding life insurance methods have affected values, there is no evidence of the fact. It may be conceded, however, that life insurance funds are furnishing less stimulus to speculation than formerly.

The disturbance of affairs in Russia has caused a modification of the plans of banking interests in this and other countries. A Russian loan had been arranged almost to the final details, and representatives of American banking houses were understood to have been ready to agree as to the amount that should be placed here, when the rioting in St. Petersburg caused a discontinuance of negotiations and the visiting financiers became more interested in obtaining a ship to take them out of the country than in buying bonds.

As far as a new Russian loan is concerned, it will now have to be delayed until political affairs become more settled. Japan, however, is understood to be preparing to put out a 4 per cent. loan for $321,000,000 at 90. The proceeds will largely be used in retiring outstanding issues. What portion of the new loan will be offered in this country has not been made known.

The prospect of a Russian loan for a while affected the various money markets where the loan was likely to be placed. That has been eliminated, but rates for money abroad are generally higher. The Bank of England adheres to its 4 per cent. rate, while the Bank of Germany last month advanced its rate from 4 to 5 per cent.

The prevailing influences kept the local money market firm. The prospect of gold imports disappeared and the possibility of gold exports began to command attention. The low reserves of the banks excited some apprehension. A fact not without interest is that loans last month exceeded deposits for the first time this year. At the end of July last the deposits were nearly $55,000,000 in excess of loans. On October 14 the loans were the larger by $4,000,000, but by the end of October deposits were again slightly in excess of loans. There have been some notable movements in both loans and deposits during the current year as shown in the following summary:

	DEPOSITS.		LOANS.	
	Amount.	*Change since previous date.*	*Amount.*	*Change since previous date.*
January 1	$1,104,049,100	....	$1,066,701,200	....
February 11	1,202,972,300	Inc., $98,923,200	1,142,106,100	Inc., $75,504,900
April 8	1,128,100,700	Dec., 74,871,600	1,090,759,600	Dec., 51,346,500
May 20	1,165,151,700	Inc., 37,051,000	1,120,426,800	Inc., 29,667,200
June 10	1,128,832,800	Dec., 36,318,900	1,089,520,900	Dec., 39,905,900
July 29	1,199,744,900	Inc., 70,912,100	*1,146,163,700	Inc., 56,642,800
October 21	1,023,859,400	Dec., 175,855,500	1,026,690,100	Dec., 119,473,600

* August 5th.

Loans were about $1,300,000 larger on August 5 than on July 29. With that exception, both loans and deposits reached extreme points on the same dates. The largest amount of loans reported outstanding at any time was $1,146,000,000 on August 5. Between that date and October 21 there was a decrease of $119,000,000. On July 29 the deposits reached nearly $1,200,000,000, the largest for the year except on February 11, and within $24,500,000 of the high record made on September 17, 1904. Between July 29 and October 21 there was a decrease in deposits of nearly $176,000,000. In the five earlier movements of the year the extreme range was less extensive, but in the first six weeks of the year deposits increased nearly $99,000,000 and loans $75,000,000.

The resumption of refunding operations by the Government last month has so far been attended with surprising success. On October 1 there were $156,596,400 of 4 per cent. bonds of 1907 and $77,135,360 3 per cent. bonds of 1908 outstanding. At the close of the month they had been reduced to $127,424,200 and $68,789,060 respectively. Nearly $37,500,000 of these bonds have therefore been exchanged for 2 per cent. bonds, of which there are now outstanding $580,429,000, equal to nearly 65 per cent. of the total bonded debt.

One effect of this refunding, which seems to attract no particular attention, is to extend for more than twenty years the maturity of the bonds exchanged. On July 1, 1907, or twenty months hence, the 4 per cents will be redeemable, and on August 1, 1808, or less than three years hence, the 3 per cents may be retired at par. There are only about $196,000,000 of these two classes of bonds now outstanding and the Government should have no difficulty in paying them off when they mature.

If the present rate of refunding is continued a few months there will be none of the 3's and 4's to mature. The bonds into which they are being exchanged do not become redeemable until April 1, 1930, and the only other bonds to mature prior to that date are the $118,000,000 4 per cents redeemable on February 1, 1925. The extinguishment of the debt does not seem to be contemplated in the financial policy of the Government.

The refunding operations have had a very substantial effect upon National bank circulation. Nearly $23,000,000 of the new two per cents issued have gone at once to secure bank circulation, while $9,000,000 more have taken the place of other bonds to secure public deposits. Practically all the new bonds, except about $5,000,000, have thus become the security for notes or public deposits. Until the Government resorts to new issues of bonds, the extension of bank circulation must depend upon the refunding of the present issues.

The course of speculation in the stock market has been variable, prices alternately advancing and declining. The volume of business was somewhat larger than in September and was in excess of that of any corresponding month in a number of years excepting only last year, when stock rates aggregated more than $32,000,000 shares and bond sales nearly $150,000,000. This year the sales of stocks fell a little short of 18,000,000 shares and of bonds below $75,000,000.

While there have been many disappointing turns in the market, prices generally have been strong and several stocks have advanced to the highest figures reached this year, some the highest ever touched. It is generally conceded that the conditions of prosperity underlying values justify high prices, nevertheless there is some feeling that the advance which has occurred in recent years has put prices generally on a very high level.

"Lest we forget" has been a popular refrain in the local political campaign now drawing to a close. There are men in the financial world who think it a wise one for campaigns in Wall Street. Going back two years or three years to jog the memory is hardly sufficient to accumulate that experience of the past which will serve as a wise mentor for the future. We are just entering upon the tenth year since the last great period of depression closed. It was in August, 1896, just at a time when the defeat of free silver as a political issue began to manifest itself, that the stock market shook off the lethargy into which adverse conditions had forced it. Since that time there have been temporary setbacks, but no return to depression such as existed in the early nineties. It is only necessary to compare the highest prices of last month with the lowest in August, 1896, to ascertain the extent of the appreciation in values which has occurred in the last nine years.

The following list of stocks in which the advances have been of an extraordinary character, suggests to what a high level prices have advanced.

	Lowest. Aug., 1896.	*Highest. Oct., 1905.*		*Lowest. Aug., 1896.*	*Highest. Oct., 1905.*
Atchison	8¼	90⅞	Missouri Pacific	15	106½
Baltimore & Ohio	12¼	114⅝	Minnesota & St. Louis	12	84¾
Canadian Pacific	55	176	New York Central	88	154¼
Central of New Jersey	87½	235	Norfolk & Western	8	88⅜
Chicago, Milwaukee & St. Paul	59⅞	183	North American	3½	99
Chicago & Northwestern	85⅛	224½	Pullman	138	257¼
Cleveland, Cinn., Chic. & St. L.	19½	101⅝	Reading	5⅞	129⅝
Delaware & Hudson	114½	240¾	Southern, preferred	15½	100¼
Delaware, Lack. & Western	138	498½	Tennessee Coal & Iron	14	92¼
Illinois Central	84⅛	183	Union Pacific	4	135¼
Louisville & Nashville	37⅛	156¾	American Sugar	95	144½
Manhattan	73¼	167½	General Electric	21⅛	190⅞

In some cases the stocks named above represent properties in which there have been reorganizations and a general financial rehabilament. In all it may be said, perhaps, the conditions have so improved that the properties have greatly increased in value since 1896.

That prosperous conditions still prevail admits of no dispute, whatever difference of opinion may exist as to the proximity of the climax of good times. A striking illustration of the situation is found in the statement of the United States Steel Corporation for the quarter ended September 30. In the first place the unfilled orders reported on that date were the largest in its history, amounting to 5,765,377 tons, which compares with 5,597,560 tons on March 31 and with 3,027,436 tons on September 30, 1904.

The net earnings for the quarter exceeded $31,000,000 as against less than $19,000,000 in the corresponding quarter of last year, an increase of seventy per cent. The earnings were $1,000,000 less than in the same three months of 1903, but in that year the earnings were on the down grade, while this year they are increasing from month to month. The following table for each month of the quarter in the last three years shows how remarkable has been the improvement.

MONTH.	*1905.*	*1904.*	*1903.*
July	$9,035,168	$6,344,771	$12,384,647
August	10,986,901	6,202,957	10,918,174
September	11,218,513	6,226,204	9 120,134
Totals	$31,240,582	$18,773,932	$32,422,955

After paying the fall dividend on the preferred stock there was a surplus of $10,672,613, as against $1,312,988 in the same quarter last year. The company appropriated $6,500,000 of the surplus this year for construction, improvements, etc.

The prosperity of the railroads of the country is strikingly shown in the statistics presented in the advance sheets of the introduction of "Poor's Manual of Railroads" for 1905. The gross earnings in 1904 were $68,780,887, or 3.06 per cent. larger than in 1903. Compared with 1902 there was an increase of $256,823,813, or almost 15 per cent. The net earnings increased $46,731,515 over 1903 and $99,213,750 over 1902. The amount paid for interest was $2,300,000 less than in 1903, but the dividends paid increased nearly $21,000,000. The average rate of interest paid was 3.98 per cent., the lowest recorded in twenty years; while the average rate of dividends paid was 3.28 per cent., the highest in the same time. The following table gives a summary of the earnings and interest and dividend payments yearly since 1892:

YEARS.	Gross earnings.	Net earnings.	Interest on bonds.	Dividends.	EARNINGS PER MILE. Gross.	Net.	Expenses to earnings.	Interest paid—on total bonded debt.	Dividends paid—on total share capital.
							p. c.	p. c.	p. c.
1892..	$1,169,036,840	$352,817,405	$229,909,292	$93,862,412	$6,852	$2,068	69.82	4.25	1.93

The Money Market.—Early in the month the local money market was subject to the same influences which advanced rates in September. Call money touched 8 per cent. on October 4. Later the market took on an easier tone. At the close of the month call money ruled at 4 to 5½ per cent., averaging about 5¼ per cent. Banks and trust companies loaned at 4 per cent. as the minimum. Time money on Stock Exchange collateral is quoted at 4¾ @ 5 per cent. for sixty to ninety days, and 4½ @ 4¾ per cent. for four to six months on good mixed collateral. For commercial paper the rates are 4¾ @ 5¼ per cent. for sixty to ninety days' endorsed bills receivable, 4¾ @ 5½ per cent. for first-class four to six months' single names, and 5½ @ 6 per cent. for good paper having the same length of time to run.

New York City Banks.—The net changes for the month shown in the statements of the clearing-house banks include a decrease of $30,000,000 in loans, a decrease of $38,000,000 in deposits, a decrease of $5,000,000 in cash reserves and an increase of $5,000,000 in surplus reserve. For the first time during the year the loan exceeded the deposits on October 7 and again in each of the two following weeks, but on October 28 the deposits were $272,900

in excess of loans. In the first three weeks of the month loans were reduced nearly $45,000,000, but were increased $15,000,000 in the last week. Deposits declined $56,000,000 in the three weeks but increased $18,000,000 in the last week. Deposits are $162,000,000 less than they were a year ago while loans show an increase of less than $500,000. The surplus reserve increased from $7,000,000 to $12,000,000 in October.

FOREIGN EXCHANGE.—The sterling exchange market was controlled by the large amount of finance bills maturing during the month. Rates advanced rapidly until the close of the month and as similar conditions will be operative during the first half of November, no immediate decline in rates is looked for.

NATIONAL BANK CIRCULATION.—Another extraordinary increase in National bank circulation occurred in October, the amount outstanding having increased $8,056,000. The amount of bonds deposited to secure circulation increased from $484,810,890 to $494,017,790, or more than $9,000,000. The 2 per cent. bonds deposited increased nearly $23,000,000, while there was a reduction of $11,000,000 in the 4 per cent. bonds of 1907 and of $2,000,000 in the 3 per cent. bonds of 1898. The National banks also increased the amount of 2 per cent. bonds deposited to secure public deposits of $9,000,000, making the increase in this class of bonds now in the hands of the banks $32,000,000.

NATIONAL BANK CIRCULATION.

	July 31, 1905.	Aug. 31, 1905.	Sept. 30, 1905.	Oct. 31, 1905.

U. S. bonds to secure circulation:				
Funded loan of 1907, 4 per cent	14,197,100	14,931,850	15,494,350	4,094,350
Four per cents. of 1895	4,394,000	4,124,000	4,374,000	4,465,000
Three per cents. of 1898	4,257,440	4,465,940	4,580,440	2,375,540
Two per cents. of 1900	454,089,750	458,676,300	460,362,100	483,182,900
Total	$476,938,290	$482,198,090	$484,810,890	$494,017,790

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, $2,349,500; 4 per cents. of 1895, $5,333,700; 3 per cents. of 1898, $3,760,000; 2 per cents. of 1930, $44,243,600; District of Columbia 3.65's, 1924, $1,332,000; Hawaiian Islands bonds, $1,193,000; Philippine loan, $6,040,000; railroad and other bonds, $1,838,500; a total of $66,090,300.

GOVERNMENT REVENUES AND DISBURSEMENTS.—The expenditures of the Government in October exceeded the receipts by $5,217,000, making the deficit since July 1, $14,791,000. Last year there was a deficit of $4,000,000 in October and of $21,800,000 in the four months ending October 31. Customs receipts are much larger than in 1904, the gain in October being more than $2,000,000 and in the four months, $12,000,000. Expenditures show only a small increase compared with last year.

UNITED STATES PUBLIC DEBT.—The principal feature of the public debt statement for November is the increase of $37,000,000 in the amount of 2 per cent. bonds outstanding, caused by the refunding of $29,000,000 of the 4 per cents. of 1907 and $8,000,000 of the 3 per cents of 1908. Nearly two-thirds of the entire interest-bearing debt now consists of the 2 per cent. issue of 1900. There was an increase of more than $4,000,000 in gold certificates and of $1,000,000 in silver certificates. The deficit in revenues in October is reflected in a decrease of $5,000,000 in the cash balance. The net debt, less cash in the Treasury, increased $6,000,000 and was more than $1,002,000,000 at the end of the month.

UNITED STATES FOREIGN TRADE.—Both exports and imports in September exceeded $100,000,000, a record never before equalled in that month. Exports aggregated $136,000,000, an increase of nearly $2,000,000 over those of September, 1904. Imports were $102,000,000, an increase of $18,000,000. The net balance of exports for the month is nearly $34,000,000 as compared with

$50,000,000 in the previous year. The magnitude of the export movement is indicated in the total of more than $1,102,000,000 for the nine months of the year. That is an increase of $117,000,000 over the same period in 1904 and is larger than in either 1900 or 1901 when the total was exceptionally large. The imports have made the extraordinary record of $872,000,000 or $121,000,000 more than in 1904. The net exports were $230,000,000, which is about the same as in each of the previous three years.

BANKERS' OBITUARY RECORD.

Cook.—David A. Cook, who has been for the past sixteen years National Bank Examiner for Illinois, died at his residence in Ottawa, Thursday, September 21, 1905.

During all these years only five banks in his territory have failed. Two of these resumed business, the third paid the depositors in full, and the remaining two are still in the hands of Receivers, having failed but recently.

Gray.—G. B. Gray, Cashier of the Commercial National Bank, Houston, Texas, died October 10, aged forty years.

Howland.—George Howland, President of the National Bank of Barre, and Vice-President of the Barre Savings Bank and Trust Co., died recently, aged seventy-four years.

Kaufman.—I. B. Kaufman, Cashier of the Citizens' National Bank, New Bethlehem, Pa., died recently, aged forty-two years.

Lord.—Charles V. Lord, President of the Veazie National Bank, Bangor, Me., died September 26, aged sixty-nine years. He occupied a leading position in the business life of Bangor, being actively connected with many of its financial and manufacturing institutions. The bank of which Mr. Lord was President at the time of his death was founded by his grandfather as a State institution, and a member of the same family has always been at its head.

Mallaby.—Leonard B. Mallaby, Assistant Cashier of the Phenix National Bank, died October 20, in his sixty-first year. He had been connected with the bank for forty years.

Somes.—John E. Somes, Vice-President of the Cape Ann Savings Bank, Gloucester, Mass., died September 29. He was born at Gloucester in 1841.

Stuart.—John Stuart, President of the State Bank, La Salle, Ill., died September 30. From 1862 to 1885 he was almost continuously an alderman of the city, and for the past eleven years had been engaged in the banking business.

Warren.—George B. Warren, President of the United National Bank, Troy, N. Y., died October 8. Mr. Warren was born in Troy, June 9, 1828. Both his father and grandfather were Presidents of Troy banks.

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-NINTH YEAR. DECEMBER, 1905. VOLUME LXXI, No. 6.

THE JAPANESE FUNDS deposited at London, Berlin and New York, and amounting to about $170,000,000, are proposed as a proper basis for an "international currency," in a paper published elsewhere in this issue of the MAGAZINE.

As is well known, these funds represent proceeds of some of the loans negotiated by the Imperial Japanese Government during the late war with Russia. That the proceeds of these loans were allowed to remain, either in whole or in part, in the centres named is somewhat exceptional, the usual course being for the borrowing country to take gold from the markets where the loans are obtained. But the Japanese financiers are close students of the international money markets, and they doubtless saw that the withdrawal of large sums within a short period from any of the leading money centres might cause a world-wide disturbance. Also, having heavy purchase to make abroad, they could gradually use the funds, drawing against them as needed. Moreover, the part of the money not in actual use could be advantageously and safely lent at interest, which would inure to the benefit of the Japanese Government.

Apparently, for Japan to allow these balances to remain abroad, while at the same time a new loan was being negotiated, might seem purely altruistic. But probably this policy was really dictated by enlightened self-interest. The Japanese financiers were farseeing enough to discern that it was not a wise policy to withdraw the funds from the great money centres in the face of an impending loan. If the money belonging to Japan and now held in these centres had been withdrawn at any time within the past six months, it would have been less easy for the money markets of the world to have met the Japanese requirements for fresh loans. Thus, by allowing the funds to remain undisturbed, Japan undoubtedly derived a substantial advantage.

But to forego the direct employment of these funds indefinitely will be more than Japan can well afford. To utilize the foreign credits, and at the same time to avoid the disturbance their withdrawal might occasion, would seem to be a desideratum worthy of attention. Whether the plan set forth in the paper referred to is practicable in all its details, or whether it would, under all the circumstances, commend itself to the Japanese authorities—these are matters as to which the Finance Department at Tokyo alone can judge.

While the plan, taken altogether, is decidedly novel, some of its underlying principles are by no means new. The reserves of the National banks in the United States are put to a somewhat similar use; reserves in country banks being deposited in reserve cities, the banks in the latter sending a portion of the deposits to a central reserve city, and the banks here again lending out a portion to their dealers, each step representing a lending operation. The gold-exchange currency systems in operation in the Philippines and in Mexico also have foreign funds deposited abroad as a basis on which exchange may be drawn. Thus, it will be seen, the principle of the plan in question is already in successful use, but its application in the manner proposed is new.

Although there is some indication that the paper circulation of Japan is at the present larger than is required, this redundancy will probably prove only temporary, it having been engendered by financial conditions growing out of the war. When the Land of the Rising Sun once more turns its undivided attention to industrial development, active and profitable employment will no doubt be found for a much greater volume of money than is now in existence in that country. As the so-called international bills, based on the foreign funds, would be substantially gold certificates, they would not be open to the objections commonly urged against an increase in the supply of paper money.

THE REPORT OF THE COMPTROLLER OF THE CURRENCY for the year ending October 31, published in another part of this issue of the MAGAZINE, contains much statistical and other information regarding the progress of the National banks. Most of the recommendations made by the Comptroller relate to the subject of bank examinations, particular stress being placed upon the present method of compensating the examiners by fees instead of paying them a salary, as recommended by Comptroller RIDGELY and all his predecessors in recent years. It is difficult to understand why these suggestions, so manifestly conducive to the greater safety of the National banks, have been treated with indifference by Congress. As this body shows no inclination to heed the Comptroller's advice, perhaps it would be well if the bankers throughout the country would write to their Senators and Representatives and urge them to give this matter their attention.

THE SAFETY OF THE NATIONAL BANKS is adverted to in the Comptroller's report. He points out that of the 7,966 National banks which have been organized, 460 have failed, or 5½ per cent. of the whole number, as against about 17½ per cent. of banks other than National in the same period. The National banks which have failed have paid their creditors about seventy-eight per cent. of the amount due them, while the other banks have paid only about forty-five per cent. Of the billions and billions of dollars they have had on deposit, the National banks have lost for their creditors in the whole period of their existence only about $32,000,000. In the Comptroller's opinion these records in favor of the National banks are mainly, if not entirely, due to the wise provisions and restrictions of the National Bank Act and examination and supervision by the national authority.

Despite the fact that, taken as a whole, the National banks have made a better record for safety than other classes of institutions, the latter seem to be holding their own remarkably well, as the following statistics, furnished by the Comptroller, will show:

The number of State and private banks reporting and non-reporting are now 14,242, with capital of $748,263,149 and deposits aggregating $8,002,662,822. The total number of National, State and private banks in the United States and island possessions is therefore 19,910, with aggregate capital of $1,539,830,380 and individual deposits of $11,786,321,316. The number of National banks in active operation has increased since 1902 by twenty-five per cent., and the figures presented indicate that banks other than National have increased at the rate of about twenty-two per cent. during this period. In 1902 National bank capital represented 52.4 per cent. and deposits 32.3 per cent. of aggregate capital and deposits, respectively, of all reporting banking institutions. The percentage of capital of National banks to capital of all banks in 1905 was 51.41 per cent., and of deposits 32.10 per cent., showing a slight reduction since 1902. Within the period in question the capital of National, State, and private banks increased about fifteen per cent., while the deposits increased approximately twenty-three per cent.

These facts would seem to indicate that while the banks other than National, on the whole, may not offer quite the same degree of security as the National banks, this is counterbalanced to a considerable extent by some other elements that sustain the vitality of the State and private banks. Probably the greater freedom enjoyed by the banks other than National makes it possible for them to render a wider service to the community, but at a somewhat greater risk. But the chief reason for the better record made by the National banks is undoubtedly due, as the Comptroller states, to the wise provisions and restrictions of the National Bank Act and to the examination and supervision by the national authority.

There is no good reason why a State could not exercise a degree of supervision at least equal to that exercised by the Federal Government. Indeed, it is conceivable that the States might, within the comparatively narrow limits of their own domains, keep a more careful watch over the banks than would be possible under national authority. Investigation would probably show that in many of the States, where there is an efficient system of supervision, the State banks will compare favorably with those operating under the National Bank Act. But in some of the States the supervision of banks is very lax, while in a few of the States there is no supervision at all. These facts tend to modify to an important extent the inference that might be made from a first reading of the Comptroller's figures. Of course, it should also be borne in mind that he includes private banks among those other than National. Many of the private banks are strong and well managed, but there are also a considerable number whose capital is so small and whose transactions are of such a character as to render them more liable to succumb in a financial crisis than is the case with the majority of the State and National banks.

The causes that have tended to give the National banks an enviable position with respect to safety are worthy of attentive study. It is believed that with concerted effort by the bankers' associations of the respective States, the systems of State supervision may be made as effective as that exercised by the Comptroller of the Currency over the National banks.

THE PANAMA CANAL enterprise continues to be the subject of much public attention. No decision has been reached at this writing whether a lock canal is to be built at a cost of $130,000,000, or a sea-level waterway at a cost of $230,000,000. Expert opinion seems to favor the sea-level plan, but the longer time required for the completion of the canal under the latter plan will probably cause its rejection.

Although the world has managed to get along comfortably for at least several thousand years without any canal across the Isthmus of Panama, it is regarded as altogether out of the question to delay the completion of this enterprise beyond a period of ten years. This manifestation of hot haste is by some ascribed to real or supposed military and naval exigencies, while others merely see in it a renewed evidence of the restless desire of doing something—anything—and doing it quickly, which seems to be characteristic of a considerable part of the population of the country at the present time.

Undoubtedly the Panama Canal is a great undertaking, and one well calculated to arouse the enthusiasm of the American people; and if it is to be built at all, it would seem to be the part of wisdom that the greatest care be taken to prevent any irremediable mistakes at the outset of the enterprise. The expenditure of some $200,000,000, even in these prosperous times, is not a matter to be treated lightly. It would be a serious error if the canal should be built on a plan that would greatly impair the usefulness of the waterway in meeting the heavy demands that will undoubtedly be made upon it. If the best expert opinion favors the sea-level canal, as seems to be the case, that is the kind of canal that should be built, if it takes twenty years instead of ten, and $230,000,000 or more instead of $130,000,000.

THE REDEMPTION OF SILVER IN GOLD, though not expressly provided for—at least while the silver remains at par with gold, is yet clearly implied in the financial legislation of the country. To go no further back than the Act of March 14, 1900, we find this provision (section 1):

"That the dollar consisting of twenty-five and eight-tenths grains of gold nine-tenths fine, as established by section thirty-five hundred and eleven of the Revised Statutes of the United States, shall be the standard unit of value, and all forms of money issued or coined by the United States shall be maintained at a parity of value with this standard, and it shall be the duty of the Secretary of the Treasury to maintain such parity."

Of course, if silver should go to a discount, as compared with gold, there would be no doubt as to the authority of the Secretary to exchange gold for silver. But Secretary SHAW has not waited for any such contingency. In his address before the last annual convention of the Ohio Bankers' Association (printed in full on another page of this number), the Secretary said:

"Every dollar of our currency, gold certificates, silver, silver certificates, United States notes, Treasury notes, National bank notes, subsidiary silver, nickel and copper coins, are all redeemable in or exchangeable for gold at the will of the holder. This fixes the stability of our currency. Its value does not and can not fluctuate. I grant that there is no express statute for the exchange of gold for silver certificates or for silver itself. Silver certificates are, of course, redeemable in silver.

Silver certificates are simply warehouse receipts for the number of silver dollars mentioned in the receipt, and on the return thereof the coin can be demanded. But the law expressly provides that the Secretary of the Treasury shall maintain the parity of all forms of money coined or issued by the Government. The only way to make a silver dollar, the metallic value of which is but fifty cents, worth one hundred cents in gold, is to give gold in exchange for the silver whensoever and by whomsoever demanded. On this proposition the record has been made so that subsequent Secretaries of the Treasury for all time, whoever they may be, and whatsoever party they may represent, will find it necessary to overrule the decision of at least one predecessor before he can refuse gold in exchange for silver, and until such refusal silver will remain at par. There being but one way to preserve parity in time of pressure, the best way to avoid a time of pressure is to make public the Government's intention to redeem in gold at all times. Thus all forms of lawful money are exchangeable for gold, and National bank notes are redeemable in lawful money. These provisions make our system absolutely safe, and no man need look the second time at any form of our circulating medium to discover its actual or exchangeable value."

Congress has made it the duty of the Secretary of the Treasury to preserve the parity of the silver dollars, leaving the details, to some extent, to executive discretion. There can be no doubt that Secretary SHAW has acted wisely in establishing a precedent for exchanging gold for silver, without waiting for a possible contingency when the silver dollars might be at a discount. In fact, his action has probably prevented any such contingency from ever arising.

HIGH RATES FOR MONEY were a characteristic feature of the financial situation in New York last month, the rate on call loans going up at one time as high as twenty-five per cent. Secretary SHAW declined to come to the relief of the money market by increasing Government deposits with the banks, apparently taking the view that the high rates for money were caused, to a considerable extent, by the demand for loans for speculative purposes. The Secretary declared that he would not intervene unless he was convinced that the legitimate business interests of the country were threatened. That the Secretary is able to exercise that fine sense of discrimination which enables him to tell exactly where business stops and speculation begins, is fortunate for the legitimate business interests of the country, but hard on those who are speculatively inclined. But those who believe all speculation harmful, will be pleased to see the Secretary take this firm stand against it.

At the same time, in refusing to help the speculators out of a pinch, the Government is not altogether logical. By maintaining an inflexible currency system—one that encourages the issue of bank circulation when money rates are at the lowest limit, and by other arbitrary interference with the conditions that should govern the money market, the Government has undoubtedly promoted speculative activity; and why should it not, in fairness, come to the aid of those who have been encouraged, and perhaps misled, by this mischievous policy?

Not only does the present system of bank issues tend toward a fixed volume of paper, but even if the amount in circulation should be redundant, cancellation and retirement of more than $3,000,000 a month is prohibited. Of course, Congress can not determine, with any degree of accuracy, whether $3,000,000 or $30,000,000—or any other definite sum —is the proper amount to retire in any one month. That is a matter to be decided solely by the condition of the money market.

The subject of an elastic currency has been exhaustively discussed in these pages in recent years, and the ground need not be gone over again. There can not be an elastic currency without some provision that will not only induce the issue of notes, but that will compel their retirement when no longer needed.

Primarily, however, the high rates for money during the crop-moving season are not due to the inelasticity of the currency, but to banking methods. This autumnal demand for money is well known and could be provided for by the exercise of a little foresight. Possibly the banks do not find the high rates for money at such times at all distasteful. But still, it is skating on thin ice. A twenty-five per cent. money market does not strengthen the position of New York as a financial centre.

Although, as stated, the currency system is not, primarily, the cause of the annual monetary stringency, it is nevertheless true that the situation is greatly aggravated by the inelasticity of the National bank note issues. The large increase in the circulation, unchecked even by the low rates for money prevailing for some time, undoubtedly led to heavy speculative commitments, and it was the demand for credit to carry these over the period when money naturally flows to the West that caused the November flurry in money at New York.

THE RISE IN THE PRICE OF SILVER within the past few weeks has brought it up close to the parity of the new coinage systems of Mexico, the Philippine Islands, Japan, Panama, and Peru. Fears are entertained in some quarters that the price will go high enough to send the coins of these countries to the melting-pot unless immediate steps are taken to protect them. There is probably little ground for immediate apprehension on this point. Possibly some exports of silver from these countries will occur, but they will represent in a measure the legitimate movement of currency from communities where it is not needed to those where it is needed. The acute need at present seems to centre in Manchuria, where half a million men of the Japanese army, and about an equal number of the Russian, require a large volume of currency with which to carry on their every-day transactions. As the armies are repatriated, this demand is likely to fall off, the silver will flow back to the countries from which it is now withdrawn, and its price will cease to advance.

The demand for silver in Manchuria is not the only factor, however, in the rise in price of the metal during the last three years. When the governments of Mexico and China appealed to the United States at the close of 1902 to co-operate for securing more stable exchange between the gold standard and the silver countries, silver was at its lowest ebb, with a minimum London price of 21 5-16 pence. It recovered somewhat from this decline, but did not begin to advance above a very low average until the summer of 1903, when the American and Mexican Commissions on International Exchange were laboring in Europe to bring about an agreement in regard to the money systems of the Oriental dependencies of leading countries. The advance in the price has since then, in spite of slight interruptions, been comparatively steady, until silver has risen above the average of the ten years ending with 1902 and is close to the price of 1896. The hiatus in the demand for silver apparently occurred in 1902. Governments which had abandoned silver as a standard were then melting up their old coins to meet demands for subsidiary coinage, and former silver countries were abandoning silver for gold. The stock of old coins which could be spared for recoinage seems now to be practically exhausted, and these countries are likely to appear in the market as purchasers of silver. The demand for silver for use in the arts is also increasing. These combined conditions have contributed to an increased demand for the metal, which has naturally enhanced its price.

In spite of this revival of demand, it does not seem likely that silver bullion will go much higher in the near future than the quotations for the last two or three weeks. One of the effective means of averting a demand for silver in excess of the supply will be a wider use of gold currency in the silver countries. Mexico appears to be already providing for this. Her bankers will act wisely if they introduce gold into their reserves and obtain it by the sale of silver coins, if they can do so without loss. This would at once release a considerable quantity of the white metal, while diminishing the permanent demand for it by substituting gold for silver as currency. The mere fact that a great mass of Mexican, Philippine, Peruvian and Japanese silver was hanging over the market, ready to enter it if silver went above the coinage ratio of 32 to 1, would be likely to have a steadying effect and prevent any serious impairment of the currencies of these countries by the melting and exportation of their silver coins. In the last resort, and to guard against future contingencies, it may be found advisable to reduce somewhat the amount of silver contained in the coins, but there will probably be ample time for the governments concerned to examine this question deliberately before taking action.

THE FOREIGN EXCHANGE business transacted at New York is continuously increasing. While, of course, many outside banks and bankers participate in this business, the preponderating share of the country's import and export trade done by New York makes this city the centre of foreign exchange transactions. Until within recent years but little attention was paid to the foreign exchange business, except by a limited number of houses having more or less direct connections abroad. But with the great advance in the volume of the country's exports, beginning shortly after 1893, the banks generally, particularly those in the larger cities, awoke to the importance of foreign exchange as an additional source of banking profit.

That a business of such magnitude, growing up within a comparatively short time, should in the course of its progress develop some abuses, was to be expected. Undue speculation, excessive competition, and other elements that tend to derange the foreign bill market, have rendered still more uncertain a business that already contained sufficient possibilities in that direction. To correct the abuses that have grown up is manifestly desirable, and this may be done now more easily than to allow the present haphazard methods to go on unchecked until they have become so fixed and so formidable as to be practically ineradicable.

In another part of this issue of the MAGAZINE an article will be found dealing with some of the conditions bearing upon the foreign exchange market at New York. Other papers will be presented later on containing suggestions for bringing about greater stability in this important branch of financial operations.

THE SUFFICIENCY OF THE GOLD RESERVE of $150,000,000 for providing for the convertibility of all forms of our currency, under all circumstances, is open to question, especially in view of the additional burden thereupon imposed by Secretary SHAW's policy of exchanging gold for silver. This adds over $500,000,000 of gold obligations which the Treasury must be prepared to pay on demand. On November 1 there were outstanding the following amounts of silver, National bank notes and legal tenders, all redeemable in gold, directly or indirectly:

Silver dollars	$568,228,865
Subsidiary silver	115,554,205
United States notes	346,681,016
National bank notes	524,408,249
Total	$1,554,872,335

There are also some of the Treasury notes of 1890 still outstanding, as well as some minor coins, that are properly a charge on the gold reserve; but the amount of both these items is not large enough to be material.

We thus have over $1,500,000,000 of gold obligations sustained by a gold reserve of $150,000,000, or less than ten per cent. In ordinary times this is, of course, ample; but whether it is large enough to prevent a feeling of apprehension in a crisis like that of 1893, is open to question. But in addition to the gold reserve, the obligations mentioned are backed by the borrowing power of the Government, and the sale of bonds for replenishing the gold reserve is expressly authorized in the Act of March 14, 1900. It was shown, however, in Mr. CLEVELAND's second Administration that the sale of bonds for gold was not effectual in protecting the gold reserve. After trying that expedient, Secretary CARLISLE was compelled to call on a syndicate of bankers for help.

There has been a great increase in the country's gold stock since that time; but, on the other hand, there has been a vast expansion in credit and of National bank circulation, and the silver has now, by executive ruling, been made an additional charge against the gold reserve. It is hardly conceivable that we shall have another demand on the Treasury's gold holdings such as was made between 1893 and 1897. But who can tell?

In a properly-constructed financial system the maintenance of gold payments would be the duty of the banks, not the Government, but owing to unwise legislation a realization of this ideal has been made practically impossible in the United States. As the legal-tender notes and silver certificates were issued by the Government, it can not be expected that the banks will provide for their redemption in gold. Even the bank notes depend, practically, upon the Treasury for their convertibility into gold, being redeemable, in the first instance, only in "lawful money."

Secretary SHAW's action in making gold and silver interchangeable is an event of great importance, and one which ought to go far toward strengthening our currency system.

TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.*

BOOKS, RECORDS AND FORMS FOR THE TRUST DEPARTMENT —*Continued.*

SUNDRY FORMS FOR THE CORPORATIONS DIVISION, TRUST DEPARTMENT.†

In the handling of a trust in which the company acts as trustee under a bond issue, the first entries are made, as already stated, in the Trust Register, such entries giving an outline of the provisions contained in the deed of trust. The next entries that need to be made are in the Tickler—memoranda of interest periods, due dates of the bonds, sinking fund payments, date of record of chattel mortgages, if any, and memoranda of miscellaneous provisions to be attended to periodically. When the bonds are engraved and duly

signed by the proper officers of the company issuing them, they are turned over to the trust company which acts as trustee, and record of their receipt is then made in the Bond Register, a form of which is shown in Figures 39 and 40. At the top of the first page (Figure 39) is given certain general information regarding the bond issue. Under the heading "Bonds Received," a record is made of the bonds turned over to the trustee. As the bonds are authenticated by the trustee and delivered on order of the issuing company, record of such deliveries is made under the heading "Bonds Delivered;" and the last column on the page shows the total number of bonds outstand-

* Publication of this series of articles was begun in the January, 1904, issue of the MAGAZINE, page 31.

†In the preparation of these articles on Trust Company Forms, the writer wishes to acknowledge his indebtedness to the various companies which have been so kind as to supply him with copies of some of their forms, and to Mr. E. E. Newman, of the Cleveland Trust Company, who has looked over the proofs and made many valuable suggestions.

ing at any time. When, in the course of time, any of the bonds are retired, record is made under the heading "Bonds Retired," and the amount of bonds retired is deducted from the last balance shown in the column headed "Bonds Outstanding." Thus, in Figure 39, prior to the retirement of $10,000 bonds on September 1, 1905, the balance of bonds outstanding is shown to be $1,350,000. By the retirement of the $10,000 bonds, the total

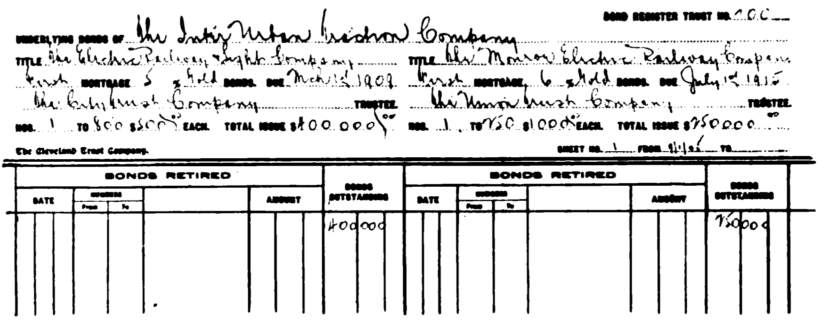

FIG. 40.—BOND REGISTER, SECOND PAGE.

outstanding is reduced to $1,340,000. This record provides the data from which may be learned the serial numbers and denominations of all bonds outstanding at any time and of the bonds remaining unauthenticated in the hands of the trustee. At the left-hand lower corner of the page (not shown in the figure), space is provided for the record of bonds cremated, if any. The advisability of cremating (or burning) retired bonds under any circumstances is a matter of dispute. If done at all, it is done in the presence of officers of

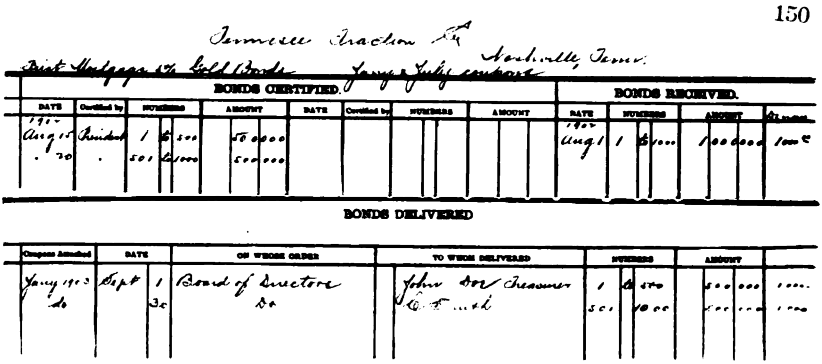

FIG. 41.—BOND REGISTER.

the issuing company and of the trustee company, all of whom sign in duplicate a "Cremation Certificate," their signatures being duly witnessed. The Cremation Certificate reads as follows: "This is to certify that we, the undersigned, have this day, in the presence of each other, destroyed the following-described securities by burning the same to ashes, viz." Thereafter follows a detailed description of the securities burned.

It often happens that there are other bonds underlying a given issue of bonds, and in this form of Bond Register the reverse side of the leaf, shown in Figure 40, is arranged for the records of the underlying bonds, if any.

The entries show that at the time of the issue of the $2,000,000 bonds of the Inter-Urban Traction Company there were outstanding two series of under-

FIG. 42.—BOND REGISTER WITH ABSTRACT OF TRUST DEED.

lying bonds, amounting to $400,000 and $250,000, respectively. As these underlying bonds are retired, record is made in the spaces shown. This book is made on the loose-leaf plan.

Figure 41 shows another form of Bond Register, used by an eastern company. The chief difference between this and the form shown in Figure 39 is that in this form provision is made for the record of bonds certified, in addition to the record of bonds delivered. This form could be improved by the addition of a column showing the amount of bonds outstanding, although such balance may of course be figured from the data given. This form is made up in a permanently bound book, and the opposite folio, which has a simple record journal ruling, is used for memoranda of bonds retired and of any other matters of importance affecting the account. The same form may of course be adapted to use in a loose-leaf binder.

Seal O K R. M. S.
Numbers O K R. M. S.
Certificate O K A. K. R.
Count O K A. K. R.

FIG. 43.—MEMORANDUM CARD FOR PACKAGES OF BONDS.

Figure 42 shows a form of Bond Register which includes space for an abstract of the trust deed under which the bonds are issued. With some slight changes in the wording at the left of the page, this is the form given in the Book of Forms issued by the Trust Company Section of the American Bankers' Association. At the bottom of the page (not shown in the figure), provision is made for a record of the names of the officers who executed the deed of trust for the mortgagor company and for the date when all bonds are reported redeemed. The right half of the page calls for about the same information as that called for in Figure 41.

Before certifying and delivering bonds, the trust company must of course be certain that everything necessary has been attended to. A convenient way of handling the work is to have the bonds done up in packages, and a card like that shown in Figure 43 attached to each package., Before the package is tied up, trusted clerks examine the bonds for particular features and certify to their correctness by placing their initials on the card as shown in

REQUISITION FOR BONDS.

REQUISITION FOR BONDS.

Chicago, Ill. 3/1 1905

To the Blank TRUST COMPANY OF Chicago, Trustee.

Please authenticate under the 1st Mortgage of this Company, dated Sept 1 1905, 1000 Bonds $1000.00 each, Nos. 1 to 1000 inclusive, bearing coupon due Mch. 1, 1906 and subsequent thereto, and deliver the same to the order of John Napoleon, Treas.

the figure. Thus, "R. M. S." has satisfied himself by examination of the bonds that the signature of the proper officer of the corporation and the seal of the corporation appear on each bond, and that the bonds and coupons are consecutively numbered as stated on the card. "A. K. R." has examined the bonds and found that the certificate of the trust company as trustee

Received, New York, Sept. 1 1904, from the BOWLING GREEN TRUST CO., New York, Trustee, 500 Bonds of The Inter-Urban Traction Company $1000.00 each, Nos. 1 to 500 inclusive, duly authenticated by said Trust Company as Trustee, under the First Mortgage of said Company, dated July 1, 1904. Coupon No. 1 of Jan. 1, 1905 and subsequent thereto attached.

The Inter-Urban Traction Co

$500,000.00 By John Doe President

FIG. 45.—RECEIPT FOR BONDS.

has been signed on each bond and that the count of 100 bonds in the package is correct.

Some companies have a blank Requisition for Bonds, which the corporation issuing the bonds is expected to fill out and hand to the trust company when it desires some of its bonds authenticated and delivered. A form for such a requisition is shown in Figure 44. This matter is, however, often attended to by letter or even by telephone, and in any event, the bonds are of course delivered in accordance with the provisions of the deed of trust. When the bonds are delivered, the trust company takes a receipt for them, in a form like that shown in Figure 45.

With reference to the matter of the payee, bonds are either registered or coupon bonds. Registered bonds, strictly so-called, are rarely issued in this country, except by the National Government. Coupon bonds, both principal and interest, are payable to bearer; but provision is usually made for the registering of such bonds as to principal or interest, or both, at the option of the holder. The trust company, acting as trustee under bond issues, must therefore keep a Record of Bonds Registered, a common form of which is shown in Figure 46. Other forms of this record provide a separate column

for the address of the payee, and some provide a column for the name of the officer of the trust company by whom the bonds were registered. If the bonds are registered bonds, the bond numbers should appear in the record in consecutive order; but if coupon bonds, only a few of which may be registered, such order is not important. The book should be made on the loose-leaf plan, to avoid waste of space where only a few bonds of a given issue are registered.

Figure 47 represents a card form for a Record of Bonds Registered. The

cards are kept in a case, an index card for each corporation whose bonds are registered being provided. After the index card are inserted the individual cards in alphabetical order of the names of the holders. This form has the advantage of showing both the transferrer and the transferee of the bonds.

In the handling of coupon bonds the trust company is called upon to act as agent for the payment of coupons as they mature, and therefore has need of a coupon record, a form of which is shown in Figure 48. In Figure 12* has been shown a form combining a coupon record with a coupon ledger

FIG. 48.—COUPON RECORD.

account. As there stated, the combining of the two records is a great convenience and time-saver. Many companies, however, keep the two records separately. It will be seen that the form for the record of bond numbers of coupons paid at the right of Figure 48 is identical with form at the right of Figure 12, and its use has there been explained. It need be added here only that the use of this form is a decided protection against forgeries, as it shows at a glance whether the coupon from a given-numbered bond has been paid. The balance of Figure 48 is self-explanatory. It is not always possible to learn the name of the owner of coupons presented, especially when a large number of coupons comes through another bank, but it is of advantage when possible. Although coupons are payable to bearer, many companies make an effort to learn the name of the person who presents coupons for payment at the counter.

It is often of great advantage for the trust company to have a list, even if not complete, of the holders of the securities. If a refunding plan is to be carried out, or when under the sinking fund provisions the funds held are to be used for the retirement of bonds at certain periods, if a list is at hand, the trustee may communicate direct with the holders of the bonds, instead of relying upon advertisements. If such a list of holders is obtained, however, it must, of course be used with extreme care.

Figure 49 shows another form of Coupon Register, which differs from

CLAY HERRICK.

(*To be continued.*)

BANKS IN IRELAND.—According to a recent report by Consul Moe, of Dublin, the deposits and cash balances in the joint stock banks of Ireland amounted in December, 1904, to $224,418,647, exclusive of $10,764,698, belonging to the Government and other public institutions, deposited in the Bank of Ireland. The year before the amount was $220,934,233. The balances in the post-office Savings banks were $47,920,425, against $46,460,475 the year previous. In the postal savings banks and the trustees' savings banks together there were $59,867,683, against $58,417,466 the year previous. This is the highest amount ever recorded. The increase in the last six months of 1904 was nearly $10,000,000 more than during the previous half-year, but $647,244 below the average semi annual increase for the previous twenty-one half-year periods.

FOREIGN EXCHANGE.

I.

THE FRUITS OF COMPETITION.

If the last half-century is any criterion, it must be evident, even to the casual observer, that the next half-century will see commercial intercourse between the United States and foreign countries grown to fabulous proportions. In our natural resources, our increasing wealth and our inevitable trade development, we have the fundamentals of a creditor nation. Possessing these, and supplementing them by native energy and initiative, it is not in the least prophetic to assert that we, as a nation, are on the eve of a trade development which will carry our articles of commerce in vast quantities to all quarters of the globe. The increased and increasing facilities for this commercial expansion are the forerunners which point the way. The perfecting of these facilities, however, is attended by problems which do not solve themselves: the proprietors of such facilities are both collectively and severally responsible for their fitness, stability and efficiency. Accountability for these qualities cannot be evaded. If unfitness obtains as to any of the facilities which go to make up our commercial propaganda, those responsible for it must either devise and apply remedies, where such are possible, or stand charged with being grossly indifferent to the welfare not only of the immediate business in which they are engaged, but of our general commercial system as well.

In view, then, of the leading role which our foreign bankers* must play in this inevitable trade development, and the haphazard methods which obtain all too generally in the conduct of their business, there is evident necessity for an organization among them designed to control, regulate and give all possible stability to the rates and credit of the exchanges arising from this international commerce. The wisdom of concerted effort in promoting the general interests of any commercial body is not open to question. Associations of this nature are operative in practically all classes of trade and business; they develop and stand for measures which make for the common good; they engender desirable business fellowship; they develop a spirit of co-operation which is beneficial in many nameless ways. Yet, notwithstanding the favorable results which such an organization among them would undoubtedly accomplish, foreign bankers do not seem alive to its necessity. Mutual discussion and action as to their common good, instead of keeping pace with the development and importance of their business, has actually grown less and less, until an attitude of seeming indifference to other than individual welfare is now the vogue. Without an organization having for its purpose the promotion of their interests as a body, without collective discussion as to conditions, ends or tendencies, without business

*The term "foreign bankers," wherever used in this and subsequent articles, is meant to include all banks and trust companies which do a foreign exchange business, as well as foreign bankers proper.

fellowship, without even personal acquaintance, save in comparatively few instances, foreign bankers are apparently imbued with the idea of succeeding individually; forgetting, or so it seems, that they, by the very essentials of their business, are bound together in such a far-reaching network of dependency that individual welfare cannot be safely or sanely promoted except in keeping with the welfare of all.

This principle applies more forcibly to the business of foreign banking than to any other in our entire commercial system. Of this fact we have abundant evidence in the abuses and dangers which a lack of its recognition has produced. The evil effects of abusive or unsafe methods are nowhere more quickly or keenly felt than in the banking world, which truth is its own best argument for measures to prevent them. This individual struggle to succeed has brought into existence many practices which are unsafe, unprofessional and wholly unworthy of bankers. The quoting of rates at whatever point necessary to win counter customers away from a competitor; the prostitution of foreign exchange facilities by using them to indirectly influence business in other channels; the issuing of commercial credits without margins commensurate with the increased risk attendant upon such operations; the cheapening process of seasoning bills too rapidly; the buying and selling at rates which by no calculation can be made to represent a fair profit on their capital and facilities, not to speak of insurance on the risk involved; the cold-blooded strife which continually tempts one to win by fair means or foul—these are some of the fruits of the present competition between foreign bankers. Such practices evolve improper business tactics; they make for lower instead of higher standards; they are destructive, not constructive. Moreover, they tend to deaden the nobler impulses of men, which fact alone, were there none other to condemn them, puts them beyond defense.

This viewpoint, be assured, is not merely that of an idealist or visionary. Indifference to these facts does not dispose of them. Business ideals are quite as essential as business principles, and ultimately hold us to equally strict account. To those, however, who choose to consider the matter from the more material standpoint, there is offered the further fact that this struggle by foreign bankers to win individually not only tends to destroy business ideals, but tempts those concerned to operate in defiance of safe business principles. For it may be laid down as a principle essential to safety, that the foreign banker must, between the bills which he buys and his own which he sells against them, derive a profit which shall not only be a fair return on the facilities and capital which he provides, but insure him against the risk involved as well. It is idle to contend that such minimum can be safely abridged. But being unable individually to command this minimum of safety, the foreign banker is continually under pressure either to disregard it and meet all competitive quotations, or to allow his prospective customer to seek someone who will. Faced thus on the one hand by these competitive quotations and on the other by the necessity of producing results, it would be strange, indeed, if he did not often find himself paying first-rate prices for second-rate bills, extending his credit limits beyond the dictates of prudence, and in many other ways making compromises with his sense of what is safe. Whoever contends that such duress is in any way compatible with sound banking must, to say the least, have abiding faith in the resistive power of human kind. Some foreign bankers, because they refuse to abridge this minimum of safety, have, in the main, given up the purchase of commercial bills, and now seek profit in other and safer channels. Those who, under the present competitive system, still purchase them in great qualities without adequate profit to themselves, may fare well enough as long as the financial skies are clear. But it is improvident banking none the less, and there needs only the inevitable financial crash to rudely awaken them to the danger lurking in such a policy. When the inevitable loss comes, as come it will, the foreign department will be forced to make good by drawing on a general surplus fund to which, in all probability, it has not aforetime contributed its quota of profits. Financial strength may make this kind of foreign banking practically safe, but no amount of capital or surplus can make it fundamentally so.

The lack of fair profit in the present competitive method of trading in foreign exchange has another equally serious result: it tempts the foreign banker to resort to the doubtful expedient of seeking, through an immense speculative turnover, the returns which he should derive from regular and more legitimate channels. This expedient is harmful in that its effect is always to accelerate, and often directly produce, artificial fluctuations in rates which properly should be left to their natural course. Further, it is harmful in that it gives rise to the speculative broker—a business genus sprung up in these later years, whose office is, through the medium of open contracts, to pit his market judgment against that of the banker. If he has any other, it is not apparent. The necessary propaganda of foreign exchange does not require him; he neither trades on orders nor draws his own bill, and cannot, therefore, have any legitimate requirements for remittances. In the speculative propaganda, however, this type of broker is a very important factor: he enlarges the field of operating by buying and selling when no one else will. Often it is upon his initiative entirely that market movements are begun; after which he, along with the banker with whom he competes, adds his quota of artificial impetus to the fluctuation in progress. Anyone who compares the rate fluctuations of the past few years with those of former times will find convincing evidence that the influence of this speculation is not assumed. Besides, such terms as "short," "long," "reaction," "oversold," "short covering," "unloading," and others which apply to highly speculative markets, have become a part of the foreign banking vernacular; which is in itself proof that this speculative turnover is no negligible factor. Nor does it require any genius to observe that the countenance given these operations is not growing less, and therein lies cause for reflection. If men are to play with the world's greatest and most vital commodity much as boys play with marbles; if regard for the commercial sacredness of money lays no restraining hand on speculation in it; if it is to be bought and sold with little or no thought as to its office or its power, then truly we are approaching evil days.

But, laying aside the right or wrong of this speculative turnover, there remains the question of its efficancy. The assertion is here ventured that the foreign banker who attempts it, after all his extra work, after all his increased endorsement liability, after all the anxiety attendant upon it, will at best show no greater actual gain at the year's end than a fair and stated profit on a comparatively small turnover would have afforded him. Indeed, he cannot tell when he really has made a profit; for what appears as such at the year's end may, through operations less fortunate, be suddenly offset by a corresponding or greater loss. Considering the certainty of his calculations being often thwarted by factors which he cannot foresee or prevent, the possibility of wresting profit from such adverse odds by means of speculation seems almost nil. The violent fluctuations in foreign exchange rates during the past ninety days attest it. Local call money rates, continental rates on London, foreign bank rates, stock speculation, arbitrages, sterling loans, the cotton market, international bond dealings, the commitments of the speculative broker, wars and rumors of wars—these are a few of the factors which directly or indirectly influence the rates for foreign exchange. The foreign banker who attempts a speculative turnover in such a maze of probabilities and emerges at the year's end with profits would, to say the least, be a speculative genius of the highest order.

It must be evident, even to the layman, that a great majority of the trading methods which obtain at present in the foreign exchange market tend to irregularity of rates—and that in a market where stability of rates should be a cardinal virtue. It is not contended that these disturbing factors can all be eliminated, or that rates would not still fluctuate greatly if they were. But in view of the fact that the necessary volume and the variety of the foreign exchanges are in themselves productive of sharp fluctuations, it is sheer business folly to allow these fluctuations to be increased in range and frequency by unnecessary means. The concerted effort should be to neutralize them as much as possible; the least we can do is to leave them to their natural course. This is a plain duty which every participant, whether banker or broker, owes to the welfare of the very important business in which he is engaged. Those of us who have to do with making the local market owe it additionally to the merchant and to the interior banker, whose operations in foreign exchange arise out of the legitimate and vital commerce of the country. Surely no one believes it fair ever to subject them to making their purchases or sales in an artificial market, when they have no alternative.

It is not supposed that anyone will seriously defend the existence of the abuses and dangers herein set forth, or deny that their influence makes for looser and lower business standards. Nor can it be easily imagined that anyone, seeing the chaos resulting from it, will contend that our present system of trading in foreign exchange is the best that can be devised. In this business, as in all others, there are safe and orderly principles which must be discovered and made operative; there are moral standards which must be created and severally maintained. To lose sight of these facts is to invite the very abuses of which complaint is so often made. The present need is not for the foreign banker who can devise mere schemes for his personal aggrandizement, but rather for the one who realizes that his individual welfare cannot be separated from that of the entire body of foreign bankers; and who, therefore, feels that to redeem the foreign exchange business as a whole from the chaotic state to which it has come, is to redeem it thus for himself.

FRANKLIN DICKEY.

NEW YORK.

[This series of articles will be continued in following numbers.]

Kansas Bank.—John Q. Royce, State Bank Commissioner, recently received a report from the Comptroller at Washington showing deposits of $61,000,000 in Kansas National banks. In State banks the deposits are $57,000,000, making a total of $118,000,000, an increase of $8,000,000 in twelve months.

NATIONAL BANK EXAMINATIONS.

The following article on National bank examinations was prepared for The Bankers' Magazine by Geo. M. Coffin, Vice-President of the Phenix National Bank, New York city, and formerly Deputy Comptroller of the Currency. Mr. Coffin is a native of Charleston, S. C. After being educated there and engaging in business for some years, he entered the office of the Comptroller of the Currency, under Mr. Trenholm, in May, 1886, and was soon after made Chief of the Division of Issues. In 1888 he was transferred to the head of the Reports Division, the duties of which included the supervision of examiners' reports. He greatly improved the system of handling the work coming under his direction. The present form of examiners' reports was adopted by Comptroller Lacey at the suggestion of Mr. Coffin. In March, 1896, Mr. Coffin was promoted to be Deputy Comptroller, on the unsolicited recommendation of Comptroller Eckels. Mr. Coffin's work in the Comptroller's office extended over a period of twelve years, during which he enjoyed the confidence and esteem of Comptrollers Trenholm, Lacey, Hepburn, Eckels and Dawes. In 1898 Mr. Coffin resigned as Deputy Comptroller, to accept the Vice-Presidency of the Phenix National Bank of New York.

There has been much recent discussion and criticism of the present system of National bank examinations, and as its defects can be cured only by the action of Congress, agitation of the subject now is timely in view of the recent assembling of that body. Time and again, various Comptrollers of the Currency, realizing the inefficiency of existing law, have recommended to Congress the necessary changes; but their appeals have fallen on deaf ears, and so far they have been unable to overcome the inertia of that legislative body.

The law under which National bank examiners are appointed and their powers and duties defined is contained in Section 5,240 U. S. R. S., which provides that "suitable" persons shall be appointed by the Comptroller "with the approval of the Secretary of the Treasury," with power to make thorough examinations into all the affairs of every National bank, and if necessary to examine the officers and agents thereof on oath; also that they shall make full and detailed report of the bank's condition to the Comptroller. One restriction is that no director or other officer of a bank shall act as its examiner.

For over forty years the law has stood substantially as it was first enacted, except as to the compensation of examiners. In 1864 the law provided pay at the rate of $5 for each day employed in the examination and "two dollars for every 25 miles" traveled in the performance of the duty. Now the remuneration is by a scale of fees graded from $20 up to $75 for each bank, according to its capital stock, except for banks in reserve cities and the Territories, fees for which are fixed by the Secretary of the Treasury, upon the recommendation of the Comptroller.

From an experience of eight years (from 1888 to 1896) as Chief of the Reports Division in the Comptroller's Office, and two years as Deputy Comptroller, the writer is of opinion that there are two serious defects in the law as it now stands, and these are:

I. The *system of fees* out of which the examiner must pay the cost of his traveling and hotel expenses. Not more than one bank can be examined on the same day and none on Sundays or holidays, while the making up of reports and the correspondence consume considerable time, so that in some fields the net compensation is not sufficient to remunerate a competent man. The most pernicious feature of this fee system is its tendency to make the examiner hurry through his work and slur it by not giving sufficient time to each bank, in order to earn the maximum of fees in a minimum of time.

II. The *method of appointment*, which opens the door to the baneful effects of political influence on positions which should be filled with men selected solely with regard to their character, ability and general fitness essentially necessary to the important and delicate duties required. In the banks which they examine, the rules of tenure during good behavior and promotion for merit almost universally prevail, and there is no good reason why the same rules should not apply to bank examiners. Instead, with every change of administration, changes are made without due regard to the good of the service under the pressure of political or other influence, with the result that some of these positions are filled by men entirely unfitted by previous training for their important duties, who are therefore not "suitable persons," as the law prescribes. As an illustration of the results of the present system are a few examples taken at random from actual occurrences of recent years.

1. A bank which had been repeatedly examined during some four years by several examiners appeared from their reports to have $100,000 capital and $20,000 surplus, both unimpaired, with some assets regarded by them as "slow" but probably good. A slight run caused it to close its doors, and it was found that out of some $300,000 loans and discounts $250,000 had been "borrowed" by three directors and was absolutely worthless, while next to nothing was realized from the remaining assets.

2. A bank in a reserve city was examined in the usual course, and the examiner's report estimated a loss of some $20,000 on its entire assets. A month or two after, the directors, of their own accord, wrote off over $50,000 of losses, leaving quite an amount to be written off later. At the same time there was and had been in the bank for some time a large loan in which some of the directors were interested, but no comment was made until the Comptroller's attention was called to the matter by a director, when at the next examination this loan was severely criticised.

3. A bank with $200,000 capital and $60,000 surplus was duly examined and the examiner's estimate of loss was about $20,000. The failure of another bank soon after called the attention of a director to this bank, and, making a personal examination of its affairs, he discovered worthless assets to the amount of $160,000, which were provided for by a fifty per cent. assessment on the shareholders and writing off the entire surplus.

In each of these cases the examiners were men of intelligence and undoubted integrity and regarded as doing good work. An hour's discreet inquiry outside of the bank by the examiner in each case as to standing of borrowers, in accordance with his instructions, would have put him on the track of learning the true value of the assets. In one case the examiner did not even make inquiry of the officers of the bank as to value of questionable assets. One examiner, not now in the service, when the writer suggested that discreet inquiry be made outside the bank under examination as to any doubtful assets, as prescribed by his printed instructions, expressed the opinion that it would not be proper to do this.

These examples are sufficient to demonstrate the defects of a system under which they are possible. While examiners, as a rule, are men of high character and do much good and effective work, still the lack of training in some of them and the fee system are both obstacles to the performance of better service. There can be no question that the sound condition of the great majority of National banks is due more to their good management by honest and able men than to examinations; and if such managers were disposed to speak frankly from their experience of examiners they had known, we would hear some interesting and amusing accounts of incompetency. But good bankers are not disposed to incur the examiner's ill-will by reporting his shortcomings, which, on the other hand, are only too welcome to the crooked bank manager.

Further proof of the banker's lack of confidence in Government examinations is the increasing number of special examinations of banks made by audit companies and expert accountants, which cost much more than do those of the Government. Frankly stated, the Government examinations do not now command the respect and confidence of which they should be fully worthy. Congress therefore, ought to do two things to improve this service:

1. Provide compensation for examiners by salaries (instead of fees), allowing also actual cost of traveling and hotel expenses.
2. Place examiners under civil service rules, as are now all officers and clerks employed in the Comptroller's office, from the Deputy Comptroller down, making their selection and promotion depend entirely upon character, special training and general fitness for this important work.

No one with any experience of human nature will imagine for a moment that any system of examinations can be devised which will completely prevent bank failures, but if there are defects in the existing system, the Government, which undertakes the supervision of these banks, owes it to depositors and shareholders to correct them with the least possible delay, and to provide a service fully equal to any now furnished by private enterprise, free from any suspicion of sinister political influence.

The recent disastrous failure of a National bank in Pennsylvania with political affiliations and the dismissal of the examiner for incompetency is the latest and strongest argument for such changes in the law as are urged in this article.

GEO. M. COFFIN.

Prosperity in South Carolina.—"The State," published at Columbia, S. C., in its issue of October 1 presents letters from nearly all the banks of the State regarding business conditions. It summarizes these letters as follows:

"The condition indicated in South Carolina at this time is one of remarkable and general prosperity. Ten cent cotton, even with a short crop, means 'good times' for the farmers and that means good times for the merchants and banks. The effect is seen as well in the crowded dormitories of the schools and colleges, reports from which have already been published in 'The State.'

The remarkable thing in these letters is the statements which occur in very many of them that the farmers are large depositors. Another thing is the fact several times mentioned that the demand for farm lands is good and that the prices of good farms are steadily advancing."

In 1895 the total deposits in the banks of South Carolina were $13,065,240, compared with $28,183,940 in 1905.

A PRACTICAL TREATISE ON BANKING AND COMMERCE.

LOANS.

DIFFERENCE BETWEEN THEM—LOANS TO VARIOUS CLASSES—TO FARMERS—TO GRAIN MERCHANTS—WAREHOUSE RECEIPTS OF VARIOUS KINDS AND THE LAW RELATING THERETO.

When a banker has acquired sufficient information as to persons and securities to enable him to part with money with reasonable assurance of its return when promised, he may enter upon that difficult field of operations which will prove either the making or the marring of him, viz., the conducting of Loans and Discounts. It is obviously in this department of a banker's business that the connection between Banking and Commerce is most clearly shown, and most constantly in operation. The public at large has to do with banking corporations as issuers of circulating notes and receivers of deposits, but in making loans and discounting bills, banks have to do with the Commercial classes almost exclusively. It is well, however, at this stage, for the sake of clearness to reiterate that the word "commerce" is used throughout this work in a broad and comprehensive sense. Besides the merchant, properly so called, the whole class of manufacturers is included, inasmuch as they require to *sell* what they produce and to *buy* their raw material. For the same reason, the whole farming class is included; for the farmer appears on the market both as a *seller* and a *buyer*. He sells his products, and he buys his machinery and materials.

Banking is distinguished from money lending in that it requires an active "*turn-over*"; hence loans for periods of years are entirely foreign to its scope, as, also, are loans of money which, even if made to a business firm, cannot be repaid periodically out of its active operations. To loan a manufacturer money to build or equip a mill is a violation of prudent banking, even though the security may be good. The whole operation of loaning money on security of land, buildings, ships, or mines, belongs to another category of business than banking. This has been so recognized by the Legislature of Canada in granting charters to banking corporations, that they are absolutely prohibited from lending money on immovable property.

This, therefore, being understood at the outset, let us enquire what line of loans are called for by the operations of commerce? On what ground, and with what documents of security, can a merchant or manufacturer properly approach a banker when he desires the use of the bank's money?

DISTINCTION BETWEEN LOANS AND DISCOUNTS.

This question opens up a variety of considerations, the first of which is the distinction between loans and discounts.

Though both classes naturally arise in the dealings of bankers with commercial customers and both are exactly alike in that they draw money from a bank, there are fundamental differences between them in their origin, nature, and practical working. The main difference is this. When a merchant or manufacturer has made a sale of goods and received in return a written promise to pay for them at a definite time, he is in possession of a valuable document, which he may offer to a banker for *discount;* that is, he will ask the banker to give him the amount promised in the document, deducting the interest thereon. This deduction of interest beforehand is what the word "discount" means. The merchant, of course, signs his name to the document, and this signature, in law, operates as a guarantee of payment, should the other party not fulfil his promise.*

The banker, therefore, having a document founded on a sale of merchandise (for value received, as the technical expression is), has a *prima facie* assurance that merchandise of sufficient value to ensure payment has passed from the seller to the buyer. This transaction between the banker and his customer has a close analogy to the purchase and sale of a commodity; the bill being the commodity, and the net proceeds of the discount the price paid for it. And it has been contended by an able writer on banking that this is the proper mode of viewing it; that is, as a *sale with guarantee;* and that the proper title of all such transactions in a banker's books and elsewhere is not "Bills Discounted," but "Bills Purchased." This practice has been adopted by some bankers, and it has the advantage of making a clear distinction between two classes of transactions, the confounding of which on this continent has worked very serious mischief.

A banking loan is a different matter in several respects. To begin with, it is, as a rule, applied for at an earlier period. The customer has no promise from a buyer to offer; in fact, in many cases, he has not any salable goods in possession when he negotiates the loan. What he desires is to borrow the money in order to *produce* the goods; or, in some cases to *bring the goods* to his warehouse. The transaction, to go to the root of it, is *borrowing money*, instead of *selling a document.* It is important to keep the distinction clear; but this is more difficult on this side of the Atlantic than in Great Britain, owing to the prevailing practice of having borrowings represented by promissory notes, made in the same form as those given for a purchase of goods.†

---

*This is the usual course of business. But there are cases, especially in large financial centres, where a banker or bill-broker agrees to relieve the merchant from being so called upon. In that case, the merchant when endorsing the bill, adds the words "without recourse," meaning (and this is the legal effect of the term), that he is not to be called on for payment in case the bill is dishonored. The banker, of course, charges a higher rate for such a transaction.

†The notes which represent borrowings are often treated by Canadian banks in the same manner, and entered in the same books as trade bills discounted, although the transactions they represent are radically different. The practice in England and Scotland renders such confounding of loans and discounts impossible. Loans or advances are made by means of what bankers here call "overdrafts;" the balance of the current account of the customer being allowed to run on the debit side for a specified term, up to a specific amount agreed upon. Such debit balances are usually secured. The security, however, is not given by the simple endorsement of a promissory note, but by a formal guarantee duly signed, sealed and delivered; or it may be by a mortgage of such property as the law allows to be taken as a basis for bank advances. This mode of making advances is called in Scotland the "Cash Credit" system. But the system of English banks is practically the same. Both agree in establishing a distinction between money lent to a customer and trade bills discounted for him.

When a loan or standing credit is proposed to a banker, there arise these practical considerations: For how much? For how long? For what purpose wanted? On what security? The two first can be answered in a few words, but with regard to the two last, long explanations may be needed; and much consideration and consultation before an answer can be given. Here the difference between a loan and a discounted bill becomes very apparent; for when a trade bill is offered, three of the foregoing questions are answered by the bill itself. For it tells for how long, for how much, and on what security; and that without a word spoken by the customer who offered it. But when he desires a loan, a customer must explain himself on every one of these points, and be prepared to answer questions as to the two last.

There are as many varieties of loans as there are of *occupations* in the district where transactions arise and each variety has its own special conditions. All these may be summed up in the five following classifications:

1. Loans connected with Agricultural pursuits, and with the dealing in their products.
2. Loans connected with the products of Woods and Forests.
3. Loans connected with Manufacturing industries, as well as mining, fishing, etc.
4. Loans arising out of the Importing trade; and the dealing in manufactured articles.

All these are distinctly commercial.

But there are also loans to various classes of corporations, such as railways, power companies, municipalities and Governments; or, to capitalists other than merchants or to private individuals. Before proceeding to consider in detail the loans indicated, one general remark may be made with regard to all, viz., that *every legitimate loan from a banker will rest on a foundation of salable merchandise or collectible debts.* Loans, credits or advances that rest on fixed property, no matter how safe they may ultimately be, are not such as a banker can properly make, or should be asked for.

Even when security or real estate may lawfully be taken by a bank, as is the case in England and Scotland, it is always understood that merchandise must be possessed by the borrower to cover it. The property is not considered as the foundation of the loan, as is the case with a mortgage company or capitalist, but as *collateral.* The means of ordinary repayment are always considered, and this must consist of merchandise.

This being premised, various classes of banking loans will now be brought under review, for the purpose of pointing out the conditions which govern them respectively, and the proper mode of dealing with them.

Loans Connected With Agricultural Pursuits.

First amongst these come loans or advances to the cultivator of the soil, the farmer. Loans to farmers are the common staple of the business of branches of banks in rural districts, and the accusation made against chartered banks, that as a rule, they refuse to make such loans, is without foundation. But a bank cannot be expected to lend money to every farmer who applies for it.

If a farmer wishes, as he sometimes does, to borrow money to build a new house, or to make a payment on his land, or to improve his barns and stables, still less if he wants to buy more land, he cannot be surprised if the banker refuses to lend, for none of these will furnish the means within themselves of repayment. That could only be had by forcing the guarantor, or by selling the borrower's property. Further, if the applicant is known to be dilatory, or unsteady, or unreliable in his representations, he cannot expect a banker to part with his money in his favor, no matter how good a guarantor he offers. The fact that a farmer's land is heavily mortgaged, or that he does not own the property at all, are circumstances very unfavorable to borrowing, but if the farmer is a man of respectable character whose promise can be relied upon, and can offer a good guarantor, he may reasonably ask for a loan from a bank for the following purposes:

1. He may require an advance for the purpose of buying seed, preparing his land for a crop, meeting the expenses of gathering in and harvesting, all having in view the resulting crop.

2. A farmer whose principal occupation is breeding horses, cattle or sheep may reasonably ask, and the banker may reasonably lend, as much money as will buy such stock as will, when fattened, *be sold off the farm.* In this case as in the former the money loaned will furnish from within itself the means of repayment. But, obviously, more care is needed for this kind of business than the other.

3. In a dairy district a farmer whose principal product is butter or cheese, or raw material for making them, will, as a rule, need to borrow less than one who has to depend on his crops, for returns of dairy products are more rapid. But he may reasonably ask an advance for such a moderate amount as is required to buy fodder at certain seasons, or as is represented by the amount accumulating at his credit in the books of a cheese factory. (Care, however, is needed here, for this money is sometimes not forthcoming.)

But in the two last cases a banker needs to watch that his money is not used to buy stock *for the working of the farm;* and that cannot be sold without detriment. If he does, although the position is not so unpleasant as if his money were locked up in the land, he will still have a dead loan or lock-up on his hands, and commonly require to obtain payment by an unpleasant amount of pressure. In all dealings with farmers the banker will need to take care that his money is not used *to pay debts.* Almost every farmer has other creditors. Hence it is reasonable that a farmer shall be asked to state his position, what he owes, when it is due, and whence will come the funds to pay it.

In a country district a banker will naturally acquire such a knowledge of a farmer's business as will enable him to judge whether he is borrowing a reasonable amount, considering the size of his farm, or the extent of his dairy operations.

Some bankers, whose whole experience has been with city business, have a dislike to lending money to farmers, as a slow and unprofitable style of business. But in the rural parts of Canada, and the United States, as well as in England, dealing with farmers has generally been found desirable and satisfactory. Loans to farmers rarely result in loss if made with any degree of prudence, and often result in borrowers becoming steady depositors.

Passing from the farmer himself to the man who deals in his products, we are introduced to a class of loans of a more extensive character. Indeed, the operations of the men who buy the products of the farmer are so large as to have given rise to several well-marked lines of subdivision. One class confine themselves to *grain*, others to *cheese and butter*, others to *wool*, others to *cattle*, others to *hogs*.

The country storekeeper, indeed, may buy from the farmers about him more than one of this variety of products; but at the next move, there will be found a differentiation. The larger grain merchants buy grain and nothing else, the wool merchants wool, and so on with the rest. The dealings of each of these classes with a banker are of a character involving a different style of risks, and demanding a distinct line of treatment.

THE GRAIN TRADE.

The most important of these is the grain trade.

This trade is one of large transactions, quick returns, considerable risk, and small average profits; with possibilities, however, of heavy gains at one time, and heavy losses at another. It is a trade, too, in which large speculative operations are constantly going on in great centres. It affords fewer instances than any other of permanent prosperity, and more instances than any other of men who after a lifetime of dealings aggregating millions have ended their career in poverty. Yet no trade renders more valuable service to the country. The movement of crops to market sets all the wheels of commerce in motion. The men, therefore, who perform this service are entitled to honorable recognition in the community, and to a considerate hearing from a banker when they apply for advances. But in dealing with such applications the banker will need to exercise all the faculties of judgment, caution and experience he possesses. The accounts of grain merchants are among the most *profitable* and, in many respects, the most indirectly advantageous that a bank possesses. They can be carried on with much facility in Canada, owing to the admirable system of circulation the country enjoys. The turn-over is large, the returns rapid, and the advances give rise to numerous bills of exchange, both inland and foreign, yielding collateral profits. Yet a prudent banker will never forget that the business is accompanied with unusual risks. When, therefore, a grain merchant proposes to obtain advances, the first consideration will be how much *capital he has of his own*, and in what shape that capital exists. For the amount of such capital and the shape in which it is held furnish an exact index to the amount he may reasonably borrow. No man has the right to hold grain on borrowed money, without having his own capital as a margin against loss to the lender. How much per cent. this margin should be, will depend on the season and the state of the trade; but, obviously, the higher the price, the higher per cent. should be the margin. In such circumstances there is more room for a fall, and more chance for a holder and even the bank itself to lose. When, therefore, a banker knows with reasonable assurance what his proposed customer's capital is he can calculate how much it would be reasonable to lend him.

But this is only the first step. It would be most unwise for a banker to lend any man money to buy grain, unless the borrower had a good knowledge of the trade. Yet this is often wanting. The grain trade is the easiest of all trades for a man to venture upon. If he has a little money he can open an office anywhere and announce himself a buyer of wheat. If in the country, farmers will certainly come to him and sell for cash. If in a city he can go on Change like any other man, or employ a broker to do it, buying and selling to his heart's content, as long as he has money to put up a margin. He needs no warehouse, no store, or factory, or water power, or, in fact, anything whatever such as men need in other lines of business.

This facility is the special danger of the business; and experience proves that when a man enters upon it in this style he will, before long, be ruined.

The *temperament* of the borrower is a matter to be considered. The grain trade is a dangerous one to a man of sanguine temperament. A man of this sort who has borrowed, let us say, $10,000, from a bank, may, instead of buying that amount of wheat, be drawn into putting up the money as a margin for his share in some deal or "corner." This has happened, as will be seen in a subsequent chapter. The risk of $10,000 worth of wheat he could legitimately carry; but the risk of ten or twenty times as much would plunge him far out of his depth.

Even if he avoids speculation, a sanguine man is apt to persist in holding for a rise when he ought to sell, and pay off his advances. To a banker's remonstances, such a man always has a plausible theory, which to him is a demonstration, why prices must inevitably advance. He therefore holds on until a loss is incurred sufficient to ruin him. An example of this is also given.

It may indeed be laid down as an axiom that none but a cautious man is fit for the grain trade. He should also be a man of moderate ideas, and willing to sell when a sound profit can be made. One of the few survivors of the heavy grain dealers of former years, in this country, has attributed his being able to stand while others were falling to the fact he was always willing for *some other person* to take the *last cent of profit.*

Another important point, but one often lost sight of, is that a grain merchant needs to have a certain line of *customers;* exactly as a dry goods merchant has. The man who buys grain in the market for all the world in general, so to speak, without any idea who is going to buy *from him*, is one of those whose mercantile course is generally short. Such buying does not deserve the name of trade. It is simply speculation. All successful grain merchants buy with a definite purpose in view. They have a connection, at home or abroad. They know that certain varieties are wanted by certain people, or in certain markets. Commonly, or frequently, they have orders from millers or distant merchants. Millers who are perfectly good, but whose operations are not large enough to go into a wide market themselves. These are legitimate customers. So are the merchants of foreign cities like Liverpool, London, Glasgow or Antwerp, who maintain a constant correspondence with Canada indicating their particular wants, and not seldom making firm offers to buy. These are all legitimate forms of outlet to a grain merchant on this side the Atlantic. But the man who buys without any specific purpose, and sends his stock to a foreign market on consignment, trusting to the mere chances of the market, and having no idea who will be the real buyer of his stock, is pursuing a road which sooner or later leads to ruin. Of this also a conspicuous example is given in a subsequent chapter.

Loans on Warehouse Receipts.

The amount of a reasonable credit to a grain merchant has already been discussed. It remains now to consider the important question of *Security.*

Except for such moderate amounts as may be advanced to the grain dealer of a small village—generally the storekeeper—the time when personal guarantors or endorsers were commonly offered has long passed by. The amounts are too large for such a form of security to be taken. But as there was necessity for the trade to be carried on, and an almost universal necessity for bank advances to do it, special forms of legislation were devised by which the grain itself could be pledged as security. The ordinary chattel mortgage was seen to be ineffectual, as too slow in operation, and too formal in character for so quick-moving a trade. A special style of pledge was therefore legalized, giving the same rights and powers as a mortgage, yet of so simple a character that men of business could use it without the intervention of a lawyer. This special style of pledge was a *warehouse receipt*, and was so framed as to give the bank advancing upon it, in theory at least, the same power over the commodity as if he had it locked up in a warehouse of his own, always supposing the document to be *genuine*.

The idea of such security has been developed as circumstances arose by amending and enlarging enactments, some of them anything but reasonable, but in its original and natural form the document was an acknowledgment by the keeper of a warehouse that he had so many bushels of grain in his possession, which he would deliver to the owner when called for, or to his order. Such receipts were natural as between the owner of grain and the owner of the warehouse, and were in use long before there was any special legislation about them. The legislation was to enable the owner of grain to make a legal *transfer* to a bank, not of the document merely, but of title to the grain itself, so that a banker would become as much the owner of the grain as if he had bought it; with, however, two important limitations. The banker was debarred from selling the property without giving ample notice and could of course only sell what would cover his advance. Both were most reasonable. But, on the other hand, the banker's right to the grain, after making an advance upon it, was made absolute as against the claim of any other creditor, even of the party who had sold the grain, in case he had not been paid for it. This provision was absolutely necessary to the safety of loans made on the security of such property, and the whole trading community have acquiesced in them as being for their advantage. For they well know that the more perfect the security, the more easy it is to obtain advances on it, and, other things being equal, the more moderate the rate of interest.

The law contained another provision of a perfectly equitable nature, viz., that the document could only carry such powers when it had been lodged at the time the advance was made. It was seen to be unreasonable that a man should be able to pledge grain to a banker as security for an old debt, and that such banker should have a preference even over an unpaid vendor.‡ The law intended that the loan secured by the pledge should always be connected with the pledge itself.

But as time went on, and circumstances transpired, two amendments were made. The most important of these was that a man might pledge grain (and other specified agricultural products) *when stored in his own warehouse;* and that this pledge, when properly transferred, should give a banker the same rights as the receipt of a warehouse keeper would give. This was to meet the case of grain buyers in towns and villages, where no public warehouses exist, and whose purchases were therefore stored in warehouses or sheds of their own. It had reference also to the dealers in other agricultural products, such as cheese and pork, who, even in large cities, almost universally store their goods in warehouses which they either own or lease.

‡There is, however, nothing to prevent a borrower from giving a warehouse receipt to a bank as security for an antecedent debt if he pleases. But in that case the document will give the bank no right to hold the grain as against other creditors. The banker can only take the receipt for what it is worth.

The other amendment was intended to obviate the difficulty experienced by dealers of small capital in complying with the clause that a warehouse receipt to be effectual must be lodged at the time of the advance. The dealer in this case must have bought and warehoused the grain before getting an advance upon it. But many dealers had not capital enough to do this, or had their capital in other forms than money. They required money at the very outset, especially when deliveries were active and heavy. Formerly such men would get these preliminary advances on the security of an endorser; but as this became necessarily difficult, the law was amended so as to allow a warehouse receipt to be a valid security even if lodged after the advance was made. But only with the proviso, that the *borrower must, at the time of getting the advance, have given a written promise to lodge the warehouse receipt in question.* The law thus carried out its original intention to make a distinct connection between the advance and the security.

These amendments were all intended to facilitate borrowing by grain dealers (and dealers in other products of the farm) by enlarging the power to create warehouse receipts and use them as security. But bankers have long ago found out that though the amendments enlarged the powers of borrower and lender, they were far from enlarging the security in the same proportion.

For the difference in the security afforded by a receipt given by a warehouseman for property stored with him by another, and the pledge of a man who has stored goods in his own warehouse is almost inconceivable. In the one case, the banker has the written assurance of a perfectly independent party, that the grain exists, that he has got it for safe keeping, and that he will not part with it except on the return of the document. In the other case, there is no independent person to give the assurance. But this is the feature that gives its peculiar value to such a document. Take this away and the banker has absolutely nothing but the honor of the borrower to fall back upon, guarded of course by the same penalties as are applicable to the man who holds the property of another.

There is as much difference, therefore, in point of real security between an independent warehouse receipt and a man's own pledge, as there is between a man's own promissory note, and a good trade bill. Yet such pledges have their value. If the grain exists, a pledge will hold it against creditors; though it is always in the owner's power to remove it. And as to whether the pledged grain exists, there is the point that to write out a pledge for grain that does not exist is so deliberate a fraud that it is perhaps as rare as forgery.

The same lack of real security (though there is an appearance of it) is found in the taking of a written promise to lodge a warehouse receipt. The only value it has is, that, if when a warehouse receipt comes to be pledged, that receipt will hold the grain although the advance was not made simultaneously with its delivery.

MEMORANDA ON WAREHOUSE RECEIPTS.—EXTRACTS FROM AN ADDRESS ON OWN RECEIPTS AND PLEDGES, TO THE STOCKHOLDERS OF THE MERCHANTS' BANK.

As the productions of the country became more and more diversified, it was important to grant facilities for enabling banks to lend money to purchase them.

So from time to time, the scope of the act, i. e., The Warehouse Act, was enlarged. And the intention of the Legislature in these successive enlargements is clearly shown by the title of one of the acts. It was called "an act granting additional facilities in commercial transactions," a very proper title, too.

So when hogs became an important farm product, pork was included; then hides and wool, then, as maltsters and distillers were large purchasers of farm products, maltsters and distillers were included. Finally, the matter was summed up in general terms of the products of agriculture, the forest, the mine, the sea, lakes and rivers, together with live and dead stock, in addition to which manufacturers were allowed to borrow on pledge of goods of their own manufacture, or raw material therefor.

Down to the very last revision of the Warehousing Act, the great object was kept in view of affording facilities for obtaining money on goods, wares and merchandise; without which the true value of all our products would never be obtained, and the wheels of commerce and industry stand still.

The men who sat on the various Parliamentary committees on this subject were nearly all men of business, who had a practical acquaintance with the needs of the country. They knew the vital importance of affording banking facilities to the dealers in the country's products, and from time to time, as the act was reconsidered, they kept this object steadily in view. Yet they showed their wisdom in the safeguards with which they surrounded the business, and particularly with regard to the right of an unpaid vendor. And to show how equitably the matter is worked, though transactions of this kind have amounted to millions every year, and to hundreds of millions in all, the claims that have been made by unpaid vendors have amounted to an infinitesimal fraction.

But now a mode of looking at this class of business has arisen (through decisions of Judges) which will, if carried on, go largely to defeat the object intended by the Legislature. This is founded on what I must consider to be an extraordinary misconception. It has been asserted in various quarters that the general principle of legislation is that banks shall not make advances on goods, wares and merchandise, and that the cases in which it can be done must be taken as exceptions to a general rule. This idea is not only contrary to the fundamental rules of all banking, but to the spirit and intention of all the foregoing legislation. To legislate that banks shall not make advances on goods, wares and merchandise as a general rule, would be equivalent to a legislation that a saw miller shall not manufacture deals as a rule, or that a dry goods merchant shall not, as a rule, sell cotton, or that a farmer, as a rule, shall not grow wheat.

The very essence of the business of a banker is to advance on goods, wares and merchandise, either in the shape of discounting bills representing goods sold, or making loans to enable goods to be purchased or held. And the whole object of the Warehouse Receipt legislation is to enable such advances to be got at the cheapest rate by basing them on actual merchandise. The restrictive clause of the Act is, that advances on goods shall not be made except as provided by the Act. But the Act itself opens the door to a wide enough range of transactions, and the limitation plainly means that banks shall not lend on goods as a pawnbroker does, or keep warehouses to store them in as the Bank of Germany does, and also that a storekeeper or a dry goods merchant who buys goods on credit shall not have the power of pledging them for bank advances. It is true that the Act gives the lender of the money, when he advances on goods, a right to them, even over an unpaid vendor—a very strong provision, and showing how strong was the desire of Parliament to facilitate loans on merchandise. But it is safeguarded by restricting the operation of the Act to cases in which, as a rule, there *is no* unpaid vendor. Any other limitation, I venture to think, should always be interpreted reasonably and liberally, and with due regard to the great object intended to be accomplished by the Legislature, and to the vast importance of such advances to the country at large in its increasing development.

An Act of Parliament, as we know, may be variously interpreted; in fact, it is impossible to frame clauses that are not susceptible of divers interpretations. If such interpretations are of a nature to hamper and embarrass banks in assisting merchants to handle the products of the country, they cannot be for the good of the community, but very much to its detriment.

G. H.,

Former General Manager Merchants Bank of Canada.

FOREIGN CAPITAL IN MEXICO.—Consul Harris, of Chemnitz, reports vast opportunities for the investment of foreign capital in Mexico, citing the fact that a great deal has gone in already and that the fields are favorable. He quotes the "Chemnitz Tageblatt" as follows:

"During the past thirty years the industrial development of Mexico has been the development of the banking system and foreign capital in that country. In 1876 there was only one bank of any importance in Mexico. To-day there are thirty-three under Government supervision which have the privilege of issuing notes to twice the value of the paid-up capital The National Bank of Mexico is permitted to issue notes to the extent of three times its capital, but has never made use of the privilege. The thirty-three banks already referred to have a capital of about $100,000,000, with $20,000,000 in reserve. At the present time there are representatives of Canadian banks in Mexico for the purpose of studying the industrial conditions of the country. In 1904 over $3,000,000 English capital was invested in the mining region of Durango.

Mexico unquestionably presents a favorable field for foreign capital. Aside from the gold, silver, lead, copper and coal mines, located in the central and northern States of the Republic, petroleum has been found in various parts of the country to such an extent that it promises to become an efficient substitute for wood and coal. The forests of Mexico, at least those within reach, are being destroyed as rapidly as those in the United States and Canada. The great expense attendant upon the importation of coal has forced the price of fuel for factories and railroads up to the highest limit, so that wherever possible the former are utilizing water power to the fullest extent, and the latter are beginning to construct their locomotives for petroleum."

REISSUE OF COUNTERFEIT $10 UNITED STATES (BUFFALO) NOTE.—The counterfeit of the $10 United States note, check letter C, has been reissued with a marked improvement in the color and form of the figures in the Treasury number. They more nearly approximate the genuine. The number of the note under inspection, which passed in New York city, is 15233105. There has been a slight improvement also in the color of the back, which is not so dark as the first issue. The back plate number of this note is 54.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

NOTICE OF PROTEST—NOTICE GIVEN TO A FIRM.

New York Supreme Court, Appellate Division, First Department, May, 1905.

TRADERS' NATIONAL BANK *vs.* FRANK CAZEMORE JONES.

The firm of C. F. Beckwith & Co. of Scranton, Penn., executed two promissory notes payable to the order of one Jones, a member of that firm. The notes were first indorsed by Jones and then by the firm of Beckwith & Co. and were delivered before maturity to the Traders' National Bank. The notes not being paid at maturity, notice of protest was served upon the firm. With it, under separate cover addressed to Jones, in care of the firm, was a notice of protest directed to Jones which the firm were requested to forward to him. Beckwith, the other member of the firm, immediately mailed such notice of protest to Jones at the latter's regular address for receiving mail in the city of New York.

In an action brought by the Traders' National Bank against Jones to charge him as indorser upon the notes, it was

Held, that while Jones was presumptively an accommodation indorser for the firm which made the notes and while the firm could not, therefore, in their own behalf, give him a valid notice of protest, the firm could and did, on behalf of the plaintiff bank, and as its agents, give such a notice of protest.

Semble, that the service of the notice of protest upon the firm of which Jones was a member, had the plaintiff alleged that Jones was such member, would alone be sufficient to charge Jones with liability as indorser;

LAUGHLIN, *J.*: The action is brought to recover of the defendant, as indorser, the amount of two promissory notes and protest fees. The question presented for determination is whether the evidence shows as matter of law the giving of due notice of protest to the defendant. Both notes were made at Scranton, Penn., by the copartnership firm of C. F. Beckwith & Co. of that city. They were payable to the order of the defendant, indorsed by him and then indorsed by the makers and delivered to the plaintiff before maturity at whose bank they were payable. The notary who protested the notes was called by the plaintiff. His testimony is sufficient to show due presentation, demand, dishonor and protest, but concerning the mailing of the notice of protest to the defendant it was indefinite and uncertain both as to time and address and conflicted with other evidence presented by the plaintiff. He testified that he addressed the notice to the defendant at some place, the number he could not remember, between 60 and 70 Central Park West, city of New York, and that he obtained the defendant's address from C. F. Beckwith, one of the makers; but he does not expressly state that he addressed the envelope according to the address he received from Beckwith. Beckwith was also called by the plaintiff and gave the defendant's residence, place of business and other addresses for receiving mail at that time, none of which, however, was Central Park West, and further testified that the defendant had had an apartment in Central Park West, but does not specify the time or place. He was not asked concerning the address that he gave the notary. Beckwith testified that the defendant was a member of his firm. It may be that the jury would have been justified in finding that the notary addressed the notice to an address given by Beckwith, the defendant's partner, and that this would be a full compliance with the duty of exercising proper diligence to ascertain the post office address and notify the indorser of the dishonor of the paper which is a condition precedent to his liability. (Spencer vs. Bank of Salina, 3 Hill, 520; University Press vs. Williams, 48 App. Div. 188; Requa vs. Collins, 51 N. Y. 144; Gawtry vs. Doane, Id. 84, 92.) The court, however, was not warranted in attempting to reconcile this conflict of testimony and in deciding the question as one of law. The verdict, therefore, cannot be sustained upon the direct notice to the defendant.

The notary gave due and timely notice of protest to the defendant's firm, who were both makers, and, in form at least, subsequent indorsers. If the plaintiff had alleged that the defendant was a member of the firm I am of opinion that he would be chargeable with knowledge of the dishonor and with the notice given to his firm as indorsers (Gowan vs. Jackson, 20 Johns. 176; Halliday vs. McDougall, 22 Wend. 264, 272; see, also, Neg. Inst. Law [Laws of 1897, chap. 612], §§ 170, 185, 186); but this was not pleaded, and, since it was not an issue, there is no justice or propriety in seizing upon this item of evidence, although admitted without objection that it was not pleaded, for the purpose of holding the defendant. The verdict should stand or fall upon the issues as tried. The notice to the firm, however, was received either on the day the note fell due or on the morning of the day following. With it came under separate cover, addressed to the defendant, care of the firm, a formal notice of protest by the notary in behalf of the plaintiff directed to the defendant, and the firm were requested to forward the same to him. Mr. Beckwith testified that immediately upon receiving this notice he inclosed it in an envelope and addressed it to the defendant at his regular place for receiving mail in the city of New York, which was in care of his counsel on this appeal.

The notary, who was a member of the bar of Pennsylvania, testified that the statutory law of that State required that the notice of protest to an indorser, when served by mail, be addressed either to his residence or place of business or last place of residence. If this testimony is to be construed literally it indicates that the rule in Pennsylvania is more restricted than the requirements of the law merchant or of the Negotiable Instruments Law as adopted in this and many other States, including Pennsylvania (Laws of Penn. of 1901, No. 162), in that under them, if the indorser has not designated an address on the instrument, notice to any address where he is accustomed to receive mail would be sufficient. (Ransom vs. Mack, 2 Hill, 587; Van Vechten vs. Pruyn, 13 N. Y. 549, 555.) This question would not have arisen had the plaintiff's counsel introduced the statute instead of taking the opinion of the attorney, which was manifestly not only erroneous on the law, but, as he construed the law, it is doubtful whether the notice would be sufficient. We think that the verdict may be saved, however, upon the theory that this evidence was incompetent to prove statutory law (Code Civ. Proc. § 942; Hynes vs. McDermott, 82 N. Y. 41, 54; Lincoln vs. Battelle, 6 Wend. 475; Chanoine vs. Fowler, 3 id. 173), and even if the plaintiff, having introduced it, is bound by it, it is insufficient to establish that the law of Pennsylvania on this point is different from the law merchant and should be so construed as to be consistent therewith.

Although it presumptively appears from the face of the notes and the indorsements that the defendant was an accommodation indorser for the makers (Smith vs. Weston, 159 N. Y. 194; National Park Bank vs. German American M. W. & S. Co., 116 id. 281), and, therefore, would not be liable to them and consequently they could not in their own behalf give him a valid notice of protest (Neg. Inst. Law, § 161; Cabot Bank vs. Warner, 92 Mass. [10 Allen] 522; Harrison vs. Ruscoe, 15 M. & W. 231; Stanton vs. Blossom, 14 Mass. 116, 120; Story Prom. Notes [7th ed.], § 303), yet they could on behalf of the bank and as its agents give the notice by forwarding it immediately as was done. (Neg. Inst. Law, §§ 162, 163; Sewall vs. Russell, 3 Wend. 276; Chanoine vs. Fowler, supra; Lawrence vs. Miller, 16 N. Y. 325; Smith vs. Poillon, 87 id. 590; Eagle Bank vs. Hathway, 46 Mass. [5 Metc.] 212; Rowe vs. Tipper, 13 C. B. 249; Chapman vs. Keane, 3 Ad. & El. 193; Lysaght vs. Bryant, 19 L. J. C. P. 160.)

It follows, therefore, that the judgment and order should be affirmed, with costs.

INGRAHAM and McLAUGHLIN, *JJ.*, concurred; PATTERSON, *J.*, concurred in result; VAN BRUNT, *P. J.*, dissented.

LIABILITY OF STOCKHOLDER—STOCK HELD AS PLEDGEE.

United States Circuit Court of Appeals, Sixth Circuit, May 11, 1905.

HULITT *vs.* OHIO VALLEY NATIONAL BANK.

As a general rule, the question of liability for an assessment on the shares of an insolvent National bank depends upon who was the actual owner of the stock when the operations of the bank were suspended.

For the purpose of the National Banking Act, the pledgor of stock not transferred on the books is to be regarded as the owner until and unless something further transpires which operates to transfer the ownership to another.

Defendant bank held stock of a National bank as collateral security for a note at the time the maker of the note died leaving it unpaid. Subsequently defendant caused the stock, which was indorsed in blank by the pledgor, to be transferred on the books of the bank to one of its employes who was irresponsible, and who paid no consideration for the transfer, but in fact held the stock for defendant. Defendant then made an indorsement on the note of a sum as proceeds of a sale of the stock made on the day of the transfer, and proved the balance due on the note against the estate of the pledgor, and was paid dividends thereon.

Held, that such transaction operated to transfer the ownership of the stock from the pledgor's estate to defendant, which was liable for an assessment thereon on the subsequent failure of the issuing bank.

In error to the Circuit Court of the United States for the Southern District of Ohio.

Before LURTON, SEVERENS and RICHARDS, *Circuit Judges*.

SEVERENS, *Circuit Judge*: This suit was brought by the plaintiff in error, who is the Receiver of the First National Bank of Hillsboro, Ohio, to recover an assessment levied by the Comptroller of the Currency upon the shareholders of the bank on account of their extraordinary liability to creditors, the bank having become insolvent. The defendant in error is charged as the owner of twenty shares of the stock of the Hillsboro bank. To the petition the defendant filed an answer making a general denial of the plaintiff's allegations in respect to its ownership of the stock. The case was heard in the court below upon an agreed statement of facts, which is embodied in a bill of exceptions, and is as follows:

(1) On March 18, 1893, one Overton S. Price procured a loan from the defendant in the sum of ten thousand ($10,000) dollars, giving his promissory note therefor, together with certain collateral securities recited in the body of said note, a copy of which note, with all indorsements thereon, is hereto attached, made part hereof, and marked "Exhibit A."

(2) On December 25, 1893, said Price deceased, leaving said note at that time past due and unpaid. No payments have ever been made upon said note, except as hereinafter set forth. There is still a balance remaining due and unpaid upon said note.

(3) On June 18, 1894, the defendant made a formal transfer of the pledged stock of the First National Bank of Hillsboro, Ohio, and the Dominion National Bank of Bristol, Va., to one Henry Oetjen, an employe of the defendant, who was pecuniarily irresponsible. Said shares were transferred upon the books of said banks, respectively, and new certificates therefor issued in the name of said Oetjen, and delivered to him on July 7, 1894. No money consideration passed to the defendant for said transfer, and none was expected, nor did the defendant at that time credit said note with any sum by reason of said transfer, nor was any credit at that time indorsed upon said note or entered in defendant's books. Said Oetjen indorsed in blank the certificates of stock which were issued to him.

(4) Said transfer was made upon the understanding and agreement between said Oetjen and the defendant that the former should hold said stock as security for the indebtedness of the estate of said Price upon said note, applying any amounts which he might realize from said stock as credits upon said note; that in pursuance of this agreement and understanding said Oetjen subsequently paid the defendant, on account of said note, a sum of money received by him from said Dominion National Bank on account of a reduction in the capital stock, and also the amount of certain dividends which he received from time to time upon said Dominion National Bank stock, until the same was finally sold by said Oetjen, whereupon the proceeds of said sale were likewise applied by him upon said note.

(5) That on February 19, 1896, the defendant prepared proof of claim against the estate of said Price, and at that time, believing the stocks transferred to said Oetjen to afford a reasonable security for said Exhibit A to the amount of Forty-four hundred and eighty-four ($4,484.00) dollars, indorsed the credit for that amount upon said note, which appears upon Exhibit A, and filed its proof of claim against said estate for the balance of the indebtedness upon said note; that no consideration was paid for said credit

and the same was not entered upon defendant's books; that all dividends arising upon said distribution of the estate of said Price were applied upon said note.

(6) That said First National Bank of Hillsboro, Ohio, continued to do business until July 16, 1896; that from the date of said transfer the stock in said bank at all times appeared on the books of said bank in the name of said Oetjen; that there was nothing on the books of said bank at any time to connect this defendant with said stock or to indicate that this defendant had any interest whatever in the same; that defendant at no time performed any act of ownership of said stock, or exercised, or attempted to exercise, any of the rights of a stockholder of said bank or of the Dominion National Bank of Bristol, Va., unless the acts above set forth were, according to legal intendment, of that character. Defendant caused said shares to be transferred to said Oetjen because it was unwilling to assume the risk of the statutory liabilities of a stockholder in respect to said shares.

EXHIBIT A.

"$10,000. X. Cincinnati, O., March 18, 1893.

"Ninety days after date I promise to pay myself or order, ten thousand dollars for value received, payable at the office of A. C. Conklin & Co., having deposited or pledged as collateral security for the payment of this note,

50	shrs. Citizens' Nl. Bk. Stock, Hillsboro, O.................shrs.	$100
20	shrs. First Nl. Bk. Stock, Hillsboro, O....................shrs.	100
40	shrs. Hillsboro Gas Light Co. Stock......................shrs.	50
30	shrs. Dominion Nl. Bk. Stock, Bristol, Va................shrs.	100
100	shrs. Bk. of Camden Stock, Camden, O....................shrs.	100
200	shrs. Bk. of Lynchburg Stk., Lynchburg, O...............shrs.	50

"And I hereby give to the holder thereof full power and authority to sell or collect at my expense all or any part or portion thereof, at any place, either in the city of Cincinnati, or elsewhere, at public or private sale at holder's option, on the non-performance of the above promise, and at any time thereafter, and without advertising the same or otherwise giving to me any notice. In case of public sale, the holder may purchase without being liable to account for more than the net proceeds of such sale.

"O. S. PRICE."

Indorsed: "O. S. PRICE."

"Forty-four hundred and eighty-four ($4,484.00) dollars paid on account of within note June 18, '94, being proceeds of sale of 30 shares stock Dominion Natl. Bank and 20 shares of stock 1st National Bank of Hillsboro, O."

The court gave judgment for the defendant, to which the plaintiff excepted. No opinion was filed by the trial judge, but counsel assumed, and we suppose correctly, that the conclusion of the court was that the defendant was not the owner of the shares. That is the essential question in the controversy. The proposition that, in the absence of exceptional circumstances, the question to be settled is, who was the actual owner of the stock at the time when the operations of the bank were suspended, is established by repeated decisions of the Supreme Court. Recent decisions to this effect are: Pauly vs. State Loan and Trust Co., 165 U. S. 606; Rankin vs. Fidelity Insurance, etc., Co., 189 U. S. 242.

In dealing with the present case we are limited to the facts contained in the agreed statement. We can infer no other facts unless they are necessary inferences from those agreed. It has been often said that that which is necessarily implied is as much a part of the agreement as if it were written into it. And this rule of interpretation is applied to the most solemn instruments, inter partes, as well as to statutes. But the implication must be one arising from legal intendment, and not merely a deduction of fact.

For the purposes of the banking act the pledgor of stock is to be regarded as the owner until and unless something further transpires which operates to transfer the ownership to another. The pledgee may, without himself becoming liable to the contingencies of ownership, have the stock transferred in blank by the pledgor, as was done in this case; but in such case the pledgor does not cease to be the owner in the sense intended by the law, and until the ownership is in some way divested from the pledgor the latter continues to stand for the stock.

In a suit of this character we are required to have regard to the relations of those who are concerned with the stock and their dealings with it, and to ascertain who, as between such persons, is the actual owner of it, provided, of course, there is no transfer to the pledgee on the stock book of the bank, and no fraud upon creditors is found in their conduct. From the facts agreed, we think that probably, upon the authority of Anderson vs. Philadelphia Warehouse Co., 111 U. S. 479, it should be held that the defendant did not become the owner of the stock and so liable to be assessed on account of it, down to the time of the transaction which occurred during the settlement of the estate of Price in the probate court. After the death of the pledgor, Price, and on June 18, 1894, the defendant, transferred the stock to Oetjen without consideration given or expected. It was transferred to him on the stock book of the Hillsboro bank. Oetjen indorsed the new certificates in blank. He was an employé of the bank and irresponsible, and in fact the defendant continued to control the stock notwithstanding the formal transfer to him.

While the Hillsboro National Bank was continuing to do business, and on February 19, 1896, the defendant filed a claim against the estate of Price, in the proper probate court, for the amount due on the note, less the sum of $4,484, which it had indorsed as a sum "paid on account of within note June 18, '94, being proceeds of sale of 30 shares stock Dominion Natl. Bank and 20 shares of stock 1st National Bk. of Hillsboro, O." The date, June 18, '94, was the date of the transfer of the stock it made to Oetjen. It is to be inferred that the claim was allowed, as it is stated not only that the claim was filed, but "that all dividends arising upon said distribution of the estate of said Price were indorsed upon said note." Afterwards, on July 6, 1896, the Hillsboro bank ceased to do business.

It is stated in the agreed statement of facts that the transfer of the stock to Oetjen was made upon the agreement and understanding between him and the defendant that he should hold the stock as a security for the indebtedness of the estate of said Price upon the note; but it is not stated that this agreement was made known to the representative of Price's estate. Nor is it stated that the act of the defendant in applying dividends from the estate upon the note was made known to said representative of the estate. And the maxim applies, "De non apparentibus et non existentibus eadem est ratio."

Counsel for the defendant in their brief advance the following argument:

"It is said that this indorsement was evidence tending to show that the defendant had intended the transfer to Oetjen to be a sale absolute, and not merely by way of security. If that claim were sound, still the court has found that there was no intent of that character."

But the statement of the facts could not be affected by a finding of the court any more than could a special verdict. It is, however, a mistake to say that the court found any facts. The record states that "the court, upon consideration of the pleadings, evidence, and arguments of counsel, finds the issues joined in favor of the defendant." But this means nothing more than that the court found the issues of law in favor of the defendant. The case in all particulars is like that of Supervisors vs. Kennicott, 103 U. S. 554, where the court said:

"It is true that in the judgment as entered it is stated that the court found the issue in favor of the plaintiffs; but that, when read in connection with the bill of exceptions, is no more than a declaration that the court found the law to be in favor of the plaintiff on the case as stated."

In presenting and obtaining the allowance of its claim, the defendant represented that it had sold the stock and that it had appropriated the proceeds to the payment of the note, and the adjustment of its claim was made upon that footing. When it is said in the agreed statement "that no consideration was paid for said credit," meaning the indorsement of the $4,484, the interpretation must be that no other consideration "was paid" than such as the transaction itself imports. And granting that, notwithstanding the defendant's representation, there had in fact been no actual sale of the stock, we think the result of the proceedings in the probate court upon the defendant's representation and claim was, as between the Price estate and the defendant, to transfer the ownership of the stock to the defendant for the consideration represented in the indorsement, and that the defendant could not thereafter claim against the estate that it had not appropriated the stock in satisfaction pro tanto of the sum due on the note. It may be that the representative of the Price estate might once have had some remedy to recover the stock, but he has made no claim for relief against the transaction, and it is manifest that he would now have no motive for doing so.

The stock has become worse than useless. Whatever the undisclosed motive of the defendant may have been, we think the legal import of what was actually done was that it acquired the stock, and that the estate of Price no longer held it either for the benefits or burdens of ownership. No one could believe that the defendant when its claim was adjusted by the probate court expected to make further answer to the estate for this stock, or intended anything else than a conversion of it into its own property at the price for which it reported the stock sold. It would be unjust for it now to cast what has proved to be a disadvantage upon the party whom it dispossessed. The burden of the assessment must fall upon one of these parties, and we think the Receiver has made the right selection.

The judgment should be reversed, with costs, and direction given to the court below to enter a judgment for the plaintiff for the amount of the assessment, with interest from May 27, 1897, the time when it became payable.

PAYMENT OF FORGED CHECK—LIABILITY OF DRAWEE BANK.

Supreme Court of Tennessee, June 3, 1905.

FARMERS & MERCHANTS' BANK *vs.* BANK OF RUTHERFORD.

A bank on which a forged check is drawn in the name of a customer, whose signature is well known to it, is negligent, where the Cashier does not examine the signature closely, but passes the check, relying on previous indorsements.

Where a check is in the ordinary form, and is payable to bearer, so that no indorsement is required, a bank, to which it is presented for payment, need not have the holder identified, and is not negligent in failing to do so.

An indorser of negotiable paper does not warrant to the drawee the genuineness of the maker's signature, but such warranty only extends to subsequent holders in due course of trade.

Where the drawee bank received and paid a forged check, which had been previously honored and indorsed by other banks, and held the check for 30 days or more, it thereby admitted the same to be correct, and was estopped to deny the genuineness thereof, or to avoid, as to the indorsing banks, the effect of its act in accepting and paying the check.

The drawee of a check, by accepting the same, makes himself a guarantor thereof.

WILKES, *J.*: The bill was filed by complainant bank against the defendant bank to recover from it the amount of a forged check, which was drawn on complainant bank, for $54.75, and, after being indorsed by the defendant bank and others, was presented to, and paid by, complainant bank.

The check was in the words and figures following:

"Dyer, Tenn., Octo. 28, 1903.

Farmers' & Merchants' Bank:

Pay to J. L. Freeman, or bearer, fifty-four 75/100 dollars. For cotton.

Johnston Merc. Co."

The ground upon which the recovery was sought was that the Bank of Rutherford was negligent in cashing this check for a stranger without identification, and thereafter indorsing it, so as to give it circulation, and to mislead complainant bank, the payee, to presume it was genuine, and pay it to the holder.

The check, after being indorsed in the name of J. L. Freeman, was cashed by the Bank of Rutherford, and indorsed by it, and passed to the Jackson Banking Company, then to the St. Louis Trust Company, Continental National Bank of Chicago, and Fourth National Bank of Nashville, and by the latter bank was sent by mail to complainant as the drawee bank, and paid by it. The complainant bank at the time of payment wrote or stamped on its face the words: "Paid Nov. 7, 1903. Farmers' & Merchants' Bank, Dyer, Tenn."

The Cashier of complainant bank states that, when the check was presented for payment, he did not examine the signature closely, and, if he had, he would have detected that it was a forgery, but that he was thrown off his guard by the indorsements of the defendant bank and others.

It held the check, thus cashed and marked "Paid," some thirty days, when the forgery was discovered, whereupon it entered up a credit upon the account of the mercantile company to balance the charge made against it when it was paid, and thereupon brought suit against the Bank of Rutherford for the amount of the check.

The chancellor gave judgment for the amount, and the Bank of Rutherford has appealed and assigned errors.

It is insisted that the case is governed by the principles announced in People's Bank vs. Franklin Bank, 88 Tenn. 299.

In that case it was held that a bank that negligently cashed a forged check, purporting to be drawn upon another bank, and had upon its indorsement of such check received payment of the drawee bank, is liable for the amount paid by it upon discovery that the check is forged, and the fact that the indorser bank is unable to give the name of the person who presented the forged check, to whom it was paid, or to positively identify such person, is sufficient evidence of negligence to make it liable, and that the drawee bank will not be precluded from the recovery by the fact that, lying upon the indorsement of the indorsing bank, it paid the check without investigation as to its genuineness.

If this case is not distinguishable from that in some essential feature, and that is affirmed as sound, it must be considered as determinative of the present case.

As an original proposition we would not assent to the correctness of People's Bank vs. Franklin Bank, and think the great weight of authority is against it, and that it is contrary to one of the most important rules regulating the law of negotiable instruments, to wit, that the drawee of the check should be held to know the signature of its customers, and to pay only such paper as has a genuine signature.

But we think there are two important distinctions between People's Bank vs. Franklin Bank and the recent case.

The first is that in that case the payment was made direct by the drawee bank to the bank that negligently cashed the check, and, after indorsing it, put it in circulation, and, as against the indorsing bank, there was no consideration received by the drawee bank, while in the present case the check had passed through a number of hands, and had been paid, not to the alleged negligent bank, but to the Nashville bank.

In the present case the drawee bank is not suing the Nashville bank, from which it received the check, and to whom it paid the money, but is suing a remote indorser, with whom it had no transaction, except as a remote indorser.

In other words, the Rutherford bank received none of the money of the complainant bank, but it received the amount of the check from the Jackson Banking Company. It is the Nashville bank which has received the money of the complainant bank for the worthless paper cashed by it.

In addition, the check in People's Bank vs. Franklin Bank was payable to the order of Morgan, and was indorsed in the name of Morgan; the indorsement being also a forgery. In order to cash this check, it was necessary that it be indorsed by Morgan, and that he should be identified; and it was incumbent on the bank, when it cashed it, to see that the indorsement was made, and that it was genuine.

But in the present case the check was payable to Freeman, or bearer. It was not necessary to be indorsed at all, and was indorsed, as the proof shows, simply as a compliance with the custom of the Rutherford bank. It was not only not necessary that it should be indorsed, but it was not necessary that Freeman, the holder, should be identified, and hence it was not negligence in the bank to fail to have him identified, and it was a bona fide holder, if it paid to bearer, with or without indorsement.

In People's Bank vs. Franklin Bank identification and a genuine indorsement were not only material, but absolutely necessary, and a failure to require them was negligence. In the present case neither indorsement nor identification was necessary, and a failure to require them was not negligence.

Liability in People's Bank vs. Franklin Bank is predicated upon negligence, which does not exist in the present case.

On an examination of the record we are not able to find any negligence on the part of the Rutherford bank, while that of the complainant bank is apparent and glaring; and, if a comparison is allowable, the negligence of the drawee bank was much the greater.

The mercantile company was its customer, and had been for years. Its place of business was next door to the complainant bank. Its signature was well known to complainant bank. The Cashier says he did not examine the signature closely, or he would have easily detected the forgery.

On the other hand, there was nothing to excite the suspicion of the Rutherford bank. It was a common cotton check, such as was usual and common in every-day transactions; and, being payable to bearer, it was not necessary to identify the holder when it was cashed.

We are of opinion that the indorser of negotiable paper does not warrant to the drawee the genuineness of the signature of the maker, but such warranty only extends to subsequent holders in due course of trade. The drawee of the check is the party to pass upon the genuineness of the signature of the drawer.

This is the rule, we think, by the law merchant and by the Negotiable Instruments Law. It is the rule laid down in New York, upon whose statute our Negotiable Instruments Law is based, and of which it is substantially a copy; and, in construing the Negotiable Instruments Law, it has been said by this court in Unaka Bank vs. Butler, 83 S. W. 657, that great weight should be given to the decisions of New York.

In this case the complainant bank received and paid the check, thereby admitting the check to be correct, and held it for thirty days or more, and it is precluded and estopped to deny the genuineness of the signature, or to avoid the effect of its act in accepting the check and paying it.

The indorser of a check does warrant and guaranty the genuineness of the check to all subsequent holders in due course; but the drawee is not a holder in due course.

A holder in due course is defined, in section 52, p. 150, of the Negotiable Instruments Act (Acts 1899, c. 94), and the definition does not embrace the case of a drawee.

A holder means a payee or indorsee who is in possession, or the bearer. (Acts 1899, p. 139, c. 94.)

The drawee, when he accepts the check, makes himself the guarantor thereof.

The liability of an indorser only arises when the necessary proceedings on dishonor are taken; but this feature of the law is not presented in this case.

Without commenting further upon the several points raised by counsel, we are of opinion that the complainant bank has no right in law, or in equity and good conscience, to recover from the defendant bank the amount of this check, and the chancellor was in error; and his decree is reversed, and the suit is dismissed, at cost of complainant.

STOCK BOOK OF NATIONAL BANK—RIGHT OF STOCKHOLDER TO INSPECT.

New York Supreme Court, Appellate Division, First Department, June, 1905.

PEOPLE, *ex rel.* JOSEPH W. LORGE *vs.* CONSOLIDATED NATIONAL BANK.

A stockholder of a National bank located in the State of New York is entitled to inspect the stock books of the bank for the purpose of ascertaining the names of the other stockholders of the bank, in order that he may negotiate with such other stockholders for the purpose of their stock, and, as an incident to this right, may copy from such book and take away with him a list of the other stockholders.

The statute of the State of New York, authorizing the stockholders of a corporation to inspect the books thereof, applies to a National bank located in the State of New York.

Under such statute the court has power to deny the right to such an inspection if demanded for an illegitimate purpose, and may regulate the time when the inspection may be made; but if the inspection is sought for a legitimate purpose and the application therefor is made to the corporation during business hours, the right to the inspection is mandatory.

This was an appeal by the relator, Joseph W. Lorge, from an order of the Supreme Court, made at the New York Special Term and entered in the office of the clerk of the county of New York on the 31st day of March, 1905, denying the relator's motion for a peremptory writ of mandamus.

HATCH, *J.*: The relator is a stockholder of the defendant bank, owning ten shares of stock. After he became such owner he applied to the bank for leave to make a copy of the list of stockholders of the bank; this request was refused by its officers. Thereafter he called at the bank during business hours and asked to see the stock book. The same was exhibited to him, and he commenced to make a copy of the list of stockholders, when the officers of the bank removed the book and refused to permit him to make a copy of any memorandum therefrom. The relator contended that he had a right so to do, and stated that unless he were permitted to make a copy of the list of stockholders he did not care to inspect the book. The relator admits that he is a dealer in stocks and bonds and that he desired to obtain a list of the stockholders of the bank in order that he might, for a legitimate purpose, negotiate for the purchase of stock, and denies that he intended to make use of the information for any purpose inimical to the interests of the bank. Upon this motion it was made to appear that, since the demand for an inspection, the relator had purchased 110 additional shares of stock of the bank.

It is settled by authority that a right of inspection and examination of corporate books existed at common law; that the statute has not taken away such common-law right but has amplified it. (Matter of Steinway, 159 N. Y. 250.) The distinction between the right at common law and the statutory right is, that in the former case the power to compel an exercise of the right is discretionary, while in a case brought within the terms of the statute it is mandatory. Section 5210 of the United States Revised Statutes provides that the President and Cashier of every National banking association shall at all times cause to be kept a full and correct list of the names and residences of all the shareholders of the association and the number of shares held by each, in the office where its business is transacted, and that "such list shall be subject to the inspection of all the shareholders and creditors of the association, and the officers authorized to assess taxes under State authority, during business hours of each day in which business may be legally transacted." A verified copy of such list is also required by said section to be furnished to the Comptroller of the Currency. Pursuant to the provisions of section 29 of the Stock Corporation Law of the State of New York (Laws of 1892, chap. 688, as amd. by Laws of 1901, chap. 354), every stock corporation is required to keep at its office correct books of account of all of its business and transactions, and also a book to be known as the stock book, which book shall be open daily during at least three business hours for the inspection of its stockholders and judgment creditors, who may make extracts therefrom. Section 53 of said Stock Corporation Law (as amd. by Laws of 1897, chap. 384) makes a similar provision applicable to foreign stock corporations having an office for the transaction of business in this State, except moneyed and railroad corporations, and requires a stock book to be kept in the same manner as for domestic stock corporation, provides for the right of inspection, and requires the same to be kept open daily during business hours.

It appears, therefore, that by both Federal and State statutes, the corporation is bound to keep its stock book open for the inspection of its shareholders. It is said, however, that the State statute does not apply to the defendant because it is a foreign corporation. The contrary was held in Matter of Tuttle vs. Iron Nat. Bank (170 N. Y. 9). The court in that case referred to an amendment of the United States Judiciary Act of 1875 (18 U. S. Stat. at Large [pt. 3], 470 *et seq.*), which seems to be still in force (24 id. 554, § 4, as re-enacted by 25 id. 436, § 4) as authority therefor. Therein it is provided that National banking associations established under the laws of the United States are, among other reasons, for the purpose of actions against them to "be deemed citizens of the States in which they are respectively located; and in such cases the Circuit and District Courts shall not have jurisdiction, other than such as they would have in cases between individual citizens of the same State." Authority is cited to show that the courts of this State have uniformly held that they have jurisdiction in actions against National banks and have exercised the same in due course. These authorities establish that the relator had the right of inspection of the stock book at a proper time and place.

The right of inspection thus given is to inform the shareholder of the facts appearing in the book, so that he may act thereon. He is entitled to all of the information disclosed by the book. It is not to be presumed that he can carry in his memory all of its contents; and, as the inspection is granted for the purpose of informing him concerning the matter, he has the right to make such copies and memoranda as will make the inspection effectual not only by conveying to his mind the contents of the book, but also by enabling him to retain the same in such form that he may act thereon for any legitimate purpose. The right of inspection, therefore, carries with it the right to make such extracts from the book as will enable the shareholder to retain the information disclosed by the inspection. Doubtless the court has power to withhold an inspection for an illegitimate purpose, and may regulate the time when the inspection shall be made. But where it is sought for a legitimate purpose, and the application is made during business hours, the right to such inspection is mandatory. The relator had the right to purchase the stock of the bank upon such terms as might be agreed upon between the owners and himself, and he had the right to resort to the stock book for the purpose of acquiring knowledge as to who were its stockholders and to preserve such information in permanent form by making a copy of the names. As is disclosed by the record, this was his object in making a demand for inspection and taking memoranda therefrom. This was within his clear legal right to do; and as this right has been denied, it follows that the order should be reversed, with ten dollars cost and disbursements, and a motion for a peremptory writ of mandamus granted, with ten dollars cost.

PATTERSON, O'BRIEN and LAUGHLIN, *JJ.*, concurred.

PROMISSORY NOTE—PROVISION FOR EXCHANGE AND COLLECTION CHARGE.

Supreme Court of Minnesota, July 28, 1905.

SMITH, *et al. vs.* FIRST STATE BANK OF TYLER.

Where a note is drawn payable "with exchange and collection charges" it is not a negotiable instrument.*

As the holder of such an instrument would lose nothing by the omission to protest it, a bank having the same for collection would not be liable for failure to have it protested.

Action to recover damages for the defendant's failure to protect an alleged promissory note. The trial court, when the plaintiffs rested, granted the defendant's motion to dismiss the action, and the plaintiffs appealed from an order denying their motion for a new trial.

START, *C. J.*: The instrument here in question is in the words following, namely: "Arco, Minn., June 21, 1902. Nov. 1 after date for value received we promise to pay Smith & Zimmer, or order, the sum of Four Hundred thirty-five Dollars, with Exchange and collection charges at First State Bank of Tyler, Minn. with interest from Mat. at the rate of eight per annum until paid. Pederson Bros." This obligation was sold and indorsed by the payees thereof to the plaintiffs before maturity, who sent it to the defendant for collection and protest if not paid when due. It was not so paid, nor was it protested. The makers are insolvent, and this action was brought to recover the amount of the note from the defendant. The basis of the decision of the trial court was to the effect that the instrument was not a promissory note, and the plaintiffs lost nothing by the failure of the defendant to protest it.

The sole question for our decision is whether the instrument is a promis-

*The Negotiable Instruments Law provides that "the sum payable is a sum certain within the meaning of this act, although it is to be paid * * * with exchange, whether at a fixed rate, or at the current rate, or with costs of collection or an attorney's fees, in case payment shall not be made at maturity."

sory note, for, if it be not, the rules of the law merchant concerning notice and protest do not apply, and the plaintiffs lost nothing by the defendant's failure to protest it. (2 Daniel, Neg. Ins. § 970; 4 Enc. of Law, 403.)

A promissory note is an unconditional promise in writing for the payment of a certain sum of money. It is an essential condition of a promissory note that there be no uncertainty as to the amount it calls for at any particular time. If the promise be to pay a stated sum, plus or minus an indefinite amount, it is not a promissory note. (Loring vs. Anderson [Minn.] 103 N. W. 722.)

Another form of the question, then, is whether the amount called for by this instrument is definite and certain. It calls for the payment of $435, plus exchange and collection charges at a certain bank. It is to be noted that the instrument does not call for the payment of the collection charges of the bank, but the principal sum, exchange, and collection charges are to be paid at the bank. Or in other words, by the terms of the contract the holders of the instrument or their agent could have presented it at maturity to the bank, and demanded payment thereon not only of the principal sum and exchange, but their collection charges. How much? By whom and how shall the question be determined?

In the case of Jones vs. Radatz, 27 Minn. 240, it was held that a note negotiable in form, whereby the maker promised to pay a definite sum of money and reasonable attorney's fees, was uncertain as to the amount of money to be paid, and hence it was not negotiable; that is, it was not a promissory note.

In the case of Hastings vs. Thompson, 54 Minn. 184, the written instruments upon which the action was based were in the form of promissory notes, and called for the payment of a specific sum of money, with current exchange on New York city. The action was by an indorsee of the notes before maturity. The answer stated a good defense to the instruments in the hands of the indorsee if they were not promissory notes. The opinion of the court was given by Mr. Justice Mitchell, who said:

"The only point raised on this appeal is whether the instruments sued on are promissory notes, for, if they are, they are unquestionably negotiable, under the law merchant. * * * Upon examination of the reports and text-books, it is surprising how little direct authority of any value is to be found as to the effect of the addition of such a provision to an instrument for the payment of money. Daniel, Randolph, and Tiedeman state, in general, that such a provision does not affect the commercial or negotiable character of the paper, but none of them discuss it at any length, and all of them treat of the question as if it only went to the negotiability of the instruments, whereas the real question lies back of that, and is whether they are promissory notes or bills of exchange at all."

The court held that the instruments were promissory notes, and therefore negotiable. The reason given for this conclusion was that the amount called for by the notes was not made uncertain by the stipulation to pay exchange, because the rate of exchange was a matter of commercial knowledge or easily ascertainable. Whether or not this conclusion is in accordance with the weight of authority we need not stop to inquire, for it must now be accepted as the law of this State. It may, however, be suggested that it is in some respects a departure, for practical reasons, from the original rule, that one of the essential qualities of a promissory note is that the amount to be paid must be definitely fixed, and ascertainable from the face of the paper, without the necessity of resorting to any extrinsic evidence, and that for this reason the doctrine of the case ought not to be extended.

If the only element of uncertainty in the instrument here in question was the promise to pay exchange, it would necessarily follow, from the decision in the case of Hastings vs. Thompson, that it was a promissory note; but such is not the case, for the promise to pay collection charges introduces an additional element, of undoubted uncertainty. This promise to pay collection charges is quite as uncertain as a promise to pay reasonable attorney's fees, for what a collector may lawfully charge in a given case cannot readily or definitely be ascertained, for it depends upon no uniform rule or practice, and is more or less under the control of the holder of the instrument.

This case, then, is ruled by that of Jones vs. Radatz, and not by Hastings vs. Thompson; and we therefore hold that the instrument here in question is not a promissory note, and hence it is not a negotiable instrument, for the reason that the sum of money to be paid is uncertain. See First Nat. Bank vs. Slette, 67 Minn. 425, in which it was held that an instrument in the general form of a promissory note, but made payable in New York or Chicago exchange, was not a promissory note, because not payable in money, and therefore it was not negotiable. It is claimed, however, by the plaintiffs, that, if the instrument here in question be not negotiable paper, yet its indorsement by the payees operated as a bill of exchange drawn on the makers for the amount thereof, to which the rules of the law merchant concerning protest and notice would apply.

The cases of Helfer vs. Alden, 3 Minn. 332 (Gil. 232), and Hart vs. Eastman, 7 Minn. 74 (Gil. 50), are relied upon in support of this proposition. The action in the first case cited was based upon an instrument made by the regents of the University of Minnesota, which was in form a negotiable promissory note, whereby the makers promised to pay to the order of the payees a definite and certain sum of money, absolutely and at all events. There was attached to the note the official seal of the makers, and for this reason it was held to be non-negotiable. It was, however, stated in the opinion that the indorsement of such a note by the payee thereof, as between him and his immediate indorsee, operates as a drawing of a bill of exchange for the amount of the note on the maker in favor of such indorsee, and that, between the parties to such an indorsement, it ordinarily creates the same obligations as the indorsement of a negotiable promissory note. In the second case cited (Hart vs. Eastman) the notes were also made by the regents of the university, and each note called for the payment of a definite and certain sum, and was in the form of a negotiable promissory note, but it was not negotiable, by reason of certain provisions in the charter of the university. It was held (following Helfer vs. Alden) that the indorsement of the notes, although not negotiable, operated, as between the indorser and his immediate indorsee, as the drawing of a bill of exchange for the amount of the note, and the indorser was liable on his indorsement, but was entitled to notice of non-payment of the notes, which after such indorsement were, in legal effect, bills of exchange.

It is clear that these cases are not here in point, for the instrument in each case was, in its form and terms, a promissory note, but non-negotiable, by reason of some extrinsic matter. Therefore, when the notes were indorsed by the payee, they were, as to him, in legal effect, negotiable bills of exchange, because the amount for which they were drawn was in each case certain on the face of the instrument. Or in other words, they were, before indorsement, non-negotiable promissory notes. (See 1 Daniel, Neg. Instr. § 664.)

But in this case the instrument is not definite as to the amount to be paid, but obviously uncertain. Bills of exchange are governed by the same rules with respect to certainty in their terms as promissory notes, and they must be drawn for a definite and certain sum of money. It follows that when the instrument in this case was indorsed by the payees the uncertainty as to the sum of money to be paid thereon was in no manner made certain, and that for this reason its indorsement could not operate as a bill of exchange. It was therefore neither a promissory note nor a bill of exchange, but a contract, the indorsement of which did not create the liability which results from the indorsement of negotiable instruments. (Easton vs. Hyde, 13 Minn. 90, Gil. 83.)

The case last cited was an action by an indorsee against indorsers, who were the payees in an instrument in these words: "Certificate of deposit, July 14, 1864, Hyde and Broughton have deposited in this office five hundred and thirty-five and 75/100 dollars in treasury notes to the credit of themselves and payable to their order hereon in United States six per cent. interest bearing bonds." It was conceded by the court, for the purposes of the case, that a certificate of deposit is in legal effect a promissory note, and that the liability of an indorser is the same, whether the note is negotiable or non-negotiable. The instrument, however, was held to be a contract, and not a promissory note, on the sole ground that it was not payable in money, and that for this reason the indorsers were not liable. It is clear that the decision in this case is opposed to the rule of Helfer vs. Alden and Hart vs. Eastman, if it be construed as applicable to instruments which are not promissory notes, for the reason that they are not payable in money, or are uncertain as to the sum of money to be paid. On the other hand, if the earlier cases, as we hold, apply to instruments in the general form of promissory notes, which are payable in money, and are certain as to the amount thereof, the three cases are in harmony.

We therefore hold that the instrument here in question is not a promissory note, but a contract for the payment of money, and that the indorsement thereof by the payees did not create the liability which follows from the indorsement of negotiable instruments.

Order affirmed.

PRIVATE BANKER—LIABILITY TO DEPOSITOR AFTER SALE OF BANK.

JOHNSON, *et al. vs.* SHUEY.

Supreme Court of Washington, September 6, 1905.

A private banker who receives deposits assumes a personal obligation to repay to each depositor the amount of his deposit, and he cannot relieve himself of this obligation by selling and transferring the bank to a third person.

The depositor's right of action in such case is assignable.

The fact that the depositor has presented a claim against the transferee of the bank and its Receiver is no bar to an action against the original owner of the bank.

This was an action by John Johnson and others as assignees of the Bank of Ballard to recover from H. O. Shuey the difference between the amounts the depositors had to their credit at the time of the failure of the bank and the amounts thereafter paid to them by the Receiver of the bank's assets. A motion for judgment on the pleadings was made by the defendant and sustained by the court below, and the plaintiffs appealed.

FULLERTON, *J.* (omitting part of the opinion): That the complaint states a cause of action cannot be seriously questioned. Briefly restated, it is alleged in the complaint that the respondent opened the bank without capital, falsely and fraudulently pretending that it was incorporated with a capital stock of $25,000, for the purpose of inducing the assignors of the appellants to make deposits therein; that by such means he did induce them to make deposits therein from time to time, under the belief that the bank was incorporated, and that the respondent was the owner and in charge of the same; that he made a pretended sale of the bank for the purpose of cheating and defrauding his depositors, put an incompetent person in charge of the same without notice to such depositors, who so mismanaged as to cause the loss of the greater part thereof, the amount being stated.

Clearly, if the appellants can prove these allegations, they are entitled to recover. But if we were to adopt the respondent's view, and disregard the allegations of fraud, and assume that the several transactions were in fact what on their face they purported to be, the complaint would still state a cause of action. When the respondent opened the Bank of Ballard as a private banker, and received deposits therein, he assumed a personal obligation to repay to each depositor or to his order, on demand, the amount deposited by such depositor, either in one single amount, or in such fractional amounts as the depositor should direct. This personal obligation the respondent could not relieve himself of by merely transferring the bank and its deposits to a third person; so that if it be true that the respondent did make a bona fide sale of the bank, and transfer it to DeLong, together with the deposits, he was still personally obligated to repay to each depositor the amount such depositor had therein at the time of the transfer, or might thereafter deposit in ignorance of such transfer, and under the belief that the bank was still owned and operated by the respondent, unless, of course, the failure to discover the transfer was the negligence of the depositor. This personal obligation gave each depositor a right of action against the respondent when demand for the amount deposited was made and payment thereof refused, and this right of action the depositors could assign to the appellants.

Unless, therefore, some other element shown on the face of the complaint has intervened which cut off this right of action, the complaint states a cause of action, even if we disregard the allegations of fraud.

It is said that this right is cut off by the fact shown on the face of the complaint that the appellants' assignors presented the claims sued upon in this action to the receiver appointed over the property of the respondent's assignee as creditors of such assignee, and received a pro rata share of such property as dividends upon the winding up of the receivership. But clearly this fact alone does not bar the right to recover the balance from the respondent if he is otherwise obliged to pay it. Two or more persons may be obligated to pay the same debt, and where such is the case the pursuit of one debtor does not relieve the others; unless, of course, the debt is collected from the debtor pursued, which the complaint makes clear is not the fact in the case before us.

The same result follows if we assume that DeLong at the time he purchased the bank's property and took over to himself the deposits promised and agreed to pay as a consideration for such transfer the debts due the depositors, and assume further that the presentation of these claims to the receiver for payment was, in effect, a suit by the depositors against the assignee for the amount of such deposits.

This court has held that where one person for a valuable consideration makes a promise to another to pay the debt of that other to a third person, such third person can maintain an action in his own name upon the promise. (Nordby vs. Winsor, 24 Wash. 535; Dimmick vs. Collins, 24 Wash. 78; Gilmore vs. Skookum Box Factory, 20 Wash. 703; Ordway vs. Downey, 18 Wash. 412; Don Yook vs. Washington Mill Co., 16 Wash. 459; Solicitors' Loan & Trust Co. vs. Robbins, 14 Wash. 507; Silsby vs. Frost, 3 Wash, T. 388.) And such, also, is the general rule. (9 Cyc. 378, note 7.)

Such a promise does not, of itself, discharge the original debtor, nor does it have that effect when the creditor seeks to collect his debt from the new promisor. The effect of such a promise is, as between the original debtor and his assignee to make the assignee the principal debtor and the original debtor a surety; but it gives the creditor a right of action against both of them, which he may pursue jointly or severally, as suits his convenience. (Cases, supra.) And this being so, the fact that he may have presented his claim to the Receiver of the property of one of them, and received a part of his claim, does not bar his right to proceed against the other for the uncollected balance. Whatever view we take, therefore, of the effect of the allegations of fraud, the complaint states a cause of action.

What we have said in answer to the first contention in part answers the second. The trial court seemed to think that the depositors had a remedy against either the respondent or his assignee for the recovery of their deposits, but not a remedy against both of them, and that the pursuit of one remedy was a bar to the after exercise of the other. It is undoubtedly true that where a person has a choice of two or more remedies for the redress of one wrong that the selection of one is a bar to the subsequent exercise of any of the others, but it is at once obvious that the facts before us do not present that kind of a case. The appellants have never prosecuted this claim against the respondent in any other form of action. Nor have their assignors so prosecuted it. All that the respondent shows is that the appellants' assignors prosecuted the same action against another person, claiming that such other person was legally liable for the debt. But this could not relieve the respondent from his several legal liability for the debt, unless it is to be held that two persons severally liable for one debt cannot be pursued severally for the collection of that debt—a proposition it needs no argument to refute.

The appellants and their assignors, therefore, by first pursuing the assignee of the respondent for the debt of the respondent did not elect to make such assignee their sole debtor; and this being true, there was no such election of remedies by them as will bar the present action.

Nor is there anything in the case of Gaffney vs. Megrath, 23 Wash. 476, that is opposed to this conclusion. In that case it appeared that Gaffney held a judgment against Megrath, which she placed in the hands of her attorney for collection. In payment of the judgment the attorney took certain personal property of the judgment debtor, which he afterwards converted to his own use, and refused to account therefor. Gaffney thereupon brought an action against the attorney for the value of the property so taken. She recovered a judgment against him, but failed on execution, whereupon she sought to enforce her original judgment against Megrath. It was held that while the act of the attorney in taking property for the debt was unauthorized, and could have been repudiated by the judgment creditor when brought to her attention, yet she affirmed the act by proceeding against her attorney for the property, and could not afterwards repudiate it.

The difference between that case and this one is that there the debtor paid the debt to the creditor's agent, but not in that species of property the creditor was obliged to accept. The creditor, therefore, had an option, when the property was presented to her, either to take it or refuse it, and, having chosen to take it, she could not afterwards repudiate her choice.

But in the case before us the respondent has not paid the debt to either the appellants, their assignors, or their agents in any kind of property. It may be inferred that he turned property over to a third person, who in consideration of its receipt promised to pay the debts due them. This, however, as we have shown, but gave the creditors futher security for their debt; it did not relieve the respondent of his obligation.

Judgment reversed.

COLLECTIONS—LIABILITY FOR LOSS—SENDING CHECK TO DRAWEE BANK.

Supreme Court of Alabama, April 5, 1905.

JEFFERSON COUNTY SAVINGS BANK *vs.* HENDRIX.

A bank, which receives a check for collection and enters the face value of it as a deposit credit to its owner, becomes the agent of the owner to collect it; if the collection is made the relation of depositor and banker is consummated; but if the collection is not made, the bank's right to charge off the deposit arises.

If a bank fails, through its own fault, to collect a check deposited by a depositor, it is liable for all damages sustained by him through such failure, and this liability may be enforced by an action for breach of the bank's implied understanding to use due care and diligence to collect the check, or by an action for damages, resulting from its negligent discharge of the duties in respect to collection imposed upon it by law.

Prima facie, it is negligence in a collecting bank to send the check to be collected directly to the drawee bank for payment, and especially is it improper to send a Cashier's check direct to the bank issuing it.

The complaint in this action consisted of eight counts, the first four being the common counts. The fifth count alleged a deposit of the amount sued for by plaintiff with the defendant, and that "plaintiff demanded of defendant the payment of said sum," which was refused. The sixth count alleged that plaintiff deposited a check with the defendant for collection, that the check had been collected, that "plaintiff had demanded of the defendant the payment of said sum of money," and that defendant refused to pay same. The seventh count alleged a deposit by plaintiff with the defendant for collection of a check for $1,100, "drawn by Burgess Little, the Cashier of the Shelby County Bank of Montevallo, Ala., upon said Shelby County Bank"; that defendant agreed to use "good faith and due care in the selection of sub-agents or sub-agencies for the collection of said check"; that defendant sent said check for collection "direct to said Shelby County Bank," which suspended without paying same; that defendant "by the proper agency could easily have collected said check"; and that defendant has refused to pay plaintiff the amount of the check, although requested to do so. Defendant demurred to this count on the following grounds: (2) For that the count did not show a breach of defendant's agreement; (3, 4, and 5) for that no injury to plaintiff because of defendant's breach was shown; (6) for that it did not appear that defendant was guilty of any negligence in the performance of its agreement; (7) for that it did not appear that the sum claimed was payable on request; (9 and 10) for that said count was in form an action of debt, whereas the allegations showed a right in assumpsit for the recovery of damages. Said demurrer was overruled by the court. The eighth count alleged a deposit of a check for collection on May 13, 1901, in substance the same as the seventh count; that "said check was presented by defendant on May 15, 1901, but was dishonored, of which dishonor defendant failed to give plaintiff any notice until May 24, 1901, by that day mailing a letter to him, giving him notice which did not reach him until May 26, 1901, at which time said bank had failed"; that after plaintiff had such notice it was too late to collect said check, and that by want of timely notice plaintiff was deprived of an opportunity to collect the check, which he could have done if such notice had been given; and that defendant subsequently refused to pay the sum named on plaintiff's request. Defendant demurred to the eighth count on the grounds: (2) That it did not show that defendant had broken its agreement; (3, 4, and 5) that it did not appear that plaintiff was injured by defendant's breach; (6) that it did not show that defendant was guilty of any negligence in performing its contract; (7) that it did not appear that the sum claimed was payable on request; (9 and 10) that the form of action was in debt, instead of an assumpsit; (11) that it did not appear that defendant owed plaintiff the duty to give notice of dishonor other than was given; (12) that it did not appear that any damage resulted to plaintiff from defendant's failure. The demurrer was overruled by the court.

McClellan, *C. J.*: Neither the deposit of a check with a bank for collection, nor the entry on its books of the amount of the check as a deposit of money in favor of the owner of the check, nor yet the negligence of such bank in and about the collection of the check from the drawee bank, whereby there is a failure to collect it, nor all these facts combined, makes such check the property of the collecting bank, nor the owner of the check a depositor of the money entered to his credit, in such sense as gives him a right of action for money had and received, or otherwise, for the amount of the face of the check as money due him from the bank. A bank which receives a check for collection, and enters the face value of it as a deposit credit to its owner, becomes the agent of the owner to collect it. If the collection is not made, the bank's right to charge off the deposit arises. If the bank fails to collect the check through fault of its own, it is liable to the holder for all damages sustained by him through such failure; and this liability may be enforced by an action of assumpsit sounding damages for a breach of the bank's implied undertaking to use due care and diligence to collect the check, or by an action in case for damages resulting from negligence of the duties in respect of collection imposed upon it by law upon the fact of its receiving the check for collection. But the damages recoverable are by no means necessarily the amount of the check. It by no means follows from the negligent failure of the bank to collect the check, or its negligent failure to give the owner timely notice of the dishonor of the paper, whereby he is denied fruitful opportunity to collect it himself, that the owner loses the demand for which the check was given, or even any part of it. To the contrary, it is frequently, if not generally, true that the owner of the paper secures some part or all of the debt for which it was given in some other way, as by subsequent voluntary payment by or suit against the drawee bank when it is solvent, or by dividends upon its being wound up as an insolvent concern. It will, therefore, not suffice for the owner to hale the collector bank into court and implead that "you took this check to collect it. You did not do your duty in that regard, and of consequence the check was not collected. Therefore the check is yours, and the amount of it in money is mine, and in your hands for me, and you must pay me that amount."

It does not follow from the facts the owner thus puts forward that the bank is liable to the extent he seeks to hold it, or to any extent in fact. The mere failure of collection of the check does not demonstrate the loss to the owner of the demand for which it was given, or any part of such demand. The owner should say to the bank: "You took this check for collection. Certain duties were thereby devolved upon you in respect of efforts to collect or in respect of notice to me of its dishonor. You failed to perform those duties. From such failure resulted the non-payment of the check. Because of its non-payment, I have suffered damages in the sum of so many dollars. For these damages you are liable to me, and must account in this action."

In other words, a complaint in the common counts, or for money deposited, or for the amount of the check, averring the bank's unwarranted failure to collect it, or negligence operating to deprive the owner of opportunity to collect it—averments which, if proved, and this theory of liability were sound, would entitle the plaintiff to recover the full face value of the check, though his demand may have been satisfied in whole or in part from other sources, though he had suffered no damages or only nominal damages from the defendant's derelictions—would either not, by intendment or expressly, present the facts of this case (which is true of the common counts and of special counts 5 and 6) or claim a recovery of the facts of this case upon an inadmissible theory and in an amount which those facts do not justify (which is true of counts 7 and 8). Hence it is that we deem it unnecessary to discuss rulings below bearing upon the first six counts of the complaint. None of them is supported by the evidence. Hence it is, also, that we hold that the demurrers to counts 7 and 8 should have been sustained. These counts not only claim a sum of money, to wit, the amount of the check, which the plaintiff by their averments is not shown to be entitled to; but they are so wanting in averments of damages suffered by plaintiff as to state no cause of action. It will not do to say that they aver facts which warrant a recovery of damages, and that they are not rendered bad by the form and amount of the claim they make, because, if they are held good against the demurrer, a recovery would follow proof of their averments, though no proof of damages should be made, since neither of them contains any allegations that plaintiff has suffered any damages from defendant's failure to collect the check non constat but that his demand has been otherwise paid, as above suggested, and non constat but that, though not paid, the demand is collectible in whole or in part out of the assets of the drawee bank. (Bank of Mobile vs. Huggins, 3 Ala. 206; Morris vs. Eufaula National Bank, 106 Ala. 383; Sahlien vs. Bank, 90 Tenn. 227; Farmers' Bank and Trust Co. vs. Newland, 97 Ky. 464; Zane on Banks and Banking, § 184.)

The different doctrine which prevails where a creditor receives the check of his debtor to pay the debt may be referable to the distinctive consideration that in such case the creditor, being the payee in the check or unqualified indorser, is the legal holder and owner of it for the purpose of realizing upon it and applying its proceeds to his own debt; and upon this theory the case of Watt vs. Gans & Co., 114 Ala. 264, 21 South. 1011, 62 Am. St. Rep. 99, is not opposed to the views above expressed. Abstractly, and prima facie at least, it is negligence in a collecting bank to send the check to be collected by mail or otherwise directly to the drawee bank for payment, especially when the paper is a Cashier's check; i. e., drawn officially by the Cashier of the drawee bank. Of course, it is the duty of a collecting bank to give the depositor prompt notice of the dishonor of a check deposited for collection.

Reversed and remanded.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B.A., LL.B., Barrister, Toronto.]

BILLS OF EXCHANGE—FORGED CHECKS—CROWN—FORGERIES BY CLERK IN GOVERNMENT DEPARTMENNT—PAYMENT BY BANK—NEGLIGENCE—PASS-BOOK—DUTY OF CUSTOMER TO CHECK ACCOUNTS—SETTLEMENT OF ACCOUNTS—AUDIT ACT—ESTOPPEL—LACHES—DEPOSIT OF CHECKS IN OTHER BANKS—LIABILITY OVER DUTY OF KNOWING CUSTOMER'S SIGNATURE—MISTAKE—LIABILITY AS BETWEEN TWO INNOCENT PARTIES.

THE KING *vs.* THE BANK OF MONTREAL (10 Ontario Law Reports, p. 117).

STATEMENT OF FACTS: This was an action brought by the Government of Canada to recover back from the Bank of Montreal the sum of $75,705, the aggregate amount of twelve checks forged by a clerk in the Department of Militia and paid by the defendants. Most of these checks were deposited in other banks and came to the Bank of Montreal through the clearing-house with the endorsements of the banks with which they had been deposited. The Bank of Montreal claimed relief over against these banks. The further facts are given at length in the judgment of the trial judge.

JUDGMENT: This action is brought to recover a sum of $75,705, the aggregate amount of twelve checks forged by one Abondeus Martineau, at the time of the forgeries a clerk in the Department of Militia and Defence and now a convict in the penitentiary at Kingston. These checks were paid by the defendants and have been charged against the account of the Receiver-General of Canada. Six of them, aggregating $20,005, made payable to the order of Chas. Cote, a fictitious name assumed by Martineau, were deposited by him with the Quebec Bank, in an account opened in that name, and their proceeds he eventually drew out and lost in stock speculations.

Four other checks, totalling $30,200, he made payable to the order of Chas. D. Cote, a pseudonym in which he opened an account with the Sovereign Bank, to the credit of which he deposited these checks, afterwards drawing out and losing their proceeds in like manner. The remaining two checks, amounting to $25,500, were drawn payable to the order of A. Martineau, and were deposited by the forger to his own credit with the Royal Bank. These moneys also appear to have been all drawn out by Martineau.

Each of the forged checks was in due course forwarded by the third party bank with which it was deposited, to the Ottawa Clearing-House. It was there charged up to the Bank of Montreal and sent on to that bank, which debited it in the Militia Department "letter of credit account." On the following day (the second after it had been originally deposited by Martineau) it was, with other checks, transmitted by the defendant bank to the Militia Department, accompanying the daily sheet or statement, in the nature of passage book, which the bank furnished to the department.

Martineau entered the Militia Department in August, 1901. It is not suggested that his superior officers had any reason to believe him dishonest, or incompetent to discharge the duties to which he was assigned. His first work was the preparation for signature of checks for payments to be made by the department. After some weeks he was given the duty of checking the pass-book sheets sent daily by the bank to the department, with the checks paid by the bank on the previous day and returned.

All Dominion Government moneys are deposited, with the defendant bank, as in other banks, to the credit of the Receiver-General of Canada. Provision is made by the Audit Act for the issue by the Receiver-General, from time to time, on application of the Auditor-General, of credits, on the several banks authorized to receive public moneys, in favor of the proper officers of the several departments, for sums voted by Parliament, payment of which has been authorized by warrant of the Governor-General. These credits, during the period covered by the Martineau forgeries, took the form of a letter authorizing the bank to honor checks, not exceeding in the aggregate an amount specified, to be signed, in the case of the Militia Department, by Lieut.-Col. Pinault, the Deputy Minister, and Mr. W. J. Borden, the accountant. By order in council the bank was authorized, in the absence of Lieut.-Col. Pinault, to honor checks signed by S. Sulte, an officer of the department. On receipt of these letters of credit or authorization, the amount therein stated was placed to the credit of an account known as the "Department of Militia letter of credit account," but no corresponding debit entry was then made in the Receiver-General's account, nor were checks drawn against this letter of credit account on payment debited to the Receiver-General's account, but only to the letter of credit account itself. At the end of each month, upon a statement of all checks being furnished to the Auditor-General, and a duplicate of such statement to the Receiver-General, the latter, on the request of the Auditor-General, who is required first to satisfy himself of the correctness of such statements, causes a check upon his account to be prepared, signed by himself and countersigned by the Auditor-General, or their respective deputies or officers thereunto duly authorized, to reimburse the banks for advances made under such credits. Upon receipt of this reimbursement check, the amount covered by it, and theretofore charged only against the letter of credit account, is debited by the bank in the Receiver-General's account.

I state this course of procedure in detail, for the reason that on behalf of the third party banks it is contended that the present action against the Bank of Montreal, brought to recover moneys of His Majesty wrongly paid out by that bank, must fail, because the bank has never received reimbursement checks covering the amounts of the forged checks, and, therefore, has not paid out His Majesty's moneys, but has advanced its own funds. The defendant bank has in fact charged up the amount of the forged checks in the Receiver-General's account, and refuses to account to him for such moneys. It may be that the form of relief asked is not entirely appropriate. But, in substance, the question for determination is the same whatever be the appropriate form of relief, and that question is whether, as against the Receiver-General, representing His Majesty, the Bank of Montreal is entitled to claim credit for the moneys paid out on the Martineau forgeries. If that question be determined adversely to the defendant bank—whether it be ordered to refund the amount wrongly charged up, treating such charging up as a conversion of the plaintiff's moneys or to remove the wrongful debit entries, or to enter reversal credits in the Receiver-General's account, precisely the same problem as to the right of the defendants to indemnity from the third parties presents itself for solution.

The procedure provided for by the Audit Act has, however, an important bearing upon the main defence advanced by counsel for the Bank of Montreal, and in that aspect I shall have occasion again to advert to it.

Martineau committed the first of his detected forgeries on December 19, 1901, and the last on October 17, 1902. Ten other checks were forged at intervals during the intervening ten months. His method, as described by himself, was to procure blank checks by tearing them, some out of the backs of books in current use and others out of some blank books kept in reserve in the stationery bureau of the department. These checks did not bear printed serial numbers and were not made of safety paper. Having at his command departmental documents bearing the genuine signatures of Messrs. Borden and Sulte, Martineau procured a piece of typewriter's carbon paper, and, inserting this between the blank check and the document bearing the genuine signature, he traced over the latter lightly, thus producing on the check a more or less distinct impression of each signature. These tracings he went over with pen and ink. On one of the checks only one signature, that of the accountant of the department, was forged.

I am unable to find that there was negligence or carelessness on the part of any of the various bank officials who handled these checks, except as to the check which Martineau says bore only the one false signature. It may be that the officials of the Quebec Bank, in which this check was deposited, had not the means of knowing that the second signature was required. There is no evidence that the Quebec Bank had an account with the Militia Department, or indeed with any other department, similar to that in the Bank of Montreal against which these checks were drawn. It is impossible, however, to escape the conclusion that there was culpable carelessness on the part of the officers of the Bank of Montreal who passed the particular check now under consideration. Such blunders should be practically impossible with well-trained officers held strictly responsible for any carelessness. Counsel for the defendants urged that I should discredit Martineau as mistaken if not romancing, when he said that one of these checks did not bear a second signature. But the production in evidence of a Militia Department check, which has been paid by the Bank of Montreal, though bearing no signature whatever, shows Martineau's statement to be by no means incredible. As to the check for $3,819.04, the negligence of its own officers precludes the defendant bank from setting up any subsequent default of its customer in bar of his claim.

During the months in which he committed his forgeries, Martineau's duties included the checking of the daily pass-book sheets sent by the bank to the department. These sheets, with the accompanying checks, were received by Mr. Holt, acting for the accountant of the department, to whom the registered envelope containing them was addressed. The usual acknowledgment of receipt of a registered letter was given by him, and the checks in the envelope, frequently unopened, were then handed over to Martineau to be checked. Martineau promptly abstracted and destroyed his forgeries, which thus came to his hands. At the end of each month the bank sent to the department a detailed statement showing all the deposits made to the credit of the departmental account and all withdrawals by checks during the month. Martineau was intrusted with the comparison of this statement with the checks received during the month, and, upon his report of its accuracy, a receipt for such checks and an acknowledgment of the correctness of the balance as shown by the statement were given to the bank, signed by Mr. Holt, for the accountant, or by the Deputy Minister himself. Such receipts and acknowledgments are produced for the whole period covered by the Martineau forgeries, and the balances which they show were, in each instance, reached by debiting the forged checks to the departmental account.

The Bank of Montreal kept a separate "letter of credit account" with the department for each financial year. In order to postpone, as long as possible, discovery of his criminal conduct, about the time when the accounts for the fiscal year 1901-2 were in the course of final adjustment, Martineau forged a letter from the accountant of the department to the accountant of the Bank of Montreal requesting (as was quite a usual thing where the bank had charged in the account for one financial year checks drawn to pay items provided for in the appropriations of another year) the transfer from the account of 1901-2 to that of 1902-3 of a certain check, and the transfer from 1902-3 to 1901-2 of two other checks, the net result being a transfer from the debit side of the 1901-2 account of an amount approximately sufficient to cover the forgeries on that account down to the date of this forged letter.

At the close of each month the Auditor-General received from the bank a statement showing the balance standing to the credit of each of the departmental letter of credit accounts, and also the net general balance to the credit of the Government. The department also furnished to the Auditor-General a monthly statement showing the credits to which the department had been entitled during the month, and the expenditure shown on its books and represented by the checks drawn against its letter of credit account. As the latter statement included all the checks drawn, and the former only checks actually presented for payment, the credit balance shown in the bank statement should always have been equal to or greater than that shown in the department statement. From September, 1902, to February, 1903, a comparison of these statements establishes that instead of being greater than or at least equal to the balance shown on the department statement that shown on the bank statement was in each month less, the discrepancies ranging from $10,000 to $60,000 in round figures. These somewhat startling shortages in the funds which the bank acknowledged holding appear to have passed unnoticed in the audit office.

An investigation, made as the result of Mr. Holt having noticed, in February, 1903, that the balance shown to the credit of the department by its books largely exceeded that stated in the usual monthly receipt asked for by the Bank of Montreal, resulted in the discovery of the series of frauds, and ultimately, on February 19, 1903, in the arrest of Martineau charged with forging the twelve departmental checks, the subject of this action.

The department promptly notified the Bank of Montreal of the discovery of the forgeries and of the intention of the Government to make the claim now in suit. A similar notification was without delay given by the defendants to each of the third parties.

The right of the Crown to recover in this action is tacitly conceded, both by the defendants and the third parties—subject to a question already alluded to, as to the form of relief sought—unless alleged omission or neglect by officers of the Government of duties, which the ordinary customer owes to his bank has barred such right.

Mr. Shepley, for the defendants, discarding as a ground of defence everything in the nature of negligence affording opportunity for, or conducing to the commission of, the forgeries, rests his argument entirely upon an alleged breach by the Crown of a supposed contract or undertaking on its part, arising from the relation of banker and customer, that, when supplied by the bank with the means to do so (a pass-book with entries of credits and debits and paid checks as vouchers for the latter) it would with due diligence cause the pass-book and vouchers to be examined and would report to the bank, without unreasonable delay, any errors which should be discovered. Breach of this contractual obligation, Mr. Shepley argued, has entirely relieved the bank from liability to account to its customer. Mr. Gormully, however, contended that there was such negligence in the circumstances preceding the forgeries as conduced to their commission; that, apart from contractual obligation, there was such negligence on the part of the Government officials in regard to the checking of the statements furnished by the bank, and the acknowledgment of the correctness of such statements, and in giving to the bank receipts for its own checks, that it would now be inequitable to permit the Crown, after the destruction by one of its own officers of the vouchers for the items in question, to open up what is in effect a settled account. Both learned counsel argued that by the conduct of its officers the Crown is estopped from enforcing its claim upon the defendants, whose position in regard to relief against the third parties has been seriously affected as the result of breaches of duty by the officers of the Crown. Counsel for the third parties urged similar grounds of defence.

I find nothing of negligence or carelessness on the part of the Crown officers in the cimcumstances preceding the forgeries which conduced to their commission—nothing which would affect the right of any customer of the defendant bank to recover in such an action as this. Perhaps as much cannot be said in regard to their dealings with the statements and vouchers furnished by the bank.

I put aside the apparent neglect in the department of the Auditor-General to make comparison of the monthly statements furnished him by the Militia Department with those sent to him by the bank, because, although an investigation into the discrepancies which such a comparison would have disclosed, must have unearthed these forgeries several months before they were actually discovered, the omission to make such comparison would not, in my opinion, be a breach of a duty owing to the defendants had it occurred in the conduct of the business of any ordinary customer.

But, were the present plaintiff other than His Majesty, I should not, in respect to the eleven forged checks, as to which I have found there was no want of proper care on the part of its officials, without very mature consideration, reject, as unavailing to the Bank of Montreal for its defence, the failure of the depositor himself to check over his pass-book, or, if this duty was entrusted to an employee, to exercise reasonable diligence in supervising the conduct of his clerk in discharging the trust committed to him. If the employer has not been negligent in the selection of his employee, it seems at first a little difficult to understand upon what principle he should, though relieved of responsibility for his clerk's dishonesty in committing a forgery, be held liable for his dishonesty in concealing it. Yet, in regard to fraudulent checking, it is said that the bank cannot be in a worse position because its depositor employs a dishonest clerk for this purpose, than it would have been, had this important work been intrusted to honest hands. The employer is held responsible in the latter case probably because the clerk omits a duty which he was employed to discharge, and which his employer was bound to perform, or cause to be performed, whereas the actual forgery is an act of commission entirely outside the scope of the clerk's employment.

While there is no evidence of any negligence in selecting Martineau for this work of checking, or of any reason to suspect his honesty, the principal officers of the Militia Department seem to have placed extraordinarily implicit confidence in the integrity, the competence, and the diligence of one so recently placed upon their staff. It may be difficult to say, where delegation, not only of the duty of checking, but also of any supervision over the person intrusted with the duty, is inevitable, what provision for such supervision will be adequate to protect the customer of a bank from liability. Apart from an absolute contract binding the customer to check efficiently himself, or to have such checking properly done, for failure to perform which no excuse would avail, negligence is the foundation of the customer's liability, and the limitations of practical business would be taken into account in determining what, in each particular case, should be held to constitute such negligence. The proprietor of a large mercantile establishment may intrust to his most esteemed assistants the duty of supervising this examination of his bank pass-book, "sed quis custodiet ipsos custodes." Martineau, however, was under no supervision whatever.

A mere comparison of the checks returned with the items of the daily statement furnished by the bank, though made by a careful and upright man, would not have disclosed these forgeries. But any reasonably careful comparison of the bank pass-book sheets, or of the returned checks either with the cash account of the department, or with the stubs in its current check-books, would have resulted in their prompt detection. Nobody in the department appears to have been charged with the duty of making any such comparison. Intrusted to the forger himself, without supervision, even this comparison would, of course, have served little purpose.

But, though the relation of customer and banker is recognized as that of mandant and mandatory, no English authority establishes any contractual obligation on the part of the banker's customers to examine his pass-book. Indeed there is modern English authority for the proposition that the customer in regard to his pass-book and vouchers owes to his bank no duty which he must discharge at the peril of being bound, if he omits it, by the debit entries contained in the pass-book as by a settled account.

In Vagliano vs. Bank of England, Bowen, L.J., delivering the judgment of the majority of the Court of Appeal, speaks of the obligations in regard to the pass-book as resting upon implied contract as to the settlement of account, or as a duty of the customer to the bank arising from the ordinary course of dealing between banker and customer, and, in either case, as something to be established by evidence. Counsel, at page 245, is reported as having argued that the receipt of the pass-book, with items debited representing forgeries, accompanied by the vouchers, and retention of the latter without objection, amounted to a settlement of the account, which the plaintiff's negligence in regard to the examination of the vouchers precluded him from having opened. This contention the Court by implication rejected. The House of Lords in reviewing this decision proceeded upon other grounds, and, though the judgments refer to the duties of the customer in regard to the pass-book, they do not indicate their Lordship's views as to the precise nature of his obligation.

No evidence of the custom or course of dealing between banker and customer was offered at the trial of this action. Counsel dealt with the matter not as depending upon evidence, but as a question purely of law—a legal inference from or incident of the relation of banker and customer.

In Commercial Bank of Scotland vs. Rhind, Lord Campbell treats the pass-book, returned by the customer without objection, as affording prima facie evidence for the bankers as to entries with which the customer is debited, and against them as to entries on the other side.

In the American cases in which the duty of examination by the depositor is clearly affirmed and knowledge is imputed to him of all that such an examination carefully and honestly made would give, and in the English cases in which the customer aware of forgeries and failing to communicate such knowledge to his bank, has been deemed to have adopted such forgeries, the defence available to the bank is treated, not as the breach of an implied contract, but rather as an estoppel, entitling the bank to resist, in the former class of cases the opening of the settled account between itself and its customer, and, in the latter, the repayment to the customer of the amount of the forgeries held to be ratified or adopted, without proof that even the most prompt and complete discharge by the customer of the duties imposed upon him would have enabled the bank to recover the whole or any part of the moneys obtained by the forger.

The consequences to the customer of this breach of duty are in such cases not confined to the actual pecuniary loss which the bank can prove it to have caused, as they probably would be if the failure to examine the pass-book and vouchers and report promptly to the bank were deemed a breach by the customer of an implied contract entitling the bank to damages by way of set-off, or to resist pro tanto the customer's demand for repayment.

The arguments for the imposition upon the customer of the duty which the defendants claim he owes them in regard to the pass-books are cogent, and the American cases, if binding as authorities, would be conclusive in favor of the bank. The English authorities do not appear at all so strongly to support the defendant's contention. Sir John Paget says at page 120 of his work: "In the meantime, and until evidence of the nature suggested by the Court of Appeal is forthcoming, but little reliance can be placed on the pass-book as precluding a customer from disputing debits which have appeared in the book both when delivered to him and returned by him without objection, or from denying the genuineness of his signature to checks which represent such debits, and have been returned paid with the book and retained by the customer without comment."

In disposing of the present action on this question, I should, on the other hand, have to consider a matter not urged by counsel for the plaintiff. Although the evidence upon this point is not wholly satisfactory, I think it may fairly be inferred that the Bank of Montreal had from month to month in its own hands the means of detecting discrepancies between its accounts and those of the department caused by these forgeries. The monthly reimbursement checks of the Receiver-General, prepared on the basis of the departmental monthly statements furnished to the Auditor-General, certainly did not cover the sums charged up by the bank on account of the forgeries in its books and in its monthly statements rendered to the department and to the Auditor-General. It is difficult to account for the failure of careful bank officers to notice that each of the monthly reimbursement checks from January, 1902, to February, 1903, was drawn for a smaller sum than the bank books and statements showed to be due, the difference increasing with every forgery committed until, for each of the last three months, it amounted in round figures to $75,000, less only the amount of unpresented checks. It is still more difficult to understand how, during this period, if the books of the Ottawa branch of the Bank of Montreal were balanced, these discrepancies remained undiscovered, or if discovered why an investigation, which would undoubtedly have unearthed the forgeries, did not promptly follow. How far the bank's failure to avail itself of this means of detecting the frauds in question might be an answer to any counter-neglect of an ordinary depositor in regard to the checking of his pass-book and vouchers need not, however, be now determined.

But from another point of view these refunding or reimbursing checks have a direct and very important bearing upon the rights of the plaintiff and the defendants.

The defendants knew that they were dealing with the department under section 30 of the Audit Act. They must be deemed to have opened the Militia Department letter of credit account and to have conducted the business connected with it upon the basis of that legislation. They knew that provision is there made for the issue of checks "to reimburse the bank for advances under credits to cover the expenditures made and authorized."

This is the mode of "settling the account" between the bank and the Government prescribed by the statute. It sanctions no other. The transmission by the bank to the department of the daily pass-book sheets with the paid checks, however convenient in practice, is not a method of checking or settling the departmental account contemplated by the Audit Act. Whatever authority Government officers may have to bind the Crown by a settled account must, in view of these express statutory provisions, be restricted to what they authorize and direct. If so, the bank would seem not to have had the right to regard the retention of pass-book sheets and vouchers without objection as a settlement of accounts. The express provisions of the statute under which the dealings in question were conducted exclude any implication such as might arise in the case of an ordinary customer. Those provisions defer the adjustment of the interim advances made by the bank under the credits issued to it until the Receiver-General, at the instance of the Auditor-General, issues his reimbursement check. The sending of this reimbursement check and its acceptance by the bank without protest must therefore be regarded as effecting the settlement of the account between the bank and the Crown, if there ever was such a settlement. No reimbursement check covered the Martineau forgeries. It may well be that the bank, by its acceptance and retention of these reimbursement checks without protest, bound itself by settlements of account which exclude the items that it now claims to charge against the plaintiff. If the view which I have expressed of the effect of section 30 of the Audit Act be correct, it follows that the bank cannot on any plea of settled account justify its retention of His Majesty's moneys to cover these forgeries.

Although in Critten vs. Chemical National Bank the court declines to treat the liability of the depositor as resting upon either an implied adoption of the forged checks as genuine, or a ratification of their payment, as an estoppel from asserting that they are forgeries since Devaynes vs. Noble, where courts have held the depositor for want of examination of his pass-book and vouchers chargeable with forgeries debited to his account, it has almost invariably been upon the ground that "his silence is regarded as an admission that the entries are correct." In Leather Manufacturers' Bank vs. Morgan, the Supreme Court of the United States treats such a case as a settlement of accounts by conduct working as estoppel. In Blackburn Building Society vs. Cunliffe, Brooks & Co., Lord Chancellor Selborne, delivering the judgment of the Court of Appeal, speaks of "the doctrine that a pass-book passing to and fro is evidence of a stated and settled account." This I take to be the true ground upon which the ordinary customer, who has had opportunity to examine his pass-book and vouchers, and has failed with reasonable promptness to notify the bank of such forgeries as by a proper examination he would have discovered, is precluded from objecting to these debit items in his account. That ground, for reasons above stated, is not, I incline to think, available to the present defendants.

But upon another ground of a very different character their defence must fail. To whatever disabilities the circumstances above adverted to might subject the plaintiff in this action, were he an ordinary customer of the defendant bank, they do not, in my opinion, in any wise embarrass the position of His Majesty as a suitor. Whether the defence, which counsel urge is available to a bank against its customer who neglects the duty of examining his pass-book and vouchers with ordinary diligence, should be regarded as arising from breach by the customer of an implied contract or undertaking on his part to perform this duty, or as an estoppel resulting from conduct by negligence or omission inducing a reasonable belief, and therefore tantamount to a representation that the statements as rendered by the bank were correct, upon which the bank has acted or abstained from action to its prejudice—in either aspect, if effectual in this action, such defence would involve imposing upon the Crown responsibility for the fraud, the negligence, or the omission of its servants. In the one case the Crown would be deemed by implication to have guaranteed the honesty, the fidelity, and the diligence of its employees; in the other it would be precluded from showing the truth by reason of the breach of duty of its servants.

The King is not bound by estoppel.

The Government "does not undertake to guarantee to any person the fidelity of any of its officers, or agents whom it employs." (Story on Agency, sec. 319.) Nor may the Government, under guise of a breach of an implied contract, be made responsible for laches of its officers for which it would not be directly liable as for breach of duty tortious in character.

"Even in regard to matters connected with the cause of action relied on by the United States, the Government is not responsible for the laches, however gross, of its officers."

It is a standing maxim of English law that in the King there can be no laches. For the same reason negligence is not imputable to him.

"This doctrine is indeed not confined to an exoneration of the Crown from liability for the torts of its agents and servants, but is carried so far as to exonerate the Crown or Government from the non-performance of contractual obligations, which in the case of private persons would be fatal to their rights, when such non-performance or negligence consists in the omissions of public officers to perform their duties. In the case of contracts, they are to be construed as though they contained an exception of the Crown for liability in respect of any wrongful or negligent breach by its servants. If Her Majesty could not be made liable in tort for the negligence of the persons who caused the injury to the suppliant of which he complains, it is impossible that she should become liable from the fact that the negligence which is said to have caused the injury is alleged to be in breach of a duty arising out of a contract."

In Cooke vs. United States, Waite, C.J., delivering the opinion of the court, says: "Generally, in regard to all the commercial business of the Government, if an officer especially charged with the performance of any duty * * * neglects that duty, and loss ensues, the Government must bear the consequences of his neglect." And "If it comes down from its position of sovereignty, and enters the domain of commerce, it submits itself to the same laws that govern individuals there." In United States vs. Barker it is laid down that the Government, as holder, of a bill of exchange, is bound to use the same diligence to charge the drawer and indorsers that is required of individuals; failure in this involves the loss of its claim against them.

In England the Crown, holding a bill of exchange seized under an extent before it is due, is said to be not chargeable with the neglect of its officer to give notice of dishonor. It may be contended that in this latter case the holding by the Crown is ascribable to the exercise of powers incident to its sovereignty, and not to any "entry into the domain of commerce." But neither should the opening in a chartered bank of a current account, necessary for the convenient handling of its moneys to be used in meeting the exigencies of the public service, be deemed an undertaking of commercial transactions implying an abrogation pro tanto or quoad hoc of privileges and rights peculiar to sovereignty. If it were, the Government could not, without seriously endangering public interests, avail itself of the facilities afforded by an institution owing its existence to a parliamentary charter.

Whatever may be the case in the United States, where the immunity of the Government from responsibility for the laches or negligence of its officers is founded upon considerations of public policy, in British dominions, where this wholesome privilege is part of the ancient prerogative right of the Crown, no implication of waiver by conduct, no consent express or implied given by any officer, no inference of extinction or abandonment to be drawn from statutory provisions, nothing less equivocal, authentic and compelling than a clear legislative enactment, in express terms taking it away, can be permitted to deprive the sovereign of the protection afforded by this portion of his royal prerogative, if he be minded to claim it.

In my opinion, therefore, the plaintiff is entitled to recover from the defendants the amount claimed, $75,705, with interest from the date at which such sum was, or the respective dates at which its component parts were, charged against the account of the Receiver-General of Canada, and were thus converted to the use of the defendants. From this, however, must be deducted the sum of $12,443.77, found upon Martineau's person when arrested, which was taken possession of by the Dominion Government. This money Martineau acknowledges to be a portion of that derived by him from his forgeries. Interest upon this latter sum from the date of its recovery must also be credited. The plaintiff shall have the costs of this action from the defendants.

The questions raised by the claim of the defendants against the third party banks must now be considered. Counsel for the Bank of Montreal argued that the third party banks are liable as indorsers, or upon warranty or representation that the checks were genuine, involved in or to be implied from their presentation of such checks for payment through the clearing-house. The defendants also claim to recover from each of the three banks to which they paid proceeds of the forgeries, the several amounts thereof as moneys paid and received by and under mistake of fact.

Upon the evidence I find that the third party banks were not indorsers. They did not become parties to the checks to pass title thereto. They did not place their names upon them with intent to assume liability, or for any other purpose than to identify as their property such checks as they had respectively sent to the clearing-house, and to signify to the officer there in charge to what bank he should credit such checks. Nothing depends upon the fact that these forged checks were passed through the Ottawa Clearing-House.

Neither did they warrant nor represent anything as to the genuineness of the checks. The defendants did not act voluntarily on the request of the third parties. They paid in assumed discharge of their obligations to the plaintiff. In such cases there is no implication either of warranty or of representation upon which a claim for indemnity could be founded. Neither was there any passing of title by delivery, the checks being "at home" with the Bank of Montreal.

The third parties resist the claim of the defendants upon several distinct grounds: viz., 1st, that there was negligence on the part of the defendants in making the payments which precludes recovery; 2d, that, by the law merchant, failure on the part of the drawee to give notice of dishonor of a forged bill on the day of its presentment and payment absolutely discharges a bona-fide holder for value who has received payment innocently; 3d, that a similar statutory obligation, its breach entailing like consequences, is imposed by section 54 of the Bills of Exchange Act; 4th, that the fact that the defendants paid their own customer's check, and the change in position of the third parties since payment by the defendants, render it inequitable that the latter should be permitted to recover.

I have found that, except as to the fourth check of the series, there was no negligence on the part of any of the bank officers in passing these checks. It may be that the special negligence on the part of the Bank of Montreal in regard to the fourth check, precludes recovery from the Quebec Bank of the money paid upon it. I find it unnecessary to dispose of this question.

On behalf of the Royal Bank evidence was given to establish that, although, when deposited, the last two checks of the series were formally placed to Martineau's credit in his account, the ledger keeper was in fact instructed not to permit him to draw against that account in respect of the sums represented by these checks until they had been actually paid by the Bank of Montreal. It is not pretended that Martineau was informed of these special instructions or of anything which would restrict his right to treat these deposits as actual credits which he was immediately entitled to use.

In Capital and Counties Bank vs. Gordon, Lord Macnaghten says: "It is well settled that if a banker before collection credits a customer with the face value of a check paid into his account the banker becomes holder for value of the check." And Lord Lindley: "It must never be forgotten that the moment a bank places money to its customer's credit, the customer is entitled to draw upon it, unless something occurs to deprive him of that right. Nothing occurred in this case to the knowledge of the bank which had any such effect." I cannot regard the Royal Bank as a mere agent of Martineau for the collection of the checks deposited with it. Like the two other third party banks, on whose behalf no such evidence was offered, I must treat the Royal Bank as holder in due course of the two last checks of the series, so far as there can be a bona-fide holder in due course of forged paper.

On behalf of the Quebec Bank it was proved that its rules requiring certain notices of withdrawal to be given are notified to depositors by being printed inside their pass-books. The Manager, on examination in chief, stated that these rules were insisted on; but on cross-examination he conceded that the rule requiring fifteen days' notice of withdrawals is not always observed.

In the case of the Royal Bank the pass-book contains a notice that the bank reserves the right to require fifteen days' notice when all or any portion of a deposit is withdrawn. There is no evidence of any similar provision affecting the Sovereign Bank account.

An examination of the Cote account with the Quebec Bank shows that notice of the forgeries to the bank would have enabled the bank to protect itself, in the case of the first forged check, if given on or before the fifth day after it was deposited; of the second check, if given on or before the sixty-ninth day; of the third, on or before the thirty-ninth day; of the fourth, on or before the thirty-fourth day; of the fifth, on or before the fifth day; and on the sixth on or before the third day. In the case of the Sovereign Bank, notice would have had a similar effect if given as to the seventh and eighth checks on or before the seventh day after their deposit, and as to the ninth and tenth checks, on or before the third day following their deposit (allowing for accumlated interest not credited). In the case of the Royal Bank, notice would have been effective if received in the case of the eleventh check, on or before the sixth day following its deposit, and of the twelfth check, on or before the eighth day after its deposit. In each case a still later notice would have enabled the bank to protect itself as to part of the amounts of these checks, which, except three, were paid by the defendants on the day after their deposit with ont of the third party banks. The second check, deposited December 24, 1901, was paid December 26, 1901; the fifth, deposited April 18, 1902, was paid April 21, 1902, being the second judicial day after its deposit; and the last check, deposited October 15, 1902, was paid October 17, 1902.

In the case of every check of the series, therefore, the position of the recipient bank was altered to its prejudice after the day on which payment was made by the defendants.

This clearly distinguishes the present case from Imperial Bank of Canada vs. Bank of Hamilton, in which the face value of the forged check had been obtained by the depositor from the former bank before its presentation for payment at the latter. The Privy Council, in holding the want of notice of the forgery to the Imperial Bank on the day of payment to be unavailing as a defence, lays distinct stress upon the fact that "no loss has been occasioned by the delay in giving it." The question presented for my determination, therefore, is not concluded by that decision. I have not overlooked the language found at page 57 of the report, where Lord Lindley, speaking for the Board, says: "Quite apart from the fact that the appellants were not in any way prejudiced by want of notice on the day of payment, it appears to their Lordships that the stringent rule referred to * * * does not really apply to this case." His Lordship was speaking of the well-known rule in regard to genuine bills and notes laid down in Cocks vs. Masterman, "reasserted in even wider language by Mathew, J., in London and River Plate Bank vs. Bank of Liverpool." That rule in nowise depends upon negligence, and involves a conclusive presumption of prejudice for want of notice on the day of presentation for payment. The Judicial Committee held it inapplicable to "a simple forgery," whether or not actual prejudice resulted from notice not being promptly given. I understand that this judgment simply excludes from the consideration, as inapplicable to the case of mere forgeries, such as we are dealing with, the rules as to notice established in regard to genuine bills and notes.

What I have said answers the second and third contentions of counsel for the third parties, but does not affect the question raised by their final contention as above stated. As to the third ground, the Bank of Montreal never was an acceptor of any of these checks within the meaning of section 54 of the Canadian Bills of Exchange Act. I, therefore, proceed to deal with the question between the defendants and the third parties apart from all considerations as to notice peculiarly applicable to bills and notes of established genuineness.

Where in the course of business, as the result of mistake of fact between them, a loss has fallen on one of two equally innocent and blameless parties, it is held by some courts in the United States that such loss must remain where the chance of business has placed it.

The grounds upon which recovery has been successfully resisted in many cases of forged signatures are two: viz., that the fact that the person seeking to recover is the banker of the drawer, whose signature has been forged, in the absence of any fault on the part of the payee, deprives him (the banker) of all right to relief; and that a prejudicial alteration of his position by the payee after payment renders it unjust that he (the payee) should be required to refund. These two grounds demand careful investigation.

For the defendants it is contended that, while the duty of the banker to his customer to know his signature is absolute, he owes no such duty to any other person, and no third party can claim any benefit from such an obligation.

It cannot be denied that there is a great mass of authority to the contrary. In Price vs. Neal, Lord Mansfield says: "It was incumbent upon the plaintiff to be satisfied 'that the bill drawn upon him was the drawer's hand,' before he accepted or paid it." In Smith vs. Mercer, Dallas J., says: "If an acceptor is then bound to know the drawer's hand-writing, is it less the duty of a banker to know the hand-writing of his customer? In degree, it is more so; for he sees it, probably, every day. I consider therefore the payment of this bill as a want of caution on the part of the plaintiffs." Heath, J., says: "The situation of bankers is most peculiar—they are bound to know the hand-writing of their customers." Gibbs, C.J., approves of these statements. In both these cases the right of recovery of the banker from the holder for value, whom he had paid, was under consideration. In neither was there any evidence that by greater care the forgery could have been detected.

In Wilkinson vs. Johnson, the court speaks of the fault of a drawee who pays on a forged signature. To Bramwell, B., in Hart vs. Frontino, etc., Gold Mining Co., is attributed this statement: "As against a bona-fide holder for value a banker paying a forged check * * * cannot afterwards recover back the money." In Simm vs. Anglo-American Telegraph Co., Lindley, J., says: "A banker paying a forged check to an innocent holder for value cannot recover back its amount." In Sheffield Corporation vs. Barclay, Vaughan Williams, L.J., refers approvingly to the dicta of Bramwell, B., and Lindley, J.

It will be noticed, however, that neither Lindley, J., nor Bramwell, B., speaks of the banker as bound to third parties to know his customer's signature. While advancing the proposition broadly that his mistake precludes recovery, these judges abstain from stating for what reason it is, or should be so. Cross, J., alludes to the banker's recognition of the forged signature.

There is no relation between the banker and the payee which can extend to the latter—a stranger—the obligation which the banker is under to his customer, the real foundation of which must be that, in the absence of a genuine signature, the banker has no mandate or authority from the customer to pay. Notwithstanding the profound respect which I entertain for such eminent jurists as Lord Mansfield, Sir A. A. Dorion, and Mr. Justice Story, I am bound to express my opinion that the alleged right of the stranger to set up a duty to himself of this kind appears to rest upon no solid foundation, and is incapable of logical proof; and, in the light thrown upon the real position of simple forgeries by the Privy Council judgment in Imperial Bank of Canada vs. Bank of Hamilton, the propositions stated by all the

Upon a distinctly different ground the banker may be precluded from recovery. The finding that there was no negligence on the part of the Bank of Montreal officials (except as to the fourth check) because the forgeries were so executed that no reasonable care in examination would have detected them, involves a finding that the bank had not means of knowledge. It is not, therefore, driven to rely upon the principle established by Kelly vs. Solari. But, though he has neither knowledge nor the means of knowledge of the forgeries, if a banker by his conduct represents to a person in the position of any of the third party banks that he is prepared to treat a drawer's forged signature as genuine, and such person, in consequence of such representations, acts, or refrains from acting, to his prejudice, is the banker ex aequo et bono entitled to ask the courts to shift his loss to the innocent person whom he has misled, however blamelessly? Did the defendants so represent?

Mathew, J., meets this situation in London and River Plate Bank vs. Bank of Liverpool, thus, when speaking of Price vs. Neal, he says: "It seems to me the principle underlying the decision is this. that if the plaintiff in that case so conducted himself as to lead the holder of the bill to believe that he considered the signature genuine, he could not afterwards withdraw from that position." But the banker did in fact consider the signature genuine, and, unless his conduct is to be taken as calculated to convey more than this belief to the holder whom he pays, there not seek to withdraw from that position. Does he not, however, go further distinguished judges whom I have quoted, must, I venture to think, be is no misrepresentation on which to found an estoppel. He, therefore, need deemed too broad.

Finding myself unable to agree with the proposition that the banker owes to the holder of a check the duty of knowing his customer's signature, I prefer not to rest my decision upon it.
and impliedly assert that he accepts and assumes responsibility for the check as genuine? Such, it seems to me, is the construction which a reasonable man might be expected to put on a banker's payment of his customer's check drawn upon him, and it is from this position that he cannot, if his assumption of it has been the cause of appreciable detriment to a person who might be expected to rely upon it, as against such person be permitted to recede. Had the defendants made express representations that these checks were genuine, they would beyond doubt be bound thereby. (Deutsche Bank vs. Beriro.) They must be assumed to have known that payment of these checks would be likely to induce in the holders a belief (upon which they might act, or refrain from action) that the Bank of Montreal deemed the forged signatures of the departmental officers genuine and had accepted and assumed responsibility for the checks to which they were appended. The

fact that the banker has special facilities for recognizing forgeries of his customer's signature, and may be expected, for his own protection, to take every precaution to detect such forgeries, fosters this belief and is calculated to beget in the holder absolute confidence in this security, so much so as to give to this representation by conduct all the force of an express representation of fact.

Had the third party banks been merely agents for collection, the fact of prejudicial alteration in position and the causal connection therewith of the defendants' conduct would be obvious. Is it less so where, although the amounts of the forged checks had been placed to the credit of the depositor before, the banks in fact retained their proceeds, or the consideration to be given for them, until after payment by the drawee?

In the case of the Royal Bank clearly not, because, upon the positive and uncontradicted evidence of its Manager, payment was made by the bank to Martineau solely in reliance upon the assurance which payment by the defendants afforded. The estoppel in favor of the Royal Bank is, in my opinion, complete. Its alteration in position is unquestionably directly attributable to the confidence engendered by the act of the defendants.

I do not find in its rule requiring notice of withdrawal sufficient ground for distinguishing the case of the Quebec Bank from that of the Sovereign Bank. In the absence of express evidence to that effect, should it be inferred that the conduct of the defendants induced the alteration of position which ensued in the case of these banks?

In the first place the onus of proving that such is not the case is perhaps upon the defendants. The position of the defendants required that they should either pay or refuse to pay these forged checks. In the latter event the third parties, instead of being "lulled to rest," would have been warned immediately to take steps to protect their interests, which, in this case (in that respect different from most others), it is clear would have been effective. These third party banks had the forger's moneys in their own hands.

Cameron, C.J., in Merchants' Bank vs. Lucas, says: "If it is necessary that there should be affirmative evidence of their being prejudiced by actual doing or refraining from doing, there has been no legal estoppel in this case. But I am of opinion the principle of estoppel is more extensive in its application, and it will be sufficient if it be shown that in absence of the matter of estoppel, the plaintiffs might have put themselves in a position from which a benefit might accrue to them. It is unimportant whether they would have taken steps to secure the benefit or not."

It is not unreasonable to infer that the change in position of the third party banks, subsequent to the payment by the defendants of the forged checks, is attributable, in part at least, to the fact that such payment was made. They refrained from taking steps which there is every reason to suppose they would have taken in the event of non-payment by the defendants on presentation—a fact of which they would undoubtedly have had prompt notice.

Though the inference that the loss sustained is ascribable to the misrepresentation established is not a conclusion of law, as had been stated by Jessel, M.R., in Redgrave vs. Hurd, without express evidence that the payments to Martineau by the Soverign Bank and the Quebec Bank were induced by the fact that the Bank of Montreal had honored the checks deposited by him, as a juror I find little difficulty in drawing such an inference of fact.

Upon the ground of estoppel arising from its payment of the forged checks and the change in the position of the third parties which ensued, rather than for default or breach of duty in failing to detect forgeries of its customer's signature, or upon any conclusive presumption of culpable negligence raised by that misfortune, the Bank of Montreal should, in my opinion, be held not entitled to recover.

Apart from any application of the principles of estoppel, the third parties appear to have a defence to the claim made upon them for repayment. "When one of two innocent parties must suffer by the acts of a third, he who has enabled such third persons to occasion the loss must sustain it." Although the third party banks had credited Martineau's account with the amount of the forged checks before they were presented for payment, that mistake or indiscretion, if I may so call it, would have been quite innocuous to them, had it not been for the subsequent mistake of the defendants in honoring those checks. This act of the defendants was, I think the proximate cause which enabled Martineau to reap the benefit of his frauds. Upon the principles established by Lickbarrow vs. Mason they must bear the loss. Upon both grounds, however, in my opinion, the defendant cannot ex aequo et bono claim to be relieved at the expense of the third parties from the loss which they have sustained.

But, inasmuch as the third parties have upon equitable grounds successfully resisted the defendants' claim, they must in turn do equity. While the claim made against the third parties will be dismissed with costs, the Quebec Bank must pay to the defendants the balance of $5, which it appears to hold at Martineau's credit. The Sovereign Bank account and the Royal Bank account had been closed before Martineau was arrested.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

A reasonable charge is made for Special Replies asked for by correspondents—to be promptly sent by mail.

Editor Bankers Magazine: ———, Tenn., November 23, 1905.

Sir: Will you please answer the following questions:

We are situated in the country, and bills drawn on us can only reach us by mail, as a general thing; and occasionally we receive notices from other banks stating that, "they hold for collection checks drawn on us," and request us to remit amount before they will forward the check. In so doing we can tell nothing about the signature until after we have paid the check. In this way how can we guard against forgery?

Where country checks are paid through city clearing houses, and it is the rule of the clearing house to consider all checks paid which are not returned before one o'clock same day, what should be done in regard to forged checks? PRESIDENT.

Answer.—It is an elementary rule in the law of commercial paper, that the drawee is presumed to know the signature of the drawer; and if he pays a bill to which the drawer's name has been forged, he is bound by the act and cannot recover the money. The law proceeds upon the theory that the drawee must know the signature of his correspondent much better than the holder can, and that, therefore, the holder may cast upon him the entire responsibility of determining as to the genuineness of the instrument. If he fails to discover the forgery, the law imputes to him negligence; and although he has made payment under a mistake, and parts with his money without receiving the supposed equivalent, and although the holder has obtained the money without consideration, still the drawee cannot be relieved from the consequences of his neglect at the expense of the holder, and the latter may retain the money in equity and good conscience. This rule was first established by the decision of Lord Mansfield in Price vs. Neal (3 Burrows, 1354), and has been held to apply to banks in the payment of checks. (Nat. Park Bank vs. Ninth Nat. Bank, 46 N. Y. 77; Bank of St. Albans vs. Mechanics' Bank, 10 Vt. 141; Commercial and Farmers' Bank vs. First Nat. Bank, 30 Md. 11.) But this rule applies only where the paper is actually presented, so that the drawee has an opportunity to inspect the signature. (Allen vs. Fourth Nat. Bank, 59 N. Y. 12.) In the case cited, it was said:

"In case of commercial paper being paid without previous inspection, it is, no doubt, the duty of the party paying to use due diligence in making the inspection as soon as he has opportunity, and in giving notice of the forgery if one be discovered; and if by his failure to do so the party receiving is prejudiced, such negligence would be a good answer to the claim for restitution. The doctrine of Price vs. Neal (3 Burr. 1354) is exceptional, and in strictness applies only where the paper is actually presented to the party, and accepted or paid on or after such presentation. Where the payment is made without presentation, and accepted subject to future examination of the paper, the case is not within the exception in Price vs. Neal, and the ordinary rules respecting money paid by mistake and negligence and its consequence should be applied."

In the case stated, therefore, as the payments are made without an opportunity to inspect the signatures to the checks, the bank would not be precluded from disputing their genuineness when such opportunity is given, and could recover any payments so made as payments made under mistake of fact. (See Allen vs. Fourth Nat. Bank, 59 N. Y. 12; Canal Bank vs. Bank of Albany, 1 Hill [N. Y.] 287; Redington vs. Woods, 45 Cal. 406; Espy vs. Bank of Cincinnati, 18 Wall. [U. S.] 604; Rouvant vs. San Antonio Nat. Bank, 63 Tex. 610.)

As to country checks paid through the clearing house, if they are paid by some member acting as clearing house agent for the drawee bank, then they would be subject to the clearing house rules, and would have to be returned within the time fixed by such rules.

Editor Bankers' Magazine, Syracuse, N. Y., November 23, 1905.

Sir: One of our customers is in receipt of a check accompanied by a statement bearing the following notice: "N. B. This is understood and intended to be a settlement in full for all our purchases of you up to the date of the latest bill herein paid. If not correct, return our check." The check does not cover all the purchases to the date of the latest bill, and our customer retains the check, credits it on account and writes the maker of the check to that effect. Is this proper, or should he have returned the check?

CASHIER.

Answer.—The acceptance of the check would in this State operate to discharge the entire debt. If, when the amount of an indebtedness is in dispute, the debtor sends the creditor a check for the sum conceded by the debtor to be due, with an unsigned receipt "in full" and a letter requesting the signing and return of the voucher, the offer of payment is to be deemed made upon the condition of its acceptance in satisfaction of the debt; and if the creditor retains the papers, and, after claiming a larger sum, and the refusal of the debtor to pay anything more, indorses and collects the check, such acceptance of the check imports an election to be bound by the condition on which it was offered and constitutes an accord and satisfaction which will not be affected by the creditor subsequently sending the debtor a receipt "on account," unless such receipt is acquiesced in by the debtor. (Nassoiy vs. Tomlinson, 148 N. Y. 326.)

UNSOUND PRINCIPLES OF CURRENCY.—United Sates Treasurer Treat's report, just published, says that our paper currency "is subject to very rough usage, which soon reduces it to a condition unfit for circulation."

What is the reason that our currency comes to need washing and ironing before it is fit for the pocket? It is because it is never truly redeemed. Some of our paper money stays afloat for years, although it ought to be destroyed whenever the cycle of trade which called it into existence is accomplished. When a farmer gets greenbacks for a load of grain, and deposits them in bank, they ought to be destroyed when next they reach the Treasury. If the farmer pays the paper "money" to a store, it ought to be destroyed whenever it is paid into bank in satisfaction of the discount which called it into existence.

If we are not mistaken, the average life of our paper money is two years, whereas it ought not to exceed at most the time of currency of the ordinary promissory note. Dirty money has a deeper meaning than mere wear and tear. It is an outward and visible sign of unsound principles of currency. —*New York Times.*

INVINCIBLE POWER OF THE PEOPLE.—When aroused the people are invincible. The bosses may have the political machinery running ever so smoothly, but the heart and conscience of the people is the strongest machine in the world. Such a machine is the mightiest that can be constructed.—*Governor Folk of Missouri.*

THE FUTURE OF THE RATE OF INTEREST.

[By Alex. Del Mar, Author of a "History of the Precious Metals," "The History of Money," "The Science of Money," Etc.]

Although it was commonly known that the production of gold throughout the world had greatly increased and was still increasing, yet marked attention was first drawn to the subject in July, 1905, when not only was the great increase of gold explicitly set forth, but the cause of it explained, and the prediction made that within the next five years even this great increase would be doubled; so that instead of, as now, producing a million a day, the world would produce two millions a day. The main cause of the increase was shown by the same authority to be the cyanide process and the Gold Dredger; and the basis of the prediction for the future was the vast extent of placer ground known to contain alluvial gold in paying quantities, when worked by this practically new and very effective device.

Great and Increasing Product of Gold.

Soon after the publication of these facts, explanations and predictions, the Director of the United States Mint, in his preliminary official report, confirmed them all; though in less positive and explicit terms; whereupon there almost immediately appeared a number of printed papers and essays, upon the effect which this influx of gold, thus confirmed by official research, was likely to have upon the future permanent rate of interest for money. In most of these papers the only cause put forth for apprehending any change in the long-time ordinary rates of interest, was the increase of gold; in only one of them was the subject treated historically; whilst none of them appeared in a form or setting which, like an essay in The Bankers' Magazine, is valuable for reference and suitable as the basis of further study.

The principles which underlie a rate of interest and therefore the basis upon which the future of the rate of interest may be predicated, form neither a new study nor an easy one. They were discussed over twenty-two centuries ago by Aristotle; they occupy a space in every modern work on political economy; they have filled entire volumes, from the Denunciad of Father O'Callaghan, 1856, to the Dunciad of Calvin Elliott, 1902, and from the profound lucubrations of Thomas Henry Buckle, 1855, to the sciolistic treatise of Boehm-Bawerk, 1891. The mere bibliography of interest would fill twenty-odd pages of The Bankers' Magazine.

Analysis and Principles of Interest.

Yet when interest is analyzed, these principles stand out plainly enough, and are found to have little or no necessary connection with the increase of gold, or of any kind of money. A rate of interest consists of three elements: First, profits in production or trade; second, risk; third, the cost of superintending loans. For example, the rate of interest in New York at the present time, on such financial or commercial security as bankers accept, is, let us say, five per cent. Of this rate, a portion is charged and conceded as insurance, to cover the risk to which the lender is exposed of not receiving back his principal, with interest. Seeing that first-class three per cent. State and municipal bonds—a much better security than financial or commercial collateral—command par, it follows that the risk involved in the latter must account for a great part of the difference, say one per cent. Then the cost of superintending the loan, namely, finding the borrower, keeping the account, collecting the interest, defraying legal and notarial fees, etc., amounts to something, let us say one-fourth of one per cent. The Connecticut Insurance Commissioner computes this item at one-eighth of one per cent.; but this we regard as too low, when applied to the whole body of loanable capital. In the long run the net profits of production or trade in the United States, after all losses and failures are deducted, as is proved by a great variety of evidences, do not exceed three and three-fourths per cent. per annum. This makes up the market rate of five per cent.

Profit is the Chief Element of Interest.

The restrictions of space will not permit discussion of all these elements of a rate of interest, but only the principal one, namely, the profits of production or trade. If no profits could be made or were expected to be made in production or trade, nobody would desire to borrow money on security, were the rate ever so low. Men borrow money for the purpose, either of lending it again at a higher rate than they pay, or of investing it in production or trade which promises a profit greater than the rate of interest charged upon the original loan. This is the borrower's foundation of interest. The lender's foundation of interest is the amplitude of his treasure or credit; in other words, the supply of loanable funds.

In nearly every essay which has appeared during or since the very recent rise in the rate of interest it has been regarded as temporary and the cause of it (we are not now referring to the probable future permanent rate, but the current rate), the sole reason put forward or discussed, was the Western demand for moving the crops; by which is meant the initial funds required for advances on the crops, or what funds were likely to prove sufficient to bring them into market, practically into the elevators, or the cattle-pens. But any quantitative consideration of the subject should have been sufficient to indicate that such a cause was quite inadequate to produce the known result. The crop movement is a familiar phenomenon; it recurs every year at the same period; country dealers are prepared for it; local bankers are prepared for it; Kansas City, St. Louis, Chicago, and all the great Western cities whose names are legion, are prepared for it; and were it necessary, the Western bankers could finance the crops without any assistance at all from New York, Philadelphia or Boston, or without withdrawing their balances from those financial centres. The sum necessary to move the crops is thirty or forty, say fifty, say one hundred millions.

What is this compared with the tremendous difference between a two per cent. and a five per cent money market, operating, as it did, upon billions of securities, determining their current value and that of the incomes derived from them? To say that the crop movement had nothing at all to do with the recent rise of interest would be perhaps saying too much, for it certainly had something to do with it; but not much; almost nothing.

On the other hand, and apart from the recent rise of interest, some of the essayists have built predictions of the future entirely upon the new supplies of gold. One writer declares that in future we shall have lower interest, because the new gold will render money more plentiful and consequently more difficult to lend. On the other hand, the "Wall Street Journal" editorial of October 3d, held that "the enormous production of gold in recent years had gone very largely into the coinage of the principal nations, caused an expansion of money, a rise of prices, and a corresponding uplift in interest rates." This relates to the past, not to the future; yet, until quite recently, there was in fact, despite this reasoning, no rise of interest. Last year money was a-begging at one per cent. per annum. Another writer predicts higher interest, because the new supplies will lower the purchasing power of gold; therefore the lender will have to demand a higher rate of interest, part of which is to cover the fallen value of the principal.

It is perhaps needless to reply that money-lenders by themselves cannot make a rate of interest; that "it takes two to make a bargain;" and that a rate of interest, like any other price, is fixed by the contest between buyer and seller, between lender and borrower; in brief, by exchange, the universal touchstone of value.

Increase of Gold Will Not of Itself Affect Interest.

That an increase in the volume of money, whether of gold or silver coins, or paper notes, will tend not to enhance, but to lower the rate of interest for a brief time, that is to say, until the new money thoroughly permeates the channels of trade, goes without saying, for it is written on the pages of history; but as to any permanent alteration of interest, neither an augmentation nor a diminution of money could, of itself, and apart from other circumstances, affect it at all. As the Stagyrite long ago demonstrated, money cannot breed money; only production and trade can breed it; and unless the conditions of the latter are such as to yield or promise to yield profits, there would be no rate of interest at all; for nobody would wish to borrow, nor nobody care to lend. The Halcyon, or Elizabethan, Age of England did not arise solely from the great increase of money which occurred at that period, but from the circumstances and opportunities which attended that increase and which created an intense demand in production and trade for the profitable employment of that money; a subject to which we shall revert as we proceed.

The Recent Temporary Rise Versus the Future Permanent Rate.

It is curious how readily untrained observers, among them especially those who contribute voluntary and eleemosynary essays to the alms-seeking portion of the press, are apt to overlook a great truth in their eagerness to grasp some platitude sufficiently conventional to save their remarks from ridicule. The stale, trite, false, conventional platitude, which they offered to account for the recent rise of interest, was the crop movement: the great truth which they saw not, was the crop itself.

It was not the demand for a few millions of money to move the crop, which caused the rise of interest, but the amplitude and exuberance of the crop, the profits it earned this year, the profits which farming promises to earn next year, and the desire on the part of the farmers to buy more land, tools, farm implements, cattle and labor, in order to increase those profits; that is what caused the rise of interest; that, and other enterprises which now are creating fresher and fresher demands for loans of capital.

Some Evidences of Existing Industrial Activity.

Bankers need only turn to the pages of the trade journals to note the enormous development of sound industrial enterprises to which the adoption of electrical power is giving rise. For some examples, taken at random, the New York Central is electrifying its entire system from New York to Croton at an outlay of at least sixty millions; a power company is erecting a dam on the Tennessee River 1200 feet wide and thirty-five feet high, over which the water is hereafter to fall, developing 56,000 horse-power, enough to add 400 more manufactories to the 400 already existing in the adjacent city of Chattanooga. This dam, the fourteen electrical generators to be used, the power-house, a lock, etc., in short, the improvement, will cost three millions, and is to be finished in fourteen months. The Mexican Electric Company, with headquarters in the City of Mexico, is another new enterprise of large dimensions. It deals in electrical apparatus, accessories and supplies, and has already furnished machines and materials to numerous installations in Mexico, both in the capital, in Vera Cruz, Jalapa, Puebla, Guadalajara, Zacatecas, Guanajuato, San Luis Potosi, Hermosillo, Guaymas, Ciudad Victoria, Tampico and elsewhere. All of these installations required capital, and most of them came to the United States for it. Along the lines of the Southern Railroad, 7,000 miles long, during the year ended June 30, 1905, there were completed and put in operation forty-six textile mills, thirty-four furniture factories, thirty-eight iron industries, six tanneries, seventy-seven stone quarries and coal mines, thirteen cotton-seed oil plants, eight fertilizer works, and more than 500 small industries. Over 250 plants were enlarged, and fifty-four new industries were under construction when the report closed. All these industries needed capital, and most of them applied for and procured it in the rich cities of the North and East. In a railway journal we read of a new electric road in Indiana, 146 miles long; the American Car and Foundry Company has booked orders ahead for 45,000 new cars; the ship-building yards on our great lakes are overburdened with orders for new steam vessels of greater length and superior tonnage than those now in use; in a local real estate journal we read of several hundred new six story apartment-houses being erected in New York city, the rooms in many of which are already engaged at profitable rentals; in a machinery paper, of orders for fifty Gold Dredgers, costing $30,000 to $70,000 each; on every hand new enterprises promising big returns and requiring capital to start them.

Active Demands for Loanable Capital.

This year's crops will command, not merely for advances, or for initial payments, but for the entire value of all that considerable portion of them which will seek distant domestic and all foreign markets, more money than there is in the entire country; and if this money circulated or was used but once a year, instead of, what is the fact, some sixty odd times a year, it would be entirely inadequate for this purpose alone; to say nothing of the numerous other purposes for which this age of sudden electrical expansion is hammering at the doors of the banks for loans of capital.

What else is the meaning of that new and unprecedented rivalry for deposits which the banks have recently exhibited, but the assurance which each banker feels that he can lend these deposits upon good security at a higher rate of interest than he is paying for them? All over the country we see the banks offering one and one-half, two and in some instances three per cent. for deposits subject to check, but of a character, such as State and municipal funds, not likely to be suddenly withdrawn; all over the country we see the banks eagerly advertising for business, a practice never resorted to before, except in those stiff and stately announcements which commonly distinguish the learned professions. Here is a trust company, which, for the sake of securing the deposit of its funds, undertakes the entire care and administration of an estate; there is a bankers' association, offering greater facilities or superior security for remittances of small sums than either the post office or the express companies can afford; everywhere is to be seen an eager demand for money, a rivalry between the most prudent and conservative class of men in the country, to secure deposits. What can it mean, what else can it mean, what else can it possibly mean than that there is a corresponding demand for money, of even greater intensity, from the customers of these institutions; not a demand for foreign remittances, not a demand for stock-exchange purposes, nothing desperate, nothing wild, but a steady, solid, business-like demand from the industrial world, to help it harness those great forces of nature, the force of heat in the sun's rays, the force of gravitation in the fall of water, which the control of electrical currents now enables us to employ, at distances, in places, and in ways which before were impracticable?

Active Trade Conditions Universal.

These conditions of trade are not confined to America, they exist in Great Britain and her colonies, they prevail in Germany, they are even, though in lesser degrees, felt in France; and in all those countries they are evidently due to the recent adaptation of electrical and other novel powers to production and trade, and to the organizations and combinations which have rendered these powers effective. Hence the rate of interest has risen not only in America, but in all the States named as well as in others.

Trade Opportunity Combined with Influx of Gold.

But while these conditions sufficiently account for the recent rise of interest, they are hardly enough to justify a continuance of the rise. They furnish no assured basis for prophecy. Something else is wanted beside *opportunity*, and that something else is the *means*. Credit is not strong enough to supply the means of changing the world's motive powers from steam to electricity, in all the varied ways and to the almost endless extent to which such a monstrous change is susceptible of being carried. The indications point to an entire revolution of production and trade, a revolution in which many great guns will be fired, many old structures blown to pieces, and a great many superior ones erected in their places. The powder of these guns will be the electrical force; the cannon-balls will be cast from the new supplies of gold. The ancient Hindus divided the ages of mankind into four great intervals: the ages of Iron, of Bronze, of Silver and of Gold. The conceit was a fanciful one, and the order of the ages was more than once changed; but as it now stands, it hits the mark wonderfully well. We are entering upon the Age of Gold.

THE HALCYON AGE OF ENGLAND.

In reverting to the Halcyon Age of England, for the purpose of showing that it was not merely the increase of money but also the opportunities for investing it profitably, which caused the rise of interest that followed, it is necessary to be explicit. The Halcyon Age covered the period 1570-1640. Although Spain, Italy, France, Holland and Germany, indeed all maritime Europe, shared to some extent the benefits which arose out of the great influx of money-metal from America, it was England who derived the greatest advantage from the influx; because it was in England that those trade opportunities, to employ this money profitably, were the most numerous and attractive. A few examples of these opportunities must suffice. It was in 1538 that the monasteries were suppressed by Henry VIII. The sale of mortmain lands which followed offered to the peasantry that opportunity to cultivate them for their own profit, for which they had waited in vain since the decline of the Roman empire in Britain, but which until now had never been within their reach. The first work on agriculture published in England was the "Book of Husbandry," by Sir Anthony Fitzherbert, in 1534. This was followed by another from the same author, in 1539. Thomas Tusser's "Five Hundred Points in Good Husbandry" followed in 1564; and thus not only was the land thrown open for tillage, but the art of tilling it was imparted to all who could read. These events occurred before the influx of silver from America and before the Halcyon Age began. The dates when the principal plants were introduced into England prove the eagerness with which the people entered upon the profitable industry of proprietary farming; for be it known that previous to this period these plants were all strangers to a soil which under monastic influence had been restricted for the most part to a vassal and niggard cultivation of barley and oats. Indian corn, potatoes, squashes, carrots, artichokes, cabbages and turnips were all unknown in England until after the mortmain lands were thrown open. Flax was first grown in 1533; the vine was first introduced, since the ancient Roman days, in 1552; orange trees, 1548; turkeys and guinea fowls, 1570; tobacco, 1586; and most of the fruits and flowers now in common use, about 1570. With the limitations to the feudal system which began in 1495 and continued all through the reigns of Henry, Edward and Elizabeth, mechanical inventions and devices made a similar rapid progress. The first wind and water mills were introduced during the early part of the 16th century; the spinning-wheel was invented 1530; the diving-bell, 1538; the coining-press, 1560; and even a practical steam-engine was set up in Vauxhall so early as 1656. Gilbert produced frictional electricity in 1600; Fernel measured a degree of the meridian in France, 1550, and Norwood in England, 1635; hosiery was first made in England, 1564; the cotton manufacture (fustians and velveteens), 1641; the silk manufacture, 1604 and broad-silk, 1620; the staining of linen, 1579; the dyeing of cloth in colors, 1608; manufactures of glass, 1557; felted paper, 1580; paper-mills, 1588; newspapers ("The London Weekly News"), 1619; the manufacture of pins, 1543; of needles, 1545; of table cutlery, 1563; iron-smelting, with stone coals, 1619; and so on through a long list of industries, all of which were established in England during this period and most of them before Potosi threw its treasures upon the European world.

Land was placed within reach of a peasantry who had never before seen it freed from the taint and burden of feudal vassalage; commercial companies were formed to establish factories and promote trade and mining in America, Africa, the East Indies and the distant islands of the Sea; canals, warehouses, and the improvement of rivers and harbors were energetically carried on; the marshes of Lincolnshire were drained; the forests were felled; the East India Company was chartered in 1600 and the post-office established, 1635. It was an age of great enterprises. In 1588 the Spanish Armada, consisting of 150 sail, was destroyed in the British Channel; in 1591 the East India trade was opened by a direct sea route from England to Bombay; and while every kind of productive and commercial enterprise arose at home for the first time, and clamored for capital to sustain it, Drake and his bold colleagues scoured the Spanish Main, bombarded their coast cities, plundered their caravels and himself sailed around the world with a ship laden with gold and silver, to furnish, through the London goldsmiths, the means to carry these enterprises to success.

Influx of the Precious Metals from Spanish America—Rise of Interest.

It was upon the heels of the great impulse to trade which is marked by these events that came the supplies of the precious metals from America. The Protestant Reformation afforded the Opportunity; the silver from America furnished the Means; the result was the Halcyon Age and the rise of interest.

In 1483 lands were valued in England at ten years' purchase. This was tantamount to a ten per cent. rate of interest for money. In 1546 (37 Henry VIII, c. ix), interest was legalized at ten per cent., and contemporaneous evidence proves that this rate fairly represented the value of money on the best security at that period. Yet such was the intense demand for capital with which to prosecute those varied industries which the freedom of the lands and the abolition of ecclesiastical government and feudalism had promoted, that in 1547 Edward VI was obliged to offer fourteen per cent. per annum upon his royal bond. In London, in 1553, the rate of interest on landed security still ruled as high as twelve per cent.; in 1558 (loan of Queen Mary) the rate was still twelve per cent.; while in 1560 loans on landed property in London ruled as high as fourteen per cent. It was not until 1571 that Elizabeth ventured to sign a tentative act which forbade a higher rate than ten per cent.; and not until 1597 that this act was made permanent.

Halcyon Days in California—Rise of Interest.

A somewhat similar course of events took place in California in 1849. According to the theory advanced by the writer first above alluded to, the rate of interest in California should have fallen when gold was produced in the unexampled quantities which distinguished that and the following years. On the contrary, it rose, until almost as much was charged for money per mensam, as had previously been charged per annum. This was, first, because of the great opportunities for profit which presented themselves in every department of trade; and second, because of the great risk involved in lending money to a roving and unsettled community, as yet not brought under the protection and restraints of law.

Some of these opportunities for profit were so curious or extraordinary as to be worthy of preservation. The writer had many of them directly from the parties concerned, and knowing their character for veracity, he is able to vouch for the correctness of the information. One merchant bought a lot of scythe-blades in San Francisco, forming part of the cargo of a Boston clipper, for twenty-five cents each; nobody wanting them, and storage being excessively dear. Six months later, when scythe-blades were needed to cut the grass crop, he was the only possessor of the articles in California, and he sold his blades for one hundred dollars each. Another merchant finding himself in possession of the only lot of iron tacks in the new settlement, and these being in urgent demand for tacking up the muslin partitions which formed the rooms of the ready-made houses then in vogue, sold them, ounce by ounce, for their equal weight in gold. A storekeeper, who had declined to store a lot of beer kegs, for fear that their value would not be sufficient to pay for a month's storage, saw them sold within the month for a hundred dollars each. They were the only vessels then within reach suitable for packing water on mule-back. Said Captain Folsom, writing in 1848: "Whole cargoes of goods are sold at an average of about 150 per cent. clear profit and ready pay in gold dust. In a few months, real-estate that cost me less than $800, I suppose I could now sell for $8,000, perhaps $10,000." At San Francisco, 1849, potatoes sold at forty cents a pound; milk, $1 a quart; quinine, $1 a grain; a shave, $1; fare to Sacramento, eighty miles by river, $40; lumber, which cost $15 per thousand feet in Bangor, fetched $500 per thousand feet in San Francisco. Wages were an ounce, $16, a day; and the rate of interest for loans of money was five to ten per cent. a month.

At Sacramento, 1849, a three-story building on Front street rented for $3,500 a month. At San José, flour sold for $50 a barrel; boots, $32 a pair; eggs fifty cents each; onions, twenty-five to fifty cents each; almost any edible vegetable was worth a dollar; and money was worth five per cent. a month.

Not only was money loaned at this high rate, in many cases the interest was compounded monthly; and lest it may be supposed that this statement exceeds the bounds of credibility, it can be added that suits at law for arrears of interest compounded monthly in California were carried into the courts of Pennsylvania; though there they were decided adversely to the plaintiffs.

The Present Age a Halcyon One.

We now come to the present time. What are the indications which point to a permanently higher or increased rate of interest for money than the rates which have prevailed of late years? Answer: the new and great development of manufactures and trades which has been and is still being occasioned with added intensity by the increasing application of electricity to the various branches of industry; in short, to the new opportunities which the application of electrical power presents. What are the rates which have hitherto prevailed? Answer: during the decade 1880-1890 the profits realized upon the entire listed wealth of the United States, substantially all of which was capital, or reproductive wealth, was 4.46, say, 4½ per cent.; while during the decade 1890-1900 it was 3.79, say, 3¾ per cent. How is this known: by what means has it been ascertained? Answer: by means of the census of the United States. If asked to explain the process, the reply is as follows:

Rate of the Increase of Capital Wealth in the United States.

According to the "Statistical Abstract of the United States," issued by the Department of Commerce for the year 1904, p. 534, the Wealth of the United States (exclusive of Alaska and the Islands) or "The True Valuation of Real and Personal Property," as ascertained by the official census, was in 1880, 42,642 millions; in 1890, 65,037 millions; and in 1900, 94,300 millions of dollars. In these figures we have the elements of our computation. Assuming, what is probably sufficiently near the truth, that the influx of capital by immigration, and the efflux of capital by Americans and others going abroad, are equal, it follows that the increase of wealth from 1880 to 1890 amounted to about fifty-five per cent. and from 1890 to 1900 to about forty-three per cent. Upon computing the rate of profit, which, upon being compounded annually, would produce these results, it is found to be 4.46 per cent. in the earlier decade, and 3.79 in the later one. It is as though the whole of these vast sums of capital wealth were put out at usance to earn as much as possible, and that after deducting all expenses and losses, they formerly earned, say, 4½ and of late have earned 3¾ per cent. per annum.

Probable Future Rate of Interest.

Therefore, if from the considerations previously advanced concerning the adoption of electrical and other machinery and concerning the increased opportunities of profit which these and other devices have presented: therefore if the rate of profit upon the investments of capital is destined to increase, such rate will exceed 3¾ per cent. In view of the rate of profit earned during the previous decade, when no such new and ample opportunities occurred, the future rate may fairly be estimated at fully 4½ per cent. and perhaps a fraction more. Whatever average net rate of profit can be earned in production or trade, that rate must be closely reflected in the rate of interest for money; because, if the latter is lower, capital, instead of being loaned at interest, would be invested in trade; and if it was higher, the capital invested in trade would flow into the banks to be loaned at interest, until the two rates came to a common, or nearly common, level.

Identity of Net Profits and Net Interest.

It must not be supposed that the identity of the net rate of interest and the net rate of profit is accidental. It is an axiom in political economy that the profits of all occupations, whether they consist of producing, buying, selling, or lending, tend to a common level; and as a matter of fact, the books of any very large class of commercial concerns will actually confirm the deductions herein drawn. Let them be examined not for one year, or ten years, but for fifty years, or a sufficient interval of time to cover a few panics, revulsions and set-backs; and if they show a greater rate of profit than about four per cent. per annum, we would advise the banking fraternity to go into trade. On the other hand, if they show a lesser rate of profit than about four per cent., we would advise our manufacturers and merchants to turn bankers. Such examination must not be confined to the concerns that have prospered. Oh, no. It must include those also which have failed; for it is not alone the profits of the successful that are sought to be ascertained, but the average net profits of all the capital embarked in trade, whether successful or not.

Hopeful and Promising Character of the Present Time.

It is upon this solid mass of evidence and deduction that we rest our case. We regard the present time as most hopeful and promising for all prudently-conducted enterprises, and as affording a good chance for everybody to succeed in business who does not push into some overcrowded enterprise, or seek to prosper by impudence and false pretences. It is true that many branches of trade are monopolized, but on the other hand there are many more branches that are not monopolized. It is true that many avocations demand the investment of larger capitals than are commonly at command of the enterprising; but on the other hand there are very large capitals impatiently waiting their call.

Opportunity beckons enterprise from every quarter of the industrial world, and the Argosies of the Desert are sailing over the land laden deep with the golden Means to unlock the treasures of success. The times are flush, the wind is fair, the sails of trade are expanding; and, barring some unforeseeable disaster, the rate of interest must rise to the level of an evidently increasing commercial profit.

No More Private Fortunes.—The day of the private fortune is past. There are no private fortunes any more. There never can be private fortunes again as that term was understood one hundred years ago, fifty years ago, ten years ago. When a man makes money in excess of all possible honorable uses to which he and his family can put that money, his fortune ceases to be a private fortune, just as the man himself ceases to be a private citizen.

The steady unvarying intent and intense attention which eighty millions of people are giving to the excessively rich among them is a concrete, definite, practical thing which the Crœsus must take into account whether he will or not.

More and more he is taking it into account. More and more he is doing what the millions of his fellow citizens think he ought to do, and what, in reality, he ought to do, with his wealth. More and more he is conforming to the modern and Christian ideal of wealth. And so every year and every day he is coming to be less and less the owner of a private fortune and more the trustee of a public fund.

Public opinion! There is no human force at all equal to it. Public opinion is beginning to effect that much more difficult thing, the humbling of the man of wealth, and forcing him, even against his will, to make hoarded gold work righteousness for his fellow man.

More and more this will continue until, in the not distant future, the man of wealth who does not make the accumulated power which he has stored up in bank-vaults work for the world at large will be a moral, social and even a business outcast among his fellows. And no human being is willing to pay the price of a detested isolation in order to keep his dollars earning more dollars for himself or to save the whole mass of his money for the worse than useless purpose of bequeathing it to his children, whom, in nine cases out of ten, that wealth rots and kills.—*Senator Albert J. Beveridge, in Saturday Evening Post.*

BANK STATEMENTS.

SUGGESTIONS FOR PRESENTING THEM SO THAT THEY WILL DO THE BANK THE MOST GOOD AND BE UNDERSTOOD BY THOSE WHO READ THEM.

For awhile past there has been a movement amongst banks to present their statements in as nice a form as possible. Bankers have vied with each other to get out the best. So much has this been the case, and so much notice has been taken of it, that a few of the banking papers have commented on the ways in which some of the statements have been gotten up, and even going so far as to mention some as being the finest sent out by the banks of a certain city. Their comments referred to the typographical work, the colors or tints used and the paper on which they were printed. These things combine to make the statements genteel in appearance—and this is not to be despised. Just as good clothes are not to be despised, for they help to make a man genteel in appearance, and that helps him in business and society.

To have the statements appear genteel, to use this word, is certainly better than printing them on common news stock with ordinary news or circular style of type and poor ink. A number are still issued in that form and they certainly look mean, poor and cheap when compared with the better printed ones.

Some bankers think that the people to whom the statements go do not care what kind of paper is used, nor what kind of type, nor how it is set; but that they only care what kind of a report the figures show. This is partly true, and some of the best reports, so far as percentages and proportionate amounts go, show the poorest typographical work. But it is better to make a good impression in every way than a poor one at first glance and a good one on examination; for first impressions are often lasting; or it is better to make two good impressions at once than it is to make only one. The statements whose figures make a good report and whose typographical get-up is also good, make two good impressions.

The cost to get out a well-printed statement is not much more than that incurred in getting out a poorly-printed one.

It is not a good policy to have an engraved cover, as many do for a four-page statement; because the first cost is so heavy that you do not feel like discarding it after using it two or three times, and if you have a large quantity of the outside "run off," so that you have enough for five or more different statements, you, or your customers, cannot tell whether it is the old one or a new one without looking inside for the date. Some have the engraved cover and change the color of ink with each statement. This is a little better way, but it does not change the design. Variety of style and general appearance add to the interest and excite curiosity.

Printers to-day take pride in being able to turn out artistic designs in type arrangements; and if their customers have ideas of designs that they want, the printers will try to place their ideas in type.

The artistic typographical appearance must not be supposed to cover up the deficiences of the contents of the statements, although some bankers seem to think that they do. Judging by many of the statements issued now, the bankers have an idea that the public only desire to know about four things from each side of the ledger, for that is all many of them give. Some may think that is all they have a right to know, but it is not. If they are stockholders or depositors they have a right to know much more.

The writer has before him a number of statements from different parts of the country and most of them lump the items from the credit side of the ledger under four or five headings, and from the debit side under the same number; but some go into detail, giving in their resources the amounts of overdrafts—without stating whether secured or not, dividing the stocks and bonds items, separating the due from banks items, and their cash on hand items; and on the liabilities side they divide the deposits into the various items that are usually included in the one amount. Some, but very few, going so far as to have an unearned discount account—by this they mean the discount taken on paper that has not yet matured, and the amount is not credited to undivided profits until the paper is paid; for then the discount is considered earned, as there is then no liability of loss from the paper.

But not one statement has been seen by the writer that even referred to the suspended or over-due paper account—and what bank does not have to carry such an account?

Until the revelations of the past few years, and more especially the last few months, most business men trusted financial institutions and received their statements as being a true showing of their condition; but since so many dishonest practices in financial institutions have been revealed, men are questioning the reports, and some consider them as good as nothing, because so much can be covered by them, and sometimes very much is covered—as in the case of the Enterprise National of Allegheny.

For example, the account in which the past due paper is carried has no showing in the statement. It is there, but out of sight; like the price of a suit of clothes was included in the traveling salesman's bill for expenses on the road—but the firm could not see it. The average business man being critical and knowing by experience that the bank must have some such paper, he naturally wonders how much and why no report is made of it, or if it is so large that they are ashamed to give the amount.

Some bankers have a very clean bill on this line, and others carry a lot of dead matter in it, fearing to charge it off lest it will reduce the profits too much. If the bankers who have the accounts clear, or nearly so, would reveal it in their statements they would do their bank a good turn, and it would make the banks that carry a lot of "dead dogs" in the account clean them out. The bank that starts to give such an item in its statements must expect to be called down by some who are afraid to give it; but that should not be minded, for the statement will be more appreciated by those who are most interested in the bank.

Most banks carry the full amount of the items in the suspended account, others may reduce them to what they expect to realize on them, while others carry each item at a nominal amount. The writer knows of one large bank that carries each suspended item at one dollar, regardless of the amount of it, so that if there are twenty items in the account, the total of the account shows only twenty dollars, the balance having been charged off. This is a good way, and when anything is realized on any of the items it goes at once to undivided profits.

Sometimes these items are paid long after all hope of payment has been given up. One such case comes to mind where a merchant had failed and the bank held some of his paper which had to go to the suspended account and later had to be charged off entirely. He had a desire to pay the bank but passed from this life without being able to do it. Years passed and the transaction was forgotten by the bank's officers—in fact the old officers had died or resigned and new ones were filling the positions. But the merchant had a daughter to whom he had expressed his wish to pay the bank, and she did not forget her father's wish. So, when she finally was in position to cancel the debt, she sent her check to the bank covering it. Such cases are unusual, but are always welcome.

Place yourself in the position of a stockholder or depositor and try to analyze one of the condensed statements. Take this one:

RESOURCES.

Loans and discounts	$2,303,762.10
Stocks and bonds	325.500.00
Due from banks	295,764.50
Cash on hand	190,820.75
Total	$3,115,847.35

LIABILITIES.

Capital	$250,000.00
Surplus and profits	115,235.89
Circulation	150,000.00
Deposits	2,600,611.46
Total	$3,115,847.35

The average man in looking at this statement would not try to understand it; he would simply notice the totals—it would be too much of an enigma for him to try to understand more than that. But there are many who would compare the amounts with each other and try to get an understanding that would give them more of an insight into the real condition of the bank. Let us follow one of these men in his analysis.

Imagine him, with his glasses on, holding the statement in one hand. He would probably look at the liabilities first. The capital being unchanged, he would pass that and look at the surplus and profits. The question would arise as to whether that included items that should be charged off, such as salaries, expenses and taxes; but there is no way for him to tell or form an opinion, unless he has a former statement to compare it with and see if the difference is large or small.

The circulation item he will understand to mean the National bank notes issued by the bank, and for which bonds have been deposited with the Treasury Department at Washington, D. C.

The deposits he would be pleased to see so high—more than ten times the capital. But the question would arise as to the source of the deposits that composed the total. How much in United States, State, city or county funds are included; and how much is secured by bonds or in some way that gives them a prior claim in case of trouble? How much of it is from other banks, trust companies or saving funds on which interest is being paid? The statement does not answer the questions.

Now, follow his study of the resources. The loans and discounts—what kind of paper is included? How much demand and how much time? How much single name, how much double, and how much collateral? The bank owns its building, is it included in this or the next item? Is any other real estate included? How much of the paper is past due and unsecured, with really no prospect of being paid? Well, what is the reply? Simply this: he cannot have the questions answered. He will pass on to the rest of the statement, but before passing he will figure on what the bank ought to make a year with that much loaned. If it averages five per cent. it would be over $115,000.00, which, with the same amount of interest on stocks and bonds, would make more than fifty per cent. of the capital, not deducting the expenses for running the bank.

The item "stocks and bonds" he knows includes $150,000 in United States bonds deposited with the authorities at Washington to cover the circulation. But what does the other $175,500 represent; are they worth par or not? He can imagine they are worth more than par.

The next two items compose the reserve, and are more than the legal requirement of fifteen per cent. But the due from banks no doubt includes that which is due from those that are not reserve agents; still, there is enough to allow more than $60,000 in other banks, so that is safe enough. The law allows the banks outside of the reserve cities to keep three-fifths of their required reserve with their reserve agents.

This is a good statement as far as the showing of the figures goes; and if the various items that make up the amounts given are all true and of full value the bank's officers have reason to congratulate themselves, and ought in a few years make a much better showing in the surplus account—unless they are paying too much for the deposits and the management of the bank.

The bankers who follow the Comptroller's itemized form for the printer, and do not condense their statements, give a very full statement—except in the matter of overdue paper. It takes more space, to be sure, but it gives more satisfaction to those interested and inspires more confidence.

A good feature noticed on a statement recently received is worthy of mention, and there being no copyright on it, it can be used by any bank on its statements. It is this: a statement of the gross earnings for the last six months and how they were used.

In this case it was a bank with $500,000 capital and $250,000 surplus, and about three million deposits. The report was shown at the bottom of the sheet thus:

Gross earnings past six months		$58,053.75
Disposed of as follows:		
Expenses and taxes charged off	$21,015.00	
Dividend—four per cent	20,000.00	
Fund set aside for paying taxes	4,000.00	
Carried to undivided profits	13,038.75	
Total		$58,053.75

Very few bank statements give gross earnings, and there is no way for an interested party to tell what they have been. He can figure out what they might have been, if he can form an idea of a fair average rate of interest received on the loans and discounts, taking for granted that they stood about the same during the six months. In this case the loans and discounts were about $2,300,000 on which they averaged about two and a quarter per cent. for the half year, or four and a half per cent. per annum; and in addition to this they received interest on accounts with reserve agents and interest and dividends on bonds and stocks, making the total earnings as stated.

When the gross earnings are compared with the capital it shows an earning of almost twelve per cent. for the six months and more than twenty-three per cent. for the year; or if they are compared with the combined capital and surplus, it shows a profit of almost eight per cent. for the half year.

A statement giving the report as above will cause appreciation to be expressed to the officers of the bank by stockholders and depositors. The officers of the First National, of Louisville, Ky., have no doubt found this to be true, for the report is on the statement of this bank.

Much has been said recently about the weekly statement of the clearing-house banks in New York city in reference to its unreliability as a guide of the money market conditions, because many of the large banking institutions of the city are not represented at all in the statement, and it is therefore only a partial showing of the condition. All this is true, but there are a few other things in the statements that interest bankers outside of the city—things they would like to see made plainer.

Students of financial conditions have noticed the great difference between deposits claimed by the individual New York banks in their reports to the Comptroller and the average amount of the same banks for the week in which the call was made. Sometimes the differences in the larger banks run into millions of dollars, and many do not understand the reason for the great difference. It is this: the reports to the Comptroller give the gross amount of deposits, including deposits from all sources and all items that can be construed to be deposits; but the clearing-house rules require the deposit report to be the net amount, and to get that they must exclude the certified checks accounts, cashier's checks accounts and the United States Government deposits. When these are excluded from the total of deposits it, in many cases, makes a big difference.

The New York Clearing-House weekly statement gives the deposits for each bank in one amount. It would be a source of gratification and enlightenment to the bankers throughout the country if they would divide them into deposits from banks and trust companies and individuals—this including firms and corporations. It is well known that New York banks have a big line of deposits from other banks, and with some most of their business is from out-of-town. While some others make a specialty of commercial accounts and pay very little attention to accounts from banks. If the weekly statement made the division it could easily be told "which is which." Why do they not do it?

This may lead to inquiry as to what the other banking centers do in this line. In Chicago they report deposits the same as New York does—in one lump sum. In Philadelphia they divide them into bank deposits and individual deposits, and in the latter they include United States deposits. In Boston they separate them into three classes—from banks, from individuals and from United States. The Philadelphia and Boston reports in these respects are more satisfactory to the students than those issued by the New York and Chicago associated banks. CHARLES WESLEY REIHL.

TAXATION OF SAVINGS BANKS.

[An Address by Willis S. Paine, Former Superintendent Banking Department, State of New York; Delivered at the Meeting of New York Chapter, American Institute of Bank Clerks, October 26.]

Four years ago a bill was introduced in the New York State Legislature, entitled "An act to amend the tax law in relation to the taxation of Savings banks." It became a statute by the signature of the Governor, March 16, 1901. That statute was to the effect that every Savings bank incorporated under the laws of this State should pay to the State annually for the privilege of exercising its corporate franchise for carrying on its business in such corporate or organized capacity, an annual tax which would be equal to one per centum on the par value of its surplus and undivided earnings.

The aggregate of the taxes collected from the Savings banks under this Act of 1901 to September 30, 1904 was $2,933,568.63, distributed as follows: 1901, $705,333.12; 1902, $737,225.20; 1903, $771,474.94; 1904, $719,535.37. The amount collected up to this time for the current fiscal year is $668,000. The amount for the year 1904 is less than the year previous, because of rebates to the Savings banks in accordance with the decision of the Court of Appeals given in February, 1904, in the case of the People ex rel. the Bank for Savings vs. the Comptroller, which is to the effect that securities in which surplus is invested must be appraised at their market value whenever such value is less than their face or par value.

THE BENEFICENCE OF SAVINGS BANKS.

The moral and material in the development of the world's civilization keep each other company and progress to a common end. The countries that are developing material prosperity witness the growth of benevolent institutions among their people; notably societies or corporations for the care and comfort of the dependent and the housing of the great army of incapables.

An established organization that encourages prudent economy, and provides means for the safe keeping of savings, serves a better purpose, in inducing provision for the future, than do almshouses for the improvident. Viewed in this light, Savings banks cannot fail to be regarded as among the most beneficent of our modern institutions. However the people of a State may desire to accumulate, by securing returns for the use of their money, those people sadly miss it who do not lay up in the present as against the inevitable future. The State misses it which fails to provide for this purpose by establishing institutions for the encouragement of thrift, where savings may be deposited in security, and the laborer may, when the years have gone by and the hand has lost its cunning, have recourse to a fund provided through sacrifice, and which a well-managed Savings bank has enabled him to accumulate.

The earnings of the workingman are the interest on his capital of strength and skill. Savings bank deposits are his surplus income, brought into being by reason of his ambition. The moment he opens an account with a Savings institution he is a capitalist, and thus becomes a conservator of order. These depositors and earners are truly the "salt of the earth;" they are, in fact, the very backbone of the nation.

SAVINGS DEPOSITS A SACRED TRUST.

As a nation we have been made optimistic by the recent wonderful development of our country, yet the experiences of the past, with its failures, should not be forgotten. Rightly utilized they will give us accurate judgment in place of an expectancy born of desire. It may be thought a strong statement to say that trustees of Savings banks should be held to the strict accountability of individual trusteeship. Savings banks are corporations, and this would seem to absolve individual responsibility as incorporation usually does. But reflection will show that this peculiar and individual trusteeship, and its resulting duties, is a verity.

It is this general rule of the trust relation of Savings institutions, as well as the innate justice of the ruling, that, at the meeting held at New Orleans to organize the Savings Bank Section of the American Bankers' Association, induced me to oppose the latter-day tendency to tax the deposits of mutual Savings banks. Considering that Savings banks represent the frugalities of the people; considering, too, that these people form part of the great multitude who pay the bulk of indirect taxation; and considering that they are conducted for the public good, it seems only just that they should be freed from the burden of taxation by the State, as is the case with other beneficent institutions.

Taxation of Savings Deposits a Tax on Thrift.

Savings banks in the Commonwealth of New York are not organized for corporate or personal aggrandizement. To tax their deposits is to discourage the placing by wage-earners of their gains with such corporations. Not only are the dividends which they receive lessened by the amount of the tax paid, but the knowledge that the earnings are to be taxed and thus diminished, acts as a deterrent. To tax the accumulations of the provident poor is often to tax the insurance which protects their offspring from becoming public charges in the event of death of the parents. The unwisdom of the enactment of the law, which I have taken as the text for this address, is evident when it is remembered that a surplus is created to the end that when investments depreciate the depositors may receive in full upon demand the moneys deposited, together with the earned interest.

I have elsewhere made a summary of the failed Savings banks of this State in which reference is made to the fact that there are now in the hands of the Bank Superintendent nearly $117,000 awaiting claimants to dividends deposited with him by the Receivers of thirty-one insolvent Savings banks. Having had personal experience as the incumbent of a Savings bank receivership, and necessarily thereby coming into close contact with the sufferings of deserving people, caused by its failure, I became deeply impressed with the absolute necessity of throwing every possible safeguard around their deposits. I was brought to realize that the taxation of these bulwarks against anarchism, communism and nihilism is as wrong as the enactment of loose statutes relating to investments, and, let me further say that the advocates of these "isms" whose banner is a red flag and whose song is the marseillaise, are constantly increasing in numbers.

The Large Increase in Immigration.

According to the report, made public by the Commissioner of Immigration recently, for the first time in the nation's history the army of immigrants has passed the million mark—1,027,421 aliens having been admitted into the country during the year ending June 30, 1905. This is an increase of 214,551 over last year's total and of 170,375 over the highest previous total—that of 1902-'03. This fact exists although our inspection laws have been made more stringent, and new and more exacting tests of eligibility have been prescribed. Most of our immigration comes from southern Europe. Italian immigration rose in volume from 193,296 in 1903-'04 to 221,479 in 1904-'05. But the inflow from Austria-Hungary increased much more rapidly. In 1903-'04 177,156 Austrians and Hungarians were admitted; 275,693 were admitted in 1904-'05. For the first time in six years Italy has been crowded into second place. But these two Mediterranean countries still contribute about one-half of our immigration. Three years ago their quota was a little more than fifty per cent. Year before last it was about forty-five per cent. Last year it was again a shade under fifty per cent. Russia is the third greatest factor in the over-sea exodus. We admitted in the year just ended 184,897 Russians, including Finns and Poles from Russian Poland. The year before the Russian total was 154,141. Three years ago it was only 107,347. Immigration from other countries has not varied greatly, though the total from Great Britain and Ireland rose to 137,057 last year.

Those who came in previous decades, seeking a haven in the land of liberty and plenty, were, to very material extent, alien only in name, and were half-assimilated before they arrived. They were industrious people who meant to make our country their permanent residence. They were comparatively a well-educated, enterprising people. Many of the recent newcomers constitute the unleavened masses which create the well-termed "foreign quarters" in the metropolis of the nation.

With hundreds and thousands of immigrants coming into our great cities year after year, the prospect of lean years, when there are no wages to be earned, must be viewed with distrust. If those who now swell the ranks of cheap labor are dissatisfied under existing circumstances of material prosperity, what may we not expect to see when these prosperous conditions fail. And when the present remarkable industrial activity subsides and financial depression obtains, which is inevitable as the preceding speaker, Professor Johnson, stated a few moments ago, may we not see great suffering, not only among those whose wants are small, but among those others of a higher plane of living who are to-day competing with the recent arrivals. I may add this problem is one with which Congress must grapple at once. In spite of the asserted demand for laborers, it cannot possibly be doubted that we need numbers far less than quality. Our country is growing so rapidly that a few decades may see its people aggregate more than two hundred millions. Then even more than now character will determine the moral power of the republic, the perpetuity of its institutions, and the happiness of its people. The investigations of the insurance companies of this city show that there exists in their vaults what may be termed "undigested securities." A greater evil in the body politic is liable to follow from what may be termed "undigested aliens."

High Character of the New York Savings Banks.

During the last few years efforts have been made in the New York Legislature to unduly extend by statute the scope of Savings bank investments. Such efforts have been closely watched by the officers of our Savings banks, the ever-faithful body of men who are ready to oppose any movement that suggests the chance of undue risk. Conservative management is the rule. It is only natural that this should be so. They realize that Savings institutions are of the people and for the people. They cannot be bought by any so-called "banking trust." The people's savings are, in this Commonwealth, the special care of capable and disinterested men of affairs, whose safeguarding is a form of practical patriotism that is not fully appreciated. Much has been done in the way of restricting the discretion of trustees and limiting their power of doing harm. The tendency is to a still closer system of inspection and control. An illustration of this statement is the Act adopted by the Legislature of this State during the present year. By chapter 416, each official communication directed by the banking department to a Savings bank pertaining to an investigation or examination conducted by the department, or to the affairs of such Savings bank, or containing suggestions or recommendations as to the conduct of its business, must be submitted by the officer receiving it to the board of trustees of such Savings bank at the next meeting of its board.

At the present time if a trustee is insolvent or becomes a non-resident of the State, his position becomes vacant. Trustees, in this Commonwealth, serve without compensation. It has come to be a realized fact that the general good name and high standing of trustees of Savings institutions make the position one of honor, as it should always be of the strictest financial integrity. That so many men in active business life, some of large means, give at the present time so much of their time and energy to the care of the people's savings makes one think well of humanity.

Supervision by the State.

A word as to the supervision of Savings institutions by the State. This supervision in the interest of safety and good management does not prevail in all States, but is seen at its best in the States of New York, Massachusetts and Connecticut, where the strongest and largest banks are to be found. The colossal deposits of savings in these three Commonwealths have drawn the attention of the ambitious, and many attempts have been made to get similar results without adequate restriction. It is not in any spirit of criticism, but under a sense of duty, that I feel compelled to say that outside of New York and New England there are but few States where fully protective Savings bank legislation exists. In several of the States there are concerns, some in corporate form, others as quasi copartnerships, a number of which have inadequate resources, actually doing the business of Savings institutions. A portion of them are under no restriction as to the use to which they may put the accumulations of the multitude, and the security exacted is far from adequate. Nor do depositors, whose moneys are subjected to the hazards of the ordinary business of such concerns, duly participate in the profits of such organizations, for these accumulations are to a material extent diverted to the pockets of the managers and stockholders of these establishments. The abuse of this method of conducting a Savings institution will surely crop out. When we see such institutions managed for personal profit it is easily understood why in some instances unscrupulous promoters have been known to promise liberal dividends. The natural result of the rule of great gains and great risks may soon be seen. It would not be correct to sweepingly assert that Savings institutions outside of State supervision are unwisely managed. They are directed by the personal equation that happens to control; but there is no adequate government by law, no system of safeguarding the interests of the modest earners who are the depositors in a number of concerns which advertise themselves as Savings institutions.

A man of affairs may hesitate to risk his means in an investment which his judgment tells him is hazardous, yet when acting in a fiduciary capacity the hope of favorable results, especially if he is to be personally benefited, may obscure his judgment and even his conscience. Misfortune to a bank does not necessarily imply dishonesty in management. He whose duty it is to conserve the savings of the poor must remember that the exercise of this duty is the most sacred of trusts. Trustees must not be permitted to neglect their plain duties, and every State should at least enact a law that a deliberate misuse and intentional misappropriation of property in the keeping of such officers shall be severely punished as a crime.

Savings Bank Tax Should Be Repealed.

The aggregate deposits of the Savings institutions of our Commonwealth on the first day of last July were $1,367,692,000. There is nothing of which you, as citizens of the State of New York, especially interested in banking may be more proud than this fact. This sum is mentioned to show what the general exemption policy, which has been pursued by our State until recently, has accomplished. This exemption has been based to a material degree upon the fact that these institutions have proven to be great educators, and while our Commonwealth exempts from taxation all school property, both real and endowment, public ecomomy and public morality demand that the means by which our citizens are taught to acquire habits of thrift and enterprise should also be relieved from the burden of this tax, which discourages depositors and impairs the usefulness of these institutions far beyond the measure of the tax received.

It has been stated that the statute, which is the text of this article, owed its conception to the thought in the minds of some that as a Savings bank possesses a franchise, it should be taxed like other privileges conferred by the State vesting a special enjoyment in some individuals who are thus benefitted and who are given this advantage to the exclusion of others. If this is true, the enactment of this law shows a lack of intelligence. As both of the great political organizations of our Commonwealth adopted, last fall, planks in their respective platforms to the effect that the statute should be abrogated, a determined effort should be made when the Legislature meets next January to repeal this unjust law.

THE QUESTION OF OUR CURRENCY.

[Address of Hon. Leslie M. Shaw, Secretary of the Treasury, before the Annual Convention of the Ohio Bankers' Association.]

Mr. President, Ladies and Gentlemen—The fact, and I think it is a fact, that the United States has the best currency system in the world, does not imply that the currency system of the United States is perfect or that it cannot be improved. It is as safe as any system in the world, because it is established on the only safe basis known to man—the gold standard. It is not safe simply because our dollar contains one hundred cents. If we were on a silver basis our dollar would still contain one hundred cents, but they would be silver cents. The United States dollar is worth not only one hundred cents, but one hundred gold cents. The dollar is worth 25.8 grains of gold. That measures the market value of our dollar. Whatever 25.8 grains of gold will buy, our dollar will buy; and it is worth precisely the same uncoined as coined, for the Government stands ready to coin it free and in unlimited quantities.

Every Kind of Currency Convertible into Gold.

Then, in addition, every dollar of our currency, gold certificates, silver, silver certificates, United States notes, Treasury notes, National bank notes, subsidiary silver, nickel and copper coins are all redeemable in or exchangeable for gold at the will of the holder. This fixes the stability of our currency. Its value does not and cannot fluctuate.

I grant that there is no express statute for the exchange of gold for silver certificates or for silver itself. Silver certificates are simply warehouse receipts for the number of silver dollars mentioned in the receipt, and on the return thereof the coin can be demanded. But the law expressly provides that the Secretary of the Treasury shall maintain the parity of all forms of money coined or issued by the Government. The only way to make a silver dollar, the metallic value of which is but fifty cents, worth one hundred cents in gold, is to give gold in exchange for the silver whensoever and by whomsoever demanded. On this proposition the record has been made so that subsequent Secretaries of the Treasury for all time, whoever they may be and whatsoever party they may represent, will find it necessary to overrule the decision of at least one predecessor before he can refuse gold in exchange for silver, and until such refusal silver will remain at par. There being but one way to preserve parity in time of pressure, the best way to avoid a time of pressure is to make public the Government's intention to redeem in gold at all times. Thus all forms of lawful money are exchangeable for gold, and National bank notes are redeemable in lawful money. These provisions make our system absolutely safe, and no man need look the second time at any form of our circulating medium to discover its actual or exchangeable value.

The Lack of Elasticity.

It is the most convenient system in the world, because it is constructed on the decimal or metric system. It is not necessary to carry a lightning calculator in order to make change. The system is not perfect largely because it is non-elastic. It fails to respond in volume to the changing needs of seasons and of localities. Attention has been called to this many times and by many people. That there will be no further currency legislation until we shall have experienced a panic occasioned by this want of elasticity, I am convinced. The country does not appreciate the danger, and until the danger is fully understood no remedy will be applied. We came nearer such a panic September 30, 1902, than most people appreciate. The fact that we then escaped does not raise a presumption that we will always escape. A glaring defect at a vital point will sometime, soon or late, assert itself. Meantime a remedy should be discovered, discussed, and as far as possible agreed upon, so that it may be promptly applied when the people are ready for it.

Let me define this defect more specifically. Annually we have an excess of money during the spring and summer months. Annually we pass through a period of anxiety as we approach the period of crop moving, for annually the volume of money is relatively insufficient to meet this sudden increase of business. We do not need and must not have inflation. The average amount of money is in my judgment abundant. The difficulty lies in the fact that the volume remains stationary. The result is as unsatisfactory as it would be for railroads to run the same number of cars on the same schedule of time at all seasons of the year—rumbling along empty in June and overloaded in October. If such a policy were pursued by railroads the unnecessary cars would naturally invite loads of straw and chaff and worthless plunder, and when the time came to use the cars in legitimate business much disturbance would ensue while they were being unloaded and fitted for profitable employment.

Similar conditions occur annually in our currency system. Cheap money during summer months, like cheap cars, invites anything and everything except legitimate business, and when the money is needed in the fall, like the cars, it is occupied and much disturbance to commerce is occasioned by the unloading. In the language of the street this unloading is called liquidation.

Let me use another illustration. You bankers were nearly all reared on a farm and most of you have led a horse behind a buggy. Those of you who have performed this task have doubtless noticed that when you let the horse out the full length of the halter, be that halter long or short, you have experienced some inconvenience whenever you passed rapidly over rough places, and you have sometimes felt the knot at the end of the strap. Thus by experience you have found it convenient to keep some slack to be let out as occasion requires. We employ every inch of our financial tether all the time, and some fine day the unexpected will cause another acute tension and we will again feel the knot. Fortunate indeed we will be if it does not slip through our hands.

Now, what shall be the remedy? Shall it be asset currency? In the popular acceptation of that term, I answer no. Asset currency, as commonly understood, would mean inflation, and that we must not have. Asset currency, as commonly understood, would be supported only by the solvency of the bank of issue. That must not be. No currency must be issued under any circumstance that will cause the holder to look at it twice to discover its exchangeability for gold. Shall it be emergency currency? In the popular acceptation of that term, I answer no. The United States originates more commerce than any other country on the map, but our chief commercial city is not the world's clearing-house. It ought to be, but it is not. One reason why it is not is the fact that it has sometimes resorted to clearing-house certificates, which is a plea of guilty to an indictment charging bad management locally or bad legislation nationally, and the financial world charges both. Clearing-house certificates must never be authorized by law. Let those who love our country and those who conserve her credit set their faces against such a course with the same intensity as they resist the free and unlimited coinage of silver. Clearing-house certificates debase our currency with the consent of those who are supposed to be the best financiers in the nation. The free coinage of silver would debase it through political upheaval. The threat of both I doubt not contributes to that distrust which prevents foreign bankers from keeping their international balances in America. Whatever the remedy shall be, it must not advertise our calamity or our extremity.

"Additional" National Bank Circulation.

Among the many remedies suggested none appeals to me as strongly as the authorization of additional National bank circulation. This method involves the right of National banks to increase their circulation in any amount, perhaps equal to fifty per cent. of their outstanding volume of Government bond-secured circulation, on which the bank should pay a tax of five or six per cent. during the time it is maintained, and the Government in consideration of this tax should guarantee its redemption.

I endorsed this plan not long ago in the second largest city of this nation. The next morning one of the daily papers had interviews from several bankers to the effect that they would not issue currency under ordinary circumstances if taxed at five per cent. This confirms my belief that the proposition was wise. It certainly would not result in inflation. Though the right to issue additional circulation were granted, I should be exceedingly glad if it were not exercised for many years. It would demonstrate that we had passed over no very rough places.

You may call this, if you please, an emergency provision. So it is, but it injects into our circulation no new form of money as an element of alarm. By eliminating the one statement on the present bank note, "This note is secured by bonds of the United States," the additional currency could be made identical with that based on Government bonds. The Comptroller of the Currency and the bank issuing the currency would alone know of its existence. It would not advertise its existence or our extremity, and I can scarcely conceive of conditions under which it would remain out sixty days. It could be printed and kept ready for issue as occasion might require, and it would be retired, not by gathering up each individual bill, but by a deposit of equal volume of money with any sub-Treasury. Then the notes as they came in would be charged against this deposit until it was exhausted, after which redemption and reissue would run on as before.

BOOK NOTICES.

Poor's Directory of Railroad Officials. New York: Poor's Railroad Manual Co.

Contains lists of all the steam, electric and other railroads in operation in the United States, Canada and Mexico.

Project for the Panama Canal. By Linden W. Bates, with general plans and profiles of the waterway, the regulation works, and the terminal harbors. New York: Linden W. Bates.

This is an exhaustive examination of the problems to be dealt with in the construction of the Panama Canal.

The Banks in the Clearing-House. By William Howarth. London: Effingham Wilson.

Mr. Howarth has given in this volume a brief history of the London Bankers' Clearing-House, and a more complete history of the member banks. These institutions are, as a rule, much older and also much larger than the banks comprising the New York Clearing-House Association, though the clearings of the latter are the largest.

Banking in Mexico.—Banks in Mexico are very prosperous. In fact the only bank failures recorded since the first Mexican bank charter was issued is that of a promoters' bank organized in the United States and several smaller private banking enterprises. October 14, 1905, the second anniversary of the closing of the International Bank and Trust Company of America, the promoters' bank referred to, was celebrated by a first payment to creditors of twenty per cent. It is stated that no National bank earns less than ten per cent. Loans are made, not on stock or bond collateral, but on two or three signatures, and the per cent. of losses is very small in the banks constituted under National laws. Interest rates to borrowers run from eight per cent. to twelve per cent.

INTERNATIONAL CURRENCY.

A FINANCIAL SUGGESTION RESPECTFULLY SUBMITTED TO THE JAPANESE GOVERNMENT.

During the war, Japan's circulation of paper currency has been increased, while its stock of gold has diminished. A replenishing of this stock, by drawing gold from abroad against Japan's foreign credit balance, seems to be indicated, so as to restore a proper proportion between circulation and reserve. The money markets of Europe and America, however, are in such a condition that the withdrawal of a large amount of gold would cause a widespread disturbance. If such a disturbance were to take place, any schemes for refunding Japan's loan bonds at a lower rate of interest would meet with more or less difficulty, on which account it may be best to leave the foreign credit balance as far as possible intact, for the present, at least.

The peculiar condition of Japan's finances seems to favor the adoption of a special financial measure, by means of which two important objects, apparently of a contradictory nature, could be achieved: first, to leave the foreign credit balance practically intact; second, to use these same funds for securing an ample reserve for Japan's paper currency.

To this end a new kind of paper money should be issued, of the same class as the "certificates of deposit" issued in the United States; with this difference, however, that, while the American certificates attest to the deposit of a certain amount of gold with the Government, the Japanese certificates would attest to the deposit of a certain amount of money with the Government's agents in London, New York, or Berlin. These certificates would be issuing and circulating in Japan, and be secured by the Government's foreign credit balance, being redeemable in Japan as well as by the Government's agents *abroad*—thus constituting, as it were, an "international" currency.

These international bills should read for two kinds of money, say, *yen* and dollars, or *yen* and shillings, or *yen* and marks. Their face value should be five *yen*, or a multiple thereof; but each bill should also read for the corresponding value in foreign money. A sterling bill may read for five *yen*, redeemable by the Bank of Japan at Tokyo; or, at the option of the holder, redeemable by the Yokohama Specie Bank at London, to the amount of £0.12.1 in place of five *yen*. Eventually each bill may be made payable in any one of the four countries at the option of the holder, being redeemable in *yen* if presented at Tokyo; in dollars if at New York; in marks if at Berlin; or in sterling money if at London; the respective amounts, in the different kinds of money, being stated on each bill.

The bills should be issued by the Government, in the shape of drafts against its foreign credit balances. And it should be well understood that they are to be issued only in Japan, and to circulate only in Japan, *as money*, the same as ordinary Treasury bills. Virtually they are drafts on the Government's foreign credits; but until presented for redemption, and canceled, they will circulate as money; and since a holder has no incentive to present them for redemption, they may be kept in circulation indefinitely, unless wanted for foreign remittances, in place of shipping gold abroad. To bring this money into circulation, the Government may use it for paying off some of its domestic loan bonds; or for after-war expenses, and for other expenditures such as cannot be met out of the Government's regular income. Inasmuch as the bills actually represent so much gold held abroad by the Government, or at least money which at any time can be changed into gold, they practically are certificates of gold deposit; and the issue of such kind of paper money would strengthen Japan's currency precisely the same as if the Government had imported an equal amount of gold.

Suppose that international bills to the amount of *yen* 200,000,000 were issued on the strength of the foreign deposits; then that much of the foreign deposits would not really belong any more to the Government, but would belong to the holders of the bills. Nevertheless (and here we arrive at the essential point of the scheme) that money remains *nominally* the property of the Government, the latter retaining full control and full possession of it, also retaining the use of it—though not for purposes of expenditure, yet for purposes of financial management. This control can be made useful in two directions: first, to assist in refunding Japan's loan bonds, whenever they mature; second, for the sake of earning interest. A handsome amount of interest can be cleared by lending the funds out in a similar manner as is now being done, and this can be earned in addition to the interest accruing from the use of the international bills *at home*. As it were, the foreign funds can be made to earn double interest.

To this end the Government should leave the funds in the same Western cities where they are now deposited, and entrust them to the care of its special agents; say, of the Yokohama Specie Bank, who, in turn, would put them in charge of its branch offices in London, New York, and Berlin. The Bank should manage the funds on regular banking principles, *but in behalf of the Government*, and under the supervision of Government officers, the Bank earning a fee for its services. The funds will readily bring two per cent. interest by simply being left on deposit, subject to "call," with banks or trust companies; but can be made to bring three or four per cent., at least in New York, when loaned out on three or four months' time, against commercial paper.

The Bank would not only be charged with the custody of these foreign funds, but also with the redemption of the international bills, such as may be presented at those Western branch offices. The redemption would then be made, not in *yen*, but in the money of the particular country, out of the funds which the Bank holds in custody.

It may be thought that these funds, to properly serve as security for the international bills, should be kept in the shape of gold coin, and not be loaned out in the market, especially not *on time*. Anyone, however, who is familiar with banking business, will know that doubts on that score are out of place. Those funds are *not now* held in the shape of gold coin; still, if the Government would demand delivery of those funds, in the shape of gold, the gold would come forward, even if the Western markets should be disturbed thereby. No such sudden call, however, is to be anticipated on the part of international bills. Most likely they will not be presented abroad for redemption *at all*. If nevertheless they should be, from any unforeseen reason, they will not come in all at once, nor even within a space of three months; and in the meantime the funds, if loaned out against commercial paper, some of the loans maturing every week, can gradually be released, so there will always be ample cash on hand to meet the requirements for redemption purposes.*

It should be noted that this practically unlimited supply of gold for the redemption of international bills will obtain only where the bills are payable in some Western money centre, or preferably in several of them. It would not obtain if the bills were redeemable only in Japan, because the country does not harbor a sufficient amount of gold.

The undoubted convertibility and high degree of security thus attaching to international bills renders them practically equivalent to certificates of gold deposit, so much so that *they should be rated as such*, and the Bank of Japan should be authorized to count them as actual gold for purposes of reserve, such as the Bank is required to hold against its note circulation. At present, the Bank is empowered to issue an unlimited amount of its notes against the security of gold or silver, and a limited amount on the security of Treasury bills, Government bonds, or commercial paper. The international bills certainly should rank higher in this respect than Treasury

*Whether the funds are invested in commercial paper, as above contemplated, or whether in exchequer bills, as recently has been done with the funds held in England, or whether in a still different way, that does not matter much. In either case the funds can readily be converted into cash, if required for redemption purposes, especially where the demand for redemption would in no case be more than a gradual one.

bills, considering that the latter are based solely on the credit of the Government, while the former are secured both by the credit of the Government and by the deposits in the Western money centres; so it would be entirely safe to empower the Bank to issue its own notes, to an unlimited amount, against the security of an equal amount of international bills held in reserve. In this way the Bank could withdraw a part of the international bills from circulation and thereby strengthen its reserve, without reducing the country's money circulation.

International bills, after having been issued by the Government in the manner above stated, may come to the Imperial Bank in two ways: First, in the shape of deposits on the part of business men, in which case the Bank can pass them out again, after retaining enough of them to satisfy its requirements for reserve purposes; second, they may be presented to the Bank for redemption, the bearer withdrawing the gold. In the latter case the Bank's specie reserve would be affected; and unless the gold it thus pays out flows back to it in the course of regular business, the Bank may, in order to replenish its specie reserve, request the Government to have an amount of gold imported from its Western depositories; and against the delivery of the gold so imported the Bank will hand to the Government a corresponding amount of international bills, which are thereupon cancelled. Thus, the Imperial Bank's specie reserve will be replenished and kept up to its present volume.

The Bank, however, will hardly ever be called upon to redeem international bills, as people would not care to have the gold in preference to the bills, so long as they know the gold can be had on demand. For *domestic* trade, therefore, the gold will not be wanted. For *foreign* trade it will not be wanted either, since, in most cases, the Government's foreign funds can be used for that purpose, through the intermediacy of the Yokohama Specie Bank, in a manner which will be explained further below. So the Imperial Bank's gold reserve is not likely to be disturbed, if protected by a supply of international bills.

In connection with foreign trade a peculiar question turns up, viz., how to determine the equivalent value in foreign money; say, in dollars. While the domestic value of an international bill of five *yen*, or a multiple thereof, is very definite, there are two ways of determining the foreign value. First, by fixing the rate in compliance with the real intrinsic gold value of the *yen;* which method might possibly be objectionable on account of the fluctuations in foreign exchange; these may at times make the bills an object of speculation and cause their exportation for the sake of reaping a small benefit in an exchange transaction, where no profit could be made if, instead of the bills, gold had to be exported. Second, by fixing the rate, not on the basis of the intrinsic gold value of the *yen*, but on a commercial basis, *i. e.* at a figure nearer to its lowest commercial exchange value, such as prevails at the gold-export point, where freight, insurance and loss of interest are deducted from the intrinsic value of the *yen*. Under the first-mentioned method, a one-hundred *yen* international bill would read for $49.85, if presented for payment in New York; under the second, or the commercial method, it would read for, say, $49.60; the actual gold-export point being $49.25. Suppose the rate to be fixed on the latter basis, at 49.60; and suppose furthermore that a Japanese merchant desires to make a remittance to New York of one thousand *yen*, the market rate of exchange being at the gold-export point. Then he may either send the gold out, which would net him $492.50 at New York, after deducting freight, insurance and interest from the intrinsic gold value of the one thousand *yen* (this value being $498.50); or he may, instead of the gold, send out *yen* 1000 in international bills, which represent a face value of $496 in American money, and which would net him, after figuring the cost of insurance and loss of interest, as much as, say, $493.50 in New York. Naturally, he will prefer the cheaper way, and no gold will be sent out. But there is a still cheaper method—one which does not require the sending out either of the gold or of the international bills—simply by buying a draft on New York from the Yokohama Specie Bank, which method will be explained further below.

The Yokohama Specie Bank will buy as well as sell foreign drafts; buying the drafts which Japanese merchants draw against their foreign correspondents, which drafts the Bank sends to its foreign branches for collection;

and, on the other hand, selling to Japanese merchants the drafts which it draws on its foreign branches. And so long as the selling practically offsets the buying, the Bank's own funds will be sufficient for the transactions, and the Government's foreign funds will not be disturbed. But if the sales should preponderate; in other words, if the balance of foreign trade should run against Japan (which ordinarily means export of gold, the Bank will have to make more drafts on its Western branches than are covered by the remittances, so the Bank's own funds held by the branch offices will quickly be eaten up, and, to meet further drafts, resort will have to be made to the Government funds in the custody of these branches. In the same proportion cash funds will accumulate at the home office of the Yokohama Specie Bank as a result of the payments made by the Japanese merchants against the drafts bought from the Bank. If the adverse trade balance continues, and has run up to, say, *yen* 3,000,000, without any prospect of diminishing later on; in other words, if cash to the amount of *yen* 3,000,000 has accumulated in the Bank's vaults as the proceeds of its drafts against the Government's foreign credit balance, then the Bank will hand this money, in the shape of international bills (which a bank can readily gather from circulation), over to the Government, for cancellation. These bills, therefore, will disappear from circulation in the same proportion as the foreign credit balance becomes reduced, affecting the country's money supply precisely the same as if so much gold had been exported—only that this exportation takes place without the handling of gold, and in a much simpler way.

In order to use the Government's foreign funds in the manner above stated, and thus protect Japan's domestic gold supply (in case an adverse foreign trade balance should occur), it is essential, however, to adjust the face value of the international bills, *i. e.* their face value in terms of foreign money, so that for the purpose of foreign remittances they offer an advantage over gold. A rate of 49.60 cents, or an equivalent amount in shillings or marks, would probably answer. Figuring on the basis of this rate, the exchange values for the various methods of remitting would be about as follows:

When remitting in gold, an amount of yen 1,000 would net in New York, at a time when the specie-export point has been reached	$492.50
The same amount, if sent in the shape of international bills, would net, as assumed on a preceding page....	493.50
The Yokohama Specie Bank could afford a better rate than the above, and probably would allow as much as..	494.50
The Bank itself will obtain from the Government for yen 1,000 in international bills (as will be explained later on) as much as	496.00

It is clear that the Bank can allow $494.50 for *yen* 1,000 and make a profit, if it obtains $496.00 for *yen* 1,000 from the Government; and this would be the case if the foreign face value of the *yen* would be fixed at 49,60 cents.

So whenever the foreign trade balance should run adverse to Japan, the Japanese merchants can remit abroad to better advantage by means of international bills than by sending gold. And they could do still better by buying a draft of the Yokohama Specie Bank on its foreign branch offices than by sending international bills.

This peculiar advantage of the Yokohama Specie Bank in monopolizing the foreign exchange business would obtain only when the trade balance becomes adverse and the exchange is nearing the specie point—which might never occur. At other times the Bank has no advantage over ordinary exchange brokers, the rate being determined by the competition of the open market.

By adopting the "commercial method" explained above, and fixing the foreign face value of the international bills not at the intrinsic gold value, but at the rate of, say, 49,60 cents to the *yen*, a given sum of foreign money, say, $1,000,000, will yield to the Government, when issuing international bills, a larger aggregate of *yen* than could be obtained by adhering to the intrinsic value. This slight exchange profit, however, would be eaten up if the international bills were presented for redemption *at home*, *i. e.* at the Imperial Bank; and if in consequence the latter Bank would request the Government to import an equivalent amount of gold—as the cost of such importation and of the recoining would fall upon the Government. But the profit will not be eaten up whenever the foreign funds are absorbed by exchange transactions on the part of the Yokohama Specie Bank, as explained above, since in such a case no gold would be imported.

To clearly understand the position of the latter Bank, compared with that of the Imperial Bank, in reference to their relative functions concerning international bills, we should bear in mind the following points: the Bank of Japan will redeem international bills in gold at the request of the bearer; the other bank will not, but will accept them in payment for drafts drawn by the bank against the Government's credits in the Western money centers. Both banks may, on their part, present international bills to the Government for final redemption and cancellation; but the method of redemption, on the part of the Government, is not the same for the two banks: to the Imperial Bank the Government has to supply Japanese gold coin, for which purpose it has to import the gold, drawing it from abroad out of its foreign credit balance; to the other Bank the Government supplies no gold in redemption of international bills, but merely credits the Bank on its books for the amount of international bills received—having charged the Bank originally for the amount of the foreign funds when placing them at the disposal of the Bank. And it should be well understood that this original charge on the part of the Governmnet was not for so many *yen*, but for so much foreign money, either dollars, pounds sterling, or marks; consequently, whenever the Yokohama Specie Bank hands in international bills to the Government for final redemption, say, a million *yen*, it will not get credit for a million *yen*, but for the face value of these international bills in terms of foreign money, either dollars, or pounds, or marks, at the option of the Bank.

This manner of accounting would make it impossible for the Yokohama Specie Bank to gain any profit *at the expense of the Government*, from its exchange transactions. Furthermore, this manner of accounting would explain why this Bank, as assumed on a preceding page, can obtain $496.00 (at New York) as an equivalent for *yen* 1,000 in international bills handed to the Government in Japan, and why, consequently, the Bank can allow the merchants as much as $494.50 for *yen* 1,000 and make a profit, where other exchange brokers cannot.

By adopting the "commercial method" of adjusting the foreign face value of international bills at 49,60 cents to the *yen*, or the equivalent in shillings or marks, a small exchange profit will accrue to the Government (viz., the difference between 49,60 cents and 49.85 cents); and, on the other hand, Japan's stock of gold will be effectually protected against foreign demands. At the same time there will be no such thing as going to the expense of importing gold from Europe, recoining it, and then exporting it again.

Nor is it probable that the Government's foreign funds will be much disturbed by the exchange transactions of the Yokohama Specie Bank, except that their volume will shrink whenever the balance of trade is adverse to Japan. Ordinarily, the Bank's own funds will be sufficient for its exchange transactions. Nor will the foreign funds be sensibly disturbed by redemptions. International bills, presented at the Western branches for redemption, may be redeemed by the Bank out of its own funds, and sold again abroad, at a profit; or the Bank can, unless the rate of exchange be near the specie point, return them to Japan, and restore them to home circulation—just the same as the home banks in Japan will pass them out again after receiving them in payment. Taking it all in all, the custodian Bank has as much of an interest as the Government itself, in keeping the foreign funds intact.

At first sight, the plan outlined above, of using international bills, *i. e.* Government drafts drawn against foreign credits, as an equivalent of gold for reserve purposes on the part of a bank of issue, may seem to be a doubtful experiment. The general principle, however, of keeping part of the reserve of one bank in some other bank or banks, is by no means new. The great majority of the banks in the United States, as well as in other countries, follow this principle, and with uniformly satisfactory results, even in times of financial stress and of panic. And invariably we find that the "reserve banks" do not keep the reserves thus entrusted to them in the shape of cash, but they loan them out and make them useful—employing the funds precisely in the manner as would be done with the Government funds which form the basis of the international bills. Only *the extension* of the principle, in applying it to a bank of issue, may be novel, but there is no reason why it should not be feasible. Were the Bank of Japan likely to be exposed to large and sudden demands for gold, then a large reserve of the yellow metal would become imperative; but since the business men of Japan made no such demands under the trying conditions during the war, they are not likely to make such demands now, in times of peace, where they have no incentive for withdrawing gold.

It may, perhaps, seem objectionable to the Japanese, on sentimental grounds, that their Government Bank should keep any part of its coin reserve elsewhere than in its own vaults, since all other Government banks keep such reserves in their own custody. As an offset to this, however, it should be a matter of pride if Japan would appear as one of the most prominent lenders in the Western money centers and thus take a commanding position among the financial powers of the world.

The question as to the amount of the Government's foreign funds that should, in the shape of international bills, become a part of Japan's circulating medium—whether 100, or 150, or 200 million *yen*—must, of course, be left to the decision of Japan's statesmen. In any event, the amount will have to be quite large, the present circulation being altogether too small, as is evinced by the very high rate of interest now prevailing in Japan. True, the high interest rate primarily indicates a dearth of available cash capital, not necessarily a dearth of money; but the former is often the sequence of the latter. If there were an adequate supply of money circulating in the hands of the people, the formation of new cash capital would most obviously be facilitated. The well-known process of this formation—first, withdrawing money from circulation on the part of the savers, then turning the savings over to the money market in the shape of cash capital, then investing this cash capital in some enterprise, thereby scattering again the accumulated funds, making them leave the money market and reënter the channels of general circulation—this process evidently could repeat itself oftener and easier if the volume of Japan's money supply were more ample than it is now. Thus, while a plentiful supply of money is not identical with a plentiful supply of cash capital, it is certainly the primary condition thereof and the most direct means of insuring a lowering of the interest rate.

A lower rate of interest seems almost indispensable, considering that so many of the natural resources of Japan are waiting to be developed, which development is more or less hampered by the high rate of interest now exacted by the lenders of money.

Where the Government undertakes, on its own initiative, to add to the country's circulation, be it by means of the importation of gold or by the issue of international bills, and thus to regulate the country's money supply, the question naturally arises, Would the addition have to be a large one? Would an increase of, say, *yen* 200,000,000 be too much? What would be the possible consequence if such an expansion of the currency should be greater than necessary?

If the circulation consisted chiefly of uncovered paper money, a depreciation of the latter, below the par value in gold, might result. This, however, could not take place in the case of international bills, which are backed up to their full value by foreign credits equivalent to gold, and readily convertible into gold. Another kind of depreciation of the country's money, however, might take place through the depreciation of the gold itself, represented by a lessening of its purchasing power. Were the money supply too ample, there would be too much of a tendency for wages and prices to rise, and this might affect the country's foreign trade, rendering the Japanese market a better one for foreigners to sell in and a poorer one to buy in—with the result that the balance of trade might turn so heavily against Japan as to call for a continued export of gold, or eventually an eating up of the foreign credits and a concurrent cancellation of international bills, which would mean a corresponding shrinkage of the circulating medium. Or, on the other hand, the adjustment of the trade balance may be effected by the exportation of Japanese securities, which would make Japan so much more of a debtor nation. Neither of these contingencies, however, is likely to occur, even though the currency of the country be substantially augmented. Japan is not destined to remain a debtor nation, nor a poor nation. Whoever attempts to forecast its future in the light of its past development cannot avoid the conclusion that the sound economic policy adopted by its rulers, in conjunction with the remarkable thriftiness of its people, is bound ere long to change Japan's position from a debtor to a creditor nation. Whatever foreign debts were incurred prior to the war did not represent an excess of consumption over production, but almost invariably an addition to its industrial equipment and to its internal wealth—the latter increasing many times faster than the foreign indebtedness. Considering the rapid growth of the country's wealth, it is almost surprising that foreign capital has had so small a share in its development, Japan comparing very favorably in this regard with the United States. whose wealth was built up in a much larger proportion by means of foreign capital. The Japanese have shown a strong tendency to make themselves industrially independent, and more and more to diminish the lines of goods they now draw from abroad, supplanting them by goods of their own make; and the natural outcome of this tendency will be that after wiping out the excess of imports, the Japanese people will seek an outlet for the products of their own growing industries—and after that it will not take them long to attain their place among the world's industrial powers and to become a creditor nation.

It is well understood that an expansion of business and industry necessitates an ample supply of money. Such an expansion is usually accompanied by a general increase of wages, which of itself calls for a larger supply of the circulating medium. Wages will no doubt continue to rise as they have done for the last ten years, and it may seem that such an advance in wages, in conjunction with the consequent rise in prices, will weaken Japan's exporting power and therewith its position regarding foreign trade, augmenting the unfavorable balance and bringing with it a risk that a large increase of the money supply, through the issue of international bills, will lead to exports of gold, or, as it were, to the eating up of the foreign credit funds. On the other hand, it must be conceded that the wages now prevailing in Japan are really too low, and that there is room for a substantial advance before the products of Japanese labor will be unable to stand the competition of Western labor, especially after the mechanical equipment of Japan's industrial establishments has reached a degree of efficiency equal to that of Western nations—a standard that is already being rapidly approximated.

The protest recently made by the Tokyo Bankers'' Association against an expansion of the currency may possibly be construed as applicable to the issue of international bills, for these would effectively expand the currency; but an expansion of this kind, where the paper money is so fully secured by a gold equivalent, should certainly not be objectionable. An ample supply of the circulating medium, and a consequent lowering of the rate of interest, may not specially benefit the bankers, but will prove a great boon to the community. Every branch of industry and trade would feel its vivifying influence, and it will above all ameliorate the condition of the Japanese workingman. To improve his standard of life he evidently should be paid higher wages; but this would require more money, and in the aggregate a larger supply of the circulating medium. True, a general increase of wages will, as a rule, entail a general increase of prices, thus partly annihilating the benefit derived from the advance in wages; still, a large share of the advance would go towards improving his condition, and augmenting his purchasing power, which is now quite small. This increase of purchasing power would call for increased production, this again for more labor and for more productive forces; and this process of action and reaction would not only add to the income of the individual, but would stimulate the business activity of the entire country, and result in a general uplift of industry and trade. This again would swell the public revenues, making it easier for the Government to meet the increased fiscal requirements.

Not exactly that the mere expansion of the volume of money will, of itself, *bring about* the development just cited, but it will surely *facilitate* such development, considering that the primary conditions for it already exist.

On the whole it does not seem likely that a material addition to the country's currency, as outlined in this treatise, would weaken Japan's position in regard to foreign trade or tend to render Japan's currency supply top-heavy so as to result in exports of gold. Not unlikely, things may take just the opposite course. If business prospers and the Government's income swells, and if the aspect of affairs throughout indicates improvement and stability, foreign capital will be attracted even more than now toward Japanese securities—and gold is more apt to flow in than out.

A peculiar after-war phenomenon has lately been observed in Japan's money market. Cash funds are freely flowing to the banks and are, to some extent, accumulating there—a fact which seems to betray the existence of an abundance of cash funds and of the country's money supply. This plethora of cash funds, however, is only temporary, being caused by the great changes in economic conditions resulting from the cessation of the war, and will soon disappear. A country of rapid development needs an abundant supply of cash funds and is much more likely to experience financial troubles from a dearth of money than from an excess of it.

In conclusion, let us recapitulate the salient features of the financial plan herein set forth.

First.—By avoiding the withdrawal of large amounts of gold from the Western money markets, a disturbance of the latter will be prevented.

Second.—The maintenance of a large foreign credit balance at Japan's command will materially aid in carrying out any plans for refunding the outstanding Government loan bonds at a lower rate of interest. For this purpose it is not essential that the Government should really own the funds, the mere control of them being sufficient.

Third.—The Government would derive a handsome income, in the shape of interest, from the continued control of the Western funds. Suppose the Government would issue *yen* 200,000,000 in international bills and apply them towards the purchase of an equal amount of its domestic loan bonds; then it would save five per cent. interest on these bonds; and if earning three to four per cent. interest on the foreign funds which form the basis of these international bills, it would, in all, earn eight or nine per cent. interest on the above amount, while the loan bonds, by means of which those foreign funds were procured, eat up only 4½ per cent. in the shape of interest.

While the foregoing plan commends itself to Western financiers, so far as they have been consulted, some objections may present themselves from a Japanese standpoint, as follows:

First.—The Bank of Japan has the exclusive privilege of issuing bank notes; the issue of international bills would seem to conflict with this privilege.

Suppose it does; could not this objection be overcome by a slight compensation to the Bank of Japan? Suppose, on the other hand, that the Government, in order to transfer some of its Western funds to Japan, would import the gold, instead of issuing international bills; that would certainly not interfere with the Bank's privilege. But would it make the least difference to the Bank, so far as its profits or interests are concerned, as to whether the Government would pursue the one course or the other? If not, the privilege of the Bank of Japan should not stand in the way to prevent the consummation of an important fiscal measure.

Second.—It may be thought dangerous to leave the adjustment of the volume of the country's currency supply to the discretion of the Government.

The fact is, however, that the Government is already using its discretion to that effect, inasmuch as it has limited the uncovered bank-note circulation to *yen* 120,000,000, imposing a heavy tax on any excess above that amount.

Furthermore, let us suppose that, instead of issuing international bills, it would *import gold* to pay off part of its internal debts; would not then, likewise, the question turn up as to the quantity of gold to be thus imported, and would not the Government have to use its discretion in the one case just as well as in the other?

Some guide for adjusting the currency volume may be found in the rate of interest. At present this rate is quite high. International bills may be issued with impunity to such an extent as to bring the rate of interest down to reasonable figures.

THIRD.—Many Japanese financiers, though wishing for the participation of foreign capital in developing Japan's resources, object to the extension of Japan's currency volume, and seem to hold the country's money supply to be sufficient for the transaction of its business.

The one view is more or less contradictory of the other. If foreign capitalists are to go into Japanese enterprises, would not they have to send cash funds to Japan, and would not this increase the country's circulation? True, instead of cash they might send merchandise; and if in consequence there were an excess of imports over exports, that excess could be invested by them in Japanese securities or enterprises. But would the influx of foreign capital under such circumstances, i. e., by means of an adverse trade balance, be desirable for Japan, after it has reached its present state of development?

If Japan is to be really benefited by foreign capital, the latter should come in the shape of cash funds. But whether these funds consist of foreign gold, or whether of international bills which represent cash funds supplied by foreign capitalists, that does not matter. If the Government uses these bills to redeem internal loan bonds, the bills will become cash capital in the hands of the receivers, ready for investment in some enterprise. But as soon as thus invested they will surely increase the country's circulation—precisely the same as if the foreign capitalist had sent so much gold, and had himself undertaken the enterprise.

Japan's financiers are wishing for the influx of foreign cash capital to assist in Japan's development. By the issue of international bills they can have it.

N. JOHANNSEN.

NEW YORK.

UNIFORM PACKAGES FOR CURRENCY.—The lack of uniformity in putting up the smaller denominations currency is often a source of annoyance and delay to paying tellers who are rushed with business on Saturdays or pay-roll days. Some banks have issued circulars like the following to their customers and have found that it has resulted in quite a saving in time and temper:

To our Depositors:

In order to facilitate the handling of business at the teller's window please take note of the following:

Pennies are kept in packages of			.50
Nickels	"	"	$2.00
Dimes	"	"	5.00
Quarters	"	"	10.00
Halves	"	"	10.00
$1 & $2 bills	"	"	50.00
$5 Bills	"	"	$100 & 250.00
$10 Bills	"	"	500.00

As far as possible please call for amounts as above or multiples of each.

Your co-operation in this respect will be appreciated both by the officers of the bank and the customers who form the lines in waiting.

CAREFUL OF HIS NAME.—I know of many worthy institutions with which I would trust my money; my name, never. I would never lend them my name, because that is sacred to me.—*Andrew Carnegie.*

ANNUAL REPORT OF THE COMPTROLLER OF THE CURRENCY.

The National banks have made five reports during the period beginning November 10, 1904, and ending August 25, 1905. There has been an increase in banks in that time from 5,477 to 5,757. Loans and discounts representing over 50 per cent. of the banks' aggregate resources steadily increased from $3,772,638,941.58 on November 10, 1904, to $3,998,509,152.62 on August 25, 1905. The increase in bonds on deposit as security for circulation was from $425,759,090 to $477,592,690, the increase being approximately $52,000,000. The banks' total investments in Government bonds—that is, as security for circulation and public deposits and amount held—represented approximately 7.5 per cent. of their resources. The amount invested in securities of this character on November 10, 1904, was $548,600,000 and on August 25, 1905, $551,300,000, the net increase being only $2,700,000 by reason of the large withdrawals during the year of Government deposits and the coincident release of a like amount of securities. At date of the first report in question the holdings of specie and legal-tender notes aggregated $642,100,000. These holdings increased on January 11 to $669,900,000, fell to $641,100,000 on March 14, increased to $649,200,000 on May 29, and on August 25 last reached $665,500,000. The percentage of specie and legal-tender notes to the total resources was 8.9 on the last-named date, as against 7.2 on September 6 and 8.9 on November 10, 1904. The three items of loans, United States bonds and lawful money represented 70.2 per cent. of the aggregate resources, $7,472,350,878.64, on August 25.

The paid-in capital stock on August 25, 1905, was approximately $800,000,000, the exact amount being $799,870,229, and the earnings—surplus and other undivided profits—were $620,200,000. On November 10, 1904, the capital paid in was slightly in excess of $776,000,000 and the surplus and other undivided profits, $595,300,000. On September 6, 1904, the stockholders' interest, represented by capital, surplus and profits, was 20.8 per cent., and on August 25, 1905, 19 per cent. of the total liabilities. The reported outstanding circulating notes on November 10, 1904, were $419,120,020 and on August 25, 1905, $468,979,788, an increase of nearly $50,000,000.

Of the liabilities on August 25, 1905, 51.1 per cent. represented individual deposits, which latter amounted to $3,820,681,713.23, an increase since November 10, 1904, of $112,900,000. The Government deposits, including deposits of United States disbursing officers, decreased from $110,300,000 on November 10, 1904, to $62,000,000 on August 25, 1905.

The composition of the specie held by the banks on November 10, 1904, was as follows: Gold, $395,000,000; silver, $89,000,000. On January 11, 1905, the holdings of gold had fallen to $386,000,000, and the silver had increased to $105,000,000. On March 14, 1905, the amount of gold held was $387,000,000 and silver $95,000,000. On May 29, 1905, the gold holdings had fallen to $380,000,000 and the silver holdings increased to $99,000,000. The aggregate specie holdings on August 25, 1905, were the greatest at date of any report during the period in question and amounted to $495,000,000, of which $397,000,000 was in gold and $98,000,000 in silver. Legal tenders held by the banks fluctuated from a minimum of $157,000,000 on November 10,1904, and March 14, 1905, to a maximum of $178,000,000 on January 11, 1905, but fell to $170,000,000 on August 25.

Reserve.

The deposits on which reserve is required—that is, individual deposits and net bank balances—amounted on August 25, 1905, to $4,735,000,000, of which $1,342,000,000 was held by central reserve city banks (New York, Chicago and St. Louis), $1,275,000,000 by banks in other reserve cities (the aggregate in the two classes being $2,618,000,000) and $2,117,000,000 by associations classed as country banks. The law requires banks in the central reserve cities to maintain a cash reserve of 25 per cent., and on the date in question the rate was exceeded by 0.63 per cent. of the proportion required. Banks located in other reserve cities are authorized to carry one-half of their 25 per cent. reserve with central reserve city banks, and their reserve with such banks and on hand averaged 25.29 per cent., the average for both classes being 25.47 per cent. Banks located elsewhere than in reserve cities are required to maintain a reserve of but 15 per cent., three-fifths of which may be on deposit with reserve city banks and the remainder held in their vaults. The average reserve held by the banks of this class was 17.03 per cent., making an average for all banks of 21.69 per cent.

Loans and Discounts.

Of the total amount of funds loaned by the banks, namely, $3,998,509,152, demand paper, with one or more individual or firm names, amounts to $320,052,942; demand paper secured by stocks, bonds and other personal securities, $854,115,721; time paper, with two or more individual or firm names, $1,382,258,561; time paper, single name (one person or firm), without other security, $689,124,987; time paper secured by stocks, bonds and other personal security, and mortgages, $752,956,941. Nearly one-third of the aggregate volume of loans represented accommodations granted by central reserve city banks, New York leading with $805,000,000, followed by Chicago with $213,000,000, and St. Louis with $99,000,000. The loans granted by other reserve city banks slightly exceed $1,031,000,000, Philadelphia leading with $176,000,000, followed by Boston with $168,000,000, Pittsburg, $130,000,000, Baltimore, $51,000,000; and decreasing from $48,000,000 in Cleveland to approximately $2,000,000 in Dubuque.

The loans granted by banks in the central and other reserve cities amount to 54 per cent. of the total, leaving 46 per cent. as the proportion of loans of banks located elsewhere. In the list of country banks Pennsylvania leads with loans of $232,000,000, followed by New York with $155,000,000; Ohio, $125,000,000; Massachusetts, $118,000,000; Illinois, $116,000,000; New Jersey, $87,000,000; Texas, $83,000,000; Iowa, $64,000,000; Indiana, $58,000,000, and Connecticut, $53,000,000.

Capital, Circulation and Bonds.

In the past year there was a gross addition to the authorized capital of National banks of $59,336,240, of which $33,532,500 were from banks organized since October 31, 1904, and $25,803,740 from old associations increasing their capitalization. The net increase, however, was but $30,899,740, as there was a loss of $28,436,500 as a result of voluntary liquidations, failures and reductions of capital of continuing banks.

The average capital of the 3,617 National banks in existence on March 14, 1900, was $170,000. At the close of business on October 31, 1905, the average capital of the 5,858 banks then in operation had been reduced to $138,000, the reduction being due to the organization of banks with capital of less than $50,000, under authority of the act of March 14, 1900, the latter being organized generally with capital of $25,000, although the exceptions raised the average of that class of banks to approximately $26,000. The average capital of the 947 banks organized under authority of the act of 1864, and from March 14, 1900, to October 31, 1905, was $120,000, making an average for the 2,702 banks organized during the period in question of approximately $60,000.

The outstanding circulation secured by bonds on March 14, 1900, was but 35 per cent. of the authorized capital stock, the latter being the measure of the maximum amount issuable. By reason of the granting of authority to issue circulation to the par value of bonds deposited, and the reduction by one-half of the semi-annual tax on circulation secured by 2 per cent. consols of 1930, the proportion of circulation secured by bonds to authorized capital had increased on October 31, 1905, to 60 per cent.

At the close of business on October 31, 1905, registered bonds to the amount of $493,912,790 were on deposit with the Treasurer of the United States, in trust as security for National bank circulation, of which $483,181,-

900, or nearly 98 per cent., were 2 per cent. consols of 1930, there being still on deposit as security for circulation 3 per cent. bonds of 1908 to the amount of $2,215,540, fours of 1907 to the amount of $4,050,350, and fours of 1925 to the amount of $4,465,000. The average market price of 2 per cent. consols in November, 1904, was 104.7838. The maximum price was reached in March, 1905, namely, 105.1389. In October, 1905, the average market price of these consols fell to 103.4295, giving them an average investment value in October of 1.826.

The percentage of outstanding circulation to the paid-in capital of National banks, as shown by reports of condition, periodically, from January, 1866, to December, 1885, materially exceeded 50 and ranged from a maximum of 70.3 at the close of 1868 to 50.5 at the close of 1885. From the latter date there was a gradual decrease to 18.4 in July, 1891. From October, 1893, to March, 1895, the average was approximately 25 per cent., and thereafter a steady and slight increase to 33.8 per cent. in December, 1899. The act of March 14, 1900, resulted in an increase of the rate to 38.3 per cent. on April 26 of that year, and 47.3 at the close of the year. With the exception of July, 1902, when the rate was 44 per cent., the proportion of circulation to capital has exceeded 45 per cent. since the date last named, and reached a maximum of 58.6 per cent. in August, 1905.

The law requires every National bank to keep on deposit with the Treasurer of the United States lawful money to the amount of 5 per cent. of its outstanding circulation for use in providing for current redemptions. During the year ended October 31, 1905, notes to the amount of $306,073,880 were received for redemption at the United States Treasury redemption agency, of which $204,753,612 were delivered to the Comptroller of the Currency for destruction, $182,021,822 of the latter amount being replaced by new notes, $12,583,410 redeemed and destroyed as a result of reduction of circulation under the act of June 20, 1874, and $10,148,380 redeemed and destroyed on account of insolvent and liquidating banks. In addition to the foregoing, notes to the amount of $404,618 were received by the Comptroller direct from National banks for redemption without reissue or for replacement with new notes.

Nearly one-third of the notes received for redemption by the National bank agency ($98,910,670) being in good condition after their redemption, were returned to the issuing banks. Ninety per cent. of the total receipts at the redemption agency was shipped from New York, Chicago, Boston, Philadelphia, St. Louis, Baltimore, Cincinnati and New Orleans, the receipts from New York alone amounting to approximately 50 per cent. of the total.

The cost of redemption of notes by the Treasury of the United States during the fiscal year ended June 30, 1905, was $247,973.26, the cost per thousand dollars being $0.80993. In addition to redemption charges every National bank is required to pay the cost of plates from which its notes are printed, both at organization and extension of charter. The assessments for the cost of the original plates and those ordered on extension of charters during the past fiscal year were $47,825 and $64,800, respectively. The fees assessed for examination of banks during the year aggregated $388,307.39, and during the same period taxes were paid on circulating notes to the amount of $2,163,882.05. Including tax on capital stock, 1864-1883, tax on capital and surplus under the War Revenue Act of 1898, and on deposits from 1864—1883, aggregating $75,884,368, the associations have been charged with and paid expenses during the existence of the system as follows:

Expenses.	Amount.
Redemption of circulating notes from 1874 to 1905....	$5,211,035
Cost of original plates, 1883 to 1905..................	527,760
Cost of extension plates, 1883 to 1905.................	368,170
Fees for examinations authorized by section 5240, United States Revised Statutes, 1883 to 1905.......	4,697,506
Total payments other than taxes......................	10,804,471
Combining the taxes and other expenses, a total is shown of	182,869,767

The profit on National bank circulation varies with the cost price of bonds deposited as security for circulation. In October last the market price of 2 per cent. consols of 1930 was at the lowest point during the year and hence circulation secured thereby shows a greater profit than during any other month of the year. In calculating the profit the interest on the bonds is added to the interest received on the circulation loaned at 6 per cent., giving the total receipts on an investment in $100,000 worth of bonds as $8,000. From the gross receipts are deducted the taxes on circulation, average expenses incident to cost of plates, redemption charges, etc., and the amount set aside as a sinking fund to provide for the premium paid for the bonds, the difference being the net receipts. Assuming that the amount invested in $100,000 worth of bonds was loaned at 6 per cent., the profit on the issue of circulating notes will represent the difference between the interest on the amount invested in bonds and the net receipts from the interest on bonds purchased and the amount received by loaning the circulating notes. The profit so ascertained at the average cost price of bonds in October is shown to be 1.123 per cent.

While the deposit of bonds is mandatory, the issue of circulating notes is permissive. There are eight National banks in operation with aggregate capital of $2,625,000, having bonds on deposit to the amount of $181,250, which have no circulating notes outstanding. One bank, The Chemical National Bank of New York, has never issued circulating notes during its existence as a National banking association.

Earnings and Dividends of National Banks.

On March 1, 1869, an act was passed requiring National banking associations to submit reports of their earnings and dividends to the Comptroller of the Currency within ten days after the declaration of a dividend. Since that date reports of this character have been compiled covering semi-annual periods ending March 1 and September 1. These returns from March 1, 1869, to March 1, 1905, inclusive, have been consolidated in annual statements, the capital and surplus being averaged and the total amount of net earnings and dividends, with the ratios of dividends to capital, dividends to capital and surplus, and net earnings to capital and surplus, shown. The annual summary of this report shows that from 1869 to 1876, inclusive, dividends were paid at an average rate of approximately 10 per cent. The liquidation following the stringency of 1892 is reflected in the decline in the rate of dividends on capital from 7½ per cent. in the year named to 6.7 in 1897. Since the last date there has been a gradual recovery and the dividend rates have fluctuated from a minimum of 6.9 per cent. in 1898 to a maximum of 9.9 in 1904, with a slight falling off in 1905 to 9.2.

Liquidations and Consolidations.

Including one association placed in voluntary liquidation prior to October 31, 1904, but not reported until subsequent to that date, 144 National banking associations with capital stock of $26,744,500 were closed during the year ended October 31, 1905, of which 90 with capital of $18,840,000 were closed by voluntary liquidation; 31 with capital stock $5,569,500 by expiration of corporate existence, and 22 with capital of $2,035,000 (exclusive of one bank closed and resumed during the year) by failure. Of the banks in the first class, 33 with capital of $9,620,000 were consolidated with 30 associations with capital of $13,910,000, the consolidation resulting in an increase of capital of the absorbing banks to $23,635,000. Nine of these associations with capital of $4,250,000 were reorganized under seven new charters, the capital of the latter banks being $5,100,000. In both classes instances occurred where two liquidated banks consolidated their interests in one new or absorbing association. Thirty-two banks with capital of $3,915,000 were succeeded or absorbed by State banks or trust companies, and 16 with capital of $1,055,000 closed to discontinue business.

Of the 31 associations closed as a result of expiration of corporate existence, the stockholders of 22 of the number reorganized under new charters with aggregate capital of $2,480,000; 5 of the number with capital of $830,000 were succeeded or absorbed by State banks or trust companies, and 4 with capital of $420,000 were not succeeded by any other class of bank.

Insolvent National Banks.

The history of the National banking system has been marked by very few failures, only 5.5 per cent. of the total number of associations chartered from 1863 to October 31, 1905, having been closed as the result of insolvency. The failures, with few exceptions, were due to fraudulent management or violations of the restrictive provisions of the National banking laws.

The capital of the 460 insolvent banks, liquidated, or in process of liquidation (including 21 restored to solvency), was $74,737,420, the assessments thereon to make good deficiency in assets amounting to $42,268,490. Assets coming into possession of Receivers were of the nominal value of $289,554,139, classed as: good, $140,861,361; doubtful, $88,399,431; worthless, $60,293,347.

The disposition of assets was as follows:

Collections	$135,221,042
Offsets allowed and settled	21,445,459
Losses (assets compounded or sold under order of court)	98,722,584
Returned to shareholders	8,917,034
Remaining on hand	25,248,020
Total	$289,554,139

In addition to collections from assets there was realized from the assessments upon shareholders $19,873,856, these collections having been disposed of as follows:

Loans paid and other disbursements	$31,194,756
Dividends	107,208,594
Legal expenses	4,341,391
Receivers' salaries and all other expenses	7,479,917
Returned to shareholders	2,383,473
Balance held by Comptroller or Receivers	2,486,767
Total	$155,094,898

The affairs of 361 of the 460 insolvent National banks have been settled. The capital of those banks was $56,182,420, and their assets coming into the possession of the Receivers amounted to $203,280,184. United States bonds amounting to $19,424,150 were held as security for $17,295,748 outstanding circulation. These bonds were sold for $20,970,480.39, leaving a balance transferable to the general assets of the trusts of $3,674,732.39. Stockholders were assessed $33,780,390, and there was realized from the assessments $15,897,440.

The disposition of assets was as follows:

Offsets allowed and settled	$15,553,455
Losses (assets, compounded or sold under order of court)	82,848,290
Collections from assets, etc	94,085,712
Assets returned to shareholders, nominal value	8,917,034
Assets remaining, nominal value	1,875,693
Total	$203,280,184

The disposition of collections from assets and from shareholders was as follows:

Loans paid and other disbursements	$21,459,075
Dividends paid	77,199,813
Legal expenses	3,339,365
Receivers' salaries and other expenses	6,021,552
Returned to shareholders in cash	1,935,254
Balance held by the Comptroller or Receivers	28,093
Total	$109,983,152

On claims proved, amounting to $109,514,273, dividends were paid, as heretofore shown, to the amount of $77,199,813, or 70.49 per cent. Including with dividends, loans paid and offets allowed, creditors received on the average 77.95 per cent. Up to and including 1904 the average rate of dividends paid on claims proved was 70.78 per cent., and on claims proved, including offsets and loans, 78.11 per cent.

For the purpose of ascertaining the results of the settlement of affairs of insolvent National banks located in central reserve and other reserve cities, a comparative statement has been compiled relating to the affairs of all insolvent National banks, classified as to their location—central reserve cities, all other reserve cities, and other cities and towns. In the first class are twenty banks with capital at date of failure of $10,810,300 and assets of $35,519,412, from which creditors received on an average 88.91 per cent. The second division relates to forty-five banks, located in other reserve cities, the capital and assets at date of failure being $16,052,800 and $68,799,836, respectively. Creditors of these banks received on an average 78.10 per cent. The 296 insolvent National banks located in other cities and towns were capitalized at $29,319,320, and their assets at date of failure were $98,958,614, from which creditors received on an average 73.87 per cent.

The cost of liquidation—that is, Receivers' salaries, legal and all other expenses, in relation to the assets of the trusts—averaged 4.4 per cent. for the central reserve city banks, 3.2 per cent. for other reserve city banks, 5.63 per cent. for banks located in other cities and towns, the average for all being 4.6 per cent.

Geographically the number of failures and capital of the banks involved, the affairs of which have been settled, are shown in the following table:

	Number of banks.	Capital.
New England States	19	$5,021,300
Eastern States	66	11,940,620
Southern States	69	9,771,500
Middle Western States	78	15,422,000
Western States	92	9,267,000
Pacific States	37	4,760,000
Total	361	56,182,420

In order to ascertain the extent to which officers and directors were interested in the insolvent National banks, an examination of the Receivers' reports of the forty-nine banks which failed during the two years ended October 31, 1905, has been made and shows that of the 43,850 shares of stock of the banks 7,771 were owned by the Presidents, 1,805 by Vice-Presidents, 3,210 by Cashiers, 8,687 by directors other than executive officers, and 290 by minor officers. The total number of shares held by directors and other officers was 21,763, or nearly one-half of the total number of shares of the associations with which they were connected.

Organization of National Banks.

From the date of the granting of the first charter to a National banking association, in 1863, to October 31, 1905, 7,966 associations were organized, of which 1,214, with capital at date of issue of charter of $298,861,928, were conversions of State banks, 64 per cent. of the number being located in the New England and Eastern States. At the close of business on October 31, 1905, 5,858 associations were in existence, 1,669 having been placed in voluntary liquidation and 439 (exclusive of twenty-one restored to solvency) in the charge of Receivers. Expressed in percentages, the proportion of active banks is 73.5 per cent.; in voluntary liquidation, 21 per cent.; insolvent, 5.5 per cent.

Under authority of the act of March 14, 1900, permitting of organization of banks with capital of less than $50,000 in places having population of not more than 3,000 there have been organized 1,755 National banks, with aggregate capital of $45,817,000, and during the same period charters were issued to 947 banks, with capital of $113,227,800, the individual capital being $50,000 or more, making the total number of organizations since March 14, 1900, 2,702, with authorized capital of $159,044,800 and charter bonds of $39,363,800. A further classification shows that 1,503 of these banks, with capital of $79,544,000, were of primary organization; 904, with capital of $59,859,000, reorganizations of State or private banks, and 295, with capital of $19,641,800, conversions of State banks. The combined capital of the converted and reorganized banks was approximately the same as that of banks of primary organization, although the number of banks of the latter class exceeded conversion and reorganization by 304.

In the year ended October 31, 1905, there were organized 506 associations with aggregate capital of $33,532,500, of which 318, with capital of $8,357,500, were with individual capital of less than $50,000, and 188, aggregate capital $25,175,000, with individual capital of $50,000 or more. The number of conversions was 45, reorganizations 188, and primary organizations 273.

State and Private Bank Failures.

Through the courtesy of the Bradstreet Commercial Agency this office has been placed in possession of information relating to the number, assets, and liabilities of State and private banks which failed in the year ended June 30, 1905. The total number of failures during the year was 57, the assets of the banks being $6,970,345, and the liabilities $10,273,023. In the year ended June 30, 1904. there were 102 failures of banks of this character, with assets of $24,296,823 and liabilities of $31,774,895. Included in the 57 failures of banks other than National in 1905 were 16 State banks, 4 Savings banks, 2 trust companies, and 35 private banks. The number of failures by geographical sections was: New England States, none; Eastern States, 8; Southern States, 10; Middle Western States, 32; Western States, 2, and Pacific States, 5.

Savings Banks.

Savings bank reports to the number of 1,237 have been received, of which 668 are from mutual institutions and 569 from stock Savings banks, the latter being operated for the benefit of both shareholders and depositors.

The principal items of resources and liabilities of Savings banks, both mutual and stock, are as follows: Loans, $1,534,114,618; bonds, stocks, and securities, $1,535,354,306; deposits, $3,093,077,357, and aggregate resources, $3,368,279,857. Compared with 1904, these figures show an increase in loans of $122,500,000; bonds, stocks, and securities of $45,300,000; deposits of $174,300,000, the aggregate resources having increased over $193,000,000.

The mutual Savings banks are located in the New England and the Eastern States, with the exception of 1 in West Virginia, 2 in Wisconsin, 3 in Ohio, 5 in Indiana, and 10 in Minnesota, the number of these reporting institutions remaining the same as last year.

The aggregate resources of mutual Savings banks is $2,967,341,724, against $2,817,996,115 in 1904, a gain of over $149,000,000. The loans and discounts amount to $1,269,755,274, an increase of $85,570,729 over 1904. The loans are classified as follows: On real estate, $1,054,950,935; other collateral security, $41,285,876; all other loans, $173,518,463. The amount invested in bonds, stocks, and other securities has been increased from $1,402,292,764 in 1904 to $1,453,091,615 in 1905, a gain of $50,798,851. The investments in bonds and other securities are as follows: United States bonds, $13,278,932; State, connty, and municipal bonds, $136,493,056; railroad bonds and stocks, $321,282,624; bank stock, $27,119,101; other stocks, bonds, and securities, $954,917,902. The cash in bank is only $265,210 greater than reported last year, being now $18,404,563; the cash on deposit with other banks is $121,815,707, or $6,624,123 more than shown by the reports of 1904.

Individual deposits have increased from $2,602,040,775 in 1904 to $2,736,533,039, a gain of over $134,000,000. The deposits are credited to 6,463,677 depositors, or 177,302 more than was shown by the reports for 1904. The average deposit account has increased during the same period from $413.92 to $423.37. Reports from each State having this class of banks show a larger average deposit account than in 1904 with the exception of Wisconsin and Minnesota.

School Savings Banks.

Statistics relating to the operation of school Savings banks in the United States, in existence on January 1, 1905, have been received through the courtesy of J. H. Thiry, of Long Island City, N. Y.

The school bank system was inaugurated in the schools of Long Island City in 1885. From the statement compiled by Mr. Thiry it appears that there are 4,541 school banks in operation located in 1,089 schools in 109 cities of the United States. The number of scholars registered in these schools is 347,895, of which 191,009 are depositors in the school banks. The amount collected since the introduction of the system is shown to be $2,782,-

012, the amount withdrawn $2,165,072, leaving a balance due depositors of $616,940.

The school Savings bank is the simplest form of banking institution known. A teacher collecting the money from the pupils of a class, Mr. Thiry's report states, constitutes a school Savings bank. From the statement submitted it appears that the school children of Dayton, Ohio, have the largest sum on deposit to their credit, namely, $111,433.

A letter (in part) from Mr. Thiry, explaining the workings of the school bank system, follows:

I beg to answer your inquiries as follows:

1. In what manner are the deposits safeguarded?

Answer. By the law of the State of New York. (For a copy of the bill of the Legislature and the rules and regulations see my annual for the years 1902 and 1904 in a separate cover.)

2. What disposition is made of the deposits, especially with respect to their investment?

A. The deposits of the scholars are subjected to the same process as those of adult depositors.

3. Is interest paid on deposits?

A. Yes; 4 per cent. on average.

4. In what manner is provision made for expenses incident to the management?

A. None. In some cities the banks receiving the deposits of the juvenile depositors furnish all the blank forms. In others the school boards furnish a part of them, which, however, do not amount to much.

5. What is the minimum and maximum amount which may be deposited at one time?

A. One cent and up.

As regards the debit and credit accounts, the teacher and principal have nothing to do with them. This is solely the work of the banks. * * * The monthly list of depositors, with name and amount deposited during the previous four weeks, is the only clerical work performed by the teacher besides the record of the four Mondays previous of deposits inscribed in the Monday column of the roll-call book. * * * I may say without vanity that the Long Island City plan, which is in practice in the majority of the schools included in the statistical table, has proved to be the shortest and the most effective of all the plans in practice in the European cities.

As far as the expenses of the general supervision of the system in America is concerned, such as correspondence, collecting, and publishing the annual report for the past twenty years, the introducer, moved by a sentiment of charity and patriotism, has tried to save from a moderate income enough to cover the expenses, which amount annually to about $300.

The introduction in 1885 of the school Savings bank system in the United States has evidently been the incentive of many other good things. First, it helped to swell the list of depositors in the localities where the plan was introduced. The stamp savings plan and the recent introduction of commercial stamps now offered by the merchants as a premium owe their origin to the school Savings bank plan.

Growth of Banking in the United States.

From returns made to this office on or about June 30, 1902, it appears that there were in operation 4,535 National banking associations, with capital of $701,990,554 and individual deposits of $3,098,875,772, and also 7,889 incorporated State and private banks, with capital and deposits of $499,621,208 and $6,005,847,214, respectively. The non-reporting banks to the number of 3,732 had capital and deposits estimated at $138,548,654 and $478,592,792, respectively, or an aggregate of 16,156 banks and banking institutions, with capital of $1,340,160,416 and deposits of $9,583,315,778. The first estimate made by this office as to the number, etc., of non-reporting banks, published in 1903, was for the year 1902. From returns on or about June 30, 1905, it is shown that the number of National banks has increased during the past three years to 5,668, with capital of $791,567,231 and deposits of $3,783,658,494. The number of State and private banks reporting and non-reporting are now 14,242, with capital of $748,263,149 and deposits aggregating $8,002,662,822. The total number of National, State, and private banks in the United States and island possessions is therefore 19,910, with aggregate capital of $1,539,830,380 and individual deposits of $11,786,-321,316. The number of National banks in active operation has increased since 1902 by 25 per cent. and the figures presented indicate that banks other than National have increased at the rate of about 22 per cent. during this period.

In 1902 National bank capital represented 52.4 per cent. and deposits

32.3 per cent. of aggregate capital and deposits, respectively, of all reporting banking institutions.

The percentage of capital of National banks to capital of all banks in 1905 was 51.41 per cent., and of deposits 32.10 per cent., showing a slight reduction since 1902. Within the period in question the capital of National, State, and private banks increased about 15 per cent., while the deposits increased approximately 23 per cent.

There was in existence in 1902, as estimated, one bank for every 4,897 inhabitants and, based on the estimate for the present year, there is one bank for every 4,182 inhabitants.

Deposits.

No items indicate so clearly the growth of banking as those relating to deposits. A compilation of the returns for the years 1896, 1900, 1904, and 1905 for each State and geographical division is submitted, showing the amount of individual deposits of each class of banks in each geographical division during the years mentioned. It will be noted that the increase was from $4,945,124,423 in 1896 to $7,238,986,450 in 1900, or 46+per cent. During the four years from 1900 to 1904 deposits increased to $10,000,546,999, or over 38 per cent. The deposits for the current year are $11,350,739,316, or an increase of 13.5 per cent. over 1904, and approximately 130 per cent. over 1896.

Geographically summarized, there is shown to have been an increase in the deposits of banks located in the New England States from $1,193,300,000 in 1896 to $1,791,400,000 in 1905, a gain of $598,100,000. The increase in the Eastern States during this period was $2,961,000,000, or from $2,291,700,000 in 1896 to $5,252,700,000 in 1905. In the Southern States the increase was from $221,700,000 to $767,300,000, an increase of $545,600,000. The deposits of banks in the Middle Western States which reported in 1896, amounting approximately to $877,800,000, have now increased to $2,461,200,000, showing a gain in that section of $1,583,400,000. The banks of the Western States increased their deposit accounts from $128,800,000 to $430,900,000, a gain of $302,100,000. In the Pacific States the banks gained $397,700,000 in deposits, or an increase from $231,800,000 to $629,500,000.

The deposits in the banks in the island possessions (Hawaii only) were first stated for 1900, when they amounted to $3,096,174.

Stock of Money of the World.

Under direction of the Director of the Mint there has been recently compiled a statement based on the latest information obtained relating to the monetary systems and approximate stock of money in the principal countries of the world at the close of the year 1904. The summary relates to 47 countries, in all of which gold is the monetary standard, with the exception of the Straits Settlements, Bolivia, and the Central American States.

The aggregate stock of gold, silver, and uncovered paper currency is reported as amounting to $12,510,000,000, classified as follows: Gold, $5,987,100,000; silver, $3,130,400,000; uncovered paper currency, $3,392,500,000. The gold represents 48 per cent. of the stock, and the silver and uncovered paper currency 25 and 27 per cent., respectively. Comparing this statement with that relating to the stock of money at the close of 1903, it appears that the holdings of gold have increased to the extent of $358,900,000, but that silver and uncovered paper currency have decreased $71,000,000 and $91,000,000, respectively, the net increase in the stock of money being $196,900,000. The greatest mass of gold is held in the United States and is stated as amounting to $1,348,200,000. France is second in the list, with a stock of $926,400,000; followed by Germany with $886,700,000; Russia, $783,700,000; United Kingdom, $533,200,000; Austria-Hungary, $305,000,000; India, $263,900,000; Italy, $131,400,000; and Australasia, $128,600,000. The leading countries with their stock of silver are as follows: United States, $685,100,000; India, $603,800,000; France, $411,100,000; China, $350,000,000; Germany, $210,200,000; Spain, $173,700,000; United Kingdom, $113,400,000; Russia, $101,900,000. With the exception of Columbia, which has $741,000,000, the United States leads the principal countries of the world with a stock of uncovered paper currency of $559,900,000, followed by Brazil with $368,100,000, the next in the list being Argentina, $286,100,000. Germany's stock of uncovered paper currency is $169,800,000, and that of Italy $150,700,000. The amount of this kind of currency in Spain is $125,100,000, the next in the list being the United Kingdom with $118,100,000; Belgium, $111,900,000; France, $110,900,000, and Japan, $101,200,000.

The greatest per capita stock of money is held in France, namely, $37.13, followed by the United States with $31.41; Germany, $22,46; Spain, $19,83; United Kingdom, $17.58; Italy, $9.26; Austria-Hungary, $9.04, and Russia, $6.90.

The countries reported have an aggregate population of 1,298,500,000 and an average per capita holding of money of $9.63.

Money in the United States.

At the close of the fiscal year ended June 30, 1905, the stock of money in the United States amounted to $2,883,109,864, of which $2,031,296,042 was in coin, including bullion in the Treasury, and $851,813,822 United States and National bank notes. The coin, bullion, and paper currency in the Treasury as assets amounted to $295,227,211, the remainder, $2,587,882,650, being in circulation. The estimated population of the country on this date was 83,260,000, giving an average circulation per capita of $31.08. The amount of money held by National and other reporting banks at date of reports nearest to June 30, 1905, was $987,800,000, which leaves $1,600,100,000 outside of the Treasury and the reporting banks. Stated in percentages the money in the Treasury represents 10.24 per cent. of the stock; in reporting banks, 34.27 per cent., and elsewhere 55.49 per cent. The per capita unaccounted for appears to be $19.22.

From midsummer of 1900 to June, 1905, the increase in money in banks was from $749,900,000 to $987,800,000, or $237,900,000. In 1900 the banks in the Eastern States held 49.22 per cent. of the total, the proportion falling to 46.61 in 1902, 46.01 in 1903; increased to 50.60 in 1904, and decreased to 47.75 in 1905.

Banks in the New England and Eastern States held 57.47 per cent. of the aggregate money in all banks in 1900, and 56.62 per cent. in 1904, whereas in 1902 and 1903 the proportion was but 54.56 and 53.35 per cent., respectively. In 1905 the average held by banks in those sections was 54.22 per cent.

Clearing-House Exchanges.

The volume of exchanges of the 103 clearing-houses in the United States amounted to $140,501,841,957, as against $102,356,435,047 for the year ended September 30, 1904, an increase of $38,145,406,910 and the largest gain in any year since these statistics have been published in reports issued by this Bureau. The general prosperity of the country and confidence in the stability of business credits are evidenced in the volume of clearings effected during the current year.

The clearings for the whole country in the years indicated were as follows: 1900, $84,000,000,000; 1901, $114,000,000,000; 1902, $115,000,000,000; 1903, $113,000,000,000; 1904, $102,000,000,000; 1905, $140,000,000,000.

The proportion of increase in transactions in 1905 over 1900 was 66 per cent.

The percentage of gain in each geographical section for five years were as follows: New England States, 19 per cent.; Eastern States, 74 per cent.; Southern States, 72 per cent.; Middle Western States, 52 per cent.; Western States, 48 per cent.; Pacific States, 100 per cent.

The statement of the exchanges of the clearing-houses of the United States for the year ended September 30, 1904, shows a decrease in volume, as compared with 1903, of $12,000,000,000, thirty-seven cities sharing in this decrease. For the year ended September 30, 1905, the reports from only 14 cities having clearing-houses show decreases as compared with 1904, viz: Cincinnati, Dayton, Youngstown, Springfield, Canton, and Akron, Ohio; Lowell and Fall River, Mass.; New Orleans, La.; Macon, Ga.; Lexington, Ky.; Davenport, Iowa, Topeka, Kans., and Beaumont, Tex.

The falling off in the volume of exchanges in the cities named during the past year was $57,681,839.

Bank Examination and Supervision.

After a careful study of the cases which have come under my observation during the past four years, I am firmly convinced that no system of bank examination or supervision from the outside of the bank can absolutely prevent fraudulent bank failures. The more thorough and efficient the supervision the more surely and quickly frauds will be discovered, and the more fear of detection will tend to prevent them, but they can not be surely and in every case prevented by any practical means outside of the bank.

I am also equally convinced by the same experience that with careful and efficient work on the part of the examiner, aided by intelligent and thorough letters of criticism based on the examiners' reports, any board of bank directors of fair intelligence with an honest desire to obey the law can, by coöperating with the examiner and the Comptroller, make the failure of their bank practically if not absolutely impossible.

I am sure that in this direction, the coöperation between the directors of a bank and the supervising authority, lies the best hope of decided and permanent improvement in the supervision of banks and the reduction of bank failures to a minimum.

No outside supervision can supply honesty or brains for the management of a bank or take the place of either when it is lacking. The best it can do is to discover acts of dishonesty or bad errors of judgment after they have occurred, and to some extent prevent illegal acts by fear of their discovery and punishment.

An examiner always works under one great and unavoidable disadvantage. He can do little or nothing until after the law has been violated when much, if not all, of the harm is done. If the trouble is a bad, excessive, or fraudulent loan, it has been made before he can act. If there is a shortage in the cash through a defalcation or robbery, the money is gone before he can know it, and often with little or no chance for its recovery. A good examiner does his whole duty in the discovery of such a case. It is not reasonable to ask him to prevent it.

A bank does not often fail suddenly. The condition which leans to it is apt to be of comparatively slow growth. Far the most frequent cause of failure is a large line of loans to some concern or group of concerns in which the officers are interested, or to the officers themselves. When the loans are new they look all right and frequently are good; but if things go wrong and this outside venture loses money, the loans begin to increase, and soon good money begins to go after bad with the inevitable result. It is surprising to see in how few cases men who may have been theretofore honest and square have the honesty and moral courage to face the failure of their bank, when due to bad judgment or incompetency, without resorting to frauds of some kind. It is extremely rare to find a bank has failed without some of the officers committing fraudulent or illegal acts to hide it.

Every examiner, however, has many cases to report which are taken up and corrected, sometimes after they have become very bad. There are a great many such cases where a bank gets into more or less serious trouble, and yet is saved, where one goes to failure. There is seldom a day in the Comptroller's office when there is not pending a case of a bank which is found, not necessarily from frauds or always violations of law, but from bad banking, in a condition which, if allowed to go on, would lead to serious trouble, but which is corrected on the examiner's report and advice. There always is a list of those that are being watched, and a very large percentage come out all right. They almost invariably do when the officers are honest and tell the truth. It is very hard to tell when the bank is beyond hope and really is insolvent. The hard cases are where the officers are dishonest and untruthful, and perpetrate all kinds of frauds to conceal the condition.

After a bank fails and disclosures of dishonesty are made, it is wondered why such things could go on undiscovered so long. The examiner is blamed and abused, with or without reason. In some cases he is very much to blame, but in those which I have had occasion to investigate this has not very frequently been found to be true. It must be remembered that these frauds and deceptions are in most instances being carried on by men of unusual ability—men who stand very high among their neighbors, not only in business, but also in social, religious, and political matters. Almost invariably they deceive the whole community, their business associates, their friends, and even their families. It is frequently an astounding revelation to all of these that the banker who has failed, defaulted, and perhaps absconded or killed himself, is not a man of wealth as well as the ideal of honor and business integrity. Only men who establish such reputations have the opportunity to betray large trusts, and of these, only those with skill, shrewdness, and peculiar courage can carry them on for any length of time without discovery. However his suspicions may be aroused, the examiner is, as I have said, under the great disadvantage of only being able to act after the crime is committed. He can discover them, but he can not surely prevent such frauds.

The system of National bank examination is much the most extensive which has ever been undertaken by any country or government, and the experience accumulated during the forty-two years of its operation covers almost every conceivable trouble or complication into which the affairs of a bank may be brought, either by dishonesty, incompetency, or neglect. The methods of examination, reports, and criticisms based on them have, of course, been a gradual growth. In spite of certain defects and weak points, some of them serious and now needing improvement, it has worked very well. In the main the examiners have been faithful, competent men, doing conscientious and good work. The record of the National banks in regard to failures is better than any banks we have ever had in the United States or those of any other country under at all similar conditions.

Of the 7,966 National banks which have been organized, 460 have failed, or 5½ per cent. of the whole number, as against about 17½ per cent. of banks other than national in the same period. The National banks which have failed have paid their creditors about 78 per cent. of the amount due them, while the other banks have paid only about 45 per cent. Of the billions and billions of dollars they have had on deposit, the National banks have lost for their creditors in the whole period of their existence only about $32,000,000.

These records in favor of the National banks are mainly, if not entirely, due to the wise provisions and restrictions of the National Bank Act and examination and supervision by the national authority. The examination provided in the bank act from the first—and in this it has never been changed—contemplated the examination of a bank by a single individual, and, except in the large cities, only provided such compensation as would cover one or two days' fair pay, including expenses. This is not sufficient examination, no matter how efficient and careful the examiner, to infallibly detect, much less prevent, fraud and dishonesty. It does detect much of it, perhaps most of it, but not by any means all. One is more often surprised at what is detected by shrewd examiners, and upon what slight clews, than at what escapes them.

The weakest feature of the present system of examinations is that the examiners are paid by fees instead of salaries. I believe every Comptroller of the Currency of recent years has advised a change in this system. The examiners as a whole are a good body of men—faithful, industrious, and attentive to their duty. But unfortunately this is not true of each individual, and the circumstances of their work being away from the observation of the office, makes it difficult to check them up and see that all the work is well done. The temptation to slight it is sometimes too great, and this should be removed as far as possible by changing the basis of their remuneration. It is not reasonable to expect a complete audit of the books of a bank and the checking up of every department in it for a fee of sometimes only $20. If one were to employ a professional accountant to do such work it would cost many times this amount. This in a large bank is the work of many days or weeks. Perhaps it is not practicable nor advisable to have such a complete service as this by officers of the Government. It is more a matter for the directors of a bank. It is now being done very thoroughly by an increasing number of the best banks, and it is a matter to which every board of directors should give the most careful consideration.

The Government can, however, and should by all means, improve the service by paying the examiners by the day and greatly increasing their number, so that a man would have time and take time to go into matters as thoroughly as is necessary to get at the real condition of the bank. The men ought to be paid good salaries; large enough to attract and hold good men. It is one of the difficulties of the present service that it is hard to keep a good man. Just as an examiner gets to know his district well, and becomes really efficient, he is apt to be hired by some bank looking for an officer. I see no way to altogether prevent this, but the salaries should be enough to keep men fit for the service in it. It is easy enough to get ambitious young men who are thoroughly competent to go into the service for the experience and acquaintance it gives them. It is more difficult and more important to keep them after they have been trained to the work.

There are now in the service 78 examiners, to examine 5,858 banks, or make 11,716 examinations a year. This number should be materially increased.

The examiners should be paid a per diem for the days actually at work and an allowance for traveling expenses and subsistence. Each examiner should have with him, also, a clerk or assistant, who should be a good accountant, familiar with bank books, and able to count money quickly and accurately. The pay of the assistant need not be large, but the assistant will add very greatly to the value and efficiency of examinations and save much of the time of the higher-priced man.

Increase in Bank Circulation.

The increase in the amount of National bank notes outstanding, which had been so great during the years 1903 and 1904, has been still greater during 1905. On October 31, 1905, the total amount in circulation was $524,508,249, which is by far the greatest sum outstanding during the history of the National banks.

This amount is 64.6 per cent. of the authorized capital stock of all the banks, or of the possible maximum of circulation, and is the highest percentage of possible circulation since 1882.

This increase in circulation is mainly due to the release of bonds on deposit with the Treasurer of the United States to secure Government deposits which could find little other profitable use, and to the refunding of the older issues of bonds into the 2 per cent. consols of 1930. The 2 per cent. bonds have, in consequence, declined in price until the profit on circulation has proved so attractive as to lead to its great increase.

On the present capitalization of the banks there is room for $287,617,826 further increase in this circulation, and a possible demand for this amount of bonds. Of the $580,429,000 2 per cent. bonds, consols of 1930, outstanding on October 31, 1905, $483,181,900 are deposited against circulation and $44,243,600 against the Government deposits in the banks, leaving only $53,003,500 which are not on deposit with the Treasurer.

The bonds on deposit to secure circulation on October 31, 1905, were divided as follows: Loan of 1908, threes, $2,215,540; loan of 1907, fours, $4,050,350; loan of 1925, fours, $4,465,000; consols of 1930, twos, $438,181,900.

From these figures it will be seen that for a further increase of circulation of the banks now organized and the new banks entering the system we shall have to depend upon the $53,000,000 of 2 per cents, and whatever additional quantity of these bonds is made available through refunding operations, and the bonds to be issued for the Panama Canal, if they are given the same privilege as the other 2's, in regard to circulation.

In spite of the great increase in the volume of the National bank circulation, as shown by the figures in this report, and a considerable increase in the amount of money of all kinds in circulation, there has been within the last few weeks a very decided disturbance in the money market, call money having advanced to figures which were alarming. This has led to the usual call upon the Treasury Department to relieve the situation. Fortunately the demand has subsided, and rates have declined. That this should have occurred when every line of business in all parts of the country was in a most prosperous condition and there was abundant basis for all the credit needed to do the business required, is a most serious reflection upon banking and financial conditions in the United States. It but emphasizes again the necessity for the creation of some remedy or safety-valve for our banking and financial machinery which could be used in case of such an emergency. No practical way has yet been suggested, of which the Comptroller is aware, which is not based upon adding elasticity to our currency.

With this in view, the Comptroller would again call attention to his recommendation, made in his annual report for 1902, on the subject of uncovered emergency bank notes. Several very good plans of this kind have been suggested, differing only in non-essential details.

The Comptroller would very respectfully but earnestly urge upon Congress the necessity for the adoption of some measure of this kind.

Limitation on Issue of Five-Dollar Notes.

The Comptroller has several times called attention to the provisions of the law of March 14, 1900, limiting the amount of five-dollar notes any bank can issue to one-third of its circulation.

The purpose of this provision was evidently to keep the proportion of five-dollar bank notes in circulation below one-third of the whole amount. The official records show that without this limitation the proportion of notes of this denomination has never exceeded one-third, and since the limit was placed on them the proportion of five-dollar bank notes fell from 31 per cent. in 1900 to 13.6 per cent. October 31, 1904, and was 14.01 per cent. October 31, 1905.

Most of the larger banks do not need any five-dollar notes, and so issue none. The smaller banks in the country districts, however, have a great demand for smaller bills, and it seems a useless hardship on them to limit the proportion of five-dollar bills which they may issue to meet the demand of their customers.

The Comptroller would therefore recommend that he be authorized to suspend the limitation on five-dollar notes issued by any one bank as long as the proportion of five-dollar bank notes in circulation does not exceed one-third of the circulation issued to all banks. This will afford a badly needed relief in some parts of the country, and is therefore very strongly urged.

Limitation on Reduction of Circulation.

Section 9 of the act approved July 12, 1882, limits the amount of lawful money which may be deposited with the Treasurer of the United States by National banks reducing their circulation to $3,000,000 during any calendar month.

The repeal of this limitation, it is believed, would contribute materially to the elasticity of the currency. The principal causes which led to its enactment no longer exist as a reason for its continuance, having been removed or corrected by subsequent legislation, as fully shown in the Comptroller's annual report to Congress for the year 1902.

The volume of National bank circulation should be governed by the business needs of the country. The banks should be as free to retire the whole or any part of their circulation during periods of redundancy as they are at liberty to increase their note issues in times of money scarcity. The uncertainty of being able to promptly retire their notes when demand for them has ceased deters many banks from increasing their circulation when such increase would be a material aid to the business needs of their respective communities during periods of commercial activity.

The only known objection to the unrestricted reduction of bank-note circulation advanced in opposition to the repeal of the $3,000,000 a month limitation is the fear of too great a contraction of the currency at a time when it would be detrimental to the business needs of the country. It is claimed that if the limitation is removed the banks would take advantage of every rise in the market by withdrawing and selling their bonds held as security for circulation in order to realize the greater profit in the increased premiums over that to be derived from circulation.

While this was one of the principal reasons which led to the adoption of the $3,000,000 limitation, the act of March 14, 1900, minimized the temptation to indulge in operations of this character by increasing the issue of circulation from 90 per cent. to par of the bonds, thereby giving the banks dollar for dollar of the face value of the bonds deposited, and reducing the incentive to engage in transactions of this nature to whatever profit might be represented by the difference between the price paid for and the fluctuating market value of the bonds.

The volume of circulation, however, does not appear to have been materially affected by operations of this kind, either before or since the adoption of the three-million limitation, either in periods of stringency or redundancy, and it is not believed that the repeal of this restrictive clause would result in any undue contraction of the currency in times of monetary stringency.

The volume of National bank circulation should be governed by the law of supply and demand. The removal of the obstacle to the prompt retirement of currency when the supply exceeds the demand would induce the banks to immediately increase their note issues when the demand for circulation exceeds the supply, and the increased elasticity which such a result would give the currency is more to be desired than the danger of undue contraction is to be feared.

The Comptroller would therefore renew his recommendation that the $3,000,000 limit on the retirement of circulation be repealed.

Excessive Loans.

With the increase in the size of business houses and the magnitude of their operations there has come a necessity for larger loans from the banks; and unless a bank has an enormous capital, one-tenth of it is not sufficient to take care of the loans needed by any large customer, which the bank feels compelled to do to hold his business. The result of this is the very large number of excess loans reported. When such loans are discovered the banks are always notified that they must be reduced to the legal limit, and in most instances they are, even though they may soon reappear in new notes. The chief difficulty with the enforcement of this clause of the bank act is the lack of any reasonable penalty which can be imposed. There is no way to discipline an offender but the general clause authorizing the Comptroller to begin a suit for the forfeiture of the charter of any bank violating any of the provisions of the act. In other words, there is no penalty but death to the corporation for what is alone no more than a serious misdemeanor. The result of this is that in more than forty years no Comptroller has felt justified in invoking such a severe penalty. In most cases where the violations have been so excessive and flagrant as to justify closing a bank for excess loans, they have soon been closed through insolvency. In many cases where it was still possible to collect the loans the mere threat of a suit has led to their being collected, or at least taken out of the bank. But this is not as it should be. The law should be made reasonable and right, so it could and should be enforced, and then all banks should be made to live up to it strictly.

If the 10 per cent. limit is too small, it should be changed to what is right and fair, and there should be some reasonable penalty put upon the violations of this clause, so the Comptroller could enforce obedience to it without such a proceeding as a suit in court for forfeiture of charter.

When the loan limit was originally placed at 10 per cent. of the capital stock of the bank few banks had any large surplus. It was not expected that new banks then organizing would pay in surplus with their capital; and by many it is claimed that the capital was meant to include surplus, which only differed from it through a bookkeeper's entry, and that this is now the meaning and intent of the law. However that may be, it would seem if it is safe for a bank with $500,000 capital and no surplus to loan $50,000 it should be safe for one with $250,000 capital and $500,000 surplus to loan as much.

After much consideration and discussion of this subject with many able and conservative bankers and business men, the Comptroller is satisfied that this is a reasonable view of it and that banks may safely loan 10 per cent. of their unimpaired capital and surplus, and would recommend that the law be amended to that effect.

Wm. B. Ridgely,
Comptroller of the Currency.

The Speaker of the House of Representatives.

AMERICAN SECURITIES IN EUROPE.

W. R. Lawson, Esq.

Dear Sir: In the latter part of your very interesting article in The Bankers' Magazine, October, 1905, I notice this statement in reference to English investments in American securities between 1873 and 1893:

"These two decades represent the zenith of English influence in Wall street. With the reorganization of 1894-6 it waned, German influence taking its place. But a more important change was the gradual predominance which New York acquired in its own market. It may now be said to control all its principal railroad stocks and to be no longer dependent either on London or Berlin."

Now, this claim that at the present time foreign capitalists have less interest in American railroads than in a former period has been very persistently exploited by our own financial experts, but thus far no real evidence has been produced to show that the claim is well founded. In his article on the "American Invasion" (Scribner's Magazine, January, 1902), Frank A. Vanderlip estimates that in the four preceding years we bought back from Europe $1,200,000,000 worth of American securities. A request for some definite information on this point elicited from Mr. Vanderlip the following very frank reply:

"I am in receipt of your letter of December 29 and note your desire to find statistics verifying a statement I made in a recent magazine article that the United States had bought back from Europe $1,200,000,000 worth of our securities. This, I regret to say, is impossible. There are no definite figures, nor is there any way in which you can set about to prove my assertion. The calculation is entirely one of estimate in which many collateral pieces of information entered."

Here we have the real basis of this whole claim of foreign liquidation. It is a calculation based entirely on estimates. That is to say, it is all mere guess-work. Mr. Vanderlip is undoubtedly correct in saying "there are no definite figures" to prove his statement: but I can say quite positively that there are some very definite figures, and a lot of facts and circumstances, to disprove it. The figures are to be found in the market reports of dealings for foreign account on and off the New York Stock Exchange as published in the leading newspapers. For the four years ending December 31, 1901, the dealings for foreign account on the Stock Exchange show an excess of purchases of some 3,700,000 shares. The excess for each year was as follows: 1898, 516,000 shares; 1899, 550,000 shares; 1900, 1,298,000; 1901, 1,433,000.

It has been suggested that these exchange dealings are not a safe guide in the matter, because they do not include the dealings in our stocks on foreign exchanges, or foreign dealings in this market outside of the New York Stock Exchange. As to the first, investigation shows that as a rule the trend of business in American securities abroad is pretty much the same as it is in Wall street. As to the second, I find reports of foreign investments in our mines, industrial plants, and in railroad and Government securities to the value of over $300,000,000; but of this much-exploited foreign liquidation, I can find no evidence whatever outside of the Stock Exchange.

Furthermore, there are certain facts and circumstances which strongly corroborate these market reports. If there had been this enormous liquidation since 1894, or even since 1897, we should certainly see some evidence of the fact in the diminishing activity in American stocks on foreign exchanges; but a comparison of the reports of any year prior to 1894 with the reports of the past five years shows that it is very much the other way. The buying and selling of American securities on the exchanges of London, Berlin, Amsterdam, and Paris, is on a more extensive scale than in any former period. This is notably the case in regard to the last two cities. Since 1899 it is safe to say that more French capital has gone into American securities, corporations, notes, and finance bills, than in the previous fifty years.

If, again, this liquidation had gone on to such an extent that the principal American railroads were now owned and controlled by American capital, we should certainly expect to witness the rapid retirement of the agents of foreign capital from the control of these properties. But here, too, it is very much the other way. J. P. Morgan, Kuhn, Loeb & Co., Speyer & Co., J. & W. Seligman, August Belmont, Ladenburg, Thalmann & Co., Hallgarten & Co., and other promoting bankers are very much more in evidence at the present time than they ever were in any former period.

A summary of the daily reports of foreign dealings in this market during the period mentioned by Mr. Vanderlip was published in my article on Trade Balances in THE BANKERS' MAGAZINE, July, 1902. A fuller and more complete summary was published in my article on the same question in the "Sewanee Review," July, 1903, and July, 1904. The last article also contained a summary of the reports for 1902 and 1903. In this last-named article, the Rock Island bonds sold abroad are said to have amounted to $163,000,000. That amount was to have been issued, but only $25,000,000 were sold abroad.

These are the only detailed statements of foreign transactions in this market in the six years ending December 31, 1903, that have been given to the public, and thus far no attempt has been made to show that it is not a fairly correct statement. The liquidation advocates have never published a detailed statement of such transactions for even one whole month of this entire period. Aside from Mr. Vanderlip's reply to my request for information on the subject, the only other reply I have received is the following from "The Evening Post," of July 16, 1904:

"The general facts in this matter have been agreed upon by the consensus of opinion among bankers, investors, and financial critics at every market where our securities are dealt in."

This is altogether too indefinite. It proves nothing. I am looking for the facts: and so I come to you for them, thinking that perhaps you may have discovered some sources of information that have not been available to Mr. Vanderlip or to any of the other numerous advocates of this liquidation claim.

I should also like to ask you (first) if our stocks and bonds are not more actively dealt in on European markets now than they were prior to 1894; and (second) are not the foreign bankers and other agents of foreign capitalists more prominent in this market than they were prior to 1894?

Respectfully,

BROOKLYN, N. Y., November 20, 1905. W. H. ALLEN.

THE PANAMA BONDS.—It is stated that no Panama bonds will be issued until Congress shall have authorized their use as a basis for National bank circulation at one-half of one per cent., the same as the consols of 1930. Two per cent. bonds, it is said, would not be worth par if bank circulation based thereon was taxed at one per cent. as the law now provides, on circulation based on other bonds than the two per cents. of 1930. And even if the bonds were issued and sold the money would not be available until Congress should appropriate it.

Treasury officials are somewhat surprised at the published statement that the Secretary of the Treasury is contemplating the issuance of bonds under present conditions. Secretary Shaw has twice called the attention of Congress to this needed legislation, and Speaker Cannon has given him assurance that he will do everything in his power to expedite its passage.

It is probable that bonds will be issued after the contemplated legislation approximately as the proceeds are needed in the construction of the Isthmian Canal. Any other policy would subject the Government to the payment of interest while the money was in the Treasury awaitng the progress of the canal.

MODERN BANKING FIXTURES AND FURNITURE.

By Paul L. Barrett.

PART II.

Clothes do not make the man, neither does the furniture make the bank or office, but it goes a long way toward signifying the general characteristics of those who govern the institution. A slovenly-kept bank often leads us to believe its business methods are the same: an antiquated interior impresses us that its methods are behind the times. A gaudy equipment gives us the impression of recklessness. There is, however, a point of appropriateness where all things seem to be in strict proportion, producing an effect of solid dignity and general stability which we never fail to recognize upon entering the doors of some of the leading financial institutions of the country. In this connection, we can gain much by reviewing what the market affords and what has been done along this line.

During the past ten years, in which time the question of proper and up-to-date furniture has taken an important part in the make-up of a bank, there has been a great change in the styles of furniture, owing perhaps to a more careful study of the requirements by the manufacturer. The fancy carvings have given way to heavy, rich, but plain designs: one of the chief benefits of which is found that such furniture is much easier kept clean.

Offices of Harriman & Co., New York.—Customers' Room.

(Courtesy of Derby Desk Co.)

Taking up such articles as are generally used, we consider first, the executive desk. Of these, what is now called the low roll banker's desk is coming in great demand. These may be had in a variety of designs, but the most effective and the one best suited to the general requirements was brought out by a large Eastern manufacturer. The pattern was originated by him for one of the large Eastern banking houses. What has made this style of desk so popular, is that there are no panels at all. All surfaces are entirely flat, the character of the desk being brought out by the richness of the woods used in its construction, together with fine cabinet work. For those who think this pattern too severe, large single panels have been substituted. The edges are square cut and writing beds and top shelves are of heavy built-up materials. Flat tops of these same designs have also

OFFICES OF HARRIMAN & CO., NEW YORK.—MR. HARRIMAN'S OFFICE.

(Courtesy of Derby Desk Co.)

been produced and are rapidly coming into favor on account of the unobstructed view they afford: though some of the roll top are being built with very low rolls.

This particular design is distinctly American in its conception, and illustrates the most advanced ideas in practical banking architecture. One large desk manufacturing concern, the exponents of this style of furniture, has a staff of designers who are constantly in demand by architects and banks to furnish ideas to conform to the general style of some of their large new buildings.

Directors' tables, chairs, bookcases, etc., are to be obtained conforming exactly to the patterns of the desks. The effect of the plain, solid construction can hardly be imagined until seen in some of the modern banking institutions.

This style of furniture is sought, not alone by financial institutions, but

OFFICES OF HARRIMAN & CO., NEW YORK.—REAR OFFICE.

(Courtesy of Derby Desk Co.)

also by many large manufacturing companies, railroads, etc. In fact, three of the country's newest public buildings, the State capitols of Minnesota and Pennsylvania and the Court-House of Essex County, Newark, N. J., are fitted with similar designs of work throughout.

The woods used nowadays are chiefly oak and mahogany, which should match the trim of the building, but Circassian walnut and English oak are sometimes used when a costly effect is desired.

A trip through the offices of the Messrs. Harriman & Co., on the second floor of the new Trinity building, New York, impresses one as to what can be done in making a place representative of dignity and wealth. Mahogany is the wood used throughout, to blend with which a Spanish leather of a peculiar green and red effect is used on all chairs and settees.

At the end of the customer's room is a large mantle fifteen feet high by twelve wide, the canopy of which is supported by two pillars of solid mahogany each eighteen inches in diameter. Long settees are placed in front of this fire-place where the customers may keep warm during a chilly market.

The desks in the private offices are after the design of the Governor's desk in the State capitol of Pennsylvania at Harrisburg. The other desks are of the flat surface banker's low roll pattern. All tables and chairs match these and produce a very pleasing effect.

Space will not permit of further descriptions of work along this line, but one thing should be noted: that to have a bank or office look right, it is not always necessary to go to a great deal of expense. In patronizing the large manufacturers who make a specialty of this fine work, one is able to get the benefit of the best that has been produced both as to design and workmanship and often many pleasing effects may be obtained at a small cost.

THE RECEIVING TELLER'S DEPARTMENT.

The principal functions of a commercial bank are to receive money on deposit, to make loans in the form of discounting notes, and demand-loans guaranteed by collateral securities, and the power to issue notes. The deposits consist of currency, checks, drafts, and other negotiable instruments left with the bank for collection and credit for the account of the depositor. These deposits are converted by the bank into cash, and the funds resulting are drawn against, sooner or later, at the will of the depositor; but during the interval the banker has the use of the funds, or the balance to the credit of the depositor less the amount for the required legal reserve, to be loaned by him according as he may think best; and through the discount and interest on these loans he makes his profit. The interest in many States has a maximum fixed by law, but loans are often made below the legal rate, depending, of course, upon the general conditions of the money market, and the security offered by the borrower.

The fact that there are commercial banks gives the borrower, the merchant, broadly speaking, the advantage of a cheap interest rate, for if he had at certain times in the year to depend upon funds other than his own to carry on his business, and those funds could only be had from private individuals, instead of the accumulated deposits of the people, he might not only have to pay exorbitant rates for the use of the money, but might find difficulty in getting even so much as his legitimate business would demand. When in these days we hear of borrowers having to pay fifteen and twenty per cent., this applies only to call loans in Wall street, when the legal reserve has had to be encroached upon, and the credit power of the banks curtailed by unusual shipments of currency to the South and West to move the crops, and not the reasonable demand made by the merchant which his bank account and credit entitles him to.

The note-issuing power is confined strictly to National banks having deposited with the United States Treasury United States Government bonds, and paying a tax of one or one-half per cent., according to the issue of the bonds deposited. The State banks do not avail themselves of this privilege on account of the heavy tax of ten per cent. imposed by the Government, and so making this function not profitable for them.

This paper, however, is to treat of the Receiving Teller's Department, so I will leave the details of loans, the earning capacity, and the note circulation of a bank for some other time.

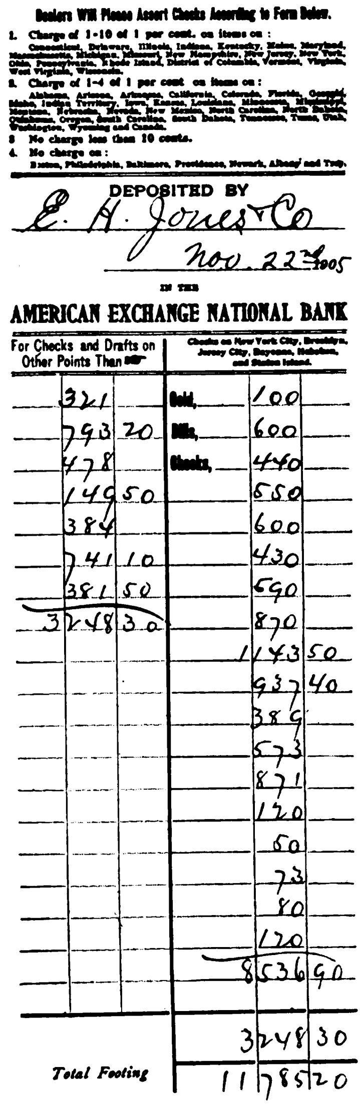
The Receiving Teller receives from the customers of the bank deposits, listed on deposit slips, of currency, and deposit currency; that is, checks, drafts, money orders, etc., payable on demand, which he credits to the account of the depositor, contingent, of course, on the payment of the instruments. This last statement makes it imperative upon the Teller that he must know the responsibility of the account of the customer with whom he is dealing, and if he has any doubt or suspicion about any item deposited, he should either refer the matter to an officer of the bank for his judgment, or, if necessary, send it out for certification. Promissory notes, time and sight drafts, are deposited with the collection clerk for collection, and are not credited to the account of the customer until paid.

The usual form of a deposit slip is: first, coin; second, bills; third, checks—city and country.

Those checks which are payable in the city are listed in the right-hand column of the slip, and those payable out of town are listed on the left. A separate footing is made of the list of country checks, brought forward and included in the total of the deposit.

The Teller should always count the money first; exceeding care is required in this, as a raised or counterfeit bill, or a short or over difference once passed, loses its identity as to the depositor, the loss falls on the bank, and the Teller's reputation is at stake.

The verifying of checks also requires great care; errors in listing of checks and vouchers, checks withdrawn and not deducted before the deposit is made; checks enclosed but not listed; checks listed twice are frequent and must be detected at the time of receiving by the Teller, or a night session stares the department in the face.



Dealers Will Please Assort Checks According to Form Below.

1. Charge of 1-10 of 1 per cent. on items on :
Connecticut, Delaware, Illinois, Indiana, Kentucky, Maine, Maryland, Massachusetts, Michigan, Missouri, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, District of Columbia, Vermont, Virginia, West Virginia, Wisconsin.
2. Charge of 1-4 of 1 per cent on items on :
Alabama, Arizona, Arkansas, California, Colorado, Florida, Georgia, Idaho, Indian Territory, Iowa, Kansas, Louisiana, Minnesota, Mississippi, Montana, Nebraska, Nevada, New Mexico, North Carolina, North Dakota, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, Texas, Utah, Washington, Wyoming and Canada.
3. No charge less than 10 cents.
4. No charge on :
Boston, Philadelphia, Baltimore, Providence, Newark, Albany and Troy.

FORM OF DEPOSIT SLIP.

But not all the mistakes are made by the depositor, however; a check might be listed correctly by the depositor, but the figures are illegible, or a certification stamp is across one or more of the figures, and they appear entirely different from what they are intended, and the figures might perhaps be listed as they look to be by the men at the rack. Here the Teller's good work comes in again, say by drawing a pencil through the original figures at the time and making legible figures which agree with the amount in the body of the check.

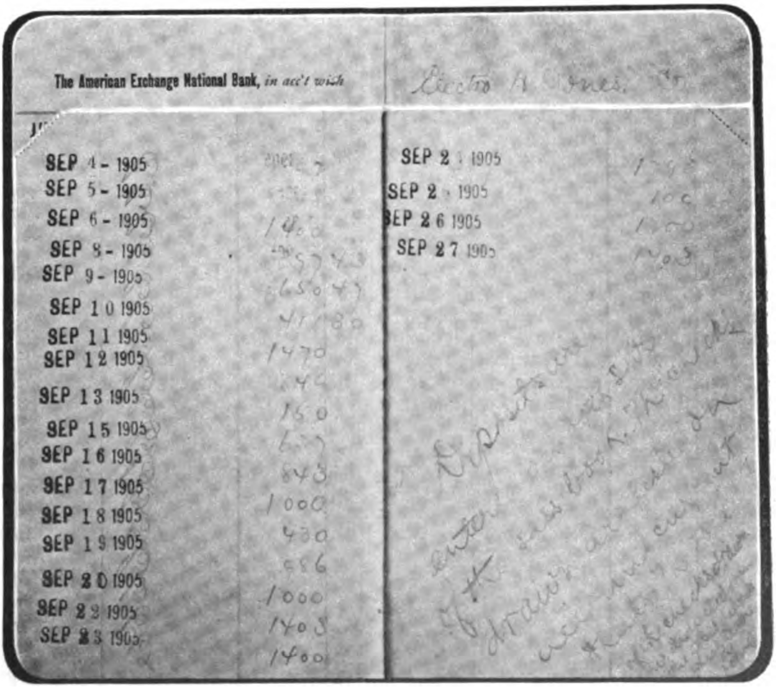
The endorsements of the checks deposited are then examined; by this, of course, is meant to see that the checks are endorsed by the depositor, and if such endorsements require a guarantee; for instance, checks endorsed for deposit, for credit, by attorney, Cashier, bookkeeper, etc. With checks for large amounts it is a good policy to examine all prior endorsements in order to detect any irregularities, and have the same rectified at once. Great care must also be taken to compare the name of the endorser with that written on the deposit slip; they may differ, and where a depositor has one or more different accounts with the same bank, an error on the part of the depositor or an oversight on the part of the Teller may create considerable confusion. This same care applies as well to the passbook and the deposit slip.

A few words about the passbook. It is well always to have the name of the depositor before you in the passbook. This can be done by having the pages of the passbook, excepting the first and last, cut off on the top about one inch; you then have at all times before you on the top of the left side the name of your own bank, and on the top of the right side the name of the depositor. Another great convenience in a passbook, I have found, is to have the upper right-hand corner of the page perforated. When the page has been fully used you tear off the small perforated slip of this full page, and you can turn at once to the page to be used for entering deposits.

The Teller should always give some form of written receipt to the customer for deposits of currency made without a passbook, for then he is ready for any erroneous or fraudulent claim that might be made by the depositor against him by insisting that the receipt be produced for the deposit claimed.

After a deposit is checked and the endorsements examined, the city checks are endorsed with a paid clearing-house stamp, and are assorted in the rack to their respective drawee banks. These are then listed twice on different adding machines and by different men, and a proof made of each package or bank; one of the slips is kept as a memorandum for future reference, while the other is sent with the checks to the drawee bank. The out-of-town checks are charged by total of each lot, and sent to the correspondents' department; there the checks are listed, the fee for collection or exchange is charged, and the checks are forwarded to the various correspondents.

When a deposit slip has been checked and entered in the passbook, it is assorted in the compartment of the rack corresponding to the ledger in

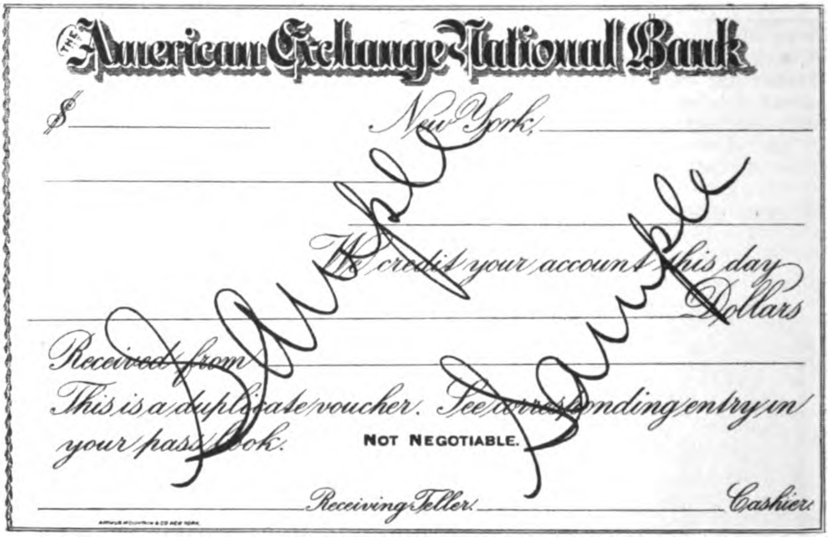


Depositor's Passbook.—Deposits are entered on both sides of the passbook. The checks drawn are listed on account current sheets. The total of the checks drawn is deducted from the total deposits, which leaves the balance.

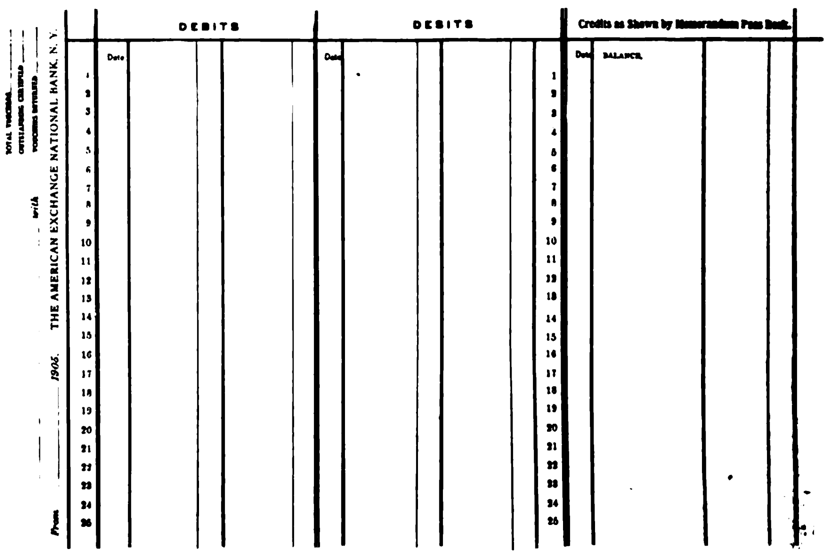
which the account is kept. The slip is entered, name and amount, in what is termed the Credit Book, and the account posted by the bookkeeper from this book to the ledger. In order to lessen the chances of any serious error in crediting or posting the various accounts, the assistant bookkeeper posts from the original deposit slips on account current sheets. These account current sheets and the ledger are compared every few days, and any error in posting of either account or amount is at once investigated and the error rectified.

The hour has now arrived for closing, and the final proof and disposition of the work begun. The deposits have been entered in the credit books, they have been called back, and the total amount of each book taken. The total of all the credit books, plus the amount charged by the Paying Teller, constitute the total liability side of the Receiving Teller's Department.

We now start with the cash or assets of the department; that is, the items of which the deposits consisted. A list of the total of each clearing-



house bank is made, and the total of all the banks is the clearing-house amount. Checks on trust companies and private individuals not in the clearing-house are made up separately, the total listed on the office slip and charged to the Paying Teller, who, the following morning, charges them to the City Collection Department, to be collected. Checks on one's own bank were passed on as to their goodness at the time of receiving the deposit, and these checks are charged to the check department, to be charged to their respective accounts. The loose currency and coin are counted and made up in a package. This together with the money counted and strapped in packages by the customers, and express money, is charged to the Paying Teller on the office slip, which the Paying Teller receives the following morning. The currency he charges in turn to the money department, which department proves the money, separates the clean from the mutilated bills,



assorts the various denominations and kinds, as legal, National, coin, silver and gold, sends the National bank notes to Washington, the mutilated United States currency to the Sub-Treasury, and the clean money is returned to the Paying Teller, all ready to be paid out by him. The charge to National bank note accounts, and the receipts for mutilated currency, together with the money returned to the Paying Teller by the money depart-

We are now ready to strike. We have the amount of the clearing-house checks, the non-clearing-house checks, the checks on one's own bank, the country checks, the currency. What is the verdict? Everyone holds his breath. The cash is O. K., a shout goes up, and everyone is happy.

M. F. Bauer,
Receiving Teller, American Exchange National Bank.

Money in Circulation in the United States.—There was $9,000,000 added to the volume of money in circulation in November, practically every dollar of which was in National bank notes. There was an increase of $3,000,000 in United States notes, offset by decreases in gold and silver certificates.

EDWARD E. DUFF.

At the recent convention of the Savings Bank Section of the American Bankers' Association, Edward E. Duff, Vice-President of the Safe Deposit and Trust Company, Pittsburg, was chosen Chairman of the section.

In 1883 Mr. Duff entered the service of the People's Savings Bank, of Pittsburg, at the age of eighteen, as a general clerk, when that institution

EDWARD E. DUFF,

Chairman Savings Bank Section, American Bankers' Association.

had only two other active men, viz., the Secretary and Treasurer, and Teller, and he served continually with this institution as clerk and officer for a period of twenty years, at which time he was elected a Vice-President and relinquished the active management of the People's Savings Bank to assume the position of Vice-President and Treasurer of the Safe Deposit and Trust Company, which company now owns the People's Savings Bank as well as the People's Savings Bank of Pittsburg.

During his connection with the People's Savings Bank Mr. Duff served successively as general clerk, book-keeper, teller, Assistant Secretary and Treasurer, to which position he was elected in 1890, and in 1892 was elected Secretary and Treasurer. At the time of his election as Assistant Secretary and Treasurer the bank had deposits of a little over $2,000,000, and when he retired from active management its deposits were about $10,000,-

000. During his connection with the Savings Bank he was honored by reëlection for ten successive years as Treasurer of The Bankers and Clerks' Mutual Benefit Association, an organization composed of bankers and bank clerks, as its name indicates. After serving this period he declined a reëlection, but has since served as a trustee, and only recently retired as President, which office he had held for the past year and to which office it has been customary to elect one person for a single term only.

Mr. Duff was elected to the position of Vice-President and Treasurer of the Safe Deposit and Trust Company in April, 1903, which position he has since held, and has been the active executive head of the institution. He has also been a director in the People's National Bank of several years. About a month ago he resigned the treasurership of the Safe Deposit and Trust Company, relieving himself of some of his duties.

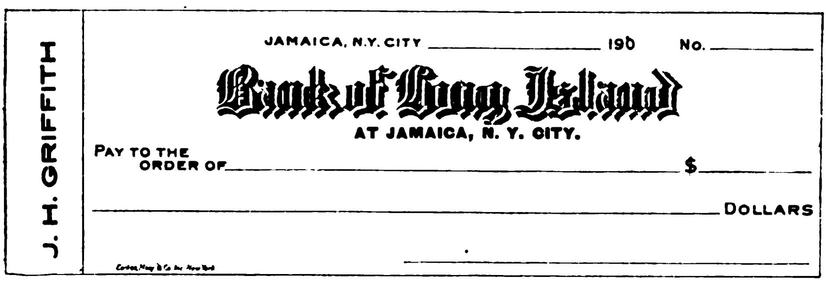
He was honored by the Savings Bank Section of the American Bankers' Association a year ago by election to the position of Vice-Chairman, and in October of this year was still further honored by election to the office of Chairman of the Savings Bank Section.

UNIFORM CHECKS.

It has been a part of the writer's duty to handle from two to three thousand checks each business day for some time. This work has been largely increased, aggravated is a better word, by the infinite variety in color, shape and style of the so-called checks handled. They have varied in color from a brilliant scarlet to a funereal black, and in shape from the ordinary oblong to a shape and size which closely approached that of a single-sheet poster.

The most aggravating of the documents, miscalled checks, are the double-sheet invoices—a combination invoice, receipt and check. These complicated documents are often drawn and dated in one town and payable, after certain conditions as to signatures, etc., are complied with, in some metropolitan city. The combinations are usually drawn by large firms who are perhaps able to dictate to their banks and who would resent being called to account for making the bank clerks attend to an important part of their bookkeeping department.

The combination checks usually require careful examination to ascertain the place where payable, and the conditions as to receipt, endorsements,



J. H. GRIFFITH

JAMAICA, N.Y. CITY ______ 190 NO. ______

Bank of Long Island

AT JAMAICA, N. Y. CITY.

PAY TO THE ORDER OF ______ $ ______

______ DOLLARS

etc. Such so-called checks often take more time to examine and assort than a dozen properly drawn checks.

The fact that a check is drawn as a voucher for so many kegs of nails, pounds of pork or days' labor, is of no interest to the bank clerk who has to handle the document. Checks in the form of vouchers, invoices or receipts should never be handled as cash.

Another aggravating form of checks is one of abnormal size, either longer or wider than the average size. These checks are often made worse by a so-called safety device which makes one or both ends ragged and uneven. The ordinary safety devices, unless very simple and easily comprehended, are a source of delay and annoyance to paying tellers and are of doubtful value.

The inordinate ambition of individuals to advertise themselves on their checks is little short of a public nuisance. A half-tone illustration of the drawee of a check on either end of the document is as much out of place as a bull in a china shop. So also is the statement that the drawee of the check sells peanuts or repairs broken china. The banks themselves are often aggressive in this regard. They cover their checks with a lot of information regarding the financial condition of the institution or such facts as that their town is the largest in the county, or that it boasts of a courthouse. The so-called safety paper is often another source of annoyance. Many of these papers make the writing so obscure as to strain the eyesight of the poor clerks who have to handle checks drawn upon it.

A check should be about eight inches in length and three inches in width, printed in plain type on a good quality of slightly tinted paper. It should contain nothing but the information desired to be conveyed—the date line, the name and location of the bank, the number, the amount and the signature of the drawer. If the drawer has an unreadable signature—as is too often the case—it is permissible to print the name and address across one end of the check—but this should be the limit of advertising in all cases. If bank officials will do everything in their power to secure uniformity in blank and completed checks the tendency to add to the labors of the bank clerks by vouchers, invoices, receipts and monstrosities of the printer's art—which masquerade as checks—will be overcome, and it may be possible to eventually secure a uniform size and style of check. J. H. G.

Italian Gold Reserves.—We have received from the Bank of Italy a letter from Rome, dated November 8 and signed B. Stringer, the General Manager of the Bank, complaining that in our article giving the gold reserves of the United States, France, Russia, Germany, Austria-Hungary, and England, we left Italy out altogether, and asking us to supply the omission. We do very willingly. The letter says: "At the end of last month the three Italian banks of issue had a total bullion reserve in gold of 715 million lire (about £28,600,000), and in silver of 95 million lire (about £3,800,000); in all 810 million lire (equal to £32,400,000). To this must be added, further, 133 million lire (or about £5,320,000) in the shape of bills and credits in gold on foreign countries and Treasury bills of various Governments, also payable in gold. You will see that the figure given above as to the bullion reserve alone is somewhat higher than that of the Bank of England, whilst the whole reserve, inclusive of bills, credits, and Treasury bills, payable in gold, is only a trifle less than that of the Imperial Bank of Germany." It will be seen that, adding the figures of the Bank of Italy to those given a fortnight ago, the gold reserves of the seven greatest banking institutions amount to the immense total of 514 millions sterling.—*The Statist* (*London*).

Rapid Check Listing.—The contest for accuracy and speed in check listing which was a feature of the Office Appliance Show in Madison Square Garden was won by E. D. McCullough of the American Trust and Savings Bank, Chicago. Mr. McCullough listed 500 checks in 9 minutes, 12 seconds on a hand-operated Universal Adding Machine. Forty competitors, including the most expert men from New York banks were entered in the contest, and but two of the machines used were Universals.

Derby, Iowa.—J. Herbert Park, who is President of the Derby State Bank recently started here with $35,000 capital, is President of the Cambria (Iowa) Savings Bank, and Vice-President of the Home State Bank, Humeston, Iowa. He also holds a large amount of stock in the Burlington Savings Bank.

BANKING AND FINANCIAL NEWS.

NEW YORK CITY.

—Stuart H. Patterson, formerly of the firm of Patterson, Teele & Dennis, is now associated with the banking house of Fisk & Robinson.

—The Lincoln Trust Co., whose head offices are at Madison Square, has leased the premises at 413 Broadway, and will establish a branch office.

—Walter W. Lee, Manager of the Wall Street branch of the North American Trust Co., has been elected Vice-President of the National Bank of North America, and will enter on the duties of his new office at the beginning of next year.

Mr. Lee is only thirty-one years of age, but has had valuable banking experience. At the age of seventeen he entered the Gallatin National Bank as an office boy, rising in a few years to the position of loan clerk. In 1889 he became Assistant Secretary of the City Trust Company, and when this company was merged with the North American Trust Co. he became Manager of the Wall Street branch of this institution.

—The Seaboard National Bank has increased its capital from $500,000 to $1,000,000 by declaring a stock dividend out of surplus earnings.

Recently the Seaboard National extended its corporate existence for twenty years. In connection with the new issue of stock, the directors make the following statement:

"During the past twenty years as a National bank it has earned on its paid-up capital of $500,000 upwards of $2,000,000, of which about $700,000 has ben paid to the stockholders in dividends, and over $1,500,000 placed in the surplus fund.

In view of the very largely increased business of the bank, the directors have thought it wise to declare a stock dividend of 100 per cent. payable out of the surplus, making the capital of the bank $1,000,000, of which $500,000 was originally paid in and $500,000 earned; the surplus, $1,000,000, was also earned. The directors think that this action will be appreciated by its friends, increasing as it does the stockholders liability, in addition to the capital of the bank, to $1,000,000."

—A syndicate has been formed to reorganize the Credit Clearing House, a mercantile agency formed here a few years ago. The new company will add to its plant the old International Mercantile Agency. Among the men interested are Clarence Whitman, Charles A. Conant, John Moody, Charles A. Henderson and H. A. Wheeler.

—Geo. Leask, senior member of the firm of Geo. Leask & Co., bankers, 85 Wall street, was recently elected a director of the Lincoln Trust Co.

—H. B. Fonda recently resigned as Assistant Cashier of the National Bank of Commerce to become Treasurer of the Trust Company of America.

—At the meeting of the Banking Publicity Association, held in the Lincoln Building, New York City, November 14, Alfred M. Barrett; Assistant Secretary of the Guardian Trust Company, New York, was elected Chairman of the New York Council.

—The Societe Financiere Franco-Americaine, with £2,000,000 capital has been organized by the Union Parisienne, of Paris, and Messrs. Speyer & Co., New York, to promote dealing in American securities.

NEW ENGLAND STATES.

New Haven, Ct.—At a meeting of the New Haven Clearing-House Association, October 25, Samuel Hemingway, President of the Second National Bank, was elected President of the Clearing House-Association, to succeed the late Wilber F. Day.

—It was announced recently that the Comptroller of the Currency had granted an application of the Beaver National Bank of this city to begin business. The new institution will be located at Wall, Pearl and Beaver streets, and will cater to the coffee, tea, molasses, tobacco and cotton trades. It will have a capital of $200,000 and a surplus of $100,000. The organizers are John B. Daniels, William G. Brown, Edward S. Farrow and William A. Griffith.

MIDDLE STATES.

Baltimore, Md.—It is reported that the Commercial and Farmers' National Bank, which a short time ago increased its capital from $300,000 to $500,000, is contemplating an increase to $1,000,000. At the January stockholders' meeting, this matter, and also the question of a new building, will come up for decision.

WESTERN STATES.

Oklahoma Bank Consolidation.—The Commercial Bank, of Oklahoma City, recently consolidated with the State National Bank, giving the latter an individual responsibility of $1,500,000. C. F. Colcord, former President of the Commercial National, becomes Vice-President of the State National; and E. C. Trueblood, former Assistant Cashier of the Commercial National, is now teller of the State National.

St. Louis.—According to the official statement of the Mississippi Valley Trust Co. on November 9, the deposits of the company show an increase of 5.4 per cent. in the last year, while the surplus and undivided profits show a net increase of 7.6 per cent. after payment of sixteen per cent. in cash dividends to stockholders. The net earnings on capital were 23.6 per cent., while earnings on entire capital, surplus and profits were 8.4 per cent. During the year $480,000 in dividends have been paid and over $228,000 added to undivided profits. The total resources November 9, 1905, were $25,642,423.76, while a year ago they were $24,506,623.23.

—The National Bank of Commerce has issued an interesting booklet treating of the relations of a bank and its customers.

Chicago.—The Western Bank Note and Engraving Co. has removed to its new buildings at Indiana avenue and Twentieth street. Besides the fire-proof structure, the company now has special vaults and other equipment designed to protect documents not only against fire but against counterfeiting and fraudulent reproduction.

—On December 5 the Bank of America opened for business, with a capital of $500,000.

—The Chicago City Bank will add $300,000 to its capital stock on January 1.

Columbus, Ohio.—The Capital Savings and Trust Co., which commenced business in May last, on November 14 had $400,000 capital, $13,665 surplus and profits and $325,000 deposits. This company is erecting a sixteen-story building of fire-proof construction.

Milwaukee.—On January 1 the Marshall & Ilsley Bank will increase its capital from $300,000 to $500,000, and at the same time the surplus will be increased to $250,000.

Hutchinson, Kas.—On November 9 the First National Bank reported $200,000 capital, $25,000 surplus, $16,130 undivided profits, and $1,490,456 deposits. Of its total resources of $1,831,587 there is invested in United States bonds $155,000, while the cash and sight exchange together amount to $511,425.

Peoria, Ill.—In the past year—Nov. 9, 1904, to Nov. 10, 1905—the Commercial-German National Bank has increased its deposit by $800,000.

Ottumwa, Iowa.—About January 1 the Iowa National Bank will move into its new six-story building, which is of modern steel construction. Three fire and burglar-proof vaults will constitute an important part of the bank's equipment, and the furniture and fixtures will be throughout models of taste, durability and convenience.

Leavenworth, Kas.—The State Savings Bank has recently moved into its new building, on the old site. With the additional facilities provided by increased space and new equipment in the way of vaults, safe-deposit boxes, etc., the bank is better than ever prepared to care for its growing business.

Kansas City, Mo.—The First National Bank is putting up a new building at Tenth street and Baltimore avenue—one of the best business corners in the city. This structure is being built of Georgia marble, and is to be occupied exclusively by the bank. When the building is finished and fitted up, it will be one of the notably fine bank homes of the Southwest.

PACIFIC SLOPE.

Spokane, Wash.—J. P. M. Richards, President of the Spokane and Eastern Trust Company, in a recent trip through Columbia, Garfield, Walla Walla and Umatilla counties, observed a remarkable decline of the country school in some sections. Inquiry and further investigation developed a more than corresponding growth among the town and city schools, large new brick buildings being under construction in several of the principal towns whither farmers were removing with their families for the educational advantages; and besides increasing the size of their farms by extensive purchases of adjacent lands, the farmers were carrying on these larger farms from town, where they reside and, in many instances, employing fine large automobiles in their daily travel to and from their residences to their farms in the country. It is not an unusual thing, says Mr. Richards, for additional purchases of land to be completely paid for from the proceeds of three or four crops under present prosperous conditions.

The best land is selling at $30, $40 and $50 per acre. In some instances an extra choice 160 within ten miles of town is held at $60 per acre. Real estate in towns seems to be assessed at about sixty per cent. of its actual cash value and pays from seven to 10 per cent. net in rental return.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report.

APPLICATIONS TO ORGANIZE NATIONAL BANKS APPROVED.

The following notices of intention to organize National banks have been approved by the Comptroller of the Currency since last advice.

First National Bank, McDonough, Ga.; by L. O. Benton, et al.
First National Bank, Amo, Ind.; by Jno. Kendal, et al.
Whittier National Bank; Whittier, Cal.; by J. A. Graves, et al.
First National Bank, Lockport, Ill.; by D. L. Harmon, et al.
First National Bank, Texico, N. M.; by Joseph B. Sledge, et al.
First National Bank, Quitman, Ga.; by L. W. Branch, et al.
First National Bank, Stone Fort, Ill.; by M. Ozment, et al.
First National Bank, Carrier Mills, Ill.; by M. Ozment, et al.
Esmont National Bank, Esmont, Va.; by Wm. B. Forsyth, et al.
First National Bank, Holland, Texas; by L. B. Mewhinney, et al.
City National Bank, Morristown, Tenn.; by Geo. W. Ivy, et al.
First National Bank, Erick, Okla.; by I. C. Thurmond, et al.
Atkins National Bank, Maysville, Ga.; by T. E. Atkins, et al.
Citizens' National Bank, Redlands, Cal.; by Walter M. Campbell, et al.
National Bank of Garland, Garland, Texas; by Jno. T. Jones, et al.
First National Bank, Renwick, Iowa; by W. M. Hoffman, et al.
First National Bank, Rock Lake, N. D.; by C. J. Lord, et al.
Palisade National Bank, Palisade, Colo.; by Verner Z. Reed, et al.
First National Bank, Hayes Center, Neb.; by Jno. B. Cruzen, et al.
State National Bank, Phoenix, Ariz.; by Jno. C. Adams, et al.
Berthoud National Bank, Berthoud, Colo.; by John Bunyan, et al.
People's National Bank, Lebanon, Ind.; by James A. Hogshire, et al.
Produce National Bank, South Deerfield, Mass.; by James B. Bridges, et al.
First National Bank, Greenwood, N. Y.; by Arthur P. Woodward, et al.
First National Bank, Upland, Cal.; by H. E. Swan, et al.
First National Bank, Sandoval, Ill.; by R. A. Youngblood, et al.
First National Bank, Terral, I. T.; W. H. Eddleman, et al.
First National Bank, Allendale, Ill.; by Frederick Holsen, et al.
Hall County National Bank, Memphis, Texas; by Charles Drake, et al.
Tupper Lake National Bank, Tupper Lake, N. Y.; by J. A. Thissell, et al.
Emmetsburg National Bank, Emmetsburg, Iowa; by M. L. Brown, et al.
Mineola National Bank, Mineola, Texas; by R. N. Stafford, et al.
Beaver National Bank, New York, N. Y.; by John B. Daniels, et al.
Citizens' National Bank, Cheyenne, Wyo.; by E. W. Stone, et al.
First National Bank, Gibson City, Ill.; by Evan Mattinson, et al.
Merchants' National Bank, Glendive, Mont.; by R. H. Watson, et al.
National Bank of Joseph, Joseph, Oreg.; by F. F. Scribner, et al.
First National Bank, Schulenburg, Texas; by I. E. Clark, et al.
National Bank of Commerce, Clinton, Mo.; by F. E. Frantz, et al.
Raton National Bank, Raton, N. M.; by Benj. Sherrod, et al.
First National Bank, New Haven, Ill.; by Wm. P. Tuley, et al.
Farmers' National Bank, Quarryville, Pa.; by Daniel E. Helm, et al.
First National Bank, Randolph, Utah; by L. S. Hills, et al.
First National Bank, Ohiowa, Neb.; by R. A. Harvey, et al.
Kenedy National Bank, Kenedy, Texas; by H. S. Jacobi, et al.
First National Bank, Samson, Ala.; by G. H. Malone, et al.
Citizens' National Bank, Antlers, I. T.; by S. P. Ancker, et al.
Second National Bank, Fort Pierre, S. D.; by James R. McKnight, et al.
First National Bank, Reinbeck, Iowa; by John H. Leavitt, et al.
Merchants' National Bank, Dickinson, N. D.; by J. H. Daly, et al.

NATIONAL BANKS ORGANIZED.

7959—Shelby National Bank, Shelby, North Carolina; capital, $50,000; Pres., O. L. Watts; Vice-Pres., H. I. Washburn; Cashier, James T. Bowman.

7960—First National Bank, Adrian, Minn.; capital, $35,000; Pres., A. G. Lindgren; Vice-Pres., W. R. Faragher; Cashier, Charles W. Kilpatrick.

7961—Canyon National Bank, Canyon, Texas; capital, $30,000; Pres., R. W. O'Keefe; Vice-Pres., J. I. Campbell; Cashier, I. L. Hunt.

7962—First National Bank, Colbert, I. T.; capital, $25,000; Pres., G. A. Ramsey; Vice-Pres., J. J. Cravens and A. N. Leecroft; Cashier, W. H. McCarley; Asst. Cashier, E. P. Harris.

7963—First National Bank, Buena Vista, Ga.; capital, $25,000; Pres.,

L. O. Benton; Vice-Pres., Geo. R. Lowe; Cashier, R. H. Stokes.

7964—First National Bank, Owasso, I. T.; capital, $25,000; Pres., F. W. Casner; Vice-Pres., S. W. Miller; Cashier, S. T. Wolfe.

7965—First National Bank, Lindsay, Cal.; capital, $25,000; Pres., S. Mitchell; Vice-Pres., Ernest L. Daniells; Cashier, G. V. Reed.

7966—Ladysmith National Bank, Ladysmith, Wis.; capital, $25,000; Pres., Laurids Jorgenson; Vice-Pres., John L. Jorgenson; Cashier, Willard E. Thompson.

7967—First National Bank, Waukomis, Okla.; capital, $25,000; Pres., J. A. Butler; Vice-Pres., L. M. Butler; Cashier, S. A. Butler.

7968—First National Bank, Wakonda, S. D.; capital, $25,000; Pres., Rufus Jackson; Vice-Pres., E. W. Babb; Cashier, J. W. Bryant.

7969—First National Bank, McDonough, Ga.; capital, $30,000; Pres., T. A. Sloan; Vice-Pres., L. O. Benton; Cashier, A. M. Stewart.

7970—First National Bank, White City, Kans.; capital, $25,000; Pres., E. C. Jenkins; Vice-Pres., H. Simmons; Cashier, M. W. Baker; Asst. Cashier, H. O. Walker.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, December 4, 1905.

A STRINGENT MONEY MARKET made the month of November memorable. The past decade has witnessed such a tremendous development of American wealth and resources that there has grown up a class of optimists who insist that the old things have passed away, and the new are to be entirely different from anything ever before witnessed. Those who entertain this view naturally insist that experience counts for nothing. If history is never to repeat itself, of course knowledge of history is of little practical use.

A few years ago, when the stock market was running the mad pace of two to three million shares a day, it was seriously asserted that only a normal condition was prevailing and never again would the daily transactions fall as low as one million shares except in mid-summer.

Not very long ago it was as seriously urged that we would never again see money lending at call at twenty-five per cent. So great and powerful had become our financial institutions, and so perfect had been made the mechanism of banking, that the old flurries in the money market would be impossible hereafter.

The events of the past month have disturbed this theory. After advancing for some time call money touched fifteen per cent. on Saturday, November 11. On that day the New York Clearing-House banks reported a deficit of $2,428,800, and on Monday, November 13, call money advanced to twenty-five per cent. The deficit was not very large, the reserve being 24.76 per cent. of the deposits when it should have been twenty-five per cent., as generally figured. But a deficit is of so rare an occurrence as to be overmuch feared when it does put in an appearance.

The last deficit, prior to the one in November, was on September 20, 1902, and then the reserve fell only to 24.81 per cent., but money on call went to twenty-five per cent. This was about the time of the collapse of the speculation in which Gates figured. The largest deficit in twenty years was reported on August 12, 1893, when it reached $16,545,300 and the reserve was down to 20.55 per cent.

The banks have come in for a good deal of criticism in that they had not prepared for just such an emergency as arose. While every year there is talk about the West being so well supplied with funds that it will not have to draw upon New York for money with which to move the crops, yet every year New York is called upon to supply funds, sometimes its own, sometimes funds which belong in the West, but deposited here. The larger the crops the surer the call for money in the East.

This year the West has had bountiful crops. The Secretary of Agriculture estimates the farm value of products this year at $6,415,000,000 as compared with $6,159,000,000 in 1904 and with $5,917,000,000 in 1905. The value of corn alone is $1,216,000,000, an increase of $126,000,000 over the crop of 1904. The wheat crop is valued at $525,000,000, an increase of $15,000,000. In the prosperity of the farmer may be traced the causes of the recent money stringency, at least in part.

The local banks suffered a serious drain since the beginning of August, but they fared even worse last year. This year the total cash reserves reached $315,000,000 on July 29. On November 18 they had fallen below $253,000,000, a loss of $62,000,000. Last year the reserves increased until August 20, when they were $361,000,000. By the end of November they had fallen to $294,000,000, and from that point dropped to about $288,000,000 on December 17, making the extreme loss about $73,000,000. In 1903 the reserve fell from $251,000,000 on August 1 to $215,000,000 on November 21, a decrease of only $36,000,000.

There were some extraordinary changes reported by the banks during the month. The deficit existed only one week, giving place to a surplus of $5,000,000 in the following week and of $9,000,000 in the next week, but on December 2 it was only $2,565,375. The deposits on November 18 fell below $1,000,000,000 for the first time since March 19, 1904. On February 11 this year they reached nearly $1,203,000,000. A comparison which is given below shows that the losses in loans, deposits and reserves in the five weeks from the end of October to the beginning of December were not nearly as great this year as in 1904.

November	Loans.		Deposits.		Cash Reserves.	
	Decrease, 1904.	*1905.*	*Decrease, 1904.*	*1905.*	*Decrease, 1904.*	*1905.*
1st week...	$2,407,100	Inc. $16,453,000	$8,281,800	Inc. $10,686,200	$8,751,700	Dec. $7,405,100
2d week....	14,789,600	Dec. 13,984,600	20,107,400	Dec. 24,459,700	6,244,700	" 10,898,000

Total....	$51,683,700	Dec. $17,937,100	$76,556,100	Dec. $34,919,800	$27,393,600	Dec. $18,595,500

Last year there was a steady decrease in each of the items every week. This year it was not the case, and the total decrease in the five weeks was $38,000,000 less in loans, $41,000,000 less in deposits and nearly $9,000,000 less in reserves.

As the banks began to make a better showing later in the month the money market became easier, but at the close of November call loans had again advanced to nine per cent. It may be mentioned here that at the time the banks showed a deficit in reserves an appeal was made to the Secretary of the Treasury to help the money market. After a conference with some of the bankers, however, the Secretary expressed the opinion that the situation did not require the intervention of the Government. On November 20 the Secretary gave public notice that the refunding of the three and four per cent. bonds into two per cents would be discontinued on November 29. About $52,000,000 of bonds have been exchanged since September 28.

The stock market had a break during the money squeeze, but recovered and prices generally were strong at the close of the month. The trading was much more active than in October, but the transactions in both stocks and bonds were smaller than in November last year. There is some fear of a tight money market in December, not an unusual event in the last month of a year, and this is making operators cautious.

There was a very active cotton market and the price of the staple was very sharply advanced. The census report on November 21 showed the cotton ginned to November 14 this year aggregated 7,498,167 bales, as compared with 9,786,646 bales in 1904. Following the report cotton advanced to twelve cents a pound with only a slight concession from that figure at the end of the month.

The annual session of Congress will begin on December 4, and it is possible that it may introduce a disturbing element into the financial situation. That there will be an attempt at railroad legislation seems to admit of no doubt. The President is expected to propose it in his message to Congress. To what length of rate regulation the proposed legislation may go, it would not be easy to predict, but there will be a fight made to give the Inter-State Commerce Commission absolute power to fix rates.

The folly of such exercise of governmental authority ought to be apparent, but unfortunately for the railroads they have so frequently shown a disposition to ignore, even to override, the obvious rights of the public that many people ordinarily fair-minded enough are now disposed to apply the rod to the backs of the railroads without regard to whether the punishment is just or not.

But Congress might well consider the wisdom of withholding so important a power as rate-making from the Inter-State Commerce Commission, if for no other reason than that the Commission has so frequently shown its inability to perform wisely the duties already imposed upon it. It would probably be understating the truth to say that the decision of the Commission, whenever they have come before the courts, have been modified or overruled three times out of four.

If, however, Congress is to start in upon a campaign against the railroads, with even a remote prospect of success, there will be a shaking up of confidence in financial circles, which the most favorable conditions of business, now apparent in all directions, will not prevent.

The railroads are showing evidences of prosperity, and also of confidence in the future, in various ways. The New York Central has just announced that it will increase its capital from $132,250,000 to the full authorized amount, $150,000,000. Stockholders will be permitted to subscribe for the new stock at par, the present market price being about 150. The proceeds of the new issue will be used in improvements.

The Chicago, Milwaukee and St. Paul has made official announcement of its intention to build an extension to the Pacific Coast. This is considered one of the most important railroad projects that have been undertaken in a number of years. It will involve the expenditure of $50,000,000 and create another through line from the Mississippi to the Pacific. Whether the company will issue stock or bonds for the building of the extension has not been made known to the public.

Lackawanna declared an extra dividend of ten per cent. on its stock last month, making a total of twenty per cent. for the year. The last dozen years have developed Lackawanna at a wonderful rate.

Some surprise was caused by the statement that the Erie Railroad which recently bought the Cincinnati, Hamilton and Dayton Railway from J. P. Morgan & Co. had resold the property to that firm. It appears that the acquisition of the property by the Erie did not prove as desirable as was anticipated and J. P. Morgan & Co. took the road off its hands.

The time seems to have arrived again when the production of iron may be taken as a trustworthy index of the situation. The output of pig iron is again exceeding all previous records. For the first time in any month the total exceeded 2,000,000 tons in October, and the weekly capacity of the furnaces in blast on November 1 was nearly 15,000 tons larger than on October 1. In the ten months ended October 31 the production of pig iron amounted to 18,527,761. which is more than 500,000 tons larger than the full year's output in 1903 when the highest record was made. It is probable that the total this year will exceed 22,000,000 tons, and it is estimated that it is possible to increase our annual product to 30,000,000 tons. The following statistics of pig iron production for the last three years will be found of interest.

There have been several events in the investment field in the last few weeks which have been more or less significant. There was a sale of $12,-500,000 New York city 3½ per cent. bonds, all but about $900,000 of which were sold at par. The average net price for all was only 100.007 per cent., which is about the lowest ever realized. The sale was at an unfortunate time, the money market being in an unsatisfactory state. Controller Grout expressed the view that the mortgage tax law, which exempts mortgages from the State tax, had caused investors to turn to real estate mortgages which yielded 4½ per cent. The sales of bonds by the city in the last three years and the prices obtained are shown as follows:

NEW YORK CITY BOND SALES.

Date.	Amount.	Price.	Date.	Amount.	Price.
June 26, 1902	$4,667,000	104.999	January 20, 1904	$10,000,000	100.23
November 12, 1902	7,500,000	106.162	March 24, 1904	3,000,000	100.10

November 19, 1903	7,510,000	101.05			

Japan last month arranged for the issue of a new loan of $125,000,000 to bear interest at 4 per cent. The loan is distributed as follows: $62,500,000 to Paris, $31,250,000 to London, $15,625,000 to Germany and $15,625,000 to New York. Only one-eighth of the loan comes here and in the opinion of some bankers it is a sufficient amount. The bonds are not specially secured, as some recent loans were, and pay only four per cent., while the issue price is 90. The total issue of bonds by Japan since the war, including the present issue, amounts to $675,000,000 as follows:

JAPANESE BOND ISSUES.

First series, six per cent	$50,000,000
Second series, six per cent	60,000,000
First series, four and one half per cent	150,000,000
Second series, four and one half per cent	150,000,000
First series, four per cent	125,000,000
Internal, February, 1904, five per cent	50,000,000
Internal, May, 1904, five per cent	50,000,000
Internal, October, 1904, five per cent	40,000,000
Total	$675,000,000

While Japan is placing its new loan Russia has been forced by internal troubles to call a halt in its loan negotiations. Russia has now $431,000,000 of bonds outstanding on account of the war and was getting ready for a new issue when the outbreak occurred. It is now a serious question what will be done with the old debt, and a partial repudiation of principal or interest would not be unexpected. Considerable quantities of Russian bonds are held in this country and their market value has been seriously impaired by the misfortunes of the Russian Government.

A notable occurrence was the advance in the price of silver in London to 30⅝d. per ounce and in New York to 66¾ cents. This is the highest price reached since 1896. The price touched 31-15/16d. in London in that year and since then the highest price until last month was 30¼d., touched in 1900.

THE MONEY MARKET.—Rates for call loans advanced to 25 per cent. on November 13, the decrease in reserves, which made the banks report a deficit on November 11, causing the advance. There was a rapid decline, however, in the next few days, but another advance on November 29, to 9 per cent. Sixty-day loans advanced to 6 per cent. plus a commission on the 13th, which made the rate equal to about 8 per cent. At the close of the month call money ruled at 4½ to 9 per cent., averaging about 5½ per cent. Banks and trust companies loaned at 5 per cent. as the minimum. Time money on Stock Exchange collateral is quoted at 5½ @ 5¾ per cent. for sixty days, 5¼ @ 5½ per cent. for ninety days, 4¾ @ 5 per cent. for four months, and 5 per cent. for five and six months on good mixed collateral. For commercial paper the rates are 5½ @ 5¾ per cent. for sixty to ninety days' endorsed bills receivable, 5½ @ 5¾ per cent. for first-class four to six months' single names, and 6 per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—At the beginning of the month the reserves of the banks began to fall off. In the first week there was a loss of $7,000,000, in the second week of nearly $11,000,000 and in the third week of $2,000,000—a total of $20,000,000. About $6,000,000 was recovered in the week ended November 25, but $4,500,000 was lost again in the following week. Compared with the end of October there was a net loss for the month of $18,500,000, of which $16,000,000 was in specie. Deposits gained more than $10,000,000 in the first week, but were reduced $24,000,000 in the second week and $29,000,000 in the third week. There was an increase in the week ended December 2, but the deposits on that date were $35,000,000 less than on October 28. Loans also increased the first week $16,000,000, but were reduced $14,000,000, $27,000,000 and $5,000,000 respectively in each of the three succeeding weeks. An increase of $11,000,000 in the last week left the loans on December 2 $18,000,000 less than on October 28. The reserve showed a deficit of $2,428,800 on November 11, but there was a surplus of $2,565,375 on December 2.

MONEY RATES ABROAD.—The Bank of Germany advanced its rate of discount from 5 to 5½ per cent. on November 4. This was the only change. The Bank of England rate remains at 4 per cent. Discounts of sixty to ninety-day bills in London at the close of the month were 3⅝ @ 3¾ per cent., against 4 @ 4⅛ per cent. a month ago. The open market rate at Paris was 3 per cent., against 2⅞ per cent. a month ago, and at Berlin and Frankfort 4¾ @ 4⅞ per cent., against 4⅜ @ 4½ per cent. a month ago.

FOREIGN EXCHANGE.—The local money market was the controlling influence in the sterling exchange market during the month. At the time when money was quoted at the highest rate, 25 per cent. on November 13, rates for sterling were the lowest. They advanced as the money market became easier, but toward the close of the month were lower.

Spanish doubloons	15.55	15.65	Chilian pesos	.46¼	.48¼

Fine gold bars on the first of this month were at par to ¼ per cent. premium on the Mint value. Bar silver in London, 30⅛d. per ounce. New York market for large commercial silver bars, 65¾ @ 67⅛c. Fine silver (Government assay), .65⅞ @ 67⅝c. The official price was 65⅝c.

NATIONAL BANK CIRCULATION.—A further increase in National bank circulation was made last month, the gain amounting to $8,821,009, or more than $500,000 in excess of the increase in October. The total circulation is now in excess of $533,000,000, while $500,000,000 of Government bonds are now held by the banks to secure circulation. Of the latter, $491,612,700 are the new 2 per cent. issue. The banks also hold $45,664,600 of the 2 per cents as security for public deposits. There are still $57,000,000 of these bonds outstanding not used for either circulation or public deposits, and these may afford a further increase in circulation.

Hill Predicts Ruin in Rate Legislation.—President J. J. Hill of the Great Northern Railway, was the principal speaker at a banquet tendered by the Lewis and Clark Exposition officials to Hill and President Elliott of the Northern Pacific Railroad. President Hill said:

"Notwithstanding the average rate paid by the people of the United States is only about forty per cent. of that of Russia, we have a great many people who are preaching a new doctrine, and that is the regulation of railway rates by Federal authority. It has been announced in an official manner that there has been no reduction of rates in the United States for twenty-five years: that tariffs have been reduced at times, but that whenever a tariff was reduced, the classification was given another turn of the wheel and advanced to at least offset the reduction in the tariff.

The man who made that statement did not tell the truth. The reduction in the average rate per ton per mile in twenty-five years on the Great Northern Railway aggregates $667,000,000. That has been the reduction that the people have gotten on one railroad.

I am not afraid that any Federal regulations will ever get down deep enough to touch us where we live, because long before they do, the country will be strewn with railroad corpses. They would bankrupt two-thirds of the mileage in the United States."—San Francisco Call.

Yokohama Specie Bank.—At the half-yearly ordinary general meeting of the shareholders of this bank, held at the head office in Yokohama, September 9, the directors stated that the gross profits for the past half-year, including yen 529,922.388 brought forward from last account, amounted to yen 8,340,-221.409, of which yen 6,230,500.701 were deducted for current expenses, interest, etc., leaving a balance of yen 2,109,720.708. The directors proposed that yen 220,000 be added to the reserve fund, raising it to yen 9,940,000, and that yen 200,000 be placed to the silver funds. From the balance the directors recommended a dividend at the rate of twelve per cent. per annum, absorbing yen 720,000 on old shares and yen 360,000 on new shares. The balance, yen 609,-720,708, was carried forward to the credit of next account.

BANKERS' OBITUARY RECORD.

Brackin.—Henry R. Brackin, Cashier of the Farmers' Deposit Bank, Montpelier, Ind., died November 3.

Bristol.—Hon. Isaac B. Bristol, President of the First National Bank, New Wilford, Ct., died November 2, in his eighty-fourth year. He had been a stockholder of the bank since its organization in 1852, a director since 1876, and in April, 1901, he was elected President. He had served several terms as a member of the Connecticut Legislature; first in the House and later in the Senate.

Dawkins.—Sir Clinton Edward Dawkins, a partner in the banking house of J. S. Morgan & Co., London, died December 2, aged forty-six years.

Ketcham.—Richard P. Ketcham, Cashier of the Dover Plains (N. Y.) National Bank, died November 11. He was born at Poughkeepsie, N. Y., in 1848, and was formerly a bookkeeper in the Importers and Traders' National Bank, New York.

Margorum.—Theodore F. Margorum, President of the Farmers' National Bank, Sussex, N. J., died November 18, in his sixty-sixth year.

McCormick.—W. M. McCormick for twelve years Cashier of the Citizens' Savings Bank, Letts, Iowa, died October 29.

Montgomery.—Moses Montgomery, Assistant Cashier of the First National Bank, Bellefonte, Pa., died October 25. He entered the bank as a clerk forty-three years ago.

Rickly.—Samuel S. Rickly, President of the Capital City Bank, Columbus, Ohio, died November 22. He was born in Switzerland, eighty-seven years ago, and came to America in 1834. With the exception of a brief interval, he had resided at Columbus since 1840. He became interested in banking there in 1857, and in 1875 organized the Capital City Bank.

Rodes.—Capt. Boyle O. Rodes, President of the Boyle National Bank, Danville, Ky., died November 15. He served in the Federal Army through the Civil War as a captain in the Fourth Kentucky Volunteer Infantry.

Stoddart.—Thomas A. Stoddart, Manager of the St. Louis Clearing-House Association, died November 5, aged seventy-six years.

Sweetser.—George Sweetser, Vice-President of the Marion (Ind.) State Bank, died November 21, aged sixty-two years.

Taylor.—Geo. P. Taylor, one of the best-known business men of Eastern Kentucky, and President of the Burnside (Ky.) Banking Co., died October 30.

Thomas.—J. Preston Thomas, President of the National Bank of Chester County, Westchester, Pa., died November 20.

West.—Nathan B. West, President of the First National Bank, Allegan, Mich., died November 4, aged eighty-nine years.

Westbrook.—John Westbrook, President of the Richmond County Savings Bank, West New Brighton, N. Y., and a director of the Port Richmond National Bank, died November 15, aged seventy-four years.

Yancy.—John H. Yancy, President of the Kentucky and Indiana Bank, West Point, Ky., died November 5.

PROMINENT BANKS AND OTHER FINANCIAL INSTITUTIONS.

HON. ROBERT B. ARMSTRONG, PRESIDENT OF THE CASUALTY COMPANY OF AMERICA, NEW YORK.

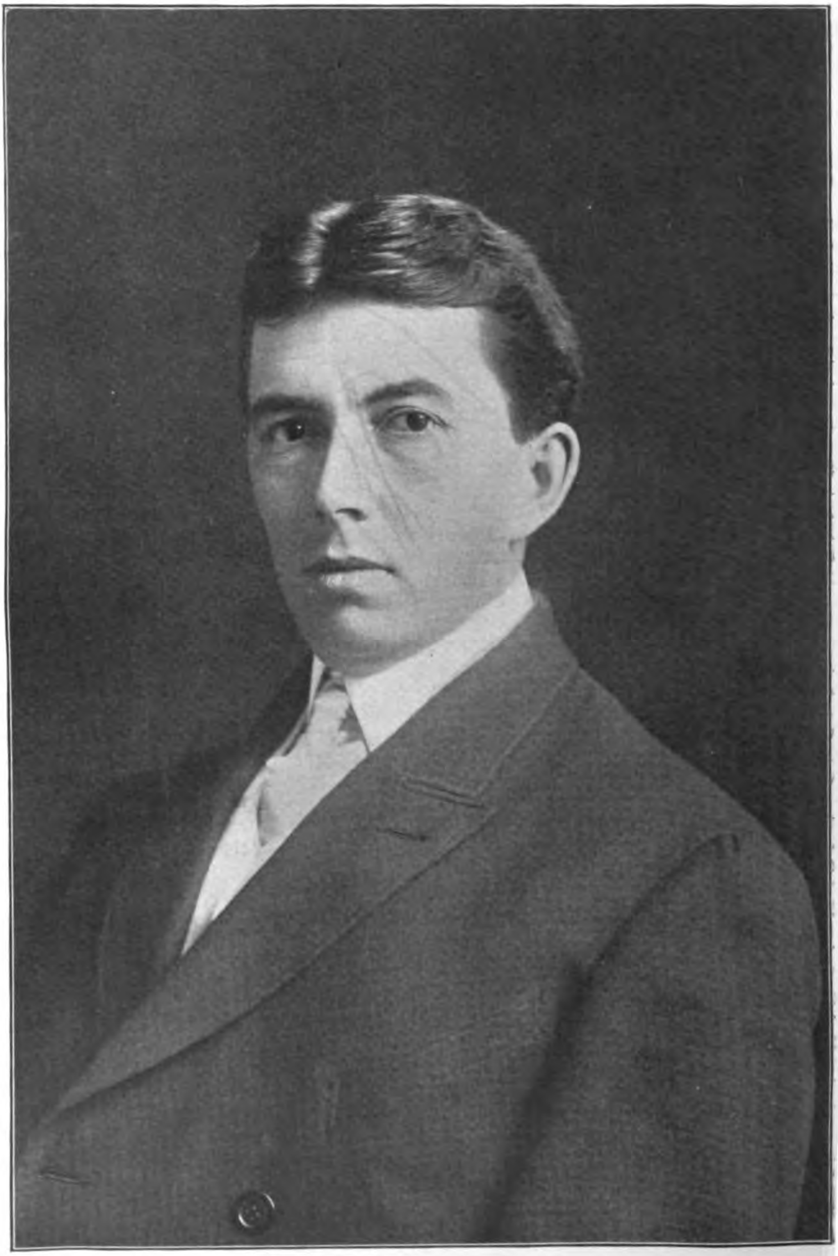
There are few better illustrations of the business possibilities open to energetic young men than is afforded by the experience of Hon. Robert B. Armstrong, former Assistant Secretary of the Treasury, and now President of the Casualty Company of America, New York City. He is not yet thirty-two years old, and already has a record of achievement which would be highly creditable to any man. Mr. Armstrong has had no fictitious aids to success, having advanced solely as a result of meritorious work. His rapid progress from a workman in the office of a country newspaper to an important executive position in the Treasury Department and later to the management of a large financial corporation in New York shows the inherent power that lies in energy and ability, properly applied.

Like many other American boys who have demonstrated their title to the qualities that command success, Mr. Armstrong was compelled to do whatever work he could find while at college to help meet the expenses of his education, and when an accident befell him that put him far behind his class, his situation was rendered sc difficult that he was forced to give up his college career and seek employment. This he found in an Iowa newspaper office, the compensation being "board and room." He made progress, soon getting better pay, and later working his way up to a connection with newspapers at Des Moines, which gave him a better opportunity of displaying his real capacity. He soon rose to a higher position in newspaper work at Chicago, and afterwards in New York, returning again to Chicago as correspondent of the "New York Herald." It was while thus employed that he was selected by Secretary Shaw as his private secretary, and he did his work so well that when, in 1903, the post of Assistant Secretary of the Treasury became vacant, Secretary Shaw selected him for that position, to which he was appointed by President Roosevelt in March, 1903.

He was only twenty-eight at the time, and was the youngest man who had ever occupied this office. His services in the Department were characterized by remarkable energy, and the administrative details coming under his direction were greatly improved. His work included a general oversight of the customs service—one of the most important with which the Government has to deal.

About the time the last Presidential term closed, Mr. Armstrong was invited by the Casualty Company of America, of New York City, to become its President, an offer which he accepted. Since his election as President the Company has shown a marked gain both in the character and amount of its business, an increase of fully thirty per cent. having been made in the past year. This has been accomplished by gradually withdrawing from the field likely to prove unprofitable and vigorously pushing the Company's interests elsewhere—a policy fully sustained by results. The Company was organized September 28, 1903, and its net premiums in the first fifteen months amounted to $1,088,579.45. Its annual statement on December 31 last was as follows:

Assets.	Market Value.
United States bonds	$ 52,375.00
State and city bonds	416,562.50
Railroad bonds and stocks	365,775.00
Cash in office, bank and trust companies	136,773.98
Premiums in course of collection	347,154.39
Interest accrued	5,187.50
Total	$1,323,828.37



HON. ROBERT B. ARMSTRONG,
Former Assistant Secretary of the Treasury; President Casualty Company of America,
New York.

LIABILITIES.

Reserve for reinsurance, as required by New York Insurance Department	$410,896.40
Reserve for claims, taxes, commissions and all other charges	249,073.13
Capital and surplus	663,858.84
Total	$1,323,828.37

The lines of business undertaken by the Company include: Manufacturers' and contractors' liability, landlords' and general liability, marine employers' and public liability, theatre liability, elevator liability, teams' liability, owners' contingent liability, steam boiler, workmen's wages, personal accident and health, disability and plate glass insurance.

Associated with Mr. Armstrong in the management of the Casualty Company of America are some of the best-known bankers and capitalists of the country, as may be seen from the list of officers and directors:

Officers: President, Robert B. Armstrong; Vice-Presidents, Geo. R. Read and Edwin E. DeLeon; Secretary-Treasurer, Chauncey S. S. Miller. Executive Committee: Andrew Freedman, Chairman of board of directors; Marshall S. Driggs, President Williamsburg Fire Ins. Co., New York; Robert H. McCurdy, The Mutual Life Ins. Co., New York; Wm. H. McIntyre, director Lawyers Title Insurance Company; Jordan J. Rollins, Rollins & Rollins, attorneys-at-law; Valentine P. Snyder, President National Bank of Commerce in New York; George W. Young, G. W. Young & Co., bankers, New York; President and Vice-Presidents.

Other members of the board of directors besides the members of the executive committee named above, are: Cornelius C. Cuyler, of Cuyler, Morgan & Co., bankers, New York; Richard Croker, Jr., Secretary and Treasurer Roebling Construction Co., New York; Maxwell Evarts, director Cromwell Steamship Co., New York; Benj. J. Greenhut, treasurer and director Siegel-Cooper Co., New York; Ernest Hall, ex-Justice Supreme Court, New York; Charles A. Moore, sole member Manning, Maxwell & Moore, New York; John F. O'Rourke, President O'Rourke Engineering Construction Co., New York; Francis Peabody, Jr., of Peabody & Arnold, counsellors-at-law, Boston; Morton F. Plant, trustee American Surety Co., New York; Wm. B. Rankine, Niagara Falls, N. Y.; director Bell Telephone Co., Buffalo; Jacob Ruppert, Jr., president and director Astoria Silk Works, New York; Philip L. Saltonstall, of Tucker, Anthony & Co., bankers, Boston; Alfred Skitt, vice-president and director Manhattan Railway Co., New York; E. F. Swinney, President First National Bank, Kansas City, Mo.

It will be seen that the company's management is one that assures a high standard both of capacity and strength.

THE BATTERY PARK NATIONAL BANK OF NEW YORK.

The Bank of the Shipping and Export District.

This institution commenced business November 21, 1904. It occupies a position peculiar to itself—in the center of the shipping and export business, directly opposite the new Custom House.

From the start the management has been guided by the soundest principles of commercial banking. Its deposits have grown steadily, although there has been no striving for mere *bigness*, more attention having been given to the *character* of the business than the *quantity*.

E. A. de Lima, Persident of The Battery Park National Bank, was chosen by those identified with its organization from its inception, as a man possessing those qualifications fitting him for a position of prominence among men of finance. Mr. de Lima is the senior partner of the old-established and prosperous firm of D. A. de Lima & Co., having a large clientele in South American countries. Mr. de Lima's business experience particularly fitting him for the class of business of this institution, catering to the interests identified with the neighborhood in which the bank is so well situated.

Edwin B. Day, Cashier, commenced his banking career with the National Bank of Commerce in New York, being identified with that institution for over twenty-five years, holding positions of trust and responsibility—occupying the position of manager of the loan department, when severing his connection with the National Bank of Commerce in New York after its consolidation with the Western National Bank, of New York.

Mr. Day is a brother of Chas. J. Day, Vice-President of the Oriental Bank, of New York, and Alfred W. Day, Assistant Cashier of the Mercantile National Bank, of New York.

Geo. S. Talbot, Assistant Cashier, was also for a long period connected with the National Bank of Commerce in New York, having gained valuable ex-

BATTERY PARK NATIONAL BANK, NEW YORK.

perience in his service as assistant paying teller, and other positions of importance and responsibility.

The conservative character of the management is further attested by the following strong board of directors:

Howard T. Alexander, H. T. Alexander & Co.; Nicholas W. Anthony, President North American Coal Co.; William D. Baldwin, President Otis Elevator Co.; Charles T. Barney, President Knickerbocker Trust Co.; Harry S. Black, President U. S. Realty & Construction Co.; Harold G. Cortis, Wheeler, Cortis & Haight; Robert A. Chesebrough, President Chesebrough Mfg. Co.; William H. Chesebrough, President Century Realty Co.; George S. Hart, George S. Hart & Co.; Elias A. de Lima, President; John N. Robins, President Erie Basin Dry Docks; Carman R. Runyon, President Communipaw Coal Co.; Henry F. Shoemaker, Capitalist; Oakleigh Thorne, President Trust Company of America; Calvin Tomkins, Manufacturer, and William G. Willcox, Albert Willcox & Co., Insurance.

The Battery Park National Bank commences its second year under most favorable auspices; with the new Custom House approaching completion, and the rapid development of the section of the city in which it is located, its success is already assured.

WEST END TRUST COMPANY, PHILADELPHIA, PA.

This company was chartered February 24, 1891, as the West End Trust and Safe Deposit Company, the title being shortened on November 20, 1901, to the West End Trust Company. Having purchased from the Girard Trust Company the property at 2020 Chestnut street, the West End Trust Company opened for business March 16, starting with a capitalization of $300,000,

HORACE A. DOAN,
President West End Trust Co.

which was increased to $500,000 on March 21, 1898, and to its present amount, $1,000,000 fully paid, on December 11, 1901.

The company was established on a solid basis and a sound policy has characterized the management from the first. Beginning with the year ending October 31, 1892, the annual reports showed a substantial item in the undivided profits accounts, but it was not until 1895 that the payment of dividends was begun, the annual rate being five per cent. In the same year a surplus fund of $75,000 was created, and this has grown steadily until it now amounts to $1,000,000. The dividend rate has also advanced to eight per cent. Deposits have grown steadily until they now foot up $5,000,000.

On August 14, 1899, the West End Trust Company moved to the southwest corner of Broad street and South Penn square, into a fourteen-story building, erected by the company, and especially adapted to its growing business. On March 1, 1903, work was commenced on an addition to the building, which was occupied the following November.

The progress above recounted has been due to the fact that the company possesses facilities required by the business public, and has made those facilities known; and, furthermore, it has safely and profitably invested its capital and deposited funds.

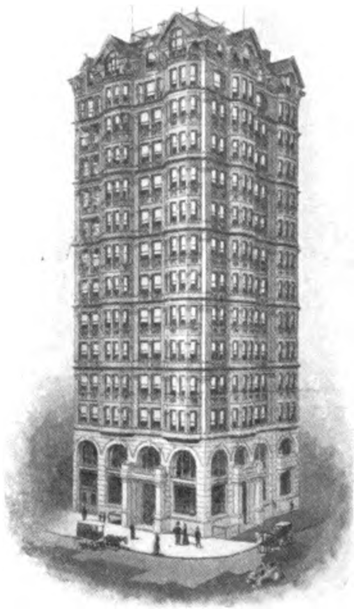
In addition to exercising the customary functions of a trust company, such as acting as administrator, executor, guardian, etc., the company insures titles to real estate and manages estates.

Letters of credit and travellers' checks are issued, available in all parts of the world. A safe-deposit department also constitutes an important part of the company's equipment.

All trust funds are kept separate from the company's assets and all investments for trust estates are made by the finance committee of the board.

Frequent reports are made to the Superintendent of Banking, and examinations are made both by the Banking Department and by an auditing committee appointed by the board of directors.

Horace A. Doan, President of the West End Trust Company, has held that office since November 12, 1894, having formerly been Vice-President. He



WEST END TRUST CO. BUILDING, PHILADELPHIA.

was one of the incorporators of the company. His capacity for financial management is well illustrated by the company's growth.

The other officers are: Vice-President, Joseph T. Richards; Second Vice-President, Treasurer and Secretary, Charles E. Wolbert; Trust officer and Real Estate officer, John M. Strong; Assistant Secretary and Assistant Treasurer. Robert L. Morgan; Solicitor, John Hampton Barnes.

NATIONAL BANK OF THE REPUBLIC, CHICAGO.

During a period in which the tendency toward consolidation has been general, the National Bank of the Republic, of Chicago, has preserved the integrity of its individuality intact. Organized, developed and conducted on the principle of conservative banking along progressive lines, year by year there has been some gain in strength, in scope and in the confidence of the public. Continuing to be governed by the principles upon which its past and present prosperity have been built, and entertaining a reciprocal confidence in a public which recognizes the right relationship between service and recompense, the National Bank of the Republic expects to continue to

THE NATIONAL BANK OF THE REPUBLIC, CORNER LA SALLE AND MONROE STREETS.

Financial Center of Chicago.

grow both in its capacity and its opportunity to serve, and to that end invites the patronage to which it believes it has proved itself entitled.

As the success of a bank is governed chiefly by its care in making loans, the National Bank of the Republic has taken especial care to surround its lending operations with every reasonable safeguard—thus insuring not only safety but the highest degree of service to the local business community and to its numerous banking correspondents. Loans are made in moderate amounts, and are not allowed to remain too long outstanding. This bank was among the first to establish a thoroughly-equipped credit information department, and the knowledge thereby afforded has been of great advantage in enabling the bank to grant applications for loans in all cases where warranted by the circumstances, as well as to deny advances of an undesirable character.

The National Bank of the Republic takes a just pride in the fact that it strictly conforms both to the letter and the spirit of the National Banking Act. The executive officers are admirers of Hon. Hugh McCulloch, the first Comptroller of the Currency and twice Secretary of the Treasury, and one

* State bank; figures from statement November 28, 1896.
† Was a State bank; figures from November 28, 1896.

Considering totals of banks absorbed as part of institutions with which they were consolidated, "the Republic" leads in percentage of gain, having increased 486 per cent. against an average increase of 178.4 per cent.

of the ablest and soundest bankers this country has produced. They believe that banks in great reserve centres like Chicago should follow the suggestions made by this able financier in his open letters and instructions to the banks at the time he was Comptroller.

How well the principles and policy of the National Bank of the Republic of Chicago have succeeded may be gained from the preceding table showing the increase in deposits of the National banks of Chicago between the two dates—December 17, 1896, and August 25, 1905.

The officers of The National Bank of the Republic are: President, John A. Lynch; Vice-President, W. T. Fenton; Cashier, R. M. McKinney; Assistant Cashiers, R. L. Crampton, O. H. Swan and Thos. Jansen. Both Mr. Lynch and Mr. Fenton are widely-known among the bankers of the United States. Their ability and fidelity need no commendation beyond that written so clearly in the history of the bank they have so long served. The other officers are likewise faithful and efficient.

On August 29, 1905, the official statement of the condition of the bank was:

Resources.	
Loans	$13,313,786.24
U. S. bonds	207,000.00
Real estate	37,787.28
Cash and exchange	7,686,443.48
Total	$21,245,017.00
Liabilities.	
Capital stock	$2,000,000.00
Surplus and profits	971,602.24
Circulation	99,975.50
U. S. bond account	50,000.00
Due depositors	18,123,417.26
Total	$21,245,017.00

COMMERCIAL NATIONAL BANK CHICAGO.

As its name implies, this is a commercial bank purely; and within this field it has acquired a reputation for sound judgment combined with a high degree of efficiency in the extension of credit facilities to those engaged in the production and marketing of the great staple commodities. In order that its work in this direction may rest upon a sure foundation, the Commercial National Bank regularly makes a complete investigation, through its numerous correspondents, of the crop and general business conditions of its tributary territory—the great Middle West, Northwest and Southwest. These reports are so carefully compiled as to be of recognized usefulness not only to the bank, but to the general business community. This bank has reduced the handling of commercial paper very nearly to an exact science, and has practically eliminated the risk of loss. At the same time the operations of the bank have been widely extended and its business enormously increased.

The Commercial National Bank is almost as old as the National Banking system of which it is a part, having been established in 1864. Its capital is $2,000,000, surplus $1,000,000, and undivided profits $803,230. The surplus was actually earned, and of course the same can be said of the undivided profits. This is an important distinction at a time when there is a growing practice to report as surplus a part of the amount paid in, either at organization or later.

James H. Eckels, President of the Commercial National Bank, was Comptroller of the Currency in the second Administration of President Cleveland, continuing also through a part of President McKinley's term. The high executive capacity displayed in the discharge of his duties in that position has marked his career in banking, on which he entered soon after resigning as

Comptroller. He is a frequent speaker at conventions of bankers, and his views on currency and banking matters are widely received as authoritative.

The other officers of the banks are: Vice-President, Joseph T. Talbert; Second Vice-President, Ralph Van Vechten; Third Vice-President, David Vernon; Cashier, Nathaniel R. Losch; Assistant Cashiers, Geo. R. Smith, Harvey C. Vernon, and Wm. T. Bruckner; Assistant Cashier and Auditor, H. Erskine Smith; Assistant Manager Foreign Department, L. Schuetz.

Directors: Franklin MacVeagh, of Franklin MacVeagh & Co.; William J. Chalmers, Treasurer the Allis-Chalmers Company; Robert T. Lincoln President the Pullman Company; E. H. Gary, Chairman United States Steel Corporation; Paul Morton, President Equitable Life Assurance Society;

COMMERCIAL NATIONAL BANK BUILDING, CHICAGO.

Darius Miller, First Vice-President Chicago, Burlington & Quincy R. R. Co.; Charles F. Spalding, President Spalding Lumber Co.; Joseph T. Talbert, Vice-President; James H. Eckels, President.

Statement of the condition of the Commercial National Bank, of Chicago at the close of business, August 25, 1905:

Resources—	
Loans and discounts	$24,771,721.84
Overdrafts	137.56
Real estate	58,717.35
U. S. bonds at par	700,000.00
Other bonds and stocks	2,629,020.85
Due from U. S. Treasurer	117,500.00
Cash and due from other banks	12,438,333.18

National bank notes outstanding	700,000.00
Deposits	36,212,200.21
Total	$40,715,430.78

AMERICAN GUARANTY COMPANY, OF CHICAGO.

In this day of large financial transactions, the guaranty of a responsible company is becoming indispensable to the carrying out of many business enterprises. The American Guaranty Company, whose general offices are at 171 La Salle street, Chicago, was established in 1892. It has $500,000 capital, $500,000 surplus and $76,332 undivided profits.

The company assumes four classes of corporate obligations; viz., the payment of principal on bonds, the payment of interest on bonds, the redemption of corporate stock, and the payment of dividends on redeemable and preferred stock.

It also performs the following services for its clients, assuming the expense thereof: First, secures the services of a reputable trust company to act as trustee for the bondholders and to certify to the genuineness of the bonds; second, prepares the necessary deed of trust in conformity with the requirements of the trustee; third, has the bonds and coupons engraved or lithographed, laying same before the officers of the corporation, ready for execution; fourth, attends to all the details of an issue of bonds, relieving the officers of the issuing company of the annoyance incidental thereto; fifth, furnishes engraved or lithographed certificates of stock bearing proper endorsement of guaranty and ready for issuance; sixth, prepares and submits the form of necessary motions and resolutions to be passed by the stockholders and directors, and otherwise supervises all work in any manner affecting the legality of the issuance of securities.

The officers of the American Guaranty Company are: President, Frederick M. Steele; Vice-President, Charles L. Furey; Secretary, Lewis W. Pitcher; Treasurer, James L. Bigelow. Directors: Frederick M. Steele, President Standard Forgings Co.; W. F. Barnes, President Manufacturers' National Bank, Rockford, Ill., and President W. F. & Jno. Barnes Mfg. Co.; Charles L. Furey, Vice-President; Frank M. Heggie, Lepman & Heggie, Chicago; James L. Bigelow, Treasurer; Duncan A. Holaday, J. I. Brown & Co., Denver, Colo.; Lewis W. Pitcher, Secretary; B. M. Fellows, Treasurer U. S. Realty & Improvement Co., Treasurer Geo. A. Fuller Co., New York; William George, President Old Second National Bank, Aurora, Ill., President Bankers' Association of the State of Illinois.

GERMANIA NATIONAL BANK, MILWAUKEE, WIS.

Favored by a good local situation—or, in other words, starting a bank where a bank was needed—and managed by men who understand from experience how a bank should be conducted, and strong in the public confidence, the Germania National Bank, of Milwaukee, has demonstrated its right to be counted among the safely progressive banks of the country. It was established on July 1, 1903, and has $300,000 capital, $40,000 surplus and (Aug. 25, 1905) $18,731 undivided profits.

The bank was organized by a number of Milwaukee's well-known and successful business men, who were convinced that the locality selected for the bank's home was in need of additional banking facilities.

George Brumder, owner of The Germania and a business man whose stability is thoroughly recognized, was made President, and George P. Mayer, secretary and treasurer of the F. Mayer Boot and Shoe Co., was elected Vice-President of the bank. Alfred G. Schultz, who had been connected with Milwaukee banks nearly all his life, was selected as Cashier. Mr. Schultz started his banking experience in the employ of the old Merchants' Exchange Bank, where he served for ten years. When the Merchants' Exchange Bank was absorbed by the First National, he was manager of the West side branch, and was one of the organizers of the West Side Bank, which grew out of the branch of the Merchants' Exchange. M. A. Graettinger, whose banking experience dated from 1886, was made Assistant Cashier. He started work as a messenger for the Commercial Bank and at the time of its liquidation in 1895, had advanced to the position of paying teller. Before the Germania National Bank was founded he was Cashier for the J. G. Flint Co.

In addition to being Assistant Cashier, Mr. Graettinger has charge of the bank's promotion department. E. A. Reddeman is also an Assistant Cashier.

When the Germania National bank opened in 1903 it closed its first day's business with deposits aggregating $135,591.76. The first call for a statement after its organization was on Sept. 9, 1903, when it was shown that the deposits amounted to $527,553.07. The statement one year following, in September, 1904, showed over double the amount of deposits, the amount being $1,098,604.72. Since the latter date the deposits have kept on growing, being $1,597,077.01 on March 14, 1905, and $1,911,990.45 on August 25, 1905.

GERMANIA NATIONAL BANK, MILWAUKEE, WIS.

With ample capital, directors of large resources and a thorough knowledge of business, and with experienced officers, who are courteous and diligent in their dealings, the Germania National Bank is sure to maintain the stong hold it has already gained in the estimation of the public, and to acquire a still greater share of the prosperity that is a certain consequence of the best service.

NATIONAL LOAN AND EXCHANGE BANK, COLUMBIA, S. C.

The most substantial index of the growth of the South is to be found in the development of her banking institutions. It has not been many years ago that the South was struggling to get on its feet, and whatever money was available went into the upbuilding of the country and the development of its industries. This industrial development has been intense for the past decade, and with it there has been a healthy growth of the banking institutions. Ten years ago there were 102 banks in South Carolina with total deposits of $14,059,000; whereas, in July last, or in ten years' time, the deposits have grown to $38,164,000 and the number of banks have multiplied to 199.

In Columbia, which is the capital of the State, in 1895 the bank deposits aggregated $1,366,000; in 1900 they had climbed to $2,670,000; whereas, to July of this year the aggregate deposits of Columbia are over $4,000,000.

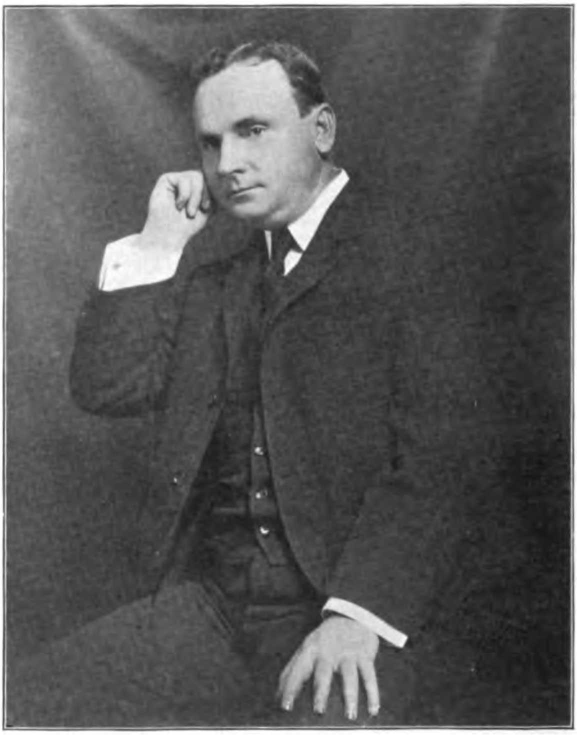
For a bank in South Carolina to go over the million-dollar mark is surprising, and for it to go over the two-million dollar mark is regarded as

NATIONAL LOAN AND EXCHANGE BANK, COLUMBIA, S. C.

a financial phenomenon. Such is the record of The National Loan and Exchange Bank, of Columbia. Ten years ago it would have been thought quite out of the question for a bank in Columbia to have shown over two million dollars of deposits and more than three million dollars of business, but by the persistent and consistent application to legitimate bank business, The National Loan and Exchange Bank, of Columbia, has reached this mark.

To-day there is no bank in South Carolina that has a higher reputation for orthodox business methods or for conservatism than The National Loan and Exchange Bank of Columbia. Its success has been due very largely to what some folks are inclined to regard as undue conservatism and careful attention to detail. These principles, strictly enforced, have given The National Loan and Exchange Bank the reputation of being "the strongest bank in South Carolina."

The financial blood of three separate and distinct banks course through the veins of the present National Loan and Exchange Bank. In 1886 Col. Alexander C. Haskell, a gallant Confederate Soldier, organized the Loan and Exchange Bank of South Carolina as one of the pioneer State banks. It began business with a paid-up capital stock of $50,000, which in due time was increased to $128,000. This bank continued to prosper and in due time its deposits ran up to the half million dollar mark. In May, 1892, Edwin W. Robertson and Gilbert M. Berry organized the Canal Dime Savings Bank with a capital stock of $30,000. Two years later this was increased to $50,000. In 1897, Mr. Robertson having paved the way for expansion and the opportunity being ripe, merged the Loan and Exchange Bank with the

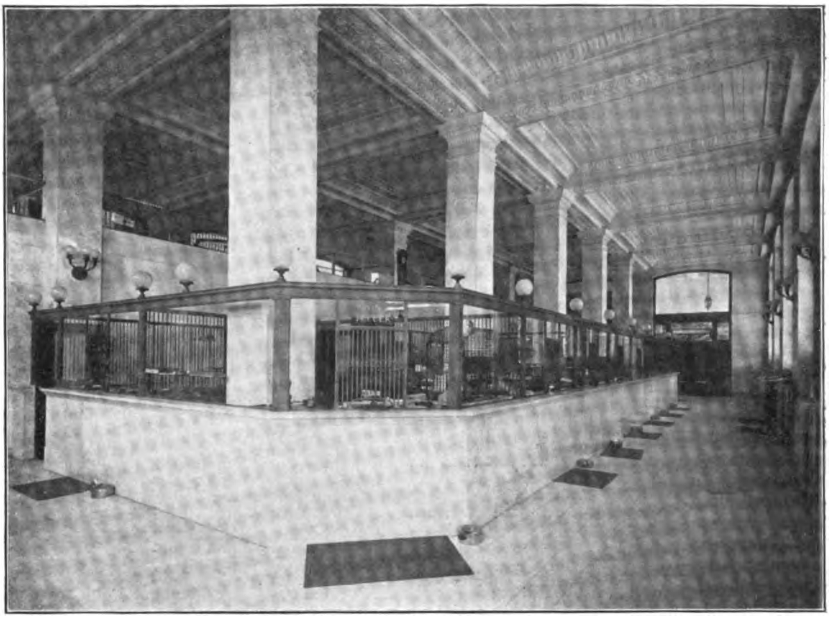


EDWIN W. ROBERTSON,

President National Loan and Exchange Bank, Columbia, S. C.

Canal Bank, and at that time the deposits showed an aggregate of $644,-381.29. Edwin W. Robertson became President, Judge A. C. Haskell, Vice-President, and Gilbert M. Berry, Cashier of the consolidated banks under the title of the Loan and Exchange Bank. It has been largely due to the splendid ability and energy of these three executive officers in particular that the bank of to-day has its present high position.

Year by year the Loan and Exchange Bank prospered, and in February, 1902, the Central National Bank, one of the oldest of the National banks in this country was acquired, and that bank was liquidated, practically all of the accounts going to the Loan and Exchange Bank. The deposits at that time aggregated $1,099,831.15. This represented the merger of the three banks. In June, 1903, it was decided to increase the capitalization to $500,-000 and to change the State bank into a National bank, giving the depositors and customers all of the additional protection that follows a National



NATIONAL LOAN AND EXCHANGE BANK, COLUMBIA, S. C.—BANKING ROOM.

bank. The conversion into a National bank and the increase of the capital stock to one-half million dollars,—which is the largest of any bank in South Carolina, was contemporaneous with the bank's moving into its new home, a magnificently constructed twelve-story building. The entire ground floor of this twelve-story structure is occupied as the banking rooms of The National Loan and Exchange Bank, and it is conceded to be as handsome a banking house as any in the South, and for that matter, in the entire country. The entire interior is finished in rubio Vermont marble and steel, with exquisitely designed panels.

There have been some who have naturally wondered at the remarkable development of The National Loan and Exchange Bank, and particularly that the volume of business should have grown until it is now larger than that of any other bank in the State; or, at least, that it is running neck and neck with the largest.

The National Loan and Exchange Bank is not a local bank. It is used to a large extent by the State generally, and the purpose of Mr. Robertson for some time has been to make it a clearing-house for the State of South Carolina, and in this work he has met with decided success.

The executive officers of the bank are:

Edwin W. Robertson, President.

Judge Alexander C. Haskell, First Vice-President.

Edward Ehrlich, Second Vice-President.

T. B. Stackhouse, Third Vice-President.

Gilbert M. Berry, Cashier.

E. C. Cathcart, Assistant Cashier.

Although Mr. Robertson is in his early forties, he has by his accomplishments taken first rank among the successful financiers of the country. He is an indefatigable worker, careful, conservative, and ambitious to keep the bank, of which he is the head, in the very front rank. Some time ago when there was a decimation of some of the directors of the Equitable Life Assurance Society, the stockholders of South Carolina unanimously requested the trustees of the Equitable Life Assurance Society to appoint Mr. Robertson as one of the directors of the Equitable. The appointment was made by Messrs. Grover Cleveland, Westinghouse, and O'Brien, and was a recognition of the standing of Mr. Robertson. He is also the President of the Columbia Electric Street Railway Light and Power Co., and a number of other Columbia and State enterprises, and has served as the President of the State Bankers' Association, which organization he did much to rejuvenate.

A great deal might be written of the conspicuous part that this bank has taken in the development of Columbia and how its conservative and careful methods have made the institution prosper, but the following condensed statement of a bank in a city the size of Columbia (40,000), (half of whom are not of a saving race,) is the epitome of the National Loan and Exchange Bank's marked success:

Statement of the condition of The National Loan & Exchange Bank of Columbia, Columbia, S. C., at the close of business October 11, 1905:

Assets—	
Loans and discounts	$1,490,807.32
U. S. bonds to secure circulation	265,000.00
U. S. bonds to secure U. S. deposits	15,000.00
Premium on U. S. bonds	8,971.88
South Carolina 4½ per cent. bonds	184,500.00
Other bonds, etc	253,759.00
Banking house, furniture and fixtures	190,179.59
Redemption fund with U. S. Treasurer, five per cent.	13,250.00
Cash on hand and due from banks	731,902.36
Total	$3,153,370.15

Liabilities—

Surplus and undivided profits		88,171.78
Circulation		265,000.00
Reserve fund		25,000.00
Deposits:		
Individual	$1,764,874.73	
U. S.	15,000.00	
Banks	395,323.64	
		2,175,198.37
Bills payable		100,000.00
Total		$3,153,370.15

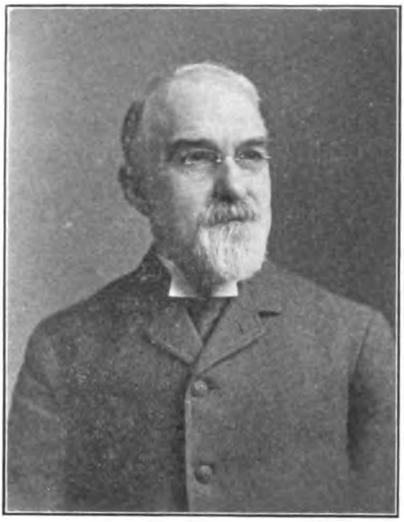
WYOMING NATIONAL BANK, WILKES-BARRE, PA.

The Wyoming Bank was chartered by the State of Pennsylvania in 1829, and in 1865 became a National bank. Its capital stock is $150,000 and the surplus over $500,000, the stock of a par value of $50 being difficult to buy, the last sale—at public auction—being at $301 a share. In proportion of surplus to capital this bank stands thirty-fifth among the National banks of the United States, twelfth in the State of Pennsylvania, and first in its own city.

The exceptionally strong position the bank has attained is the best possible proof of its efficient service to the business community and of the strong and able character of the management. A better idea of the bank's steady growth may be had from the following comparative figures:

	Investments.	Capital and Surplus.	Deposits.
January 1, 1895	$785,631.00	$422,120.00	$869,615.00
" 1896	799,193.00	448,446.00	746,821.00
" 1897	865,284.00	465,806.00	807,047.00
" 1898	895,910.00	482,658.00	935,544.00
" 1899	1,007,609.00	514,860.00	1,056,720.00
" 1900	1,221,254.00	535,903.00	1,219,576.00
" 1901	1,347,249.00	567,195.00	1,173,377.00
" 1902	1,394,652.00	593,489.00	1,227,027.00
" 1903	1,527,320.00	614,560.00	1,645,680.00
" 1904	1,768,312.00	639,603.00	1,747,890.00
" 1905	2,030,732.00	677,166.00	2,025,998.00
October 9, 1905	2,213,178.00	706,300.00	2,424,733.00

WYOMING NATIONAL BANK, WILKES-BARRE, PA.



GEO. S. BENNETT,
President Wyoming National Bank, Wilkes-Barre, Pa.

GEO. H. FLANAGAN
Cashier Wyoming National Bank, Wilkes-Barre, Pa.

Geo. S. Bennett, President of the Wyoming National Bank, comes from one of the families of the first settlers of the Wyoming Valley. He was born at Wilkes-Barre and has always resided there. He enjoys the unquestioned respect of all. Mr. Bennett is connected with nearly all of the industries and manufactories, and some of the educational institutions of the Valley.

Geo H. Flanagan, the Cashier, began the banking business in Wilkes-Barre in 1871. He was employed by the Wyoming National Bank in 1883, and was elected Cashier in 1886, which position he has held continuously up to the present time.

PLAINFIELD TRUST COMPANY, PLAINFIELD, N. J.

Measured by its substantial growth—which is the one sure test in judging financial institutions—the Plainfield Trust Company, of Plainfield, N. J., is entitled to rank among the highly successful trust companies of the country. It began business about three years ago, and has $100,000 capital, with surplus and profits of more than twice that sum, while the deposits have steadily increased until they now amount to over $1,600,000.

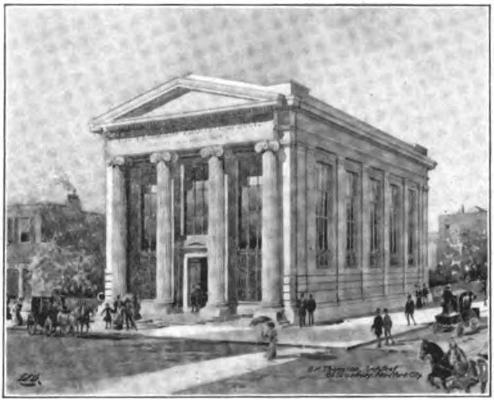
The company's prosperity may be attributed to its good location, an exceptionally strong board of directors, and an official staff who have been quick to realize the opportunities presented and to take advantage of them. The numerous facilities for transactions of a financial character possessed by a modern trust company have been intelligently, persistently and courteously brought to the attention of the public, and with the most gratifying results. Of course the undoubted strength of the management has greatly aided in the company's progress.

So rapidly has the business grown that the company has found it necessary to erect a new building—an illustration of which is presented herewith. The new structure is located at the corner of Park avenue and Second street.

The building will be constructed of Indiana limestone, and will be equipped with steel vaults of the most approved type. The banking room fixtures will be of marble and copper, and the furnishings of mahogany. When completed the city of Plainfield may boast one of the finest bank buildings in the State of New Jersey.

The officers of the Plainfield Trust Company are: O. T. Waring, President; A. V. Heely and Henry A. McGee, Vice-Presidents; J. Herbert Case, Secretary, and Edward F. Feickert, Assistant Secretary.

The directors are: Ernest R. Ackerman, president Lawrence Cement Company, New York; J. Herbert Case, Secretary and Treasurer, Plainfield, N. J.; Frederick Geller, attorney and counsellor-at-law, New York; Augustus



NEW BUILDIMG OF THE PLAINFIELD TRUST CO., PLAINFIELD, N. J.
