THE

BANKERS' MAGAZINE

RHODES JOURNAL OF BANKING AND THE BANKERS' MAGAZINE

CONSOLIDATED

VOLUME LXXI

JULY TO DECEMBER

1905

NEW YORK

THE BANKERS PUBLISHING CO., PUBLISHERS

87 MAIDEN LANE

NOTICE.—The BANKERS' MAGAZINE having been consolidated with RHODES' JOURNAL OF BANKING, the volume number of the former only is retained.

BOUND VOLUMES.—Beginning with July, 1895 (consolidation of the BANKERS' MAGAZINE with the JOURNAL), the volumes comprise the numbers for six months.

Price, bound in cloth with leather backs and corners, $3.50 a volume. By mail or express, prepaid, 40 cents additional.

INDEX.

July to December, 1905.

I. EDITORIAL COMMENT AND LEADING ARTICLES.

II. BANKING AND FINANCIAL LAW AND REPLIES TO QUESTIONS.

LIST OF CASES.

CANADIAN BANKING LAW DECISIONS.

LIST OF CASES.

REPLIES TO LAW AND BANKING QUESTIONS.

III. BANKING MISCELLANY, REPORTS, ETC.

IV. MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

COMPARATIVE PRICES AND QUOTATIONS OF ACTIVE STOCKS, RAILWAY, INDUSTRIAL AND GOVERNMENT BONDS.

ACTIVE STOCKS, COMPARATIVE PRICES AND QUOTATIONS.

RAILWAY, INDUSTRIAL AND GOVERNMENT BONDS.

BANKERS' OBITUARY RECORD.

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-NINTH YEAR. JULY, 1905. VOLUME LXXI, No. 1.

THE STANDARD OF CONDUCT as applied to business transactions should be, it would seem, as irrevocably fixed by this time as the money standard. It is only a few years since, however, that the latter question was the subject of heated and angry discussion in this country. The result of the controversy was a decisive rejection of the double monetary standard. Just now, while we are not exactly engaged in a campaign for a double standard of conduct in business (since no one, perhaps not even a hired attorney, would dare uphold dishonesty as the proper policy), we are witnessing some remarkable exhibitions of the differing views men take of their duties when acting as individuals and when acting as trustees or officers of corporations.

The man who in his private capacity would scrupulously regard not only the rules of common honesty but the higher ethical principles, as the director of a corporation has been shown to be capable of a total disregard of such rules and principles.

While it has been generally believed that those who are naturally disposed to be dishonest were restrained by fear of the law, the supposition has not been uncommon that most men are either honest from principle or that at least they have sufficient intelligence to perceive that in the long run there is nothing to be gained by dishonest practices. Recent revelations in the financial world, however, would seem to indicate that there are circles where none of these considerations have much weight, so long as the danger of discovery is avoided. With an effective corporation cloak to hide his appropriation of others' property to his personal use, the unfaithful trustee pays but little attention to any moral or legal hindrances to the execution of his plans. Moral restraints may be easily brushed aside by a process of reasoning something like the following:

"This is the twentieth century, and old-fashioned ways of doing things must give way to make room for new ideas; the style of living to which I have been accustomed can not be changed, but constantly makes new demands on my purse—automobiles, European trips, the opera, entertainments, city and country houses—all these and countless other forms of pleasure or dissipation call for increasing expenditures; true, the income I am unjustly receiving may be in part derived from poor people or those in moderate circumstances, who are struggling to accumulate sufficient means to provide for their dependents, but really I can not stop to consider such people as these. They are not used to luxurious living anyway, and so long as I leave something for them they should not complain."

But little heed seems to be paid to legal obstacles by these modern exponents of high finance. A trustee or director can plead ignorance. Furthermore, he is too busy with his yachts, automobiles, etc., to attend to such trifling details as the management of property entrusted to his care. If an officer, directions may be given to subordinates, and if these orders are not obeyed, the delinquency may be ascribed to "a misplaced switch," for which officers, of course, are not responsible.

No doubt the financier whose fortunes have been accumulated by such methods as these actually considers himself, and is considered by others ignorant of his methods, as a very fine type of American. He lives well—even if at the expense of unwilling contributors—liberally supports religious and benevolent enterprises, is a patron of art and literature, and is regarded everywhere as an all-round good fellow.

There is, however, another side to transactions of this sort, and it was well described by GROVER CLEVELAND in his letter accepting appointment as trustee of the Equitable Life Assurance Society. Mr. CLEVELAND, in writing to Mr. RYAN, said:

"While the hope that I might aid in improving the plight of the Equitable Society has led me to accept the trusteeship you tender, I cannot rid myself of the belief that what has overtaken this company is liable to happen to other insurance companies and fiduciary organizations as long as lax ideas of responsibility of trust are tolerated by our people. The high pressure of speculation, the madness of inordinate business scheming, and the chances taken in new and uncertain enterprises, are constantly present temptations, too often successful, in leading managers and directors away from scrupulous loyalty and fidelity to the interests of others confided to their care.

We can better afford to slacken our pace than to abandon our old, simple American standards of honesty, and we shall be safer if we regain our old habit of looking at the appropriation to personal uses of property and interests held in trust in the same light as other forms of stealing."

When the appropriation to personal uses of property and interests held in trust is regarded in the same light as other forms of stealing, the immorality of such proceedings will be established; but something more than that will be necessary to stop further "appropriations" of this character. This remedy, so far as relates to persons acting in their individual capacities, is well known and is frequently applied. A like application will have to be made where corporations are the apparent offenders. As was said by Messrs. JUDSON and HARMON, the Government attorneys in the Atchison rebate cases:

" * * * What we have said is peculiarly true of the great corporations of our day. They cannot be imprisoned, and punishment by fine is not only inadequate but reaches the real culprits only lightly, if at all. The evils with which we are now confronted are corporate in name but individual in fact. Guilt is always personal. So long as officials can hide behind their corporations, no remedy can be effective. When the Government searches out the guilty men and makes corporate wrongdoing mean personal punishment and dishonor, the laws will be obeyed."

An officer or director of a National banking corporation can not use his charter as a screen to protect him from violations of the National Bank Act. If guilty, the "misplaced switch" can not be pleaded in extenuation.

The recent disclosures of corporate mismanagement indicate that some corrective more powerful and convincing than moral suasion is needed to prevent a spread of similar evils. Full restoration of unearned emoluments, and sure and swift punishment of the guilty, will alone prove effectual.

If reckless corporation financiering is not checked it may finally engender a feeling of distrust that will work substantial harm. It is well to bear in mind however, that the so-called "high finance" does not represent the real financial strength of the United States. This lies deeper, and is rooted in the character of the people and the unmatched resources of the country. It is no more disturbed by the present commotion than are the depths of the sea by the agitation of the waves on the surface.

THE ELASTIC CLAUSE OF THE GERMAN BANK ACT was the theme of an interesting address by Mr. HERMANN SCHMIDT before a meeting of the London Institute of Bankers earlier in the year. This address, together with the discussion called forth by it, will be found in another part of this issue of the MAGAZINE.

What might be called the ordinary bank-note circulation in Germany is limited to the cash in hand plus a certain fixed amount (now 541,600,000 marks) for which a fiduciary issue is allowed. But this fiduciary issue does not constitute an absolute limit. What in this country is called an emergency circulation is provided for by Section 9 of the German Bank Act, which reads as follows:

"Banks whose circulation exceeds their cash plus their share in the fixed fiduciary issue have to pay to the Imperial Exchequer on the excess issue a tax of five per cent. per annum. 'Cash' consists of German coins, Imperial paper money, notes of German banks, besides gold and foreign gold coins."

This section constitutes the elastic clause of the German Bank Act. It is well to bear in mind that this excess issue, like all the circulation, is covered by one-third cash and two-thirds by short bills.

On referring to Mr. SCHMIDT's address, and consulting the tables accompanying it, one may see the practical workings of this clause of the law. For Americans who take an interest in such matters, the question of most importance will be, does this device really impart any marked degree of elasticity to the bank-note circulation? This question seems to be answered in the affirmative. It is shown, for example, that the excess circulation declined from a maximum of 205,000,000 marks on September 30, 1897, to a minimum for the year of 7,000,000 marks on November 7. In the following year the excess fluctuated between the lowest point, 6,000,000 marks, on November 23 to the highest point, 282,000,000 marks, on December 31. In 1900 the first figures given are 209,000,000 on January 7. By July 7 the excess had declined to 41,000,000, rising to 355,000,000 at the close of the year.

The suddenness of the changes in the volume of the excess of circulation seem to indicate that the tax really compels a quick retirement of the portion of the circulation which was called into existence to meet temporary stress in the money market.

Regarding the criticism frequently heard that this expedient would be overworked and that the metallic basis for bank issues would grow smaller, Mr. SCHMIDT shows that as a matter of fact the metallic cover for the German note issues has risen from an average of 74.55 per cent. in 1876 to 92.94 per cent. in 1905. Perhaps it ought to be said, however, that in some of the years from 1876 to 1905 the percentage was below the figures for 1876. The total metallic reserves have increased from 501,593,000 marks in 1876 to 1,110,288,000 marks in 1905.

The fear expressed that the workings of the elastic clause would unfavorably affect the foreign exchanges, has proven to be unfounded; and, indeed, the contrary effect has been produced. This is explained by the fact that the Reichsbank having to pay a tax of five per cent. on the excess circulation, raises its rate of discount, which tends to attract gold.

It is stated further, that not a single one of the adverse effects predicted as a result of the action of the elastic clause has materialized. On the other hand, by reason of this provision, Germany has been enabled to conduct a larger business with the gold actually at her disposal than would otherwise have been possible. The elastic clause, it is declared, has been particularly serviceable in enabling the banks to provide for the exceptional payments that must be made at certain seasons of the year.

In concluding his address Mr. SCHMIDT said: "My remarks to-night ate intended to show that a close examination into the workings of the elastic clause fails to bring out a single instance where its effects have been detrimental, while there is a strong presumption that by giving her note issue greater freedom, Germany has added to the defence of her business interest a weapon, modern, progressive, and ingenious, which has probably formed one of the most effective, if less obvious, causes of her remarkable progress in commercial and industrial activity."

THE IMPERIAL BANK OF GERMANY has practical control of the German bank-note issues. Although nominally a private institution, it has a purely State administration. Its powers are exercised by a President, Vice-President and six members of the directorate, officially nominated. The accounts are audited by Imperial officials, and the Empire participates in the profits. The shareholders are represented by a permanent central committee, composed of representatives of leading banks and bankers of Germany, thereby forming a connecting link between the Reichsbank and the outside institutions. This committee seems to possess advisory powers only.

In a country like Germany and with the note issue concentrated to a great extent in a single powerful institution, the problem of a bank circulation is much simpler than it is in the United States. But the problem need not, for that reason, be given up here as being insoluble. Probably through the instrumentality of the clearing-houses, properly organized, our numerous banking units could be substantially coalesced and brought up to a standard of homogenity, as far as relates to note issues, approximating that which exists in Germany.

AN UNLIMITED RESERVE, as stated by Mr. SCHMIDT in the discussion which followed the reading of his paper, is the only sure remedy in times of panic. In England this "unlimited reserve" is practically obtained by the suspension of the Bank Act; but the necessity for anything of this sort is obviated by the elastic clause of the German Bank Act.

Some interesting points were brought out in the discussion. In reply to a question from Mr. FELIX SCHUSTER, Mr. SCHMIDT stated that the obligation of the Reichsbank was simply to pay "in current coin of the realm," which, he explained, included silver thalers. Mr. SCHUSTER said that this constituted an essential difference between the German notes and those of the Bank of England, the holder of a Bank of England note having the right of demanding payment in gold and nothing but gold.

THE BASIS OF THE GERMAN NOTE ISSUES consists of cash and short-bills—the former to the extent of one-third and the latter two-thirds of the notes issued. "Cash" includes not only German coins but Imperial paper money and notes of German banks. It has been proposed in this country to issue notes based on the legal tenders, which would perhaps not be particularly objectionable, as the legal tenders are an obligation of the Government to pay gold on demand. The German Act, however, would seem to permit the issue of notes partly on the security of the notes of other banks. Proposals have been made, in this country, to count National bank notes as a part of the reserves which the National banks are required by law to keep.

The "asset" part of the security is represented by the permissible two-thirds of short bills. Under the wise control of the Reichsbank, the tendency has been to increase the metallic cover of the notes.

THE NATIONAL FINANCES OF GREAT BRITAIN are becoming a subject of much concern to many of the thoughtful men of that country. In an address delivered before the meeting of the London Institute of Bankers, June 7, Mr. EDGAR SPEYER, of the well known banking house of Speyer Brothers, pointed out the tendency toward national, municipal and individual extravagance now existing in Great Britain. A condensed report of Mr. Speyer's address is published elsewhere in this issue of the MAGAZINE, and it will be found worthy of a careful reading.

The national expenditure in the past ten years was £1,440,833,126, compared with £902,209,158 in the previous decade—an increase of £538,000,000 or nearly sixty per cent. Even if the expenditure on account of the South African War be deducted (about £220,000,000, exclusive of interest on the debt) the growth in the normal expenditure for the past ten years will be still over £300,000,000, or about forty-five per cent. If to these figures are added the municipal expenditures, it will be seen that the country's national and municipal outlay has reached a total of £2,710,000,000 in the last ten years, compared with £1,639,-000,000 in the previous decade.

As a result of this extravagance imports have largely increased while exports have remained relatively stationary. The excess of imports over exports in 1903 was £183,000,000 compared with £81,000,000 in the later eighties. A further effect of these liberal expenditures has been a practical stoppage of the investment of capital abroad in recent years. Mr. SPEYER shows the importance of Great Britain's foreign investments by pointing out that the investment of British capital abroad and the income received therefrom maintain about 1,500,000 wage-earners, and, including their families, about 7,000,000 people.

In the United States considerable criticism is heard regarding the tendency toward lavish expenditure on the part of individuals. We have been enjoying a long and practically unbroken period of prosperity since recovering from the low point of depression following the financial crisis of 1893. The people have the money to spend, and are not disposed to be parsimonious. National expenditures, too, are on a rising scale, the outlay for the army and navy especially being very largely increased over the normal figures of a few years ago.

This country is so vast in extent and its resources so great that the people are able to make enormous expenditures with comparative ease. Whether the riches annually taken from our soil bring an equivalent return, however, may be open to question. It is, perhaps, not so much a matter of the sum of the expenditures as the benefits derived therefrom. In Great Britain serious concern has been expressed regarding the growth in the drink traffic, and while it has been asserted that a "wave of sobriety" is sweeping over that country, Mr. SPEYER says the wave is largely froth. A similar wave appears to be sweeping over the United States, the consumption of malt liquors having grown from a total of 526,000,000 gallons in 1882 to 1,494,000,000 gallons in 1904, the per capita consumption increasing in the same time from eleven to eighteen gallons.

The effects of extravagance upon individuals are easily observed; and while in the case of municipalities and nations the ill effects may be hidden for a time, they are liable to come suddenly to light at most inopportune times and in an unpleasant manner.

THE BANK CLERKS' CONVENTION to be held at Minneapolis July 20, 21 and 22 promises to be an interesting and profitable meeting. It will be the third National Convention of the American Institute of Bank Clerks, the first one having been held at Cleveland and the second at St. Louis last year while the World's Fair was in progress.

Suggestions have been made of late that the bank clerks of the country do not share directly in the benefits of the conventions of the American Bankers' Association and those of the various State associations. Delegates to these meetings are almost always made up from among the official staff of the banks; and so far as the American Bankers' Association is concerned only officers, directors or trustees, or members of a banking firm, are admitted as delegates. Clerks, however, could be spectators of the proceedings, even if they were debarred from voting or taking part in the discussions.

It is said that the attendance of clerks at the conventions, either of the American Bankers' Association or of the State associations is very small. Whether this is due to the indifference of the clerks, the apparent lack of welcome, or whether it is because the officers wish to monopolize the privilege of representing their bank on these special occasions, is not stated.

It is conceivable that if the clerks attended the conventions in larger numbers the proceedings might in most cases take on a more practical form. The clerks constitute the less conspicuous, but not less important, part of the working machinery of the bank. The young men comprising the numerous cogs and wheels of this machinery have not yet emerged into the higher realms of finance, and if they were allowed to talk at these conventions they would doubtless talk chiefly about the practical operations of their several departments. Their views might fitly supplement many of the essays now presented at the conventions.

The meetings of the American Institute of Bank Clerks, both in the annual conventions and in the local chapters, afford an opportunity to the bank clerks of the country to discuss their work more freely than would be possible at the conventions of State associations and of the American Bankers' Association.

It might be surmised that bank officers would derive practical advantage from attending the Minneapolis convention. They would see there a large body of young men well trained for the work of to-day, and keenly alive to the opportunities of to-morrow.

Directors of National banks who may have been negligent in the performance of their duties are receiving the attention of the Comptroller of the Currency. The director who is content to be a mere figurehead is not regarded with great favor in the Comptroller's office. Heretofore when attention has been called to irregularities which have finally resulted in failure of the bank, the directors have sought to excuse themselves on the ground that they were wholly unaware of the irregular transactions. In the future they will be obliged to find some other excuse. The Comptroller now, when writing to banks and calling the attention of the officers to violation of the rules and laws established for the regulation of National banks, requires the answer to his letter to be signed by every member of the board of directors. The directors of failed National banks will therefore find a plea of ignorance of little avail in aiding them to escape responsibility. Even the illustrious precedent of the "misplaced switch" will not be an effectual bar to their accountability to the Comptroller.

While this rule may, in some cases, work more or less hardship, it is no doubt justifiable. The stockholders of a bank delegate the management to the board of directors, and these in turn place the immediate control in the hands of officers; but the acts of the latter ought to be the subject of constant scrutiny by the directors. When they fail to exercise the supervision necessary to insure prudent management and the observance of the banking laws, they are justly censurable for neglecting their plain duty. The plea of ignorance, instead of extenuating the offense, aggravates it; for if they did not know what was being done by the officers, they should have known.

It is probable that violations of some of the provisions of the National Bank Act have not been as strictly dealt with by the Comptroller's Bureau as they should have been. Official complaint has been made that the penalty for an infraction of certain of these laws was unnecessarily harsh. Those charged with the enforcement of the law have therefore endeavored to mitigate its severity by withholding the infliction of the penalty and depending upon mild reproofs periodically administered. This executive endeavor to correct the short-sightedness of Congress has, apparently, not produced the happiest result. Authority is not lacking to prove that had these same laws been strictly enforced the failure of many banks—perhaps the greater number of failures—would have been prevented.

While, therefore, the decision of the Comptroller to enforce a stricter compliance with their duties on the part of National bank directors is to be welcomed, it might also be an opportune time to inaugurate a policy of supervision that will compel compliance with the banking law. If the law is unnecessarily harsh, this is the most certain way to obtain reasonable modifications that will assure the results aimed at without resorting to a penalty out of proportion to the offense.

THE SECRETARY OF THE TREASURY recently made an attempt to revive the discussion of matters relating to the currency. In an address delivered before the joint convention of the bankers' associations of Georgia and Florida held at Atlantic Beach, June 9, Mr. SHAW said:

"Suppose the National banks were granted permission to issue a certain volume of currency, either proportioned on the capital of the bank or on the amount of bond-secured currency, and were charged not less than five per cent. interest during the time this currency is out. Certainly additional currency would spring into existence whenever money is scarce, and if the banks were compelled to pay five per cent. interest thereon they would retire it as soon as the pinch is over. It could be retired by a deposit of an equal amount of lawful money at any of the sub-Treasuries. It would not be necessary to redeem each individual bill. The volume of money would be contracted by the deposit as well as by the actual destruction of the bank bills so issued.

The Government should guarantee the redemption of this credit currency, for the interest charged would vastly more than cover all possible loss. I desire to go on record as opposing the issuance of any currency that the Government does not guarantee, and I am equally opposed to the Government guaranteeing bank currency without being first amply secured."

Some difficulty might be experienced in deciding when the five per cent. tax should become effective. At present, with a capital of $782,000,-000, the banks have $430,000,000 outstanding circulation. If they issued to the par of their capital, as the law permits, they could put out $352,000,000 more. Should this limit be the one fixed for the imposition of the tax, or would it become operative at the present limit, if Secretary SHAW's plan should receive the sanction of Congress?

Of course, if the existing bond-secured circulation should be taken as the basis for the emergency issue, the problem would be somewhat different. In the latter case it could be provided that when the total bank-note circulation of the country reached a fixed sum—say, $450,000,000, all beyond that should be taxed five per cent., just as all notes issued by the Bank of England, beyond a prescribed limit, must be secured by an equal amount of gold.

But if our bank-note circulation were circumscribed by taxing all issues above a certain fixed aggregate, it would have some curious results. In the first place, as soon as the limit was reached, new banks would either have to forego the circulation privilege or pay the tax. Another effect would be the limitation of the circulation without regard to the future growth of the country, but this latter would tend to make the increased taxed circulation really available in emergencies.

Perhaps something might be gained by a study of the conditions which engender the emergencies that call for an increased amount of currency. If panics are caused by overtrading, they could be prevented by some device that would automatically check business expansion. Instead of putting a stamp tax on the nostrum for curing the disease, why not tax the cause of the disease?

Suppose all banks were taxed on their loans according to a graduated scale: as business expanded, the tax would finally become so high as to be prohibitive of new loans; but this would at least prove a check to that undue business activity which many believe to be the cause of financial crisis.

It may be that if interest rates were not fixed by legal enactment, something like the above would occur. In seasons of speculative activity, with an enlarged demand for money and banking credits, the interest on loans would advance to an extent that borrowers would cease to make fresh loans when they could no longer profitably use the proceeds of the loans. At present loans are curtailed in time of panic not so much by the inability of the borrower to pay the rate, but by the inability of the bank to lend at the rate the law permits; or, very often, at any rate at all. If lending operations were taxed at all times—the per cent. of tax increasing with the size of the loan—there would be a lending power held in reserve for the seasons of most active demand for money and credits.

So much for theory; in practice it might be otherwise. The same observation would apply to Secretary SHAW's emergency circulation. A tax of five per cent. uniformly imposed would not be uniform in the effects produced. Such a tax might prove no effectual bar to the continued issue of the emergency notes in some parts of the country.

Of course, emergency circulation subject to a tax is not a new device. It exists in Germany and Japan; but in neither of these countries are the conditions at all similar to those that prevail in the United States; although, on this account, it can not be declared with positiveness that an emergency circulation would not afford some relief in times of depression. But it is questionable if the amount that could be issued would be sufficient to alleviate the strain of such a panic as that of 1893.

What would seem to be of more importance is the relief of the banks and the money market from the numerous artificial conditions now imposed by law or custom. If the banks were allowed to issue notes to the full limit of their capital and without the deposit of bonds, they could put out only $782,000,000. This seemingly large sum is comparatively small when placed by the side of the nearly four billions of loans and discounts which the National banks have outstanding. It is in the management of this enormous mass of credit that the true means of elasticity must be sought.

There are some things, apparently, that are deserving of closer study at the present time than an emergency circulation. First, how much is the elasticity of the check and deposit system interfered with by the growing circulation of Government bonds (miscalled bank notes), issued or retired without regard to business conditions? Second, what effect is produced on the money market by the artificial means of regulation of the supply of funds by the Secretary of the Treasury in depositing and withdrawing public moneys and in attempting to exercise partial control over the issue of National bank circulation? Also, what is the effect of the large fixed volume of silver and legal-tender notes?

A GOVERNMENT GUARANTY of the currency is favored by Mr. SHAW. The present guaranty of the National bank notes by the Government is simply an agreement of the Government to redeem its own obligations at par. But if a real bank-note currency should ever be adopted, there is no substantial reason why the banks themselves should not be made the custodians of the guaranty fund. No one can doubt either the honesty or the solvency of the united banking institutions of the country. What the Government should do, however, is to permit the issue of notes only under such regulations as would insure absolute safety. If an adequate redemption fund were provided, it could be entrusted to the banks just as well as to the Treasury. In fact, it is conceivable that aside from insisting on the proper means of current and ultimate redemption of notes, Treasury intermeddling with the currency and the money market, however carefully and skillfully managed, may prove a source of harm. No doubt the Secretary is anxious to do everything in his power to prevent a tension in the money market, but this very anxiety may lead to injudicious measures being taken. And however able any Secretary may be, he can not possess the wisdom of even approximately controlling the money market. So far as that may be controlled at all, it is a function that can be exercised by the banks alone.

THE TREASURY DEFICIT for the fiscal year ending June 30, 1905, is $23,987,752.10, the receipts having been $543,423,859.24 and the expenditures $567,411,611.34. In his last Annual Report Secretary SHAW estimated the deficit at $18,000,000.

As the available cash balance at the end of June was $142,490,322.87, no immediate concern need be felt about the excess of expenditures over receipts for the fiscal year just closed. But, on the other hand, it must be admitted that the difference is not on the right side, and that if this unfavorable balance continues much longer, we shall either have to resort to increased taxation or to borrowing.

With the present restless tendency toward the extension of Governmental activity, it is too much to expect that the equilibrium between income and outgo can be re-established by being more economical. That would be old-fashioned and not in keeping with the progressive spirit of the times. And yet it is a very good way, after all; for it is a policy that tends to keep the national resources free of unnecessary burdens in ordinary times, thus insuring a greater reserve strength for use in emergencies. The present taxation of the people of the United States for Federal purposes is not excessive, but the growth of national expenditures can not be viewed with unconcern. An unchecked tendency toward extravagance, even for a nation as rich as the United States, is fraught with possibilities too serious to be disregarded.

TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.*

†ORGANIZATION OF THE WORKING FORCE OF A TRUST COMPANY.

It is difficult to find two trust companies the scope of whose business is exactly the same; and because of this fact, and because these institutions are still in the formative period, the plans under which the working forces of trust companies are organized are nearly as numerous as the companies themselves. There is some variety in the titles given to different officers and employees, and great variety in the duties which such officers and employees are called upon to perform. It is therefore quite out of the question to treat the subject as one might write of banks, where the names given the several workers, and the duties which they perform, are, within certain limits, pretty well defined. The average trust company worker, outside of the banking department, is usually called upon to do service of a more varied nature than that of the average bank employee.

The organization of the working force depends, in the first instance, upon the character and amount of the company's business. If it is practically a bank operating under the name of a trust company, as is often the case, its working force will be organized in a manner differing little from that of an ordinary bank. Its active head, where the President or a Vice-President is not an active official, is apt to be called the Secretary and Treasurer, or the Treasurer, rather than the Cashier; although the latter title is frequently used in the South and in the West. Where the business of the company is large and diversified, requiring a considerable number of officers, the titles most commonly given are President, Vice-Presidents, Treasurer, Secretary (or Secretary and Treasurer), Assistant Secretaries and Assistant Treasurers. Among other titles found are Attorney, Trust Officer, Auditor, Advertising Manager, Manager of the Bond Department, Manager of the Safe-Deposit Department, and Manager of the Real Estate Department.

Duties of the Various Officers.

The titles given trust company officials do not necessarily convey any idea of their duties. While the President is sometimes the active head of the company, he is more often not active, devoting to the company's affairs only so much time as is necessary to preside at directors' meetings, serve on certain committees, and act in an advisory capacity. In such case, the active management devolves sometimes upon a Vice-President, sometimes upon the

* Publication of this series of articles was begun in the January, 1904, issue of the Magazine, page 31.

† The summary of State statutes relating to trust companies was concluded in the June issue of the Magazine. We have since received a copy of the new banking law of Texas, a summary of which will be found at the end of this article.—Editor.

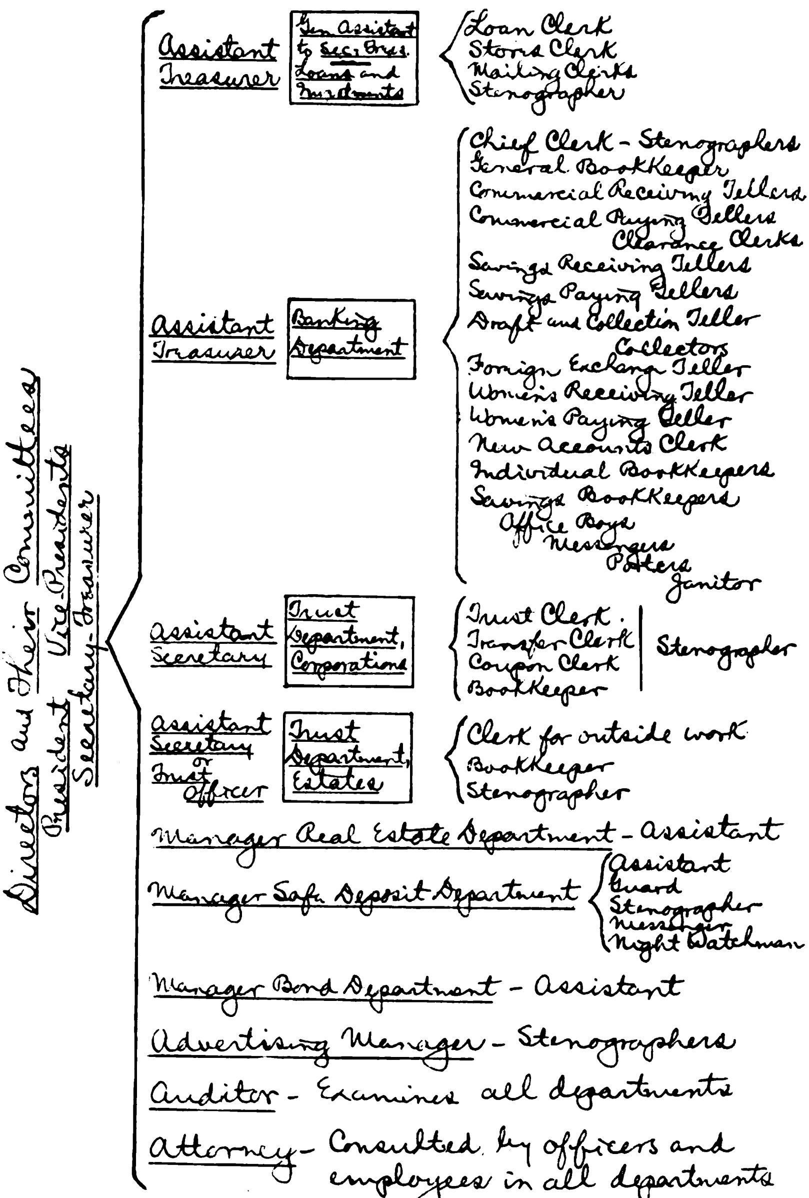

Chart D, showing the organization of the working force of a trust company.

Treasurer, occasionally upon the Secretary, but most often upon the Secretary and Treasurer. Where the Secretary and the Treasurer are not the same man, the duties of the Treasurer are apt to be connected with the banking department, and those of the Secretary with the trust department, but instances are numerous where no attention is paid to titles in the assignment of the duties of the different officers. The titles of other officers, like that of Trust Officer, are more descriptive of their duties.

The accompanying chart is designed to show the general organization of the working force of a trust company doing a considerable business in trust, banking and kindred lines of business. It represents no particular company, but the attempt has been made to incorporate the arrangements most common among a number of companies examined, the type of company represented being that in the large cities of the Middle States. Of course the various lines of work will be combined so as to be done by fewer workers if the company be smaller than the one for which the chart is designed, and will be distributed among more workers if the company be larger. The assignment of responsibilities among the Assistant Secretaries and Treasurers is purely arbitrary, and in a given company may be quite different from that shown in the chart; such assignments usually and properly depending more upon the personal fitness and experience of the various officers than upon their titles. A newly-organized company is apt to pay more attention to the relationship of titles and duties than an old company, where the different men have grown to their titles, their duties having been well established before the titles were given.

Reading horizontally, the arrangement of the chart is designed to show the superior officer to whom each worker is responsible. Reading vertically, no effort has been made to show the relative standing of the officers and employees. Thus, each worker in the column beginning "Assistant Treasurer" is responsible directly to the Secretary and Treasurer. Reading horizontally, one may see the special department of which each officer or worker is in charge, and the various employees who report directly to him. The question as to which of the under officers is in direct line of promotion depends upon the man rather than upon the position.

Whatever title be given the official who has active charge of the company, he is the man who is directly responsible to the directors, and through them to the stockholders, for the general conduct of the institution. Upon his shoulders rests the general supervision of the affairs of the company; to him the lesser officials report, and under his general direction they administer the business of their several departments. Matters of detail are as a rule not brought to his attention, but his strength and time should be reserved for the consideration and determination of general policies. He is, of course, the one upon whom rests the responsibility for the safe and profitable investment of the funds of the company and of the funds which the company holds in trust. Such investments, however, especially those of trust funds, are not usually made upon his sole responsibility, but are determined by an investment committee, of which he is the most influential member. The laws of many of the States prescribe the classes of investments permitted for trust funds, and for the general funds of the trust companies; and within the limits allowed by law, many companies by by-law or resolution of the board of directors prescribe the classes of investments in which their different funds shall be placed. These limitations, if wisely made, tend towards safety and lessen the responsibility of the chief executive of the company. If unwisely made, their effect is quite the reverse. In the matter of loans, the chief executive is usually the man who decides, but the loans made are regularly and frequently reported to the finance committee or executive committee, by whom large loans are ordinarily authorized in advance. This officer keeps the records of the directors' meetings, and of the meetings of the executive committee.

In a large institution the Secretary-Treasurer will hardly have time and strength to look after all the general executive work of the company, and another officer is apt to be named to act as his general assistant. In the chart this officer is an Assistant Treasurer. He decides those matters of general management with which he thinks it unnecessary to trouble the Secretary-Treasurer. He has charge of the general correspondence, himself dictating such letters as he sees fit, and distributing, through an office boy, the other letters to the heads of the various departments. He has general charge of the loans, carrying out the orders of the executive committee, and taking a varying amount of responsibility in decisions on loans of small amounts. He has charge of the collaterals given for loans, and of the investments made by the company; a frequent arrangement being that he shall have access to the latter only in company with another officer or trusted employee. Upon him rests the responsibility of seeing that coupons and other forms of income on investments are collected at maturity. He approves and initials expense vouchers, exercises general supervision over the expenditures of the company, and places orders for supplies needed as such needs are reported to him by the Stores Clerk.

The Loan Clerk has direct charge of the details involved in the handling of loans. Through his window he meets the customers whose applications for loans have been approved, sees that their notes are properly made out, signed, endorsed, etc.; that they are accompanied by the proper collateral, if collateral loans, and that such collateral is correctly transferred to the company; and, if mortgage loans, that the mortgage is in correct form and accompanied by an abstract of title or title insurance policy correctly describing the property and showing clear title, and by insurance policies properly assigned, if needed. He figures interest, sends notices of and collects same. He receives payments on loans, either partial or complete, and endorses same on the notes or cancels and delivers the notes. He keeps records showing all necessary information regarding the loans, including the balance on each loan and the interest payments. He keeps line cards or records, showing the total loaned on each particular collateral, and keeps track of daily quotations on stocks and bonds held as collateral, to notify his superior officer if same decline in price to an extent that makes them poor security for the loans. He receives written applications for loans from those who do not see an officer in person regarding same. Sometimes he is given a limited amount of discretion in making loans to designated parties within specified limits or upon stated collateral. At the close of the day, or at convenient times during the day, his figures are turned over to the General Bookkeeper. In his work he has one or more assistants, including a Stenographer.

If the company handles discounts, there is sometimes a Discount Clerk who looks after the details of such loans, though if the amount be small, such loans can be handled by the Loan Clerk.

The Stores Clerk is in charge of the various supplies, books and stationery needed by the employees and officers of the company. His duty is to see that a sufficient supply of each article is always on hand, which requires, of course, a careful system of keeping track of the amounts on hand of the different articles. Supplies are distributed to the different workers on requisitions initialed by the Assistant Treasurer, by whom also orders for supplies are placed as their need is reported to him by the Stores Clerk. In a large company the value of the supplies handled by this clerk in a year amounts to a good many thousands of dollars. This clerk is sometimes in charge of the expense vouchers, filling out the vouchers after seeing that the bills are correct, handing same to the Assistant Treasurer for his "O K," and sending them to the payees. He keeps an expense book showing the distribution of expenditures.

The Mailing Clerks are charged with the duty of seeing that all outgoing mail is in proper shape: that each letter is signed and placed in the proper envelope correctly addressed, sealed, stamped and placed in the post office. During part of the day they are assigned to special tasks in the different departments of the company.

An Assistant Treasurer has general charge of the banking department, aside from the loans. Save in the matter of loans, his duties are much the same as those of the Cashier of a bank so far as the supervision of the practical work is concerned. He sees that the different workers in the department perform their work satisfactorily; keeps track of the reserve and balances with correspondents; meets customers, oversees the opening of new accounts; adjusts differences; attends to the correspondence of the banking department; signs drafts, decides questions of signatures, overdrafts, identification, etc., and looks after numerous other matters that come up daily. This officer, with the assistance of the Chief Clerk, is usually charged with the duty of detailing men to fill temporary vacancies due to sickness, vacations, etc., both in his own and other departments. The banking department is divided into two parts, one of which handles commercial accounts, and the other savings accounts.

The Chief Clerk acts as general assistant in the banking department. While he has some stated duties, his time is largely occupied in attending to special matters assigned to him from time to time. He is a man of all-around ability and experience, who can step in to fill any position in the department in an emergency. He looks after matters of detail in the relations of the different departments one with another.

The General Bookkeeper keeps the general books of the banking department and the records of investments, and also acts as general bookkeeper for the whole institution to the extent of recording the earnings and expenses of the several departments. Aside from these items, each department keeps its own books. The General Bookkeeper prepares the daily statement and reports based on his books, which together with the reports of the other departments, are laid before the Secretary and Treasurer each morning.

The Commercial Receiving Tellers and the Commercial Paying Tellers perform the duties usually devolving upon such workers, receiving deposits and paying checks for customers, and attending to kindred duties. One of

2

the Paying Tellers has charge of the cash, and locks and unlocks the safes in which it is kept. The Savings Receiving Tellers and the Savings Paying Tellers respectively receive deposits from and make payments to the holders of savings pass-books.

Progressive trust companies have separate tellers to handle the business of women customers. The duties of these tellers are the same as those of the corresponding tellers in the men's department.

The Draft and Collection Teller issues drafts on New York and other correspondents, has charge of collections, and makes remittances for the company. The Collectors work under his direction, receive from him each morning the items to be collected for the day, and after making their rounds hand him the proceeds of paid collections and return those unpaid.

The Foreign Exchange Teller issues foreign drafts, travellers' checks and letters of credit. If the business in this line be small, it is attended to by the Draft Teller; while, on the other hand, some companies have so large a business in this line as to justify the maintenance of a separate department, with several employees.

Many companies have a clerk called the New Accounts Clerk, who attends to the details of opening new accounts, under the direction of the officer in charge of the department.

The Individual Bookkeepers keep the accounts of customers in the commercial department, and the Savings Bookkeepers the accounts of customers in the savings department.

The Clearance Clerks have charge of items for the clearing-house, which they collect from the various tellers, arrange according to the banks on which they are drawn, and take to the clearing-house. They also bring and assist in looking over the incoming clearing. They usually work under the direction of one of the Tellers.

The remaining employees in this department are Stenographers; Messengers, who carry money and securities to and from the bank, to express offices and elsewhere; Office Boys, who run errands, file letters and attend to various duties assigned to them. The Janitor and the Porters, though having to do with the whole institution, are most naturally classed with this department. The Porters stand at the doors to direct customers to the proper offices or windows, keep a watchful eye on persons passing in and out of the bank, and are on hand for any service demanded of them. Frequently the same persons act as Porters and as Messengers.

The Work of the Trust Department.

The trust department—which is semi-legal in the character of its work, and which is the department of specialties—is divided into two sub departments, one of which devotes its attention to trust work involving the affairs of corporations, while the other is engaged in the handling of estates and probate business. Some companies make three departments by putting the work of transfer agent and registrar into the hands of a separate department.

One Assistant Secretary has charge of the corporations division of the trust department. If not a lawyer, he must at least have thorough familiarity with so much of commercial law as concerns his work, and he freely consults the company's attorney as occasion arises. There is great variety in the work of this department, and the duties to be attended to on one day or week may be of a character quite different from those of the succeeding day or week. Now they are the details attendant upon acting as trustee under a bond issue; the next task may be that of acting as assignee for a large concern, mercantile, manufacturing, banking or other; again they may concern the re-financing plans of a corporation, the handling of a bond pool or syndicate, the collection of assessments, or the distribution of proceeds, acting as depository under escrow agreements, the duties of a Receiver, acting as depository for a sinking fund, depository of stocks under voting trust agreements, the payment of coupons, the transfer and registering of stocks or the registering of bonds, and so on. The general direction of these and similar matters rests upon the officer in charge of the department. A Trust Clerk acts as his general assistant, handling the details, figuring assessments and distributions, keeping the department tickler, and so forth.

The Transfer Clerk attends to the transfer and registering of stock certificates, and the registering of bonds, keeps the records of same, furnishes certified lists of stockholders and attends to such other matters as occasion demands.

The Coupon Clerk pays coupons as they mature and are presented, cancels and arranges and keeps a record of them, and returns them with statements at regular intervals to the companies concerned. Sometimes he has charge of all incoming and outgoing registered mail and express matter for the whole institution except the banking department, attending to valuation and insurance on outgoing matter and keeping a record of same.

The Trust Bookkeeper keeps the records of the department and looks after such special duties as are assigned to him.

The Stenographer of this department operates a book typewriter, with which he makes entries, dictated to him by the officer in charge, upon the trust register and other records.

One officer—perhaps the Trust Officer or an Assistant Secretary—has charge of that division of the trust department which handles estates and probate business. Like the officer in charge of the other division of the trust department, he needs to be familiar with the law as it concerns the work of his department. He confers with customers who wish to leave property in trust with the company, or to appoint the company agent or attorney-in-fact, or to name it executor or trustee under will, or trustee under agreements relating to life insurance, or who wish to employ the company to act for them in any capacity. His advice is sought and freely given to customers on various matters of semi-legal character regarding their estates. He has general charge of the estates in the keeping of the company, looking after them as he would after his own property. He confers with heirs and beneficiaries under trusts held by the company. It is largely through this department that the trust company develops that peculiar personal character that distinguishes it from the proverbial "soulless corporation." As guardian of the estates of minors and others, and in other capacities, the officer in charge of this department is often called upon to perform duties that bring him into close personal touch with customers.

It is a part of the duty of this officer to see that trust funds in the department are kept invested in ways that are safe and as profitable as safety will permit. Such investments are made upon the advice, either of a committee existing for the special purpose, or of the executive or finance committee of the company. In some companies the Trust Officer is in charge of the whole trust department, the subdivisions of such department being under the charge of assistant trust officers.

An Outside Man in this department looks after the real property held in trust, rents the property, pays taxes, attends to repairs and improvements, assists in the negotiation of sales, visits courts to look up records and legal matters, and so on.

The Bookkeeper of the department keeps the books, in which a separate set is kept for each trust, as well as general figures showing the entire work of the department. He remits income to the beneficiaries of the various trusts as same is received or at stated intervals, has charge under the Trust Officer of the securities and papers belonging to each trust, collects coupons and other forms of income aside from the rents collected by the Outside Man, collects bonds and mortgages as they mature, keeps the department tickler, renders statements to the courts and to others as required, etc. In this work he is assisted by the department Stenographer, who also takes dictation and attends to the correspondence.

The Manager of the Real Estate Department conducts for the company a general real estate agency business. His duties are similar to those of an ordinary high-grade real estate agent, being the purchase and sale of real estate and the renting of same, acting as agent in the handling of real property, the collection of rents, etc. Sometimes, with the advice of the executive committee, he buys property for the company, for the purpose of turning it over at a profit, either by sale in bulk or in allotments. Much of this business is of the same character as part of that done in the estates division of the trust department, and is frequently handled by that department, extra clerks being employed as needed.

THE SAFE-DEPOSIT DEPARTMENT.

The Safe-Deposit Department is under the direct charge of a Manager. His duties involve the general supervision of his department, but as this does not require all of his time after the department is once established and put in running order, he devotes considerable time to working up new business and to seeing that his department is kept fully up to the times.

An assistant keeps the accounts, makes out the daily reports and assists in the handling of customers. He has charge of setting the time locks and opening the vaults. In the absence of the Manager, he rents boxes and space in the vaults. He keeps record of all visits made by customers to the vaults or boxes.

A guard admits customers to the department, keeps his eye open and gives general assistance.

In large companies, a trusty man is needed to call for and deliver packages. Special wagons, either automobiles or drawn by horses, are provided for this purpose by the most progressive companies.

A Stenographer in the department takes dictation and attends to duties specially assigned.

While the Night Watchman belongs to the whole institution, his most responsible duties are in connection with this department.

The Manager of the Bond Department is engaged in the investigation, purchase and sale of municipal bonds and other high-grade securities, his department conducting practically the same business as a first-class bond house. He needs one or more clerks to assist in the work; but as his department is in close touch with portions of the trust department, the clerks of that department are often detailed to assist him.

The Advertising Manager is, as his title indicates, in charge of the company's advertising. The growth of the idea that banks, and particularly trust companies, may with dignity advertise and "hustle" for business, has been phenomenal, and has already reached the point where these institutions are among the leading advertisers. Accordingly, the Advertising Manager of an enterprising company has an important mission to perform, and must be a man of experience in his line, of ideas and of industry in the pursuit of new and attractive ways of drawing public attention to his company. In his work he has the assistance of several stenographers, who prepare and maintain advertising lists and send out advertising matter.

Many companies now include in their regular force an Auditor, who gives his time to auditing all departments, preventing or detecting defalcations, seeing that the orders of the executive officers as to methods of work are carried out, suggesting to employees improvements in their work and devising improved forms, records and systems. He reports directly to the chief executive at regular intervals and whenever occasion demands.

An indispensable official in a trust company is an attorney, or firm of attorneys. Sometimes he devotes his whole time to the company, but more often there is a working agreement by which his services are at the disposal of any member of the working force, officers or employees, whenever needed. Unless the Trust Officer or other official is an experienced attorney who is capable of passing upon legal or semi-legal questions which are apt to arise at any moment in the work of the trust department, it is of the utmost importance to have a competent attorney within easy reach. The duties of this official are, of course, mainly advisory. CLAY HERRICK.

(To be continued.)

SUMMARY OF THE TEXAS STATE BANK LAW.

(PASSED BY THE TWENTY-NINTH LEGISLATURE. EFFECTIVE AUGUST 14, 1905.)

Five or more persons may incorporate a "banking and trust company." Articles of agreement must be filed with the Secretary of State. The corporation may not continue more than fifty years.

The act authorizes the establishment of banks of deposit or of discount, or both, having trust powers. The powers specified are: to exercise the powers of banks of deposit and discount; to act as fiscal agent of corporations, public and private; to act as transfer agent and registrar; to receive deposits of trust moneys, securities or other personal property; to loan money on real or personal securities; to hold such real estate as is needed in the transaction of the business, and such as is acquired in the satisfaction of debts due the company; but the latter may be retained not more than five years; to act as trustee under any mortgage or bond issue, "and accept and execute any other municipal or corporate trust not inconsistent with the laws of this State;" to accept trusts for married women with respect to their separate property, and to act as agents in the management of same; to act under the appointment of court as guardian, receiver or trustee of the estate of any minor, the annual income of which shall not be less than $100; to act as depository of any moneys paid into court; to execute any legal trusts regarding the management of estates real or personal, from whatever source the trust may be received; to manage estates; "to purchase, invest in, guarantee and sell stocks, bills of exchange, bonds and mortgages and other securities;" to issue its own bonds and obligations; to act as executor, as administrator, as guardian of any infant, insane person, idiot or habitual drunkard, or as trustee for any convict in the penitentiary, under appointment of court; to do a fidelity insurance business; "provided, this act shall never be construed as authorizing the granting of a trust not lawful as between individuals."

The capital shall be not less than $50,000 nor more than $10,000,000. The affairs of the corporation shall be managed by a board of directors not less than five nor more than twenty-five in number; elected annually unless the number exceeds five, in which case they are to be divided into three classes so that each shall serve three years, one-third retiring each year.

The office of Superintendent of Banking is filled by the Commissioner of Agriculture, Insurance, Statistics and History, who is authorized to employ clerks and examiners. It is his duty, either in person or by an examiner, to visit and examine every trust company in the State once per annum, and oftener when he thinks it necessary. The expense of such examinations is borne by the companies examined, according to a schedule of maximum charges outlined in the statute. Detailed provision for procedure to enforce the authority of the Superintendent of Banking is made in the statute. In case he finds a trust company to be in bad condition or to ignore his instructions, he must communicate the facts to the Attorney-General, who shall institute such proceedings as the nature of the case may require. In case of need, the Superintendent of Banking may take immediate charge of the company, pending the appointment of a Receiver. A trust company may place itself in the hands of the Superintendent of Banking by posting notice, and a voluntary general assignment is forbidden.

Reports to the Superintendent, in a form prescribed in the statute and by the Superintendent, must be made upon his call at least twice each year, and oftener at his discretion. Such statements must be published in a local newspaper, and must be posted in the banking house.

Trust companies may not loan to any one individual, company or corporation an amount greater than twenty-five per cent. of the capital stock; or of the capital stock and surplus if the latter is equal to or in excess of fifty per cent. of the capital. The discount of bills of exchange drawn against actually existing values and the discount of paper upon the collateral security of warehouse receipts covering products in store under certain conditions. are not considered as money borrowed. Trust companies may not engage in trade or commerce. The directors may declare dividends, if earned, every six months or oftener, but must first set aside ten per cent. of the net profits to a surplus fund, until the same amounts to fifty per cent. of the capital.

Funds in the charge of trust companies may be invested in loans secured by real estate or other sufficient collateral security, in public bonds of the United States or of this State, in the bonds of any incorporated city or county or independent school district in this State. Such corporations may own only such real estate as is required for the transaction of their business, and such as is acquired in the collection of debts; but the latter may not be retained more than five years. Stockholders are subject to double liability. The books and records of such corporations must be kept open for the inspection of all persons interested. Trust companies having a capital of at least $100,000, and making a deposit of $50,000 with the State Treasurer shall be permitted to qualify as guardian, curator, executor, etc., without giving bond as such. Such deposit shall consist of cash, Treasury notes of the United States, or Government, State, county, municipal or other bond or bonds, notes or debentures, secured by first mortgages or deeds of trust, or mortgages or deeds of trust, or unincumbered real estate in the State worth at least double the amount loaned thereon, or such other first-class securities as the Superintendent of Banking may approve. This deposit shall be primarily liable for the obligations of such company acting in fiduciary capacities, "and shall not be liable for any other debt or obligation of the company until all trust liabilities have been discharged."

Trust companies already in existence may avail themselves of the provisions of this act, provided that they thereby waive the powers granted by their charters and derive their sole powers under the terms of this act. Corporations not organized under this act are forbidden to use the words "trust" or "trust company" in their titles; except that corporations already organized and authorized to use such terms in their titles may retain same by using thereafter the words "without banking privileges." Foreign corporations, other than National banks, are forbidden to do a business of banking and discount in this State.

Every banking corporation is required to maintain a reserve of at least twenty-five per cent. of the aggregate amount of its demand deposits, ten per cent. of which is to be actual cash in the bank. The reserve fund or any part thereof may be kept on hand or on demand deposit in any bank or banking association of the State of Texas or under the laws of the United States approved by the Superintendent of Banking and having a paid-up capital of $50,000 or more; but the deposits in any one bank or trust company shall not exceed twenty per cent. of the total deposits, capital and surplus of said bank.

School Savings Banks.—J. H. Thiry, of Long Island City, N. Y., founder of the School Savings Bank system in the United States sends the Magazine a report of the twentieth anniversary of the introduction of these banks into this country, from which the following is taken:

"The School Savings Bank plan is now in practice in 1,089 schools of 109 cities of twenty-two different States of America, and the sum of $2,782,012.27 has been saved by 191,009 scholars, of which $2,165,072.63 has been withdrawn, leaving a balance of $616,939.64 due little depositors January 1, 1905.

The rapidity with which extreme poverty multiplies its victims is one of the startling facts in social science. The public schools, acting upon every child, must be the great public agency for the arrest of the evil. If every child could be trained to save, as well as given the knowledge and habits which assure his earning power, much would be done towards saving the very poor from temptation and suffering. School Savings Banks have already yielded excellent results in this direction, at the same time that they have helped to check and prevent pauperism, crime, prodigality and various vices, and lead children to the road of thrift and frugality.

The united effect of the practical lessons of thrift and economy is a clearing out of the intellectual avenues which open upon the moral faculties. By the ennobling power of truth revealed to children and by good surroundings, some uplift is given to their thoughts and purposes towards that life of honest industry and rational enjoyment which makes him who lives it a satisfaction to himself and a blessing to society."

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

LIABILITY OF STOCKHOLDER—CHARACTER OF—STATUTE OF LIMITATIONS.

Supreme Court of the United States, March 6, 1904.

ADOLPHUS F. MCCLAINE *vs.* GEORGE C. RANKIN, AS RECEIVER OF THE FIRST NATIONAL BANK OF SOUTH BEND.

The statutory liability of a stockholder of a National bank for the debts of the bank is not a liability arising upon contract.

Under the statute of limitations of the State of Washington an action to enforce the liability of such a stockholder must be brought within two years after the assessment is made.

In error to the United States Circuit Court of Appeals for the Ninth Circuit to review a judgment affirming, on a second writ of error, a judgment of the Circuit Court for the District of Washington, overruling a demurrer setting up the statute of limitations in an action to enforce the statutory liability of a shareholder in a National bank.

The First National Bank of South Bend, Washington, became insolvent and was closed on August 10, 1895, and on the seventeenth day of the same month one Heim was appointed Receiver, who was succeeded by Aldrich, and Aldrich by George C. Rankin.

August 17, 1896, the acting Comptroller of the Currency levied an assessment against the shareholders of the bank in enforcement of their statutory liability. Adolphus F. McClaine was one of the stockholders, was notified of the levy, and demand was duly made of him to pay the assessment on or before September 17, 1896, and shortly thereafter an action was commenced against him by the Receiver to recover the same. Pending the action, efforts to settle the claim were made. Subsequently, the action was dismissed. Thereupon the Receiver brought an action against McClaine upon an alleged contract of compromise, which went to trial, and the Receiver took a non-suit. The present action was then brought on the assessment, August 15, 1899, and McClaine set up the statute of limitations by demurrer, which the circuit court sustained, and dismissed the action. (98 Fed. 378.) The cause was taken to the circuit court of appeals, and the judgment of the circuit court reversed. (45 C. C. A. 631, 106 Fed. 791.)

The case having been remanded, the circuit court overruled the demurrer, McClaine answered, and a trial was had, resulting in judgment for the Receiver, which was affirmed by the circuit court of appeals. This writ of error was then brought.

Mr. Chief Justice Fuller delivered the opinion of the court:

It is conceded that, in the absence of any provision of the act of Congress creating the liability, fixing a limitation of time for commencing actions to enforce it, the statute of limitations of the particular State is applicable. (Rev. Stat. 721, U. S. Comp. Stat. 1901, p. 581; Campbell vs. Haverhill, 155 U. S. 610, 39 L. ed. 280, 15 Sup. Ct. Rep. 217.)

If, then, this action was barred by the statute of limitations of the State of Washington, that ended it, and both judgments below must be reversed and the cause remanded to the circuit court, with a direction that judgment be entered for defendant.

Reference to the State statutes shows that subd. 2 of § 4798 relates to "an action upon a contract in writing, or liability, express or implied, arising out of a written agreement;" while subd. 3 of § 4800 relates to "an action upon a contract or liability, express or implied, which is not in writing, and does not arise out of any written instrument." The one relates to contracts or liabilities growing out of contracts in writing, and the other to contracts or liabilities growing out of contracts not in writing. The Receiver's contention is that the case falls within subd. 3 of § 4800, imposing the limitation of three years. If it does not, it is not otherwise provided for, and falls within § 4805, which fixes the limitation at two years.

And as this action was commenced within three years, but not within two years, after the assessment became due and payable, the question is whether subd. 3 of § 4800 applies.

It is contended that the meaning of the word "liability" as used in that subdivision is not restricted to contract liabilities, but, reading it with subd. 2 of § 4798, and in view of the enumeration of other actions to enforce liabilities, we think that this cannot be so, and, indeed, the subdivision has been construed by the Supreme Court of Washington as applicable only to contracts. (Suter vs. Wenatchee Water Power Co. 35 Wash. 1; Sargent vs. Tacoma, 10 Wash. 212.)

The circuit court was of that opinion when the case was originally disposed of, and held that the cause of action arose by force of the statute, and did not spring from contract. (98 Fed. 378.) But that judgment was reversed by the circuit court of appeals on the ground that the liability was not only statutory, but contractual as well, and that the limitation of three years applied in the latter aspect. (45 C. C. A. 631, 106 Fed. 791.) Conceding that a statutory liability may be contractual in its nature, or more accurately, quasi-contractual, does it follow that an action given by statute should be regarded as brought on simple contract, or for breach of a simple contract, and, therefore, as coming within the provision in question?

The National Bank Act provides that "the shareholders of every National banking association shall be held individually responsible, equally and ratably, and not one for another, for all contracts, debts, and engagements of such association, to the extent of the amount of their stock therein, at the par value thereof, in addition to the amount invested in such shares." (Rev. Stat. § 5151, U. S. Comp. Stat. 1901, p. 3465.)

And under other sections the duty is imposed on the Comptroller of the Currency to give the creditors of an insolvent National bank the benefit of the enforcement of this personal liability, and to decide whether the whole, or a part, and, if only a part, how much, shall be collected, he being also authorized to make more than one assessment, as circumstances may require. (Kennedy vs. Gibson, 8 Wall. 498; Studebaker vs. Perry, 184 U. S. 258; and cases cited.) But even his decision does not determine the liability except as to contracts, debts, and engagements of the bank lawfully incurred. (Schrader vs. Manufacturers' Nat. Bank, 133 U. S. 67.)

The liability is conditional, and statutes of limitation do not commence to run until after assessment has been made. (McDonald vs. Thompson, 184 U. S. 71.)

In the latter case the statute of Nebraska provided (§ 10) that actions must be commenced within five years, "upon a specialty, or any agreement, contract, or promise in writing, or foreign judgment;" and (§ 11) within four years "upon a contract not in writing, express or implied; an action upon a liability created by statute other than a forfeiture or penalty."

The action was brought on an assessment upon the stockholders of a National bank to the amount of the par value of the shares, and not to recover an amount unpaid on the original subscription, and it was held that the five year limitation did not apply, because the cause of action was not upon a written contract, but that the four year limitation applied, "whether the promise raised by the statute was an implied contract not in writing or a liability created by statute," no distinction between them as to the limitation being made by the State statute. And Mr. Justice Brown, speaking for the court, said: "Whether the promise raised by the statute was an implied contract, not in writing, or a liability created by statute, it is immaterial to inquire. For the purposes of this case it may have been both. The statute was the origin of both the right and the remedy, but the contract was the origin of the personal responsibility of the defendant. Did the statute make a distinction between them with reference to the time within which an action must be brought, it might be necessary to make a more exact definition; but, as the action must be brought in any case within four years, it is unnecessary to go farther than to declare what seems entirely clear to us, that it is not a contract in writing within the meaning of § 10 of the Nebraska act." And it was also said: "Granting there was a contract with the creditors to pay a sum equal to the value of the stock taken, in addition to the sum invested in the shares, this was a contract created by the statute, and obligatory upon the stockholders by reason of the statute existing at the time of their subscription; but it was not a contract in writing within the meaning of the Nebraska act, since the writing—that is, the subscription—contained no reference whatever to the statutory obligation, and no promise to respond beyond the amount of the subscription. In none of the numerous cases upon the subject in this court is this obligation treated as an express contract, but as one created by the statute and implied from the express contract of the stockholders to take and pay for shares in the association."

In the present case the limitation imposed on an action upon a statute for penalty or forfeiture, where an action was given, was three years (subd. 6, § 4800), and on any other action to enforce a statutory liability was two years, because not otherwise provided for, and, therefore, the question must be met whether this is an action brought on a contract or not. But it is an action to recover on an assessment levied by the Comptroller of the Currency by virtue of the act of Congress, and although the shareholder, in taking his shares, subjected himself to the liability prescribed by the statute, the question still remains whether that liability constituted a contract within the meaning of the statute of limitations of the State of Washington.

Some statutes imposing individual liability are merely in affirmation of the common law, while others impose an individual liability other than that at common law. If § 5151 had provided that subscribing to stock or taking shares of stock amounted to a promise directly to every creditor, then that liability would have been a liability by contract. But the words of § 5151 do not mean that the stockholder promises the creditor, as surety for the debts of the corporation, but merely impose a liability on him as secondary to those debts, which debts remain distinct, and to which the stockholder is not a party. The liability is a consequence of the breach by the corporation of its contract to pay, and is collateral and statutory. (Brown vs. Eastern Slate Co. 134 Mass. 590; Platt vs. Wilmot, 193 U. S. 602; Matteson vs. Dent, 176 U. S. 521.) The stock still stood in the name of the decedent, and it was decided that the statutory liability was a debt within the State law, but not that it was a true contract.

It is true that in particular cases the liability has been held to be, in its nature, contractual, yet, it is nevertheless conditional, and enforceable only according to the Federal statute, independent of which the cause of action does not exist; so that the remedy at law in effect given by that statute is subject to the limitations imposed by the State statute on such actions.

Cases such as (Carrol vs. Green, 92, U. S. 509, and Metropolitan R. Co. vs. District of Columbia, 132 U. S. 1) are not controlling, for in them the right to recover was direct and immediate, and not secondary and contingent.

In Metropolitan R. Co. vs. District of Columbia, the charter of the company provided "that the said corporation hereby created shall be bound to keep said tracks, and for the space of two feet beyond the outer rail thereof, and also the space between the tracks, at all times well paved and in good order, without expense to the United States or to the city of Washington." The declaration set out a large amount of paving done by the city, which it was averred should have been done by the company. The action was based on the implied obligation on the part of defendant to reimburse plaintiff for moneys expended in performing the duty which the statute imposed on defendant.

In Carrol vs. Green it was said: "According to the statute, the liability of 'each stockholder' arose upon 'the failure of the bank.' The liability gave at once the right to sue; and, by necessary consequence, the period of limitation began at the same time."

But here the right to sue did not obtain until the Comptroller of the Currency had acted, and his order was the basis of the suit. The statute of limitations did not commence to run until assessment made, and then it ran as against an action to enforce the statutory liability, and not an action for breach of contract.

We think that subd. 3 of § 4800 did not apply, and that § 4805 did.

The judgment of the Circuit Court of Appeals is reversed; the judgment of the Circuit Court is also reversed, and the cause remanded to that court with a direction to sustain the demurrer and enter judgment for defendant.

Mr. Justice White, with whom concur Mr. Justice Brown and Mr. Justice McKenna, dissenting.

LOST BANK NOTES—WHEN ACTION MAY NOT BE MAINTAINED.

Supreme Court of Louisiana, January 4, 1905.

PELLETIER *vs.* STATE NATIONAL BANK.

In a suit on bank notes purporting to have been issued in 1856, and which are genuine on their face, mere possession makes out a prima facie case in favor of the holder; and the burden of proof rests on defendant to show, as alleged, that such notes were not issued by its precedessor bank, but were lost or stolen, and that plaintiff acquired the same in bad faith or with notice.

Where the evidence shows that such notes were not issued or put in circulation, but were lost or stolen, and came into plaintiff's possession in 1901, and his own account of how he acquired same is either false, or shows a purchase from an "old woman," not named or identified, for the insignificant price of $25, more or less, for above $10,000 of notes of a solvent bank, plaintiff will be treated as a finder of such notes, or as having acquired the same with notice of all the facts, and subject to all equities.

Where the evidnce shows that plaintiff, through the interposition of third person acting as his secret agents, and prior to the institution of this suit, collected from defendant bank some of the notes so found or acquired by him, and that such payments were made by the officers in ignorance of the facts of the case, plaintiff will be condemned to restore the money thus unduly received by him.

(Syllabus by the court.)

On April 18, 1902, plaintiff filed his petition alleging that the defendant corporation owed him $9,185, with five per cent. interest thereon from March 19, 1902, until paid, as "the holder and owner, bona fide, and for a valuable consideration, acquired in the usual course of business," of certain bank notes issued by the Louisiana State Bank on April 11, 1856. The notes were described in the petition as $5 and $10 bills of certain series, duly signed by the officers of said bank.

The defendant corporation in 1870 became the successor of the Louisiana State Bank, and, as such, bound for its obligations. The latter was authorized in 1856 to issue bank bills. The petition alleged presentment of said bills for payment to defendant bank on March 19, 1902, and its refusal to pay the same.

The bank admitted the execution of the bills sued on, but averred that the plaintiff was not a bona fide holder, having obtained possession "surreptitiously and without legal right or valid consideration."

The defendant charged that plaintiff knew that the notes had not been issued or put in circulation by the bank, and that the party or parties from whom he obtained them were not in lawful possession of the same.

The answer further charged that plaintiff had a few of said notes presented by different persons at different times to the bank for payment, in order not to arouse suspicion, and that such notes for small amounts were paid in error, from time to time, and that the suspicion of the bank officials was not aroused until a demand was made for the payment of notes exceeding $4,000 in the aggregate, whereupon the books of the old bank were examined, and it was then discovered that the notes had never been issued or put in circulation, but had been lost or stolen, and the defendant so averred.

The answer pleaded further the prescription of 10 and 30 years, and alleged that plaintiff had, in bad faith, and through different persons, collected, and defendant had paid, in error, from time to time, similar notes aggregating $1,180, which sum defendant claimed in reconvention, with interest from December 26, 1901.

The case was tried, and there was judgment in favor of the plaintiff, from which defendant prosecuted this appeal.

LAND, *J.*: The judgment of the court *a qua* was based on the following propositions, to wit:

"The defense that the instruments sued on were lost cannot prevail, for the reason that the bank has not conformed to the requirements of the law as contained in Articles 2279, 2280, Civ. Code.

The defense that they were stolen must be shown by affirmative testimony, and that plaintiff had knowledge of the theft at the time he acquired possession of them. This the bank has failed to do."

In his opinion the trial judge said:

"The testimony to show that the bills or notes were never issued is barely sufficient for that purpose, although this fact may be considered here as proved."

It is clear that this case is not one where a lost instrument is made the foundation of a suit or defense, because the instruments sued on were produced and filed in evidence. Hence the articles of the Civil Code cited, permitting the introduction of secondary evidence of the contents of an instrument lost or destroyed, and in the former case requiring advertisement of loss, have no application.

The defense set up in the answer was that the notes sued on were not issued and put in circulation by the bank, but were lost or stolen, and that the plaintiff's possession of the same was in bad faith. Hence the contention that the notes were lost should have been considered as an element in the determination of the case, which seems to have been decided on the theory that plaintiff was entitled to recover, because the defendant had failed to prove affirmatively that the bills were stolen, and plaintiff had knowledge of the theft.

The bills in question were signed by the proper officers of the bank, and were apparently valid on their face.

The bank kept a record of all bills issued during its existence. In this record such bills were denominated "checks," and on the top of each page the denomination is given thus: "Five Dollars Checks." Immediately following appears a statement or proces verbal in form as follows:

"Payable to Bearer and numbered and dated by ——— and signed by ———Pres. and ——— Cashier ——— dated ——— 1856.

Issued per Resolution of ——— 1856."

Beneath such caption, properly filled out, appear the numbers and series of the checks.

The entry on the registry as to the $5 bills sued on is preceded by no caption or proces verbal whatever, and in a number of instances the series is not given.

The entry of the $10 bills or checks is regular in form, but on the margin is written, "Not issued," in the handwriting of the then Cashier of the bank.

In the latter part of the year 1901 a large number of the $10 bills and of the $5 bills referred to, aggregating $10,365, reappeared in the possession of the plaintiff. Thus it is shown that the $10 bills certified on the record as not issued were found in company with the $5 bills, which the record shows were not certified as issued, and plaintiff admits that all were in one and the same trunk when they came into his possession. These bills found in possession of plaintiff more than forty-five years after their date were new, crisp, clean, and the numbers ran in regular sequence, which would not have been the case, had they been put in circulation during the existence of the bank. It is not credible that these bills were issued in globo, and kept in globo for forty-five years by the holder or holders thereof.

We therefore think that the evidence establishes with a reasonable degree of certainty that the bills sued on were never issued and put in circulation by the bank in the year 1856 or subsequently, but were either lost or stolen.

Hence we must consider the law applicable to such a state of facts as against the possessor of such bills.

In Bank vs. Bank, 9 Mart. (O. S.) 398, it was held that possession is prima facie evidence of property in a bank note alleged to have been stolen from the holder, and that the burden of proof was on the defendant bank to show that plaintiff bank received the note in bad faith, and with a knowledge that it was stolen. The note was in circulation, and had been stolen from the holder, and there was no evidence to show how plaintiff had acquired it.

Where a stolen bank note has been acquired for full value, in the usual course of business, and without any notice of the circumstances, the holder will recover; but the finder of a bank note acquires no title as against the owner. (Daniel, Neg. Ins. [5th Ed.] 1674.)

The same author states the American doctrine to be that a holder of a bank note "can rest secure in its possession, as the evidence of his right to recover, until the defendant shows that he was in privity with the fraud, or acquired the note mala fide or with notice." (Id. 1680.)

This distinction between bank notes and other negotiable instruments is not admitted in England, except as to the notes of the Bank of England; and the American doctrine seems to rest on the difficulty, if not impossibility, of a business man proving when or where, or from whom, or for what consideration, he received any particular bank notes in his cash drawer. (Id.)

The sum and substance of all the authorities cited by counsel is that a bank bill stolen from a bank and fraudulently put in circulation is good, as against the bank, in the hands of a bona fide holder for value, and that the mere possession of any holder is sufficient to impose the burden of proof on the bank to show the fraud or bad faith of the plaintiff. The same principle applies to bank bills which have been lost by the bank.

But neither the thief, nor the finder, nor the holder in bad faith, who has good reason to believe that the bill has been stolen or lost, can recover on the instrument.

The crucial question in this case is whether the evidence shows that plaintiff was a holder in bad faith.

The testimony of the plaintiff is so shuffling and evasive that it is difficult to extract therefrom any intelligent statement of how he acquired possession of the bank bills in controversy. He purchased them from an "old woman," but cannot give her name, though he had dealings with her a number of times, and took her receipts, which, however, he failed to produce. When asked to state the residence of this "old woman," he replied, "Somewhere in the city of New Orleans," and, when further questioned, named a particular street, but could not locate the square, though he had been to her house "twelve times." This "old woman" was not produced, nor her absence accounted for. Question after question was asked him in vain, with the view of extracting a statement of the amount he paid for the notes sued on. The following is a sample of his replies:

"Q. How much did you pay her for the $9,190?

A. I bought the whole trunk. I bought some furniture, and there was some books, and some Confederate notes, and some other notes.

Q. How much did you pay for the whole lot?

A. I would have to look for some receipts. I don't know if I got them or not.

Q. How much did you pay for the old trunk, the old notes, the old Confederate money, and the old furniture?

A. I can't remember."

The inquiry was pursued on the same line at great length in order to get some definite answer as to what was paid for the old trunk and contents, including the notes sued on, but the witness could not remember whether the sum paid was less or more than $25. In short, the witness would or could not state any sum whatever.

When the plaintiff obtained possession of these notes, he did not consider them as having any value as money. He caused them to be hawked around through third persons, and offered for sale as curios in the same manner as Confederate notes. Several packages of these notes were offered to Hawkins, the well-known dealer in art antiques. He made three purchases, taking, in all, 13 $5 bills, for which he paid seventy-five cents. Two of these sales were made by two young men, one of whom was the son of plaintiff. Mr. Hawkins testified that the notes were brand new—never had been handled—and the numbers ran equally or in rotation, and that he told the parties selling that the notes were of no value, and could not have been issued or circulated.

Another dealer in antiques declined to purchase on any terms.

According to plaintiff's testimony, he made a number of purchases of bank notes from the "old woman," and, after the bank had paid a few of the notes, he made the deal by which he acquired the notes sued on. If he did so, he committed a fraud on his vendor; paying about $25 for $10,365 of good bank paper. If, however, plaintiff purchased from a person who offered to take that insignificant price, he is chargeable with implied notice that there was something wrong about the transaction; and, if he took the notes without inquiry, he should not be protected. Such conduct "may be regarded as willful or fraudulent blindness, and abstinence from injury, so great as to amount to evidence of bad faith." (Daniel, supra, 777a.)

The same writer says:

"Where the plaintiff, knowing that the maker was able to pay, bought his note for $300 from a third party, paying only $5, and the note had been executed without consideration, it was held the mere nominal price charged him with constructive notice of the defect." (Id. 778.)

Plaintiff, on his own showing, purchased above $10,000 of bank notes from a poor "old woman" for an insignificant price, without making any inquiry whatever. Her possession of such an amount of notes was suspicious, and her willingness to sell for a nominal price was more suspicious. Plaintiff, if blind, was willfully blind, and he cannot be considered otherwise than a purchaser in bad faith and with notice. The bank received no consideration for the notes, and plaintiff cannot be permitted to enrich himself at the expense of defendant corporation.

In our estimation of the facts of this case, plaintiff tried, but failed, to show title by purchase, or how he came into possession of the notes in controversy, and must be considered in no better position than the finder of bank notes never issued, and either lost or stolen.

He did not present the notes for payment, as any holder in good faith would have done, but presented small numbers at different times, through the interposition of third persons, one of whom was a note broker, who received for his services 10 per cent. of the amount collected. The notes so presented appeared to be genuine, and were paid by defendant bank in ignorance of the facts; its officers, however, taking a memorandum of each payment, and of the name of the person receiving the same. Suspicion was not aroused until plaintiff's son claimed that he had a large amount of such notes. The matter was then investigated, and it was ascertained that the bills in question had not been issued by the former bank. It may be here stated that no bills of said bank had been presented for redemption to its successor for a number of years, but that the payments were made on the supposition that some of such bills might be outstanding, in the hands of bona fide holders.

He who receives what is not due him obliges himself to restore it to him from whom he had unduly received it. (Civ. Code, art. 2301.)

It is therefore ordered, adjudged, and decreed that the judgment appealed from be annulled, avoided, and reversed; and it is now ordered and decreed that plaintiff's demand be rejected, and his suit dismissed, with costs; and it is further ordered and decreed that defendant herein, the State National Bank, do have and recover of the plaintiff, J. B. Pelletier, the full sum of $1,180, with 5 per cent. interest thereon from December 26, 1901, until paid, and all costs of said defendant's reconventional demand.

TRUST COMPANY—LIABILITY ON PROMISSORY NOTE—ULTRA VIRES —IRREGULAR INDORSEMENT.

Supreme Court of Missouri, March 16, 1905.

FIRST NATIONAL BANK OF KANSAS CITY *vs.* GUARDIAN TRUST COMPANY.

One who writes his name on the back of a note of which he is neither payee nor indorsee becomes prima facie liable as a co-maker.*

Where a trust company executed a note to enable a corporation it was financing to obtain a loan, and which became co-maker of the note, and the payee advanced the money to such corporation; Held, that the trust company could not set up as a defense that the note was in excess of its powers.

This was an action on a promissory note by the First National Bank of Kansas City against the Guardian Trust Company.

The Kansas City Suburban Belt Railroad Company is a corporation organized under the railroad laws of Missouri on the —— day of January, 1887, for the purpose of building and operating a belt railroad around Kansas City. About two years afterwards, namely, in February, 1889, the Guardian Trust Company was organized under the general trust company law of Missouri, as it then existed, as the Missouri, Kansas and Texas Trust Company. Afterwards this name was changed to its present name, Guardian Trust Company. Mr. E. L. Martin was the president of the Kansas City Suburban Belt Railroad Company from the time of its incorporation continuously until after the time in which the transactions in controversy were had; and soon after the organization of the Guardian Trust Company he became the Vice-President of the trust, company and continued in such position until after the transactions involved in this controversy were had. On September 22, 1899, long after the Kansas City Suburban Belt Railroad was finished and put in operation, Mr. Martin, as president of the railroad company, went to the plaintiff bank, and made application to Mr. Swinney, its President, to borrow $25,000 for the railroad company. Mr. Swinney asked him what collateral he wanted to give, and Mr. Martin replied that he did not have any at that time. Swinney then told him that he could not make the loan or take the note of the railroad company without collateral or security. It was then suggested by Mr. Martin or Swinney that the Guardian Trust Company should go on the paper as surety, and Swinney, for the bank, consented to make the loan to the railroad company if the Guardian Trust Company would become surety on or indorse the paper. In pursuance of this understanding between Martin, representing the railroad company, and Swinney, representing the bank, the following note was made and executed by the railroad company, and indorsed by the Guardian Trust Company, and delivered to the bank, and $25,000 was deposited by the bank to the credit of the Kansas City Suburban Railroad Company. This deposit was made by the plaintiff in its own bank. The note was as follows: "$25,000.00. Kansas City, Mo., Sept. 22, 1899. Ninety days after date, for value received, we promise to pay to the order of the First National Bank, Twenty-five Thousand and no-100 Dollars at its office in Kansas City, Mo., with interest from maturity at the rate of eight per cent. per annum. Kansas City Suburban Belt R. R. Co., by E. L. Martin, Prest." Indorsed: "Guardian Trust Company, by E. L. Martin, Vice-President."

When the note became due, it was not paid, but was renewed by giv-

---

* This rule has now been changed in Missouri by the Negotiable Instruments Law, which provides: "Where a person, not otherwise a party to an instrument, places thereon his signature in blank before delivery, he is liable as indorser in accordance with the following rules:

1. If the instrument is payable to the order of a third person, he is liable to the payee and to all subsequent parties.
2. If the instrument is payable to the order of the maker or drawer, or is payable to bearer, he is liable to all parties subsequent to the maker or drawer.
3. If he signs for the accommodation of the payee he is liable to all parties subsequent to the payee."

(Section 114, New York Act.)

ing another like note; the only difference being that the indorsement of the trust company in the latter case was signed by F. B. Wilcox, Assistant Treasurer, instead of E. L. Martin, Vice-President of the trust company When this second note matured it was not paid, but was again renewed by giving another similar note. The last-mentioned note (being the one sued on in this action) differed from either of the two former notes only in that it ran for sixty instead of ninety days, and the name of the Guardian Trust Company was signed by F. B. Wilcox, Manager, and is as follows: "$25,000.00. Kansas City, Mo., Mch. 26, 1900. Sixty days after date, for value received, we promise to pay to the First National Bank or order, Twenty-five Thousand Dollars at First Nat'l Bank, K. C., Mo., with interest after maturity at 7 per cent. per annum until paid. . Kansas City Suburban Belt R. R. Co., by E. L. Martin, Prest. No. 34348. Due May 28, 1900." Indorsed: "Guardian Trust Company, by F. B. Wilcox, Manager."

The $25,000 borrowed by the Belt Railroad Company was deposited to its credit in plaintiff bank, and was all checked out by the railroad company to pay its own obligations. The Guardian Trust Company never received any of the money.

Fox, *J.*: The first proposition presented to our consideration on the record in this cause is embraced in the contention of the appellant that, even if the defendant was liable upon the contract sued on, his liability was that of an accommodation indorser, and he was erroneously held liable as maker under the first count in the petition.

The facts in this case clearly show that defendant's name was indorsed on the back of this note before its delivery to the plaintiff, and there is an absence of any testimony indicating any understanding or stipulation that it should be held simply as an indorser.

The defendant, being neither a payee nor indorser in said note, must be treated prima facie as a co-maker. It was ruled in Kuntz vs. Tempel, 48 Mo., loc. cit. 76, that if a defendant placed his name on the back of a note, and if the act was done to give the note credit with the payee, and before it was accepted by him in satisfaction of the debt due from the maker, he was a surety, and not an indorser, unless he expressly stipulated that he should be held as indorser.

This rule was approved and followed in the case of Boyer vs. Boogher, 11 Mo. App., loc. cit. 131. It was said in that case that "it has long been the settled law in this State that one who writes his name on the back of a note of which he is neither payee nor indorser becomes prima facie liable as a co-maker, and will be held to be such in the absence of extrinsic evidence, and it was the contract or understanding of the parties at that time he so indorsed it that he should be liable only as indorser."

To the same effect is Schmidt Malting Co. vs. Miller, in 38 Mo. App., loc. cit. 254. In that case the court very clearly announced the rule applicable to this proposition. It thus stated the law: "The note offered in evidence made the defendant prima facie liable as maker. (Powell vs. Thomas, 7 Mo. 440 [38 Am. Dec. 465]; Lewis vs. Harvey, 18 Mo. 74 [59 Am. Dec. 286]; Kuntz vs. Tempel, 48 Mo. 71; Boyer vs. Boogher, 11 Mo. App. 130.)

To avoid such a liability, it was incumbent upon him to show that there was a contract or understanding between him and the payee that he should be bound only as technical indorser, or indorser in the technical legal sense, as the use of the word 'indorser' by the parties to the contract does not of itself constitute such proof. (Boyer vs. Boogher, supra.") * * *

This brings us to the consideration of the only remaining and most important proposition involved in this controversy; that is, did defendant have power to execute this note under the circumstances surrounding its execution—in other words, under the testimony as disclosed by the record before us, was the act of the defendant in the execution of this note a valid one, or was it ultra vires and void? While this correctly states the main proposition involved, it embraces also the further proposition—conceding that, in the execution of this note, for the purposes indicated by the testimony, it exceeded its powers conferred upon it by the statute—upon the undisputed facts surrounding the execution of this note, is defendant in a position to avail itself of the defense of ultra vires?

The powers conferred upon the defendant, as applicable to the disputed questions in this case, may be thus stated: Section 1,427, Rev. St. 1,899, provides that: "Corporations may be created under this article for any one or more of the following purposes: * * * Fourth. To act as agent or attorney in fact for any person or corporation in the management and control of real or personal property and the sale or conveyance of the same, and for the investment of money, and to act for and represent corporations or persons under power and letters of attorney and as agents for persons and corporations for the purpose of issuing, registering, transferring or countersigning the certificates of stock, bonds, or other evidences of debt of any corporation, association, municipality, State or public authority, on such terms as may be agreed upon. Fifth. To accept from and execute trusts for married women in respect to their separate property, whether real or personal, and act as agent for them in the management of such property and generally to have and exercise such powers as are usually had and exercised by trust companies. Sixth. To act as executor under last will or as administrator of the estate of any deceased person, or as guardian or curator of any infant, insane person, idiot or habitual drunkard, or trustee for any convict in the penitentiary, under the appointment of any court of record having jurisdiction of the person or estate of such deceased person, infant, insane person, idiot, habitual drunkard or convict. Seventh. To guarantee the fidelity and diligent performance of their duty of persons or corporations holding places of public or private trust; to guarantee or become surety on any bond given by any person or corporation, and to reinsure or guarantee any person or corporation against loss or damage by reason of any risk assumed by insuring the fidelity or diligent performance of duty of any such person or corporation, or by guaranteeing or becoming surety on any bond; to guarantee the principal or interest, or both, of any securities of any kind, and to certify and guarantee titles to real estate. Eighth. To loan money upon real estate and collateral security, and execute and issue its notes and debentures, payable at a future date, and to pledge its mortgages on real estate and other securities as security therefor, which notes and debentures may be issued to an amount not exceeding, in the aggregate, ten times the amount paid up on the capital stock of the company issuing the same, and shall in no case exceed the amount of first mortgages pledged to secure their payment. Ninth. To buy and sell all kinds of Government, State, municipal and other bonds and all kinds of negotiable and non-negotiable paper, stocks and other investment securities."

Counsel for appellant, as well as respondent, very fully and ably presented the controverted legal propositions involved in this case, not only in their oral arguments, but by exhaustive briefs, fully covering all the questions presented by this record. At the very inception of the investigation of the important questions presented by counsel, we are confronted with at least an apparent conflict in the authorities, but a careful analysis of the cases treating of the subject under discussion demonstrates that the conflict is more apparent than real. The difficulty which has confronted the courts in the treatment of this question as to the exercise of powers by private business corporations conferred upon them has not been in the application of the well-settled general rule that corporations can only exercise such powers as are authorized by their charter, but it has been in the announcement of the exceptions to such general rule made necessary by reason of the particular conditions and circumstances surrounding the transaction in which the power is sought to be exercised. Morawetz, in his work on Private Corporations, fully recognized this difficulty. He says:

"No rule can be framed which would be of any practical value in determining cases of this character. The most that can be done is to state the general principles which have influenced the courts in their decisions, and to illustrate these general principles by examples. The application of the law to individual cases must always remain a matter involving the exercise of sound practical judgment and business experience. Great caution is therefore necessary in treating a decision that a corporation has or has not authority to do a particular act as a precedent to be followed in other cases. Such a decision would not establish an absolute rule which could be applied mechanically, but all the facts and the general principles by which the court was guided in reaching its conclusion must always be considered. It is important also to bear in mind that the fact that a transaction of a corporation has been sustained

3

by a court does not necessarily prove that the corporation has a right to enter into it. There are many instances in which the court will disregard the illegality of a transgression by a corporation of its chartered powers in order to do justice between the parties."

The contention so ably presented by counsel for appellant is that the act of the Guardian Trust Company in the execution of the note in suit was unauthorized by the statute under which the trust company was organized, and is therefore void. This leads us to a consideration of the conditions and circumstances surrounding the execution of this note. That the Guardian Trust Company and the Kansas City Belt Railway Company, for whom this money was procured from the bank, the plaintiff, were not strangers, is made apparent from the undisputed facts of this case. The undisputed testimony shows that the Guardian Trust Company was deeply interested in the ultimate success of the purposes of the Kansas City Belt Railway Company. Upon the organization of the Guardian Trust Company, for many years it undertook to successfully promote and finance the Belt Railroad Company. It bought the bonds and considerable of the stock of the railroad company. From time to time it advanced money from its own treasury to put it upon an operating basis. In fact, the testimony indicates that the principal business of the defendant after its organization was the organization and promotion of numerous corporations. The president of the railroad company at the time of the execution of this note was also the vice president of the trust company, and the testimony of this official, as disclosed by the record, clearly indicates the deep interest the defendant had in the success of the railroad company in the accomplishment of the purposes for which it was organized. That the business relations between the defendant and the Belt Railroad Company were close, and that the defendant was a large creditor of said railroad company, and therefore was interested in maintaining it as a going concern, cannot be disputed, in view of the evidence disclosed by the record. In fact, the witnesses, in referring to the railroad company and other corporations that had been financed by the defendant, referred to them as "subcompanies."

The plaintiff, First National Bank, was fully aware of the business relations between the defendant and the railroad company, and of its course of dealing with it, in the way of furnishing the finances for its operation; hence it was natural for the bank to conclude, in the execution of this note, that it was simply in pursuance of a business policy that had been adopted by the trust company in taking care of the financial condition of the Belt Railroad Company.

It was earnestly argued that the plaintiff knew that no part of the money secured upon this note went to the Guardian Trust Company. That may be true, but it is equally true that the bank had a right to presume, in the execution of this note, that the Guardian Trust Company was still pursuing its policy for a long time previously adopted in financing the railroad company. While no part of the consideration embraced in this note was applied to the benefit of the Guardian Trust Company, it does not necessarily follow that it was executed as purely a matter of accommodation. It had the right, under the powers conferred by the statute, to act as agent in the managament and control of the property of the railroad company, and to take such steps in the way of financing the company as it deemed proper and appropriate, and the consideration for the act performed by the defendant in the interest of the railroad company was a matter to be settled between them; and, in view of the relations existing between these two companies, and the policy adopted by the defendant in financing the railroad company, the plaintiff could well rest upon the presumption that the making of this note was in pursuance of the former policy of the defendant, and for such consideration as they may have seen proper to agree upon.

The contract in this case was fully executed on the part of the plaintiff, and its money was parted with by reason of the execution of the note by the defendant. This being true, the question confronts us, should the defense of ultra vires, as interposed by the defendant, be availing under the facts as disclosed by the record? We have reached the conclusion that it should not be. It may be conceded that, under the powers conferred upon the defendant by the statutes under which it was organized, it would not be authorized to simply engage in the business of becoming a purely accommodation maker or indorser of promissory notes.

Upon the facts in this case, this legal principle is not applicable to the questions herein presented. "When acts of corporations are spoken of as ultra vires, it is not intended that they are unlawful, or even such as the corporation cannot perform, but merely those which are not within the powers conferred upon the corporation by the act of its creation, and are in violation of the trust reposed in the managing board by the shareholders; that the affairs shall be managed and the funds applied solely for carrying out the objects for which the corporation was created." (Whitney Arms Co. vs. Barlow et al. 63 N. Y. 62, 20 Am. Rep. 504.)

While the testimony offered does not show that the defendant at the time of this transaction was a stockholder in the Belt Railroad Company, yet it is disclosed by the record that at one time it was a large stockholder, and that it is now a large creditor of that company. The record is silent as to the disposition of the stock owned in the railroad company by the defendant; hence it may be said that this fact of the defendant owning stock having been shown to have once existed, nothing to the contrary appearing, the presumption would be indulged that it still exists. Aside from this, the testimony of the officers rather indicates that at the time of the execution of this note it was a stockholder.

It is apparent that the execution of this note by the defendant was not purely a matter of accommodation, but was induced by reason of the interest in the railroad company, not only as a stockholder, but also as a creditor, and that the procuring of the money upon this note to pay the pressing indebtedness on the part of the railroad company was not only of interest to the defendant as a stockholder, but at least increased the chances of finally realizing from its debts against said company. It was under these circumstances that this note was executed, and the contract on the part of the plaintiff was fully performed upon the faith of such acts by the defendant.

The conclusion reached as indicated herein finds support in a number of well-considered cases in other jurisdictions, and is in keeping with that just rule, as announced by the New York courts, that the plea of ultra vires should not, as a general rule, prevail, whether interposed for or against a corporation, when it would not advance justice, but, on the contrary, would accomplish a legal wrong. Similar views are entertained by the Supreme Court of the United States.

In Ry. Co. vs. McCarty, 96 U. S., 267, it is said that "the doctrine of ultra vires, when invoked for or against a corporation, should not be allowed to prevail where it would defeat the ends of justice or work a legal wrong."

The defendant had been for a number of years financing the Belt Railroad Company. By the execution of this note it had received the benefit from the plaintiff in the performance of an undertaking it had long been engaged in (of furnishing the Belt Railroad Company with finances), and, having received the full consideration from the plaintiff in aid of the performance of a duty it had undertaken to perform in the interest of the Belt Railroad Company, it is in no position now (the contract having been fully executed on the part of the plaintiff) to say that its act was not within the powers conferred upon it by the statute.

The record in this case discloses further that, at a meeting of the stockholders of the defendant corporation, all of the acts of the directors, officers, and executive committee of the company had and taken since the last annual stockholders' meeting were fully ratified.

Upon the subject of acquiescence and ratification of acts performed by a corporation, the Supreme Court of New York in Kent vs. Quicksilver Mining Co., 78 N. Y. 159, clearly states the rule as approved by that court. It was said by the court in that case that, "in the application of the doctrine of ultra vires, it is to be borne in mind that it has two phases—one where the public is concerned; one where the question is between the corporate body and the stockholders in it, or between it and its stockholders, and third parties dealing with it, and through it with them. When the public is concerned to restrain a corporation within the limit of the power given to it by its charter, an assent by the stockholders to the use of unauthorized power by the corporate body will be of no avail. When it is a question of the right of a stockholder to restrain the corporate body within its express or incidental powers, the stockholder may in many cases be denied, on the ground of his express assent, or his intelligent though tacit consent, to the corporate action. If there be a departure from statutory direction, which is to be considered merely a breach of trust to be restrained by a stockholder, it is pertinent to consider what has been his conduct in regard thereto.

A corporation may do acts which affect the public to its harm, inasmuch as they are per se illegal or are malum prohibitum. Then no assent of stockholders can validate them. It may do acts not thus illegal, though there is want of power to do them, which affect only the interest of the stockholders. They may be made good by the assent of the stockholders, so that strangers to the stockholders, dealing in good faith with the corporation, will be protected in a reliance upon those acts."

"The general rules of law relating to contracts and private rights apply to corporations as well as to individuals, and the principles of law agency apply to both alike. The stockholders are the equitable owners of the corporate property, and if the officers or trustees do any unauthorized act, or incur indebtedness which would create a corporate liability, the stockholders may subsequently ratify and validate the original unauthorized transaction." (Martin vs. Niagara Falls Paper Co., 122 N. Y. 165, 25 N. E. 303.)

The conclusions reached in this case, however, do not rest upon the doctrine of ratification, and it is unnecessary to express an opinion as to our approval of this sweeping rule announced in the case cited by the New York court upon that subject. The weight of authority and the better reasons seem to be that, where the corporation has absolutely no authority to perform the act, the ratification by the stockholders would not make it valid. The ratification by the stockholders in the case at bar becomes significant, as indicating their acquiescence in the business policy pursued by the defendant toward the Belt Railroad Company.

We repeat in this case that the defendant had adopted a business policy in respect to the Belt Railroad Company—that of undertaking to finance the company, to the end that it might be successfully operated. The plaintiff in this case, in furnishing the money upon the execution of this note by the Belt Railroad Company, and the defendant, was rendering a benefit and aid to the defendant in carrying out a business policy it had so long pursued; and it would be grossly inequitable to permit the defendant, after fully receiving the assistance of the plaintiff in carrying out this undertaking to finance the Belt Railroad Company, and relieve it of a pressing indebtedness, to now say that it had exceeded its corporate powers, and interpose such want of power as a defense to this action.

As was said in the case of Wright vs. Pipe Line Co., 101 Pa., loc. cit. 207, 47 Am. Rep. 701: "The law never sustains a defense of this nature out of regard for a defendant. It does so only where an imperative wrong of public policy requires it. The instances are rare in which a corporation or individual has been permitted to set up its own wrong in order to retain both the property and its price. It would be difficult to imagine a defense with less merit, and the law would be exceedingly impotent, were it to allow it to succeed." So it may be said as to this case that it would be a humiliating confession as to the inefficiency of our system of jurisprudence in the administration of justice to hold that the defendant could receive the aid, assistance, and benefit from the plaintiff in carrying out an undertaking in which it had long been engaged—financing the Belt Railroad Company—and then, being called upon to answer by a contract for such aid and assistance, it simply says, "We were unauthorized to make the contract."

At this advanced age in our civilization, and the rapidity with which our commercial interests are advancing—methods and occasions for concentrating the efforts of our people in the prosecution of business by forming corporations multiplying from day to day—the time is at hand for the enforcement of the rule as announced by Lord St. Leonards in Eastern County R. Co. vs. Hawks, 5 H. L. C., loc. cit. 370, where it was said that "the safety of men in their daily contracts requires that this doctrine of ultra vires should be confined within narrow bounds."

There are no public interests involved in this case. The stockholders are the equitable owners of the corporate property. The plaintiff, as well as the president and vice president of the defendant corporation, in executing this contract, placed full faith in the power of the corporation to execute it. The stockholders selected their officers, and ratified their acts after the execution of the note; the interests of no third parties have intervened; the State is no party to this proceeding; and there are no principles of public policy or of the administration of justice which demand that the defense of ultra vires, as interposed in this case by the corporation itself, should be availing.

It was said in St. Louis Drug Co. vs. Robinson, 81, Mo., loc. cit. 26, that: "Conceding the facts to be as defendants allege, it is sufficient on this point to say that in a line of decisions of this court, unbroken except in the case of Matthews vs. Skinker, 62 Mo. 329, 21 Am. Rep. 425, it has been held that the question of ultra vires can only be raised in a direct proceeding by the State against the corporation, and not in a collateral proceeding by another, except when the charter of the corporation, not only specifies, and therefore limits it to, the business in which it may engage, but, by express terms, or by a fair implication from its term, invalidates transactions outside of its legitimate corporate business."

Without expressing any opinion as to the correctness of the rule announced in the case last cited, or its application to the facts of this case, it at least indicates very clearly the tendency of this court to follow the line of decisions as herein cited, which supports the conclusion that the defense of ultra vires is never sustained out of regard for a defendant, but only where an imperative rule of public policy requires it.

It is unnecessary to pursue this subject further, or to indulge in a review of the numerous authorities cited by counsel, or to give expression to our views as to the powers which can be lawfully exercised by the defendant, conferred under the statute granting such powers. For it may be conceded that the defendant is not authorized to indorse or execute promissory notes purely as an accommodation maker or indorser, yet, under the facts of this case, as disclosed by the record, the concession can be of no avail to the defendant. We must be content with simply saying that the defendant corporation, in the execution of this note and procuring the money from plaintiff for the railroad company, was simply carrying out a business policy in respect to financing said company which it inaugurated shortly after the organization of the railroad company. That by the execution of this note the defendant was given the aid and assistance of plaintiff in maintaining such policy, and the presumption which could be reasonably indulged by the plaintiff that the defendant received such consideration as was agreed upon between the defendant and the Belt Line Company for its efforts in providing the necessary finances for the conducting of the business of the railroad company. The officers of the respective corporations in good faith consummated this transaction, and, if the defendant can avoid the payment of the note in suit upon the plea that its act was a wrongful one, in excess of its powers, and void, then we confess that the maxim, which is as old as the law itself, that "no person can take advantage of his own wrong," is absolutely shorn of all its force and vitality under our system of jurisprudence.

The judgment of the trial court was right, and should be affirmed, and it is so ordered.

Brace, C. J., and Gantt, Burgess, and Lamm, *JJ*., concur. Marshall and Valliant, *JJ*., not sitting.

PROMISSORY NOTE—HOLDER IN DUE COURSE—RIGHT TO ENFORCE COLLATERAL.

Supreme Judicial Court of Massachusetts, March 3, 1905.

WHITE *vs.* DODGE, *et al.*

Where a negotiable promissory note is obtained by fraud, the title of the holder is voidable only, and a bona fide purchaser for value, who acquires the note before any measure taken to avoid it, is entitled to enforce the same. And in such case he is entitled to enforce security given as collateral, though such collateral security is not itself negotiable.

This was a bill in equity in which the female plaintiff, acting by her guardian, sought to set aside a note of $1,591.65, given by her to the defendant

Dodge, and by him indorsed to the defendant Conant, and also an assignment of a mortgage and note for $9,000, given to her by George B. White, and assigned by her to Dodge as collateral security for the first-mentioned note. The master to whom the case was referred found the facts in favor of the defendants upon nearly all the questions in issue. Exceptions to his report were overruled in the superior court, and a decree was entered for the defendants, from which the plaintiff appealed.

KNOWLTON, *C. J.* (omitting part of the opinion): A careful reading of the very voluminous report of evidence shows no error on the part of the master, material to his decision that "there is no ground for granting the relief prayed for in the plaintiff's bill." There is nothing in the testimony that leads us to doubt the correctness of his finding that "the defendant Conant was a bona fide purchaser of the said two notes and mortgage for value and without notice." The affirmative evidence on this point is clear and convincing. The note of $1,591.65 was payable on time, and was indorsed to the defendant Conant before maturity. The note and mortgage for $9,000, which had been assigned by the plaintiff to Dodge as security when she made the first mentioned note, were assigned by him to Conant as a part of the transaction when he transferred the other note.

The plaintiff's principal claim rests upon the alleged fraud of Dodge in obtaining the execution and delivery to him of these contracts. If he was guilty of fraud, as she alleges, the title which he obtained was voidable by her; but it was sufficient to enable him to give a perfect title to a bona fide purchaser for value, before she took measures to avoid it. (Rev. Laws, Chapter 73, Sections 69-74; Wheeler vs. Guild, 20 Pick. 545; Rowley vs. Bigelow, 12 Pick. 307-312; Hoffman vs. Noble, 6 Metc. 68; Moody vs. Blake, 117 Mass. 23-26.) This elementary proposition of law is a complete answer to the plaintiff's chief contention.

The plaintiff says that the note secured by the mortgage was not negotiable, because there is a provision in the mortgage that the mortgagor may pay it, if he chooses, before its maturity. The note itself contains no such provision, and is, in terms and in law, negotiable. But if, considering both the note and mortgage, a purchaser who takes them together has notice that he does not acquire, under all circumstances, all the rights of a purchaser of ordinary commercial paper (see Strong vs. Jackson, 123 Mass. 60); this is not material in the present case. For as between the maker and the payee, there was no infirmity in the mortgage note or in the mortgage. Together they constitute valuable property. They were assigned to Dodge. If the contract of assignment was voidable for fraud, his conveyance of them to a bona fide purchaser for value transferred a good title, just as such a conveyance, under similar circumstances, would give a good title to a stock of goods which the vendor had obtained by fraud. (See cases above cited. See, also, as to the effect of the previous record of the mortgage, Rev. Laws, Chapter 127, Section 5.)

The purchaser could therefore avail himself of the note and mortgage, and enforce them, without reference to the question whether the mortgage note was negotiable.

CONSOLIDATION OF BANKS—APPRAISEMENT OF STOCK.

Supreme Court of New York, Appellate Division, Second Department, March, 1905.

In the Matter of the Application of HENRY C. ROGERS for the Appointment of Appraisers.

To entitle a person objecting to the merger of one bank with another, to have appraisers appointed under Section 36 of the New York Banking Law, he must show that he is the actual owner of stock; and it is not sufficient that stock stands in his name if it belongs to another.

This was an appeal by the petitioner, Henry C. Rogers, from a judgment of the supreme court, entered in the office of the clerk of the county of Kings on June 1, 1903, upon an order entered in said clerk's office on May 28, 1903, which confirmed the report of a referee, recommending the dismissal of the petitioner's application, and also from the said order upon which the judgment appealed from was entered.

Per Curiam: This is an application by a person claiming to be a stockholder in the Union Bank of Brooklyn, and objecting to the proposed merger thereof with the Kings County Bank of Brooklyn, for the appointment of three persons to appraise the value of his stock under section 36 of the Banking Law (Laws of 1892, chap. 689, added by Laws of 1895, chap. 382). The referee, to whom the proceeding was referred to take proof, found that the petitioner, Henry C. Rogers, was not at the times mentioned in his petition the owner of any stock of the Union Bank. The evidence leaves no doubt of the correctness of this conclusion, for it shows that the 136 shares of stock which he claimed to own were in fact the property of one William H. Ziegler. We agree with the referee that section 36 of the Banking Law refers to the actual ownership of stock and not to shares standing in the name of one but really the property of another. The petitioner, Henry C. Rogers, was shown to have no interest entitling him to maintain this proceeding and it was, therefore, properly dismissed.

The order and judgment should be affirmed.

PROMISSORY NOTE—WHEN OFFICERS OF CORPORATION BOUND INDIVIDUALLY—NEGOTIABLE INSTRUMENTS LAW.

Supreme Court of Washington, April 29, 1905.

Daniel *vs.* Buttner, *et al.*

A note was executed upon a lithographed form bearing the name of a corporation, and was signed by the president and secretary of the corporation, who each affixed his official title to his name. The instrument did not purport to be executed by the corporation, and, though it bore the corporate seal, there was no reference thereto in the note. Held, that under Laws 1899, page 345, Chapter 149, Section 20, providing that the mere addition to one's signature of words describing him as filling a representative capacity, without disclosing his principal, does not exempt him from personal liability, the president and secretary were personally liable on the note.

This suit was brought to recover of the defendants, Buttner and Glidden, for an alleged personal liability upon a written instrument of which the following is a copy: "German American Investment Co., Inc. No. 409. $600.00. Seattle, Wash., Feb. 8, 1902. Received from Herman Daniel $600.00 (Six Hundred Dollars) which we promise to pay six (6) months after date with interest at the rate of eight (8) per cent. per annum. Wm. H. Buttner, President. H. M. Glidden, Secy."

Hadley, *J.* (omitting part of the opinion): It will be observed by reference to the note that, while the signatures are each followed by words indicating a representative character, yet no principal is disclosed. The words "German American Investment Co., Inc.," at the top constitute no material part of the instrument. The original is before us, and it shows that the above words were merely lithographed upon a blank form of receipt which was used as a paper upon which to write the note. Appellant's name is followed by the following, "Secy."

Assuming that the letters designate him in the representative character of secretary, yet they disclose no principal. What purports to be the seal of the German American Investment Company is impressed upon the paper, but by no reference is it made a part of the note itself. There are no apt words used in the note showing that the corporation is obligated. Therefore, although appellant's signature is followed by an abbreviated word indicating a representative capacity, yet, no obligated principal being disclosed, he cannot escape personal liability under our Negotiable Instruments Law. Section 20 of that statute, c. 149, p. 345, Laws 1899, is as follows: "Where the instrument contains or a person adds to his signature words indicating that he signs for or on behalf of a principal, or in a representative capacity, he is not liable on the instrument if he was duly authorized; but the mere addition of words describing him as an agent, or as filling a representative character, without disclosing his principal, does not exempt him from personal liability."

The signatures to this instrument come squarely within the terms of the above section, and the signers are personally liable.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B.A., LL.B., Barrister, Toronto.]

PROMISSORY NOTE—CONSIDERATION—DONATION—ARTICLE 762 OF THE CIVIL CODE.

BRULE vs. BRULE (Quebec Reports 27, Superior Court, page 77).

The facts of the case appear sufficiently in the judgment given below.

JUDGMENT (LORANGER, *J.*): This was an action on a promissory note signed by the defendant in September, 1897, engaging to pay $200 on September 13 each year for ten years from date. The plaintiff was the sister of the defendant, and the latter had signed the note at the request of their father who, at the time of making the request, was on his deathbed. The father had previously given about $20,000 to his son, and in consideration of this required the son to sign the note in question. The sum of $200 falling due in September, 1898, had been paid, but the payments due for the following four years were in arrears, and the note had been given by the sister to her brother under compulsion.

The defendant admitted signing the note, but alleged that it was without consideration and had been signed only to prevent disturbing his father in his dying hours and that the gift of the note to the daughter under the circumstances was *donatio mortis causa* and therefore null.

The words on the note are as follows: "I, the undersigned, undertake to pay to my sister, Flore Brule, the sum of $2000, payable $200 per annum; and this obligation has been contracted freely and voluntarily on my part."

Under the circumstances I am of the opinion that the consideration of this note does not consist in the gift of the sum of money made by the father to his daughter, the plaintiff, but on the contrary this note is the evidence of an obligation freely contracted by the defendant in favor of his sister and is supported by the benefits which the defendant had received previously from his father by reason of which his sister was reduced to poverty except for the provision made for her by this note. I, therefore, am of the opinion that the defendant has not sustained his defence of want of consideration, and direct the payment by him to the plaintiff of the sum of $800.

PROMISSORY NOTE—AGREEMENT SET UP IN ANSWER TO CLAIM—EVIDENCE TO VARY THE NOTE IS NOT ADMISSIBLE.

MCNEIL vs. CULLEN (Novia Scotia Reports, 37 Supreme Court, page 13).

STATEMENT OF FACTS: This action involved a number of points and issues, but the one of interest here was the claim by the plaintiff on a promissory note for $150, payable on demand, made by the defendant. In answer to the claim the defendant alleged an agreement that the demand note should not be payable unless a certain event happened within a given period. The trial judge refused to receive evidence of this agreement, stating: "Counsel for the plaintiff at the trial objected to the admissibility of that portion of the testimony of the defendant directed to show that this note, although payable on demand, was subject to certain conditions deferring payment. As a matter of law I must sustain the objection and exclude such testimony. No oral evidence can be admitted to vary the terms of the written contract contained in the note."

From this judgment an appeal was taken and it was argued on behalf of the defendant that the Bills of Exchange Act permitted the conditional delivery of a note; that oral evidence was necessary to show the condition on which delivery was made, and that in this case the alleged agreement was not a variation of the terms of the note but a collateral agreement attaching a condition to its delivery.

JUDGMENT (TOWNSHEND, WEATHERBE and RITCHIE, *JJ.*): We are of the opinion that the trial judge was correct in his decision as to the note for $150 for the reasons stated by him. The note being absolute on its face, no oral evidence could be received to vary its terms, and there is nothing in the evidence to warrant contention that it was given on a condition or only to be treated as a note upon the happening of a certain event; this view of the law was laid down by Lord Justice Mellish in Hill vs. Wilson L.R. 8 Chancery Appeals. We therefore dismiss the appeal and confirm the judgment of the trial judge.

CHECK—PAYMENT STOPPED—HOLDER IN DUE COURSE—BILLS OF EXCHANGE ACT, SECTIONS 29 AND 74.

GAUTHIER VS. REINHERDT, et al. (Quebec Reports, 26 Superior Court, page 134).

STATEMENT OF FACTS: The defendant Reinherdt gave his check for the sum of $491.25 to the defendant Dussurault, who in turn endorsed it to the order of the defendant Gelinas. This latter defendant deposited the check in her own bank and immediately drew in cash $450 on account of it. When the check in the ordinary course of business was presented at the Dominion Bank, upon which it was drawn, payment was refused because the drawer, Reinherdt, had stopped payment of it the day after it was drawn.

In receiving the check and allowing the sum of $450 to be drawn on account of it without the check having been accepted by the bank upon which it was drawn, the teller of the bank in which the defendant Gelinas had deposited the check had committed a breach of its regulation. He was therefore required to make good this amount to his bank and was subrogated to their rights with respect to this check. He thereupon brought this action against the drawer and the two endorsers of the check.

At the trial Taschereau, *J.*, dismissed the plaintiff's action on the ground that the plaintiff had not become the holder of the check until after its dishonor and was not therefore a holder in due course. Sections 29 and 36 of the Bills of Exchange Act were relied upon in support of this decision. Section 29 provides: "A holder in due course is a holder who has taken a bill complete and regular on the face of it under the following conditions, namely: (a) that he became the holder of it before it was overdue and without notice that it had been previously dishonored, if such was the fact." Section 36, sub-section five, reads:—"Where a bill which is not over-due has been dishonored, any person who takes it with notice of the dishonor takes it subject to any defect of title attaching thereto at the time of dishonor; but nothing in this sub-section shall affect the rights of a holder in due course."

The trial judge, being of the view that the plaintiff was not the holder in due course, held that his position was no better than that of the endorser Gelinas, and as the latter could not, for reasons not stated in the report, recover on the check, the plaintiff's action must be dismissed.

On appeal this judgment was set aside.

JUDGMENT (PAGNUELO, DOHERTY, of St. Pierre, *JJ.*): The check in question was given for valuable consideration and is a debt not only of the maker but also of the endorsers who have received proper notice of protest for non-payment. The endorsers are not entitled to raise the question whether or not the plaintiff is a holder in due course, because the check is absolutely regular and not affected with any defect as regards the plaintiff. The person who deposited the check became the holder of it before it could reasonably have been presented for payment, and the plaintiff having paid the amount of the check to the bank, stands in the position with respect to drawer and endorsee in which that depositor stood; that is to say, he has all the rights of a holder in due course by virtue of sub-section 3 of section 29 of the Bills of Exchange Act, which provides: "A holder, whether for value or not, who derives his title to a bill through a holder in due course and who is not himself a party to any fraud or illegality affecting it, has all the rights of that holder in due course as regards the acceptor and all parties to the bill prior to that holder."

Although the bank retained the balance over $450, the maker and endorsers are nevertheless liable for the whole amount of the check. On paying the whole amount of the check they are entitled to have it delivered up to them. That the depositor did not receive the full amount of the check is a personal matter between her and the bank with which the defendants have nothing to do.

We therefore order that the judgment of the trial judge be set aside and direct the three defendants jointly and severally to pay to the plaintiff the sum of $494.83 with interest and costs.

DEMAND NOTE—PRESCRIPTION—ARTICLE 2,231—CIVIL CODE—ACTS SUFFICIENT TO INTERRUPT PRESCRIPTION.

Bank of Ottawa vs. McLean (Quebec Reports, Volume 26, Superior Court, page 27).

Head Notes: 1. Prescription of five years, and not thirty, applies to a note, notwithstanding that part thereof was for money loaned and for securing which hypothec was given.

2. Interest on demand note runs from the date thereof.

3. Prescription begins to run from date thereof and not from date of demand of payment.

4. Acknowledgments made by one party to a note, interrupts prescription as to the others.

5. Acknowledgments can be proved by the oath of one of the parties defendant.

6. A transfer of property by one defendant to the plaintiff, though signed by defendant before consideration was filled in, and imperfect in form, when coupled with the admission of said defendant, that the consideration, whatever it was, was to be placed to the credit of the said note, is a "reconnaissance per ecrit" at the date of the transfer, and sufficient to interrupt prescription.

7. The oath alone of one defendant is in itself enough to interrupt prescription.

8. While it requires a new promise to pay, clearly expressed, to renounce a prescription acquired, the sole acknowledgment of a debt is sufficient to interrupt prescription, while running.

Statement of Facts: This was an action commenced July 17, 1901, by the Bank of Ottawa against H. M. McLean and A. McLean on a demand note made by them jointly and severally, dated January 4, 1896, for $21,524.98. The bank alleged that a demand of payment was made on June 1, 1901, and refused. The defendants contended that the note had been outlawed by the expiration of five years from its date under provision of the Civil Code.

Judgment: (Rochon, *J.*): The prescription of a note made payable on demand commences to run from the date of the note and not from the date upon which a demand of payment is made, and it therefore follows that interest upon a demand note commences to run from the date of the note.

The note in question would have been outlawed on July 17, 1901, if there had been no interruption of the prescription during five years from the date of the note. In November, 1897, H. McLean sold some land and authorized the purchaser to pay in the purchase money to the bank, and this payment was relied upon by the bank as an acknowledgment of the debt and a new starting point from which the period of prescription should run; but it was shown that this money was appropriated by the bank to an individual indebtedness of H. McLean, and it therefore can be no interruption of the prescription of the note made by H. and A. McLean jointly and severally.

In the same month the defendant H. McLean sold to the Bank of Ottawa, the plaintiffs, certain property for $2,500, which sum was credited by the bank in reduction of the note now sued upon. This payment was admitted by Hector McLean under oath as a part payment on account of the note, and consequently had the effect of interrupting the prescription and giving a new starting point.

There were also letters written by H. McLean in June, 1901, to the advocates for the bank which admitted the debt in writing and constitute an interruption. There was no act by the other defendant A. McLean which amounted to the acknowledgment or payment on account, but he is bound by the act and admission of his co-maker under article 2,231 of the Civil Code, which provides that any acknowledgment or payment on account by one co-maker shall have the effect of interrupting the prescription against all the makers of the note.

Interest, however, can only be collected for the five years immediately prior to the issue of the writ. There will therefore be judgment against both defendants for the amount of the note after crediting the $2,500 referred to and for interest for five years preceeding the date of the commencing of the action.

EDITOR'S NOTE.—This case well illustrates the difference in the law with respect to prescription in Quebec and in the other provinces of the Dominion. In the June number of the MAGAZINE, page 737, is reported the case of Harris vs. Greenwood in the Ontario Courts, where it was held that payment by one of two or more joint makers will not interrupt prescription against any of the others. This is the law in every province but Quebec where, as this case shows, payment by one of two or more joint makers will operate against all the makers of the note.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

A reasonable charge is made for Special Replies asked for by correspondents—to be promptly sent by mail.

Editor Bankers' Magazine: Waseca, Minn., June 24, 1905.

Sir: A borrows $100 from the bank, and C signs and endorses the note with A; the note matures June 1 and the next day A calls at the bank and wants to renew his note; the bank consents on condition that C will endorse the new note, and the new note is made and signed by A and the old note is held awaiting the signature of C, and in the meantime, for convenience, the bank carries the new note on their books instead of the old. Does this release endorser C?

Subscriber.

Answer.—As the agreement to renew is upon the condition that C shall place his signature upon the new note, the old note is not discharged until that condition is fulfilled, and in the meantime remains in force against all the parties thereto, just as effectively as if there had been no arrangement for renewal. The fact that the new note is carried on the books of the bank is material only so far as it is evidence bearing upon the question of what the arrangement was; and if the other evidence clearly shows that the agreement was conditional, this fact is not important.

Editor Bankers' Magazine: Stamps, Arkansas, May 20, 1905.

Sir: We forward a draft for collection to U & P Bank, drawn on M & Co by B Bros. The draft is returned to us protested, but has written on back "have sent check to B Bros," signed by the President of M & Co. Should the draft have been protested, and are we compelled to pay the protest fees?

Cashier.

Answer.—The duty of the U. & P. Bank as collecting agent required that, if the draft was not paid, no matter for what reason, proper steps should be taken to fix the liability of the parties thereto. That bank could not know whether the remittance of the check would be satisfactory to the holder. It had only the draft to deal with, and it was not at liberty to assume that the statement that the check had been sent was true, or that such remittance would be accepted in discharge of the draft. Of course, if the draft remained the property of the drawers, there was no necessity for protest; but the U. & P. bank could not know but what the draft had been negotiated to the remitting bank. We think, therefore, that the U. & P. bank acted properly in protesting the paper, and is entitled to be reimbursed the fees therefor.

Editor Bankers' Magazine: West Mansfield, O., May 20, 1905.

Sir: Please answer through the columns of your Magazine the following: Mr. A has time certificate of deposit on Bank No. 4, which is not due for thirteen days. He (Mr. A) presents same at Bank No. 1 to be cashed. The Cashier of Bank No. 1 will not allow interest on the certificate, but suggests to Mr. A to telephone to Cashier of Bank No. 4 and ask him what interest he will allow on certificate, which Mr. A consents to do, but requests Cashier of Bank No. 1 to talk for him, which he does. Cashier's answer of Bank No. 4 is: "Tell Mr. A I will make it right with him when he comes down"; which proposition was accepted by Mr. A. Cashier of Bank No. 1 cashed certificate for Mr. A at face value with the understanding that Mr. A was to receive interest from Bank No. 4. Bank No. 1 sends certificate to Bank No. 2, their correspondent, at face value; Bank No. 2 sends certificate to Bank No. 3 at face value; Bank No. 3 holds certificate for thirteen days and then sends to Bank No. 4 and collects face and interest for full time.

From which bank could Mr. A collect interest? Assistant Cashier.

Answer.—Under the law of Ohio, Bank No. 3 would be regarded as the agent of Bank No. 1, and not the subagent of A. (Reeves vs. State Bank, 8 Ohio St. 465; Exchange National Bank vs. Third National Bank, 112 U. S. 176.) Bank No. 1, therefore, as principal, is liable for any sums collected by its agent, and A, if he should see fit to do so, may make a claim therefor upon No. 1 for the interest collected by No. 3. In the same way, No. 1 may look to No. 2 for any sum it has to pay A. This is the legal situation of the parties, though they may agree upon any other mode of adjustment.

Editor Bankers' Magazine: Albany, N. Y., June 10, 1905.

Sir: If a customer has a check certified, and does not use it, but brings it back to the bank, to place it to his credit again, what is the legal course for the bank to take? The check is not endorsed by the party to whom it is payable, but is in the hands of the person to whose account it was charged.

Teller.

Answer.—The Negotiable Instruments Law provides that "every contract on a negotiable instrument is incomplete and revocable until delivery of the instrument for the purpose of giving effect thereto." (Sec. N. Y. Act.) When, therefore, the check is never delivered to the payee, the drawer and the bank have the right to cancel the check or destroy it or make any disposition of it that they may mutually agree. But the usual course adopted in such cases is not to cancel the certification or destroy the check, but for the drawer to deposit it to his own account. The bank then gives him credit for the amount, and treats the check as paid. Such a transaction is perfectly legal, and a complete protection to the bank.

Effect of the Gold Standard on Mexican Trade.—From information furnished this office by bankers, importers, and leading commercial houses of this consular district, the recent adoption of the gold standard by the Mexican Government has served to stimulate the inauguration of new business enterprises, as well as to strengthen confidence and credits. With a fixed rate of foreign exchange, the logical sequence of an unvarying monetary standard, importers are making lower prices, and many exporting firms in the United States and Europe who had withdrawn their traveling salesmen have notified old customers that the sending of these agents for the promotion of business will be resumed at once.

Business on the American side of the Rio Grande has also exhibited a more healthful and confident tone since the establishment of a fixed monetary standard by Mexico. This was to have been anticipated, as Mexican money is largely used on the American side, and its daily fluctuations in value could only have the effect of depressing trade and preventing that regularity desirable in commercial transactions.—*From United States Consul Griffith, Matamoros, Mexico.*

A PRACTICAL TREATISE ON BANKING AND COMMERCE.

THE SUCCESSFUL MERCHANT.

Before a banker can do a successful business, there must be successful merchants, manufacturers, or farmers in the community. It is for this reason that the consideration of their business comes first.

Some years ago there was published in England a very readable book entitled, "The Successful Merchant," in which was described the career of a Bristol trader who was not only a successful man himself, but the founder of successful firms that bear his name to this day. The success of this merchant, it is evident, was not due to speculative ventures by which some men seek to acquire a fortune rapidly, but to perfect knowledge of his own line of business, combined with industry, shrewdness and rectitude. It becomes evident, too, that this is the reason why the business he founded has continued to flourish in the hands of his successors.

It is essential to the success of a banker, that the mercantile customers with whom he deals shall be on the whole successful men; otherwise they will cause him loss and embarrassment, even though he holds what is called "security." For security in many instances fails to secure.

It is equally essential to a merchant that *his* customers shall be also successful. If they are not, their failure will result in even a larger proportion of loss, seeing that generally the merchant gives credit without security at all.

The losses of both banker and merchant may be, and, indeed, not seldom have been, serious enough to bring both into embarrassment, in fact, they continually act and react on each other. The study of the causes of success and failure is therefore one that practically comes home to both.

Let us first consider the conditions and causes of success. When a person enters upon any line of commercial business, as distinct from mere speculation,* he will find that the first element of success is knowledge of goods: that is, what goods are, where they are to be bought to advantage, what is the right time to buy them and how to place them to advantage.

As he progresses he will discover that the second element of success is knowledge of men; that is, whom to employ, what to give them to do, to whom to give credit and whom to avoid. The first is to be acquired only in the warehouse, the second can be learned best in the office or "on the road." When, with these two, is combined a reasonable capital, together with common sense, enterprise and integrity, success may be said to be not problematical but reasonably certain.

A young man who enters a mercantile warehouse, will be employed for some time in learning how to *handle* the goods dealt in; how to sort and arrange them for sale, how to receive and dispatch them with expedition, and generally to become so familiar with the stock as to know where any particular article is to be found and how much of it there is in the warehouse. While doing this, the head of the business will have opportunities of judging the young man's capacity, intelligence and character; also whether he is more likely to be useful in the warehouse or in the office. A young man whose mind is in the business will desire to find out not only how much

---

*The difference between the merchant and the speculator is that the merchant handles the goods he deals in, and therefore requires to be a judge of their quality and suitability; while the speculator rarely handles the merchandise in which he speculates, and could not tell good cotton or grain from bad. His business is simply to watch the markets, and to buy or sell on change. For his operations he needs neither a warehouse nor stock.

goods sell for, but how much they cost; also where goods are bought, and from whom. If the goods he handles are not bought strictly from manufacturers, then he will find out who *did* manufacture them, and where. An intelligent warehouse clerk will try to gather information from young men not in the same house, and will, at times, be able to communicate to his principals something to their advantage.

There are, of course, other elements of success in a junior, such as civility, readiness to assist, quickness to obey orders, punctuality in attendance. A good junior will also avoid what mars the usefulness of many a clever employee, viz., an impatience of work, and eagerness to rush away at the earliest moment when work appears to be finished.

Supposing that a young employee has proved himself capable so far, the next step will be to trust him with the responsibility of *selling*. Here his knowledge of goods comes into play. For many of the customers of a wholesale house have only a vague idea of what they want, and expect to be told what goods are in the market; to be shown them and have their merits pointed out by one who knows and can describe them accurately.

If, for example, the warehouse is that of a dry-goods merchant, the salesman will have some knowledge of the person he is speaking to, where he comes from, and what is the nature of his business. It would be absurd to show the store-keeper of a backwoods village the goods suitable for a leading town or city store. *The seller must know both his goods and his men.* If the young clerk performs the duty of a seller satisfactorily, in the warehouse, he has taken another step towards ultimate success.*

It may not be possible in a large establishment for every salesman to ascertain what is the net cost of the goods he is handling, and to a majority of those engaged in selling, a principal would scarcely think it prudent to give such information. But as a salesman grows in experience he will be sure to exercise himself in this direction. And it is desirable he should; for in the case of salesmen and travellers of experience, they may sometimes be allowed discretion in the selling price of goods. It would obviously be of advantage to a salesman, in using this liberty, to know what things cost, so as to ensure that no mistake was made in reducing the price unreasonably.

A successful salesman or traveller will exercise a good deal of tact in dealing with the peculiarities of customers, and a large amount of patience and perseverance also. Experience shows that a stubborn "no" may be changed into a complacent "yes" by quiet and intelligent persistence. Above all things he will be civil; ready to anticipate a customer's wishes, ready also with suggestions as to what would be satisfactory in case the party does not see the article he wants. But it is a mistake for a salesman to push off undesirable goods on a customer by brag and volubility. The customer who has been overreached in this way will avoid the place in future.

In the life of George Moore, of the great house of Groucock and Co., of London, who used to be called "The Napoleon of the Road" because of his wonderful quickness and energy, there is an excellent story of his success with a retail storekeeper who, after repeated refusals such as would have damped the energy of most men, was at last induced to make a purchase

---

*It is sometimes supposed that to be able to sell goods successfully, an employee must not be too scrupulous; must, in fact, be willing to tell lies about them. But quite apart from the immorality of this, experience demonstrates that to deceive customers is not to the seller's advantage. The deceived buyer will avoid the warehouse in which he has been deceived. Even if he does not go so far as this, he will certainly make a complaint. If he has been deceived by an employee, he will complain to the principal, and the employee will suffer. If he has been deceived by the principal himself, he will probably be more outspoken. In either case he will want redress.

It was said of the late A. T. Stewart, whose retail store used to be one of the wonders of New York, that one element of his success was this, "He always turned the rotten side of the melon up"; a very homely phrase, but highly expressive, as indicating that, if there were anything defective about his goods, he never concealed it. It thus came about that people had implicit confidence in Stewart's goods and consequently flocked to his store to buy them. There are manufacturing firms in England that have built up a reputation by the invariable rule of never stamping their name on an inferior article. They have found the advantage of this in the fact that the name came to have a distinct mercantile value; such, for example, as that of Rodgers of Sheffield, for fine cutlery.

of some insignificant article and thereby open an account. The door once opened, the young traveller took care it should be kept open; with the result that the casual buyer became a valuable customer of the house. The responsibility of a traveller is, of course, much more than that of a salesman in the warehouse. He needs much more tact, more knowledge of human nature, more patience, more perseverance. And, it needs to be added, he will need to be more watchful of his own conduct. Living in hotels, he will be in the way of temptation that does not meet those whose duties are at home.

Pursuing the future successful merchant through his course of preparation, and supposing him to have achieved success as a salesman and a traveller, the next question will be, whether he can be trusted with the responsibile function of *buying*.

It is a maxim of trade that "*goods well bought are half sold.*" Though the most difficult functions of a buyer are exercised in lines of business where taste and fashion come into play, yet his skill, if he has it, will find ample scope even in dealing with raw materials and great staples. Judgment and special knowledge are required even to buy grain, cheese, timber or iron to advantage.

Passing, however, by these for the present, let us look at the characteristics of a successful buyer of dry goods and fancy goods. Here an essential difference must be noted. While the buyer of grain or any other like commodity may make mistakes, it is certain that the goods he buys can be sold at *some* price. But the buyer of dry goods can never be sure that what he buys (unless it be simple staples) can ever be sold at all. The buyer then will naturally be one who has had experience as a salesman or traveller, and has learned by experience what the taste and fancy of customers are likely to be when new goods are offered them. There is a difference in this respect, between the customers of one house and another, between the people of one city and another, and between one period and another. A class of goods can be safely imported by a merchant in New York that it would be unwise to bring into a smaller city. As to the difference between one time and another it is a fact that in the inflation that prevailed in the early days of Manitoba, there were goods to be found in the Hudson Bay Company's store at Winnipeg, of so costly a character that no merchant in Montreal and scarcely even in New York, would have dared to import them. Such goods could be sold in Winnipeg at that time. Two years afterwards a heavy reaction set in, and no such articles have been seen there since.*

The buyer then will consider the customers of the house, as to their taste and capacity, as well as the time. An intelligent buyer after some experience develops a sort of intuitive apprehension of goods. He could not explain it if he tried, but it exists, and it will lead him to say of some new patterns, "Our house could never sell them," and of others, "These will suit us exactly." Judging thus intuitively he judges promptly; and in a majority of cases he will be right.

A buyer's judgment, however, is not only exercised as to what goods to buy, but how much. This, sometimes, is a more difficult matter to determine than the other, for if he buys too much, even of an article that takes the fancy of customers, the extra quantity will be carried past the time when the fancy of customers favors it. On the other hand, if he buys too little, a feeling of vexation is generated in the warehouse at op-

---

*During this inflation a rough looking fellow entered a crockery store in Winnipeg and asked to be shown a dinner set. The proprietor, wondering somewhat what such a man wanted with a dinner set, reached down one of a common character. The man, however, said at once, "That won't do." Other sets were then shown him of a better kind, but none of them suited him. They were not good enough. The man then said, "I've had a big stroke of luck; made $50,000 out of a piece of property, and I want to give my wife something really tip-top; something extra, you know." The storekeeper then brought out a set he had specially imported for customers of the nouveau riche order; a set of such rarity and beauty that it would have graced the table of an English nobleman. The man said, "That will do;" and it was bought and paid for on the spot. The merchant showed his knowledge of the time by ordering a single set like this. But a year or two afterwards, no such goods, or goods of a quality even many grades lower, were ever seen on his shelves.

portunities of profit being missed. The latter error, however, is the safer of the two. If the goods are evidently going off well a repeat order can be cabled.

Buying too much is a foible of some otherwise capable men, and sometimes a cause even of financial embarrassment. The amount to be bought is a matter for the principal to judge of. He will look over his stock, consider his average sales, and give his buyer instructions accordingly. But cases may arise in which an experienced buyer may take the risk of varying from instructions. He may learn things about the market when abroad that make it desirable rather to hold off than to buy. Or, what he learns may lead him to buy more heavily than was arranged. This, however, he will do at his own peril. A young buyer entering this difficult field will do well to err on the side of caution rather than otherwise. Better for him to cable for instructions and pay the cost himself, than to make such large purchases as, to the writer's knowledge, have not only caused loss to his principals, but deranged the whole market.

There are fields of mercantile enterprise in which the functions both of buyer and seller would appear to be far more easy than the foregoing, seeing that prices are quoted day by day, and that all a man has to do, apparently, is to follow the market. A plausible theory, but utterly fallacious. For in all staple articles, such as grain, cheese, wool or timber, there is a remarkable range of *quality*. The grades, certainly, are indicated by market quotations. But even in such apparently simple matters as grain and flour, there are shades of difference that none but experts can appreciate.

Yet it is often on a correct appreciation of these that the profit or loss of a given line of operations consists. The same remark applies to imported articles in other trades, such as groceries, fruit, wines, raw sugar; not to speak of hardware, iron and steel, in all of which there is room for the finest exercise of judgment on the part of the buyer as to the quality of goods. It may indeed be laid down as an absolute rule with regard to every variety of staple goods, that none but a man of experience can safely venture on the operation of buying. If he does, he will infallibly "burn his fingers," and if he continues, he will ruin himself.

The Office.

Passing now from the warehouse to the office, let us consider what is done therein as bearing on the conduct of a successful business. Here are kept the records which show whether the business is or is not on a proper foundation, and whether it is being conducted profitably from time to time. It is in the office that the merchant ascertains whether credit is being given judiciously, who and what the customers of the firm are; whether prompt in payment or otherwise; whether profits are being made, and what are the drawbacks in the shape of losses.

The important matter of *insurance* will here come before him, also the financial management of the house. Above all, it is here he will ascertain whether he is keeping on a right footing with his banker. That all these are vital elements in the success of a business, every merchant knows; indeed, the trend of experience shows that business failures are more frequently traceable to defective management in the office than in the warehouse. For one merchant who fails by reason of not understanding his goods, ten fail because of injudicious crediting, too easy collecting, neglect of insurance, an incorrect style of stock taking, too small capital, too heavy drawings of partners, too heavy borrowing, and general lack of economy. All these are matters for the office. It is not so essential for the principal to have passed through the grades of *office* work, as that he should have had a thorough training in handling goods. But every principal should have had so much experience as to understand office records, and to see whether office work is properly done, and if the statements rendered to him from time to time can be depended upon.

In large mercantile firms a judicious combination of talent is desirable, so that while one partner shall be particularly conversant with goods, another shall be familiar with finance and office work; each giving, as a rule, undivided attention to his own department, yet being able at times to take an oversight of the other in case of need. But where there is only one partner, and one who has a thorough familiarity with goods, it is desirable that he should have at the head of his office, not a mere bookeeper, however efficient, but a reliable man to whom he can entrust the *management* of the finances and accounts of the house. To such a man he will pay such a liberal salary as will make him as much attached to the business as if he were a partner. Such a person will save his salary many times over by attention to credits, prompt collecting, sufficient insurance, attention to economic details, keeping stock within due bounds; and last, but not least, keeping the borrowings and discounts of the house within such limits that their cost will not be a drain on the business.

The foregoing may be called the elementary foundations of success in business as now carried on. They may not all have been necessary in the earlier days of the country. Many a man then succeeded who conducted his business by rule or thumb. But competition is now too keen and its methods too developed to permit any man to succeed who is not equipped at all points.

But this is not all that is necessary to success.

There have been men who could sell and buy goods, and know how to keep accounts, too, who have entirely failed in the attempt to carry on business for themselves.

It was said that at one time a considerable number of the salesmen in the employ of Mr. A. T. Stewart, of New York, (who has been already referred to) were men who had failed in business. They were expert salesmen; and perhaps some of them expert buyers, but were deficient in other qualities essential to success. They could serve an employer and be depended upon to follow instructions. But experience had proved that they could not succeed when they had no guidance but their own judgment.

What, then, are the other and final conditions of business success, permanent success, let us say, in addition to the technical knowledge and skill before referred to? The consideration of these is of sufficient importance to form the subject of further treatment.

G. H.
Ex-Gen. Manager Merchants' Bank of Canada.

Dutch Foreign Investments.—The people of the Netherlands are thrifty and economical, excellent merchants, and, in proportion to population, their nation is one of the richest in the world. They are cosmopolitan, and large minded in the investment of their capital. They were the first and most extensive foreign buyers of United States bonds of 1861-65, but did not touch the Confederate issues. According to estimates of official statistical and financial sources, Dutch capital to the amount of $544,500,000 is invested in American bonds and shares, and $400,000,000 in Russian bonds and shares. Very large sums of Dutch capital are invested in Mexican Government bonds and in bonds and shares of Mexican railroad and industrial companies; also in the Government and railroad bonds of Austria-Hungary, Portugal, and numerous other countries, and a large amount is working profitably in the Dutch Indian colonies in sugar, tobacco, and rubber plantations, the mining of tin and other metals, petroleum wells, etc. A financial book of reference places the capital of all Dutch joint-stock companies at $744,164,000, but this does not embrace the numerous Dutch companies which have their headquarters in the colonies and in foreign countries. The Netherlands, possessing neither coal nor iron, is not a manufacturing country of note, and in this respect is even surpassed by little Switzerland, also having neither coal nor iron. The Dutch are full of the commercial spirit and have a large merchant marine. The rural inhabitants are given to dairying, cattle raising, and horticulture, in which branches they excel.—*Richard Guenther, Consul-General, Frankfort, Germany.*

Gold Standard in Korea.—On June 7 an ordinance became effective establishing the gold standard in Korea and providing for the exchange of the old nickel coins for the new coinage.

4

THE WORKING OF THE ELASTIC CLAUSE OF THE GERMAN BANK ACT.*

[Read before the London Institute of Bankers by HERMANN SCHMIDT, ESQ., March 1, 1905.]

When the German Empire was founded, one of its primary tasks was to bring order into the chaos of the different German currency and banking systems. At that time there existed within the boundaries of the new Empire 140 kinds of paper money and 33 issuing banks. Two economic schools claimed the right to undertake the task—the English and the French—and both had accomplished champions.

In the Currency question the English gold-monometallism scored an early victory over the French bimetallic system. The German Act of 1873 dethroned silver and inaugurated the reign of gold, thereby conferring growing economic advantages on the two great Anglo-Saxon Powers, who, since the annexation of the Transvaal by Great Britain, practically control the gold supply of the world.

In banking the decision took a longer time. On the one hand were the champions of the French State Bank system, with its banknote monopoly and an issue practically untrammelled by legislative restrictions. On the other hand were the partisans of a central bank on the English model, legally and administratively a private corporation, with its note-issue strictly limited under statute, but with semi-public functions and prerogatives.

For a long time it seemed as if, in banking, Germany would as closely adhere to the English model as it had done in currency, but, in deference to able critics, notably Mr. Ernest Seyd, a Fellow of this Institute, it was decided to modify the cast-iron English system, and the law of March, 1875, introduced what has since become known as the Elastic Clause.

Let me first give a few details about the German banking system. The thirty-three issuing banks which existed in Germany at the date of the Bank Act, had been established under charters granted by the authority of individual German States. The new Act conferred on them an Imperial status. Only if they declined to accept its provisions was their activity to be limited to the State of their origin. Thirty-two of the existing banks accepted the Empire's terms, the exception being the Brunswick Bank, which, consequently, will remain a local institution till its charter expires in 1952. Under the Imperial law all issuing banks have to renew their charter every ten years.

The leading and ever-growing position among these issuing banks is held by the Reichsbank. This bank took the succession of the former Prussian Bank. The latter having been a private institution, the Reichsbank was nominally constituted as a private limited liability company. But its organization is of special character. It has a purely State administration. Its chief is the Imperial Chancellor. Its powers are exercised by a President, a Vice-President, and six members of the directorate, officially nominated. The accounts are audited by Imperial officials, and the Empire participates in the profits. The shareholders are represented by a permanent central committee. It consists of fifteen members and fifteen alternates, whose office is honorary. As a matter of fact, this committee is composed of the representatives of the leading banks and bankers of Germany, and forms thereby a connecting link between the great Central Bank and the outside institutions which has worked very beneficially in Germany. This committee meets once a month the directors of the Reichsbank, when it receives the weekly returns, with details of the discount and advance business, of the circulation, and of the reserves. It has only a consultative

* From the Journal of the Institute of Bankers, London.

voice, but its advice is asked on different questions, such as raising or lowering the bank rate, selecting the securities admitted as cover for advances, etc.

The capital of the Reichsbank was originally M. 120,000,000, but has, by the Act of June, 1899, been raised to M. 180,000,000.

The Imperial regulations of the note-issue provided that all bank notes must be covered as to one-third by cash, and as to the remaining two-thirds by bills of exchange with a maximum currency of three months. The total note-issue is limited to the cash in hand *plus* a certain fixed amount, for which a fiduciary issue is allowed, the "cash in hand" in this connection meaning gold in any form, current German coins, Imperial paper money, and notes of other German banks. The fiduciary issue of the thirty-three German "Note-Banks" was originally fixed at M. 385,000,000. Here is the list of the different banks and their quota in the fiduciary issue.

1.	Reichsbank	M. 250,000,000
2.	Ritterschaftliche Privatbank (Stettin)	1,222,000
3.	Städtische Bank, Breslau	1,283,000
4.	Bank des Berliner Kassenvereins	963,000
5.	Kölnische Bank	1,251,000
6.	Magdeburger Privatbank	1,173,000
7.	Danziger Privat Actienbank	1,272,000
8.	Provincial Actienbank, Posen	1,206,000
9.	Kommunalständische Bank, Görlitz	1,307,000
10.	Hannoversche Bank	6,000,000
11.	Landgräflich Hessische Landesbank	159,000
12.	Frankfurter Bank	10,000,000

		M. 385,000,000

Almost immediately after the Imperial Bank Act, came into force in 1875, thirteen banks (viz., Nos. 2, 4, 9. 15, 22, 23, 25, 26, 27, 28. 29, 30, and 31 of the above list) relinquished their right of issue which, together, amounted to M. 22,561,000. The Act provided that should any of the issuing banks abandon or lose their note privilege, its fiduciary issue should be added to that of the Reichsbank. The latter's privilege was, therefore, almost from the start, raised to M. 272,561,000. During subsequent years twelve more banks (viz., Nos. 3, 5, 6, 7, 8, 10, 11, 16, 17, 21, 32, and 33 of the above list) abandoned their note privileges, which added another M. 20,839,000 to the total of the Reichsbank. This amounted then to M. 293,400,000, and, at that figure, it stood for a number of years. The fiduciary list of the German banks had thus been reduced to the following number.

1.	Reichsbank	M. 293,400,000
2.	Frankfort Bank	10,000,000
3.	Bavarian Bank	32,000,000
4.	Saxon Bank	16,771,000
5.	Württemberg Bank	10,000,000
6.	Baden Bank	10,000,000
7.	Bank für Süddeutschland	10,000,000
8.	Brunswick Bank	2,829,000
		M. 385,000,000

In course of time the progress of business in Germany made it clear that the figures fixed for the fiduciary issue had to be reconsidered, and the Act of June, 1899, raised the note privilege of the Reichsbank to M. 450,000,000. The Government had proposed only M. 400,000,000, but the Reichstag raised the sum to M. 450,000,000. The total fiduciary issue of Germany was thus fixed at M. 541,600,000. This figure became statutory in January, 1901. In March, 1901, the Frankfort Bank abandoned its M. 10,000,000 note privilege, and in June, 1902, the Bank für Süddeutschland followed with its M. 10,000,000. This leaves to-day six issuing banks in Germany, dividing the fiduciary issue of M. 541,600,000. The Reichsbank has M. 470,000,000, the remaining five banks M. 71,600,000, including the Brunswick Bank with its local M. 2,829,000 issue.

As stated above, however, the German fiduciary issue does not constitute an absolute limit. Section 9 of the German Bank Act reads as follows: "Banks whose circulation exceeds their cash *plus* their share in the fixed fiduciary issue have to pay to the Imperial Exchequer on the excess issue a tax of five per cent. per annum. 'Cash' consists of German coins, Imperial paper money, notes of German banks, besides gold and foreign gold coins calculated at M. 1,392 per lb. fine."

This section constitutes the renowned Elastic Clause of the German Bank Act. It has enriched the disputed ground of Banking Theory by an important additional controversy. It has added a new feature to German banking policy, viz., the "tax-free note reserve," *i.e.*, the excess of the cash *plus* the fiduciary amount over the circulation. We recognize easily in this "tax-free note reserve" the equivalent to the "Reserve" in the banking department of the Bank of England. But we have no equivalent in England for the "*minus* reserve," which appears in the German bank statements whenever the circulation is subject to the tax, *i.e.*, when the provisions of this elastic clause become operative.

It is not my province to-night to enter into a theoretical discussion of the merits of this clause. I shall content myself by examining its working.

The first bank to take advantage of this clause was the Bank of Saxony, which has paid tax under Section 9 every year since the Act came into force. The Bank of Würtemberg followed in 1889, and has since paid tax every year. In 1890 the Bank of Bavaria and the Bank of Baden began to pay tax, and have intermittently done so since. But these are details of local interest. General attention has only been directed to the effect of the Elastic Clause on the policy and position of the Reichsbank. The following is the table of dates and amounts of the over-issues of banknotes by the Reichsbank. It shows growing recourse to the provisions of Section 9, interrupted in 1901, when the fiduciary issue was revised:—

		Excess circulation.	*Tax.*
1881.	31st December	M. 26,092,200	M. 27,179·34

		Excess circulation.	*Tax.*
1904.	7th January	M. 99,861,153	M. 1,118,373·21
	31st March	166,126,902	
	7th April	16,222,874	
	30th June	105,400,518	
	30th September	305,038,527	
	7th October	179,169,568	
	18th October	28,298,848	
	31st December	173,519,879	

The above table shows that the excess of note-issues is coincident with certain periods of the year when the internal movements of the currency are greatly increased. Such periods are the end of June, the end of September, and the end of the year, when enormous payments for salaries, rents, dividends, interest on mortgages, etc., have to be made. How large the increase of internal circulation is on these dates may be shown by the following instances, supplied by the returns of the Reichsbank:—

			Increase over previous week.
30th September, 1903.	Circulation	M. 1,515,581,000	M. 302,804,000
31st December, 1903.	Circulation	M. 1,565,490,000	M. 260,800,000
30th September, 1904.	Circulation	M. 1,599,067,000	M. 311,991,000
31st December, 1904.	Circulation	M. 1,599,784,000	M. 257,637,000

This explanation deprives the excess note-issue of any adverse significance, for it proves it to be a purely internal concern. It also justifies a recurrent readjustment of the fiduciary issue. The proper method of fixing the later is by a reference to the average circulation, to which it should bear a businesslike proportion. In Germany the average circulation of the Reichsbank has risen from.

M. 684,866,000 in 1876
to M. 802,178,000 in 1886
M. 1,083,497,000 in 1896
and M. 1,248,718,000 in 1903

The question which naturally suggests itself is whether Germany has derived any advantages from the working of the Elastic Clause. Have there been any beneficial effects?

The reply to this question is necessarily still somewhat controversial. Before answering, it may be of advantage to state the effects which have *not* resulted from the Elastic Clause. Here we are on a firmer basis of facts. Expressed in a single sentence, I may state that the clause has not caused a single one of the anticipated evils confidently predicted by nervous and apprehensive critics.

The most obvious, and, therefore, the most frequent criticism was that an elastic Bank Act would lead to a gradual reliance of the bank-note on the fiduciary rather than the metallic basis. The underlying assumption was that, because a commercial community had become possessed of a superior weapon for the defence of its monetary and financial position, it would gradually become careless, and cease to bestow that vigilance which a more exposed financial position renders imperative. The following figures totally disprove this assumption, as far as Germany is concerned. They prove conclusively that the existence of an elastic clause has weakened neither the absolute nor the relative metallic cover of the German note-issue, and been no impediment to a continuous and rather remarkable growth of the total of the reserves.

		Metallic Reserves.	Reichsbank Total Reserves.	Metallic cover of Note Issue.
1876 ..	(Average)	M.501,593,000	M.564,850,000	74.55 Per cent.
1886 ..	"	693,105,000	724,487,000	86.40 "
1896 ..	"	891,988,000	925,306,000	82.32 "
1900 ..	"	817,137,000	853,849,000	71.77 "
1901 ..	"	911,411,000	947,189,000	76.57 "
1902 ..	"	982,202,000	1,018,180,000	79.88 "
1903 ..	"	904,947,000	942,508,000	72.47 "
1904 ..	"	926,669,000	972,063,000	71.92 "
14th Feb. 1905 ..	"	1,110,288,000	1,159,657,000	92.94 "

A second objection to the clause was that it would adversely affect the foreign exchanges, and thus lead to gold exports from the country. Here, again, experience has proved that nothing of the kind need be apprehended. Where the clause had any effect whatever on the foreign exchanges, it was to make them more favorable. For the Reichsbank, having to pay 5 per cent. interest, under Section 9, generally raised its rates of discount when the note-issue became subject to the tax, and dear money, in Germany as elsewhere, has tended to lower exchanges, and, ultimately, to cause an influx of gold. As proof, I need only refer to the experience of last year. In the middle of October the German bank rate was raised to 5 per cent. Just prior to this measure the Reichsbank's reserves had amounted to M. 833,181,000, its metallic reserve to M. 789,444,000, while its note reserve was M. 179,169,000 "*minus*." Three months later, when the German bank rate was lowered to 4 per cent., the total reserves had risen to M. 1,005,791,000, the metallic reserve to M. 968,299,000, while there was a "positive" note reserve of M. 31,085,000. In the Reichsbank returns of the 23rd of last month this note reserve reached M. 508,970,000, a record total.

The last objection was that, by favoring a greater reliance on a fiduciary issue, by raising foreign exchanges and producing gold exports, the Elastic Clause would finally create distrust in the German bank note, and thereby depreciate the German currency. Again, nothing of the kind has occurred. Once or twice since the establishment of the Reichsbank the exchange on London has temporarily exceeded the orthodox "Specie Point," but this passing phase has no more affected the status of the German currency than the value of a Bank of England note was affected when bar gold rose to 78s. 0½d. in open market, though this price also implied a "theoretical" depreciation of sterling by over 2 per mille.

Not a single predicted adverse effect has therefore materialized by the action of the Elastic Clause in Germany. Let us now consider whether the country has derived any positive advantages from the clause. Here we tread on ground where proof is more difficult. Yet there are one or two points so obvious and self-evident that they may be pronounced as practically settled by experience.

The first is that the Elastic Clause has enabled Germany to conduct her business with less gold than would otherwise have been necessary, or, put differently, has enabled Germany to conduct a larger business with the gold actually at her disposal. The German gold reserves have always been sufficient for the ordinary requirements. But, as we have seen, at certain periods of the year, exceptional payments—payments which increase every year with the growth of population and wealth—have to be made, causing the internal circulation to largely exceed the average. Without the Elastic Clause, these transactions could not be carried out without considerable changes in business. Either a further very large and, generally useless, amount of gold would have to be stored, or the Bank Act would have to be periodically suspended, or a new system of payment would have to be popularised. No such system would prove as acceptable to the Germans as their present method of paying in bank notes, which are largely the substitute of the cheque in Germany. By the quiet and almost unobserved action of the Elastic Clause, Germany is tiding over all these periods of increased home circulation without a single hitch, nay, without the bulk of the population ever becoming aware that any important change has taken place in the character of the banking reserves. How important this point is will be seen from the following figures:—

1890.	Reserve.	Other Securities.	Circulation.
Sept. 23rd	M. 803,577,000	M. 635,533,000	M. 991,563,000
" 30th	752,260,000	780,506,000	1,131,733,000

1904.			
Sept. 23rd	M. 977,459,000	M. 844,064,000	M. 1,287,076,000
" 30th	824,023,000	1,211,956,000	1,599,067,000
	decrease M. 153,436,000	increase M. 367,892,000	increase M. 311,991,000

This little table shows the growing nature of these periodical demands for currency in Germany at the end of the third quarter of the year. Other quarters would give similar results.

It may be remarked that the genius of the business world of Germany would have found other solutions for the difficulties here presented if the Elastic Clause had not existed. But there is one advantage of this clause which it would be impossible to obtain from any substitute. I refer to the elimination of apprehension, sometimes of panic, which the knowledge of the existence of an absolute limit to the power of note-issue creates in times of difficulty. The City knows, by painful experience, the reality of this danger—the general scramble and struggle for accommodation once that a doubt as to the sufficiency of the existing reserves is spreading. From this apprehension the German business community has been delivered by the Elastic Clause. Some observers go further, and maintain that Germany has been saved, by this clause, from financial and commercial crises. They assert that more than once since 1876 such crises were predicted by competent critics—we all remember the confident assertions in the English Press to that effect—but they never came to pass, being averted by the liberal supply of credit. Probably these statements go beyond warrant. But it cannot be denied that, in the crucial times which followed the industrial collapse of 1901, and the later suspension of the Leipziger Bank, the Reichsbank, thanks to its freedom of action, was enabled to grant accommodation on the largest possible scale, and thereby saved every sound business. History supplies no more striking instance of immense national services rendered by a single bank.

One obvious reflection seems to suggest itself in this connection. If an elastic clause, with its greater freedom of action, confers the benefits here recorded, the French system of a practically unfettered note-issue should prove still more advantageous. Practice, however, fails to confirm this conclusion. In the first instance, the Bank of France is limited in a most important respect, viz., as regards its total note-issue. This total has been fixed so high that the limitation is without practical significance, nay, more, in case of need it will undoubtedly be raised, as on former occasions. But, eliminating this objection, there is another drawback attached to the French system. It fails to bring into relief the full significance of the bank's figures. Let us take the Bank of France's returns of 3d November, 1904, and compare it with that of the middle of February.

3rd November, 1904—			
Gold	Fr. 2,596,461,500	Circulation........	Fr. 4,445,367,300
Total Cash	3,693,488,500		
16th February, 1904—			
Gold	Fr. 2,813,082,500	Circulation........	Fr. 4,341,327,705
Total Cash	3,915,512,300		

In about three months, therefore, the Bank of France shows a decrease in circulation of £4,161,700 and an increase in gold of £8,664,900. In Germany, as in England, this would constitute an increase in the bank's reserve of £12,826,000. In France these figures are not brought out in their full significance, and the country fails to obtain the stimulus to business which such enormous accession of strength ought to produce.

Before concluding it may be expected that I should touch upon a question sometimes discussed in the Press, viz., whether the addition of an elastic clause to the Peel Act is desirable. Already, some thirty years ago, a Chancellor of the Exchequer proposed such an addition, though under provisions which would have rendered the alteration practically useless. With regard to this question, I may at once state that the business conditions of this country do not demand the same elasticity of the note-issue as in Germany. The Bank of England, it is true, experiences several times a year an increased demand for accommodation. But the bulk of the money then borrowed is not taken into circulation in the shape of notes, but reappears on the other side of the Bank Returns in the "deposits." The transactions, in fact, constitute only "book entries." That is why they are frequently described as "window dressing," a most imperfect designation. The following table shows that, while the total of the displacements at the Bank, at the quarter's end, is growing, the loss in reserve is little altered, and therefore does not call for any special legislation.

	Other Securities.	Other Deposits.	Reserve.
1890.			
17th September	£21,342,288	£27,790,345	£13,672,750
1st October	26,089,629	29,042,970	11,221,867

28th December	35,463,898	44,321,197	20,173,062
	increase £6,850,640	increase £3,868,005	loss £1,830,300

Another remarkable feature which must be considered in this connection is the more or less stationary character of the total bank-note circulation in this country. We have seen above the constant and great rise of circulation in Germany. In England we have the following figures:—

	Circulation.
1st week, January, 1880	£27,867,782
" " 1890	24,673,490
" " 1900	28,327,820
" " 1905	28,607,725

Where the circulation is showing such comparatively small changes, the necessity for a reconsideration of the fiduciary issue does not impose itself.

But although the technical position of business conditions in England makes it comparatively easy to dispense with an elastic clause, there is little doubt that, in several directions, the latter would prove of advantage also in this country. It certainly would entirely dissipate all apprehensions as to the sufficiency of our banking reserves. These reserves are, to-day, on the whole, larger than formerly, and the outlook is for their further increase. Yet there is, in certain organs in the Press, a constant wail for more and more gold. To the student this cry must appear a sign of weakness. Banking is not hoarding, nor is the larger reserve a proof of greater safety. The art of banking consists in combining the remunerative employment of the largest proportion of the funds in hand with absolute liquidity. Any office-boy can conduct a bank by holding excessive gold reserves. Among nations, we find the most backward requiring the largest "visible" reserves to maintain their credit. But so persistent has, of late, been the cry for larger and ever larger gold reserves that few bankers have had the courage to point to the retrograde nature of this advice. Thus, to-day, it is difficult to say where to draw the line. For there seems no finality in the demands of these critics. Their appetite grows with the feast. Probably 100 per cent. cover in gold would satisfy them. There is only one excuse for all this reactionary writing, the theoretical possibility of a temporary breakdown in our credit system. Against such a possibility an elastic clause would be an absolute guarantee. If it did nothing else it would free England from this nightmare.

But Germany need not trouble how far the Elastic Clause would suit other nations. Its adoption in Austria and some minor countries has caused her no emotion. For her it suffices if her own business is furthered and facilitated. My remarks to-night are intended to show that a close examination into the workings of the Elastic Clause fails to bring out a single instance where its effects have been detrimental, while there is strong presumption that, by giving her note-issue greater freedom, Germany has added to the defence of her business interests a weapon, modern, progressive, and ingenious, which has probably formed one of the most effective, if less obvious, causes of her remarkable progress in commercial and industrial activity.

Discussion on Mr. Schmidt's Paper.

Mr. D. M. Mason: Mr. President and gentlemen, I think that we all owe a very deep debt of gratitude to Mr. Schmidt for the very able and excellent paper he has favored us with to-night. I would only advert to one or two of the matters raised in the paper which have struck me as being particularly interesting, and these are contained more or less on the last page, and which refer to our own Act, the Peel Act of 1844. I think, if my memory serves me right, the French Government, in 1866, held an inquiry into the causes governing currency and banking, and it was there maintained that, so far as the issue of notes was concerned, absolute freedom might be given in the issue of notes, provided the notes were made payable in gold on demand. That, to my mind, is the fundamental principle of a note issue. If the note issues are made payable in gold on demand, I do not think we need have any fears of an inadequate gold reserve, because it is evident if these notes are thrown back on the banks they would automatically provide a gold reserve to provide for their conversion. Mr. Schmidt points out, very pertinently, that the fact of holding or keeping a large gold reserve is very largely overdrawn, and its importance largely overestimated, owing to a lack of appreciation of what he considers sound and legitimate banking. It seems to me, with regard to this question of an elastic clause being added to the Peel Act, although I apprehend a five per cent. tax is intended to meet the fear that exists of inflation or excessive issue of notes, theoretically I must agree with the solution which was evolved in the French inquiry that there need be no fear, but possibly it might be advisable to have such a restriction. I quite agree with Mr. Schmidt and Mr. Hansard,* that if such a clause were added to our own Act it would unquestionably be of immense value in removing that fear of panic when accommodation cannot be secured. In addition to that, I think members will agree that it is rather a barbarous system we have in this country when we feel, as bankers know, that in times of panic we can only achieve the tiding over of that trouble by breaking the law of the land. Surely, it is evident that a law, which only takes effect by breaking it, is antiquated, and therefore one worthy to be looked into and brought up to date, so that we may be on a par with Germany and other nations. I may point out also, possibly what may appeal to many, that we do know in this country that just because of the lack of such a clause, we have a system—twice a year in Scotland more particularly —of transference of gold to Scotland, at the two terms of the year, spring and autumn, owing to the Act which compels these banks to increase their gold reserves. Gold is sent up there in boxes and brought back again never opened; so we see a very eloquent example of our rather antiquated system in this country. I think, therefore, that is an added proof of the need of some reform to bring us more up to date with present-day methods. I do not know there is any other point in the paper which appeals to me personally, but I would only like, in conclusion, to congratulate Mr. Schmidt on his lucid paper and its very interesting nature from beginning to end.

Mr. SCHUSTER: Let me first say that our President had to leave, and he asked me to occupy his place temporarily to-night. Perhaps I ought to be speaking from the other side of the table instead of from this chair, therefore, you must not take my remarks as coming from the chairman of the meeting, but simply as from a private member of this institution. I wish—and I am sure you all agree—to tender our very hearty thanks to Mr. Schmidt for his very interesting and valuable paper. Before commenting on the subject of the paper, I should like to congratulate him also on this, that he has kept it within very reasonable limits, and kept very strictly to the point, so that it gives us an opportunity for discussion. I am sorry there is not a greater number here who are willing to take part in the discussion, but I always feel it would be desirable if the papers that are read here were a little shorter, that is to say, confined themselves, as Mr. Schmidt has done, to one point only, so that we could discuss it freely without having to look forward to the black looks of the hosts of the evening who may be expecting us to dinner, and whom we may be keeping waiting. Well, this paper is extremely interesting and valuable. We have so often heard reference made at our meetings to the Elastic Clause that I am sure it is of the greatest interest and benefit to us to know exactly what it means, and how it has worked, and this is what Mr. Schmidt has very clearly brought out to us. One interesting feature he brought out. It is not immediately connected with this Elastic

*See letter at end of this discussion.

Clause, but it refers to the constitution of the Imperial Bank. This central committee, to which attention is drawn—an honorary committee—consists of representatives of the leading banks and bankers of Germany, gentlemen who form a connecting link between the great central bank and outside institutions and the commerce of the country generally. I think that is one of the most interesting and most satisfactory features of the constitution of the Reichsbank, and I must confess I do not know whether it would be possible or practicable to introduce such a committee here in London; but what is felt here—and I think we all have felt it—is that there is a lack of touch between the central institution and the outside banks and commercial community generally. Through such a committee the central institution might convey information which would be valuable to other representatives of banking and commerce. On the other hand, the private banks, outside banks, joint stock banks, may have information—I have maintained that often they do have information—which may be valuable for the central institution to possess; yet there is no recognised means for confidential communication of that kind, and a committee of this sort, even though an informal and unofficial one, would be, I think, most useful if it could be introduced here. As to the next paragraph, I should like to ask Mr. Schmidt one question, which, perhaps, he will be kind enough to answer at once. I take it one-third of the note issue has to be covered in cash and two-thirds always by bills of exchange?

Mr. SCHMIDT: That is right.

Mr. SCHUSTER: Well then, now when you come to the fiduciary issue, is that covered by bills of exchange also?

Mr. SCHMIDT: One-third in cash and two-thirds in short bills.

Mr. SCHUSTER: Where does the fiduciary character of that come in?

Mr. SCHMIDT: Because the total may exceed the total cash in hand. You mean the excess fiduciary?

Mr. SCHUSTER: Yes.

Mr. SCHMIDT: You see one-third must always be in cash and two-thirds in short bills. That is never altered. In addition to that, if the issue, the total issue, exceeds the fiduciary issue plus all the cash in hand, then comes the excess issue.

Mr. SCHUSTER: But how is that excess covered?

Mr. SCHMIDT: Also covered by one-third in cash, and two-thirds in bills.

Mr. SCHUSTER: So it is really an extension of the limit to the issue, and the actual character of the cover remains entirely unchanged?

Mr. SCHMIDT: Always.

Mr. SCHUSTER: Mr. Schmidt refers to the periods of the year when the excess of note issue is coincident with the internal movements of the currency, which always increase them. Well, has it struck you that these periods are coincident with those periods when, in this country, all the papers talk about "window-dressing"? It is exactly the same thing that occurs here when great demands, at these stated periods, are made on the banks, when the banks have to meet certain demands. When these demands are made on the banks, the banks have to take in large amounts from the market, and, naturally, these demands disturb the whole of Lombard Street, and they call it "window-dressing." In Germany it is done by excess issue, but the point I want to make is what Mr. Schmidt particularly explains as to what happens at certain periods of the year, whether it is in Germany, or London, or elsewhere, where demands for rent, interest payments, etc., have to be met, that is, recurring demands on the banks at fixed periods.

Now, I am afraid I am going on to much more debatable ground—and as I notice the expression "nervous and apprehensive critics," I will at once admit myself to belong to that class. As to whether it would be possible to have the Elastic Clause here, or whether it would be useful, of course, it would be useful to have it; I do not think there can be any difference of opinion on that at all. I think it would be most useful if such a clause could be introduced in our Bank Charter, but I do not think it would simply do to tack it on to the Bank Charter as it stands at present. A great many more precautions would be necessary, and I would confine the working of such a clause only to such cases which would now compel the Chancellor of the Exchequer to interfere by suspending the Bank Charters altogether. The conditions are totally different in London from what they are in Germany. One more question I would like to ask Mr. Schmidt, and that is as to the convertibility of the bank note. What is the actual obligation of the Reichsbank?

Mr. SCHMIDT: To pay them in current coin of the realm.

Mr. SCHUSTER: What I wish to know is, can the holder of that note go to the Reichsbank and say, "I want so much gold for that "note"?

Mr. SCHMIDT: No, he could be paid in silver thalers.

Mr. SCHUSTER: Here you have the difference; the holder of a Bank of England note has the right of demanding payment in gold, and nothing but gold. In Germany the note is paid in legal tender or the current coin of the nation, whatever that may be. You see what a vast difference it is, and how much more necessary it is for us to keep a sufficient gold reserve in London to meet those possible demands, where the obligation exists, and where the necessity exists, when we are the only country in the world to pay notes in gold.

I come to a paragraph which I have marked with an emphatic "No;" that is Mr. Schmidt's reference to book entries, which is part of his argument that our gold reserves are quite large enough—I think he goes so far as to say they are entirely excessive. I am quite of another opinion, and will say they are not nearly large enough. We all know that at various periods of the year there is a very large amount of borrowing from the Bank of England. The amount is, say, £15,000,000—it has reached £15,000,000. I do not think that an excessive figure to name. It has a constantly growing tendency, and, in ordinary times, as Mr. Schmidt has said, this is only a book entry—it goes from one ledger into another; so long as times are quiet and peaceful, and everything goes well, that will always be so, but the essence of a reserve is to be available for times when things are not so quiet, and it does not follow—it is not a natural law—that those amounts which are borrowed from the Bank of England will be placed to the deposit account on the other side. Not at all. A case may arise when they have to be taken out of the Bank, either in notes or in gold. We have not had such a thing as a gold crisis, or a gold panic, for many years, but still it is not without the range of possibility that one should come, and for such times we should be prepared. That is the very essence of reserve; and quite recently, when the foreign exchanges were all against us, it was quite possible that just during one of these periods a very large amount might have been taken out of the Bank—many millions. Again, it is the last remark on the matter I have to make—is Mr. Schmidt's reference to the sufficiency of our bank reserves. Now, I hope Mr. Schmidt will forgive me—I think there is a little confusion of thought here. The ordinary banking reserves have really nothing to do with the question we are discussing to-night at all. You are discussing the currency of a country, and the conditions which are imposed on the leading State Institution which has to regulate that currency. The question of the outside banking reserves is quite a different one. It behooves every bank so to conduct its business—I am taking the outside banks, not the State bank, that has a note issue, but the banks to which Mr. Schmidt refers as keeping too large reserves, and who have got nothing to do with the currency of the country; to keep such reserves in hand in legal tender as may enable them to satisfy, not only the ordinary demands, but the exceptional demands that may arise from time to time. Each bank must judge according to its own accounts, and must judge the probabilities according to what may be their own experience as to possible requirements. But a reserve means, to my mind, something which should be there, and always there, beyond your daily requirements, beyond your till money, and whether this reserve, bank reserves which happen to be held by the Bank of England—which question is purely coincident and has nothing to do with the currency of the country at all—whether these reserves are too large, as Mr. Schmidt seems to maintain, I think that is a question on which I am not disposed to agree with him at all; because, take the average of the published accounts, that is fifteen per cent.—I think the London Clearing House banks that publish their accounts show, on the whole, an average of 15 per cent. in cash; in New York it is necessary that the banks should hold a reserve of 25 per cent.—but 15 per cent. has been found quite sufficient for the ordinary demands, which may arise at any time. I do not think that amount is excessive; if anything, to my mind, it is rather below the mark than above it, and if Mr. Schmidt will find me that office boy who can conduct business with an excessive gold reserve, and yet be able to earn a dividend for the bank——

Mr. Schmidt: I did not say that.

Mr. Schuster: I think he will be worthy of a very large salary indeed. Therefore, I am not at one with him here, and with his general conclusions —"But so persistent have, of late, been the requirements for larger and ever larger gold reserves that few bankers have had the courage to point to the retrograde nature of this advice." I maintain that the advice is not retrograde at all; it is progressive, and the stronger the banks keep themselves, surely, the greater the benefit to the commerce of the country all round. The question of the gold reserve in the Bank of England has nothing to do with this part of the subject. We have been discussing it here from time to time. I am certainly one of those hysterical people who believe there ought to be a larger gold reserve in the Bank of England, considering the huge liabilities which may at any time become due, and the huge liabilities which may at any time suddenly arise. Do not compare those figures of the German Reichsbank with those of the Bank of England. The Bank of England figures must be considered together with the deposits of all the joint stock banks of the country, deposits which amount to something like £800,000,000 taking it all round. Such a thing does not exist in Germany; the whole business of that country, as has been pointed out in this paper, is carried on, or the greater part of it is carried on, by means of the bank notes. Here it is the banks themselves that replace the bank note by issuing their cheque-books to their customers. Each individual makes his own bank note to any amount, and eventually that bank note is payable in gold. In Germany they have a different system altogether, a different currency, and it is our pride and boast that we are the only country that has a real gold standard—that is to say, a currency which must always be payable in gold, and for that it is our duty to maintain proper and reasonable reserves, and, considering the huge amount of the liability I think the reserves in the Bank of England cannot be called excessive at all. There is only one remark which I omitted, and that is that Mr. Schmidt has pointed out how the note circulation in Germany has grown compared with ours, which has been stationary. That is again explained by the fact that the banks here do all the business that is done by the bank note in Germany, and you have a much larger growth in the banking deposits; much larger in proportion than the growth of the note issue in Germany, so that the conclusion which might be arrived at from this paper, that our business is stationary, would be entirely erroneous. I do not mean to suggest that the inference was intentional at all, but I mean without considering the growth of the bank deposits, which, as we all know, has not only been constant, but astonishingly rapid and very large indeed, one might be tempted to arrive at erroneous conclusions from this part of the paper. I am afraid my remarks have been very lengthy, but I wish once more seriously to protest against the tendency of relaxing all precautions which have been thought necessary, especially as both Mr. Hansard and Mr. Mason were inclined to follow the reader of the paper in his argument that we are doing too much in the way of reserves. I think, on reflection, perhaps, you will agree that we are not really erring in that direction at all.

Mr. Mason: Pardon me, my point was that if a note is made payable in gold on demand, that would automatically compel us to maintain the reserves. That is my point.

Mr. Schuster: I did not quite follow that.

Mr. Mason: My point is—if I may take up the time of the meeting—to my mind, the essence of sound banking consists in the very point you referred to, of making the note payable in gold on demand, and if other bankers in this country were allowed a continuous issue, and the issues were made payable in gold on demand, that would automatically compel them to maintain their reserve against these notes, and the currency would then obtain an elasticity which it lacks at present, because, as the notes went out of circulation, the bankers automatically would increase their reserves to meet these notes if they were thrown back upon them. The mere holding of a huge gold reserve does not constitute sound banking. There is more than that in sound banking—there is the question, as Mr. Schuster will agree with me, of advances, etc., but if we had a more free issue of notes payable in gold on demand we would automatically hold large gold reserves, whereas, under our present system, the mere keeping of large gold reserves would indicate an inelastic currency as at present.

Mr. Steele: I should like to point out that the argument that the mere fact of endowing notes with the quality of convertibility will automatically provide gold to meet them, is a pure fallacy. I am unable to follow the argument that the mere endowing of a note with the right of payment on demand will create a gold reserve.

Mr. Schuster: I think Mr. Mason has explained that. I was also puzzled by the statement he referred to, but what he had in his mind, as I understand it, was the possibility of other bankers being given power to issue notes, and holding against those notes a proper reserve which, of course, in that case, would increase the total holding of a stock of gold throughout the country, but I am afraid we have got off the line altogether, because, so far as I can see, we need hardly discuss such a possibility.

Mr. Mason: My point was that when a banker knew he had a considerable note issue outside he would naturally, in view of that liability, create his own gold reserve.

Mr. Steele: It comes to this—instead of automatically, Mr. Mason means naturally, which is a very different thing.

Mr. R. Dobson: Perhaps I might be permitted to make one remark with regard to the question which has arisen, and that is that the teaching of English bank history is that when bankers can freely issue their own notes they do not provide sufficient gold reserve. There we have the testimony of historical fact. I should like to ask Mr. Schmidt are all the German bank notes, whether issued by the Reichsbank or by others, legal tender?

Mr. Schmidt: No, not one.

Mr. Dobson: I do not want to act upon it; I only want to know it as a matter of fact. Mr. Schmidt remarked at the end of his paper that, among nations, we find the most backward requiring the largest possible reserves to maintain their credit. I do not know whether Mr. Schmidt wished to imply that the smaller the reserves the nation held the more advanced it was.

Mr. Schmidt: That is the case.

Mr. Dobson: Well, that being so, it will be rather dangerous for those nations to accept this as a principle and push it to its logical conclusion. If Mr. Schmidt really means that the most advanced nation will be able safely to work with a smaller reserve than the more backward nations, I quite agree with him, but I would ask whether it is not a fact that, at the present time, this country works with a smaller gold reserve than any other nation, if we consider it relatively to the liabilities of which it is the basis; and, in considering these liabilities, as has already been pointed out by the chairman, he must consider the total deposits of this country, which amount to about £800,000,000.

Mr. Schmidt (in reply): I am afraid there is not much for me to answer. The discussion has mostly travelled beyond the scope of my paper. However, I should like to say that with regard to the sufficiency of our gold reserves our chairman and I look upon this subject from different standpoints. I quite agree that, under present conditions, banks are hardly safe with the existing reserves. Nay, I go further. Should a real credit crisis arise, these reserves may not be sufficient unless they amount to full 100 per cent. The only thing that will stop a panic is the knowledge that there is an unlimited reserve. In other words, the suspension of the Bank Act. An elastic clause would do away with that necessity. It would remove the cause for apprehension, and, under then existing conditions, we need not trouble about the sufficiency of our gold reserves. They would take care of themselves, provided the assets of our banks are solid, and only require the Bank of England to possess the power of issuing notes in order to be made liquid. The question is, which is better for the country—to modify the Statute, now over 50 years old, and dating back to a period of quite different business conditions, or to go to the expense of accumulating reserves which, when really wanted, will never be efficient unless covering 100 per cent. of the liabilities? It is on the answer to this question that I, unfortunately for me, differ from our chairman. I emphasise the statement that I am no advocate of insufficient reserves, with or without the Elastic Clause, but I think there are important points in banking besides the mere holding of gold. The power and the control of the foreign exchanges is of such importance. It is probably even a more important factor than the mere display of gold. If the latter were the essential, Russia would be the strongest financial power in the world to-day. We know that she is not. The ability of foreign nations to protect their reserves by declining to part with gold has really nothing to do with our subject. For, at any rate in Germany, this power has never been used. Witness her foreign exchanges. Moreover it could only be used to the extent of her limited stock of thalers. But if this facility is used as an argument, it tells in favor, and not against, an elastic clause in this country. For, if such a clause was salutary in Germany, which possesses another line of defence, how much more salutary should it prove with us, unprotected as we are against sudden withdrawals of gold.

The following extract from a letter from Mr. L. Hansard to Mr. Schmidt was read to the meeting at the commencement of the discussion:—

"Without commenting on the figures and statistics you have given, I may say that personally I am a believer in the efficacy of the German system, and I think it would be a distinct advantage to us if we had some such clause as the one that is known in the German Bank Act as the Elastic Clause, tacked on to our Act of 1844. Although we have not had any actual suspension of the Bank Act since 1857, I believe that some such system for the automatic suspension of the limit of issue would be most beneficial to us, and would remove what you mildly term 'apprehension,' but which is often panic caused by unreasoning fear that borrowers will not be able to obtain accommodation.

"Speaking from a long experience I may say that I have never known a time when borrowers with really good security could not obtain loans, although they might have to pay a high interest, and might have some difficulty in selling their securities at a fair price.

"As regards your last paragraph on page 210, I am very glad you allude to what seems to me the hyper-sensitiveness of our critics, and even some of our bankers, on the subject of gold reserves. I think many of us attach far too much importance to this gold question, and I think one may fairly ask, as you do, where the limit of gold reserve is to stop. To judge from some of our Press critics and others, one would imagine that there was no gold in the world except at the Bank of England. This is too narrow a view to take, and leaves out of account altogether the international money markets, which, owing to the telegraph and otherwise, respond much more quickly than they did in former times; and independently of this the foreign money markets have far more power nowadays than formerly. It should be remembered that at the time of the panic of 1857, which was caused by financial weakness in the United States, the cable between Europe and the Western Hemisphere did not exist. I agree with you that the outcry for gold on the part of some of our critics has been overdone. What is necessary, as you state, is that a banker should look to his securities being absolutely liquid and convertible.

"I hope some good will come of your paper.

"I am, yours very faithfully,

"LUKE HANSARD.

"Hermann Schmidt, Esq."

LABOR AND WAGES IN CHINESE COTTON FACTORIES.—German papers state that a working day in the Chinese cotton factories is thirteen and one-half in ordinary daily business transactions, the need of clearing-houses has been agitated, with the result that only a few mills now run day and night. Many cotton factories at Shanghai still pay by the piece, and the workingmen earn the equivalent of but 12 cents American per day.—*Richard Guenther, Consul-General, Frankfort, Germany.*

A CREDIT LEDGER.

Resuming our argument setting forth features of operation in banks, necessary to tabulate, analyze and compare, we will now take up borrowers' statements, the item of main importance in the commercial lending end of the business. Presentation of an analyzed statement will be deferred for a later article.

That part of the article which deals with the legal aspect of statements is based upon information courteously extended to the writer by Thomas B. Paton, Editor of the "Banking Law Journal," New York.

Figs. one and two represent a form of borrower's statement suitable for an individual; Figs. one and three answer for a firm; and Figs. four and five for a corporation. The latter form is filled in to illustrate a statement as it would appear upon receipt from a prospective borrower.

After analysis and to permit at all times thereafter immediate reference and comparisons, the statements received by a bank would be filed away alphabetically and consecutively in a Rand loose-leaf ledger binder. Its capacity is from one hundred to twelve hundred sheets. Small banks, handling a moderate amount of statements, need devote but one section of their credit ledger to statement filing. Large institutions, receiving many, should use a separate binder for that feature alone.

Explanation of the Form.

In general the statement shown is considered complete and definite. The rulings for the schedules on the face side of the sheet set forth:

REAL ESTATE ....LIENS
QUICK ASSETS...........................FLOATING INDEBTEDNESS
SECURED ASSETS OR LIABILITIES..........CONTINGENT INDEBTEDNESS

These have been arranged so as to present these items in a comprehensive manner, permitting immediate and satisfactory analysis.

Real Estate.

Real estate is an item that usually figures in borrowers' statements. It is invariably overestimated and generally contributes more than a desired share of the total assets. Notwithstanding these facts, in many forms of borrowers' statements in daily use by bankers, this item, frequently consisting of many pieces, is only asked for in gross amounts with no clew as to the location, identity or stability. On an item of credit that can be so specifically recorded, why the necessity, obligation or hazard of the lender being expected to guess by the amounts given, as to whether the borrower owns his dwelling, or his place of business, or but the unmortgagable part of all? For this last conclusion, the mind ofttimes must needs be in a very receptive mood, when the eye, stumbling upon the amount of gross liens, notes how strongly they appear to be holding their own. I am not unmindful of the theory that note loans are assumed to be made only against quick assets and not against real estate; nevertheless the extent to which a concern owns its tools of trade and equipment or is interested in, or has funds invested in its plant, and an acquaintance with its part-plant-owner (first to be paid therefrom, and at best a steady fixed charge), the mortgagee, are items so pertinent to the question of continuance in business that they should be especially inquired into. That a man is not temporarily claiming or believing he owns all the property titled among the family circle, even though we may concede he paid for it, is likewise a matter suggesting reasonable safeguards. Hence, the definiteness of our real estate list. With a complete schedule, equipment can be thoroughly analyzed that

OFFICIAL STATEMENT.

INDIVIDUAL.

List each piece of real estate separately, filling out this schedule and all schedules carefully and as called for, using words "none" or "don't know" where figures asked you do not supply. Specify every asset and liability you have, using the blank spaces where printed form does not answer.

after the post mortem of the statement, its appearance joined to the total quick assets, should quickly determine whether the borrower gets the loan.

Contingent Liabilities.

The contingent indebtedness of a concern is an item demanding careful dissection as not infrequently a condition disclosing too great a line of credit extended on notes and open accounts or other risks in the way of endorsements, guarantees, contracts and otherwise, is uncovered.

Signing Statements.

The reader will notice that the forms shown provide that each member of a firm, and at least two officers of a corporation, shall be obliged to authenticate their statements. As a preventive of chicanery among themselves, as a matter of recourse, and as an equitable and safer method all around, this idea seems to be meritorious. The optional "please sign here," per "anybody," permitted generally, invites and assists optimism (?).

Advantage of Signed Statements.

The necessity of a lender having something tangible to investigate and upon which to rest judgment of a borrower's ability to meet demands, suggests the primary advantage in requiring signed statements of condition. As to a bank's redress thereon, it is offered as a matter of law that a signed statement is evidence in black and white for immediate use and remedy; whereas, without it, it might be difficult in many instances to make out a case of fraudulent representation, or it might take considerable time to procure the evidence necessary to substantiate the fraud. Of course, contracts based on fraud are rescindable, and without a statement sometimes the facts proving false pretences might easily be demonstrated; but on general principles acts are more apt to be provable from the basis of signed statements than otherwise, and at all events they furnish a safer basis from which to fix valuations or from which to prosecute. The reader is doubtless aware that upon a provably false statement a borrower can be prosecuted. But do not permit reliance on that fact to assist a borrower to a loan. Criminal prosecution to recover civil damages is invariably unsatisfactory and distasteful.

Attention is called to the agreement upon which the loans are based (see Figs. two, three and five). The clause permitting, under certain conditions, a bank's maturing paper and charging it up to a depositor's account, is a needful one. In the State of New York a bank is not entitled, in the absence of a prior agreement to that effect, to set off the deposit of a failed depositor against unmatured notes. The New York Court of Appeals in Fera vs. Wickham, 135 New York, 223, said:

"The principle to which we should adhere is this: When a party asks to have set off against a demand upon him held by an assignee for the benefit of creditors, a claim against the insolvent estate, it will be allowed, provided his was a claim upon the estate due when the assignment was made; upon the ground that by reason of the existence of cross demands at the time of the assignment which were due (or might have become due at the creditor's election) an equitable adjustment by set off is made without interfering with the equities of others. But after the estate has passed to an assignee upon a trust to hold for and to distribute among creditors, the former and natural equity disappears in the superior equities vesting in the general body of creditors. They are then interested in having equality of distribution, and if a creditor who, when the assignment was made, had no right to any offset, may be allowed it afterwards he gains a preference. By the intervention of the rights of third persons, under the assignment, the equities change with the change in the situation of the original parties; to the misfortune of the creditor holding a demand against the insolvent estate, but, nevertheless, in accordance with equitable principles."

However, that a bank, by agreement with a borrower, can acquire a lien upon a shifting deposit for any indebtedness of the latter, as well as the right to mature his debt upon the latter's insolvency, is shown by

FIG. 5.

the case of Coats vs. Donnell, 94 New York 168, wherein a bank was held justified in appropriating a deposit balance in payment of unmatured paper in conformity with an agreement with the borrower when it learned that the latter was in difficulties.

It was held that the agreement was not invalid as against public policy and that the lien was effectual though upon a deposit balance which was constantly fluctuating in amount. It would seem, therefore, that a clause giving a bank a lien upon the deposit balance and a right to mature paper under certain conditions is one necessary to its protection.

To state the matter in another way. In the event of bankruptcy, the creditor must either elect to retain the benefits of the agreement and be barred from sharing the proceeds of bankruptcy, or elect to go into bankruptcy and share ratably with the other creditors, being barred from retaining to himself any benefits arising from the agreement. A creditor sharing in bankruptcy can retain no property of a debtor coming into his possession within four months next preceding the date when the debtor is adjudicated a bankrupt. The agreement, while the bankrupt law stands, simply grants the creditor two methods of settlement, and if repealed (about time) it would permit any proceedings that the lender could desire.

Procuring Statements.

Competition, in weakening insistence, has of course considerably retarded the matter of educating borrowers up to an appreciation of the benefits accruing to them from properly setting forth their condition before their financial medicus.

A helpful stimulant for reluctant statement-givers is to acquaint them with the fact that they alone handle their assets, and if a portion of your depositors' dollars is to pass from your control and invest itself among these assets, you, as guarantor of the return of these dollars, are entitled to know, at all times, upon what basis the borrower is operating his business and upon what he predicates his ability to pay.

With borrowers in the moderate credit grades, have no hesitancy in permitting them to see that their periodical ailments can and will be more readily diagnosed and the doses prescribed apt to be more ample, when based upon straightforward signed statements.

When tardy in responding to requests for statements, remind them, when the trade inquires as to their business health, suggesting your ability and willingness to serve them, but preferably from a definite basis—the statement already asked for and not given.

If, after careful and courteous nursing, the patient is still unreasonable and fractious, permit your non-statement-asking competitor to steal the business. For, "The day has gone by for wasting too much time on the would-be-customer who endeavors to hide rather than disclose the true condition of his affairs—the gentleman whose most conspicuous assets are cheek and bluff—who claims credit on his fine appearance and standing in the community, concerning both of which no one can be found to entertain quite so exalted an opinion as himself."

To properly handle borrowers in the higher credit grades, tact of a superior order is required at all times. It must find an inoffensive and successful way of procuring sufficient information upon which to base their requirements. Usually the loans asked for are of but the temporary variety and modest in proportion to the apparent wealth. When otherwise reasonably complete statements should be insisted upon.

George L. Tickner,

Syracuse, N. Y.

(To be continued.)

Circumventing the Law.—A great lawyer who employs his talents and his learning in the highly remunerative task of enabling a very wealthy client to override or circumvent the law, is doing all that in him lies to encourage the growth in this country of a spirit of dumb anger against all laws and of disbelief in their efficacy.—*President Roosevelt.*

THE NATIONAL FINANCES OF GREAT BRITAIN.

At the Institute of Bankers (London) on Wednesday, June 7, Mr. Edgar Speyer, of the well-known banking house of Messrs. Speyer Brothers, speaking to an influential gathering of bankers, gave an important address upon "Some Aspects of National Finance." A condensed report of the address follows.

On January 1, 1904, when in New York, said Mr. Speyer, I was questioned with regard to the financial condition and outlook in this country, and I then ventured to express the view that the root of our troubles, and one of the main reasons for the growing excess of imports over exports, was general extravagance—national, municipal, individual; that retrenchment was necessary all round, and that it would have to come eventually through the stress of hard times, if through nothing else. Since that time, about fifteen months ago, many momentous events have happened in the world, and great changes have taken place. The heat of fiscal discussion has cooled, but the central fact of the situation as it has existed for some time—the fact of general extravagance—still exists, and it is this fact and the consequence arising therefrom that I wish to examine a little more closely to-day.

Particular emphasis has been laid on the extravagance of our municipalities. I am the last to defend or ignore the enormous increase in municipal expenditure; the growth has been enormous, and merits the most careful consideration of the nation.

I do not propose, however, to discuss municipal finance to-night, not only because it has been exhaustively dealt with by Lord Avebury, but because the time at my disposal obliges me to limit myself to national finance; that is, a review of the financial position and the financial policy of the country.

Growth of National Expenditure.

Let us now look at the picture which presents itself to us when we consider the sums expended by the nation and to be expended in the ten years from 1896 to 1906.

In the past ten years the country has expended a sum of £1,440,833,126 in contrast with £902,209,158 in the previous ten years, a difference of no less than £538,000,000 or nearly 60 per cent. These figures are more eloquent than any comment of mine.

Expenditure such as this was bound to seriously affect our capital fund and our savings; but this is not all. With the figures I have just mentioned our expenditure is not by any means fully stated. In the past ten years an additional extraordinary expenditure of about £45,000,000 has, on balance, been charged to capital, chiefly for unproductive works, whereas in the previous ten years all expenditure other than about £3,000,000 has been charged to revenue. The national expenditure has in the past ten years exceeded that of the previous decade by about £581,000,000. Portions of these expenditures have been incurred for the Post Office, the telegraphs, and the steam-packet service. To ascertain the growth of the expenditure for what may be termed unproductive purposes it is necessary to eliminate these reproductive outlays. In the decade ended with March, 1886, the net expenditure for purposes not reproductive was £728,000,000. In the ten years ended 1893 it was only £754,000,000. In the past ten years it was no less than £1,291,000,000. In other words, whereas in the 1886-96 decade the growth was only 3·6 per cent. compared with the previous decade, in the ten years which will terminate on March 31, 1906, the increase of unproductive expenditure will be no less than 71 per cent. compared with the previous decade. We must, of course, remember that a good part of this huge expenditure has been caused by the war. But even if we deduct war expenditure, which amounts to about £220,000,000, excluding interest on debt, the growth in the normal expenditure for the past ten years will be still over £300,000,000, or about 45 per cent., in comparison with the previous ten years.

We are not here concerned with the question whether this huge expenditure was justified or not, but I only want to point to the fact, already stated, that these enormous outlays have very seriously encroached upon the income which the nation would have received had these moneys been invested in reproductive works.

At five per cent. interest the annual loss at simple interest would be £26,000,000 per annum, and were allowance made for a normal growth in expenses, arising from increased population and additional expenditure upon education, the net loss of income to the nation from the excessive growth of the national expenditure is about £24,000,000 per annum.

But this is not nearly the whole story. The loss of income per annum is much greater, for, in addition to the Government expenditure, both municipalities and individuals have incurred very large expenditures which have swelled those figures considerably. As regards municipal expenditure I will only quote one or two figures. For the last ten years, up to 1905-06, the aggregate expenditure, capital and income, has been approximately £1,270,000,000, compared to £737,000,000 in the previous ten years. Therefore this country's national and municipal outlay has reached the enormous total of £2,710,000,000 in the last ten years, compared to £1,639,000,000 in the previous decade. The consequence of this general extravagance, which I ventured to point out a year ago, has been that our imports have been very largely increased, while our exports have remained relatively stationary. The result has been that the balance of our imports over our exports has more than doubled since the later eighties. I do not think we need go to our fiscal system, or find any other scapegoat, for this state of things. The reason seems to me perfectly obvious. We have been spending too much money. To use a well-known expression, we have been burning the candle at both ends.

Let us now examine the effects of this extravagance on our trade. We all know that exports of capital from this country take place in two ways. Firstly, capital is sent away by exporting British goods and produce; and, secondly, capital is sent out by reducing our purchases of foreign goods and produce; or, to express it a little more circumstantially, foreign nations which owe us interest, dividends, commisions, etc., send us, in the ordinary course of events, produce to pay for these items; but it also happens that they retain at home for themselves a larger portion of their produce than really belongs to them, and they do so by borrowing in this country the money they need for interest, commissions, freights, etc. In the decades before the present—that is, in the sixties, seventies, and eighties—the quantity of capital invested in foreign countries by Great Britain was very large. It is, of course, difficult to give exact figures for these periods, but we have certain data which enable us to form a fairly good opinion of the effect on our foreign trade balance of our exports of capital in the eighties, and by its relative absence in the nineties. The income-tax returns furnish these data, and show the amount of our income from certain sections of our foreign investments in the two periods, but these statements by the Inland Revenue Commissioners showing the income from colonial and foreign investments are not complete, as they do not include a very large amount of income received by companies, bankers, and firms from their foreign agents and branches.

For all that the Inland Revenue Commissioners' statements are instructive; they show the income from our Indian, colonial, and foreign investments, in periods of five years, from 1890 to 1900. Our income from certain of our colonial and foreign investments were:—

	Annual Income. £
1900-01	60,331,000
1890-91	55,488,000
1880-81	29,951,000

Capitalized at twenty years' purchase the amount of investments represented by the above would be £598,000,000 in 1880-81, £1,110,000,000 in 1890-91, and £1,206,000,000 in 1900-01. That is to say, in the ten years from

1881 to 1891 we have invested a sum of £512,000,000, whereas in the ten years to 1901 we only invested £96,000,000. Some small portion of the apparent increase in our income from foreign investments in the eighties was due to the greater care taken by the Inland Revenue Commissioners to earmark the various sources of income assessed to income tax. But these figures do not by any means represent our total investments. I do not think it is in any way reckless to say that in the eighties decade this country invested abroad over £600,000,000, or at the rate of £60,000,000 a year; and in the nineties £250,000,000, or at the rate of £25,000,000 a year. These figures give a natural explanation of the great changes in the balance of trade in these two periods. In the eighties decade the average excess of imports over exports was about £98,000,000 per annum. In the nineties this average excess amounted to £148,000,000 per annum. If we allow for the investment of about £60,000,000 per annum capital abroad during the eighties, we arrive at a net excess of imports over exports of about £158,000,000 per annum. Similarly, if we allow for the investment abroad of £25,000,000 per annum in the nineties, we arrive at an excess of imports over exports in that period of about £173,000,000 per annum. The increase of £15,000,000 is accounted for by the additional interest on our foreign investments in the past ten years compared with the previous ten years.

These capital investments abroad have of late years practically stopped altogether, because we have spent all our money at home. Our exports, therefore, have been relatively small, and our imports have increased. The excess of imports over exports in 1903 reached the enormous total of £183,000,000, compared to £81,000,000 in the later eighties. It will be seen, therefore, that the large excess of imports over exports in recent years is due not so much, if at all, to our fiscal policy, but to great extravagance, and to the comparatively small amount of savings devoted to investments in foreign and colonial securities. It is here that reform should come in, for the comparative absence of reproductive savings available for investment in our Colonies, in India, and elsewhere, is a very serious factor in the situation, and cannot be too clearly recognized. Our population increases about one per cent. per annum—that is, about ten per cent. in ten years—and our ability to maintain this growing population depends to some extent on the income from our reproductive savings, of which our foreign and colonial savings form so important a portion. I do not think we realize sufficiently the importance of our colonial and foreign investments, or the great part they have played in bringing about the great prosperity of this country. We could not maintain a population of about 43,000,000 of people in the comfort in which they now live were it not for our colonial and foreign investments. Now what do these investments do for us? In the first place, they give much employment to our working classes. The capital we invest in Colonies and in foreign countries is largely sent in the form of British produce, rails, bridges, and rolling-stock for the railways we build abroad, clothes for the workmen to wear, often food for them to eat. If we do not send out goods directly to the countries in which we are investing money, we do so indirectly. The capital we have invested in foreign countries at the present has been estimated at about £2,500,000,000. This estimate seems conservative if we bear in mind the figures given by Sir Robert Giffen in 1889 in his book "The Growth of Capital." Of this sum we have invested in the last half a century about £2,000,000,000. It is further estimated that of this sum probably £1,500,000,000 has been sent out in the form of British exports, and the remaining £500,000,000 has probably been sent in the form of imports, which, but for our exports of capital, would have come to us. In other words, over the past fifty years about £30,000,000 per annum of our exports have been sent out because we have employed capital abroad. This sum has been sufficient to pay £100 per annum to 300,000 persons for fifty years. But beyond this we are receiving an income from our foreign investments of upwards of £110,000,000 per annum, which is equal to an income of £100 a year to 1,110,000 persons. Therefore the investment of our capital abroad and the income we receive are maintaining about 1,500,000 wage-earners, and, including their families, about 7,000,000 of our people.

If these facts are realized, the Government should make it their first duty to encourage thrift in every possible way, and should be the first themselves to give an example in this direction. Great stress is rightly laid on the importance of having an efficient Army and Navy. Very large sums have been expended, and the country has not grudged any outlay that it has been asked to make to insure this most desirable object. We only hope that we have got value for our money. It should not be forgotten, however, that in order to be successful we should be equally prepared for the great commercial struggle which we are engaged in. We should be alive to the fact that commerce, in order to be successful and progressive, requires adequate capital and reserves just as much as the Navy wants battleships, or the Army wants guns, and both want competent leadership. The finance of the country should, therefore, be so conducted that English sovereigns or their equivalent should be available for employment in any direction at any time that trade requires them to go. To you, bankers of the City of London, I need not affirm that in recent years we have not had that adequate supply of capital which in the past so greatly assisted the development of our export trade to our Colonies and to foreign countries. On the other hand, the Continent and the United States have taken advantage of our extravagance to export capital to the new countries—Canada, South Africa, South America, China, Cuba, the Philippines, and elsewhere—and have, in consequence, enjoyed a much larger share of the trade of these countries than they could possibly have secured had we been as thrifty as of yore. Our extravagance was their opportunity.

Let us now examine whether the interests of trade have been of late sufficiently safeguarded in other directions.

The Issue of Treasury Bills.

Since the beginning of the war the Chancellor of the Exchequer has issued a very large amount of Treasury bills and other forms of floating debt, which, at one time and another, reached the large sum of £35,000,000. Such an amount naturally absorbed what should have been at the disposal of the banking funds, and it interfered with the facilities which bankers are expected and accustomed to grant to private customers, whose prosperity is intimately bound up with active trade. Instead of assisting trade, therefore, the Government, by pursuing a policy which necessitates the issue of such a large amount of Treasury bills, is actually competing with the traders, and absorbing the bank balances which should go to finance trade. But there is one other point that should be mentioned in this connection, and to which I have already referred at the beginning of my address. In recent years the ordinary Budget has been supplemented by an extraordinary Budget—that is; a Budget containing expenditures which are provided for out of capital. In the past year these expenditures have amounted to £8,114,000, and to complete the works an additional sum of over £25,000,000 has yet to be borrowed. This capital expenditure, as has been pointed out by the "Economist" and "The Statist," means nothing less than that the sinking funds provided for the redemption of debt have not been used for that purpose at all, but have in reality, in recent years, been used for providing expenditure upon naval and military works, etc. The continuance of these capital outlays, if they are financed by fresh borrowings, will prevent any reduction of the debt of the country for several years.

Before examining how these enormous outlays have been and are being met by fresh taxation, allow me to recapitulate the conclusions reached so far. They are, firstly, that general extravagance has affected the annual additions to the capital fund of the nation, has curtailed, and is now curtailing, trade. Secondly, the lack of capital available for investment in colonial and foreign countries has had the effect of doubling the excess of imports compared to exports. Thirdly, the large amount of Treasury bills has further injured trade. Fourthly, extraordinary Budgets have been allowed to exist and nullify the beneficial action of the Sinking Fund in reducing the National Debt, which, in reality, has not been reduced at all since the war. It speaks for the vitality of British trade that it has not suffered greater injury from these regrettable conditions than it has, conditions which are due to what I believe to be a mistaken diagnosis of the case. We have been drifting along without recognizing the evils that beset us. This will become more evident if we look at the way in which the large expenditure of the country has been provided for by new taxation. One should have thought that, as we have been so extravagant, the wisest and most natural thing would have been to tax articles which constitute extravagance—that is, luxuries—in the first instance. A policy was, and is, needed which tends to discourage spendthrifts. That this has not been done a few figures will show.

In 1896-97, when the expenditure of the country had not reached such huge proportions, the duty on spirits was 10*s.* 6*d.* per gallon.
only 11*s.* per gallon.

Although it is predicted in some quarters that a higher tax would yield no greater revenue, I venture to think that it would be worth trying. Let me say here, in parenthesis, that the "wave of sobriety" which the Chancellor of the Exchequer has discerned when watching the huge sea of drink consumed in this country is like some *fata morgana.* If you come closer the seductive picture disappears from view. Figures are like dogs—you can make them do many tricks; and Talleyrand has said: "Le chiffre c'est un grand mensonge." Since 1896-97 there has been a very large increase in the annual consumption of spirits. The total amount of spirits consumed in recent years has been hidden in some measure by the enormous clearance of spirits out of bond when the war broke out, and the then Chancellor of the Exchequer, by delaying his war Budget, gave the spirit merchants and consumers a splendid opportunity for several months to anticipate increased taxation. I personally, therefore, do not much believe, and the figures do not prove, that the nation's sobriety is greater. Of the "wave of sobriety" only the froth remains.

When we come to tobacco, there seems no reason why this duty should not have been materially increased. The additions that have been made to the duty in recent years immediately followed a corresponding reduction of tax in 1898, and on balance tobacco has borne no increase in duty in the last ten years. The vast growth in consumption of tobacco shows that a higher duty could have been borne without materially affecting a demand for this luxury.

The absence of any increase in the inhabited house duty is also matter for surprise. One of the most striking characteristics of the recent period of luxury has been the vast sums of money spent upon expensive houses, and while I am the last to say anything in disparagement of fine houses, it must be nevertheless recognized that the enormous expenditures on the houses of the well-to-do do not altogether make for efficiency.

Rather than let the income tax stand at such a high figure as 1*s.* in the £, the inhabited house duty could have been materially increased without much hardship, and the principle of such change would have been sound and logical. It would have discouraged extravagance. Those who are able to pay an increased rental for their houses should also be easily able to make an increased contribution to the Exchequer to meet the enormous national expenditure.

To sum up the case, I have shown that the taxation has not, to any appreciable extent, been placed upon those who are in a measure wasting their resources, and failing to add their quota to the capital fund of the country. The result has been that the growth of the capital fund of the nation is unsatisfactory, and that the banking funds at the service of trade are inadequate.

Our financial policy, therefore, is responsible to a great extent for the check that trade has received owing to the scarcity of capital, and our policy will be in a large measure responsible for the reduction in the income of the nation in the future, in proportion to the population, in consequence of an inadequate portion of our capital funds having in recent years been placed in reproductive enterprises.

The growth in rates and taxes handicaps trade, and this at a time when our traders and our railways are endeavoring to reduce cost of production by introducing improved appliances and methods. It is therefore essential that these efforts of the traders and of our railways, which are necessary in order to keep pace with the competitors of other countries, should be seconded by the Government by refraining from abnormal and wasteful expenditures.

I have before referred to the practice of having an extraordinary Budget. Miscellaneous extraordinary expenditure should not come out of capital, but should be charged to revenue, so that the Sinking Funds become effective again. The practice is altogether indefensible, and no well-managed commercial house would consider itself justified in creating an account of this character. Why should a State act differently from any commercial concern that is conducted on sound lines? If these extra expenditures for unproductive purposes are absolutely necessary, the country should be told, and the Government of the day should come forward boldly and raise taxation accordingly. It is all the more necessary because, if we look at our National Debt, the war, combined with the creation of debt for miscellaneous purposes, has destroyed all the advantages derived from the previous 33 years' Sinking Fund payments and debt redemption. The debt in 1866 was about £800,000,000, and so it is to-day.

Under the circumstances which I have ventured to describe, it seems obvious that a reorganization of the finances of the country is imperative, and if we recognize that extravagance has been at the bottom of the present unsatisfactory situation, the guiding principle of such reorganization should be to check extravagance by higher taxation of luxuries, to diminish our debt, and to reduce our expenditure.

We have it on the authority of the Secretary of State for War and of the late First Lord of the Admiralty that economies can be introduced into both naval and military expenditure.

If we could reduce our Army and Navy expenditure by, say, £5,000,000 a year without impairing their efficiency, this would materially assist the carrying through of such a policy. Such a reduction would make it possible to pay the naval and military works now under construction out of revenue, without increasing taxation to any great extent, and without creating fresh debt. This would set the Sinking Fund free to redeem debt of about £8,000,000 per annum, and the effect would soon be felt.

The income tax should be reduced as soon as possible. It is as a rule paid out of the year's savings, and therefore comes from the fund available for savings accruing to capital, and this capital fund should be kept for emergencies. The income tax is a war tax, and a certain reserve of this tax should always be kept.

In summing up, the conclusions reached are: "First, that economies should be effected in the existing expenditure large enough to allow of extraordinary capital expenditure being made out of revenue. These extraordinary capital expenditures at the moment are at the rate of £7,000,000 to £9,000,000 a year. It may not be possible to effect economies of £8,000,000, but it is to be hoped to reduce this capital expenditure from £8,000,000 to £5,000,000, and thereby enable these capital outlays to be made by the economies effected in ordinary expenditure. Second, that the income tax should be reduced and additional duties be put on tobacco, spirits, and inhabited houses. Third, that the floating debt should be funded or paid off out of the Transvaal indemnity, if that is received, in order that, at the end of each fiscal year, there should be no Treasury bills outstanding to be carried through the next year, so that by this means the bankers' fund might be free to finance trade."

The result of such a policy would be that there would be no further extraordinary expenditure paid out of capital, that the Sinking Fund would be made effective, that the National Debt to the extent of £8,500,000 per annum would be redeemed, that the credit of the country would be speedily raised, that a larger amount of money would be available for the trade, and the savings of the nation would be protected; whilst extravagance, through additional taxation of luxuries, would be checked. In three or four years, when the extraordinary expenditures are completed, expenditure would be reduced £5,000,000 and £5,000,000 of taxation would be repealed. This policy is so obviously in the interest of the nation that I cannot but think that the views on which it is based are shared by many people who have watched with some anxiety the course events have lately been taking. With proper guidance there cannot be any doubt that the splendid and unequalled qualities and opportunities of the British people are bound to triumph, but let us recognize that mistakes have been made, and that the time has arrived to repair them.

THE CLEAN MONEY BILL.

A very important measure of legislation to the bankers of the country will come before the next session of Congress in the form of the "Clean Money Bill" introduced by Representative Gaines of Tennessee.

While the passage of such a measure is important to the people in general, it is especially important to the bankers, because they are the ones who most often come into contact with dirty money and are thereby oftener subjected to its disease-bearing germs. The bankers are forced to accept without question all and any kind of money presented to them. It matters not whether it has long been stored away in some fever-ridden district or kept on the person of some tubercular victim.

The bacteriologist's report shows that there is an average of 73,000 bacteria on every dirty bill and 2,250 on every moderately clean one. On dirty pennies and dimes there are twenty-six and forty living bacteria respectively. Great doctors have often traced death to diseased money. Mr. Gaines has received many letters in which cases were cited where people had lost hands, eyes and even whole arms from diseased money. One man from Boston recites how he lost his thumb and came very near losing his life because of bacteria received in a pin scratch while handling dirty money. Doubtless disease is often given to little children by the hands of their parents after touching such money.

The reason that dirty money is not now returned to the Government for reissuance is because the rates are practically prohibitory, as it costs from sixty cents to $1.20 per hundred each way to send it to and from Washington. Then it is claimed that under the present arrangement one cannot afford to do without the use of the money for the time being. Congressman Gaines's bill provides a remedy for these evils by cutting the bills in two pieces and sending the halves in different packages to the nearest sub-Treasury at the Governor's expense. In this way it would go as paper, with the rate very low, and be returned as money. With these provisions it could not well be intercepted, for should it be, the party would have to get the exact halves together, which would then have to be identified before it could be claimed.

The bill provides for the official mutilation of dirty money and its return and reissuance by the Government at the latter's expense. The banks of the country will be the principal ones that will have to make this change, as they are the ones that have the money in the greatest quantities and have it long enough to make the transformation.

The Government sends its paper money into all quarters of the globe and returns it to its people. It may come from the plague-ridden district of the East bearing the germs of the cholera and yellow fever, or from our own islands of the Philippines; but wherever it comes from, it is still legal tender which the people have to accept and the Government should therefore make provision to keep it as clean as possible.

The consideration of Mr. Gaines's bill will be taken up by the Banking and Currency Committee of the House at the next session of Congress, and the prospects are good for its passage. There is no opposition to the proposed measure in Congress, its necessity being so apparent. Dr. Thomas Darlington, Health Commissioner of New York city, appeared twice before the Congressional committee last session and each time was given a vote of thanks. His last argument was just before adjournment, and had it not been so late in the session, it would doubtless have been recommended for passage by the committee and some clean money legislation would have been enacted

Many of the State bankers' associations have already taken the matter up and passed resolutions endorsing the measure. I wish to urge through your MAGAZINE that those that have not already done so, do so at their next convention. If they will do this and communicate the fact to their Congressmen, it is believed that it will be a step towards securing some much-needed legislation along this line.

FRANK K. HOUSTON,
Assistant Secretary Tennessee Bankers' Association.
NASHVILLE, Tenn.

OLD AGE PENSION FOR BANK EMPLOYES.—Frank H. Vanderlip, Vice-President of the National City Bank of New York, in an address at the annual banquet of the St. Paul Chapter of the American Institute of Bank Clerks, on the evening of May 8 spoke in favor of an old-age pension for bank employes. Mr. Vanderlip said in part:

"I believe that as a body the bank clerks of this country should be made secure in the assurance that a lifetime of faithfulness, industry and integrity should be followed by an old age free from want. My suggestion is that the American Institute take up this subject, study it in the light of what has been done in other countries; study it in the light of some beginnings which have been made here; confer with the bank officers, and finally evolve a plan which will meet with the general approval of the banking interests of the country. And I am here now to say that when you have done that the institution of which I am an officer will, if you will permit, have great pride in heading with its name the list of banks accepting the responsibility of the plan."

SPECULATING AND UNDERWRITING.—The distinction which should be observed both with regard to underwriting and speculation was well defined by George E. Allen, secretary of the American Institute of Bank Clerks, in an address recently delivered before the convention of the Texas Bankers' Association. Mr. Allen said:

"Recent bank tragedies have aroused public sentiment, which has taken the form of indiscriminate denunciation of underwritings and speculative investments. Such denunciation is just when applied to bankers who use for speculative purposes funds entrusted to their custody for safe-keeping; but such denunciation is unjust when applied to specialists who use in underwriting and investment their own money and the money of such others as knowingly and willingly participate in the chances of profit and loss."

GERMAN CLEARING-HOUSE ASSOCIATIONS.—The gradual adoption of the clearing-house system by German bankers marks an advance in a branch of business long noted for its conservatism. Though the clearing-house method has been in use in London since 1775 and in the United States for more than half a century, its introduction into Germany is but recent. Twelve German cities now have clearing-house associations, against almost or quite 100 such associations in the United States. Other German cities, including Mannheim, are planning to form similar organizations.

In view of the fact that personal checks are scarcely known in Germany in ordinary daily business transactions, the need of clearing houses has been less felt than under the American or English systems. How far the use of checks in payment of private debts and in other daily transactions will become popular under the stimulus of a clearing-house system remains to be seen. Slight inroads in Berlin and elsewhere have already been made on the German practice of closing banking houses from two to three hours at midday, with the necessarily prolonged hours later in the day. That the adoption of American banking hours would be gratifying to many German bankers is frequently stated, and it will doubtless gradually come about.—*H. W. Harris, Consul, Mannheim, Germany.*

STATE BANKERS' ASSOCIATIONS.

REPORTS OF RECENT CONVENTIONS.

PENNSYLVANIA BANKERS' ASSOCIATION.

The bankers of Pennsylvania met in their eleventh annual convention at Wilkes-Barre June 15 and 16, William H. Peck, Cashier of the Third National Bank, Scranton, presiding. Hon. F. C. Kirkendall, Mayor of Wilkes-Barre, made the address of welcome on behalf of the city, and Wm. S. McLean, President of the First National Bank, of Wilkes-Barre, on behalf of the local bankers, President Peck responding for the association.

In his annual address President Peck reviewed the work of the association and gave the following statistics regarding the banking institutions of the State: "In our State there are nine clearing-house associations, located at Philadelphia, Pittsburg, Scranton, Reading, Wilkes-Barre, Erie, Greensburg, Chester, and Franklin. The total of their clearings for the month of May, 1904, was $614,983,510, and for May, 1905, was $857,115,476, showing an increase of $242,131,966 for the month, which is a gain of 39.37 per cent., and this gain was not confined to one or two of these cities, for each of the cities mentioned showed a substantial gain. There has been a gain in the number of our banking institutions during the last twelve months as follows: National banks, 34; State banks, 8; trust companies, 11; savings institutions, none; total, 53. There are now in the State about 1,102 such institutions. The increase in clearings and in the number of banks and trust companies shows an increase in the business of the people of our Commonwealth, and is an evidence of prosperous conditions."

D. S. Kloss, Cashier of the First National Bank, Tyrone, presented his report as secretary of the association. It showed a membership of 738—a gain of forty-eight since last year's convention.

Treasurer E. E. Lindemuth, Treasurer of the Clearfield Trust Company, reported: $5,436.65 balance on hand October 7, 1904; dues from members, $6,255; disbursements, $8,387.03; balance on hand, $3,304.62.

Reports were next presented from the secretaries of the several groups. Following the reading of these reports a number of practical banking questions were presented for discussion. F. M. Hays, of the American Surety Company, New York, made a brief talk, explaining the form of bankers' money orders adopted by the American Bankers' Association.

Reports from the chairmen of the several groups were presented at the second day's session, and they showed almost uniformly prosperous conditions. Joseph Wayne, Jr., Cashier of the Girard National Bank, Philadelphia, speaking for Group 1, said: "We have been asked by bankers throughout the country how long we are going to continue free collections. I would reply, 'Just as long as we receive a square deal from outside banks.' But I venture to say that if the present competition for business on unbusiness-like methods continue, and such terms are accepted by banks for the handling of their business, all city bankers will be compelled to combine on the exchange question, and put in force an equitable charge on all outside items and transfers of funds from city to city."

Clark Williams, Vice-President of the United States Mortgage and Trust Co., New York, made an address on "Good Will as a Valuable Asset in Banking." He said, in part:

"Good will cannot be measured by the yardstick, nor estimated in dollars and cents, yet there are essential elements and fundamental principles underlying it, which are ascertainable as long as human nature, by its manifestations, indicates certain fixed qualities and justifies definite conclusions. The factors in its composition are as numerous as the vagaries of human nature itself; some apparently trivial and unimportant, others of dominating and controlling influence. Prestige by reason of long and successful career; strength of connection, local position, or even accidental circumstances, reputation for courtesy and promptness, ease of access, general good report; whatever may influence the public mind in favor of your bank have their direct bearing on good will. Like the fortune from a father, it may be dissipated or it may be maintained and increased.

The patrons of a bank are the corporations and the individuals. But however great the corporation, it is through individual decision that its affairs are managed and controlled. The subject, therefore, under consideration, resolves itself largely into a study of the influences which create the impressions determining the action of the individual for or against the interests of the bank. Our customer is human, and is susceptible to all the influences which are responsible for satisfactory or unsatisfactory results in his business relations with us. His treatment, therefore, by those with whom he comes in contact is of controlling importance in shaping the impressions which are reflected in good will. So it follows that those employees whose duties bring

JOHN G. READING,
President Pennsylvania Bankers' Association.

D. S. KLOSS,
Secretary Pennsylvania Bankers' Association.

them into direct daily contact with our clients have it in their power in large measure to increase or diminish the good will of our institutions. There is many a customer who never approaches the teller's window of a bank without a 'chip on his shoulder,' and the tactful, courteous conduct of this faithful, loyal employee does much to influence favorably the minds of those who spread abroad the good report which establishes good will. This same teller may have spent the night before nursing the frozen pipes in his suburban home, but he greets his friend, your customer, with a smile, and because of his genial attitude of accommodation your client considers it a privilege to pay the ten cents exchange on the item he proposes to deposit. There is no hypnotism in this, gentlemen, it is plain responsive human nature. But the other fellow, the sour one, whose politeness, if it comes to the surface, is a condescension, and who, by his general manner, impresses the customer with the idea that the check has been cashed with the uncleanest bills in the pack—for the good man has no business to interrupt one's conversation with one's neighbor—he it is who compels the contrary report, which likewise has its incalculable influence on your good will.

These, gentlemen, are little things in the warp and woof of the great fabric of business coming to our banks, seemingly not worthy of our consideration, but I venture to say that if controlled with an adequate appreciation of the value of good will, they are of the utmost importance to every institution, large or small, which relies on public patronage for its success. I have known instances of incivility causing the loss of millions of dollars of deposits to a single institution, and we, as bankers, cannot afford to be unmindful of their effects.

Relations Between Officers and Clerks.

The proper relations between the officers and the clerical force of a bank are of the utmost importance in the maintenance of that esprit de corps which is essential to the highest development of good will. In this connection I ask your indulgence in my effort to give you a few practical suggestions.

It is the officers' first duty to gain the good will of the clerk. In too many of our financial institutions the employee is compelled to look upon the President and the Cashier as possessing certain attributes of the Deity which place those officers far beyond his reach. In the case of some of our larger banks he may only have seen the President's likeness in the gallery of Prominent Americans. He contemplates the great man with awe and would no more seek his recognition than that of the King of England. It is usually enough that the President knows the work of the bank is properly done and so apparently it may be. There are no errors in the footings, the books may balance to a cent and the checks may be properly filed. But I maintain that unless there is a cordial human interest between man and master the possibilities of the highest efficiency for the good will of the institution are undeveloped.

How stimulating to the best endeavor if the clerk feels that a friendly interest is taken in his progress; that he may go to the officer as to a father confessor and be heard and helped. He soon realizes that he is serving his own interest to the best advantage through his efforts to advance the interests of his employer. He may at any rate stand on the common ground of single purpose for the upbuilding of the institution on which he depends for his own success. Appreciation by the employer of work well done or kindly correction and suggestion will do far more to strengthen this purpose than machine-like indifference or a system of penalties and fines.

Remember these men are human, too.

I believe that if the officers of every bank in the land should periodically call their clerks together for a half hour's discussion of the ways and means by which the good will of a bank may best be maintained and increased, such meetings would be only second in effectiveness to those of the board of directors.

Such truths might be dwelt upon as recently attracted my attention on a placard in the office of our friend, the President of the American Bankers' Association: 'People who never do any more work than they are paid for, are never paid for any more work than they do.'

Friendliness and courtesy should characterize their treatment of each man who has a tongue in his head and a brain which controls it, whether he be the President of a trust, or the office boy of a struggling lawyer. This friendliness does not mean that your Cashier should wear his heart on his sleeve, nor should it countenance the flirtatious back-slapping methods which sometimes manifest themselves in those who have not a true conception of courtesy; but it does mean that the man who comes to any officer of a bank to transact business has a right to considerate attention, and no loss of money is entailed in clearly indicating by cordial manner, that it is a pleasure to be of the least assistance or helpfulness in accommodation.

The man thus treated leaves your office respecting your institution as one which assures him a friendly welcome and a sincere desire on your part to be of the utmost aid. You may not be able to grant that which he has asked, but if your treatment of him has been patient, gracious and frank, he feels that there is good reason for your attitude and he is pleased to tell his friends of the pleasure he has in transacting his business with you; and here begins the endless chain. He becomes at once the most potent kind of advertisement, the sower of the seed which in its fruition enables you to report an increasing business as the years go by.

Judicious advertising is an important factor in maintaining good will, for by suggestion it supplements the effect of the good report we have described.

Bankers and Other Business Enterprises.

Certainly we may look upon the financial institutions of the City of New York as reflecting a fair measure of stability and soundness. Of the largest ten banks in that city each President, on the average, is a director of nineteen institutions besides his own. When the presidents of our banks can no longer be trusted to participate in the direction of the affairs of other corporations without jeopardizing the interests of their own institutions, because of their desire for personal gain, they will be apt to weaken under ordinary temptations which would quite disqualify them from holding any position of trust.

The banker who holds himself aloof from the progressive movements of the meritorious enterprises surrounding him, loses for the institution which he represents an intelligent knowledge of existing conditions and a claim on resulting business, and probably gains the criticism of those who appreciate the real value of such association. Show me the banker who disregards these outside interests and shuts himself up in his counting room to his own banking business alone and I will show you a banker who has very little to count.

I desire to emphasize the advantages of such association as essential to good will. An occasional misadventure occurs as the result of bad judgment or inherent dishonesty, but you cannot legislate integrity into any man. Although he may seem to possess those qualifications which would warrant his becoming a bank official, we believe that unless the spirit of rectitude is inborn and a fixed element of character, the banking laws of this country cannot change his condition. The good judgment of an individual must again be relied upon to control any tendency toward indiscreet ambition, which failing, he must answer to the law.

Each of us is endowed to a greater or less degree with the faculty of making friends and the results of such relations on the business of the institutions we represent will be proportionate to the active cultivation of such a faculty. There are those who are unwilling to credit such relations with their true value and we must agree that friendship as a controlling factor in business is hazardous; but business without friendship is failure. A general appreciation of the value of personal acquaintance in banking is evidenced by the increasing attendance at the meeting of such associations as that to which you all belong, for it must be conceded that there is not so much of value to be gained from the wisdom of those who are flattered with an invitation to address you as from the meeting with the old friends and from the making of the new.

But after all has been said, we find that honesty and integrity lie at the foundation of our structure of good will, above which rises the keystone of confidence in the arch embodying those cardinal yet simple virtues reflected in the golden rule."

John H. Connellan, Title Officer of the Equitable Trust Company, Philadelphia, spoke on the subject, "The Phenomenal Expansion of the Trust Company." A part of his address follows:

"The rise of the trust company presents an interesting problem in the economics of financial development. The forces which operated to produce this system may be found in the growing needs of our great monetary expansion, and its marvelous growth has been the natural outcome of modern methods. Our whole financial system is dependent upon the employment and conservation of capital. At no other period in the world's history has such energy been displayed in utilizing natural resources for the production of wealth; and the development of our industrial system is unparalleled.

These companies have existed in this country for three-quarters of a century; their great development, however, has only been within the last quarter of a century. They are not entirely unknown in other countries, but their remarkable growth in the United States has marked them as a distinctively American institution. Bound by laws of the State; examined exhaustively at unknown periods by impartial experts; managed by boards of directors composed of careful business men and lawyers who have themselves been successful; officered by men especially trained in their several departments, and who, notwithstanding their known integrity, are bonded by some other corporation, the trust company would seem to be the most perfect fiduciary agent that human ingenuity could invent. The record which these companies has made is one to which they may well point with pride; they have won the confidence of the people, and they have become established as one of the permanent institutions of the country.

To illustrate the confidence of investors in the stability of the trust companies it is interesting to note the sales of their stock in the open market. We have in Philadelphia a number of companies whose stock always finds a ready purchaser whenever any of it is offered for sale. The par value of the Provident Life and Trust Company stock is $100 per share; its market value is $770. The par value of the stock of the Fidelity Trust Company is $100 per share; the last reported sale was at $715. The Girard Trust Company has a paid up capital of $100 per share and it sells readily at $710.

In the year 1895 there were in the State of New York thirty-eight trust companies with total resources amounting to $365,419,729. In 1905—ten years later—there are eighty-one companies with total resources amounting to $1,364,016,016, a gain of $998,596,287 in the short period of ten years.

In the State of Pennsylvania we had in 1895 eighty-two trust companies with resources of $189,166,991. In 1905 we have 290 companies with total resources amounting to $628,990,507. These enormous gains show a rapid growth and there seems to be no indication that the highest development has yet been reached.

What of the future? There are those who see in the great expansion of the trust company a menace to our financial integrity. The phenomenal rise of these institutions having occurred in a season of unusual prosperity fears are expressed as to the strength of the system to stand the strain of a great financial panic. Cumbersome safeguards are proposed to restrict the free use of trust company resources, requiring a large reserve to remain idle, like an army in time of peace, awaiting the battle that may never be fought."

Professor Joseph French Johnson, Dean of the New York University School of Commerce, Accounts and Finance, read a carefully prepared paper on "The Influence of the Gold Supply on Prices and the Rate of Interest." THE BANKERS' MAGAZINE hopes to publish Professor Johnson's paper in a subsequent issue.

George M. Coffin, Vice-President of the Phenix National Bank, New York, spoke on "Our National Banking System." In speaking of the competition between the banks and trust companies, he said:

"There was a time when it was considered undignified for a bank to solicit business, but nowadays this is all changed and human ingenuity is taxed to coax the local depositor, while officers of city banks from the President down are becoming trained commercial travelers in their ardent quest for outside bank accounts.

And to what, pray, is due all this strenuous activity and what has converted the modern banker into a hustler? It is due mainly to 'the expansion of the trust company' of which Mr. Connellan spoke this morning. Yes, the trust company has invaded our territory and shared it with us and the only defense left to the National banker is the power to discount commercial paper and to issue circulating notes. This power to discount commercial paper is a powerful weapon, for not only does it furnish us a profitable field for investment, but it serves as the basis for non-interest bearing deposits.

In 1904 the National banks alone discounted over $2,000,000,000 of this paper for individuals, firms and corporations without collateral security, stupendous evidence of the banker's faith in human nature. Where we feel the pressure of the trust companies most keenly is in the payment of interest on deposits, a custom which has come to stay, for as they are not required to keep any cash reserve against deposits, as do National banks, they are able to invest a larger proportion of these funds and so are able to offer depositors a higher rate of interest. While this has reduced the profits of banking, the trust companies have rendered a great public service, for they have taken their depositors into partnership with them. As an illustration, the trust companies of New York State alone last year practically divided their gross earnings with their depositors and paid them over 2½ per cent. interest on more than $1,000,000,000 deposits, or the great sum of $26,000,000.

Another result of this competition is the lowering of rates of interest on loans and discounts, and between these upper and nether millstones it is a wonder the National banker is not ground to powder. But somehow he seems to thrive, and his salvation has been wrought by a liberal use of printer's ink and stationery, adding machines and numerous other devices for the saving of time and labor in these days of fast mails, long distance telephones and wireless telegraphy. He has been compelled, too, to increase his profits by cutting down losses, and for this reason the standing of borrowers is more closely inquired into than ever before, and a bank's credit department is of vital importance to its life and success.

In the face of this keen competition between themselves, the State banks and the trust companies, one would expect to see the National banks eking out a precarious existence, but, on the contrary, they 'grow and multiply,' 'wax fat and kick.' Last year they earned nearly ten per cent. on about $1,200,000,000 of capital and surplus which was owned by over 318,000 shareholders, and this has been the average ratio of earnings for the past five years.

In the light of these facts and figures it must be admitted that I have made out a pretty good case, that competition has not been disastrous in the banking field. On the contrary, this more or less friendly rivalry has had a most wholesome effect by stimulating us to greater effort, getting us out of old ruts and forcing us to keep up with the procession of human progress with the result of a vastly improved service to the public. We need to be only a little philosophical to see in it all a blessing in disguise. After all, the trust companies are our very good customers and it is a great consolation to feel that they cannot get along without us for the National banks act as their reserve agents, keeping on deposit for them large sums which otherwise would lie idle in their vaults. Of course, we have to pay for this privilege."

Before adjournment these officers were chosen: President, John G. Reading, President Susquehanna Trust and Safe Deposit Co., Williamsport; Vice-President, Joseph Wayne, Jr., Cashier Girard National Bank, Philadelphia; Treasurer, Glenn C. Page, Cashier Marine National Bank, Erie.

At the convention of the Trust Company Section the following report was presented:

To Robert E. James, Esq., Chairman, Trust Company Section, Pennsylvania Bankers' Association, Easton, Pa.

My Dear Sir: The committee appointed by yourself at the late annual meeting of the Trust Company Section, to interview the Commissioner of Banking of Pennsylvania, regarding the circular recently issued by him calling the attention of the trust companies of Pennsylvania to the question of discounting commercial paper, respectfully report:

That all the members of the committee, accompanied by yourself as President of the Trust Company Section, had the pleasure of a personal interview with the Commissioner of Banking, the Hon. Robert McAfee, and with his deputy, Mr. John W. Morrison. We canvassed with them the whole subject of the rights of trust companies to discount, as well as to purchase commercial paper. These officials desire to put no obstacle in the way of the trust companies of the State in making proper purchase of paper, but do insist that the trust companies have not the right of discounting. Discounting means the taking of interest in advance, and accounting it as profit before the same is earned. The Department does not object to the purchase of commercial or other paper, provided the companies carry it on their books at the face value at which it was purchased, avoiding the crediting of interest until the amount is repaid when the amount of the loan as well as the interest could be credited on the books of the company. This avoids all such useless shifts as the taking of a bill of sale, or taking a collateral note, with the commercial paper as the collateral.

This would appear to be a simple method of meeting the desires of the Department without any unnecessary embarrassment to the trust companies, and violates no law.

We recommend that you have this report printed and forwarded to members of the Association in the State of Pennsylvania. Your committee begs leave to submit this report.

Respectfully yours,
F. G. HOBSON, Chairman.

An approval of this report by the Commissioner of Banking was also read.

GEORGIA-FLORIDA BANKERS' CONVENTION.

The bankers of Florida and Georgia united in joint session at Atlantic Beach, Fla., June 9 and 10, although such separate meetings were held as were found necessary to transact the business of the respective associations. It was the fourteenth annual convention of the Georgia Bankers' Association, and the twelfth of the Florida Association.

President Miller S. Bell, Vice-President and Cashier of the Milledgeville Banking Co., presided over the convention of the Georgia Bankers' Association, in the convention hall of the Continental Hotel, Atlantic Beach, June 9. After the preliminary exercises, he delivered his annual address. He referred especially to the aid Southern bankers were giving to the farmers in helping them market the cotton crop under the most favorale conditions.

R. F. Maddox, Vice-President of the Maddox-Rucker Banking Co., Atlanta, presented the report of the delegates to the convention of the American Bankers' Association.

Reports were also presented by Treasurer Oscar E. Dooly, Secretary L. P. Hillyer, and the executive council, the latter report being read by Chairman John H. Reynolds. These reports showed that the work of the association is being carried on actively and successfully.

The afternoon session, which was a joint meeting of the Georgia and Florida associations, was addressed by Hon. Leslie M. Shaw, Secretary of the Treasury.

Address of Secretary Shaw.

Mr. Shaw spoke in part as follows:

"We have the best money system in the world. I am not unmindful of the fact that we have three hundred and odd million dollars of fiat money. It was understood when it was made that it was fiat money, but we do have $150,000,000 of gold laid aside expressly to maintain the parity of the greenback, and the profession that all of these greenbacks shall be redeemable in gold, and that makes the fiat good and no one questions it. Therefore we are not worried about it. No one has any anxiety. It is true that the metallic value of our silver is more than $300,000,000 less than its current value, but it is made the duty of the Secretary of the Treasury to maintain the parity of all forms of money coined or issued by the Government. I wish the law was a little more specific, that we would redeem silver in gold. I know of but one way that you can make your note as good as gold, and that is to lay down your note on the bank counter and the gold, and tell the banker that he can take his choice. If you don't do that, your note will be at a discount. The only way the Government can maintain the parity is to say: 'If you prefer gold, you can get the gold.'

Our currency system has one manifest weakness, and that is it is non-elastic. You people down here may have heard a reference to rubber money. No one advocates an elastic dollar, a dollar that will stretch, but many people do advocate an elastic volume of dollars. We have a little elasticity in our currency system now, but unfortunately it works the wrong way. Whenever money is scarce, there is a tendency to contract the currency, and, whenever plentiful, there is a tendency towards expansion.

Now, my experience has been that the banker is looking out for himself. In that respect he is not entirely unlike other people. The banks can issue more circulation, when money is scarce, but they don't think they ought to do so at a loss. Everybody recognizes this defect—that we need more money. Now let's see if we can make this plain. Sometimes you get quoted as saying what you don't say. The farmers in our country need more grain sacks at harvest time than at seeding time, and it is equally true that the country needs more money in harvest time than in seeding time. Ordinarily the farmer retires his grain sacks when he disposes of his crop, but the banks are unable to contract their medium of exchange with the disposition of the crop.

We need this voluntary, this spontaneous springing into existence of more money, when more money is needed, and the speedy retirement of it, when not needed to respond to the calls of trade. I am not going to suggest the only way. I am going to suggest one way. Many ways have been suggested. Now I simply desire to suggest the desirability of adding the element of elasticity to our system, and if it is to be added, some plan must be devised. This is one: Suppose the National banks were granted permission to issue a certain volume of currency, either proportioned on the capital of the bank or on the amount of bond-secured currency, and were charged not less than 5 per cent. interest during the time this currency is out. Certainly additional currency would spring into existence whenever money is scarce, and if the banks were compelled to pay five per cent. interest thereon they would retire it as soon as the pinch was over. It could be retired by a deposit of an equal amount of

Jos. T. Orme,
President Georgia Bankers' Association.

L. P. Hillyer,
Secretary Georgia Bankers' Association.

lawful money at any of the sub-treasuries. It would not be necessary to redeem each individual bill. The volume of money would be contracted by the deposit as well as by the actual destruction of the bank bill so issued.

The Government should guarantee the redemption of this credit currency, for the interest charged would vastly more than cover all possible loss. I desire to go on record as opposing the issuance of any currency that the Government does not guarantee, and I am equally opposed to the Government guaranteeing bank currency without being first amply secured. But one-quarter of one per cent. interest on the currency issued, under conditions such as I have described, would pay the insurance. Any insurance company would be glad to take the risk at that rate. The tax on this credit currency should be kept sacred to the redemption of the currency of failed banks. Thus the country would be saved another experience with wild-cat currency, and the Government take absolutely no risk.

The only other plan that seems to me at all feasible would be permission to issue a small volume of heavily taxed currency, based upon bonds other than Government bonds. I am not certain, however, that this would prove as elastic as some of the friends of the plan contend. It seems to me that the banks, when their surplus was running low, could hardly afford to purchase any kind of bonds as security for circulation."

F. W. Lafrentz, of New York, spoke in favor of the American Bankers' Association form of money orders, and at the conclusion of his remarks

Joseph T. Orme, Cashier of the Lowry National Bank, Atlanta, offered a resolution, which was adopted, endorsing these orders and recommending their use by the bankers of Georgia and Florida.

Walter F. Coachman, President of the Florida Bank and Trust Company, Jacksonville, was down on the programme for an address on "Naval Stores and Timber." Mr. Coachman was unable to be present, but his paper was read by Hon. W. S. Jennings, ex-Governor of Florida. Mr. Coachman gave an interesting description of the industries forming the subject of his address, and had the following to say regarding the progress of his State:

"In no way can the gain in the business in the State be more accurately shown than in the increase of its banking interests. In 1899 the total resources of the National and State banks in Florida aggregated $12,492,961. By 1904 this had increased to $29,797,496, a gain in four years of 138 per cent.

This remarkable growth of the banking business of Florida has followed and kept pace with the production of lumber and naval stores. In large part it represents the introduction and increase of the capital of the State arising from the development of industries directly connected with forest products. Ten or fifteen years ago the wholesale business of Florida was in its infancy. Our foodstuffs were furnished by the wholesalers of the North and the jobbers of Georgia. The demands of the lumber and turpentine producer, and the introduction of new capital, have made possible the development of the jobbing business of Florida to a degree of prosperity which has surpassed all expectations."

J. C. Chase, of Messrs. Chase & Co., Jacksonville, Fla., spoke on "Fruits and Vegetables," and gave an interesting description of the development in this important field of production.

At the second day's session addresses were made by Alfred J. McGrath, Vice-President National Shoe and Leather Bank, New York, and by Anthony White, of the National Bank of Commerce, New York. The latter called attention to the great prosperity of the South, and expressed the hope that it might not engender speculation.

A. P. Coles, chairman of the committee on transmitting currency and securities by registered mail, read a report showing the rates of insurance charged by various companies. In the course of his report, he said:

"Experience shows that on shipments of $5,000 and $10,000 in single packages, the denomination of bills averaging $10, the total cost does not exceed thirty-five cents per thousand; or, in other words, a saving of forty cents per thousand over the lowest express rate. The cost of insurance and postage between points in Georgia on similar packages does not exceed twenty-six cents per thousand. The plan of insurance and transmitting securities and currency by registered mail has been in continually increasing use by banks and bankers of this country during recent years, and it has generally been found that the service is prompt and reliable and in every instance much cheaper than express service.

The question has been asked how prompt are losses settled and what are the formalities necessary in obtaining settlements. This committee has taken some pains to ascertain the actual results in cases of loss by this method of transmitting securities and currency, and feel no hesitancy in saying that in every case that has come under our investigation, the settlement has been prompt and satisfactory and free from unnecessary formalities, and we know of no unpaid claim where the terms of the policy have been complied with."

John D. Walker reported on the progress of the movement to raise a fund by contributions from the banks to aid the farmers in marketing the cotton crop. He said the success achieved destroyed the old notion that the banks were not friends of the farmers.

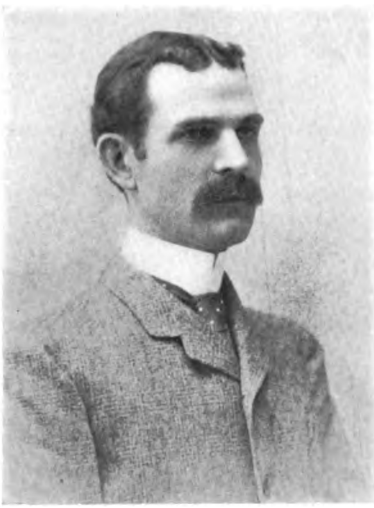
Addresses were also made by W. O. Jones, Assistant Cashier National Park Bank, New York, and by Geo. M. Coffin, Vice-President Phenix National Bank, New York.

The following officers of the Georgia Bankers' Association were chosen: President, Joseph T. Orme, Cashier Lowry National Bank, Atlanta; first vice-president, John H. Reynolds, President First National Bank, Rome; second vice-president, Joseph S. Davis, Cashier First National Bank, Albany; third vice-president, F. S. Etheridge, President Jackson Banking Co., Jackson; fourth vice-president, E. B. Lewis, President Lewis Banking Co., Montezuma; fifth vice-president, J. A. Sasser, Cashier Farmers' and Merchants' Bank, Senoia; secretary, L. P. Hillyer, Cashier American National Bank, Macon; treasurer, J. T. Neal, Cashier Bank of Thomson.

The Florida Bankers' Association elected the following officers: President, E. W. Lane, President Atlantic National Bank, Jacksonville; vice-president, Geo. D. Munroe, Cashier Quincy State Bank, Quincy.

WEST VIRGINIA BANKERS' ASSOCIATION.

The twelfth annual convention of the West Virginia Bankers' Association was held at Fairmont June 14 and 15, Charles B. Hart, of Wheeling, presiding. In his annual address President Hart said that in the past year the resources of the State banks of West Virginia increased from $53,481,000 to $55,433,000, and the resources of the National banks from $38,921,000 to $41,011,000. He also described the legislative work done by the association. A law was recently passed making it a misdemeanor for any individual or



F. W. STAUNTON,
President West Virginia Bankers' Association.

C. T. HITESHEW,
Secretary and Treasurer West Virginia Bankers' Association.

association of individuals doing business in the State to use in connection with such business the term bank or trust company until a charter has been taken out and the laws regulating banks and trust companies complied with.

C. T. Hiteshew presented his report as secretary and treasurer, which was in part as follows:

"There are in West Virginia 241 banking institutions, of which seventy-seven are National banks, 142 are State banks and twenty-two are trust companies. Of this number 160 are members of the association and eighty-one are non-members. Last year a resolution was passed increasing the dues of all banks with $50,000 capital and over, and while we have lost two members from the fact of the increased dues, yet we have added four new members to the roll, making an increase of two. This comprises three-fourths of all the banks in the State and more than four-fifths of the aggregate banking capital of the State. Our association compares very favorably with other associations throughout the country."

After the transaction of some routine business, F. M. Staunton, Vice-President of the Kanawha Bank and Trust Co., Charleston, made an address on "Bank Taxation and Legislation." A striking address on "Some Banking Lessons from the Life of Judas Iscariot," was made by Hon. J. D. Baines, of Charleston. In closing the address, which was a strong plea for fidelity in positions of trust, Mr. Baines said: "As an admonition to us ever to persevere in the paths of honor, integrity and truth, let us remember that the crime of Judas Iscariot, in its last analysis, was simply a betrayal of his trust."

Joseph E. Sands, Cashier of the First National Bank, Fairmont, talked entertainingly of banking in West Virginia in the last half century. At the conclusion of his address, the convention adjourned to reassemble in the evening, when President Charles A. Hinsch, of the Fifth National Bank, Cincinnati, made an address on "The Outlook." Mr. Hinsch favored an annual appropriation of not less than $50,000,000 for the development of internal waterways, the control of private freight cars, supervision of railways, revision of the tariff, incorporation of labor unions with sufficient capital to make their contracts binding, "action by the civilized powers of the earth to prevent the settlement of international differences by engaging in wholesale butchery, ample capital for banks, an emergency circulation, and insurance of bank deposits." Judge L. N. Taverner, of Parkersburg, spoke on "The Inlook," and at the second day's meeting an address was made by Mr. Dammann, of New York, who spoke on "Bank Money Orders." A resolution proposing to introduce this system in West Virginia was tabled. Addresses were also made by several visiting bankers from New York and elsewhere. Officers for the association were chosen as follows: President, F. M. Staunton, Vice-President Kanawha Banking and Trust Co., Charleston; secretary and treasurer, C. T. Hiteshew, Cashier Farmers and Mechanics' National Bank, Parkersburg.

MASSACHUSETTS BANKERS' ASSOCIATION.

The first annual meeting of the Massachusetts Bankers' Association met at the Hotel Somerset, Boston, June 20 and 21, H. M. Batchelder, President of the Merchants' National Bank, Salem, presiding. But little regular business was transacted, the meeting being chiefly for the purposes of bringing the bankers together for better acquaintance. Addresses were made by President Batchelder, Hon. Arthur B. Chapin, State Treasurer; Charles L. Burrill, Vice-President and Treasurer of the Adams Trust Co., Boston; Franklin Haven, President of the Boston Clearing-House Association; Hon. Geo. A. Marden, Assistant U. S. Treasurer, at Boston; Geo. A. Hibbard, postmaster of Boston; and James D. Gill, collector of internal revenues.

Festus J. Wade, President of the Mercantile Trust Co., St. Louis, spoke on "Trust Companies." In regard to the recent growth of trust companies, he said:

"In no year in the past decade has the growth been more marvelous in the strength and development of the trust companies than during the past twelve months, and the most accurate data obtainable at this time will show that there are 1,438 trust companies in existence, 278 of which were organized since June 30, 1904. In addition to the above, at least 400 companies employ the title of "trust company," which are not properly institutions of this character.

Few realize the financial development of the Middle West, and especially its financial centre, the city of St. Louis. The aggregate capitalization of the banks and trust companies of St. Louis on June 1st, 1905, was more than the aggregate capital of the National banks and trust companies of New York City ten years ago. It equals the capitalization of all banks and trust companies of Chicago, and it is practically equal to Boston.

The ratio in the increase of the banking power of the world in the last fourteen years is 110 per cent. The ratio of the increase in the banking power in the United States in the past fourteen years is 168 per cent. The ratio of increase in individual deposits of the National banks in the past twelve years is 90 per cent. The ratio of increase in individual deposits of the trust companies of the United States in the last twelve years is 390 per cent.; and the individual deposits of the trust companies on June 1, 1905, was within a few million dollars of the individual deposits of the National banks of the United States in 1892.

When one stops to consider that the trust companies of the United States in their combined resources represent more than twenty-three per cent. of the banking resources of the United States and practically ten per cent. of the banking resources of the world, the importance of the trust company to this Government is forcefully impressed upon one's mind.

The live, active, energetic banker, be he State or National, in all the large centers of this country has recognized the value of trust companies for the accumulation of idle money, for the development of commerce, and for the enlargement of the financial horizon of the United States of America. Many of the larger National banks are financially interested in trust companies in the large centres. Some of the more progressive have organized trust companies and are running them in connection with their National banks practically as departments. It is only a very short period of time until the trust company official, in keeping up with the progression of the National bank official, will add a National bank practically as a department to the trust company.

In the western country, at least, the trust company occupies the same relation to the masses of the people that the Savings bank does to the East. Very few western States have Savings banks, the reason being that the trust company in the western States runs a department for savings, and such a department is in itself a Savings bank of and for the people where the thrifty son of toil may deposit his dollar a day, week, month or year, and receive thereon interest varying from three to four per cent., with the entire capital, surplus and undivided profits of the trust company to protect him against loss.

The trust company should not only keep a reserve, but a strong reserve. While it was well enough years ago, when the trust companies simply discharged the functions of trustee, registrar, executor and administrator, to keep nominal amounts of cash on hand, with a comparatively small amount on deposit with banks, that condition has now ceased to exist, and is so recognized today. The methods applied to trust companies ten, fifteen or twenty years ago are not applicable today, nor are trust companies doing business on the lines established ten, fifteen or twenty years ago. If you will show me the trust company today which keeps a reserve both in cash and in bank in comparison with the successful National banker, I will show you the trust company that pays its stockholders not only a handsome return but that is constantly developing its business. The surest way to retard the growth of a trust company is to decrease its reserve. The most certain way to develop its resources and power is to increase its reserves.

Well balanced, the trust company officials invite publicity and frequent examinations, not only by its auditing committee but by expert accountants as well. The trust company official who fears frequent publication of the condition of his institution, and who does not encourage frequent examination of his work and the assets of his corporation, is unjust to himself, his associates and his corporation.

The interests of the National and State banks and the trust companies are reciprocal. Examine the banking statistics of any financial center in the East, West, North or South, and where you can find a great development of financial resources there you will find the trust company, not only doing its part for the development of that particular section, but also paying handsome returns to its stockholders upon the capital invested. The National and State bankers, where they are progressive, although competitors, are all working along the same lines. Of the $4,500,000,000 of deposits carried by the National banking system, practically ten per cent. of the entire amount are the deposits of trust companies. The most cordial relations should always exist between bank and trust company officials. Continue to encourage it as you have by this meeting in joint session; each will be greatly benefited and the interest of both bank and trust company greatly advanced."

F. A. Shove, Treasurer of the Malden Savings Bank, gave some interesting statistics regarding the growth of Savings banks in Massachusetts. At the conclusion of Mr. Shove's address, the delegates embarked on a steamer for a trip down Boston Harbor.

IOWA BANKERS' ASSOCIATION.

The nineteenth annual convention of the Iowa Bankers' Association was held at Des Moines, June 7 and 8, Ackley Hubbard, Cashier of the Citizens' National Bank, Spencer, presiding. President Hubbard, in his annual address, after reviewing the work of the association in the past year, made a strong plea for the incorporation of private banks as a means for promoting sound banking; favored the repeal of the Bankruptcy Act, did not approve the insurance of bank deposits, and concluded his address as follows:

"Bankers often fail to realize that the assets of the bank are not their private property; that they are held only in trust for certain specific uses; that it is criminally wrong to divert them from these uses; and so bank managers become speculators. The resources of the bank are diverted from their legitimate uses and are lost; the bank is ruined, the banker a criminal and often a fugitive; the depositors, often widows and little children, or the aged and infirm, robbed of their little sustenance; poverty, sorrow and suffering entailed on all and no good done. Will we ever learn that there is safety and honor and happiness only in following legitimate methods of banking; that any departure from the straight and narrow way leads to suffering, sorrow, dishonor and crime? Let us all at all times preach and practice only that which is legitimate, honest and right; let us avoid speculation of all kind as we would a pestilence. And, if we cannot do this, if the gambling instinct is too strong in us, then let us quit the banking business and engage in some line where we can ruin only ourselves and not the innocent and helpless ones who have entrusted their savings to us."

Reports were read by Treasurer John J. Large and Secretary J. M. Dinwiddie. The latter stated that at last year's convention the membership was 865, to which over one hundred names had been added.

After a number of other reports, Mr. Norcross, of the Chicago office of the American Surety Co., explained the system of guaranteed money orders, and an address was made by Hon. B. F. Carroll, State Auditor. He said that there had been no bank failures in Iowa where the directors had properly attended to their duties, and he urged upon directors the importance of carefully scrutinizing the loans.

Reports were presented from the sixteen State groups, and a plan was adopted for redistricting the State into eleven groups. The report of the committee on insuring bank deposits was presented, declaring in favor of such insurance. After considerable discussion the report was ordered to lie on the table. Hon. Henry Vollmer, of Davenport, spoke on "Taxation." He declared that indirect taxes tend to remove all checks on governmental extravagance.

Officers of the association were elected as follows: President, D. H. McKee, Cashier Citizens' State Bank, Mediapolis; vice-president, John J. Large, Cashier First National Bank, Rock Valley; treasurer, J. T. Brooks, Cashier First National Bank, Hedrick; secretary, J. M. Dinwiddie, Cashier Cedar Rapids Savings Bank.

MINNESOTA BANKERS' ASSOCIATION.

The sixteenth annual convention of the Minnesota Bankers' Association met at Tonka Bay Hotel, Lake Minnetonka, June 20, O. H. Havill, President of the Merchants' National Bank, St. Cloud, presiding. In his annual address President Havill said that many bank failures were caused by the refusal of bankers to take the first loss—continuing to throw good money after bad. He said the time is coming when the methods pursued by a man who has acquired a large fortune will be inquired into, and if found dishonorable, he will be ostracized from the society of good citizens.

A. A. Crane, Cashier of the National Bank of Commerce, Minneapolis, presented his report as chairman of the executive council, and Joseph Chapman, Jr., Cashier of the Northwestern National Bank, Minneapolis, read his report as secretary of the association, showing a present membership of 635 —a net increase of thirty over the figures reported at last year's convention.

After the presentation of reports by the treasurer and the protective committee, C. D. Griffith, President of the First National Bank, Sleepy Eye, made an address favoring the organization of a surety company by the bankers of Minnesota.

At the second day's session, Prof. F. L. McVey, of the University of Minnesota, spoke on "The Relation of Banking Capital to Volume of Business," and Senator Knute Nelson spoke on The Bankruptcy Act. Henry Clews, of New York, was on the programme for an address, but was unable to be present.

Reports were presented from the various Congress districts, after which J. F. Kerr, of the American Surety Co., New York, made an address in relation to the American Bankers' Association form of money orders. Resolutions were adopted favoring this form of money orders, opposing branch banks, and favoring the organization of a company by the bankers of Minnesota for carrying their burglary and fidelity insurance.

Officers for next year were than elected. They are: President, Cliff W.

Gress, Cashier Citizens' State Bank, Cannon Falls; vice-president, Wm. E. Lee, Cashier Bank of Long Prairie; secretary, Joseph Chapman, Jr., Cashier Northwestern National Bank, Minneapolis; treasurer, Geo. H. Prince.

NEW OFFICERS OF THE NORTH CAROLINA BANKERS' ASSOCIATION.

C. N. Evans,
President.

W. A. Hunt,
Secretary and Treasurer.

New Bank in Athens.—United States Consul George Horton, Athens, Greece, reports, under a recent date, that a new bank has been founded in Athens with a capital of 10,000,000 francs ($1,930,000), divided into 20,000 shares of 500 francs ($96.50) each, of which the National Bank of Greece guarantees 10,000 shares and the National Bank fur Deutchland, of Berlin, the other 10,000. It will be known as the Bank d'Orient (Oriental Bank). The announced object of this bank is to carry on all financial, industrial, and commercial operations usually undertaken by banks and establishments of credit. Its special object is to develop the commerce of the Orient, and its support by German capital is an indication of the hold which German enterprise has obtained on the business of the East. Branches have been established at Constantinople, Saloniki, Smyrna, and Alexandria. An agency has also been established in Hamburg.

The Bankers' Directory.—The January edition of the "Bankers' Directory," published by The Bankers Publishing Company, 87 Maiden Lane, New York, is the most complete and conveniently arranged directory for ready reference published. It is less cumbersome than the Western publications, being more compact, while at the same time it contains all the information that is required by the banker, broker, merchant or lawyer. It is accurate and reliable, all information being corrected down to date of publication. The best indication of this directory's popularity is increase in the advertising patronage. The price is $7.00 indexed, or $4.00 per single copy. Published January and July.—*Banking Law Journal.*

FIDELITY NATIONAL BANK, SPOKANE, WASHINGTON.

Among the prosperous and growing cities of the Pacific Coast, few have made more rapid or steadier advancement than Spokane. Banking progress has been well up to the demands of expanding commerce and industry. The upbuilding of the city and the development of the resources of the surrounding section have been greatly facilitated by a wise direction of banking capital.

GEO. S. BROOKE, PRESIDENT FIDELITY NATIONAL BANK, SPOKANE, WASH.

One of the notably successful banks of Spokane is the Fidelity National. It was established originally at Sprague, Washington, by Geo. S. Brooke, in 1882, as a private bank, and in 1886 was converted into the First National Bank of Sprague. In 1896, by special Act of Congress, a removal was made to Spokane, the original charter number being retained, but the title was changed to the Fidelity National Bank of Spokane.

A careful policy has characterized the management, as is witnessed by a late statement. With a capital of $100,000, surplus and undivided profits of $43,000 have been accumulated, in addition to paying regular semi-annual dividends. Deposits foot up $750,206, and $317,586 was reported as cash, or due from banks and U. S. Treasurer, thus providing available funds equalling nearly fifty per cent. of deposit liabilities, without taking the $457,985 of loans and discounts and $107,330 bonds and warrants into account. The advisability of having a large fund of cash procurable at short notice is generally understood by bankers, though some are tempted by the hope of large profits to disregard this principle to a certain extent. The Fidelity National Bank carries no real estate in its balance-sheet, and only the modest amount of $2,000 in "furniture and fixtures." Total resources exceed $942,000.

A recent evidence of the progress of the bank was its removal into new quarters in the Symons Block, located at the corner of Howard and Stevens Streets, a more central location than the one formerly occupied by the bank. The new quarters have been attractively fitted up for the safe and convenient transaction of the growing business of the bank.

George S. Brooke, President of the Fidelity National Bank, was also its founder. He is of distinguished Maryland and Virginia ancestry, and was born at Dubuque, Iowa, February 12, 1855. He was graduated with the degree of A. B. at Griswold College, Davenport, Iowa, in 1872. Ten years later he married Miss Julia I. Hill, of Westport, Conn.

In 1882 Mr. Brooke established the private bank at Sprague, Washington, which later became the Fidelity National of Spokane. He was Mayor of the City of Sprague for three terms. Mr. Brooke, is, in addition to being President of the Fidelity National Bank, President of the Spokane Clearing-House Association, treasurer of the Taxpayers' League, senior warden of All Saints' Cathedral, member of the executive council of the Washington State Bankers' Association, a member of the Society of Colonial Wars and the Sons of the American Revolution. He has delivered addresses before the conventions of the Washington State Bankers' Association on these topics: "The Country Banker," "The Bank and Its Depositors"; "The Theory and Practice of Banking."

As a result of Mr. Brooke's identification with the bank from its organization, a stability has been imparted to the management by a continuous policy, and this has contributed to a large extent in gaining and keeping the confidence of the public.

The other officers are: Vice-President, D. K. McPherson; Cashier, A. W. Lindsay.

Liquor Consumption in the United Kingdom.—The sum spent for intoxicating liquors in Great Britain and Ireland in the calendar year 1904 was $817,000,000 in round numbers. This is a decrease from the total of 1903. In fact, for several years, the national drink bill has been decreasing The average per capita expenditure for drink in 1904 was $20.59 for England, $15.57 for Scotland, and $15.08 for Ireland. In Belfast, with an estimated population of 358,693, the total expenditure was $5,495,000 for drink. This is almost equal to the total taxable valuation of the city, which for the year ending March 30, 1904, was $6,129,610.—*S. S. Knabenshue, Consul, Belfast, Ireland.*

Canadian Savings Banks Deposits.—There are 213,638 depositors in the Savings banks of Canada, and they have to their credit $60,771,126, which indicates a widespread habit of thrift. As a rule these institutions receive comparatively small sums from wage-earners and people who possess but little, yet the average savings of Canadian depositors is $289.14, and is the second highest in the world, the United States coming first, with an average of $418.89. The per capita deposit of the Dominion is $10.99.—*James H. Worman, Consul, Three Rivers, Quebec.*

American Chamber of Commerce in Italy.—This organization is endeavoring to promote trade relations between the United States and Italy, and to better enable it to carry on this work desire to increase its membership, which already includes some of the largest firms both in Italy and America. The offices are at 10 Piazza della Borsa, Naples, Italy.

GIRARD NATIONAL BANK OF PHILADELPHIA.

STEPHEN GIRARD.

When Alexander Hamilton became Secretary of the Treasury, in 1789, he was requested by the House of Representatives to report upon such measures as he deemed expedient for providing for the National debt and sustaining the public credit. In December of the following year he reported to the House a plan for incorporating a Government bank, and on February 25, 1791, a bill for carrying this recommendation into effect became a law. This was the beginning of the first Bank of the United States, which opened for business December 5, 1791. It was a successful bank, but in 1811 on application being made for renewal of the charter, opposition to it developed out of the prejudices of the time, and Congress refused to renew the charter. Accordingly, the career of the institution came to an end March 3, 1811.

Believing that the services the bank had rendered to the people would induce Congress to prolong the bank's life, Stephen Girard, a wealthy Philadelphia merchant, and already a heavy stockholder, made large purchases of the stock of the bank. When Congress failed to extend the charter, Mr. Girard bought the building of the bank, together with its equipment, engaged the services of George Simpson, who had been Cashier of the Bank of the United States for about seventeen years, and in May, 1812, opened "Stephen Girard's Banking-House," in the building on Third Street formerly occupied by the United States Bank.

A notable proof of Mr. Girard's financial sagacity was given at the beginning of his banking career. He recognized the importance of giving his bank something of the permanent character of a corporation, and of securing his depositors against delay or obstruction in withdrawing their money after his death.

He therefore selected five trustworthy men to whom he executed a deed of trust, vesting in them, at his death, the assets of his bank in trust to pay depositors immediately after his death in the same manner as they
From the outset Mr. Girard's bank was a success. Some of his methods
would have been paid if such event had not taken place.
—very different from those now prevailing—may be recalled with interest. It is stated that it was the rule of the bank first to discount the notes of small merchants and traders and of poor mechanics, the balance being then applied to the notes of the more opulent men; a preference, however, being always given to the needs of the Government. At a critical period in 1814, during the war with Great Britain, the Government tried to raise a loan of $5,000,000, bearing seven per cent. Although the price was fixed at seventy-five, when the time came for closing the subscription it was found that only about $20,000 had been taken. At this time Mr. Girard came forward and subscribed for the whole remaining sum. This had the effect of advancing the price, and those who before had refused to subscribe were now anxious to do so, and this was permitted by Mr. Girard, though he might have obtained a considerable premium. When subscriptions were invited for the stock of the second Bank of the United States, he pursued a similar course. Subscriptions were slow in coming in until Mr. Girard put his name down for $3,100,000, when the demand became very strong. He there-

GIRARD NATIONAL BANK.

fore opened up his subscription in order to give others an opportunity to become interested, and when they had done so he took the remaining stock, amounting to about $1,500,000.

Mr. Girard continued in the banking business up to the time of his death. On the winding up of his bank the trustees turned over more than $4,000,000 to the executors of Mr. Girard's will.

INCORPORATION OF THE GIRARD BANK.

Immediately after Mr. Girard's death, steps were taken by a number of prominent business men to form a new bank, and as a result of this move, a bill incorporating the Girard Bank was approved by the Governor of Pennsylvania April 3, 1832. The bank opened for business August 23, with a capital of $1,500,000. James Schott was President and William D. Lewis, Cashier. In 1836 an act was passed increasing the capital to $5,000,000. In 1849 a reduction to $1,250,000 took place, and in 1862 this was further reduced to $1,000,000.

The United States Government was among the early depositors of the bank, and this account grew to be a large one, particularly after President Jackson removed the public deposits from the second Bank of the United States, chartered in 1816.

Throughout the Civil War the Girard Bank maintained a friendly attitude towards the struggle for the preservation of the Union. It made loans to the national Government and subscribed liberally for its securities as they were issued from time to time for the purpose of carrying on the war. It also responded to the many calls made for subscriptions to funds to further the enlistment of troops in Philadelphia, and to maintain the various institutions established there in aid of the soldiers on their way to and from the field, as well as those in hospital and camp.

Becomes a National Bank.

In the fall of 1864 the bank entered the National banking system under the name of the Girard National Bank. From that time forward for a number of years the history of the bank was not characterized by any events of especial importance.

Daniel B. Cummins, third President of the bank, died May 6, 1892, after a service of over thirty-four years as chief executive officer. On May 13, Seth Caldwell, Jr., who had been a director for twenty-five years, was elected President, and continued to act in that capacity until July 11, 1899, when he resigned on account of impaired health and was succeeded by Francis B. Reeves, who has since continued at the head of the institution.

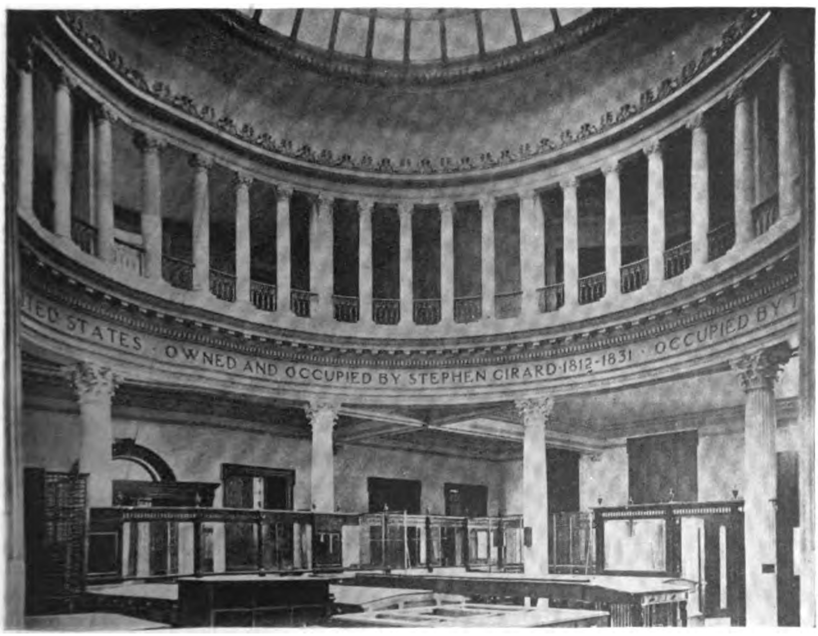
Absorbs the Independence National.

On May 8, 1901, the Girard National Bank, having increased its capital stock to $1,500,000, absorbed the Independence National Bank, which was organized in 1883, and had $500,000 capital. Richard L. Austin, who had been President of the Independence National, was chosen Vice-President of the Girard National, and Theodore E. Wiedersheim, who had been Cashier of the Independence National, was elected Second Vice-President of the Girard National.

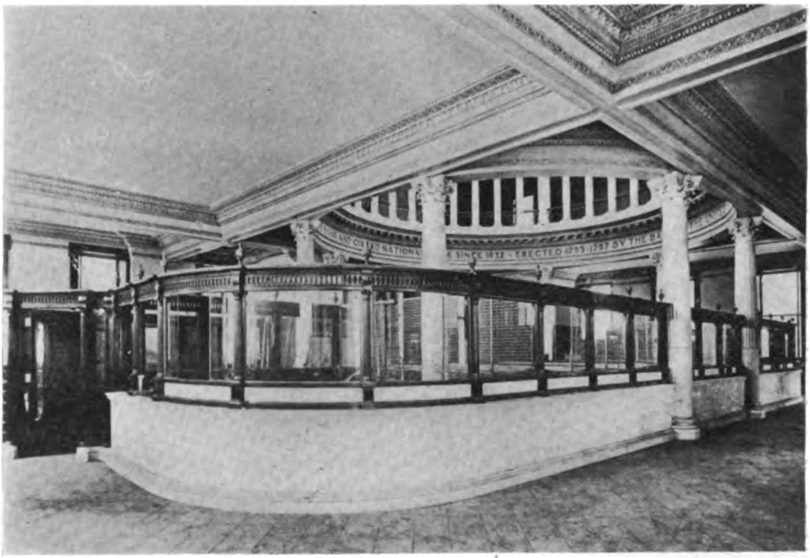
On January 13, 1903, the Girard National Bank having increased its capital stock to two millions of dollars, absorbed the Mechanics' National Bank, which had a capital and surplus of over one million dollars, and resources of over six million dollars. The Mechanics' National Bank was chartered by the State of Pennsylvania on June 4, 1814.

Growth of the Bank.

The growth of the Girard National Bank in recent years is especially noteworthy. On September 20, 1898, deposits were $8,000,000; they increased to $9,975,000 on September 5, 1900; to $19,430,000 on September 16, 1902, and



Girard National Bank—Interior View.



INTERIOR VIEW OF GIRARD NATIONAL BANK.

are now about $30,000,000. These figures show that the Girard National is fully meeting the requirements of a modern bank. It now ranks among the largest banks of Philadelphia. This position has been attained by a steady adherence to sound methods and by a careful study of the banking needs of the present day, together with adequate provision for meeting these requirements.

Besides the capital of $2,000,000, the Girard Bank has an accumulated surplus and profits amounting to $2,800,000.

THE BANK'S BUILDING.

No sketch of the Girard National Bank would be complete that did not mention the bank's building. It is the oldest bank building in the United States, the corner-stone having been laid in 1795 and the building completed in 1797. As has been mentioned already it was first occupied by the Bank of the United States and afterwards by Girard's Bank. Until within the past two or three years, the building remained as originally constructed, but in 1902 the exterior was thoroughly renovated and the interior rebuilt in a modern manner.

THE OFFICERS.

Francis B. Reeves, President, was born at Bridgeton, N. J., October 10, 1836. He entered the Girard Bank as a clerk March 9, 1854, and in 1853 he left the bank to become associated with N. B. Thompson & Co., wholesale grocers, becoming a partner in the firm February 1, 1859. This connection has been continued ever since, the firm being Reeves, Parvin & Co. since 1865. In 1881 Mr. Reeves was elected a director of the Girard National Bank and was re-elected for seventeen years. He was elected Vice-President January 3, 1896, and President July 18, 1899.

Mr. Reeves has been active in the commercial life of Philadelphia for many years. He is an officer and director in a number of large and successful corporations, and prominent in religious and philanthropic work.

Richard L. Austin, first Vice-President, was born in Philadelphia March 28, 1859. His father, John B. Austin, was for many years President of the Southwark National Bank. The son was educated at the Central High School and in 1876 entered the Central National Bank as a clerk. In Oc-

JOSEPH WAYNE, JR.,
Cashier Girard National Bank.

tober, 1885, he was chosen Assistant Cashier of the Independence National Bank, and in the following December was elected Cashier, holding this position until January, 1889, when he became President. He retained this office until the consolidation of the Independence National with the Girard National, in 1901, when he became a director and first Vice-President of the Girard National Bank.

Colonel Theodore E. Wiedersheim, Second Vice-President, was born at Petersburg, Ohio, January 12, 1846. He was for some years a member of the firm of Fell, Wray & Co., bankers and brokers, at Philadelphia, and in December, 1887, was chosen Assistant Cashier of the Independence National Bank, becoming Cashier in 1889, and continuing to hold this office until the Independence and Girard National were merged, when he was elected Second Vice-President of the latter bank.

He was in the Union Army in the Civil War, serving in the Gettysburg campaign in 1863. Later he served with the Pennsylvania National Guard, successively as lieutenant, captain and colonel.

Joseph Wayne, Jr., was born in Philadelphia, September 26, 1873. He entered the employ of the Girard National Bank in August, 1890, was chosen Assistant Cashier in 1900, and on May 3, 1901, was elected Cashier, being the youngest bank Cashier in Philadelphia. The wisdom of his promotion has been fully demonstrated, very much of the bank's progress having been due to his energy and capacity.

THE POINT OF VIEW.—Two dudes visited the Zoo in Boston. With cigarettes in their mouths, they stopped at the cage of a mother anthropoid ape with her young ones. Pointing to the family of anthropoids, one dude said to the other: "That is what you came from." And they laughed heartily. The mother ape called her children aside and, pointing to the dudes, said: "My children, that is what you are coming to." And she wept bitterly.—*Christian Work.*

NO SYMPATHY FOR BANK ROBBERS.—Nothing horrifies a woman who dodges paying her street car fare more than to read about a man who has robbed a bank.—*New York Press.*

FRANKLIN NATIONAL BANK OF PHILADELPHIA.

Five years ago this month the Franklin National Bank, of Philadelphia, was organized. It commenced business July 2, 1900, with $1,000,000 capital and $1,000,000 paid-in surplus. In five years the deposits of the bank have grown to $28,299,510.02, making the Franklin National rank among the largest banks in Philadelphia. During this comparatively brief period, net profits of $720,945.58 have been earned. The strong position of the bank is indicated by the fact that its cash, due from banks, and exchanges, foot up $11,101,591.42. Loans and discounts amount to $20,118,764.18, and the total resources are $31,220,455.60.

J. R. McAllister, President of the Franklin National Bank, has had a wide experience in banking in Philadelphia. He began with the National Bank of the Republic, May 15, 1878, and in October, 1881, entered the correspondence department of the First National Bank, later becoming a paying teller. He resigned this position February 15, 1892, to accept a position with the Corn Exchange National Bank as foreign collection clerk. On April 15, 1892, he was appointed Assistant Cashier, and in 1893 was made Cashier, holding this office until June 1, 1900, when he resigned to become Cashier of the Franklin National Bank, then in course of organization. He continued Cashier until May, 1904, when he was elected President. Mr. McAllister has represented his State as Vice-President of the American Bankers' Association, and was elected President of the Pennsylvania Bankers' Association in 1902.

J. R. MCALLISTER,
President Franklin Nat. Bank, Philadelphia.

E. P. PASSMORE,
Cashier Franklin Nat. Bank Philadelphia.

E. P. Passmore, Cashier of the Franklin National Bank, is not only familiar with all departments of bank work, but by his energy, ability and courtesy has contributed in an important degree to the popularity and success of the bank.

C. V. Thackara, is the efficient Assistant Cashier, and William Wright is the Manager of the Foreign Exchange Department.

The directors of the Franklin National Bank include some of the leading bankers and business men of Philadelphia, while New York banking and financial interests are also well represented in the board.

CONDITION OF THE NATIONAL BANKS.

Abstract of reports of condition of National banks in the United States on January 11 March 14 and May 29, 1905. Total number of banks reporting on June 9, 1904, 5,331; May 29, 1905, 5,668; increase, 337.

Resources.	Jan. 11, 1905.	Mar. 14, 1905.	May 29, 1905.

BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—Messrs. Spencer Trask & Co., the well-known bankers at William and Pine streets, have prepared a description of the principal issues of short-term notes and collateral trust bonds, issued by railroads. The ready absorption of these securities, which yield from 3½ to 5 per cent., would seem to indicate that they are, in many instances, particularly fitted for banks and trust companies desiring investments for stated periods.

—The plans have been filed for the new home of the Chemical National Bank in the rear of its old quarters. The new building is to be four stories and basement and will be built of granite, classic in design, with a facade adorned with pilasters, supporting arches spanned by a dome of copper tile. The main banking office will be 75.3 feet wide and 100 feet long, and will be decorated with columns and arches carrying the dome, which is to be lighted by windows or ornamental lattice work. The old building is to be remodeled into a public corridor ninety-one feet long, which will be the main entrance to the new building. The corridor will have ornamental skylights and above it will be the room set apart for the bank trustees.

The new building is to cost $350,000, and will be completed in 1906.

—In their "Monthly Bulletin of Investments," Messrs. Fisk & Robinson say: "The railroad bond market during May was comparatively quiet, prices in the main holding firm, especially for the older issues. The decline in the stock market has had only a slight sympathetic influence, but an appearance of irregularity at times can, to some extent, be ascribed to this cause. The continuance of easy rates for money and confidence in the general business situation have prevented any except trifling declines in the market, and should soon lead to a broader demand."

—On June 30 the Guaranty Trust Company reported deposits of $67,966,612. On April 13, when John W. Castles became President, deposits were $48,000,000. Total resources have increased from $41,018,720.37 on December 31, 1903, to $75,879,278.29 on June 30 last.

—An extra dividend of 120 per cent. was recently declared on the stock of the Fifth Avenue Bank, to be paid from the profits of 1903 and 1904. This is in addition to the regular quarterly dividend of twenty-five per cent.

—The Comptroller of the Currency has issued to the Merchants' National Bank a re-extension of its charter for twenty years, from June 17, 1905, to June 17, 1925.

—Edward P. Hatch, President of Lord & Taylor's, was recently elected a director of the Lincoln Trust Co., to fill a vacancy caused by the death of James I. Raymond. George J. Bayles has been elected Trust Officer of the company.

—The Bank of New York National Banking Association recently extended its charter to June 7, 1925.

NEW ENGLAND STATES.

Maine Bank Report.—A report of the Savings banks and trust companies of Maine, recently issued, shows that the deposits of the Savings banks were $78,230,219 on April 29, compared with $76,686,546 on October 29, 1904. Trust and banking companies show $23,555,000 total resources on April 29, compared with $22,928,000 on October 29, 1904.

State Bank Supervisors.—The National Association of the Supervisors of State Banks met in annual convention at Portland, Me., June 27, George F. Kendall, of Connecticut, presiding. Mayor Baxter, of Portland, Governor Cobb and Bank Examiner Fremont E. Timberlake, of Maine, welcomed the delegates. Among the speakers and topics were: "Overcapitalization," by Hon. Charles E. Littlefield, member of Congress from Maine; "Governmental Supervision of Business," Justice L. A. Emery, of the Supreme Court of Maine; "Commercial Banks of Maine," Frederick E. Richards, former Bank Examiner of Maine; "The New England Conscience in Banking," Meigs H. Whaples, Hartford, Ct.; "Development of Modern Banking and Its Agency in the Expansion of Business," Francis B. Sears, Vice-President National Shawmut Bank, Boston, and "Interest on Commercial Deposits," Frederick D. Kilburn, Superintendent of the New York State Banking Department.

These officers were chosen: President, M. C. Bergh, Madison, Wis.; vice-presidents, Warren E. Locke of Boston, Richard M. Scammon of Concord, N. H., and David O. Watkins of Woodbury, N. J.; secretary-treasurer, George W. Moore, Port Huron, Mich.; chairman of executive committee, George F. Kendall, Suffield, Ct.

MIDDLE STATES.

Reading, Pa.—Through the courtesy of the Farmers' National Bank, The Bankers' Magazine has received a copy of the semi-annual issue of "The Financial Bulletin," which contains much valuable information relating to local securities, as well as statements and brief histories of the Reading banks and trust companies.

New York State Bankers' Association.—The order of exercises at the convention of the New York State Bankers' Association is as follows:

Thursday, July 13—Annual address by Charles H. Sabin, president; annual report of secretary, E. O. Eldredge; treasurer's report, David Cromwell; report of group chairmen; address, S. R. Flynn, President National Live Stock Bank, Chicago; address, James M. Beck; nominations.

Friday, July 14—Address, "Is This Country in Danger of Becoming Socialistic?" John R. Van Wormer, secretary Lincoln Safe Deposit Company, New York; address, "A Voice From the South," Joseph C. Brown, President Citizens' National Bank, Raleigh, N. C.; address, "Money Orders of American Bankers' Association," F. W. Lafrentz, comptroller American Surety Company; election of officers.

A pleasing and varied social programme has also been prepared.

Pittston, Pa.—Theodore Strong, who has been President of the First National Bank, Pittston, Pa., since its organization in 1864, and who was a member of the board of directors of its predecessor, resigned his office on June 20, to take effect July 1. His successor will be the Vice-President, William L. Watson. Mr. Strong is now eighty-six years of age. He will continue to be a director of the bank.

Pittsburg, Pa.—N. Holmes & Sons have merged their business with that of the Union National Bank. It is said the capital of the latter will be increased, the new stock being largely taken by Messrs. Holmes & Sons. It is also stated that a new banking house of twenty or more stories will be built.

New York State Trust Companies.—A recent compilation of the reports of the statements of the trust companies of the State of New York showed that the total resources of trust companies operating in the State have increased from $1,364,016,015 to $1,487,424,840 in the past six months. The surplus and undivided profits also increased from $104,465,545 to $115,822,231. The market value of the surplus and undivided profits at the close of business June 7 was $162,019,905, and the total amount of deposits on which interest is paid was $1,187,575,627.

A Bequest to Bank Clerks.—By the will of Charles J. Everett, former Cashier of the National Bank of Orange County, Goshen, N. Y., the Bank Clerks' Mutual Benefit Association of New York will receive a legacy of over $100,000. Mr. Everett left an estate of about $150,000.

A sister is to enjoy the income during her life, after which $12,000 is given to the village of Goshen for a library, $10,000 to the same village for a soldiers' monument, and $3,000 to the Presbyterian Church at Goshen for maintaining a park and grounds, the balance going to the Bank Clerks' Association.

Philadelphia.—Next fall the Girard Trust Company will begin the construction of a new building, which will be of purely classic design, and will be built either of white marble or white granite.

—Recently a committee was appointed by the trust companies to confer with a committee representing the Philadelphia Clearing-House with regard to a plan for improving the present system for the collection of checks drawn upon trust companies. On June 19 the committee representing the trust companies reported agreement on all points except the matter of reserve. The amended proposal concerning the reserve to be kept by trust companies, as submitted by the clearing-house committee, was as follows:

"Each non-member clearing through a member of this association shall maintain a reserve of not less than fifteen per cent. of its net average deposits, of which three per cent. shall be in cash in its vaults up to June 1, 1906, and thereafter 5 per cent. in cash reserve shall be maintained, the remainder to be kept in its depository banks."

SOUTHERN STATES.

Dallas, Texas.—On June 12 it was announced that the National Exchange Bank and the American National Bank would be consolidated. The National Exchange Bank was established in 1875 and the American National in 1884. The consolidated banks will have deposits approximating $7,000,000.

Fort Worth, Texas.—J. T. Pemberton was elected a director and Vice-President of the Farmers and Mechanics' National Bank June 27. Mr. Pemberton and his business associates, W. H. and Geo. E. Cowden, have purchased a substantial amount of the bank's stock. They have been engaged in the banking and cattle business in West Texas for fifteen or twenty years.

Chattanooga, Tenn.—Financial arrangements have been completed for the construction of a power plant on the Tennessee River here which will secure a minimum continuous current of 36,000 horse power, furnishing electric motive force for all the factories of the city and for many new enterprises that are expected to be established in consequence of this important improvement.

Greenwood, S. C.—The Bank of Greenwood now exclusively occupies its new building, which is a perfect example of the best style of modern bank architecture. In the exterior facings Georgia granite and marble have been used, while the interior represents a tasteful and substantial combination of marble, bronze, mahogany, steel and glass. The vaults are of chrome steel and are equipped with the latest improvements.

Mississippi State Banks.—State Auditor T. M. Henry has completed the compilation of the State bank statements made under the call of May 29. As compared with the statements made on May 27, 1904, about one year previous, the banks had increased in number from 183 to 228, an increase of forty-five banks for the period, not counting the twelve or fifteen organized but having done no business.

Gulf and Ship Island Railroad.—During the month of May, 1905, the Gulf & Ship Island Railroad handled export lumber amounting to 16,472,000 feet. For the eleven months ended May 31, 1905, exports amounted to 209,225,750 feet, as against 171,082,657 feet for the same period of the previous year.

WESTERN STATES.

Chicago.—The Hibernian Banking Association now occupies new quarters comprising two floors of the new Rector Building, corner Clark and Monroe streets, centrally located in the financial district. These rooms have been provided with everything needful for the safe and convenient transaction of business, and are besides attractive in appearance.

W. A. Heath, who has been Vice-President of the bank since January and who is now in charge of the commercial department, was formerly a bank examiner, and prior to that was engaged in banking at Champaign, Ill.

—Announcement is made by the Bankers National Bank of the opening of its enlarged and fully equipped foreign exchange department, which now issues drafts on all cities of Europe and important trading centres in the Orient, buys bills of exchange, furnishes commercial credits to importers and circular letters to travellers, available in all parts of the world, makes cable transfers and bank post remittances and deals in foreign coins.

The facilities of the Bankers' National, and its foreign connections, enable it to meet every requirement of this branch of banking. The service is also open to other banks.

St. Louis.—St. Louis capitalists a short time ago bought the property at No. 1 Wall Street, New York, paying therefor $700,000. This is said to be the highest price ever paid for New York real estate, the plot being only thirty by thirty-nine feet.

—An increase of capital is to be made by the Merchants' Laclede National Bank, the new stock to be sold at $300 a share. When the new stock is issued the bank will have $1,700,000 capital and $1,600,000 surplus.

—The new Mechanics'-American National Bank has declared its first dividend since the consolidation. The stockholders will receive two per cent. on their holdings for the two months the bank has been in operation. This establishes the stock at a twelve per cent. annual dividend if the present rate is maintained.

At a recent meeting the board of directors elected two new Assistant Cashiers, Charles L. Allen and F. M. Gardner, making five Assistant Cashiers. Both men are old Mechanics' bank employes.

—The National Bank of Commerce recently increased its regularly quarterly dividend from three to four per cent., the first payment at the new rate having been made July 1.

The board announces that since the bank increased its capital and surplus to $15,000,000 three years ago on a twelve per cent. annual dividend basis there has accumulated $1,000,000 in additional profits, which it decided to distribute in increased dividends. At the advanced rate the distribution will be $1,120,000 a year, which is nearly $100,000 less than the bank has been earning during the past three years. On this showing the officials see no difficulty in maintaining the increase.

The recent dividend was the 116th in the history of the bank and $2,520,000 has been paid out in dividends since the increase in capital stock.

Holland, Mich.—A new building is being put up for the People's State Bank, which will open August 1. An entire floor, 30 by 100 feet, will be occupied by the bank.

Corunna, Mich.—Progress is indicated by the recent removal of the Old Corunna Bank into its new building, which is a solid and beautiful structure, well arranged for the increasing business of the bank.

Saginaw, Mich.—A short time ago a compilation of the reports of the six banks here was made, and it showed: capital, $700,000; surplus and profits, $1,053,730; deposits, $11,178,000. There is not a bank that does not have surplus and profits in excess of the paid-in capital.

Hillsdale, Mich.—The Hillsdale Savings Bank is putting up a new building adjoining its present location. The new structure will be of Bedford stone, will be occupied exclusively by the bank, and fitted up with modern equipment.

Decorah, Iowa.—Notwithstanding the great number of banks in Iowa, they all seem to be prospering. C. J. Weiser, the President of the Winneshiek County Bank, is so well satisfied with the business of his institution that he has decided to take a vacation, and on June 22 sailed for Europe, where he will spend several weeks, most of the time in Norway. Mrs. Weiser, their two children, and maid, accompany him.

Negotiable Instruments Law.—Michigan is one of the latest States to adopt the uniform Negotiable Instruments Law. Geo. W. Bates, of Detroit, and others have labored for many sessions of the Michigan Legislature to have this measure passed, and they have at last succeeded.

Zeeland, Mich.—The State Commercial and Savings Bank, which commenced business May 1, is putting up a modern two-story brick building, which will be ready for occupancy about October 1.

Ypsilanti, Mich.—The First National Bank has moved into its new home, which is a substantial and complete bank building. Daniel L. Quirk, the President, has been connected with the bank since its organization, having been elected Vice-President in 1863 and President in 1884. The First National has $75,000 capital, $75,000 surplus, and over $400,000 deposits.

PACIFIC SLOPE.

Portland, Ore.—I. W. Hellman and associates have bought the Wells, Fargo Bank here and merged it with the United States National Bank, increasing the capital of the latter from $300,000 to $500,000.

Tacoma, Wash.—A consolidation of the Lumbermen's National Bank with the Pacific National Bank went into effect June 28, the last named bank being the succeeding institution. It will have $300,000 capital and will retain the services of the officers and employees of both banks.

Pasadena, Cal.—Ernest H. May succeeds the late Alexander R. Metcalfe as President of the First National Bank. A. K. McQuilling has been chosen Vice-President, and Don C. Porter a director, to fill a vacancy. R. I. Rogers, Cashier of the First National, is now a director of the Pasadena Savings and Trust Company, succeeding Mr. Metcalfe.

Sacramento, Cal.—On July 1 the Fort Sutter National Bank opened here with $200,000 capital. Its directors are well-known local business men. Frank Ruhstaller, the President, is at the head of a large brewing establishment and is known as a successful business man. George J. Bryte and E. A. Nicolaus, the Vice-Presidents, are also pushing but careful men of affairs. A. L. Darrow, the Cashier, resigned as manager of the exchange and collection departments of the Western National Bank, San Francisco, to take his present position. While with the Western National the domestic exchange business increased over 300 per cent. and foreign exchange 700 per cent.

McMinnville, Ore.—Since May 31, the McMinnville National Bank has been doing business in its remodelled banking rooms, which have been fitted up with adequate facilities for the growing volume of accounts being handled. The capital of the bank is $50,000, surplus $50,000, and deposits $370,000—the latter item having increased to this figure from $224,000 in 1901.

CANADA.

Eastern Townships Bank.—The statement of the Eastern Townships Bank for the six months ending May 15 shows net profits of $167,185 or 6.68 per cent. In addition $14,055 was added to profit and loss account from premiums received on new stock, which, with the amount at credit of profit and loss from last year, $30,217, brought up the total for distribution to $211,458. After payment of the half-yearly dividends of four per cent., amounting to $99,986, the balance, $111,471, was carried forward.

Imperial Bank of Canada.—The Imperial Bank of Canada, of Montreal, announces that it will increase its capital by $1,000,000. It will be offered to the shareholders at the rate of one new share for three of the old.

Bank of Toronto.—July 3 was the date fixed for the first payments for the new $500,000 stock of the Bank of Toronto. This increase gives the bank $3,500,000 paid-up capital and $3,800,000 surplus.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report.

APPLICATIONS TO ORGANIZE NATIONAL BANKS APPROVED.

Zanesville—Commercial National Bank; in voluntary liquidation June 5; absorbed by Security Trust & Savings Co.

PENNSYLVANIA.

Philadelphia—City, Trust, S. D. & Surety Co.

WISCONSIN.

Ladysmith—First National Bank; in hands of Receiver June 2.

The Hurry to get Rich.—Commercialism is commonly held to be the peculiar stamp of this age, and the haste to be rich the great evil of the times. There is, however, "nothing new under the sun," and this evil is by no means a growth only of the twentieth century.

Sir James Dyer, Lord Chief Justice of England, addressing a grand jury in the year 1567, said: "Man cannot abide and tarry time and space, but in post-haste must be rich. This posting and hasting and running after riches, this great thirst and covetousness, is reproved and condemned as most detestable."—*Wall Street Journal.*

National Bank of Abyssinia.—The Emperor Menelik, according to German papers, has granted a concession to the National Bank of Egypt to establish a National Bank of Abyssinia in and for that Empire. French and Italian financiers are said to furnish part of the capital.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, July 3, 1905.

THE CLOSE OF THE FIRST HALF OF THE YEAR has been awaited during the past month with more than usual interest. It is a time when some disturbance of the money market may ordinarily be looked for owing to the large amounts of money which must be accumulated in anticipation of the disbursements for interest and dividends to be made about July 1. These payments this year will be exceptionally large, probably exceeding $140,000,000, or an increase over a year ago of about $5,500,000.

The local money market, however, continued in an easy condition until the end of the month. The rate for call money touched six per cent. on June 30, but barely averaged four per cent. With that exception the prevailing rate during the month was from two to 2¾ per cent. As a precaution against a possible flurry in money the Secretary of the Treasury announced early in the month that the final installment of the call of April 5 for public funds to be paid July 1 would not be required until July 15.

The position of the clearing-house banks is not as strong as it was a year ago, the surplus reserve being only about one-third of what it was then: $12,658,875, as against $36,105,300. In the last week of the month loans were increased $18,000,000, making an increase since June 10 of $31,000,000. A comparison of loans, deposits and reserves on January 1 and June 30 in each of the last five years makes the following exhibit:

	LOANS.		DEPOSITS.		RESERVES.	
	January 1.	*June 30.*	*January 1.*	*June 30.*	*January 1.*	*June 30.*
1901............	$796,457,200	$892,381,300	$854,189,200	$971,382,000	$225,073,200	$251,329,700
1902............	857,960,200	893,871,800	910,869,800	955,829,000	235,608,800	251,935,700
1903............	875,352,100	913,746,900	873,115,000	903,719,800	228,472,600	238,853,800
1904............	906,570,500	1,075,031,500	886,178,900	1,152,988,800	231,066,610	324,352,500
1905............	1,066,701,200	1,120,869,000	1,104,049,100	1,166,038,900	289,695,700	303,168,600

Since January 1 loans have increased $54,000,000, deposits $62,000,000 and reserves $13,000,000. In the first six months of last year loans increased $166,000,000, deposits $267,000,000 and reserves $93,000,000. The changes in these items this year are very moderate as compared with a year ago.

Easy money did not contribute activity to the stock market. At one time the daily transactions were but little more than 100,000 shares, yet the total for the month reached 12,500,000 shares as against about 5,000,000 shares in June last year. The sales in May last, however, were over 20,000,000 shares and in April nearly 30,000,000 shares.

While the market was inactive prices gradually moved upward and there was a net advance for the month in most stocks and also in bonds. The bond transactions aggregated $80,000,000 in value, the largest total for June in many years, but $34,000,000 represented government bonds, largely Japanese issues.

The general sentiment is optimistic, the conditions affecting values being considered favorable. The earnings of the railroads are showing gains and there are many rumors of probable increases in dividends. The Reading Company, which paid its first dividend on the common stock in February, last month, increased the rate from one and one-half per cent. to two per cent. This gives the holders of $70,000,000 stock an annual return of $2,800,-000 where formerly they received nothing. It is possible that the increased earnings of some other roads may result in larger dividends also.

Hopeful views are entertained regarding the wheat crop. The report of the Department of Agriculture was favorable, and from it estimates were made of a wheat yield this year of 700,000,000 bushels. This would mean an increase of about 175,000,000 bushels over the production of last year. Such an increase would result in larger exports of wheat and flour.

There has been an active speculation in cotton at advancing prices based upon rumors of poor conditions. The most conservative authorities, however, make the condition of the crop better than it was a month ago and almost as good as a year ago.

There was a shipment of gold from New York to Paris late in the month, some $3,300,000 going forward. The shipment was upon such a narrow margin of profit that a decline in the price of bar gold in London ended the movement.

The report of the National banks of the United States as of May 29 last shows that the system continues to increase. The number of banks in existence on that date was 5,668, which compares with 5,587 on March 14, and with 5,331 on June 9, 1904. The average increase is about one bank a day. The total capital is $791,567,231, an increase of more than $9,000,000 since March and of $24,000,000 in the past year. The total surplus and profits exceed $615,000,000, an increase of $11,735,000 since March and of $33,652,000 in the last year. Individual deposits now reach nearly $3,784,000,000, the largest amount recorded. The gain since March is $6,184,000 and since June 9, 1904, $471,218,000. The deposits due other banks and trust companies are nearly $1,510,000,000, a decrease since March of $8,458,000, but an increase compared with a year ago of $135,018,000. The total resources now approximate $7,328,000,000 and have increased since March $19,678,000 and since June last year, $671,817,000. The total cash reserves amount to $649,264,000, an increase since March of $8,000,000, but a decrease compared with June, 1904, of $9,000,000. The gold reserves are the smallest reported since January, 1904, but the banks had a larger amount of legal tenders than are usually reported. Some of the principal items contained in the statements issued in the last two years are given in the accompanying table:

CONDITION OF THE NATIONAL BANKS OF THE UNITED STATES.

	Capital.	*Surplus.*	*Individual deposits.*	*Gold.*	*Silver.*	*Legal tenders.*
November 17, 1903	$755,315,170	$375,508,102	$3,176,201,572	$306,297,918	$71,992,508	$142,325,352
January 22, 1904..	765,861,640	385,531,867	3,300,619,898	362,154,503	91,037,050	161,434,599

November 10, 1904	776,089,401	399,961,534	3,707,706,531	395,111,859	89,075,963	157,942,968
January 11, 1905..	776,916,147	406,177,675	3,612,499,598	386,366,808	105,482,221	178,122,523
March 14, 1905....	782,487,884	408,888,534	3,777,474,006	387,249,060	95,545,506	157,904,573
May 29, 1905......	791,567,231	413,436,145	3,783,658,494	380,199,342	99,435,728	169,629,979

One interesting feature in the combined statement of the National banks is the amount of Government bonds owned by those institutions. The total owned is $547,900,490 of which $457,502,540 are deposited to secure circulation and $74,289,450 to secure United States deposits, the remainder, $16,108,-500, being held by the banks. More than sixty-one per cent. of the entire bonded debt of the Government is now owned by the National banks, and those institutions now own not only a larger proportion of the total, but a larger aggregate amount of Government bonds than at any previous time. Prior to 1901 the largest amount ever held, as shown by the statements to the Comptroller of the Currency, was $447,646,300 on January 2, 1866. In 1879, during the operation of refunding the National debt, large amounts of Government bonds were temporarily in the custody of the National banks, and on April 4 of that year the total reached $712,437,900. In the strict sense, however, a large portion of these bonds was not really owned by the banks, and by December 12 following the total had fallen to $419,739,000. At the close of the Civil War, or on July 3, 1865, the National banks held $391,744,850 of Government bonds, out of a total issued of $2,221,311,918, or only 17.63 per cent. On January 2, 1866, the amount held by the banks was 19.05 per cent. of the total issued. On December 19, 1890, the banks held a smaller amount of Government bonds than at any other time since the early history of the system, the total being only $169,622,250. This, however, represented 27.18 per cent. of the total bonded debt of the Government, which had then fallen to $624,000,000. Since 1890 there has been almost a continued increase in the amount and proportion of Government bonds held by the National banks, as the following table shows:

	Government bonded debt.	*Government bonds owned by National banks.*	*Per cent. of bonds held by Nat. banks.*
July 3, 1865	$2,221,311,918	$391,744,850	17.63
January 2, 1866	2,350,000,000	447,646,300	19.05
December 19, 1890	624,000,000	169,622,250	27.18
" 2, 1891	585,026,870	177,304,450	30.31
" 9, 1892	585,032,980	185,918,850	31.79
" 19, 1893	585,039,220	222,294,350	38.00
" 19, 1894	639,143,030	231,546,300	36.23
" 13, 1895	741,361,960	234,493,400	31.63
" 17, 1896	847,364,520	263,620,890	31.11
" 15, 1897	847,365,620	282,3[illegible]3,650	33.31
" 1, 1898	1,036,396,630	363,338,400	35.06
" 2, 1899	1,037,049,690	333,387,240	32.14
" 13, 1900	1,001,499,750	418,061,920	41.74
" 10, 1901	949,062,330	442,718,610	46.64
November 25, 1902	914,541,240	478,069,550	52.27
" 17, 1903	902,911,240	52[illegible],366,940	58.40
" 10, 1904	895,157,770	540,221,650	60.35
May 29, 1905	895,158,240	517,900,490	61.20

With less than thirty-nine per cent. of the total Government debt, or $347,000,000, held outside of the National banks, the opportunity for those institutions to increase further their holdings would seem to be limited. In December, 1899, more than $700,000,000 was in other hands, and this amount has been cut down more than one-half in the last 5½ years.

The statistical report for 1904 just published by the American Iron and Steel Association is a most vaulable exposition of one of the most important industries in the country. The production of pig iron in 1904 fell below that of either 1903 or 1902, but those were the two years of greatest production. The following table shows the production and consumption in each of the last three years:

Pig Iron.	*1902.* Gross tons.	*1903.* Gross tons.	*1904.* Gross tons.
Domestic production	17,821,307	18,009,252	16,497,033
Imported	619,354	599,574	79,500
Stocks unsold January 1	73,647	49,951	598,489
Total supply	18,514,308	18,658,777	17,175,022
Deduct stock December 31	49,951	598,489	446,442
Also exports	27,487	20,379	49,025
Approximate consumption	18,436,870	18,039,909	16,679,555

The consumption of pig iron in 1904 was only 1,360,354 tons less than in 1903 and exceeded the total production of any year prior to 1902. An interesting table in the report shows the annual production of pig iron since 1861. In that year the total was only 653,164 tons, an amount which now represents only about two weeks' product. In 1864 it had increased to 1,014,282 tons, falling off to 831,770 tons in 1865. There was an increase nearly every year until 1873, when there were 2,560,963 tons produced, then a decline until 1876, when the output was 1,868,961 tons. By 1882 it had increased to 4,623,323 tons and by 1890 to 9,202,703 tons. The year 1894 witnessed a drop to 6,657,388 tons, and then followed a recovery which in 1903 culminated in a production of 18,009,252 tons. There was a temporary setback in 1904, but the present year has shown a recovery. The following table shows the annual production of pig iron since 1885 in the three greatest iron-producing countries, and also the production of steel rails in the United States:

YEAR.	*Germany.*	*Great Britain.*	*United States.*	*Steel rails in U. S.*
	Metric tons.	Gross tons.	Gross tons.	Gross tons.
1885	3,687,434	7,415,469	4,044,526	963,750
1886	3,528,657	7,009,754	5,683,329	1,579,895
1887	4,023,953	7,559,518	6,417,148	2,119,049
1888	4,337,121	7,998,969	6,489,738	1,390,975
1889	1,524,558	8,322,824	7,602,642	1,513,045
1890	4,658,450	7,904,214	9,202,703	1,871,425
1891	4,641,217	7,403,064	8,279,870	1,298,936
1892	4,937,461	6,709,255	9,157,000	1,541,407
1893	4,986,003	6,976,990	7,124,502	1,130,368
1894	5,380,039	7,427,342	6,657,388	1,017,098
1895	5,464,501	7,703,459	9,446,308	1,300,325
1896	6,372,575	8,659,681	8,623,127	1,117,663
1897	6,881,466	8,796,465	9,652,680	1,645,020
1898	7,312,766	8,609,719	11,773,934	1,977,922
1899	8,143,132	9,421,435	13,620,703	2,271,108
1900	8,520,541	8,959,691	13,789,242	2,384,987
1901	7,880,088	7,928,647	15,878,354	2,872,909
1902	8,529,900	8,679,535	17,821,307	2,941,421
1903	10,085,634	8,935,063	18,009,252	2,991,810
1904	10,103,941	8,562,658	16,497,033	2,283,840

Both Germany and the United States have outstripped Great Britain in the production of iron, Germany passing that country in 1903, while the United States first passed Great Britain in 1890 and has been ahead each year since, excepting only in 1894 and 1896. While there has been a large increase in the production of steel rails in recent years, except in 1904, it will be seen that the ratio to the total production of pig iron has been very much reduced. The growth of the iron industry has followed the development of the use of iron in various forms of construction, nor does the prosperity of that industry any longer depend upon activity in railroad building.

Statistics compiled by the "Railway Age" for the first half of the current year show that there was less new track laid than in any corresponding period since 1898. The total laid in the six months was 1,284 miles, as compared with 1,937 miles in the first half of 1904. While these figures would indicate a total of 3,500 miles for the entire year, it is believed that this figure will be considerably exceeded, as it is estimated that 6,000 miles of new road are now under construction and the financial and other conditions are now favorable to building operations. The following table shows the construction of railroad track for the six months and entire year since 1891:

YEAR.	*First 6 months.*	*Entire year.*	YEAR.	*First 6 months.*	*Entire year.*
1892	1,367	4,178	1899	1,360	4,588
1893	1,014	2,635	1900	1,654	4,486
1894	525	1,948	1901	1,817	5,222
1895	641	1,728	1902	2,314	5,684
1896	788	1,848	1903	2,221	5,786
1897	623	1,880	1904	1,937	4,254
1898	1,181	3,018	1905	1,284	.....

THE MONEY MARKET.—Early in the month the money market was firm, but under the influence of a dull stock market became easy. After the first week the rate for call money ranged from 1¾ to 2¾ per cent. until June 30, when the rate temporarily touched 6 per cent. in anticipation of July disbursements. At the close of the month call money ruled at 3 @ 6 per cent., averaging about 4 per cent. Banks and trust companies loaned at 2 per cent. as the minimum. Time money on Stock Exchange collateral is quoted at 2¾ @ 3 per cent. for 60 to 90 days, 3 @ 3¼ per cent. for 4 months, 3½ per cent. for 5 months, 3½ @ 3¾ per cent. for 6 months and 3¾ @ 4 per cent. for 7 to 8 months on good mixed collateral. For commercial paper the rates are 3½ @ 4 per cent. for 60 to 90 days' endorsed bills receivable, 3¾ @ 4¼ per cent. for first-class 4 to 6 months' single names, and 4½ @ 5 per cent. for good paper having the same length of time to run.

New York City Banks.—The weekly statements of the New York Clearing-House banks in June were of a variable character. Deposits decreased $12,000,000 in the first week, increased $16,000,000 in the second week, $6,500,000 in the third week, and $19,000,000 in the fourth week. Loans decreased $11,000,000 in the first week, increased $15,000,000 in the second week, decreased $2,000,000 in the third week and increased $18,000,000 in the fourth week. The surplus reserve, which on June 3 was $6,050,275, increased to $9,827,500 on the 10th, fell to $7,209,500 on the 17th, increased to $15,094,675 on the 24th and fell to $12,658,875 on July 1. The net changes for the month are an increase of $19,000,000 in loans, of $10,000,000 in specie, of $3,000,000 in legal tenders, of $30,000,000 in deposits, and of $6,600,000 in surplus reserve. Deposits are $13,000,000 more than they were a year ago, loans $45,000,000 more, and surplus $23,000,000 less.

MONEY RATES ABROAD.—No change was made in the posted rates of discount of any of the European banks last week. At the close of the month open market rates were generally firm and in Paris they were somewhat higher. The Bank of England rate of discount is unchanged at 2½ per cent. Discounts of 60 to 90 day bills in London at the close of the month were 1/15-16 per cent., against 2⅛ per cent. a month ago. The open market rate at Paris was 2 per cent., against 1¼ @ 1⅜ per cent. a month ago, and at Berlin and Frankfort 2⅜ @ 2½ per cent., against 2⅜ per cent. a month ago.

FOREIGN EXCHANGE.—The market for sterling exchange was dull throughout the month, and there was little change in quotations. One event caused a temporary disturbance. The Bank of France having shipped gold to Italy, began drawing upon London, resulting in an engagement of gold in New York to the amount of $3,300,000. Before the entire amount was shipped there was a decline in the price of bar gold in London of one farthing per ounce and a rise in Paris checks on London of one centime. These changes eliminated any profit in gold shipments and there were no further engagements here. The sterling market then relapsed into dullness.

Fine gold bars on the first of this month were at par to ¼ per cent. premium on the Mint value. Bar silver in London, 26⁹⁄₁₆d. per ounce. New York market for large commercial silver bars, 58⅝ @ 59¾c. Fine silver (Government assay), 58⅛ @ 60¼c. The official price was 58¼c.

NATIONAL BANK CIRCULATION.—There was $7,392,290 added to National bank notes outstanding in June, represented by an increase of $6,430,318 secured by Government bonds and of $961,972 secured by lawful money. For some months past there has been a steady increase in the deposit of lawful money to retire bank circulation, the amount now exceeding $33,000,000. Nearly $7,000,000 of bonds were deposited during the month to secure circulation, while the amount of bonds deposited to secure United States deposits was reduced nearly $1,500,000. The bonds deposited for this purpose aggregate $80,404,950.

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, $9,605,900; 5 per cents. of 1894, $100,000; 4 per cents. of 1895, $6,069,200; 3 per cents. of 1898, $6,953,800; 2 per cents. of 1930, $47,254,550; District of Columbia 3.65's, 1924, $1,652,000; State and city bonds, $375,000; Hawaiian Islands bonds, $942,000; Philippine loan, $4,361,000; railroad and other bonds, $3,091,500; a total of $80,404,950.

GOVERNMENT REVENUES AND DISBURSEMENTS.—There was a surplus shown by the United States Treasury in June amounting to $12,661,928, which reduced the deficit for the fiscal year ended June 30, 1905, to $23,987,752. In the previous year there was a deficit of $41,000,000 but the Government had disbursed $54,000,000 for the Panama Canal purchase and loan to the St. Louis Exposition. There was, therefore, a surplus of about $13,000,000 as against a deficit this year of nearly $24,000,000. The revenues for the year were nearly $2,000,000 more than in 1904 while the ordinary expenses increased $39,000,000.

United States Foreign Trade.—The exports of merchandise in May aggregated $123,942,789, an increase over May, 1904, of $34,000,000, and only about $600,000 less than the exports in May, 1901. Imports were $92,828,437, an increase of $12,000,000 over May, 1904, and the largest yet reported for the same month in any year. The net export balance is $31,114,352, the largest reported since 1901. The gold movement in May shows a net balance of imports amounting to $2,175,233. A year ago we exported net $32,000,000 gold. The net exports of silver were $1,659,421 against $3,114,653 in May, 1904. The total exports of merchandise for the eleven months ended May 31 were $1,397,557,400, an increase over the previous year of $30,000,000 and of

THE SPLENDOR OF SUCCESS.—In a recent sermon at the Broadway Tabernacle, New York city, the pastor, Rev. Charles E. Jefferson, said:

"We are a people easily imposed upon by size. We like cleverness and ingenuity, and success we are ready to adore. If trickery can accomplish big things magnificently, if falsehood can deceive brilliantly, if cruelty can win a crown with dash and glitter, we find it hard to abhor the evil, so fascinated are we by the large and splendid way in which the victory has been won. Has he succeeded? Has he done a big thing? Has he gotten there? If so, let us not be over particular in regard to the righteousness of the methods by which he has achieved his triumph. This is the temper of our age."

A MODERN FIDUCIARY DEVELOPMENT.—"Cumulative Trust Estates" is the title of an attractive booklet issued by the Lincoln Trust Company, of New York. This brochure takes rank with the best of the instructive monographs that have been issued by our financial institutions in their work of educating the public in the facilities offered by modern methods of conservative finance. The plan is that of the adaptation of what is perhaps the oldest legal provision for the financial future of dependents—namely the trust estate—to the needs of the present rank and file of people. It is worth reading for its form and it is worth studying for its matter.

TRANSVAAL GOLD PRODUCTION.—The figures of the output from the Rand mines for the month of May at length establishes an undisputed record, the total being 416,395 ounces of fine gold, valued at £1,768,734, which compares with 399,166 ounces, valued at £1,695,550 for April, 1905, and with 314,480 ounces, valued at £1,335,826 for May, 1904.

BANKERS' OBITUARY RECORD.

Atkins.—Hugh Atkins, senior member of the banking firm of H. & T. E. Atkins, Maysville, Ga., died June 14, aged about seventy-three years.

Campbell.—Wm. A. Campbell, Cashier of the First State Bank, Chester, Ill., former sheriff of Randolph county, Ill., and at one time Cashier of the Bank of Evansville, Ill., dropped dead on the street, June 8.

Campbell.—Edward S. Campbell, President of the National Newark Banking Company, Newark, N. J., died July 2 at the Hotel Sagamore, Lake George, where he and his wife had been staying a month. He was born in Middlesex county, N. J., fifty-one years ago. He went to Newark in 1894, after being Cashier of the National Bank of New Jersey at New Brunswick for ten years, and, in 1902, was elected President of the Newark Banking Company, which was chartered in 1804 as the Newark Banking and Insurance Company and was one of the eight earliest banks on the continent. Mr. Campbell was president of the New Jersey State Bankers' Association, treasurer of the Provident Loan Association, a member of the Newark Social Settlement Society, the State executive committee of the Y. M. C. A. and of the Essex Club and the Newark Board of Trade, of which he was treasurer. He represented his district at the National Monetary Convention in Indianapolis. He was married in 1877 to Elizabeth M. Meeker of Brooklyn.

Chambers.—Dr. Martin L. Chambers, Vice-President and director of the First National Bank, Port Jefferson, N. Y., and former president of the board of education there, died June 12, aged sixty-two years.

Myers.—Lawrence Myers, who had been engaged in banking and real estate in Pittsburg for over half a century, and who had amassed a large fortune, died June 14, aged eighty-six years.

Parkhurst.—L. K. Parkhurst, President of the First National Bank, Reed City, Mich., died recently. He was born at Elkland, Pa., in 1856, and had been a resident of Reed City for fifteen years.

Raven.—Richard M. Raven, President of the South Side Bank, Bay Shore, N. Y., died June 16, aged seventy-seven years. He was the founder of the bank and continued to be its President from its organization till his death.

Seney.—George E. Seney, President of the Tiffin (Ohio) Savings Bank, died June 11.

Sims.—M. L. Sims, for twenty-five years President of the Red River National Bank, Clarksville, Texas, died May 16, aged seventy years.

Sumner.—William H. Sumner, President of the Schuyler (Neb.) National Bank, died at the home of his sister in Belfast, Me., June 18, aged fifty-six years.

Respect for Law.—Every man of great wealth who runs his business with cynical contempt for those prohibitions of the law which by hired cunning he can escape or evade, is a menace to our community; and the community is not to be excused if it does not develop a spirit which actively frowns on and discountenances him.—*President Roosevelt.*

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-NINTH YEAR. AUGUST, 1905. VOLUME LXXI, NO. 2.

THE SECRETARY OF THE TREASURY has begun the usual preparation for providing the additional currency which he believes will be required to meet the autumnal demand for crop-moving purposes. By a slight use of imagination one can picture the astute Secretary busily engaged in figuring out just how much currency will be called for—so much here, so much there—and taking the utmost pains to see that every section is furnished its due share. One thought must sometimes arise to perplex the Secretary: suppose the supply of Government bonds should run short? This dilemma could be met by calling an extra session of Congress and issuing more bonds, but it would take some time to apply the remedy, and in the interim, of course, the crops would lie rotting for lack of means to get them to the markets! Much criticism has been aimed at the Chinese for their lack of progressiveness; but the spectacle of the United States being unable to market its crops because the public debt is not big enough to supply the basis upon which alone the additional currency required for crop-moving purposes can be issued, is certainly on a par with any antiquated ideas that China can produce.

Mr. SHAW is undoubtedly an able Finance Minister, and with the clumsy tools with which he is equipped has upon the whole done excellent work in managing the affairs of the Treasury in a manner to cause the least possible disturbance of the money market. But neither the astute Secretary, nor any one else, can determine with any degree of accuracy how much extra currency is wanted to market the crops, or whether any additional amount whatever is needed. That the harvesting and marketing of a large crop of the staples of our farms are operations that give rise to an enlarged demand for banking accommodations, can not be questioned. But it is by no means certain, even with the prospects of the abundant harvests of the present season, that more bank notes are either necessary or desirable. At all events, it is little short of the ludicrous to see the Secretary of the Treasury engaged in coaxing—

almost in begging—the banks to do what they would do without any urging if there were any profit in it.

Perhaps, with the enormous amount of currency now available, it might be profitable for the banks to learn how to employ it so as to make it respond to the business needs of the community, without having to be tutored by the Secretary of the Treasury once or twice a year.

THE IMPERTURBABLE CHINAMAN seems to be waking up to the possibilities of some of the devices of Western civilization. One of the modern weapons now coming into favor in China is the boycott, which is being employed against the sale of American goods in that country. This action is taken in retaliation for the harsh manner in which the Chinese exclusion act has been administered in the United States. There is apparent ground for complaint on this score, and President ROOSEVELT has found it necessary to issue strict instructions that the law shall be applied without harshness.

Whether the exclusion act itself ought not to be amended, is being widely discussed. It is charged that the law was passed, not as a result of sober deliberation, but to appease a somewhat noisy element of professional labor agitators. Indeed, the assertion has been made that the agitation for the law was helped along by an organized Chinese syndicate in this country, who desired to make use of the act to extort money from their countrymen desiring to gain admission to the United States.

Whatever may be true in regard to either of these assertions, it would appear to be reasonable to consider whether the admission of the Chinese would be beneficial to us or otherwise, and also to give some attention to the effects of the exclusion act on American trade in China.

That there is any great menace to American labor from Chinese immigration has not been conclusively shown. On the contrary there is considerable evidence going to prove that while the ranks of skilled workers in this country are well filled, there is room for a great many servants and unskilled laborers. It is this latter demand that has attracted Italian immigrants in such large numbers in recent years. That the Chinese laborers are as a rule industrious, sober, honest and peaceable, is indisputable. Two objections are urged against them—they do not become citizens, and are exceedingly frugal in their habits. In respect to the first of these two objections it may be said that they might in time become citizens if given a chance, and with regard to the second, it can hardly be asserted that an example of frugality, at the present time, would be without some good effects.

The unrestricted immigration of Chinese into this country would doubtless be objectionable; but the same can be said in regard to other races. It is, however, worth while considering whether the time has not arrived to treat the question of Chinese immigration not from the standpoint of politics or race prejudice, but from the standpoint of enlightenment, justice and common sense.

THE CHINESE BOYCOTT has not only been placed upon American goods, but a New York bank having a branch at Shanghai has also come under the ban. Moreover, the concession granted some years ago to an American syndicate to construct a railway from Canton to Hankau has been cancelled by the Chinese Government, and it is reported that the work will be done under Japanese auspices. That both the Government and industries of China will gradually come under Japanese tutelage as a result of the war between Japan and Russia, may be expected. In fact, Japan will take the place that Russia has occupied for some time, but perhaps with the distinction that Japan is seeking extension of her commerce rather than her territory. It may be expected also that Japan will be somewhat more liberal than Russia has been, and understanding the Chinese people better, the change can hardly be otherwise than beneficial to China as well as to Japan, and in a somewhat lessened degree to other nations as well. Although Japan will doubtless pursue an enlightened policy, it is not to be supposed that her motives in going to war with Russia were largely altruistic. Incidentally other countries may gain indirectly as a result of the change of tutors for China; but Japan has waged this desperate conflict, not for other countries, but for the protection of her own territory and the extension of her commerce and industries. If Russian statesmanship had had the foresight to seize the opportunity presented in **Manchuria**, and had pursued a course that would have gained the sympathetic coöperation of the rest of Europe and of the United States, the situation might have been very different from that now presented. That Japan is best fitted, however, to become the preceptor of China, and to lead that country into the ways of modern civilization and progress, would seem to be manifest from the proximity of the two nations and the racial resemblance existing between them. It remains to be seen whether the stimulus of this enlightened leadership will be sufficient to arouse the Celestial Empire from the lethargy that for centuries has paralyzed the energies of the people.

THE INCREASED EXPENDITURES on the part of the Federal Government will require the serious attention of Congress on its assembling next December. That the business of the country has grown is generally admitted. Receipts of the Treasury have grown also, but not so fast as the expenditures. The latter have been mounting up very rapidly of late, and amounted in the last fiscal year to a total of $567,000,000, compared with $365,000,000 in 1896-97—an increase of more than $200,000,000, although as "The Chronicle" points out, there was a reduction in the interval of $13,000,000 in interest charges. In the period named the expenses for the Navy went up from $34,000,000 to $117,000,000; of the War Department from $48,000,000 to $122,000,000, and civil and miscellaneous expenditures increased from $90,000,000 to $146,000,000. As both the volume of imports and of internal business is near the highest figures ever known, the growing difference between income and outgo can not be laid to dull times. The fact is, as shown above, that the country is spending a great deal of money, and spending it at a rate that is increasing steadily and rapidly. But it is so common now to talk in large terms about everything pertaining to the country, that there can be little hope of getting expenditures brought down to a more modest scale. In making appropriations, Congress appears to proceed on the theory that inasmuch as "the foreigner pays the tax" anyway, there is no particular reason why he should be treated with consideration.

THE BOND ISSUES likely to be made to pay the cost of constructing the Panama Canal may have an influence on the business interests of the country greater and more important than has yet been realized. Whether the cost of building the canal will be $200,000,000 or $500,000,000 is not definitely known; but it is safe to say that the amount required will be very large.

In view of the fact that the bonds issued for this purpose are likely to be used as a basis for increasing the circulation of National banks, the possibility of such an enormous inflation of the currency, within a comparatively short period, becomes a matter worthy of serious attention. If the bonds are issued in large amounts, the tendency will be to depress their price and thus stimulate the organization of National banks, besides furnishing an incentive to existing banks to increase their circulation. Perhaps this tendency could be checked by issuing the bonds in amounts not exceeding $50,000,000, new issues to be offered as the proceeds might be needed. This would prevent a sudden inflation of the currency, but it would not avoid the large permanent addition to the National bank circulation that is almost sure to follow as a result of constructing the canal by the Government.

If it could be definitely ascertained that the canal could be built for $200,000,000 or $300,000,000, the cost might be defrayed by increased taxation, and no bonds need be issued at all. Shortly after the close of the Spanish-American War, it was stated in debate in the House that the cost of that war could have been met without difficulty by an increase in taxation, and that the bonds issued to meet the expenses of the war were unnecessary. They not only caused a considerable increase in the permanent paper currency, but provided a large surplus which tempted extravagant appropriations. The statesmen of the time failed to take an accurate measure of the immense resources of the country and how quickly they could be made available. Moreover, war always contains the possibilities of sudden and unforeseen contingencies, for which it is always well to be prepared.

But, while the total expenditures on account of the canal may not be estimated with exactness, it will not be impossible to tell, approximately, what the annual expense to be incurred on this account will be. This sum could be provided for by a moderate increase in taxation, especially if reasonable economy were practiced in other directions.

As pointed out by Professor CLEVELAND in a recent work, "the effect of the increase in bank notes on the money circulation is identically the same as an increase of like amount in greenbacks would have been." There are, perhaps, few people who would advocate an addition of from $200,000,000 to $500,000,000 to the greenback circulation, and yet, if Professor CLEVELAND is right, that will be what will happen, in effect, if the bonds issued for canal purposes are used as a basis for more bank circulation. This will tend to enhance prices; and, further, considering the interest to be paid on the bonds, it is at least an open question whether it would be more economical to meet the yearly charges for canal construction by increased taxation.

THE EXCESSIVE LOANS to one person, firm or corporation, which seem to be the cause of many bank failures, have again been fatal, this time to one of the prominent banks of Kansas—the First National, of Topeka. With a capital of only $300,000 this bank allowed one person to become indebted to it in one way or another in the sum of $1,200,000. How long it took the borrower in question to get this amount is not stated, but it is probable that his operations extended over a considerable period. When the bank was finally closed it had loaned its entire capital and surplus and the bulk of its deposits to one person.

It would be enlightening to know whether this case is to be taken as a standard of probable allowable borrowing before action is taken to close a bank. Doubtless some thrifty borrowers, particularly officers who organize and manage banks as a means of promoting their private business enterprises, have supposed that it was risky to borrow more than two or three times the capital of the bank. They will be encouraged by the Topeka financier's exploits to extend the limit of their loans. Just what is a safe percentage can not be stated with exactness, but it would seem a fair deduction from the Kansas case, that so long as the borrowings of one person do not exceed three or four times the capital nothing more annoying than an epistolary reproof from the Comptroller's office need be expected. If these letters become at all threatening in tone the ambitious financier will be given an opportunity of extending the limit so as to get practically all the funds of the bank in his possession before the final crash comes.

As pointed out by Deputy Comptroller KANE, while the National Banking Act prohibits loans in excess of ten per cent. of a bank's capital to "any person, company, corporation or firm, including in the liabilities of a company or firm, the liabilities of the several members thereof," the liabilities of a member of a corporation are not to be taken into consideration in fixing this limit. The Topeka financier, who seems to have been interested in a number of corporations, was therefore able to get a large share of the funds of one bank without making the bank amenable to the law. Mr. DEVLIN as a member of one corporation borrowed, say, $600,000, and as a member of another corporation, $600,000 more. He would therefore seem to be in fact, though possibly not in law, the "person" who actually got $1,200,000. The provision of the law mentioned by Mr. KANE offers a convenient loophole of escape for those who wish to avail themselves of it. There is another clause in the statute which also affords an opportunity for completely evading the provisions of the entire section. The elastic clause is as follows: "But the discount of bills of exchange drawn in good faith against actually existing values, and the discount of commercial or business paper actually owned by the person negotiating the same, shall not be considered as money borrowed." If this provision were lived up to in good faith, it would be unobjectionable; but there can hardly be a doubt that in many cases "commercial and business paper" is manufactured to meet the requirements of the law, so far as its letter is concerned, but entirely in violation of its intent.

In restricting the loans which a bank may make to one person, firm or corporation to ten per cent. of the bank's capital, Congress intended to apply what is believed to be a wise policy in bank management—a distribution of loans. This law was designed for the protection of stockholders and depositors. The wisdom of Congress in enacting this law has been vindicated by statistics showing that the greater number of bank failures are caused by loans made in excess of this restriction.

Obedience to the law has not been insisted on, as the punishment provided is considered excessive—the forfeiture of the bank's charter. Where a bank is practically wrecked, however, it seems that it would be much better to inflict this apparently harsh penalty than to permit the violation of the law to continue until one man gets practically everything in sight. The closing of a bank on the manifestation of the first signs of a policy that, as experience has shown, is so likely to lead to its downfall and ruin, would, in the long run, be less injurious to all concerned than to permit that policy to continue unchecked until the bank ignominiously fails. If the law itself is not wise, an agitation for its modification or repeal should be instituted. There is a practical certainty that if the banks that now permit the law to be violated were convinced that a suit for the annulment of their charters would follow, violations of the law would cease.

A CHECK TO STATE SOCIALISM was administered by the Supreme Court of Kansas in a late decision to the effect that an appropriation of money to build an oil refinery, to be operated partially by convict labor, and for the purpose of competing with the Standard Oil Company, was unconstitutional. What the court evidently decided was not that the State of Kansas could not embark in the business of oil refining, but that no warrant for such an enterprise is to be found in the existing constitution of the State. Such a departure would involve so radical a change in the purpose of government that it was not to be entered upon without the greatest deliberation. Of course, if the State may engage in oil refining it may also go into all sorts of industrial, transportation and commercial enterprises. There is no doubt if the people so decide, that a State may go into any of these undertakings, but such a step would be a radical innovation and would almost wholly revolutionize the basis upon which business is carried on at present.

Quite irrespective, therefore, of the merits of the controversy between the people of Kansas and the Standard Oil Company, the decision may be regarded as favoring a calmer view of the subject than seems to have prevailed heretofore.

If in any line of business intolerable extortions should be practiced, the right of the people to relief in some way can not be denied; for the right to live is fundamental, and whatever comes in conflict with this primary right—even constitutions—must yield or be changed to meet the popular will. Perhaps when the trusts that are seeking to establish monopolies and high prices realize that in the background there is always lurking this reserve power of the people to manage their own industries, under State control if need be, there will be less of a high-handed disregard of the interests of the public.

There is, apparently, a considerable trend of opinion toward State socialism in this country. This probably does not originate so much in altruistic motives as in the desire to get even with some of the great corporations whose gouging propensities have aroused popular wrath. It is somewhat contradictory, with the present disposition to bemoan the alleged universal corruption of political life, to propose to turn the management of all public utilities, and even industries as well, into the hands of politicians. It is admitted that municipal control so far as it now extends is frequently very bad, but the remedy that seems to find greatest favor is not that the powers of municipalities should be curtailed, but that they should be greatly enlarged. This proposal is given an air of plausibility by the assertion that whereas at present the people are so slightly affected by what a city does that they take but little active part in shaping its government; but, on the other hand, it is claimed that if the city were given control of additional utilities, such as lighting, transportation, etc., the people would have so much at stake that they could no longer afford to be indifferent.

Even if this ideal state of affairs should come to pass, it is greatly to be feared that the almost unbounded opportunities for fraud and corruption that would be presented would not fail to attract the attention of political adventurers.

The benefits either of municipal ownership or State operation of industries do not appear to be so clearly established as to warrant the overthrow of existing conditions, bad as some of these latter undoubtedly are. Kansas went rather impetuously into the oil business, and the decision of the Supreme Court of the State will give the people time for sober reflection. If they then conclude that they want a State oil refinery, they will no doubt find a way to get it, even if they have to amend their State constitution.

THE EXAMINERS OF NATIONAL BANKS come in for a great deal of criticism whenever there is a bad bank failure. Some of these criticisms are just, but many of them have no substantial foundation. As a rule, irregularities that lead to the failure of a bank extend over a considerable period. But there are many exceptions to this rule. Frequently at the time of examination a bank may make a satisfactory showing to the examiner, and in a very short time it may be wrecked. Another criticism is to the effect that the examiners do not discover irregularities until after the bank fails. Occasionally this is true; but generally it will be found that the bank is closed by the Comptroller because of irregularities reported by the examiner. Of course, the public can learn of the condition of affairs only when the crash comes.

Successive Comptrollers have recommended that the law in regard to the compensation of National bank examiners be changed, so that they shall be paid a salary instead of fees. It is probable, also, that the number of examiners (about seventy-five for over 5,600 banks) is far too small to make efficient work possible. Congress has heretofore paid little attention to the suggestions of the Comptroller made with a view to improving the administrative features of the National Bank Act. The time seems to have arrived, in view of the great expansion of the National banking system, when these suggestions should be given proper consideration.

FEDERAL CONTROL OF ALL BANKS was a future possibility which occupied the attention of the recent convention of bank clerks at Minneapolis. Although this can hardly be called a practical question at the present time, the discussion was valuable in bringing out a comparison of the relative merits of the State and National systems.

In contrasting the records made by State and National banks, the comparison is sometimes carried no further than the number of failures and the amounts realized from the assets of the respective classes of institutions. This method fails to take account of the services which the banks rendered to the community, and thus omits one of the most important elements to be studied in this connection.

The safety of a bank is, of course, highly desirable; but if it could be shown that one class of banks rendered more efficient service to the business interests of the community than another, even though having a somewhat higher percentage of failures, it would be of great importance to learn whether the percentage of failures could be reduced without any loss of efficiency. It might be found, for example, that the National banks make a somewhat better showing in regard to failures than the State banks, solely because the former class of banks have a higher average of capital and are, perhaps, on the whole under a closer system of inspection than the State banks. On the other hand, because of their greater latitude in some respects, it might be found that the State banks meet the general requirements of the community better than National banks. If this greater freedom of operation did not entail any additional risk, it would be an injustice to the community to curtail the freedom of the State banks.

The only reforms necessary, if the surmises above stated were found actually to exist, would be to extend to the State banks the same requirements as to capital and examinations and reports as now apply to National banks.

It would be taking a short-sighted view of the matter to conclude that if National banks appear to make a somewhat better exhibit of realization from assets in case of failure than State banks do, all banks should be brought under Federal control.

Without attempting to decide as to which of the existing systems affords the greater safety, it may be said that the real question to be determined is, which system can be made most useful and at the same time maintain the highest possible degree of safety?

Aside from the consideration set forth, there does not seem to be any good reason why all banks should be brought under a uniform law. The deposit business is largely local, and in the case where one bank desires to make deposits with another, or send paper for collection, or transact any inter-State business, it can, if it so prefers, choose a National bank. Actually, however, in most instances, there is little choice, as the State regulation and supervision of banking, in the majority of the States, is very much like the regulation and control exercised by the Federal Government. Furthermore, with respect to commercial paper, the Negotiable Instruments Law is gradually bringing about a uniform system.

The proposal to hand over to Congress absolute authority over all the banks in the United States is not likely to commend itself to the unprejudiced judgment of careful observers of the growth of American banking.

A RUSSIAN LOAN of large proportions may be necessary to meet the indemnity which Japan will receive for terminating the war in the East.

In a recent communication to the "Wall Street Journal," Mr. ALEX DEL MAR points out that Americans appear to be losing sight of the opportunities afforded by Russia for the investment of American capital. For a long time the loans placed abroad by the Russian Government have been absorbed chiefly by the Paris market, which was to have been expected, seeing that France and Russia are allies. But it is not improbable that it may be found advantageous to seek the assistance of other markets when the new loans are issued, and with the possible exception of Berlin, the most natural source of replenishment of the Russian exchequer will be New York.

Mr. DEL MAR calls attention to the great size of Russia, its natural resources, large population, and the industrial activity of the people. He also says that the recent disturbances in Russia have been greatly exaggerated.

Although the disasters of the present war will entail a heavy tax upon Russia for many years to come, it is not improbable that the net result will be beneficial in the end. Relieved of the necessity of maintaining a large army in the Far East, closer attention can be paid to the internal development of the Empire.

AMERICAN SECURITIES IN EUROPE, 1783–1845.

The key to a correct appreciation of American institutions, generally, and of American finance, in particular, is a clear grasp of their unique character. Whatever their merits or demerits may be, their national type is always unmistakable. It shows alike in their weakness and their strong points. This is all the more remarkable if we consider the great variety of alien elements they have absorbed. It was not till an advanced stage in its evolution that American finance acquired the national note now so dominant in it.

For well-nigh a century it was under foreign influences of various kinds —British, Dutch and German. In the early days it received a large amount of help from Europe. Previous to the great reorganizations of 1894–1896, American railroads were largely controlled from London. Some of them were planned, surveyed and built by Englishmen. Few of the older roads but had British capital, British labor and British materials put into them.

To go still farther back to the gloomy days of the Civil War, when Secretary Chase had to raise money anywhere and anyhow, could Wall Street have taken hundreds of millions of six per cent. bonds from him if London, Amsterdam and Frankfort had not stood behind it to receive the overflow? Still farther back in the forties, the golden key that first opened the Great West and revealed its boundless possibilities of wealth was, in no small degree, of foreign origin. Back to the very birth of the Republic we find traces of foreign finance. Possibly the Republic would have been still-born but for the alliance with France, concluded in the nick of time, which procured for the Continental Army the few million dollars of hard cash that were absolutely necessary to keep it in the field. The War of Independence was not wholly won at Lexington, Saratoga and Yorktown. Dr. Franklin and his loan operations at Versailles had a very considerable share in it.

The history of American securities in Europe is an essential aspect of American finance and also one of the most interesting. It begins with the birth of the Republic, but we need hardly go so far back as that. The close of the War of Independence, say 1783, will be our most convenient starting-point. That will give us nearly a century and a quarter of evolution to deal with. Certain historical peculiarities divide this century and a quarter into two periods of about sixty years each. The first, which extended from 1783 to 1845, was distinguished by a very narrow and primitive selection of securities. Down to 1825 it was limited to national bonds which then gave place to State bonds. From 1825 to 1845 the latter constituted the principal American market in London. In the decade 1835–1845 they experienced both their climax and their anti-climax.

The first sixty years of the American market in London may be distinguished as the State bond period. Railroad stocks then began to come in, and from 1845 onward will be known in history as the railroad period. It may assist us in illustrating this long process of evolution if we take note of the large amounts of British capital that had been sunk in the thirteen original States of the Union while they were still British colonies. It embraced not only trade debts owing for goods imported, but investments of various kinds in land, local banks, trading and shipping ventures, etc. The volume of these it is impossible even to guess at, and we note them merely as primitive elements which doubtless contributed to the financial growth of the Republic.

Dr. Franklin as a Financier.

But American finance, as a distinct and definite power in history, began with the French loans negotiated by Dr. Franklin, at Versailles. These exhibited in the germ, as it were, some of the most characteristic features that subsequently distinguished not only American finance but American diplomacy as well. Dr. Franklin was a typical American who always knew what he wanted and invariably succeeded in getting it. He was a born diplomatist who, without any training or any of the social advantages usually associated with diplomacy, beat the professionals at their own game. More remarkable still, he was a statesman for whom no political problem was either too great or too small. His scientific gifts, superficial as they may be considered now, added immensely to the personal influence which he knew so well how to exercise. If he had a weak side at all it was finance. He did not even profess to be a man of business. Printing, politics and physical science, he was quite at home in, but at the mention of money or accounts his self-confidence deserted him. Lord Bute had a similar weakness—it was the only point of affinity between the two men.

Nevertheless, this financial tyro, with no faith in himself, achieved one of the greatest feats of national finance on record. He coaxed money out of three European States—France, Holland and Spain—not only without having any tangible security to offer them, but when the very act of lending involved risk of war with Great Britain, a country then more powerful than all the three lenders together. As a money-raiser, the Morgans, Schiffs and Harrimans of the present day are not to be named beside Franklin. He borrowed from very unwilling, and often very impecunious, lenders, of whom the most impecunious was Louis XVI. When the King's own coffers were empty, Franklin induced him to guarantee a Dutch loan. Even the royal guarantee could not wholly disarm Dutch caution, but sundry small advances were obtained through it.

Franklin's diplomatic career at Versailles was very appropriately crowned by his final loan of six million francs which he obtained on the eve of his return home. He had offended the French court by secretly arranging the preliminary articles of peace with England. The Minister, Count de Vergennes, was particularly wroth about this, regarding it as a personal slight. Nevertheless, American diplomacy was irresistible. As a farewell favor Franklin obtained the promise of a further six million francs. The first installment of it—six hundred thousand francs—was shipped on the packet that carried the preliminaries of peace to New York, and the rest was remitted as it could be spared.

Incredible and even ludicrous as it may sound to-day, the best part of the hard cash that the Americans put into the War of Independence was what Dr. Franklin raised for them at Versailles and his fellow-commissioner, Mr. Jay, at Madrid. Between 1777 and 1783 these two active agents negotiated advances to the amount of six and a half million dollars—a large sum for those days. The Spanish share of it was insignificant—only $174,000—a mere token of sympathy with the revolutionists and of ill-will to the Power they had revolted against. But the French contributions were numerous and substantial, a striking proof of the Anglophobia which still rankled in France over the loss of Canada. Apart from the loans, which in seven years totalled $6,352,500, France spent over six million dollars on naval and military expeditions in support of the revolution. Much of this may be attributed to the anti-British enthusiasm of the French which showered on Franklin both political and personal honors. He knew how to make the most of that enthusiasm while it lasted. In the American vernacular, he "ran it for all it was worth." His friends in Congress went farther and overworked it. So freely were the European agents of the Republic drawn upon from home, that desperate appeals had to be made again and again to the French Government to save the bills from being dishonored. Franklin had not only to protect the bills drawn on himself, but those of his colleagues as well. A graphic account of his troubles is given in a letter of Mr. Silas Deane from Paris to a correspondent in New York.

"Congress," it says, "drew bills on Mr. President Laurens as being in Holland many months before he sailed from America. They drew on Mr. Jay long before his arrival in Spain. These bills have been honored and you in America have been taught to believe that it was from money received in Spain and Holland. No such thing. These bills have been uniformly sent to Dr. Franklin for payment. Even the salaries of Mr. Jay and Mr. Adams and their suits have been drawn for on Dr. Franklin who has paid them out of the moneys received here."

Though there was, no doubt, a good deal of sentiment in the ardor with which the French Government espoused the American cause, it had its business side also. The trade of the Thirteen Colonies which Great Britain had so foolishly thrown away was well worth capturing. The French were keen to secure it and elaborate arrangements were made both at Paris and the principal outposts for working it. Agents were appointed to act as consignees for cargoes of American produce and to realize them. Other agents were employed to do the financing, and a special nominee of the French Government, M. Beaumarchais, exercised a general supervision over all. The practical results were not satisfactory on either side. Many cargoes fell into the hands of English cruisers. Some were run away with by their crews and sold in foreign ports. Even the cargoes that came to hand yielded, as a rule, poor results. As for the accounts, they got into such a tangle that it took years to straighten them out. Dewey frankly acknowledges the failure of this sanguine scheme.

"Attempts," he says, "were early made to obtain loans to be repaid in France secured by the exportation of goods from America, particularly tobacco, but the danger of capture by English cruisers broke this policy. The earlier negotiations were clothed in secrecy for fear on the part of France and Spain of political complications with England. The intercouse of the American agents, and later of the envoys, with the French officials reveals most pathetically the financial straits of the American Government. Without warning, the envoys were drawn upon by Congress, and only by repeated pleadings with the French Government could they secure funds with which to honor the drafts."

Thus early did the founders of the Republic begin "to take risks" and occasionally to be overtaken by them. Their French patrons were almost as hard up as themselves, and could not long bear the strain of fighting for them and financing them at the same time. The importunities of Dr. Franklin gradually wore out his welcome at Versailles and, for other reasons as well, the French court desired to extricate itself from an embarrassing connection. In 1783, France closed her purse to her American protégés, and they had to find a new banker in Europe. But that was no longer so difficult as it had been. The revolution was now an accomplished fact and the young Republic was definitely, though by no means firmly, established. American credit, which had started on a six per cent. basis, had so far improved that Dutch capitalists were willing to lend at five per cent. In 1782, John Adams arranged with certain bankers in Holland for a loan of $720,000 at the latter rate, and next year he obtained further advances to the amount of $582,000.

The First Bank of the United States.

Those were the first purely business loans raised in Europe. The Dutch are, consequently, the oldest financial allies of the United States, and to that distinction may be added another: they have also been the most faithful and persistent. From 1782 onward, they have never lost interest in American finance. Of all Europeans they have studied it most systematically and been the quickest to appreciate its great possibilities. Many of their historical associations with it have been broken or have died a natural death, but new ones have always sprung up again. They did not even hesitate to take shares in the first Bank of the United States which began business in 1791, and with their help became an important international institution.

It was, in fact, the first international bank on modern lines. It had a nominal capital of ten million dollars, less than a fourth of which was paid in cash. The Federal Government subscribed for two million dollars, but only gave "I O U's" for the amount extending over ten years. Then it borrowed from the bank far more than it paid in. By 1796, it had run up a debt of over six million dollars, and as the bank could give it no further accommodation it had to realize its salable assets, of which its bank shares were the most valuable. No doubt they found their way to Europe and, among other places, to Amsterdam.

Private shares followed those of the Government, until fully three-fourths of the capital of the Bank was held in Europe. But this circumstance, instead of proving an advantage to the Bank, as it might naturally have been expected to do, only aggravated its later difficulties. Its original charter was for twenty years, and during the first half of the term it had a fairly quiet existence. Meanwhile State banks had been multiplying rapidly, and during the second ten years they became not only powerful but bitter rivals of the central institution. The fierce contest which ensued showed in a very aggravated form some of the worst traits of American finance.

One of these was the irrational jealousy of foreign influence which till lately biased even intelligent Americans. Another was the tendency of the American politician and the American financier to regard each other as natural enemies. But the worst and most pernicious of all was embodied in the fatal phrase, "State rights." Whenever or wherever the battle-cry of "State rights" was raised, there was sure to be fierce and furious fighting. No matter what the occasion—it might be currency or slavery, a bank charter or an inter-State commerce law.

The first Bank of the United States was in the doubly unfortunate position of being both a Federal and a quasi-foreign institution. All the forces of Americanism and of "State rights" were consequently arrayed against it. According to Dewey:

"The United States Bank was also unpopular because of the large foreign holdings in the Bank's stock, amounting to 18,000 shares out of a total of 25,000. This use of foreign capital was construed to be a large foreign tribute in dividends, and though foreign stockholders could not vote, indirectly they could exert a 'malignant influence.' The extravagant character of this opposition was summed up by Senator Crawford in the following language: 'The member who dares to give his opinion in favor of the renewal of the charter is instantly charged with being bribed by the agents of the Bank, with being corrupt, with having trampled on the rights and liberties of the people, with having sold the sovereignty of the United States to foreign capitalists, and with being guilty of perjury by having violated the Constitution.'" *

The bill for renewing the charter of the Bank was defeated in the Senate by the casting vote of the Vice-President. The European investor had here his first of many misadventures in American finance. Holding as he did three-fourths of the shares in the boycotted Bank, he took fright and liquidated prematurely as he has often done since. But the recoil on the Americans themselves was far more disastrous than the original offence. While the final struggle over the United States Bank was being carried on, the country was on the brink of a new war with the mother country. It broke out in June, 1812, and found the Government with neither money nor credit to finance it. London was of course a closed door; Paris had long outgrown its American craze, and Amsterdam, the only money market in Europe where a loan might have been negotiated, was smarting under the ill-treatment it had received from Congress. The war had consequently to be financed at home with Treasury notes and six and seven per cent. loans. The last of these had to be issued at eighty per cent., payable in State bank notes worth sixty-five, so that their yield in hard cash was only fifty-two.

Introduction of United States Stocks on the London Stock Exchange.

The War of 1812 was happily much less serious than the original quarrel between the United States and the mother country. It was more of a commercial than a political dispute. Among its other bad effects it upset for the time being a movement lately started for introducing United States stocks on the London Stock Exchange. It was somewhere about 1811 that dealings in these securities were first officially recognized. The earliest mention of them in Wetenhall's list occurs in that year. Presumably, business had then begun to outgrow old limits and to call for larger organization. In January, 1811, we find the official list suddenly trebled in size and many new securities ad-

* Dewey's "Financial History of the United States," p. 127.

mitted to it. A rude attempt at classification also presents itself. Foreign stocks are grouped by themselves, and a small list of Americans makes its appearance. For the sake of its historical interest I produce it verbatim:

The First American Stocks Quoted in the Official List, Tuesday, January 15, 1811.

Three per cents	65
Old six per cents	101-2
New " "	.....
Bank shares*	107-8
Louisiana six per cents	105

*Shares of the First Bank of the United States.

With some difficulty I have traced the three per cents and the old sixes back to Alexander Hamilton's consolidation scheme of 1790. London stock brokers set a good example to their countrymen of letting bygones be bygones when they condescended to deal in bonds that symbolized the loss of their best colonies. The new six per cents, it may be presumed, were part of a new issue that had been made in 1810 to cover urgent necessities of the Treasury. The shares of the United States Bank may have had two sources—Philadelphia and Amsterdam. A circumstance in favor of the theory of direct dealings with America is that in October, 1811, a new column was added to the American table, giving the latest New York prices. As they had to come by sailing packets they could not be very close up to date. In fact, the first New York prices published are nearly six weeks old, and in the winter they are often two months behind. The first set of double prices (shown below) appeared on October 8, 1811.

	London, Oct. 8, 1811.	*New York, Sept. 1, 1811.*
Three per cents	70.71	60
Old six per cents	.....	101
New six per cents	.....	101
Bank shares	92	360-64
Louisiana six per cents	112	100

Considerable discrepancies will be noted between the London and New York prices. They were due to the sterling exchange in New York being about twenty per cent. premium. This continued through the war of 1812, but afterwards a reverse movement set in. By 1816, the tables had turned in favor of New York, and sterling exchange fell to 9 or 10 discount. Nominal prices of stocks, instead of being as hitherto lower in New York than in London, became higher. This appears very clearly in the Wetenhall list of January 2, 1816.

	London, Jan. 2, 1816.	*Philadelphia, Dec. 23, 1815.*
Three per cents	51	61
Old six per cents	.....	.....
New six per cents	81½-82	92
Seven per cents	.....	.....
Louisiana six per cents	82½-83	93

On comparing the list of 1816 with those of 1811, two significant changes will be noted. The shares of the United States Bank have disappeared and a new seven per cent. figures among the United States bonds.

INCREASE IN AMERICAN STOCKS—SECOND BANK OF THE UNITED STATES.

Let us now skip over a decade and look into Wetenhall of 1825. Several new developments here challenge attention. First we find two new Government issues—a four and a half per cent. and a five per cent. Next we have a new Bank of the United States—that of 1816–36. Four States—New York, Pennsylvania, Virginia and Louisiana—are represented by special issues, as are also two cities—New York and New Orleans. None of these issues can have been very large for it has not been deemed worth while in any case to state the amounts outstanding. The year 1825 opened as follows in the London-American market:

UNITED STATES BONDS.	*London, Jan. 4, 1825.*	*New York, Dec. 8, 1824.*
Three per cents	80	89⅛
Four and a half per cents, 1832-34	....	104-5
Five per cents, 1832-36	....	....
Six per cents, 1825-6-7-8	99	101⅛-102⅛
STATE BONDS.		
New York five per cents, 1837	....	110
New York five per cents, 1845	....	111
New York six per cents, 1837	....	122-⅛
New York six per cents, 1845	....	....
Pennsylvania five per cents, 1841	....	....
Virginia six per cents, 1844	....	....
Louisiana five per cents, 1834	105	110-12
Louisiana five per cents, 1839	106	....
Louisiana five per cents, 1844	107	....
Louisiana five per cents, 1849	108	....
CITY BONDS.		
New York five per cents, 1850	....	....
New Orleans seven per cents, 1832-3-4	112	....
United States Bank	£24, 12s.. 6d.	118¾

A significant feature in the above list is the favor shown for Louisiana bonds. Judging by the quotations they seem to have had the freest market among the State issues, and to have commanded as high a price as any other not even excepting New York. Their popularity may have been derived, to some extent, from the old Louisiana bonds of the United States. The latter were issued by the national Government in 1803 when Louisiana was purchased from France. The purchase money agreed upon was $15,000,000, of which the Treasury was able to provide nearly $4,000,000. The remaining $11,250,000 was raised by means of six per cent. bonds having fifteen years to run. They were on the London market in 1811, if not earlier, but they must have disappeared soon after their maturity in 1818. Louisiana State bonds speedily took their place and inherited a share of the favor they had enjoyed.

We skip now another decade and come to 1835, when many more new developments will be discovered. All but one of the United States issues have vanished, for the good reason that the Government was now virtually out of debt. It had a larger surplus in the Treasury than would have paid off all its outstanding bonds. This gave the States their opportunity and they did not neglect it. State bonds now form a large majority of the list published by Wetenhall. The number of issues separately quoted has, since 1825, increased from ten to twenty-eight. Not only have the four original borrowers added to their issues, but half a dozen new States have joined in, namely, Maryland, Ohio, Indiana, Illinois, Alabama and Mississippi.

About 1835, the amount outstanding of each issue begins to be stated, and we are enabled thereby to gauge more accurately the rapid and dangerous growth of these loans. The total amount listed in London increased, as will be seen in the subjoined table, from thirty-six million dollars, in 1835, to nearly seventy million dollars in 1845. A few years later, only two or three stragglers survived of that immense group. It is a significant fact that since 1845 the American market in Capel Court has undergone complete renovation. There is not a national bond or a State bond or a railroad stock of that day now left in the official list. The State bond decade of 1835–45 has completely vanished with all its booming repudiating reorganizing and scaling down. The table on the following page will, to intelligent readers, be grimly reminiscent.

Anglo-Dutch-American Finance.

Anyone who had access to the archives of old American houses like the Barings or Brown, Shipley & Co., might throw some interesting light on the growth of Anglo-Dutch-American finance. Outside of these the only information available as to such firms is to be obtained from casual references to their operations in the press and elsewhere. Even such references are few and far between. They barely suffice to indicate the trend of financial events. From Franklin's letters and other contemporary records we know that the original creation of United States securities in Europe took place at Versailles, that later on Amsterdam co-operated with Versailles and ultimately superseded it. How the business came to be transferred from Amsterdam to London, is more difficult to ascertain. The Dutch bankers who acted for Franklin had, doubtless, correspondents in London—very likely the Barings—and when anti-American resentments began to die down there, the large return which American securities offered would naturally prove tempting.

Another anomaly connected with the Franklin loans is that the agents through whom they went to Holland were not Dutchmen but Swiss. They were two brothers named Grand, friends of Count de Vergennes, the French Minister. Sir George Grand was partner in a banking house in Amsterdam, with which the French Government appears to have had some kind of financial relations. There was nothing unusual in that, however. Very few European sovereigns in those days could get on without a Dutch banker. Frederick Grand, the other of the two brothers, lived at Versailles, probably as resident agent for the bank. It was no doubt through him that Louis XVI gave his guarantee for a six million franc loan, which after all seems to have hung fire.

The United States Government, when definitely organized, kept up its connection with the Grands and probably had their assistance in promoting the first Bank of the United States. Through them a large number of the Bank shares were placed in Holland, and it may have been from Holland that they ultimately found their way to London. When dealing in them was established here—and that may have been long before they were admitted to Wetenhall's list in 1811—other shares had doubtless come over from Philadelphia and New York. In fact there may have been from an early period in the nineteenth century a three-cornered market in United States banks—American, Dutch, English. With their usual luck, English investors got in at the top and out at the bottom. In the Wetenhall list of January, 1811, bank shares are quoted 107–8. In the list of January, 1816, they have disap-

peared, the bank having in 1812 been forced into liquidation by the refusal of Congress to renew its charter.

CLOSER FINANCIAL RELATIONS BETWEEN LONDON AND NEW YORK.

In spite of this discouraging experience, London and New York began to draw closer together financially. When the second Bank of the United States was projected in 1816, London agents were found indispensable. Messrs. Baring Brothers & Company were induced to accept the office and they discharged it in a most generous spirit. The Bank exercised very freely its drawing powers just as the Continental Congress had done on its friends at Versailles. In 1819 a halt had to be called and, on examining the accounts of the Bank, it was found to be due the Barings $900,000. This pinch was got over, however, and ten years of quiet prosperity followed. It is an interesting conjecture what the Bank might have grown to if President Jackson had left it alone. Some curiosity is also excusable as to how the Barings got out in the final liquidation twenty years later.

The second Bank of the United States was in itself an important financial institution, and it set in motion many new financial developments. Large as its domestic business became, its foreign operations were of still greater consequence. It was, even more than its predecessor, an international bank operating on a large scale and over a wide area. It was also the first bank to launch into finance business as distinguished from regular banking. Through it the first assortment of State and municipal bonds was placed in Europe. Wetenhall's list in January, 1825, shows no less than a dozen of these. Ten years later the number had grown to nearly thirty. Some of them are marked "sterling" issues though the amounts are given in dollars. This indicates that the London market was being specially catered for. A few sterling issues were made in London, generally by Messrs. Baring. One of these, a South Carolina loan for £200,000, is distinguished in the list as "Barings." The bank share list had also begun to expand at this period, and in 1835 it included half a dozen eight to ten per cent. dividend payers.

The fortunes of finance, like the fortunes of war, have many ups and downs. One great American house having, as we have seen, made itself by the introduction of American securities on the London market, another firm arose out of their collapse in 1839. This was George Peabody & Company, which after various changes is now known as J. P. Morgan & Company.

Mr. Peabody was one of the first discoverers of the chief secret of successful speculation. It is to buy anything and everything you can lay your hands on in a demoralized market. He laid the foundation of his fortune by wholesale buying of State bonds when they were being thrown away by the Rev. Sydney Smith and other British investors after the collapse of 1839. There is an octogenarian veteran on the London Stock Exchange who remembers Mr. Peabody commencing business in a small office in the old Warnford Court. The old court has since been swept away and replaced by a new one more in the American style. American pilgrims to the Peabody shrine may easily find the latter huge barrack on the north side of Throgmorton street, facing one of the doors leading into the American department of the Stock Exchange.

When he began buying, Mr. Peabody had his choice of sixteen States and more than twice as many issues, all officially quoted in London and New

York, to say nothing of Amsterdam. Quite unconsciously and unintentionally, the victims of repudiation played into his hands. The more frightened and disgusted they became, the cheaper they sold their bonds and the more assiduously Mr. Peabody snapped them up. If he had paid the city editor of the "Times" for his diatribes about State repudiation, and Sydney Smith for his caustic wit on the same exciting theme, these two gentlemen could not have served him better. The plain truth was that the British investor lost his head as he generally does in a financial disaster, and sold when he should have been buying. He has repeated the mistake pretty often since then, notably during the Turkish collapse of 1875 and the Egyptian smash which followed soon after.

On both these occasions the British investor threw away his stocks just as he had for still less cause thrown away his "repudiation" bonds. He was much chagrined to learn years after that he had only given millionaires like the late Baron Hirsch a chance to add to their millions by buying "Turks" and "Egypts" in the thirties. Let it not be imagined that I defend repudiation or offer any excuse for it. The most indulgent critic of American finance could not honestly do that, nor would any self-respecting American expect it of him. On both sides of the Atlantic, it must be admitted that the wild gamble in State bonds which culminated in 1839 had many reprehensible features. From the standpoint of the issuing States, it was almost as mad as the deluge of paper money let loose by the Continental Congress during the War of Independence.

We have seen that on the eve of the collapse no less than thirty-six and a half million dollars of State bonds were outstanding. Hard cash had been paid for most of them, and it had gone in land booms and other wild cat ventures. But the wasting of the money was not the worst of it. English bondholders could have borne that, as they have borne similar losses good-naturedly, had they been fairly treated afterwards by the defaulters. What stuck in their gizzard most was their higgling and sharp practice, amounting at times to chicanery, that was practiced on them in the subsequent negotiations for a settlement. Some of the defaulting States, instead of trying to do the best they could for their creditors, did the best they could for themselves. A few of them even defaulted again on the dividends they had undertaken to pay! This was the unkindest cut of all, and Sydney Smith had reason to be bitterly sarcastic over it. So angry did he get in his once famous, but now forgotten, "Letters on American Debts," that even his powers of sarcasm failed to give sufficient vent to his feelings. Nothing short of jeremiads and Cassandrine denunciations seemed to him to rise to the occasion. In that vein, however, he was as harmless as Madame Angot. I don't suppose that our grandfathers took outbreaks like the following seriously, and to-day they only provoke a smile:

"I repeat again that no conduct was ever more profligate than that of the State of Pennsylvania. History cannot pattern it, and let no deluded being imagine they will ever repay a single farthing. These people have tasted the dangerous luxury of dishonesty and they will never be brought back to the homely rule of right. The money transactions of the Americans are become a byword among the nations of Europe."

The reverend satirist overshot his mark as reverend gentlemen often do when they meddle with business affairs. He went much farther than his ally, the city editor of the "Times," could follow him. The "Times's" indictment of Pennsylvania as quoted below is moderate and rational compared with the other:

"Pennsylvania has never, in the general sense, been a repudiator, but her financial character suffers from a wound which derives its worst feature from its smallness. She issued bonds for arrears of interest and when these fell due with an accumulation of such interest she refused to pay them unless the holders would accept a lower rate."—"*Times*," *July 21, 1861.*

It will be seen from the date of the above extract that it appeared at the beginning of the Civil War *apropos* of the question which was then exercising the London Stock Exchange, whether it would be safer to lend to the North or to the South. The "Times" concluded that the safest course would be not to lend to either. In enforcing its argument it rather ungenerously brought up the old State repudiation grievance. It may now, however, be forgiven for the sake of two or three interesting facts which it resurrected:

"Finally, it must be remarked that the aggregate population of such of the Northern States as may have been compromised by default is 5,000,000, and that of the South only 800,000. Under these circumstances it would seem there is not much to encourage our capitalists to interfere by supplying means to either side, while in a political sense it is certain that any such movement would injure our future good relations, since we should have a strong prospect that on the termination of the contest, either by force or by compromise, the reunited friends would join to attribute the greater part of the miseries they had inflicted on each other to the British gold maliciously supplied by our aristocracy for the very purpose of giving intensity to the contest and destroying free institutions."

Unhappily for the people of 1861, too many Americans had that idea of the British aristocracy, and too many Englishmen considered the American people capable of turning round on us as the "Times" suggested that they might do. Happily for the people of to-day, all such alienating prejudices have completely disappeared from the minds of both nations. They are only recalled here in order to note the very bad effect they had at the time on American securities in England. But for the repudiation scandals of 1839 and the following decade, and for the bitter controversies which arose out of them, the British investor would have been much better disposed than he was toward the war loans of 1861–64.

Both countries were serious losers in consequence. New York got only a fraction of the support from London it might otherwise have had, and London made only a fraction of the profit it should have done out of United States six per cent. bonds. But all is well that ends well, though in this case the end has been rather long in coming. From the standpoint of the perfect understanding at which they have now arrived, the two nations can look back with a smile on the mistakes and misadventures which provoked the diatribes of the "Times" and the Rev. Sydney Smith sixty years ago.

LONDON.

TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.*

CHAPTER VI.

BOOKS, RECORDS AND FORMS FOR THE TRUST DEPARTMENT.

It is a trite but eminently correct remark to make regarding the books and records of any financial institution, that they ought to be as simple, clear and accurate as skill and experience can make them. The remark applies with special force to the books and records of the trust company, and especially to those of its trust department. Here is need of special care, because of the fiduciary nature of the business, because of the necessity of using the records as the basis of frequent reports to the beneficiaries of the various trusts and to the courts, because the history of business handled in trust for others ought to be complete and self-explanatory.

The wise trust department manager will therefore see to it that provision is made at the start for books and records that shall approach the golden mean between the two extremes of too great fullness of detail and the unnecessary labor and time required thereby, and of too little fullness and detail, resulting either in fatal omission of facts that may be of the utmost importance, or in the waste of much labor and time in the work of supplying the omitted information.

To attain to such an ideal set of books requires large experience and careful study, together with a liberal endowment of "common sense." The records will be inadequate if they do not contain a complete history of all the essential matters pertaining to the trust; they will be cumbersome and unwieldy if they contain more than such necessary information. Yet it is better to err on the side of too great fullness, if one must err at all, and it is better for the forms for the records to contain blank spaces for details which the intelligent bookkeeper may omit at his discretion in particular cases, than to make no provision to suggest such details to the careless, lazy or incompetent worker.

The matter of simplicity and clearness is of the greatest importance from many standpoints. The books ought to be simple enough to be understood by any officer or intelligent employee of the company, without the necessity of special experience or explanation. This has been learned by costly experience in many institutions. The writer knows of one case in which a company had a set of books so complex that the man who regularly kept them was the only one in the company, officers included, who could interpret them without much study. When he was out for lunch or away for the day, it was necessary to await his return to ascertain the simplest facts regarding

* Publication of this series of articles was begun in the January, 1904, issue of the MAGAZINE, page 31.

those accounts. The books were devised by an expert accountant, were perfect from the theoretical standpoint, and were beautifully arranged by the printer, but they required an expert to translate them, and were soon discarded. Similar experiences have been met with by many companies, and there is a distinct trend towards simplicity by the older institutions.

Another consideration is that the bookkeeper on an any particular set of books may at any time meet with accident or sickness which may occasion his long absence or death; and it is obviously important that another man be able to take his place without the necessity of a long course of training, or the making of numerous errors in starting the new work.

Where it can be afforded, it is of decided advantage to have the books specially prepared with printed headings for the various columns and spaces. To the man who works on the books daily, these headings may seem unnecessary; he knows what the various spaces are for without the labels. But it is not enough to have the books understood by the man who keeps them; they must be readily understandable by any intelligent person, so that the officers may know the state of things at a glance, and so that a new man may take up the work at any time. This proposition seems clear enough on its face, yet it is astonishing how little it is heeded by some institutions.

Because of the frequent reports required, it is of great advantage to have the records in such form that the stenographer may copy them on the typewriter just as they stand. This precaution saves a great amount of work and many errors.

There should be a general system of accounting, of which each book and record is a part, and through all of them should run a chain of entries that binds them together. This insures accuracy and prevents manipulation. Each entry should show whence it was derived.

Some companies, especially where loose-leaf books are used, consider it of advantage to have all leaves of the same size, thus insuring uniformity in the size of all the books and records. This adds much to neatness and general appearance, and is often of convenience. If this is done, the size should be large enough for those records which need considerable space. This requires making some records larger than necessary, but the fault is not a bad one. The size used by one of the best companies is 15⅝ inches high by 13⅞ inches wide. This makes a book of convenient shape and size.

Use of Loose-Leaf Books and Cards.

The question of the use of loose-leaf books and records is one on which opinions differ, and the opinions for and against their use are often quite emphatic. That they are convenient is generally conceded. The essential objection against them is the ease with which leaves may be removed, and the records changed or the leaves lost. This objection is largely removed by the plan of having the keys to the books in the sole charge of one official or trusted clerk, who is held responsible for any irregularities due to removal of leaves. Where there is objection to the general use of loose-leaf records, they may be used only on ledgers and other secondary books, the books of original entry being bound in the usual way. It argues much for the convenience and safety of the system that few cases are on record where a company has discarded loose-leaf books after having given them a trial.

The use of card records is open to much the same objections as the loose-leaf book, and its advantages are of the same kind, but more pronounced where adapted to the needs. The use of cards for various purposes is steadily growing, and in many institutions has entirely displaced books in some departments.

Of course the cash and securities should not be in the keeping of the ones who keep the records concerning them. Audits should be made at frequent and irregular intervals, and the cash and securities on hand must then agree with the amounts called for on the books kept by another.

However complete and carefully arranged the set of books may be, the matter of accuracy and care in their keeping depends upon the men who do the work day by day. The books of the trust department ought never, even for a day, to be in the charge of novices or incompetents. The best bookkeepers in the institution ought to be in charge of these books. They ought to be well paid and well treated. This is done in most of the best-managed institutions. In others there seems to be a lack of appreciation of the importance of such work. The writer knows of an instance in the metropolis of the country where an unusually competent and painstaking manager of the bookkeeping department was informed that, as his department added nothing to the earnings of the company, its expenses must be kept down to the lowest possible figure. The shallowness of such an argument is obvious enough.

The number and kinds of books needed by the trust department depend upon the size of the company and the character of its business. Trust business necessarily accumulates slowly and usually requires years to reach considerable proportions. The greater part of the business of the average trust company, especially of the small and the new ones, is in the banking department, and what trust records are necessary may often be kept in the general ledger. In the following pages will be given descriptions of the books, records and forms required by companies doing considerable trust business. Many of these are not needed at all by the smaller companies, and often two or more of them may be combined in one book. There is such variety of business done by different companies that it is quite impossible to devise sets of books applicable to all, and each company is under the necessity of devising books suited to its individual needs. To what extent it is desirable to discount the future in a new company, and to provide at once sets of books in anticipation of a large and diversified trust business, will necessarily depend upon the individual prospects of the company.

Relation of the Trust Books to the General Books.

It is usual for the trust department (or departments) to keep separate records of its own work. For its cash it keeps an account with the banking department just as any customer would; and some companies keep bank accounts for some of their trust funds with other trust companies or banks. Only the totals of such accounts appear on the general or individul books of the company. For example, if at any time the trust department has on hand $300,000 in cash, accumulated or awaiting investment, such sum appears on the books of the banking department as a deposit to the credit of the trust department. Regarding the details of this deposit the banking department has no more to do than with the details of the deposit of any customer.

THE TRUST REGISTER.

When a new trust is taken on by the company, the first book in which record needs to be made is the trust register or register of trusts. The purpose of this book is to give a list of the trusts held by the company, together with a concise history of each trust, its conditions, etc. Some companies use two or more books for this purpose, keeping trusts received through the probate court in one book, and other trusts in another book. Considerable discussion on the wisdom of this course was brought out at the meeting of the Trust Company Section of the American Bankers' Association at Milwaukee in 1901.* The best usage seems to be to have but one trust register in which are kept records of all trusts, from whatever source.

In 1900 a committee was appointed by the Trust Company Section of the American Bankers' Association to print a book of trust company forms. In Fig. 1 is given the register of trusts recommended by this committee, with sample entries on same. When a trust is received, memorandum of same is

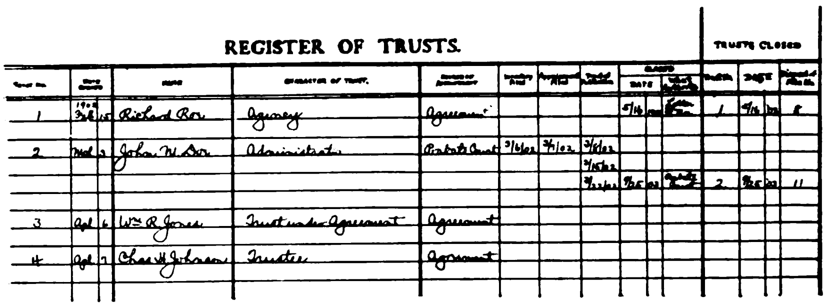

FIG. 1.

at once made on this register, and the trust is given the next consecutive number. By this number it is thereafter known, and its papers and securities are filed under that number. This is not only a great convenience when the number of trusts becomes large, but is a decided safeguard in filing documents. It becomes of special importance, too, when more than one trust is held from the same party. The numbers also show the order in which the trusts were received and the total number received up to any given date. It does not show the number of open trusts, as many may be closed.

In Fig. 1 the first column is for the number of the trust. The second column is for the date when the trust was opened. Care should be exercised here —and in all books—to have the year, as well as the month and day, correctly and plainly indicated. After the book has been in use for a term of years, this becomes of the utmost importance. Young bookkeepers frequently overlook this.

The next column, headed "name," is for the name in which the trust stands.

The next column, headed "character of trust," describes briefly the capacity in which the company is to act, or the general nature of the work undertaken by it.

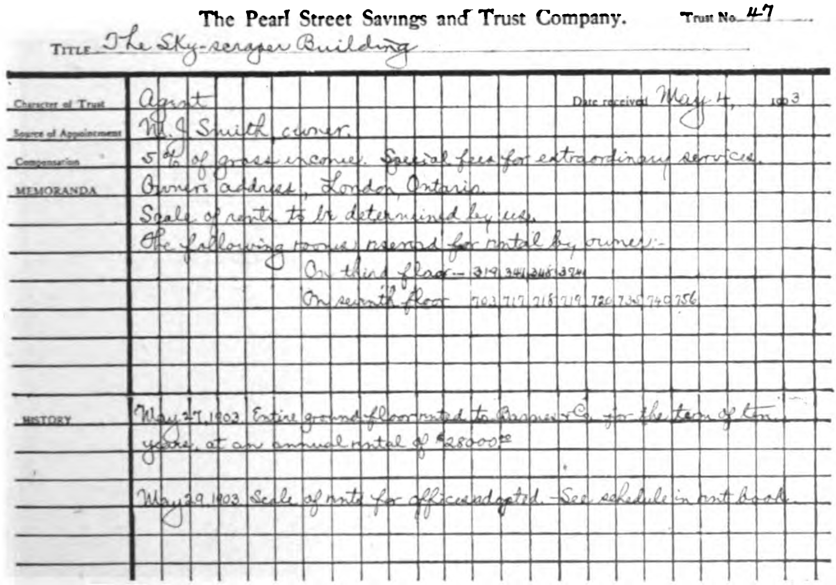
---

* Proceedings Trust Company Section American Bankers' Association, 1901, pp. 22-27.

The next column, headed "source of appointment," shows whether the trust was received by appointment of court, by private agreement, or otherwise.

These are all the entries that can be made at the time that the trust is received. In cases where an inventory, an appraisement and a proof of publication are required, the dates when these were attended to are inserted in the proper columns. When a trust is closed, entries are made in the next columns showing the date when closed, and the authority for such closing.

It is a convenience to have a special file, called the "disposed of file," for trusts which are closed, so that the live trusts can be kept separate. The last section of Fig. 1, headed "trusts closed," is for use in connection with this file. At a convenient time, the papers of closed trusts are placed in boxes or envelopes in this file, the package is given a number, which is in-



The Pearl Street Savings and Trust Company. Trust No. 47

TITLE The Sky-scraper Building

Character of Trust: Agent — Date received May 4, 1903

Source of Appointment: W. J. Smith, owner.

Compensation: 5 % of gross income. Special fees for extraordinary services.

MEMORANDA: Owners address, London, Ontario.

On seventh floor 703 717 718 719 720 735 740 756

HISTORY: May 27, 1903 Entire ground floor rented to [illegible] & Co. for the term of ten years, at an annual rental of $28000.00

May 29, 1903 Scale of rents for offices adopted. See schedule in rent book.

FIG. 2.—The above form is a reduction of the original, which was about 15 inches long by 11 inches wide, the space between "Memoranda" and "History" being about 7 inches.

serted in the last column in the register, and the number of the trust and the date of closing are inserted in the columns shown. But some companies do not give new numbers to closed trusts, but file same by the original number.

There should be an alphabetical index to the register of trusts, giving the number of each trust and, if desired, the page on the register in which it is entered. The regular size of page for this register is 21 by 15½ inches.

It will be seen that this register permits of only a meagre record of the facts regarding each trust. It serves as a convenient means of keeping a list of trusts and of learning at a glance the proper number to give to each new trust. But fuller details regarding the trusts must be written out elsewhere. Some companies have such details on a specially-printed page inserted in the loose-leaf trust ledger at the beginning of the account of each trust.

Many companies dispense with the use of this form of trust register entirely, and register all trusts in a book devised on quite a different

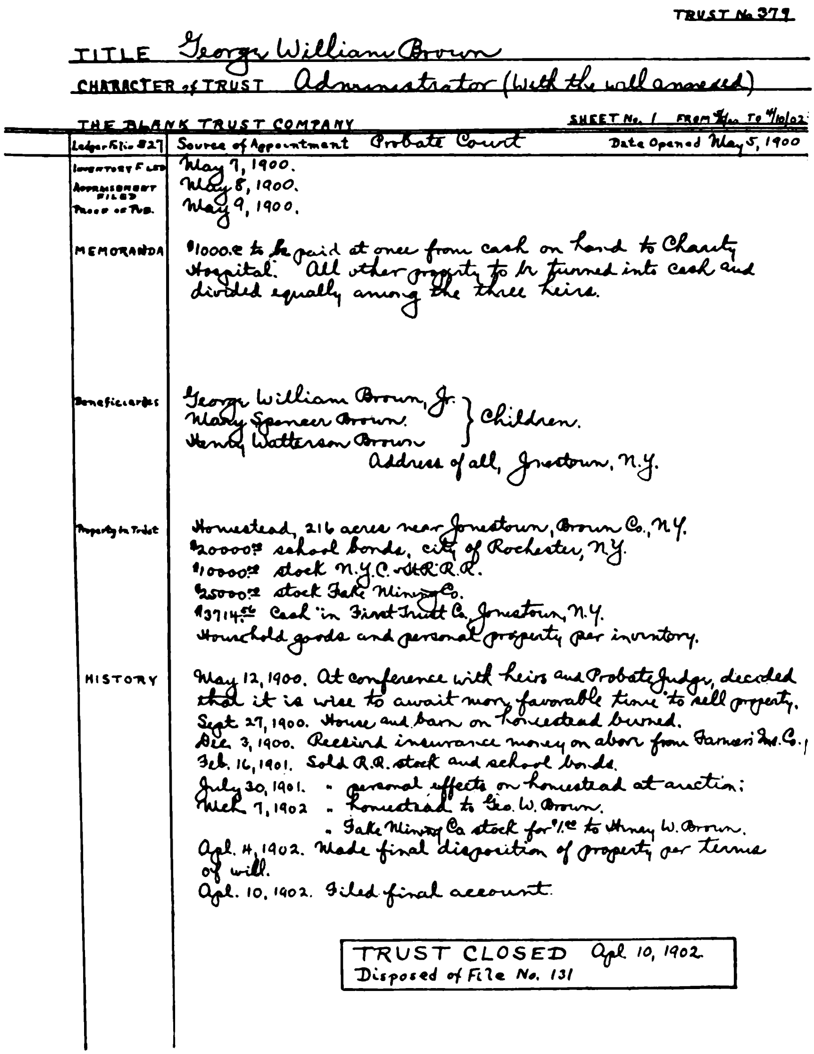
OVER.		

FIG. 3.

plan. In the book, one page (or more, if necessary) is given to each trust, the facts regarding the trust being treated at greater or less length, as the case in hand may require. The trusts are given the proper consecutive numbers as received, the same as in the brief form of register. The pages are either ruled across like an ordinary record book for writing, or are entirely blank if they are to be filled in with a book-typewriter. The book may be specially printed, but unless loose leaves are used it will not be of advantage to have much printing, as the record needed for different classes of trusts varies greatly. In any event the matter to go in the trust register should either be dictated by an officer or inserted by an intelligent clerk who is thoroughly familiar with the work.

Fig. 2 shows a page for such a register. The history of the trust may be continued on the other side. The page is quadrille-ruled, as a convenience in tabulating items when necessary.

If the trust business is large, the best plan is to use a loose-leaf trust register, with pages specially printed for different classes of trusts that are common, and blank pages for others. As each trust is received, the proper kind of page is inserted, and the next consecutive number is given to the trust.



TRUST No. 379

TITLE George William Brown

CHARACTER of TRUST Administrator (With the will annexed)

THE BLANK TRUST COMPANY — SHEET No. 1 FROM 5/5/00 TO 4/10/02

Ledger Folio 827 — Source of Appointment Probate Court — Date Opened May 5, 1900

INVENTORY FILED May 7, 1900.

APPRAISEMENT FILED May 8, 1900.

PROOF OF PUB. May 9, 1900.

MEMORANDA
$1000.00 to be paid at once from cash on hand to Charity Hospital. All other property to be turned into cash and divided equally among the three heirs.

Beneficiaries
George William Brown, Jr.
Mary Spencer Brown. } Children.
Henry Watterson Brown
Address of all, Jonestown, N.Y.

Property in Trust
Homestead, 216 acres near Jonestown, Brown Co., N.Y.
$20000.00 school bonds, city of Rochester, N.Y.
$10000.00 stock N.Y.C. & H.R.R.R.
$25000.00 stock Fake Mining Co.
$3714.56 Cash in First Trust Co. Jonestown, N.Y.
Household goods and personal property per inventory.

HISTORY
May 12, 1900. At conference with heirs and Probate Judge, decided that it is wise to await more favorable time to sell property.
Sept. 27, 1900. House and barn on homestead burned.
Dec. 3, 1900. Received insurance money on above from Farmers Ins. Co.
Feb. 16, 1901. Sold R.R. stock and school bonds.
July 30, 1901. " personal effects on homestead at auction;
Mch. 7, 1902 " homestead to Geo. W. Brown.
" Fake Mining Co. stock for $1.00 to Henry W. Brown.
Apl. 4, 1902. Made final disposition of property per terms of will.
Apl. 10, 1902. Filed final account.

TRUST CLOSED Apl 10, 1902.
Disposed of File No. 131

FIG. 4.

Figs. 3 and 4 shows two different pages for such use; and the page shown in Fig. 2 may also be so utilized.

Fig. 3 gives the front page of a leaf used by a large company for the registering of trust deeds. This company uses a book typewriter, with which the entries are made, as shown in the figure. The abbreviation "Comp." at the upper left-hand corner refers to the compensation received by the company for its services. Most of the entries are self-explanatory. It will be noticed that the memoranda opposite the headings, "in case of default trustee may" and "in case of default bondholders may" are not extended. The utility of extended memoranda on such points is doubtful. If action is to be taken in such matters, such action should be put in the hands of the attorney of the company, and he will not be content with less than a study of the trust deed itself. Especially will this be true if there is any question regarding the interpretation of the instrument. It is a safe rule never to put into the trust register any memoranda regarding whose correctness there might be the least question. The blank space is much more useful than such a memorandum, and capable of less damage.

On the reverse side of the leaf the record is continued with the following headings: "In case of sale," "liability of trustee," "sale or exchange," "delivery of bonds."

Fig. 4 shows a page adapted to record of trusts received through the probate court. The first part calls for the same information as in Fig. 1. Under the "list of property in trust," need be given such property only as is not itemized on the trust ledger. Some companies put into the ledger only the cash in the trust; others add the securities at the appraised value and some at the face value, and some include all the property in the trust, items of uncertain or doubtful value being listed at the nominal appraisal of one dollar. The last plan is a safeguard against overlooking any item of the trust property. If this plan is followed the list of property in the register may be omitted.

Under the head of "memoranda" are entered any special remarks regarding the terms of the trust, matters to be attended to and, if desired, the names of the beneficiaries, regular remittances, etc. The best usage, however, is to enter the latter memoranda on a page preceding the account in the trust ledger, as will be described later. Indeed, some companies register their trusts only on pages (like that shown in Fig. 2, or blank pages) which are inserted in the trust ledger, thus keeping all memoranda regarding each trust in one place. In such cases a numerical index to trusts must be kept in a separate book.

Under "history" should be given a complete record of all essential matters in the administration of the trust down to the time of its final disposition. The careful keeping of this record is of great convenience and importance. It should contain such matters as important conferences with the makers or beneficiaries of the trust, changes in the written agreement, death of interested parties, etc. When necessary the history should be continued on the reverse side of the leaf.

For the registering of trusts for which neither of these forms is adapted, blank pages should be used, the entries to be dictated by the trust officer or other experienced person. It is convenient to have these blank pages ruled as in Fig. 2 or Fig. 4.

A convenient size for these pages for use in a loose-leaf binder is 15⅜ by 13⅞ inches.

Fig. 5 gives the first page and an outline of the other pages of the form used by another large company, on a somewhat different plan. This form

HISTORY

FIG. 5.

is made of card-board, size 5¼ by 10½ inches, containing eight pages and no cover.

At the top of the second page is the heading "terms of the trust and powers of trustee." The third page is divided into three equal parts, with the headings shown in Fig. 5. The fourth page is headed "history," and this is to be continued as far as necessary on the remaining five pages. These forms are arranged in numerical order in specially-prepared files, which contain only the live trusts, the forms being removed to a transfer file as each trust is closed and its record completed. This plan is convenient in that when one wishes to consult the record of a given trust he may remove the form from the file, and have the record in compact and convenient shape without the handling of a large book, and without interfering with the work on other trusts. It requires care lest a record be lost or misplaced. Where such records are used, it is a good plan to have printed forms of receipts, one of which the person taking the form signs and puts in the place from which the form is removed, thus showing who is responsible for that particular document until it is replaced.

Some companies use a probate settlement docket, the standard form of which is shown in Fig. 6. The headings and sample entries are self-explanatory. This book is indexed for months, and thus serves as a tickler to show settlements due each month on this particular class of trusts. All probate

trusts are here entered, so that the book contains a complete record of settlements of such trusts.

The use of this docket is of course unnecessary if the large form of trust register is adopted, and a suitable general trust register used, as all the information here contained, and more, is easily recorded on the register. It is of advantage where, for any reason, it is deemed important to keep such memoranda regarding probate trusts separate from those of trusts received from other sources.

It should be said that there is great difference in the ways in which various companies use their trust registers. Some make the memoranda exceedingly brief, depending upon reference to the papers in the trust at frequent intervals. Others have lengthy entries made, even copying wills and other documents in full. In favor of this practice it is urged that many trusts, especially as trustee under wills, may last for twenty or thirty years, during which time the will itself may become displaced or worn by constant usage. In case of the loss of the original paper the *verbatim* copy becomes invaluable.

(*To be continued.*)

A PRACTICAL TREATISE ON BANKING AND COMMERCE.

THE SUCCESSFUL MERCHANT.

Persons of little experience in the world may think it strange that a man whose character and capacity have been such as were sketched in the preceding paper should not succeed in business. Experience, however, shows that they do so fail. But that we may understand what is meant by success or failure let us remember that commercial business in this treatise is considered in relation to banking. Following this clue, it must be answered that the successful merchant is simply and essentially one who is able, from the beginning to the end, to meet his engagements; to perform every obligation he has entered upon, and to close his business career without being in debt to any man. He may and ought to aim at more, but considering the number of persons who fail in this primary condition, this must be looked on with no little satisfaction. But if the idea of success is to be carried no further than this, the mercantile world will generally pronounce it to be inadequate. Every man on entering business aspires after something beyond this, otherwise he might as well have remained an employee. What he generally aspires after is, at least, a competency—a sufficiency over and above his liabilities to support him when old age has deprived him of his powers.

No man could conduct his business with comfort if he were always on what may be called "the ragged edge" of this world's affairs, being barely able to pay his debts and nothing more. A captain may at times have to sail close to the wind, but if he made a practice of so doing he would undoubtedly lose his ship. There must be a *margin* if there is to be any satisfaction in business; and this margin in the case of a merchant is his Capital. Of this a few words require to be said. And the first thing is that the capital, so called, must be a man's own. There is hardly a more dangerous delusion than for a merchant to talk of "borrowed capital," and no more dangerous practice than to enter in his balance sheet as "capital" money that does not belong to him. Borrowed money is not "capital," it is a liability. No matter though the loan has been arranged for a long term, though there may be an apparent certainty of the loan being renewed when due, or what is more dangerous, that no period of payment has been fixed at all—money borrowed, no matter from whom or under what circumstances, is not "capital."

Traders sometimes think it does no harm to reckon as capital an amount of money which is certain to remain in the business for a considerable period. But it does this harm, that a merchant, if he so consider it, will incur risks, buy goods, and give credit to a larger amount than he would do, if he rigidly thought of this supposed capital as a debt of which payment would some day be demanded.*

---

*A very common form of the delusion spoken of is apt to arise when a partnership is dissolved, and the retiring partner leaves his money to those

Capital, then, is *what a merchant owns himself*, on which no other person has a claim, the surplus over *all liabilities*, no matter to whom.

To ensure success in business, capital must be sufficient; an elementary truth, indeed, but capable of a great variety of applications. For example, it may be taken as a well established truth, that other things being equal, the larger the business the larger the capital needed. But the proviso, other things being equal, must be carefully noted. The slower the course of the business, the more the capital required to conduct it. The country store doing business where payments are only made once a year, requires more capital than a town store that sells a good deal for cash, and gives no credit for longer than a month. And the cash store, that gives no credit to anybody requires *pari passu* least of all. The business of a saw miller or the maker of timber is one that calls for an unusually large capital in proportion to the annual production; for expenditures go on continuously for a whole year before the article is ready for market. At the other end of the scale, we find a grain merchant where the article is bought and sold on the spot for cash. This consideration, of course, determines the percentage of profit called for.

Credit Does Not Supplant Capital.

It is argued by some theorists that credit answers every purpose of capital. It answers some purposes of capital, for a time, beyond doubt. But such theorists are apt to forget that *credit must always be paid for*, no matter in what shape it is taken, whether in goods or in money. And experience shows that what is paid for credit in the shape of interest sometimes absorbs all that remains of profit, after expenses and losses have been provided for. Young men, for example, who buy out the assets of an established firm, paying a small amount down and giving notes for the balance, may find that interest absorbs their profit year by year, and renders progress impossible. The same thing is likely to happen when a young man is set up in business by a wholesale house, he having nothing worth the name in the shape of capital. The house sells him a stock of goods, and keeps him supplied with what he needs. He is compelled to buy from them, for if he buys elsewhere, they can bring his business to a stand. Under these circumstances, he invariably pays a high price for everything he orders, which high price really represents the interests on his indebtedness, together with compensation for the risk run by the supplying house. If a man determines to break the chain and get free, bending his energies to effect it by a steady course of economy and industry, he may possibly make progress, and in time acquire a competency. But if not, he will almost certainly toil on through life, and be as poor at the end as he was at the beginning. But in a majority of cases he will fail during the process, and if the supporting house fails, he will fail, too.

As to the approximate amount of capital required for safety, it may be roughly estimated as follows: For a storekeeper, a merchant whose business is moderately brisk, about one-fifth or sixth of his annual sales; in a slower style of business, about one-third or fourth. A manufacturer of any kind should have at least as much capital as his factory or mill with its

---

who remain. The remaining partners are then under constant temptation to consider the capital of the house to be as much as before, and to carry on business accordingly. From this delusion they sometimes receive a rude awakening.

plant, water power or machinery have cost together with the price of the land. In the case of a saw miller, the value of his limits or timbered lands must be added. A merchant in agricultural products, during the season of navigation, may do a large business on a smaller capital than a merchant in any other line of business; for the movement is so quick that he may be able repeatedly to turn over his whole capital in a week. To do this, however, he must act on the principle of steadily selling as fast as he buys.

But when navigation is closed in river and canal, a produce merchant may find at times that he cannot profitably move his product at all. He should therefore have as much capital, at least, as will enable him to meet not only the fluctuations of the market, but unfavorable conditions of trade.

Paradoxical as it may sound, it is undoubtedly true that, on entering upon business it is not desirable for a firm to have too much capital. If they have they will be apt to indulge in an easy-going style of conducting business, crediting too much, not collecting sharply, carrying too much stock, all of which are bad habits and may lay the foundation of future embarrassment.

If a father is setting up his son in business, the wisest course to pursue is to give him such an amount of capital only as will necessitate his being both industrious and careful. Better he should learn the value of money by being occasionally short of it. Better he should learn to be economical in personal and business expenses by its being rendered impossible for him to be otherwise. The law of necessity is a wholesome one, though many a man has fretted by reason of its pressure. Experience, in the majority of cases and in due time, will convince him that it is salutary.

VALUE OF A GOOD BUSINESS LOCATION.

An important element of success in mercantile business is a *good stand* in a *proper locality;* and, in the case of such a business as dry-goods, a well arranged, well lighted, and convenient warehouse or store.

But, even in the same locality and in the same street there are differences in the eligibility of a stand. The chance of obtaining a choice corner has not seldom been the making of a business. On the other hand, the energy and skill of an able man may be neutralized by a badly lighted store, or one placed on the wrong side of the street.

With regard to the building in which he is to carry on business, a young merchant will beware of entering upon a warehouse too large for his means. If he makes this mistake, he is in danger of either attempting too large a style of business for his capital, and being continually hampered for money, or of paying out too much of his profits on rent and taxes.

THE EXTENSION OF CREDIT.

But now on the supposition that a merchant who knows his business, has secured a warehouse in a good position, that he has a proper amount of capital, that with the judgment of a good buyer he has laid in a seasonable stock of goods, he will immediately be confronted with the difficult question of *giving credit.* In all lines of wholesale business, this may be said to be the question of questions. It is even so to some extent with a retailer, especially in a country store.

The giving of credit in a country where the average of failures is so high at times as it is in Canada is so difficult a function to exercise, that, in a large establishment, it is well for one partner to devote his whole attention to it.

In this matter, a few general rules and principles may be indicated as the result of experience, some of which are applicable to the wholesale merchant and some to the retail storekeeper. It may be said, also, by the way, that most of them apply to a banker also.

With regard to the former, the importance of correct information cannot be too much emphasized. *Get information, and be always on the lookout for more;* that should be the rule. Day by day, it should be the merchant's business to keep his information up to date. The things he knew about his customer a year ago may utterly mislead him now. Solvent a year ago and doing well, a man may now be losing ground and even unable to pay his debts. But while the present condition is important, the past has also to be considered. A man's antecedents are an important element in considering whether he is deserving of continued credit or not. Information requires sifting, for there are false reports as well as true. The working of a customer's account will tell him much. Conversation with the customer himself will elicit what could not otherwise be learned. The traveller who waits upon him will bring information also.†

It is always desirable for a mercantile house to have a *maximum sum* beyond which they will trust nobody. This maximum will be carefully considered in relation to the capital of the house itself, and so regulated that the failure of no five or six persons could bring the firm into embarrassment. But the bulk of the accounts carried by a firm will be far smaller than this. That good old trade maxim, "Divide your risks," can never safely be forgotten. A tendency to be watched is for the large customers of a firm to drift into a habit of leaning upon the house. Such accounts have a general tendency to go on increasing, and their very size makes it difficult to throw them off. It is always known in the trade that such and such customers are "supply houses" of this firm or that, and the fact of the parties desiring to open an account elsewhere raises a suspicion that the supporting firm desires to get rid of them. Hence they cannot be got rid of at all; the only alternative being, either to bring them to a stop and face a loss, or carry them on with a constant endeavor at reduction, which is generally futile.

In the ordinary run of accounts the amount of credit will vary with the means and standing of the customer, a theory which is unquestionably true, but which requires a firm hand and watchful oversight to carry out. For some customers, when kept strictly within bounds by one house, will endeavor to run up an account with another. A dangerous amount of credit may arise when dealings are with a number of houses; each one imagining its own line to be judicious, while the whole, collectively, are unreasonable in a high degree. The remedy is to keep well informed, and to require periodical statements from customers, in addition to which the partner at the head of the credit department will find it useful to have statements rendered him by his clerks *in comparative form*, showing the progress of accounts from month to month, or year to year, indicating the amount of a customer's purchases during these comparative periods. From this it could readily be seen whether the account was sufficiently active for the indebtedness.

---

†All this will be more fully considered further on.

The head of the credit department of a house will also do well to note any hints he may receive from his banker. The banker often knows what the merchant does not. He deals with other houses in the same trade, and has branches in other cities. He may therefore be able to say to a wholesale merchant: "You are aware, I suppose, that such a customer of yours is running an account with a house in another city?" The banker need not violate confidence by going into details. "A word to the wise is sufficient." But if a hint is not sufficient, a banker may sometimes render an essential service by throwing out the paper of that customer.

The real test as to whether a merchant is crediting judiciously is the average *percentage of his losses to his sales.* Some percentage every merchant may expect. But in ordinary times this percentage should be so moderate as to make no serious impairment of profits. Even in times of depression, when insolvencies are double or treble the average, the losses ought never to be so much as to impair the stability of the house, though they make serious inroads into its profits.

The foregoing observations have reference wholly to dealers in imported goods. The dealing in exports, however, is governed by other considerations. It may be laid down as a general rule that the exporter of Canadian products, partly from the nature of the products themselves, and partly from other circumstances, should usually give no credit at all. For how can he keep himself informed of the changing position of merchants in a foreign country? A partner may die or retire, yet the conservative habits of English houses will lead to the *name* being retained, while the capital may have been withdrawn. Even the ratings of firms in reference books may be kept as before, although a vital change has taken place in their composition and capital.

The true position for the Canadian exporter to take is, that if the buyer abroad wants credit, he should get it in his own country; an idea which is undoubtedly reasonable, and has led to the habit, now general in many lines of export trade, of attaching bills of lading to bills of exchange, and requiring the bill to be paid before the security is given up. All this will be fully considered later.‡

With regard to the credit given by retailers, a distinction must be made between those in the city and the country.

The accounts of respectable families in cities are seldom a source of loss, though some householders do occasionally run up tradesmen's accounts to an unreasonable extent. Such accounts, however, seldom give rise to discountable bills; and if such are presented to a banker he will generally do well to decline them.

But the credit given by country storekeepers to farmers rests on different

‡It is to be said, however, that the houses in Great Britain with whom our timber exporters deal are almost invariably of a high class, both in wealth and credit, merchants of long standing and unblemished antecedents, who have never failed to meet obligations in the worst of times. Yet it is singular how cautiously English bankers speak when asked an opinion of even these. Circumstances prove that there is a good reason. A timber merchant in England who had maintained a high position through a long course of years became embarrassed and stopped payment, with heavy loss to his creditors. To the astonishment of them all, his bankers included, it was found that he had engaged in reckless speculation in an article that had nothing to do with his trade, which speculation going wrong, had resulted in such heavy loss as to ruin him. This affair was the occasion of considerable loss to Canadian firms who had dealt with him continuously for years.

grounds. The farmer has property which can be seen, both real and personal, and though often slow, is generally sure. The danger with farmers' accounts is not so much of ultimate loss, as of their degenerating into what bankers call "lockups." A storekeeper with his books full of such accounts is apt to become as slow as the farmer himself. His interest account therefore becomes heavy and tends to eat up his profits. He is made also to feel in times of pressure that his account is undesirable. In dealing with farmers, storekeepers need to be careful to consider whether their customer is owner or tenant; and if owner, whether his land is free of encumbrance or not. The utmost limit of credit to a farmer should be the amount of one season's supplies. When an account gets beyond this, it should be stopped. No consideration of ease in getting bank discount should prevail to alter this rule.

Economy in Business Expenditures.

This is another condition of success. By this is not meant mere saving and cheese-paring. Economy primarily means *management*, as the derivation of the word implies to begin with; careful calculation of what charges can be afforded according to the size of the business. The primary charge in a mercantile business is the rent of the warehouse. To rent too large a store is a serious mistake. But it is poor economy to rent one too small; or that is situated on a back street, or is badly lighted, or badly laid out for business. Saving of this kind will be far more than offset by loss of customers.§

The salaries of clerks, salesmen and travellers is another item of even more importance than the other. Here again it is poor economy to employ an inferior class of men. Such are apt to injure the business by inefficiency. More men, too, are required to do a certain amount of business when they are below a proper standard. Three competent men will do as much work as four of an inferior class, and while they cost no more in the aggregate, they help to build up the business by wise attention to the wants of customers. A merchant will do well to have young men about him who are undergoing training in the methods of the business. This tends to economy, but must not be carried too far, as no warehouse or office can be carried on well when there are too many juniors in it.

Closely connected with this matter of employees and making the most of their capacity, is that of the treatment of the *seniors*. Some of these, although they grow in years, and can be more and more trusted, do not develop business capacity. Men of this kind have their value; as they save the principal much anxiety, and need no supervision. They can also be useful in the training of juniors. They gradually therefore grow up to the position of old servants of the house, who have a comfortable salary and are contented with it, on whom reliance can be placed and who never aspire to anything beyond. It is always good economy to treat such servants well.

But there are others who develop a capacity for business. Such as these not only work, but think. They suggest improvements and economies. They

§It need scarcely be pointed out that the rent of a store is a charge upon the business, even when the premises are owned by the firm. And in an adjustment of accounts, or stock-taking, rent should be charged as part of the annual expense of business exactly as if it were paid to an outside person. Where the business belongs to one person, and he owns the warehouse or store, he is deluding himself as to the expense of the business if he omits to charge it with rent, and he is of course deceived as to the percentage of increase to charge on his goods.

calculate how much things cost, and sometimes find out where they can be bought cheaper. Such employees as these should be noted and encouraged, and sometimes taken in as partners.

It is thus that the traditions of a house are preserved from generation to generation, the firm going on doing service to the community and securing wealth for its members, many examples of which may be seen on both sides the Atlantic, but especially in Great Britain.||

INSURANCE.

Another item of expenditure and one in which serious mistakes are made is that of *insurance*. This will be fully treated of hereafter. It may, however, be noted in this connection that insurance is as reasonable a charge as rent and taxes, and if business, as carried on, will not bear the expense of insurance, there is something wrong with the business.

INTEREST AND DISCOUNT.

Another item of expense which, in some cases, is the most serious of all, is *interest and discount*. Few firms are in a condition to conduct their business without bank loans or discounts at all. But there is a reasonable use of bank credit, and an imprudent use. When a wholesale merchant's line of discounted paper averages more than one-fourth of his annual sales, it is generally a sign that his credit to customers is too long, or that he does not collect sharply, or that he is too easy in renewing. But when, in addition to discounted paper, he borrows directly and regularly from his banker, he has reason to revise the whole methods of his business. Bank credit to some men is a dangerous luxury. Such loans may serve a useful purpose, provided they never amount to more than one-fifth of the average line of discounted paper and that they never extend beyond one or two months. But when such loans are required constantly, and exceed the amount above named, it is, as a rule, a sure sign that the credit department of the house is loosely managed, or that it is carrying too much stock.

When times of difficulty set in, and the general average of failures rises, the pressure will show itself in a tendency to require more of this kind of bank credit. But this state of things is best met, not by taking more credit, but by curtailing the business. As to the interest account of a merchant in agricultural products, it will not amount to more than one-third or one-half of one per cent. on the total sales, if the business is as active as an exporter's should be. But should such products be held month after month, in our long winters, interest and charges will almost certainly swallow up the profit, even of an ordinary rising market.

||A mistake has sometimes been made by the head of a commercial house who has one or more sons growing up, whom he naturally desires to succeed him in business. While they are growing up one or more of his employees are developing a capacity for management; yet he hesitates to take them into partnership, fearing they may displace members of his own family. The result often is, that these employees leave the house, enter into business for themselves, and become serious rivals. If the sons prove to have managing capacity, the firm may not ultimately be damaged. But if not, the chances are that a business founded and maintained by the father may disappear under the incapacity of the sons. It is, therefore, wise to keep managing capacity in the firm, even if, under such a regime, sons have to become little more than sleeping partners. The prevailing tendency to convert firms into joint stock companies affords, however, an easy method of dealing with this state of things.

ADVERTISING.

There are other items of expense, such as *advertising*, which every merchant must think out for himself, for no general rules can be laid down, except this, that advertising should be in a proper medium, that it should be arranged so as to attract attention, and that it should be changed from time to time so as not to become monotonous. In the nature of things some kinds of business depend more on advertising than others. Those who deal in articles that are constantly changing must bring their novelties before the public; on the other hand, those who deal in staple goods with a limited range of customers, and where the price is a matter of market quotations, such as grain, etc., never need to advertise at all.

But in the general matter of charges and expenses, when they have been arranged so as to comport with the size of the business, the thing to be kept constantly in view is to get *good value* for the expenditure, whether of rent, salaries, insurance, advertising, or what not.

PERSONAL DRAWINGS.

It goes without saying that personal drawings from the firm and personal expenditures should be on an economical scale also. This is a matter requiring careful adjustment where there are two or more partners, and careful consideration where there is only one proprietor. The amount to be drawn is usually set forth in the deed of partnership and should obviously be on a scale that will allow a considerable margin between drawings and profits. But in case the amount is for any reason exceeded by one or more partners, the amount of the excess should by no means be entered as among the open accounts due to the firm. This is a most delusive practice and has not seldom been the means of deceiving a firm's bankers. Right and proper it is between partners to keep accounts so as to show how the members of the firm stand to each other; but for a firm to enter amongst its available assets sums that are due by one member to the rest, and to render an account to a creditor in that shape, is a proceeding that borders upon fraud. This practice is particularly dangerous when a partner, by arrangement with the other member of the firm, is allowed to draw out a considerable sum, possibly to build himself a house, or enter on a speculation. The real capital of the firm may be largely depleted in this way without its being apparent in their statements.

In these days of increasing competition where business is apt to assume the form of a contest and only the fittest survive, it is essential that the principals of a firm shall be constantly on the watch to note new developments, new markets, new methods, new economies, new styles of goods, new methods of transportation. All the world is rapidly becoming one country, and the successful merchant will keep an eye upon whatever is going on that bears upon his business.

In dealing with his customers a merchant will observe the maxim, "Civility costs nothing, but is worth a good deal." Many a merchant spoils his trade by a deficiency in this respect. He is impatient, and if his customers don't like the goods he is showing them, he will not take the trouble to show them something else. True, a merchant sometimes knows what will suit a customer better than does the customer himself. But it is bad policy to say so, or to show that he thinks so. A dry goods merchant should make a practice of systematically clearing out all goods that are *passé*, or becoming so. That was another of Mr. Stewart's cardinal rules. He made a point of having nothing but salable goods on his shelves. But there is a great temptation to hang on to stock that has once been bought, and some men constantly do it, hoping against hope that it will be sold in ordinary course. It is an unpleasant thing to sell goods at a loss, but it is often true economy in the end. The process of weeding will, of course, be carried on by the principal, so as to ensure that good plants may not be pulled up with the weeds.

Value of Careful Accounting.

The final element of business success is the keeping of *accurate accounts*, and the systematic balancing of them once a year at least. It has been said of many a merchant, but perhaps more frequently of a manufacturer, that he does not know what his goods cost, and therefore he is deluding himself during the whole time that he is selling them. The only efficient check upon this is the careful taking of stock, and periodically balancing of books. In stock taking, when goods on hand are written down to what the merchant could buy them at for cash, or what he would be willing to give for them; when all accounts are put at their collectible value, and written off if they have none; and when due allowance has been made for depreciation in fixed property, a merchant will sometimes be astonished to find that he has not made half the profit he had anticipated, or perhaps none at all. This being so, he will naturally endeavor to ascertain where the leak is, overhauling every department of his business for the purpose. He will, after this, buy more carefully, sell more closely, economize expenditures, collect more sharply, and borrow less money—thus laying a foundation for a satisfactory result in future.

It may be objected to this that many a man has prospered and made a competency in Canada who conducted his business by "rule of thumb" and never made out a balance-sheet in his life. There have been cases, no doubt, where great natural shrewdness and ability in buying and selling have brought out such results. But these were exceptions, even in the early days of the country. But now that population has increased and competition increased with it, the "rule of thumb" must perforce give way to the keeping of accurate accounts.

G. H.,

Former Gen. Manager Merchants' Bank of Canada.

New York State Banks.—Showing the aggregate of resources and liabilities of the banks of the State of New York, at the close of business on Wednesday, June 7, 1905, as exhibited by their reports to the Superintendent of Banks:

Resources.		Liabilities.	
Loans and discounts, less due from directors	$264,151,489	Capital	$29,880,700
Liability of directors as makers	9,614,800	Surplus fund	24,681,479
Overdrafts	142,061	Undivided profits	11,461,967
Due from trust companies, banks, bankers and brokers	48,186,449	Due depositors on demand	350,663,526
Real estate	13,342,564	Due to trust companies, banks, bankers and brokers	42,506,028
Mortgages owned	5,149,859	Due savings banks	18,174,862
Stocks and bonds, notes	38,111,086	Due building and loan associations	593,676
Specie	33,398,504	Due the Treasurer of the State of New York	1,891,754
U. S. legal tender notes and notes of National banks	21,807,108	Amount not included under any of the above heads	958,768
Cash items	45,577,506	Add for cents	329
Assets not included under any of the above heads	1,331,058		
Add for cents	605		
	$480,813,089		$480,813,089

EVOLUTION OF THE GOLD-EXCHANGE STANDARD.

The extension of the gold-exchange standard in recent years to countries formerly upon a silver basis has been one of the most striking illustrations in monetary history of the adaptation to actual conditions and local needs of constructive legislation. The adoption of this standard in Java and British India was a recognition by law of the evolution of events; but while their experience afforded an illuminating example, the adoption of the gold-exchange standard in the Philippine Islands, Mexico, and Panama was the result of a definite constructive policy based upon the application to existing conditions of sound monetary theory.

The terms "gold-exchange standard" and "limping standard" are to some extent interchangeable. If, however, a distinction may be made, it is that the limping standard represents a crystallization by law and custom of accidental conditions which have not always been favorable to the smooth working of the system; while the gold-exchange standard represents a monetary system consciously constructed upon a sound basis, adapted to conditions and fully guarded in its actual operation.

Origin of the Limping Standard.

The limping standard came into operation in the countries of the Latin Union as a natural result of the wide departure of the relative bullion values of silver and gold from the official ratio fixed by the coinage laws. These causes were considered by the law-making powers of those countries as compelling action to prevent the loss of their gold and their descent to the silver basis. It was recognized that gold was the preferred money of modern commerce by reason of its large value in small bulk, its facility of transportation, and its availability for foreign trade and bank reserves. But it was recognized from the beginning that none of these countries could well afford to part with their entire mass of silver at bullion price, and that the attempt to part with it at the price prevailing at any given date would so weigh down the market with silver bullion that it could be sold only at a still greater loss, if it could be sold at all. Events, rather than deliberate choice, forced upon the countries of the Latin Union the continued use of their silver coins.

If the annual gold production of the world had continued nearly stationary in the face of a growing demand, as was the case from 1873 to 1888, and the countries of the Latin Union had deliberately sought to replace the bulk of their silver coinage with gold as in the monetary systems of Great Britain and Germany, then indeed, with the expanding demand for gold in the arts, "the scramble for gold," which has been the nightmare of bimetallic dreams, might have become a reality. Such an influence was probably more felt about the time of the international conference of 1881 than even at a later date, although the anxiety then expressed on the subject of the scarcity of gold was as exaggerated as were the fears felt after 1850 over the abnormal increase of gold. It was at the conference of 1881 that the German delegates came forward with the suggestion that Germany would check her sales of old silver bullion, withdraw small gold pieces, and notes of small denominations, and break up her large silver coins into smaller pieces.[1] It was of especial significance that such proposals should come from Germany, because that Government had refused to send delegates to the international conference of three years before. It was at the conference of 1881 also that Mr. Broch, the delegate of Norway, arguing strongly in favor of the gold standard among the civilized countries of the West, declared that the true field for silver was to be found,[2] "not by arbitrarily raising the value of this metal in Europe and America, but by encouraging its use in the countries of the Orient which still have a preference for it; in that vast Chinese Empire scarcely yet opened to Europe, in that immense African Continent, which is to-day invaded from all sides, and where trade is still carried on under the primitive form of barter, but where it would no doubt be easy to introduce the use of silver money."

These expressions of Mr. Broch anticipated to some extent the actual course of events. The influence of the *status quo* always imposes itself with compelling force upon statesmen, however it may be disregarded by theorists. In the case of the countries of the Latin Union and the United States, it was not possible, without great loss to the budget and an economic upheaval, to substitute gold currency for the silver in use. It was possible to rescue the monetary system from disaster by taking under Government control the output of silver coins, and thereby withholding the premium offered to owners of silver bullion to deluge the country with their product through the mints.

The Experience of British India.

Under the pressure of events this theory took form in British India, where use is found for nearly $500,000,000 in full legal-tender silver, but where all this silver is maintained at a fixed ratio with gold. The British Government by the act of 1899 established a gold fund in India and at London, for the purpose of maintaining the parity of the standard silver coin with gold. This coin, known as the rupee, contained silver worth originally a little less than fifty cents in American money, but it fell gradually to nearly the level of silver bullion until 1893. In that year, as the result of the report of the Indian Currency Commission, the free coinage of rupees was suspended, and the attempt was made to fix their value at sixteen pence, or about thirty-two cents in American money. At first the experiment was difficult. There was a surplus of rupees, and they poured out in great quantities from hoards when it was found that their legal value had been raised above their bullion value. The Government, however, persevered in selling exchange on India at London at rates as near the new ratio as could be obtained, and in receiving rupees at that ratio for public dues. Under ordinary conditions these measures would almost of themselves have maintained a limited silver coinage at par with the standard. While this result was delayed in India,

[1] "International Monetary Conference of 1881," pp. 29-30.

[2] "International Conference of 1881," p. 45. A similar suggestion had been made by Feer Herzog of Switzerland at the Paris conference of 1867: "The world is divided in its monetary relation into two considerable and very distinct groups: on one side the Western States, where gold tends more and more to prevail; on the other, the countries of the extreme East, where silver continues to predominate.—"International Monetary Conference of 1878," p. 824.

it was so completely achieved by 1899 that in that year the Indian Government felt strong enough to establish a gold reserve and offer to deliver silver rupees for gold. The offer was not made at first to pay gold for rupees, but it was soon found that the limitation of the coinage had created a demand for rupees which drew gold into the Treasury instead of drawing it out.

After the failure of the last efforts to secure bimetallism by international agreement in 1897, the course of exchange between the gold countries and the silver countries became still more erratic and disturbing to trade than it had previously been. Maximum and minimum quotations for silver bullion in the London market were as far apart in 1901 as 29 9/16 pence and 24 15/16 pence, or a variation of more than fifteen per cent. In 1902 the maximum quotation fell to 26 1/16 pence per ounce, and the minimum finally dropped in December to 21 11/16 pence per ounce, or about thirty per cent. below the maximum of the year 1900.[3]

THE MOVEMENT IN FAVOR OF THE GOLD-EXCHANGE STANDARD.

It was keenly realized by the financiers and economists of the silver countries that their trade was being greatly hampered by these violent fluctuations. Accordingly, the Government of Mexico took the initiative in the autumn of 1902 in seeking the co-operation of the Imperial Government of China and the Government of the United States in a new method of steadying the exchanges. There was a strong movement in Mexico to adopt the gold standard, but it was felt that this could not be done upon the same basis as in the richer gold standard countries, because of the importance to Mexico of her silver mining interests. Mexico and the United States were the largest producers of silver in the world, producing between them two-thirds of the world's entire product. The problem was more important, however, to Mexico than to the United States, because silver formed nearly forty per cent. of the value of her exports. It was felt, therefore, by Mexican statesmen, that it was a condition of vital importance in changing to the gold standard that steps should be taken to prevent another serious fall in the value of silver.

The method decided upon by the Mexican Government for remedying the evils of fluctuating exchange was substantially the adoption of the gold-exchange standard. The Government of the Philippine Islands had recently requested authority from the Congress of the United States to adopt a definite gold-exchange system in the Philippines, and official commissions were sitting in London and Paris, to consider the adoption of some means of steadying exchanges in the British colonies in the Orient and in French Indo-China. It was, therefore, with a view to harmony among these nations that Mexico asked the co-operation of the United States and China in seeking to bring about greater stability of exchange between the moneys of the gold standard countries and silver-using countries. The support of the American Government was cordially granted, and a commission was appointed to confer with the powers having important colonial and commercial interests in the Orient.[4] The objects of the commission in visiting Europe were to explain to the representatives of European powers the benefits of putting China upon a gold-exchange standard, and bringing British, French, German,

[3] The London price is for "standard silver," 0.925 fine, while the New York price is for "fine silver," 0.999 fine; so that the equivalents of London prices in American currency require other calculations than the reduction of the currencies.

Russian, and American dependencies in the Orient to a similar coinage basis.

The result of the American mission was an agreement between representatives of all the governments visited—those of Great Britain, France, The Netherlands, Germany and Russia—which was well expressed by the first resolution adopted at London:[5]

There was not absolute agreement among the various powers in regard to the best means of reaching this result, but in most cases it was agreed that the ratio of thirty-two to one should be adopted as the relation between the gold standard and the new silver coins. This fundamental resolution was an endorsement of the principle of the gold-exchange standard. It remained to put this resolution in force in as many countries and dependencies as circumstances permitted.

Gold-Exchange Standard in Mexico and the Philippines.

The Government of the United States took action before the departure of the American commission for Europe by enactment of a law for the establishment of the gold-exchange standard in the Philippine Islands.[6] Subsequently, in the summer of 1904, by agreement between the governments of the United States and the Republic of Panama, a similar system was established for use in Panama and in the Canal Zone, which was leased to the United States.[7] Action was not taken by Mexico until near the close of 1904, but the gold-exchange standard was put in full operation from May 1, 1905. The relative stability of silver during the year 1904 tended to promote stability of exchange between Mexico and New York, and made the transition easy from the standard of the Mexican silver peso to the new parity of two to one in American gold. The mere announcement of the adoption of the gold-exchange standard brought exchange down to about 205, and soon after to 202, or, with due allowance for the costs of shipping gold, substantially to the new parity. In the Oriental dependencies of Great Britain and France the movement towards a fixed exchange has been somewhat slower, but free coinage of silver has been suspended and eventually in both countries the silver unit will be given a fixed parity with gold at a ratio of about thirty-two to one.[8]

In two important particulars the plans adopted for a gold-exchange

---

[4] The appointment of this commission was preceded by an informal conference in the City of Mexico in March, 1903, between representatives of the Mexican Government and three Americans who were invited to Mexico for the purpose—Prof. Jeremiah W. Jenks of Cornell University, Mr. Edward Brush of Greenwich, Conn., and the writer of the present work. The members of the American commission appointed by President Roosevelt were Hugh H. Hanna of Indianapolis; the present writer; and Professor Jenks.

[5] "That the adoption in silver-using countries of the gold standard on the basis of a silver coin of unlimited legal tender, but with a fixed gold value, would greatly promote the development of those countries and stimulate the trade between those countries and countries already possessing the gold standard, besides enlarging the investment opportunities of the world." Report of the Commission on International Exchange, 1903, p. 141.

[8] Pierre Leroy-Beaulieu, in an article referring to the Philippine currency system, remarks that "it would be an example easy and extremely useful to follow in our Indo-China, where we are losing precious time in Oriental discussions on this subject, as on many others."—"Economiste Francais, June 10, 1905, p. 830.

standard in the Philippines, Panama, and Mexico differed from the limping system brought about by circumstances in Java, France, British India and the United States. These particulars were that the coinage ratio between gold and silver was adjusted to the fall in the gold value of silver after 1866, and that definite provision was made for keeping the silver coins at parity with the gold standard by the offer to sell gold bills of exchange at fixed rates for the silver coins.

The ratio adopted in the Philippines was approximately thirty-two to one—a recognition of the fact that silver had fallen in relation to gold fifty per cent since the adoption of the ratio of 15½ to 1 by France and fifteen to one by the United States at the close of the eighteenth century. In recognizing this fact and in adopting a coin of the same weight as the Mexican peso, the new system for the Philippines practically consecrated existing conditions of the value of the coin in use and thereby prevented the disturbance of contracts and customary prices which would have occurred if a different system had been adopted. The exchange value of the new unit was fixed at fifty cents in American gold and the coin was made of approximately the same weight and fineness as the Mexican peso—416 grains, nine-tenths fine. The adoption of a coinage "ratio" of about thirty-two to one was not intended to control the value of silver bullion, but simply to conform to its recent price tendencies.[9] It was necessary, however, to allow some margin for changes in the gold price of silver by deliberately fixing the exchange value of the new unit at a price above its bullion value at the moment. The reasons for such an allowance were set forth elsewhere by the present writer as follows:[10]

> "It is obvious if a coin were adopted which represented the gold price of silver at a given moment, and silver should afterwards rise in price, the silver coins would become more valuable as bullion than as coins. They would go to the melting-pot, and the country would be denuded of its currency. For this reason a margin of about fifteen per cent. between the bullion value of the coins and the value given them by law was adopted in the Philippines, and has caused no difficulties in the acceptance of the coins at their full face value."

Practical Workings of the Measure.

Government control of the quantity of instruments of exchange goes far to fix their value if it restrains the quantity within the limits of demand; but the effective test of these limits (as we shall see when we come to the discussion of paper currency) is the ability of the holder of the currency to convert it into the standard at will. Whenever an excess appears in the currency of a country, that excess tends to go to other countries where it is likely to earn a higher return. The only money which is thus accepted

---

[9] The American Commission of 1903 were careful to explain thus their use of the term: "The use of the term 'ratio' in this connection is not intended to imply that the adoption of a given ratio of weight would in itself fix the relation of value between the coins and the gold unit, as is sought by the policy of free coinage of two metals. The term is used here simply to define the relationship between the weight of the silver coins and the gold unit. It is not proposed that the new coins shall depend upon this ratio for their value; that value will depend upon the measures taken to maintain the coins at par with the gold unit."—Report of The Commission on International Exchange, 1903, p. 25.

[10] "Putting China on the Gold Standard," "Wall Street and the Country," p. 193.

abroad among commercial nations to-day is gold. A nation, therefore, which proposes to maintain its currency at absolute equality with gold must face the necessity of furnishing gold on demand for export. This is, perhaps, the most vital principle in the maintenance of a gold-exchange standard—that while tokens and instruments of credit serve well the purposes of interior circulation they must respond to the touchstone of exchangeability with gold to meet demands abroad.

Inasmuch, however, as the demand for gold is a demand for the use of the metal in other countries rather than at home, such a demand will be effectively met by furnishing the gold at the points where it is intended to be delivered. What has been done by the Government of the Philippine Islands is to establish a gold fund in New York, against which drafts can be delivered entitling the holder to gold at New York. It was a similar policy which was adopted by the Government of Mexico in establishing its monetary system upon stable foundations. It was a similar policy which was recommended to the Government of China as a means of securing the gold standard. If gold funds are kept at the leading financial centres—London, Paris, Berlin, St. Petersburg, and New York—drafts can be sold upon these funds whenever there is a demand for gold for making payments abroad.

There is one essential condition to the successful operation of the system. This is that whenever drafts are sold for local currency the local currency paid for them shall be locked up and withdrawn from circulation. This operates to reduce the redundancy of the currency at home, to stiffen rates of interest, and ultimately to influence the prices of commodities in a downward direction. Hence the new system will operate under this arrangement with the same automatic precision in regulating the volume of the currency as in a country with a gold currency, like Great Britain, where the exportation of gold reduces the volume of the circulation, and by making money scarce reacts upon the rates of interest. When these operations have produced their effect and there comes later a renewed demand for currency at home, that demand can be met by the deposit of gold in the reserves at the leading centres, thus replenishing the stocks reduced by the previous demands and releasing local currency to meet the demands for increased circulation. This is substantially the plan which has been in successful operation in British India, where rupees are paid out at a fixed rate for the gold coin of Great Britain.

Thus far the experience of the Philippines, Panama, and British India has attested the soundness of these principles by their successful operation. In the Philippines laws of a somewhat vigorous character were required to overcome the tendency of "Gresham's law," to keep in use the currency issued on a silver basis,[11] but as soon as the new currency had obtained a firm footing its advantages over the previous fluctuating standard were generally recognized. Any holder of the new currency was authorized to exchange it for drafts on the gold funds of the Philippine Government in New York at a charge of three-quarters of one per cent. for demand drafts and one and one-eighth per cent. for telegraphic transfers.[12] Parity was thus fully maintained, and the Philippine Government was able to report to

[12] Act No. 938 of the Philippine Commission, "Report of The Commission on International Exchange," 1903, p. 409.

Washington that the gold standard met the approval of the entire public and that business conditions were much improved.[13]

In British India, where the experiment of maintaining parity seemed most doubtful, because of the necessity of maintaining the value of $500,000,000 in silver at the artificial ratio of about twenty-four to one, the embarrassments the Government has suffered have come from the growing demand for silver coins rather than from pressure on the gold reserve. The sum specially set aside as a gold reserve fund increased from £3,810,730 on March 31, 1903, to £6,382,200 in 1904, and to £10,984,000 in 1905. So remote is the probability of demands upon it that it has been invested in consols and other Government loans; for, in addition to this distinctive fund, there is a further accumulation of gold in the "currency reserve" amounting to £10,-494,556 ($51,160,000), available for the purchase of silver for further coinage.[14] So heavy have been the demands for silver rupees, under the stimulus of large crops, railway extension, and the inflow of foreign capital, that measures were taken in 1904 to anticipate the demand by accumulating silver bullion at the mints in advance of the tender of gold.[15]

Prospects of Introducing the Plan into China.

To confer upon China the benefits of a similar system was one of the chief objects of the American and Mexican commissions in their conferences with European powers in 1903. In dealing with the subject they acted at the invitation of the Chinese Imperial Government and without seeking to derogate in any degree from the political independence of China—any more than Belgium reflected upon the independence of France in proposing the conferences which brought about the Latin Union in 1865.[16] The difficulties in China were great, growing out of the absence of any uniform monetary system (or even the use of coined money in certain parts of China), the lack of power of the Imperial Government over the viceroys, and at first the opposition of powerful banking interests. Much was done to overcome these obstacles by Prof. Jeremiah W. Jenks, who was in China during most of the year 1904 as a representative of the American Commission on International Exchange. High officials, including the most progressive of the viceroys, were convinced of the wisdom of the proposed plan. Foreign business and banking interests, at one time skeptical, were won over, and there appears no doubt that China will eventually abandon her isolation as the only important country which is not upon a gold basis, and will follow her Oriental neighbors into the ranks of gold-exchange countries.[17]

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

NOTICE OF DISHONOR OF CHECK—WHEN INSUFFICIENT.

New York Supreme Court, Appellate Term, December, 1904.

THE STATE BANK *vs.* MORRIS WEISS, *et al.*

The defendant received three checks in payment of goods drawn upon a branch of the plaintiff's bank. The following day the defendant deposited the checks in the Corn Exchange Bank, which presented them through the clearing house, where they were credited to the Corn Exchange Bank and debited to the plaintiff. The checks turned out to be worthless.

Held, though the recognition of the checks at the clearing house was merely an assumption of their genuineness, subject to future examination, and the arrival of the checks at the plaintiff's branch bank was their first presentation for payment, yet a check is a bill of exchange payable on demand and a drawee is deemed to have accepted the same if he do not return it within twenty-four hours after its delivery for acceptance as provided by the Negotiable Instruments Law, §§ 321, 325. As plaintiff failed to show diligence in giving proper notice of dishonor, judgment for the defendants should be affirmed.

MACLEAN, *J.*: It is alleged in the complaint that "the defendants are indebted to the plaintiff in the sum of $65.10 for money had and received * * * said indebtedness dating from July 5, 1904." It is in the testimony that on July 4 the defendant received, with orders for goods, three checks, aggregating as above, dated July 5, and drawn upon the Brownsville branch of the plaintiff, that the defendants deposited the next morning the checks in the Corn Exchange Bank, which presented them through the clearing-house where they were paid, *i. e.*, entered in the lists and allowed in the settlement by credit to the Corn Exchange Bank and debit to the plaintiff, which passed their amount to the favor of the defendants' account. In answer to inquiry made about five o'clock that afternoon one of the defendants was told by the manager of the Corn Exchange Bank that the checks were all right. That same evening the defendants delivered the goods ordered to the person who had drawn and brought them the checks. As it turned out the checks were worthless, for when brought by the messenger from the clearing-house to the branch upon which they were drawn it was found the drawer had and had had no account therein.

The recognition accorded the checks at the clearing-house was upon the assumption of their genuineness, which their production there imparted. The arrival of the checks at the branch is to be taken as their first presentation for payment or dishonor, for it is not to be supposed that the accountant and messengers attending the morning session at the clearing-house are equipped for more than comparisons and verifications of lists and balances. Payment there was made without presentation and accepted subject to future examination of the paper. In the case, however, of commercial paper being paid without previous inspection, it is, no doubt, the duty of the party paying to use due diligence in making the inspection as soon as it has the opportunity, and in giving notice of forgery or other infirmity if such be discovered; and if by its failure so to do the party receiving is prejudiced, such negligence is a good answer to a claim for restitution. (Allen vs. Fourth Nat. Bank, 59 N. Y. 12.)

Does the evidence in the case show diligence in giving the required notice? A demand is alleged in the complaint, but no proof of one is adduced other than bringing action July 11. From a remark volunteered by an official while a witness on the stand it appears that such paper is to be returned the same day it goes through the clearing-house, presumably the banker's day ending at three o'clock, or, in this case, a couple of hours before the defendants were told the checks were all right; longer still before they delivered their goods. Apart from clearing-house rules and customs mentioned and made much of in the briefs, though not in proof, a check is regarded by law in this State as a bill of exchange payable on demand, and there is no evidence in the case to take it out of the rule that a drawee will be deemed to have accepted a bill which he does not return within twenty-four hours after its delivery for acceptance. (Neg. Insts. Law, §§ 321, 325.) Failure of, proof that it had exercised the diligence required of it lost the plaintiff its case below, and is likewise fatal to its appeal.

Judgment affirmed, with costs.

INSOLVENT BANK—PAYMENT OF DEPOSITORS—PREFERENCE—IOWA STATUTE.

Supreme Court of Iowa, April 5, 1905.

STATE, *ex rel.* CARROLL, Auditor, *vs.* CORNING STATE SAVINGS BANK, *et al.*

Under the statute of Iowa the depositors of an insolvent bank are entitled to payment in full before other creditors are allowed to share in the general assets.

The Corning State Bank became insolvent and was placed in the hands of a Receiver for a settlement of its business. Having reduced the assets of the bank in part to money, the Receiver applied to the district court for instructions as to his powers and duties in making a dividend or partial payment to the creditors. In this application the Receiver showed to the Court that from the general assets of the bank there would be realized not to exceed about forty to fifty per cent. of the indebtedness owing to depositors, or twenty to thirty per cent. of the total indebedness to creditors of all classes. The estimate thus made does not include the amount likely to be realized from the statutory assessment upon stockholders.

WEAVER, *J.*: The record presents but one question for our consideration: Does the statute require that depositors be first paid in full before other creditors are entitled to share in the general assets of the insolvent bank? The statute provides that whenever the Auditor of State becomes satisfied of the insolvency of a bank, or believes that the interests of creditors require that it be closed, he may by proper proceedings in the district court procure the appointment of a "Receiver for such bank and its affairs shall be wound up under the direction of the court, and the assets thereof ratably distributed among the creditors thereof giving preference in payment to depositors." (Code, § 1877.) In case a deficiency still remains, a ratable assessment may be made upon the stockholders not to exceed an amount equal to their respective holdings of shares, and the sum so realized shall be distributed equally among all the creditors in proportion to the several sums due them. (Code, §§ 1878-1883.)

We regard it as very clear that the statute will admit of no other construction than the one placed upon it by the trial court. Counsel for appellant have with much thoroughness digested the history of bank legislation in this State and the development of the statutory provisions now in force, and therefrom draw the conclusion that the controlling idea of the Legislature in the chapter now under discussion was to secure ratable equality to all creditors in the distribution of the assets of an insolvent bank.

It is frankly conceded that from the standpoint of counsel the provision for "giving preference in payment to depositors" is not easy of interpretation, and to avoid its apparent effect two theories are presented. It is said that the clause in question is so repugnant to other provisions, and so out of harmony with the general spirit and purpose of the statute, we are at liberty to disregard it as surplusage and void; or we may allow it force and effect by giving depositors preference in time of payment, while preserving ratable equality among all creditors in the final settlement.

For the court to adopt the first suggestion and read out of the statute the provision giving preference to depositors, or deprive it of any force or meaning in directing the settlement of the affairs of an insolvent bank, would be radical judicial legislation and an unwarranted assumption of power. That the Legislature has power to provide for preferences in the settlement of insolvent estates has been too long and too well settled to admit of question or to call for citation of authorities.

The alternative suggestion that the preference given by the staute has reference only to the time is ingenious, but not convincing. Such a preference would be an idle ceremony. Before any dividend or distribution can be made, the Receiver must have money on hand applicable to that purpose, and, if ratable equality to all creditors is the rule, preference in time of payment would affect nothing more than the order in which the creditors may approach the Receiver's desk and receive their respective dividends. Counsel's suggestion that the court may make payments to depositors from time to time and thereafter equalize the distribution with other creditors upon the final settlement, is impracticable. No court or Receiver who is bound by law to make an equal and ratable distribution to all creditors can safely or properly apply the funds on hand to the payment of a part of the creditors, and depend on the future and its developments for other funds with which to satisfy the lawful claims of others who are entitled to equal consideration. Nor is there anything in the language of the statute itself which requires us to give it such a forced and unnatural interpretation.

In may be conceded that, standing alone, the provision for ratable distribution among the creditors of the bank would require that all creditors be placed on an equality, each receiving as much as the other, in proportion to the amount of his approved claim. But a "ratable distribution of the assets among creditors, giving preference in payment to depositors," is an altogether different proposition. Under the unqualified provision first mentioned, all creditors are placed in a single class; but under the statute as it stands they are separated into two classes, one of which is given preference over the other in the distribution of the assets. The distribution is still "ratable," although the classes may participate only in a stated order of priority. A ratable distribution is one which is made at proportionate rates (see "ratable," Webster's International Dictionary), and, if each creditor received his due proportion of the funds applicable to the claims of his class, the letter and spirit of the statute are observed. In other words, if the creditors of a bank are by law separated into classes, a proportionate distribution made to the members of the several classes in the order of their established priority until the funds applicable thereto are exhausted, or all claims are fully met, is, in a just and appropriate sense, "ratable," and such, we think, is the manifest legislative meaning and intent in the statute under consideration.

Nor can we admit the justice of counsel's contention that the preference here recognized is opposed to the principles of justice or of sound public policy. The banks serve as a means by which the comparatively small individual earnings and savings of the people generally are drawn and massed together in large aggregate sums or amounts which we call "deposits." Upon these deposits not only the banks themselves, but business enterprises of every kind, are largely dependent for success. Anything which tends to strengthen public confidence in banks and assures the depositors of the safety of their money is a matter of general public benefit, while anything which engenders distrust or alarm and causes a withholding or withdrawal of deposits is a public injury. It is therefore entirely fitting that in authorizing the organization of banks the law should at once provide for the protection of depositors, and for the protection of public interests, by giving preference to the claims of those without whose co-operation modern banking would be impossible.

We have not thought it necessary to go into any discussion of the authorities. The question is one of the construction of a statute of our own State, the terms of which are not in the least uncertain or ambiguous. We are satisfied that the ruling appealed from gives force and validity to the act in accordance with the legislative intent.

TRANSFER OF STOCK OF LIQUIDATING BANK—REGISTRATION OF TRANSFER.

Supreme Court of Washington, May 15, 1905.

MUIR *vs.* CITIZENS' NATIONAL BANK OF FAIRHAVEN.

Where stock of a National bank in voluntary liquidation is transferred, the transferee, while he has such rights as an equitable owner may have in the management of the trust, has no right to have the transfer entered on the books of the bank.

This action was brought for the purpose of obtaining an order against the defendant requiring it to transfer to plaintiff six shares of its stock on the books of the corporation, and to issue to plaintiff in his own name a certificate therefor in lieu of a certificate purchased from a former stockholder of record. The defendant appeared in the action, and filed a motion to strike certain words and make a more specific statement of some of the allegations of the complaint. These motions were denied, and thereupon a demurrer to the complaint was filed, which was also denied. Defendant thereupon filed an answer, denying certain allegations in the complaint, and alleging as an affirmative defense, in substance, that the defendant, since January 10, 1900, has been a National banking corporation existing under the laws of the United States; that, prior to the commencement of this action, defendant, being solvent, went into voluntary liquidation under the provisions of sections 5,200 and 5,221, Rev. St. U. S. [U. S. Comp. St. 1901, p. 3,503]. The plaintiff demurred to this answer, and the demurrer was sustained. The defendant declined to plead further, and a judgment was entered as prayed for in the complaint. The defendant appealed.

MOUNT, *C. J.*: The motions to strike and make more definite are of no particular moment in the case, and we shall not notice them further, but will pass to the main question, which is, may a National bank in process of voluntary liquidation be compelled to make transfers of stock on its books and issue certificates thereof to new subscribers?

For a better understanding of the question, we may state that the pleadings show that the appellant was organized as a National bank on January 10, 1900. On August 7, 1901, at a meeting of the stockholders, at which meeting the whole stock of the bank was represented, it was resolved by a vote of all the stock that the corporation be placed in voluntary liquidation, to take effect August 26, 1901, under the provisions of section 5,220 et seq. of the United States Revised Statutes. The proceedings were thereupon certified and reported to the Comptroller of the Currency of the United States. Thereafter, on August 11, 1903, respondent purchased from one of the stockholders six shares of the capital stock of said corporation, and received a certificate therefor duly indorsed. Said certificate was thereupon presented to the Cashier of said bank for transfer upon the books of the corporation. Such transfer was refused.

It is admitted, also, that the corporation is solvent, and that the six shares are worth at least $300. It has frequently been held that a National bank in voluntary liquidation is not thereby dissolved as a corporation, but may sue and be sued by name for the purpose of winding up its business. (National Bank vs. Insurance Co., 104 U. S. 54; Rosenblatt vs. Johnston, 104 U. S. 462; Bank of Bethel vs. Pahquioque Bank, 14 Wall. 383; Chemical Bank vs. Hartford Deposit Co., 161 U. S. 1.)

The decisions go no further than to hold that the corporation continues for the purpose of liquidation and winding up its business. No decision has been called to our attentoon, and after careful search we have found none, which holds that the stock of a corporation in liquidation, either voluntary or involuntary, may be the subject of traffic and transfer from one to another upon the books of a corporation after it ceases to do business in the usual way. On the other hand, the United States statutes (section 5,220, Rev. St.), referring to National banks, provides: "Any association may go into liquidation and be closed by a vote of its stockholders owning two-thirds of its stock." The words "and be closed" seem to indicate a conclusion of its business as a going concern. Thereafter it may transact only such business as is necessary or proper in the settlement and winding up of its affairs. The corporation, of course, continues, under the decisions above cited, for such purpose, but for such purpose only. The closing of the business of the corporation for the purposes for which it was organized, while not a dissolution of the corporation, is in substance a dissolution of its powers to transact new business. The only power left to it is the power to collect its dues and pay its debts, and to distribute ratably among its stockholders the balance after the debts are paid. The rights and liabilities of the stockholders of the bank are fixed at the date when the bank goes into liquidation, and a stockholder may not thereafter transfer his stock and avoid liability thereon. (Bowden vs. Johnson, 107 U. S. 251; Schrader vs. Bank, 133 U. S. 67; Irons vs. Manufacturers' National Bank [C. C.] 17 Fed. 308; Crease vs. Babcock, 23 Pick. 334.)

If the power of the bank, after voluntary liquidation begins, is limited to final settlement and winding up of its affairs, it seems to follow that no new stock may be issued pending such settlement. The act of issuing new stock or new and original certificates of stock would upon its face seem to contradict the fact that the corporation was in process of liquidation or of dissolution, and would indicate that the corporation was an active, going concern.

The policy of the statute is certainly opposed to the issuance of new certificates of stock pending the dissolution of the corporation, or of any act which would belie the true condition of the corporation, and which is not necessary or proper in the final settlement and winding up of the affairs of the corporation.

A stockholder may no doubt transfer and sell his stock in a banking corporation in process of liquidation, and the purchaser may acquire all the rights of such stockholder in and to the assets of the corporation. It is said: "* * * An assignment or transfer of stock by a stockholder after the dissolution of the corporation is merely an equitable assignment of his interest in the assets of the concern as it may appear upon the settlement." (Cook on Corporations [5th Ed.] § 641; James vs. Woodruff, 10 Paige, 541; Richards vs. Attleborough Nat. Bank, 148 Mass. 187.)

The last case cited above is in point upon the facts in this case, and holds in accord with the claim of appellant. It was there said:

"The reasons for making the stock, as such, transferable, and allowing the purchaser by virtue of his purchase to become a member of the corporation, cease to exist when there is no profit to be made, no business to be done, and when the property of the bank and its liabilities are fixed, and nothing remains but the adjustment of these. Whether the liquidation of the affairs of the bank be voluntary or involuntary, or whether it proceeds under the authority given to continue the bank in existence in order to close its affairs, it is necessarily implied that the respective rights, not only of the creditors and debtors of the bank, but of the stockholders, are to be determined as of the time when it commences. Indeed, were the stock, as such, to continue transferable, serious embarrassments would arise. Where stock is sold in the ordinary course of business, and so transferred, it is not important to the purchaser whether the bank has or has not claims against the stockholder so transferring stock. But when the bank is in liquidation, and when all to which the stockholder is entitled is his proportion of the assets, the claims which the bank may hold against him are a proper offset to those which he may hold against it by virtue of his ownership of stock. He cannot, therefore, place another in the position of a stockholder, even if he may invest him with such rights which he himself equitably may have. * * * Where a bank is in liquidation, the liability of the stockholder for the debts of the corporation has been fixed. If there is a debt due from the bank, he cannot transfer to any one else his liability to pay that debt, so as to affect the creditor or subject him, in seeking such remedies as he may have against the stockholders, to any examination beyond the list of those who were so when the liquidation commenced. No further debts can be contracted thereafter, nor any transaction made except such as may result by implication from the duty of closing up its affairs. While the embarrassments that would arise from holding the stock of a bank transferable after it has once gone into liquidation are manifest, no reason incidental thereto exists why such stock should continue transferable."

While the respondent in this case is the equitable owner of the fund which will result to the stock after the final settlement of the affairs of the bank, and while he has such rights as an equitable owner may have in the management of the trust, yet we think he has no right to be registered as a stockholder in the corporation and have a new certificate of stock issued to him. The notice which was given to the Cashier or liquidating agent by presenting the six shares properly indorsed is no doubt sufficient to put the corporation on notice that respondent is entitled to his distributive share of the trust funds to be disbursed to the stockholders when final settlement is made, and would, if the bank were a going concern, entitle him to be registered as a stockholder and receive a certificate to that effect. But when the bank pleads that it is in process of liquidation under the law, this is a defense to a demand for a certificate of stock. It was therefore error to sustain the demurrer to the affirmative answer.

The order appealed from is reversed, and the cause remanded for further proceedings in accordance with this opinion.

Dunbar, Fullerton, and Hadley, JJ., concur.

CHECK GIVEN AS PAYMENT IN FULL—EFFECT OF.

Supreme Judicial Court of Maine, April 12, 1905.

LOIS RICHARDSON *vs.* JULIAN D. TAYLOR, Administrator.

Shortly after the death of the defendant's intestate the plaintiff presented her claim to the defendant, and after the latter's appointment as administrator he sent the plaintiff a check for the sum of $100 inclosed in a letter of the following tenor: "If you choose to accept the inclosed check in satisfaction of all demands against my father's estate, will you please sign and return to me the accompanying receipt? If not, please return the check." The plaintiff received this letter and the inclosed check, and retained the check, later obtaining the money thereon, but she did not sign and return the receipt.

Held, that the plaintiff, having accepted the check upon the condition clearly stated, she received it in full satisfaction of all demands that she had against the decedent's estate.

This was an action against the defendant, as administrator of his father's estate, to recover for services rendered to the intestate.

Shortly after the death of the defendant's intestate the plaintiff presented her claim to the defendant, and on June 5, 1902, after the defendant's appointment as administrator, he sent the plaintiff a check for the sum of $100, inclosed in a letter of the following tenor: "Miss Lois Richardson: If you choose to accept the inclosed check in satisfaction of all demands against my father's estate will you please sign and return to me the accompanying receipt. It not, please return the check."

The accompany receipt was as follows: "Received from J. D. Taylor, adm., one hundred dollars in full satisfaction of all claims against the estate of Daniel Taylor, deceased."

The plaintiff received this letter and the inclosed check, and retained the check, later obtaining the money thereon, but she did not sign and return the receipt. Subsequently she commenced this suit, giving credit for this payment upon account. At the trial the jury returned a verdict for the plaintiff for the amount claimed.

WISWELL, *C. J.*: Irrespective of the merits of the plaintiff's original claim, we are of the opinion that the verdict was clearly wrong, and that the plaintiff cannot maintain this action because of the acceptance by her of this payment of $100 under the terms and conditions made by the defendant, and clearly stated in the letter in which the check was inclosed. "If an offer of money is made to one upon certain terms and conditions, and the party to whom it is offered takes the money, though without words of assent, the acceptance is an assent de facto, and he is bound by it. The acceptance of the money involves the acceptance of the condition. Under such circumstances the assent of the creditor to the terms proposed by the debtor will be implied, and no words of protest even can affect this result." (Anderson vs. Standard Granite Company, 92 Me. 429.)

The letter from the defendant to the plaintiff clearly expressed the terms and conditions upon which the check for $100 was sent her. If she chose to accept it, it was to be "in satisfaction of all demands" against his father's estate; if she did not choose to accept it in full satisfaction, she was to return the check. The defendant had the right to impose the terms upon which this payment should be accepted, if accepted at all. He did impose terms in language clear and emphatic, and as to the meaning of which there was no opportunity for doubt upon the part of the plaintiff. The plaintiff accepted the check upon these terms. She therefore took it in full satisfaction of all demands that she had against the decedent's estate.

Motion sustained. New trial granted.

NOTE PAYABLE AT BANK—WHEN PAYMENT TO BANK DOES NOT DISCHARGE MAKER.

Supreme Court of Arkansas, April 22, 1905.

State National Bank of St. Louis *vs.* J. J. Hyatt & Co.

The fact that a note is made payable at a particular bank does not of itself make the bank the agent of the holder to receive payment, and payment to the bank, where it does not have possession of the instrument or authority to collect it, does not discharge the maker.

This was an action upon a promissory note in the following form: "$1435.85. Nashville, Ark., Nov. 5, 1902. Three months after date, for value received, we promise to pay to the order of Howard County Bank, Fourteen Hundred Thirty-five and 85/100 Dollars, at Howard County Bank, with interest at maturity at the rate of ten per cent. per annum until paid. [Signed] J. J. Hyatt & Co."

Afterwards, on December 31, 1902, the Howard County Bank borrowed $20,000 from the State National Bank, of St. Louis, Mo., and to secure said loan the Howard County Bank on the same day transferred to the State National Bank, along with other notes, the note of J. J. Hyatt & Co., above described. Hyatt & Co. were not notified of this transfer by either bank, and, supposing that the note was still held by the Howard County Bank, they, on February 6, two days before the expiration of the days of grace allowed in the payment of notes, sent the following written request to the bank, to wit: "Please charge our account with our note for $1400 and interest and send note to us and oblige."

At the time this order was sent to the bank by Hyatt & Co. they had funds on deposit there more than sufficient to pay the note. The bank charged the amount of the note to their account as directed, and indorsed on the order the words, "Paid 2/6/1903." The note was at that time in St. Louis, and was not returned to Hyatt & Co., as requested by them; but they supposed that it would be returned at the end of the month with the monthly statement of their account, which the bank usually sent them, and therefore made no inquiry about it. The bank failed on February 12, 1903, and did no business after that date. It was totally insolvent, and its assets were placed in the hands of a Receiver, and Hyatt & Co. have received nothing from the bank or Receiver since it failed.

Afterwards the State National Bank of St. Louis brought this action against Hyatt & Co. to recover the amount of the note held by that bank as collateral security for the debt due it by the Howard County Bank. The St. Louis bank alleged that the note was taken and received by it from the Howard County Bank in the usual course of business, and for value, before maturity, and without notice of any defense either in law or equity. The defendants appeared, and set up as a defense to the action that the note was payable at the Howard County Bank; that defendants had no notice of the transfer thereof to the plaintiff; and that defendants, on February 6, paid the amount of the note to the Howard County Bank, which, under the circumstances, had authority to receive it; and that on account of the negligence of the plaintiff in failing to present the note for payment the amount paid by defendants to the bank in satisfaction of the note was lost by the failure of the bank.

RIDDICK, *J.* (omitting part of the opinion): This is an action by the holder of a negotiable promissory note, to whom the note had been transferred for value in the usual course of business, against the maker to recover the amount of the note.

The first contention on the part of the defendants is that, as the note was made payable at the Howard County Bank, and as defendants, without notice of the transfer, delivered the money to the bank at the place of payment, and it was lost by reason of the failure of the plaintiff to present the note for payment, the loss should fall upon the plaintiff, who failed to present the note. There is an authority for this contention in an opinion by Mr. Justice Scott in the case of Pryor vs. Wright, 14 Ark. 189. But the question was not involved in the decision of that case, and must be regarded as only the expression of the opinion of the judge who wrote the opinion. If the question was a new one, much might be said in support of the dictum of Judge Scott, for there are decisions that support it; but it seems now to be settled by the decided weight of authority in this country that the loss in such a case does not fall on the holder of the note unless the party to whom the money was paid had authority from the holder to receive the payment, or, what would be in effect the same thing, unless the circumstances under which the payment was made were such as to estop the holder from denying that the party receiving the money was its agent for that purpose. The fact that a note is made payable at a particular bank does not of itself make the bank the agent of the payee or holder to receive payment, and payment to a bank of the amount due on the note made payable there when the bank does not have possession of the note or authority to collect it, does not discharge the maker, for under such circumstances the bank will be treated as the agent of the maker, and not of the holder. (Jenkins vs. Shinn, 55 Ark. 347; Adams vs. Hackensack Com. Co., 44 N. J. Law, 638; Glatt vs. Fortman, 120 Ind. 385; Bank vs. Ingerson, 105 Iowa, 349; Grissom vs. Bank, 87 Tenn. 350; Cheney vs. Libby, 134 U. S. 68, 3 Eng. & Am. Ency. Law [2d Ed.] 803; 7 Cyc. 1035; 2 Randolph on Commercial Paper, 1119; 1 Daniel on Negotiable Instruments, § 326.)

It follows from what we have said that, in our opinion, the circuit court erred both in refusing to give the instructions asked by the plaintiff and in giving the one asked by the defendants which are set out in the statement of facts.

DEPOSIT OF TRUST FUNDS TO PERSONAL ACCOUNT—WHEN BANK NOT LIABLE.

Supreme Judicial Court of Massachusetts, April 7, 1905.

BATCHELDER *vs.* CENTRAL NATIONAL BANK.

The mere fact that a depositor deposits to his personal account a check drawn to him as trustee, does not impose a liability upon the bank in case the trust funds are misapplied by him.

This was a bill in equity by one Batchelder, trustee, against the Central National Bank, of Boston, to charge the defendant bank with money deposited by one Waterman, who was trustee under the will of one Gray. It appeared that Waterman sold bonds of the estate to a firm of brokers, who gave for the bonds a check to "Otis A. Waterman, Trustee." Waterman deposited the check to his personal account in the defendant bank, drew the money out, and disappeared. The court dismissed the bill and reported the case to the full court.

BARKER, *J.*: The short answer to the plaintiff's case is the finding that he has not sustained the burden of proving that the bank had reason to believe that Waterman was acting dishonestly. The bank was not a creditor of his, and the only deposit account he had with it was one to his personal credit. The bank had no other knowledge even that he held any trust, than such as it might have inferred from the fact of the form of the check. Under those circumstances, it cannot be ruled, as matter of law, that for him to deposit to his personal account funds which he took as trustee was a dishonest act on his part, or that the circumstance that the check so deposited was one payable to his order as trustee gave the bank reason to believe that the depositor was acting dishonestly. The circumstances were much less significant than those under consideration in Ashton vs. Atlantic Bank, 3 Allen, 217, and which there were held not to afford a sufficient presumption of knowledge that the trustee was acting in violation of duty to create a liability on the part of the bank. We could not reverse the decision of the justice who heard the present case without in effect overruling the case cited.

The plaintiff relies upon Duckett vs. National Mechanics' Bank, 86 Md. 400. So far as that case charges the defendant bank, it seems to us to do so upon the ground that the bank credited to the personal account of a depositor funds which it was ordered to credit to his account as trustee. In the same case the court refused to charge the bank with another check in fact belonging to the same trust, but which it was ordered to credit to the same person, without more. We do not read the case as holding that mere knowledge on the part of a bank that trust funds stand to the credit of a depositor's personal account must charge the bank with knowledge that the depositor is acting dishonestly. Nor, if it should be so read, could we follow it. (See Safe Deposit & Trust Co. vs. Diamond Nat. Bank, 194 Pa. 334.)

Upon the report a decree should be entered dismissing the bill, with costs. So ordered.

PROMISSORY NOTE—PROVISION FOR ATTORNEYS' FEES.

Supreme Court of South Carolina, March 14, 1905.

GREEN *vs.* SPIRES. GREEN *vs.* TRAYWICK. GREEN *vs.* JENNINGS.

A provision in a note that if it is collected through an attorney or by legal process the maker will pay all costs and expenses, including ten per cent. of amount collected as attorney's fees, renders it non-negotiable.

Actions by T. A. Green against Henry S. Spires, by the same against J. B. Traywick, and by the same against A. S. Jennings and others. The actions were heard together, and judgment rendered for defendants, and plaintiff appealed.

GARY, *A. J.*: These cases were heard together and involve the same question, to wit, did his honor the circuit judge err in ruling that the notes sued upon were non-negotiable? It will only be necessary to set out a copy of one of the notes, which is as follows: "$8.00 Cope, S. C., March 2, 1901. On or before the first day of September, 1901, next, I promise to pay W. H. Hurt or order eighty-four dollars for value received with interest after maturity at eight per cent. per annum. In case this note, or any part of it, is collected through an attorney or by legal proceedings of any kind, I promise to pay all costs and expenses including ten per cent. of amount collected for attorney's fees. Negotiable and payable at Bank of Orangeburg. Orangeburg, S. C. H. S. Spires. [Two cents revenue stamp canceled.]"

The note contemplated expenses of collection other than attorney's fees of ten per cent. on the amount collected. The expenses are not specified, and are therefore uncertain.

Conceding that the note had reference to expenses incurred after the maturity thereof, it was, nevertheless, non-negotiable.

In the case of Bank vs. Strother, 28 S. C. 504, 517, 6 S. E. 313, 318, the question was whether a provision in the note for the payment "of all counsel fees and expenses in collecting this note, if it is sued or placed in the hands of counsel for collection," destroyed its negotiability. The court said: "The only uncertainty as to the amount arises after maturity and after the paper would thereby lose its negotiability. * * * But, inasmuch as the first requisite to the negotiability of the paper is that it should be a note, anything that would deprive it of that character must necessarily deprive it of any negotiability, and as a note must be an obligation for the payment of a certain sum of money if the paper, in addition to an obligation to pay a specified sum of money, contains also an obligation to pay another undefined sum of money, even upon a contingency, that, it seems to us, will deprive it of the character of a note, under the statute of Anne."

This case has not been overruled, and is conclusive of the question under consideration. The appellant relies upon the recent case of White vs. Harris, 69 S. C. 65, in which the note contains the following provision: "We agree in default of payment after maturity to pay ten per cent. for attorney's fees for collection." The court held this agreement did not destroy the negotiability of the note. It will be observed that in the note just mentioned there was not an agreement to pay undefined expenses. That case is, therefore, not an authority on the question under consideration.

It is the judgment of this court that the judgment of the circuit court be affirmed.

Jones and Wood, JJ., dissenting.

ATTACHMENT AGAINST NATIONAL BANK—JURISDICTION OVER.

Supreme Court of the United States, May 29, 1905.

HENRY VAN REED *vs.* PEOPLE'S NATIONAL BANK OF LEBANON, PA.

An attachment cannot be issued against a National bank before judgment, whether the bank be solvent or insolvent.

The law in this respect, as contained in Rev. Stat. U. S., Sec. 5242, was not changed by the act of July 12, 1882.

Jurisdiction over a National bank or its property cannot be obtained by the issue of an attachment.

In error to the Court of Appeals of the State of New York to review a judgment which affirmed the judgment of the Appellate Division, First Department, of the Supreme Court of that State, which, on appeal from the judgment of a Special Term of the Supreme Court held in and for the County of New York, denying a motion to vacate an attachment against a National bank, reversed such judgment and vacated the attachment.

The plaintiff, who was the owner of a claim against the defendant, the People's National Bank of Lebanon, Pennsylvania, commenced an action in the State of New York by levying an attachment upon the funds of the defendant in that State, upon the ground that it was a foreign corporation. The defendant, appearing specially for that purpose, moved to have the attachment vacated upon the ground that it was prohibited by the Revised Statutes of the United States. At special term the motion was denied; the appellate term reversed the judgment of the special term, and vacated the attachment. The Court of Appeals answered two questions certified to it by the appellate division, and affirmed the judgment of that court. The two questions propounded are as follows:

"1. Is the defendant exempt from attachment before judgment under Section 5242, U. S. Rev. Stat. U. S. Comp. Stat. 1901, p. 3517?

"2. Are the rights claimed by plaintiff, to attachment against the defendant before judgment, and to the jurisdiction thereby acquired, preserved and given by Section four of the act of Congress of July 12, 1882?"

The Court of Appeals, in affirming the judgment of the court below, answered the first question in the affirmative and the second question in the negative.

Mr. Justice Day delivered the opinion of the court:

We deem the answer to the first question already determined by the decision of this court in Pacific Nat. Bank vs. Mixter, 124 U. S. 721, 31 L. ed. 567, 8 Sup Ct. Rep. 718. The right of Congress to determine to what extent a State court shall be permitted to entertain actions against National banks, and how far these institutions shall be subject to State control, is undeniable. National banks are quasi-public institutions, and for the purpose for which they are instituted are National in their character, and, within constitutional limits, are subject to the control of Congress, and are not to be interfered with by State legislative or judicial action, except so far as the lawmaking power of the Government may permit. Section 5242 of the Revised Statutes of the United States (U. S. Comp. Stat. 1901, p. 3517) is as follows:

"All transfers of the notes, bonds, bills of exchange, or other evidences of debt owing to any National banking association, or of deposits to its credit; all assignments of mortgages, sureties on real estate, or of judgments or decrees in its favor; all deposits of money, bullion, or other valuable thing for its use, or for the use of any of its shareholders or creditors; and all payments of money to either, made after the commission of an act of insolvency, or in contemplation thereof, made with a view to prevent the application of its assets in the manner prescribed by this chapter, or with a view to the preference of one creditor to another, except in payment of its circulating notes,—shall be utterly null and void; and no attachment, injunction, or execution shall be issued against such association or its property before final judgment in any suit, action, or proceeding in any state, county, or municipal court."

The language of the latter clause of this section would seem to be too plain to admit of discussion as to its meaning. It in terms forbids the issuing of an attachment, injunction, or execution against a National bank or its property before final judgment in any suit, action, or proceeding in any State, county, or municipal court. This was the view taken by this court in Pacific Nat. Bank vs. Mixter, 124 U. S. 721. The origin of Section 5242, and its growth from previous enactments, were pointed out by Mr. Chief Justice Waite, who delivered the opinion of the court in that case:

"It is clear to our minds that, as it stood originally as part of Section 57 [13 Stat. at L. 116, chap. 106], after 1873, and as it stands now in the Revised Statutes, it operates as a prohibition upon all attachments against National banks under the authority of the State courts. * * * It stands now, as it did originally, as the paramount law of the land, that attachments shall not issue from State courts against National banks, and writes into all State attachment laws an exception in favor of National banks. Since the act of 1873 all the attachment laws of the State must be read as if they contained a provision in express terms that they were not to apply to suits against a National bank."

Since the rendition of that decision it has been generally followed as an authoritative construction of the statute holding that no attachment can issue from a State court before judgment against a National bank or its property. (Freeman Mfg. Co. vs. National Bank, 160 Mass. 398; Planters Loan and Sav. Bank vs. Berry, 91, Ga. 264; First Nat. Bank vs. La Due, 39 Minn. 415; Safford vs. First Nat. Bank, 61 Vt. 373; Rosenheim Real Estate Co. vs. Southern Nat. Bank [Tenn. Ch. App.], 46 S. W. 1026; Garner vs. Second Nat. Bank, 66 Fed. 369.)

It is argued by the plaintiff in error that the decision in the Mixter Case, 124 U. S. 721, should be limited to cases where the bank is insolvent; but the statement of facts in that case shows that, at the time when the attachment was issued, the bank was a going concern and entirely solvent so far as the record discloses. The language of Chief Justice Waite, above quoted, is broad and applicable to all conditions of National banks, whether solvent or insolvent; and there is nothing in the statute, which is likewise specific in its terms, giving the right of foreign attachment as against solvent National banks.

We find nothing in the case of Earle vs. Pennsylvania, 178 U. S. 449, which qualifies the decision announced in the Mixter Case. We therefore conclude that the Mixter Case is applicable here, and the decision therein announced meets with our approval.

The answer to the second question involves a consideration of the act relating to National banks of July 12, 1882, Section four (22 Stat. at L. 162, chap. 290, U. S. Comp. Stat. 1901, p. 3458), which is as follows:

"That any association so extending the period of its succession shall continue to enjoy all the rights and privileges and immunities granted, and shall continue to be subject to all the duties, liabilities, and restrictions imposed, by the Revised Statutes of the United States and other acts having reference to National banking associations, and it shall continue to be in all respects the identical association it was before the extension of its period of succession: Provided, however, That the jurisdiction for suits hereafter brought by or against any association established under any law providing for National banking associations, except suits between them and the United States, or its officers and agents, shall be the same as, and not other than, the jurisdiction for suits by or against banks not organized under any law of the United States, which do or might do banking business where such National banking associations may be doing business when such suits may be begun. And all laws and parts of laws of the United States inconsistent with this proviso be and the same are hereby repealed."

There is nothing in this section enlarging the right of attachment against National banks. Before the passage of this section circuit courts of the United States had jurisdiction of suits against National banks because they were corporations of Federal origin. It was the purpose of this legislation to deprive such banks of the right to invoke the jurisdiction of the Federal courts simply upon the ground that they were created by and exercised their powers under the acts of Congress. (Petrie vs. Commercial Nat. Bank, 142 U. S. 644; Continental Nat. Bank vs. Buford, 191 U. S. 119-123.) It regulated the jurisdiction of the courts to entertain such actions against corporations of this character, and had nothing to do with the kind and character of remedies which could be had against them. Certainly there is nothing in the act repealing the prior provisions of Section 5242, above quoted.

It is further insisted that, whether or not the lien is absolute upon the property of the bank, jurisdiction is obtained of it by the issuing of the attachment; but we cannot take this view. There was no personal service in the court of original jurisdiction, and the attachment being without the power of the court by reason of the terms of the Federal statute, no jurisdiction was acquired in the case, either over the person or property of the defendant.

We see no error in the judgment of the Court of Appeals of New York, and the same is affirmed.

PROMISSORY NOTE — DELIVERY THROUGH THE MAIL — WHERE DELIVERY TAKES PLACE.

Supreme Court of Indiana, May 23, 1905.

GARRIGUE, et al. *vs.* KELLER.

Where before the making and delivery of a note the maker and payee agreed that the same should be signed in Chicago and sent by mail to the payee in Indiana, and this was afterwards done: Held, that the note was an Illinois contract, and governed by the laws of that State, though payable in Indiana.

This action was brought upon two promissory notes executed by Lida M. Garrigue and others to the Noble County Bank, and payable at that bank, and before maturity assigned to Jacob M. Keller. Lida M. Garrigue defended upon the ground that she had executed the note as a surety, and was at the time a married woman.

MONTGOMERY, *J.* (omitting part of the opinion): Appellant's counsel contends that the notes were not delivered in Illinois, but in Indiana, and, if this contention is true, then they are Indiana contracts, and the judgment must be reversed.

A precedent agreement between the principal in the notes and the appellee acting for the payee was shown by the evidence, according to the terms of which the notes were to be signed by the makers in Chicago, and sent to the payee by mail. They were properly signed and sealed in an envelope addressed to the payee, and delivered to the United States mail in the city of Chicago, according to agreement, and, in our opinion, the delivery was then and thereby completed.

In the case of Purviance, Adm'r, vs. Jones, 120 Ind. 162, 21 N. E. 1099, 16 Am. St. Rep. 319, Justice Mitchell, speaking for the court (page 164, of 120 Ind., page 1099, of 21 N. E., [16 Am. St. Rep. 319]), says: "While it is not indispensable that there should have been an actual manual transfer of the instrument from the maker to the payee, yet to constitute a delivery it must appear that the maker in some way evidenced an intention to make it an enforceable obligation against himself, according to its terms, by surrendering control over it, and intentionally placing it under the power of the payee, or of some third person for his use."

In the case of William Glenny Glass Co. vs. Taylor, et al. (Ky.) 34 S. W. 711, involving conflicting laws, Pryor, C. J., in the opinion says: "The note, when signed by Mary D. Bradford in Kentucky, and inclosed to the payee, was an executed instrument; as much so as if the payee had been present and the note delivered to her in Kentucky."

In the case of Barrett vs. Dodge, 16 R. I. 740, 19 Atl. 530, 27 Am. St. Rep. 777, the court, speaking upon the question under immediate consideration, said: "In the absence of instructions to the maker as to the mode by which he should return them when signed, the payees must have contemplated that the maker would return them by the natural and ordinary mode of transmitting such obligations, and must be deemed to have authorized him to so return them. The natural and ordinary mode of transmitting them was by mail, the mode adopted by the maker. In such cases the post office may be regarded as the common agent of both parties—of the maker for the purpose of transmitting the note, and of the payee for the purpose of receiving it from the maker. By depositing the note in the mail with the intent that it shall be transmitted to the payee in the usual way, the maker parts with his dominion and control over it, and the delivery is, in legal contemplation, complete."

We accordingly conclude that the notes were fully executed by delivery in the State of Illinois, and are Illinois contracts, and under the laws of that state valid against both the makers. The notes being valid under the laws of Illinois are equally valid and enforceable in this State, by the principle of comity, unless their enforcement would be contrary to good morals, or in violation of public policy, or forbidden by positive law. * * *

We hold, in accord with the great weight of authority, that the enforcement of the notes in suit against appellant Lida M. Garrigue is in no sense violative of the public policy of this State.

CHECK DELIVERED TO IMPOSTOR—LIABILITY OF DRAWER.

Supreme Court of Pennsylvania, March 20, 1905.

LAND TITLE AND TRUST CO. *VS.* NORTHWESTERN NATIONAL BANK.

Where the drawer of a check delivers it to a person supposing him to be the one whose name he has assumed, the drawer must bear the loss, where such person negotiates the same, as against the drawee of a bona fide holder thereof.

Where a check was drawn by the trust department of a trust company on its own banking department, and was delivered to an impostor, supposing him to be the person whose name he had assumed, and payment was refused by the banking department immediately after the check was issued, because the person presenting it was not identified, it did not affect the liability of the drawer for a loss as against the drawee or a bona fide holder of the check.

Brown, *J.*: This judgment cannot be disturbed unless we overrule Land Title and Trust Co. vs. Northwestern Nat. Bank, 196 Pa. 230, 46 Atl. 420, 50 L. R. A. 75, 79 Am. St. Rep. 717. When the opinion in that case was delivered by our Brother Fell it expressed the view of the majority of the court, as then constituted, after a most careful consideration of the question involved; and it is approved by a majority of the court as now composed, who have also duly considered the question on what is really a reargument of it on this appeal. We do not feel called upon to say more of the opinion of Justice Fell, which, in a manner satisfactory to us, clearly expresses our views. In the note to the report of the case in 50 L. R. A. 75, there will be found numerous cases sustaining and vindicating it; the justified comment of the annotator being, "It is apparent from the foregoing cases that the drawer of a check, draft, or bill of exchange, who delivers it to an impostor, supposing him to be the person whose name he has assumed, must, as against the drawee or a bona fide holder, bear the loss, where the impostor obtains payment of or negotiates the same."

The only fact not developed on the first trial which was proved on the second was that the check was taken to the banking department of the institution by the person to whom it had been delivered, and payment demanded. The paying teller refused to pay it unless the person presenting it was identified, whereupon the latter said he would deposit it in his own bank. This was the person to whom the settlement clerk of the appellant had handed the check, intending to designate him as the payee; and the appellee, which had no knowledge of the teller's refusal to pay unless the holder of the check was identified, is not to be affected by such refusal, any more than if the check had been presented at another bank, and payment had been refused for the same reason, for the banking department of the trust company must be regarded as separate and distinct from that which issued the check. It was what the appellant did at the time it handed the check to the impersonator of Bissey that stands in the way of its recovery from the appellee, which paid the check to the indorsee of the person to whom the appellant had issued it as its payee. It is not seriously argued that the refusal of the paying teller to pay without identification materially changes the situation.

The judgment is affirmed.

Dean and Potter, JJ., dissented.

PURCHASE OF BANK STOCK BY INSURANCE COMPANY—ULTRA VIRES.

Supreme Court of Iowa, June 10, 1905.

FIDELITY INSURANCE COMPANY *vs.* GERMAN SAVINGS BANK.

Where an insurance company which has subscribed for stock in a bank has received the benefits of the transaction, it cannot afterwards, when the bank becomes insolvent, repudiate its ownership of the stock upon the ground that it had no power to acquire the same.

In 1897 the plaintiff had on deposit in a bank of the same name as this defendant, and to which this defendant became successor, the sum of $8,244. On January 21 of that year said bank was placed in the hands of a Receiver under allegations that it was insolvent. Subsequently the bank was reorganized by the incorporation of this defendant with a capital stock of $100,000, its predecessor having had a capital stock of only $50,000. Of this capital stock of the reorganized bank $50,000 was subscribed by stockholders and $50,000 by the holders of deposits in the old bank, the reorganization being carried out in accordance with the plan proposed by a committee of stockholders and creditors. In pursuance of the plan of reorganization, the plaintiff company subscribed for $5,000 of stock in the reorganized bank, to be paid out of the company's deposit in the old bank, and accepted certificates of deposit, payable at intervals, for $3,244, the balance of the company's deposit.

McClain, *J.* (omitting part of the opinion): Counsel for appellant take the broad ground, however, that the acquisition of this stock by the plaintiff company in the defendant bank was ultra vires, and therefore illegal and void, and that plaintiff may entirely disregard it, and recover from the defendant the balance of plaintiff's deposit in the old bank; and we shall proceed to consider the soundness of this contention. It is claimed that the act of the plaintiff company in acquiring stock in the defendant company was ultra vires, because it was outside of the scope of the plaintiff's business as an insurance company, and prohibited by statute.

As to the claim that this acquisition of stock was outside of the general scope of plaintiff's business, it is sufficient to say, first, that a corporation cannot repudiate an executed contract of which it has received the benefit on the ground that such contract is ultra vires; that is, not within the scope of the business which it is authorized to transact. (Hitchcock vs. Galveston, 96 U. S. 341, 24 L. Ed. 659; National Bank vs. Matthews, 98 U. S. 621; Central Transp. Co. vs. Pullman's Car Co. 139 U. S. 24, 60; Richmond Guano Co. vs. Farmers' Cotton Seed, etc., Co. 126 Fed. 712, 61 C. C. A. 630; De Groff vs. American Linen Thread Co. 21 N. Y. 124; Vought vs. Eastern B. & L. Ass'n, 172 N. Y. 508, 517, 92 Am. St. Rep. 761; Whitney Arms Co. vs. Barlow, 63 N. Y. 62, 70, 20 Am. Rep. 504; Gause vs. Commonwealth Trust Co. [Sup.] 89 N. Y. Supp. 723; Bradley vs. Ballard, 55 Ill. 413, 8 Am. Rep. 656; Tootle vs. First Nat. Bank [Wash.] 33 Pac. 345; Magee vs. Pac. Improv. Co., 98 Cal.

678; Trustees vs. Piedmont Realty Co. 134 N. C. 41; Schrimplin vs. Farmers' Life Ass'n, 123 Iowa, 103.)

Many other cases might be cited in support of this general proposition, but it is so universally recognized that at this time the mere statement of it is sufficient.

In the second place, although the act of plaintiff in acquiring stock in the defendant bank was outside of the general scope of its business, nevertheless the acquisition of such stock for the purpose of securing itself against loss on account of the insolvency of the bank in which it had a deposit was fully authorized.

In speaking of a transaction by which a bank acquired property on a claim against a debtor, this court, in Rosenbaum vs. Horton, 89 Iowa, 692, used the following language: "The transaction was not a usual one with the bank, but was necessary for it to secure its claim and the claim of the machine company. It does not require any argument to show that the bank was authorized to secure itself against loss by taking the property in question, and that it had the right to ship it to Chicago for sale, even though such a proceeding was not within the ordinary scope of its business, and was unusual. If it be claimed that the transaction was so unusual that the plaintiff, in the exercise of ordinary caution, should have inquired in regard to it, the answer is that, if such inquiry had been made, it would have disclosed the fact that the flax seed and oats were properly taken in the transaction of the ordinary business of the bank."

In First Nat. Bank vs. Reno, 73 Iowa, 145, it was held that, although a National bank has no authority under its charter to engage generally in the business of buying and selling personal property, nevertheless such a bank may, under certain circumstances, acquire and dispose of such property in the course of its business when necessary to secure itself against loss. So it was held in Security Nat. Bank vs. St. Croix Power Co., 117 Wis. 211, that a National bank acquiring in the course of its business a subcontractor's lien might proceed to complete the work in order to preserve its lien. And even the Supreme Court of the United States, which holds that it is beyond the power of a National bank to acquire stock in another bank as an investment, holds also that such a bank may lawfully acquire such stock in the course of business to protect itself from loss. (National Bank vs. Case, 99 U. S. 628; First Nat. Bank vs. National Exch. Bank, 92 U. S. 122.)

So far, then, as plaintiff's contention that the acquisition of stock in the defendant bank was ultra vires is founded on the general proposition that the purchase of stock in a banking corporation was not within the scope of the business for which plaintiff was incorporated, we think it is entirely without merit, in view of the fact that the transaction was entered into for the purpose of protecting itself against loss, and has been fully completed. A corporation cannot rely upon the doctrine of ultra vires to relieve itself from the consequence of a contract made by it which is fully executed by the other party, and which is not expressly prohibited, or contrary to public policy. The recent decisions on this subject almost, if not quite, unanimously support this general proposition. (See cases cited 10 Cyc. 1068, 1156-1167, and additional cases in supplemental volume for 1904. See, also, cases cited in 3 Current Law, 889.)

When the plea of ultra vires is founded solely on lack of power granted to the corporation to do the act in question, the following rule, stated in Security Nat. Bank vs. St. Croix Power Co., supra, is undoubtedly supported by the great weight of authority: "When a corporation enters into business relations not authorized by a corporate grant of power, the doctrine of ultra vires cannot be used by it nor by the person with whom it assumes to deal as a means of defeating the obligations assumed. The State alone can take advantage of the abuse."

There are, however, authorities supporting the proposition which is further relied on in behalf of appellant that an attempted exercise of power expressly prohibited to a corporation is void, and that the corporation is not estopped to take advantage of the plea of ultra vires in such a case, although it has received the benefit of the prohibited transaction.

The principal case relied on is that of California Bank vs. Kennedy, 167 U. S. 362 (see, also, Concord First Nat. Bank vs. Hawkins, 174 U. S. 364; Schofield vs. Goodrich Bkg. Co. 98 Fed. 271, 39 C. C. A. 76; Burrows vs. Niblack, 84 Fed. 111, 28 C. C. A. 130), in which it is held that the statutes of the United States prohibit National banks from purchasing or subscribing to the stock of other corporations, and, further, that such a bank cannot, by acquiring stock in another bank, not in the course of its usual and lawful business, become liable as a stockholder in such a bank, and may rely upon the doctrine of ultra vires, notwithstanding it has received dividends on such stock.

It seems to be assumed in this case that the act of the National bank was contrary to law, and not simply outside of the general scope of its powers; but we think such a distinction is not well taken. It is undoubtedly true, that, where a statute specifically prohibits the doing of an act by a corporation, neither the corporation nor the person dealing with it will be allowed to rely on such transaction, or assert any benefits that grow out of it. (Pennypacker vs. Capital Ins. Co., 80 Iowa, 56, 45 N. W. 408, 8 L. R. A. 236, 20 Am. St. Rep. 395; In re Assignment Mut. Guaranty Ins. Co. vs. Barker, 107 Iowa, 143, 77 N. W. 868, 70 Am. St. Rep. 149.)

But the fact that a transaction is wholly unauthorized by the law empowering the corporation to do business, or by the terms of the charter of such corporation, or that it is contrary to general restrictions as to the scope of the corporate power, will not render it so far void as that the corporation may not be estopped by receiving the benefits of the transaction from relying on the doctrine of ultra vires. (Pennypacker vs. Capital Ins. Co. supra; First Nat. Bank vs. Haire, 36 Iowa, 443; Hunt vs. Hauser Malting Co. 90 Minn. 282, 96 N. W. 85; Security Nat. Bank vs. St. Croix Power Co., 117 Wis. 211, 94 N. W. 74.)

The Minnesota and Wisconsin cases just cited disapprove of the case of California Bank vs. Kennedy, and it is pointed out that, whatever may be the rule established by the Supreme Court of the United States with reference to the liability of a National bank as a holder of stock in another bank, the decisions of that court are not binding on the State courts in applying the general doctrine of ultra vires.

Without discussing all the cases which have been cited on either side of the proposition which we are now considering—a task more onerous than profitable—in the effort to reach a correct conclusion, we are satisfied that the rule supported by the great weight of authority is that, unless the transaction is so specifically prohibited that it is contrary to law, or is so manifestly against public policy that it is to be deemed prohibited without express declaration, a corporation is estopped, after receiving the benefit of a transaction, from saying that it is totally void, even though it is contrary to the general provisions of statute as to the method in which the business is to be conducted.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B.A., LL.B., Barrister, Toronto.]

PREFERENTIAL ASSIGNMENT—DOCTRINE OF PRESSURE—KNOWLEDGE OF INSOLVENCY—YUKON CON. ORDINANCE, CH. 38, SECS. 1 AND 2.

Benallack vs. The Bank of British North America and Others (36 Supreme Court Reports, page 120).

Statement of Facts: The judgment of Mr. Justice Craig, from which this appeal is taken, contains the following summary of the facts:

This is an action brought by the plaintiffs to set aside several instruments as being void against creditors under chapter thirty-eight of the Yukon Consolidated Ordinances, and also asking that the defendant bank be declared a trustee for Bossuyt of the property covered by the mortgage and assignments mentioned; that Finlaison be declared a trustee of certain property conveyed to him; that the bank be ordered to account for all the goods mortgaged or transferred and the moneys or proceeds realized by said bank under those various assignments; and a general account.

This case has two main branches: one in which the plaintiffs attack the chattel mortgage, assignment of book accounts and notes; the other attacking the rate of interest charged by the bank and asking for an account of that interest and an allowance of the same, taken over seven per cent., for the benefit of the creditors.

The pleadings set out that the plaintiffs were execution creditors on June 28, 1902, and simple contract creditors for a long period before that date; that the defendant Bossuyt was insolvent in October, 1901; that on November 1, 1901, there was due from Bossuyt a debt of $41,550; that the bank took immediate possession of that property and disposed of it, this property consisting mainly of butchers' meats; that land transferred to Finlaison, acting Manager of the bank, was transferred to him as trustee to secure the same debt; that Bossuyt assigned debts in April and May, 1902, in all amounting to $20,000; that he indorsed and transferred promissory notes amounting in all to about $12,000 to secure the same debt; that no consideration was given, but security for prior debts; that since October, 1898, Bossuyt borrowed from the bank moneys at twenty-four per cent. per annum and afterwards at eighteen per cent. per annum, and that the bank wrongfully collected interest over and above the rate of seven per cent. allowed by the Banking Act; that during this time Bossuyt was insolvent to the knowledge of the bank, and that assignments were made voluntarily and with intent to defeat the plaintiffs and other creditors, and were taken by the bank with such intent and to give a preference, and had the effect of giving a preference to the bank over other creditors; that the assignments were made fraudulently for the purpose of defeating creditors, and had that effect, and are void; that if the assignments were good an account should be taken of the interest, and only seven per cent. allowed.

The defendants deny these allegations generally, alleging that the book debts of Bossuyt, chattel mortgages, etc., and other assignments were taken as extra precaution and additional security; that the notes and book debts were transferred as collateral in the ordinary course of business; that the interest paid was settled and the account closed and the interest over and above the legal rate was voluntarily paid by Bossuyt long before the action; and they allege that the execution creditors have no status to ask for an account, there being no privity between them and the bank in the matter of the interest; that the plaintiffs are not creditors within the meaning of the Act respecting preferential assignments.

The evidence, I think, shows the following facts: That Bossuyt, the judgment debtor, in 1898 and 1899, was owing the plaintiffs a balance of $28,200; that the balance remains unpaid to date; that Bossuyt also owed Davies $9,000, secured by warehouse receipts before the assignment was made, and that he also owed one Van Rass $500; and, further, that he owed Lafrance $17,000 in the fall of 1901; that from 1899 down he continued to borrow large sums of money from the bank, amounting in all on November 1, 1901, to about $41,000, there being a current note then matured of about $5,000 which was unpaid, not included in the then security; that on November 1, he gave a chattel mortgage to the bank covering stock of meat and fowl situate in Dawson; that between that time and April and May, 1902, the bank made other advances to him, and that additional security was taken by assignment of book debts and promissory notes. After the taking of the chattel mortgage in November Bossuyt was allowed to sell the meat. For about a month he took it away without the leave of the bank. The bank Manager observing this, required the bookkeeper, one Peck, who was acting in the service of Bossuyt, to keep check of the meats and pay over the proceeds to the bank, which was done. Bossuyt had a great deal of other meats in his warehouse; the meat of one Burns, about $8,000 worth or more of which the bank advanced the money on the purchase; also the meat which was covered by a warehouse receipt to Davies, all of which was sold and turned into the general account of Bossuyt without any distinction or ear-marking. Bossuyt, clearly in fraud of Davies, disposed of the entire stock of meat which Davies held as security for his advance and deprived him entirely of his money, without any knowledge on the part of the bank, however, and this money was paid over along with the other money realized from the sale of the meat which was purchased from Burns with the $8,000 advanced by the bank.

During this time I take it that Lafrance was well aware (at least I draw that inference from the evidence) that Bossuyt was dealing with the bank; he never mentioned to the bank the Bossuyt indebtedness to him even on the occasion when he indorsed a $9,000 note for Bossuyt in the fall of that year, which the bank discounted and paid over to him, although at that time it is quite clear from the evidence that the Manager of the bank informed the plaintiff, Lafrance, that he had advanced up to the limit of Bossuyt's credit and assets, yet Lafrance never mentioned to the bank anything of his debt. It is also absolutely clear from the evidence that Bossuyt never in any way informed the bank of his other liabilities, and the bank had no knowledge whatever in any way of the liabilities of Bossuyt beyond that to themselves. The Manager of the bank, in March 1902, became aware of the Davies note of $9,000. It is quite clear that the bank charged twenty-four per cent. interest on all the advances made up to December, 1901, and then the rate was reduced to eighteen per cent. It is also in evidence that Bossuyt did not tell Lafrance of his large debt to the bank, and Lafrance, it appears, never inquired, although he knew that Bossuyt had dealings with the bank and that the bank required his indorsement before advancing $9,000.

That the bank was ignorant of the financial condition of Bossuyt is quite apparent from this, that the Manager swears that if he had been requested he would have loaned Bossuyt the further $9,000 to pay off the Davies note upon the security of the assets which he believed Bossuyt had.

Bossuyt's evidence is not at all satisfactory, but this can be clearly drawn from it, that he never informed the bank of his position and that the bank was ignorant of his real position; that he anticipated being able to pull through at the time of giving the chattel mortgage; that he went into a statement of his effects with the bank at that time, with the Manager, and together they estimated he had about the sum of $95,000, and in view of what the bank knew of his position from that statement and otherwise, and being aware only of their own debt, Bossuyt was clearly not insolvent to the knowledge of the bank. Bossuyt carried on his business until June 28, selling his meat, as I have already recited, mixing all the moneys from the various sources of supply in the one general account. The bank certainly at that time became anxious about the large advances it was making and felt that it should have security. The stock as valued by Bossuyt and the bank was taken at wholesale prices. Bossuyt to-day cannot give any very clear estimate of what he had, but he does not deny going over his stock with the Manager of the bank, and the estimate that the bank Manager now gives must be taken to be what was arrived at at that time.

Bossuyt admits that Lafrance knew he was borrowing from the bank in the fall of 1901 to pay for meat, and in that fall Bossuyt bought a very large consignment of meat from Lafrance, about $27,000 worth, on which he paid Lafrance $17,000 in cash borrowed from the bank, the balance being paid by a note discounted by Bossuyt and indorsed by Lafrance, which is the note I previously referred to. Some considerable losses, which are not very clearly sworn to, but certainly losses which seriously affected Bossuyt, occurred in the winter of 1901 and 1902. Bossuyt says that so far as the bank knew he was solvent in 1901. Bossuyt admits signing the check monthly for the interest, as called upon or otherwise. He says generally the checks were written in the bank by the Manager, and he signed them. These checks, as appears by the exhibits, ran from June 29, 1901, to February 8, 1902, the first check being for $6,054, and being ear-marked: "Interest on notes to 30 June"; and so on, at various dates monthly from that time on, checks were given to the bank on themselves and paid out of the general account which Bossuyt had whenever money was on hand. Some of the book debts assigned certainly were proceeds of the meat mortgaged and some of the notes the same, as well as other book debts contracted during the same carrying on of Bossuyt's business.

Lafrance was called and his evidence was just about as I have given it summarized. He did not learn of Bossuyt's mortgage to the bank until February, 1902. He knew of several shipments all paid through the bank; he admits telling Finlaison that Bossuyt was all right, and that he never mentioned to the bank Manager any claim of his against Bossuyt.

The action was based upon the law contained in chapter thirty-eight of our ordinance, which I had better give in full. Section 1 says: "Every gift, conveyance, assignment or transfer, delivery over of payment of goods, chattels or effects, or of bonds, bills, notes, securities or of shares, dividends, premiums, or bonuses in any bank, company or corporation made by any person at any time when he is in insolvent circumstances, or unable to pay his debts in full or knows that he is on the verge of insolvency, with intent to defeat or delay or prejudice his creditors, or to give to one or more of them a preference over his other creditors, or over any or more of them, or which has such effect, shall, as against them be utterly void." Section 2: "Every such gift, conveyance, assignment, transfer, delivery over or payment, whether made owing to pressure or partly owing to pressure or not, which has the effect of defeating, delaying or prejudicing creditors or giving one or more of them a preference, shall, as against the other creditors of such debtor, be utterly void." The title of the Bill is, "An ordinance respecting preferential assignment," and the marginal note to section 1 is: "Fraudulent and preferential assignments"; and the marginal note to section 2 is the word "Pressure" at the foot. Section two was passed after the decision of Molson's Bank vs. Halter.

JUDGMENT (Sedgewick, Girouard, Davies, Nesbitt and Idington, *JJ.*): It is urged by the appellants that the amendment by sec. two of ch. thirty-eight of the Yukon Ordinances consolidated (1902) is such as to distinguish this case from the cases of Molsons Bank vs. Halter followed by Gibbons vs. McDonald, that interpreted the R. S. O. 1887, ch. 124, and Stephens vs. McArthur, that interpreted the Manitoba Act, 49 Vict. ch. forty-five, sec. three, where the words used are identical with those of the Ontario act.

The Yukon Ordinance before its amendment in question was almost identical with those of the Ontario and Manitoba statutes upon which these cases were respectively decided. The amendment now in question consists in adding to the first section the following as sec. 2: Sec. 2. Every such gift, conveyance, assignment, delivery over or payment, whether made owing to pressure or partly owing to pressure or not, which has the effect of defeating, delaying, or prejudicing creditors or giving one or more of them a preference, shall as against the other creditors of such debtor be utterly void. This was passed after the decision in Molson's Bank vs. Halter. Does it do more than remove the question of pressure out of consideration in arriving at a proper conclusion in a case falling within the first section which was practically passed upon by the decisions referred to? I think not. "Every *such* gift, etc.," evidently means that class or those classes designated by the preceding section.

Take the doctrine of pressure out of the question by force of this amendment as it was taken by the facts in the case of Gibbons vs. McDonald, and we have nothing left to distinguish this case from that. There the whole of the debtor's assets had been assigned as it is alleged by the appellants in the case here.

I cannot read this amending section two of the Yukon Ordinance as doing more than striking at the doctrine of pressure. If the words: "whether made owing to pressure or partly owing to pressure," had been inserted in the first section just after the word "intent," the same legal effect would have been produced.

The only other thing in this amending section is a repetition of the words, "which has such effect." That repetition adds nothing to the force of the words in the first section if we are to be governed, as I think we must be, by the interpretation given by the cases I have referred to and the reasoning which leads to their decision. I need not refer at length to that reasoning. It is clearly set forth in the judgments of Mr. Justice Strong, especially at pp. 452 and 453 of Stephens vs. McArthur. It would seem as if there the removal of the doctrine of pressure, as an element of the reasoning leading to the conclusion reached, had been anticipated. It was, therefore, not necessary when the case of Gibbons vs. McDonald arose, without any fact in it upon which the doctrine of pressure could rest, to repeat this reasoning, and the same learned Justice simply contented himself with referring to his former judgment and the majority of the court concurred therein. It was there shown that the preference prohibited was a voluntary preference and hence a fraudulent preference. And if a fraudulent preference, to whom is the having such a purpose to be attributed? Is it enough to show that the assignor may have had such an intent? Must not the assignee as well as the assignor be a party to the fraudulent intent? Such would seem to be the result of a long line of decisions upon which the commercial world has had a right to act for a long time past. And though there may not have been any express decision of the point upon this legislation in this court, the late Chief Justice, Sir William Ritchie, in Gibbons vs. McDonald, at page 589, indicates that in his view there must be a concurrence of intent on the one side to give, and on the other to accept, a preference over other creditors.

Counsel for the appellants properly conceded that the evidence here did not show knowledge on the part of the bank such as would enable us to find this concurrence of purpose.

Until the Legislature obliterates the element of intent in such legislation and clearly declares that, quite independently of intent, the preferential result or effect of the transaction impeached is to govern, it will be exceedingly difficult to arrive at any other conclusion in cases of this kind. The results that might flow from such legislation ought not to be brought about without such purpose being most clearly expressed by the Legislature.

The appellants as execution creditors only (not suing for all creditors), assert some rights of a novel character which, in the view I take, it is unnecessary to dispose of or pass upon.

I think the appeal must be dismissed with costs.

COMPOSITION WITH CREDITORS—RESERVATION OF COLLATERAL SECURITY—EFFECT OF SURRENDER OF ORIGINAL NOTES FOR NOTES UNDER COMPOSITION—DEBT NOT THEREBY DISCHARGED.

Banque D'Hochelaga vs. Beauchamp (36 Supreme Court Reports, page 18).

Statement of Facts: Appeal from the judgment of the Court of King's Bench, appeal side, affirming the judgment of the Superior Court, District of Montreal, maintaining the plaintiff's consolidated actions with costs.

In March, 1900, the plaintiff obtained a deed from his creditors for sums of $100 and upwards in composition and discharge of the debts owing by him to them, as follows:

"We, the undersigned creditors of L. E. Beauchamp, of the city of Montreal, hereby agree to accept from him a composition of seventy-five cents in the dollar on the amount of our respective claims against him at this date; said composition payable by his notes at three, six, nine, twelve, fifteen and eighteen months from May 1 next, without interest; it being a condition to this agreement that Mrs. L. E. Beauchamp's claim will remain in abeyance till all the composition notes are fully paid. Said composition to be signed by all creditors for $100 and over. The real estate to be transferred to the Hochelaga Bank, Gault Bros. & Co. and J. G. Mackenzie & Co., till composition notes are fully paid. In case any of the installments are not paid at maturity the balance of the original debt will revive in full."

The Bank Hochelaga signed this composition deed, with the following words immediately before the signature: "Special reserve being made as to the securities which we hold." The security held by the bank was an assignment of a debt of $5,000 owing to plaintiff by the telephone company, *mise en cause*. The debt due by the plaintiff to the bank, at the time of the signing of the deed, amounted to $12,985.60, and on execution of the composition thereby effected, the bank received six notes from the plaintiff amounting to $9,839.20 and, thereupon, surrendered to the plaintiff his original notes then held by the bank, representing their full claim of $12,985.60.

The first three composition notes were duly paid to the bank which, in the meantime, had continued collecting from the telephone company on their collateral security, so that upon the maturity of the fourth composition note it had collected $4,350 on this security. The plaintiff asked to have this sum applied towards payment of the three last composition notes, but the bank refused to do so, contending that the reserve made in the deed entitled it not only to receive the amount of the composition at the rate of seventy-five cents in the dollar upon the amount of their full claim against the plaintiff, but also to make the remaining twenty-five cents in the dollar by realizing, if possible, upon the collateral security so reserved.

The plaintiff then brought two actions against the bank, which were subsequently consolidated, and the plaintiff's demands therein were, in effect, granted by the trial court judge (Robidoux, J.), affirmed by the judgment appealed from, which condemned the bank to return all the composition notes to the plaintiff and retransfer to him the collateral security or the balance due thereon.

JUDGMENT (Sedgewick, Girouard, Davies, Nesbitt and Idington, *JJ.*). The judgment of the court was delivered by Nesbitt, J.:

The plaintiff being indebted to the bank in the sum of $12,800 for which the bank held as collateral security certain debts due from the company *mise en cause* to the plaintiff to the amount of about $5,000, asked his creditors for a composition at seventy-five cents on the dollar, said composition to be payable by his notes at three, six, nine, twelve, fifteen, and eighteen months from May 1, 1900. All creditors of $100 and over were to sign. Certain of the creditors signed, with a condition following their signatures that notes at three and six months should be given instead of the notes provided for in the deed, and one firm signed excepting goods sold on a certain date. The bank signed by its General Manager, adding the words: "special reserve being made as to the securities which we hold."

The bank had collected from the Telephone Company about $4,500, and the plaintiff has paid the bank in addition some $4,869, which two sums added together would pay the seventy-five cents on the dollar due under the composition deed. The plaintiff claims that the money collected from the Telephone Company should be applied on the seventy-five cents on the dollar and that he should be entitled to receive the return of the balance of the claim against the Telephone Company and a return of his notes. And the bank claims that it is entitled to receive from him seventy-five cents on the dollar and to obtain, if possible, the other twenty-five cents on the dollar from the realization of the collateral security.

The trial judge found in favor of the plaintiff and that judgment has been confirmed by a majority of the judges of the Court of King's Bench. The majority of the court below take the view that the reserve of the securities in the composition deed was a reserve to guarantee the payment of the seventy-five cents on the dollar.

I think that the true construction of the bank's reservation when it signed the deed is that the bank says to the debtor: "we will accept seventy-five cents on the dollar from you in full discharge of your personal liability to us, but the collateral securities we have we will hold for whatever they may be worth, and to the extent of twenty-five cents on the dollar we will collect on them, if we can."

Of course, any balance over the twenty-five cents would be accounted for. I think the view taken by Mr. Justice Hall in the court below was the correct one.

True, the original notes were given up by the bank to the respondent, but not to extinguish the debt, but for the purpose of being handed to the other creditors. These notes were, moreover, mere evidence of the debt, and if it can be established that the latter was not extinguishd or novated, then it is in full force. The deed of composition declares in express terms that in case any of the installments were not paid at maturity, the balance of the original debt would revive in full.

Some interesting questions presented themselves at the hearing, arising out of the manner and expressed conditions under which the deed of composition was signed by the several creditors, by virtue of which the necessary equality which the deed called for amongst the assenting creditors was destroyed. No question was raised before us on the point and in the view we take of the case it is not necessary to do more than refer to it to show that we have not by our silence given an apparent sanction to such a proceeding.

The actions of the respondent should be dismissed with costs.

NORTHERN CAPITAL IN THE SOUTH.

[Address by DANIEL G. WING, President First National Bank, Boston, Mass., delivered before the recent annnal convention of the South Carolina Bankers' Association.]

If your secretary had ever heard me try to speak in public, he never would have sent me so cordial an invitation to attend this convention and to say something to you upon any subject I might choose; and I certainly should not have accepted but for the fact that I have had the pleasure of meeting some of you before, and could not resist the temptation to meet all of you, when this opportunity came.

I have said enough already for you to agree with me that I was not intended for a public speaker, and you will, therefore, pardon my reading what I want to say to you in regard to making closer and more intimate the business and financial relations between your section and New England.

I trust also you will take what I have to say and the suggestions I may make as coming, in a way, from an outsider, an onlooker, and one whose financial experience has been gained largely outside of Boston and New England; for I have been there a comparatively short time, only five or six years; hardly long enough to acquire a taste for Boston baked beans and brown bread.

From 1887 to 1897 I was engaged in the banking business in Nebraska, in the various positions from messenger to Cashier, and I wish to outline briefly conditions as they existed in the West during those years, or that may hereafter exist, in the South.

For some five years prior to 1892, the West was prosperous and growing fast, crops had been good, farmers had been making money, and business was expanding. There had been a period of railroad building, involving the expenditure of vast sums of money. New villages, towns and cities sprang up along the new lines of road. Pacific Coast cities, such as Seattle, Tacoma, Portland and Los Angeles, had a phenomenal growth. Denver, Kansas City, Omaha, St. Paul and Minneapolis were in the midst of great real estate booms. A man could buy a lot almost anywhere and sell it the next week at a profit. A great many National and State banks were organized. In many instances the organizers borrowed money for the greater part of the capital and pledged their stock as collateral.

Sites were given and cash bonuses paid to almost any kind of manufacturing enterprise that would locate its plant in a town with the promise of employing labor. These factories were started in many cases without regard as to whether the location was suitable for that particular industry. Thus you could find cotton and silk mills in Nebraska, woollen mills in the Black Hills, and magnificent buildings, intended for normal schools and denominational colleges, scattered over the country by hundreds. Fine office buildings and expensive residences went up in the cities and costly improvements were made on the farms. But the factories and office buildings were bonded, the farms were mortgaged, schools and colleges were in debt. The people of the West were doing wonderful things, but it was largely on borrowed capital, and they forgot that a time might come when money could no longer be borrowed and loans must be paid.

Then came the panic of 1893, followed by two or three years of successive crop failures. Eastern creditors needed their money; new loans were not to be had. People paid while they could, but when men tried to turn property into cash, they could find no purchasers, and the only alternative was failure. In Lincoln, Nebraska, there were twelve banks in 1891; there were only four of us left in 1895, and we weren't much to brag about. We saw in those years the values go out of our assets, the accounts receivable of our merchants and business men grow worthless, real estate equities disappear and farm mortgages foreclosed.

There has been another turn of the wheel and the West has had a series of good crops and high prices. Within the last few years the farmers have grown prosperous and are largely out of debt; business of all kinds is good; manufacturing of various kinds has been established upon a firm basis, and generally in the West to-day they have money enough to finance themselves and their own enterprises and some to spare to loan in the East. They are not likely again to be affected by panic and crop failure, as they were in those years. They have learned a lesson. But all the prosperous, active, "public-spirited" business men and farmers of ten years ago are not in that class to-day. Hundreds and thousands of them were wiped out and were unable to get upon their feet again, to take advantage, to any great extent, of the later prosperity. Other men have purchased their business and their farms for a song, and are reaping the benefit of their labor, to a greater or less degree. Perhaps more conservatism, more saving, would not have helped matters; but I am inclined to think that it might have.

Conservatism Should Be Practised in Times of Prosperity.

Now, the South has been growing rapidly. You have had good crops and good prices. You have built up fine cities and magnificent manufacturing plants. You bankers have had a large share in this prosperity, and in bringing it about. Good crops, high prices, good business, prosperous times, may continue throughout the country for many years—I hope they will—but there may be another period of depression, hard times, a curtailing of credit, and everything that implies. It may not come this year or next, but it is sure to come sooner or later, in some form. I don't want you to think I am pessimistic or that I am looking for serious trouble, either now or at any particular time in the future, but in periods of good times and expansion, such as we are now in, I believe the influence of all bankers should tend more and more towards conservatism, and their advice to customers should be along the line of strengthening present resources, rather than the encouragement of continued expansion.

How to Bring New England Capital into the South.

This brings me to the cotton industry, in which I assume you all are interested either directly or indirectly, and in which outside capital is, and could still further be, used advantageously. New England banks and investors have money to loan. You have had some of it and could use more, if the rates were low enough. Now, how can we get together?

To obtain our money at low rates, you must satisfy us that the security you offer is as good, or a little better, than that we can get nearer home; and further, that you are so strong financially that we can get our money when we want it, without having recourse to the security.

In the first place, I don't know much about a cotton mill or cotton manufacturing, and a good deal of what I have to say has been picked up in talking with those who do. I am only going to give you criticisms and suggestions; you know the favorable points well enough. I want to say I have met personally a number of the active managers of Southern cotton mills, and judging all by those I have met, a finer, more intelligent, earnest, energetic set of men is not engaged in any industry in this country, and they do not suffer by comparison with the mill treasurers of New England.

Now, how can Southern mills establish as high credit for their paper and as good an investment demand for their stocks as has been enjoyed by the New England mills? A manufacturing business, to be entitled to high credit, must possess a plant capable of the greatest economy in operating expenses; earning power sufficient not only for dividends, but for a gradual improvement and extension of plant without encroaching on its cash assets; and it must have assets readily convertible into cash amply sufficient to pay its debts. The fact that many of the Southern cotton mills, to-day, do not fulfil these conditions, or some of them, is the reason why New England bankers and investors, with their intimate knowledge of the cotton manufacturing situation and methods, do not generally favor investments in Southern mill paper and stocks.

High Credit of the New England Cotton Mills.

New England cotton mill paper sells in Boston at the lowest rates and is regarded by the banks generally as the highest grade of commercial paper, for several reasons:

First: The mills have been in operation for many years and have demonstrated that they are capable of earning a reasonably satisfactory percentage of profit, for any given period of years.

Second: Many of the New England mills have accumulated a large cash surplus and are in condition to avail themselves of such advantages as the market may from time to time afford, either in the acquiring of raw material or the disposing of the manufactured product. Many have also charged considerable amounts, during long periods, for depreciation, betterments, and extensions, so that whereas the average Southern mill will produce in a year product about equal in value to its capital stock, New England mills will in many instances produce double their capital, and in some cases three times.

Third: The strong financial position they have attained enables them to withstand losses, or a series of seasons of trade depression, with little practical effect upon their credit.

Fourth: The New England mills are geographically a part of the great money centres; their proximity to these centres tends towards a closer personal acquaintance between the mill men and the bankers; and also enables the bankers more easily to investigate the status of the mills whose paper they are holding.

A few days ago I asked a gentleman, who is largely interested in cotton manufacturing, both North and South, for some information as to the amount of Northern capital invested in Southern mills and also why more Southern mill paper was not carried in New England, and I quote from his reply:

"In the old Southern cotton mill, which has not been rebuilt or enlarged, there is probably comparatively little stock held in New England. In the branch mills, like the Merrimac and Massachusetts, which have plants in the North and also plants in the South, the ownership is probably almost entirely in New England.

In the new concerns, or old ones that have been thoroughly revamped or greatly enlarged during the last ten years, the Northern ownership of stock is large, and in many instances, controlling. This comes from the fact that machinery makers have quite generally taken a part, and sometimes a large part, of their pay in stock, and I may add that as a rule this has not been unprofitable for either party, though there are those who think it has been overdone, by creating a stimulus for more mills in some lines than the market demands.

The new Southern mills, as a rule, are better equipped for the production of the special goods that they are organized to make than the average Northern mill. The Southern mills have also been more enterprising than the Northern in the adoption of new and improved machinery, so that they have another marked advantage in cost of production besides that caused by their cheap labor.

Another factor in many Southern mills is important, and that is the large ownership in the stock by the parties managing, while in far the larger share of the Northern concerns the ownership of the management in the property managed is but small.

The greatest criticism on these organizations is that many are insufficiently capitalized. The conservative Northern rule that the stock should represent at least the value of the plant, is frequently departed from, and this makes the borrowing of money more difficult, and the rate of interest, when it is borrowed, higher."

Of the modern Southern mills, the larger number were not only destitute of working capital upon the completion of their plants, but found themselves more or less in debt for money borrowed against their plant account; but even under these conditions, which in many lines of trade would be considered almost insuperable obstacles to success, they have been operated so profitably that they have not only discharged the liabilities against their plants, but have proceeded in many instances to immediately double the number of spindles in their original mills, thus reverting to their previous condition of debt against plant account. In pursuing this course, they have, for some time at least, eliminated the possibility of strengthening their quick assets; a course which, viewed from the standpoint of conservatism, can hardly be commended.

I understand fully the temptation to expand that there has been during the past five or six years, and I am not at all prepared to say that this policy, under the prevailing conditions, is not the wisest that could have been adopted, but from the investors' and bankers' standpoint, would it not have been better had these corporations devoted their energies and profits, after the completion of their original plants, to the building up and maintenance of strong cash reserves, thereby securing for themselves what would undoubtedly be a position of financial strength and independence in their dealings with the banking and commercial world?

If I am mistaken in this, and the past few years have been a time for building and expansion, has not the time come now for the mills to conserve what they already have and to strengthen their reserves? Ought you not to advise and insist on this, for your own safety as well as theirs? I am inclined to think that the same volume of business done on a larger working capital would result in a greater degree of independence of commission houses, better sales at lower commissions, lower rates of interest and better profits, for with a greater proportion of quick assets to liabilities the mills would be free to seek any money market and any sales agent, and Southern mill paper would be as much sought after and as readily taken as is New England mill paper.

New Outlets Needed for Northern Capital.

New England capital has played a large part in the development of the West. It has been loaned freely there—not always wisely—but on the whole profitably. I wonder if you realize how well worth cultivating this New England capital is. New England people are thrifty and saving, they have no great natural resources at home, like coal or iron, in the development of which they can use their money. They have been saving and accumulating for generations, until today the amount of money in their Savings banks is enormous, and their surplus funds available for outside investment constantly increasing.

Think of the railroads in this country that have been built with New England money; the farms on which there have been mortgages to New England investors; the copper and gold mines that have been developed; the street railways and public utilities in various cities that have been financed! Go to any large city, from Chicago to Seattle, and you will find many of the best and most substantial buildings either owned by New England investors or built with New England money. It has been for years the best bond market in the country.

But conditions in the West have changed, and Eastern capital is no longer needed or sought to the same extent as formerly. It must seek employment elsewhere. Interest rates are low and banks and investors must necessarily eliminate, so far as possible, every element of loss, but they must also secure the best rates possible with good security and are, therefore, seeking new fields where better rates are obtainable, if satisfactory security can be had.

New England bankers and investors may have peculiar ideas; they may, in a way, be narrow and prejudiced in some of their financial methods, but for all that they have the capital which the South needs for the development of its great resources and its increasing manufacturing interests, and it would flow into the South, as it has in times past into the West, if mutual confidence could be established and the borrower could bring himself to conform in the matter of credit or collateral to the ideas of the investor.

By almost universal custom the basis of credit is determined by the financial statement, together with the personal equations of integrity, ability and competency of the management. It has also grown to be the practice with many bankers, in analyzing statements, to eliminate, or practically eliminate, the plant account. Long experience has proven this rule to be a safe one to follow, although of course, exceptions should be made in many individual cases.

It is just this, however, which prevents the free buying of Southern mill paper by New England banks. The first question asked is, "Is there a debt on the plant?" In other words, do the liabilities exceed quick assets. And while the present abundance of money in the financial centres may cause bankers to strain a point and scrutinize less closely, you will find, when money tightens and there is a greater discrimination in the taking of paper, that the plant account will look less and less valuable, and the demand will be made that quick assets shall exceed liabilities, or other security be given. The prudent banker, by forcing his customers to strengthen their reserves in times of easy money, like the present, will to just that extent be protecting himself against the time of stringency, when his customers will be obliged to pay up their outside liabilities and fall back upon the local banker for accommodation.

Loans on Warehouse Receipts.

In the matter of collateral paper offered by mills whose financial statements are not such as will warrant their single name paper being marketed, various forms of warehouse receipts covering cotton have been offered in the North. Such receipts covering cotton stored in the warehouses of the mills have not been well received in New York and Boston, for the reason that the cotton never really passes from the owner's hands into an independent warehousing company.

If a warehouse receipt is to be received with favor, it must be issued by a company of sufficient capital and financial strength to insure its stability in all markets, whose management must be such as to render it absolutely certain that such receipts represent the actual cotton stored as described, and that it will be held by the warehousing company on its own premises, or upon leased premises separate and distinct from those belonging to the mill to whom the receipt is issued. Personally I am a great believer in this class of security and I am glad to know that in South Carolina a number of independent standard warehouses have been built, and that companies have been formed, or are in process of organization, to develop this class of business. I believe you will have no trouble in getting unlimited capital in the North, at low rates, to carry cotton warehouses in this manner.

On the one hand, New England bankers, who expect to do business in the South, should come here and see conditions as they exist; form the personal acquaintance of your bankers and manufacturers and establish those intimate relations which are really the basis of credit.

On the other hand, Southern manufacturers or corporations desirous of interesting Northern capital should earnestly consider the desirability of conserving and increasing quick assets: the extension and erection of new mills only when ample working capital can be provided. The necessity of submitting accurate and complete financial statements, embodying figures as to the volume of annual business, figures showing the increase or decrease of such annual business as compared with preceding years, and expression of opinion as to further prospects of the business under existing conditions, and the probable changes, if any, in future profits and earning capacity, and the reasons therefor.

I have talked to you about the cotton industry, because it is the particular development in the South in which we in New England are most interested and know most about, and I have tried briefly to show you what I believe to be the viewpoint of the average New England banker. I trust you will receive what I have said in the spirit in which it is offered, for I have meant to point out to you frankly some of the obstacles, as I see them, to closer and more intimate financial relations between the South and New England, believing that with a fuller understanding means will be found to overcome them.

You have here in South Carolina some of the best banks in the South. You have many of the strongest and most prosperous manufacturing concerns. There is already a good deal of New England money invested here, and you can interest vastly greater amounts, if you will so finance and conduct your enterprises as to appeal to the New England conception of safety and conservatism.

Better Acquaintance Among the Northern and Southern People.

Western people are coming more and more each year to spend their summer vacations at the beautiful resorts along our New England shore. This association during the summer months has brought a better understanding and led to many close friendships.

You of the South have not as yet formed this habit to any great extent, and until recently, even in a business way, you gentlemen have not been frequent visitors to our section of the country. Would it not be worth while for the bankers, both of the South and New England, to begin systematically to bring about such personal friendship and business intimacy between the two sections as has existed between the East and West for many years, to the advantage of both?

CHARACTER AS COLLATERAL.

[Address by Bright Williamson, President Bank of Darlington, S. C., delivered before the recent convention of the South Carolina Bankers' Association.]

Your committee has done me the honor of asking me to tell you what I know about character as a collateral, and although the subject is somewhat abstract, it is intensely practical in its applications, and the more thought I have given it the more importance it appears to assume in our every-day dealings.

I take the import of the bearing of the subject, as conceived and proposed by your committee, as connected with something good, something positive, something tangible, and with reference especially to good character, for only good character is collateral.

Good Character the Basis of Business Methods.

Indeed, good character is the very basis of all of our present methods of business, commerce, and intercourse, as well as the underlying principle, and the foundation of every species of collateral currently offered in the business world. Good character, the synonym of honesty, sincerity, "fair dealings with others and free from trickery and fraud," purifies every avenue and system of business it permeates; a guarantee of honesty and integrity; it establishes confidence between man and man, between corporations and individuals, between governments and the people—the "*sine qua non*" of all the methods of the business world to-day.

On the other hand, we must not lose sight of bad character in our investigations, for bad character is worse than no collateral at all—the very opposite of good character. Fraud, dishonesty, and deceit are the worst and most despicable elements of a business transaction—elements which, when discovered, are to be avoided, to be watched and well guarded against, for they poison the system of every artery they enter, and sow the seeds of distrust.

Collateral Security for Loans.

When we take collateral it is for the purpose of securing the performance of an obligation, and it is taken in addition to the principal promise to pay money, or to do certain things. The law compels in a slow, limited, and ineffectual way the performance of legal obligations, but he who has to resort to the courts and the "delays of the law" loses even though he win, so that the business man of experience turns away from transactions, however attractive they appear, giving any promise of litigation or contention, and looks for something better than summons, complaints and the "undue" process of law for the carrying out of obligations.

There are several sources of collateral security: viz., some species of property, personal endorsement and good character, and if you take away the personal character of the persons connected with the property offered, that very collateral itself fails to satisfy its integrity. I mean that if bonds, stocks, choses in action or other forms of property, such as are usually hypothecated, be offered as collateral, the careful banker will thoroughly examine the character of the specific elements which enter into the composition of such property, and will look well into the character of the men in charge of institutions issuing such stocks and bonds, and he will value them according to the character and reputation of the personnel of these concerns.

The Ability of Judging Character.

I was asked some time ago by a thoughtful gentleman what I considered the one most important quality of a bank President, and, after some hesitation, I answered that it was the ability to judge correctly the character of the persons with whom he would come in contact. "To be able to look thoroughly into matters, and not let the peculiar quality or intrinsic value of anything escape you." To be able to discriminate between character and reputation, this is the real difficulty and where genius comes in, for there is no other term applicable to that gift of distinguising between the character attributed to a person and the real character behind that reputation; and I regard this as the one greatest requisite in business transactions.

In dealing with character as a collateral, it is not honesty alone which we are to consider, but all the elements which go to make up a successful character. A character which is an asset, a collateral, a guarantee for the performance of an obligation, is a strong positive character of a person himself a man of good judgment and conservatism, with energy, industry, and frugality; a man who is himself able to judge others and who knows himself, and who by his ability is able to carry to a successful termination his undertakings, and one who will not undertake to do what it is not likely he can accomplish.

The Example of Langdon Cheves.

Two years ago we listened with interest and profit to one of our distinguished members who related so eloquently the influence of the character of that distinguished Carolinian, Langdon Cheves, who by his integrity, honesty, ability and character lifted from ruin and bankruptcy the great financial institution of the Government, and placed it upon a basis and plane which has left his impress upon the financial character of our institutions, and which will live as a monument to his memory forever. It is such a character as this which forms the best collateral that any bank has to-day as a guarantee for the performance of its obligations.

Character of a Bank Depends upon its Officers.

I wish to refer again to the fact that the standing of a bank, or any other corporation, is taken from the character, the habits, and the personnel of its officers, and the good character of an institution is not only a collateral in time of need and an element of profit to the concern, but especially is it expected of a bank to set a precedent in a community as the standard of morality in business transactions, and the institution which stoops for gain, or lowers this standard, not only loses the confidence of its community, so necessary to its success, but sets an example by which it will be dealt with in return.

A deposit of property, of course, guarantees the specific performance, but the good character of a people extends further than an individual transaction, and influences public sentiment for the punishment of all wrong and the enforcement of every right, a guarantee and a collateral especially taken into account by strangers of a community, for the character of a country, State, or community is but the sum of the individual character of its citizens. Good character has always, in the history of the world, commanded a premium; twenty centuries ago the people were commanded, "choose out amongst you seven men of honest report . . . whom we may appoint over this business."

Difficulty of Properly Judging Character.

There is not one in this intelligent audience before me who doubts for a moment the correctness of the estimate I have placed upon good character. The practical question is, Why, then, from such characters do we require the same collateral security as from others? The answer at once is, the great difficulty of accurately judging our fellow man. Character is the greatest complexity of all things human to judge accurately and to estimate correctly; like faces, there are no two alike. To estimate correctly the sum of the qualities which distinguish one person from another, is at once to be in possession of the greatest gift necessary to successful undertakings dependent upon other than one's own individual exertions. A great many men can conduct a limited business requiring only their own efforts, but the most essential element in large undertakings is the ability, alluded to a few years ago by Mr. Frick, when he said that his success was due to using men like tools, each in his most useful place; and it was this same quality that made Napoleon and others great.

Character and Reputation Contrasted.

It is remarkably strange how approximately character may be read by human nature, and how each individual in a community is summed up by the general public in the reputation he bears. Reputation is the consensus of a community as to the character of an individual, and this opinion may be correct or it may be fallacious; but the power to go further, go behind this reputation and judge of the true value of the character of a person, is difficult indeed; for too often, for one reason or another, a person hides and disguises his real character, and it is a quantity not always known to the individual himself. Such information as is necessary to form an opinion is best acquired by association and intercourse, and a thorough acquaintance with the habits, surroundings, and associations of one's customers.

Upon this subject much might be said, but I only wish to point out a few practical propositions which have again and again come to every one. It has been said that with every person there are two characters, viz., the real character and the character known to others. Oliver Wendell Holmes remarked that there is also another character, that character which the individual thinks others think him to have, and upon each of these distinctions an estimate has to be placed. I believe the third character referred to, the reputation that a man thinks he bears with his fellow man, plays an important part in valuing a multitude of transactions in every-day life. Such a character is influenced by public opinion and practices the philosophy of Confucius, that apart from principle, honesty is the best policy. In asking for information about others you are often told that a person could not afford to do such and such a thing even if he would, for in so doing he would injure himself; so that even the reputation which he thinks he enjoys is one of no small account, and in a limited way is a good and useful bank collateral.

Our disappointments come in mistaking the reputation—that value which others put upon a person—for real character and worth. Generally a person of good reputation has earned it by the way in which he has acted, and is entitled to all that is generally accorded to him in this world, but it sometimes falls short of expectations, especially when the tests are beyond the sphere in which he has usually acted, and beyond the pressure of public opinion.

Character and reputation, generally so closely confounded, assert themselves in different ways. There are so many conflicting elements, and each has its influence in the result arrived at: for instance, one man will do wrong to save his reputation, while another will sacrifice his reputation rather than violate, in the least degree, his honor. A man of good character may perchance, by misfortune, lose his good reputation and yet build up again, but a good reputation, backed by a bad character, when once broken, is likely to be broken forever.

Bankers Must Be Impartial.

Besides the difficulty of judging, and the danger of misjudging, there is still another reason why good character cannot always be recognized to its full extent, and rewarded by the banker as it should be. An individual in his private transactions may show favors or discriminate as he chooses by making excuses, and not even assigning reasons; but it is not so with the banker, whose success in business is measured by his balance and who has amongst his depositors every class of customers. A discrimination, by way of a favor, in exacting less than the usual amount or the usual class of collateral, is soon advertised by the customer himself, and the banker is placed in the uncomfortable situation of explaining to his next customer why he cannot do the same thing for him also. It is the one collateral that cannot be discussed with your customer, unless favorably. You may sit down and figure with him the value of any other collateral; but politeness, tact, courtesy, good business policy, and, I may add, a due regard for your physical welfare, prevent you from stating the slight value you place upon his character as a guarantee for the performance of his promises.

The Borrower Who is too Hopeful.

I have already referred to the high place good character occupies in the business world. There are so many elements of good character that I want to make a distinction here between persons who are always honest in their convictions, but weak and easily influenced by circumstances, and by others; and another form of an honest character whose moral convictions are always right and good, but are over-sanguine and too full of hope, coupled with poor judgment, and must be always carefully and continuously watched and advised, for just such characters sometimes bring misfortune not only upon the possessors themselves, but upon their friends also; and it is to the interest of the banker, as well as his duty, to save, if possible, every one from calamity, loss or misfortune.

It has, no doubt, been the experience of every banker present that there is too often among even good men quite a difference in their regard for their obligations, and for the obligations which they have contracted or assumed for others by way of endorsement or otherwise. It has been my experience that some men would not if they could avoid obligations contracted by them as principal, but that those same men will contest every inch of ground on other liabilities equally moral and binding, and, for that reason, we all know men of good financial and personal standing who make very poor endorsers. On the other hand, it has probably been the experience of many members of this association to have their collateral shrink and dwindle away until it would seem that it would have no value at all, and at last have had to look alone to the character of the man behind the loan. What a joy and gratification it has been to him in such a case to find a man, a true man, an honest man, "the noblest work of God"; one who would take no advantage of technicalities, exemptions, limitations, and the law, but would stand alone upon the morality of the obligation, and ask but for time and the opportunity, and who by the sweat of his brow repaid in full a loan which he might have avoided.

Many years ago in our "City by the Sea" a distinguished attorney of a large corporation requested another attorney, whose name is well known to you all as among the first in South Carolina, to go to a lady friend of his and explain to her that the title to a certain piece of property, which had been sold and deeded by her to the corporation, had become defective, and by some technicality or contingency had again become hers; that it was very valuable, and to ask her what additional compensation she would require to perfect the title. He did so. The lady arose, and addressed the attorney by name. "Jimmy," she said, "you know I was opposed to selling that piece of property on account of my attachments and associations; besides, it was against my judgment, and I knew the price paid was nothing like its worth; but you can tell the attorney of that phosphate company that if I felt the property was rightfully mine they haven't money enough to buy it; but I did sell, and received the money; and if the titles I gave him long ago are defective, let him prepare others now; I will sign them, and they cannot pay me one cent for what I have already sold them and have been paid for."

This is the kind of character I refer to as indispensable, a collateral of that kind cannot be bought nor is it sold; one that always commands a premium, to be credited, encouraged and commended to the business world. It is character of this kind, this mould, of this clarion ring, of which the very salt of the earth is made, the character of a man whose word is his bond.

"The purest treasure mortal times afford
Is spotless reputation. That away,
Men are but gilded loam or painted clay."

A CREDIT LEDGER.

Referring the reader back to page 69 in the July number of this MAGAZINE and the corporation borrowers' statement illustrated therein, I will now take up the question of statement analysis, using the statement mentioned as a basis.

Fig. 1 covers directions for recording, and embraces a few reflections on the principles underlying the proper method of inquiring into the ability of a going concern to meet demands. Fig. 2 presents the statement analyzed.

The reader will readily perceive the ability of this form to note shrinkages or abnormal growth in any schedule; also to uncover indications of absenteeism among the liabilities or far-fetched inclusions among the assets. The completeness of its scope in providing a space for every pertinent fact would, in the recording of a borrower's statement, disclose all omissions.

Concealment is always a bad sign, and in the average case demands an immediate investigation into the reason why. Borrowers unwilling to substantiate, with mathematical facts, the safety of the (going of their concern) proposition into which the investment of depositors' dollars is bidden, should be taken well in hand; likewise those whose shiftless methods of accounting preclude their knowing the actual status of their business and their answering satisfactorily the questions asked in statements additional to those covering a mere list of assets and debts. To properly safeguard unsecured loans, banks must insist upon being given the opportunity of examining the collateral behind them—the condition of the business of the borrower. Surely loan-prognosis approaches hazardous guessing from any other standpoint than that of thorough analysis of a reasonably complete statement.

Of course, in analyzing statements, since each one presents individual merits and defects; the problem of a horse trade—a bit lame here—a little bloated there; each one demands individual treatment, and especially so in the cutting down department. (See in Fig. 2 column for "bank's estimate as a loan basis.") No set rules can govern. The credit man's opinion of the applicant's order of ability helpfully assists decision as to whether the operation shall be cutting or trimming. Integrity, the prime loan requisite, must be a positive quantity always. If negative, consideration of a loan is barred.

Noting the prevalent claim of many bankers, that statements do not amount to much—that they frequently have been misled by them, etc., one may pause to inquire as to whether the ease of shiftlessness, the lack of a systematic method of procuring and analyzing statements has not permitted the deception. Instead of sharpening up your harpoon, sticking it in deep, then thoroughly dissecting, carefully separating the blubber and fat from the lean in the statement, do you assume that since your customer is honest, that statements of condition as he sees them are equally as strong for a loan basis?

Is it safe to assume that while some customers may get figures a trifle high, a few thousand cut off net worth will supply a safe margin for shrinkage? Are you content to file away unanalyzed in the credit section of your brain—already encroached upon by the flood of facts, figures, arrangements, deals and everything else governing the operation of your bank, from the economy of purchasing red ink by the gallon to the net operation earnings for the quarter, or current prices of Japanese 6's—the additional fact that, per his last report, James Manstill is worth net $7,414.47? When you try to pick it out of your memory months afterward are you apt to be in doubt, as to his worth, or the nature of his assets, or perchance as to whether you have received a statement at all from Manstill within a couple of years back?

Is your "credit reference system" such that you can be unaware of the fact may be that he claims a stock on hand of $50,000, and either belies the

Directions for Using the Tickner Credit Ledger.

Directions for filling in the Liabilities and Gross Assets Schedules.

Into first column of the Liabilities and Gross Assets schedules copy in full as offered the borrowers statement (omit cents in all schedules), but do not list in either of the schedules Total Mortgages or Total Value Mortgaged Real Estate. If you do, you will make Total Mortgages a direct liability and Total Value Mortgaged Real Estate a direct asset of the business, which they are not.

Instead list the equity borrower claims in the Mortgaged Real Estate in the first column of the Gross Assets schedule and the value of the equity as a loan basis in the second column. All facts being obtained from Real Estate schedule next page.

To analyze Liabilities

In second column of Liabilities schedule, the credit department in addition to listing all liabilities admitted by the borrower would add any borrower had not included, but that it had become aware of, interlining for reference same space just above amount added descriptive name of this undisclosed debt.

To analyze Gross Assets

In second column of Gross Assets schedule, Credit Department must place its estimate upon these items from a loan basis standpoint. Usually allowing no value for fixtures, not to exceed half value on machinery and but little in excess of mortgage on Mortgaged Real Estate.

Proper basis for a bank loan

statement should from its quick assets: Cash, Merchandise, Receivables and Clear Real Estate at Credit Department loan basis values pay the debts and leave sufficient net worth to guarrantee the continuance of a concern seeking business accomodation. When a statement after analysis does not meet these requirements it is not a safe basis for a loan.

Character, ability, or part collateral might supply that which the statement lacks. If they do not the loan should be denied.

To analyze Net Worth

Fill out the Net Worth schedule as follows: At bottom opposite words Net Worth in first column insert total amount of Net Worth claimed in borrowers statement, and in second column amount of net worth allowed by Credit Department.

Then and in this order commencing at the bottom again, list the Gross Assets, in first column re-copying the figures in customer's statement directly above, and in second column re-copying the figures of the Credit Department directly above, (re-copying the Gross Assets in the order of least value.)

But in re-copying proceed only up to and into (include only) so much in amount of the last asset needed to be taken as will when added to the assets you have just listed below it total the amount of Net Worth.

The debt paying Assets

The untaken part of the asset which contributed the balance needed to make up Net Worth added to the remaining Gross Assets listed just above it in schedule of Gross Assets will total amount needed to pay the debts.

Liquidation the process of paying up

These last mentioned assets under any conditions would be the assets first applied to the payment of the debts.

By so much as they fail to pay the debts, (shrink from the estimated cash values), Net Worth decreases, sacrificing in order from the top downward its items each in turn until all shrinkage is made up or until exhaustion of these items (bankruptcy) ends the process of liquidation.

The comprehensive scope of this book.

For a period of five years at a glance, each being on its own line the Liabilities, Gross Assets and Net Worth in totals, groupings or individually can be compared from either standpoint of borrower's statements or loan basis of the Credit Department.

Tendency of borrower's loan and deposit accounts

And in conjunction with an absolute barometer of credit, the tendency of a borrower's deposit and loan accounts as is fully betrayed in the analysis showing average balances kept, exchange paid and amount and quality of loans carried.

Corroborative schedules

The minor schedules furnish all the incidental and corroborative information that can be had or desired.

Pertinent Facts

Commercial banks will always make statement based loans and this book will be of immense and increasing value to them as an immediate and permanent loan basis reference.

It will hold and retain more information and in a more explanatory and comprehensive form than heads or memories. And it will be on duty always, responsive to the needs of progressive banks and bankers.

A Suggestion

That the schedules and comparisons be presented in a manner instantly comprehended it is especially recommended, that red ink be used for the figures embraced in Deposit Balances, Direct Loans, Credit Department Analysis and Contingent Liabilities, the amount of the latter to be placed yearly under Credit Department Net Worth. That green ink be used for amounts embraced in Exchange and Interest, and that black ink be used for all other figures or written matter. (See illustrated forms and the ease of comparing the information.)

The forms of borrower's statements designed to accompany and facilitate the use of this Credit Ledger are based upon the Standard Forms of the American Bankers Association, being complete in scope covering fully all facts pertinent to a corporation, firm or individual borrower

FIG. 1.

fact of so much stock by a known insurance of $20,000, or reveals the risk assumed, should he burn out. We have heard of the above being bettered, in an actual case the borrower claiming to be carrying "good" book accounts exceeding his admitted annual sales.

Perhaps he claims to hold in office good customer's notes amounting to $9,000, and yet is beseeching you for a loan on his single name for $2,500; your request for the offer of the business paper instead betraying the fact of

its non-existence, worthlessness, or pledge elsewhere. He may claim to have, on a lessened annual sale, more than the previous year's amount on his books in "accounts due from customers," and in the little heart-to-heart talk—the final arbiter on all loan questions—that you have with him, he owns up to a bookkeeping error, and you learn that the increase represents partners' accounts, salaries, etc., not yet charged off.

Possibly good-will appears the third or fourth year to assist a declining strength, perhaps his life insurance account intrudes among the business assets, the statement-maker failing to mention the fact, however, that the latter has no connection with his estate at all, its payment going absolutely to his kin. His fixtures may have a perpetual full market value and stubbornly resist toning down. Do they so steadily hold to their original value as to give the blush of shame to Government bonds, fluctuating by big eighths and quarters? He states, may be, that the capital stock of his concern was paid in in cash, say $25,000, and although you are not unaware that with this cash was purchased everything connected with the business, the realty, fixtures, machinery, accounts, etc., yet note that the first three alone, as set forth in the second annual statement, with little improvement to date, are holding up strong at $34,000. We linger a bit to mention a humorous incident related, wherein, in an actual case, the similarity in the amount of customers' notes already discounted (and funds spent) and the amount given in statement as customers' notes on hand (knowing that all business paper appeared to be discounted as received) suggested a doubling on this asset. Borrower was unaware of the fact, although "eating his cake and keeping it, too."

As to net worth, the fund that guarantees continuance in business, or in other words ability to meet demands, you ofttimes find that although seductively stated as so many dollars in statement submitted, that when you cut down the statement and begin to set off the floating debts against the quick assets, that the-then-left-overs are a great remove from any appreciative value. You finish the post-mortem of the statement, doubting that this net worth, as invested in equities, in vacant land, in machinery, equipment, a declining amount of accounts, good-will, etc., is a persuasive enough guarantor of the ability of the borrower to pay up without some creditor being obligated to take a piece of it for his, and then you give your bank the benefit of your doubts.

GEORGE L. TICKNER.

SYRACUSE, N. Y.

(To be continued.)

MUTILATED GERMAN BANK NOTES.—A recent occurrence has caused the administration of the German national debt to announce the regulations regarding indemnification for bank notes mutilated or unsuitable for circulation. The public is generally of the opinion that bank notes for five, twenty, and fifty marks torn, partially burned, or otherwise mutilated will be cashed by the exchequer, upon presentation, if the number of the note is still on the portion presented. This is erroneous. According to existing regulations, the administration only redeems mutilated notes if the piece presented forms a part of a genuine bank note and the fragment is larger than one-half of the entire note, so that not the owner of the part of it containing the number but the person presenting the larger portion of the note will be entitled to payment. The national banks have been instructed to accept in payment mutilated notes, including soiled notes or notes pasted together, only when they are fit for circulation beyond doubt. If the notes are rejected the owners must apply for reimbursement to the administration of the national debt direct. Mutilated bank notes for 100 and 1,000 marks are cashed only when the owner presents a fragment larger than one-half of the note or can furnish proof that the missing portion of the note has been destroyed. For lost or destroyed bank notes no claim for indemnification can be made.—*Hugh Pitcairn, Consul-General, Hamburg, Germany.*

GRAFTERS IN BANKS.—An exceptional form of "graft" was described by James B. Dill, the New York corporation lawyer, in a recent address, in which he said:

> "Another graft is that of the bank official, who is influenced in the use of his institution's funds by any reason other than the good of the institution. Such a man is dangerous to the community. His position is so high and his form of graft is so insidious that its existence ofttimes is not suspected until the explosion resulting from his grafting has injured the community and made the man and his practices notorious; but too late.
>
> The director of a corporation who directs the affairs of a company from the viewpoint of his own pocket rather than from the standpoint of the stockholders' interest, although he may not be indicted by a grand jury, is none the less a social highwayman."

Alfred H. Curtis,
President New York State Bankers' Association.

NEW YORK STATE BANKERS' ASSOCIATION.

PROCEEDINGS OF THE TWELFTH ANNUAL CONVENTION, HOTEL FRONTENAC, JULY 13 AND 14, 1905.

The twelfth annual convention of the New York State Bankers' Association was held at the Hotel Frontenac, Thousand Islands, New York, July 13 and 14, Charles H. Sabin, Vice-President of the National Commercial Bank, Albany, presiding. The convention was opened with prayer by Rev. Lawrence N. Sirrell, pastor of the First Baptist Church, Clayton, N. Y.

Alfred H. Curtis, of New York: May I interrupt the proceedings? The council of administration, recognizing the ability, vigor and fairness with which you, sir, have presided over the affairs of the association during the past year, have requested me to present to you this slight token of their affection and esteem.

(Mr. Curtis then handed to President Sabin a beautiful gavel, mounted with solid silver and suitably inscribed.)

President Sabin: Mr. Curtis, I accept this beautiful gavel, and, through you, desire to return my sincere thanks to the council for it.

Annual Address of President Charles H. Sabin.

To the Members of the New York State Bankers' Association: Gentlemen—It is with very great pleasure that I greet you at the opening of the twelfth annual convention of the New York State Bankers' Association. We assemble under most agreeable circumstances and in the midst of business conditions which are distinctly reassuring to the men of our guild.

In the year since our last meeting we have passed through the excitement of a presidential campaign and the strain of a presidential election without a ripple of disturbance in the business world. The volume of business has steadily augmented and we look out upon the coming year with every reasonable expectation that it will bring a still more decisive advance. The rates for the use of money have been low, notwithstanding the fact that industrial enterprise and commercial activity have made unprecedented demands upon the money markets. Regardless of the low rates of interest, the banks have prospered. The reduction of dividends has been so rare as to be a negligible quantity in the last year's banking. In general, the New York State banks show gratifying enlargements in surplus and undivided profits.

Very likely this is accounted for by conservative management and more systematic methods of administration. I entertain no doubt that the very general discontinuance of the practice of paying interest on commercial accounts has given added security to the banking situation and greater confidence to the banking outlook. It was a practice which many of us fell into for the sake of increasing the volume of business, but it was a menace to successful banking. Anything which is a menace to successful banking is quite as opposed to the interests of the borrower as of the banker. Banks must do more than live; they must prosper if they are to serve the interests of their constituents, both depositors and borrowers, and if they are to give encouragement and support to business activities all around them. The practice of paying interest on deposits which are subject to call ought, I am sure, to be wholly discontinued, before the inevitable result of gorging the banking stomach at the expense of good digestion and healthful living is reached. The banking business, like all business, is to be judged by results. Experience is the best guide. It points us with entire accuracy to the sound and the unsound principles in banking. There is such a thing as paying too much for a volume of business.

As has been said by a Texas banker, "Mushroom deposits breed mushroom loans, and then the least agitation of the commercial ship will cause them both to turn green with sea-sickness." Like a house of cards, the least adverse wind will shake the whole structure down. A declaration upon this subject by this association might be of substantial advantage in pointing all interests to a true principle in banking.

Recent years have witnessed a marked multiplication of trust companies. In view of this growth, the relations which these companies should sustain to the banks, to the banking business of the State, and to the State Banking Department, have been much considered. It now seems to be the accepted conclusion that they are to be regarded as upon the same footing as all other banking institutions, so far as fraternal relations and State supervision may be concerned.

At first the new trust companies were competitors of the older banks to an extent which gave some alarm. But the ground for this has substantially passed away and inevitable adjustment of relations has been effected.

Two years ago, when the O'Neill bill, compelling trust companies to report to the State Superintendent of Banks five times each year when called upon—the same as State banks—was presented in the Legislature at the instance of this association, it was decisively and successfully opposed by the companies concerned. In the past year the attitude of the legislative committee has been more aggressive and that of the trust companies less opposed. It had become apparent that the companies could continue only under proper supervision. The main asset of a trust company, like that of a bank, is public confidence, and confidence in any institution flourishes best in the sunlight of publicity. Accordingly, and much to our gratification, the O'Neill bill was passed very promptly in the Assembly with hardly a dissenting vote. It was delayed for a brief time in the Senate Committee on Banks, but was finally passed, with slight amendments, and, with the approval of the Governor, became Chapter 297 of the Laws of 1905. It ought to be said that, contrary to the general attitude two years ago, a large number of trust companies advocated the passage of this law.

In view of this change in situation, and as it is evident enough that the trust companies are to continue in very considerable numbers, and as they are doing a banking business, I suggest for your consideration that they be invited to become members of this association. Membership with us in these agreeable gatherings would surely result in better understandings, which would be for our mutual protection and our common advantage. As we are all to transact business of a similar, if not of an identical, character, and as we must necessarily sustain business relations and sometimes enter into honest business rivalries, it would seem as though we ought all to be governed by similar rules of action and submit to the same restrictions.

Public confidence in financial institutions has recently been rudely shaken by the exposure of the internal affairs of the Equitable Life Assurance Society. This has been essentially true in the smaller cities and towns where we are

CHAS. H. SABIN,

Former President New York State Bankers' Association.

not familiar with such enormous trusts and certainly not accustomed to such enormous salaries. Happily, the decisive action of the authorities promises to save that great corporation from the inevitable ruin which an uninterrupted continuance of reckless and extravagant administration must have brought upon it. The incident ought also to prove of advantage to all of the financial institutions of the State, for it must remind all that sound and economical administration is the life-blood of business security. It ought to lead to some fresh examinations, to some needed renovations, and to some desirable house-cleaning in other institutions. If so, it will be fortunate that it occurred. It seems as though such an incident must occur now and then to call the attention of all to the imperative importance of frequent investigation and exact accounting by the officers and boards who are charged with the administration of large financial trusts.

Much has been done by the committees of the association in the last year. It will all be reported to you, and I have not much occasion to comment upon it.

The legislative committee has been particularly active, with the result that several propositions in which the association was interested have become laws.

For the past two years the association has advocated the repeal of the bankruptcy law which is now in operation. Congress has not acted, but the sentiment in favor of repeal seems to be strengthening and there is reason enough why our efforts in this connection should be continued with reasonable expectation of satisfactory results.

A new committee of our number was constituted in the past year to consider desirable changes in the laws governing National banks, and to co-operate with a similar committee representing the American Bankers' Association in effecting legislation which might be thought well. There is, it is clear, enough for this committee to do, and I suggest that it be continued with ample authority to act for us in its important field.

Our membership shows an increase each year, but, compared with some other States, the ratio of members to the number of banks is not as satisfactory as we could wish. An annual meeting of representatives of all of the banks of the State is very desirable. It is quite as desirable for the smaller banks as for the larger ones. The reluctance of some to accept our cordial invitation to membership is quite beyond explanation. It can be overcome only by making the purposes of the association widely known and by making our meetings so attractive and useful that no good bank man can afford to hold aloof from them.

Bankers' associations are the means by which a diverse system of banking is systematized and improved, and the links by which a great number of institutions are bound together in sympathetic and helpful accord. Through them the credit system is strengthened, abuses eliminated, crimes detected, conservatism encouraged, and competition used to develop strength, instead of permitted to breed trouble and weakness.

This suggests how changed our business has become, how diversified it is. One who can not wear a swallow-tailed coat with comfort can hardly be looked upon as a thoroughly initiated banker, but it is quite as certain that one who can not put on a blouse and shovel coal under the boilers is not yet an expert in modern banking, either.

We must not only be conservative; we must encourage business enterprise. We must judge men, and sustain the deserving. The business will not all come to the office, we must go out and look for it. Sometimes we must create and initiate it. We must at all times stand for public improvements and community progress. We must often see that opportunities for successful investments are provided. All this while we have a care that the foundations are secure and that our knowledge, our experience and our prudence command the public confidence.

Before closing I must express my very sincere appreciation of the loyalty and energy, during the year, of the members of the council of administration, and of others outside of the council, who have served on committees. And I must specially thank the secretary and the treasurer, who have performed the larger part of the duties of this administration.

We are met in a delightful place, in a region which is notable for natural and fascinating beauty and for interesting history and reminiscences. Plans are matured for our entertainment and enjoyment. It is my very sincere desire that this meeting of the association may be long remembered, not only for the pleasure we derive from it, but also for the satisfactory business results which our discussions and our action may produce.

The next business in order will be the annual report of the secretary.

SECRETARY EEDRIDGE: Mr. President, Ladies and Gentlemen—The report of your secretary is as follows:

SECRETARY'S ANNUAL REPORT.

To make an interesting secretary's report, which does not read like most of the preceding reports of the secretary, is not an easy thing to do. You all know pretty well what is expected of your secretary, and he might sum it up by saying that this he has tried to do. There seems, however, to be an increase in the number of things which he can find to do for the welfare of the association year by year.

Following the last annual meeting, copies of the stenographer's minutes were mailed for correction to every person who took any part whatsoever in the convention, before being compiled for the printer. Unusual pains were taken to see that the book of proceedings should be accurate in its matter in every respect, and with the change of its external appearance, I believe, I may say that it is the most presentable copy we have yet issued.

The secretary has been persistent in his attempts to increase the membership. In this he has been officially aided by the effort of the other officers and the group chairmen, with the result that we have to report 479 members. We have lost forty-four members, but we have gained fifty members and are therefore able to report a net gain of six.

Failed	7
Out of business	4
Merged	8
Refused to renew	6
No response	19
New members gained	50
Old members lost	44
Net gain	6

The nineteen that have not responded are not irretrievably lost. We hope yet to enroll a good portion of them.

The net result, as above stated, while not as good as we might wish it to be (because there are still some two hundred eligible banks in the State outside of the association), is the best yet, and it is expected that the good work will continue.

The secretary has attended group meeting in Groups I, II, III, IV, V and VI during the year, besides attending the meetings of the council and various committee meetings and meetings of the officers, at New York and Albany. The group meetings have been enthusiastic and profitable.

The secretary was excused by the chairman of the group from attending the annual meeting of Group VII, which he had promised to attend, because he was asked to be present at the organization of a State bankers' association for our sister State of Massachusetts, in Boston. It is perhaps worthy of note, in passing, that the response to an invitation to organize an association brought representatives from 240 banks in the State of Massachusetts and that they organized, practically along the lines of our own association, with a membership of something like 150, since increased to 190.

The secretary has mailed during the year about 8,000 pieces, besides sending the printed proceedings to every bank in the State, and sending hundreds of copies of legislative bills and other literature, as suggested at various times by his superior officers.

Reference has already been made in the president's address to legislative accomplishments, and it is believed that the State association has hardly done greater credit to itself in any way, than to secure the adoption of the law requiring our friends, the trust companies, to publish reports as do their competitors.

There has been in all this matter no disposition to antagonize the trust companies. It was found that a great many of the good trust companies were anxious to have the enactment of this law, and now that it has come

E. O. ELDREDGE,

Secretary New York State Bankers' Association.

about, it is hoped that a large number of the trust companies of the State may be inclined to come in with us and be of us, as they may under the provisions of a resolution which was adopted two years ago, which provides that trust companies keeping a reserve the same as State banks, are eligible to membership in the association. Within the past two weeks the association has received the application of one trust company under this provision, which has been enrolled as a member. This first trust company is the Flatbush Trust Company of Brooklyn.

The association shows the following number of members by groups:

Group I	49
Group II	35
Group III	35
Group IV	68
Group V	83
Group VI	49
Group VII	42
Group VIII	118
Total	479

Some solicitude on the part of the officers of the association was felt as to the effect upon the membership of the change in date for the payment of annual dues from October 1 to May 1. The fact is that but six banks have refused to pay the annual dues on this account, and the officers feel that this result has shown the wisdom of the course which was adopted in assessing the annual dues before the time for the annual convention, in order that we might have funds in hand wherewith to pay expenses, rather than spend our money so long in anticipation and have our treasury empty for the remainder of the year, as has been the case heretofore. The prompt and willing response of the members generally to this change has been most gratifying.

Hearty co-operation in the work of the association on the part of all the officers, the members of the council of administration and the committees, has made the performance of the secretary's duties an enjoyable service. The association was never in more prosperous condition, nor its influence in the direction of "safe and sane banking" more apparent. Its possibilities for the future are to be measured only by our energy joined with wisdom.

PRESIDENT SABIN: Gentlemen, what is your pleasure regarding this report?

E. D. FISHER: I move that the report be received and placed on file.

E. H. CADY: I second the motion.

PRESIDENT SABIN: All in favor of the motion will please signify it by saying aye; those of a contrary opinion, no. Carried.

DAVID CROMWELL,
Treasurer New York State Bankers' Association.

Next in order is the report of the treasurer.

TREASURER CROMWELL: Mr. President, I beg leave to present the following report as treasurer of the association:

TREASURER'S ANNUAL REPORT.

New York State Bankers' Association in account with David Cromwell, Treas.

Receipts—July 14, 1904, to July 10 1905:		
Balance on hand last annual report	$ 937.67	
Proceeds from $1,000 and $500 notes	1,481.48	
Collection of October, 1904, dues	5,425.00	
Collection of May, 1905, dues	5,440.00	
Total receipts		$13,284.15
Payments—July 14, 1904, to July 13, 1905:		
Council meeting expenses	$ 474.12	
Stationery and supplies	204.98	
Lake Champlain convention expenses	1,851.54	
Printing and miscellaneous items	667.50	
Secretary	698.99	
Notes charged	3,500.00	
Expenses of committee and group meetings	571.64	
Total payments		$7,968.77
Balance on hand		5,315.38
Total membership reported at last convention		473
Total membership reported at this convention		480

Respectfully submitted,
DAVID CROMWELL, Treasurer.

THE PRESIDENT: It is customary at this time to appoint an auditing committee to audit the treasurer's accounts. Is it the pleasure of the convention that such committee should be appointed now?

WILLIAM P. ADAMS: I move that the chair appoint a committee of three for that purpose.

CHARLES E. GRIFFITH: I second the motion.

PRESIDENT SABIN: All in favor of the motion will signify it by saying aye; those of a contrary opinion, no. Carried.

I will appoint as such auditing committee Mr. F. C. Haviland, of Hudson; Mr. Louis J. Clark, of Pulaski, and Mr. Haldane, of Coney Island.

Reports of group chairmen are next in order. I will call for a report from the chairman of Group I.

REPORTS OF GROUP CHAIRMEN.

E. C. McDOUGAL: Mr. President and Gentlemen—In the absence of the chairman of our group, I will report, as secretary of the group association, that Group I has held an annual meeting on the 3d of December, 1904, at which meeting there were thirty-one members present. We also had the pleasure of the attendance at the meeting of Mr. E. O. Eldredge, the secretary of the State association. I may also state that the chairman and secretary of the group sent out letters to all members of the group asking their opinion whether it was advisable to have two or only one meeting during the year. A tabulation of the replies to those communications shows a majority of 5 to 1 in favor of having one meeting a year and endeavoring to concentrate all the goodness in that one meeting. We have some ambitious plans for the meeting that we are to hold in the fall, among them the possibility of publishing for the use of the members a large volume in which we shall endeavor to codify the banking laws of 1905. The group is in a flourishing condition and is, we believe, doing good work.

PRESIDENT SABIN: Group No. II.

M. S. SANDFORD: Group No. II held a meeting in the month of May last, which was the first meeting held by the group in three years. At that time President Sabin and Secretary Eldredge, of the State association, were present, and they gave us a good talk and created a great deal of enthusiasm in the work of the association. Thereupon we all went to work heartily, and now I am glad to report that we have added nine new members to the group, and there are very good prospects of increasing the number in the near future. I personally sent out letters to twenty-nine non-members of the group enclosing blank forms of application and urging them to join the group, representing the benefit to be derived from membership in it, and also, setting forth the good times we have in the association and the pleasant and lasting friendships that are formed by coming in contact with the members of the association. Out of the twenty-nine letters that I sent out, there was one unfavorable response, one sent in an application and the fees to me, eight sent their fees direct to the secretary or treasurer, and seventeen did not reply at all, nor did they return the stamps which I enclosed asking for a reply. However, I shall not let them rest, but will keep at them personally and write them often.

I desire to say that Mr. Eldredge has done much valuable work in the past year, and, to my knowledge, has devoted a great deal of his time to visiting groups, and he deserves great credit for the work he has done for this association.

Our group has benefited greatly from the labors of Mr. Eldredge and Mr. Sabin, and I wish to thank them for the interest they have taken in the work.

Unfortunately, perhaps, I was chosen chairman of the group, but I shall do the best I can to further the interests of the association.

PRESIDENT SABIN: Group No. III.

F. E. LYFORD: I am sorry that I have to apologize for the fact that neither the chairman nor secretary of our group is present. Mr. Eldredge has winked at me, and so I suppose I shall have to tell you what I can, as near as I can remember it, what we have done in the group during the past year.

At that time Mr. Charles Adsit was elected chairman of the group, and we all feel that we did a very wise thing in electing him and getting him to accept the chairmanship. The meeting was not a large one, but we had with us Assemblyman Rodgers, the leader on the Republican side of the House at Albany, and he gave us a very interesting talk, appealing to us as a member of the Legislature to assist in every way we possibly could to bring before the public laws that should work for our benefit, as well as for the benefit of the State at large, and he urged especially that, if we had any suggestions to make in reference to the subject of taxation, which was then being considered, we should do so. Accepting his invitation, I made a suggestion, and, like the man who went to a doctor and asked his advice, and the doctor said: "You mustn't drink any more," and the man took his hat and started to go, and the doctor remarked: "I charge you $2 for my advice," and the man replied: "I don't propose to take it," so I presume my suggestion is somewhat in the same way, for I have not heard anything from it. Still, I am not discouraged. We have done a good deal of work on taxation heretofore and have accomplished something for the banks. I would like to call the attention of the association to that matter. It seems to me that the bankers of the State can do something in that line. It seems too bad that for all these years that we have been doing business no tax law has been framed that didn't have to be fixed up and amended and something new brought out from year to year to produce the revenue necessary to carry out the purposes of the State, and I am going to suggest that a committee be appointed in addition to our present legislative committee to take up the question of taxation alone. It is as important to us as anything I can think of, and I believe that if we cannot find legislators who can succeed in attaining good results we ought to find bankers who can do so.

In closing, permit me to say that, so far as Group III is concerned, we are very loyal to the association. Our numbers are not very many to-day, but we are great in enthusiasm, and what we lack in members we make up in that respect.

President Sabin: Group No. IV.

E. S. Tefft: Group IV held its last meeting at Utica in December, about forty members being present. We were very nicely entertained by the Fort Schuyler Club. There has been an increase in membership of five during the past year. The interest in the group is well sustained, and business throughout the various localities in the group is in a flourishing condition. Our next meeting will be held in October.

President Sabin: Group No. V.

Frank E. Howe: I would report on behalf of Group V that, as usual, our group shows an ever increasing interest in the association. I think that report can be reiterated: The members are taking very great interest in the association's work. I believe our group is the largest geographically, and the second largest in membership of any group in the State.

President Sabin: Group No. VI.

Frederick B. Post: Mr. President and Gentlemen—Since the last convention Group No. VI has held two meetings and the executive committee of the group has met once. The regular annual meeting of the group was held December 10, 1904, at the Murray Hill Hotel in New York, and there was a very good attendance present. Matters of interest to the association were discussed and officers chosen for the ensuing year. After that luncheon was served, and some after-dinner pleasantries indulged in. The executive committee met at the same place on April 29, 1905, and made plans for the summer meeting of the group, which meeting was subsequently held on Friday and Saturday, June 9 and 10, at Lake Mohonk. The summer meeting was really a two days' convention, the people arriving during the afternoon of Friday and leaving late on Saturday, although a number remained over Sunday. The banquet on Friday evening was one of Mr. Smiley's best, and was followed by after-dinner speaking. A short business session was held on Saturday morning. The emphasis, however, was laid on the social side of the gathering, about 150 being in attendance, and from the expressions heard it seemed as if the summer meeting of Group VI was thoroughly enjoyed by all those present. I may say that credit for the success of the meeting was largely due to the presence of the ladies. Of the thirty-six banks in the territory of the group eligible to membership in the association forty-nine are members and seventeen non-members, two banks having joined during the year.

President Sabin: Group No. VII.

STEPHEN M. GRISWOLD: I expected to meet our secretary here. He intended to be present I know, but for some reason he has not arrived yet. He could have given you a much more detailed report than I can of the workings of our group during the year. However, I will give you the main points covering our work since we last met in convention with you.

We held our closing business meeting at the Clarendon Hotel in Brooklyn in December, which was presided over by the retiring chairman of the group, Mr. Hutchinson. We had quite a large number in attendance. We transacted our business, and we enjoyed a most excellent dinner. We always have a dinner when we gather to do business down on Long Island; it helps to make things run smoothly, you know, and we find that we can do more business when we have had a good dinner.

We then adjourned over to our annual banquet and reception, which was held at the Hotel St. George. We had over 100 present there, and we had one of the best meetings we have ever held. There are about fifty banks in Brooklyn and Long Island, and forty-two of them are members of the group. Banks start up down our way every few days almost without our knowing it, and we have a great many branch banks also, and, on the whole, I think I may say that we are very prosperous. We have the honor of the introduction to the State association of the first trust company that has ever belonged to it, the Flatbush Trust Company having recently joined the State association. Mr. Fisher, the secretary of that company, who is sitting by my side, joins with you to-day in the festivities and pleasures of this convention. We hope that the good example set by this company will be followed by others, and I predict that the time is not far distant when we shall have as members of this association many trust companies.

In conclusion, it affords me pleasure to say that we have between forty and fifty ladies and gentlemen from Brooklyn and Long Island, representing Group VII here on this occasion.

PRESIDENT SABIN: Group No. VIII.

CHARLES ELLIOT WARREN: I regret very much the absence of the chairman of our group, but he has sent me the following report, which is very brief, and which I will read:

New York, July 3, 1905.

The annual meeting of Group VIII of the New York State Bankers' Association was held at the New York Clearing-House on May 10, 1905.

Group VIII has a membership of seventy-eight banks and thirty-six banking firms, making a total membership of 114. The group has a balance on hand of $20.19.

The annual banquet was held at the Waldorf-Astoria on December 20, 1904, and was, as usual, a great success, there being present 464 members and guests.

(Signed) HERBERT L. GRIGGS.

PRESIDENT SABIN: Next in order is the report of the council of administration, which Secretary Eldredge will kindly present.

SECRETARY ELDREDGE: The report of the council of administration is as follows:

REPORT OF THE COUNCIL OF ADMINISTRATION.

The council of administration of the New York State Bankers' Association has held three meetings during the year, the first at the Fort Orange Club in Albany, on the 29th of November last. The full council was present, excepting that Groups I, II and VIII were not represented.

The meeting was largely taken up with the consideration of matters which should be brought to the attention of the State Legislature and a legislative committee was appointed. The committee consisted of Senator Persons, of Buffalo; Edward Elsworth, of Poughkeepsie; Hon. J. T. Smith, of Fishkill Landing; Charles Adsit, of Hornellsville, and Henry P. Davison, of New York. Later Senator Persons felt obliged to give up active duties in connection with the committee, because of the pressure of other matters, and for him was substituted R. Ross Appleton, of New York city. The doings of the committee will be covered by its own report at this session.

The council gave lengthy discussion to the matters of income and expenditure of the association, and, in view of the fact that the treasury was not in an overflowing condition, voted not to send the $3 per capita to the several groups, which had formerly been sent, excepting upon the request of the chairman of any group, who should state that the group had expended in its natural course moneys for meetings or otherwise, which they had not in hand and they were then authorized to request the treasurer to remit them such funds as they might need, up to $3 per capita. A number of the group chairmen reported moneys on hand which were idle, and the above conclusion was unanimously reached by the council.

A committee was appointed to recommend to the American Bankers' Association that they consider and take up with the National Legislature, if that association should think desirable, the subject of the revision of the National Bank Act and in general make suggestions for the benefit of National banks in regard to their existing limitations enacted by the National Bank law.

Consideration was given to various other matters pertaining to the welfare of the association.

The second meeting of the council was held on the 4th day of March, 1905, at the New York Athletic Club, New York city. A full council was present, excepting that Groups III and IV were not represented.

A report of the doings of the legislative committee up to that date, further recommendations to that committee and suggestions how best to aid the work of the committee were made at length. The secretary was instructed to communicate with every bank in the State, requesting that they urge upon their legislators of both houses the importance of sundry bills then pending, which had the approval of the legislative committee. The council ratified the action of the legislative committee in indorsing various bills, a more detailed account of which will doubtless appear in the report of the said committee.

A committee, consisting of Messrs. James G. Cannon, Lewis E. Pierson and Hon. S. M. Griswold, all of New York, was appointed to get up a form of statement blanks, superseding the old forms which were adopted several years since by the association, and which were made prior to the present bankruptcy laws, and which were affected by other laws, which have been passed since its adoption. That committee has been active and will report at this session.

The question for the time and place for the next convention was brought up and unanimously the Hotel Frontenac of the Thousand Islands was chosen as the place and date was fixed for the 13th and 14th of July. A committee of arrangements, consisting of A. H. Curtis, chairman; A. C. McDougal, David H. Pierson, F. E. Howe and the secretary, was appointed.

A committee on fidelity insurance, consisting of Henry Dimse, chairman; George T. Murdock, E. S. Tefft, F. B. Post and W. N. S. Sanders, was appointed. The results of the labors of that committee will be given in the report of the committee this morning.

The eternal question of bringing in non-member banks was again discussed and various suggestions were adopted. The routine business pertaining to the interests of the association was acted upon and the meeting adjourned.

It might be proper to state that there are necessarily matters of vital importance to the association, which came up for discussion and for action by the council, which cannot be recited in a public report, which goes into print as does this report and that therefore no reference is made to them herein.

The third meeting of the council of administration was held in this hotel last evening.

A meeting of the council of administration was held at the Hotel Frontenac on Wednesday evening, July 12, 1905, at 8 o'clock.

The report of the council was read and approved for presentation to the convention.

The report of the treasurer was read and approved for presentation to the convention. It was voted to pay to the treasurer the sum of $250 for his services during the past year. It was voted to direct the treasurer to send a draft to the secretary of $301.01 to make up the balance due on his salary for the year.

Mr. Henry Dimse, the chairman of the committee on fidelity insurance, was invited before the council. The report of the committee was read and it was voted to recommend to the convention its adoption.

The report of the committee on revision of statement forms was read and approved for presentation to the convention.

A communication was read from Hiram R. Smith, of Rockville Centre, giving notice that at the convention he will move to amend Article five, Section one of the constitution and by-laws relative to the establishment of a protective feature similar to that maintained by the American Bankers' Association. It was voted to refer the same to the convention with the favorable recommendation of the council.

A communication from C. A. Pugsley, dated Peekskill, July 5, 1905, was read, stating that he had conferred with Mr. McDougal, President of the Bank of Buffalo, and Mr. McGarrah, President of the Mechanics' National Bank, who, together with himself, were appointed a committee to consider the advisability of reform in the State and National banking laws, and that the committee was of the opinion that the subject is one of such great importance, and so intricate, that the committee could not in the limited time at its disposal present a comprehensive report at this meeting. The council voted to recommend to the convention the continuance of the committee.

It was voted that the name of J. H. DeRidder be in future omitted from all publications of the association.

Adjourned.

F. E. Lyford: I move that the report be received and placed on file.

L. E. Pierson: I second the motion.

President Sabin: Gentlemen, you have heard the motion that the report be received and placed on file. All in favor of the motion will signify it by saying aye; those of a contrary opinion, no. Carried.

STEPHEN M. GRISWOLD: I would suggest, Mr. President, that this is the proper time to appoint a committee on resolutions, as they will have to meet and prepare a report to be presented to-morrow. I therefore move that the chair appoint a committee of three for that purpose.

E. S. TEFFT: I second the motion.

PRESIDENT SABIN: All in favor of the motion that the chair appoint a committee of three on resolutions will signify it by saying aye; those of a contrary opinion, no. Carried.

I will appoint as the committee on resolutions Stephen M. Griswold, of Brooklyn; Leo. Schlesinger, of New York, and Eugene Satterlee, of Rochester.

It affords me pleasure to now introduce Mr. S. R. Flynn, President of the National Live Stock Bank, of Chicago, who has kindly consented to come here to address us.

ADDRESS OF S. R. FLYNN, PRESIDENT NATIONAL LIVE STOCK BANK, OF CHICAGO.

The public mind is seemingly capricious. Those who attempt to follow its apparently aimless wanderings find themselves lost in a bewildering maze of mental vagaries. It seems to bound with such apparent unreason from one radicalism to another as to suggest a state of chronic hysteria. Any proposition, no matter how grotesquely absurd, commands a following not without its quota of the reputed intelligent. Viewed from the cold prominence of sanity the public mind presents a weirdly kaleidoscopic effect. Its composite thought is as brilliant, its design as difficult to determine. I say the public mind is seemingly capricious. In truth it does but seem so. In reality it has a definite, fixed purpose to which it steadfastly adheres. A different impression obtains because we too often mistake the vaporings of impractical minorities for public opinion. Visionary minorities do not make public opinion. If we would discover the trend of public thought we must study the majority made up of the sober, practical men of affairs.

Sometimes we are amazed at the apathy of the majority. It appears hypnotized by the aggressive insistence of the minority. Wild theories are advocated in frenzied, frothy fashion, while the majority listens with stolid indifference. But the instant the rightful dominance of the majority is seriously threatened it acts quickly, drastically, effectively. The fanatic finds himself and his theories swept aside, and reason once more in full command. There is never cause to fear that the foolish will long prevail, for the majority must and will rule, and the majority is sane.

Every properly constituted individual restlessly seeks betterment of condition. His primary purpose is self-advancement, to be sure. Yet eliminate selfish, individual ambition, and you eliminate progress. The chief, the overmastering purpose of the majority, individually and collectively, is progress—progress mental, progress moral, progress physical, progress financial. But it demands that progress shall come in orderly fashion, step by step, in the gentle process of evolution. It has no patience for the advocate of radical change. It insists that we be prepared for each advanced position before we take it. Progress is evolutionary, not revolutionary. Sudden as change may at times appear, analysis of conditions will convince us that it has come because we are prepared for it, and that it has in reality not come suddenly, but is the logical effect of long accumulating causes.

Common sense is frequently stunned by the seeming imminence of revolutionary change. Invariably we are needlessly alarmed. The threatened radical change does not come, and it never will come until it should come. This may sound ultra optimistic, but we have good ground for trusting the common sense of our thoroughly practical people. Have we not disposed of one bad theory after another? And have we not ever been sufficiently discriminating to delay the acceptance of good theories when we have not been prepared for their practical adoption? Branch banking and asset currency both are good in theory, and undoubtedly we will put both in practice when conditions warrant, but not before. Some of us, in discussing these questions when they were under consideration, declared that we were wasting valuable time in debating propositions not possible of acceptance at the time, asserting that we would be better employed were we to devote our mental energies to solving in some way the combination problem. This, we asserted, was the question of paramount importance. Some laughed, none heeded. To-day the combination question, comprehending, of course, combinations of labor as well as of capital, is universally recognized as the one question which more than all others demands immediate solution. Few if any of us fully realize the temper of the people regarding this grave subject. Let no one for a moment imagine that the campaign for government ownership, government control, government supervision of public service corporations or public control of public thoroughfares, is inspired by the craving for notoriety possessing sensation makers. The call for the settlement of this vexed problem comes from the majority. The unorganized majority is clamoring for protection. It demands that in the execution of our laws the individual, unaffiliated with organization of any kind or character, shall be accorded the same privileges, the same rights, the same measure of protection, enjoyed by combinations.

The majority of our citizens place their allegiance to their country first of all. In turn, they expect, and should receive, the fullest measure of protection from their country. No man's liberty should be curtailed except when and where it would trench upon the liberty of another. The nation we love, the nation for which we stand ready to sacrifice property, life, if need be, should for no other reason place restriction upon the liberty of the individual. Certainly, it should allow no other agency to take upon itself the functions of government, and in despotic disregard of human rights interfere with the heaven-granted liberty of individual action. And when organization, whatever its character or purpose, attempts to deprive the unaffiliated individual of legal or natural rights by threatening his person or property, then I say, if local authorities are unable or unwilling to give him adequate protection, the national Government, to which he owes his first allegiance, should give him all needed protection, though it require the entire regular army and every man available for drafting, to give him that needed protection. If government fails in this, then it fails in its chiefest duty.

We falsely teach that all men are created equal. They are not created equal, nor are they equal at any point in their development. For this very reason the government must exercise a species of parental oversight of its citizens. A triumvirate of tyrants are ever preying upon the weak—and these are muscle, mind and money. The deficient in muscle cannot be given physical strength by legislation. Neither can the money-making sense be given every individual in equal measure by any "Be it enacted" spread upon our statute books. But the strong in muscle can be punished for slugging the weak, the strong in mind for cozening their mental inferiors, and the strong in purse for increasing the fatness of their wallets by dishonest manipulation. The great majority have suffered the tyrannies of this triumvirate long and patiently. They have endured the violence of the strike. They have submitted to the confidence games of the keen of wit. Thy have, with tolerant apathy, condoned the manipulations of tne masters of high finance. They have endured, submitted and condoned in hopeless patience.

Organization has made the despots so strong that they have been able to defy the law, to control or ignore the executors of the law. As it is with all agencies, so it is with the combinations, their excess of power has induced excess in its use. Insidiously they have usurped one function of government after another, until now they, to all intents and purposes, nullify our laws at pleasure. Their encroachments upon individual rights have become so atrocious, so grievously outrageous, that the patience of the unorganized has become exhausted and they are determined to submit no longer to these self-constituted despots. Hence the popular clamor for the exercise of greater power by the national Government.

Do not think the leaders stand alone in this movement. The unorganized majority is behind them. And more than that, the time has come for a change. Conditions demand change. As usual, the radical is demanding changes revolutionary in character. As usual, the radical will not prevail. There is no present danger of Government ownership. It is not at all likely that you or I will see Government regulation of rates and charges an accomplished fact. We are not ready for such radical departure from present policies. In a word, we are not ready for socialism, that arch enemy of individual endeavor, the chief promoter of success—and, please God, we will never be. But we are prepared for Government supervision of corporations. We are prepared for the exercise of sufficient power by the national Government to protect the individual in his right to work for whom he chooses, to work for as many hours as he chooses, to work for as many dollars as he can get and is willing to take. The time is ripe for Government supervision and control of the organization of corporations. We are ready for honest capitalization based upon actual values arrived at by impartial, expert appraisement. We are prepared for the prevention of unjust discrimination in fixing rates and charges. We are ready for national supervision of life insurance companies. Their business is national in character, and so should be their organization and supervision. We are quite prepared for the criminal prosecution and the punishment as criminals of officers of corporations, who buy securities on their individual account for the purpose of selling them to their corporations at personal profit, or who in any other way appropriate to their own use profits properly belonging to their corporations.

We are not ready for a bank deposit guarantee fund created and maintained by a special bank tax. Depositors in sound banks do not need it. Neither should depositors in unsound banks need it, for unsound banks should not be permitted to live until deposits become impaired. In all possible ways the confidence of the public in banks should be fostered. Guaranteeing deposits, it is true, would effectively preserve confidence, but proposed methods are so manifestly unfair that the scheme is impossible. There is no reason why weak, poorly managed institutions, should live upon the reputations, the profits, of strong, well-conducted institutions. Moreover, assessing the good for the preservation of the bad is as unnecessary as it is unwise and unfair. We can inspire confidence in our banks in a better way. A way more fair, a far more effective way. The time has come for the compulsory incorporation of banks. Every place of deposit should be under State or Federal supervision. The word "Bank" on door or window should give guarantee to the people that their representatives have supervised the organization of the institution doing business within, and are intelligently supervising its operation as a bank. It should not be easy to start a bank. The character, ability and financial strength of the promoters should be definitely ascertained. And no set of men whose character, ability and financial worth will not bear closest scrutiny should be permitted to do business as bankers.

The man or woman with a check book is a helpful factor in our commercial development. The man or woman with money in pocket, or other approved place of retirement, is an enemy to progress. Money in the bank vault is a basis for credit expansion, and speeds progress. Money, even when in actual circulation, is not performing its highest function. When in actual circulation, each dollar is but a dollar. When in actual concealment it might as well not exist. The dollar is doing its best work when seemingly dormant in the bank vault, for there its usefulness to business is multiplied from four to six and two-thirds times. Therefore, do not put money in thy purse, but money in thy bank vault. The check is a much safer medium of exchange than cash. It performs, with ordinary business care, all the functions of cash, and performs those functions in a much more satisfactory way. There is no cash needed, and none should be used, except in small change transactions. Encourage the use of the check book. Discourage the use of cash except when and where its use cannot be avoided. The recent wholesale organization of small banks has in great measure relieved the strain upon our cash supply. Money formerly in office safe or store till is now in the bank vault, and its work is being better done by the check.

In my own experience during the past year I have seen in one small section of Chicago one million dollars find its way into newly-built bank vaults, and of this amount I think I may say with truth at least one-half or $500,000 had been in hiding in safe-deposit vaults or elsewhere. This million dollars is owned by about 4,000 people. These people were holding their surplus money in personal possession, and paying their bills with cash. Now their surplus is in the bank, and their current bills are paid with check. About $700,000 of the million is doing its proper work in the channels of trade. This $700,000 of itself is but a small increase in the fund available for enterprise, but it is only one of many $700,000 brought from concealment for business use, by the organization of small neighborhood banks. The class of people who have made these hidden thousands available for enterprise are not in a position to know the strength of the bank to which they entrust their savings. Therefore protect them. It is the rule, almost without exception, that money lost in bank failures is lost by those who can least afford loss. The active man of business is seldom caught by a bank failure, and when he is, application of the law of offset usually gives him his credit balance as part payment of money borrowed. The money upon which our business life depends is provided by the comparatively poor. If we would continue the trusted guardians of the billions, of the millions we must prove ourselves worthy of trust. Public confidence is the measure of our capacity for financing enterprise. Therefore, when we submit to laws, to regulations, imposed upon us for the protection of depositors, we do but protect ourselves. Laws and regulations safeguarding the interests of depositors should be welcomed—no, more than that, should be demanded by the banking interests and by general business interests as well. The banks cannot hope for maximum public confidence unless danger of loss through bank failure is reduced to a minimum.

Compulsory incorporation, bringing all places for deposits under public supervision, should be strongly advocated by bankers as evidence of good faith. Every banking institution should be examined at least twice a year. These examinations should be made chiefly to test solvency. Surface examinations accomplish nothing. Sound banks make no attempt to conceal technical violations of law. Every man who has had experience as an examiner knows that the most rotten banks show the most correct surfaces. Therefore, the good banks are criticised and bad banks praised, unless the examiners get beneath the surface. If I were to examine a bank now I think I would begin by investigating the methods employed. If I found a system in use which rendered wrongdoing practically impossible without collusion between two or more persons, I would devote no more time to the accounts than a surface checking would require. I would look for error, not crime. But if I found a system inviting crookedness, a system without safeguard, I would call the board of directors together, present the facts to them, and have it then and there determined whether the negligence of the officers evidenced stupid ignorance or intelligent purpose to loot the bank. In either case the officers should be removed. The examiner, backed by his chief, should insist upon their removal. Frankly, I suspect the honesty of a bank officer who favors a bank system devoid of proper checks and safeguards. The banker with right instincts will adopt a system that will as nearly as possible render it impossible for him to commit a crime. And the wise board of directors, instead of making examinations which leave them at their completion as ignorant of the true condition of the bank as they were at the beginning, would do well to have for the main object of their investigation the discovery of methods of doing business, the system of accounting adopted by their executive officers. If they find lax methods, lax system, they will make no mistake if they discharge the official responsible. They will be removing either a fool or a crook. Fire your fool before some stupid blunder results in staggering loss. Fire your crook before he has opportunity to loot. If he is too quick for you, do not let maudlin sympathy influence you to help him escape just punishment.

The most sacred trust conceivable is confined to the custodians of bank and life insurance funds. The men charged with the duty of selecting these custodians should be actuated by highest motives in making their selections. They should be as certain of the ability and honesty of the men chosen as methods of investigation within human reach permit. Executive management of banks or life insurance companies should be entrusted to neither blunderer nor plunderer. It is true, no matter what precautions may be taken, there will be betrayal of trust. That we cannot prevent. But we can make it most difficult to misuse trust funds. We can make detection reasonably swift and sure. And we can make punishment of the discovered criminal absolutely swift and sure and appallingly drastic. These much-to-be-desired ends might be, I believe can be, accomplished by National supervision of life insurance companies—by compulsory incorporation of banks—by thorough examination of both by thoroughly competent examiners, whose compensation shall be fixed and adequate—by healthy public sentiment favoring speedy and most severe punishment of the betrayers of trust.

But above all things else, we are ready for the suppression of domestic violence. What if our pockets are safe if our bodies are in constant jeopardy? After all, the highest duty of government is the maintenance of order. If it fails in this, then there is no excuse for its existence. A government that seemingly does not rebuke lawlessness, certainly does not punish lawlessness if committed in the name of organization, is a failure, and should pass into history as an unsuccessful experiment. When we see our public officials according mob leaders the rights of belligerents, negotiating with them for peace as with a rival power, we almost despair of free government.

There is little temporizing with individual law-breakers, but organized violators of law may maim and kill without fear of effective interference. Little wonder that mob leaders have no fear of law, no respect for official authority. A permit giving free use of our streets issued by a mob leader, affords complete protection. A Federal court order, issued by lawful authority, with the same end in view, invites attack upon the holder, and places his very life in peril.

Ninety per cent. of the members of organizations, whether capital or labor, would be free, would be independent, if they dared. The threat of physical violence, the threat of financial ruin, holds them in subjection. They realize the sad truth that organization gives them a measure of protection that our lawful authorities either cannot or will not give.

Is it possible our Government has ceased to be a government of all the people, by all the people, for all the people? Has it become a government of organizations, by organizations, for organizations? For the time, perhaps, but lawlessness and disorder cannot long prevail among this liberty-loving people. Life, liberty and the pursuit of happiness are the inalienable rights of every citizen. And soon or late the majority will awake and destroy the small minority who would deprive us of those rights. Though the permitted lawlessness of the minority may give us fear that we are drifting into anarchy, we may have an abiding faith that this Government will grow no weaker. It is at its lowest ebb in the exercise of its police function. The danger is that, moved to desperation by the violence of the lawless minority, we may demand and insist upon a form of government not in accord with the democratic idea. I say to the lawless you cannot permanently weaken our government, but you may give it greater strength than the law-abiding themselves would wish. Even now we hear important citizens in confidential private conversation express the fear that free government is a failure. But no recreant public officer, clothed with a little brief authority, which he fails to use for the upholding of the law and the putting down of disorder, can make me lose faith in this people or in democratic institutions. A recreant public official can be disposed of in many ways. We may rest content that officially condoned lawlessness will always reach a point where the law-abiding will themselves violate the law that the law may be enforced. And the recreant official should bear it well in mind that when the law-abiding are aroused he will be among those also hung. And let the mob leader never forget that the discriminating majority will know whom to punish. Mob violence would not last a minute if the leader were promptly and properly disposed of. The majority know this and will act accordingly.

I confess to a sincere belief in the fundamental principle of our Government, that governments obtain their just powers from the consent of the governed, and, further, that it is within the rights of the majority of the people "to alter or to abolish it, and to institute a new government, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety or happiness." Still further, I believe in the right of the majority to suspend the Government if that be necessary, and to enforce the law, to preserve order by what means may seem best, whenever public officials betray their trust.

And the first man they hung was the judge. If all our lenient judges and other complacent officials were to read carefully the history of vigilante days in California and Montana it might not be necessary to dispose of any judges or sheriffs or other officials to end this present reign of lawlessness. Indeed, those pages narrating the deeds of the vigilantes teach a wholesome lesson. If its significance were understood by timid or recreant officials there would be no lawlessness. For then, in fear of the just wrath of an aroused majority, if for no higher motive, they would enforce the law. And if our laws were rigidly enforced there would be no mob violence.

I firmly believe, despite apparent evidence to the contrary, that we are progressing toward peace and quiet at home and abroad. I am sincerely confident, not only is peace coming within the homes of nations, but peace is coming between the nations as well. There is a force working to this end whose influence cannot be overestimated—it is wealth. The distribution of wealth goes on apace. The vast majority of our peoples are now sharing in this distribution. The number possessing in some measure some form of wealth is constantly increasing. This is said with full knowledge of the generally accepted theory that wealth is in process of concentration. The control of wealth is in process of concentration, but ownership is in process of dissemination. Under modern methods of financing great undertakings minority ownership of all our enterprises is very widely scattered. The stocks and bonds of our great corporations are in the hands of a multitude of small investors. These are beginning to realize that an attack on the enterprise in which their little savings are ventured is an attack upon themselves and affects not only their incomes, but the selling value of their securities as well. No man who has money saved, or hopes to save money, whether he has invested it or banked it, or hopes to invest or bank it, can escape paying his share of the cost of every domestic upheaval that gives pause to progress. Soon or late there will come universal realization of the cost, and true public sentiment will then give itself voice and the authorities will heed. A public official desires public approval. Therefore, show him that the majority favors the suppression of domestic violence and you will be surprised how quickly domestic violence will be suppressed.

The time is close at hand when the law-abiding majority will assert itself. As the number of people who in some measure possess some form of wealth increases, so will the desire for peace at home and peace abroad. Possession conservatizes. It awakens a sense of responsibility. Responsibility tempers thought, expression, action. Give a socialist a house and lot; and he becomes a defender of property rights. Give an anarchist a public position, and he becomes an advocate of government. Give a citizen a government bond and his patriotism becomes intensified. Possession is the greatest of all the influences working for a higher and better civilization. It is the chief promoter of peace. Every normal man possesses something, if no more than the right to earn a living. Riot and disorder decrease not only the value of property, but the value of labor as well. Neither demand for property nor demand for labor will exist in a lawless community. Therefore, all men, all women, have financial interest in the maintenance of law and order. When all other appeals fail, the appeal of the dollar is potent.

The young man talks with pleasure,
  The old man talks with ease,
The lawyer talks as some men walk,
  Six days, go as you please.
The preacher talks of sin and things,
  Of hell's eternal fury;
The lawyer hurls his jawbone
  At a mad but helpless jury.
And each one talks and talks,
  Each of his talk the proudest,
All unmindful of the painful fact,
  The dollar talks the loudest.

The influence of the dollar is not all bad. True, it is responsible for much of the wickedness in the world. It is responsible for graft; it is responsible for high finance. The dollar is responsible for the figure-mad banker seeking personal prestige and increased salary value at the expense of his shareholders, and it is responsible for the money-mad speculative plunger chasing millions at the risk of his creditors. Its enticing call has lured men and women to destruction, moral, physical, financial. I am not blunt enough nor have I time enough to mention even a modicum of the evil it has wrought.

But this is the dark side of the picture. There is another side, a more pleasing side. The influence of the dollar has brought us more of good than of evil. In its quest new worlds have been discovered. The way has been blazed for the cross, for commerce, for civilization. Through its agency forests have been leveled, deserts watered, marshes drained, canyons have been bridged and mountains bored. The dollar is the open sesame that calls from the bowels of the earth its hidden treasure. In art, in science, the influence of the dollar is ever potent. It has developed the genius of the inventor, giving us material advantages not dreamed of by our sires. It has discovered for the use of man the most secret forces of nature. It has annihilated distance, making neighbors of antipodes. And to-day its influence is at work to bring us the greatest of all boons—peace. The financial interest of all our citizens in the growth and prosperity of our country and in the growth and prosperity of every enterprise conducted within its borders, will bring peace to us at home. And in the greater field of world politics the influence of the dollar is silently, slowly, but surely, lifting us to a higher civilization. The interchange of government bond investments between the peoples of the nations of the world will bring peace to the world. Nations will not war upon each other when every shot will weaken the security upon which the investments of their citizens are based. Exchange of investments will prevent exchange of shots.

Domestic peace will come through realization of individual financial interest in domestic enterprise. Peace will come to the world, not through the bond of brotherhood, but through the brotherhood of bonds. Peace will come within the nations and between the nations at the call of the dollar.

President Sabin: We shall now be favored with an address by Hon. James M. Beck, of New York city, whom I now take pleasure in introducing.

"Moneyphobia"; or Lawsonism.—Address of Hon. James M. Beck.

The signs of the times indicate a growing feeling of social discontent, which finds its chief expression in the indiscriminate abuse of wealth. Apart from the baser passion of class hatred, there is now in progress a searching inquiry in the great court of public opinion as to the ethical significance of money and money making. The presses are groaning under the weight of books and periodicals, whose chief purpose is to discuss the ethics of the dollar. Demagogues are making frenzied appeals to popular passion to proclaim a new crusade against property. One notorious agitator—in cunning knavery, a John Law, and, in picturesque diction, a Beaumarchais—is now frantically calling upon the masses to withdraw simultaneously all their bank deposits and sell all except governmental securities, with full consciousness that his appeal, if heeded, would produce a world-wide financial cataclysm. Fortunately, the common sense of the American people classes him with the Coxeys, Carrie Nations and other freaks, who amuse but do not convince the law-abiding masses.

The agitation, however, is not confined to the ignorant, the envious or the malicious. The recent commencement session unmistakably indicated that educated men are disinterestedly considering the phenomena of business in their moral aspects. Their deliverances teem with woeful jeremiads at the evil of the times and the decay of morals.

The underlying causes of the present agitation are complex and conflicting. Its net effect will probably be for good, for in an age of overshadowing materialism, the great ethical considerations which underlie all social questions cannot be too carefully or frequently considered. A distinguished French publicist, who visited our shores, has remarked that in America socialistic ideas are not as in Europe a philosophy and at times a religion, but spring from the vulgar passion of class jealousy. He has, I believe, misunderstood American character. While such a feeling may animate some of the baser sort, they are in a pitiful minority. There is little of the Jack Cade spirit among our people, and the average American, far from regarding success with envy, both admires and emulates it. His worst fault is to overvalue it. The soldiers in the ranks of the industrial army admiringly applaud the captains of industry, who lead them to great constructive achievements. The common sense of the American people appreciates that in the "career open to talent," which our institutions are designed to secure, great fortunes are inevitable. The American appreciates that equality of legal opportunity necessarily means inequality of result. The swift will always outrun the slow, the strong will always surpass the weak. With marvelous national resources and a rapidly expanding national development, it is inevitable that great constructive achievements should carry rewards of corresponding magnitude. Indiscriminate attacks, therefore, upon the rapidity with which great fortunes are won, are often attacks upon the right of the captain of industry to secure a result in proportion to his superior skill. Such a spirit is un-American, for it assails the basic principle of our institutions, which never has and never will place any limit upon constructive achievement. "Thus far and no further" is not written in American character.

Primarily—at least among the conscientious critics of the times—the present discontent is due to a profound dissatisfaction with the code of commercial morals. Abuses of trust have run riot. They are not, as I believe, due to the fact that men are essentially less honest than previous generations, but in part to the intoxication that inevitably marked the most rapid and extraordinary period of commercial expansion that the world has ever known, and also to the artificial character of our commercial machinery. The complex subdivision of social office has caused a certain diffusion, and, therefore, weakening of moral responsibility. That artificial creation of the law—the corporation—with the legal fiction that it is a moral personality, has been a Pandora box, from which infinite good and evil have proceeded. A corporation with many thousand stockholders does an act, which benefits itself while injuring the public, but the sense of individual responsibility of each stockholder for the wrong done becomes so attenuated as to lose any appreciable existence, while its officers, who, in whole or part, are directly responsible, are too apt to feel that, as trustees for the stockholders, they must subordinate their personal views of what is right or wrong to the welfare of the corporation. The surpassing difficulty of adapting this mighty instrumentality of civilization to the moral needs of the age must be apparent. The solution of this problem surpasses all others in importance. Its just solution will require dispassionate consideration, not intemperate agitation.

Apart from this commendable intolerance of unquestioned abuses, the present agitation has in part its origin in less worthy considerations. It results in part from the clash of ideals. A narrow spirit of literary dilettanteism to some extent inspires it. The aesthetic world, with its immense over-valuation of its own sphere of activity, is at war with the practical. It cannot reconcile itself to the present extraordinary and overshadowing development of industrialism. The dominance of commerce in the thoughts and activities of men has aroused the antagonism of many educated men, who see in its machine-like organization the annihilation of the individual. An attitude of cynical contempt has generally marked the men of learning, so-called, for the men in trade.

John Ruskin, in making an address at Bradford on the occasion of the dedication of a commercial exchange, deliberately flouted his audience, by asserting that it was impossible for merchants to have any noble form of architecture because business was ignoble. He bitterly complained that the deity of the time was Minerva Agoria or Minerva of the market-place.

This literary dilettanteism is in part inspired by the military ideas of other ages produced by centuries of continuous armed conflict. Even so philosophical a speaker and so ardent a lover of the ideal as Edmund Burke mistakenly lamented the passing of a decadent feudalism, when in that beautiful apostrophe to Marie Antoinette he said, "the age of chivalry is gone and that of economists and calculators has set in and the glory of Europe has departed." He strangely failed to perceive that a better day was dawning and that the courtiers of the voluptuous court of Versailles were not worthy to unloosen the shoe latchets of the "economists and calculators" like Adam Smith, whose "Wealth of Nations" was even then challenging the attention of the world.

Moreover, we are still influenced by the narrow and mistaken view that the religious philosophers of the early Christian era took of money. The man who "took a breed of barren metal from his friend" was an oppressor. As late as Bacon's time, that great philosopher expressed the opinion that "usury" (thereby meaning any rate of interest) "dulls and damps all industries, improvements and inventions." To massacre money-lenders was the mediaeval method of going through bankruptcy.

Said Dr. Johnson to his faithful Boswell, "avoid cant," and we of this generation should take the doctor's advice and give over this pitiful cant about the dollar. It is simply a certified check upon the bank of civilization for a proportionate share of its accumulations. To be prejudiced against wealth because of its misuse by the individual is a childish absurdity. No man can acquire wealth by honest methods without becoming serviceable to his fellow man, for in the very acquisition of money the adaptation of our energies to the social machinery of modern life is a necessary incident. Legitimate money-making necessarily involves human service, and every multi-millionaire, who has amassed his fortune by constructive achievement, such as the building of railroads or development of mines, has in a far greater degree enriched the public.

No error is more common than that which imputes to the American people or to this generation an inordinate love of money-making, unless it be the graver error that modern industrialism has debauched human society and that we are worse than our fathers. Every adverse comment that the ultra pessimists can make of this generation can be applied with infinitely greater force to preceding ones, and I do not exclude the epic period of our national life. The evils which exist now existed then; but on the credit side of the ledger what immeasurable intellectual and moral progress distinguish this industrial age!

Is the struggle for wealth greater to-day than before? Are men the slaves of business that they once were? On the contrary, men of other generations worked harder to secure less, and the cultivated relaxation of the modern financier was wholly unknown to them. Girard, the typical banker of an earlier generation, spent his whole life in harness, never taking a vacation, and at eighty he was still groping with blinded vision across the threshold of his bank and feebly feeling for the hands of the door. "If I knew I were to die to-morrow," he once said, "I would plant a tree nevertheless to-day." "Immemor sepulchri" was the spirit of the business men of other generations. To-day we find many business men who not only give but a limited portion of time to business, but voluntarily retire early in life with a competence. No charge is more false than that we are a money-loving people. No people of any time or clime ever cared less for money when earned than we. Prodigality of expenditure rather than a narrow desire to hoard unnecessary wealth is the distinguishing characteristic of the average American. If he has a strong purpose and an earnest desire to amass wealth, it is in most cases because money is the necessary material for further constructive work. To achieve rather than to acquire is his ambition. We undoubtedly seek larger fortunes than our fathers, but this is not only due to our larger needs, caused by a more complicated and refined civilization, but also and principally to a finer recognition of our moral responsibility towards those dependent upon us. Life insurance—largely the development of the nineteenth century—conclusively proves the existence in our time of a more conscientious and altruistic husbandry of resources for the benefit of others than in any previous age.

That industrialism has not degraded the moral nature of man can only be determined by comparing the ideals of human character as set forth in the literature of other periods than ours. Thus the great heroes of our Colonial ancestors were the pleasure-loving gallants of Fielding, Smollett and Congreve, whose chief exploits and pursuits were in the drawing room, the dueling field or the card table. Honest industry as an ideal of life never seemed to have occurred to our great great grandfathers. Tom Jones was their hero, who, if in the flesh to-day, would be socially ostracized by respectable society.

Unquestionably the spirit of business enterprise often leads men into excesses. In the great gamble of fluctuating values men frequently sink to the level of the gambler, but the gambling spirit is not nearly so rife to-day as it was in the eighteenth century. Much that is now called speculation is not a mere wager upon ascertainable hazards, but is a highly scientific adaptation of the present to the probable, and as such calls into exercise the intellectual facilities of analysis and deduction.

In the eighteenth century, however, gambling was not a scientific adjustment of future conditions, but the idlest and most mischievous form of wagering upon pure chance. Policies of insurance now condemned as immoral were at that time issued in great numbers upon the most extraordinary hazards. Clergymen utilized lotteries to build places of worship.

The entire edifice of the commercial world rests upon fair dealing. The true capital of the banker is confidence. His nominal capital is a mere concession to public opinion. There are unquestionably broken contracts, but their number is infinitesimal in comparison with the many that are kept with scrupulous fidelity. Despite an enormous expansion of business activity there was never so little litigation over broken contracts. We hear in these days of many defalcations and breaches of trust, but we must remember that the means of publicity are a thousandfold greater than ever before and that the opportunities for such recreancy are a thousandfold greater than in any other age. There are more faithless bank clerks because there are more bank clerks, but how few are the faithless in comparison with the faithful! Nor need we fear the final test as to whether commercialism deadens that spirit of true chivalry, which is faithful to a noble idea, "even unto death." The four great commercial nations of our time are England, the United States, Germany and Japan. Within the present generation each has engaged in a mortal struggle, and each has shown that the finest soldiers may be recruited from the counting-room and shop, and from the field and farm.

PRESIDENT SABIN: Nominations are now in order for president for the ensuing year.

CHARLES ELLIOTT WARREN: It affords me very great pleasure, on behalf of Group VIII, to nominate for president of the association, Mr. Alfred H. Curtis, now vice-president of the association.

EUGENE SATTERLEE: On behalf of Group II, which I may say as a matter of geographical interest, represents the rich and prosperous valley of the Genessee and the metropolitan city of Rochester, I am pleased to second the nomination of Mr. Curtis. We know of his long and laborious efforts on behalf of this association, and we are pleased to most emphatically and enthusiastically second his nomination.

F. E. LYFORD: Group III desires to add its congratulation to the association in the nomination just made of Mr. Alfred H. Curtis for president.

F. B. POST: Group VI takes pleasure in seconding the nomination of Mr. Curtis.

E. S. TEFFT: Group IV desires also to second the nomination of Mr. Curtis.

F. E. HOWE: Group V also takes pleasure in seconding Mr. Curtis' nomination.

S. M. GRISWOLD: Group VII heartily seconds Mr. Curtis' nomination.

PRESIDENT SABIN: Nominations for vice-presidents are now in order.

E. J. NEWELL: On behalf of Group I, I desire to nominate for vice-president of the association Mr. E. C. McDougal, President of the Bank of Buffalo.

M. S. SANFORD: Group II takes pleasure in seconding the nomination of Mr. McDougal.

F. E. LYFORD: Group III desires also to express its pleasure in the opportunity given it to second the nomination of Mr. McDougal.

E. S. TEFFT: Group IV takes pleasure in seconding Mr. McDougal's nomination.

F. E. HOWE: And Group V likewise.

F. B. POST: Group VI desires to be recorded as seconding the nomination of Mr. McDougal.

S. M. GRISWOLD: Group VII heartily seconds the nomination of Mr. McDougal.

CHARLES ELLIOTT WARREN: Group VIII seconds the nomination of Mr. McDougal.

PRESIDENT SABIN: Nominations for secretary are next in order.

E. J. NEWELL: Group I gives way to Group III for the purpose of making the nomination.

F. E. LYFORD: Group III nominates Mr. E. O. Eldredge for secretary. We know that he will give good service because he has done so in the past.

E. S. TEFFT: Group IV heartily seconds the nomination of Mr. Eldredge.

F. E. HOWE: Group V takes pleasure in seconding the nomination of Mr. Eldredge.

F. B. POST: Group VI is very glad to second the nomination of Mr. Eldredge.

S. M. GRISWOLD: Group VII takes very great pleasure in seconding the nomination of Mr. Eldredge.

CHARLES ELLIOTT WARREN: On behalf of Group VIII I am pleased to second the nomination for secretary of Mr. Eldredge.

PRESIDENT SABIN: Now nominations are in order for treasurer.

E. J. NEWELL: Group I will yield the floor to Group VI.

F. B. POST: On behalf of Group VI, I desire to nominate for treasurer Mr. David Cromwell.

S. M. GRISWOLD: I second the nomination of Mr. Cromwell.

CHARLES ELLIOTT WARREN: Group VIII also seconds the nomination of Mr. Cromwell for treasurer.

PRESIDENT SABIN: The nominations are complete, and I believe this concludes the business allotted on the programme for to-day.

I therefore declare the convention adjourned until 10 o'clock to-morrow morning.

SECOND DAY'S PROCEEDINGS.

PRESIDENT SABIN: The first order of business this morning will be reports of committees. First I will call for a report from the committee on legislation.

HENRY DIMSE: It seems that there is no report from the committee on legislation, but there are two points which I think should be brought before that committee for its consideration. In the early part of this year the Merchants' Association of New York recommended the passage of an amendment to Section 344 of the Penal Code which would strengthen very much the relations between merchants buying and selling goods with each other. The district attorney of New York took a great interest in the matter, owing to the fact that he found it was almost impossible to procure an indictment against an individual who had purchased goods under false pretenses. The section was rather short, and, as it had been passed it had been very much enlarged by beginning with the words "that in the purchase of goods," etc., the merchant must produce his books within a certain period if their inspection was demanded by the merchant selling the goods in case he should default in payment.

When that bill was presented to me on behalf of the Merchants' Association I noticed that there was nothing in the article which would cover the banks and I suggested that they should add to the words in the purchase of goods "and in the obtaining of credit." The attorney for the association at that time said to me: "Mr. Dimse, if you will let this bill go through as it is drawn when it gets into the committee on codes at Albany we will be able to fix that very easily, but if you come in with an interlineation of that kind, in all probability it might interfere with having the section amended." So I said I would not interfere, and I went to Albany with the committee later, and I know the hard work that they had in having that section passed. Now, that bill has been passed.

A few weeks ago the Merchants' Association, knowing that they had met with such good success, invited Mr. Jerome to Delmonico's to dinner, and after dinner I had a talk with him and I said: "Mr. Jerome, we did not interfere with this bill, but now where does the banker come in?" He said: "Why, Mr. Dimse, you banks of New York have it all your own way." I said: "That sounds very well, but it was only a short time ago that one or two bankers in New York that had loaned money to some merchants who had gone to the wall, came to you and wanted to have the men indicted, and you told them that in order to procure an indictment they must prove something." "Now," I said, "it is up to you to do something for the banks, and what we would suggest is an amendment to the section providing that any person obtaining money under false pretenses commits a felony." He said: "You banks have got it all your own way." I said: "Why didn't you say that before the bill was introduced."

Now, I think that the committee on legislation should look into those two sections, and if possible have some amendment passed at the next session of the Legislature in order to protect the banks so that there will be no ambiguity in the section that the banks expect to be covered.

There is another matter that I want to bring before you, and that is in relation to the bill which was passed at the end of the session a year ago, which went into operation last September, and that is the amendment to the Negotiable Instruments Law. It relates to forged endorsements ostensibly, but in reality it only has application to forged signatures. If you will read that amendment very closely and interpret it as I have had it interpreted by counsel, owing to the fact that several bankers have asked me my opinion about it, you will find that the amendment does not in any way affect forged endorsements. We as bankers all know that when we pay checks the signatures to which are forged that we of course are liable, but when it comes to the question of a forged endorsement we should have that section of the Negotiable Instruments Law so amended that it will impose upon the depositor or the person from whom we receive a check with a forged endorsement that he shall make a claim for the payment of the forged paper within one year. I think that would be a good thing for the banker.

In my opinion, gentlemen, these are two good points that our committee on legislation should take up.

PRESIDENT SABIN: Is the committee on revision of statement forms ready to report?

JAMES G. CANNON: As chairman of the special committee which was appointed by the council of administration, I beg leave to make the following report in the matter of a uniform statement blank. I might say in presenting this report that I believe the committee do not think that this statement which we present is absolutely perfect, and we shall be very glad of any suggestions which may be made here as to anything that we can add to it.

REPORT OF COMMITTEE ON REVISION OF STATEMENT FORMS.

New York, July 5, 1905.

To the Executive Council of the New York State Bankers' Association:

Gentlemen—The undersigned were appointed by your honorable body to serve as a committee to devise new forms for property statement blanks.

Owing to the highly technical nature of the work necessary to be done prior to the completion of new forms, the committee have not held stated meetings, but have pursued their labors through Mr. M. E. Evans, who has served in the capacity of secretary to the committee.

Forms in use by various banks, both those which are members of this association, and others, have been carefully studied and compared.

The forms devised by other associations of banks and of credit men have been given careful consideration in arriving at the conclusions which the committee are prepared to submit to the council.

The standard forms now in use by this association may be considered to be the basic form, which has served to mold most of the forms devised by public and private bodies during these recent years of development in credit affairs.

No small part of the labors of the committee have been to determine wisely what changes, if any, are now called for in this form. In general, the committee believe they righly interpret the general feeling of the members of the association in the following conclusions:

First. The standard form should be as simple as possible.

Second. The standard form should ask for only such information as is practicable for the business man to furnish and such as is valuable in determining credit.

Third. The blank should be in form and substance one which will not discourage but encourage its general use.

With these general conclusions in mind, a careful study was made of the particular questions to be asked and of their suitable arrangement on the form.

Legal advice was taken in the preparation of these recommendations, to be sure that no legal advantages were given over which were consistent with the principle that "to get information from a man do not try first to tie him up in a legal bow-knot."

The forms, of which printed copies accompany this report, have been prepared for corporations and firms, and the committee respectfully recommend to the council that the same be presented to the association for consideration.

We further recommend that the secretary be authorized to arrange with some competent printing establishment to furnish these forms to members of the association, on requisition of the secretary, at a tariff to cover cost for printing in the name of the bank.

By this means uniformity will result and the secretary will be relieved from carrying a large stock of forms.

Respectfully submitted,
Signed: J. G. CANNON,
LEWIS E. PIERSON,
STEPHEN M. GRISWOLD, Committee.

I might say that in this second form in reading the proof the heading was inadvertently left off, but the heading will be the same as in the standard form.

We offer these forms for adoption.

PRESIDENT SABIN: Gentlemen, you have heard the report of your committee. What is your pleasure in respect to it?

F. H. HAMLIN: I move that the report be accepted and adopted.

W. B. ROYCE: I would like to make one little suggestion. If you will notice the heading of this report it says, "For the purpose of procuring credit from time to time with you for our negotiable paper or otherwise, we furnish the following as a true and accurate statement of our financial condition on the blank date, which you are to consider as continuing to be full and accurate unless notice of change is given you."

You will see that there is no agreement on the part of the borrower there as to guaranteeing the truth of that statement, and the trouble about obtaining conviction on these forms is that a creditor would come into court and say, "Why, when I made that statement it was absolutely correct, but matters have changed." Now, the point to be reached is that the creditor shall make a continuing agreement—possibly something on the line of continuing collateral securities or mortgages. If I may be permitted I would make this suggestion: That right after the date these or similar words be inserted:

We (or I) agree shall be considered by us (or me) and received by you as continuing to be a true and accurate statement of our (or my) financial condition until notice in writing of a change is given to you by the undersigned.

There is a direct agreement on the part of the creditor that the paper that he files with you shall be a statement, not on the date made alone, but any remote date when he comes to your bank to borrow money. I think if that were incorporated in this statement form it would come pretty near holding the man. It seems to me that a direct statement or agreement on the part of the borrower of that kind will go just as far towards holding him as is possible without some special legislation. I simply throw out this suggestion and leave it to the convention to determine whether it is not wise to act upon it.

President Sabin: What do you say to the suggestion, Mr. Cannon?

Mr. Cannon: I think, sir, that there is no objection to it. I think the suggestion made by the gentleman is a good one.

Mr. Lyford: I would inquire if any one is sure that a continuous agreement of that kind would hold in law? Can a man make a statement to-day that will hold three months from to-day when his conditions may have changed?

President Sabin: I should doubt it very much myself.

Mr. Lyford: It might be well to put in there the suggestion made by the gentleman from Middletown, although I am afraid it would not hold legally.

Mr. Royce: Would not the fraud consist in the act of coming to borrow on that statement that he had filed, stating that if any change was made he would notify you? The fraud is not in the statement, but in the agreement that he makes with you that if any change is made before coming to you to borrow again, he will give you notice. So, if he does come to borrow and has not given you notice, there is where the fraud will come in.

Mr. Hamlin: I will amend my previous motion, Mr. President, by moving that the report of the committee be received and the committee continued for the purpose of considering the suggestion that has been made.

Mr. Lyford: I second that motion as amended.

President Sabin: You have heard the motion as amended, gentlemen. All in favor of it will please signify it by saying aye; those of a contrary opinion, no. Carried.

Mr. Schlesinger: I desire to say from personal experience in regard to the headings of these statements respecting the continuation of credit, that our headings generally read that if there are any changes and the borrower fails to notify us and anything happens that we have a right to a lien upon whatever money there may be standing to the credit of the concern in the bank. We have succeeded in retaining every dollar that has been standing to the credit of a customer who owed us money, if anything happened. I think that clause at the head of the statement is a good one and should be maintained, because every time the matter has come to our notice where there has been any difficulty we have taken the money that stood to the credit of the customer and applied it to his account, and it always held good.

Mr. Lyford: I would like to ask if this last motion does not do away with the adoption of the report and postpone the time when we shall get these forms?

President Sabin: I assume not.

Mr. Hamlin: I do not understand it so. The committee will simply report with such changes as have been suggested after considering the legal aspect of the question.

President Sabin: I assume that these forms are ready now, and, if necessary, they may be changed later.

Mr. Cannon: That is so, sir.

Mr. FISHER: I think if you insert the words "with power" in the reference to the committee that will cover the suggestion.

PRESIDENT SABIN: Next in order is the report of the committee on fidelity insurance.

Mr. DIMSE: As chairman of the committee on fidelity insurance I would say that I have only held the position a very few months. The committee has worked hard and faithfully, and we offer the following report:

REPORT OF THE COMMITTEE ON FIDELITY INSURANCE.

C. H. Sabin, Esq., President, New York State Bankers' Association:

Dear Sir—At the convention held last year at Lake Champlain, questions concerning fidelity insurance were brought before the members and it was recommended that a committee be appointed to consider the following questions and report at this convention:

First.—That the secretary of this association be authorized and requested to take up the matter of insurance with the various indemnity insurance companies doing business in the State with a view to having reduced the rates charged; and

Second.—At the same time securing to this association the most complete protection in the form of policies issued.

Third.—That the policies written for the members of this association be written through the secretary of the association; and

Fourth.—That, if possible, an arrangement be made with the company with whom this business is placed that the regular agents' commission be paid our secretary, which fund shall be turned into the treasury of the association.

Your committee begs to report that communications were addressed to several surety companies writing fidelity insurance for banks in this State and from the replies and information otherwise received, your committee arrives at the following conclusion concerning the above questions:

First.—The judgment of the committee is that no uniform rate for fidelity insurance bonds can be arrived at, as the rates of the various companies are so different from each other, for reasons best known to themselves, that your committee deems it advisable to leave the question of obtaining rates with the bank desiring fidelity insurance.

Second.—Counsel was employed to examine the various bonds issued by companies writing fidelity insurance in this State; the form of fidelity bonds adopted by the American Bankers' Association was also examined; his opinion regarding the most complete protection in the form of policies issued is as follows:

"In accordance with your request we have carefully examined the forms of bond enclosed, in the light of the authorities, and, in our opinion, the form No. 3 (The American Bankers' Association), is undoubtedly the best contract for a bank to accept. Not only is the form of bond No. 3 (The American Bankers' Association) the best form, but in our opinion that form meets substantially all the requirements which are likely to arise in the ordinary transaction of banking business, with the exception of the following points to which we beg to draw your especial attention: The suggestion has been made that, inasmuch as the American Bankers' Association standard form fidelity bond has been copyrighted, it must be accepted or rejected in its entirety, and that no amendment of the form is permissible. Such an objection might be easily met, in case amendment to the form to cover the points which we have suggested were to be made, by obtaining the consent of the American Bankers' Association to the use of the amended form by the members of the State Bankers' Association.

Our views may be summarized by saying that we regard the American Bankers' Association standard form fidelity bond as the best form that has been submitted to us; that we consider it fair and sufficient for all practical purposes, and that, while the amendments, in the form which we have suggested, would, in our opinion, greatly strengthen the form of bond, none of them are vital.

Third.—Two well known surety companies writing fidelity insurance in this State, the National Surety Company and the American Surety Company, have agreed to designate the secretary of the New York State Bankers' Association, or any other person named by the association, as their agent to write fidelity bonds for all of the banks which are now or may hereafter become members of this association; and

Fourth.—The companies referred to above will also agree to pay the secretary of the New York State Bankers' Association or any other person named by this association, a commission on all fidelity bonds issued by them, or when rewritten for present or future members of this association.

In conclusion your committee recommends:

First.—That the New York State Bankers' Association enter into arrangements with the National Surety Company of New York and the American Surety Company of New York in conformity with the terms regarding the appointment of an agent to write fidelity bonds and the commission to be paid, which have been submitted to the committee on fidelity insurance; and

Second.—That when these arrangements are entered into, with those two surety companies, that all members of this association be notified that it is desirable and advantageous to this association to have all of the fidelity bonds expiring, or new fidelity bonds when written, to be obtained from these surety companies, appointing your representative their agent.

Respectfully submitted,
HENRY DIMSE, Chairman;
E. S. TEFFT,
GEO. T. MURDOCK,
WM. N. S. SANDERS,
F. B. POST, Com. on Fidelity Insurance.

PRESIDENT SABIN: What is the pleasure of the convention respecting this report?

ANDREWS S. BOOTH: I move its adoption.

SAMUEL PARKER: I second the motion.

Mr. CANNON: May I ask a question? There is nothing compulsory about this, is there?

PRESIDENT SABIN: No, sir. It is simply optional with the members. All in favor of the adoption of the report will signify it by saying aye; those opposed, no. Adopted.

Mr. DIMSE: Now, with the adoption of the report, there are one or two points which the committee considered especially as to the revenue which could be derived from this commission paid by the surety company. I understand that the Missouri State Bankers' Association has a fund of about $18,000 which has been largely derived from the commissions paid. I feel that in time to come this association will be placed in such a position that it will be able to reduce the amount of fees which some of the smaller banks raise issue about at the present time. I therefore offer the following resolution:

Resolved, That the secretary of this association be authorized to employ counsel to prepare the agreement to be entered into with the surety companies referred to in the report of the committee on fidelity insurance;

Resolved, secondly, that the secretary be designated in the agreement as the agent of this association, and that he be hereby authorized to employ a clerk to assist in this work or otherwise, the salary of such clerk to be paid by the treasurer from the commissions received from the surety companies.

PRESIDENT SABIN: Gentlemen, what is the pleasure of the convention in respect to this resolution?

PHILIP F. SWART: I move its adoption.

Mr. SCHLESINGER: Should there not be a limit placed upon the amount of compensation to be allowed by the secretary to this clerk?

PRESIDENT SABIN: It seems to me that matter may very properly be left to the discretion of the secretary.

Mr. HAMLIN: I would suggest that it be left in the hands of the council of administration.

Mr. DIMSE: I accept that suggestion.

PRESIDENT SABIN: Then the question will be put upon the resolution, as amended. All in favor of its adoption will please signify it by saying aye; those of a contrary opinion no. Adopted.

The committee on National bank legislation—is there any report from that committee? I understand there is not, as the chairman of the committee is not present.

HIRAM R. SMITH: Mr. President, at what time will it be proper for the association to consider the resolution which I handed in to the council of administration?

PRESIDENT SABIN: That will come up under the head of new business.

Gentlemen, I take great pleasure in now introducing to you Mr. John R. Van Wormer, of New York, who will address us upon the subject, "Is This Country in Danger of Becoming Socialistic?"

IS THIS COUNTRY IN DANGER OF BECOMING SOCIALISTIC?—ADDRESS OF JOHN R. VAN WORMER.

From time immemorial the banker has been the adviser and best friend of his customer. With the lapse of time, the advance of civilization and the tremendous increase of industrial transactions throughout the world, the calling of the banker has appreciated vastly in importance. From force of circumstances, as well as for a variety of other reasons, he must needs become a many-sided man, alert each day to discover "some new thing" pertaining to the welfare of his business and of the community in which he lives. Never before was this truer than it is to-day. Whenever unrest and dissatisfaction exist the banker is among the first to discover the fact. The nature of his business develops in him caution, conservatism and foresight. In short, he is a natural advocate and promoter of whatever makes for the improvement of business and society, and he sets his face like flint against whatever tends toward disintegration and demoralization. Among other things, the banker should be deeply interested in the latest manifestations of socialism, because, as a good business man and a good citizen, his services will be needed in the near future more than they ever were at any previous time in combating some of the seductive fallacies of this, with some people, panacea for all the ills to which the body politic is heir.

There is doubt in many minds as to what constitutes the doctrine of socialism; what its present status is and in what way its advocates propose to substitute it for the established order of things. It is worth while to keep in mind the respects in which socialism differs from communism, from anarchism, from nihilism, or from any other of the isms that threaten to disturb the existing conditions of society and of the government. Let us strive to find the best obtainable definition of the principal "isms" and then contemplate the condition of things which would ensue were the theories of their extreme advocates put into operation and substituted for the present social order.

The Century Dictionary defines "communism" as follows: 1. An economic system "or theory which rests upon total or partial abolition of the right of private property, actual ownership being ascribed to the community as a whole or to the State. The right of the State to control the means of production, and also the distribution and consumption of the products of industry, is in general especially emphasized by the advocates of the theory. In some communistic schemes the right of the individual to the control of his own labor is also denied, each one being required to do that which is most advantageous to the community as a whole. Such theories, differing in details, have frequently been advanced, by Plato in his 'Republic,' by Sir Thomas More in his 'Utopia,' and in recent times by many writers, and have not infrequently been carried into execution on a small scale, as in the Oneida Community. The Oneida Community, a religious society or brotherhood, the Bible Communists or Perfectionists, was established in 1847 on Oneida creek in Lenox township, Madison county, N. Y., by John H. Noyes, after unsuccessful attempts to establish it at New Haven, Conn., in 1834, and at Putney, Vt., in 1837. A branch of the Oneida Community also existed at Wallingford, Conn., but it has been withdrawn. Originally the Oneida Community was strictly communistic, all property and all children belonging primarily to the society, and the restriction of marriage being entirely abolished; but in 1879, owing to the increasing demand of public opinion that the social practices of the societies should be abandoned, marriage and family life were introduced, and in 1880 communism of property gave place to a joint-stock system and the community was legally incorporated as the Oneida Community Limited."

Fourierism.—The communistic system propounded by the French socialist, Charles Fourier (1772-1837), based on his philosophy of the passions and affections. According to his plan, society was to be organized into phalanxes, or associations united by the principles of attraction, each large enough for all industrial and social requirements (estimated at about 1,800), arranged in groups according to occupations, capacities and attractions, living in phalansteries or common dwellings, and guaranteeing to every member the means of self-support, or maintenance under disability, and opportunities for the harmonious development of all his faculties and tastes. Several philansteries were established in France and the United States; but it was not found practicable to carry out his plans fully in any of them, and their existence was brief.

John Stuart Mill, the political economist, says: "Fourierism was brought to America about 1840, and soon found numerous advocates, including many names of which America is proud." This refers to what was known in its day as the "Brook Farm" experiment at Roxbury, Mass., in 1841-1845. It was a socialistic movement entered into by some distinguished American gentlemen who thought that Fourierism could be adopted with advantage by all civilized people. The experiment failed, however, as property held in common was not adequately represented, and as too many faces constantly at one board and around one hearthstone tended to destroy the sanctity of private life, obliterate family life, etc. Interest attached to this unique departure chiefly because among those identified with the movement were Hawthorne, Charles A. Dana, Albert Brisbane, Parke Godwin and Margaret Fuller. Emerson, Lowell, Thoreau, Longfellow, Whittier, Channing and Higginson were sympathizers. Forty years ago, and even later, not a little quiet fun was poked at Horace Greeley on account of his early leaning toward Fourierism.

Christian socialism is defined as a doctrine of somewhat socialistic tendency, which sprang up in England about 1850, and flourished under the leadership of Charles Kingsley, Frederick D. Morris, Thomas Hughes and others. The main contentions of its advocates were: First, that Christianity should be directly applied to the ordinary business of life, and that in view of this the present system of competition should give place to co-operative associations, both productive and distributive, where all might work together, as brothers; second, that any outer change of the laborious life, as aimed at in most socialistic schemes, would not suffice to settle the labor question, but there must be an inner change brought about by education and elevation of character, especially through Christianity, and, third that the aid of the State should not be invoked further than to remove all hostile legislation. A similar scheme appeared somewhat earlier in France. The doctrines of Christian socialism, or similar doctrines under the same name, have been frequently advocated in the United States.

One of the sanest and most lucid contributions to the meaning which socialism would have if applied to the situation which exists at present in the United States is made by Nicholas Paine Gilman in his book, "Socialism and the American Spirit." He says: "The 'social problem' which deeply occupies the mind and heart of our time is essentially the issue between individualism and socialism. Are the two reconcilable or must one be preferred to the other by progressive races? Voices are not wanting to tell us that there is no half-way house between State socialism and anarchy—between an enormous extension of the functions of the State on one hand and a virtual abolition of State control on the other. The ears of them that listen are filled with the cries of extremists who unite only in denouncing the actual order, employing a rhetoric and a logic which pay little heed to reason, and a sentimentality that has small concern for the laws of economics or the fundamental realities of human nature. When they occasionally give attention to each other the socialist has little difficulty in showing that the anarchist is a sentimentalist of the future, who dreams of an impossible race of men needing no restraint, since they have arrived at perfect virtue and entire reasonableness; the anarchist has no more difficulty in demonstrating that the socialist is a sentimentalist of the present, far astray in supposing that the majority of men can safely be trusted with extreme authority over the minority.

Meanwhile the man of scientific temper cannot recognize in the ideal picture drawn by the socialist or by the anarchist a natural development for existing society. He is altogether unable to perceive why the human race should be given up to exclusive control by the principle of authority or the principle of liberty. These two principles have blended, in various degrees, throughout human history; and if to-day, as ever before, 'only law can give us freedom,' freedom only can give us law. The meliorist and the optimist must reject with decision the irrational denunciation by socialism and anarchism of the present order of things, which they declare incapable of improvement except by revolution. One may easily discover the fundamental pessimism underlying the superficial trust in human nature (in the future) professed by these two classes of extremists—those who would free mankind from all control by government, and those who would give the majority unlimited power over the minority. If human society is now so evil as to need complete transformation, after the thousands of years of life on this planet, where is the just foundation for hope that all will be well under any scheme, since this is to be administered, of necessity, by the same human nature?

The scientific spirit, on the other hand, joins with practical philanthropy in declaring a deep faith in the ability of mankind to improve its lot upon earth through the method of evolution. The development may now be conscious to a degree; reason can accelerate that 'unreasoning progress of the world' of which Wordsworth speaks; but in all probability the forward movement will be on lines already found to be practicable toward an ideal the equal of which no theorist has yet conceived."

In an authoritative work on "Socialism and Socialist" are the following pertinent observations: "In every human society, where it advances or retrogrades, modifications more or less profound are always going on, modifications which are more or less perceptible, and which, with or without the knowledge of such society, act upon its economy."

Apparently such a society remains the same; but in reality it is daily affected by changes of which it becomes entirely conscious only after time has fixed them in the habits and customs of the people, and marked them by its sanction. This is the course of civilizations which are being perfected or which are declining. The honor of a generation is to add something to the inheritance it has received, and to transmit it improved to the generation which comes after it. To employ what has been acquired as an instrument of new acquisition to advance from the verified to the known; such is the idea of progress as it presents itself to well-ordered minds.

But such is not the idea of the socialists. In their eyes the situation given is a false one and the process too simple. Reforms in detail do not seem to them worthy of attention. They have plans of their own, the first condition of which is to make a tabula rasa of everything that exists, to cast aside existing laws, manners, customs and all the guarantees of personal property. It seems to them that we have lived thus far under the empire of misconception which it is urgent should cease; our globe, according to them, is an anticipated hell, and our civilization a coarse outline only. What is the remedy? There is only one—to try the treatment of which the socialists hold the secret. There are socialists with mild remedies and socialists with violent remedies; the only difficulty is the choice. But with all their differences there is one point on which they agree—the formal condemnation of human societies as they are at present constituted, and the necessity of erecting on their ruins an order of things more conformable to the instincts of man and to his destiny here below. In exchange for our real world, the socialists offer us worlds of their fancy. This is their distinguishing trait, and one which makes of them a family apart. In this pursuit they have had so many precursors that to enumerate them would be to write the history of the adventures of the human mind. First we find Plato with the most captious of models. He invents an imaginary commodity, which Sir Thomas More reproduces in his Utopia. In both cases goods were to be in common and the fruits of labor distributed by means of arbitrary combinations. There is one formula which a certain type of socialist understands. To take from those who have in order to give to those who have not, is a concise and intelligible proposition. To reduce all positions and fortunes to a level, is one not less so. Both find in the heart of men a bad passion, which answers them.

The crudity of some American legislation which has the appearance of socialistic tendency is commented upon as follows: The prominent matter in the minds of the American legislator is, usually, the obvious public welfare for the time being. As he is not, commonly, well equipped historically or a careful student of political evolution, he is only too ready when he sees an undesirable evil to enact a law against it. Often he does not previously consider whether legislation may not even increase the evil; the proposed law may well seem to deliberate students of sociology, politics or finance, an unwarrantable interference with the natural laws of these phenomena which can only fail of its aim.

The humaneness of the American temper is largely responsible for the laws which exempt the homestead and a certain amount of personal property from attachment, thus apparently interfering to preserve the citizen from the consequences of his own recklessness or incapacity.

The interference of the government with individual rights in certain respects has become a settled fact. Witness the State inspection of stores, factories, steamers, analysis of drugs, liquors, food preparations, collection of statistics of labor, transportation and manufactures, the testing of butter and fertilizers, tree planting, irrigation, etc. Such facts as these are not to be explained by any bias of American legislation toward theoretical socialism. In fact, socialism has been little known, and less understood, in the United States down to a comparatively recent period. Within this period there has been no change in the general scope of American legislation.

No party of considerable strength has yet proposed in a State Legislature or in the National Congress a distinctively socialistic programme, and there seems no prospect of such party arising. Whenever a measure has been adopted which the socialist would call a step in the direction of complete ownership by the State of the means of production, it has not been passed as such, but purely on its merits as an individual instance. Thus the Massachusetts General Court of 1891 authorized towns and cities to manufacture electric light under carefully specified conditions; but the Legislature was far from giving this simple permission on the ground, expressed or implied, that, everywhere and always, the State is to be preferred to the individual as a producer. On the contrary, in accordance with the usual practice in such permissive legislation, it left each local community free to decide for itself whether to undertake the manufacture of electric light or not, and to continue the business or not, according as the results should be found to be favorable or unfavorable by the community.

Prof. William Graham says in respect to the extension of government in the sphere of industry: "This is pre-eminently one of the cases where an induction from the part to the whole would be fallacious, where what would be true for part of the field of industry occupied by the government would not be true if it were universally occupied."

The potential part played by education in the development of the American spirit is a matter of great importance, in so far as it has prepared the minds of intelligent members of the community to accept many of the doctrines of socialism and to combat others, as well as to resist apparently dangerous influences. Theodore Parker once said in the early days of the republic: "In this country every one has a taste for knowledge, while few persons get a full meal," a saying not as true now as when uttered. John Adams said: "This Government stands on four corner-stones—the church, the schoolhouse, the militia and the town-meeting." If alive to-day what would he probably think about the free school-books of our public schools and of the existence of such a free educational institution as the University of Michigan? An eminent writer and one of the ablest students of American history, in speaking of the books of our public schools, has said about the American people: "Their absolute democracy and their universal use of the English language have made the common schools most successful machines for converting the raw material of immigration into American citizens. This supreme benefit is the basis of the system and the reason for its existence and development, but its incidental benefit of educating the people has been beyond calculation."

As to the attitude of American sentiment toward changes in the legislation and administrative policy of the Government, Gilman says: "The American would undoubtedly give the individual the first chance in every new field. To such a race, marked by great business capacity and a genius for self-help, the presumption is always in favor of private enterprise. If experience shows that much injury to the public arises from combinations or competition between persons or corporations, however closely checked here or there, a fuller control may be reluctantly assumed by the people. This reluctance is not theoretical; it is solidly grounded on the fact that each enlargement of the sphere of a republican government increases the burden of the public duty laid upon the citizen. The new functions must be discharged by agents whom he knows he will need to watch with vigilance. As I have had occasion more than once to repeat, there is no American theory of the State; there is no philosophical system, generally accepted by the people, limiting the functions of the State or the freedom of the individual. The Government is not a power looked up to as wiser than the average voter; it is a body of delegates chosen to carry out a certain policy and manage the public business for a limited period."

In Germany it is evident to the American observer that the social democratic programme is very largely political in its demands; most of the institutions advocated we already possess in this country, having enjoyed them for a long time. American socialism, largely for this reason, has thus far been almost purely economic in its basis. But as certain great political changes would be inevitable even in preparing for the economic regime of socialism, it is in order to inquire how such changes would strike the American mind.

The active and laudable individualism of the energetic and capable American mind revolt at the necessary industrial and political despotism of such a State, and the conservative element in his political temper is as much repelled by the destruction of time-honored political institutions absolutely requisite for the mere erection of the socialistic state.

Mr. Gronlund has been the most specific of socialistic writers in acknowledging the chief changes in our political fabric which socialism would involve simply as preliminaries. These are so great that it requires a vivid imagination to suppose that the American mind will seriously consider them. A radical upheaval would be necessary for the sagacious American temper to rashly surrender the ample benefits which political freedom now secures simply in order to discover whether or not the economic blessings promised by Mr. Bellamy and Mr. Gronlund have any existence outside their imaginations.

One of the most interesting of the recent expositions of socialism appeared in an able article in "Munsey's Magazine" for June, 1905. It was written by Mr. Herbert N. Casson. In part his observations were as follows: "In 1848 a German Jew named Karl Marx published a pamphlet, which has now become almost as famous as the Declaration of Independence. Marx, driven out of Germany, went to England, and, while studying in the British Museum, became interested in Adam Smith's 'Wealth of Nations,' which states, among other things, that 'Labor produces wealth, and therefore should not be interfered with.' Marx added that 'If labor produces all wealth, then all wealth should belong to labor.' Unhampered by the slightest personal knowledge of industry, Marx began to weave his philosophy. He began where Adam Smith ended.

He declared that the capitalist who owned the land, machinery and money would inevitably possess all the property. That the wage-earner would inevitably sink lower and lower, and eventually be compelled by hunger and cold to take away the land, machinery and money from the few owners and make them the common property of the nation. This is, in a sentence, the gist of this great book, 'Capital,' which at once became the Bible of socialism.

There is a wonderfully persuasive power in a definite, untried, optimistic scheme. When there are no troublesome details and no local issues, it is easy to make mass meetings unanimous. The gospel of Marx was good news to all the under dogs of the world.

In Germany not one of the eighty-one socialist members of the Reichstag is a bonafide workingman.

In France, where there are 900,000 public officials already, the socialistic doctrine of a government that shall be universal owner and employer was welcome. Even yet French socialism is too lofty and ethereal to deal with any practical details. When Millerand, an able and trusted socialist leader, was honored by being made a member of the cabinet, he was sternly expelled from the party as one who had defiled himself. Although they are in control in ten of the largest cities, the French socialists have made little practical headway toward their ideal, partly because of their lack of political and business discipline, and partly because French cities have a comparatively small degree of self-government.

In Belgium, especially, the socialist organization has become so complex that it touches the life of its members at every point. It is, in fact, becoming the chief capitalist in the country. It sells its members groceries and dry goods, insures their lives, supplies them with music and books, and entertains them with excursions and festivities. In the unheroic, matter-of-fact atmosphere of England Marxian socialism wilted like a banana tree in Norway. A handful of refugees from the Continent kept it feebly alive in London, but even British social reformers and trade unionists rejected it until the famous London Fabian Society Anglicised it and disinfected it of all revolutionary germs. The socialism of England, Australia and New Zealand is not of the Marxian brand. It waves no red flag and chants no Marseillaise. In these countries socialism appears in the form of innumerable committees, each one grappling with some one definite local issue, such as cheaper gas, public baths, pure water, better train service, and so on.

New Zealand has been from the first entirely immune from the doctrine of Marx, and in the matter of practical progress it has far outstripped all other countries. As a land without a millionaire, without a tramp, and without a strike, it stands unique. In fact, the New Zealanders have placed themselves in the van of social progress, not so much because they have been led by able statesmen, but because of their isolation and the absence of social classes among them. A member of the present New Zealand Government expressed popular opinion in his country recently by saying: "We are organizing our great industries so that they shall not make a few individuals enormously rich, but so that they will give the advantage of cheaper service to the whole body of the people."

In the European countries mentioned (France, Germany, etc.), there has as yet been no disillusionment with regard to the workings of political democracy. It is assumed that a just law will at once become magically efficacious. The far-off hills of democracy look green. Whenever socialists have undertaken to operate co-operative stores or factories, their idealistic philosophy has been greatly modified. They have learned to appreciate business ability, and the old phrase, "Labor creates all wealth," becomes less convincing than before.

In a socialistic store in Brussels, the head clerk is paid five times more than an ordinary clerk. "Why do you do this?" asked a visitor. "Because he is worth it," was the reply.

The heavy debt of New Zealand and the municipal ownership cities of Great Britain is taking some of the rosy glow out of the socialistic future. And so in most countries, the socialists are sadly coming down out of the enchanted land of philosophy, and preparing for a long hard pull on the steep road of social progress. It is a curious and little known fact that one of the world's first advocates of socialism was Thomas Skidmore, a New Yorker, who, in 1829, wrote a book in favor of the collective ownership of all the means of production and distribution. At that time the word socialism had not been coined and the great Marx was a curly-haired boy of eleven.

In 1840 the writings of Fourier, the Frenchman, and Robert Owen, the Englishman, attracted the attention of literary people in New York and Massachusetts. Scores of little co-operative communities were formed, that of the Brook Farm being the most notable. Instead of soaring to the ideal, these communities sank into squalor and bankruptcy, and are worth mentioning only because of the eminent Americans who approved of them.

It is a well known fact that trades unions, as a rule, and the Catholic Church, invariably and unalterably, are opposed to socialism. At the last national convention of socialists held in this country, three out of every four delegates were American born.

As in Europe, the party is still dominated, as an organization, by the prestige of Marx and the early leaders. Any editor or orator who is not doctrinally sound is attacked and usually expelled. But among the rank and file, in the West especially, socialism is being interpreted into American ideas and methods. The practical socialism of Australia and New Zealand is being carried into California by sailors; and in a few years the Marxian epoch in America will be at an end, unless it is prolonged by business depression.

It has been shown that there are now more than 330 different trades, professions and institutions that are directly operated by government, in some parts of the globe. Twenty-five nations own their own Savings banks. Fifty-five own their own railroads, wholly or in part. Sixty-eight own their telegraph systems. Some nations have found it safe and profitable to operate such enterprises as pawnshops, drug stores, theatres, blast furnaces, coal mines, factories, hotels and breweries.

With the exception of ancient Peru, we do not know of any nation which has ever adopted wholly the principle of collectivism; neither do we know of any nation that has been wholly without it.

After all, is it not the unending task of all peoples to establish a just balance between the rights of the individual and the rights of society in general, so that there shall be liberty without chaos and order without repulsion?

PRESIDENT SABIN: We shall next listen to "A Voice from the South," by Mr. Joseph G. Brown, of Raleigh, N. C.

"A VOICE FROM THE SOUTH."—ADDRESS OF JOSEPH G. BROWN, PRESIDENT CITIZENS' NATIONAL BANK, RALEIGH, N. C.

Mr. President, Ladies and Gentlemen—I count myself peculiarly fortunate in being permitted to stand before the bankers of this imperial Commonwealth, and before the only beings on earth who can control these bankers—the good women of New York—for the purpose of bringing fraternal greetings from their brethren south of the Potomac.

It is always pleasant to be the bearer of good tidings—it is especially pleasing to me to come as "A Voice From the South," bringing messages of good will to you of the North, because such expressions coincide so fully with the feelings of my heart.

I have revelled to-day in the beauties of this glorious place. Yet it has not been simply that

> "Nature has shed o'er the scene
> Her rarest of crystal and brightest of green."

This surely had been sufficient, but mine has been the greater joy of mingling with many old friends and making many new ones. I shall never forget the cordiality of my welcome and your gracious hospitality.

As I have gone from place to place in various parts of the North and the West, I have heard many pleasant expressions about the hospitality of the South. It has been as sweet music to my ears, but I fear the oft-repeated story had begun so to impress me that I was becoming somewhat puffed up with the idea that the grace of hospitality was peculiar to the South, and to be found in its sweetest form nowhere else than under our sunny Southern skies.

But this illusion has been dispelled as on several occasions I have found myself the guest of New York bankers—and especially was my mind thus disabused when, two years ago, I had the happy privilege of planting a little North Carolina colony in the midst of a group of New York bankers and their ladies, and of journeying with them across the American continent; and again a year ago when the whole of Greater New York, including Coney Island, was turned over to their guests, the members of the American Bankers' Association. On these occasions I discovered that the beautiful plant of hospitality was not indigenous to the South alone, but that it grew, too, in richest luxuriance in this far Northern clime. These impressions have been confirmed and strengthened by my welcome to-day, and I do not know how to express my appreciation more strongly than by assuring you that you have made me feel at home. You have made me feel that I was among my own people—bone of my bone and flesh of my flesh.

And, after all, is not this true, my friends? Are we not of one great family? Are we not one people—one in spirit, one in thought, one in our aims and purposes, one in that broad fraternal love which makes the whole world akin?

There was a time, ah me! a sad, sad day when we were torn asunder, when the North and the South stood face to face, not in friendly intercourse, but in cruel war. Bravely did each their duty as it was given them to see it. The horrors of that period will live forever—a sad, a fearful memory; but the great God of nations was overruling and His righteous will was accomplished. The sons of the South laid down their swords, laid away their folded banners, and went back to their homes, not to sulk in their tents, however, and to complain at fate, but to take up again their allegiance to the old flag, to rejoice in its glory, and to build up a new home on the ashes of the old. The way was not an easy one. On both sides were many who cherished rancor in their breasts, and who, for personal gain, were ready to throw hindrances in the way of perfect unity. In such way was closer fellowship retarded for many years; but, presently a brave young Southern spirit from the State of Georgia, Henry W. Grady, stood up in New York city, in full view of the nation, and proclaimed to the world that the war was ended, that the family jar was healed, that the brave boys who wore the blue, and the equally brave ones who wore the gray, had clasped hands in friendship and brotherly love. A thrill of joy ran through the people of the North and the people of the South, and from every direction came a great responsive echo, until it needed but little imagination to catch the sweet notes of the angels as they proclaimed "Peace on earth, good will to man."

Like most of you, I was too young for the war, but my two brothers fought bravely for the cause their State espoused, and they believed was right.

One of them fell in the Valley of Virginia, and is sleeping to-day in an unknown grave. The other, released from prison on Johnson's Island, on one of the great Northern lakes, came back to his aged mother, brave in spirit but broken in health, lingered a while, then passed away, and is now resting peacefully by her side in fair Oakwood. Both are gone—but if it be given to those on the other side to know what transpired here, methinks that their brave spirits thrill in unison with mine to-day at the thought that the same flag which waved over their cradles waves over their graves, and will wave over mine, and my children's on through the generations.

God bless the old flag!
Fathers shall bless it,
Children caress it,
And shall maintain it,
No one shall stain it.

Cheers for the sailors that fought on the wave for it,
Cheers for the soldiers that always were brave for it,
Tears for the men that went down to the grave for it,
God bless the flag!

Only a few months ago, as I entered my chamber at bedtime, I found the little white bedstead in the corner in which my ten-year-old boy slept, decorated with the stars and stripes, and next morning, when I asked him why he did it, the little fellow's face beamed as he replied: "So I might see our colors, papa, the last thing at night and the first in the morning."

And he is not an exception, for all through our Southland our boys are taught to love the flag, and from many a country school-house there floats to-day our national colors, while the hymn that tells of the "Sweet Land of Liberty" is a familiar one to every Southern child.

You have asked me to talk to you of the Southland. I am glad of the opportunity, for while I love all this fair land of ours yet, naturally, it seems to me that in my own homeland the skies are just a little bluer, and the stars a little brighter, the grass is greener and the flowers perhaps more fragrant, and tinted with a little softer hue, the air is a bit purer and the water sweeter, that there is a trifle more of melody in the murmuring of the brook and the music of the song bird and all because 'tis home. I am glad to tell you, gentlemen, that there are no more loyal people anywhere than those in the South. And I believe that the North recognizes this fact. The occasional croaker, whose mutterings are heard on both sides of the line, can no longer disturb the harmony that prevails. The South loves her sons; the glory of her young manhood is her glory, and her crown is her young womanhood, but when this great nation is in peril no life is too sacred to be given in her defence. When the "Rough Rider" rode fearlessly up the hills of San Juan, a gallant young North Carolinian, Lieutenant Shipp, followed close at his side, and laid down his life there for his country.

My own townsman, a noble lad, the pride of his widowed mother, young Worth Bagley, at Cardenas, gave the first blood that was shed in the Spanish War.

Intrepid Victor Blue, another Southerner, penetrated the enemy's ranks and brought back tidings of their condition, and the gallant Hobson, of Alabama, thrilled the nation with his bravery. The gallant soldier, the imperial Grant, recognized our common tie when at Appomatox he gave back to the immortal Lee the sword which he had surrendered. So McKinley testified to our loyalty when he commissioned those old Confederates, Joe Wheeler and Fitzhugh Lee, to don the blue—and only recently President Roosevelt placed his seal thereon when he sent to West Point a grandson of the Southern hero, Stonewall Jackson, and again when he returned to the Southern States their old battle flags. And, in passing, may I not say that our people believe that President Roosevelt is friendly to the South, and they are ready to stand by him in every effort to blot out sectionalism and to cement all our people together in the closest union? We believe this is his purpose and we recognize in him a great leader, a strong, brave, big-hearted American citizen, thoroughly national in spirit and in every way well equipped for the great trust committed to him by the American people.

If war divided, war has done much to reunite us. Have I dwelt too much at length on these matters? It is because I long so ardently to see the time come when there shall be no more forever the slightest lack of harmony between the North and the South; and I believe that time is at hand. I steadfastly believe that every passing day brings our people into closer relations of friendship, and I believe this is facilitated by our frequent social meetings, just as, by constant companionship, the soul of Jonathan was knit with the soul of David.

The subject assigned to me is an alluring one, but one which I approach with no other feeling than that I am talking of your country as well as of mine. I speak of the South, as I would of the North, as a part of our common heritage.

To get an adequate idea of the South of the present it will be necessary to catch a brief glimpse of its past. It is unique in that it is divided into three parts—three distinct periods—that before the war, the four years of warfare and the years of famine following, and the period of industrial growth. The South was cursed with slavery, perhaps unconsciously so, but none the less cursed.

There are many erroneous views, however, as to the relations between the slaves and their owners. There was, perhaps, some basis for the horrible stories related in "Uncle Tom's Cabin," but special instances were pictured as a general condition. There were in fact the closest relations between the whites and the blacks, and in many cases ties of the strongest affection. This was shown by the fact that many negroes of their own choice remained with their masters, as servants, after their freedom had been proclaimed.

Lincoln's proclamation was more than a proclamation of freedom to the negro—it was a proclamation to the white man of his freedom from the idea that manual labor was for the negro only—and of his freedom to use his wonderful endowments for the upbuilding of the country which God had given him, and it was thus to him a blessing in disguise.

The dependence of the South on the negro for the cultivation of the field and for practically all manual labor resulted in a generation of young people unaccustomed to the employment of their hands, who were thus deprived of that sweetness which is found only in the bread earned "by the sweat of the face."

Notwithstanding this, however, the South had attained to a high state of prosperity just prior to the war. Her farms were well tilled, and their products largely increasing. She produced all the cotton, sugar and rice in the United States. She raised forty-four per cent. of the corn crop. She produced 351,500,000 pounds of tobacco, while only 77,880 pounds were raised in the other States. All but 3,000,000 bushels of Irish potatoes were from her fields (38,600,000 bushels, all told). The value of her live stock was forty per cent. of its total value in the country, and her farms one-third of the value of all the farms. She owned forty per cent. of all the agricultural implements, and forty-four per cent. of the total assessed value of all property in the United States.

Her manufactories were increasing, and in the decade prior to 1860 she quadrupled her railroad mileage running it from 2,335 miles to 9,897, while New England and the Middle States only increased by about 100 per cent. from 4,798 to 9,510 miles.

Her statesmen largely directed the affairs of the nation. One of them led the first armies to victory and became the first President. Another wrote the Declaration of Independence and later gave to the country those great possessions which gave occasion for the great World's Fair that has just been held. The story of the nation is told in the lives of Washington, Madison, Jefferson, Calhoun and a host of others of Southern birth.

Her property in 1860 was assessed $5,200,000,000. With only forty-four per cent. of population she had one-half of the wealth of the country. Her banking capital was ample. There were a few strong banks with many branches. No legitimate business needed to seek financial aid elsewhere. Statistics are not available for the whole country, but in my own State of North Carolina, as illustrative of the others, there were sixteen banks with twenty-six branches, having a capital of $9,408,470, and a large circulation. The loans amounted to $14,975,028. Apparently business transactions were made largely in cash, as deposits amounted to only $1,831,598.

But the war period came. You who lived remote from the scenes of carnage cannot fully realize the force of Sherman's characterization of war. Hell could be no worse.

The flower of the South's young manhood was called into service. With a military population of only 115,300, North Carolina furnished 127,000 soldiers, many of them being boys under age, and forty-one thousand of these never came back to their homes, but found a resting place on the battlefield. Never were more heroic people, never were greater sacrifices made. This was the period when the faithfulness of the negro won the lasting gratitude of the white people of the South. He showed a phase of his character then that seems to have been beclouded by his freedom. In those days lynching was unknown, and although the women and children were at the mercy of the negroes, the shocking crimes, now so common, were never heard of. It is said that "It is an ill wind that blows nobody good." The trials of the war revealed the sterling character of the people of the South. Men, unused to toil, and women, too, became workers. A Chinese wall was built about us. The outside world was shut off from us. We were forced to rely upon our own resources, and right royally did we rise to the occasion. A new world of strength and power of achievement was revealed to us, a wealth of character and a wealth of self-reliance of which we had never dreamed. With the conditions that surrounded them, one would naturally have expected to find in the young men of the South an effeminate specimen whose former apparently indolent life would have totally unfitted him for the stern, exacting and strenuous demands of soldier life in real war. But a strength, born of courage that had behind it the consciousness of right, cannot easily be overcome; and such was the power that nerved the arms and stimulated the souls of the boys in gray.

The South emerged from her war penniless. The only currency she had was worthless. Her homes in many cases had been destroyed. Her farms were laid waste. The negro—upon whom she had depended for the cultivation of her soil—had been set free, and, intoxicated with this new view of life and unused to self-control, became a menace. Her public men were disheartened. Her boys and her young men were broken in health, mutilated in body and crushed in spirit. But there was one thing left, her noble womanhood. With an unquestioning faith in the righteousness of their cause they had sent their husbands and their sons to the front, submitting themselves to such sacrifices as the world had never witnessed before. Accustomed to luxury, with slaves to do their every bidding, with wealth to provide every comfort, clad in purple and fine linen, they laid it all aside and submitted to every privation. They disposed of their jewelry; they wore homespun clothes and wooden bottom shoes; they drank coffee made of potatoes; and, with their own delicate hands, did the drudgery work of the home in order to save every possible dollar that it might go to the support of the army in the field.

Such spirits as these could not be crushed by defeat, and the time was not long before the broken-spirited men had caught the enthusiasm of these noble women, and had turned their faces again toward the rising sun, with the determination to re-establish their homes, and to build up again the country they loved so much. The task was no easy one, but the brave women inspired a courage that could not be daunted, and side by side the men and the women of the South fought the cruel fate that seemed determined to destroy them. They were content to face poverty, they were content to endure hardships, they were content to live lives of struggling, because they knew the richness of their inheritance, and would preserve it for their children. For long weary years they could hardly provide the actual necessities of life. There was no chance to accumulate anything. They could only earn a meagre living, but they kept possession of the garden. To branch out in lines of business was impossible, because the means were lacking, but they toiled on, and many long winter nights, as they gathered around the big log fires, which furnished the only light for their cabin homes, except perhaps an occasional tallow candle, they talked of the old times, and saw, in their fond dreams, their children occupying the re-established homes, and building up a new South, the equal or superior of the old.

They murmured not. They did not regret, and to-day their children rejoice that the negro was freed. They saw through a glass darkly then, but now the hand of Providence is unmistakable. The most serious condition that faced these people was in the realm of public life. A great mass of humanity, reared in slavery, uneducated, unacquainted with the first principles of self-government, without the slightest moral perception, only a few generations removed from heathenism were given not only their freedom, but the full rights of American citizenship. The ballot was placed in their hands, an act done in kindness doubtless and with best intent, but recognized now by all thoughtful men of every section as the mistake of that century in American politics.

It was an easy matter for a few foreign politicians, backed by the lowest element of our native people, to secure absolute control of the entire negro vote, and wield it for their own selfish ends. And this they did. In every Southern State the greatest corruption prevailed. The most extravagant issues of bonds were put out, as is evidenced by the millions of these securities that were later repudiated. Upon my own State was placed a debt of $38,000,000, and on the Southern States probably not less than $800,000,000. In many cases it appears that the States got little if any benefit from these issues. In North Carolina, and in my own city, these bonds were thrown around like waste paper. In the trunk of the mistress of one of our leading public men were found $50,000 of our newly issued State bonds. Under such conditions it cannot be wondered that our people embraced the first opportunity of repudiating such fraudulent obligations, at the same time making as liberal a settlement of legal issues as in their poverty they were able to do. And be it said, to their eternal credit, they never repudiated a single honest debt, but paid back a full dollar for every dollar received, as far as this could be ascertained. Many of these old bonds have been bought up by speculators at from two to ten cents, and I see from the public prints that a syndicate has been formed and an effort is to be made through the aid of the State of New York as a medium to enforce their payment in the courts of the land.

I cannot believe that this great Empire State, rich in her material resources, rejoicing in her marvellous financial strength, and in the business integrity of her people, and standing as a city set on a hill, a beacon light to the world; I cannot believe, I say, that such a State will lend her aid to so pernicious a scheme, or countenance in any way the efforts of a few get-rich-quick brokers to force a sister State to pay obligations that were conceived in sin and born in iniquity. It would be the price of blood, the thirty pieces of silver, that were heavy enough to break the neck of Judas.

Thank God, out of the wreck she has come with her honor unstained, and her credit unimpaired, having in her treasury securities sufficient to pay every dollar of her honest debt, a State rich in the memory of her past, rich in her present resources, and richer still in the prospects of her future development, and in the character of her citizenship.

But by and by there came a change. Conditions became so unbearable that endurance was no longer possible. Years of unremitting toil had brought us to the point where advance in material wealth became perceptible. Property began to accumulate. The avenues of business were opened up, the wealth of our forests, of our fields, and our mines was revealed. The genius of our people began to assert itself, and the cry came that protection must be had. Years had rolled by. The negro had shown but little capacity for government and still showed no sign of having his own opinion, but was voted in solid mass by unscrupulous politicians. Recognizing his dependence on the native whites, and realizing the mutuality of interests between the two races, he followed them in everything save politics. This necessitated the solid South. Thoughtful men recognized the danger in this state of affairs, but dared not think of division because of the fear of negro domination, and the return of the conditions that prevailed after the war. Then came the suggestion of the constitutional amendment basing suffrage on intelligence. This was welcomed as an inspiration. It affected some whites, but practically disfranchised the negro for the present, but gave him an opportunity and an incentive to prepare himself for the exercise of the high duties of citizenship. In one more year, however, these restrictions will be removed and at the next general election the negro will stand upon the same basis as the white man. Our governmental affairs are now in the hands of our own people, and are being administered to the best interests of all classes. There is no disposition to treat the negro unfairly. His interests are carefully guarded. The South appreciates the negro. She can never forget his loyalty and fidelity during the war. Longing for freedom and knowing the meaning of the battle that was waging, he never failed in his devotion to the interests of his old master, and to the women and children left at home. History records no similar devotion among any people. The South cannot forget these things, and because of them she gives the negro her sincerest friendship, as is shown by the fact that since 1866 she has taxed herself to the extent of more than $100,000,000 for his education. She has provided schools for his children, hospitals for his sick, homes and asylums for his deaf and dumb and blind, and for those whose minds are impaired; in a word, she has given to the negro everything that she has given to her own people. But she was convinced that the best interests of both races and of our common country demanded that the control of government should be in the hands of intelligent men, and to this end the constitutional amendments were enacted and educational restrictions imposed. Thus were these political matters settled. And they are settled. No fear of reducing our representation in Congress could make us consider for a moment a return to former conditions. We would sooner have every Southern seat in the national Congress vacated than have our own section ruled as formerly.

These things being disposed of, then the South turned her attention to material interests and to the development of her natural resources. The results have been wonderful. In the assessed valuation of her property she has increased $225,000,000 annually or $900,000,000 since the beginning of this twentieth century, this value being in 1904 more than six billions of dollars. If, from some mountain height you could catch a vision of all the States that constitute our Southland, a busy, bustling scene would greet your eyes. You would see broad acres of waste lands being converted into beautiful orchards and gardens yielding up their wealth of fruit and berries and vegetables. You would see rude shanties giving place to splendid farm houses; you would see the trees of the forest being hewn down to make way for the villages springing up in every direction; you would see villages growing into bustling towns and busy cities; you would see business and commercial relations springing up with all peoples; you would see great lines of railway penetrating into hitherto unknown regions connecting village with village, tying town to town and State to State, until by trade and commerce, as well as by these great stretches of railway, not only all the States of the South, but all of their sister States are bound together as with ropes of steel into an indissoluble union. Such a vision would appear like the moving pictures of some great kaleidoscope constantly changing and every turn of the wheel adding to its beauty and attractiveness.

Such a panoramic view may be had in a measure from the pages of the Baltimore "Manufacturers' Record," to which I am indebted for many of the statistics presented.

Much of her prosperity is due to King Cotton. The annual value of the white staple, not counting its by-products, is far in excess of a half billion dollars, and as the new markets of the world are opened, they can but add to its increase, for, despite the boll weevil, the South, and the South alone, can supply the demand of the entire world for cotton. The prediction is confidently made that the day is approaching when the South will in her own mills manufacture as much as her present production, and furnish as much more to mills elsewhere. It requires but litte calculation to estimate the immense increase of wealth when she ships the finished product instead of the raw material, and her multiplying mills are doing this more and more every day. My own State is manufacturing practically her entire output, and one year manufactured 50,000 bales more than she raised. But the South is no longer dependent on her cotton. She has learned the better secret of wealth in the diversification of her crops. In 1904 she produced 661,746,754 bushels corn valued at $370,136,327, 62,902,975 bushels wheat valued at $69,763,506,

65,361,722 bushels oats valued at $29,799,163, and other crops proportionately.
The value of her yield of corn, wheat, oats, Irish potatoes, rye and hay in 1904 was $542,121,000, or $140,000,000 more than these crops yielded in 1902.

The value of other products is estimated at $550,000,000, making the value of her agricultural product, exclusive of cotton, easily more than one billion dollars. The yield of her mines, her production of iron and steel, and of coal, the yield of her forests, her lumber interests, the wonderful increase of her exports, and the comparative growth of her ports, the development of her railroads, their increase in mileage, and their splendid equipment, have all been commensurate with her agricultural development.

In her manufacturing interests she is making rapid growth. Mr. Hewitt said of us years ago: "There is no corresponding region on this habitable globe which has so many advantages as the South, all available by natural or artificial communications, and capable of more economical operations than in any other part of the country."

Only a few weeks ago Secretary Metcalf of the President's Cabinet, at a banquet in High Point, N. C., known, by the way, as the Grand Rapids of the South, said: "It will not be long before High Point becomes the manufacturing centre for furniture in the United States." And there are good reasons for such optimistic views.

The needs of wives and children and of aged parents had nerved the arms of our growing manhood and stimulated their brain until out of chaos they brought order, and in the new life that came one could almost hear the command of the Creator, "Let there be light," as the "New South" world sprang into existence. Her growth was slow necessarily, and not until 1880 was her basis adequate to build upon. Since that time Aladdin's lamp seems to have been operating with its magical power, until to-day there is scarcely a section that has not felt the thrill of this twentieth century's progress. The cotton crop of 1902 was equal in value to that of all her agricultural products in 1880, about $660,000,000. To-day their value is $1,700,000,000. Her manufactured products from $457,000,000 in 1880, grew to $917,000,000 in 1890, and are now $1,600,000,000. The value of her manufacturing, mining and agricultural output in 1880 was $1,100,000,000 annually, now three times as much, or $3,500,000,000. These products have increased in value since 1880 by 300 per cent., while her population has grown only sixty per cent. And there is the greatest bar to the South's advancement. She needs more people, more capitalists, more laborers. The black belt seems to have acted as a bugaboo. But a clearer idea of our Southland now prevails; the tide of immigration is beginning to turn our way, and our people stand with outstretched hands ready to extend a cordial welcome to all true men and women who come to make their homes among us and to aid in the development and the upbuilding of our goodly land. There is a dearth of labor, and especially of skilled labor, in almost every line of industry.

Her 6,000,000 tons of coal in 1880 have multiplied to 66,000,000. She makes to-day practically as much pig iron as the whole of the United States made in 1880. At that time her cotton mills represented $21,000,000 and consumed 225,000 bales; now 2,000,000 bales are needed to keep busy the spindles and looms that cost $200,000,000. There are 2,000,000 spindles now; only 667,000 in 1880.

Her lumber product to-day is $200,000,000 against $39,000,000 in 1880, while the mileage of her railroads has grown from 20,000 to 65,000. In 1904 more than 1,600 miles of railway were built, and more than five hundred banks organized.

The bales of cotton consumed:

	Northern Mills.	Southern.
1890	1,799,258	546,894
1902	2,050,774	1,937,971

the South increasing by 1,393,500 bales, while the North added only 250,000 bales to her consumption.

Her banking resources have grown from less than $500,000,000 in 1890 to more than a billion dollars and her increasing foreign trade has largely augmented the volume of business in her ports. And these ports cannot fail to grow in importance when the great wealth of the Mississippi Valley finds through them and through the great canal a near and easy way to the opulent markets of the Orient. Who can tell what this great thoroughfare for the merchantmen of the world shall mean for Norfolk, Wilmington, Charleston, Savannah, Mobile, New Orleans and Galveston and the territory contiguous thereto?

And the South will continue to grow. There is a constantly increasing demand for her products. Many of the earth's people are discarding fig leaves and are wearing at least a bit of cotton cloth about their loins, and the size of this cloth will grow with their advancing civilization. It will take many figures to tell the wealth of the South when she shall manufacture as much as her present production, and still furnish the rest of the world with all its needs. The question of labor is a serious one in this connection. But that this will be satisfactorily solved is made certain by the fact that the American people have always been able to find a way or make it to any desired good. The crowded conditions of European countries and the impoverishment of the lower classes will make this land appear indeed a land of promise. And it is "a good land, a land of brooks of water, of fountains and depths that spring out of valleys and hills, a land of wheat and barley, and vines and fig trees, and pomegranates; a land of oil, olive and honey; a land wherein thou shalt eat bread without scarceness, thou shalt not lack anything in it; a land whose stones are iron, and out of whose hills thou mayest dig brass."

We have a new South only because we have new conditions. We have not lost the spirit of chivalric devotion to woman, or of consideration for others nor our love of home or our faith in God. We still recognize that the strength of our manhood and womanhood, the strength of our American Union, lies in our American homes. The spirit of patriotism still abides among us and that loyalty still inspires us which characterized those men who bore the trials of the period which revealed to the world a Lincoln and a Lee, a Jackson and a Grant, and a host of others whose names are now honored, even though some of them lifted up their hands and led their people against the sovereignty of their own country.

Such characters command the respect of the world, and such an ancestry cannot fail to have produced men whose country's weal is as their own.

But I fear I worry you. I must again thank you for this delightful privilege, for the opportunity of visiting and enjoying with you the beauties of these islands and of this magnificent river. It is an entrancing place. As I look about me I feel somewhat as I imagine Mohammed felt when he stood upon one of the hills near Damascus and looking upon the beauty of its environments, saw the "golden flowing of the seven streams of Abana," which carried fertility and richness and beauty throughout that section. In a religious frenzy he exclaimed as he galloped away, "Man can have but one paradise and mine is not on earth." So I feel loath to turn my back on this lovely place, but I must escape its charm lest I, too, should want to live forever, satisfied with this earthly paradise.

PRESIDENT SABIN: I will next introduce to the convention Mr. F. W. Lafrentz, of New York:

MONEY ORDERS OF THE AMERICAN BANKERS' ASSOCIATION.—ADDRESS OF F. W. LAFRENTZ, COMPTROLLER AMERICAN SURETY COMPANY, NEW YORK.

Mr. President and Gentlemen—I shall call your attention for a few moments only to this subject of bankers' money orders. Those of you who represent banks that are members of the American Bankers' Association are necessarily more or less familiar with this subject, because, in the first place, the secretary has given notice of it and so has the surety company. Nevertheless, I wish to state that the reason for the inception of this movement is undoubtedly found in the fact that a great deal of the exchange business was being taken away from the banks by the post-office department and by express companies, and that, coupled with the fact that banks all over the country were getting up money order propositions of their own, led the American Bankers' Association to promulgate a scheme that should be uniform and stable.

It is an easy matter for an express company to formulate a scheme of this kind and enforce it through its various agents, because all of the money taken in by the agents finds it way eventually into the treasury of the company; in other words, the companies in that case control the whole situation, they get the money and they are responsible for the payment of that money to some one. The Government is in a similar position. But there are thousands of banks to be dealt with, each having its own organization, and each, therefore, having its own management and its own responsibilities. It was not difficult, of course, to get up a uniform form in that respect, because a form of this character would suit most of the bankers, even if it did not meet the requirements in every particular. In order to meet the question of stability the expedient was hit upon of having the orders guaranteed by a corporate surety company engaged in business for that purpose, and we were favored by this proposition of the American Bankers' Association, and we not only took a contract to guarantee the orders, to guarantee the drawers, but we also guarantee the drawee bank; we furnish the orders and send them out and we supply the advertising matter. Now, the proposition rests with the banks themselves to make it a success. We have up to date interested about 500 banks in the matter, and within a few months twenty-one State associations have endorsed the plan.

I desire to meet one question that is put to us very often by banks. namely, Why should it be necessary to have a guarantee on the orders? The banks say they are strong enough to run their own business and that they do not need a surety. Now, the committee who worked upon this proposition say that all the banks that are members of the American Bankers' Association should be placed upon the same footing with respect to this business so that the great public might have confidence that if a money order was bought from a bank and the form of the American Bankers' Association used the money would be paid to the proper person in the end. Some banks are stronger than others, as you know, and banks sometimes fail in business the same as do individuals. The best proof that a guarantee is necessary I hold in my hands here. (Exhibiting.) This is the first batch of orders that we have been obliged to take up. It amounts to $1,195. Every order drawn by that bank we have had to pay. It is the American Bank of Manila. The first of these orders presented for payment came with a protest notice attached, and I informed the bank that held these orders that it was not necessary to protest them; that it was their duty first to present them to us, and, if we did not pay them, then they could protest them. So all the others have been taken up by us without protest. All we want to know is that the order was properly issued by the bank and that the drawee bank has refused payment.

Now, what I want to ask of you gentlemen here is this, and I do it on behalf of the American Bankers' Association: I want you to recollect that this is not a scheme of suretyship insurance that we have devised and are trying to foist upon you. It is a plan of the American Bankers' Association to which other surety companies were invited as well as ourselves, and I would like to have you adopt resolutions here favoring the banks of this association going into this proposition and helping to make it a success. Surely there is enough in it for the banks to go after the business; $700,-000,000 annually are transferred by express companies and by the Government from place to place within the United States. See the amount of money that is tied up between the dates of the issuance of the orders and the payment of them! In regard to this particular proposition it is not necessary for a bank to make remittances daily somewhere to cover the orders drawn. They can be drawn upon your regular correspondents in exchange cities.

I want to ask another thing of you, and that is to invite your scrutiny and consideration to see if the proposition or problem can be improved upon in any way. Of course, this is the first thought, and it may not be perfect. There may be things that should be presented to the next meeting of the American Bankers' Association in respect to it. I think that association should adopt a scale of rates to be charged by the bank, and I think that the American Bankers' Association members, irrespective of whether they sell these orders or not, should obligate themselves to cash them at par when presented. That is the meat in the cocoanut. Here you are handling Government orders and express money orders, paying the money over your counters for them, and, in most cases, without any compensation whatever. Now, if you adopt a rule charging for the collection of Government and express money orders and making no charge for these orders, the problem would be solved at once. It is up to the bankers themselves to make the thing a success. We will do anything we can in the way of furnishing advertising matter to you free of charge. The price of these orders, $5 per thousand blanks, includes not only the printing, but also the advertising matter. The orders cost the American Surety Company when they come from the printer $4.35 per thousand. We started off, as Mr. Pierson, your former President, knows, by first of all simply having an order blank. We have added to that a stub for your convenience, we have added a receipt for the purchaser, and all of that has increased the cost of the orders very materially. The orders are printed upon the bankers' safety paper, and it takes three numberings, and that costs 75 cents a thousand. Therefore, there is no money in it for directing the scheme by the surety company, but we have gone into it and we are going to make it a success.

Mr. LYFORD: In connection with this subject, Mr. President, I would like to state that the representatives of this association were largely instrumental in having the American Bankers' Association adopt this form of bank money order. I present the following resolutions, and move their adoption:

Resolved, That the money order plan, devised by the American Bankers' Association and now in use, be adopted and used by the members of the New York Bankers' Association and that the following charges be recommended in the sale of said orders, viz.: 5 cents for orders up to $10; 10 cents over $10 and up to $25; 15 cents over $25 and up to $50; 20 cents over $50 and up to $75; 25 cents over $75 and up to $100.

Resolved, further, That the members of the New York Bankers' Association, in order to place in general use the money orders of the American Bankers' Association, endeavor in every way to discourage and discontinue the issuance of small drafts of the institution and without a charge similar to that made for money orders.

Resolved, further, That this association and the members thereof co-operate with the American Bankers' Association for the purpose of propagating and extending this new feature of banking.

Mr. PIERSON: I second the adoption of those resolutions.

PRESIDENT SABIN: All in favor of the adoption of the resolutions will please signify it by saying aye; those opposed, no. Adopted.

I will now call for the report from the auditing committee.

SECRETARY ELDREDGE: Mr. President, the report of the auditing committee has been handed to me and is as follows:

Frontenac, N. Y., July 13, 1905.

To the New York State Bankers' Association:

Gentlemen—The committee appointed to audit the accounts of the treasurer beg to report that they have examined the treasurer's report and the vouchers accompanying it, and certify that they are correct in every particular.

(Signed) F. C. HAVILAND.
R. K. HALDANE,
LOUIS J. CLARK.

Mr. CURTIS: I move that the report be received and the committee discharged with thanks.

J. H. LUDLAM: I second the motion.

PRESIDENT SABIN: All in favor of the motion will signify it by saying aye; those opposed no. Carried.

This, of course, approves the treasurer's report and places it on file. Are the members of the committee on resolutions ready to report?

REPORT OF COMMITTEE ON RESOLUTIONS.

STEPHEN M. GRISWOLD: Mr. President and Gentlemen—Prefacing the presentation of our report, I desire to state on behalf of the committee that in our opinion this is the most successful convention the association has ever held. Meeting as it does in this charming and ideal location, it has brought together not only a large attendance of members, but guests and ladies, and the presence of the ladies always insures a delightful gathering. In addition, the addresses delivered before the convention have been by gentlemen of national reputation and of an extremely interesting and instructive character.

Now, on behalf of the committee, I desire to offer the following resolutions and move their adoption:

Resolved (1) That the sincere thanks of the delegates be, first of all, tendered to the committee of arrangements, consisting of Messrs. Curtis, McDougal, Eldredge, Howe and D. H. Pierson, for their wisdom in selecting this ideal location for holding the convention and the completeness with which their plans have been carried out;

(2) To the retiring officers of the association who have had in charge the conduct of the convention;

(3) To Mr. S. R. Flynn, of Chicago, Ill.; Hon. James M. Beck and Mr. John R. Van Wormer, of New York city; Mr. Joseph G. Brown, of Raleigh, N. C., and Mr. F. W. Lafrentz, of New York, for their addresses before the convention;

(4) To Rev. Lawrence N. Serrill and Rev. Bouck White, of Clayton;

(5) To Manager C. G. Trussell, of the Hotel Frontenac, and his corps of able assistants, for their successful efforts in entertaining the convention;

(6) To the Venetian Quartette of the Cafe des Beaux Arts, New York, who have contributed so much to the pleasure of those in attendance;

(7) To Messrs. Brown, Coler, Flynn, Beck and Lawson, whose brilliant speeches rendered the banquet so enjoyable;

(8) To the Thousand Island Steamboat Company, the New York Central Railroad Company and the People's Line Steamers for transportation facilities and courtesies;

(9) To the members of the financial press, who have so ably seconded the efforts of the officers of the association in their efforts to make this, the twelfth annual convention, a notable success.

GEORGE W. SPENCE: I second the adoption of the report of the committee on resolutions.

PRESIDENT SABIN: All in favor of the adoption of the report of the committee on resolutions will signify it by rising. Adopted.

In connection with the resolutions I want to make one remark. This has undoubtedly been a very successful convention, and the success of it is largely due to Mr. Curtis and his colleagues on the committee of arrangements.

New business is now in order, and, under this head, I will call upon Mr. Hiram R. Smith to present the matter which he brought before the council of administration and which was favorably referred to the convention.

MR. SMITH: A couple of weeks ago I mailed the following letter, giving notice of my intention to propose an amendment to our constitution, to every member of the association:

Rockville Centre, N. Y., June 29, 1905.

To the Members of the N. Y. State Bankers' Association:

Gentlemen—Whereas, the protective feature of the American Bankers' Association has been most efficient and successful in protecting its members against professional criminals, but has not given special attention to the minor offenses, and I believe that our association could take up the matter to the advantage of our own members, and at the same time be in line with the action of other State associations. Therefore I give notice of my intention of proposing at our annual meeting to be held at "The Frontenac," Thousand Islands, on July 13, 14, 1905, the following amendments to our constitution:

ARTICLE V.

Section 1. The council of administration shall appoint a standing protective committee of three persons, whose names shall not be made public. The said committee shall control all actions looking to the detection, prosecution and punishment of persons attempting to cause or causing loss, either by false statements, or any other form of crime, to any member of the association.

Sec. 2. The said committee, when called upon for aid by any member of the association through the secretary, shall forthwith take such steps as it shall deem proper to arrest and prosecute the party charged with the crime, provided, however, that no expense or liability shall be incurred beyond the amount of funds in the treasury especially appropriated for that purpose.

Sec. 3. The said committee is prohibited from compromising or compounding with parties charged with crime, or with their agents or attorneys.

Sec. 4. All detective and legal expenses and costs incurred by the protective committee and other committees not exceeding the appropriations set apart for the use of these committees, respectively, shall be paid by the treasurer only upon vouchers drawn by the chairmen of the various committees, duly countersigned as provided for in article III, section 9, of this constitution.

Sec. 5. All members of the association, when called upon by the secretary in behalf of the protective committee for information or aid, shall promptly respond by giving all assistance in their power; and all members shall, at all times, notify the secretary, who shall promptly notify the committee, of any attempted or accomplished crime reported to him likely to affect other members of the association.

Yours truly,
HIRAM R. SMITH,
President Bank of Rockville Centre.

In drawing this amendment I have followed the form used by the American Bankers' Association, and, it having been recommended by the council of administration, I present it to the convention at this time for its action.

PRESIDENT SABIN: As Mr. Smith has given the required notice to enable him to present an amendment to the constitution, the amendment is before the convention. What is the pleasure of the members regarding it?

Mr. DIMSE: I move the adoption of the report and that the constitution be amended as stated.

Mr. SCHLESINGER: I am heartily in favor of the amendment. It is just what this association wants. We heard from various chairmen of groups yesterday statements about the efforts they were making to get in new members, and I think this will tend to bring in new members more than anything else.

PRESIDENT SABIN: All in favor of the adoption of the amendment proposed will signify it by saying aye; those opposed, no. Adopted.

Mr. GRISWOLD: I have a brief resolution which I desire to present, although I do not ask you to adopt it, but I have introduced it at the request of some members of the association, and I ask simply that it be referred to the council of administration for consideration:

Whereas, The New York State Bankers' Association secured the equalization of the taxation of banking capital; and

Whereas, The members of this association believe that a tax law should be passed that will be so framed that new measures for producing revenue, except for exceptional or extraordinary expenditures, will not have to be considered every year; therefore

Resolved, That the council of administration be empowered to appoint a committee to take up the question of general taxation, secure information in any and every way possible, consult with the State Tax Commission and other State officers, and secure as soon as possible the enactment of a just and equitable tax law with a basis that will be unchangeable.

PRESIDENT SABIN: I understand, Mr. Griswold, you present the resolution and ask that it be referred to the council of administration?

Mr. GRISWOLD: Yes, sir.

PRESIDENT SABIN: The resolution will be so referred.

Mr. SCHLESINGER: I read the other day some remarks of the Superintendent denouncing the practice of banks paying interest on deposits. Legitimate banking cannot be conducted if a bank is to pay four per cent. on deposits. We have seen the results of the large payment of interest by trust companies and banks, and we know what it leads to. I am receiver now of a bank that attempted to pay four per cent. on deposits. I think the Council of Administration should take this matter up with the Superintendent of Banking and call attention to the fact that it is unsafe banking business. That would in time tend to stop the practice and then the banks could afford to pay us poor officers a decent living salary to come up and enjoy the beauties of the St. Lawrence, and, furthermore, would assure depositors that if they put their money in the banks where we have the honor to be their trustees, they will have money to enable them also to come here and spend their vacations.

PRESIDENT SABIN: Certainly a great deal can be done by the council of administration and by this association to discourage this practice.

REFORM IN THE STATE AND NATIONAL BANKING LAWS.—STATEMENT SUBMITTED BY EX-CONGRESSMAN C. A. PUGSLEY, PRESIDENT OF THE WESTCHESTER COUNTY NATIONAL BANK, PEEKSKILL.

Peekskill, N. Y., July 5, 1905.

Chas. H. Sabin, Esq., President New York State Bankers' Association, Albany, New York:

My Dear Mr. Sabin: I have conferred with Mr. Elliott C. McDougal, President of the Bank of Buffalo, and Mr. Gates W. McGarrah, President of the Mechanics' National Bank, of New York city, the other members of the committee appointed by you to consider the advisability of reform in the State and National banking laws, and we are of the opinion that the subject is one of such great importance and so intricate that the committee could not, in the limited time at its disposal, present a comprehensive report at this meeting of the association. It may be proper for me to state, however, that the general consensus of opinion seems to be that both State and National banking laws might be amended with advantage to the banking interests of the State and nation.

Suggestions have been made that there should be an amendment to the National Bank Act, so as to permit the loaning of ten per cent. of capital and surplus, instead of ten per cent. of capital, as is now provided. Any effort, or contemplated legislation aiming to change the law, which allows loans of only ten per cent. upon the amount of the capital, would undoubtedly occasion much criticism. Many of the most conservative bankers believe this provision is a most wise and prudent one. It is generally understood, however, that in some instances there is an evasion of the law; but whether a greater latitude in the matter of loans would be beneficial to the banking interests of the country as a whole, is a mooted question.

Many plans, designed to give our currency greater flexibility, have been presented. Asset currency has been debated throughout the country, but has not, as yet, met popular approval. A supplementary currency has also been advocated, to be based upon other than Government bonds, and to be available in times of panic. It might possibly be advisable to permit of the issuing of such a supplemental currency in proportion to the capital and surplus of the banks, or based upon the amount of Government bonds held by the banking institutions, but it should be taxed heavily, so as to secure its retirement when the occasion which called it into existence had passed. Just what provision should be made for the securing of this supplemental currency is, however, a problem demanding very careful consideration.

The great essential of any currency is quality, rather than quantity. Our present national bank currency, guaranteed by the Government, though an expensive system, is not of doubtful quality, and any supplemental currency issued by the National banks should be guaranteed by the Government and the Government should have some security for its guarantee. The great increase in National bank circulation, however, during the past five years, owing to the withdrawal of Government bonds held for public deposits, and the pledging of them for circulation, has possibly lessened the demand for a supplementary or asset currency.

The elasticity or flexibility needed in our system could be had by enlarging the amount of circulating notes of National banks that might be surrendered in any one month from $3,000,000 to $6,000,000 or even $10,000,000 per month. This should give us an expansion or contraction of the currency to the extent desired without the enactment into law of any measure that would radically change our present system. Bills have been presented to Congress along these several lines, but none has, as yet, met just the requirements.

It would further seem necessary that banks holding Government deposits secured by the pledge of Government bonds should be required to keep a reserve against these deposits, the payment of which is usually provided for in advance of the withdrawal of the deposits by an arrangement for sale of the Government bonds pledged by the banks. Ample reserve should be held against deposits, but there should not be an unnecessary tying up of money when such reserve is not required for the protection of the special deposits of public funds of the Government.

In the matter of State banking laws, there seems to be a general feeling that the laws should be so amended as to bring State banks and trust companies which are doing a commercial banking business upon a more equal footing in regard to reserves kept, as well as along other lines.

While I have written you thus fully, my letter is not intended as a report, but rather as an indication of the scope of the work before the committee. I will request the other members of the committee to also write you their personal views, and I trust that the opinions expressed may be of some value to the committee that may be appointed to consider these important problems.

Very sincerely yours,

CORNELIUS A. PUGSLEY.

P. S.—Mr. Gates W. McGarrah, President of the Mechanics' National Bank, of New York city, has read the foregoing, and concurs in the views expressed.

PRESIDENT SABIN: There are several invitations from various places for the convention to meet next year, among them one from the Business Men's Association of Saratoga Springs, and they will be referred to the council of administration for consideration.

We will now proceed to the election of officers. It is customary for the secretary to cast the ballot of the association for the election of president, if that is the pleasure of the convention.

Mr. SCHLESINGER: I move that the secretary cast the ballot of the association for the election of Alfred H. Curtis as president.

Mr. LYFORD: I second that motion.

PRESIDENT SABIN: All in favor of the motion will signify it by saying aye; those opposed, no. Carried.

SECRETARY ELDREDGE: Mr. President, I beg to announce that I have cast the ballot of the association for the election of Mr. Alfred H. Curtis as president.

PRESIDENT SABIN: I declare Mr. Curtis duly elected president of the association for the ensuing year, and I request Mr. Griswold and Mr. Schlesinger to escort the president-elect to the chair.

The president-elect then ascended the platform.

PRESIDENT CURTIS: Gentlemen of the New York State Bankers' Association, I thank you. It is certainly a great honor to be chosen as the head of this organization, numbering as it does the greatest banks of our country. I assure you that I shall endeavor to the utmost of my ability to deserve the confidence you have reposed in me.

I believe the next business in order is the election of the vice-president.

Mr. NEWELL: I move that the secretary cast the ballot of the association for the election of Mr. Elliott C. McDougal as vice-president.

Mr. GRISWOLD: I second that motion.

PRESIDENT CURTIS: All in favor of the motion will manifest it by saying aye; opposed, no. Carried.

SECRETARY ELDREDGE: Mr. President, I announce that I have cast the ballot of the association for the election of Mr. Elliott C. McDougal as vice-president of the association.

PRESIDENT CURTIS: The chair declares Mr. McDougal elected vice-president. Now comes the election of secretary, and, with the permission of the house, I will request the retiring president, Mr. Sabin, to cast the ballot of the association for the election of Mr. E. O. Eldredge as secretary.

Mr. SABIN: Mr. President, I announce that I have cast the ballot of the association for Mr. E. O. Eldredge as secretary.

PRESIDENT CURTIS: I declare Mr. Eldredge elected secretary.

Now the treasurer, and I will ask Mr. Eldredge to cast the ballot of the association for the election of Mr. David Cromwell the nominee for treasurer.

SECRETARY ELDREDGE: I announce that I have cast the ballot of the association for Mr. David Cromwell for treasurer.

PRESIDENT CURTIS: I declare Mr. Cromwell elected treasurer. The next business in order is the selection of delegates to attend the convention of the American Bankers' Association at Washington. It is customary to call upon each group in order for its selection.

Group I. (No response.) Group II.

Mr. TEFFT: Group II names Mr. M. S. Sandford.

PRESIDENT CURTIS: Group III.

Mr. LYFORD: Group III nominates Mr. Charles Adsit.

PRESIDENT CURTIS: Group IV.

F. L. BARNES: Group IV nominates Mr. E. S. Tefft.

PRESIDENT CURTIS: Group V. (No response.) Group VI.

Mr. HAMLIN: Group VI nominates Mr. Bradford Rhodes.

PRESIDENT CURTIS: Group VII.

Mr. GRISWOLD: Group VII nominates Mr. George W. Spence, President of the People's Bank of Brooklyn, with Mr. E. H. Davis, Cashier of the Bank of Port Jefferson, as alternate.

PRESIDENT CURTIS: Group VIII.

Mr. DIMSE: Group VIII will send in the names of the secretary.

Mr. HAMLIN: I would like to add the name of Mr. A. M. Holden as alternate for Group II.

LEWIS S. PIERSON: It is possible that we may have 500 members by the time of the convention of the American Bankers' Association, and, if so, we will be entitled to another delegate. Perhaps it might be well to name an additional delegate at this time.

SECRETARY ELDREDGE: The association is entitled to nine delegates now, and we may possibly be entitled to a tenth delegate. At any rate, we have elected eight delegates, or are entitled to elect eight, besides one delegate at large.

Mr. Pierson: I nominate as the delegate at large the retiring president, Mr. Sabin.

Mr. Cromwell: I second that nomination.

President Curtis: All in favor of the nominations that have been made will signify it by saying aye; those opposed, no. Carried.

Mr. Lyford: Now, in case we are entitled to another delegate, I move that Mr. Lewis E. Pierson be that delegate.

Mr. Griswold: I second the motion.

President Curtis: All in favor of the motion will signify it by saying aye; opposed, no. Carried.

Is there any further business to come before this convention? If not, a motion to adjourn is in order.

Mr. Schlesinger: I move that the convention adjourn.

Mr. Cromwell: I second the motion.

President Curtis: All in favor of the motion will signify it by saying aye; those opposed, no. Carried.

I declare the convention adjourned sine die.

THE BANQUET.

A notable incident of the convention was the banquet on the evening of July 13. Following is a report of the speeches.

President Sabin: Ladies and Gentlemen—I do not suppose there is a man or woman in this room who does not know what the Governor of North Carolina said to the Governor of South Carolina. (A Delegate: "I don't.")

Well, to that gentleman who does not know I am going to ask Mr. Brown, of North Carolina, to tell him.

Response of Joseph G. Brown, President Citizens' National Bank, Raleigh, N. C.

If the gentleman who said he did not know what the Governor of North Carolina remarked to the Governor of South Carolina had been sitting at this elevated table, I am sure he would have soon learned that every other man, and almost every woman, in this company were very well acquainted with the remark that was made. I judge it by the frequency with which they have raised their glasses.

Not many weeks ago Joseph Chamberlain was the guest of honor at a banquet in Liverpool. After they had enjoyed the dinner some hour or two the Lord Mayor, who was presiding, touched Mr. Chamberlain on the arm and said: "Shall we let this company continue to enjoy themselves or shall we have your speech now?" If our honored toastmaster had touched me on the arm I should have replied, let the company continue to enjoy themselves.

I came here to-night not dreaming that I would have hanging over my head that dread which everyone knows who has ever made an after-dinner speech, but no sooner had I taken my seat than your president said I had to break the ice. I presume you are familiar with that dread which some speaker not long ago expressed when he said that he felt when he had to make an after-dinner speech very much like an old darkey down our way, who had just buried his fourth wife. As he was returning from the burial a friend said: "How do you feel?" He replied: "I feel like I am in the hands of an all-wise but unscrupulous providence."

To make an after-dinner speech without any preparation, one must have the utmost self-confidence he should have as much confidence in himself and in his powers as the old darkey preacher had. Some of the bad boys—and we do have some bad boys down South as well as North—found out what he was going to read for his Sunday morning lesson and they slipped into his pulpit during the week and finding that the words of the lesson began near the bottom of one page and finished at the top of the next, they very carefully pasted the two pages together so that the subject would change. Sunday morning came, and the old preacher gave out the first hymn and had it sung, and then he looked up his lesson and began to read: "And Noah when he was an hundred and twenty years old took unto himself a wife;" and he turned over and continued, "and she was one hundred and forty cubits long, sixty cubits wide, built of gopher wood, and covered with pitch inside and out." The old darkey was a little nonplussed at first, and he took out his glasses and carefully rubbed them and readjusted them and turned back and read again: "And Noah when he was an hundred and twenty years old took unto himself a wife, and she was one hundred and forty cubits long, sixty cubits wide, built of gopher wood, and covered with pitch inside and out," and he remarked: "Brethren, I never came across this passage before, but it is in the Holy Scriptures and so I am sure it is true, and doubtless it is given to teach us that we are fearfully and wonderfully made."

But, my friends, I am to have my chance at you to-morrow, and, as I am to tax your patience then, I am not going to weary you much to-night, but will give the time to the other speakers. I thank you, however, for the continued courtesies to me, and I thank you for this delightful entertainment. I feel like I could use the blessing pronounced by a young fellow who was called upon and who arose in his seat, and, as he did, he saw the savory and tempting viands, and he earnestly said: "O Lord, we thank Thee for this that we are about to receive. We thank Thee for its quality. We thank Thee for its quantity and variety, and, O Lord, we thank Thee for capacity."

You have given us a good dinner and we have enjoyed it, but you have given us something more. It was Dean Swift, I believe, who said when he was urged to attend a dinner and given the bill of fare: "What do I care for the bill of fare? Give me your bill of company." I am sure that even the fastidious gentleman would have been satisfied with this company to-night. You people have evidently learned the art of making happy the people that are about you; you have learned the art of being kind.

"So many Gods and so many creeds,
So many paths that wind and wind,
When just the art of being kind
Is all this old world needs."

James Whitcomb Riley was right when he said:

"It makes no matter whate'er the weather;
It is the songs you sing and the smiles you wear
That makes the sunshine everywhere."

I know that the most enjoyable part of this occasion to-night is the presence of the women. After all it is the women that make life worth the living.

(Here the company burst into singing "So Say We All of Us.")

That went without saying, gentlemen.

From this viewpoint as I have looked around here to-night I have become more than ever satisfied of one thing, and that is that we are pretty much the same people wherever we come from. Before I left my home in North Carolina I think I would have said, and said it conscientiously, that the North Carolina women are just a little the prettiest of any women on earth. But to-night as I look about me I must forego that claim and say simply that the New York women, and I am going to say the Virginia women and the North Carolina women, are the counterparts of each other, and that of all of them it may be said, as some one has very happily said of the strawberry, doubtless God could have made a prettier thing, but doubtless God never did.

Now, if you will allow me I want to give you just a little verse dedicated to my esteemed young friend David Pierson:

"The pepper grain is very small, but seasons every dinner,
More than all other condiments, although you spread it thinner.
And so a little woman, if love will let you win her,
There's not a joy in all the world you cannot find within her."

President Sabin: I have the honor of introducing to you now Hon. Bird S. Coler, of New York city.

Response of Hon. Bird S. Coler.

Mr. Toastmaster, Ladies and Gentlemen—I can assure you that I have felt very much agitated this evening since your president handed me a card and said I was to speak second, for he made me feel just about as bad as I did three years ago when I was second.

I thank you for your applause. Never before, excepting on one occasion, have I seen so many intelligent men and so many men that were familiar with commissions and rake-offs as to-night, and that was the occasion of the police captains' dinner in New York. The simile was accentuated when you all joined in singing "On the Bowery" and the thought then occurred to me what would happen to some poor bank clerk if the president here saw him doing those things on the Bowery.

I think the same of the ladies as does Mr. Brown, but I am here to defend them to-night. Mr. Beck this morning rather cast some aspersions on the presence of so many ladies at this convention, and he seemed to infer that they had a desire to go into business like Mrs. Chadwick. Now, I beg to inform him that every lady who takes a few dollars out of her husband's pockets is not a Mrs. Chadwick. She only does that because she disagrees with Mr. Flynn. Mr. Flynn said, Put the money not in your pocket, but in the bank and then it would go four times farther. She believes that in her hands it will go four times further still.

Seriously speaking, Mr. Flynn touched upon a most important subject. He referred to the old Vigilance days in California and told why it was necessary for the people to take the law into their own hands, and said that the judge was the first man they hanged. The recent revelations in our city has made me fear that something might happen to our junior senator in the State of New York. In fact, I was very fearful about him until Mr. Beck proved that all of us were the best that ever happened.

I do not intend to detain you from hearing those who are better able to entertain you than I am, but I do want to congratulate the association upon the large attendance here and upon the necessity of further developing this great association. To-morrow you will hear an interesting address from Mr. Van Wormer upon socialism. To my mind it seems to me that the great way to combat that movement is for the people to get together, to become acquainted with each other, for when the time of crisis comes we may all have to act and we will surely be better able to act intelligently if we know each other and appreciate each other's relation. I thank you.

PRESIDENT SABIN: **There was a time when Mr. Curtis was the strongest man in the New York Athletic Club, and now I have the pleasure of introducing Mr. John R. Van Wormer, the president of that club.**

RESPONSE OF JOHN R. VAN WORMER.

Mr. Toastmaster, Ladies and Gentlemen—This seems to have resolved itself into an experience meeting. The gentleman from North Carolina comes to New York for the first time and discovers that we have beautiful and charming women. That shows how remotely a man may be removed from modern civilization. I had always been taught to believe that one of the great virtues of the South was that some of its leading citizens had the wisdom to select Northern wives, and consequently we had this splendid product of mixed civilization and added virtue, as well as beauty. Don't you think it would have been a splendid idea if as good looking a fellow as he had picked up one of our magnificent Northern beauties? You knew the moment those honeyed phrases fell from his lips decorated with that peculiar Southern pronunciation of his, what superb things might have happened.

And then Coler comes along with his confession about a second advent of disappointment, and he twits on facts and speaks to you bankers about rake-offs. He would never have done that before election, all of which shows how defeat inspires courage.

With all these ladies present I was thinking about a great classic in American literature. Thomas Wentworth Higginson wrote a book on the theme, "Shall women learn the alphabet," a startling announcement at the outset. In that remarkable book he referred to the fact that as late as 1844 it was seriously discussed by the school board at Boston whether or not it was expedient to permit women to learn more than reading, writing and arithmetic. It was said that the boys must have the best education, and in some mysterious and unknown manner the Lord was to take care of the girls. Well, the Lord has, and the girls have taken care of the rest of us.

That brought to the minds of many thoughtful people the fact of how utterly woman was disregarded in economic, civil and religious provisions of society in this country to that time. The boy, it was said, was more likely to favor the mother than the father, because, you know, the mothers had to endure the fathers. That was an infliction in itself, because of that old New England hypocrisy that made a fellow who was desperately uncertain of his position try to maintain himself under lost conditions. The result was that he always came out at the little end of the horn, and the women dominated the situation. We are wiser far in this generation, because we recognize the fact that that is the motive force that makes all civilization progressive, and to-day in this community the women are far more near ultimate emancipation than they ever were in the history of the country. I remember, as a native of this county, when the life of a farmer's wife was desolation personified. To-day the home of the farmer's wife is the personification of hope, courage, and progress. All brought about through modern education. Yet for 250 years in this country it was overlooked, and only recently there has been the installation of women and she has come into her own. I presume that is one of the reasons why the New York State Bankers' Association has taken counsel of wisdom and experience and is in at the finish. It is a beautiful thing to contemplate, because man no longer fears the inspiration or even the competition of women. Twenty-five years ago in some walks of business life it was considered almost a crime for a woman to be able to earn her own livelihood in a business calling. To-day it is honored throughout the land, and no man who is worthy of the name has been in anywise damaged. It is a superb commentary on the emancipation of religion and modern philosophy and civilization, and I congratulate the New York State Bankers' Association of having the most brilliant background to show off their peculiarities that could possibly be imagined.

PRESIDENT SABIN: **It is not necessary for me to introduce to you the next speaker, because he is well known to all, Stephen M. Griswold, one of the former presidents of this association.**

RESPONSE OF HON. STEPHEN M. GRISWOLD.

Mr. Toastmaster, Ladies and Gentlemen—While I appreciate the honor of being invited to say a few words to you, it would be presumptuous on my part to occupy more than a few moments of your time.

I was thinking while sitting here what a world of change this is. I remember when this association was founded twelve years ago, and I think there are only two men here who were instrumental in its organization—Mr. Cannon and myself. Several have died and a number have dropped out, and the present managers of the association are new men. Well, that is the way it should be. Forty or fifty years ago the bank President was a very different type from what he is at present. In those days the President of a bank came downtown, stepped out of his carriage, walked through the bank with stately tread into an inner room without a smile upon his face, and only the sanctified few were admitted to his presence. It was about twelve o'clock when he arrived at the bank, and about two o'clock he came out and walked through the bank with the same stately tread, and without a smile upon his face, entered his carriage and departed.

All that is changed. The President of a bank to-day, to use the popular expression, must be a hustler. He must get out and get business. He must be cheerful and pleasant to all the customers. He must shake hands with all the ladies, and sometimes kiss the babies. He must give a man three per cent. interest on his deposit if he demands it. He must be ready to promote the welfare of the Bottomless Pit Mining Company, and to accept as collateral the guaranteed bonds and mortgages on clear sky in Colorado. He must own a yacht, and he must ride in an automobile. If he is over fifty years of age, why, he is too old. Well, that is all right, too. That is progress, and I suppose it is all right.

I was quite impressed to-day with the able addresses that we listened to in the convention, and especially with the spirit of patriotism that ran through them. We are Americans. After singing "John Brown's Body," and the "Star Spangled Banner" and "America," I am satisfied that the bankers are loyal and patriotic. The proudest moment I ever experienced was some years ago when I was travelling through the East. After leaving Naples we took our way across the Indian Sea through the Grecian Archipelago up to Constantinople, across the Black Sea to Sebastopol, up to Odessa, where we called upon the Emperor of Russia, then back again to Constantinople, down the coast of Asia Minor, up the Gulf of Smyrna, and in all that journey we never saw the American flag. But sailing up the Gulf to the City of Smyrna, one bright beautiful morning, we saw an American gunboat anchored, and, as we went by, they ran up the American flag. Never in my life was I so proud of America as when I saw Old Glory go up the halyard. It reminded me of home and of the greatest nation in the world. I tell you, my friends, we can take them all in.

The Frenchman loves his native wine,
   The German loves his beer,
The Englishman loves his half and half,
   Because it gives good cheer;
The Irishman loves his whiskey straight,
   Because it gives him dizziness;
The American has no choice at all
   But drinks the whole blame business.

I am not going to take up your time any longer. A man of my age when he gets up and sees such a great assemblage of young men feels that he must give advice. So I will just give you a word of advice and sit down. I have had fifty years of experience in business life, and I tell you that if you will stop working for yourselves and try to make other people around you happy, you will fulfil the highest mission of life. The optimist always succeeds, the cheerful man always attains success. What you do for yourselves will not live after you. It is what you do for others, to make them happy and to make them cheerful, that will endure. Lord Stratford once gave a dinner to the officers of the Crimean War, and during the course of the dinner he asked each officer to secretly write upon a card the name of the greatest hero of that war and the one whose name would live longest in history, and it was found when the cards were collected that every officer had written the name Florence Nightingale.

President Sabin: I wish to introduce to you again, Mr. S. R. Flynn, of Chicago.

Response of S. R. Flynn.

I will make no apologies for being on my feet to-night, having bored you once before, but I do wish to state that I plead in vain with your toastmaster to save you.

Since I was told that I was to be the fifth speaker, I believe that is to be the title of my address—I have vainly searched my mind for some message that title might fit. One after another these gentlemen have taken the thunder I might have used. My friend, Mr. Griswold, has told of the qualifications necessary for a bank President—shaking hands with the babies and kissing the ladies. Well, being a habitant of the Chicago stock yards, I am glad to say that is not one of the requisites there.

I have vainly endeavored to find a story that might be told in this presence. If I had the eloquence of Van Wormer or of Beck or Griswold or Coler or Brown I might acquit myself creditably. If I had the speed of a limited train that a friend of mine told me of, going through the town of Bristol in Indiana, I might do so. An old darkey there was asked if the Limited ever stopped at Bristol, and he replied: "Stop! Why, no indeed, honey, it don't even hesitate."

I have thought that perhaps I might give you some words of wisdom as to profits and the best way to attain them, but since I heard of one of Mr. Brown's friends in the South I find that I am the merest amateur. An old darkey wanted to move his crops and he needed $10. So he went to a bank and told of his need, and the clerk at the window passed him on to another window where he told his story again, and that clerk passed him on to another window, until at last he found his way to the President of the bank. The President listened to his request, asked him how many wives—I mean children—he had, and such other necessary information as he thought he required, and finally concluded that he would let the old darkey have the $10. So he had a note made out for $10, and the darkey signed it and took it back to one of the windows to get the money, and they handed him out $7.50. The darkey went out of the bank scratching his head in deep thought, and, as he walked down the street a man who knew him accosted him and said: "What's the matter, what are you in a quandary about?" "Well, I'll tell you," said the darkey, "I just went up to this bank shop cause I wanted to get $10 for to move my crops; I went to all the various gemmen in there and at last I found one that seemed to be de boss in authority and he said he would let me hab the $10, and I signed a note for de $10 and dey give me $7.50, and I am just thinking what would have happened if I had asked for the money for four months instead of only one month because den I wouldn't have got anything."

In the days when I used to offend in this way more than I have been guilty of lately, I had many friends who would suggest things to me of what I might say. On one occasion a friend said to me: "Say, I just heard the best story you ever heard in your life. Of course, I can't tell it the way you could, but I'm going to give you the points and you can fix it up and tell it and you'll make a hit. There was a drummer got on the train one night late, and he said to the porter, 'Now, I want you to put me off at Elkhart. Here is a $5 bill, and you be sure that I am put off at Elkhart.' Well, the man went to sleep, and when he woke up the next morning the train was approaching Chicago, and he went to the porter and said, 'Why didn't you put me off at Elkhart?' The porter looked at him and laughed and said: 'If you the gemmen that told me to put him off at Elkhart Ha! Ha! Ha! I wonder who that man was that I did put off.'"

It would be impossible in this presence with the patriotic airs that have been sung not to be imbued with a sense of patriotism. I noted to-night with much pleasure that when "Dixie" was played everyone applauded, and I turned to Mr. Brown and asked him if they were singing the "Star Spangled Banner" in the South, and he said they were. It was a glad message to me. I regret exceedingly that the West—although I am not a native of the West, but am an adopted son—has not some air that the South and the North and the East can applaud. We of the West applaud "Dixie" and the "Star Spangled Banner," but we have no distinctive air of our own. Still, the people there are as you are. I think the people of the East more often than they should mistake the character of the West, the people, and the conditions obtaining there. They who travel know that we are, after all, one people—a people with but one flag and with one common purpose. As the nations of the older world have contributed in some cases their worst, but also their best, to the people of this entire country, so you of the East have contributed to the West, and the splendid energy that has developed the West comes from the East. It is not as it used to be when I first went there. At that time a gentleman from North Carolina, in a speech that he delivered there, very aptly illustrated the conditions existing at that time. He was a celebrated stump speaker, and he was visiting a town where the papers had paid great attention to him and had abused him in every possible way. When he appeared on the platform and was introduced, he said: "The people of this town and the newspapers have abused and vilified me, but if I am guilty of one-half the crimes I have been charged with I ought to have been hanged long ago, but I can tell you one thing: I am travelling under the same name way out here that I lived under in my own home town in North Carolina, and that is a — sight more than seventy-five per cent. of you people can say." There was a time when respected citizens who had lived in the community long enough to think that their past deeds had been forgotten, announced with a flash of trumpets that they were about to visit their old home, and banquets and ovations were given them. They were gone about a week and then the papers announced that they had been jailed for some old crime. But that is all passed away, and as I have said, the East has contributed a lot to the spirit that exists in the West; it is responsible for it. A young boy going to the West, a boy raised in the East, went to the West with this sentiment, and I can tell you that many of them have lived up to it. It is a little piece of poetry written by an Eastern literateur to his parting young friend:

> A word at parting, counsel true,
> Is fit, my boy, from me to you.
> And since I, your senior many years,
> Have learned life's lesson from its care,
> Long experience bids me say,
> Success in life has but one way:
> It is the path of right.
> In every action of thy life,
> Whether at peace or bitter strife,
> Let conscience be your guide;
> Misfortunes bear with manly pride.
> When fortune smiles, prepare to dream.
> Success with humble thanks receive,
> When richest think most poor;
> When poorest shun the rich man's door.
> Never desert a friend in need;
> Never forget a kindly deed.
> For gratitude is magic test
> Of all in man that is the best.

Be neither sinner nor a saint.
If ill-luck comes, make no complaint.
Some ills of life admit no cure;
He is the man who can endure
Who bravely can each burden bear;
Suffer and hope when most despair;
Accept thy cross with good grace;
Thy heart keep young when old thy face,
And know that years will bring content
To him whose life has been well spent.
Farewell, my boy; you do your best,
And trustfully leave to God the rest.

PRESIDENT SABIN: I will again introduce to you Mr. Beck.

RESPONSE OF HON. JAMES M. BECK.

I congratulate you all upon the very great success this convention has already had, and especially upon this notable banquet. It reminds me very much of the story of two newsboys out in Seattle who climbed up in the peanut gallery in the theatre to see the play of "Hamlet." They followed that marvelous masterpiece until the last act, when the dead were coming fast and thick and when the stage was a huge quarry of riot, when one of the boys said to the other: "Come, Jimmy, let's run to the newspaper office, 'cause there'll be extras out on dis."

I am sure if the newspaper press does justice to this convention there will be extras out on this.

Nothing was further from my thought than that I should again trespass on your patience. Yet I can hardly pass by some of the remarks that have been made by the preceding speakers because they naturally prompt comment. Mr. Griswold says it is the customary function of modern bankers to kiss the female depositors and shake hands with the babies. When I heard that, I could only wish that I had been a banker instead of a poor but honest lawyer. Then, I was much struck by the lament of the last speaker, that the great imperial West, from which he came, had no peculiar song with which to celebrate its patriotism. It never occurred to me before that it had that deficiency, and I am going to claim the originality of suggesting to him when he returns to his fellow citizens of the far West, a most appropriate song for the West, that will be a companion piece to "Dixie" and the "Star Spangled Banner." It is this: "If You Haven't Got Any Money, You Needn't Come Around." And there was my friend, Coler, who administered to me a most righteous rebuke, and from a most unworthy motive. He had already, as he told us, run once second, and I am going so far as to say that he would run first if there had been no opposition. But he, knowing that he would again challenge the suffrages of his fellow citizens and knowing perfectly well that in the coming day the women should have a right to vote in anticipation of the claim to their suffrages, visited upon me a rebuke as to a slur which he said I in my address this morning cast upon the fair sex. Now, in the wisdom of that appeal to woman suffrage I perceive in this particular bird an owl.

I want to say that I did not cast any slur upon the ladies. I may run for office myself one of these days, and I want to say that they have no more respectful admirer than I am, notwithstanding the somewhat bombastic utterances with respect to the ladies of the preceding speakers. I vie with them in all they have said about the ladies. Why, I think a woman a born economist. They often appeal to us to relieve us of the necessity of administering our wealth, and for the most part they do it. And, what is more, such is the woman's craze for economy that I have known a woman to spend a whole day travelling around to save two cents on a ribbon and spending twenty-five cents in car fares. But I say to you in all sincerity that I, for one, would open wide the avenues to women.

Now, as my eloquent friend has lapsed into poetry, I will venture to lapse, and I quote:

"The woman of the coming time,
  Of this you may be sure
And bet your bottom dollar
  She will do as she's a mind to.
As she says she will or says she won't,
  It will be the same as now;
But if she does or if she don't,
  God bless her, anyhow."

Why, I shall not yield to these gentlemen in the praise of woman, and, as patriotism seems to be the prevailing note of the evening, let me remind you that it was an American woman who first wove an American flag and flung it to the breeze, and as long as that flag floats in the heavens so long may every chivalrous American cherish and love the noblest creation of God—woman.

I indulged in a good many pedantic references this morning that I do not believe went beyond the Christian era, still I am going to refer to something now which shows the antiquity of the banker. I was very much interested some months ago in reading reports of the wonderful excavations at Nippur conducted under the auspices of the University of Pennsylvania, and I read how Dr. Peters in delving into the ruins came across a bandaged mummy that had utterly escaped previous observation. As they slowly unfolded wrapper after wrapper they discovered that he was a high priest of Babylonia. Then in further excavation they discovered the old temple of Nippur and the old library. Unquestionably, it was the temple library; but as they failed to discover any books, these savants reached the conclusion that it must have been a Carnegie library. Then they came upon the ruins of an old bank, for they found clay tablets upon which were written promissory notes and collateral obligations, and what convinced them absolutely that it must have been a bank was that when they opened the vault they found nothing in it.

I have wondered why it is that the bankers chose this for their place of meeting until I chanced to glance across this beautiful river and saw the shores of Canada—what Moses saw when he stood upon Nebo's heights and beheld the promised land.

Thanking you all for the patience with which you have listened to my rather didactic discourse, I can only say, come up to the Thousand Islands again, but do not cross over to the other side of the river.

President Sabin: I introduce to you Mr. Joseph A. Lawson, of Albany.

Response of Joseph A. Lawson.

I am frank to admit that I am going to be a little didactic myself. It may be that I come from Albany, but in Albany they are not publishing the "Simple Life" or "The Pace That Kills." I have stood in the presence of lovely women before; I have spoken in the presence of crowned heads—four queens. All I said was, "That's good." I am reminded of those beautiful lines of Coleridge—you see, I have read something besides reading, writing and arithmetic, I am not absolutely ignorant if I do come from Albany—"Money, money everywhere, and not a cent for me."

To invite a poor lawyer from the capital of the State to come here in this aggregation of wealth makes him feel like a three-card monte man at a country circus. I wish I knew a lot of those Joe Millers that my friend Beck has entertained you with. But talking about antiquity, I know as much about mummies as he does; that's because I live in Albany. I look with veneration upon Moses as the author of the twelve tables, but when I reflect that little Moses was found on a bank and by Pharaoh's daughter, it must have been a faro bank, then I realized that the law is not one, two, three with banking.

I wish I had something serious to say to you. I am not a bank President, nor a director. I have mighty little money in the bank, but I have got out a lively lot of discounts. I cannot talk on collateral, however, for one dinner.

Mr. Toastmaster and descendants of Pharaoh's daughter, and bankers of the State of New York, for your consideration in listening to these desultory remarks I thank you.

President Sabin: Before we disperse I think we should hear from Mr. Curtis.

Alfred H. Curtis: Mr. Toastmaster, I do not think at this late hour you care to hear from me, so I will simply wish you good-night.

LIST OF DELEGATES AND GUESTS ATTENDING THE CONVENTION.

Adams—Geo. Hannahs, Farmers' National Bank.

Alexandria Bay—C. U. Putnam, First National Bank.

Albany—Charles H. Sabin, National Commercial Bank; Geo. A. White, N. Y. State National Bank; Fred'k A. Mead, First National Bank.

Baldwinsville—W. F. Morris, First National Bank.

Ballston Spa—Andrew S. Booth and Samuel R. Taverner, Ballston Spa National Bank.

Batavia—Samuel Parker, First National Bank.

Brockport—Luther Gordon and Philip F. Swart, First National Bank.

Brooklyn—Edmund D. Fisher, Flatbush Trust Co.; Henry E. Hutchinson, Brooklyn Bank; Stephen M. Griswold, Union Bank of Brooklyn; Bird S. Coler, Brooklyn Bank; E. A. Walker, J. S. Ogilvie and John Eaton, Seventeenth Ward Bank; R. K. Haldane, Coney Island and Bath Beach Bank; Geo. M. Spence, People's Bank of Brooklyn; Stephen M. Randall, Seventeenth Ward Bank; W. A. Field, First National Bank.

Buffalo—Elliott C. McDougal and Ralph Croy, Bank of Buffalo; E. J. Newell, People's Bank.

Canajoharie—Q. S. Brumley, Canajoharie National Bank.

Canandaigua—F. H. Hamlin, Canandaigua National Bank.

Cohoes—Geo. R. Wilsdon and Wm. P. Adams, National Bank of Cohoes.

Carthage—F. W. Coburn, Carthage National Bank.

Cooperstown—G. Pomeroy Keese, Second National Bank.

Corinth—Theo. Elixman, Corinth National Bank.

East Bloomfield—Henry M. Parmele, Hamlin & Co.

Freeport—Wm. G. Miller, Jr., Freeport Bank.

Fulton—Thos. Hunter, First National Bank.

Gainesville—John T. Symes, Gainesville National Bank.

Geneva—M. S. Sandford, Geneva National Bank.

Glens Falls—John W. Parry, National Bank.

Gloversville—Chas. N. Harris and W. H. Byers, Manufacturers and Merchants' Bank.
Gouverneur—F. M. Burdick, First National Bank; H. G. Aldrich and Henry Sudds, Bank of Gouverneur.
Herkimer—A. W. Haslehurst, First National Bank.
Hilton—A. B. Frazer, A. B. & G. G. Frazer.
Honeoye Falls—A. M. Holden, Bank of Honeoye Falls.
Hoosick Falls—Delmer Runkle, People's National Bank.
Hudson—Alex. R. Benson, First National Bank; M. D. Herbs and F. C. Haviland, Farmers' National Bank.
Huntington—Henry F. Sammis and Thos. Young, Bank of Huntington.
Johnstown—W. A. Hersey, Jr., Johnstown Bank.
Jamestown—F. W. Hyde, Chautauqua County Trust Co.
Kingston—E. J. R. Clark and C. R. Cantine, National Ulster County Bank.
Larchmont—Walter B. Manny, Larchmont National Bank.
Liberty—W. E. Sprague, Sullivan County National Bank.
Lowville—Frederick McCullock, First National Bank.
Little Falls—L. O. Bucklin, Little Falls National Bank.
Lyons—S. B. Gavitt, Gavitt National Bank.
Malone—M. F. McGarrahan, People's National Bank.
Mamaroneck—R. G. Brewer, First National Bank.
Mexico—Chas. A. Peck, First National Bank.
Middletown—D. C. McMonagle and Wm. B. Rouce, First National Bank.
Mount Kisco—Theodore Carpenter, Mount Kisco National Bank.
Mount Vernon—Theo. F. Nesbitt, First National Bank.
New York City—W. L. Walker, National Bank of North America; James G. Cannon, Fourth National Bank; Wm. C. Cornwell, J. S. Bache & Co.; D. H. Pierson, Bank of Manhattan Co.; C. F. Hess, J. B. Russell & Co.; David Taylor, Coal & Iron National Bank; H. H. Applegate, Hanover National Bank; Alfred I. Warren, Fisk & Robinson; E. B. Wire, National Bank of North America; H. C. Miller, Nassau National Bank; Frederick Phillips, Lincoln Trust Co.; Wm. R. Hooper, National Bank of North America; Mortimer H. Wagar, Consolidated National Bank; P. S. Babcock, Colonial Trust Co.; Milton C. Roach, National Bank of North America; Jos. L. Barker, "U. S. Investor"; W. K. Cleverly, Seaboard National Bank; Leo Schlesinger, Mechanics & Traders' Bank; Chas. W. Riecks, Liberty National Bank; J. G. White, National Bank of North America; Chas. A. Morrison, stenographer; Arthur Sachs, Goldman, Sachs & Co., W. J. B. Mills, Geo. W. Young & Co.; Alfred W. Day, Mercantile National Bank; Edwin B. Day, Battery Park National Bank; H. L. Crandell, Bank of Long Island; John A. Thayer, National Bank of North America; F. E. Marshall, Phenix National Bank; Walter Kutzleb, Russo-Chinese Bank; G. E. Lewis, Gallatin National Bank; John S. Davis, Jr., Hamilton Bank; Frederick H. Reed, National Bank of North America; Geo. N. Hartman, Knickerbocker Trust Co.; A. A. Knowles, Mechanics' National Bank; A. W. Snow, Garfield National Bank; E. Myerson, stenographer; Wm. J. Henry, New York National Exchange Bank; W. O. Jones, National Park Bank; James M. Donald, Hanover National Bank; Albert S. Cox, Merchants National Bank; Thomas Simpson, Twelfth Ward Bank; Wm. L. Frankenbach, Yorkville Bank; Alfred M. Barrett, Guardian Trust Co.; W. E. Purdy, Chase National Bank; J. P. Dunning and F. T. Martin, Corn Exchange Bank; F. W. Kinsman, Jr., Hamilton Bank; James V. Lott, Mercantile National Bank; Henry Dimse, Citizens Central National Bank; Chas. Elliot Warren, Lincoln National Bank; Lewis E. Pierson, N. Y. National Exchange Bank; Alfred H. Curtis, National Bank of North America.

Northport—Henry S. Mott, Bank of Northport.
Northville—E. Eglin, Northville Bank.
Norwich—Geo. T. Dunham and H. H. Higley, Chenango National Bank; Howard D. Newton, National Bank of Norwich.
North Tonawanda—Benj. L. Rand, Benj. L. Rand & Co.
Ogdensburg—R. J. Donahue, National Bank of Ogdensburg.
Oneonta—E. A. Scramling, Wilber National Bank.
Oswego—F. E. Sweetland and L. W. Mott, Second National Bank.
Owego—G. Truman, Jr., First National Bank; W. L. Ayer and E. O. Eldredge, Owego National Bank; F. E. Corey, stenographer.
Oyster Bay—Jas. H. Ludlum, Oyster Bay Bank.
Oxford—John R. Van Wagenen, First National Bank.
Philadelphia—W. A. Marwick and D. C. Rodenhurst, Bank of Philadelphia.
Pleasantville—Danl. P. Hays, Mount Pleasant Bank.
Port Jefferson—E. M. Davis, Bank of Port Jefferson; F. A. Kline, First National Bank.
Port Jervis—Frederick B. Post, First National Bank.

Buffalo—Mrs. E. C. McDougal and Mrs. Ralph Croy.
Canajoharie—Mrs. S. Brumley.
Canandaigua—Arthur T. Hamlin.
Cohoes—Mrs. G. R. Wilson.
Clayton—Rev. L. W. Sirrell and Mrs. L. W. Sirrell.
Cohoes—Miss Adams.
Freeport—Mrs. W. G. Miller.
Frontenac—Hubert Van Wagenen and Mrs. H. Van Wagenen.
Fulton—Carlisle E. Hunter.
Gainesville—Mrs. J. T. Symes.
Geneva—Miss Sandford.
Gloversville—Mrs. C. H. Harris and Mrs. W. H. Byers.
Gouverneur—Mrs. F. M. Burdick, Miss Burdick, Mrs. H. G. Aldrich, Misses Aldrich and E. D. Barry.
Herkimer—Mrs. A. W. Haslehurst and Miss Haslehurst.
Hilton—Mrs. A. B. Fraser and Eva E. Kerr.
Hoosick Falls—Mrs. Delmer Runkle.
Hudson—Mrs. M. D. Herbs and Mrs. F. C. Haviland.
Huntington—Mrs. H. F. Sammis, Mrs. Thomas Young and Miss Bertha L. Young.
Johnstown—Mrs. W. A. Hersey, Jr.
Kingston—Mrs. F. J. R. Clarke, Miss Clarke, Mrs. C. F. Cantine and Miss Cantine.
Larchmont—Mrs. W. B. Manny.
Liberty—Mrs. W. E. Sprague and Miss Louise Young.
Little Falls—F. I. Small.
Malone—Mrs. M. F. McGarrahan.
Mamaroneck—Miss Louise Rushmore, Mrs. R. G. Brewer and Miss Nellie G. Brewer.
Mexico—Mrs. C. A. Peck.
Middletown—Mrs. D. C. McMonagle and Mrs. W. B. Royce.
Mount Kisco—Mrs. Francis H. Carpenter.
Mount Vernon—Horace Loomis, Mrs. Horace Loomis and Mrs. T. F. Nesbitt.
New York City—Mrs. W. L. Walker, Mrs. James G. Cannon, B. J. Robertdon, Mrs. H. H. Applegate, Miss Mildred Applegate, Mrs. E. B. Wire, Mrs. H. C. Miller, Mrs. M. H. Wager, J. H. Allaire, Mrs. J. L. Barker, Mrs. Leo Schlesinger, Mrs. Daninberg, Mrs. Dugan, Mrs. J. G. White, J. Dugal White, Mrs. C. A. Morrison, Miss Marion Morrison, Geo. A. Farnham, Mrs. A. Farnham, Anthony Stumpf, James R. Branch, Secretary American Bankers' Association, C. C. Hay, W. H. McFarland, D. W. Armstrong, Jr., Ballard McCall, J. M. Fitzpatrick, F. Howard Hooke, J. H. McFarland, Dwight H. Day, H. T. Lansing, J. M. Beck, Mrs. J. M. Beck, E. W. Kimball, Mrs. J. S. Davis and son, E. M. Scovil, Mrs. J. A. Thayer, Lloyd E. Brown, H. D. Marshall, Jr., G. W. Smith, Mrs. H. L. Crandell, Arthur F. Schermerhorn, C. W. Kingsley, Mrs. C. W. Kingsley, F. W. Lafrentz, Mrs. A. W. Day, Miss Day, Mrs. F. W. Lafrentz, A. E. Sheridan, Albert Henry Auge, Mrs. Albert Henry Auge, H. A. Canfield, Miss Canfield, C. H. Senauer, Mrs. F. H. Reed, Kenneth McK. Reed, Mrs. W. J. Henry, Miss Florence R. Rhodes, Mrs. W. O. Jones, Mrs. J. M. Donald, Mrs. A. S. Cox, Mrs. Thos. Simpson, Mrs. W. L. Frankenback, Misses Frankenback, John R. Van Wormer, Mrs. H. Dimse, Mrs. C. E. Warren, Mrs. L. E. Pierson, Miss Grace Thorn, Miss Maud Thorn, Mrs. A. H. Curtis, Mrs. M. P. Claggert, Mrs. Eugene Van Schaick and Clarence R. Leach.
Northport—Mrs. Henry S. Mott.
Norwich—Mrs. H. H. Higley, Miss Anna Newton and Miss Margaret Newton.
North Tonawanda—Mrs. B. L. Rand and Jas. H. Rand.
Owego—Mrs. E. O. Eldredge, Mrs. G. Truman, Jr., Mrs. W. L. Ayer, F. W. Clifford and Mrs. F. W. Clifford.
Oswego—Mrs. F. E. Sweetland.
Oyster Bay—Mrs. J. H. Ludlum.
Oxford—Mrs. J. R. Van Wagenen.
Philadelphia—Mrs. W. A. Markwick and Mrs. D. C. Rodenhurst.
Pleasantville—Mrs. D. P. Hays.

Rochester—Mrs. W. J. Trimble, I. Heckmyer, Edmund Ocumbaugh, Mrs. Eugene Satterlee and Miss Satterlee.
Rome—Mrs. F. M. Shelley.
Sherburne—H. H. Wells.
Syracuse—E. T. Clark, Mrs. A. Lamb, Herbert W. Lamb and Miss Julia Coe.
Troy—Mrs. A. B. Cobden, Ben Franklin, Mrs. F. E. Howe, Miss Fancher, E. F. Howe, Julius Christensen and Mrs. J. W. Fleming.
Ticonderoga—Mrs. W. W. Richards.
Waterloo—Mrs. J. H. Haslett.
Waverly—Mrs. F. E. Lyford, Mrs. C. W. Slaughter and Miss Gertrude Slaughter.
Warsaw—Miss Humphrey.
White Plains—Mrs. David Cromwell

TENNESSEE BANKERS' ASSOCIATION.

This year's convention of the bankers of Tennessee was held at Lookout Mountain, June 20 and 21. After the customary preliminary exercises the annual address was delivered by President Joseph P. Gaut, President of

F. B. FISHER,
President Tennessee Bankers' Association.

FRANK K. HOUSTON,
Secretary Tennessee Bankers' Association.

the Holston National Bank, Knoxville. He described the work done by the association in the past year, and reported an increase in membership from 175 at the last annual meeting to 250 at the present one. In regard to the banking business of the State, President Gaut said:

"There are in the State of Tennessee approximately 307 banks. These banks have an authorized and fully-paid capital stock of about $18,500,000. They also have in addition to their capital stock a fund of surplus and undivided profits amounting to about $6,500,000. They have on deposit a sum in excess of $85,000,000. From these figures it will be seen that there is no business interest in Tennessee that compares in importance, or perhaps in magnitude, with that of the banking interests. That their vast sums of money are, and must be, the real means for developing the resources of our State, and marketing and disposing of its products, will be readily conceded. That the wise handling of such funds, so that they may at once be available for all legitimate enterprises and business interests, and at the same time furnish no help to doubtful and speculative enterprises is a most important problem, will be as readily conceded."

J. F. Brownlow, Cashier of the Farmers and Merchants' Bank, Columbia, made an address in which he favored the organization of a Southern bankers' association.

Harvie Jordan, of the Southern Cotton Association, spoke on "Closer Relations Between Farmers and Bankers." He favored the encouragement of the establishment of standard warehouses and of more cotton mills, and said there was need of more State banks, distributed throughout the rural counties of the South. "Conservative Banking" was the theme of an address by F. B. Fisher, Cashier of the Jackson Banking Co. In the course of his address he said:

"Speculation and speculative securities are not in harmony with conservative banking. A speculator has no place in a bank. The first time an executive or an employee of a bank speculates, even though the stake be small, that is the moment for him to tender his resignation, and, failing to offer his resignation, he should be discharged. No satisfactory excuse can be made for a person holding a fiduciary position speculating. Conservative banking exacts correct morals, correct habits, correct living upon the part of every employee from President down, and includes the directors. People intrusted with the savings of other people are under moral as well as legal obligations to the depositors, and conservative banking exacts moral integrity as well as financial integrity."

Tate L. Earnest, Cashier of the Unaka National Bank, Johnson City, described "The Ideal Banker and His Opposite." His address dealt chiefly with the qualities that constitute an ideal banker. He spoke strongly in favor of providing employees with good bank literature, modern systems of accounting, and time and labor-saving equipment.

Following are the new officers of the Tennessee Bankers' Association:

President—F. B. Fisher, Cashier Jackson Banking Co., Jackson.

Vice-Presidents—J. B. Walker, Cashier First National Bank, Centreville; J. N. Fisher, Cashier First National Bank, Morristown; G. P. Hurt, President Kenton Bank, Kenton.

Secretary—Frank K. Houston, Nashville.

Treasurer—D. W. Shofner, Cashier Bank of Mt. Pleasant, Mt. Pleasant.

Chairman of Executive Council—T. R. Preston, President Hamilton Trust and Savings Bank, Chattanooga.

President State Bank Section—J. Arnold, President Bank of Cookeville.

H. S. HANSBROUGH,
President Virginia Bankers' Association.

N. P. GATLING,
Secretary Virginia Bankers' Association.

D. H. McKee,
President Iowa Bankers' Association.

J. M. Dinwiddie,
Secretary Iowa Bankers' Association.

Cliff W. Gress,
President Minnesota Bankers' Association.

J. C. White,
President Texas Bankers' Association.

Offices of J. S. Bache & Co.,

42 Broadway, New York.

A TYPICAL NEW YORK BANKING FIRM.

It is after all only a few years since the skyscraper was a seven-days' wonder and the ten-million-dollar corporation gigantic. What a few years back was a stupendous enterprise is to-day scarcely noticed. It is an age of progress, and probably nowhere has this been reflected to a greater extent than in the Wall Street district. A revolution, commercial, financial and industrial, has taken place, and to-day it is not remarkable if a single firm or corporation transacts as much business as did a dozen important firms a decade ago.

The recent installation of Messrs. J. S. Bache & Co. at 42 Broadway, is a typical illustration of recent progress. The firm's new quarters are the finest private banking offices not alone in America but in the entire world. Covering in extent practically the whole of the ground floor of that enormous building, the offices occupy fifteen thousand feet of floor space and stretch from Broadway to New Street. On the Broadway front are the executive offices, the headquarters of the members of the firm, while on the New Street side are the various departments, the customers' room and the wire-room. Solid mahogany and quartered oak have been used throughout in the wood finishings, and their massive effect is in sharp but pleasing contrast to the vari-colored Sienna marble of the mural decorations. The furnishings are harmonious throughout. The artistic bronze fixtures and the richness of the office furniture impress upon the mind the idea of luxury without ostentation.

Altogether the firm's new quarters exhibit a completeness that is unparalleled. They are in keeping with the important banking position and financial standing of the firm. In contradistinction to brokerage firms dominated by a railroad president, a market operator or the representative of a corporation, Messrs. J. S. Bache & Co. are a "Commission House" profiting by their ability to serve the public in financial transactions. Exchange operations by

BANKING ROOM OF J. S. BACHE & CO.

ORDER AND TELEGRAPH DEPARTMENT,

J. S. Bache & Co., 42 Broadway, New York.

no means absorb the activities. It is a banking as well as a brokerage firm; buying and selling bonds whether listed on Exchange or not; buying and selling domestic and foreign exchange and transacting a general banking business. Operations are both international and domestic; letters of credit are issued on any place in the world that has banking facilities, and through foreign correspondents intimate relations are maintained with the principal European centres of commerce and finance.

For the transaction of their brokerage business Messrs. J. S. Bache & Co. are members of the leading exchanges of the country and their activities embrace transactions in every commodity that is traded in on the larger financial markets. Stocks and bonds on the New York, Boston, Philadelphia, Chicago and Rochester Stock Exchanges, and on the New York Curb market; cotton on the New Orleans, New York and Liverpool Cotton Exchanges; grain and produce on the New York Produce Exchange and the Chicago Board of Trade; pig iron on the New York Produce Exchange and coffee on the New York Coffee Exchange, are all the objects of daily transactions.

In addition to its headquarters at 42 Broadway the firm has two branch offices in New York city and branches at Albany and Troy, Philadelphia, Montreal, Rochester, Newark, N. J., and at Liverpool, England, besides summer offices at Atlantic City and Saratoga. These offices, of course, cover a large field, but one that is small in comparison with the territory tributary to the private wire system. From New York in the East to San Francisco in the West, from Montreal in the North to New Orleans in the South, stretches a private wire system centering in the firm's wire-room at 42 Broadway. It embraces the entire continent. It reaches every important city, either directly by the main trunk lines or indirectly by branch lines radiating as in the cotton belt to smaller but important centres of trade and commerce where the firm has correspondents. Altogether the firm's relations are world wide. They are typical of New York's financial progress, of its imposing financial position, reflecting immediately a change in the financial pulse whether at home or abroad.

BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—W. F. H. Koelsch, Assistant Secretary of the Alliance Trust Co., has been appointed Treasurer to succeed Charles Dittman, resigned. ' Gilbert S. Mott and Webb Floyd have been appointed Assistant Secretaries.

—The Guardian Trust Company has taken the entire ground floor of the building at the southeast corner of Broadway and Maiden Lane, and will now be fully prepared to accommodate its business, which has increased thirty-three and one-third per cent. in the last four months.

—Charles H. Hampton was recently unanimously appointed Assistant Cashier of the Hanover National Bank.

—At a recent meeting of the directors of the Greenwich Bank William A. Hawes, Cashier, was appointed auditor; Clarence Foote, manager of the William Street branch, was appointed Cashier; and Frank Hammond, paying teller at the main office, and Harry A. Golding, manager of the Broadway branch, were appointed Assistant Cashiers.

—The Farmers' Loan and Trust Company has leased the property at 475 Fifth avenue, adjoining the southeast corner of Forty-first street, and opposite the new Public Library, and will erect there a new building, to be occupied as an uptown branch.

—The Mercantile National Bank, which has been at the southwest corner of Broadway and Dey street for nearly fifty years, is about to move across the street into the Western Union Building, on the northwest corner, where it has taken a long lease of the entire first floor.

The bank owns its present building as well as the one adjoining, at 189 Broadway, the two together covering a plot 46 by 100.

NEW ENGLAND STATES.

Long Service in a Bank.—Francis N. Plimpton, who has been for sixty years continuously in the service of the Wrentham (Mass.) National Bank, severed his connection with that institution on August 1. He entered the bank at the age of seventeen, filling minor positions for a time. Forty years ago he was made Cashier.

Newport, R. I.—The Industrial Trust Co., of Providence has absorbed the Coddington Savings Bank, and the Newport Trust Company has absorbed the First National Bank.

Bank Commissioner Resigns.—Frederick B. Washburn has sent to Governor Douglas his resignation as Savings Bank Commissioner for Massachusetts, to take effect September 1.

MIDDLE STATES.

New York Savings Banks.—Deposits in the New York Savings banks during the past year show an increase of $85,836,855; the increase the past six months has been about $52,000,000. Prior to this year the largest increase in any one year was in 1899 when the deposits increased $71,336,282.

The total resources of the banks on June 30 were $1,367,692,595. The amount on deposit is $1,252,928,299. One year ago the deposits were $1,166,091,444. The surplus is now $114,139,526, as compared with $108,584,097 one year ago.

The amount of money deposited during the year aggregated $363,213,466, and the amount withdrawn $317,711,472. On the deposits interest in the sum of $41,748,434 was paid or credited during the year. The number of open accounts in the banks is 2,513,570.

WESTERN STATES.

Cleveland, Ohio.—Governor Myron T. Herrick has resigned as President of the Society for Savings, and A. L. Withington, who has been Secretary and Treasurer for the past ten years, succeeds him. Governor Herrick will be Chairman of the Board of Trustees—a position created for him. His resignation was due to the pressure of official and political duties upon his time and attention. The Society for Savings ranks among the largest institutions of its class in the country.

Oklahoma City, Okla.—A consolidation of the Bank of Commerce and the American National Bank, under the title of the last-named institution was recently effected. The officers are: President, J. H. Wheeler; Vice-President, G. G. Sohlberg; Cashier, F. P. Johnson; Assistant Cashiers, H. B. Carson and O. L. Avey. By the consolidation the resources of the American National will be greatly increased, its capital being $100,000 and deposits $800,000.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report.

Platteville—Platteville State Bank.

THE BANKER'S RESPONSIBILITIES.—At the recent convention of the South Carolina Bankers' Association, R. G. Rhett, President of the People's National Bank, Charleston, delivered an address on "The Banker: His Moral Responsibility." Mr. Rhett said, in part:

"There is no business in which the element of moral responsibility does not enter. But it will be seen that the business of the banker is one of such power and influence that it is proportionately more important it should not be overlooked by him. In the first place, in him is centered not only the cash balances of the community, but its credit, and the credit of its component parts. These constitute practically the motive power of the community, and the throttle rests in the hands of the banker. He can choke the steam, and stop its progress; he can pull wide the lever, and destroy the machinery in reckless speed, or he can steadily and wisely feed the power so as to bring forth and develop its full strength. In other words, he can dwarf and strangle industries by curtailing their credit unduly; he can discourage new enterprises by refusing them credit recklessly and extravagantly, and thus encourage and create unsound enterprises which must fail, and in their failure bring discredit upon the whole community. He can legally demand his pound of flesh when enterprises totter, and bring them to ruin while saving himself. He can, on the other hand, with equal safety extend the hand of help in this hour of need.

In all these cases he should not forget that the very foundation of his business is the community's cash and credit, which it has placed in his hands in trust, not for him to utilize as he pleases, but for him to employ in its upbuilding. Before he destroys he is morally bound, in my judgment, to exhaust every prudent effort to save. Before he employs his resources in other fields, he is morally bound to exhaust every effort to safely employ them in his own community."

AMERICAN BANKERS' ASSOCIATION.—The dates for the thirty-first annual convention of the American Bankers' Association have been changed to October 11, 12 and 13, 1905. The conventions of the trust company section and savings bank section will be held October 10. Headquarters will be at the New Willard, Washington, D. C.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, August 3, 1905.

GENERAL CONDITIONS rather than special events gave tone to financial sentiment during the month just closed. New developments were few, the most prominent being the arrangement of a conference between Russia and Japan to be held at Portsmouth, N. H. Some unpleasant disclosures regarding the crop-reporting department of the Government furnished a temporary sensation.

As to the conditions which generally make for the advantage of investors, there is little that can be found to cause apprehension. Except as to cotton the crop situation is favorable and both wheat and corn promise to be bountiful in yield. Railroad earnings are showing gains and a number of railroads have recently declared increased dividends. The owners of railroad shares are getting larger returns than in many years past. Foreign trade, both exports and imports, is larger than ever before. Money is in ample supply and loaning rates are low.

Under the call of the Secretary of the Treasury the National banks made a further surrender of public deposits and now only about $65,000,000 is held by those institutions. This represents fully fifty per cent. of the available cash balance in the Treasury, which will be further reduced if the deficit in revenues continues. As the banks have surrendered public deposits they have increased their note circulation. About $60,000,000 of the bonds now securing public deposits are Government bonds and may be used to secure circulation should the Government further withdraw its deposits from the banks. Beyond that there is not much opportunity for increasing circulation, even if the evidence did not point to an overissue of currency at the present time. There is now $2,901,000,000 of money in the country, of which the Treasury holds nearly $297,000,000, leaving about $2,605,000,000 in actual circulation. As this is equal to $31.29 per capita, the supply of money seems to be amply sufficient for all future needs for some time.

An important event in the financial world was the successful marketing of the new $150,000,000 4½ per cent. sterling loan of Japan in New York, London and Berlin. To each of these money centers $50,000,000 was allotted, and the amount was oversubscribed in each instance. The bonds were offered here at 87⅝ per cent. and accrued interest. They run to July 10, 1925.

The hopes of investors were stimulated somewhat by the action of the directors of the Erie Railway last month in declaring the first dividend on the second preferred stock, of which there is $16,000,000 outstanding. The dividend is four per cent., payable two per cent. on October 9 next and two per cent. on April 9, 1906. While a dividend on the common stock is not yet in sight, the payment of a first dividend on the second preferred stock is a hopeful sign. The Erie is now paying four per cent. on about $64,000,000 of its two classes of preferred stock. The common stock amounts to $112,000,000 and it would require $4,500,000 a year to pay a similar rate on that stock.

The Baltimore and Ohio is another railroad among many which have prospered wonderfully in recent years. Less than ten years ago it went into the hands of a receiver, and it was not until 1899 that it was restored to the possession of the stockholders. Within a year it was paying four per cent. per annum on both common and preferred stock and last month the rate on the common stock was increased from two to 2½ per cent. semi-annually. This road, so lately in danger of foreclosure, is now earning substantial dividends on more than $180,000,000 of stock, far in excess of the dividends it is actually paying. The Union Pacific Railroad also increased the semi-annual dividend on the common stock from two to 2½ per cent.

The financial statement for the quarter ended June 30 issued by the United States Steel Corporation showed an improved condition of affairs. The net earnings were $30,305,116, as compared with $19,490,725 in the same quarter of 1904 and with $36,642,308 in 1903. The balance applicable to dividends was $16,875,600 this year against $9,082.563 last year and $27,801,956 in 1903. The corporation has not yet recovered the earning capacity which it developed in 1901, 1902 and 1903. The surplus applicable to dividends in the June quarter of 1902 was $29,703,830 and of 1901 $27,801,956. The Corporation reports unfilled orders on June 30 of 4,829,655 tons which compares with 5,597,560 tons on March 31, 1905, and with 3,192,277 tons on June 30, 1904.

A far more unsatisfactory state of affairs is disclosed by the delayed annual statement of the International Mercantile Marine Company, which is more generally known as the "Shipbuilding Trust." The statement is for the calendar year 1904 and covers the second year of its existence. The following table shows the increase for the two years:

	1904.	*1903.*	*Changes.*
Gross voyage earnings	$27,926,908	$29,677,756	Dec. $1,750,848
Miscellaneous earnings	920,085	1,359,664	Dec. 439,579
Totals	$28,846,993	$31,037,420	Dec. $2,190,427
Gross expenses	27,040,586	27,036,898	Inc. 3,688
Net earnings	$1,806,407	$4,000,522	Dec. $2,194,115
Charges –			
Interest on bonds	$3,312,151	$3,083,346	Inc. $228,805

Final deficit	$1,142,098	*$1,797,797	Inc. $2,939,895

* Surplus.

A deficit of $2,000,000 is hardly a favorable showing for a company with over $100,000,000 capital stock and $70,000,000 bonded debt. The prospect for 1905 is, however, said to be much brighter than the results in 1904 would indicate.

Significant of the investment situation is the very great increase that has taken place in the listing of securities at the New York Stock Exchange. A compilation made for the first six months of the year and published by the "Financial Chronicle" shows that $642,315,650 of bonds and $358,064,800 of stocks were listed, of which $342,800,000 bonds and $66,794,200 stocks were issues for new capital. The following summary is obtained from the "Chronicle's" figures:

FIRST 6 MONTHS.	BONDS.		STOCKS.	
	Issues by new capital.	*Total listed.*	*Issues by new capital.*	*Total listed.*
1896	$125,243,000	$360,255,500	$10,522,997	$292,458,885
1897	20,707,502	217,935,500	23,168,500	385,801,800
1898	28,657,000	387,705,500	8,943,305	253,723,505
1899	66,911,240	267,504,740	152,790,300	405,239,230
1900	65,831,000	293,745,000	206,609,000	325,320,150
1901	161,678,500	396,191,000	296,830,050	1,273,587,575
1902	157,261,313	355,377,700	128 093,700	313,[illegible]53,890
1903	115,577,150	322,165,800	86,258,840	290,967,435
1904	193,144,500	233,856,500	30,336,900	41,527,300
1905	342,800,000	642,315,650	66,794,200	358,064,800

The fact that there were $1,000,000,000 of stocks and bonds listed in the first six months of the year, as compared with $275,000,000 in 1904 and $613,000,000 in 1903, is suggestive of a revival of activity in investments. The listing of United States Steel securities in 1901 alone prevented the year 1905 making a new record.

The first of the quarterly statements which the trust companies of this State are now required to make, was issued as of June 7. It showed that the growth of these companies continues at a marvellous rate. The aggregate resources were $1,487,424,480, an increase of $123,000,000 since January 1 last and of $279,000,000 since July 1, 1904. The aggregate deposits were $1,233,662,205, an increase since January of $106,000,000 and since July 1, 1904, of $255,000,000. The principal assets are classified as follows for the dates mentioned:

	July 1, 1904.	*Jan. 1, 1905.*	*June 7, 1905.*
Cash and cash deposits.................	$262,247,178	$218,367,788	$180,719,525
Loans on collateral.....................	500,106,646	681,449,715	762,798,786
Loans on personal security.............	71,611,198	72,346,980	[illegible]2,88[illegible],807
Bonds and mortgages	61,224,759	64,549,930	83,9[illegible]6,364
Stock investments	276,024,912	295,663,165	341,661,738

Sine July, 1904, cash on hand and in banks has been reduced $81,000,000, while all the other classes of assets have increased—loans on collateral, $262,-000,000; loans on personal security, $11,000,000; bonds and mortgages, $22,-000,000, and stock investments $65,000,000.

The official statements of the Department of Agriculture regarding the grain crops were very encouraging last month. True, there was a lowering in the condition of both winter and spring wheat as compared with the June report. But the indicated yield of wheat this year is 705,000,000 bushels, which compares with an actual yield of 552,000,000 bushels in 1904. Such a total will bring the 1905 crop ahead of all other years except 1901, when the total was 748,000,000 bushels.

The first official information about the corn crop came last month and was of a very encouraging character. The condition on July 1 was reported at 87.3 as against 86.4 on the same date in 1904 and 79.4 in 1903. The area is 94,011,000 acres or about the same as in 1902, while the indirect yield is in excess of 2,651,000,000 bushels. That is an increase over last year's first estimate of nearly 114,000,000 bushels. Such a yield would exceed that of any other year so far as the Department estimates show. The census report made the yield in 1899 2,666,000 bushels. Reports regarding the cotton crop have been less favorable. The Government in the first place revised its estimate of area and made the total planted 27,000,000 acres. The condition on July 25 is reported at 74.9, as compared with 77.0 on June 25 last, and with 91.6 on July 25, 1904. The condition is the lowest reported for a corresponding date in more than twenty years. From these figures estimates of the probable yield of cotton this year have fallen below 10,000,000 bales. Future weather conditions, however, may materially change the figures.

The reports of the foreign trade movement for the fiscal year ended June 30, 1905, are to some extent surprising in the magnitude of the results shown. Once more the exports of merchandise have surpassed all previous records. In 1901 the record of $1,487,764,991 was made, and after a decline of $106,000,-000 in the following year, the figures of 1901 were not again reached until now. The total for 1905 is $1,518,462,833, exceeding the 1901 record by $30,000,000. Imports of merchandise have also made a new record. The previous high record was $1,025,719,237, made in 1903. The total in the year just closed is $1,117,507,500. The exports exceeded the imports by nearly $401,000,000, which is about the smallest balance reported for any year since 1897.

The gold movement in the past year was exceptionally large. Our exports of gold were $92,000,000—the largest in any year since 1896, and our imports were $53,000,000, making the net loss nearly $39,000,000. This is the only considerable loss of gold since 1896. The total movement of gold both ways was $146,000,000 and rarely has there been so large a total in a single year. In the previous year it was $180,000,000, making in the last two years $326,-000,000 sent into and out of the country, yet the net result is a loss of $21,000,000 in the two years. The clearing-house device might well be adapted to the international gold movements. The following table shows the total movements and balances of merchandise and gold yearly since 1892:

Merchandise.

Fiscal Year.	Exports.	Imports.	Excess.	
1892	$1,030,278,148	$827,402,462	Exp.	$202,875,686

THE MONEY MARKET.—Rates for money are easy both for call and time money. There is no present indication of a hardening of rates. At the close of the month call money ruled at 1¾ @ 2 per cent., averaging about 2 per cent. Banks and trust companies loaned at 2 per cent. as the minimum. Time money on Stock Exchange collateral is quoted at 2¾ @ 3 per cent. for 60 to 90 days, 3¼ @ 3½ per cent. for 4 months, 3½ @ 3¾ per cent. for 5 months, and 3¾ @ 4 per cent. for 6 months on good mixed collateral. For commercial paper the rates are 4 @ 4¼ per cent. for 60 to 90 days' endorsed bills receivable, 4 @ 4¼ per cent. for first-class 4 to 6 months' single names, and 4½ @ 5 per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—While the clearing-house banks made a net gain in their surplus reserves in July of $3,600,000, they are in a much weaker position than they were a year ago at this time. The surplus at this time is $15,305,000, as compared with nearly $56,000,000 a year ago. In August last year the surplus further increased to over $58,600,000 and then set in a decline which left it at about $8,000,000 early in September. Deposits last month fell off about $8,000,000 in the first week and then increased in the following three weeks $41,000,000. Loans decreased in the first two weeks $13,000,000 and increased in the last two weeks $37,000,000. Deposits are $5,000,000 less than they were on August 1, 1904, while loans are $47,000,000 larger. Deposits are now $55,000,000 in excess of loans, while a year ago they were $107,000,000 greater than the loans. The latter are now very near the highest record.

FOREIGN EXCHANGE.—The market for sterling exchange was generally weak throughout the month, although making a slight advance in the last few days. There was a renewed demand for remittance on Japanese account at the close of the month.

MONEY RATES ABROAD.—Open market rates were generally easier last month, although toward the close of the month were somewhat firmer in London and Germany. There were no changes in the posted rates of discount of the principal banks. The Bank of England rate of discount is unchanged at 2½ per cent. Discounts of 60 to 90 day bills in London at the close of the month were 1¾ @ 1⅞ per cent., against 1-15/16 per cent. a month ago. The open market rate at Paris was 1½ @ 1⅝ per cent., against 2 per cent. a month ago, and at Berlin and Frankfort 2⅛ @ 2¼ per cent., against 2⅜ @ 2½ per cent. a month ago.

Fine gold bars on the first of this month were at par to ¼ per cent. premium on the Mint value. Bar silver in London, 27 5/16d. per ounce. New York market for large commercial silver bars, 59⅝ @ 60⅝c. Fine silver (Government assay), 59⅛ @ 61⅛c. The official price was 59¾c.

NATIONAL BANK CIRCULATION.—Last month, for the first time in the history of the National banking system, the outstanding note circulation reached $500,000,000, the total on July 31 being $503,971,395. This is an increase of more than $8,000,000 for the month, and of nearly $54,000,000 in the last twelve months. There was an increase of nearly $9,000,000 in Government bonds deposited to secure circulation which approximated the reduction in Government bonds deposited to secure public deposits.

Total	$452,855,790	$461,150,290	$468,066,940	$476,938,290

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, $8,660,900; 4 per cents. of 1895, $6,105,300; 3 per cents. of 1898, $6,105,300; 2 per cents. of 1930, $40,629,900; District of Columbia 3.65's, 1924, $1,321,000; Hawaiian Islands bonds, $875,000; Philippine loan, $4,041,000; railroad and other bonds, $2,918,500; a total of $69,797,300.

GOVERNMENT REVENUES AND DISBURSEMENTS.—The first month of the new fiscal year shows a deficit of nearly $14,000,000. The month of July usually witnesses a deficit, and last year it was nearly $17,500,000. The revenues this year were nearly $2,500,000 larger than in 1904, while the expenditures were $1,000,000 smaller. Both customs and internal revenue receipts show a substantial increase. A new item appears in the expenditures, "public works." The payments under this head were formerly included under "war" disbursements. The latter now show a decrease of $2,700,000, while the disbursements for "public works" were $1,500,000. Civil and miscellaneous increased $700,000 and navy expenditures decreased $1,400,000, while payments on account of Indians increased $700,000.

UNITED STATES PUBLIC DEBT.—There was an increase of $12,000,000 in the net public debt last month, and it now stands at $1,002,000,000. The aggregate debt, including certificates and notes increased only about $1,000,000, while the total cash assets were reduced about the same amount. There was an increase in certain demand liabilities however, of $7,000,000 in outstanding checks and warrants and of $8,000,000 in disbursing officers' balances, causing a decrease of $12,000,000 in the cash balance, which is represented by the increase in net debt.

UNITED STATES FOREIGN TRADE.—The June trade returns complete the record for the fiscal year and show a new high record for both exports and imports of merchandise. The total value of exports in the past year was $1,518,462,833, an increase of nearly $58,000,000 over the total for the previous year and of more than $30,000,000 as compared with 1901, the year in which the previous high record was made. The exports in June were the largest ever reported for that month. The imports of merchandise were also larger in the past year than in any previous year. They amounted to $1,117,507,500, an increase of $126,000,000 over the previous year and of $92,000,000 over 1903 when the import movement reached its greatest volume until now. The large imports made the trade balance small as compared with some other years. The net exports were about $401,000,000 or $69,000,000 less than in 1904 and $264,000,000 less than in 1901. The balance is the smallest since 1897 with the exception of 1903. The exports of gold were $92,000,000 and imports $53,000,000, a net loss of $38,000,000. This is the only important export movement of gold since 1896.

SUPPLY OF MONEY IN THE UNITED STATES.—The total amount of money in the country on July 31 is estimated at $2,901,791,907, an increase since June 30 of more than $16,000,000 and since January 1 of $62,000,000. The supply of silver dollars and legal-tender notes is a fixed figure, all the gain being in gold and National bank notes except a slight increase in fractional silver. Gold increased $8,000,000 in July and National bank notes the same amount. Since January 1 gold has increased $22,000,000 and National bank circulation $39,000,000.

ACTIVE STOCKS, COMPARATIVE PRICES AND QUOTATIONS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of July, and the highest and lowest during the year 1905, by dates, and also, for comparison, the range of prices in 1904:

Total........................	$1,487,424,480

BANKERS' OBITUARY RECORD.

Beans.—T. Ellard Beans, President of the Bank of San Jose, Cal., died July 12. He was born in Salem County, Ohio, seventy-six years ago. In 1849 he went to California, engaging for a time in mining and then in merchandising. He located at San Jose in 1866, and went into the banking business there.

Bollman.—Ernest Bollman, Mayor of Laurium, Mich., and President of the State Savings Bank there, died July 11. He had resided in Michigan since 1856, and had accumulated a large estate.

Benson.—Alexander R. Benson, Cashier of the First National Bank, Hudson, N. Y., and for nine years city treasurer, died July 23, aged fifty-six years.

Carter.—J. H. Carter, President of the banking firm of F. M. Mansfield & Co., Shell Rock, Iowa, died July 13. Mr. Carter was born in Ohio in 1837, but soon after 1850 he went to Iowa, locating at Shell Rock, where, in 1856, he established the first mercantile house.

Champlin.—Frank Champlin, President of the City Bank, Boone, Iowa, died June 20, aged seventy-four years.

Emerson.—Francis Emerson, founder of the First National Bank, McKinley, Tex., and its President during the twenty-two years of its existence, died July 22.

End.—George End, President of the Bank of Sheboygan, Wis., died July 18.

Everett.—Charles J. Everett, Cashier of the National Bank of Orange County, Goshen, N. Y., died June 21, aged seventy-one years.

Grout.—Burton W. Grout, Assistant Treasurer of the Five Cent Savings Bank, Worcester, Mass., died July 4, in his thirty-eighth year.

Hubbard.—Captain James F. Hubbard, President of the City National Bank and the Dime Savings Institution, Plainfield, N. J., died June 26, on his seventy-eighth birthday.

Lippincott.—James E. Lippincott, one of the original directors of the Long Branch (N. J.) Banking Co., and President for the last six years, died June 25, in his eightieth year.

McKinney.—Thomas S. McKinney, Cashier of the First National Bank, Sterling, Ill., died July 1. He was born at Newburgh, Ind., April 27, 1855. In 1857 he moved with his parents to Sterling, where he was educated and entered the First National Bank. His service with this institution extended over twenty-five years. He began as a collector, being promoted until he became Assistant Cashier, and about three years ago he was chosen Cashier.

Morgan.—Richard T. Morgan, Vice-President of the National Union Bank, Oshkosh, Wis., and of the First National Bank, Tigerton, Wis., and the Union Bank, Winneconne, died July 17, aged seventy-six years.

Nissley.—Jacob W. Nissley for over twenty-five years President of the First National Bank, Mount Joy, Pa., died July 17, aged seventy-eight years.

Reifsnider.—John L. Reifsnider, President of the First National Bank, Westminster, Md., died July 17. He was born at Taneytown, Md., October 19, 1836.

Thornton.—Frank M. Thornton, President of the First National Bank, Benson, Minn., died July 15. He was born in Ireland in 1840, and came to this country when ten years old. In 1856 he located in Minnesota.

Wood.—Dr. John B. Wood, President of the Bank of Independence, Mo., died recently. He was born in Lafayette County, Mo., February 15, 1841. In 1866 he located in Jackson county, but later went farther west. In 1887 he organized the Bank of Independence, of which he became President.

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-NINTH YEAR. SEPTEMBER, 1905. VOLUME LXXI, NO. 3.

THE END OF THE RUSSO-JAPANESE WAR removes a menace to business prosperity and gives the nations of the world an opportunity of devoting their energies solely to the peaceful rivalries of trade. Ever since the outbreak of hostilities between Russia and Japan, the security of the financial and commercial world has been threatened with the possibilities of an extension of the war to countries other than those immediately concerned. It is hardly going too far to say that if any nation had shown a disposition to side with either of the combatants, all of Europe, and probably the United States also, might have been drawn into the fight. Although great efforts were put forth to preserve neutrality, and perhaps on account of an accurate forecast of what would result if outside nations should become involved, yet business enterprise has never been entirely free from apprehension of the panic and disaster that would have followed if this possible world-wide war had become an actuality. With the agreement reached at Portsmouth, this portentous cloud is dissolved.

The war was waged primarily for territorial and trade rights, and the result of the struggle will be to place Japan in a position similar to that held by Russia at the beginning of the war, except that Japan will doubtless return to China a large part of the territory heretofore occupied by Russia, and on the whole will probably be guided by a more enlightened policy.

In view of the fact that Russia appears to have been the aggressor, some doubts are expressed as to whether she has been made to suffer severely enough. Japan has been subjected to a heavy burden, both in men and money, and the demand for an indemnity can hardly be called unreasonable. That this point was yielded when the Peace Conference seemed on the point of dissolution was a striking evidence both of the magnanimity and wisdom of Japanese statesmanship. Japan has not only gained all she fought for on the field of war, but has won the respect of mankind by refusing to continue to fight when nothing but money was at stake.

President ROOSEVELT is justly given the highest praise for the successful outcome of the Conference. Mr. WITTE also has maintained his reputation for statesmanship of the first order in saving something from the wreck of a war he did his utmost to prevent.

It should not be lost sight of that the country which has gained immeasurably by the war is Great Britain, whose ally is immensely strengthened, and a possible foe correspondingly weakened.

THE INSURANCE OF BANK DEPOSITS by means of a common fund contributed by all the banks is proposed in an article presented in this issue of the MAGAZINE. No doubt, without such insurance, deposits in most banks are absolutely safe and reasonably so in all banks. But the impairment of confidence caused by the failure of one bank tends to communicate itself to others, and many bankers who know that their own institutions are impregnable would like to see this unsettling of trust in the banks counteracted, although they do not consider the insurance of deposits feasible.

The discussion of measures to increase the security of banking funds is a sign that banking opinion is coming to regard even the small risk attaching to bank deposits as being harmful to the general interests of the banking community. Until this risk is reduced to a minimum, or eliminated altogether, it cannot be said that such discussion is fruitless.

This proposal to insure deposits in banks by means of a safety fund has been fully debated, and the arguments, both favorable and unfavorable to the proposition, are so well known that they need not be restated. Furthermore, the plan has been put into practice. The safety-fund law in New York, which was supposed to be designed for the protection of the circulating notes of the State banks, was made applicable to deposits of failed banks also, and in consequence the plan failed; that is, the fund was not large enough to meet the claims of the noteholders and depositors. Of course, it would be a comparatively easy matter to calculate how big a fund would be required to pay the losses of failed banks, and to provide for the accumulation of such a fund, either by taxation or voluntary contributions.

There is, however, great objection on the part of most bankers to making any payments whatsoever for such purpose. They consider that by proper management they can insure the safety of their depositors quite as effectually as in any other way, and can see no adequate reason why they should be taxed to bolster up a weak bank.

The principle of suretyship has recently been extended to include bank drafts, or money orders, so-called, and it is possible that the next step will be to apply this principle to bank deposits. If a surety company, with large enough capital, should undertake to guarantee the deposits of a limited number of banks in a certain territory, the results of such an undertaking would no doubt command the keen interest of bankers generally. It is not at all certain, with proper precautions—including a system of examination by the company furnishing the guaranty—that the losses to be met would be beyond the resources of some of the larger surety companies.

THE EXAMINATION OF BANKS by examiners acting under State or Federal authority is one of the safeguards provided for the security of bank stockholders and depositors. It is unquestionable that the system of examination and supervision of the National banks has been a strong factor in establishing those institutions in the public confidence. It is, therefore, all the more to be regretted that there is some evidence of a weakening of popular faith in the efficacy of the supervision exercised over National banks by the Comptroller of the Currency. Many bankers have always, in fact, regarded these examinations with thinly-veiled contempt, and recently there has been a tendency to become more outspoken in relation to the superficial nature of these inspections. Possibly, in some instances, this attitude of mind may have been induced by a feeling on the part of the banks that the Government was unduly inquisitive; and in such cases the hostility has been aroused by a disposition on the part of the examiners to discharge their duties fearlessly. But, as a rule, the criticism of the official examination of banks is founded on the belief that such examinations are lacking in that degree of thoroughness which alone can render them efficient.

Primarily, the examination of banks made by State and Federal examiners are conducted with a view to enforcing obedience to the laws enacted for the control of State and National banks. If the laws are being obeyed, the examiner can justly find no fault with the bank's management. His authority virtually ends in certifying that the bank is not infringing the statutes. Of course, if insolvency is impending, he may make a report that will justify the Comptroller in advising the officers that if certain loans are not better secured, a Receiver will be appointed. But, outside of enforcing compliance with the laws—the beneficial effects of which should not be depreciated—bank examination appears, in too many recent instances, to have been too much in the nature of the services of a coroner instead of a wise physician whose admonitions—had they been heeded in time—might have made the post-mortem inquiry unnecessary.

A sound system of bank examinations would have for its first object the protection of the stockholders' interests. The National Banking Act concerns itself largely with the protection of noteholders and depositors, the welfare of stockholders being the last to be considered. Not only so, but stringent regulations are provided for the assessment of stockholders to make good the losses sustained by the banks. No fault whatever can be found with these provisions of law. They contribute greatly to the security of the National banks and to the high regard in which they are held. But these regulations, beneficial as they are, do not go to the root of the matter. The assessment of stockholders, for instance, may afford an effective remedy for the symptoms of disease, but it does not provide a means of curing the disease itself.

When the safety of bank shareholders is assured; when they are certain not only of immunity from assessment to meet losses, but of a fair return on their investment, the protection of depositors may well be considered as of subsidiary importance, for it is indissolubly bound up in the shareholders' welfare.

The criticisms aimed at the official inspection of banks would have an unfortunate result if they should lead to the total discredit of such examination. With the rapid growth of the National banks since the law of March 14, 1900, was passed, it is a physical impossibility for the Comptroller of the Currency, with the limited number of examiners available, to insure an absolutely thorough examination of all the banks in the system. But the examination the Comptroller is able to give is nevertheless of great value in securing conformity to the National Banking Law, designed for the protection of noteholders and depositors, and incidentally for the benefit of shareholders. This official inspection should, in all cases, however, be supplemented by examinations made at the behest of the owners of the bank, and made in their interest alone, which, from a practical standpoint, is superior to the interest of any one else.

Outside of the banks in the large cities, there is often a lack of the trained ability requisite to a complete bank examination. This deficiency is being supplied by the professional auditors, who find a constantly growing field for their work among the banks. Generally a weakness in the management of a bank reveals itself in the methods of bookkeeping, and all weaknesses of this character can be remedied by the employment of a capable and conscientious accountant. Some of the principles that should control in the examination of a bank were well stated in an address delivered before the recent convention of the New York State Bankers' Association by Mr. S. R. Flynn, President of the National Live Stock Bank of Chicago. He said:

"Every banking institution should be examined at least twice a year. These examinations should be made chiefly to test solvency. Surface examinations accomplish nothing. Sound banks make no attempt to conceal technical violations of law. Every man who has had experience as an examiner knows that the most rotten banks show the most correct surfaces. Therefore, the good banks are criticised and bad banks praised, unless the examiners get beneath the surface. If I were to examine a bank now I think I would begin by investigating the methods employed. If I found a system in use which rendered wrongdoing practically impossible without collusion between two or more persons, I would devote no more time to the accounts than a surface checking would require. I would look for error, not crime. But if I found a system inviting crookedness, a system without safeguard, I would call the board of directors together, present the facts to them, and have it then and there determined whether the negligence of the officers evidenced stupid ignorance or intelligent purpose to loot the bank. In either case the officers should be removed. The examiner, backed by his chief, should insist upon their removal. Frankly, I suspect the honesty of a bank officer who favors a bank system devoid of proper checks and safeguards. The banker with right instincts will adopt a system that will as nearly as possible render it impossible for him to commit a crime. And the wise board of directors, instead of making examinations which leave them at their completion as ignorant of the true condition of the bank as they were at the beginning, would do well to have for the main object of their investigation the discovery of methods of doing business, the system of accounting adopted by their executive officers. If they find lax methods, lax system, they will make no mistake if they discharge the official responsible. They will be removing either a fool or a crook. Fire your fool before some stupid blunder results in staggering loss. Fire your crook before he has opportunity to loot. If he is too quick for you, do not let maudlin sympathy influence you to help him escape just punishment."

The defects in the methods of accounting can be remedied by an expert accountant; but sometimes there are elements of weakness which only the eye of the experienced banker can discern. Banks fail through the ignorance and incapacity of their officers as well as on account of dishonesty. If the auditor who makes an examination is a banker as well, none of the deficiencies in the management will escape his attention.

Another thing, the reports of examinations should be sent to every shareholder, in order that the owners of the bank may know how it is being run. If the results of an examination are placed before the officers only, or even the directors, the evils pointed out may go on unchecked; but it is hardly conceivable that if all the shareholders were apprised of the fact that their investments were being mismanaged, they would remain indifferent. If they did, they would have no one but themselves to blame when the inevitable notice of assessment was received.

A sentiment is developing among the bankers of the country for a system of expert bank examinations, at least equal to that made by the Canadian bank inspectors, who are officers of the banks, not of the Government. The independent banking system existing here will preclude the adoption of the Canadian plan; but it is probable that by giving careful consideration to the needs of our stupendous banking organization, the professional accountants and auditors will in time provide examiners who may be relied on to do efficient work, and to report exactly on what they find without regard to any other considerations save those of truth.

The comparative freedom of anybody to engage in the banking business in the United States has been of immense advantage to the business development of the country. That some weeds have grown up alongside the enormous crop of sound and strong banks is no argument for any radical change in our banking system. A moderate increase in trained oversight will remedy whatever defects have been revealed.

Both the State and National banks are justly high in the popular esteem, as is clearly shown by the enormous aggregate of the deposits in these institutions. The discussion of the merits and demerits of the system of bank examinations is not a sign of weakness, but of strength—an evidence of the realization of the truth of a statement made by Mr. Flynn, that "The banks cannot hope for maximum public confidence unless danger of loss through bank failure is reduced to a minimum." This maximum of public confidence is an ideal which the banks are striving harder every year to realize, and with increasing success. It can be fully attained in one way only—by good management. As an aid to this, there can be nothing better than frequent examinations, made by men who thoroughly understand their business, and who will fearlessly report what they find to every shareholder in the bank.

A new Secretary of the Treasury will be installed early in the coming year, according to newspaper reports. It is said that when Mr. Shaw retires from his post in February he will be succeeded by Mr. Cortelyou, the present Postmaster-General.

Beginning with Alexander Hamilton, the office of Secretary of the Treasury has been held from time to time by men of eminent ability.

Notwithstanding the tremendous growth of the country since the adoption of the Federal Constitution, it is probable that no Secretary, not even excepting CHASE, has been confronted with difficulties as great as those which ALEXANDER HAMILTON was called on to meet, nor has anyone, perhaps, shown a capacity equal to that displayed by HAMILTON.

Hardly less distinguished was the fourth Secretary, ALBERT GALLATIN, who in length of service seems to have outranked all the other Secretaries from the foundation of the Government to the present time. He held the office from May, 1801, to February, 1814. Although remembered chiefly for his services to the country as Secretary of the Treasury, Mr. GALLATIN has other claims to honorable distinction. He was a member of the Pennsylvania Legislature, of both branches of Congress, special commissioner in conducting the negotiations preliminary to the Treaty of Ghent, and Minister to France. He was also a bank President, and his writings on banking and currency have become a part of the classical literature of those subjects.

Some of the Secretaries of the Treasury whose names have been prominent in the country's history are: EWING, CORWIN, DIX, CHASE, McCULLOCH and SHERMAN.

Opinion is much divided as to CHASE'S administration of the Treasury. LINCOLN said of him: "Of all the great men I have known, CHASE is equal to about one and one-half of the best of them." Before he became Secretary of the Treasury, CHASE had been twice elected to the United States Senate and was twice Governor of Ohio. He resigned as Secretary of the Treasury in June, 1864, and in December of the same year was appointed Chief Justice of the Supreme Court of the United States.

Secretary SHERMAN was not less prominent in public life than Mr. CHASE. From 1854 to 1860 he was successively elected to the House of Representatives, was six times chosen a United States Senator, was Secretary of the Treasury, Secretary of State and a prominent candidate of his party for the Presidency of the United States. He had what is a rare combination of talents—great political sagacity and an exceptional knowledge of finance.

Mr. CARLISLE, the Secretary of the Treasury in the last Administration of Mr. CLEVELAND, was also eminent in the public life of the nation before he entered the Cabinet.

Of the Secretaries who were chosen primarily for their knowledge of finance, McCULLOCH and GAGE, in the recent history of the Department, will be remembered for conspicuous ability. Mr. McCULLOCH was not only one of the ablest of the old State bankers, but he was a man of the soundest financial views. If Congress had not interfered, he would have paid off the legal tenders and saved the country millions of dollars. The course taken by Congress in stopping the withdrawal of the legal-tender notes is a striking illustration of the opposition often existing between political expediency and a sound financial policy. Since the Civil War time the banking and currency systems have been largely shaped by the exigencies of politics.

Mr. GAGE, like MCCULLOCH, had made an exceptional record as a banker before he entered President MCKINLEY'S Cabinet. His selection was due almost wholly to his ability as a financier. As Secretary of the Treasury, Mr. GAGE exercised a considerable influence on legislation. The gold-standard act of March 14, 1900, was enacted while he was in office, and no doubt the more important details of the measure were shaped by him. This act, however, did not make any substantial change in the policy of the Government regarding the gold standard; it was, in the main, merely declaratory of the policy that had existed for many years, although improvements were made in the methods of handling the gold reserve. But it was a strong tribute to the ability of Secretary GAGE that even so mild a measure as this was passed. He had, at least, overcome the inertia of Congress with respect to financial legislation, and had he continued in office until the present time, possibly he might have secured a rational and scientific remodelling of our entire currency system.

To a man accustomed to deal with other men in a business way, the petty restrictions of politics must prove exceedingly irritating and irksome; and it can hardly be expected that a Secretary of the Treasury with the requisite capacity to exercise an appreciable influence in moulding the financial policy of the country can find congenial employment in parcelling out appointments with a view to placating the innumerable petty bosses of the various States. It is this inability to meet the exacting political requirements that tends to make the high and honorable office of Secretary of the Treasury distasteful to men of the first order of ability.

Although the members of the President's Cabinet do not hold a position analogous to that of the Ministers of the British Crown, they are nevertheless placed in a position where their views may have great weight in shaping legislation, particularly such as may directly affect the matters under the control of their respective departments.

If Mr. CORTELYOU should be named as Mr. SHAW'S successor, his experience as Chairman of the Republican National Committee would be of great advantage to him in apportioning the political emoluments in which the Treasury Department is so rich. His administrative ability and high personal character are also undoubted. Whether he will develop a genius for financial affairs that will make him a fit successor of HAMILTON, GALLATIN, CHASE and SHERMAN, remains to be seen.

The intense international commercial rivalry of the present day calls for the most perfect financial equipment if the United States is to continue to move forward in its aggressive fight for the industrial and commercial supremacy of the world. That our banking and monetary systems are, in some important respects, becoming antiquated, is becoming more and more apparent. It would be too much to expect Congress, of its own volition, to make the necessary amendments of existing law. The required reforms will be brought about only as the result of the pressure of public opinion, guided by intelligent leadership. It may be that Mr. CORTELYOU, with his keen knowledge of politics, would be just the man to arouse Congress from its lethargy and secure the needed reforms. Should he accept the Treasury portfolio, the opportunities which the position would present ought to be great enough to prove a stimulus to his ambition to win lasting fame in administering a department so rich in honorable traditions and illustrious names.

BANKING PUBLICITY as a means of preventing bank failures is given a somewhat novel application in a paper published elsewhere in this issue of the MAGAZINE. It is proposed to publish, not merely the formal statements which the law now requires, but also the facts disclosed by the examination regarding the observance of the banking laws. The point is made that by maintaining silence when the banking laws are broken the authorities are, technically at least, guilty of complicity in these violations, and the bank is permitted to continue in business, often to the serious loss of the depositors.

There is one thing to be said in favor of the proposition in question: It would bring about an automatic enforcement of the banking laws. No bank could afford to have the fact published that it was carrying on its operations in defiance of the laws believed to be necessary to ensure safety. Banks that strictly comply with the law would have nothing to dread from publicity of the kind proposed; in fact, they would be benefited by it. Only those banks that disregard the laws would be unfavorably affected, and it may be plausibly argued that they ought either to observe the regulations which the legislative power has prescribed, or quit business.

But the question arises, Is not the remedy too drastic? In the matter of legal reserve, for example, if the fact were proclaimed in the newspapers that a bank in a certain town was short of the required reserve, might this not start a panic that would not only result in the closing of the bank concerned, but of others entirely innocent of transgressing the laws? It might turn out, if this proposal were put in operation, that the penalty for breaking the banking law would, in many cases, be much harsher than the offense justified. Congress certainly did not contemplate the summary closing of a bank solely because its reserve falls below the legal requirement.

The credit of a bank is extremely sensitive to adverse criticism, and while all suggestions tending to the greater safety of banking should be welcomed, it is open to question whether the proposed extension of banking publicity would be wise or not. Perhaps it ought to be considered as a matter of course, when a bank is examined and permitted to continue in business, that it is not defying the law. That this is not always true at present is well known. But to employ a remedy that might engender a feeling of distrust among all the bank depositors of a community seems to be doing more than is necessary to make the punishment fit the crime.

"THE THEORY OF GOVERNMENT PAPER MONEY" forms the subject of an article which appears in this number of the MAGAZINE from the pen of Mr. CHARLES A. CONANT, Treasurer of the Morton Trust Company. This article is probably the last of the series written by him on the science of money which we shall have the pleasure of presenting. These papers, which have appeared from time to time in this MAGAZINE since the beginning of the year 1900 are parts of a general work on the principles of money and banking upon which the author has been employed at intervals for the past six years. A few of these articles have appeared in other publications; the larger number have appeared in THE BANKERS' MAGAZINE. They are now being brought together by the author and welded into a harmonious whole, with such additions, transpositions and revision as experience has suggested. Valuable as they have usually been, taken by themselves, they will derive a much greater interest and value from the continuity of arrangement and harmony of aim which will appear in the complete work, "The Principles of Money and Banking," which we understand will be published by Messrs. Harper & Bros. during the autumn.

The appearance of a systematic work on money and banking is not an every-day occurrence. There were only two standard works in English on the subject when Mr. CONANT began his labors—that of General FRANCIS A. WALKER on "Money," and that of W. STANLEY JEVONS, the eminent English economist, on "Money and the Mechanism of Exchange." Each of these books was of a high order of merit, but they are now more than a generation old, and much has happened in the development of monetary science within that time. Two or three books have appeared recently, but they are either more elementary or much more extended than the work of Mr. CONANT.

The time is evidently ripe for a new work on this subject, in view of all that has occurred in the world of monetary science since General WALKER and Mr. JEVONS wrote: Both of them were advocates of international bimetallism, and perhaps not without some reason, under the conditions of their time. It is one of the creditable features of the work of Mr. CONANT that he treats the progress of the gold standard as an evolution rather than a victory for a faction, as the stature of commercial countries has risen to the requirements of a unit of high value and as the supply of gold has become adequate for this enlarged demand. How this evolution has not only established the gold standard in Europe and the United States, but has led to its adoption in the modified form of the gold-exchange standard even in the silver-using countries was set forth in one of Mr. CONANT's articles in the August number of THE BANKERS' MAGAZINE. It is the thread of evolution, running from the first beginnings of the use of cattle as money down to the perfected coin of modern times which is one of the special themes of Mr. CONANT's work. The fact that he himself has had a large part in framing the policies and measures which have established the gold standard in the Philippines and Panama and confirmed it in the United States, applies to his work the touchstone of experience as well as of theoretical knowledge, and should give to it an essentially practical character sometimes lacking in the work of the professional student.

THE NATIONAL BANKRUPTCY ACT has now been in operation long enough to reveal both its good and bad features. That the latter are open to correction without repealing the law as a whole may be reasonably inferred. Several conventions of bankers' associations have passed resolutions declaring that the law has served the purpose of its creation—the release of long insolvent debtors, and ought to be repealed. Some of these resolutions seem to have been passed without discussion and without that deliberate consideration demanded by a subject of such importance.

As dealers in credits, bankers are deeply concerned in all laws relating to assignments and to the methods for distributing an insolvent's estate. With the growth of banking and its extension from central points to include areas lying in contiguous States, and the ramification of business from the more important centres to every part of the country, there has gradually been developed a demand for uniformity in many business matters. This demand has led to the enactment of a uniform Negotiable Instruments Law by many of the States. But the passage of this law has been secured only after much concerted effort, and in several States there has been a departure from the act as originally drafted. Were any attempt made to secure a uniform law on the subject of bankruptcy, enacted by the State Legislatures, similar or perhaps greater difficulties would be encountered, and it would seem much easier to get Congress to cure any defects in the present law rather than to revert to the diversities and uncertainties of State laws.

A uniform and reasonable law relating to bankruptcy undoubtedly makes for greater business security, and it would perhaps be better to study the existing law attentively, and find out its imperfections, and then ask Congress to make the act more nearly perfect, instead of agitating for the repeal of the law as a whole.

THE AMERICAN BANKERS' ASSOCIATION will hold its thirty-first annual convention in Washington, D. C., October 11, 12 and 13. Both the date and place of meeting are well chosen, and an attendance close to the high record may be expected. Congress will not be in session when the convention assembles, which is to be regretted, as the legislators seem to be more or less deficient in that knowledge of banking and monetary science which the convention could readily impart. But the convention will have the President at close range, and it is hoped he will not neglect the opportunity of getting valuable financial information at first hand. President ROOSEVELT doubtless entertains sound views on money and banking, but he has been so much occupied with other, and perhaps more pressing questions, that he seems to have given little special consideration to these subjects. In the conquest for the world's markets an efficient monetary and banking system constitutes one of the most telling weapons. The holding of the bankers' convention at Washington may serve to remind the President of this fact, and he may be moved to make some recommendations to the legislative body.

THE BUSINESS SITUATION in the United States was perhaps never better than at the present time. Good crops, the end of the war, the absence of disturbing political conditions—all these elements, and others that might be mentioned, combine to form an exceptionally favorable situation for the prosecution of business enterprise. That this opportunity will be eagerly taken advantage of by the shrewd commercial, industrial and financial men of the country cannot be doubted.

If any apprehension is to be entertained for the future, it would take the shape of fear that the outlook is so propitious as to lead many men to become too optimistic and thus push enterprise beyond prudent bounds. But to take this view would be merely borrowing trouble.

The banks seem, on the whole, well prepared to meet the heavy demands of the fall trade, and there is no reason to look for monetary stringency.

TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.*

BOOKS, RECORDS AND FORMS FOR THE TRUST DEPARTMENT —*Continued.*

JOURNALS AND LEDGERS.

The book of original entry for all transactions in the Trust Department involving cash is the General Journal of the Trust Department. This book is really, in its main usage, simply a cash-book; but usage differs in the matter of arranging the debits and credits as for a cash-book or as for a journal. The ordinary journal form suffices for the work, and for small companies is not only cheaper than specially-ruled books, but is also quite as convenient. Most of the larger companies, however, use specially-ruled books; the chief purpose of the rulings, aside from the matter of appearance, being to separate different classes of accounts. Figure 7 represents a Trust Journal, or rather Cash-Book, arranged with separate columns for the accounts of "Bond Trusts," of "Court Trusts" and of "Sundry Trusts." The company which uses this book conducts all its trust work through one department, but maintains three trust ledgers—one containing the accounts of bond trusts (i. e., trusts in which the company acts as trustee under bond mortgages, involving the payment of coupons and of bonds when due), another containing the accounts of court trusts (i. e., trusts received by appointment of court), and the third containing the accounts of all other trusts for which cash is handled. It will be seen that the arrangement of this cash-book makes convenient the posting of the items to the three ledgers, inasmuch as a glance down any column shows what items are to be posted to the ledger in hand.

The three small columns at the left of each page are for posting marks. The first of these columns, headed "Special Accounts," is for use with those items that must be sub-posted to any other than the regular ledger accounts, such as rents, items for the Loan Register, etc. In the ledger a complete set of books is kept for each trust, just as the owner of the trust might keep them for himself. Each item in the general cash-book therefore appears in the individual ledger of its proper trust as both a debit and a credit. The columns in Figure 7 headed "Individual—Dr.—Cr." are for the marks of postings to these accounts. In the figure the entries are numbered for convenience in describing the entries: these numbers would not appear, of course, in the regular use of the cash-book. Thus, in the left page of Figure 7, entry No. 1 would be posted first as a debit to the cash account of the Smithville Bond Pool, and a check mark made in the Dr. posting column. It would then be posted to the credit of Syndicate Subscriptions account of the Smithville Bond Pool, and a check mark made in the Cr. posting column.

* Publication of this series of articles was begun in the January, 1904, issue of the MAGAZINE, page 31.

FIG. 7.—RIGHT- AND LEFT-HAND PAGES OF GENERAL TRUST JOURNAL OR CASH-BOOK.

Of the remaining entries on the left page, the debits would all be made to the cash accounts of the several trusts. The credits would be made as follows: Entry No. 2, to the Income account of the trust concerned; entry No. 3, to income; entry No. 4 to the Bonds account, and if the bonds are sold at a profit, the excess over the cost would be posted to the credit of the Profit on Bonds account; entry No. 5, to the Coupons account and to the Bonds account. In entry No. 2, the items would be sub-posted to the rent ledger under the account for each piece of property, and the check marks of the postings placed in the Special Accounts posting column. In entry No. 3, the the interest on the mortgage would be sub-posted to the Loan Register, under the account for this mortgage.

In the right hand page of Fig. 7, the credits for all the entries would be made to the cash accounts of the several trusts. The debits would be made as follows: Entry No. 1, to Coupon account of the trust involved; entry No. 2, to the account of Mary Trowbridge, if remittances are regularly made to her; or, if remittances are not regularly made, to the Expense account; entry No. 3, to S. S. Smith, Syndicate Manager; entry No. 4, to Expense and Repairs accounts, respectively; entry No. 5, to Repairs and O. R. Gates accounts, respectively. The Repairs items in entries Nos. 4 and 5 would be sub-posted to the Rent ledger under the accounts of the properties involved, a separate account being kept of the expenses and repairs on each piece of property. It will be noted that a voucher is kept for each item of expense, the vouchers for each trust being numbered consecutively.

With this journal, as already stated, ledgers are used in which a complete set of "double entry" books is kept for each trust. The ledgers, which are preferably loose-leaf books, are indexed by tabs on the edges of the leaves, and after the tab index for each trust are inserted as many ledger leaves as may be required. The number of accounts carried for each trust depends, of course, upon the character of the trust. It may require the carrying of only Cash and one other account, such as Principal or Income. It may be necessary to add to these such accounts as Bonds, Stocks, Mortgages, Real Estate, Individuals, etc. Under this plan the cash account will of course contain a memorandum of every cash transaction affecting the trust, and it therefore serves as the basis for rendering statements of account either to the court or to beneficiaries or to the maker of the trust. Some companies call this account the Bank account rather than the Cash account.

For these ledger pages any of the forms shown hereafter may be used. If only one form be used, as is practicable, though not entirely convenient, that shown in Figure 16 is probably the most useful, being adapted to different kinds of accounts, and containing columns for both debit and credit balances.

Inasmuch as the character of the business done in trust work for court trusts differs considerably from that done for corporation trusts and others, many companies, as already stated, divide the trust work into two divisions, and use different styles of records in the two divisions. Figure 8 represents a journal form used in the corporations division of the trust department. The general arrangement of the page is one which is coming to be used extensively for various purposes both in trust and banking departments. Both debit and credit items are brought on to the same page; and the space for names and descriptions being in the center, the writing of the names of accounts is often avoided in cases where there are both debits and credits to be made to the same account. It also causes the name of each account to stand out prominently on the page. The object of the extra column headed "General Accounts" is to facilitate the separation of accounts which for any reason are to be treated differently from the regular deposit accounts, or of accounts which are carried in a separate ledger. For example, the total funds of the department are carried as Bank account, which is of course a general account made up of the cash balances of all the accounts in the department. These funds are carried by some companies in their banking departments, and by some are carried in other trust companies or banks. As shown in the figure, the total of disbursements for the day is credited to Bank in the General Accounts column; and the receipts are debited to Bank either at the close of the day or at convenient times during the day as deposits of the funds are made. Among other general accounts would be the interest account for interest received on the Bank account, Bonds and Stock account, if the total of these items be carried in a separate account, etc. The company from whom the writer got this form carries all coupon accounts in a separate ledger, and therefore enters items for coupon accounts in the General Accounts column in the journal. The second entry in Figure 8—that of the credit to "Auburn and Birmingham Traction Pool"—illustrates a use of the two columns. The bonds having been purchased at 80, are carried at that figure in the general Bonds account. The sale here recorded having been at

FIG. 8.—JOURNAL FOR THE CORPORATIONS DIVISION, TRUST DEPARTMENT.

86, the profit of $240 is journalized in the Deposits column, while the amount at which the four bonds are carried—$3,200—is entered in the General Accounts column.

The next-to-the-last entry in Figure 8 illustrates a time and labor saving plan that is much used. A dividend of $48,955 is paid, the amount being divided between perhaps one or two hundred persons. Only the total is entered in the journal; while the items, taken from the stubs of the department's check-book, are entered in detail in the ledger. In case of a large number of credit items to the same account on the same day, a similar plan is followed, the details being posted directly to the ledger from the credit tickets. This plan subtracts nothing from the completeness of the record, while it saves about half the labor otherwise necessary.

It will be noted that although this book is practically a cash-book, it is not, like the form shown in Figure 7, arranged in cash-book style. This matter is largely a question of personal taste, but the usage is in favor of using the journal rather than the cash-book style, the credits appearing on the right and the debits on the left, as in Figure 8.

The ledger for this department is preferably a loose-leaf book. There is so much variety in the nature of the accounts that must be kept that it is a decided convenience to have special rulings for the different kinds of accounts;

and this cannot be done easily unless loose leaves, to be inserted as needed, are used. The leaves must be large enough to accommodate accounts requireing much space. A convenient size is about fifteen and one-quarter inches deep and eleven inches wide for the rulings, with such added width as is needed for the style of binder used. Figures 9, 10, 11, 12 and 16 show several ledger forms that have been found useful.

Figure 9 shows a form adapted to accounts in which funds are collected in installments or on "calls," or in which payments are to be made in several dividends, or in which either receipts or disbursements are to be classified. The figure illustrates the use of the form for an account involving the collection of funds on several calls. From this record it is easy to ascertain at any moment the totals paid in on each call, the persons who have made payments on each, and the balance of the account. In a similar manner, where the form is used to record the payment of funds in several dividends, it easily shows any information regarding the account that is apt to be wanted. For ordinary dividend accounts, however, the use of Form 10 is better, inasmuch

as the whole dividend is usually paid on the same day, and the complete account may therefore be at once placed on a page by itself. Where funds are to be disbursed, and a separate account is wanted of items paid on account of principal, interest, commission, expense, etc., this form is well adapted to the needs. Because of the various uses to which the form may be put, the several columns have no printed headings; but it is customary to have rubber stamps for the headings most used.

Figure 10 shows a ledger form adapted to accounts where not much room for description of items is needed. The record is kept in a very compact shape. The figure illustrates its use for dividend accounts. If the number of items be large, the account is continued on the right half of the page,

FIG. 10.—LEDGER SHEET FOR GENERAL USE.

shown blank in the figure, and on the other side of the leaf, which is ruled in the same way. If the number of items be small, two dividends may be recorded on each page. This is a convenient form to use for coupon accounts, unless a special form like that shown in Figure 12 is used. The small columns headed by check-marks ✓ in this form are for use in case the work is to be checked over in a hunt for an error or for any other purpose. The use of the column for such check-marks leaves the page in neater shape than do check-marks placed indiscriminately, besides being a clearer guide.

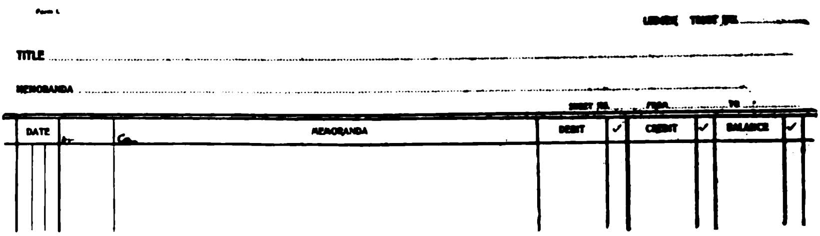

FIG. 11.—LEDGER SHEET WITH WIDE DESCRIPTION COLUMN.

In Figure 11 is shown a ledger page which is convenient where the items are to be described at length. The descriptions of debit and of credit items may be separated by the device explained in connection with Figure 14.

In Figure 12 is shown a form which combines a ledger page for coupon accounts and a record of coupons paid. The combining of the two is a great time saver, and the arrangement for noting the bond numbers of couponspaid is very convenient. In the first debit to the account—that for the payment of coupons presented by John Doe—record of the bond numbers 137, 138 and 139 is made in the description column in the ledger part of the page, and check-marks (✓) are made in the proper spaces in the form for bond numbers of coupons paid. In the fourth debit, the First National Bank of Chicago has presented twenty-five coupons cut from bonds whose numbers are not consecutive. To list all these numbers separately would require considerable time, and then the record would not be as clear as that obtained by the device here used.

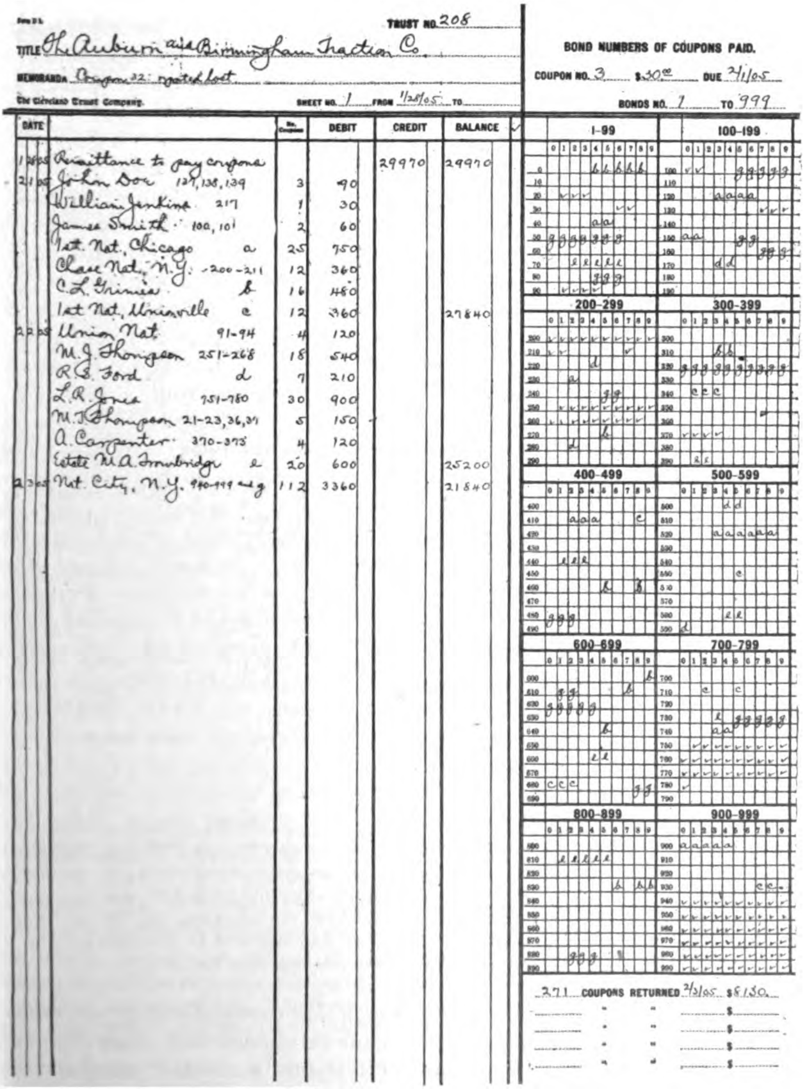

FIG. 12.—COMBINED COUPON LEDGER AND RECORD SHEET.

The letter "a" is used to designate the coupons covered by this entry. This letter is then placed in each of the little squares showing the bond numbers of such coupons—i. e., 44, 45, 123, 124, 125, 126, 232, 412, 413, 414, etc. The next party presenting a bunch of coupons whose bond numbers are not consecutive is given the letter "b," the next "c," and so on. As is evident from a study of the figure, this device shows easily and quickly what coupons have been paid, and who has presented any particular coupon. In case the ledger space on the page is exhausted before the form for bond numbers of coupons paid is filled, the use of the latter is continued, only the ledger space of the next page being used. It is more apt to happen, however, that several pages will have to be used for the bond numbers of coupons paid before the ledger space of one page is filled. If more than 999 bonds are outstanding from which coupons are to be presented, of course two or more pages will have to be used for recording the bond numbers of the paid coupons.

The use of these various ledger forms suggests again the very great convenience of the loose-leaf system. Under this system, whenever an account calls for the use of any one of these forms or of any other form which may be suggested by the needs of the case, such form may easily be inserted in the ledger and the records be kept in the clearest and most convenient manner. The system is adaptable to any need that may arise. This is not true of the bound book; for while a number of different forms may be bound under the same cover, it is impossible to foresee just how many pages of each kind of form will be needed; and it is impossible to group them in the most convenient manner for a series of accounts. Moreover, at any time a new kind of account may be received which, for the greatest clearness and convenience, will require a kind of record different from any in the book. In such a case, if the loose-leaf system is used, all that is necessary is to have the printer prepare the new form, and insert it in the binder. Furthermore, under the loose-leaf system there need be carried in the ledger only such pages as are needed, while in a bound book there are certain to be many unused pages, and the number of such unused pages is sure to be increased as the number of different forms is increased. When all of the pages of a certain form are used, the book must be filed away with many pages of the other forms unused. This takes space in the vault and adds to the expense.

CLAY HERRICK.

(To be continued.)

GERMAN NOTE CIRCULATION.—A bill is before the German Reichstag which will give the Imperial Bank the right to issue notes of twenty and fifty marks denomination; the lowest limit hitherto having been 100 marks.

The bill also provides that the Treasury certificates, of which about £6,000,000 are in circulation, shall hereafter be confined to denominations of five and ten marks. These certificates were issued originally for the purpose of taking up the paper money of the various German States in circulation when the Empire was founded, and have been left in circulation to supply the need of the country for smaller denominations than the Reichsbank was permitted by law to issue.

"The Economist," in commenting on this bill, says that "although the German public shows no great liking for paper money of small denominations, the Government think that smaller Reichsbank notes are needed in industrial centres, where large sums must be paid out in wages; but the chief reason for the bill is the need for notes in making payments by registered letter. The use of checks in Germany, owing to lack of adequate legal protection, is still quite limited, and payments by registered letter are consequently very frequent. It is believed that the gold stock of the Reichsbank will be permanently increased through the issue of twenty and fifty mark notes, and this will make for cheaper money rates.—*London Bankers' Magazine.*

THE THEORY OF GOVERNMENT PAPER MONEY.

Government paper money consists of notes issued by a government to circulate as currency. In order to circulate readily, such notes are printed in uniform style, for even sums. They do not usually bear interest, although there have been cases where an effort had been made to give to interest-bearing obligations for small denominations the money function. Two important attributes have usually distinguished issues of government paper money—that they have been inconvertible and have been made legal tender for debts.

Inconvertible Paper Money.

Inconvertibility means that the government has made no arrangements, or inadequate ones, for converting such notes at the will of the holder into standard money. The fact that they are not redeemed in such money on presentation has given such notes also the designation of irredeemable government paper. While we shall have occasion to speak of some cases in which government notes have been made redeemable, the temptation to issue them has usually derived its force from the fact that they could be issued without providing for redemption. Discussion of both the history and theory of government notes has, therefore, been based upon their lack of convertibility into coin at par at the will of the holder.

The Legal-Tender Quality.

The "legal-tender quality" is conferred on different forms of money in the United States only by specific provisions of law. In Great Britain, however, the obligation to receive money at its face value seems to have been assumed for all the current moneys of the kingdom as a part of the common law. When Henry III in 1257 tried to introduce gold into the currency, a writ issued "commanding the Mayor of London to proclaim in that city that the gold money which the King had caused to be made should be immediately current there and elsewhere within the realm of England in all transactions of buying and selling, at the rate of twenty pennies of sterlings for every gold penny."[1] In most modern States the limits are defined to which the subsidiary coins may be employed in making payments, and few such States have hesitated to give the quality of legal tender to their own paper issues and to those of the banks when war or economic difficulties have led to the suspension of specie payments.[2] The need for any legal-tender laws is disputed by some economists. Bank notes which are redeemable in standard

[1] For this and other instances, vide S. P. Breckinridge, "Legal Tender," p. 18, et seq. By a statute of 27 Edward III, persons desiring to accept foreign moneys were permitted to do so, but were not compelled to against their will.

[2] The French employ two terms for legal tender, cours légal and cours forcé—the former corresponding to the legal recognition of current metallic money, the latter plainly recognizing the forced character of irredeemable paper.

money are often not a compulsory tender, but are accepted in current transactions, because they are as good as legal money.

POWER OF THE GOVERNMENT TO CREATE AND MAINTAIN VALUE.

The fact that governments have been able from time to time to issue paper which had value in exchange, even when not redeemed in coin on demand, has led to much confusion of thought regarding the causes which give value to money. The essential question, can government create value? has been answered in too broad a way, both by those who have opposed such issues on the one hand and by those who have looked upon them as a magic means of creating wealth on the other hand.

The value of money is derived in part from its use as a medium of exchange. It is in the power of a government, as it is in the power of an individual, to give value to a certain extent to any article by creating demand for it. A government is able to create demand for articles through its position as consumer. The value of battle-ships and cannon would fall materially if governments should suddenly diminish the demand for them by a universal convention to give up their use. It cannot correctly be said, therefore, that government has no power to confer exchange value. Even an individual has power, within the limit of his means, to create demand for articles having no tangible use, as diamonds, autographs, or rare manuscripts. Such articles derive exchange value from the relation of demand to supply. The same principle applies to paper money. Government can create a demand for such money by special measures; it can by other measures monopolize the supply and so concentrate the demand for a medium of exchange upon this supply as to compel private individuals to employ it as the only alternative to going without a medium of exchange. It is well said by Fetter that "a sound theory of paper money makes it a special case of monopoly value." How this comes about he thus sets forth: [3]

"Business conditions remaining unchanged, the limit of possible issue without depreciation is the number of units in circulation before the paper money was issued, the saturation point of full-weight and full-value coins. Because governments generally have not stopped at that point, paper money has depreciated."

There is in every community a demand for a medium of exchange. This demand is met in communities where a metallic currency is used by gold and silver coins and promises by responsible institutions to pay such coin. When a government determines to issue paper money and to make it legal tender, it is aided by the operation of Gresham's law, that an inferior money will drive out a better. Where the option of receiving one or the other of two articles lies with the person who is to receive them, the option will be exercised in favor of the better article. Competition to obtain the favor of the consumer thus tends to keep up the quality of the articles offered by shop-keepers. In the case of money, if the option lay with the creditor which money he should receive, he would insist upon the best. This condition, however, is reversed by a legal-tender law, which gives the option to a debtor. Such a law confers upon the debtor the privilege of paying in paper money where the creditor would prefer gold. Inevitably under the operation of the principle of self-interest, every debtor accepts the option of paying in the cheaper money.

---

[3] "The Principles of Economics," p. 451.

Even if gold, therefore, remains a legal tender in countries where government paper has been issued, the gold will soon disappear, because it has a higher value than the paper. Even if the paper is, by careful regulation, maintained substantially at par with gold within the country, it will be found that it is not accepted readily abroad. Gold is accepted abroad and is, therefore, used to pay for imports and other obligations where the new paper cannot be so used. Hence the gold will be withdrawn from circulation for use abroad and the vacuum will be filled by the new paper. As every man has debts to pay, which he has either formally contracted for deferred payment or in the cash transactions of daily life, he will require legal-tender currency to pay them. Even aside from the payment of debts, there will be a demand for the legal-tender currency for till-money for merchants and for meeting demands upon banks for loans.

In short, the fundamental need of the community which has given rise to the use of money can be satisfied only by the continued use of some substitute for money, even where economic tendencies drive away the true money of standard metal. This entire demand for money, therefore, including the customary demand as well as the demand arising to fulfill contract obligations previously entered into, will absorb government paper up to the amount where it replaces the coined money which has been previously in use. Thus a government which issues such paper and declares by law that it shall be received for debts will have little difficulty in putting it in circulation through the medium of its usual disbursements. As the process is explained by Beaure: [4]

"Fictitious and managed money is sought because it is useful in exchanges and it is difficult of acquisition because it is limited in quantity. Then also it is representative of real money, being exchangeable for it. It enters the category of articles which, being no longer capable of reproduction, have by hypothesis a value which depends not upon their cost of production (which relates only to the past), but solely upon demand and supply."

The acceptance of government currency at par for public dues is an element in giving it value. The holder of government notes knows that if the private individual will not take them as the equivalent of the coined money which they have displaced, the government will do so. He can pay fees for passports and invoices, he can purchase postage-stamps, he can pay customs duties and direct taxes with the paper currency. If he has not such payments to make himself in large amounts, he knows that importers and others have them to make and that he can dispose of the money at a trifling discount to them. Thus, within certain limits, the fact that government currency is a legal tender to the government, as well as between individuals, aids in maintaining its value.

It should be obvious, however, that the acceptance of government paper for public dues cannot maintain the value of an amount of such paper in excess of the demand thus created. There are several historical instances where its value has been maintained because the quantity was limited, and these instances have been misinterpreted by some as affording evidence that acceptance for public dues will maintain at par any quantity of such paper issued. Thus, when the General Court of Massachusetts enacted in 1692 that the notes of the province should pass in public payments at an advance of

---

[4] "Théorie et Pratique de la Monnaie," p. 32.

five per cent. over their face value, the notes were successfully maintained at par for twenty years. But the amount was only £7,000 and when further issues were made, even with careful provision for redemption, depreciation of the paper set in.[5]

Issue of United States Demand Notes.

Another instance, much quoted by the advocates of government paper money, was the issue of demand Treasury notes made by the United States early in the Civil War. These issues fell at first below par, and were discriminated against at the banks; but when they were made receivable for customs dues on the same basis as coin, they rose to a premium over later issues, to which no such privilege was attached. As they were cancelled when thus received, and greenbacks issued in their place, Secretary Chase was able to report that the amount outstanding had been reduced on June 30, 1863, to $3,300,000.[6] As gold was otherwise required for the payment of customs duties and these notes were accepted for the same purpose, they acquired the character of gold for these payments. The Government having thus created a demand for the notes and having provided a supply which was not in excess of the demand, they retained a value which they could not have retained if the supply had exceeded the demand.

It is not an easy task, however, to hold up the value of irredeemable paper in coin. It is an axiom of mathematics that "things which are equal to the same thing are equal to each other." Paper which can be exchanged at par for coin is, therefore, equal to coin; but the corollary of this axiom is that paper which cannot be exchanged at par for coin is not equal to coin.

Reasons for Issuing Irredeemable Paper.

Why, then, it may be asked, have issues of irredeemable paper ever been resorted to? The most obvious answer is, that such issues enable the government making them to obtain capital without paying for it. When the Government of the United States in 1861 began the issue of Treasury notes, it incurred no immediate cost but that of printing the notes. It was able to exchange them for guns, ammunition, uniforms and stores. From a superficial point of view it might appear that a very clever stroke of finance had been achieved in acquiring all these things for the State, themselves the product of the labor of many thousands of men for many weeks, without any other cost to the Government or the country than an act of legislation and the revolutions of the printing-press.

In most cases of government issues, however, it has not been altogether out of pure wantonness—the desire to get something for nothing—that the printing-presses have been set in operation producing paper money. It has been because of inability, or supposed inability, to obtain resources by other means, or disinclination to resort to such means. This was the case with the early issues of the American colonies, who were ill-equipped to invest a large capital in a metallic currency; it was the case with the *assignats* issued in France in the hope of averting the bankruptcy invoked by many years of royal extravagance; and was the case also with the first issues of "greenbacks" in the American Civil War. In the latter case, it was possible to have

---

[5] S. P. Breckinridge, "Legal Tender," p. 57.

[6] "Finance Report," 1863, p. 45. The popular impression that these notes were always at par or a premium is shown to be unfounded by Mitchell, "History of the Greenbacks," pp. 149-155.

averted the issue of Government paper by prompt resort to the powers of taxation; but such steps were so long delayed as to justify in a measure Charles Sumner's declaration:

"Whatever may be the national resources, they are not now within reach, except by summary process. Reluctantly, painfully, I consent that the process should issue."

This passage rightly defines the manner in which the Government took capital from its citizens by the legal-tender acts. It hints, however, at a deeper economic motive for such action—a motive which has been generally overlooked in the discussion of the subject, but which serves as a partial set-off (though a very incomplete one) for the evils which Government paper has caused. This was the temporary saving of capital to the country. If the payment of legal-tender notes to soldiers and contractors had been simply a taking by the Government for its own purposes of the products of American laborers and manufacturers, the country would not have been the gainer. But there was another principle involved, which affected the country as a whole to substantially the same extent. This lay in the fact that the country as an economic unit was enabled to acquire from abroad the control of an amount of capital or goods representing approximately the amount of the new currency issued. No foreigner would accept the new currency in payment for his labor or its products, but the country was enabled to substitute for its existing currency, consisting of standard metal, a new currency of paper, and to pay for imported goods by the exportation of gold, which would otherwise have had to be paid for by the exportation of other goods.

It is an important principle of economics that the employment of paper substitutes for metallic money tends to afford a means of drawing capital into use which would otherwise have remained idle. While this principle is not ordinarily so applicable to issues of government paper as to bank notes—because the former do not grow out of normal commercial transactions—yet in a time of unusual need for supplies by the government, such as occurred during the Civil War, an issue of such paper, by increasing the immediate resources of the State, may have contributed to keep capital at home and to substitute gold for it in the settlement of obligations incurred abroad. In this sense the appropriation by the State of an equivalent amount of the capital of the people was a justification of the argument of Dubois, that the mercantilists were not entirely wrong in preoccupying themselves with the formation of a war-chest and that the early expenses of a campaign require great sums to be immediately available.[7] Under ordinary circumstances, it is undoubtedly true (with some qualification), as laid down by Walras, that:[8]

"The increase in the quantity of (available) capital permitted by an issue of bank notes consists in an increase, not in the quantity of circulating capital, but in that of fixed capital."

Under normal conditions, the quantity of circulating capital which a country requires does not differ widely enough from time to time to prevent new savings from being added for the most part to the stock of fixed capital in the form of tools, investments in machinery and buildings. This would be the natural effect of the issue of irredeemable paper in large amount and the consequent expulsion of a gold currency in time of peace. In time of war, however, when a large number of persons are withdrawn from the ranks of

[7] "Précis de l'Histoire des Doctrines Economiques," I., p. 265.

[8] "Etudes d'Economie Politique Appliqué," p. 362.

producers to become consumers only (as soldiers), it may be questioned whether nearly all the capital, fixed or circulating, which is capable of such conversion, is not put into consumable goods like rations, uniforms and ammunition.

If this is so, it explains in some degree the latent tendency to seize upon the metallic currency as a war resource. That this was the real economic tendency of the greenback issues—to concentrate the producing capacity and economic energy of the country upon the equipment of its armies at home—is borne out to a rather remarkable degree by the statistics of foreign trade. They show a falling off in exports of merchandise from an annual average of about $273,000,000 for the five years ending with 1860 to about $187,000,000 for the five years ending with 1865.[9] Home production was thus diverted to home consumption. The metallic currency was treated in effect as a reserve fund which was seized upon by the Government for the emergencies of war. It was a process of a similar nature to that which led the Greek commanders to strip the temples of their treasures in the internal wars of Greece, or which has led patriotic subjects to despoil the churches of their gold and silver ornaments in times of national stress.

Up to the point that the amount of paper issued by the Government did not exceed the amount of metallic currency driven from circulation, the community as well as the State profited in a narrow sense by the economy of the capital previously invested in gold. Gold had a world market. It was the most negotiable thing with which the United States could settle their obligations abroad. Hence, as Mitchell points out: [10]

"Gold really became redundant in the United States when it had been withdrawn from current circulation as money, and when bankers were asked for exchange they could 'find no commodity so cheap as gold to ship and draw against.'"

When all the metallic currency had been driven abroad, however, and the Government made additional issues of paper, the community as such ceased to profit. The Government took from its own citizens the products of their labor and forced them to accept in payment its paper promises. Unfortunately, this has been the usual history of government paper money. The necessity found in weak financial resources for issuing it in the first place has become a more imperative reason for continuing to issue it. The government which, at the beginning of war, could convince lenders of money at home and abroad that it would avail itself of the gold currency only to the extent of substituting paper for a part of it, keeping such paper constantly at par and obtaining its chief resources from loans and taxation, might accomplish some small degree of economy by its paper issues. But in the nature of the case, it would be extremely difficult to give convincing pledges that the issue of paper, when once entered upon, would not be repeated and continued until gold had been driven from the country, paper

[9] The figures of imports are also striking. They fell from $353,616,119 in 1860 to a minimum of $189,356,677 in 1862, but recovered to an annual average of about $266,000,000 for the next three years. The outward movement of gold seems to have been delayed until the year beginning July 1, 1863, but reached a net amount of over $200,000,000 within the next three years.

[10] This fact is used also to prove that the price of gold was not artificially enchanced by "speculation," as claimed by some of the paper money men, because in that case exports of gold would have been checked and imports of the metal have begun.—"History of the Greenbacks," p. 191.

had depreciated until it was the sole standard of value, and the national finances had become so deranged that public credit was seriously impaired. The government strong enough to adopt a sound policy with success would be strong enough to do without legal-tender paper at all, so that for practical purposes it may be said that the government which enters upon the policy of issuing government paper to meet an emergency forfeits confidence in its purpose and its ability to continuously fulfill its obligations.

Tendency to Emit Large Issues.

It has been the usual history of government paper that the first issue has been made reluctantly and under solemn pledges that it should not be increased, but that such pledges, when a new emergency arose, have been treated lightly as "dicers' oaths." Such was the history of the legal-tender act of 1862 in the United States. When Secretary Chase submitted his annual report to Congress in 1861, he discussed the project of issuing Government paper, but declared that its possible consequences were: [11]

"The temptation, especially great in times of pressure and danger, to issue notes without adequate provision for redemption; the ever-present liability to be called on for redemption beyond means, however carefully provided and managed; the hazard of panics, precipitating demands for coin, concentrated on a few points and a single fund; the risk of a depreciated, and depreciating, and finally worthless paper money; the immeasurable evils of dishonored public faith and national bankruptcy."

These possible disasters, Chase declared, so far outweighed the probable benefits of the plan, that he felt himself constrained to forbear recommending its adoption. Yet within four weeks after the meeting of Congress a bill had been introduced by the chairman of the sub-committee charged with the subject,[12] providing that "for temporary purposes," and until a banking law could be put in operation, legal-tender notes should be issued to the amount of $50,000,000. To this measure Chase gave his reluctant assent.[13] Warnings that the first issue would lead to others passed unheeded over the heads of members who preferred issuing fiat paper to testing the merits of heavy taxation.[14] Before the bill became law, the limit of issues had been raised to $150,000,000, and other issues soon came. The first act became law February 25, 1862. On June 7, 1862, Secretary Chase was writing to the Committee of Ways and Means, asking for more notes. The authority to issue them was granted, to the amount of $150,000,000. Descent of the path of irredeemable paper became easier with each step. In January, 1863, a bill providing for $100,000,000 more notes was introduced, passed both houses of Congress, and received the approval of President Lincoln, all within three days.[15] This issue was only part of a larger one which was coupled with a restriction on the issue of small bank notes.

---

[11] Spaulding, p. 10.

[12] This was Representative E. G. Spaulding of Buffalo, author of a work on the history of the legal-tender paper, of whom Sumner sarcastically observes that he "claims to have been the author of this act, and no counter-claimant has ever arisen."—"A History of American Currency," p. 198.

[13] Letter of January 22, 1862.—Spaulding, p. 27.

[14] Vide Mitchell, p. 57.

[15] The original bill called for $50,000,000; but on Lovejoy's motion the amount was doubled. "Then," says Mitchell, "without any discussion the resolution was passed."—"History of the Greenbacks," p. 109.

From the suspension of specie payments by the banks at the close of 1861, a premium on gold appeared, but it did not rise above three per cent. until May, 1862. After that the premium rose rapidly. The price of gold in currency was 115⅛ at the beginning of August; 122¾ early in October, and 132¼ at the close of December, 1862. Within the next two months it was as high as 172. Importers bought gold not merely for the payment of customs duties, which were still exacted in gold, and for direct payments to foreigners, but also for protection against fluctuations in the value of the currency between the times goods were bought and sold. Exporters bought and sold for similar reasons, and even manufacturers and merchants in domestic trade sought in the same manner to protect themselves on their future contracts expressed in paper currency. Thus men of foresight obtained the advantage they usually obtain in times of uncertainty and speculation over those who drift with the current.[16] While wages rose eventually in paper, prices rose much faster. In 1863, according to a careful investigation, prices in comparison with a basis of 100 in 1860, stood at 148.6; wages had risen only to 110.5. In 1864 prices stood at 190.5, wages at 125.6. Some of the effects of these conditions are thus summed up by Dewey: [17]

"As the purchasing power of earnings was greatly diminished a heavy load was placed upon the laborers of the country. The Government was the largest employer of labor in workmen, clerks and soldiers; but the Government rarely makes changes in its salaries or pay, and hence did not feel the full effect of the increase in wages which took place in the individual field of labor."

Even the benefits of disposing of the gold currency abroad were transitory and were more than offset by the bad effect of the paper issues on our international credit. It became necessary to raise at home all the capital required for carrying on the war, instead of borrowing a part, to be repaid when the country was not under such stress. The effect of this policy abroad was incidentally political as well as financial. As Bagehot points out: [18]

"The old countries were frightened by the probable issue of unlimited inconvertible paper, and they would not lend a shilling. Much more than the mercantile credit of America was thus lost. The great commercial houses in England are the most natural and most effectual conveyers of intelligence from other countries to Europe: if they had been financially interested in giving in a sound report as to the progress of the war, a sound report we should have had. But as the Northern States raised no loans in Lombard Street (and could raise none because of their vicious paper money) Lombard Street did not care about them, and England was very imperfectly informed of the progress of the civil struggle."

Ill Effects Resulting from Irredeemable Paper.

Nor was this incident peculiar to this particular case. The government which issues irredeemable paper either separates itself absolutely from the international money market or condemns itself to paying there a high pre-

[16] Simon Newcomb declares: "A system of paper money may be described, in general, as a convenient device for throwing the entire burden of an extraordinary expense upon that class of the community who have most faith in the paper money."—"Financial Policy During the Southern Rebellion," p. 114.

[17] "Financial History of the United States," p. 294.

[18] "The English Constitution," Works, IV, p. 46.

mium for the lack of confidence which its own policy has aroused. If Japan in 1904, instead of jealously guarding her gold reserve and applying to its restoration the proceeds of her first foreign loan, had issued paper money, she might indeed have obtained financial aid in London in the form of loans, but it would have been upon the onerous terms upon which it has been granted to backward peoples of uncertain credit and disordered finances.

Upon the whole, therefore, the issue of paper money is a resource which can seldom, if ever, be availed of to advantage in meeting emergencies. Governments which enter upon the issue of paper money rarely restrain the amount within the limits of the stock of metallic money which is displaced. Every new issue, if it adds to the amount legitimately required to take the place of coin, by this very fact separates the value of the paper further from that of gold. This rise of the gold premium in its turn accentuates distrust of the paper, sends its gold value still lower, and causes a demand for increased issues. The actual course of events has verified the summary made by Schwab in reference to the Confederate paper of the Civil War:[19]

"The paradox that a further redundancy of notes would create a still greater scarcity by driving prices still higher and putting commodities still further beyond the reach of the note-holder, was seldom understood. 'The business wants of the country' were never satisfied, and were calling for more notes during the inflation of the Confederacy, just as they were in the North at the same time, and as they always had done in former periods of suspension in our history. Under similar conditions the pressure for more currency was always inevitable and generally irresistible.

"The history of the French *assignats* offers an instructive parallel. We hear constant complaints of a lack of a circulating medium and a clamor for more notes, especially of small denomination. Exactly the same cry was raised in Austria during the fifties and in Russia during the next decade. It is always the same story: as the irredeemable paper drives up prices, the public demands, and generally gets, more notes with which to meet this higher price level."

Thus, the general tendency of government paper issues is to create "a vicious circle," by affording a tempting means for meeting demands for increased issues while affording no means of curtailing them when they have become obviously excessive. If it were possible to regulate the stock of paper money automatically, so that it would in fact respond to the demands of trade, while confidence in the issuing power remained unimpaired, it might be possible in theory to keep government paper currency near the level of its declared value in coin. Thus far in monetary experience, however, the only practicable means of doing so has been found to consist in direct redemption at par in coin. Rarely have governments been able to maintain such redemption at the time of issuing government paper and in many cases they have not even sought to maintain it.

In some of those communities which have gotten beyond the struggle for bare economic existence and have learned the lesson of disaster taught by excessive issues of paper, a moderate policy has in recent years been adopted which has guarded against some of the chief dangers of such issues. If such paper is to be issued without grave risk, it should form only a small proportion of the total circulation, leaving a large vacuum for money of the standard metal. Within such limits government paper, when redeemable on

[19] "The Confederate States of America," p. 147.

demand, forms a substratum upon which the more elastic element of the metallic currency may be superimposed. This has become by the progress of events the practical character of the use of paper in the monetary systems of the United States and Canada in recent years.

In the United States the $346,681,016 in greenbacks, left outstanding by the law of May 28, 1878, has not been increased. The total stock of currency in the country expanded from $789,790,976 at that time to $2,885,079,229 on July 1, 1905. If there had been no other paper issues or token currency infused into the circulation in the meantime, the increase would have been in the form of the standard metal. The greenbacks would then have constituted only about one-eighth of the total stock and would have formed no menace to the integrity of the currency system. In Canada the principle of maintaining a limited issue of Government paper as an economy to the Government and the community has resulted in the issue of what are called "Dominion notes" in denominations of $1, $2 and $4. Against such issues up to the amount of $30,000,000, a reserve of fifteen per cent. in gold is required, while beyond this limit the notes must be fully covered by gold, making them substantially gold certificates. As the banks are required to keep half their reserves in Dominion notes and their circulation has greatly increased in recent years, the joint demand from the banks and for small notes in circulation has accumulated a large gold fund in the Dominion Treasury.[1] In Austria, however, the issues of Government notes made in times of stress, in spite of the fact that they were materially reduced, proved a clog to the resumption of specie payments by the National Bank until in 1902 they were practically all retired.[20] Their history demonstrates how difficult is the maintenance of a government paper issue except by the strongest governments, on the most limited scale, and under the most severe regulations.

CHARLES A. CONANT.

[20] Vide Raffalovich, "Le Marché Financier en 1902-03," p. 820.

MISEDUCATION OF CONSCIENCE.—In an address delivered before the Christian Endeavor Convention in session at Baltimore July 7, Rev. Washington Gladden, of Columbus, Ohio, declared that there was a tremendous uneducated or miseducated conscience in this country. He said that people who are active in church work, who are models in communities, are doing things horribly wrong, because their consciences have been so dulled that they do not protest.

"A general slump of conscience in financial circles and in political circles, in society and in the Church itself," was the way he described the condition.

"The one thing this country needs today," he declared, "is a clearing and toning up of the consciences of its citizens. The phenomenon known as 'graft' is a widespread and deadly disregard of the primary rights of property, and the essence of it is the appropriation for personal uses of public property or of private property held in trust."

He referred to such instances as the appropriation of stationery by Congressmen and Legislatures, the pass habit among public officials, the tax dodger and the public official who booms public improvements that will enhance the value of his own property.

"If one could believe all he hears," he said, "and could accept the estimates of active business men who ought to know, one would be compelled to believe that not only the public service, but private business, is honeycombed with bribery of this sort—that the majority of those who are acting as agents of others are taking their private rakeoffs whenever they can do it without detection."

A PRACTICAL TREATISE ON BANKING AND COMMERCE.

MANUFACTURING.

The subject of Manufacturing, apart from the petty developments of a primitive condition, at once opens up this fundamental question, what natural capacity or suitableness exists in any given country, or given tract of country, for the production of goods by manufacturing processes? The answer to this question verges upon the problems that gather round the controversy between free trade and protection. These problems it is not within the scope of this work to consider; suffice it to state, what is universally acknowledged, that the primary conditions of the suitability of any country for manufacturing are two, the possession of *power*, and the possession (or possibility of acquiring at a competitive price) of *raw material*. There are secondary considerations, such as a supply of suitable labor, and the proximity of markets, but the foregoing are fundamental.

Where these two are found together, manufacturing is most natural, and if efficiently carried on, most profitable. Where only one of them is found, the possibility of profitable manufacturing depends on the cost of bringing the two into conjunction. Where neither of them is found, profitable manufacturing is, generally speaking, hopeless.

The early developments of manufacturing almost invariably arose around *water powers*. Thus it was with nearly all the manufacturing towns of England. The streams that flowed down from the central moorlands of the North gave rise to the falls and powers that were the origin of the manufactures of Lancashire and Yorkshire. Thus it was also in Scotland, in central England, in New England, and notably with the powers arising from the great rivers of Canada, and of the United States.

The development of coal mining introduced a new element into the question, which element, in most cases, has become the dominant one. Except in a few centres where water powers are found of prodigious magnitude and continuity—such as Ottawa, Minneapolis, and Kewatin, the power of coal has not only become supplementary to the power of water, but has almost supplanted it. But even in localities where water power has fallen almost into disuse, and great manufacturing cities are found at the present day, whose engines are almost wholly run by the power of coal, it will generally be found that some water power was the beginning of its development. Thus it was that several little converging moorland streams in Yorkshire were the origin of the town of Sheffield, though the power derived from them is now infinitesimally small. The little river Idle, which is humorously said to be the hardest working stream in the world, flows down the western sides of these same moorlands, and was the origin of many of the thriving communities of Lancashire, Manchester included. Yet hard as the little stream works, its total power and that of other streams like it is a very small factor in the total production of the district.

Nature itself, that infallible mother of all forces, has indicated with certainty where manufactures may profitably flourish. And it is one of the most striking developments of these days that water power is asserting itself again as a generator of electricity.

But though a given country, as a whole, may have the natural elements of manufacturing success, it is not every locality that is suitable for every kind of manufacture. Other elements have to be considered, and particularly the important factor of labor, economical supply of raw material, and the ease of reaching a consuming market. What particular manufacture will suit a certain locality has finally to be determined by these. It has become plain that flour milling suits Minneapolis, saw milling the Ottawa Valley, cotton manufactures New England, iron and steel Pennsylvania. Cotton spinning flourishes in Lancashire, but an attempt to introduce it into Yorkshire was a signal failure. Montreal has remarkable facilities for a variety of manufactures, and a variety of them are therefore found in that city and neighborhood. So, by a natural process of development each of the manufacturing towns of Canada has come to be what it is; and the best has come to be made both of our coal mines and the water powers of our smaller rivers, such as the Trent, Otonabee, and Grand in Ontario, and the St. Francis, the North, the Chaudiere in Quebec. And what is true of Canada is true of the United States on a much larger scale. In a forest covered country, as most of Canada was originally, the most natural form of manufacturing was sawing up the wood of the forest into lumber, or hewing it into square timber. Both have been the source of great profit at one time, both have caused great losses at another; the profit and the loss having been generally traceable to knowledge of the business or lack of it; but sometimes to the chances and changes of winter and spring. But too much or too little snow in the woods, or too much or too little water in the river, may spoil the labor of a whole season.

But a person who has been successful as a maker of timber sometimes turns his attention to saw milling. He is then confronted with new conditions of which he has had no experience, and ruinous losses have followed the experiment. Mills were built where the best conditions did not exist, and profit frittered away in cost of hauling.

The difference between a mill which can be worked properly and one that will entail constant loss may be only a difference in locality of half a dozen miles. To locate a mill on one side of a stream or the other, or on the eastern side of a hill instead of the west, may make the difference to the owner of a fortune or ruin.

The same principle applies to another natural industry of Canada, the flour mill; a business that has undergone a striking development corresponding to the development of the country. The gristing mill of former days, often buried in the woods, picturesque in appearance, with the rudest description of equipment, has been necessarily replaced by the substantial mill of these times, contiguous to a railway or navigation, equipped with modern machinery and perfect appliances for power and transport.

At quite an early period there followed Woolen mills, Tanneries, and Pork factories; and, somewhat later on, Breweries, Distilleries, Coal Mines, Iron Works, Fish-curing establishments and Implement Manufactories, Paper Mills, etc., all of which are indigenous to the soil, and work up the natural products of the country or its contiguous waters. In all these, as in flour milling, there have been enormous developments from the past to the present; and in all of them, much money has been both made and lost.

But there are now in the country manufactures of a different description, which have yet attained a high degree of development and give employment to a large number of artisans. These differ from the foregoing, inasmuch as the raw material they work up is not a product of the country. They owe their inception and, in part, their continuance, to legislative conditions, for which reason it is considered by some that they should never have been set on foot, and have no right to be continued. (Many of them have very fine water power.) These manufactures, however, exist, and their development illustrates the importance of locality as much as those before mentioned. Some mills have never been a success, and if they had been owned by private individuals the parties would long ago have gone into bankruptcy. In other cases, after the difficulties that attend all new enterprises had been overcome, success has been constant and remarkable. All of them demonstrate the points insisted upon, viz., that an ample supply of power, either of water or coal, an easily available supply of raw material, good communications both to and from the factory, and command of efficient labor, are the foundations of success, without which the largest expenditures, the most efficient machinery, and most economical management will be in vain.

There must, in the nature of things, at some time be a pioneer establishment in the case of every manufacture in every locality. It is not seldom the case that a large amount of money is lost while the experiment is in progress, even if success be attained ultimately. Some of the well-established manufactures of Canada were commenced by men who were not discouraged by losses at the outset. They persevered, but not on the same lines. They tried experiments, found out defects, introduced new methods. Thus, sometimes very slowly at first, but surely, they discovered the art of not only making goods but making money.*

Bonuses.

Closely connected with the matter of locality is the practice, once so common in Canada, of municipalities offering inducement to manufacturers to establish their business amongst them. This practice is unknown in Great Britain, and it has been of doubtful advantage to this country. For it is certain that unless a manufacturing business is established in a proper locality it cannot permanently succeed.

The great centres of manufacturing industry in Great Britain have not become so by chance, or by means of municipal bonuses, but because of their facilities. Why are they all found in the North, or in other localities contiguous to hills? It is because of the water power originally found there. In the early days of development, when a district is only imperfectly known except to the people therein, these, knowing the district to have advantages, may reasonably call attention to them, and offer inducements to a manufac-

* It is, as has been observed, foreign to the purpose of this treatise, to discuss the economic questions connected with these latter lines of industry. But it may be observed, and it deserves to be noted, that even such industries may be considered indigenous, at any rate to this extent, that the raw materials of several of them are produced on this continent, if not in this country, and that we have the means of economical production in our water power, and access to coal mines; also in a supply of suitable labor and of economical distribution in our great lines of railway and river transportation. And it is an undoubted fact that much of the water power which nature has given us would be wasted if these enterprises ceased to exist.

turer to establish himself amongst them rather than elsewhere. These inducements will offset the risk of building and bringing capital to a place hitherto unknown. Its success as a seat of manufacture has to be proved, and it may take years to accomplish it. Remission or reduction of taxes, or an actual bonus in money, may therefore be offered without violating any economic principle. If the place proves to have the advantages claimed and the parties receiving the bonus have capital and capacity, the experiment will succeed, and other enterprises follow. Then bonuses should cease.

But when the people of a town, simply out of spirit of ambition, or what is called enterprise, seek to draw manufactures to a place without natural advantages, the effort is foredoomed to failure. Any manufacturer, looking round for a spot in which to commence operations, will beware of being tempted by a bonus to an undesirable locality. Better borrow the money at ten per cent., supposing it necessary to borrow at all, and settle in a desirable locality, than get a supply of money for nothing in an undesirable one. And the people of a municipality, under such circumstances, will learn by unpleasant experience that their money has been wasted by reason of the forced enterprise never taking root.†

The Successful Manufacturer.

It may at first sight seem unnecessary to make a distinction between the successful merchant and the successful manufacturer. But the points of difference are important enough to make it desirable.

Almost all that has been said respecting a successful merchant applies also to a manufacturer; but all that applies to a manufacturer does not apply to a merchant. In using the word "manufacturer," it should be understood that, in this chapter, a flour miller, a tanner, sugar refiner, saw miller, pork packer, and hewers of squared timber are included. They all produce goods by a manufacturing process, though they are not generally called "manufacturers."

To be a successful manufacturer implies at the outset that the goods produced are such that, speaking generally, there will be some certain *demand* for them. There are goods which are subject to the changes of fancy and fashion: it is then of primary importance for a manufacturer to watch these

† The writer remembers well an instance illustrating the importance of locality that transpired in a certain town in England. The district is particularly well adapted for iron manufactures, and they have flourished there for generations. But many years ago some capitalist conceived the idea of developing the cotton industry there also. There were hundreds of cotton mills fifty miles off over a range of moorlands, why could not the industry be domiciled in his own town? The capitalist conceived there was no reason, and built and equipped a mill. But it was found impossible, year after year, to make cotton goods at a profit; although, not a hundred yards away, a great iron foundry and rolling mill, fed by the same water power, were making large amounts of money for their proprietors. The reason was that in the era before railways the range of hills aforesaid presented an insurmountable barrier. The cost of bringing raw material to the town by carting it over the moorlands and carrying back many of the finished goods over the same hills, swallowed up all profits of the mill. After years of hopeless struggle and heavy loss of capital, the factory was closed and dismantled. I well remember its broken windows, dilapidated flumes, and ruined dam, standing out as an object lesson of misplaced enterprise. Canada, too, has some object lessons of the same kind. But she has seen magnificent examples of success when natural conditions have been duly observed, and business principles brought to bear.

changes and regulate production accordingly. There are others for which the demand is certain.

But though a man may be sure of selling the goods he produces, it by no means follows that he can always sell them at a profit. A manufacturer may have an imperfect equipment, or insufficient knowledge, or inadequate capital, in which case, so strenuous is modern competition, that to make profit is out of the question.

With regard to Capital, it is obvious that more is required for a manufacturer than for a merchant. A merchant buys the very goods he sells; and can generally buy them on credit; the only immediate cash outlay on them being for freight and duties. He can generally lease the warehouse in which he does business. But a manufacturer can rarely rent his mill or factory; in fact, it is almost a necessity for him to own it.

The minimum capital on which a manufacturer can carry on business with ease, is that expended on land, buildings, plant and machinery. But it is certainly desirable for a manufacturer to have some capital beyond this, otherwise he may find himself seriously embarrassed, in a time of momentary pressure. It is only prudent therefore for him to allow his profits to accumulate until he can look circumstances squarely in the face no matter what financial changes may transpire.

But, though being in possession of adequate capital, it may be safely said that a manufacturer cannot be successful unless he, or a manager under him, has a *faculty for machinery*, and can tell, as by instinct, whether any particular machinery is serviceable and workable. This faculty, if he has it, will enable him to make economical repairs and replacements, or introduce improvements, perhaps peculiar to himself. For it is a necessity for every factory to adopt current improvements when their merit has been demonstrated.‡

Here it is that the faculty for machinery will have its scope. It will enable a manufacturer to judge whether the new thing is a good thing, and whether improvements, so called, will really improve; or whether he cannot, by some alteration, make his own machinery answer the same purpose. The proprietor of a large flouring mill, not in Canada, once lost a large sum of money by hastily adopting a new method recently patented. The mill was at a standstill for some time while the alterations were being made, and its customers were obliged to trade elsewhere. But when the mill started again, although a great flourish of trumpets had been made about the new process, it was found to make no better flour than the old and no cheaper, and in the end it was abandoned altogether.

The question, however, now arises to which all that has been referred to is preparatory, viz., *what* goods are to be manufactured, and *to whom* and *how* are they to be sold? It is not necessary in a treatise like this to enter upon the specialties of the many lines of manufacture established in the country. The greater part of them are of staple products. But there is this

‡Not that every new idea in machinery is to be adopted as soon as it comes out. A thing is not necessarily good because it is new. The patent offices at Washington and Ottawa contain hundreds of models of inventions, and of supposed improvements, which turned out on trial to be unworkable. A manufacturer, therefore, while keeping his eyes open to what is transpiring in the way of improvements, will be careful not to spend money on what may turn out to be mere "fads," unless indeed he has capital enough to enable him to spend money in experimenting.

to be said, that it is highly conducive to success, even in the manufacture of staples, for the manufacturer to make a special article, and to brand it with his own name, so that it may have a name in the market, familiar to his customers and the public. Unless he can do this, he will rarely make profit. There is a general and noticeable movement towards specializing manufactured goods, and labeling them with a name which carries with it a guarantee of quality, even of such articles as flour, pork, whiskey, etc. The reputation once established, the demand is certain, and, in most cases, the profit is assured.

But in such lines of manufactures as cottons, woollens, boots and shoes, rubber goods, etc., etc., many varieties are to be found. Some of these, too, are staple, but others are of the kind where taste and fancy have sway; such as colored and fancy cottons, woollens and silks. In agricultural implements also a considerable element of taste and fancy has sway, and competition prevails as to the quality of various kinds of machines. For the wise production of these classes of goods, the same instinctive feeling of *what will suit the market* is required, that has been referred to in the case of a merchant.

Passing, however, from the consideration of what is to be manufactured, to that of *how* the productions of the factory are to be *sold;* a wide field is entered upon, which brings the manufacturer into close contact with the Banker. At the outset, questions arise as to whether goods shall be sent *on consignment*, or whether they shall be made to reach the merchant direct; whether the services of a *selling agent* shall be secured, through whom the whole product shall be distributed to the dealer, or whether dealings shall be with customers direct.

With regard to consignments, it has long come to be regarded as an unprofitable method of doing business. Manufacturers of goods for export have long seen it necessary to establish such connections abroad that they can make *sales*, at definite prices and on definite terms of time and delivery; and will not trade except for what are called "*firm offers.*"

Manufacturers of cotton and woollens have, however, found the convenience of dealing through a selling agent who will guarantee sales; or will accept himself against the goods that pass through his hands. It saves a large amount of office work, and seems also to save a considerable amount of risk in giving credit to a large number of traders scattered over the country. But experience has proved that though trouble and office work are saved, *the risk* remains. The selling agent himself takes the risk of numerous accounts; and in difficult times he may himself succumb. Hence it has come about that while the services of a selling agent are retained, he is in some cases relieved from the responsibility of accepting against goods, or guaranteeing accounts, a difference in remuneration being made accordingly. The manufacturer then deals directly with the customer so far as collecting is concerned, and takes the risk of giving credit. This arrangement is looked upon with much more favor by the banker, for obvious reasons. The practice of selling goods through an agent is found convenient in the case of factories located in country districts. The selling agent in such cases performs the service of a well-informed partner. Being resident in a mercantile centre, he can give the manufacturer advice as to changes of fancy and taste; and prevent him running on undesirable goods.

In most lines of manufacture, the natural course is to sell to the wholesale merchant. In this case the manufacturer will have large accounts in his books, especially in the timber trade, where it is a common practice to sell the whole product of the year to one mercantile house. This involves exceptional risk, and a prudent banker will be careful as to discounting bills of the magnitude called for unless a lien is preserved on the goods until payment. But throughout all these selling arrangements, where paper is required to be taken, a prudent manufacturer will always keep in touch with his banker, as to whom to credit, and to what amount.

The last course opened to a manufacturer is to sell to the retailer. This is, or certainly was, a common practice in Great Britain, but it has not taken root here, except indeed in the case of the departmental city stores, whose purchases are on the same scale as those of a wholesale merchant, and are treated as such by a manufacturer. It is evidently not desirable for the manufacturer to sell to the ordinary retailer, for in that case he will endanger his trade with wholesale houses.§

With regard to other elements of success all that has been said of the merchant has an equal application to the manufacturer.

In the matter of insurance there is even a greater necessity for a careful outlook; for the damage to the business of a manufacturer by fire is usually far more serious than to a merchant. It is much more easy for a merchant to obtain new premises and a new stock of goods than for a manufacturer to replace his buildings and machinery. The fact that a manufactory is usually well built, or that it has unusually good fire protection should never induce a manufacturer to diminish insurance. He gets the benefit of his good appliances in a lower rate. But to diminish the *amount* is apt to prove a serious mistake.

Another factor in manufacturing success must finally be noticed. It is that a manufacturer should be about his works early in the morning. One of the most conspicuous instances of manufacturing success that Canada has

§ The method of disposing of staple export goods by consignment was formerly almost universal, but it has led to so many losses as to have been largely abandoned. It was an easy way of doing business to forward goods to a consignee as fast as they were made, and draw a percentage against them, that percentage being supposed to leave a margin to be drawn for in future. The margin would, in truth, be realized if the goods struck a favorable market; and many an exporter has deceived himself by treating it as a tangible asset. But a sad undeceiving has often awaited him on the receipt of Account Sales. In many cases there was a balance against him instead of to his credit, which balance he was called upon to pay. The technical name for this is "reclamation," a word which has had an ominous sound for many a shipper, and proved the beginning of a downfall. A consignee when his own acceptances are coming due, and markets are adverse, will sometimes slaughter his correspondents' goods. An unscrupulous consignee, indeed, in an advancing market has been known to take goods to his own account, rendering a far less favorable return than he could afterwards have done, had the goods been actually sold. There are, in fact, disadvantages every way in consigning. The manufacturer has not the advantage of that direct contact with the buyer which is one of the most efficient checks upon his business. If he consigns he may not know for weeks that his goods are unsuitable or badly manufactured; whereas, if he sells, the buyer will tell him at once. In the one case he will go on making goods by which he ultimately loses money; whereas, in the other he will at once change his methods, overhaul his machinery, or buy more suitable raw material, and so work round to a profitable style of business.

It may be thought difficult to arrange sales with buyers across the sea, but it is undoubtedly for every exporter's interest to open communication with buyers, and to visit the centres of consumption abroad, and in these days of swift communication it is becoming easy to do it.

known, in which, from small beginnings, an enormous and most profitable business had been built up, was characterized by this feature. One of the principals was always about the establishment as early as any of the workmen, going from floor to floor, from room to room, from department to department. Dusty and dirty he was as any workman in the building, before breakfast. But a few hours later the same man might be seen on 'Change, in the Bank parlor, or in his own office, guiding the finances of his large business, or attending to operations involving the welfare of men in all parts of the country.|| G. H.,

Former Gen. Mgr. Merchants' Bank of Canada.

|| It is amongst these large and diversified spheres of industry, some mercantile, some manufacturing, that banks find their principal field of operations: their mode of dealing with each will be fully opened up later on; meanwhile it may be observed that it would be of extreme interest, though it may not be possible, for a special Government return to be published say once a year, showing how much assistance the banks were rendering to the various lines of industry in the country.

THE CAPTAINS OF BANKING.—In an address before the recent convention of the South Carolina Bankers' Association, R. G. Rhett, President of the People's National Bank, Charleston, referring to the part taken by the great banks of the country in building up colossal combinations of capital, said:

"Those bankers who have thus drowned every feeling of moral responsibility to anyone, and have not found it improper to construct their palaces and erect their monuments upon the wreck of the people's rights, seem to be growing in number and in power. Their sphere of action is extending to the entire country, and if their rapacity is not held in check by their own foresight, untold disaster will result in the clash which sooner or later must come.

The quicker a moral, as well as a legal, responsibility is recognized, the speedier will the adjustment between labor and capital begin. Each class is combining for a struggle, and the battles are growing larger and fiercer. Labor cannot but feel that fabulous wealth is being concentrated in the hands of a comparatively few capitalists, by means of the sweat of the brow, and while the capitalist grows richer, the laborer grows poorer. Capital on the other hand, sees in the unions and combinations of labor a menace to all investments through the unreasonable demands often made, and so combines still closer for its protection.

If the moral responsibility of these captains of banking held a larger share of their attention, the great brains that have built colossal fortunes, and now wield princely powers, might yet solve the problem of so adjusting the rights of labor and capital—nay, deeper still, the rights of man and money—that the clash which seems drawing nearer may be averted; a mutual confidence restored, and the marvelous prosperity of this great country enjoyed by all in peace and happiness."

BANKERS MUST BE PROGRESSIVE.—The position of the erstwhile banker and especially the country banker was unique in its independence. There was no scramble for business. The banker sat in his office and business came to him all unsolicited. It is true the volume was not large, but the margins for profit were. The two qualifications requisite to success were to know when to say "no," and to be able to say "no" (and it was easier then to say "no," than it is now). To solicit business was considered at least of doubtful propriety, and in no case was it considered professional, or in accordance with bank ethics to solicit another bank's customer. But in these times of close competition, of close margins, the banker who sits down and waits for business is a back number and failure, and the same might be said of the banker who does not keep pace with the progress of the times. He needs to know, he needs to do; and the more he rubs against other bankers, the more he learns, and the more inspiration to do he catches.—From Annual Address of B. F. Mauldin, President of South Carolina Bankers' Association.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

PROMISSORY NOTE PAYABLE TO ORDER—ASSIGNMENT WITHOUT WRITING.

United States Circuit Court of Appeals, Ninth Circuit, May 1, 1905.

FIRST NATIONAL BANK OF COUNCIL BLUFFS *vs.* MOORE.

In the absence of a statute to the contrary, a written assignment of a negotiable note, payable to order, is not necessary to transfer an equitable title to the note to the transferee.*

Where certain negotiable notes sued on were transferred by parol in Iowa, the transferee was entitled to maintain a suit thereon in his own name under the law of that State.

The First National Bank, of Council Bluffs, Iowa, brought an action to recover upon three promissory notes of date January 2, 1897, made by one Moore to the Citizens' State Bank of Council Bluffs, Iowa, two of said notes being for $2,500 each and one for $800, and all made due and payable six months after date. The complaint alleged that on January 2, 1902, the payee of the notes, by an instrument in writing, assigned and transferred the same to the bank and that the payee delivered the notes to it. The defendant answered, denying upon information and belief the assignment and delivery of the notes, and setting up as an affirmative defense fraud in obtaining the original note for the renewal of which the notes in suit were made, and failure of consideration for such original note. Upon the trial of the cause the plaintiff introduced in evidence the deposition of T. G. Turner, formerly a clerk in the Citizens' State Bank, who testified in substance that the notes had been in the possession of the bank long prior to January 2, 1902; that the stock of the plaintiff in error was bought up by the Citizens' State Bank, and the two banks became consolidated, thereafter doing business under the name of the First National; that the latter took over all the assets and assumed all the liabilities of the Citizens' State Bank, and that the written assignment of the notes had been made for the purpose of enabling the plaintiff in error to bring an action thereupon.

The written assignment of the notes was offered in evidence. It purported to have been signed by the Citizens' State Bank, by Charles R. Hannan, Cashier; but when it appeared from the testimony that the name of Charles R. Hannan, Cashier, was written, not by himself, but by T. G. Turner, objection was made to the instrument on the ground that the execution and delivery of the assignment had not been proven, and that it had not been shown that Turner had authority to sign Hannan's name thereto. As to the authority of Turner to sign the name of Hannan, Turner testified that on Janu-

*The Negotiable Instruments Law (§3060-a49, Iowa Statute, §79 New York Act) provides as follows:

"Where the holder of an instrument payable to his order transfers it for value without indorsing it, the transfer vests in the transferee such title as the transferrer had therein, and the transferee acquires, in addition, the right to have the indorsement of the transferrer. But for the purpose of determining whether the transferee is a holder in due course, the negotiation takes effect as of the time when the indorsement is actually made."

ary 2, 1902, Hannan was the Cashier of the Citizens' State Bank, and that he (Turner) was the Vice-President of the plaintiff in error, and that he had verbal authority from Hannan to sign his name to any instrument necessary to close up the business of the Citizens' State Bank. He admitted that he did not consult Hannan about signing his name to the instrument, but testified that Hannan knew that he had signed it, and made no objection thereto. The objection to the admission in evidence of the written assignment was sustained by the court. The plaintiff then moved for leave to amend its complaint so as to allege as follows: "That long prior to January 2, 1902, and after the maturity of said note, the Citizens' State Bank of Council Bluffs, for value received, sold and delivered to the plaintiff the note hereinbefore set out, and that ever since said time plaintiff has been the owner and holder of said note and in sole possession thereof," and moved the court to continue the cause in order to give opportunity to procure the attendance of some of the officers or directors of the Citizens' State Bank for the purpose of proving the same.

The court denied permission to make the amendment, on the ground that to allow it would be practically to set aside a stipulation that had been entered into before the trial, whereby a similar allegation had, by the consent of the parties, been struck from the complaint, and overruled the motion for a continuance. The plaintiff thereupon renewed its offer of the assignment and of the notes sued upon, to which offer the defendant in error interposed the same objections as before. The objections were sustained, and, the plaintiff having rested, the defendant moved the court to direct a verdict in his favor on the ground that the evidence introduced did not sustain the cause of action set forth in the complaint, nor any cause of action, on the part of the plaintiff against the defendant. The court allowed the motion, and the jury, under the instructions of the court, were directed to return a verdict for the defendant.

GILBERT, *Circuit Judge* (after stating the case as above): In the view which we take of the law of this case, it becomes unnecessary to consider the question whether the written assignment of the notes was properly executed or was admissible in evidence. The complaint contained the allegation that the notes had been assigned and delivered to the plaintiff in error. The testimony showed that the notes in question were transferred and delivered by the Citizens' State Bank to the plaintiff in error long before the written assignment was made. No objection was interposed to the admission of this testimony on any ground, and it was, we think, prima facie sufficient under the pleadings to sustain the right of the plaintiff in error to recover on the notes. The objections that were made were to the admission in evidence of the written assignment, and to the testimony tending to show that Turner was authorized by the Cashier of the Citizens' State Bank to sign his name thereto.

In the absence of a statute to the contrary, a written assignment of a negotiable promissory note payable to order is unnecessary. An assignment by parol is sufficient (7 Cyc. 814). And while the title so transferred is equitable, and is subject to the defenses which the maker might have made prior to notice of the transfer, and under the old system of pleading and practice, an action to recover on the note could be prosecuted only by the holder in the name of the payee (Jones vs. Witter, 13 Mass. 304; Minor vs. Bewick, 55 Mich. 491; Coombs vs. Warren, 34 Me. 89; Freeman vs. Perry, 22 Conn. 617; Martin vs. Martin, 174 Ill. 371; Davis vs. Lane, 8 N. H. 224; Waters vs. Millar, 1 Dall. 369; under the code system, by the very decided weight of authority, a negotiable unindorsed promissory note, payable to order, may, for a valuable consideration, be assigned by mere delivery, so as to give the transferee the right to recover thereon in his own name. (Williams vs. Norton, et al., 3 Kan. 295; Pease vs. Rush, 2 Minn. 107 [Gil. 89]; Billings vs. Jane, 11 Barb. 620; Savage vs. Breqvier, 12 How. Prac. 166; Boeka vs. Nuella, 28 Mo. 180; Quigley vs. Mexico Southern Bank, 80 Mo. 289; Fultz vs. Walters, 2 Mont. 165; White vs. Phelps, 14 Minn. 27 [Gil. 21]; Cassidy vs. First National Bank, 30 Minn. 86, 14 N. W. 363; Fox vs. Harrison National Bank [Kan. App.], 50 Pac. 458; Beard vs. Bedolph, et al. 29 Wis. 136; Moore vs. Miller, 6 Or. 254; Harrisburg Trust Co. vs. Shufeldt, 87 Fed. 669, 31 C. C. A. 190.)

The notes in controversy were made and transferred in the State of Iowa.

We find no statute of that State which requires that such an assignment be in writing, nor have the courts of that State so held. On the contrary, it seems to have been there settled by the adjudications that not only may such an assignment be made by parol, accompanied by delivery, but that the assignee of such a note, so transferred, may maintain an action in his own name to recover thereon.

In Conyngham vs. Smith, 16 Iowa, 471, it was held that the assignee of a bond by parol contract of assignment may maintain an action thereon in his own name. In Younker vs. Martin, 18 Iowa, 143, in an opinion rendered by Judge Dillon, it was held that the transferee by delivery, without indorsement of a promissory note payable to order, may maintain an action thereon in his own name, but without prejudice to the maker's right of set-off of equities existing before notice to him of the transfer. The court said: "Notes are choses in action—that is, things which must be recovered by action at law—and, like all other things in action, they may be assigned and the title will pass without indorsement."

The doctrine of that decision was reaffirmed in Pearson vs. Cummings, 28 Iowa, 344, and Switzer vs. Smith & McGowen, 35 Iowa, 269.

It is our judgment, therefore, that the judgment be reversed, and the cause remanded to the court below for a new trial.

CHECK—RIGHT OF DRAWER TO STOP PAYMENT.

Supreme Court of Tennessee, June 20, 1905.

PEASE & DWYER CO. *vs.* STATE NATIONAL BANK.

Under the Negotiable Instruments Law the drawer of a check has the right to stop payment at any time before the bank has accepted or certified the same.

While it is competent for the parties by agreement to give the transaction the effect of an assignment, such intention must be clearly shown.

The complainant, a corporation and depositor with the defendant, the State National Bank, having a balance to its credit of more than $5,000, drew a check thereon July 19, 1904, payable to the order of J. W. Dickson & Co., for $600, and delivered it to the payee. Three days later, July 21, 1904, complainant instructed the defendant to refuse payment of the check, which instruction it ignored, and paid the check July 25, 1904, charged it to the account of the complainant, deducted it from its balance, and afterwards refused to account for the money when demanded.

This suit was brought to recover the proceeds of the check and interest thereon from the day when paid. The chancellor decreed in favor of the complainant and defendant appealed.

SHIELDS, *J.*: We are of the opinion that there is no error in the decree of the chancellor. The drawer of a check in the usual form, upon his general account with a bank, firm or person, before it is accepted, expressly or by implication, may revoke it and forbid its payment, after which payment, if made, is at the peril of the bank. A check of this kind is not an appropriation of any part of the funds to the credit of the drawer with the bank, and does not constitute any claim or right of action against the bank until it is accepted or certified by it. The remedy of the holder, if payment is refused, is against the drawer. (Negotiable Instruments Law, Act 1899, p. 172, chap. 94, § 189; Imboden vs. Perrie, 81 Tenn. 505; Pickle vs. Muse, 88 Tenn. 385.)

In Imboden vs. Perrie, 81 Tenn. 505, supra, the contest was between a creditor whose attachment was levied by garnishment upon the balance of a depositor in a bank, and the payee in a check drawn upon the bank before the levy of the attachment, and presented afterwards. This court quotes approvingly from Attorney General vs. Continental Life Insurance Co., 71 N. Y. 325, this statement of the law concerning the relations of banks, their depositors, and the holders of unaccepted checks: "Church, C. J., said: 'Lunt vs. Bank of North America, 49 Barb. 221, declares the rule accurately, that checks drawn in the ordinary form, not describing any particular fund, or using any words of transfer of the whole or any part of any amount standing to the credit of the drawer, but containing only the usual requests, are of the same legal effect as are inland bills of exchange, and do not amount to an assignment of the funds of the drawer in the bank. This doctrine accords with the relations between the parties. Banks are debtors to their customers for the amount of their deposits. A check is a request of the customer to pay the whole or a portion of such indebtedness to the bearer, or to the order of the payee. Until presented and accepted, it is inchoate; it vests no title or interest, legal or equitable, in the payee, to the fund. Before acceptance, the drawer may withdraw his deposit; the bank owes no duty to the holder of a check until it is presented for payment.' "

The facts of the case of German National Bank vs. Farmers' Dep. National Bank, 118 Pa. 313, were similar to those in the case of Imboden vs. Perrie. It is there said:

"I presume no one at this day questions the right of the drawer of a check to stop the payment thereof. This is usually done by notice to the bank on which the check is drawn. If the bank pay after such notice, it does so at its peril. The holder of a check has no remedy against the bank upon which a check is drawn for its refusal to pay it. He must look to the drawer."

In the case of Kahn vs. Walton, 46 Ohio St. 205, involving this direct question, it is said:

"A check, being simply a written order of a depositor to his banker to make a certain payment out of his funds, is executory, and, of course, revocable at any time before the bank has paid it or committed itself to its payment. * * * The bank is the agent of the drawer. Its duty is to pay his money as he directs. It owes no duty to the holder except under the drawer's directions, until, by virtue of those directions, it assumes some obligation to the holder; up to that time the latest order from the drawer governs."

In the case of Florence Mining Company vs. Brown, Receiver, etc., 124 U. S. 391, Mr. Justice Field says:

"A general deposit in a bank is so much money to the depositor's credit; is a debt to him by the bank, payable on demand to his order, not properly capable of identification and specific appropriation. A check upon the bank in the usual form, not accepted or certified by its Cashier to be good, does not constitute a transfer of any money to the credit of the holder; it is simply an order which may be countermanded and payment forbidden by the drawer at any time before it is actually cashed. It creates no lien on the money which the holder can enforce against the bank. It does not of itself operate as an equitable assignment."

Further cases in accord with these are: St. Louis & San Francisco Ry. Co. vs. Johnston, 133 U. S. 574; Fourth St. Nat. Bank vs. Yardley, 165 U. S. 634; Schneider vs. Bank, 1 Daly (N. Y.) 501; O'Connor vs. Mechanics' Nat. Bank, 124 N. Y. 332; Randolph vs. Allen, 73 Fed. 42, 19 C. C. A. 353; State vs. Bank of Commerce, 49 La. Ann. 1078; House vs. Kountze, 17 Tex. Civ. App. 406; Sunderlin vs. Mescosta County Savings Bank, 116 Mich. 284.

There are cases in which this general rule does not apply, but the fact must clearly show that it was the intention of the parties to assign all or a part of the specific fund on deposit. (Fourth Street Nat. Bank vs. Yardley, 165 U. S. 634.)

The insistence of the defendant is that the check was countermanded by complainant, not for its own benefit, but for that of the payee; that before payment was forbidden the check had passed into the hands of a bona fide holder for value and without notice, and that the bank, having paid it, is in equity a purchaser, and has the right to set it off against the claim of complainant; and, further, that complainant ratified the payment of the check after it was done by bringing suit against the payees, J. W. Dickson & Co., to recover the sum for which it was drawn, and interest.

We can see no force in the first insistence, but it is not necessary to pass upon it, as there is no proof to sustain it.

It is true that a check payable to order is a negotiable instrument, and, in the hands of an indorsee for value and without notice, it is a valid indebtedness of the drawer. But no such case is presented by this record. It does not appear that the check was indorsed or passed to any one by J. W. Dickson & Co., or to whom it was paid by the bank. The only references we find to an indorsement of it are in the answer and brief of the defendant.

There is evidence, brought out upon the cross-examination of a witness for complainant, that previous to this suit complainant brought one against J. W. Dickson & Co. and others to recover the proceeds of the check, but the record in that case is not in the transcript in this one.

It further appears that the defendant was also sued in the same case with J. W. Dickson & Co., and the bill afterwards dismissed as to it; but we do not know what relief was prayed against the defendant, and the facts stated are not sufficient to show a ratification of the payment of the revoked check.

We are therefore of the opinion that the payment of the check after it was countermanded by the complainant was unauthorized, and that the decree of the chancellor awarding a recovery in favor of the drawer should be affirmed, with costs, and it is accordingly so decreed.

TITLE OF BANK MAKING ADVANCES ON POST-DATED CHECKS—RECOVERY ON.

Supreme Judicial Court of Massachusetts, Essex, June 22, 1905.

SYMONDS *vs.* RILEY.

A check does not lose the quality of negotiable paper because it is post-dated.

Where a bank advances money upon post-dated checks, without notice of any equities existing between the parties thereto, it is deemed a holder in due course.

Where the Cashier of a bank takes up post-dated checks on which he had made advances for the bank, he acquires the title of the bank therein and is entitled to enforce them to the same extent that the bank could.

This was an action to recover upon four checks, all drawn by the defendant to the order of one K. F. Gorman, and indorsed by her. One of them was drawn on the Appleton National Bank of Lowell and the others upon the Second National Bank of Manchester. Three of them were indorsed by the defendant before delivery as P. J. Riley & Co. They were drawn under the following circumstances: K. F. Gorman, the payee, was a clerk in the office of one Sibley. There was an arrangement between Sibley and the defendant for an exchange of checks and notes for the accommodation of the defendant. The checks in suit were given pursuant to this arrangement. The defendant made them payable to Miss Gorman of his own motion, and they were indorsed by her, and deposited in the National Exchange Bank of Salem, of which the plaintiff was Cashier, to the credit of Sibley as cash, and Sibley was permitted by the Cashier to draw against them to an equal amount. When the checks became due, they were not paid by the defendant, and were duly protested. Thereupon the bank insisted that the plaintiff should make good the checks, and he did so, and took the checks. This was after the checks had been dishonored. The defendant neglected to pay them, on the ground that he was entitled to set off against them certain indebtedness which he claimed was due him from Sibley on account of checks and mercantile transactions. The case was sent to an auditor, who found and reported in favor of the plaintiff. At the trial the plaintiff put in the checks and the auditor's report, and rested. The defendant thereupon asked the court to rule that the plaintiff could not recover, and offered to show that when the checks were delivered to Sibley he was indebted to the defendant in a sum greater than the total amount of the checks, and asked the court to rule, that, "it being undisputed that the plaintiff took the checks twenty days after their protest, he took them subject to the equities between the defendant and said Sibley." The court declined to rule as requested, or to admit the evidence that was offered, and directed the jury to find for the plaintiff for the amount found due by the auditor, with interest.

MORTON, *J.*: We think that the rulings were right. The checks were negotiable instruments (Bill vs. Stewart, 156 Mass. 508, 31 N. E. 386), though differing somewhat from negotiable promissory notes, and as such were subject to the law relating to negotiable paper. They were dishonored when the plaintiff took them, and the defendant contends that they were subject to any equities existing between him and Sibley. They were not made payable to Sibley, and whether in an action against him by the payee, Gorman, the defendant could have pleaded in set-off Sibley's alleged indebtedness to him—as to which see Tyler vs. Boyce, 135 Mass. 558, Sheldon vs. Kendall, 7 Cush. 217, and Rev. Laws, chap. 174, § 5—it is not necessary to consider. We assume for the purposes of this case that he could. But that does not help the defendant. The checks were deposited in the bank to Sibley's credit in the usual course of business. The bank took them in good faith before they were overdue, and paid full value for them. It had no notice of any alleged equities between the defendant and Sibley, and in an action upon the checks against the defendant could have recovered the full amount of them. The checks being unaffected in the hands of the bank by the equities, if any, between the defendant and Sibley, they were unaffected by such equities in the hands of the plaintiff. The plaintiff took such title as the bank had. If the bank had a perfect title, as it did, he took the same title, and became invested with all the rights of the bank. (Thompson vs. Shepherd, 12 Metc. 311; Bank of Sonoma vs. Gove, 63 Cal. 355; Howell vs. Crane, 12 La. Ann. 126; Wilson vs. Mechanics' Savings Bank, 45 Pa. 494.) There is nothing to show that he had notice, when the checks were transferred to him, of any alleged equities or defenses on the part of the defendant. But, even if he had had such notice, it would not have availed the defendant. (Thompson vs. Shepherd, supra; Peabody vs. Rees, 18 Iowa, 571.) It is unnecessary, therefore, to inquire into or consider whether there was any such condition of things as would have constituted a good defense to the checks on the part of the defendant either by way of set-off or otherwise to an action on them by Sibley, and the evidence that was offered was rightly excluded.

The defendant further contends that the auditor's report should have been submitted to the jury. But, the circumstances in regard to the taking and the transfer of the checks by the bank as found by the auditor being undisputed, there was nothing to submit to the jury. The question became one of law, and the court rightly directed the jury to return a verdict for the amount found due by the auditor, which was the amount of the checks. (Peru Co. vs. Whipple Mfg. Co., 109 Mass. 464.)

Exceptions overruled.

PROMISSORY NOTE—IRREGULAR INDORSEMENT—ALTERATION.

Supreme Judicial Court of Massachusetts. Suffolk, June 19, 1905.

THORPE *vs.* WHITE, *et al.*

A person who signs his name on the back of a promissory note before the delivery thereof is liable as an indorser.

After H. had indorsed a note, the maker without the knowledge of H., inserted therein the words "with the privilege of renewal for one year from April 30, 1904," and then delivered the note to T. who took it without knowing of this change: Held, that T. being a holder in due course, could enforce payment according to the original tenor of the instrument.

BRALEY, *J.*: The defendant, Hannah C. Hand, irregularly became a party to the promissory note set forth in the bill of complaint, as before delivery she signed her name in blank on the back of an instrument of which the defendant White was the maker, and the plaintiff the payee. (Dubois vs. Mason, 127 Mass. 37, 38.)

According to the law relating to negotiable promissory notes before St. 1898, p. 502, chap. 533, § 64, clause 1, took effect, she was liable as a promisor between herself and the plaintiff, though entitled to notice as if she were an indorser when the note was not paid at maturity by the maker. (Fay vs. Smith, 1 Allen, 477, 478; Brooks vs. Stackpole, 168 Mass. 537; Black vs. Ridgway, 131 Mass. 77, 84.)

But after the Negotiable Instruments Act became operative this distinction was abolished, and the effect of her signature was to make her an indorser as to all parties. (Rev. Laws, chap. 73, § 81.)

After she had signed, and given the note to White, he wrote in the body of it, without her knowledge or consent, the words, "with the privilege of renewal for one year from April 30, 1904," and then delivered it to the plaintiff, who took it without knowing of this change. If such an alteration had been made by the plaintiff after delivery, and it was found to have been material, the defendant would have been relieved from performance of her promise. But if deemed immaterial, she would have been held liable. (Lee vs. Butler, 167 Mass. 426, 430; Gaylord vs. Pelland, 169 Mass. 356, 360; Jeffrey vs. Rosenfeld, 179 Mass. 506; James vs. Tilton, 183 Mass. 275; Rowe vs. Bowman, 183 Mass. 491.)

It, however, becomes unnecessary to decide whether this rule should be applied where the change was made under the conditions previously stated, for either way the defendant was not discharged. (See Draper vs. Wood, 112 Mass. 315.)

The note was put in circulation as a contract on delivery to the payee, who, upon acquiring title by its negotiation, thus regularly became a holder of it, within the provisions of Rev. Laws, chap. 73, § 69. (Boston Steel & Iron Co. vs. Steuer, 183 Mass. 140, 144; Mehlinger vs. Harriman, 185 Mass. 245; Baldwin vs. Dow, 130 Mass. 416.)

By reason of her being an owner or holder in due course without notice of the alteration, under the provisions of section 141 of this chapter she can enforce payment of the note according to its original tenor.

The decree of the superior court dismissing the bill as to all the defendants except White must be reversed, and the exception of the plaintiff in the master's report sustained. Decree accordingly.

ACTION FOR WRONGFUL REFUSAL TO PAY CHECK—NATURE OF ASSIGNMENT OF.

Supreme Judicial Court of Massachusetts, Suffolk, June 23, 1905.

ROBINSON *vs.* WILEY, *et al.*

The wongful refusal of a bank to pay a customer's check is not a personal injury, but is a breach of contract, and hence the cause of action therefor is assignable.

BRALEY, *J.*: The fund in the possession of the complainant is the avails of the judgment recovered in Wiley vs. Bunker Hill National Bank, 183 Mass. 495, 67 N. E. 655. It belongs to the plaintiff in that suit, who is a claimant here, unless under the assignment made by him for the benefit of his creditors his title passed, to the assignees, who began and prosecuted the action. In the granting part of the instrument he conveys to them "all * * * his property, choses in action of every name, nature, and description, * * * except such property only as is exempt by law from attachment." The language employed is comprehensive, and must be held to have conveyed all his title in any personal property or rights of action he then owned or possessed, and which were assignable. Under the clause of exemption, which follows the form commonly used, the parties evidently intended to exclude from the conveyance the class of property that is exempt from seizure on an execution against the judgment debtor by the provisions of Pub. St. 1882, chap. 171, § 34. Up to the time of his failure the assignor had been engaged in buying and selling wood and coal, and kept an account with the Bunker Hill National Bank, upon which he drew checks in the ordinary course of his business. Having a sufficient balance for this purpose, he drew a check in favor of third parties, which, upon presentation, the bank wrongfully refused to honor. In consequence of this it was claimed in the original suit that his credit had been impaired; that he had suffered pecuniary loss, and was thereby rendered insolvent. The strongest contention of the claimant rests upon the ground that the injury to his credit thus caused was purely personal, and essentially slander. If this view is upheld, then the act of the bank was a pure tort, and his right of recovery for the wrong was unassignable. (Rice vs. Stone, 1 Allen, 566, 569, 570; Linton vs. Hurley, 104 Mass. 353; Comegys vs. Vasse, 1 Pet. 193, 213.) Independently of the contract he had no cause of action. The refusal to pay his check was not a positive personal wrong distinct in itself, for which alone a suit could have been maintained for injury to his feelings, but it was inseparable from the contract. (Drake vs. Beck, 11 M. & W. 315, 319.) The ability of a trader to borrow money usually depends on the belief of the lender that the debt will be paid, and whatever tends to lower the financial standing of the borrower impairs his financial credit in the market. When checks given by him to his creditors are not paid upon presentation to his bankers, his financial standing, in the absence of satisfactory explanation, usually becomes impaired, and, if not retrieved, it may cause loss of customers, and finally ruin his business, with which may be associated a valuable right of good will. (Angier vs. Webber, 14 Allen, 211; Moore vs. Rawson, 185 Mass. 264, 272, 273.) Such a result may be brought about in various ways. If accomplished by the circulation of false reports, it is slander or libel, according to the form of defamation used, and the right of action dies with the person; but where it takes the form of a breach of contract, then the remedy is under the contract for damages, not to his person, but to his business, which must be considered as property. While it may be true that a merchant in good standing, when subjected to the indignity of having his checks dishonored by a banker, with whom at the time there are sufficient unincumbered funds to pay them, suffers mental distress, the wrong inflicted is not to the person of the drawer, such as arises from defamation of character, or restraint of liberty, but springs from the banker's failure to perform his contract. (Wiley vs. Bunker hill National Bank, ubi supra, at page 496 of 183 Mass., and cases cited; Heath vs. New Bedford Safe Deposit & Trust Co., 184 Mass. 481.) It is sometimes said that the test of assignability depends upon the question whether the cause of action would survive the death of the assignor. (Stebbins vs. Palmer, 1 Pick. 71, 78, 79; Comegys vs. Vasse, ubi supra.) But, if this is considered as affording the true standard by which to determine the quality of the claim, then the right to sue for the damages suffered would have survived to Wiley's personal representatives. (Stebbins vs. Palmer, ubi supra; Wiley vs. Bunker Hill National Bank, ubi supra.) If, instead of a voluntary assignment for the benefit of his creditors, the debtor had taken advantage of our laws relating to insolvency, his assignee, indeed, would not have been vested with any claim for damages for personal injuries suffered by the insolvent, because it is not a right of property until judgment has been obtained. (Stone vs. Boston & Maine Railroad, 7 Gray, 539. See Billings vs. Marsh, 153 Mass. 311, 313.) But a cause of action for breach of a contract made with the insolvent debtor, together with all incidental damages, would have passed. (Lothrop vs. Reed, 13 Allen, 294, 296.) In the instrument before us the terms employed to transfer title are fully as comprehensive as those used in Pub. St. 1882, chap. 157, § 46. The object to be accomplished, which is the distribution of the debtor's property ratably for the benefit of his creditors, is the same in each case, and no sufficient reason appears why a different rule should be adopted whether the assignment is made by force of law or where it is voluntary, if the language employed to transfer the debtor's right of property is susceptible of a similar construction. It follows that the claimants, John C. Bullard and Benjamin F. Wild, as assignees, are entitled to the money now in the possession of the plaintiff.

Decree accordingly.

REDUCTION OF CAPITAL STOCK—USE OF CAPITAL SET FREE TO CHARGE OFF ASSETS—TITLE OF STOCKHOLDERS.

Supreme Court of Errors of Connecticut, June 9, 1905.

COGSWELL *vs.* SECOND NATIONAL BANK.

The directors of a National bank having voted to recommend a reduction of the capital stock, were advised by the Comptroller of the Currency that the proposed reduction would be approved, provided so much of the amount as was necessary should be used to charge off bad, doubtful and unproductive assets, and only the difference paid to the stockholders. The stockholders then voted to reduce the capital, and a statement of the doubtful assets was sent to the Comptroller, and such assets transferred to an account called "Stockholders' Trust:" Held, (1) that this fund belonged to the stockholders individually and not to the bank, and (2) that a transfer of stock by a stockholder did not transfer his interest in this fund.

BALDWIN, *J.*: This appeal respects the disposition of the special fund to which reference was made in Cogswell vs. Second National Bank, 76 Conn.

252, 255, 261. It was held in that case that if that fund had been, as alleged, set apart by direction of the Comptroller of the Currency for the benefit of those who were shareholders of the bank at the time when its capital was reduced, a valid trust in their favor was thus created.

The facts attending the transaction have now been fully found by the superior court. The directors, having voted to recommend a reduction of the capital stock of the bank from $300,000 to $200,000, were advised by the Comptroller of the Currency that it would be approved "provided so much of the amount as is necessary is used to charge off bad, doubtful, and unproductive asset, the difference only being paid to the shareholders in cash," and that "the shareholders of a National bank, upon a reduction in capital stock, are entitled to either receive the cash or the charged-off assets, and neither can be withheld without their consent." The Comptroller also said to the President of the bank, in reference to the same matter, "The assets belong to the stockholders of record, and a trust fund must be created, so that those assets may be distributed among the stockholders of record, when your capital is reduced."

The stockholders then, in May, 1900, voted to make the reduction, without any specification of the mode of accomplishing it; but the President, in asking the approval of this action by the Comptroller, filed with him a written statement that "the whole amount of the reduction, viz., $100,000, will be used for the purpose of charging off bad, doubtful, and unproductive assets; no money to be paid to the shareholders unless realized from said assets, which are to be set aside and collected for the benefit of the shareholders of record at date of the issuance of the Comptroller's certificate approving the reduction."

It was understood that this statement was to be replaced by one from the directors, and on the faith of this understanding a certificate, on June 9, was given by the Comptroller approving the reduction, without any qualifications. The directors subsequently sent him a statement in conformity with the understanding, dating it back to June 9. On June 27 a schedule of certain assets of the bank, each item being given a valuation, and the total valuations of all amounting to $100,307.86, was presented to the directors, who thereupon voted that the assets so scheduled, "which assets are considered either bad or doubtful, and on account of which the capital stock of the bank has been reduced from $300,000 to $200,000 be set aside from the other assets of the bank, and be held by it in trust for the stockholders of record on June 9, 1900; and that whatever may be realized from said assets be distributed from time to time, as may be reasonable, among said stockholders in proportion to their respective holdings on said date."

Thereupon the account with capital stock on the books of the bank was credited with a reduction of $100,000, and the items named in the schedule above described were charged to the account of profit and loss at the valuation of $100,307.86. Some of the items were of real estate; the rest were not well secured; and all were those referred to in the directors' statement to the Comptroller dated June 9. This left the bank with good assets worth over $240,000. The bank thereafter, until its charter expired in 1903, kept a separate account relating to the assets included in the schedule, entitled "Stockholders Trust," in which were credited all collections and charged all expenditures arising in connection with endeavors to realize upon them. Two of the scheduled items represented claims for a larger amount, the valuation affixed to each representing the estimated loss upon it. The same claims were also entered in the books of the bank, as part of its remaining capital, at a valuation for each equal to the difference between its face and the valuation assigned to it in the schedule. The receiver has received $20,240 on account of the scheduled assets. Some of them also remain uncollected, but have a value. To one of the items entered as "Demand loans, E. A. Packer, $15,647.50," belonged certain railroad stock held as collateral security. A note for over $1,000, made by "C. R. Cogswell, trustee," and discounted by the bank to pay an assessment on this stock, was included in the reduced capital of $200,000, and in March, 1903, was paid off from the proceeds of sales of the stock; leaving a balance of such proceeds, which was included in the $20,240 above mentioned. All the certificates representing the shares in the original capital were, on or about July 1, 1900, exchanged by the holders for certificates in favor of each for two-thirds of the number of his original shares.

As a conclusion from all these facts it was found by the trial court that the "reduction of capital stock was made to meet the diminution in the assets of the bank caused by charging off said assets described in said schedule in the manner hereinbefore set forth, and not for the purpose of setting free any capital of the bank," whereupon an order was made that the assets included in the schedule of June 27, 1900, and their proceeds belonged to the bank, and should be distributed to those who were shareholders at the expiration of its charter.

The subordinate facts which have been detailed do not justify these ultimate conclusions, either of fact or law. The reduction of capital stock was accomplished before the assets described in the schedule were charged off. It was accomplished by a vote of the shareholders, approved by the Comptroller of the Currency, and his approval was only secured by the assurance of the President and directors that certain bad, doubtful, and unproductive assets would be charged off and set aside for the benefit of those who were shareholders at the date of such approval. It is of no consequence in this proceeding that the certificate of approval did not refer to these assurances. It is enough that it was given because of them. What was thus promised the directors did. They had the right to do it. (Rev. St. U. S. § 5145 [U. S. Comp. St. 1901, p. 3463].) The bank was not being wound up. The directors' vote was simply a form of declaring a dividend from assets in excess of the capital stock. (Smith vs. Dana, 77 Conn. 543, 554.)

The right to receive what might ultimately be realized from the fund thus set apart became, therefore, irrevocably vested in those who were shareholders on June 9, 1900, and they or their assigns are now entitled to whatever is to be distributed from it. Directors of National banks can declare dividends only out of net profits. (Rev. St. U. S. §§ 5199, 5204 [U. S. Comp. St. 1901, pp. 3494, 3495].) It is contended that the fund set apart in this case did not consist of net profits. Technically this is true. But it was the equivalent of net profits, within the meaning of those statutory provisions, which were intended simply to preserve the capital stock intact and to provide for turning a part of the net profits into a surplus fund, to be accumulated until it equaled twenty per cent. of the capital stock. Such a surplus fund existed in case of the bank whose affairs are being wound up in this proceeding at the time when the fund now in question was set apart for distribution. Whether, if no provision in regard to the assets charged off had been made by the directors, and with the approval of the Comptroller, in the nature of the declaration of a dividend, whatever might have been thereafter realized from them would have belonged to those then shareholders in the bank, we need not inquire. (See Seeley vs. New York National Bank, 8 Daly, 400, 78 N. Y. 608; Strong vs. Brooklyn Cross-Town R. Co. 93 N. Y. 426; McCann vs. First National Bank, 112 Ind. 354, 131 Ind. 95.)

With his approval, whatever it was not necessary to retain as capital or to form a surplus fund might certainly, with the assent and by vote of the directors, be returned to the shareholders; and if a dividend were ordered then it might be made payable thereafter, and only on the contingency of future collections.

There was no impropriety in placing in the schedule at a certain valuation claims which were also and primarily retained at another and lesser valuation as part of the capital stock. If a note for $2,000 had been discounted on the faith of collateral security which was certainly worth $500 and might be worth more, there could be no legal objection to charging off $1,500 from the book valuation of the loan and embracing it at a valuation of $1,500 in doubtful assets set aside for the purpose of an ultimate dividend, while also carrying it along at a valuation of $500 as part of the assets representing the capital stock. In such case what would be really set aside would be not the note, but an interest in any collections on account of it in excess of $500.

Certain of those who were shareholders on June 9, 1900, have since transferred their shares. Such transfers (notwithstanding Rev. St. U. S. § 5139 [U. S. Comp. St. 1901, p. 3461]) did not pass the right to any interest in the special trust fund created on that day. A dividend declared by the directors of a corporation in favor of those who are then its shareholders, though payable at a future date, severs the fund to be so distributed from the assets of the corporation. The share of each of the payees so named thereupon vests in him as an individual, and he does not lose it on ceasing to be a shareholder. (Beers vs. Bridgeport Spring Co. 42 Conn. 17, 24; Second Universalist Church vs. Colegrove, 74 Conn. 79, 84, 49 Atl. 902.)

It follows also from the same considerations that those who were shareholders on June 9, 1900, could at any time thereafter transfer their rights in the special trust fund, whether with or without a transfer of their shares.

There is error, and the order appealed from is reversed, with directions to enter an order for a distribution in conformity with this opinion. The other judges concurred.

USURY BY NATIONAL BANK—PENALTY, RECOVERY BY SURETY.

Court of Civil Appeal of Texas, July 1, 1905.

LASATER *vs.* FIRST NATIONAL BANK OF JACKSBORO.

A discharge of a note by a surety by giving his own note in renewal thereof does not operate as a payment by the principal in such sense as to entitle him to avail himself of the Federal statute authorizing the recovery from a National bank of twice the amount of usurious interest paid to the bank, nor does the subsequent payment of the renewal note by the surety operate to give the principal a cause of action under such statute.

SPEER, *J.*: This suit is again before us upon a judgment of the Supreme Court of the United States reversing the judgment of reversal and rendition heretofore rendered in this court on November 8, 1902. For a full statement of the nature of the case, and of the facts material to the questions involved, see the opinions of this court and of the supreme court on certified questions in 72 S. W. 1054, 1057.

In the opinion of this court deciding the case upon the original hearing, what we consider to be the most material question involved was disposed of in the following language: "The payment made by A. M. Lasater, the surety, who purchased the mortgaged cattle from appellant, and in consideration thereof agreed to pay off the note to the bank, and in discharge thereof executed his own note, which was afterward paid, was in law a payment by appellant in property, and the same as payment in money." Upon a motion for rehearing being filed by the bank, this court certified to the supreme court for answer the questions shown in the certificate, as incorporated in the supreme court opinion already referred to. The supreme court answered generally that the opinion of this court correctly decided the several points presented. This court thereupon overruled the motion for rehearing, whereupon the appellee removed the cause by writ of error to the United States Supreme Court, where a judgment was rendered reversing the judgment of this court, and remanding the cause for further proceedings not inconsistent with that opinion. (First National Bank of Jacksboro vs. J. L. Lasater, 196 U. S. 115.)

The question decided by this court in the language heretofore quoted, and by the supreme court upon the certificate, is thus disposed of by Mr. Justice Brewer in the following language: "The mere discharge by A. M. Lasater of the note executed by himself and J. L. Lasater by giving his own note in renewal thereof would not uphold a recovery from the bank on account of usurious interest in the former note. (Brown vs. Marion National Bank, 169 U. S. 416.)

The payment contemplated by the statute is an actual payment, and not a further promise to pay, and was not made until the bank in June, 1901, received its money. Prior to the renewal by A. M. Lasater, in October, 1900, there were only two or three small cash payments on the indebtedness."

It was only upon the theory that the discharge by A. M. Lasater of the note executed by himself and J. L. Lasater, by giving his own note in renewal thereof, "was in law a payment by appellant in property, and the same as payment in money," that this court in the first place reversed the judgment of the district court and rendered one in favor of appellant. But this construction of the Federal statute being held to be eroneous by the Supreme Court of the United States, it follows that, if appellant ever had a cause of action for usurious interest paid the bank, it was by reason of the subsequent actual payment made by A. M. Lasater in June, 1901. This court never intended to hold, nor do we think it should be held, that appellant can avail himself of this final payment made by A. M. Lasater. If appellant ever paid usurious interest to appellee, it was on the 17th day of October, 1900, at the time when A. M. Lasater took up appellant's note by substituting his own. Clearly, appellant's debt was discharged at that time. He never afterward owed the appellee anything, and the appellee never took, received, reserved, or charged any interest whatever, so far as he is concerned. When A. M. Lasater, in June, 1901, paid the bank the sum of $4,457, he paid his own debt, and not appellant's. Then, if the transaction of October 17th, whereby appellant's indebtedness to the bank was discharged and he was released, would not uphold a recovery from the bank, it is clear to our minds that, irrespective of the question of fraud upon his part in withholding from his trustee in bankruptcy notice of the existence of this claim, upon which the cause was decided in the United States Supreme Court, appellant has no case, and the judgment of the district court should be affirmed.

For this reason, and in obedience to the mandate of the United States Supreme Court, the judgment of the district court is in all things affirmed.

CERTIFICATE OF DEPOSIT — TRANSFER THEREOF — DEMAND ON BANK FOR PAYMENT—FORM OF.

Supreme Court of Indiana, June 21, 1905.

FIRST NATIONAL BANK OF MISHAWAKA *vs.* STAPF.

A certificate of deposit is in legal effect a promissory note, and under the statute of Indiana is transferable by indorsement.

The indorsee of such an instrument, having used due diligence to collect, has a right of action against his immediate or any remote indorser.

A bank may pay upon an oral order or direction, but under the usages of the banking business, it is not required to do so.

MONTGOMERY, *J.*: Appellee held a certificate of deposit in the following terms:

"Certificate of Deposit. Indiana National Bank, No. 8408. Elkhart, Indiana, Nov. 7, 1903. George Stapf has deposited in this bank $600.00 Six Hundred no-100 Dollars, payable to the order of self in current funds on return of this certificate properly endorsed. This deposit is not subject to check. W. C. Collins, Cashier."

On November 13, 1903, appellee indorsed this certificate and delivered the same to appellant, and the face value thereof was placed to his credit on his deposit account with appellant bank.

The third paragraph of answer is founded upon this certificate and its indorsement, and, after alleging the transfer of the certificate as the consideration for one of the items of account sued on, avers that appellant immediately forwarded the same, with proper indorsements, for collection; that payment was not made; that suit was instituted thereon, and a judgment for $604 and costs recovered against the Indiana National Bank of Elkhart, at the earliest possible date; that execution was issued at once, and returned "No property found." It further charged that said bank had no property subject to execution at any time after November 13, 1903, and sought to have the sum of money named in said certificate, with interest, set off against any amount found due on appellee's complaint, and to have judgment over against appellee for the excess.

The certificate of deposit above set out is in legal effect a promissory note, and transferable by indorsement under the statute of this State. (Section 7515, Burns' Ann. St. 1901; Gregg vs. Union, etc., Bank, 87 Ind. 238; National State Bank vs. Ringel, 51 Ind. 393; Drake vs. Markle, 21 Ind. 433; Long vs. Straus, 107 Ind. 104, 6 N. E. 123, 7 N. E. 763; 2 Daniel, Negotiable Instruments, §1698a.)

The indorsee of such an instrument, having used due diligence to collect, has a right of action against his immediate or any remote indorser. (Section 7518, Burns' Ann. St. 1901; 2 Daniel, Negotiable Instruments, § 1702; Miller vs. Deaver, 30 Ind. 371; Gwin vs. Moore, 79 Ind. 103; Spears vs. Clark, 3 Ind. 296.)

The answer further avers that the Indiana National Bank of Elkhart had no property subject to execution at any time after the transfer of this certificate. Under these circumstances, appellee would be liable as indorser without regard to the question of diligence, as no action on the part of appellant, however diligent, would have been availing. (Herald vs. Scott, 2 Ind. 55; Reynolds vs. Jones, 19 Ind. 123; Roberts vs. Masters, 40 Ind. 461; Huston vs. Bank, 85 Ind. 21; Williams vs. Osbon, 75 Ind. 280; Dick vs. Hitt, 82 Ind. 92.)

The answer appears to contain all essential averments, no specific defect has been pointed out, and we accordingly hold it sufficient, and that the court erred in sustaining appellee's demurrer to the same.

Appellant's motion for a new trial charged that the decision of the court was not sustained by sufficient evidence, was contrary to law, and that the amount of recovery was too large. It is particularly urged that there was a failure to prove a proper demand preliminary to bringing suit. Appellee alleged a demand in general terms, and the evidence shows an oral request for payment. A proper demand of a bank for money on deposit is made when the depositor during business hours presents or causes to be presented at the bank his check, order, draft, receipt, or other writing for the payment of money in the amount desired, which writing, when honored and in the hands of the bank, will be evidence of the authority and direction of the depositor to pay, as well as evidence of the payment. (McEwen vs. Davis, 39 Ind. 109; Morse on Banks and Banking, § 313.)

A banker may pay upon an oral order or direction, but under the usages of the banking business he is not required to do so. No proper demand was shown by the evidence.

The judgment is reversed with directions to overrule the demurrer to the third paragraph of answer, and for further proceedings in accordance with this opinion.

ASSESSMENT OF BANK STOCK—SUCH STOCK PERSONAL PROPERTY—ASSESSMENT UPON "CAPITAL STOCK."

Supreme Court of Appeals of Virginia, June 15, 1905.

WEST *vs.* CITY OF NEWPORT NEWS.

A city ordinance laying an assessment on all personal property of every description, "including the capital stock of banks," is not in violation of the statute of Virginia that "No tax shall be assessed upon the capital of any bank."

Under the statute of Virginia bank stock is personal property.

This was a motion for the correction of an alleged erroneous assessment of taxes, whereby the plaintiff was charged with $148.50 city taxes for the fiscal year 1903-04 on 400 shares of the stock of the Citizens' & Marine Bank of Newport News, of the assessed value, for the purpose of State taxation, of $16,500. The lower court held that the taxes complained of were legally assessed and levied, and dismissed the application for relief therefrom.

The plaintiff claimed to be aggrieved by this action of the lower court: Because (1) the ordinance of the city of Newport News approved June 17, 1903, imposing taxes on personal property, attempted to impose a tax on the capital stock of the banks of said city, instead of laying such tax upon the shares of stock of the individual stockholders; and that such an ordinance is invalid, and, being invalid, no legal tax was thereby assessed or levied either upon the shares of a stockholder or the capital stock of the bank. (2) That, even if a legal tax was imposed by the ordinance, the city authorities did not follow the mode of assessment and manner of collections prescribed by statute for the collection of State taxes upon shares of stock.

The ordinance in question, which was approved June 17, 1903, was as follows:

"Be it ordained by the common council of the city of Newport News, that for the fiscal year beginning on the first day of February, 1903, the taxes on lands and lots and the improvements thereon, persons, incomes, and other property for the payment of the interest on the city debt and to meet the appropriations for the fiscal year of 1903 and 1904, beginning July 1st, 1903, shall be as follows: Upon all lands, lots and improvements thereon, wharves and upon all personal property of every description, including the capital stock of banks located in this city, except such real and personal property as is exempted from taxation by the laws of the State of Virginia, or any ordinance of this city, ninety cents on every hundred dollars of the assessed value thereof."

HARRISON, *J.* (omitting part of the opinion): That the city has the authority to levy a tax upon the State assessment of this bank stock cannot be questioned, as section 1040a of Va. Code 1904, p. 502, gives it such power in express terms, the language of that section being in part as follows:

"(1) Hereafter each county or city in which any bank, either National or State, is so located may, subject to the conditions mentioned below, tax all the shares of stock issued by any such bank so located within its limits at the same rate as is assessed upon other moneyed capital in the hands of individuals residing in such county or city. (2) That in so taxing said shares the said county or city authorities, respectively, shall follow the mode of assessment and manner of collection prescribed by statute for the collection of State taxes upon said shares."

The ordinance in question imposes a tax of ninety cents on every $100 of the assessed value of all personal property of every description, "including the capital stock of banks located in this city." The contention is that by the use of the words, "including the capital stock of banks located in this city," the council attempted to impose a tax on the capital of the banks, instead of laying such tax upon the shares of stock of the individual stockholders.

The statute does not use the term "capital stock" in providing for the exemption mentioned, but employs the word "capital" alone. The language is, "No tax shall be assessed upon the capital of any bank," etc. (Acts 1902-04, § 17, p. 163.)

"Capital" and "capital stock," while sometimes used interchangeably, are not one and the same thing. "Capital" includes the entire assets of the bank, whether represented by the money paid in for the issuance of stock, surplus, undivided profits, or other property of the bank, and may vary from time to time according to its profits or losses; while "capital stock" is fixed and definite, and represents only the total amount derived from the issuance of the shares of stock.

In the case of Union Bank vs. Richmond, 94 Va. 316, it is said that: "The property or interest of a stockholder in an incorporated bank, commonly called a 'share,' the shares in the aggregate totality being sometimes called the 'capital stock' of the bank, is a different thing from the moneyed capital of the bank held and owned by the corporation. This capital may consist of cash, or of bills and notes discounted, or of real estate combined with these. * * * In whatever it may be invested, it is owned by the bank as a corporate entity, and not by the stockholders. A tax upon this capital is a tax upon the bank."

This is a different thing from taxing the shareholders or stockholders upon the value of their stock. All legislative acts are presumed to be lawful, and are to be construed as such, unless the contrary plainly appears. Since, then, the capital of banks is exempt from taxation, the term "capital stock" used in the ordinance clearly had reference to the totality of shares of the individual stockholders which the city had the right to tax. The purpose of the ordinance is made manifest by the fact that in its execution no attempt has ever been made to tax the capital of the several banks of the city, but the assessment and levy has been upon the individual stockholders.

If, however, it were conceded that the use of the words "capital stock" showed an intention to tax the capital of banks, the result would be the same, for we concur in the view taken by the lower court that the words "all personal property of every description" are broad enough to levy a tax against all kinds of personal property, whether tangible or intangible. That bank stock is personal property would seem to be settled by section 1173a, subsec. 7, Va. Code 1904, p. 608, wherein it is declared to be personal property; and by section 5, subsec. 10, Va. Code 1904, p. 7, which defines personal estate to include chattels real, and such other estate as, upon the death of the owner intestate, would devolve upon his personal representative.

This court has held that bank stock is property, to be assessed like any other property. (Burrowes vs. Smith, Treas., 95 Va. 694, 29 S. E. 674; Union Bank vs. Richmond, supra.) As the words, "all personal property of every description," used in the ordinance, are general terms, they include all kinds of personal property, whether tangible or intangible. Shares of bank stock being personal property, and therefore embraced by the words "all personal property," the added words, "including bank stock," gave no further meaning or force to the ordinance than it had without them. Where words of a general description are used, they cover everything of that kind not expressly or by necessary implication excepted.

INSOLVENT BANK—LIABILITY OF STOCKHOLDERS—ESTOPPEL.

Supreme Court of Minnesota, June 16, 1905.

HUNT *VS.* HAUSER MALTING CO.

1. The decision in Hunt, Receiver, vs. Hauser Malting Co., 96 N. W. 85, 90 Minn. 282, holding, where the latter corporation had, without authority, purchased stock and received dividends thereon for a number of years in the Commercial Bank of St. Paul, it was estopped from denying its constitutional liability, authorized under chapter 272, p. 315, Laws 1899, adhered to and followed.
2. Held, upon the evidence in this case tending to show that when the Commercial Bank was reorganized, its name afterwards changed, and the surrender of a specified number of shares of stock by each holder, as well as the retention and return or repurchase of stock by defendant to aid in restoring its impaired capital, that the malting company, by participating in the reorganization scheme, was further estopped from denying its stockholder's liability.

Held, that whether or not proof of the manner in which the defendant corporation assented to its agreement to reorganize and change of name was appropriately made was immaterial, and without prejudice to the defendant's rights in this case.

(Syllabus by the Court.)

Action to recover upon the constitutional liability of defendant as the holder of fifty shares of the stock of the Allemania (formerly Commercial) Bank of St. Paul. The cause was tried to the court, who directed a verdict in favor of plaintiff receiver, provided the jury should find a certain assignment was fraudulent. A verdict for plaintiff was returned. There was a motion for a new trial, which was overruled.

The points decided are stated in the official syllabus given above.

LIABILITY OF STOCKHOLDERS—STATUTE OF NORTH CAROLINA.

Supreme Court of North Carolina, May 17, 1904.

SMATHERS, *et al. vs.* WESTERN CAROLINA BANK, *et al.*

The statute of North Carolina (Pub. Laws 1897, ch. 298) imposing an additional liability upon the stockholders of banks, does not apply to debts of the bank created before the passage of the statute.

This action, in the nature of a bill in equity, was brought by Geo. H. Smathers, Receiver of the Western Carolina Bank, in which a number of creditors, in behalf of themselves and all other creditors of said bank, joined, against the bank and certain stockholders thereof, for the purpose of enforcing the statutory liability imposed upon the stockholders for the indebtedness of the bank by chapter 298, p. 473, Pub. Laws 1897.

CONNOR, *J.* (omitting part of the opinion): The seventh ground of demurrer presents the question, for the first time in this court, whether, under the power reserved by article eight, section one, of the constitution, to amend or repeal charters, the stockholder can be made individually liable for the debts of a corporation by an amendment to the charter, or a general statute passed subsequent to the charter and subscription to the stock. This is a question of very great importance to the holders of stock in banking and other business corporations in this State.

The facts stated in the complaint in respect to the status of the defendant stockholders and date of the contraction of the debts are so meager that we prefer to decide the question only to the extent clearly presented. While the Legislature has not seen fit to attach such personal liability to stockholders in other than banking corporations, the power conferred by the constitution is not confined to them. It is well settled that statutes attaching such liability are in derogation of the common law, and should be strictly construed; (10 Cyc. 665, citing Gray vs. Coffin, 9 Cush. 192; Brunswick Ter. Co. vs. Bank, 192 U. S. 386).

We hold that the statute should not be so construed as to fix such liability upon stockholders for debts or contract, contracted or made prior to the amendment to the charter or the statute. The subscription of stockholders constitutes the contract, and the extent of the liability as to debts already incurred is fixed by the terms of the charter as they then exist. Any change in the charter in this respect must be construed to operate prospectively only. It is well settled that such liability as the stockholder assumes is contractual. (Whitman vs. Oxford Bank, 176 U. S. 559.) Thus construed, we find no constitutional objection to the act of 1897.

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B.A., LL.B., Barrister, Toronto.]

CHECK—FORGED INDORSEMENT—PAYEE A "FICTITIOUS OR NON-EXISTING PERSON"—BELIEF OR INTENTION OF DRAWER—BILLS OF EXCHANGE ACT, 1890, *SECTION* 7, *SUB-SECTION* 3.

VINDEN *vs.* HUGHES (1905, 1 King's Bench, page 795).

STATEMENT OF FACTS: This was an action to recover the sum of £487, the value of twenty-seven checks drawn by the plaintiffs and cashed by the defendant in the circumstances hereinafter stated, which raise the question whether the payees were "fictitious" within the meaning of Section 7, Sub-Section 3, of the Bills of Exchange Act, 1882, which provides: "Where the payee is a fictitious or non-existing person, the bill may be treated as payable to bearer."

The facts were as follows: The plaintiffs, Messrs. Vinden & Rogers, were salesmen in Covent Garden Market. The defendant was a draper in the Brixton Road. From the year 1896 to the year 1903 the plaintiffs had in their employment a cashier and confidential clerk named Rowland Cross. Part of his regular duties was to fill up checks payable to the order of customers of the plaintiffs, who were growers for whom fruit and vegetables had been sold, with the names of the customers and the amounts payable to them respectively; these checks were then submitted to the plaintiff, Vinden, the partner who attended to this particular part of the business, who signed them, and they were sent off by post to the customers in the usual way. At times a slightly different practice was adopted, namely, when it was probable that the plaintiff Vinden would not be at the office on the day when the checks had to be sent out, he used to sign a few checks in blank, leaving the names of the customers and the amounts to be filled up by Rowland Cross afterwards, as required.

During the years 1901, 1902, and 1903 Rowland Cross drew twenty-seven checks, amounting in all to £487, obtained the signature of the plaintiff Vinden thereto, and then, instead of posting them to the various customers, took them away and appropriated them, and, having forged the indorsements, obtained cash for them from the defendant, who was a neighbor of his, and at whose shop Rowland Cross and his wife were in the habit of dealing. The defendant passed these checks through his own banking account, and had the proceeds placed to his credit. Some time in 1903 the plaintiffs had occasion to dismiss Cross, his frauds were discovered, and he was prosecuted and convicted. No imputation was made against the defendant, who had also been deceived by Cross, whom he had at the time every reason to believe to be a respectable person, and a customer whom he had been willing to oblige by changing checks for him, and the question was argued as one of law,—namely, which of these two innocent persons was to suffer through the fraud and forgery of Cross.

The actual checks had been destroyed in the usual course of the plaintiff's business, so that it was not possible to prove at the trial the exact date on which they were signed, and the dates taken were those on which they were debited against the plaintiffs by the bank in the pass-book. With the exception of one check for £20, in favor of a customer for an amount actually due at the time that check was believed to have been drawn, and in respect of which £20 had been paid into court by the defendant, all the checks were treated in the argument as having been filled up for sums not actually owing to the respective customers therein named at the time the checks were signed. It was also admitted for the purposes of this case that there was no material difference between checks filled up with the names of customers and amounts before signature, and checks signed in blank and filled up afterwards by Cross with names and amounts.

JUDGMENT (WARRINGTON, *J.*): The question I have to decide in this case is, what is the true construction of Section 7, Sub-Section 3, of the Bills of Exchange Act, 1882, applied to the facts of this particular case; that is to say, in other words, I have to decide whether in the case before me the payees of certain checks were fictitious or non-existing persons within the meaning of that third sub-section.

On these facts I have now to decide whether the defendant Hughes is liable for the moneys which he thus paid to Cross. With the exception of one check for £20, for which liability has been admitted and the money paid into court, the case I have to deal with is one where there was no money owing to the customer, or a sum less than the amount of the check, at the time it was drawn.

Is the person whose name was inserted in each of these checks by Cross a "fictitious" person within the meaning of the Bills of Exchange Act? I thought at one time that the case was covered by the second branch of the judgments in Bank of England vs. Vagliano Brothers. I will come back to that presently, merely saying in passing that on further consideration I do not think those judgments do cover this case. Independently of authority, what am I to say is meant by "fictitious"? It seems to me this at all events must be true. It cannot be fictitious in the abstract. You must look at the circumstances of the particular case, and say whether the name of the person inserted in the bill is the name of a fictitious person, having regard to all those circumstances.

In this case let us consider what was the position of Mr. Vinden when he signed these checks. It was not a fiction to him then. It was intended to be, and was to him at that moment, a perfectly real transaction. He believed that he owed the sum of money represented by the check to the person whose name appeared upon it, and he signed the check in that belief. It was only when he discovered that he had been imposed upon by his clerk that there was, I will not say a fiction, but that there was anything that was not real and in accordance with his intention. I think I am entitled to say that the fraud perpetrated upon him has really nothing to do with the construction of the act of Parliament, and that one has to look at (and the only thing one has to look at for the purpose of construing that act) is the state of things at the time the check was drawn. At the time the check was drawn he intended to pay (I will take the first one on the list) "T. H. Graves" the sum of £29. T. H. Graves, by the way, is not a non-existent person. I should have said on that that T. H. Graves is not a "fictitious" person.

Having discussed the case of Clutton vs. Attenborough & Sons the judge concluded that no assistance in this case could be obtained from that judgment and continued:

Now, does Bank of England vs. Vagliano Brothers carry it any further, or rather, is that case any authority on the particular question which I have to decide? In Bank of England vs. Vagliano Brothers, the facts were very special and very peculiar; the document with which the House of Lords had to deal was a document purporting to be drawn by a drawer, really accepted by an acceptor, and in favor of a real payee—that is to say, not a non-existing payee. I say advisedly purporting to be drawn by a drawer, because it was not drawn at all, the name of the drawer being forged. The two learned Lords whose judgments have been most relied upon in this case were Lord Halsbury and Lord Herschell. I think it is enough for me to refer to what Lord Herschell says on the question raised in the present case as to the meaning of the word "fictitious." One must bear this in mind—that in the case with which he had to deal, there being no drawer in fact, the use of a name as payee was a mere fiction, although the payee actually existed. I think all the expressions which have been referred to in his judgment in support of the defendant's case here are explained by that fact, and I think he is not dealing with the case of the drawer of the document intending to issue the document, and intending to issue it with the name of the particular payee upon it, that payee not being non-existent. On page 152 he says this, and this is a passage which was relied upon as summing up what he means: "Do the words, 'where the payee is a fictitious person,' apply only where the payee named never had a real existence? I take it to be clear that by the word 'payee' must be understood the payee named on the face of the bill; for of course by the hypothesis there is no intention that payment should be made to any such person. Where, then, the payee named is so named by way of pretence only, without the intention that he shall be the person to receive payment, is it doing violence to language to say that the payee is a fictitious person? I think not. I do not think that the word 'fictitious' is exclusively used to qualify that which has no real existence. When we speak of a fictitious entry in a book of accounts, we do not mean that the entry has no real existence, but only that it purports to be that which is not—that it is an entry made for the purpose of pretending that the transaction took place which is represented by it." Then again, later on, he says: "It seems to me, then, that where the name inserted as that of the payee is so inserted by way of pretence only, it may, without impropriety, be said that the payee is feigned or pretended, or, in other words, a fictitious person."

Now, those passages which I have read, which were the passages mainly relied upon by the defendant, would be satisfied entirely by the case in which the drawer drawing the check puts into it the name of the person who exists, but whose name is inserted by mere pretence. In the present case let us test it. Take those words of Lord Herschell. Did Mr. Vinden draw this check in favor of T. H. Graves and the others as a mere pretence? It is impossible to come to that conclusion on the facts of this case. It was not a mere pretence at the time he drew it. He had every reason to believe that those checks were being drawn in the ordinary course of business for the purpose of the money being paid to the persons whose names appeared on the face of those checks. That seems to me really to answer the defendant's case. I confess that I was much impressed by those passages in Lord Herschell's judgment and in Lord Halsbury's judgment; but when you come to see what it is they are directing their minds to, I think one appreciates that they are not really expressions which govern, or were intended in any way whatever to govern, such a case as that which I have now before me.

I come to the conclusion, therefore, that in this case the names of the payees were not fictitious, or rather, to use the expression in the act, which curiously enough says nothing about names, I come to the conclusion that the payees in these cases are not fictitious or non-existing persons; that the bills, therefore, cannot be treated as payable to bearer; that the forged indorsement, therefore, did not entitle the defendant to receive payment of the amounts of the checks; and that accordingly he is liable to the plaintiffs for the loss that has been sustained.

In the view I take of the law it is unnecessary to say whether or not the defendant is a holder in due course; but, as I have heard the evidence on that point, I think it is desirable that I should express my view upon it, which is, that there was nothing here which I can see, so to put the defendant upon inquiry as to render his payment to Cross anything but bona-fide. If that is so, then he would be a holder in due course; but as I say, it is unnecessary for me, in the view I take of the law, to decide that point.

The result will be that there will be judgment for the plaintiffs for the amount claimed, less £20 paid into court, and costs.

CHECK—CHECK STOLEN ABROAD—FORGED INDORSEMENT—TRANSFER FOR VALUE IN FOREIGN COUNTRY—CONFLICT OF LAWS—BILLS OF EXCHANGE ACT, SECTIONS 24 AND 72.

EMBIRICOS *vs.* ANGLO-AUSTRIAN BANK (Law Reports, 1905, 1 King's Bench, page 677).

The rule of international law, that the validity of a transfer of movable chattels must be governed by the law of the country in which the transfer takes place, applies to the transfer of bills of exchange or checks by indorsement.

STATEMENT OF FACTS: This action was brought by the firm of L. and M. Embiricos against the defendant bank to recover damages for wrongful conversion of a check under the following circumstances. On March 6, 1903, a Roumanian bank drew a check at Braila in Roumania on a London bank payable to the plaintiffs or their order. On the same day the plaintiffs specially indorsed the check to a London firm, but one of their clerks stole the check after such indorsement. On March 9 the check was presented at a bank in Vienna and then bore the indorsement of the London firm to whom the plaintiffs had specially indorsed it. The Vienna bankers having inquired by telegraph and having been advised by the Roumanian bank that they had issued such a check, cashed it and on the same day sent it to the defendants in London. The defendants then cashed it at the bank on which it was drawn.

At the trial it was shown in evidence that according to the Austrian law "the holder of a check which he has bought bona fide without gross negligence and for value is identified as the proprietor of the check and entitled to the proceeds thereof against all the world, notwithstanding that the check has been previously stolen and notwithstanding that the indorsement has been forged."

The trial judge dismissed the action on the ground that the transfer of the check in Vienna was governed by the Austrian law, according to which the Vienna bank acquired a good title to the check, which title was transferred to the defendants. An appeal was taken from this judgment on the ground that sec. 24 of the Bills of Exchange Act specifically provides that where an indorsement has been forged it is wholly inoperative, and no right to retain the bill or to give a discharge therefor or to enforce payment thereof against any party thereto can be acquired through or under that signature.

JUDGMENT (VAUGHAN WILLIAMS, ROMER and STIRLING, *Lords Justices*): The only question is one of conversion. Did the defendants convert the property of the plaintiffs? Now, if the plaintiffs when they brought this action had no title to the check in question as against the defendants, the action must clearly fail. The defendants, by the foreign firm through whom they claim, did acquire a good title to the check as against the plaintiffs, if the Austrian law applied. The only question, therefore, is whether the Austrian law did apply.

The plaintiffs contend that it did not, on the ground that bills of exchange and checks are wholly outside the general principle of private international law which gives effect to a title acquired by transfer abroad by the law of the country in which the transfer took place. I think that contention is erroneous for the reasons which were given by me in Alcock vs. Smith, and which were, I think, approved by the Court of Appeal in that case; and, on further consideration I see no reason, having regard to the authorities as they stand, to depart from the opinion which I then expressed. Certainly no subsequent case has thrown any doubt upon the decision which I then gave. Lacave vs. Credit Lyonnais certainly did not; on the contrary, it appears to me to recognize the general principle which formed the basis of my judgment in Alcock vs. Smith. Of course, it may well be that by reason of some special English enactment or law the English courts might be compelled not to recognize the application of the general principle of international law in special cases brought before them for decision; but I know of no English law or enactment which obliges the English courts, in such a case as the present, to refuse to give effect to the defendants' title.

Sec. 72 of the Bills of Exchange Act, 1882, which codifies the law relating to bills of exchange, checks, and promissory notes, certainly does not. On the contrary, that section at any rate recognizes those general principles, and in particular in sub-section 2, which says that, "Subject to the provisions of this act, the interpretation of the drawing, indorsement, acceptance, or acceptance supra protest to a bill, is determined by the law of the place where such contract is made." The proviso to that sub-section, "That where an inland bill is indorsed in a foreign country, the indorsement shall as regards the payer be interpreted according to the law of the United Kingdom," does not touch the present case.

The only other section to which I need refer is sec. 24. That is only a statement of the general English law—local, therefore, for the purpose of the present case—and has not, in my opinion, the intention or effect of controlling the operation of private internatioal law in such a case as the present.

For these reasons I think the appeal fails.

VAUGHAN WILLIAMS, *L.J.*: But it would manifestly be an unsatisfactory state of the law if the legal result is that the indorsement is effective to give the indorsee of a bill a good title as against the payee, but not effective according to English law to give that indorsee a good title against the drawer or the acceptor. And it would be convenient, as well from a legal as from a commercial point of view, that it should be established that the title by such an indorsement is good as against the original parties to a negotiable instrument, having regard to the contractual liability incurred by them thereby. At all events, it has never been decided that the liability of an acceptor in England of a bill drawn abroad or of the drawer of a check payable in England, amounts to a contract to pay on a forged indorsement valid by the foreign law, but invalid by the law of England. It may, however, be that the contract of the drawer or acceptor is to pay on any indorsement recognized by the law of England. I am disposed to think that this is the true contract. If the contract of the drawer of a check or acceptor of a bill were limited to payment on indorsements valid by the English local law, an argument might be raised that, even though the indorsement abroad was valid to legalize the possession by the indorsee claiming under the foreign indorsement, yet he would be guilty of a conversion if he used a negotiable instrument to the possession of which he was entitled for the purpose of obtaining and did obtain payment from an original party to the negotiable instrument from whom he could not have recovered by process of law. User of a chattel by a person entitled to possession in such a manner would perhaps give a right of action for money had and received.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

A reasonable charge is made for Special Replies asked for by correspondents—to be promptly sent by mail.

Editor Bankers' Magazine: St. Louis, Mo., July 17, 1905.

Sir: In due course of business, we sent a customer's draft, with shipper's order bill of lading attached, to a bank at Cairo, Illinois, for collection and returns. The draft was duly paid and the money held by the bank for ten days, and then refunded to the party who paid the draft and the bank has refused to remit, and has compelled us to enter legal action. Not receiving any returns, we finally wrote to the bank, which then frankly admitted the above facts, simply adding, that not having heard from us during the time he held the money, and the payor of the draft, saying the goods were not as bought, to return him the funds, which the Cashier did. What is your opinion in the pending case? CASHIER.

Answer.—If there was any breach of warranty upon the sale of the goods, then the purchaser, if he paid the draft without any opportunity to examine them, had the right to rescind the contract, return the goods, and recover back the purchase price from the seller. But the collecting bank had no right to decide this question; and when demand was made upon it to refund the money, it should have referred the matter to the transmitting bank, and asked for instructions. If it was subjected to conflicting claims, it could have protected itself by requiring indemnity, or by interpleading the parties; but its return of the money was obviously improper.

Editor Bankers' Magazine: New York, June 23, 1905.

Sir: As the clerical work in banks increases it becomes more and more difficult to provide receiving tellers for Saturdays and other extra heavy days, who are familiar with the signatures and standings of all depositors, and it delays the work enormously if every check on the receiving bank deposited must be examined both as to signature and credit before the deposit is entered upon the pass book. Is it positively settled as a matter of law that there is no recourse on a check on the bank received and entered upon a pass book of the bank? In other words, when the receiving teller receives and enters a check on his bank upon the pass book of a depositor, does that constitute final payment, or can the check be protested later, returned to the depositor or deducted from his deposit?

All other checks are received subject to collection, why not checks drawn upon the bank itself? Of course, the depositor is entitled to immediate notice of forgery, no account or shortage; but has not the bank a reasonable time in which to examine a check even after it is entered as a memorandum on the depositor's pass book?

Provided a check is drawn upon one of several branch banks and deposited in another, does the acceptance of it by the receiving teller of one bank and its entry upon the pass book constitute final payment without recourse? If so is there any distinction between a check drawn upon one branch bank (in New York city) and deposited in another or cashed over the counter of another branch bank? Of course, when a check is cashed by the bank upon which it is drawn the payment is final, but is not the fact that the bank cashing it is only a branch, as shown by the location named in the check, sufficient notice to the payee of the check that the payment is not final but subject to the same rules as a check drawn upon another bank and cashed as a matter of favor for the owner? Branch Bank.

Answer.—As to forged checks, it is settled that where payment is made and accepted without presentation and subject to future examination of the paper, the bank is not absolutely bound by the act, but the ordinary rules respecting money paid by mistake govern, and the bank may recover the money so paid, provided it uses due diligence in making the inspection as soon as it has an opportunity. (Allen vs. Fourth Nat. Bank, 59 N. Y. 12.) But this rule has never been applied in a case where the check was presented at the bank's counter, and whether it would apply where presentment is made at a branch bank, no one could say until the case shall have been decided by the courts. It is quite possible that in such a case the courts would for this purpose treat the different branches as independent banks, and very strong reasons could be urged in favor of that view. Where a check drawn on the bank itself is credited to a customer, the transaction is, in legal effect, the same as if the money had been paid over the counter to the bank, and then deposited by the customer to his own account, and the payment being regarded as complete, the bank could not cancel the credit because of any mistake But if the check was drawn on another branch, the court might treat the case as if the check was on an independent bank. To avoid any question, however, it would be well for the bank to have an agreement with its depositors that checks drawn on any branch would be credited or cashed by the other branches subject to examination.

Editor Bankers' Magazine: Oshkosh, Wis., July 19, 1905.

Sir: Please answer in your columns the following: When a certificate of deposit or savings account is issued to Mr. or Mrs. Blank, in case of the death of one of the parties, can the other draw the money? TELLER.

Answer.—An account in this form would not necessarily establish a right of survivorship, so as to entitle either of the parties to draw the money upon the death of the other; but this would depend upon the other facts of the case. If it is desired to accomplish this purpose, then it would be better to add the words "or the survivor of them." (See Bankers' Magazine. Vol. LXX., p. 201; Id., p. 343.)

AN ENDURING NATIONAL BANKRUPTCY SYSTEM THE INHERENT ALLY OF COMMERCE AND CREDIT.

[Address Delivered Before the National Association of Credit Men at Memphis, Tenn., by William A. Prendergast, of New York.]

In his Essay on "Signs of the Times" written in 1829 Carlyle says: "Were we required to characterize this age of ours by any single epithet, we should be tempted to call it, not an Heroical, Devotional, Philosophical, or Moral Age, but above all others, the Mechanical Age." The Mechanical Age—even then in its incipiency, but soon to become the great leviathan of the industrial sea—marked the incoming of that succeeding age in which we live and move, and for an adequate description of which we are justified in paraphrasing the words of Carlyle just quoted. If we were to denominate the present age, we would say that it is not "an Heroical, Devotional, Philosophical or Moral Age, but above all others, the Commercial Age."

While in its earlier applications and uses the functions of commerce were not dependent upon a well understood or elaborated theory of credit, in its modern utilities credit is an inwrought element of the commercial system. Commerce and credit are thus the great dynamic influences which animate the activities of this mighty world. The employments, the pleasures, the literature of every race are affected by the controlling impulses of the times; and as a natural conclusion, the law, designed for the regulation and protection of human rights, must necessarily partake of and adapt itself to the dominating spirit of the age.

With each succeeding day, the empire of commerce is asserting its unchallengeable sovereignty over the thought and aspirations of the human mind, and with the growth of its supremacy, there has also developed the necessity of establishing legislative safeguards for the vast interests it typifies. This condition has been lucidly explained by Madison in the tenth number of "The Federalist" as follows: "Those who hold and those who are without property, have ever formed distinct interests in society. Those who are creditors and those who are debtors fall under like discrimination; a manufacturing interest, a mercantile interest, a moneyed interest, grow up of necessity in civilized nations and divide them into different classes, actuated by different sentiments and views. The regulation of these various and interfering interests forms the principal task of modern legislation."

The characteristics which make for success or failure in the great drama of commerce or business life cannot be measured by any known rules of human action; neither can the forces or principles underlying them be reduced to a scientific exactness or identity. For these reasons the sum of successes and failures represent certain indefinable economic manifestations over which the realm of legislation must exercise its authority. As an illustration of this state, and also as leading definitely to the consideration of the primary object of this address, John Stuart Mill in his Political Economy has said: "It is true that to persons of the same amount of original means, there is more chance of making a large fortune in some employments than in others. But it would be found that in these same employments bankruptcies also are more frequent, and that the chance of greater success is balanced by a greater probability of complete failure."

Bankruptcies, insolvencies, business collapses or failures—whatever we are pleased to name them—are unquestionably an inevitable outcome of commercial engagements or enterprises, and consequently, in a constantly expanding commercial environment, as that which surrounds every phase of human activity to-day, the duty rests, not perfunctorily, but solemnly, upon those entrusted with the law-making powers of the Government, to legislate not only wisely but permanently upon these questions which concern the relations of debtor and creditor and the multifarious interests represented by them.

The proceedings of the Convention in which the Constitution was framed disclose unmistakable evidence that it was such a conception of the obligations of a government to its people, that prompted that body to include in the powers delegated to Congress the right "to establish uniform laws on the subject of bankruptcies throughout the United States." The judgment of those who have made a life study of this and kindred subjects is unanimous on the point that a system of bankruptcy laws is a concomitant of the operations and progress of commerce. Robertson has said, "The law of bankruptcy is in fact a modern creation, slowly evolved out of the criminal code in answer to the necessities of a spreading industrial life." The failure of Congress to maintain a continued national bankruptcy system has always afforded those opposed to national regulation of this important question a favorite though inadequate argument against it. In the majority report upon the bill to repeal the present act, submitted to the House of Representatives February 6, 1905, the argumentative paucity of which indicated a bankruptcy of knowledge upon the important subject under discussion, we are told that "it has never been the policy of the United States to have a permanent bankruptcy law." Those responsible for this statement evidently expect the people of the country to regard a persistent omission of the duty owed to the commerce of the nation as an evidence of exalted rectitude. As against this statement, however, it can be said that there has hardly been a period of our history when there has not been a rigorous demand for the enactment of an exemplary national bankruptcy law. The repeal of the Law of 1867 was immediately followed by a general demand for a new and a more satisfactory law, a demand that, growing in volume and intensity, had its fruition in the act of July 1, 1898. The refusal of Congress to legislate upon this subject was for years the cause of strong disapproval on the part of the great mass of the commercial interests of the country and placed us in the position, once described by a prominent member of Congress, as behind every enlightened nation of the world and on the level only of China.

When De Tocqueville (certainly one of the greatest students of governmental institutions the world has produced, and whose "Democracy in America" is recognized as a standard) paid his eventful visit to America, one of the anomalies to which he called attention in this celebrated work was the failure of Congress to enact baukruptcy legislation, a matter he said, "in which the intervention of the Union is clearly necessary." The history of bankruptcy legislation demonstrates that neither in principle nor in practice is it a new or untried method of controlling the many and important questions involved in its operation. It has developed in the range of its application, in the breadth of the principles of justice it exemplifies, in the humanitarian influence it dispenses, with the recurring evolutions that have signalized the thoughts and tendencies of the commercial world, during the past four hundred years. Where once it wrote servitude and despair for the unfortunate, to-day it affords hope and encouragement to him who, though unfortunate, has been honest in his misfortunes. Originally it contracted the number of those qualified to figure in business life by the penalties it imposed; to-day it extends the sphere of commerce by the freedom of action it affords the honest debtor, and the sustenance it gives the credit system, in the equity and universality of its provisions.

The Demand for a Permanent Bankruptcy Law.

I take issue squarely and in no spirit of compromise with those, in or out of Congress, who maintain that the present law was passed as a temporary measure in order to afford relief to those impoverished by the panic of 1893: if that was the motive of certain of those supporting the measure (which I doubt) they misunderstood the gravamen of the demand which had been urged upon Congress for many years by business men and trade organizations throughout the country. The tremendous increase in inter-State commerce, the glaring disparity and unfairness of the many State laws, the repeated injustices to which foreign creditors (those of different States) were subjected, due to the lack of harmony or uniformity in the State statutes, constituted the basis of the claim made by the people that not only should there be a national system instituted, but that it should be a permanent system. This feeling, strong at the time of the passage of the law, has since increased in vigorousness as the operations of the law in nearly all essential particulars have recommended themselves to the approval of the nation.

It has been held by some, for the sincerity of whose views we have the highest respect, that there exists throughout the country to-day a feeling of restlessness as to the merits of the law and a desire that it be either materially amended or repealed. As to the urgency of certain amendments there will be no conflict of opinion, and this feature of the situation will be treated later in this address. As to there being any unusual or numerous demand for the repeal of the law, I enter an emphatic negative. There is no country among the great family of nations where public opinion or popular sentiment among the great famli of nations where public opinion or popular sentiment manifests itself with more alacrity or unerring force than in this great land; and it is inconceivable that there should exist any radical or considerable demand for the repeal of the Bankruptcy Law without it making itself powerfully evident, not only in public expression but especially through the medium of the press. On the contrary, public expression as far as we have been able to gauge it, and the means employed have been thorough, has been almost unanimously in favor of the retention of the law. The press of the nation, without respect to section or politics, has been most outspoken in its advocacy of the law and its desire for its preservation on the statute books.

The majority report, heretofore referred to, says: "Trial and experience have demonstrated the manifold imperfections of this law, and that many cases of injustice have come and are constantly coming from its operation. To substantiate this, we refer to the many bills now pending in Congress, some of them seeking to amend the act in various particulars and others seeking its repeal." I ask, "What are the manifold imperfections and the many cases of injustice to which the report refers." If they are so palpable, so blatant, so sinful, why not give at least one of them a name? Why conceal them from the gaze of an expectant and inquiring people under a blanket of high-sounding but, in the circumstances, meaningless tautology. As to the "many bills pending in Congress, calling for either amendments or the repeal of the law," the amendments asked for in them were as harmless, considering the purposes of the law as a whole, as the most serious pronouncement of the Anti-Imperialist Society. The bills providing for the repeal of the law can be traced to the same quarters and interests, few in number, that have always been, and probably always will be, opposed to a National Bankruptcy Law. Their representatives voted against the passage of the present act; they opposed the amendment of the law in 1902 and will no doubt continue to array themselves against it, until, let us hope, they will come to realize and believe that the common interests of a whole people outweigh the selfish and purblind claims of a few small markets, or a fallacious assertion of State rights on a question in respect to which the Federal authority is clearly set forth in the Constitution.

It has also been averred that there exists on the part of the small dealers of the country, notably the retailers, a hostile attitude toward the Bankruptcy Law; if this interest has suffered through wage-earners or consumers availing themselves of the discharge feature of the law, those who sell to the consumer must understand that they have the remedy in their own hands and are in a position at any time to curtail credit. This complaint, which has arisen in one or two jurisdictions, has never assumed such proportions as to justify the claim that there is a general antipathy to the law on the part of this numerous and influential element of the body politic.

It has been stated that the larger dealers only desire the law and are those who benefit thereby; also that the larger dealers are not the best barometers of public feeling either as to the utility of the law or its acceptability as a national statute. It is futile to attempt to disassociate the interests of the large and small dealers, the wholesalers, manufacturers, jobbers and retailers. The first three classes mentioned are those who extend the great percentage of the credit of the country. Any law which protects them in their dealings with their customers, which enables them to realize the largest percentage of collections or dividends, thereby reducing losses, this character of law, is that which also enables them to sell to the retailer at a price in which the element of loss has been computed at its minimum, and what is quite as essential, a law which guards them against preferential State statutes, permits, nay, encourages, freedom of credit, of which the small dealer is the beneficiary.

The majority opinion favoring the repeal of the law also says:

"We do not believe that there is any necessity or any general public demand for the longer retention of the law. It has tended to burden the Federal courts with litigation which we believe could be just as well conducted by the courts of the States. Doubtless the people of the various States uphold honest laws and the courts of the various States administer justice as honestly, faithfully and fully as do the Federal courts. Bankruptcy law and other unnecessary Congressional legislation, creating new civil remedies and new penal offenses, are burdening the Federal courts, and the administration of justice is not bettered thereby."

Imperfections of State Laws.

There is no dispute as to "The people of the various States upholding honest laws and of the desire of the State courts to administer justice as honestly, faithfully and fully as the Federal courts." To raise this question is to attempt to befog the issue. The State courts are called upon to administer the laws of their States; they must interpret those laws as they find them. It is not with the courts we are contending, it is with the laws themselves. To pretend that the law can be executed with that celerity, that justice can be dispensed with that precision, when forty-five different statutes are working as against one general law, is to argue the impossible, and resist the irresistible. The spectacle of the gentlemen who constitute the majority referred to weeping over the State laws excites neither State pride nor sympathy. It is because these State laws were neither equitable nor honest in their treatment of the creditor, and made a slave of the debtor, that we are opposed to them and prefer a National Bankruptcy Law. We prefer and insist upon a uniform system throughout the country, in place of a system of legalized anarchy under the operations of the State laws. According to the latter, the attachment, the garnishment, the chattel mortgage, the judgment note, the deed of trust, the respite and the replevin processes, with guilty collusion and so-called diligence as their running mates, made a travesty of justice. In the name of integrity, righteousness and progress, we protest against the suggestion of a return to these conditions and utter an unqualified condemnation of it.

It is my pleasure to quote the following from an address by John G. Gray, a leading attorney of Seattle, as illustrating a few of the advantages of the national system as opposed to the State system:

Comparison of State and National Systems.

"The bankruptcy law is more efficient than a State court receivership in this, that under the Bankruptcy Law all property, wheresover situated, including that fraudulently conveyed, passes to the trustees in bankruptcy. To state the proposition more clearly, all property of the bankrupt, wheresoever situate, passes to the trustee in bankruptcy free and clear of all liens by judicial proceedings accruing within four months. The question of bona fide and want of knowledge is immaterial under the State assignment law in force in this State at the time the Bankruptcy law of 1898 took effect, and that assignment law is only suspended for such time as the Bankruptcy Law shall be in force. Under that law it was within the power of a banker, or a friendly creditor to attach the property of his debtor situate outside of the State of Washington, and, at the same time, prove his claim in the insolvency proceeding. This, of course, worked an injustice and a hardship upon the merchandise and other unsecured creditors.

Under State assignment laws a debtor in failing circumstances may prefer a creditor, regardless of the fact that the creditor knew of his debtor's financial condition, and he may prefer certain cerditors, if he acts without fraud, before making a general assignment, although such preference is made in contemplation of insolvency. This, of course, is strikingly in contrast with the provisions of the Bankruptcy Law, which provides that the transfers of property, which include payments of money, within the period of four months, while the debtor is insolvent, shall be a preference and voidable at the election of the trustee, if the creditor receiving the same had notice or knowledge that a preference was intended.

In a recent bankruptcy case here the bankruptcy scheduled approximately a collar button and a pair of cuffs to cover debts aggregating $10,000. The party elected trustee, when but two creditors were present, debated as to whether to expend five dollars to give bond; delayed for some time in giving his bond, and at last, after a lapse of six weeks, gave his bond, quietly obtained an order for the examination of the bankrupt, and on the day that the examination was to take place, procured an order for the examination of two witnesses, one the wife of the bankrupt; subpoena was served upon her after the bankrupt had left his home for the referee's office; the bankrupt's testimony was in his favor; he had nothing, he had scheduled nothing, and apparently had been honest; but the wife, coming in later, was placed upon the stand and testified to transactions which showed that she was either a donee of approximately $5,000 worth of property, or that she had been preferred to the extent of $5,000 in payment of an indebtedness not exceeding $2,000. It is needless to say that in this case the examination was effective. The testimony was clear and so diametrically opposed was the testimony of each that it would have taken a Solomon to have ascertained which was telling the truth. The property discovered in this case was real property within the State and a $3,000 promissory note in a bank in a far distant city, and this note was tied up by a simple notice in writing delivered to that bank on behalf of the trustee. It is needless to say that as the result of a suit brought within this district to compel the transfer of all the property to the trustee and to set aside the conveyance as fraudulent and a preference, a fair compromise was made, with the acquiescence of the court, so that the creditors entitled to prove their claims received a fair proportion of their indebtedness. If this proceeding had been under the State insolvent law, or an assignment for the benefit of the creditors, no such examination could have taken place, and no such results could have been obtained, and it would have been necessary, for the purpose of reaching that note, if the same could be reached under such circumstances, to have an ancillary receivership in a distant city, at a considerable expense.

All controversies regarding property in the hands of the trustee must be settled in the bankruptcy court; any person claiming property in the trustee's hands must litigate his claims before the referee. This secures prompt adjudication of the rights of the claimant and of the rights of the estate. There is no delay. However, in the State court receivership leave is generally granted to the claimant to sue the receiver and an independent action is brought, with a probable jury trial, and the settlement of the estate is delayed for a long period. By reason of this additional litigation the allowance to the receiver and counsel is enlarged. If either receiver or claimant be dissatisfied with the result of the action, then follows the expensive appeal to the supreme court and the additional delay. Strikingly in contrast with this practice is the system of review of the decision of the referee by the judge of the court in bankruptcy matters. A simple certificate of the referee and a transcript of such evidence as is material, is forwarded to the court, the matter is submitted upon oral argument or written brief, and in a short time the matter is decided by a judge whose decision is entitled to weight."

Advantages of the Present Law.

The great advantages of the present law have been summarized by an eminent authority, Referee William H. Hotchkiss, of Buffalo, as follows:

1. The prevention of preferences.
2. The administration of insolvent estates wholly in charge of the creditors interested.
3. The election of the trustee by the creditors.
4. The acquirement of increased dividends from insolvent estates.
5. The adjustment of bankruptcies through compositions with the knowledge and under the direction of the court.
6. The reduction in expenses incident to failed accounts, notably in the case of attorney's fees.
7. The examination of the bankrupt by creditors.
8. The prompt administration of estates and an avoidance of the usual vexatious delays in litigation.
9. The sale of real estate clear of liens.
10. The expeditious adjudication of bankrupts, as distinguished from the tedious and expensive processes common to State courts.
11. The settlement of the affairs of corporations in bankruptcy in the interests of creditors and stockholders.
12. The use of contempt proceedings to effect the recovery of property.
13. The institution of ancillary proceedings to reach property lying in different States.
14. The excellent influence of the law in enforcing concert of action and mutual terms of settlement without recourse to legal proceedings.
15. The punishment of fraudulent bankrupts.
16. The filing of the proof of a debt without expense or the employment

of an attorney, and thus, as a rule, the payment of dividends without the deduction of a collection fee. Save in questionable failures, there is no reason why a creditor should spend one farthing in advance or during administration in proving his debt or collecting his dividends.

I have now discussed the dependence of commerce and credit on bankruptcy legislation, the need of such legislation, the conditions and causes leading to the enactment of the present law; the iniquities and inequalities of the State statutes governing insolvencies; the sentiment of the country favorable and unfavorable to the law, certain criticisms of its opponents, and epitomized some of the claimed advantages of the law. Those who are its friends do not allege that it is not susceptible to improvement. Considering that it is the product of human agencies, we count ourselves fortunate that such excellent results have been secured. The futility of expecting that any enactment, the work of a legislative body, will ever be entirely satisfactory to every one concerned has long been conceded.

Hamilton in the eighty-fifth number of "The Federalist" brings to bear upon this point his ever luminous reasoning, when he says:

> "The result of the deliberations of all collective bodies must necessarily be a compound as well as of the errors and prejudices as of the good sense and wisdom of the individuals of whom they are composed. The compacts which are to embrace thirteen distinct States (now forty-five) in a common bond of amity and union must necessarily be a compromise of as many dissimilar interests and inclinations. How can perfection spring from such materials?"

If the advocates of the law are asked what plan they have to offer to allay such opposition as may exist in Congress or elsewhere, the only and conclusive reply will be that wherever defects as to practice or administration have developed, relief is ever at hand and the Congress can and should furnish the necessary remedy in the form of amendments to the law. To assert that because certain defects have displayed themselves the law should be repealed, is to introduce into legislation a policy of destruction against which no statute could claim immunity. It would be well in considering this subject of amendment to establish as a premise that no amendments should be urged except those that are vitally necessary and that the fewer suggested the better.

After an exhaustive discussion and criticism of the law on the part of the National Association of Referees in Bankruptcy, at its Fifth Annual Convention at Niagara Falls, May 29 and 30, 1905, these experts in bankruptcy practice and administration selected the following points as suggestive of those questions which mature consideration may lead all interested to decide embody fruitful material for amendments. They may be briefly defined as follows:

Needed Amendments of the Law.

"That the compensation of receivers shall not in any event exceed that permitted to trustees for similar services and that ten days' notice of the application therefor, specifying the amount applied for, be given to all creditors.

That the compensation of receivers shall be based on the gross proceeds realized, and not on appraised values and shall be paid when the trustee's fees are paid.

That receivers be appointed only when absolutely necessary for the preservation of the estate and after reasonable notice to the bankrupt, unless such notice is dispensed with for good cause shown and after reasonable notice to such creditors as can be reached.

That attorneys' fees shall only be allowed for legal services that are absolutely necessary and shall be allowed only upon verified and itemized accounts being filed and only after ten days' notice to creditors, specifying the amount applied for.

That where the bankrupt shall have lost money or property at gambling within four months of such bankruptcy his discharge be not granted to him until he shall, within one year of his adjudication, return such money or such property or its value at the time of such loss.

That the present third objection to a discharge [14-B(3)] be rephrased so as to include a materially false statement in writing made to any one for the purpose of being communicated to the trade.

That as an additional objection to a discharge, that the bankrupt has not accounted satisfactorily for losses and that on this objection the burden of proof be on the bankrupt.

That the burden of proof in respect to the objections for discharge enumerated in section fourteen of the law as amended be upon the bankrupt.

That debts for necessaries be also excepted from the operations of a discharge.

That claims wholly for the purchase money of exempt property or for the services of a domestic be added to the debts not affected by a discharge.

That each district court have ancillary jurisdiction to aid another district court in the administration of a bankruptcy pending in the latter.

That wages of travelling salesmen, if within the limitations of §64b, be entitled to priority.

Any corporation engaged principally in manufacturing, trading, printing, publishing, mining, or mercantile pursuits to be entitled to the benefit of the Bankruptcy Act, as a voluntary bankrupt, on petition of an officer or stockholder of such corporation duly authorized at a meeting of stockholders held for that purpose by the vote of a majority in amount of the total stock of the corporation. Also all corporations to be amenable to bankruptcy, except banks, municipal and public service corporations."

The number of the suggestions here offered might lead some, not thoroughly informed as to the actual workings of the law, to believe that radical changes were contemplated; but an examination of these proposed alterations indicates that this would be a misinterpretation. No doubt those who are opposed to the Bankruptcy Law will claim now, as they have before, that it is impossible to satisfy its advocates and that the periodical demands of the latter for certain amendments is indubitable proof of this contention. There is no disposition to avoid this feature of the subject, but rather an entire willingness to discuss it.

In bankruptcy law and practice we have to a great extent developed a new department of jurisprudence. The facility, the smoothness and the almost general satisfaction with which the law has been administered, is at once a tribute to the able judges and referees, who have executed it, and an unanswerable demonstration of the virility and solidity of the law itself. That in the application of the many doctrines and provisions of this law occasional delinquencies have manifested themselves, goes but to prove that it is the product of finite and not infinite origin.

There is neither disposition, desire, nor necessity to introduce into the law any unusual theory as to the rights of either debtors or creditors. The changes advanced would have the effect of strengthening certain present sections of the law and are born of the experience acquired in thoughtful observation of its practical operation.

An analysis of the suggestions involved yields this result: Four of the propositions relate to questions involved in receiverships, principally the remuneration to be allowed them, and attorneys. They aim at a greater economy in administration, "a consummation devoutly to be wished." No doubt it will be charged that again creditors are demanding something for themselves and themselves alone; the soft impeachment is admitted. The insolvent estate is the creditors' and the creditors' alone. Its proceeds are theirs in morals and in law. Those proceeds should be manipulated with conscientious regard to the rights of those who hold the strongest interest in them. The honest debtor desires that his estate will pay the largest possible dividend to his creditors.

Most of the remaining suggestions refer to obstacles which should be placed in the way of dishonest and undeserving debtors securing discharges. We are told that many dishonest men seek relief in bankruptcy and that this should not be permissible. The Congressional report to which frequent reference has already been made, says on this point, "that many dishonest men are taking repeated advantage of the law to avoid the payment of just debts." The panacea for this condition needs no especial elucidation. Amend the law so that the man who dissipates his estate by gambling will not be entitled to a discharge unless he make complete restitution. Debar the man who has given a materially false statement in writing *to anyone* for the purpose of being communicated to the trade, from the benefit of a discharge. Say to him who cannot or will not account satisfactorily for his losses, that he has forfeited the boon of a discharge. Wholly important in these connections, place the burden of proof as to these elements squarely on the bankrupt. If those who have criticised the law because some dishonest men have defeated its objects, will lend their assistance toward strengthening the discharge features, they will be making for higher standards in business affairs and an enhanced regard for the sanctity and majesty of the law.

For twenty years prior to the passage of the present Bankruptcy Law, the friends of this character of legislation strove zealously for the success of the cause. At that time the business interests of the nation did not present the unified force in behalf of such a law as they splendidly exemplify to-day in their adherence to it. During the period mentioned there were sharp and powerful divisions in the ranks of the commercial army as to the wisdom and expediency of such a statute. To-day, the great business institutions of the land—who were formerly most active and potent in their hostility—are either avowed friends of the law, or reconciled to the fact that it has come to stay, and has more than responded to the best hopes of its progenitors. In all this we perceive the impregnable foundation of an enduring national bankruptcy law.

Commerce knows no State lines. The laws which regulate commerce and govern the relations of its different factors should be as untrammelled in their operations as the spirit of commerce is unrestrained in its power and functions. The highest interests of commerce require that the citizenship of every State should sell and buy, one with the other, under conditions of absolute equality which a national bankruptcy law alone ensures. The chaos due to the confused and preferential State laws is an insult to commercial progress and a violation of the precepts of political economy. Commerce induces relationship and sympathy between the people of States and sections that no other known influence so effectually promotes. Verily, as Montesquieu has said, "Commerce is the cure for the most destructive prejudices." The glory of England rests not alone in the sturdiness and broad nationality of her people, but largely in the fact that her commerce and her law have gone hand in hand, thus upbuilding a system which has ever enabled her to be a leader in the stately procession of the nations. It is our part and our hope to be humble instruments in the creation and development of those theories of commercial and legal economy, the ascendancy of which will ever illumine the sacred temple of human liberty.

The Meaning of Savings.—When the total resources of the Savings banks of the State of New York are in round numbers one billion four hundred thousand dollars, we can look forward with a good deal of confidence to the conflict with the dangers of concentrated capital of which many social or Socialist prophets continuously and vociferously warn us.

There are several elements in the situation thus created which it is well worth while to keep in mind. In the first place, this vast fund is known to be managed with the utmost fidelity and good sense by a body of moderately paid trained officials, supervised carefully by unpaid trustees. That speaks well for the stock of homely virtues at the disposal of the community. Despite the alleged prevalence of corruption it is clear that our people are not "short" on plain honesty. In the second place, the fact that this great mass of capital is invested in safe securities and can be borrowed on those and those only, is a conservative and restraining influence upon business operations which is widespread and continuous. If it does not attract more attention it is because sound business is always the rule rather than the exception.

Finally—and this is the fundamental fact—this wonderful accumulation of capital is the fruit of the saving and progressive qualities of human society. It is the outcome of energy, patience, industry, self-denial, and foresight on the part of over two millions of people. These qualities are, moreover, the possession especially of those classes in which the chances for accumulation are the least in number and value and in which the hope of advance would naturally be most feeble as compared with those whose chances are abundant. Every dollar put in the Savings bank by working people expresses a certain hope for the future, and this hope, acting on such multitudes of minds, is an immense force impelling toward advance. These deposits are the expression also of confidence in the honesty and sagacity of the selected agents and in the general management of the business world in which the deposits will be employed. There is simply immeasurable value to the community in the general existence and working of these associated sentiments of hope for themselves and confidence in others shown by the Savings bank depositors.—New York Times.

Electric Lighting for Banks.—A pamphlet has been issued by the Westinghouse Companies' Publishing Department, of Pittsburg, describing the Nernst Lamp, which is evidently a great improvement over the ordinary incandescent lamp or the arc lamp. Banks desiring to improve their lighting facilities will doubtless find the pamphlet of practical interest.

THE NEW GOLD SUPPLIES.

In an article printed in a recent number of the "Engineering Magazine" appears this remarkable statement and prediction: "Ten years ago, the world's annual yield of the yellow metal was half a million dollars per diem; to-day it is a million; within the next ten years it will be two millions." Then follows a description of the mechanical and metallurgical devices which have occasioned this enormous growth, and which are now contributing to still further increase it. No attempt is made to trace the social and commercial consequences of this new and mighty development; the article is purely technical; it deals only with facts; facts already accomplished or impending; facts relating to the cyanide process and especially to the gold dredger, that phantom Ship of the Desert, which is now moving over the golden placers of Australasia, Brazil and California; without sails, paddle-wheels, or screws, and with no other water than a small pond, which it creates and carries with it in its strange career.

It is to the commercial consequences of the new supplies of gold, already enormous and expected to become still greater, that the present article will be mainly devoted; consequences concerning which the banking community can scarcely be unconcerned.

With the national mints of the world substantially open to the gratuitous and unlimited coinage of gold, the increased production of that metal is tantamount (though not in the same proportion) to an increased production of money: and as there are no legal limits in any country to the circulation of gold coins, the subject at once becomes related to everything that may be bought or sold for money, and is therefore too extensive for any comprehensive consideration. To grasp it quickly, we must limit it; limit it in space and time; limit it to the United States, to the near future, to the first, the primordial consequences which are likely to follow, which indeed are already manifesting themselves in the train of, the increasing production of gold.

The Greeks did not invent fables for the mere pleasure of romancing. Behind every one of them is a hidden truth, whether of fact or deduction, which they desired to convey or preserve. The shower of gold by which Jupiter overcame Danæ and gave the heroic Perseus to an expectant world, was evidently intended to represent the activity and prosperity which follows an increase of money. It was a myth of the most ancient Greek period; it sprang from the gold mines of Egypt, which the Phœnicians opened in the fifteenth, the Egyptians exhausted by the twelfth century before the Christian æra, and Mehemet Ali, within the memory of men now living, vainly tried to render profitable. Such showers fell again when the mines of Laurium poured their copious treasures upon the Athenian world; when Alexander returned laden with the plunder of the Orient; when the Roman Cæsars robbed both man and nature of their metallic hoards in Europe and Asia Minor; when the Spaniards despoiled America and the English despoiled the Spaniards; and when the placers of Brazil, California and Australasia threw, each of them, in the course of a few years, a thousand millions into the channels of trade. Like the flowers which suddenly carpet the desert after a fall of rain: activity, production and prosperity sprang up to mark all of these periods as halcyon ages. An increase of money, provided it is sound money—and what can be sounder than gold coin—is a certain harbinger of increased commerce and exchanges, rising prices, augmenting production, and that moderate redistribution of wealth, opportunities and honors, which alone can offer an adequate reward to the genius of man.

If from these general considerations we descend to particulars, if we restrict a survey of the subject to our own country and the near future, we perceive every indication of a prosperous term; and none of misfortune. The crops are full and abundant; the manufacturers are overwhelmed with orders; the merchants are transacting an ever-increasing trade; the railways are overburdened with passengers and freights; the artisans and laborers are receiving full employment and the highest rewards ever paid to them; prices in every direction indicate a tendency to rise; and although the banks and treasuries are already bursting with gold, the United States, Australasia and South Africa, are each producing a hundred million dollars a year more, to say nothing of other countries, or of the new Gold Ships, which we are assured will soon make themselves felt in trade, wherever commodities are bought and sold, and gold coins pass for money.

Consulting the future in the mirror of the past, we find that in all general rises of prices concerning which we possess any definite information, the rise was not simultaneous as to the various commodities and services affected; and that there was a certain order, or *precession*, in the movement. When the natural law was sought which governed this precession, it was found to be marketability: for example, during every previous general rise of prices, stocks had risen before merchandise, and merchandise before land; because stocks were more marketable than either of the other forms of property; and land, the least. A general rise of prices—and it is to be remembered that a general rise of prices can only be due to an increase of money—is like the fairy's wand, which vivifies all that it touches. It is from noting with precision the exact order and interval of time when the wand descends that the observant merchant, banker or investor reaps his most profitable returns. No spear of Ithuriel ever exposed deceit quicker than an influx of gold will raise an undervalued commodity. Gold is ever searching for commodities, as much as commodities are searching for gold.

It was asserted by David Hume and admitted by Lord Overstone and John Stuart Mill, that whilst the volume of money might be increased or diminished instantly, the resulting movement of prices would occur only after an interval of time.* Mr. Mill stated vaguely that this interval of time was only that which was sufficient "for the increased supply of money to reach all markets, or, according to the conventional metaphor, to permeate all the channels of circulation." The distinguished economist and logician made no effort to determine by induction, the actual time taken to raise prices, by a given sum of money, within a given area; but it *was* determined, and that, too, by an anonymous economist, an American, in 1864. He found, from an examination of the course of prices during a period of paper inflation in the United States, that it required a period of several years for all prices to conform to a doubling of the currency. When this problem is extended to the entire commercial world, as it would have to be in the case of a gold currency, the measure of time would undergo important modifications. It will not be necessary to go into this, because there will probably be no doubling of the world's gold currency. But there will doubtless be a great increase of it; and, if so, a rise of prices following behind it in point of time.

In California, Australasia, South America, and other placer-mining countries, wages rose before commodities, because labor was most in demand and most marketable. In other countries, wages rose after commodities; yet the laboring classes were on the whole better off during rises of prices in the last-named countries, because the laborers were all employed; gold was seeking them.

It has also been observed that no matter how carefully the various objects of exchange, as stocks, bonds, staples, imperishable commodities, perishable goods, land, labor, professional services, etc., are divided and classified, the interval of time between the rise of one class and another was not uniform; in other words, supposing ten years to be the time required for the entire doubling of prices, and the classes and services to be ten in number, it would not follow that each successive year would add one more to the classes with doubled prices. After once commencing to feel the effect of the increased sum of money, some classes doubled in price quicker than others. Moreover, it was observed that it required much more than a doubling of the currency, to double prices.

---

*Hume's Essay; Lord Overstone's "Thoughts on the Separation of the Departments of the Bank of England," 1840; Mill's "Political Economy," iii, 13, 4. Tooke, in his "History of Prices," vi, 195, says something of the same kind.

In further reference to a rise of prices, it is to be observed that the order of the rise in the same country would probably greatly differ at one period, as compared with another. This is because the marketability would differ. Forty years ago there was no large and quick market for several staples for which there is now as good a market as there is for stocks. At that time, 100 shares of railway stock could be sold much more readily than 200 bales of cotton or 1,000 bushels of wheat. At the present time one is as marketable, as "liquid," as the other. The influence of the new gold supplies should therefore be felt as quickly in the markets for staples as in those for stocks.

There are yet other considerations to be borne in mind. Our country has prospered so exceedingly and our population increased so rapidly, since the computations of 1864 were completed, that a very important modification must be made in respect to the commercial position of land. Not only are the most productive lands all taken up, even the least productive have been invaded. The high latitudes of the Northwest are occupied, the plains between the Mississippi and the Rockies are now covered with thriving farms, even the desert has been encroached upon, and some of the Indian reservations obliterated. The South, blighted so long by the slave system, has sprung into a new and healthy life; slowly, painfully, but permanently. In a word, the entire land is occupied. At the same time, we are increasing our native population by two millions a year, and adding another million from immigration. This means practically that nearly a million more farms are now demanded every year or two for the increasing requirements of subsistence. There is a limit to the land, but no limit to the increase of population. These opposing circumstances must meet somewhere and at some time; and wherever and whenever they meet there must inevitably ensue a rise in the value of land, independent of any consideration arising from the swelling volume of money. In other words, land, which in the classifications of 1864 stood in the last rank of commodities that obeyed the impulse of an increased currency and joined in the rising precession of prices, must, in the classifications of the future, take a higher rank. It must rise sooner and move quicker than it did forty years ago; and this is a consideration which should have weight not only in the purchase of land, but also in the negotiation of those varied securities which have land for their basis. A farm mortgage which in 1864, or even in 1870, might not have been deemed a reliable kind of security for a loan of bank deposits, would now probably be considered with much greater confidence; and land, which at that period could not find a purchaser without great loss of time or sacrifice of interest, is now in so much greater demand, that it will readily find a market and even furnish a profit.

Another important influence of the probable rise of prices relates to invention and the trusts. During the past ten or fifteen years the general tendency of commercial development has been toward the amalgamation and concentration of industries—in a word, the formation of trusts. Individual merchants and manufacturers have deemed it advantageous and profitable to convert their enterprises into incorporated companies, while these companies have amalgamated to form trusts. The many advantages attending this development have not, and cannot, eradicate its disadvantages. The advantages are chiefly, economy of management; cheapening of cost; standardising of product; and rapidity of production. The chief disadvantages are proctorage of management; loss of the credit trade; and the discouragement of invention. It is an old saying that "When you want a thing well done, do it yourself," or, as Sancho Panza puts it: "*Lo que quiere, andar; lo que no quiere, mandar.*" No trust, no corporation, with its long line of proctors, commencing with an impertinent office-boy and ending with a disdainful president, can successfully compete in the long run with a private merchant or manufacturer. The customer prefers to deal with some body, rather than with a thing; with a person, who is guided by tact and swayed by propriety, rather than with an institution, which is governed by neither. No corporation can offer credit with the same degree of safety and advantage that a private merchant or manufacturer can. To-day, the entire trade of South America, Africa, Asia Minor, Russia. China, and several other countries, is lost to us, chiefly because our trade is in the hands of corporations, whose executive officers dare not grant the credits which the industrial position of those countries render necessary; credits which are perfectly safe and which the foreigner can readily obtain in England, from private merchants and manufacturers. We are producing agricultural implements, tools, cutlery, arms, wire, nails, pipes, rails, typewriters, sewing machines, carriages, automobiles, and many other forms of hardware and light machinery far in excess of our own requirements, and urgently needed in those countries; but we cannot sell them, because we cannot give credit; and we cannot give credit, because our merchants and manufacturers, with their human heads and hearts, are gone; and in their places stand a rigid row of immaculate companies, which have neither heads nor hearts, but only rules, regulations, shares and dividends.

With regard to invention, the corporations have thus far managed to absorb it; because invention has thus far devoted itself to improvement in existing devices and forms; and these were already in the hands of the corporations. The result has been to discourage further invention in the old lines, and attract it to new ones. Every enterprising inventor is now experimenting with Hertzian waves, radium, flying machines, metallurgical processes, and other forces and devices not under the control of companies. Tesla declares that he will soon be able to draw in South Africa an instantaneous air-line draft on London; Maxim announces the command of four out of the five movements demanded of an air-ship; Ludlow promises to navigate his aeroplane to-morrow, or next week, or next month. As for metallurgy, let the gold dredgers make reply. Small companies, with $50,000 to $100,000 capital, are earning dividends of 100 to 300 per cent. per annum; the quartz miners are dropping their tools, and the long-abandoned placers are coming into the market again upon the basis of $100 to $1,000 an acre. Does the ingenuity of man, engrossed in stacking the cards of law and finance, expect to outstrip the ingenuity of man exercised in harnessing the mighty forces of nature? The thought is absurd.

If those lessons of the past which Sir John Sinclair so graphically describes in his "History of the British Revenue" have any force to-day; if the trusts and monopolies of the Elizabethan age had anything in common with their cogeners of the present time, then our trust system has had its day; and that day will ere long fade into twilight, and end in darkness and oblivion; their constituent companies restored to their original independence, and these again struggling to overtake the individual merchant and manufacturer.

Finally, the rise of prices will be more rapid now than at any previous time, not only because the telegraph has effected a quicker circulation of money, but also because the railway has effected a quicker movement of goods. In examining the details of that tremendous rise of prices—about five times—which occurred during the Elizabethan age, Mr. Cliffe Leslie, an able English economist, found that this rise was almost entirely confined to the maritime countries, like Spain, France, Holland and England, so that long after these countries had felt the spirited effects of the new metal from America, the inland States of Europe remained wholly untouched and inert. They had no railroads.

Perhaps the most important consequence to the banking world of the new supplies of gold will be their influence upon the rate of interest for money and the bearing which this will have upon the value of stocks, bonds, mortgages, Savings-banks and life insurance investments, and a thousand other forms of income and security. But this is a subject too vast for mere incidental mention. It demands a field for itself. To deal comprehensively with the subject of money, and especially in relation to the rate of interest, is like sitting down to a grand organ with 1,200 stops. The performer upon such a huge and complicated piece of mechanism must not only be thoroughly acquainted with its varied powers and their modulations, he must have space in which to give effect to his play. Otherwise, instead of a harmonious concert of soul-commanding sounds, he will produce a deafening burst of discords, a hideous tumult of suppressed shrieks and explosions. The future rate of interest is the 1,200 stops to the grand organ of Money: the incidental mention is the confined space in which such an instrument or such a subject cannot be properly treated. However, this much may be advanced without risk: the hitherto long-standing rates are likely to be deeply affected by the new supplies of gold; but whether in the direction of a further fall, or an opposite tendency, will require grave consideration to determine with confidence.

If from the commercial consequences of the new supplies, we turn to the social ones, these will of course depend, like the others, upon the quantity of such supplies, the proportion consumed in the arts, and the rapidity with which the balance is thrown into the mints. We can only peer into the future through the medium of the past: and this promises us that the new supplies of gold will lead to a brilliant period of social advancement and progress. In describing the Elizabethan age, or the Second or Northern Renaissance, in a work now long since out of print, the present writer said:

"It was an æra of great designs and enterprises. That which the Arabians had offered to mankind in the ninth, and the Venetians in the twelfth century—namely, OPPORTUNITY—was now offered by all the nations of Northern Europe. Land in the colonies was placed within reach of a peasantry who had never before seen it freed from the taint and burden of feudal vassalage; commercial companies were formed to establish factories and promote trade and mining in America, the East Indies, and the distant islands of the sea; canals, warehouses and the improvement of rivers and harbors were energetically carried on in France, Holland and England; and even the idea of cutting a ship canal through the Isthmus of Panama was seriously entertained. Philip II. of Spain had a route across the Isthmus carefully surveyed by some Flemish engineers, but afterwards relinquished the project. Peter Heylyn, an English writer, in a geographical treatise published in Oxford in the early part of the seventeenth century, observes that 'many have motioned to the Council of Spain the cutting of a navigable channel through this small Isthmus, so to shorten our common voyages to the China and the Moluccoes. But the King of Spain has not hitherto attempted it, partly because if he should employ the Americans (Indians) in the work, he should lose those few of them which his people have suffered to live; partly because the slaves which they yearly buy out of Africa do but suffice for the mines and sugar houses; but principally lest the passage by the Cape of Good Hope being left, those seas might become a receptacle of pirates.'

"This was the age of Sir Thomas More's 'Utopia,' 1516; of Bodin's 'Republic,' 1577; of Raleigh's Roanoke Colony, 1585; of Hall's 'Crapulia,' 1600; of Campanelli's 'City of the Sun,' 1625; of Bacon's 'New Atlantis,' 1625; of Harrington's 'Republic of Oceana,' 1657; of Vairasse's 'Sevarambi'; and of Locke's experimental government in Carolina. Not only did poets and philosophers dream, and statesmen plan, reforms of government, the commercial classes demanded them, and the people struck for them. An insurrection occurred in Castile 1520, and a popular Junta was established 1522; a popular insurrection, against devoting agricultural lands to pasture, took place in England under Ket and Flowerdew in 1549; the French army set up the Cap of Liberty for its symbol, 1552; a republic was declared in Holland, 1572; a colony, practically renouncing the European system of government, was established in New England, 1620; the peasantry rose in Upper Austria, 1626; a republic was established in England, 1645; and the barricades of the Fronde were erected in Paris, 1648.

"Everywhere there was a protest against the old order of things, against feudal governments, and against prerogatives, privileges and monopolies. Society began to recast itself, and it never stopped until a complete recasting was accomplished; slowly, methodically, peacefully, but effectively.

"The commerce of Northern Europe, hitherto consisting of a coasting trade in small vessels, suddenly grew to great proportions. In 1699, Petty estimated the combined tonnage of the European merchant marine as follows: Holland, 900,000; England, 500,000; Baltic ports, 250,000; France, 100,000; and Spain, Portugal, Italy, etc., 250,000; total, two million tons; value, $40 per ton. He estimated the sea trade of Holland at $90,000,000; England, $50,000,000; France, $25,000,000; and the rest of Europe, $60,000,000; total, $225,000,000. Without putting too much faith in computations which are partly founded upon conjecture and proportioned by national pride, it may be concluded quite safely that two-thirds of the entire maritime trade of Europe was now in the hands of the Northern States. A few centuries previously it had belonged almost exclusively to Italy and Spain. The mere fact that an essay was written in England to discuss the matter, is in itself a most striking proof of the progressive character of this æra. Before the middle of the seventeenth century there were few commercial writers in Northern Europe. They were only to be found in Moorish Spain and in Italy.

"This rebirth of commerce was accompanied by the mobilisation of commercial products, such as sugar, tea, coffee, tobacco, spices, and raw materials of almost every kind. Conrad Gesner, who died in 1564, anticipated Sir Walter Raleigh in the use of tobacco. So early as 1621, the consumption of East India silks in Europe reached five million dollars annually.

"With commerce appeared also those inventions which facilitate intercourse, negotiation and credit. The postal system, begun in Venice during the first renaissance, was introduced into the Northern countries during the second. It was established in Venice so early as the twelfth, but in Gothic Spain not until the sixteenth century; in the Tyrol, 1516; France, 1524; England, 1635; and Scotland and Ireland, 1644. The first public statement of national finances, since that of the doge Mocenigo in 1463, was made by Sully in France, 1598. Bookkeeping, long practiced in Italy, was not introduced into England until 1543.

"Education evinced the same extraordinary and sudden energy. A mere list of the universities founded during this æra will be sufficient to prove this statement. It comprises those of Seville, Siguenza, Compostella, Evora, Granada, Strasburg, Marlburg, Besançon, Konigsberg, Gripswald, Douay, Dillingen, Milan, Ingoldstadt, Leyden, Helmstadt, Altorf, Edinburgh, Bamberg, Dublin, Paderhorn, Venice, Parma, Aix, Groningen, Lima, Salzburg, Mantua, Alba Julia (Transylvania), Dorpat, Utrecht, Harvard (Massachusetts), Abo, Bruges, and Kiel. The first of these was founded in 1502, the last in 1665.

"In every department of activity, from the subtle statecraft of Richelieu to the perfection of counterpoint by Palestrina, mankind evinced its capacity for radical improvement the moment its social shackles were removed, the moment effort and reward were permitted to bear some sort of an equitable relation to one another. It was an age of miracles. The land was cleared; marshes were drained; forests were felled; roads and bridges were constructed; palaces arose on all sides; and every art that could contribute to the comfort and happiness of society, soared at once through the busy mind of man, from discovery to perfection. Everything was thought of; everything attempted; everything done. From the North Pole to the South, from the cabinet of Louis, where Colbert planned every enterprise that France afterwards completed, to the frozen tides of the Neva, where Peter originated every reform that Russia has since accomplished, there was to be observed an unceasing activity of action and of thought. Men lived by centuries instead of years; they saw more movement, more change, more progress, more growth in one generation, than had been seen before in one hundred. There was no 'depression of trade' in this renascent period; 'overproduction' was unheard of; the rich were prosperous; the poor were satisfied; everybody wore a smiling face—for every ship from America and the Orient bore a chest of bullion, and prices were rising."

ALEX. DEL MAR.

CRUDE METHOD OF STEALING.—In recently sentencing Emil Neumar, the young clerk who assisted in robbing the Equitable Life Assurance Society, Judge Foster said:

"You stole from the Equitable, but your methods were very crude and bungling. If you had had instead of collusion with an outsider collusion with an insider and thereby had had your salary raised to $50,000 and had then divided with the other man, the result would not have been a bit more objectionable from a moral or ethical standpoint and would have been no more hurtful to the policyholders; but very possibly you would not have been at the bar of justice. Under all the circumstances of the case, compelled as I am to extend to you mercy by reason of your services to the people, the sentence is to the Elmira Reformatory."

HUMORS OF FILIPINO AND CHINESE BANKING.

My first experiences with the Filipino and Chinese bankers of the Philippines was at the outbreak of the hostilities, at which time a number of United States regiments were in Manila. The local banking institutions immediately began to print signs to appeal to the Americans. The native sign-painters struggled manfully with the English words. The several larger banking houses in Manila proper did not go very far out of their way to induce business, but the hundreds of little money-exchangers, one-horse bankers, money-lenders, etc., immediately sought to reap a harvest, and some of them did so.

Upon my arrival in Manila I found that there was a great demand for the loan of money for brief periods, and afterwards learned that this short loan was required for purposes of gambling. The natives gamble almost all night. It is a failing they have. The Spanish also do considerable gambling. The soldiers look upon the sport as a pastime, and not infrequently gamble.

1

6

The result is that there is quite a business done by the money people in loans at high rates for purposes of gambling.

In Fig. 1 is a typical sign of the establishment that lends quick money to the gambler to retrieve himself with, in exchange for which he not only pays a high rate of interest, but furnishes the proper security.

On one occasion a son of a planter rushed into a money-broker's office and secured a ten-minute loan to win back his losses at the game. He signed away part of his inheritance, and lost. The money-broker secured valuable sugar properties as a result. On another occasion the proprietor of a hemp-producing farm staked his lands and machinery, and lost. He borrowed 1,000 pesos for an hour from the nearest banker and gave as security the property he had lost at the game. With the new stock of coin this man entered the game again and won back his losses and more too. The banker who had furnished the loan was paid three per cent. interest for the short use of the money, and given a present besides.

The result is that one may find signs of this order placed in conspicuous positions in the vicinity of the gambling resorts in various parts of the islands.

Another source of considerable income to the numerous money-brokers in the islands is obtained from the fees obtainable through buying up pay vouchers of Government employees. Of course, it is against the regulations to sell one's pay voucher a month or more ahead, but it is often done in an emergency. The Government employee draws up his pay voucher for any month he chooses, and properly signs it. Perhaps the amount is for $75 or for $150. He can take this pay voucher to one of the native bankers or money-changers and get it discounted at about six per cent. Therefore, you will see signs like that in Fig. 2.

In recent years discharged soldiers and civilians from America have entered into the banking business in the islands and some first-class banking institutions and money-exchanging offices have been opened. Still, one finds the interesting native and Chinese money-exchanging shops greatly in the majority. Some of these shops are very degrading in appearance, and one would take them to be junk-shops. In one place of this kind the sign was hung as in Fig. 3, indicating a cash exchange for any old rubbish. And the idea of the advertisement was carried out. There were all sorts of things in the place, for which money had been given. Of course, the payments for the articles were estimated on an exceedingly low basis. But I have always wondered how these bankers managed to derive a profitable revenue from this mode of doing business. It looked to me as if much of the rubbish-like stock had been in the place a dozen years or more without any attempt to turn it over occasionally for profitable purposes.

The money people of the islands are accustomed to do quite considerable bargaining in watches, tools, clothes, etc. It is not uncommon to see signs like that in Fig. 4 posted in the window of the bank or money-exchange. The first-class banks of Manila do not undertake any of these trivial schemes, but small shop-banks of the Chinese and natives of the cities and the provinces derive a good portion of their income in this way.

It has been supposed that the Filipinos do not have many clothes to deposit for temporary loans. This is an error. The natives of the cities, and even of the provinces, possess some excellent and really valuable fabrics made from the rich pineapple and kindred fibers. The Jusi clothes are very valuable. A small roll of this texture brings a very liberal sum of money. There are small bankers who coax the natives to patronize them with signs worded as shown in Fig. 5. "We have plenty of coin to rent. Come and rent some." Then, to substantiate the proposition, a few bags of coin are placed where they can be seen. Sometimes the coin is openly shown. The native bankers have considerable faith in advertising. They have some peculiar customs in the provinces. In one place I heard the beating of a drum on the plaza in front of the church of the town. Some people collected, and then the drummer announced that so-and-so had just called at the town, and for a certain number of days would rent money on good security. In another case the bell-ringer or town-crier made the announcement of money to lend. A very startling effect was produced at one money-exchanging establishment in the vicinity of Iloilo, by the proprietor setting up a real coffin, labeling it with the sign shown in Fig. 6. The sign read, "Our competitors are dead, and we have their business." Natives stopped and gazed upon the odd notice. Some laughed, and others crossed themselves. These are some of the humorous situations your correspondent noticed while in the Philippine Islands.

RETURNED SOLDIER.

ADVENTURES OF A BANK NOTE.—A lady passing down the Rue Richelieu had the misfortune to lose a pocketbook containing among other valuables, a 1,000-franc note. The pocketbook was picked up by a chair-mender named Renaud, who lives at Montreux; he placed it very carefully in his pocket and proceeded home. It is not often that a chair-mender has occasion to change a note for that amount, and Renaud, recognizing the impossibility of turning it into gold without detection, agreed with a friend to do the business for the consideration of 100 francs. This friend, Lucien Mathern, also a chair-mender, was in his turn filled with apprehension. The difficulty was solved with the aid of a horticulturist named Simonnet, who kindly consented to buy himself a horse for 300 francs and return the change. Renaud was thus richer by 600 francs. All might then have gone well if, two days later, it had not been discovered that the horse had been stolen from a dealer at Meaux. This led to the arrest of the trio, and later in the day the police put their hands on the horse-thieves.—*Paris Messenger.*

A SQUARE DEAL FOR THE INDIVIDUAL DEPOSITOR.

An average annual loss of approximately one million of dollars of depositors' money, covering a period of forty years, through banks operating under the National system alone—which, with whatever imperfection it has, is yet the best banking system the country has succeeded in developing—undoubtedly shows that the protection from loss afforded by banks is far less than it should be. As these losses were sustained by depositors of banks of all sizes, neither the amount of capital nor the amount of deposits serving as an absolute protection against the possibility of loss, it is equally certain that the improvement of the system in that particular is a matter of vital concern to every bank dependent for prosperity, as each is, on its success in attracting individual deposits.

Bank Failures Due to a Disregard of the Banking Laws.

The National Bank Law provides wise restrictions and outlines judicious policies for the government of banking associations, and contemplates a literal compliance with its provisions by those intrusted with the management of banks operating under its authority; and it may be here asserted that the records do not disclose a case of insolvency where the bank discharged its functions in firm conformity with the law, nor a failure whose tangled affairs did not reveal a disregard by its officers of that law.

It then seems to be undeniably a fact that the principal cause of the failures which entailed those losses on the depositors was a willful and persistent disregard of the law, either technically or criminally, or both, a fact which forces the obvious conclusion that the remedy for those conditions lies, first in the administration of the law by the officers charged with that duty in a manner to secure a more strict adherence to its provisions, and, secondly, the establishment and maintenance of a fund to cover any possible loss yet resulting to depositors from injudicious or criminal mismanagement of banks.

It is common knowledge that certain provisions of the National Bank Act are frequently disregarded by bankers. Loans in excess of ten per cent. of the capital stock to one interest, the most insidious and fatal of the dangers that beset the banking business, are frequent; and credits to officers and directors for use in their outside business affairs to an extent not warranted by their true financial standing, are likewise common. Real estate collaterals and overdrafts, both frowned on by the law, are part of the daily problems of many banks. And many more breaches, of questionable wisdom, will suggest themselves to the mind upon slight reflection. Even the Department itself seems to assume a violation of the law generally, as its printed forms are prepared for the confessions of the guilty, at least as often as five times during each year, while the policy lately announced, requiring directors to individually sign letters answering those of the Comptroller calling attention to some irregularity, caused by the frequency of directors claiming after their bank had become insolvent that they were ignorant of the fact that the officers had been violating the law, is evidence both that the law is being violated, and that it is believed it would be conducive to a sounder system if such were not the case.

Each of the conditions enumerated indicates a general indifference to the plain requirements of the law, an indifference that renders the bank guilty of such practices, to the degree to which it participates in them, just that much less secure and its depositors' money just that much less safe.

Greater Publicity Favored.

It would be largely to the advantage of both the shareholders and the depositors of banks to have more publicity of the method pursued by the officers in the daily conduct of the business. Shareholders, and directors as well, in many cases know too little of the methods actually followed in the bank, Solicited to become shareholders on account of local prominence and chosen directors because of ability displayed in the conduct of their own business affairs, too often their duties as directors are discharged as a mere formality, each delegating to his associates the duty of giving to the bank the attention and supervised that would, in the vast majority of cases, had they been exercised, have prevented the acts that finally led to distress and insolvency.

The ordinary depositor, and this applies equally to the average shareholder, reading the usual reports of condition of the bank in which he maintains his balance, has no possible way of knowing whether or not the bank is being conducted with due regard for the law, in a prudent manner and on sound banking principles. Knowledge of this kind is hard to acquire from the array of figures ordinarily presented, prolific enough to be more confusing than helpful to the average mind. The needs of the public would be far more nearly met if in addition to the reports of the condition of banks now used bank examiners at the time of their examination of a bank's affairs prepared a report to the Comptroller, a copy of which report, to be published in the local papers of the bank's home, showing whether the bank examined had loans in excess of ten per cent. of its capital to one interest, or had loans collateraled by real estate security, or had violated any other provision of the National Bank Act; and with an absolute compliance with the law as the Department's standard of prudence, conservatism and safety, classify for the records of the Comptroller's office the bank's management as first, second or third class accordingly as it complied with the law.

Present or prospective depositors of a bank where affairs had lately been examined could determine much more readily whether the bank was entitled to their patronage after they had read a report similar to the following:

SUNNYSIDE, Indiana, July 29, 1905.

The Comptroller of the Currency, Washington, D. C.

SIR: Supplementary to my report of even date regarding the condition of the First National Bank, of Sunnyside, Indiana, I have the honor to advise you that my examination of the affairs of that bank has disclosed the fact that the National Bank Act is being violated in the following particulars:

1. Loans to one interest are now being carried in excess of one-tenth part of the capital stock, contrary to Section 5200, R. S. U. S.
2. Loans are being collaterated by real estate, contrary to Section 5137, R. S. U. S.
3. Legal reserve is below fifteen per centum of its deposits, contrary to Section 5191, R. S. U. S.

By reason of these facts, I recommend that the First National Bank, of Sunnyside, Indiana, be classified on the public records of your office as to its management as in third-class condition.

Respectfully yours,

I. WILL GETEM, *National Bank Examiner.*

Shareholders themselves, after reading a notice of similar import, would awaken from the lethargy that usually encompasses their interests in the bank except at dividend-paying time, and demand of the officers a strict compliance with the law.

The other bank in the same locality, that had complied strictly with the law, would welcome the coming of the examiner and the publication of his report regarding its condition as follows:

SUNNYSIDE, Indiana, July 29, 1905.

The Comptroller of the Currency, Washington, D. C.

SIR: Supplementary to my report of even date regarding the condition of the Second National Bank, of Sunnyside, Indiana, I have the honor to advise you that my examination of the affairs of that bank has failed to disclose any violation of the provisions of the National Bank Act. That bank has no loans exceeding ten per cent. of its capital stock to one interest, no loans collateraled by real estate security, and no large loans to directors or officers. Its reserve is fully up to the requirements of the law.

By reason of these evidences of prudent, careful and conservative management, I recommend that the Second National Bank, of Sunnyside, Indiana, be classified on the public records of your office, as to its management, as in first-class condition.

Respectfully yours,
I. WILL GETEM, *National Bank Examiner.*

It would be so certain which of the banks would receive the larger share of the deposits of the community that the question in this aspect need not be argued further.

ONLY THE BANKS THAT BREAK THE LAW WOULD FEAR THE PROPOSED PUBLICITY.

It may be contended that action of the character indicated would be too radical, but it will be asserted with equal vigor that it would not be radical at all except to those banks that persistently violate the law. There is really but little difference in some respects between the present method of advising the Department of the facts and the method suggested. The Comptroller is advised of any of these breaches of the law, *but the depositor is not.* By this plan the depositor would simply be in possession of as much knowledge about his own depositary as the Comptroller now is. He would have the privilege that surely his money interest entitles him to have of determining himself whether the bank was all right.

There should be no hesitancy in making public the facts that bankers are violating the law they are sworn to uphold. No other class of malefactors has the protecting arm of secrecy thrown about it. The National banker is a creation of his own handiwork. He is not compelled to operate under the Federal law—he solicits the privilege of being allowed to do that, and he usually comes with full knowledge of its requirements and restrictions. He should not then be permitted wantonly to disobey the law, nor to be screened in his violation of it by a plea that publicity of his acts would be a radical stand against him. When all the facts developed on an examination are thus made public, examinations will be of more direct and practical benefit to the depositor. He can at present form no opinion of his bank's standing that may not be erroneous, because he may not know of the facts that are most essential to a correct conclusion.

Another evidence of the need of furnishing the public with all the information possible regarding the bank's method of doing business, and thereby permitting each individual to determine for himself the merit of the bank's claim for his confidence, is shown in the fact that while the Department has every facility for acquiring full knowledge of the condition of the banks, it is unusual for a Receiver to be placed in charge except on the initiative of the bank's officers. Many associations, struggling along with wearisome burdens, have during the last few months of their unsuccessful careers bolstered up their faith in their ultimate success by the acquiring of new depositors with the so-much-desired cash, not a dollar of which would have been placed on deposit if the depositor could have known the real facts.

So let there be publicity! Let all the facts be known! Let it be remembered that the moving principle of bank supervision is the protection of the outsider—the depositor who furnishes the great bulk of the banking power, and let him be treated with the fairness he deserves!

When all the facts are made public, competition will do the rest. Competition would compel each bank to strive earnestly for a showing as creditable as that made by its competitor, and as it is not denied that there are many banks whose officers in the administration of their affairs comply literally with the law, it naturally follows that in making the effort to secure the highest standing, a favorable report on that basis from the bank examiner being in effect a recommendation for that bank by the Federal Government, banks will adjust their business to a strict compliance with the law, thereby removing the violation of the law as the principal cause of the downfall of banks and the loss of depositors' money. The accomplishment of this result would unquestionably reduce bank failures to a minimum, on which hypothesis the second proposition of this argument is based, namely, the establishment and maintenance of a fund in the custody of the Government, out of which losses that would otherwise accrue to depositors be paid—a question new only to the extent of being founded on new conditions as indicated.

A Plan for Insuring Bank Deposits.

There were on May 29, 1905, in National banks individual deposits to the amount of over three billion, seven hundred and eighty three million dollars. The amount of capital and surplus invested in these banks was over one billion, two hundred million dollars; so that of the total banking power the owners had contributed about one-fourth and the depositors, practically without charge, the remainder. The setting aside by the banks of an infinitesimal part of the earnings from the use of this vast amount of free capital contributed by the depositor, as security for the credit extended to the banks would be sufficient to provide the fund mentioned. Thus the contributing annually by the banks of a per centum graduated in favor of the reserve banks, averaging one-fortieth of one per cent. of the total individual deposits, placed in the custody of the Government, would yield approximately one million dollars yearly, at which rate the fund would soon be beyond any possible danger of impairment by reason of payment of losses, after which the rate of tax could be lessened if desired to a figure sufficient to provide for current losses and no more. It is an authoritative assertion that as the amount of capital employed by banks increases the percentage of loss to proved claims decreases, and also that the amount realized from the assessment of shareholders increases, which shows, as a general proposition, that depositors are more protected from loss in the large banks than in the small ones. But while this is true, depositors of both large and small banks have sustained heavy losses, which disproves the theory advanced by some, that the large banks should be wholly exempt from the provisions of the corrective regulations proposed. Each bank is an integral part of the system, the betterment of which is for the benefit and advantage of all, and should therefore contribute its equitable share toward the attainment of the desired result.

In further support of the correctness of this position, it may be cited that the law bearing on a question of similar import refutes that contention, when it provides in regard to the issue of circulating notes that all banks large and small alike deposit bonds as security for the notes, not conceding the probability that because of the employment of large capital banks are any more likely to maintain the credit of their notes. Thus a tax on individual deposits of country banks ranging from one-tenth to one-twenty-fifth of one per cent., and of reserve banks of from one-fortieth to one-eightieth of one per cent., averaging one-fortieth of one per cent. on all, would not be inequitable.

The creation of a fund as suggested, out of which to reimburse depositors from loss that would otherwise be sustained, would thus, as to them, make banks absolutely safe. The benefit to the banking industry from this fact would be incalculable. Banks expend thousands of dollars annually for fire, burglar and bond insurance, not only for the direct protection from loss that the investments afford, but equally for the influence produced on the public mind that every precaution possible that can add to the safety of the bank is availed of. Many are also employing outside accountants and financial experts to audit and examine the bank's affairs to further strengthen their position in the eyes of the public. The cheapest but the best expenditure banks could make would be the tax they would be required to pay on their individual deposits, securing in return a guarantee behind which the Federal Government stood, to protect their depositors from loss.

A bank with a deposit line of one hundred thousand dollars would welcome the opportunity to pay on that a tax of one-tenth of one per cent.—a hundred dollars, a paltry sum indeed when in return it could solicit deposits based on the impossibility of loss to the depositor, and banks with larger lines would pay their proportion at the lesser rate equally as cheerfully.

Would Bring Hoarded Money into the Banks.

It has been often asserted by bankers conversant with the conditions that in every rural community there is sufficient money hidden away in tin-cans, teapots and old stockings, and buried in the ground, to give to the bank that could attract all that money a deposit line the equal of any of the other banks in the same locality. The hoarding of money in these ways means but one thing—that the owners of it resort to such means to protect their wealth, not because they believe those safe, but because they believe them safer than the banks. Bankers who have stood on the firing-line in the skirmish against ignorance, fear and prejudice will testify to that fact.

When the banking system is so regulated that the possibility of loss to the depositor is eliminated, all this hidden money will come from its retreat and thousands of new depositors, bringing with them countless thousands of mouldy dollars will stand before the windows seeking the privilege of placing the burden of caring for the money on other shoulders. The country bank would probably secure the more direct benefit of this transaction, but the reserve banks would, as is always the case, secure as well their share of the increase of the business of their rural friends.

All Banks Not Placed on a Level.

It may be urged that by thus insuring all depositors against loss the strong banks would be on the same level with the weak ones, or rather the weak banks would be raised to the level of the strong ones; but a moment's reflection that the examiner's reports displaying the weakness of the weak banks and emphasizing the strength of the strong ones is to be published in the local papers of the bank's home, would show that this would be a false assumption.

It is not proposed to alter in the least any of the present safeguards of the system. The affairs of insolvent banks would be managed just as at present, no change being contemplated regarding the liabilities of the shareholders, etc. The proposition is merely this, to attempt to provide by the means suggested a betterment of the system, thereby reducing the number of failures, after which the banks generally could, without being the least burdened, provide a fund to protect depositors of the few remaining cases of insolvent banks from loss.

Many additional reasons could be advanced showing the great advantage that would inure to banks operating under a system affording absolute protection from loss to their depositors, and also many more advanced showing the practibility of the plan outlined here for the bringing of the system to that degree of efficiency as to make that possible.

The subject is certainly an important one, and deserving of the attention of all bankers interested in the improvement of the banking system. The arguments apply equally to banks operating under State laws and supervision to the extent of the character of such laws and supervisions.

Discussion of the matter in bank meetings can do no harm.

W. E. Cook.

Corydon, Indiana, July 29, 1905.

Note.—The Bankers' Magazine will be pleased to publish other concise expressions of opinion relating to the above suggestions.

Gold Production of Australasia in 1904.—The gold production of Australasia in 1904 was 4,194,822 fine ounces, valued at $86,760,000, against 4,296,237 fine ounces of a value of $88,857,500 in 1903. There is thus a decrease of 101,415 fine ounces in quantity and $2,097,500 in value in 1904. The falling off has been principally in western Australia where a decrease of 81,571 ounces occurred, and in Queensland where the decrease was 43,629 ounces.

New Counterfeit $10 National Bank Note.—Check letter B; B. K. Bruce, Register; A. U. Wyman, Treasurer; charter No. 1050; bank No. 678; Treasury No. H556785; on the National Ulster County Bank, of Kingston, N. Y.

This is a very poor photographic reproduction, printed on two pieces of thin soft paper, between which a few black threads have been distributed. The Treasury and bank numbers have had red ink applied to them, apparently with a pen. No effort has been made to color the panel containing the charter number on the back of the note.

This counterfeit should be readily detected.

A CREDIT LEDGER.

The matter embraced in the forms illustrating this article is expected to corroborate to a considerable extent the conclusions reached in the form covering the analysis of a borrower's statement as shown in the August issue of this MAGAZINE.

Account opened 5-1, 1905, by H. J. Stillbaker. Accepted by 2d V. Pres. [illegible]

Title, The Stillbaker Cabinet Co.

Business, Makers of high grade cabinets and "specials" furniture. Incorporated 7-1—05. Began business 11-1—05.

Address, 700 to 800 Canal street.

Character of Account, Active, covering all financial transactions of the Company

Other Bank Accounts, Has at Second National that account will be closed.

Reason for changing, Refused to increase direct line to [illegible]. Says ad cashier hard fellow to get along with anyway.

Reference. [illegible]   Introduced by himself

Probable Deposit Balance, [illegible] to [illegible]

Probable Direct Line. Must have [illegible] now thinks will gradually reduce it.

Probable Indirect Line. Business paper [illegible] to [illegible]

Checks must be signed by the Company per Treasurer.   Customers Notes must be endorsed by Treasurer.

Notes must be signed by Treasurer. Countersigned by President or Vice-President.

Does applicant discount bills? Says not all.

FIG. 1.

Fig. I. Assessed value of real estate is a fair gauge of its value and is readily obtainable by inspection of the assessment rolls kept for public use in all tax offices. This schedule, in addition to supplying a suitable method of keeping one's eye on this item, embraces a space for noting the facts covering entrance and acceptance of an account. It also contains a schedule for recording annually the changes in the executive or directing forces of a company. A lender should at all times be aware of just who the partners or sponsors for a business are. This knowledge reassures and helpfully assists in selecting those with whom we prefer to confer upon questions governing requirements.

Fig. 2 represents a blank sheet to be used for recording facts pertinent to a customer's credit and financial standing. As illustrated, it is ruled, and comprehends that the information as obtained will be written by hand. In large institutions wherein, in one canvassing of the trade, a considerable amount of material would come to hand, this sheet should be adapted to use in a typewriter. A sheet of this latter sort is now in especial demand for the recording of minutes, meetings, descriptive matter covering mortgages, deeds, trusteeships, bonds, etc. It is found that the information is recorded

The Stillbaker Mfg. Co.

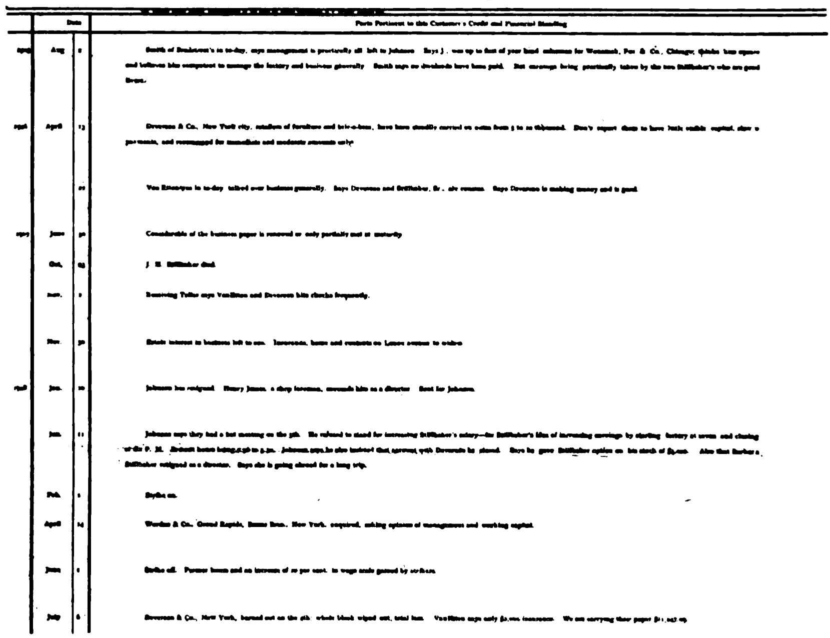

FIG. 2.

and indexed in a credit ledger is immediately accessible and obviates the necessity of hunting up, wading through, or mutilating original papers by constant handling. Assuming the case of a trust fund; a credit ledger would comprehend a uniform, neat, well set up typewritten and readily readable description of the trust inserted ahead of the sheet detailing its mathematical operations.

Fig. 3 represents a ruling analyzing a customer's deposits and loans. In operating the credit ledger the page containing these schedules is situated opposite and confronting the page that embraces the analysis of a borrower's statement. Thus, upon turning to an account in the credit ledger, a lender at one glance may review the balances carried, exchange paid, loans granted and comparative statements of a borrower's condition. This review readily indicates the earning worth of the customer's accounts, it shows the liquidity or fixity of his loans. It takes in, comparatively by months, seasons or years, his minimum or maximum requirements. It may not infrequently nor unseasonably betray the fact when a bank is hazardously approaching or has already assumed towards a borrower the position of a silent partner steadily

lending so much or an increasing amount of capital, rather than discounting periodically lines of paper that do mature. Surely a resume of these three schedules, which definitely set forth desirability of an account, facilities required, ability to pay up if called, furnishes as practical and adequate a credit basis as can be had or desired.

It seems singular that banks, the largest distributors of credit, should so generally slight the matter of persistent and thorough analysis of individual lines of credit extended, especially so in these days of sharply competitive 3½ to 4 per cent. on balances, free checks, free collections, and doing everything for nothing, when income can keep but a lap ahead of outgo and net earnings are so small as to make losses intolerable.

As pertinent and persuasively corroborative of the general need of more thorough analysis in banks I quote a prominent Philadelphia bank executive, who in a credit talk a while since delivered before the Philadelphia Chapter of Bank Clerks gave utterance to the following:

"The Comptroller of the Currency tells us that since the National Banking Act first became a law there have been organized 6,476 National banks; that 387 of these have gone into receivers' hands; that 1,411 have voluntarily liquidated. Here you have a total of 1,798 National banks out of a total of 6,476, or thirty-six per cent., forced out of business largely on account of bad or unprofitable investments. If you should add to this number the State institutions compelled to liquidate from like causes during the same period, the total would not be far from three thousand. Of this formidable array of wrecked or partially wrecked or liquidated banks a small proportion may be traced to dishonesty, but the main cause when uncovered would reveal bad investments. Any method or scheme of work, therefore, which leads to a more careful investment of the bank's funds, is in line with progress and with better things."

The above certainly is a proposition demanding reflection in those commercial-lending institutions operating without the use of borrower's statements and otherwise inadequately equipped for gauging credit.

G. L. TICKNER.

SYRACUSE, N. Y.

(Concluded.)

ANGRY BANK DEPOSITORS.—At a recent meeting of depositors representing three-quarters of a million dollars in the defunct National bank at Fredonia, N. Y., which was closed on June 21, a committee to proceed against the bank officers was appointed. The fact that eight weeks previous to the closing of the bank by Comptroller Ridgely, a certificate of renewal of charter was granted and approved, raised a storm of protest against the alleged inefficiency and incompetence of the National bank examination. The following resolution written by Lewis McKinstry was adopted:

"At this meeting of the depositors and stockholders of the defunct Fredonia National Bank, we desire to express our opinions of the value and of the services of the National bank examiners, as the same appears to us at this date. So far as we can learn the examiner acts more as a coroner than as a physician. Bank after bank fails and proves to have been in rotten condition for years, yet it has been passed on as solvent by the bank examiners at least five times each year. In the face of these facts, it seems to us that the National bank examinations as conducted by the Government officials are worse than useless, as they lull the depositors and stockholders with a false sense of security which would not obtain if they were compelled to rely upon their own scrutiny of conditions. The value of the average bank examiner seems to us about the same as the vermiform appendix in the human system, able only to breed inflammation after the patient is past help.

At this time there is violent agitation to protect the interests of the policy holders in life insurance companies, and there is a demand that they be given representation on boards of direction. It seems to us that depositors in National banks are equally entitled to representation on the boards of direction of the banks to which they intrust their money, at least to the extent of getting a little inside information occasionally. It also seems to us that the Government should be responsible for and make good losses caused by the inefficiency of its agents, the official bank examiners, the same as railroad corporations are responsible for the acts of their agents.

We call upon our Representative in Congress to consider this subject, hoping that he may devise an amendment to the National Banking Law, whereby the wrecking of banks by faithless officials may cease to be a healthful pastime, and also providing with heavy penalties for non-observance that examiners shall examine and directors shall direct."

BOOK NOTICE.

EXTENDED BOND TABLES; giving values to the nearest cent on one million dollars. By Chas. Ezra Sprague, A.M., Ph.D., C.P.A. New York: Business Publishing Co. Price, $10.

This is a valuable book for Savings banks, trust companies and all investors, and will commend itself for accuracy in that the computations are much extended beyond those found in similar works.

The tables show the values at half-yearly intervals for all dates of maturity from one-half year up to 50 years, and for five-year intervals after that up to 100 years. The rates of income are given only five one-hundredths of one per cent. apart, namely 2.50, 2.55, 2.60, 2.65, where most tables give them ten one-hundredths apart. Supplementary tables are also furnished, making it easy to compute the four intermediate points—2.51, 2.52, 2.53 and 2.54, etc.

SOME PRACTICAL BANKING HINTS.

THE AUDITING DEPARTMENT.

[From a paper by James D. Garrett, of the Central Savings Bank, Baltimore, Md.; read before the recent Convention of the American Institute of Bank Clerks, at Minneapolis, Minn.]

The auditing department, as a separate and distinct department, is somewhat of an innovation in the banks of this country, but the necessity for the same is becoming more and more apparent and appreciated, and banks all over the United States are now rapidly establishing independent auditing departments.

The auditor should ever remember that he has been appointed "watchdog of the bank," so to speak, and he is (at least theoretically) responsible to the directors only, and his department should be (again theoretically) free from all dictation on the part of the officers of the bank.

He should necessarily be thoroughly familiar with every department of the bank, and make it his first aim to establish such a system as shall be extremely simple and yet leave the records of every transaction full and self-explanatory. In evolving such a system he should endeavor to make every department and every position so independent of each other that the risk of collusion will be reduced to a minimum. He should also be careful to arrange that no one clerk has more than one position; in other words, that his work is such that it would be impossible for him to manipulate the figures of one book in order that he might cover up any possible false entries in another. He should strenuously oppose the employing of two brothers, or other close relations, for obvious reasons.

Every department of the bank should be in a state of continuous audit, so that the final entries of the day's work in the general ledger are known by the auditing department to be correct.

No teller, other than the paying, should be permitted to carry any cash over from one day to another, and any items which may constitute a part of the cash, held for proper indorsement or other reasons, should be carefully scrutinized by the auditor.

Frequent proof of the paying teller's cash should be made at irregular intervals, and also an examination of the securities held as collateral for loans, bills receivable, etc.

The computation of interest on all items discounted should be carefully checked and the total amount credited to "interest and discount" compared with the discount register.

All interest paid on daily balances should be checked by the auditing department, and no charge to that account should be permitted to be posted in the general ledger without bearing the initials of the auditor or his chief assistant. This applies, of course, to all payments of interest, whether it be on open account, certificates of deposit or otherwise.

All debits made against the various accounts on the ledgers should be scrutinized and initialed by the auditor, whether such debits be for the correction of errors or for transfers, etc., ordered by mail or telegram. In fact, all journal entries should go through this department.

The auditor should take all possible pains to obtain a report on all statements of accounts rendered, and see that such reports are signed by an officer of the bank or company, a member of the firm or, in the case of an individual, by the individual himself, or herself, or by his or her attorney.

All bills for the various expenses of the bank should be checked by the auditing department—no payments to be made without such bills having been initialed by the auditor.

All reports and statements should pass through this department.

When making up the bank's statement as of a certain date, the exact earnings to that date, including interest accrued and received, and taxes either paid in advance or reserved, they should be apportioned to that date.

All communication between the bookkeepers and depositors should be through the auditing department as far as practicable.

As regards the individual and bank correspondent's ledgers, the bookkeepers should be transferred from one ledger to another at frequent intervals without notice. The ledgers themselves should be audited regularly, and all pass-books balanced at least once a month. A receipt should be taken for all vouchers returned.

Statements of accounts rendered by other banks should be reconciled by the auditor, and reported upon without delay. This is highly important.

The bills of exchange or items in transit should be checked at frequent intervals. Also all tracers of collection items should pass through this department.

A complete record of all "differences" should be kept by the auditor, and he should see that such differences are checked for and found.

The auditor should be ever on the alert for possible "weak spots"; he should see that his ship is armor-clad below as well as above the water line, for it is below that the deadly torpedo strikes.

Educate your depositors to co-operate with this department for the mutual benefit of bank and depositor.

In a number of banks the auditor has charge of the clerical staff.

The mail is opened and routed in his department.

The entries on the individual ledgers are checked back by different clerks the following day.

For a special examination, all pass-books on a certain ledger should be called in to be balanced at the same time, so as to avoid the manipulation of accounts by the bookkeeper.

Discourage superficial examinations.

We advocate an annual audit by outside experts, who can conduct their examinations entirely independent of the influence of the bank officials, and along lines based upon their broader and more varied experience, a public auditor's certificate being one of the best mediums of advertising and of gaining the public's confidence.

TRANSIT DEPARTMENT.

[From a paper by J. G. McLean, of the Continental National Bank, Chicago; read before the Convention of the American Institute of Bank Clerks.]

In these days when the use of the check is becoming almost universal, the question of handling these checks quickly and economically is of some importance. It has been my privilege to be with one of the largest Chicago banks, which handles in the neighborhood of 10,000 to 12,000 outside country checks a day. I will try to explain briefly the method used in handling and keeping a record of these outside items.

In the first place, in order to handle these chécks to the best advantage in the office, we have requested all our large country correspondents to list separately items on Chicago, items on New York and items outside of Chicago and not on New York. These letters then go to the mail teller, who charges the total amount of outside items to the transit department, checks on Chicago banks to the clearing house department and New York checks to the New York department on one side of his book, and total amount of the credit is charged to the bookkeeper on the other side. The total amount of the checks in each of these packages is listed on the last check in each package. These packages are then taken by a representative of the transit department, and by him handed to the various machine men, who list the checks separately on the arithmometers, to prove the listings and footings of our correspondent banks. At the close of the day, the totals of all these packages are listed and footed together, and this total has to agree with the amount that has been charged to the transit department by the mail department, receiving, note and paying tellers. After these packages of checks are thus proved, they are handed to an assorter, who sorts them to the various men writing what we term "outgoing transit." In this term, outgoing transit, I include all checks drawn on banks outside of Chicago, excepting New York, and including checks on Chicago banks who are not represented in the Chicago clearing-house either directly or indirectly. We have always followed the method of indorsing our checks directly to the bank to whom we wish to send them, preferring not to use the indorsement, "Pay to the order of any bank or banker."

After the assorting, the checks are all indorsed as above stated, when they are passed to a scratcher man, who charges them to the various clerks writing the outgoing transit. The letters to all banks with whom we have accounts, such as Philadelphia, St. Louis, Boston, etc., together with letters to banks for whom we have a large volume of items, are written on the Fisher billing machine. To the banks to whom we send only from one to ten checks a day, we have large registers, on which there are eighteen letters to every page. These pages each have a different letter, starting with "A" and ending with "Z," the letter starting again with "A" and so on through the alphabet. The individual letters on the page are all numbered from "1" to "18," thus giving the first page letter No. A-1, A-2, A-3, to A-18, and on the second page, B-1, B-2, B-3, to B-18, and the third, C-1, C-2, and so on through the alphabet.

The registers all have an original and duplicate sheet, the original sheet perforated, to tear into eighteen letters. The record kept of the checks sent out is simply the indorsers, the bank on whom drawn and the amount. We rely on our indorsers to know from whom they received the items, and trace back in that way in case the items are lost.

The benefit derived from the letter system, as above stated, is, to my mind, three-fold. First, it enables us to have a record of all items sent to one bank a day on one letter-head, and also in one place in the book. Second, it provides an easy way to locate letters when returns are received, inasmuch as we have to turn to the page with that letter, and we know on what part of the page the letter is, as the numbers appear in the same place on every page. Third, it provides a way to keep a record and write the letter with only one writing and one change of a carbon to every eighteen letters. At the side of all these pages are columns with a letter number opposite them, and, at the end of the day, the clerk transfers to these columns amounts of the letters and adds these totals to obtain his balance, which must agree with the amount the scratcher man has charged him with. The average clerk will write from ten to twelve of these pages a day, containing eighteen letters, starting to write at 1 o'clock and finishing about 4.30. As the returns come in, they are assorted to the different register clerks, who first check off the draft sent in payment, listing the exchange charged on the letters and also putting the exchange in small figures in the upper right-hand corner of the check.

After the drafts are checked off, the letters are assorted, first, according to date, then according to letter, and, lastly, according to number. It is, then, an easy matter to mark off the payments of one day, simply marking a date stamp opposite the amount. In taking off a balance, the clerk uses an arithmometer and lists the unpaid items, which must agree with his make-up. This make-up is obtained by taking his balance of the previous day and adding to that his outgoing totals of the previous afternoon, and subtracting from that the amount the transit clerk received as payments during that morning. These checks or drafts, received in payment, are taken by a transit clerk and charged to the various departments—clearing-house, New York, bookkeeper, etc.—listing the exchange in a separate column alongside. The footings of these columns are balanced with the clearing-house department, New York department, bookkeeper's, etc., and the cross-footings of these totals show the total payments which are used as a credit to that particular register. We have a special register for listing items for banks who carry accounts with us. There are three copies made in these books at one writing. The first sheet is for the letter that is sent with the checks, the second is the debit ticket for the bookkeeper, and the third is a copy kept as a record, to be used when acknowledgments are received.

Another matter which seems to me to be of vast importance, and which is not followed out by all banks, is in knowing that all items which are returned to various correspondents unpaid have been received by them. A bank should always endeavor to render the best service possible to their customers, and should follow closely all items deposited with them until they are either paid or returned to their customers. To those who are working in any transit department, it is needless to say that a number of checks are lost in the mails; of course, the number lost in comparison to the number handled is very small. The number of items returned, compared with the total number handled, is also very small, and, therefore, it is only occasionally that we have a returned item lost before it reaches the correspondent. It is, I believe, on account of the small number of returned items lost that a closer check is not kept on them.

I know of a case where an item was sent to a bank for credit and was credited on receipt (subject to payment, of course), and later was returned unpaid and charged back to the account. This was early in the month. About the tenth of the month following the reconcilement of account was received, on which was the following: "July 6: You charge and we do not credit $66.40. Please explain." This is the item that was once credited and charged back, returned and lost in the mails. Now, in this case, there was no trouble in adjusting the matter, and I cite it simply as an example. But supposing that the indorser had in the meantime failed, it can easily be seen that it is of some benefit to also know that returned items reach destination.

To avoid any cases of this kind, we have a book in which three copies of the returned items are made at one writing. First, the debit for the bookkeeper charging the item back; second, the letter to which the item is attached, and third, the record in the book to be used when the acknowledgment is received.

BANK EXAMINATIONS AND RECEIVERSHIPS.

[From a recent address by Lyman D. Baird, Receiver of the First National Bank, Faribault, Minn.]

Bank examiners hold a very important and delicate position: important, in that through the examination of a bank an examiner is acting as a public servant and for the public, and by his examination and supervision of the banks under his charge to guard that public against incompetency and dishonesty in the officers and employees of the banks; delicate, for the reason that in the performance of their duties it matters not what they find amiss or irregular in the institution under examination it is not safe or proper for them to take the public into their confidence, either as to the fault or its remedy, but report of the matter is made by the examiner to the head of his department, either State or National. And even the Comptroller of the Currency or head of the State Banking Department must keep all the facts gained by an examination from the public unless the irregularity in doing business or misconduct of the officers of the bank are sufficient to close its doors, for a careless remark or a criticism, however just, made by an examiner to a customer of the bank under examination might start a run that would ruin the bank.

The public hears at once if a bank fails or closes its doors for any cause, but they never hear of the banks straightened out and put on the high road of success by the timely correction of improper practices or where an incompetent or dishonest clerk or officer has been exposed by thorough and competent examinations and quick and vigorous action by the department. I venture the assertion that there is never a working day but what some bank officer or director gets a good sharp letter growing out of the examiner's work in their bank.

How Banks are Examined.

Now, as to the examination of a bank proper.

The National banks are examined not less than twice a year and State banks are examined, in this State, I believe, not less than once a year. I believe twice a year is none too often, and if examinations could be made more frequently it would be better, and all examinations should be made without any regularity as to time so that every bank would be due for examinations at all times.

It is impossible to set any fixed rule as to conducting an examination. The examiner should always go into a bank with the feeling that the bank and its officers and employees are all right, but at the same time should adopt the motto of the man from Missouri, "They have to show me," as to every item of asset shown on their statements.

The cash, of course, must check to a cent and is practically always the first item checked after the work commences. The loans and discounts should receive a large share of the examiner's time, as it is in this item that the largest part of a bank's resources are invested. Every piece of paper in the bank should be handled by the examiner himself. They should be checked up not only as to whether the totals agree with the statement, but as to their probable worth and the responsibility of the makers and endorsers, especially as to over loans. A list of all the large loans of a bank should be retained by the examiner and compared by him in subsequent examinations of the same bank to see whether they are increased or diminished. If these lists are properly made and arranged the list would show the large loans for several years at a glance. The examiners should look with suspicion at old notes and renewals by interest payments.

The most prevalent irregularity found by examiners is in the notes and discounts by over loans. The National Banking Act positively forbids the loaning of more than ten per cent. of capital to any one firm or individual, and this very matter is the stumbling block of many otherwise good banks and bankers.

Comptroller Ridgley in an address at St. Louis last October put the whole matter in a nutshell when he said: "No National bank whose officers strictly obeyed the National Banking Laws ever failed." He also stated that "The limit on loans is the most useful and valuable of all the restrictions of the National Banking Law."

The Penalty for Excess Loans.

From my own experience as a bank examiner I know that many of the National banks violate to some extent this provision of law and still the penalty provided by statute for violating this law is corporation death; that is, a forfeiture of their charter. This penalty I consider too severe and it has never been enforced to my knowledge. Many bankers who live up to all other laws and rules violate this section habitually. The penalty for this violation should be, in my estimation, changed to a fine of about five hundred dollars, and after a few enforcements of this penalty the practice of making excessive loans would be effectually stopped as then the facts would be published as any other important news item and the rest of the bankers, knowing that punishment would surely come, would hesitate a long time before they loaned over the limit. If no National bank ever failed that lived up to the law in this particular, why not stay on the safe side? I have no doubt the same could be said of State banks.

Not Bank Examiners Enough.

The examiner should certainly be on a salary and not on a fee basis as the National examiners now are, and not have too many banks to look over. There are now but seventy-five examiners for the whole of the National banks of the United States, which exceed to-day 5500 in number. Better results would come from the salary system because an examiner would stay and make a bank clean up many matters and not leave the city until they are fixed up.

The calling in of an outside man from the board of directors to assist in looking over the notes, stocks, bonds and other assets would be an improvement. The trouble with directors generally is that they think that their bank is conducted as well as it should be and does not need looking after. I doubt very much if much can be accomplished along this line unless the law requires directors to certify to an examination with a complete list of notes, stocks, bonds, etc., showing those that in his judgment are good, doubtful and bad, and all excessive loans.

In Minnesota and Wisconsin there are but three National bank examiners having charge of about 350 banks. No trouble has come to any National bank here for the past eight years until one came in each of these States in the past few months. That is a record to be proud of by every one connected with the system.

In banks that employ more than a small amount of help the practice of rotation in clerks should be increased as fast as possible; all the clerks in a bank should be moved often from one kind of work to another. When a clerk goes home at night he should not know for certain that he will be on the same set of books the next morning.

A Menace to Banking.

The greatest menace to banking in the entire world to-day is the dealing in things not in existence; that is, in futures and options. All bankers should refuse to deal in anything of this nature and not encourage it in others by loaning to men engaged in such deals. It cannot be stated too strongly. It has no place in banking. We have the safest currency on the earth; why not finish the job and settle all these questions for ever?

Government Guaranty of Deposits.

I am in favor of the Government guaranteeing deposits, which can be done far easier and at such a small expense that it would surprise you. Nearly everything else is insured these days and fifty cents a thousand yearly on deposits would have paid every loss by bank failure for the past forty years.

All Banks Should Be Under Supervision.

I am firmly of the opinion that all bankers should come under State or National supervision. The average loss to depositors of failed National banks for thirty-nine years is a little over twenty-five per cent. The cost of receiverships in the same time has averaged 8.4 per cent.

Receivers of National banks are appointed by the Comptroller of the Currency. All the cash is sent to the United States Treasurer as fast as it comes into his hands, and dividends are paid in checks similar to those used for pensions and are signed by the Comptroller personally after the checks are prepared by the Receiver.

The Bankruptcy Act.—M. F. Bauer, of the American Exchange National Bank, New York, made an address at the recent convention of bank clerks at Minneapolis, on "The National Bankruptcy Act." After giving a brief history of the several acts passed prior to the enactment of the present law, he said:

"During the long intervals when no law of Congress was in operation, various States passed insolvency laws, while others had mere regulations and changes, of more or less importance, of the law of assignments. These statutes were limited to the boundaries of the several States, and could bind a resident only of that State. The confusion and dangers resulting from the different State enactments, in regard to insolvency, therefore, made it highly desirable that we should have a national bankruptcy law."

Editor Bankers' Magazine: Grand Rapids, Mich., July 6, 1905.

Sir: One of our customers filled out his check for $100, payable to the order of John B. Smith, and mails it to John B. Smith, and we pay John B. Smith the money. Later, our customer says he made a mistake, and intended the check for John A. Smith. Are we liable to our customer for his mistake?

CASHIER.

Answer.—The bank cannot be affected by what the customer *intended* to do, but only by what he actually *did*. The mistake was his own, and not that of the bank, and if loss resulted from it, he must bear that loss. The bank was bound to pay the check to the payee named therein, or to his indorsee, and having done this, it has the right to charge the check to the account of the drawer.

REVIEW OF CANADIAN BANKING, COMMERCE AND MANUFACTURES.

In examining the condition of Canada's finances for the past year, we find an immense growth in expenditure to keep pace with the development of the country and the consequent heavy demands. The revenue did not increase proportionately, but the ordinary revenue exceeded the ordinary expenditure by $9,000,000, though, with the capital expenditure added, there is a deficit of $1,250,000.

For the period covered in the reports of the last eight years there is a total of $278,232 to be added to the public debt, an average of $34,779. To-day we pay scarcely $9,000,000 interest on the public debt, while in 1897 we paid practically $10,700,000. Ordinarily there is cause for alarm when the increase in revenue is small, and expenditures are mounting rapidly. In this case, however, there is no cause for alarm, for there will be ample provision the coming year for this largely increased expenditure, and a surplus besides.

In effect, therefore, the enormous railway and canal building of the past decade and the marvellously successful effort made to attract settlers have added but a little over a million and a half to the debt burden of the Dominion while the population has increased fully a million. The Canadian credit is excellent, too, as will be seen by the reduction in interest paid while there has been an increase in the debt.

The tariff policy of the Government has been more clearly defined with the delivery of the last budget. The intention is again reiterated to adopt a system of maximum and minimum duties, retaining the British preference as a sort of "family concession" below the minimum rate of duty at which foreign goods will be entered. A commission of the Cabinet was appointed to inquire into trade conditions throughout the country and frame the new tariff in time for presentation to Parliament next year.

In view of the coming investigation by a tariff commission, only urgent changes were made, as follows:—

Rolled oats: This article was not mentioned specially, but had been included in a general classification. The result worked out that the duty on the raw material exceeded that on the finished article. The change imposes a duty of sixty cents per 100 pounds.

Dry white lead: The duty on this had been five per cent. for years, and not even the establishment of factories to manufacture this had been able to change this duty. The change imposes a duty of thirty per cent. on dry white and raises that on white lead ground in oil from twenty-five to thirty-five per cent.

Cement: The duty on this article has been levied per one hundred pounds, the weight of the packages to be included in the weight for duty. British cement, Belgian and other foreign cements are brought in in casks and barrels, the weight of which is considerable. To remove the discrimination, therefore, between this and cement imported in bags, a duty of twenty-five per cent. ad valorem has been placed on the bags which contain cement.

Wines: We are sending a considerable quantity of goods to South Africa, but so far South Africa has not been able to send very much to us. She has given us the advantage of preferential trade with her, which so far has not been very useful on her side. The articles she has to sell are not purchased to any great extent in Canada. She could send us, however, light wines, which are somewhat heavier than the French light wines and consequently subject to a higher duty. To encourage this trade, therefore, these wines will be admitted at the same rate as the French, twenty-five cents per gallon.

Settler's Effects: We provide that settler's effects should be admitted free. The contention has been raised that a contractor with a large amount of apparatus for construction purposes and his construction plant is entitled to bring that in as settler's effects. To avoid this difficulty this item will specify what articles are considered to be settler's effects, so that articles for sale or for manufacturing plants will be excluded.

In the last budget molasses from British West India was placed on the free list with the condition that importations must come by direct vessel. This has worked out as a hardship on Newfoundland, which sends out to the West Indies fish-laden ships that bring back molasses destined for use in Newfoundland and Canada. This has not been treated as direct importation. An extension, therefore, is made to admit this as direct importation so long as it remains in the original package.

General Condition of Business.

Reports of the present condition of crops in all parts of the Dominion are most encouraging. From East to West the prospects are even more than usually favorable. Taking the past ten years as a basis the average yield has been 18.44 bushels per acre in Manitoba, and 18.79 in the Territories, and from present indications, this year's crop will, at the very least, be an average one, which will make the total yield of wheat in Manitoba and the Territories about 75,000,000 bushels. In this connection it will be interesting to note the actual crop for a number of years past, the acreage, yield per acre, and the estimated yield this year.

MANITOBA.

Year.	Acreage.	Yield per acre.	Total yield.
1895	1,140,276	27.86	31,775,038
1896	999,598	14.33	14,371,806
1897	1,290,882	14.14	18,761,950
1898	1,488,232	17.01	25,313,745
1899	1,629,995	17.13	27,923,230
1900	1,457,396	8.90	13,025,252
1901	2,011,835	25.10	50,502,085
1902	2,039,940	26.00	53,077,267
1903	2,442,873	16.42	40,116,878
1904	2,412,345	16.60	40,000,000
1905	2,643,588	*19.00	*50,228,172

Ten year average, 18.44.

NORTHWEST TERRITORIES.

Year.	Acreage.	Yield per acre.	Total yield.
1898	307,580	18.01	5,542,478
1899	363,523	19.02	6,915,623
1900	412,864	9.75	4,028,294
1901	504,697	25.37	12,808,447
1902	625,758	22.30	13,956,850
1903	837,234	19.14	16,029,149
1904	965,459	17.40	16,875,537
1905	1,108,272	*19.00	*21,057,168

Five year average, 18.79.
*Estimated.

Not only wheat but barley, oats and hay are record crops this year. In older Canada conditions are good, though probably not much better than in the past years.

Turning now to financial conditions we find lately that the ease in money in the United States has created a market for the best class of our securities, and many millions of bonds, which otherwise might have had to await an improvement of conditions in England have been sold in the United States. In addition to this, large sales of Canadian securities have been made to international banking houses who have the command of European money centres, as well as of New York. Not only are these facts of great significance to the general credit of Canada, but they are a sufficient warrant of our ability to press with unusual vigor the many important enterprises in transportation now being carried on or about to be put in operation. Our outlook was never before so large in scope or so hopeful. Nevertheless, there are many minor features which are not in themselves favorable to rapid progress, and the effect of these may be partially seen in our exports and imports—to the extent that a decline in exports represents a decline in purchasing power, and an increase in imports represents an expansion in the scale of living.

In the five years from 1890 to 1894 inclusive, years mostly of expansion, the excess of imports was $76,500,000. In the next five years, 1895 to 1899, inclusive—three of which were years of economy, the excess of exports was $44,500,000, the last year showing a slight excess of imports.

In the five years from 1900-1904, inclusive, the excess of imports was $53,300,000, the first two years showing a small excess of exports. Of this $53,300,000, however, $45,600,000 is for 1904 alone, and it was by the concurrence of unusually large imports and unusually small exports that such a wide difference was possible. There was a loss in exports of wheat of about $10,000,000, in dairy products and eggs of $3,000,000, in fisheries $1,000,000, in lumber and kindred products $3,000,000; and in cattle, bacon, and other products, after some individual increases, a net decrease of about $3,000,000. It is true these were partially offset by large gains in the net results from the products of mining, and by gains in many minor classes of agricultural products, but even after having regard to a largely increased consumption at home, there was clearly a serious loss of purchasing power as compared with the previous years. And except in the very important article of wheat, the year 1905 is a repetition.

One might have expected to see this loss of purchasing power reflected in the imports, but it cannot be traced there. Of the $18,000,000 increase in imports almost $5,000,000 is for coal, and while some of this may represent increase of business, much is doubtless part of the permanent loss arising from the unusual winter. Under about thirty headings, of which twenty-five are manufactured goods, large increases are found. Of these one of the largest is for lumber, $2,000,000, on account of certain conditions in the United States. Of the decreases represented under twenty headings, eight are for products of iron and steel, and agricultural implements, $2,500,000.

The fiscal year just closed shows an excess of imports of $71,356,589. In examining into this there appears to be a rapid growth in the amount under the heading, "articles of voluntary use, luxuries, etc.," being $17,292,744 for 1904, and only $8,641,884 in the preceding two-year period.

Another unfavorable feature of the trade statement is the heavy falling off in the exports of agricultural products, such as grain and flour. It is largely to this class of exports that we must trust to overcome the adverse trade balance, and turn the tide again in our favor. In other words, we must meet our enormous debit balance abroad with exchange created by a heavy outward movement of agricultural products.

Last year we had a small crop and high prices, with the resultant paralysis of our export trade, the figures showing a decrease in the value of the imports of $7,144,725 from the total of the previous year, the aggregate movement constituting the smallest volume since 1901, when exports of this class were valued at $24,781,486 against $29,994,150 the past year. The only redeeming feature of the entire exhibit is in the item of exports of manufactures, which increased by $1,327,292, or approximately seven per cent. during the year. During the same time there was an increase of $6,000,000 in free goods, and as these are regarded as largely raw material for manufacture, the item is also construed as favorable, the tendency of the importation of raw materials to increase and of manufactured goods to diminish relatively being regarded as a favorable indication, so long as there is no evidence of reduced consumption, and especially if it is accompanied by an increase in exports of manufactures. On the whole, therefore, the condition of our foreign trade appears to be stationary and not particularly encouraging, but with the increase in manufactures continued and good crops the trade of Canada should show improvement, not only in volume, but in kind.

Trade with South Africa.

In the development of this colony Canada is securing an ever-increasing share of business. To a slight extent this growth is being effected at the expense of the British manufacturer, but to a greater extent the encroachment is being made upon the province of the United States. Canada's total exports to South Africa last year aggregated £476,000, just double the value for 1900, and more than ten times that of 1899. Of course this trade is facilitated now by the preference extended by South Africa, and by the direct steamship connection now established more regularly.

Trade with Great Britain.

The bulk of Canada's exports go to the British Isles—ninety-three per cent. of our butter, ninety per cent. of our cheese, ninety-eight per cent. of our eggs, seventy-six per cent. of our poultry, ninety-nine per cent. of our bacon. These figures are taken from 1904 statistics. But, with the exception of cheese, Canada's present contributions to the British market form an insignificant proportion of Great Britain's enormous purchases. Out of $584,000,000 worth of food products, only $78,000,000 worth, or thirteen per cent., came from Canada. It is obvious, therefore, how important this market is to Canada.

Progress of Canada's Railways.

The total Government expenditure on railway construction prior to and since Confederation, up to July 1, 1904, amounts, on capital account, to $142,648,039, which includes the sum of $25,000,000 granted to the Canadian Pacific for its main line. In addition there has been spent from the consolidated fund a total of $139,556,724, including $31,341,933 paid as subsidies to railways other than the Canadian Pacific, and $107,110,755 for working expenses of the Government railways, making a total expenditure of $282,204,763. Of this amount the sum of $13,881,460 was expended on construction works prior to Confederation, on portions of what is now the Intercolonial Railway System. The total revenue received from the Government railways from July 1, 1867, to July 1, 1904, amounts to $97,569,608.

The mileage of steam railways on June 30, 1904, was 19,611—an increase of 534 miles, besides 3,327 miles of sidings. The number of miles in operation was 19,431, the principal lines being: Canadian Pacific, 8,062; Grand Trunk, 3,158; Intercolonial, 1,342; Canada Atlantic, 458; Canadian Northern, 1,349. Up to date the earnings of this year surpass those of a year ago quite considerably.

The Canadian Northern is now attracting some attention. Gradually it has extended until it bids fair to become a second transcontinental. Already boasting of 1,579 miles of rail, it is adding this season some 600 miles more. Besides the main line it has branch lines reaching out to the wide farming areas of Manitoba, and all centreing in Winnipeg. The bulk of the road's traffic thus far has consisted of grain, cattle and lumber, to which must be added general merchandise. The prospects for this road are exceedingly bright, and with the increased mileage contemplated, which will connect Edmonton, under the lea of the Rocky Mountains, with Toronto, Montreal, and Quebec, a corresponding increase in its business is expected.

Canadian Failures.

Canadian insolvencies for the second quarter of 1905 compare favorably with the same months last year, liabilities decreasing over fifty per cent. As to number, the decrease from last year's manufacturing record was largest in leather and clothing, while liabilities made the best record in woollens, lumber, leather and miscellaneous. Trading insolvencies were more numerous in general stores, clothing and miscellaneous, while a decrease of ten occurred in groceries and meats. Exactly half of the trading branches of business reported smaller liabilities and seven were less satisfactory. The widest difference was a decrease of $150,000 in general stores, while in groceries and meats the improvement amounted to about $100,000. The largest adverse balances were about $100,000 each in clothing and dry goods. Taking the figures for the first six months of this year the total number of failures is found to be 674, involving $7,239,384 of liabilities. This is an increase of twenty per cent. in number as compared with the first half of 1904, and an increase of nearly forty per cent. in liabilities.

Canadian Banking Prospects.

The higher level attained by bank shares recently has led investors to examine into the outlook for banking profits in the Dominion. Evidently this is regarded as favorable, for the buyers seem to be more insistent in their demands than the sellers. So far as the immediate future is concerned, it seems to promise that in 1906 the banks will be able to transact considerably more business than ever before. There is apparently no check to the increase in deposits, and none is to be anticipated, while well-to-do immigrants are coming in at the present rate, while the farmers of the East are receiving such satisfactory returns for their dairy and other produce, and while the Northwest is yielding such enormous wheat crops to be sold at such remunerative prices. Having regard for the improvement in general conditions as compared with what was in evidence last year it seems certain then, if no untoward event happens to destroy public confidence, that the business that will fall to the share of the banks will be very large indeed. If they could transact it at the same rates they got last year, or two years ago, and if their losses are not increased, profits will assuredly reach a new high record.

The Canadian chartered banks have passed through another prosperous year, as shown by the net earnings reported. The total reserve fund has grown considerably. A year ago it was sixty-four per cent. of the total paid-up capital. It is now sixty-seven per cent. Foreign deposits in Canadian banks also considerably increased. Call loans in Canada increased slightly. The note circulation is limited by law to the amount of paid-up capital, and it has very nearly reached that limit, rendering it necessary that capital be increased in order to allow of a circulation large enough to carry on the business of the country.

One of the most striking features of the Canadian chartered bank statement for July 31 is the large expansion in call loans here and abroad. An increase in this item is rather unusual at this time of the year when the banks are preparing to meet the largely augmented demands at home for crop moving purposes. However, the chartered institutions are now arranging in order to meet the fall demands from the agricultural districts and are prepared to move the harvest with the minimum disturbance to rates characteristic of the Canadian banking system. The total loans are now $557,426,962, against $545,507,894, an increase of approximately $12,000,000 over June, of which an $8,000,000 expansion was contributed by "call loans elsewhere." A year ago total loans were $505,554,194. Note circulation decreased a trifle during the month, but still exceeds the total a year ago by $1,300,000. Deposits reflected a substantial increase over the previous month, being $522,560,767, compared with $512,600,767 on June 30, and $463,689,383 a year ago. The statement in detail is given on the preceding page.

BOOK NOTICE.

THE BANK AND THE TREASURY. By Frederick A. Cleveland, Ph.D., Professor of Finance in the School of Commerce, Accounts and Finance, New York University. New York: Longmans, Green & Co.

Professor Cleveland has so thoroughly considered many of the present banking and currency problems that it is to be hoped every student of these problems will read what he has to say. To attempt to summarize an important work like this, or to analyze its deductions, would only result in giving an imperfect idea of what is really one of the most valuable of recent contributions to American financial literature.

Concerning elasticity, Professor Cleveland says that this is not a question of note issues—and he deprecates the present tendency to make the National bank notes a permanent circulation—but that it is a matter which each bank can settle for itself through adequate capitalization and adequate redemption equipment. An amendment of the reserve provision of the National Bank Act is favored, prohibiting the redeposit of reserves—virtually a loan from one bank to another—and authorizing banks to invest their surplus capital resources in first-class marketable securities, to be considered as a part of the redemption equipment. It is claimed that the adoption of this provision would at once add over $400,000,000 to the assets of the National banks "available to procure money by sale or by rehypothecation without disturbing the credit relations of other institutions."

How this would work in practice is not clearly shown. If, for example, the banks of the West had, let us say, $100,000,000 invested as above; desiring to procure the money for these securities, they would order them sold on the New York Stock Exchange. But how could they be sold unless fresh loans were negotiated by the buyers, and would not New York still be compelled to find the cash to remit to the Western banks?

It is contended that the present arrangement ties the National banks to speculators. But the speculator who in dull times employs money for which there is no demand in the localities where the money primarily belongs, may not be an entirely useless part of the financial machinery. There is danger of the hobgoblin of speculation being used for more than it is worth. As a matter of fact the funds of our country banks that find their way to the speculative centres are generally among the best-secured loans these banks have. First, between the country bank and the speculator stands the large and strong city bank; second, the latter bank almost invariably requires practically absolute security for such loans. But the whole question is a larger one than that of mere security.

The banker who desires to make the most effective use of the resources of his institution ought to study Professor Cleveland's book. It is far more than a theoretical consideration of banking problems, and will be found of great practical benefit to those who heed the lessons it conveys.

MODERN BANKING FIXTURES AND FURNITURE.

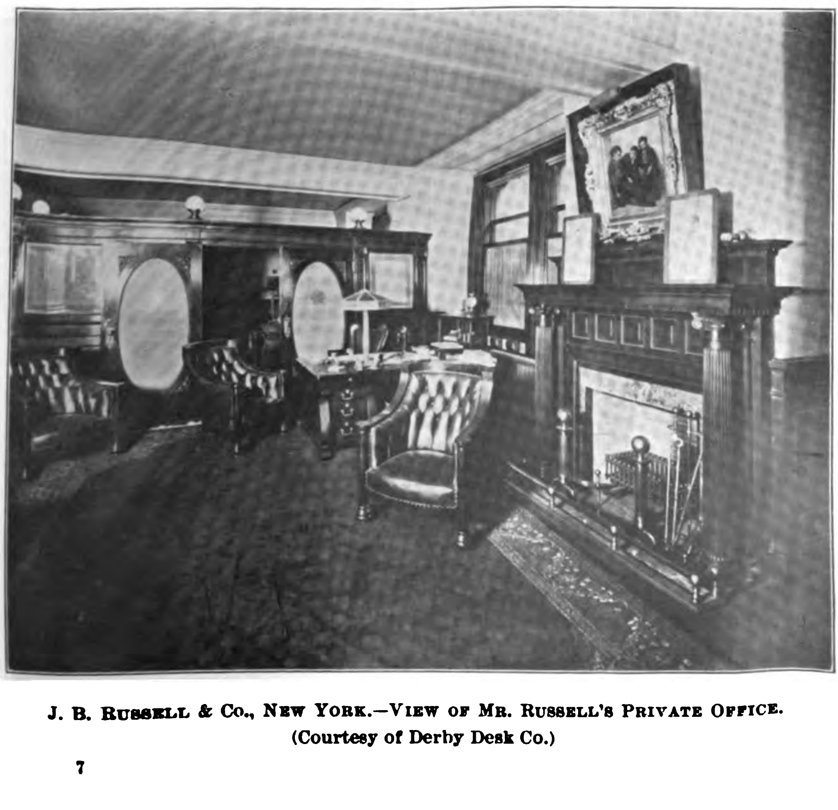
By Paul L. Barrett.

PART I.

One has only to step inside any of our modern banking institutions to note the change which has gradually been taking place during the past few years in regard to the comfort and convenience of those whose patronage forms the backbone of their strength.

Having devoted years to the building up of an organization capable of husbanding the wealth and resources they now handle, the banks of the country are now facing the keen competition of their neighbors for new business as well as striving in every way to hold their own accounts. Even the world's best-known woman financier, Mrs. Hetty Green, who is so well known by her simplicity and frugal life, has just recently availed herself of the use of the privileges of one of New York's greatest and most elaborately fitted out banks. Within these inviting walls she spends much of her time, where there is every attention paid to a lady's convenience and comfort.

One of the principal factors in planning new buildings or banking rooms is the general scheme of the interior fitting and furniture. The writer of this article wishes merely to call attention to some of the work that has



J. B. Russell & Co., New York.—View of Mr. Russell's Private Office.

LADIES' ROOM, J. B. RUSSELL & CO., NEW YORK.
(Courtesy of Derby Desk Co.)

been accomplished along this line, and give a few hints to those who contemplate building or furnishing new offices or renovating old ones.

As electricity seeks its course through paths of the least resistance, so the general public seek those places where their business will be done with the greatest amount of despatch and comfort to themselves. In arriving at a definite conclusion as to plans, etc., much depends upon the general physical condition of the building as well as the nature of the business it transacts. However, one or two points should always be considered: the convenience of those who have business to transact, and the general light and ventilation for the employees. Nothing so lames the efficiency of the working staff of any institution as poor ventilation and light, which produce a certain dullness that no amount of exertion can overcome. A trip through the new quarters of the International Banking Corporation, and the National Park Bank of New York, and the First National Bank of Chicago, three of the largest institutions of their kind in America, illustrates what has been done recently to produce the best results.

The demand for this class of work has been so great during the past few years that some of the largest firms manufacturing commercial furniture have added to their business departments under the direction of architects skilled in every detail of this line of work, who furnish, in many instances free of any cost, plans and ideas of banking interiors, the composite result of the best that has been produced to date. In this connection attention is called to the illustrations accompanying this article: the ideas for this whole floor were framed and executed by one of these specialists. It may be said in behalf of this arrangement that the firm thus commissioned makes itself responsible not only for the faithful performance of the work, but also for the general results thus obtained.

In the selection of designs, care should be taken that they should not be more elaborate than the environment demands, as well as that they should fully come up to what it requires. The idea of extravagance and ostentation should be avoided for that which produces an air of dignity and business refinement. In this connection the best results are to be obtained by using rich material with plain designs. The Windsor Trust Company of New York impresses one particularly in this respect. Circassian walnut is used throughout; a very expensive wood, but wrought in such a plain but really artistic character of architecture as to give the impression of dignity and character.

Much can be accomplished by the proper selection of materials: those which blend with one another conveying the impression of a perfect unity. The office of J. B. Russell & Company, the financial agents of the new Illinois Tunnel Company, illustrated herein and considered among the finest on Wall Street, are an example of what can be done by careful planning in this respect. As one enters from the corridor of the Bank of America building, the banking screen with its marble base and cap of Westfield or dark green and its body or dado of the lighter serpentine form a fitting base for the wrought bronze work, which surmounts it. At the right of the entrance and extending down the private corridor is the partition work which divides the offices. Hand carved and made from the finest South African mahogany with an antique finish, the heavy pilasters surmounted by bronze electric fixtures of a plain design, this woodwork forms a fitting complement to the work as a whole. The hardware for all doors, the fittings for the grate, and the electric fixtures are all made from solid bronze and to match in design and finish the banking screen and the rail. The light statuary finish is used on all metal work.

In passing, one of the illustrations shown here of the ladies' room should be noted. A few years ago such a thing was unheard of, but now a bank is not complete without one. So many ladies of the present day transact their own business, and its volume has become so great that the competition for the patronage of the fairer sex has become very keen, and many banks now advertise as having a maid in attendance. However, it has become such an important factor that the details of the ladies' department should not be overlooked. Perhaps some of the members of our own family have often had the disagreeable experience of standing in a line of men waiting for an uncivil or overworked teller merely to have a small check cashed.

In the October issue of this MAGAZINE the matter of furniture will be taken up and illustrations will be shown of some of the most recent productions in this line.

BOOK NOTICE.

THE FINANCIAL RED BOOK OF AMERICA, 1905 Edition. Price, $10. New York: Orlando C. Lewis & Co.

This is a list of about 18,000 names of wealthy people of the United States, arranged alphabetically by States, towns and names of individuals, together with office and residence addresses, and business connections.

It is not stated in the preface what standard has been employed in determining the admissibility of names to the list, so that we do not know just what constitutes a person of wealth.

There must be, of course, more than 18,000 people in the United States, who, judged by any reasonable standard, would be considered wealthy. But the difficulty of getting the names of all these people must be so great as to render the task practically impossible. What the publishers have done, however, is to make what appears to be an accurate list of the wealthier inhabitants of each of the States, classifying the names in a way that makes them easily accessible; and no doubt the list is as complete as it could well be made. People of large wealth, or many of them at least, are not proclaiming the fact from the house-tops, particularly if there is a tax assessor within hearing distance.

Besides the list of names, the book also contains a complete list of all stock exchange members in the United States and Canada.

The compilation will be found exceedingly valuable to banks, trust companies, bond houses, and all others desiring to reach the wealthier classes of the country.

A TYPICAL BOSTON BANKING HOUSE.

Among the firms that have long and worthily sustained the high reputation that has characterized the leading American banking-houses, Messrs. Harvey Fisk & Sons, of New York and Boston, deservedly hold an eminent place. The present firm was established March 26, 1885, by Harvey Fisk and his three sons, Harvey Edward, Charles J. and Pliny Fisk. Harvey Fisk was head of the old and well-known house of Fisk & Hatch, of New York city, which in 1862 did such a large business in Government bonds. At this time Jay Cooke & Co. were the fiscal agents of the Government, but as a matter

OFFICES OF HARVEY FISK & SONS, BOSTON.

of fact, however, the bulk of the securities passed through the hands of Mr. Fisk's firm.

In 1885 Mr. Fisk withdrew from Fisk & Hatch and established the present house. Since that time many changes have taken place in the personnel of the firm. Mr. Harvey Fisk died in November, 1890, and in July of that year Mr. Alexander G. Fisk was admitted to partnership. Subsequently Mr. H. E. Fisk retired, and Messrs. Wilbur C. Fisk, Wm. M. Barnum, Theodore H. Banks, Herbert L. Denny, R. H. Higgins, Albert A. Tilney and Wm. S. Fanshawe were admitted.

The Boston house was established in 1894, by Mr. Tilney, who came from New York for that purpose. The local business grew rapidly, and in one year had become so extensive that it was deemed essential to have a resident

HARVEY FISK

(Founder of the Firm of Harvey Fisk & Sons.)

member of the firm located in Boston. Alexander G. Fisk came on from New York, and made his headquarters in Boston, and with the assistance of Mr. Tilney took control of the office in that city. On account of his valuable services in building up the business, Mr. Tilney was, at the suggestion of Mr. Alexander G. Fisk, made a member of the firm.

The Boston house began business at 75 State Street, and from there removed to 13 Congress Street; then to 19 Congress, and later to Post Office Square. On March 26, 1905, on the twentieth anniversary of the founding of the house, it again moved into the Monks Building, at 35 Congress Street, where it now occupies the major portion of the ground floor of this modern business building, in the heart of the financial district. The new quarters are as handsome and commodious as those of any similar firm in the city.

A broad table-topped rail separates the public from the office staff. Near the entrance at the front of the office are the desks of Mr. Fisk and Mr. Tilney, and the remainder of the front is enclosed as a private office. In the rear of this are the desks of the bond men, and further back are the delivery department, with separate entrance for messengers, the stock department, and the telegraph and telephone rooms.

All the interior woodwork and office furnishings are of selected mahogany, from the workshops of Irving & Casson, polished to a dull finish, with beautiful hand carvings. The Cashier's window is protected by a heavy grille of antique bronze and the electric fixtures are of special design to harmonize with the other appointments.

The new offices, both in equipment and convenience of arrangement, are in keeping with the importance of the house itself.

Harvey Fisk & Sons deal only in the very highest class of securities; such as high-grade railroad bonds, municipal bonds of the large cities, and Government bonds. One of the important issues floated by the firm was that of the American Locomotive Co., whose capital stock of fifty million—twenty-

OFFICES OF HARVEY FISK & SONS, BOSTON.

OFFICES OF HARVEY FISK & SONS, BOSTON.

five million common and twenty-five million preferred—was brought out at 110 for one share preferred and one share common as a bonus.

The stock is now selling at 114 for the preferred and fifty-three for the common.

The firm are members of the New York and Boston Stock Exchanges, but do only a cash business in stocks.

Banks, trust companies, Savings banks, and investors generally will find the specialized experience of Messrs. Harvey Fisk & Sons of great assistance in arriving at a correct estimate of the value of investments.

BOOK NOTICES.

WILLIAM SEWARD BURROUGHS. Detroit, Mich.: Burroughs Adding Machine Co.

Mr. Burroughs was the inventor of the Burroughs Adding Machine, and his biographer has briefly sketched the story of his life—the struggles and final success. A man who did so much to lighten the drudgery of bank and office work is certainly entitled to grateful remembrance. Besides this worthy achievement, Mr. Burroughs was a man of remarkable perseverance and force of character, and his career gives an example of what these qualities, joined to natural ability, can accomplish.

FOREIGN COMMERCIAL GUIDE: Panama. Edited by Edward James Cattell; published by the Philadelphia Commercial Museum.

This is a full and excellent description of the new Republic of Panama, with a full-page map of the country. The subjects treated of are: the physical features, form of government, climate, banking, trade centers, customs regulations, commercial travellers' licenses, patents and trademarks, shipping and railway communication, roads, telegraphs and telephones, imports, and the country's resources.

THE PHENIX NATIONAL BANK OF NEW YORK.

This institution is one of the oldest banks in the United States, having been organized in 1812. As it approaches the end of its first century, it is taking on fresh energy for a continued existence under conditions promising the same dignified and honorable record that has marked its entire history, and with the certainty of a still greater measure of prosperity. New and important interests—among the strongest in the country—have recently become affiliated with the Phenix National, and with the present strong foundations to build on, it may be positively asserted that the future career of the bank will be one of great growth and success. Indeed, the first statement issued after the new interests came into the bank showed that from March 14, 1905, to May 29, 1905, deposits gained $2,124,299.70. Following is a comparison of the condition of the bank on August 25, 1904, and on August 25, 1905:

Assets—	Aug. 25, 1904	Aug. 25, 1905
Loans and discounts	$2,978,078.89	$4,401,356.52
U. S. Bonds to secure circulation	50,000.00	1,000,000.00
Other stocks and bonds	354,475.69	502,623.82
Real estate	8,532.47	8,356.76
Cash and sight exchange	3,069,931.63	4,983,431.07
Total	$6,461,018.68	$10,895,768.17
Liabilities—		
Capital stock	$1,000,000.00	$1,000,000.00
Surplus and undivided profits	252,263.76	223,804.88
Circulation	49,400.00	1,000,000.00
Deposits	5,159,354.92	8,671,963.29
Total	$6,461,018.68	$10,895,768.17

The Phenix National Bank was established in 1812, and continued as a State institution until 1865, when it entered the National banking system.

Since entering the National system the charter of the bank has been twice extended for a period of twenty years—on June 22, 1885, and June 22, 1905.

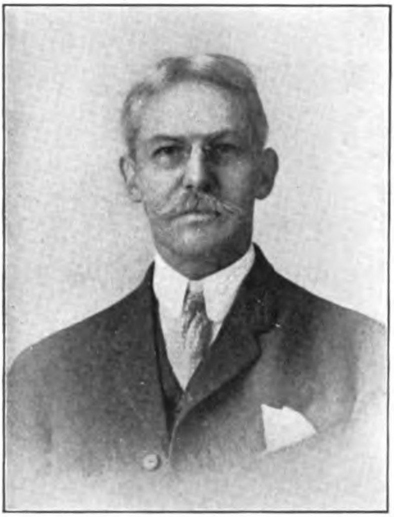
A career of enlarged usefulness was assured for the Phenix National Bank when in April of the present year a controlling interest in the stock was purchased by a sydnicate composed of Messrs. J. P. Morgan & Co., August Belmont & Co., of New York, F. E. Marshall and associates, the National Bank of Commerce in St. Louis, and E. F. Swinney, President of the First National Bank, Kansas City, Mo. As a result of this change of control the active management of the bank passed into the hands of F. E. Marshall, who came to New York from St. Louis, where he was Vice-President of the National Bank of Commerce. A brief sketch of Mr. Marshall's business life will be found interesting and instructive.

He was born at Unionville, Mo., July 15, 1860, of Virginia and Kentucky ancestry. His father, Hugh D. Marshall, is a well-known lawyer and banker, being President of the Marshall National Bank of Unionville, Mo.

The son was educated in the local schools of his birthplace and at the Missouri State University, Columbia, Mo. At the age of eighteen he became bookkeeper and Cashier in his father's bank. In 1888 he was appointed National Bank Examiner for Missouri and Kansas, his territory also embracing portions of Louisiana, Kentucky, Texas, and other States. He served in this capacity for four years, resigning to accept the position of Vice-President of the National Bank of Commerce, Kansas City, Mo. Later he became Cashier of the Continental National Bank, St. Louis, and his promotion to the Presidency of this institution followed. Under his management the bank was so successful that in six years it increased its deposits from $3,000,000 to $15,000,000. The Continental National Bank was subsequently

AUGUST BELMONT,

Vice-President Phenix National Bank.



GEO. M. COFFIN,
Vice-President Phenix National Bank.

ALFRED M. BULL,
Cashier Phenix National Bank.

merged with the National Bank of Commerce, one of the largest and most successful banks in the West, and Mr. Marshall was elected Vice-President, resigning in April last to become President of the Phenix National Bank, of New York.

The results achieved by Mr. Marshall in the various responsible banking positions he has held, his energy and capacity, and his wide acquaintance among the bankers of the country, assure a repetition of the same success for him in the New York financial field that he has won elsewhere.

The Vice-Presidents of the bank are August Belmont and Geo. M. Coffin. Mr. Coffin entered the office of the Comptroller of the Currency in 1886, and from 1888 to 1896 was in charge of the Division of Reports in the Comptroller's Bureau. He was made Deputy Comptroller on the recommendation of Comptroller Eckels. In September, 1898, he resigned and came to New York to accept his present position.

Mr. Coffin is the author of a treatise on the National Bank Act, and is in demand as a speaker at bankers' conventions.

Alfred M. Bull, Cashier, has been in the service of the Phenix National Bank for forty-three years, rising to his present office from a messenger.

Leonard B. Mallaby is the efficient Assistant Cashier.

The directors of the Phenix National are: August Belmont, of August Belmont & Co.; E. W. Bloomingdale, of Bloomingdale Bros.; Alfred M. Bull, Cashier; D. Crawford Clark, of Clark, Dodge & Co.; Geo. M. Coffin, Vice-President; Henry W. Eaton, Manager Liverpool & London & Globe Ins. Co.; Elbert H. Gary, chairman board, U. S. Steel Corporation; R. H. Higgins, Jr., of Harvey Fisk & Sons; Lewis Cass Ledyard, of Carter, Ledyard & Milburn; Henry K. Pomroy, of Pomroy Bros.; J. C. Van Blarcom, Vice-President National Bank of Commerce, St. Louis; George Coffing Warner, attorney; Irving A. Stearns, President Coxe Bros. & Co.; Frederick D. Underwood, President Erie Railroad Co.; Robert P. Perkins, President Hartford Carpet Corporation; Finis E. Marshall, President.

NEW BUILDING OF THE UNITED STATES FIDELITY AND GUARANTY COMPANY, BALTIMORE.

With that progressive and enterprising spirit which has always characterized its management, the United States Fidelity and Guaranty Company is erecting one of the most architecturally beautiful buildings in Baltimore.

This company was particularly unfortunate as the result of the great fire, because the building which it then occupied, and which during the preceding year had been remodeled and beautified, at a cost of about $80,000, was among those destroyed.

New Building of the United States Fidelity and Guaranty Co., Baltimore.

Notwithstanding this misfortune, the company points with pride to the fact that within three days after the fire had started it not only had obtained temporary quarters, but had resumed the transaction of business.

Substantial progress has already been made on the new building, and it is confidently expected that the company's large force of employees will be comfortably housed in the new structure before the first of the year.

The building is being erected at the southwest corner of German and Calvert streets, the site of the company's former home office building. It will cover a lot south sixty-eight feet four inches on Calvert street and ninety-two feet nine inches west on German street, which is considerably larger than the lot upon which the old building stood.

Designed in the spirit of the modern French school, adapted to present American requirements, the new building will be a striking addition to the group of imposing structures now being erected in this, the heart of Baltimore's financial district.

Though the plans provide for as much window area as possible, so as to admit light, the building nevertheless will be perfect in its proportions, with a strong and pleasing tout-ensemble, and representing in its noble appearance the purpose for which it is being erected. The building when completed, including its site, will represent a capital at $300,000. The first and second floors forming the base are being treated with heavy rustification, denoting strength and durability. The shaft from the third to the seventh floor, framed by substantial stone piers and arches, is crowned by the seventh story, with an ornamental cornice and plain parapet. The first or ground floor will have three banking rooms, each with separate entrances, fireproof vaults and toilets. The office entrance proper will be on German street, leading through a vestibule into the stair hall and elevator lobby. The second and third floors are to be subdivided into spacious, well-lighted offices and toilets, ante-rooms, etc., and are for renting purposes. The fourth, fifth and sixth floors will be used by the various departments of the company, and in order to admit light and air from the three street fronts, these floors will not be subdivided. The executive offices and reception rooms will be on the seventh floor.

Each floor will have fireproof vaults, ample toilet facilities and high speed electric elevator service. The building will be heated by steam and illuminated by electric and gas lighting. It will have the most approved sanitary plumbing system, water filters, mail chute and other features peculiar to a modern, well-equipped office building.

The finish throughout will be of quartered oak and the floors of terrazzo, marble or hardwood. The construction will be fireproof throughout, with steel columns, girders and beams and terra cotta arches. The street fronts will be faced with granite and Indiana limestone; in fact, only the best materials and of the best quality have been selected by Messrs. Simonson & Pietsch, the architects. The contractors are Messrs. Cramp & Co. of Philadelphia.

The United States Fidelity and Guaranty Company began business in 1896 with a capital of $250,000 and no surplus. By its enterprising and up-to-date methods, however, it soon outstripped all competitors and for three years past has written more business than any other surety company. The capital has since been increased to $1,700,000, and notwithstanding the fact that it has paid seven per cent. in dividends during the past three years and six per cent. and five per cent. during the two years preceding that time, it has accumulated a surplus and reserves of $1,721,398.55, which added to its capital makes the total resources of the company $3,421,398.55. It has one of the best organized agency plants in the world, having representatives in every county of every State and Territory in the United States, except Oklahoma (from which it withdrew a short time ago), Canada, Hawaii and Porto Rico. In all it has about 3400 agents and 3000 attorneys representing its bonding department, besides upwards of 10,000 guaranteed attorneys.

The officers of the company are: President, John R. Bland; First Vice-President, J. Kemp Bartlett; Second Vice-President, George R. Callis, also Secretary-Treasurer; Third Vice-President, Richard D. Lang; Fourth Vice-President, Chas. O. Scull; Auditor, W. George Hynson; General Counsel, Isidor Rayner; First Assistant Secretary, W. W. Symington; Second Assistant Secretary, J. Frank Supplee; Third Assistant Secretary, Albert H. Buck.

DEPOSIT INSURANCE WITHOUT ADDITIONAL COST.

Experience of nearly a year and a half entirely devoted and hopefully sacrificed to the promotion of deposit insurance has taught me that by a very simple and sensible arrangement depositors in National banks can be fully secured against loss without cost to the banks; that almost all National banks would like to see all National bank deposits absolutely secure; and that Congress, instead of being an impediment, as some fear, would pass the necessary legislation, if any large number of National banks asked for it and even a few were ready to share the comparatively small expense of ascertaining the wishes of the American people and bringing the subject to the attention of their Representatives.

Faith in the success of this movement is based on the consciousness of having succeeded in another. When THE BANKERS' MAGAZINE, in July, 1898, published my article on "The Practicability of a Clearing-House for Country Items," scarcely any one but myself expected to see New England checks cleared within a year at Boston, whither I went a stranger with a letter of introduction from a New York bank President. Some Boston bankers thought I was attempting an impossibility. It took longer than I supposed it would, but was brought about on June 3, 1899, and New England checks have now been cleared at the Boston Clearing-House for over six years. Bankers again tell me I am attempting the impossible. I will only concede that it might be impossible without my aid, as it was in Boston. With me determined to succeed, it is practically impossible to fail, if I live.

After the bank failure in Oberlin it was the most natural thing in the world for me to go into Ohio and find out at first hand how citizens there liked suddenly losing or being deprived of their deposits. I went, uninvited, at my own expense and neither asked for nor received a stiver of compensation. Indeed, in the hurry of my leaving Oberlin by an early train, the ticket-agent making change shoved on me a Mexican half-dollar, which I kept some time as a souvenir and then sold for eighteen cents. But there was cause to be satisfied with that pilgrimage. I returned with petitions to Congress. The Oberlin Board of Commerce, at my suggestion, adopted what seemed to be the best plan then known, not as advocates of any particular plan, but as firm believers in making National bank deposits perfectly safe, if possible.

Once more, in Washington, I drew up a bill in conformity with the Oberlin petition, and it was introduced in the House of Representatives by the Oberlin member, Judge A. R. Webber, near the close of the last Congress, too late for action of any kind, but in time to arouse public discussion of the matter, which was the real object of its introduction.

The Webber bill to secure depositors in National banks was announced to the country in a too condensed telegraphic dispatch as a proposal to tax National bank deposits $1 per thousand. This brought out the criticism of bankers, who had been encouraging me for ten months, that deposit insurance would be an "expensive luxury" for banks having large deposits. I tried to explain that a dollar was the maximum tax, and would not be annual. The average tax would be twenty cents per thousand dollars. They could only think of it as a yearly tax of $10,000 on their ten millions of deposits. To meet this objection I at once proposed that the whole expense should be defrayed out of the present tax on circulation, which is ample for the purpose. The bill had thrown too much cold water on them. They could not be interested again. After that I decided not to ask banks to pay any additional tax at all to secure depositors against loss. The banks could not get rid of the tax on the circulation of National banks if they wanted to. At present it specially provides for the expense of the office of the Comptroller of the Currency, which is $500,000 annually. But the whole tax goes into the general fund of the Treasury, and the Comptroller's office expenses are paid out of that fund. The tax paid in the fiscal year 1904 was $1,928,837, or $1,400,000 more than the average expense of the Comptroller's office. In the forty years from 1865 to 1904, when the tax paid was $94,000,000, depositors lost $40,000,000 by failures of National banks. The average annual deficiency ($1,000,000) in the assets of failed National banks is much less than the disposable part of the tax. Whenever the losses exceeded the available proceeds of the tax, more funds could be very conveniently raised by temporary assessments, equally and ratably, on the deposits of all National banks. Such assessments could be easily repaid out of the tax on circulation, even though the losses considerably surpassed the present average. In this way, every contingency known in the past experience of depositors under the National banking system, or to be apprehended in the future, can be met and every loss made good without additional cost to the banks.

On my proposing this absolute security of all National bank deposits to a large bank, the Cashier exclaimed: "We have $3,000,000 of capital with $5,000,000 of surplus and you would make deposits in another bank as safe as ours!" Yes, safer; as safe in every National bank as if the capital of the smallest was hundreds of millions. More than that; if a bank lost $1,500,000 by embezzlement, like the First National of Milwaukee, it would be spared the humiliation of a run and its depositors the distress of a moment's doubt as to the safety of their money. When the Government discovered that a bank was insolvent, like the First National of Topeka, the Comptroller of the Currency would, as provided in the Webber bill, arrange with another bank in town to take over the deposits with the remaining assets, the Government agreeing to supply any cash necessary to pay the deposits in full on demand as usual. If the deposits of the Topeka bank had been removed to another bank next door or across the street, neither the State of Kansas with its half-million in the failed bank, nor any depositor, would have had any apprehension or inconvenience. The deposits, guaranteed by the Government, would have been paid whenever demanded. Whereas, money not required for use would have remained in bank undrawn.

Practically, under the proposed system, so far as depositors are concerned, there would be no more failures of National banks, nothing but a change of the deposits from one bank to another. Every dollar due from National banks, whether reserve agents or collecting banks, would be safe and available. Therefore, it is no wonder that nearly all the National banks I have seen would like to have all National bank deposits secured against loss by a Government guarantee.

In Washington the only objection I could learn of among Congressmen was the supposed opposition of the large cities. I studied particularly this opposition among National banks in Philadelphia, and found it confined to three or four. Nearly all favor deposit insurance as now proposed without additional cost to the banks. Large banks are loth to express any desire lest it be taken as a confession of weakness. They would like to have deposit insurance pressed upon them without the asking. City bankers are apt to think it will be impossible to obtain favorable action from Congress. Thus, in my observation, so far as there is any opposition in Washington, Congress fears that the large cities do not want deposit insurance, while the National banks in the large cities, for the most part, fear that Congress would not grant them this boon.

Deposit insurance with the cost paid out of the tax on circulation raises an interesting point in legislation. Shall Congress take from the public revenues annually, on the average, one million dollars now disbursed in ordinary expenditures and use it to insure deposits in National banks? The money is collected from National banks. It is now employed for no banking purpose. That is very much in favor of the project. But suppose that after Congress had enacted a law for the United States to guarantee all National bank deposits, unprecedented failures occurred, with deficiencies of assets several times worse than ever before. Would that be any objection to the plan? By no means. If such extraordinary losses ever befell depositors without insurance, it might ruin many and involve the whole country in a great financial disturbance that might react upon the Government and curtail its revenues embarrassingly. With insurance of deposits no depositor would be ruined by the failure of a National bank or cause the ruin of others on that account. No disturbance of business could arise from such failures, and no reaction upon the Government or curtailment of its revenues result. Whatever the deficiency in the assets of the failed banks it could be supplied by temporary assessments on all National banks and gradually repaid. It would be a great reform.

JAMES C. HALLOCK.

NOTICES OF NEW BOOKS.

[All books mentioned in the following notices will be supplied at the publishers' lowest rates on application to THE BANKERS PUBLISHING CO., 87 Maiden Lane, New York.]

THE ITALIAN IN AMERICA. By Eliot Lord, A. M., Special Agent U. S. Tenth Census—Social Statistics; John J. D. Trenor, Chairman of Immigration Committee, National Board of Trade, Annual Session, 1904; and Samuel J. Barrows, Secretary of the Prison Association of New York. New York: B. F. Buck & Co.

Although the Italian immigration into the United States has been rapidly increasing in recent years, rising from 43,967 in 1894 to 230,662 in 1903, yet, owing to the large number who have returned to their native country, it is estimated that the existing addition to our population through Italian immigration is not likely to exceed one per cent. of the present population of this country—hardly sufficient to have any material effect upon the dominant racial character of our population.

It seems rather remarkable that most Italians coming to this country remain in the North Atlantic States (72.7 of the total), while only a comparative few (2.2 of the total) go to the warmer South Atlantic States. A somewhat better showing is made for California and Colorado, and Louisiana and Texas also appear to be attracting the attention of Italians coming to this country.

While there is a strong tendency toward concentration in the larger cities, many of the Italian immigrants are going to the country, where, as a rule, they are succeeding; principally as producers of fruits and vegetables.

The volume reviews in a general way the progress made by the Italians in this country, their assimilative capacity, education, etc.

MOODY'S MANUAL OF RAILROAD AND CORPORATION SECURITIES. New York: Moody Publishing Co.

The new edition of Moody's Manual of Railroads and Corporation Securities is comprehensive and complete in every department. This year's edition comprises 2,600 pages. It covers the entire field of corporation investments. There are ten sections to the volume and each section has been prepared by its own special experts, who have made it their entire work to make the book complete and up-to-date. The increases in information over the 1904 edition are about as follows: In steam railroads, eighty per cent. increase; in electric traction companies, fifty-six per cent.; in gas and electric light company statements, forty-nine per cent.; in water supply companies, eighty per cent.; in telephone, telegraph and cable companies, thirty-two per cent.; in industrials, twenty-one per cent.; in mines, forty-eight per cent.; in banks and financial institutions, ninety per cent.

The Manual is an accurate and complete steam railroad reference book, and also covers the field of information relating to electric traction companies, gas, electric light, water supply, telephone and telegraph companies, industrial and miscellaneous corporations, as well as mines and oil corporations; banks and financial institutions, and members of the twenty-five stock exchanges in the United States.

Such a comprehensive work will be found highly useful to bankers and brokers.

OHIO BANKERS' ASSOCIATION.—The fifteenth annual convention of the Ohio Bankers' Association will be held in Cleveland, September 27 and 28. S. B. Rankin, President of the Bank of South Charleston, is Secretary of the association.

BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

NEW YORK CITY.

—The Merchants' Bank of Brooklyn has been merged with the Union Bank of Brooklyn.

—An international bank with a capital of $1,000,000 is being formed for the purpose of carrying on banking operations between the United States and Hungary and to handle the accounts of emigrants to this country from the Balkan Peninsula. The new bank is being organized by interests identified with the Hungarian General Credit Bank of Budapest in cooperation with a number of prominent New York banking houses including Kuhn, Loeb & Co., Ladenburg, Thalmann & Co., August Belmont & Co., and J. & W. Seligman & Co.

—Messrs. Fisk & Robinson's "Monthly Bulletin of Investments" for September says:

The market for investment issues of railroad bonds during August was quiet, such activity as was shown being largely confined to semi-speculative issues which were more directly affected by the course of the stock market. Some of the more strictly investment bonds appear especially attractive, and we believe this class of securities should advance with the fall demand.

The crops are now practically assured, the general yield will undoubtedly be far above the average, and an exceptionally heavy business is anticipated by the railroads.

The local money market was easy throughout the month, rates on call ranging from 1¾ per cent. to 2¼ per cent., averaging two per cent., with rates for four to six months ruling about four per cent. per annum."

—Robert Bayles, who up to a few years ago had served the Market and Fulton National Bank for forty-three years as Cashier, Vice-President and President, has resigned both as an officer and director and has been elected to the honorary place of President emeritus. Mr. Bayles is eighty-three years old. His successor as President of the bank was Alexander Gilbert, the present incumbent.

Robert A. Parker, credit man for the National City Bank and Vice-President of the Second National Bank, was recently elected a Vice-President and director of the Market and Fulton Bank, and has given up his place with the National City Bank.

—The employees of the New York National Exchange Bank are the publishers of "Our Neighborhood," devoted to the business interests of the immediate locality of the bank. It is an interesting and attractive publication.

—Members of Group VII of the New York State Bankers' Association had their annual outing on August 15, going to Far Rockaway, where they had a banquet and an automobile ride.

—The Oriental Bank now has deposits in excess of $11,000,000. This bank has adopted the plan of having its cash and securities examined by a firm of expert auditors, whose certificate is appended to the published statements.

—The Morton Trust Company has issued an interesting and instructive booklet on "Functions of Trust Companies." As officially reported on September 5 this company has deposits amounting to $58,365,554.22, and total resources, $67,354,211.75.

MIDDLE STATES.

Buffalo, N. Y.—The Union Stock Yards Bank, which was organized and opened for business November 10, 1904, is showing a continuous and gratifying growth, the deposits increasing from $187,784 on March 1 to $518,470 on July 1.

New Jersey Trust Companies.—The report of the sixty-two trust companies in New Jersey at the close of business on June 30 showed resources of $163,426,984; capital and surplus, $23,617,920; due depositors, $120,058,497.

Gouverneur, N. Y.—The First National Bank has issued an attractive booklet giving a brief history of the bank and describing and illustrating its modern fire and burglar-proof vault. From January 1, 1882, to January 1, 1905, deposits of the bank increased from $94,798 to $343,908.

Appointed Commissioner of Banking.—John A. Berkey was recently appointed Banking Commissioner for Pennsylvania, succeeding Robert McAfee, who has been appointed Secretary of the Commonwealth.

SOUTHERN STATES.

Texas Reserve Cities.—At the last annual convention of the Texas Bankers' Association, a resolution was introduced by B. H. Walker, of Lockhart, and amended by J. E. Longmoor, of Rockdale, favoring making Galveston a reserve city for National banks. Resolutions were also passed requesting all cities in the State to apply to the Comptroller for designation as reserve cities as soon as they have the required population—25,000.

Bristol, Tenn.—Va.—The First National Bank, on August 22, took possession of its new and modern banking-house at the corner of State and Fifth streets, marking the occasion by a reception to the patrons and friends of the bank. This institution reports $100,000 capital, $30,783 surplus and profits, and $606,402 deposits.

WESTERN STATES.

Omaha, Nebr.—The Omaha National Bank has issued a pamphlet giving a concise history of the progress made by the bank in the past thirty-nine years. When the first statement was made, October 1, 1866, the capital and surplus amounted to $54,221, and the deposits $120,669. On July 1, 1905, the capital was $1,000,000 surplus and profits $230,370, and deposits $9,310,514.

Oklahoma Bank Reports.—Through the courtesy of Bank Commissioner Paul F. Cooper, the Magazine has received reports showing the condition of the Territorial banks of Oklahoma at the close of business June 1. Their aggregate capital was $2,491,200; surplus, $293,701; undivided profits, $494,-448; deposits, $8,393,110. Total number of banks in the Territory reporting, 257; average reserve held, fifty-two per cent.; legal reserve required, twenty-five per cent.; average amount of capital employed, $9,685; average amount of surplus and undivided profits, $3,066; average amount of deposits held by each bank, $32,658; percentage of capital, surplus and profits to deposits, thirty-seven per cent.

There are also ninety-five National banks doing business in Oklahoma, with a capital stock aggregating $3,705,000; surplus, $460,800.78; undivided profits, $497,202.94; deposits, $14,521,149.32. The average capital stock of the National banks of Oklahoma is $39,000; the average surplus and profits, $10,084, and average deposits, $152,853.

It will thus be seen that the aggregate deposits of Oklahoma Territory is nearly $23,000,000, an increase of $4,500,000 for the year from June, 1904 to June, 1905.

Fort Wayne, Ind.—The White National Bank has been consolidated with the First National Bank, the title of the latter being retained. This will give the First National $500,000 capital, $250,000 surplus, and about $4,000,000 assets. There is no change in the officers, except that H. A. Keplinger, Cashier of the White National since its organization, becomes Second Vice-President of the First National.

—The new German American National Bank, which opened for business May 29, 1905, has very fine banking quarters. Counters and floors are of white marble, and the furniture of mahogany, making a very pleasing contrast. The stock of the bank is well distributed among nearly 200 leading farmers and business men. A savings department will be an important feature. A statement issued on May 29—nine days after opening—showed: capital, $155,623; deposits, $149,230.

Chicago.—President James H. Eckels, of the Commercial National Bank, has issued his valuable annual Crop Summary for the Mississippi Valley, based on letters from eleven hundred correspondent banks. These reports indicate that compared with last year the following increases in production may be expected: wheat, twenty-three per cent.; corn, thirteen per cent.; oats, nineteen per cent.; rye, fourteen per cent.; barley, thirteen per cent., and cotton twenty-eight per cent. less than last year.

Nearly all reports relating to general business conditions show that the position of the banks is better than in any previous year, and that they are well prepared to finance the crops.

Evanston, Ill.—The State Bank recently added $25,000 to its surplus, making the total $100,000—the same as the capital, with $4,324 undivided profits. Deposits are $1,350,000.

The bank was established in 1874 and incorporated as a State Bank in 1892 and has stood for progressive but conservative banking throughout its career, which accounts for its very material success.

Sioux City, Iowa.—On July 25 and 26 the bankers associated with the Farmers' Loan and Trust Company, of this city, held their annual convention here. Representatives of a number of banks were present, and the exercises were both interesting and enjoyable, a banquet and addresses on topics of practical concern being prominent features of the convention. One hundred and thirty people were at the banquet, James F. Toy, President of the company, acting as toastmaster.

NEW BANKS, CHANGES IN OFFICERS, ETC.

NEW NATIONAL BANKS.

Waxahachie—First National Bank; in voluntary liquidation August 3; consolidated with Citizens' National Bank.

QUALITIES CONDUCIVE TO SUCCESS.—In an informal talk recently before the New York University School of Commerce, Accounts and Finance, Jacob H. Schiff, the well-known New York city banker, said: "I am a simple man of affairs and shall speak to you of some of the facts and qualities which make for success in life. I shall speak, first, of moral character. You young men who start in business life, do not forget that the highest success a man can achieve is to be right, always right, always just. Never suffer an injustice. Never accept the smallest success if it is to be achieved by doing wrong. Your conscience must lead you, and if you will allow it to judge for you, you will do right and maintain a clear conscience. Always consider your word once given as something sacred; never violate a promise made; it is the only way to achieve lasting success and satisfaction."

THE MANUAL OF STATISTICS, 1905. The twenty-seventh annual issue of this standard publication has just appeared, and, as in the past, presents in the fullest but at the same time the most compact form, information in regard to railroad and industrial corporations, quotations for securities in the New York, Boston, Chicago, Philadelphia and other markets, and complete statistics relative to cotton and grain, together with a comprehensive directory of banks at leading cities. The work in short, affords in one convenient volume all the information constantly demanded by those interested in the financial markets and fulfills its purpose of serving as the standard reference book of its kind. The volume is brought up to date in every respect and is distinguished by its accurate and handsome typography, which adds greatly to its usefulness. Price, $5. The Manual of Statistics Company, 25 West Broadway, New York.

MONEY, TRADE AND INVESTMENTS.

A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, September 4, 1905.

THE PEACE CONFERENCE AT PORTSMOUTH, N. H. was the governing influence of the month, at least to the extent of commanding general attention. The outcome was a universal surprise. The envoys from Japan and Russia first met on August 5, and the first meeting of the Conference was held on the 9th. The following day Japan presented her terms, and on the 12th Russia made her reply. The terms were discussed until the 18th, when a deadlock occurred and an adjournment was taken for a week. President Roosevelt urged a compromise, and on August 29 the announcement came that an agreement had been reached.

It is not easy to trace any relation between the Peace Conference and the course of the stock market. During most of the time there was little hope that the Conference would end in peace, yet the stock market advanced with only an occasional setback. As soon, however, as the favorable result of the Conference was known there came a decline in the stock market. In Wall Street it is the unexpected that happens, and it is not unusual for the stock market to decline on good news or to advance on bad news.

As regards the general situation there is no doubt that the sentiment for some time has been bullish. This sentiment has carried the prices of many securities to a level higher than would have been conceived possible a few years ago. Reading last month touched 125¾ and not very long ago was considered dear at 30. Union Pacific, once in a Receiver's hands, sold at 138⅝. Lackawanna, which sold at 230 two years ago, touched 470 last month, and Jersey Central and Delaware and Hudson, which once were considered high-priced at 150, sold at 220 and 225 respectively. Some seventy-five stocks dealt in at the New York Stock Exchange are quoted at above par. There was scarcely a baker's dozen back in 1896.

It is difficult to make any comparison of present prices with those ruling at other periods without finding the query presenting itself, "Are prices too high?" Comparatively they seem so, yet men of the widest knowledge and most practical experience speak most hopefully of the conditions that affect the value of securities. The evidences of good times seem to abound in every direction. The enormous increase in real estate values here in New York, the advance in rents and the scarcity of apartments for rent, are a near-by evidence of the situation.

While the iron trade has shown more contraction in production recently, still the reports of increased orders for iron and steel products, for part of which the railroads are responsible, give promise of greater activity in the future.

If good crops are an assurance of prosperity the August report of the Department of Agriculture is a guarantee of another prosperous year. The condition of all the grain crops on August 1 was better than on the corresponding date a year ago and there is promise of very large yield of each cereal. Wheat this year, it is estimated, will aggregate 709,000,000 bushels, a total exceeded only once, in 1901. Corn promises to be a record crop, being estimated at 2,698,000,000 bushels. Oats will approximate 949,000,000 bushels, which exceeds every other year excepting 1902. The estimate for barley is 141,000,000 bushels, beating the record made in 1904 by 1,500,000 bushels. Rye will aggregate almost 31,000,000 bushels, falling below only the two years 1891 and 1902.

In the table below are shown the nine years highest records for wheat, corn and oats with the estimated yield this year.

Wheat. Year.	Bushels.	Corn. Year.	Bushels.	Oats. Year.	Bushels.
1901	748,460,218	1902	2,523,648,312	1902	987,842,712
1898	675,148,705	1904	2,467,480,934	1904	894,595,552
1902	670,063,008	1896	2,283,875,165	1895	824,443,537
1903	637,821,835	1903	2,244,176,925	1900	809,125,989
1891	611,780,000	1895	2,151,138,580	1899	796,177,713
1904	552,399,517	1889	2,112,892,000	1903	784,094,199
1899	547,303,846	1900	2,105,102,516	1889	751,515,000
1897	530,149,168	1899	2,078,143,933	1891	738,394,009
1900	522,229,505	1891	2,060,154,000	1901	736,808,724
1905	709,000,000	1905	2,698,000,000	1905	949,000,000

Of the ten largest wheat crops all except one, 1891, were in the last ten years, while six of the largest corn crops, including 1905, were harvested in the last seven years, and seven of the largest oat crops in the last seven years.

It is not always the size of the crop, however, that makes for the prosperity of the grain-producer or of the country. Much depends upon price. Until last year the average farm price of wheat on December 1 was about sixty cents a bushel for six years. It went above ninety-two cents in 1904. Corn averaged above forty cents in the last three years, was sixty cents in 1901 and ranged from twenty to thirty-five cents in the previous six years. It has frequently happened that a large crop has yielded the producer less than a small crop, but this has been true more frequently of corn than of wheat. In the following table the production of wheat, total farm value and value per bushel on December 1 for various years, comparing large and small crops, are shown:

WHEAT.

Year.	Bushels produced.	Farm value, Dec. 1.	Value per bushel, Dec. 1. Cents.
1874	308,102,700	$265,881,167	86.3
1876	289,356,500	278,697,238	96.3
1880	498,549,868	474,201,850	95.1
1881	383,280,090	456,880,427	119.2
1882	504,185,470	445,602,125	88.4
1883	421,086,160	383,649,272	91.1
1884	512,765,000	330,862,260	64.5
1885	357,112,000	275,320,390	77.1
1889	490,560,000	342,491,707	69.8
1890	399,262,000	334,773,678	83.8
1891	611,780,000	513,472,711	83.9
1893	396,131,725	213,171,381	53.8
1898	675,148,705	392,770,320	58.2
1900	522,229,505	323,525,177	61.9
1901	748,460,218	467,350,156	62.4
1904	552,399,517	510,489,874	92.4

In only one instance is the average price of wheat for a small crop seen to have been less than for the large crop which preceded it. The big crop of 1891 commanded 93.9 cents a bushel, while the small crop of two years later averaged only 53.8 cents, a decline of thirty cents a bushel. The loss to the wheat-grower aggregated $300,000,000. The difference in price has rarely been sufficient to make the aggregate value of a small wheat crop exceed that of a large crop. As regards corn the same is not true. Here it is frequently the case that the producers get more for a small crop than for a large crop. The following table compares the production, value and price of large and small corn crops.

CORN.

Year.	Bushels produced.	Farm value, Dec. 1.	Value per bushel, Dec. 1. Cents.
1872	1,092,719,000	$385,736,210	35.3
1874	850,148,500	496,271,255	58.4
1880	1,717,434,543	679,714,499	39.6
1881	1,194,916,000	759,482,170	63.6
1885	1,936,176,000	635,674,630	32.8
1887	1,456,161,000	646,106,770	44.4
1889	2,112,892,000	597,918,829	28.3
1890	1,489,970,000	754,433,451	50.6
1891	2,060,154,000	836,439,228	40.6
1894	1,212,770,052	554,719,162	45.7
1896	2,283,875,165	491,006,967	21.5
1897	1,902,967,933	501,072,952	26.3
1900	2,105,102,516	751,220,034	35.7
1901	1,522,519,891	921,555,768	60.5
1902	2,523,648,312	1,017,017,349	40.3
1903	2,244,176,925	952,868,801	42.5

In the case of corn the price seems to have been influenced by the amount produced without a single variation. The 1896 crop exceeded that of 1894 by more than 1,000,000,000 bushels, yet its aggregate value was $63,000,000 smaller. In 1901 the yield of corn was nearly 600,000,000 bushels less than in 1900, yet the value was $170,000,000 greater.

The railroads of course have the assurance of a large traffic whether grain is high or low in price, when the supply is large. Whether the railroads will profit by the increased traffic depends upon what they charge for the haul. The Great Northern caused considerable surprise by announcing last month a reduction in grain rates, which has been figured to be a gift to the farmer of $2,000,000 to $3,000,000. There has been some talk about philanthropy being at the bottom of it all, but railroads are not usually operated with that sort of motive power. Railroad rate-cutting happens very frequently when no substantial reason for it appears to the outsider, and railroads only too often have thrown away profits that were just ready to drop into their laps. If the enormous crops of 1905 are only to be an incentive to rate wars among the railroads, it is not easy to see where prosperity and investors will connect. While the railroads are now reporting increases in earnings as compared with a year ago, it should be remembered that the earnings in the first half of 1904 were smaller than in the previous year. In the first six months gross earnings showed a loss from 1903 of $13,000,000 and net earnings a loss of $25,000,000. The gross earnings for the corresponding period of this year show a gain over 1904 of $57,000,000 and net earnings a gain of less than $19,000,000. These results are far from assuring to stockholders looking for increased dividends. The fact is that on $200,000,000 less gross earnings four years ago the railroads were earning net about as much as they are now. In the table following are shown the gross and net earnings of some of the principal railroad systems in the first six months of the years 1903 and 1905. The changes in the two years are of considerable significance.

Six months ended June 30.	Gross earnings.			Net earnings.		
	1903.	*1905.*	*Increase.*	*1903.*	*1905.*	*Decrease.*

* Decrease. † Increase.

Of the thirteen railroads named all except two show gains in gross earnings in the first half of 1905 as compared with two years ago, while only three show a gain in net earnings. Since the gross earnings of the railroads began to increase several years ago there has been a very large advance in the cost of operation. Railroad employees are commanding higher wages while material used in every kind of construction has increased in cost. It may well be doubted whether the railroads are receiving their just share of the profits which prosperity has created, in spite of the individual examples of great increase of wealth to be found among the railroads.

Cotton has commanded no little attention in the past month. During the greater part of the month there has been an upward movement in the price which, however, seems to have inspired a selling movement toward the end of the month. Much anxiety is felt regarding the coming report of the Government on the condition of the crop. The most impartial estimates of the new crop seem to make 10,500,000 bales as the reasonable yield to be expected. The final figures on the crop of 1904-05 show 13,654,000 bales to have been marketed, and the total crop approximated 14,000,000 bales. The previous high record was 11,274,000 bales in 1899. Should the new crop fall to 10,000,000 bales the total for the two years will exceed by 1,500,000 bales the largest total for any previous two years.

THE MONEY MARKET.—The local money market was affected by the expected demand for money to move the crops and also by the increase in activity in Stock Exchange dealings. Rates for call and time money have advanced since August 1. At the close of the month call money ruled at 2 @ 3 per cent., averaging about 2¼ per cent. Banks and trust companies loaned at 2¼ per cent. as the minimum. Time money on Stock Exchange collateral is quoted at 3¼ @ 3½ per cent. for 60 days, 3½ @ 3¾ per cent. for 90 days, and 4 @ 4¼ per cent. for 4 to 6 months on good mixed collateral. For commercial paper the rates are 4¼ @ 4½ per cent. for 60 to 90 days' endorsed bills receivable, 4½ @ 4¾ per cent. for first-class 4 to 6 months' single names, and 5 @ 5½ per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—Since the first week of August there has been a steady reduction in the deposits and reserves of the clearing-house banks.

November	885,616,600	10,274,150	1,204,434,200	16,793,650	....	....
December	841,552,000	6,125,200	1,127,878,100	8,539,075	....	....

Deposits reached the highest amount, $1,224,206,600, on September 17, 1904; loans, $1,146,163,700 on August 5, 1905, and the surplus reserve $111,623,000 on Feb. 3, 1894.

The deposits were reduced $30,000,000 since August 5 and loans only about $9,000,000. Compared with the close of July specie reserves have fallen off $11,000,000 and legal tenders $7,000,000, making the loss in reserve $18,000,000. The surplus reserve has fallen from $15,300,000 to less than $5,500,00 and is now lower than at any previous time since November, 1903, except on March 18 last. A year ago the surplus exceeded $57,000,000. The banks hold $54,000,000 less cash than they did at the beginning of September last year. The deposits are $50,000,000 less than at that time while loans shows an increase of nearly $20,000,000. On August 5 loans reached the highest point ever touched.

FOREIGN EXCHANGE.—Rates for sterling exchange fluctuated upward and downward during the month. At times bills against purchases of American securities for European account came upon the market. As rates declined, however, the demand for bills for transfer of Japanese funds to London manifested itself. At the close of the month rates were lower than they were a month ago.

MONEY RATES ABROAD.—There was no change in the posted rate of discount of any of the principal foreign banks last month. The money market was firmer at London and Berlin and easier at Paris than a month ago. The Bank of England rate of discount is unchanged at 2½ per cent. Discounts of 60 to 90 day bills in London at the close of the month were 2 per cent., against 1¾ @ 1⅞ per cent. a month ago. The open market rate at Paris was 1⅜ per cent., against 1½ @ 1⅝ per cent. a month ago, and at Berlin and Frankfort 2⅝ @ 2¾ per cent., against 2⅛ @ 2¼ per cent., a month ago.

NATIONAL BANK CIRCULATION.—A further increase of more than $8,000,000 last month brings the volume of bank circulation up to $512,220,367, making an increase in the last twelve months of nearly $60,000,000, almost one-half of which has been since April 30. About $4,000,000 of two per cent. bonds deposited to secure Government deposits were withdrawn last month and apparently have been used to secure circulation. More than $36,000,000 of these bonds are still held to secure public deposits.

* Excess expenditures.

$4,660,000, making for the first two months of the new fiscal year a deficit of $18,500,000. Since July 1 the civil and miscellaneous expenses show an increase of nearly $2,000,000 as compared with last year and public works $2,500,000. War and navy expenditures decreased $6,000,000.

UNITED STATES PUBLIC DEBT.—The net public debt increased nearly $3,500,000 in August and is now in excess of $1,005,500,000 of which $895,000,000 is bonded debt bearing interest. The gross debt is $2,286,000,000, of which $1,002,000,000 consists of gold and silver certificates and Treasury notes offset by an equal amount of cash held in the Treasury. There was an increase of nearly $4,000,000 in gold certificates and of $5,500,000 in silver certificates last month.

were $24,000,000 the largest reported for July since 1901. The export movement this year is conforming pretty closely to the movement of 1901 in which year the monthly exports at no time fell below $100,000,000. So far this year the lowest month's record has been $106,000,000 in February, and not since August, 1904, has the amount fallen below $100,000,000. July was the low month for exports in 1902 and 1904, when they fell to $88,000,000 and $85,000,000 respectively. In 1903 August was the low month with $89,000,000. There were net imports of gold in July of nearly $3,800,000.

MONEY IN CIRCULATION IN THE UNITED STATES.—Nearly $17,000,000 was added to the volume of money in circulation last month, causing an increase in the circulation per capita from $31.29 to $31.40. Silver dollars increased $2,000,000, silver certificates $6,000,000, subsidiary silver $1,400,000, United States notes $2,000,000 and National bank notes $5,000,000.

Total	$2,839,103,169	$2,885,079,229	$2,901,791,907	$2,921,394,085

MONEY IN THE UNITED STATES TREASURY.—Although there was a deficit of nearly $5,000,000 reported by the Treasurer for July, the actual net cash on hand increased nearly $3,000,000. The Treasury gained about $11,000,000 net gold and nearly $3,000,000 National bank notes. It lost $9,000,000 silver and $2,000,000 United States notes.

MONEY IN THE UNITED STATES TREASURY.

Organization of National Banks.—At the end of August there were in existence 5,807 National banks with authorized capital stock of $808,561,075 and with outstanding circulation secured by bonds and by lawful money of $512,220, 367. Associations to the number of 44, with capital of $2,985,000, were organized during August, but as a result of liquidations the net increase in number of banks was but 35 and in capital stock of $938,200. During the month, however, the outstanding circulation increased $8,248,972.

Since August 31, 1904, the number of National banks has increased to the extent of 376. Capital stock increased to the amount of $31,499,740, and outstanding circulation to the extent of $59,703,594.

In consequence of the legislation of March 14, 1900, under authority of which National banks with minimum capital stock of $25,000 may be organized, the semi-annual tax on circulation secured by consols of 1930 reduced from one-half to one-fourth of one per cent., and the issue of circulation authorized to the extent of bonds deposited, there has been a net increase in number of National banks since the date of the act in question of 2,190, and in capital stock of $192,252,980. During this period the outstanding circulation has more than doubled, the increase being from $254,402,730 to $512,220,367, an increase of $257,817,637.

During the existence of the National banking system 7,895 associations have been chartered, and in the period beginning March 14, 1900, and terminating August 31, 1905, the number organized was 2,631, approximately one-third of the total number of National banks which have been organized during the existence of the system. The number of associations chartered under authority of the act of March 14, 1900, is 1,705, with capital stock of $44,490,000, the average capital being approximately $26,000, and during the same period 926 banks, with capital of $50,000 or over, were chartered, the total capitalization being $110,492,800, the average being nearly $120,000. Of the total number of banks organized since March 14, 1900, 1,459, with capital of $77,104,000, were banks of primary organization; 981, with capital of $58,859,000, reorganizations of incorporated and private banks, and 291, with capital of $19,519,800, conversions of State banks.

BANKERS' OBITUARY RECORD.

Allen.—William H. Allen, President of the Franklin Savings Institution, Greenfield, Mass., died August 8. He had been connected with the bank for half a century, most of the time as Treasurer or President, and left a record of faithful service.

Bridges.—M. D. Bridges, Vice-President of the Central National Bank, Greencastle, Ind., since 1893, died August 15.

Burt.—Orville D. Burt, President of the State Bank, Kansas City, Kas., died August 31. He was born in Massachusetts in 1841, and in 1866 located at Kansas City, Kas.

Chase.—Jason DeWitt Clinton Chase, Vice-President of the First National Bank, Oswego, N. Y., died August 23, aged seventy-two years.

Day.—Wilbur F. Day, President of the National New Haven (Ct.) Bank, died September 2, aged sixty-eight years. He entered the bank as a clerk at the age of nineteen, and became President at thirty-one.

Dunkel.—Hiram Dunkel, Cashier of the Farmers' National Bank, Watsontown, Pa., died August 30, aged sixty-eight years.

Hicks.—Dr. J. Y. Hicks, senior member of the banking firm of W. L. Tooley & Co., Moulton, Tex., died August 23.

Hutchins.—Frank D. Hutchins, Cashier of the Lancaster (N. H.) National Bank, Treasurer of the Siwooganock Guaranty Savings Bank, and Vice-President of the Northern Bankers' Association, died August 5. He was born at Putney, Vt., January 11, 1850.

Johnson.—Allen N. Johnson, Vice-President of the Union Trust Co., Little Rock, Ark., died August 26.

Jacobsen.—William Jacobsen, President of the First National Bank, Luverne, Minn., died August 23, aged sixty years.

Lamson.—F. S. Lamson, Manager of the Bedford, Ohio, branch of the Cleveland Trust Co., died July 6.

Marvin.—Hon. Francis Marvin, Vice-President of the National Bank of Port Jervis, N. Y., and former member of Congress from the Seventeenth New York District, died August 10. He was born in New York city in 1828, and in 1846 removed to Port Jervis.

Munn.—G. F. Munn, of the banking firm of G. F. Munn & Son, Portage, Ohio, died August 11, aged sixty-nine years.

Patterson.—William Patterson, President of the National Bank of Lawrence County, New Castle, Pa., died August 30, aged eighty-one years.

Rorick.—Elias B. Rorick, President of the First National Bank, Morenci, Mich., died August 26. He was born in Steuben county, N. Y., in 1831.

Seeley.—William E. Seeley, President of the First National Bank, Bridgeport, Ct., and former State Comptroller, died August 25.

Thomas.—Hugh M. Thomas, Vice-President of the Long Island City (N. Y.) Savings Bank, died August 24, aged seventy-six years.

Turner.—J. N. Turner, Cashier of the Bank of Campbellsville, Ky., died August 22, aged sixty-seven years.

Two Kinds of Thirst.—The great hope of Japan lies in the determination to educate her lower classes. When, a few years ago, some Japanese warships were in Sydney, what was the most remarkable feature concerning the men by whom they were manned? The fact that they passed all the drinking saloons and thronged the libraries and bookstalls. What made this remarkable was the very saddening fact that the men of the European and American navies usually pass the libraries and bookstalls, but crowd the drinking saloons. Now, other things equal, the general tendency is for the drinker to become, sooner or later, the servant of the sober man. And this principle will hold good all the more if to the quality of sobriety be added the desire to learn. With one nation thirsting for knowledge, and another thirsting for drink and pleasure generally, it needs no prophet to name the winner.—*The Review, Sydney, Australia.*

THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-NINTH YEAR. OCTOBER, 1905. VOLUME LXXI, NO. 4.

THE INSURANCE INVESTIGATION in New York has attracted a great deal of attention in financial circles, particularly the revelations showing the relations existing between the insurance companies on the one hand and the banks and trust companies on the other. While the fact has been brought out that the banks and trust companies owned or controlled by the insurance companies may render the latter valuable legitimate service, it has also been made to appear that they render a service which the insurance companies ought not to require and that the banks and trust companies should not perform. It is one thing for a trust company to employ its machinery in the legitimate purchase of high-class investments for the parent insurance company; but it is quite another thing for the trust company to be made use of to take over and carry assets of a character that the insurance company does not wish to appear in its balance-sheet.

Some of the facts brought to light show a regrettable lack of the finer and higher sense of appreciation of the duties and responsibilities of trusteeship on the part of those charged with the handling of the vast funds entrusted to the life insurance companies.

The accumulation of enormous sums of money in the hands of life insurance companies and Savings banks is bound to give rise to serious problems when this money comes to be invested. For many years the Legislature of New York has been under pressure from interests that desired to sell securities to the Savings banks, and it was only quite recently that a general investment law was passed which will, it is believed, put a stop to the scandals possible under the former order of things. Perhaps the law relating to the handling of insurance funds could be so modified as to prevent the recurrence of conditions like those which have lately been the subject of so much unfavorable comment.

Absolute control over several hundred millions of dollars is a tremendous power to be lodged in the hands of one man. To avoid mistakes in the management of so large a fund would imply almost superhuman wisdom, and perhaps it would also require superhuman virtue to administer such a trust without being in some measure influenced, directly or indirectly, by considerations other than those which should obtain. Too much money, like too much honor, is a burden rather heavy for a man who hopes for heaven.

If the investigation of the insurance companies shall result in checking their growth for a time, it will probably be of great benefit to the policyholders. There has been, unquestionably, too much racing for big totals; and the present problem would seem to be not how to get more business, but how to take better care of that already in hand.

Notwithstanding the conspicuous faults in insurance management which have been brought to the surface by the investigation of the legislative committee, it is at least well to bear in mind that the solvency of none of the companies appears to be in doubt. Their investments, upon the whole, are of a very high character. It is, of course, deplorable that such an investigation has been rendered necessary; but its results can hardly fail to aid in clearing up the financial atmosphere.

THE NEXT FINANCIAL PANIC will put to the test a large number of small banks that thus far have encountered only fair weather. This will give a better clue to the comparative safety of large and small banks than it has heretofore been possible to obtain, so far as the National banks are concerned.

If the country should again be visited by a panic as severe as that of 1893, it would perhaps result in a greater number of bank failures than occurred in that memorable year. There would be, in the first place, many more banks in existence in the later period than there were in the former, and of those a much larger proportion of the National banks would be of small capital, owing to the change in the National Banking Law, made in March, 1900, permitting banks to organize with a minimum capital of $25,000, instead of $50,000, the lowest limit until that time. But these elements tending to increase the number of failures would be counteracted to a considerable extent by the closer community of interest that has grown up among the banks. At least, this is the general belief. Possibly, however, where this community of interest amounts virtually to a system of branch banking, it may, conceivably, be a source of weakness rather than of strength; for if the head bank finds itself unable to stand the strain, its dependents can hardly be expected to survive. But it is more probable that the unification of banks into certain groups will prove of great benefit, not only to the banks immediately concerned, but to all the banks and the commercial interests of the country generally, when the next panic comes.

Periods of depression are unavoidable; and probably while fear is so easily communicable as now, it is blind optimism to indulge in the hope that panics are altogether preventable. But their destructive influences may certainly be held in check by wise and united action. According to the periodic theory of panics, our next cataclysm should occur in 1913; but whether it will arrive on schedule time cannot be assumed with certainty. Financial prognosticators have not yet been able to predict the recurrence of panics as accurately as eclipses of the sun and moon can be foretold. The old-established banks are growing stronger all the time—stronger in the capacity of their management, stronger in the public confidence, and stronger in their surplus funds. It is doubtless well understood by most bankers that the present season of prosperity is favorable to making their banks as secure as possible against the financial storms which, let us hope, may be long delayed, but which sooner or later may be expected to put in an appearance.

THE IMPORTATION OF GOLD to meet the fall demand for money calls attention to one of the defects of our currency and banking system. There are, of course, several causes that render the international movement of gold perfectly natural; but a temporary seasonal demand for currency, such as that now existing here, hardly appears to be one of them—at least, less costly and more expeditious ways of meeting this demand might be called to mind. If the state of the bond market is not favorable to the issue of bank notes, no more can be issued; and the only way the supply of bonds could be increased would be to call Congress together and make a fresh issue. This would take time. As a matter of fact the outstanding notes have been constantly kept at such a high figure that there is no margin for additional issues when most needed.

We have this extra demand for money at stated times with regular frequency, and it would be advantageous to the banking and business community if some means could be provided for meeting it that would not be open to the objections that can be urged against the slow and expensive importation of gold or the clumsy method of issuing notes based on bonds. Voluntary action on the part of the banks, by a proper use of reserves, even under the present system, could do much; but probably no adequate relief can be obtained until compulsory measures are adopted for retiring the excess of bank notes that now continue in circulation even in times of slackened business.

THE HAGUE CONFERENCE is to be reconvened, probably some time during the coming year, on the invitation of the Czar, to whose initiative the first meeting in 1899 was due. It may be surmised, in view of intermediate events, that the enthusiasm then manifested by the Russian ruler in the cause of universal peace has measurably grown by this time.

So long as the desire for gain continues one of the dominant traits of human character, and while there are still rich lands held by weaker races, it is perhaps too much to expect that war can be abolished, at least within the near future. But if war cannot be entirely prevented, a resort to it, except as a last extremity, may be assured; and if it does come in the end, its horrors may be mitigated and the embroilment of other nations in the dispute may be made improbable.

It cannot be denied that war often brings benefits both to the victors and to the vanquished; but the practical question to be considered is whether these benefits may not be secured in ways more economical and more humane. A reliance on war as a means of settling international controversies compels each nation, or a certain group, to be always struggling to maintain a naval and military strength equal to that of possible antagonists. The fear lest this equilibrium be disturbed engenders a rivalry that involves a continually increasing scale of expenditures for warlike purposes. One nation is perpetually striving not to be outdone by another. Impelled by considerations of national safety, such expenditures may be pushed to the utmost extent that the tax-paying capacity of a people will allow. Moreover, the settling of disputes between nations by going to war does not assure a just determination of the points at issue. Victory usually goes not to the side having the strongest cause, but to the side having the strongest battalions. Money and force are often quite as potential, on the field of war, as a righteous cause. If for the passion and brutality of physical combat there could be substituted a careful and judicial weighing of the problems at stake, by a court similar to The Hague tribunal, it would seem that the chance of an equitable adjustment of the differences would be greatly improved. Within their own boundaries, nations are careful to make provision for protecting the weak against the aggressions of the strong. Nor is it unreasonable to ask that in their dealings with each other nations shall have "a decent respect to the opinions of mankind." As the relations of the different countries of the world become more intimate, no nation on going to war can afford to disregard that sense of justice which is becoming universal.

The expansion of commerce and the redistribution of population no longer call for territorial aggrandizement. Even with aboriginal races, it is not only more humane but more profitable to convert them into purchasers of commodities than to annihilate them. The inhabitants of the tropical regions of Africa are doubtless better suited to that climate than the people of the European States that are struggling to become their masters. In fact, despite the shortcomings of humanity at large, there are comparatively few people who cannot be put to better use than being set up as targets. Although modern implements of war have tremendous destructive power, they are very costly. It is said that it costs at least $710 to fire a twelve-inch gun.

A complete realization of the ideals of those who, on humane grounds, are opposed to war may be far off, but there seems to be a considerable sentiment, growing in volume year by year, in favor of settling difficulties by arbitration wherever possible. International controversies are often due to misunderstanding, and it is perhaps not too much to expect that as nations become better acquainted with each other, and as education is more widely diffused, there will be less of a disposition to take up the sword.

In reconvening The Hague Conference the Czar has given the great powers of the world an opportunity of relieving themselves of some of the burdens that are inseparably attached to the maintenance of a large military establishment.

CORPORATION CONTRIBUTIONS TO CAMPAIGN FUNDS are again the subject of much interest, owing to the testimony of one of the witnesses before the committee of the New York Legislature appointed to investigate the insurance companies of that State. The witness in question frankly said that he had contributed money in both the McKINLEY and ROOSEVELT campaigns. He had done this, he said, on his own responsibility, and in the exercise of his best judgment as to what was necessary, in this particular instance, to protect the interest of the company's policyholders.

In former times those who presided over the shrines of the respective deities having the affairs of mortals under their control did quite a thriving trade in supplying oracular utterances suited to the varying needs of those who consulted the gods and goddesses of those days. These superstitions have passed away, but in their stead have come many-headed and unappeasable monsters who must be propitiated with votive offerings before the vast transactions incident to modern business enterprise can go forward without interruption. Ignorance and greed have their countless shrines where tribute must be paid.

Whether the political contributions made by the President of the New York Life Insurance Company, out of the company's funds, were proper or not—a point exhaustively discussed in the public press—no doubt Mr.

McCall acted in the sincere belief that he was making a use of his company's money that would inure to the benefit of the policyholders. He thought, and not without good reason, that the company's investments would suffer heavy depreciation in the event of the gold standard being overthrown by Bryan or weakened by the lukewarm policy of Judge Parker's political sponsors.

In national politics it would seem that many of those who control sound and legitimate business enterprises believe it necessary to pay large sums for protection against the dangerous schemes of the demagogue who, for his own ends, inflames popular prejudices and ignorance. In State affairs, the Legislatures are, in too many cases, under the sway of a "boss," who is himself quite often controlled by the dominating railway or other corporation of the State. Where such conditions exist, the spirit of barter and sale enters more or less into certain kinds of legislation.

Much plausible argument can be adduced to excuse the political contributions made by the great corporations of the country. In fact, while there is imminent danger of an impairment of a corporation's property as a result of political hostility, the corporation can hardly be blamed for taking such measures as are deemed necessary to defend itself against the aggressions of ignorance and greed.

But when all is said, the practice of making such contributions is wholly bad, even when the money is used for legitimate campaign purposes, as has been assumed to be the case in what has been written above. As the people advance in intelligence, no honestly-conducted business need buy immunity from unprincipled attacks, but can safely defy the forces of unscrupulousness and greed.

The appropriate remedy for existing evils is the overthrow of the political boss and the return of power to the hands of the people. It is only when political affairs are guided by a sound public opinion that legitimate corporate enterprises are safe from the predatory raids of political bandits. The corporations that make contributions to political campaign funds at least lay themselves open to the suspicion that they have received, or expect, some unfair advantage over the public. They also foster the power of the boss whose existence depends upon the hostility he can excite against corporate wealth, and who is forever engineering hostile legislation under the guise of protecting the public welfare.

There is evidence—not so strong, perhaps, as it should be, but at least cognizable—in New York, in Philadelphia and in Missouri, as well as in the administration of Federal affairs, that a clearer understanding of the respective rights of the corporations and of the public is beginning to manifest itself.

Excessive loans by National banks are discussed in this issue by Mr. Geo. M. Coffin, former Deputy Comptroller of the Currency. Mr. Coffin's long identification with the Comptroller's office, where he had the oversight of examinations and reports, will give additional weight to his views regarding the loans made by National banks in excess of the limit prescribed in section 5200 of the Revised Statutes of the United States. He believes that this provision of the law is a wholesome one, and that a stricter enforcement of it will materially reduce the number of failures of National banks.

Heretofore great difficulty has been experienced in fixing upon directors the responsibility for violations of the law; but now when infractions of the law occur the directors are required to sign the reply to the Comptroller's letter calling the attention of the officers of the bank to such violations. Just what the effect of this will be may be inferred by a careful reading of the following provision of section 5239 of the Revised Statutes of the United States, relating to violations of the National Banking Act:

"And in cases of such violation, every director who participated in or assented to the same shall be held liable in his personal and individual capacity for all damages which the association, its shareholders, or any other person shall have sustained in consequence of such violation."

When a bank fails in consequence of violating any of the provisions of the National Banking Act, it can now be clearly established that the directors were cognizant of the illegal acts, and they can be held individually liable therefor. This should go far toward preventing the failure of National banks.

Although the record which these institutions have made is, on the whole, highly creditable as showing almost absolute security, the rapid growth in the number of the National banks renders it important that every reasonable precaution should be taken to still further insure the solvency of every bank in the system.

In succeeding issues of the Magazine we shall present other articles by Mr. Coffin on subjects of present practical interest to the bankers of the country.

The Anglo-Japanese alliance, the terms of which were recently made public, possesses world-wide significance. This new compact differs from the one it supersedes in one important particular. The former treaty provided for interference on the part of either of the contracting nations when attacked by more than one hostile power; but the present alliance goes much further by agreeing that when either of the signatory powers becomes engaged in war in defense of its interests or territorial rights the other shall make common cause with it in carrying on the war and in concluding the terms of peace.

An avowed object of the alliance is to preserve the territorial integrity and political independence of the Chinese Empire, and to secure equal trade rights in that country to other nations; to recognize the paramount interests of Japan in Korea and the right of Great Britain to take the measures deemed necessary to protect the Indian frontier against invasion.

The weakened condition of China has for a long time rendered that country subject to the depredations of other countries desiring to extend their trade and territory in that direction. That the Chinese Empire has not already been parcelled out among the nations of Europe is perhaps due as much to the inability of those nations to agree on a proper division of the spoils as to any other considerations. Even with this restraining influence, more or less gobbling up of territory and preempting of trading rights has been going on for some time. The check that was administered to Russian aggression by the victory of the Japanese arms will be effectually extended to all other countries similarly disposed, by the terms of the recent treaty of alliance between Great Britain and Japan. This compact makes for greater political tranquillity in the Orient and assures a fair field for carrying on the activities of trade in that part of the world.

THE RENEWAL OF REFUNDING of the public debt, recently announced by the Secretary of the Treasury is in consequence of the approaching issue of bonds to supply funds for construction work on the Panama Canal. Before going into debt any further the Secretary desires to provide for staving off the payment of maturing obligations to some more convenient season.

With the unexampled prosperity and the abundant revenues of the past few years provision might have been made for paying off substantially all the debt soon to mature. This would have had quite as stimulating an effect upon the public credit as the extension of the debt will have. But, of course, to pay a debt that can be indefinitely renewed is too old-fashioned to meet the ideas of modern financiers. Nevertheless, the policy of perpetuating the bonded debt is, under present circumstances, a bad one, as the results will prove before long if existing tendencies are not checked. The blame, however, rests primarily upon Congress, and not upon the Secretary of the Treasury.

EXCESSIVE LOANS BY NATIONAL BANKS.

The following article on loans by National banks in excess of the amount which the law permits to be loaned to one individual, firm, etc., was prepared for The Bankers' Magazine by Geo. M. Coffin, Vice-President of the Phenix National Bank, New York city, and formerly Deputy Comptroller of the Currency.

Mr. Coffin is a native of Charleston, S. C. After being educated there and engaging in business for some years, he entered the office of the Comptroller of the Currency, under Mr. Trenholm, in May, 1886, and was soon after made Chief of the Division of Issues. In 1888 he was transferred to the head of the Reports Division, the duties of which included the supervision of examiners' reports. He greatly improved the system of handling the work coming under his direction. The present form of examiners' reports was adopted by Comptroller Lacey at the suggestion of Mr. Coffin. In March, 1896, Mr. Coffin was promoted to be Deputy Comptroller, on the unsolicited recommendation of Comptroller Eckels. Mr. Coffin's work in the Comptroller's office extended over a period of twelve years, during which he enjoyed the confidence and esteem of Comptrollers Trenholm, Lacey, Hepburn, Eckels and Dawes. In 1898 Mr. Coffin resigned as Deputy Comptroller, to accept the Vice-Presidency of the Phenix National Bank of New York.

The policy of calling the attention of directors of National banks to all violations of law revealed by examinations which the Comptroller of the Currency is now said to be putting into general practice, makes interesting a discussion of one provision of the law which is most frequently violated; namely, that applying to what are known as "excessive loans." The text of the law is contained in section 5200, National Bank Act, as follows:

"The total liabilities to any association, of any person, or of any company, corporation, or firm, for money borrowed, including, in the liabilities of a company or firm, the liabilities of the several members thereof, shall at no time exceed one-tenth part of the amount of the capital stock of such association actually paid in. But the discount of bills of exchange drawn in good faith against actually existing values, and the discount of commercial or business paper actually owned by the person negotiating the same, shall not be considered as money borrowed."

The meaning of this is that no National bank can lend directly, or by evasion, to any person, company, firm or corporation an amount exceeding one-tenth of its capital stock actually paid in, not including its surplus fund, to which the law makes no reference in this connection. Nor does it matter whether such "money borrowed" is secured in any way by endorsements, collateral, or otherwise, for the law makes no such exception. In reckoning the liabilities of a firm or company, the liabilities of the several members of such firm or company must be counted against the firm or company, but in the case of a corporation, money borrowed individually by shareholders of such corporation is not to be counted against the corporation. But the restriction applies only to "money borrowed," for the law distinctly excepts the discount of bona fide bills of exchange and of commercial or business paper. In other words, when a person, firm, company, or corporation is liable to a bank with a capital of $1,000,000 for

$100,000 "money borrowed," the bank may lawfully discount for either of them bills of exchange or commercial or business paper without limit as to amount.

One peculiarity of the law is that it does not limit the amount of "money borrowed" by one National bank from another, because a National bank within the meaning of the National Bank Act is an "association" and not a "corporation."

That section 5200 has been constantly and frequently violated is no secret, for in his report for 1898 the Comptroller made the following statement: "Since the institution of the National banking system the violation of this provision has been common; and the Comptroller, though allowing no known violation to escape his written protest, finds great practical difficulty in his endeavors to enforce this requirement. On Sept. 20, 1898, the date of the last call by the Comptroller for statements of condition of National banks, 1124 banks, constituting nearly one-third of the entire number of banks in the system, reported loans in excess of the limit allowed by section 5200, Revised Statutes of the United States."

At the end of some thirty-five years of the life of the system one-third of the entire number of banks are officially reported to be violating the law and the administrative officer openly acknowledges that he finds great practical difficulty in enforcing it, for the reason that the only penalty for such a violation is that prescribed by section 5239, as follows:

"If the directors of any National banking association shall knowingly violate, or knowingly permit any of the officers, agents, or servants of the association to violate any of the provisions of this title, all the rights, privileges and franchises of the association shall be thereby forfeited. Such violation shall, however, be determined and adjudged by a proper circuit, district or Territorial court of the United States, in a suit brought for that purpose by the Comptroller of the Currency, in his own name before the association shall be declared dissolved. And in cases of such violation, every director who participated in or assented to the same shall be held liable in his personal and individual capacity for all damages which the association, its shareholders, or any other person shall have sustained in consequence of such violation."

In brief, the Comptroller (and he alone) must bring suit in a United States court and prove that the directors have *knowingly* violated the law or allowed it to be violated by the officers, in which case the bank must cease to do business and be closed, and every director who shared in or assented to the violation is personally liable for any damages sustained by the closed bank, its shareholders or any other person. Concisely stated, the penalty is so severe it has never, or hardly ever, been enforced, and with this knowledge the banks generally have quietly laughed in their sleeves at the gentle admonition from the Comptroller's office, and filed his letters on the subject in the waste-basket. As a matter of fact in a great many cases no answer to such letters, which were usually addressed to the President of the bank criticized, was either asked or expected. Only in serious cases was the officer to whom the letter was addressed requested to show same to his directors and have them join him in a reply. After 1893 the Comptroller in such cases mailed to each director at his residence address a personal letter calling his attention to the letter written the President, asking him to join in a reply, and enclosing a printed slip containing sections of the law pertaining to the duties and liabilities of directors.

As an illustration, the President of a large bank who had persistently been misusing the funds of his bank for his own interests, through excessive loans, neglected to have his directors join him in replying to the Comptroller's letters criticizing the condition of his bank. The next examination disclosing no improvement, a severe letter was addressed to the President in which the directors were notified they must in case of disaster accept the full legal responsibility of their neglect in the management. A personal letter was also sent to each director, advising him of the letter to the President, and asking an acknowledgment. Within a few days all but two of about ten directors answered. The bank failed about a year afterwards, and on the witness stand the directors stated that through these personal letters from the Comptroller they were first apprised of the bank's condition and were thereby bound to personal responsibility for the management of its affairs.

The present attitude of the Comptroller's office and the practice of requiring the directors to join in replying to every letter written as the result of an examination of a bank showing excessive loans and other violations of law, is no doubt due to the growing realization that these unchecked violations are leading to serious consequences; as, for instance, the failure, a few months ago, of a bank in Kansas and two in Illinois through excessive loans in the interests of the party who controlled the ownership of these banks. This probably was the "last straw" added to the cumulative evidence contained in the Comptroller's report for 1904 which, classifying the causes of failure of 438 National banks in forty years, shows that 117 of these banks, nearly twenty-seven per cent. of the whole, failed directly or indirectly as the result of excessive loans.

In the light of this experience, there can be no question in the mind of any safe and intelligent banker that the law imposes a most wholesome restraint, for it is very clear that the wilful disregard of this restriction has been responsible for a large percentage of bank disasters.

Observance of the restriction not only confines direct loans to reasonable and safe limits, but it goes further and operates to compel a wholesome distribution of business in these days of concentration; and this, perhaps, is one of the ends originally held in view by the framers of the law.

Under the circumstances the Comptroller is entitled to have and should receive the support and co-operation of every bank manager who favors conservative management and obedience to existing law.

GEO. M. COFFIN.

MR. ROCKEFELLER ON TEMPERANCE.—On September 10 John D. Rockefeller gave a short talk on temperance to the men's class at the Euclid Avenue Baptist Church, Cleveland, Ohio, warning his listeners against the social glass.

"The only way to be temperate is to keep away from drink altogether," he said. "The great majority of drunkards are men who take a social glass once in a great while. I wonder if any of you can give me the name of the society which furnishes recruits for the gutter?"

From several parts of the room came the reply:

"The society of moderate drinkers."

The readiness with which the answer was given seemed to please Mr. Rockefeller.

"I have never been in the least danger of becoming a victim of the drink habit myself," he went on, "just because I refused absolutely to become a member of that society. Don't join it, my friends, and you will never have any cause for regret."

THE GOLD SUPPLY NOW AND TEN YEARS BACK.

It is as well to take occasionally a few minutes for the consideration of our business position, apart from the aspects in which it is discussed, privately among us in our ordinary conversation, and publicly in the half-yearly statements which are made at the general meetings of the shareholders in banks, railways, and other industrial concerns.

These statements are very useful in themselves, and frequently contain very valuable information, but they are necessarily bounded in a degree by the particular class of business with which the institution has to deal, to the shareholders of which they are addressed. The rate for the use of money depends on the demand for its employment, and the supply available at the moment. But while the demand for its employment depends ultimately on the state of industry of the country—the wants of other countries, the requirements of war, the carrying out of great public works, all make demands for the use of money which affect the price paid for the use of it.

As time goes on there is an increasing tendency for the rate for the use of money to become more uniform over all civilized countries. Naturally this result follows with more regularity in those countries in which the conditions of trade and the general run of profits are most uniform. We can hardly expect the rate charged for advances in a newly settled country, which is in a rapidly growing and progressive state, and in which the demands for the use of capital exceed the local supply, to correspond exactly with those of a country like England, or France or Germany, in which there is usually, if not always, a sufficient amount of loanable capital to meet all requirements.

But while this is the case there have been, during the last few years, very extraordinary alterations both in the amount of banking capital and in the stock of gold and of silver money in use in the principal countries of the world. The two things naturally go together, for the precious metals form the basis of the reserves on which banking rests. We will therefore proceed to examine into the amounts of specie held now and about ten years since—the statements to hand do not admit of the figures being carried down to a later date.

To make this matter clear, we give a table* compiled from the Report of the Director of the Mint of the United States of the approximate stocks of money in the principal countries of the world at the close of the years 1903 and 1893. Owing to requirements of space, we have included in this table only the more important countries, but as those which are not included are not many, and the sums omitted only amount to about 6 per cent. of the whole, we may regard it as an adequate statement of the position of affairs in this respect in the world at the present day.

It will be observed that the aggregate stock of gold is stated as being, in 1903, £1,075,100,000; while it was on December 31, 1893, £729,680,000.

---

*These tables are omitted, but a summary of them will be found in the text.

The stock of gold is thus *more* in 1903 than it was in 1893 by £345,420,000. While the stock of gold used as coinage has increased in this manner, that of silver has diminished. This was at the end of 1903, £511,780,000; while it was at the corresponding date in 1893, £628,320,000; being thus *less* in 1903 by £116,540,000.

To make the manner in which the detail is worked out clear, we subjoin a table showing the estimated alteration in the countries named. Some of the detail is extremely curious. The holding of the following countries in gold has increased as follows:

	Gold more in 1903 than in 1893.
The United States	£138,760,000
Austria-Hungary	31,360,000
France	28,660,000
Germany	35,280,000
Russia	65,740,000

The case of Belgium is very peculiar. In Belgium the gold held appears to have diminished £5,000,000, and the silver £6,000,000. Japan is in the same position, the gold held is stated to have diminished £2,000,000, and the silver nearly £12,000,000. In Great Britain the gold held appears to be less by nearly £4,000,000, while the silver has increased £760,000. This last we may add corresponds with our own belief, that the amount of gold in circulation tends to diminish, and that of silver to increase.

Of course, the general statements can only be estimates, but there is every reason for considering them to be as close to the facts as such estimates can be, and the figures of the coinages can be absolutely relied on. We believe that in this country the amount of gold held in reserve by banks has increased during the time referred to. A private arrangement like this can hardly be taken notice of even by the most careful enquirer who is not resident in the country, and even by those who are, it is very difficult to ascertain all the facts, which are naturally kept private; but we may fully believe that the amount of gold held in this country has practically not increased within that time. This is a curious circumstance when we consider how enormous the coinages of gold, both in this country and in Australia, have been during the ten years referred to. Roughly, these coinages have been £150,000,000.

It will be observed, from the statement in Table I., that the amount of gold held in Australia, Canada and India has greatly increased during this period. In round numbers, the increase is £40,000,000, but it certainly appears that fully £100,000,000 of British sovereigns, coined within the period named, must have left our territories. This is not a matter to be regretted; the gold, no doubt, has been paid for in the form of goods, which are of more use to us than the specie, but it is another illustration of the enormous figures to which our business operations extend.

In examining these statements it will be an assistance to us to bear in mind the amount of gold which has been produced by the mines of the world during the ten years we have under consideration. In round numbers the estimate is £500,000,000. The figures before us of the gold coinages account roughly for the use of £345,000,000 out of this. Various estimates have been made of the amount of gold employed in the industrial arts for ornaments and other purposes. It is estimated that the total value for the ten years used thus would amount to £150,000,000. Broadly speaking, we may believe these figures to be correct. Meanwhile, there is another point to be considered. While the stock of gold in the world appears, during the last ten years, to have increased £345,000,000, the amount of silver used as standard coin has diminished £116,000,000. The working of this is shown in Table IV.

This includes a diminution of about £100,000,000 in the value of the coin circulating in India and in the Straits settlements. As the silver coin which has dropped out of circulation was "standard" money, the general effect on the stock of "legal tender" money in metal is that, instead of having increased £345,000,000, it has only increased two-thirds of that amount—we may roughly say about £220,000,000 or £230,000,000. We are thus brought to the conclusion that, of the immense amount of gold discovered within the last ten years, only about one-half has practically been added to the actual circulation or to the gold reserves of the principal countries of the world. Questions are sometimes asked as to the effect of the recent discoveries of gold upon prices. It has been expected that such enormous additions to the circulating medium must be followed by an increase in prices. According to the "quantity theory of money" this should happen, as "prices are determined by the relation between the demand for and the supply of money. The demand consists in the offering of goods for money; the more goods are offered, the greater the demand. The supply consists of the money-pieces, whatever their material or form, available for the purchase of goods."

This theory has been much cavilled at and criticised, and the elements involved are so numerous and so hard to grasp that the whole subject is difficult to understand. Modern habits of business, including the great development of banking, both in this country and in all the business countries of the world, have made great alterations in the use of specie in the ordinary transactions of life; but, as the increase of the specie become the basis of increased banking operations, the influence of the increased specie is augmented by the increased banking facilities dependent on it.

The habits of people in regard to the money they use, the fact that an increase of money-supply may itself become the cause of a further demand for money thus assisting to prevent prices from rising in proportion to the increase of supply of money, though all these difficulties, and many more into which we cannot go at this moment, render the subject a difficult one to understand, yet we feel bound to say, in the words of Professor Walker, "No one has ever yet seriously undertaken to show what determines the value of money—that is, prices—if supply and demand do not."

Meanwhile, we have again to call attention to the fact that, while the banks of other countries have strengthened their specie reserves considerably during the period before us, this country has done so in a much smaller proportion. We may be perfectly certain that the increase in the amount of specie circulating in the different countries of the world, will, in the natural course of business, cause increased demands for specie, and for these demands we ought to be prepared.—*London Bankers' Magazine.*

A LOSS OF THIRTY THOUSAND PER CENT.

A NEW VIEW OF A MATTER OF DAILY OCCURRENCE, SHOWING GREAT LOSS BY POOR WRITING.

With the introduction and use of the typewriter, the adding machine, the adding and listing machine, the billing machine and the addo-graph, which combines the typewriter and adding machine, handwriting has been somewhat displaced. It may be that in a few years other machines will be invented and put in use that will make the pen even less necessary in the daily work.

Since the handwriting is thus being relegated to the back-number class, is it worth the time and trouble to try to make our handwriting legible; or if it is legible, to take any care to keep it so? Or, will it pay us better to be negligent in our penmanship? In short, does it pay to write poorly?

Judging by the actual conditions it might be supposed that many bank clerks do not consider it worth any effort or pains to keep their writing plain. This was forcibly impressed upon me one morning recently when some one in a bank in our city called me up on the 'phone and asked if we had sent an item of five hundred and some dollars for collection to a certain bank in Albany. Explaining that the name of the addressee on the letter of advice was very poorly written and looked as if it had been intended for them, but they were unable to find that they had sent such an item. The name of their bank and the name of ours begins with the same letter, so they thought it might be intended for us; but the thought was wrong, for we had not sent them anything.

The credit has no doubt found its owner by this time, but the illegible writing caused a lot of useless search and waste of time. To write it poorly might have saved the writer one second, but it cost the men who tried to decipher it many hundred seconds.

Let us by a little computation see what the precentage of profit or loss was. If the writer saved one second, and five minutes were occupied by the receivers in trying to locate the item, the receivers lost three hundred seconds, and that is thirty thousand per cent. above the time the poor writer saved. It was a great loss! While, on the other hand, the poor writer saved one-third of one per cent. of the time the receiver lost. But think of the loss! If the bank's percentage of loss in dollars was that great, all the clerks would soon have to look for another source of revenue to supply their daily needs and funds for their vacation trips.

If the man's object in writing carelessly was to economize time, it was the kind of economy that proved to be the worst kind of extravagance. The percentage of loss is appalling.

Another case was recently called to my attention. A young man who was temporarily in charge of a discount desk sent out a maturity notice for a note. The name and address of the maker were copied from the note, and they were plainly written on the note, but the postoffice authorities returned it marked "not at."

The address had been properly copied, but the name was written by the clerk in such a way that the man did not think it was intended for him, and so refused it. The maker's name was Epstein, but the clerk wrote it so that it looked like Epshm. The trouble was simply this: the young man had formed the habit of neglecting to cross the t's and dot the i's; not only that, but when he makes an i, an e, or n and m, he makes them resemble the teeth of a saw or a continuation of the m curves.

When the envelope was returned he lost far more time trying to understand the reason for non-delivery than he saved by the first careless writing.

He had the saving and he had part of the loss, and his part of the loss was fully thirty thousand per cent. above his first saving.

If every careless writer would have the trouble of deciphering his hieroglyphics, instead of forcing it upon the innocent recipient, he would soon learn to write plainer.

Examples of the loss resulting from poor writing might easily be continued. You know that a few minutes are lost each day trying to understand writing and figures on remittance letters, and these lost minutes added together make many, many hours in the course of the year that are really lost because some clerks have tried to save a few seconds of their time, regardless of the other fellow's time.

A railroad officer who was noted for his bad penmanship wrote a letter to a contractor ordering him to tear down a certain building. The days and weeks passed, but the building was not torn down. The officer met the contractor one day and asked him why he did not tear the building down. He said he had not received any order to do so. The officer then said that he had written to him at a certain time giving such an order. To which the contractor replied that he had received it and supposed it was intended for a pass on the road and had been using it as such without being questioned.

The bank clerk usually gives the excuse that he cannot take the time to write plainly, and that his penmanship has been spoiled since he came in the bank. It is a poor excuse. It will take very little more time to write legibly than it takes to write poorly. After you have trained your muscles to form the letters properly, and keep them so trained, you can attain just as much speed as you did by the improper formation of the letters and figures, and your work will be far more satisfactory to you and your co-workers. They will pat you on the back and say kind things to you because you have relieved them of trouble.

Legible writing does not mean that it must be Spencerian, with its flourishes and shadings and each letter looking like a steel-plate engraving. But if Spencerian suits you, use it: if the vertical, use it: if the full round hand, use it. Any style you prefer, only so it is plain enough for some one else to read it without having to study it out like a puzzle.

Bank officers usually want to do things to make a good impression on their correspondents, but some of them forget that the letters that go out from their correspondence or transit department have a great deal to do with the impression that is made as to the interior condition of their bank. If the letters have the marks of carelessness in the handwriting, the impression is not good.

Sometimes the officers' penmanship is so poor that they seem to feel reluctant about speaking to their clerks when they notice their writing getting poorer and poorer. They remember that people who live in glass houses should not throw stones. But they surely, with a little tact, can warn the clerks not to follow after them in that particular.

If a clerk is interested in the success and advancement of the institution he is with, he will do his best to help it along, even in his small way, and his efforts will not be in vain. It is the small things that help to make the great things.

Now, to return to the question at the end of the second paragraph—does it pay to write poorly? We all say, no it does not, when we consider the other man and the trouble our poor writing makes for him. Let us therefore resolve that we will henceforth not attempt to selfishly save our time when our correspondent or co-worker will be occasioned a thirty thousand per cent. loss by our miserable substitute for writing.

CHARLES WESLEY REIHL.

TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.*

BOOKS, RECORDS AND FORMS FOR THE TRUST DEPARTMENT —*Continued.*

JOURNALS AND LEDGERS FOR THE ESTATES DEPARTMENT.

In the Estates Department, especially if the amount of business be large, it is convenient, if not essential, to have record forms prepared especially for the kind of work handled. There is much variety in the forms used by different companies; and it is of course true that a company doing only a small business in this line will find convenient the use of forms somewhat different from those required by larger companies. The chief points of excellence to be desired in a system for keeping accounts of this character are: simplicity and clearness; adaptability to both large and small accounts; adaptability to accounts requiring many sub-accounts and to those requiring but few sub accounts; convenient arrangement for rendering statements to courts or to others directly from the books, without the necessity of the stenographer being furnished with a separate copy of the account.

With all these points and some others in view, the best system of books for the Estates Department that the writer has seen is that described in connection with Figures 13, 14, 16 and 18, which was adopted by the company using it after experimenting with other forms. This system involves the use of a general journal, in which is given in skeleton form the total transactions for the day in each trust; individual journal sheets in which the transactions for each trust are entered in detail in chronological order; ledger sheets, and memorandum sheets. The loose-leaf system is used except for the general journal.

Figure 13 shows the general journal used in this system. The size of each page is 15¼ inches wide by 14¾ inches deep. This book serves the double purpose of furnishing a resumé of the total transactions for the day in all the trusts that are active for the day, and of distributing the items to their proper places among the general accounts with a minimum of labor and yet with accuracy and clearness. Reading from the center of the book outward on either page, the headings are: Date, Memoranda, Cash, Bank, Income, Principal, Individual, Unimproved Real Estate, Improved Real Estate, Real Estate Mortgages, Land Contracts, Notes, Bonds, Stocks, Total; the headings, with the exception of the first two, corresponding to the names of the general accounts carried. This company finds it convenient to maintain a separate cash drawer in this department, and hence the columns for both Bank and Cash. Where such a cash drawer is not maintained, the Cash column would of course be unnecessary. In one of the columns headed

* Publication of this series of articles was begun in the January, 1904, issue of the MAGAZINE, page 31.

Memoranda are entered simply the names of the trusts having transactions during the day, and opposite such names, in the proper columns, the debits or credits to the various accounts under each trust. In the figure, since it is necessary to show the form here in two parts, the names are entered in

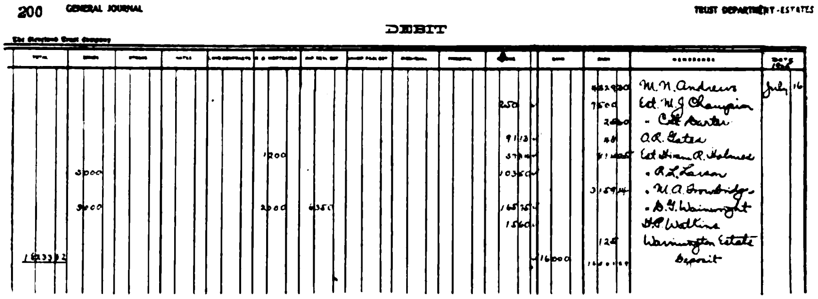

FIG. 13.—LEFT-HAND PAGE, GENERAL JOURNAL, ESTATES DEPARTMENT.

both of the Memoranda columns; but in practice they need be entered but once.

In Figure 13, the first entry shows that there was received for the M. N. Andrews trust, $4,829.30, which is debited to Cash (left-hand page). On the right-hand page, $4,500 of this amount is shown credited to Principal, and the balance, $329.30, to Income. In the second entry it is shown that there has been received for the Estate of M. J. Champion, $7,500, which is debited to Cash (left-hand page), and credited to Improved Real Estate (right-hand page). Also, for this estate there has been expended $250, which is credited to Bank (right-hand page) and debited to Income (left-hand page). In the eighth entry it is shown that there has been disbursed for the Estate of D. G. Wainright the sum of $11,515.75, of which $3,000 is debited to Bonds, $2,000 to Real Estate Mortgages, $6,350 to Improved Real Estate, and $165.75

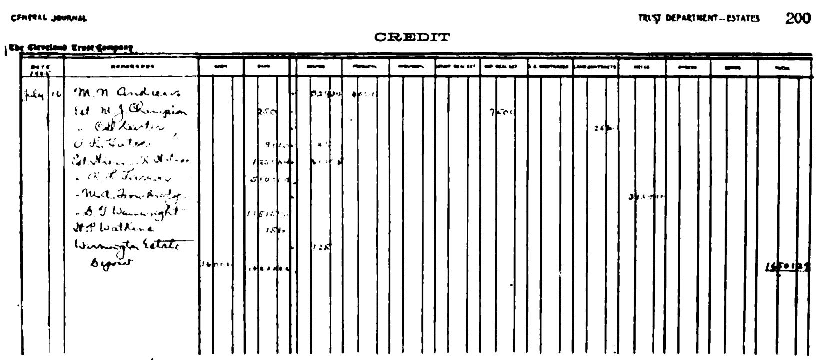

FIG. 13.—RIGHT-HAND PAGE, GENERAL JOURNAL, ESTATES DEPARTMENT.

to Income. The last entry shows that of the funds received during the day, $16,000 was deposited in the bank. The totals in the total column on either page represent the totals of all items on the page except the Cash and Bank items. The total shown on the right-hand page agrees with the footing of

check-book. This journal, it will be noted, separates entries for Income account from those for Principal account, which is a convenience not only in posting, but in the rendering of separate statements of the two accounts. At the left of the space headed Memoranda will be noticed the headings Dr. and Cr. This is a device for separating the descriptions of debit and credit items, the former being begun next to the date line, and the latter under the abbreviation, Cr. This enables the eye to quickly pick out the descriptions of the two classes of items.

In Figure 15 is shown another journal form somewhat similar to this, but arranged in cash-book style, with receipts entered in the left-hand column. At the top of the first page in this journal are given brief memoranda regarding the trust. Concerning this see the discussion in connection with Figure 18.

From the Individual Journal of each trust the items are of course to be posted to the ledger accounts for that trust. These ledger accounts may include any or all of those shown in the headings of Figure 13, or others not

there shown. A loose-leaf binder is used, and the account of each trust is indexed by tabs on the edges of the leaves. After the tab index for each trust is placed, first the memorandum sheet shown in Figure 18; next the journal sheet (Figure 14), and then ledger pages for as many accounts as the trust may require. The form for the ledger pages is shown in Figure 16, which illustrates the use of the form for the Income account. The space for

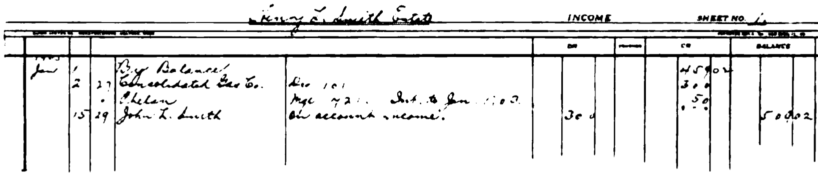

FIG. 17.—LEDGER PAGE, ESTATES DEPARTMENT.

description of items is limited, full description having been given in the journal, and still more detailed description of debit items in the vouchers. Space is provided for both debit and credit balances, as the form is used for accounts, like securities accounts, which have debit balances, as well as for those which have credit balances, like Principal and (usually) Income.

In Figure 17 is shown another form for a ledger page for this work, having much more room for description of items.

MEMORANDA

FIG. 18.—MEMORANDUM SHEET FOR ESTATES DEPARTMENT LEDGER.

Figure 18 represents a memorandum page which is inserted at the beginning of the account of each trust. Its object is to place within convenient reach of the bookkeeper such facts as he needs for guidance in attending to various matters in connection with the trust. It is not intended to take the place of the Trust Register, where fuller details are given; nor does it take the place of the department Tickler, in which are made memoranda of all things that will need attention in the future. The entries to be made on this sheet will vary with the circumstances of the trust and with the personal preferences of the head of the department and of the bookkeeper, for whose convenience it is chiefly designed. In Figure 15 have been shown the memoranda used by another company for a particular kind of trust.

As already noted, some companies prefer to keep their Trust Register leaves bound in the Trust Ledger, such leaves being inserted at the beginning of the account of each trust, so that all records pertaining to a given trust are kept together. The forms shown in Figures 2 and 4 are adapted to such use.*

* See BANKERS' MAGAZINE, August, 1905, pp. 171 and 173.

Some companies insert at the beginning of the account of each trust an inventory sheet, showing the total principal at the time the trust was received, and the changes made in same. Figure 19 shows such a sheet used by the same company (in New York) that uses the form shown in Figure 17.

The inventory shows a balance of $35,450 in Bonds and Mortgages, $7,200 in Real Estate, and $44,350 in Securities. The total inventory being $89,-168.69, the Principal account should show a balance of $2,168.69 Cash Prin-

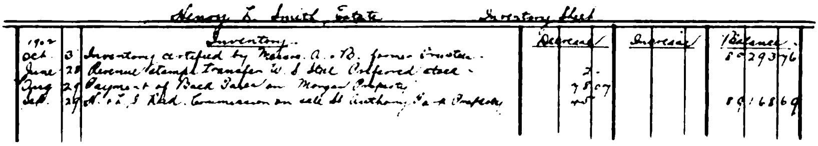

FIG. 19.—INVENTORY SHEET, PAGE 1.

cipal. Such an inventory ought, of course, to be made somewhere in the records. It may be in such an inventory sheet as here shown; or in the trust register; or in the regular ledger account of the trust, as shown in Figure 22.

The opinion has already been expressed that the general plan just outlined for the handling of estates department accounts is the best one. There are those, however, who prefer other styles of records; and in Figures 20 and

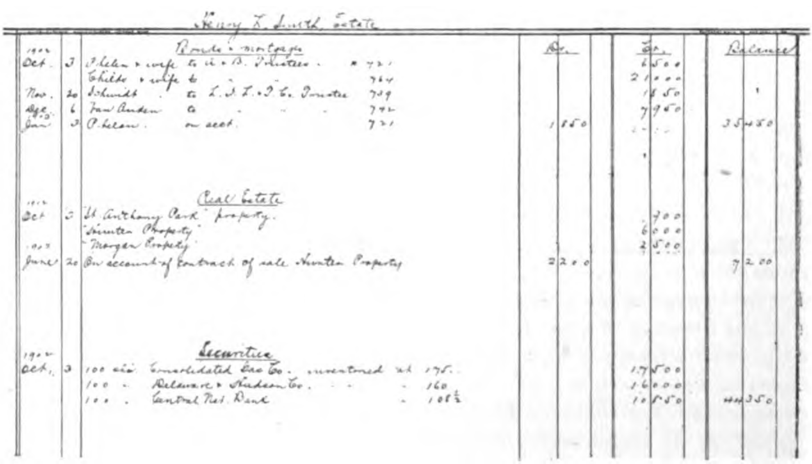

FIG. 19.—INVENTORY SHEET, PAGE 2.

21 are shown other styles of ledger sheets, and in Figure 22, the combined journal and ledger form given in the Book of Forms issued by the Trust Company Section of the American Bankers' Association. In the ledger form shown in Figure 20, provision is made for separate accounts of Capital (or Principal) and Income, and balance columns for each are provided. The first page under the account of each trust in this ledger is a memorandum page, the information called for being shown by the following headings: Brief of Terms of Trust, Date of Receipt of Trust, Amount of Commission, Character of Funds Received, Income, When to be Paid, Income Payable to,

Union Trust and Storage Company.

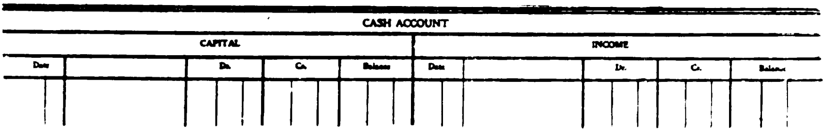

FIG. 20.—TRUST LEDGER, ESTATES DEPARTMENT.

and History. The ledger form shown in Figure 21 provides for separate accounts of Principal, Income and Trust Investments. It does not have balance columns—a serious defect. The obvious objection to these two forms, Figures 20 and 21, is that no provision is made for the keeping of more than two or three accounts under each trust; whereas it is usually convenient, and sometimes imperative, that a number of other accounts, such as those shown in the headings of Figure 13, be kept.

Of quite a different character than any of the ledger forms thus far given is that shown in Figure 22, which is both a journal and a ledger. It is necessary to show the form here in two parts, the two parts together represent-

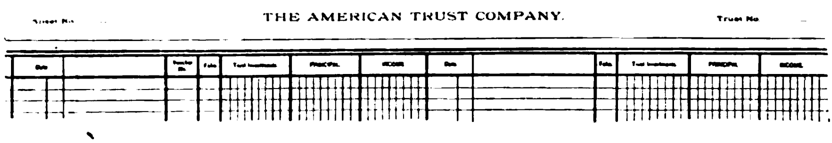

FIG. 21.—TRUST LEDGER, ESTATES DEPARTMENT.

ing the open book as it lies before the bookkeeper. This form has some distinct advantages and some distinct disadvantages. The advantages are most apparent to the bookkeeper who handles the book daily and is thoroughly familiar with its every detail; the disadvantages, to the officer or other em-

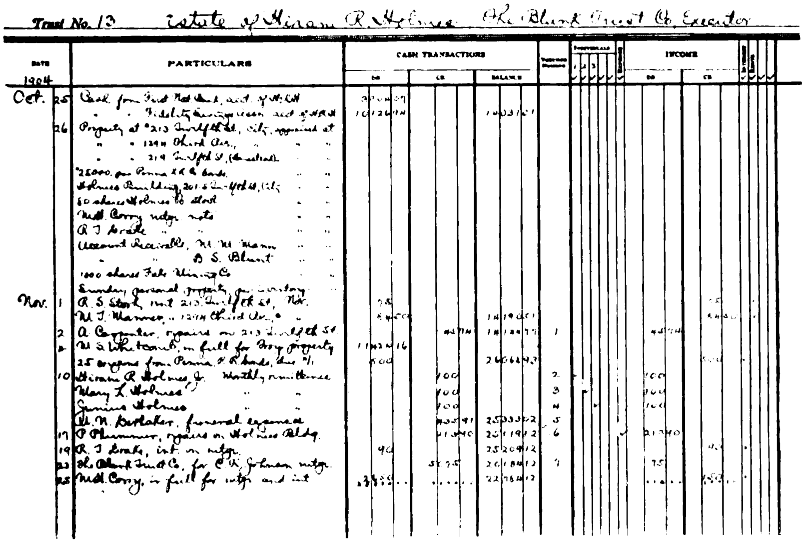

FIG. 22.—LEFT-HAND PAGE, COMBINED JOURNAL AND LEDGER ESTATES DEPARTMENT.

ployee who is not familiar with the book from daily usage, and wishes to get some information in a hurry when the bookkeeper is out for lunch. Combining as it does the journal and ledger, all posting is done away with, except for such sub-accounts as it may seem wise to carry. The record of transactions in all the different accounts is kept in chronological order, and in rendering reports the stenographer has but to copy the record as it stands. The entries for any account may be easily found. On the other hand, the absence of balance columns, except for Cash, is a serious objection. The balances may be found by simple subtraction if the footings are always up to date; but they are apt not to be so. Another objection to the form is the fact that other accounts than those given may be called for, and there is no way of keeping them except as sub accounts.

Most of the entries shown in the figure are self-explanatory. For each item there is both a debit and a credit entry, and the accounts as a whole

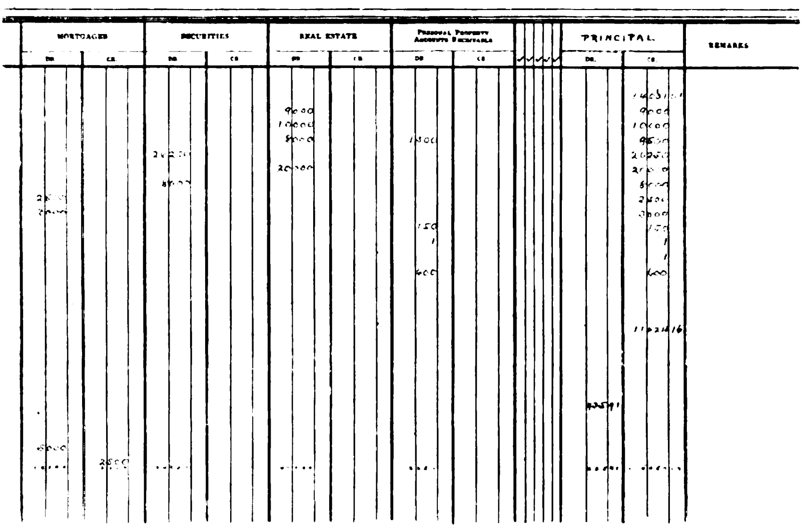

FIG. 22.—RIGHT-HAND PAGE, COMBINED TRUST JOURNAL AND LEDGER, ESTATES DEPARTMENT.

must always be in balance if the work is properly done. The check columns for Individuals, for Interest, Rents and other forms of Income, and those after the columns headed "Personal Property," may be used either for postings to sub-accounts or as a means of picking out the entries for the particular classes of items, or for both purposes. The Principal account shows the total Principal at any time, including both Cash and Investments. The cash Principal may be found by subtracting from the balance of the Principal account the total of balances under the four accounts preceding; or by subtracting from the balance of Cash account the balance of Income account; and it may be proved by combining the two operations. Some companies prefer to carry only Cash Principal in the Principal account.

The figure illustrates the plan of entering the complete inventory of an estate, at the time the property is received, in the ledger. This plan is an excellent safeguard against overlooking any item of the estate, as every item credited to Principal in the ledger must be accounted for. Items of uncertain value may be entered here at the nominal appraisal of one dollar, as shown in the figure. Whether this plan of entering the whole inventory in in the ledger is better than that of confining ledger entries strictly to cash transactions and keeping the inventory elsewhere, is a matter upon which opinions differ; and there is good authority for either course. There is also a difference of opinion as to whether securities of various kinds ought to be carried at an appraisal based on their market value or at their par value. There are arguments for and against either course, and the question is not always an easy one to decide. CLAY HERRICK.

(*To be continued.*)

CORPORATION INFLUENCE IN POLITICS.—Commenting on the late disclosures relating to the Equitable Life Assurance Society, the New York "Journal of Commerce and Commercial Bulletin" says:

"That this company, other life insurance companies and many corporations have been accustomed to make contributions to both political parties there is no doubt, and that it is done with corrupt purpose and with corrupt effect is equally beyond question. It has been done to secure legislation and to prevent legislation, to obtain privileges and immunities, and to escape burdens and exactions. Whatever excuse may be pleaded in extenuation or justification, it is an infamous business, which has had a most degenerating and demoralizing effect upon public life and upon popular political action. It is one of the perils of popular government. This kind of rottenness should be exposed without mercy and subjected to the most caustic process of disinfection. It is a cancerous growth that must be eradicated if our body politic is to have health and escape dissolution."

Novel Form of Bank Advertising.—A. G. Boal, Cashier of the First National Bank, West Elizabeth, Pa., sends the Magazine the following description of a novel form of bank advertising:

"Advertising by means of show windows is not usual for banks, but recently the Diamond National Bank, of Pittsburg, made use of one of its prominent windows for this purpose, and with good effect. The Cashier secured a full set of Philippine currency and had it neatly framed and hung in the window. It attracted the attention of passersby, among whom was a live reporter. He made a four-line news story of the exhibition, and this was copied by other papers in the city. The result was that the next few days hundreds of persons stopped before the bank to examine the currency, sometimes the crowd being three and four deep.

Doubtless there were many who looked on who had no occasion to patronize a city bank. However, in America at least, it happens sometimes that the person not needing a bank to-day will to-morrow, and no doubt the name of this particular bank was impressed on the minds of the viewing throng.

Foreign bankers in Pittsburg have frequently made impressive displays of foreign currency and coin to attract foreigners to their places of business. To the foreigner it was like getting a letter from home to see real money from the old country and to dream of the day when his pile of American dollars would be big enough to exchange for some of that same money, with which to go back home and perhaps get married.

American bankers might make interesting displays of our circulating medium from time, either in the windows, or the lobbies of their banks, inviting the public to the view and reaping therefrom some effective advertising."

AMERICAN SECURITIES IN EUROPE, 1845–1905.

The second half of the nineteenth century was pre-eminently the European period of American finance. It was then that European capital and labor overflowed into the New World in two great fertilizing streams. They had half a continent before them of offering boundless scope for their energies. The needs of the country were many and various. It called for cultivators, engineers, railroad builders, financiers, and Europe furnished them all in abundance, Great Britain especially. Adventurous spirits of all nationalities flocked across the Atlantic to the new field of enterprise where anything and everything were possible. The lives of many of them became a romance as wonderful as the imagination of a Dumas ever painted.

Young Englishmen, young Scotsmen, young Irishmen, young Germans, all as penniless as was befitting heroes of romance, struck out for the Great West to make careers for themselves. Few of them altogether failed, many achieved a fair measure of success and some surpassed their wildest anticipations. Men, who if they had stayed at home might never have risen above the desk or the shop counter, developed into railroad kings and financial magnates. Others who left Europe mere mechanics became mine-owners, iron-masters and manufacturers of world-wide fame. Europeans of another sort were able to contribute much to the development of the Republic without leaving home. British traders supplied it with all kinds of goods for which they had often to take payment in local securities. London bankers were eager enough to finance new railroads so long as the proceeds of the loans were taken in rails and equipment. The finance of those days very correctly described itself as merchant banking.

My own experience of American finance in Europe reaches back rather more than forty years. During that period I have known personally many of the financial pioneers who hailed from this side of the Atlantic. Most of them have been interesting in themselves as well as in their work. They in fact put so much of themselves into their work that to separate the two would be to spoil both. The best description that could be given of their Homeric age would be some biographical reminiscences. It may surprise even American readers to learn how many strange foreign elements have entered into the composition of their railroad finance.

It is not in war alone that Scotland has produced Dugald Dalgettys. Her banks, her factories, and her wholesale houses, have also furnished large numbers of them. Some of them had penetrated as far West as Chicago when the future metropolis of the West was still a mere village. The romantic career of George Smith, afterwards known to the end of his life as "Smith of Chicago," began there as early as 1834. He had gone out from his native Aberdeen on a special mission of colonization and investment. When he saw Chicago it struck him as being the very place he was in search of. Forthwith he organized the Scottish-Illinois Land and Investment Company for the purpose of trading in real estate. Having put into it the whole of his own small fortune, said to have been about £3,000, he returned to Scotland to raise more capital. In this he appears to have been successful, and on his return he was accompanied by two or three other young Scotsmen destined to make their mark in Western history. One of them was Alexander Mitchell, the future builder of the St. Paul road. He was Smith's partner and right-hand man in various long-headed schemes that were soon put in operation.

Smith wished to set up as a banker in Illinois, but State law forbade him. He obtained, however, from the State Legislature a charter for an insurance company, and afterwards a similar charter from the Wisconsin Legislature for the Wisconsin Marine and Fire Insurance Company, he called it—but only on the express condition that it should not do banking business. Nearly all the note-issuing banks failed in 1837, and the lapse of their issues naturally caused a great dearth of currency. Smith was almost compelled to issue some kind of circulating medium whether he liked it or not. He therefore invented "certificates of deposit" like those of the seventeenth century goldsmiths. Unlike the State banks and other primitive note issuers, he provided for their redemption at all the company's agencies, where they were in fact always promptly cashed.

What was a rare record in those days, not a single instance of refusal or delay to cash his notes was ever heard of. They became in consequence very popular and had a wide range of circulation. He succeeded in issuing nearly a million and a half dollars of them and in keeping them out. Even after the State Legislature formally cancelled the charter of his insurance company, his notes continued to circulate all the same. "Smith's Bank" held its unique position in Chicago until 1857, when its founder.dissolved of his own accord. A few years later he returned to Scotland with the spoils of twenty years' lucrative banking and investment. His pupil, Alexander Mitchell, removed to Milwaukee, where his career as banker and railroad financier made another interesting foreign episode in American history.

One of the last names Americans would be likely to connect with the early history of their railroads is that of Robert Louis Stevenson; nevertheless, his father, David Stevenson, was one of the earliest European writers on the subject. As a young civil engineer he visited the States somewhere about 1838—a few years after a combined rail and canal route had been opened up across the Alleghenies from Philadelphia to Pittsburg. Its first section was an eighty-two mile railway from the seaboard to Columbia on the Susquehanna River; its next was a canal 112 miles long from the Susquehanna to Hollidaysburg at the foothills of the Allegheny range; its third a portage railway up to Johnstown, and its last section another canal, this time 104 miles long, from Johnstown to Pittsburg, then at the head of navigation on the Ohio. David Stevenson inspected the trans-Allegheny route and paid it a high compliment as a piece of engineering. In the book he published on his return home ("A Sketch of the Civil Engineering of North America"), he said of it:

"America now numbers among its many wonderful artificial lines of communication a wonderful mountain railway, which in boldness of design and difficulty of execution I can compare to no modern work I have ever seen, except perhaps the passes of the Simplon and Mont Cenis, but even these remarkable passes, viewed as engineering works, did not strike me as being more wonderful than the Allegheny Railway in the United States."

Later on, when the two canals had been replaced by railways, an all-rail route was formed from Philadelphia to Pittsburg. Later still it became the main stem of the Pennsylvania system. One loves to think of David Stevenson's book having been extensively read by his countrymen, and of its having helped to kindle the strong interest that Glasgow, Dundee and other Scotch towns subsequently took in American railway securities. At the same time it must be admitted that a good deal of that interest sprang from a more prosaic source. Foreign trade went hand in hand with finance. The big export and shipping houses of those days were foreign bankers as well. They made advances to their American customers and negotiated securities for them. Manufacturers and wholesale merchants who did not profess to be bankers began to dabble also in American stocks and bonds. Sometimes they had to take them in lieu of cash, sometimes they bought them for invesment, and sometimes they dealt in them among their friends.

Out of these casual dealings arose the Scottish-American Investment Trusts, which from 1870 onward became important institutions in Edinburgh and Dundee. They had energetic men behind them, and they not only bought American securities for investment, but latterly they launched into railroad building and financing, not always with happy results. Mr. Robert Fleming, of Dundee, has been for thirty years a well-known figure in Wall Street. His first acquaintance with "Americans" was made as private secretary to Sir David Baxter, who had invested a large portion of his estate in them. After his death his executors found their hands full of securities they had never heard of before. They sent Fleming over to New York to arrange for realizing them. He saw the opportunity they offerred for good business, and his friends in Dundee readily furnished the requisite capital.

In conjunction with Messrs. Maitland, Phelps & Co., Fleming financed the original Denver & Rio Grande Railroad. He also interested himself in some of the Gould roads. Then he assisted his friends, Vivian Gray & Co., to convert the bankrupt Ohio & Mississippi into the now prosperous Norfolk & Western road. In 1895 he took an active part, along with Baring Brothers & Co., in the reconstruction of the Atchison, and since then he has been one of its warmest supporters on this side. Lately he has been co-operating with Speyer Brothers and Kuhn, Loeb & Co. over the Mexican Central. A year ago that road seemed to be in imminent need of their services as emergency financiers, but the crisis has blown over for the present.

Dundee at one time took a warm interest in cattle ranching, but the "Big Six" have about squeezed it out of that. It built a pioneer railway in Oregon—the Oregonian, I think it was called—which proved a frost, and the promoters were very glad when Mr. Villard came along and bought them out on fairly liberal terms. Edinburgh shared the ranching craze with Dundee, and indeed claims the credit of having started it. But few of its cattle companies now survive, and most of the survivors are moribund. It made a rich strike, however, in Arizona copper, which has far more than recouped all its other losses. Its mines near Clifton, Arizona, are connected with the Southern Pacific by a sixty-mile branch which it built for itself.

Glasgow has few American companies compared with Edinburgh, or even Dundee, though of course it is a much larger American market than either of them. Liverpool and Glasgow are, in fact, the only two important American markets in the provinces. They do a large amount of "shunting" with London, and very frequently Wall Street operates in London via Liverpool when it wants to give a false lead. The commercial connection of Glasgow with the States is the oldest as well as one of the most important on this side. A certain amount of financial and speculative interest naturally arises out of it. The Coatses, of Paisley, the Campbells, and other old Glasgow families are all American investors of long standing. Descendants still exist of the eighteenth century tobacco merchants who held high state in Virginia street and had a colony of their own at Norfolk, Va.

Glasgow men were among the first to realize the great possibilities of the pioneer railroads in the West. They were, in fact, a little too prescient for their own peace of mind. The directors of the City of Glasgow Bank and their friends erred in their American investments by seeing too far ahead. They laid in millions of dollars' worth of seven per cent. bonds of the roads which afterwards were joined up into the Chicago, Milwaukee and St. Paul. While the directors of the bank were serving their sentences in jail, these bonds rose to the full value of the advances that had been made on them. The liquidator sold them at a substantial profit and the purchasers resold them a few years later at much higher prices.

It has been already mentioned that the St. Paul road was the creation of a Scottish-American, distinguished in his day both as a banker and a railroad builder, to wit, Alexander Mitchell, of Milwaukee. It may be appropriately added here that about the same time, in the adjoining State of Minnesota, two other North of Scotland men were helping to finance another American road which has become even more famous than the St. Paul, namely, Mr. Hill's original Manitoba line. They were then plain Donald Smith and George Stephen. Now they are Lord Strathcona and Lord Mount Stephen, the creators of the Canadian Pacific Railway and the Nestors of the Canadian Northwest. Once I had the pleasure of hearing from Lord Mount Stephen himself the story of his Manitoba venture and the chain of accidents which led him into it.

Somewhere about 1877, three directors of the Bank of Montreal—Messrs. Donald Smith, George Stephen and R. Angus—were in Chicago prosecuting a lawsuit on behalf of the bank. The hearing had to be adjourned from Friday to Monday, and they hesitated between returning home for the two days or remaining in Chicago. While they were discussing the point, Mr. Stephens remembered having received, not long before, a letter from an old Canadian friend, Mr. Hill, about a railway he was building from St. Paul up the Red River Valley. He suggested taking a run up to see it, which was agreed to. They liked the country so well and the prospects of the road seemed so favorable, that an agreement was speedily made to take a hand in finishing it.

But first they had to obtain control, and that proved a difficult business. The road had been started with Dutch capital, and most of the stocks and bonds were held in Holland. Mr. Stephen went straight over to Amsterdam, hunted up the Dutch holders and made them an offer, which they gladly accepted. He returned to New York, where there were also some interested parties and settled with them. In a comparatively short time the Montreal syndicate secured a free hand, and Mr. Hill went ahead with the road at double speed. He had a straight run of luck right through to the end. The first crop of wheat raised in the Red River Valley after the road got through was a record. Wheat prices that year were away up sky-high. The syndicate admitted having cleared half a million sterling apiece, and that was only the beginning of their campaign.

It is now no secret that the millions so quickly made in the Red River Valley soon afterwards went into the Canadian Pacific. But for that accidental visit of the three Bank of Montreal directors to St. Paul in 1877, the Canadian Pacific scheme might have been hung up for another ten years, and the opening of the Northwest might have been that much delayed. But for it there might have been no Great Northern Railway, no Northern Pacific corner in Wall Street, no Northern Securities Company. It is even possible that there might have been no J. J. Hill as we know him now. Had he been stuck for a year or two longer in the Red River Valley how many of his subsequent triumphs might he not have missed?

Wisconsin, Iowa and Minnesota may be called the Scotch corner of the United States. That is where most of the Scotch and Scotch-Canadian millionaires have made themselves. From "Smith, of Chicago" and Mitchell, of Milwaukee, down to James J. Hill, of St. Paul, they form a very distinguished succession. No one will grudge them their dollars which have been so largely mixed with brains, and from which the whole Northwest has so immensely benefited. The German sphere of influence has for the most part lain further West than the Scotch. Almost from the outset it favored the Pacific Coast. One of the first, if not the very first, experiments made by the Germans in American railroad finance was on the Oregon and California. About the same time they went into the Kansas Pacific, and these two roads were about the extent of their commitments when they got into the hands of Henry Villard. All the world knows how during the next twenty years he made things hum for them. It is worthy of notice that Henry Villard and James J. Hill appeared on the scene almost simultaneously. Both of them had had a good many rough turns in the world before they took to railroading. Villard had been a train hand, a lawyer's clerk, a school teacher, a newspaper reporter and a war correspondent before he touched finance. Even then it was not railroading that he tried first. His maiden scheme was a land mortgage bank which he took over to Germany in 1871. It was only when he found that his countrymen were more interested in American railroad bonds and stocks that he switched his versatile mind on to that track. With a minimum of study he constituted himself "an expert in American railroad affairs," and his opportunity soon came.

In the crash of 1873, both the Kansas Pacific and the Oregon and California defaulted, much to the chagrin of their many bondholders in Frankfort and Berlin. Committees were at once formed to protect German interests and Villard was invited to join them. Next year (1874) he was sent out to the United States with ample powers to act for the bondholders. At first sight of Oregon he took in the situation at once. The road was ahead of settlement, and the first thing to be done was to bring settlement into line with it. With this view he opened an immigration office in New York, and a stream of German settlers was soon flowing through it into Oregon. The bondholders were so pleased with his energy and resource that in 1876 they made him President of the reorganized Oregon and California road as well as of its auxiliary, the Oregon Steamship Company.

This and another local line of steamers, the Oregon Steam Navigation Company, were both in difficulties and doing their worst against each other.

Villard cleverly untied that knot by buying out all their creditors and combining them in a new concern which he christened the Oregon Railway and Navigation Company. Thus he began in 1879 his brilliant financial combinations which first made him master of the State of Oregon, and ended in the famous capture of the Northern Pacific. A year or two sooner, J. J. Hill had started his series of brilliant financial combinations in Minnesota. The German financier little dreamed that the whole fruit of his twenty years' labor—Northern Pacific, "blind pools," gold spikes and all—was to fall into the hands of a Canadian who would prove to be both a greater "hustler" and a bolder schemer than himself.

But if Henry Villard had to succumb in the end to Scotch pertinacity, he made one or two successful Scotch deals to start with. In 1880 he completed his financial conquest of Oregon by buying out the Dundee people who owned two or three local roads of their own making. Then he founded his Oregon Improvement Company and entered into a traffic agreement with the Northern Pacific people. His "blind pool," engineered with German capital in 1881, gave him control of the Northern Pacific. His election to the presidency marked the zenith of his career. Two years later came the collapse. In 1883, the Northern Pacific had hardly been finished when it passed into the hands of a receiver, and Heny Villard's reign was practically over. Though he regained his seat on the Northern Pacific board, and even became chairman of the finance committee, the glory of the "golden spike" days never returned.

Strange ironies of fortune often dog the footsteps of brilliant financiers, and Henry Villard had his share of these also. One of the roads which he planned and started during his Northern Pacific régime was the St. Paul and Manitoba, the Canadian end of which now belongs to the Manitoban Government, and forms part of a new Canadian railway system. It might, however, have consoled him for his many mishaps if he could see to day how many of his rivals and successors have been hoist with a petard which he invented. He was the originator of what is now known as the "holding company." His Oregon & Transcontinental Company, of 1881, was the prototype of the Northern Securities Company. Oddly enough, both were organized with the same object—to take care of the Northern Pacific Railway. And strangest irony of all, both failed of their immediate object.

So far as specific results are concerned, nearly the whole of Villard's financing in the Northwest was a failure. Of all the railroads he rescued from receiverships and reorganized on German account, the Germans to-day own hardly a single mile. Not only the Northern Pacific, but their Oregon roads and the Kansas Pacific have passed into other hands. Indirectly, however, the Germans gained much through Villard's brilliant, if unsuccessful, combinations, and they owe him a lasting debt of gratitude for it. He opened the door for them into American railroad finance and gave them a firm footing in it which they never lost afterwards. On the contrary, they have strengthened and consolidated it year by year. To him is undoubtedly due the establishment of German finance in New York.

Three years after the collapse of the Northern Pacific, Villard returned from Germany to the United States as agent of the Deutsche Bank. That was the beginning of a new era in international banking. The Deutsche Bank has always made a specialty of railway finance, and its railway ramifications extend on one side to Asia Minor and on the other side to the Pacific. They may even include China, though of that I cannot speak positively. That such a bank must be very useful to German holders of American securities, goes without saying. And that it has become a power in the American stock market is also self-evident. The prominent part it took in the reorganization schemes of 1894-96 indicated how large must have been the interests of itself and its friends in the reorganized properties. These interests have certainly not diminished since, but are more likely to have been increased.

The Deutshe Bank is a typical representative of German investment abroad. It deals with all foreign securities, American, Argentine or Turkish, in the same systematic, businesslike way. It is in close touch with every railroad it holds any interest in. It knows the road itself and the management. It keeps a vigilant eye on the market. It does, in short, everything that a bank ought to do which meddles with railroad finance. Many other European banks dabble in railroad finance, but very few of them bring to bear upon it German method and thoroughness. In London, we make no pretence of the kind. Though for more than half a century we have been the principal dealers in American securities outside of Wall Street, our methods are as rough and ready to-day as they were at the beginning. Instead of half-a-dozen jobbers there are now almost as many hundreds and instead of a dozen stocks to deal in there are thousands; but our methods are as primitive as ever.

Business has grown immensely in Capel Court, but there is little more science about it than there was in the days of the half-dozen jobbers. Special study of American securities is as rare in London as it is common in Berlin, Frankfort and Amsterdam. Railroad experts can be found in Germany who have visited every station on the chief Pacific roads and have examined all the details of their working. But it would be difficult to find in England a banker who had paid even a flying visit to the United States. It is becoming a fashion on the Stock Exchange to run over to New York and Niagara Falls for an autumn holiday. Very few men go, however, in the spirit of the inquisitive and industrious Dutchman who lives for weeks in private cars or in railroad offices.

But Capel Court has not always been so phlegmatic as it is to-day regarding American securities. Sixty years ago, when they were developing into an active market, several delegates were sent over to make observations on the spot. Mr. Satterthwaite, one of the patriarchs of the American market, began his business life in 1840 with a grand tour of the States. He travelled over the short local roads in the Hudson Valley, which Commodore Vanderbilt had not yet joined up into the New York Central. He steamed up the Mississippi to St. Paul when it was still a military post, and he steamed down the same river to New Orleans. He saw Pittsburg before it had an iron furnace and, when it was known only as the highest port on the Ohio River. He crossed the Alleghenies on the Portage Railway, so much admired by Robert Louis Stevenson's father. He journeyed from the Alleghenies to Philadelphia over half-finished roads which were ultimately absorbed into the main line of the Pennsylvania. Altogether he spent fifteen months on a most instructive and adventurous tour.

Mr. Satterthwaite returned home an enthusistic believer in the future of the Western Republic, and all through his long life he has remained so. His firm have acted for many years as the London agents of Niles & Co., New York.

It was about 1840 that an active interchange of agencies began between New York and London. The Barings had long been well represented on both sides of the Atlantic. In 1837, the Rothschilds sent over Mr. August Belmont as their special representative, and he founded the firm now so well known as August Belmont & Co. Another ancient Jewish family of Frankfort, the Speyers, established about this time branch houses both in London and New York. The chief business of the latter was to feed the Frankfort Bourse with American securities, which it did most liberally.

During the Civil War, Germany was well supplied through these two channels with United States six per cent. bonds. It was, throughout, a vigorous buyer and did not lose faith in them even when they fell to low down in the forties. United States bonds were the first big venture of the Germans in international finance, and not the least successful of the long series. The Hon. D. A. Wells, in one of his special reports on the financial condition of the Union after the war—say in 1869—estimated the value of national bonds then held abroad at over 1,000 million dollars, and that of railroad, municipal and other obligations so held at over 300 million dollars.

A large proportion of the former doubtless went to Germany, while the bulk of the railroad and municipal securities would gravitate to London. Some of the earliest issues indeed were made in London. The first American railroad security to appear in Wetenhall's list was an issue of Camden & Amboy five per cent. bonds negotiated in 1834. It was described originally as a New Jersey Canal bond, but the issuing company owned railroads as well as canals. It was in fact the progenitor of the fortunate United New Jersey Railroad & Canal Co., which in 1871 leased its whole property to the Pennsylvania Railroad for 999 years, and got a ten per cent. guarantee on its stock. Notwithstanding the heavy rental, this is said to be one of the most profitable parts of the Pennsylvania system.

It was started under a series of New Jersey charters granted between 1830 and 1832. They embraced two sections of railway—the Camden to Amboy, which was opened early in 1834, and the Jersey City to New Brunswick, completed in 1836, and a canal, the Delaware & Raritan, which was not finished till 1838. Between 1834 and 1837, gold loans were raised on them in London to a considerable amount, and some dollar loans appear also to have been negotiated. In Wetenhall's list, at the beginning of 1835, two New Jersey Canal issues are quoted, namely, gold five per cents of 1864 for £210,000, and currency 6 per cents of 1861 for $800,000. This is the oldest record of American railroad or canal securities in a European market.

It is rather significant that though the following decade, 1835–45, was a very active period of railroad building in the United States, very few new securities of that class should have come to London. At the beginning of 1845, Wetenhall has still only three altogether, and two of them are old friends with new names. The New Jersey Canal bonds appear now as Camden & Amboy five per cents of 1864 for £210,000, and six per cents of 1864 for £225,000. But there is one new issne of importance—Philadelphia and Reading six per cents of 1880 for £200,000. This came over in 1843, and we may safely assume that it was the maiden effort of McCalmont Brothers in Reading finance. It began a connection which lasted for nearly half a century, and was the prototype of many similar attempts made by British financiers to manage American railways from London. They were, of course, foredoomed to failure. The management, as a rule, was unsuccessful, but even if it had succeeded financially it could not have become permanent. In any case, New York would have recovered control of all the leading American systems as soon as it was able to finance them independently.

A good deal of mystery still surrounds the abrupt termination of the McCalmont connection with Philadelphia and Reading finance. The popular theory at the time was that the McCalmonts threw it up in disgust at the persistent falsification of promises made to them, and of hopes of improvement held out. But that I have reason to believe was not their only motive. Though there were two brothers in the firm it depended entirely on one. He was the brain and backbone of the business, while the other was a man of artistic tastes who never went near the City. When the energetic brother died, the artistic one, much to the horror of the staff, declined to take his place, or appoint a successor. He would have nothing to do with the concern. The staff, including his own nephew, begged to carry it on, temporarily at least. They asked him to name a price for it, but that he also declined to do. He insisted on winding up the business then and there, and wound up it was.

It would be difficult to find in the history of commerce a parallel to this gratuitous sacrifice of a splendid business connection. Before it happened, however, Reading stocks had obtained a firm foothold in London, and in one sense the withdrawal of the McCalmont interest may have benefited rather than injured them. It gave them a freer and a broader market. But they have never been great favorites in Capel Court. At their best they never rivalled Eries or Atlantics in activity. From their debut in the early sixties, Eries have been the pet of British speculators. Nothing has so greatly narrowed our jobbing market as the New York pool, which for the past five or six years has been steadily draining away the floating stock of Eries that kept business going in Capel Court.

Strange to say, little is now known about the original introduction of Erie stocks here. The early dealers in them have nearly all died out, and hardly a tradition remains as to how or when they first came over. It must have been soon after the road emerged from its first receivership in January, 1862. From the fact that Eries always appear in Wetenhall coupled with the old Atlantic & Great Western, it may be inferred that there was some hereditary relation between them. They were twin heroes of one of the wildest and most incredible extravaganzas in financial history. To do justice to its villainies and absurdities would require the pen of a Dumas or a Jules Verne. Several of the strangest adventurers of the nineteenth century were mixed up in it. George Francis Train, Alexander McHenry, Jim Fisk and Jay Gould flit across its lurid footlights.

The first episode in the Erie-Atlantic romance has been told by Train himself in his "My Life in Many States." It began many years ago when the second Bank of the United States was still in existence, and Queen Christina, of Spain, was one of its largest depositors. Whether or not she thought of retiring to America in the event of the Spanish throne becoming too hot for her, is not quite clear; but be that as it may, the Bank could not repay her deposit. Collateral security was offered for it in the form of a large block of coal lands, 40,000 acres in extent, at the northern end of Pennsylvania. In order to look after it, she appointed two resident agents in Philadelphia, Fallon by name.

When the Erie railway reached Olean on its way up from New York to the lakes, the Fallons started building a railway from that point to the coalfields. Oil had already been discovered in the district, and ambitious projects were in the air for running an extension of the Erie right through the oil region to Dayton, where it was to connect with Cincinnati and St. Louis. Mr. Train became acquainted in 1857 with Queen Christina's banker, Salamanca—who became godfather to one of the principal stations on the Atlantic and Great Western road. He was engaged to go over to Olean and examine the situation, which he did in his usual princely fashion. The chief event of the inspection was a banquet which he gave at Mansfield to all the local politicians who were likely to be useful afterwards. Among his guests he mentions John Sherman, Benjamin Wade and Robert E. Schenck, subsequently of Emma Mine fame.

On the strength of the splurge he returned to England, and contracted with Crawshay Bailey for 25,000 tons of iron rails at $40 per ton, payable in bonds at fifty, which was equal to eighty dollars cash. The Ebben Vale Company, entered into a similar contract for 30,000 tons of rails. Thus he not only got a start, made with the future Atlantic & Great Western, but he interested some strong people in the marketing of his bonds. James McHenry, who was then a merchant in Liverpool, became financial and commercial agent to the royal syndicate. At the close of the war in 1865, the Atlantic & Great Western began to make real history. Half a dozen odd lengths of railway which had been built between 1852 and 1858 were pieced together under that name. Its first public issue was made in London, and the promoters were in negotiation with Sir Morton Peto for completing it, when the Overend, Gurney Black Friday bowled them all over. But before that catastrophe happened, Sir Morton Peto had inspected what there was of the road and, after a fifteen thousand dollar banquet at Delmonico's, had returned most hopeful as to its prospects.

Both for the Erie and the Atlantic & Great Western, 1867 was a very fateful year. It witnessed the capture of the Erie by Jay Gould, and the first receivership of the Atlantic & Great Western. Next year (December, 1868) saw the first lease of the Atlantic & Great Western to the Erie, the beginning of that Kilkenny cat alliance which, after thirty years of continuous friction, culminated in the definite union of the two roads. From 1867 to 1896 they offered every imaginable condition that speculators could desire. During these thirty years Eries and Atlantics were simply perfect as gambling counters. Both of them were all the time in hot war. The London holders of Eries had, from 1868 until 1872, to fight tooth and nail against Jay Gould, while the McHenry-Bischoffsheim duel kept things equally lively in the Atlantic & Great Western camp.

Great blocks of stock had to be continually crossing the Atlantic in order to turn the tide of battle now to one side and now to the other. A delay of a day or two to a New York mail steamer might involve a loss of millions of dollars. A fog at Sandy Hook has been known to make a difference of ten dollars a share on a shipment of Eries. That was the hottest campaign London ever had in Americans. The Erie-Atlantic fights have been the most distinctively English episodes in our American market. They excited in it a keener and more general interest than was ever taken in any other stock. Louisvilles have made the nearest approach to them, but their reign was comparatively short and uneventful. Readings also had their little day, but outside of that small circle London has seldom had any of the feverish enthusiasms of Wall Street. Eries and Atlantics it regarded as its own gambles, which it could do what it liked with.

The "Times" money article at the end of 1869 quotes about twenty American securities of which five are Atlantic & Great Western bonds, and three are Eries—eight in all, or forty per cent. of the list. The Pennsylvania is represented by two six per cent. issues and its common stock. Illinois Central has the same number, and the other half-dozen are odd stocks or bonds, most of which have since disappeared. From 1873 onward, the official list grew rapidly and kept on growing till the collapse of 1893. These two decades represent the zenith of English influence in Wall Street. With the reorganizations of 1894-96 it waned, German influence taking its place. But a more important change was the gradual predominance which New York acquired in its own market. It may now be said to control all its principal railroad stocks, and to be no longer dependent either on London or Berlin. W. R. LAWSON.

LONDON.

AMERICAN BANKERS' ASSOCIATION'S CIPHER CODE.—The American Bankers' Association has issued a specially-compiled cipher code for the exclusive use of its 7,500 members. It is thought that this will go far towards obliterating the large number of small spurious checks which are floated in different sections of the country, and whose amount aggregates a large figure annually.

New Counterfeit $5 Silver Certificate.—Series 1899; act of August 4, 1886; Lyons, Register; Roberts, Treasurer; check letter B; face plate number indecipherable; back plate number 375; portrait of Indian Chief. The serial number of the note under inspection is 64725642. It is a poorly executed note, printed on two thin pieces of paper with distributed red and blue silk fiber between them. The general appearance of the counterfeit is fair, but should not deceive anyone who inspects it carefully. The seal, denominational design and numbers are darker than the genuine and show none of the bronze tints they should have. There are a great many mistakes in the lettering on the face of the note the "V" being omitted from the script word, "Silver" in "Five Silver Dollars," right face of note. The "i" is omitted from the word "Washington" immediately below "Bearer on Demand," and there are no periods after "D" and "C" in the abbreviation for District of Columbia. "Treasurer," under the signature of Ellis H. Roberts, is spelled "Teasiuer," and "Register," below the signature of J. W. Lyons, is spelled "Ragster." The green on the back of the note is darker than the genuine and is "muddy." All of the lathe work is badly done, being scratchy and blotchy and bearing little or no resemblance to the genuine. This note made its appearance in New England.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

AUTHORITY OF CASHIER—EXTENDING TIME OF PAYMENT.

Supreme Court of Appeals of West Virginia, April 25, 1905.

BANK OF RAVENSWOOD *vs.* WETZEL.

A Cashier of a bank has no implied power, merely by virtue of his office, to receive money for interest in advance on a note owned by the bank, and agree to extend time of payment and thus discharge an indorser from liability.

This was an action upon a promissory note for $1250, made by R. T. Wetzel payable to B. D. Williams at the Bank of Ravenswood, and indorsed by Williams and next by C. C. Smith, deceased. The administration of Smith interposed the defense that he was an accommodation indorser for Williams, and that the bank, in consideration of $34.15 paid as advance interest by Wetzel after maturity of the note, agreed to give Wetzel four months' further time for payment, without the knowledge or consent of Smith, or his representative, and thereby released him from liability on the note.

BRANNON, *P.* (omitting part of the opinion): The evidence conflicts as to whether the payment of $34.15 was made as a partial payment only, or as interest in advance for extension of time of payment. My conclusion is that, as the burden of proof here is on the defendant, she has not sustained the point that further time was given. I think the oral evidence, and the record in the two books of the bank, show that the said $34.15 was simply a partial payment. If this is so, there is nothing in this defense for want of evidence; and if this is not so, still that defense must fail for want of law to sustain it. Concede that there was an agreement by the Cashier to receive the $34.15 and grant indulgence. The Cashier had no implied authority to do this. No express authority is proven; no ratification by the bank of this loose, unwarranted act is proven.

Counsel cites 2 Am. & Eng. Ency, L. (1st Ed.), reading: "The Cashier is the chief executive officer, through whom the whole financial operations of the bank are conducted. His acts within the scope of the general usage, practice, and course of business of the bank, will bind the bank in favor of a third person possessing no other knowledge."

A Cashier has very wide powers. The Supreme Court says in United States vs. City Bank, 21 How. 356, 16 L. Ed. 130: "The court defines the Cashier of the bank to be an executive officer by whom its debts are received and paid and its securities taken and transferred, and that his acts, to be binding upon a bank, must be done within the ordinary course of his duties. His ordinary duties are to keep all the funds of the bank, its notes, bills, and other choses in action, to be used from time to time for the ordinary and extraordinary exigencies of the bank. He usually receives, directly or through subordinate officers, all moneys and notes of the bank, delivers up all discounted notes and securities when they have been paid, draws checks to withdraw the funds of the bank where they have been deposited, and, as the executive officer of the bank, transacts most of its business." (4 Thompson on Corporations,

§ 4741.) He has full power within the just scope of his authority, according to the general usage, practice, and course of business in such case. (Cook on Corp. § 1718; Clark and Marshall, Corp. § 705.)

But there is at least one notable, logical, necessary exception, essential to protect stockholders against loss and wreck of the bank; to protect them against what is quite common—the loose practice and unwarranted assumption of power by Cashiers. A Cashier has no implied power, merely by virtue of his office, to give away, surrender, or release the bank's securities. He can do no act which so operates. When he does this he is outside of the scope of his authority, is acting, not according to usage, practice, or usual course of business, but in plain disregard of the rights of the bank. "The Cashier of a bank, unless specially empowered to do so, has no authority to release, otherwise than in due course of business and on payment, the makers of notes or other debtors of banks, or to release sureties or indorsers." (Clark and Marshall on Corporations, 2158.)

Such is the current of authority; I Daniel, Neg. Instruments, § 395 (1st Ed.) says: "It is well settled that neither the President nor the Cashier of a bank has authority, virtute officii, to give up or release a debt or liability to the bank, or make any admission which would release any party to an obligation, negotiable or otherwise, due to the bank; for such purposes the board of directors only having the power to act." As Thompson on Corporations, vol. 4, § 4750, says, even the directors have no power to release or give away assets which it is their duty to preserve. "A Cashier cannot, virtute officii, release a surety upon a note held by the bank, even though the bank holds other security to which it might resort. Special authority is necessary to justify such release." (Morse on Banking, § 169.)

Counsel for the bank aptly says: "The release of a debtor is an act of ownership, and not of administration;" citing many cases, among them Union Bank vs. Bagley, 10 Rob. (La.) 43; Hodge's Ex'r vs. First Nat. Bank, 22 Grat. 51; Ecker vs. First Nat. Bank, 59 Md. 291; Gray vs. Bank, 81 Md. 631.

The case in 22 Grat. 51, involved the right of a President to give a certificate that a note in the hands of the bank was given as a mere voucher, not as evidence of debt. President Moncure said: "But certainly neither the President nor Cashier could, virtute officii, give up a debt or liability of the bank, or bind the bank by such an admission."

Counsel for the bank further justly says that the act in question is equivalent to the surrender of the note, and the acceptance of a new note without Smith as an indorser; in effect, the discharge of the old note by the acceptance of a new note of the maker only; citing Bank vs. Hart (Neb.) 55 N. W. 631.

When a note is extended as to payment, the usual banking usage requires a new note by makers and indorsers. Can a Cashier depart from this usage with safety, accept interest in advance, and agree to extend time without consent of the indorsers? This is not the execution of usual powers of office. It is the waste of assets. Any other rule would be ruinous to stockholders. Wakefield vs. Truesdell, 55 Barb. 602, so much relied on, is not from a court of high authority. It does not discuss the question. It cites not a single authority.

In view of what has been said as to the want of power in the Cashier to grant indulgence, it is not material to advert to letters written by the Cashier a good while after the date when he is said to have granted further time, and which are claimed to contain admissions that he had granted further time to Wetzel. However, I will say that, on authority above quoted from Daniels and Judge Moncure, such admissions are abortive. They do not bind the bank. Elementary law found in 1 Greenleaf on Evidence, § 113, shows that such admissions are not admissible against the bank, because made a considerable time after the date of the act of the Cashier granting indulgence. That matter was closed. Such admissions are not part of the res gestæ. (See 1 Am. & Eng. Ency. L. [2d Ed.] 695; 1 Jones on Evidence, § 270; Hawker vs. B. O. R. Co., 15 W. Va. 628; Corder vs. Talbott, 14 W. Va. 277; Smith's Adm'r vs. Betty, 11 Grat. 752; Lake vs. Tyree [Va.] 19 S. E. 787.) That is one reason why those letters amount to nothing as admissions, they being mere statement as to past occurrences. Another reason is that the Cashier has no power to bind the bank by such admissions made at any time.

The point is made that, as the plaintiff did not file a special replication denying the authority of the Cashier to extend the time of payment, it must be taken for a fact that he had such authority. No plea avers that the Cashier had authority to extend the time. The pleas filed did not say that the Cashier extended indulgence and had authority to do so, and thus did not put his authority in issue. It did not say that the Cashier granted this indulgence; it said that the bank did so. The plaintiff denied this by his general replication to the pleas. It was not necessary to file a special replication. Under the pleas in confession and avoidance, the defendant had to show extension of time by competent authority, and to do this had to show that, as the Cashier extended the time, he had power to do so. She had to show an extension binding the bank under the general replication that the bank did not do so.

We reverse the judgment, and render judgment for the plaintiff for $1,474.70, with interest from the 13th day of November, 1901, that being the date of the judgment of the circuit court, and the costs of the plaintiff in that court expended, payable out of assets in the hands of the administratrix.

On Rehearing.

It is only that labored argument was made on rehearing that I write a second opinion in the case.

Reconsideration has only confirmed my opinion that the defense to the action is destitute of strength in law or justice in fact. It is only a hard case on Smith's estate in the same sense in which every case where a surety pays a just debt for an insolvent principal is hard on the surety. Promptly on maturity the bank gave the administratrix notice of the non-payment and protest. She says she received and understood this notice. She thus was informed that the bank looked to Smith's estate for payment. She could have given notice to the bank to sue, or sued herself in equity to compel the principal to pay, if it would have been of avail; the principal being insolvent. Can it be contended successfully that notice to sue could not have been given the bank because it had bound itself to extend time by taking interest in advance for renewal? It cannot, for several reasons. To release a surety by extension of time, the extension must be based on valuable consideration, so as to tie the hands of the creditor and disable him from suing. (Bank vs. Parsons, 45 W. Va. 688.)

Concede that payment of interest in advance with promise to extend for a fixed time will discharge a surety, where the creditor is an individual. (Parsons vs. Harrold, 46 W. Va. 122.) So it would where the creditor is a bank, if the promise of extension is made by the directors. But to tie the hands of a bank and prevent it from suing, the act of extension must be a valid act, one binding it, else its power to sue is not affected, and the surety can notify it to sue, or himself sue. Extension "will not release sureties unless the bank had entered into an agreement whereby it bound itself legally to grant such indulgence." (Bank vs. Evans & Dorsey, 9 W. Va. 374.)

All agree that it must be a valid, binding act of extension to tie the hands of the bank. (Caston vs. Dunlap, 23 Am. Dec. 194.) Here we have the same question discussed in the first opinion. Had the Cashier power to make a promise to extend time and prevent suit by the bank or Smith's estate? Now, all would say that the law given in 5 Cyc. 475 is sound, that a Cashier has no authority "to release the maker of a note, or a party or surety thereon." Yet it is claimed that he may, by extending time, indirectly do what he cannot directly do—release a surety. What more vital act is to be done by a bank than making loans or renewing them? The universal usage is that the directory in assembled meeting does this. We know this by judicial cognizance, and the evidence shows that such was the rule with this bank, none but the directors having this power. Our Code of 1899, c. 53, § 49, says that the directors of a corporation "shall have power to do, or cause to be done, all things that are proper to be done by the corporation." And chapter 54, § 79, provides, as to banks, that the directors "shall administer the affairs of the company." Surely the making and renewal of loans are acts of gravity, deeply concerning a bank, not within the ordinary powers of a Cashier under the usual course of business, proper to be done only by the directory, and committed to it by those statutes, properly construed. Is not the extension of time for a future period, like the expired period, another loan or a renewal? The Cashier not merely loans, but by the loan releases an indorser. Morse on Banks, § 117, says: "Thus the making of discounts is an inalienable function of the directors. They cannot part with it, or invest any officer or officers with it. It vests with them alone and exclusively. It is a power of that degree of vital importance that it cannot be taken out of the policy of the general principle that powers of a public nature, given by the Legislature, cannot be delegated. The Legislature imposes upon the board the duty of taking charge of all those matters of business upon the wise and skillful conduct of which the property of the institution and the safety of persons dealing with it depend. This duty they cannot shift in whole or part upon others, and it covers no department of banking more unquestionably than the making of loans and discounts."

Abundant authority supports the statement of the first opinion—that a Cashier cannot release a surety or liability, or make any admission releasing any party to a debt, but only the directors can do so, if they can—in addition to authority there cited.

Gray vs. Farmers' Bank, 81 Md. 631 is apt in this case. It holds that a Cashier has no power to accept a new note so as to discharge a surety on the first note. Money was paid in, and it was claimed that it was advance interest. It was held that "if the entry on the books of the bank were to be construed as payment of interest in advance, and an agreement to extend the time, so as to discharge the surety, then the Cashier had no authority to make such contract or entry." It was held that the money should only be applied pro tanto on the note.

In our case the Cashier entered on the note: "May 3, 1898. Discount paid for four months, $34.15, to Sept. 3, 1898. Pd. by R. T. Wetzel, which is applied as a credit on within note."

Some evidence goes to show that the Cashier began the indorsement, and, before completing it, remarked that he had no authority to extend time, and added the words of credit. It is claimed that he later added the words of mere credit. Say so. Say that he received the money as discount and promised to extend time, which he denies. Under that Maryland case, and a volume of law, that entry, that promise, go for naught, do not bind the bank. We are cited 5 Cyc. 473, for the words that a Cashier may "extend time for paying a note." It is inconsistent with the passage quoted above from 5 Cyc. 475. Only one case is cited and it is relied on as pointed authority. (Wakefield Bank vs. Truesdell, 55 Barb. 602.) It is counter to a river of authority, and wholly unsatisfactory in itself. The real point of the case was whether the payment was intended to extend time. The opinion is short. As to the authority of the Cashier to extend time, the case gives no consideration, but in a few closing lines simply asserts the power, giving not a syllable of authority. Moreover, it comes from a court not of high authority, the Supreme Court of New York, it not being the highest court of that State. The Court of Appeals is.

SEALED NOTE—NON-NEGOTIABILITY OF.

Supreme Court of South Carolina, March 19, 1904.

J. C. STEVENSON & CO. *vs.* PHILIP W. BETHEA.

A sealed note is not a negotiable instrument.*

This action was brought to enforce, by claim and delivery, a chattel mortgage, after condition broken. The circuit judge, in his charge to the jury, directed them, if they found as a fact that the note and mortgage were actually made by the defendant, then they must find a verdict for the plaintiff.

Pope, *C. J.* (omitting part of the opinion): It seems to us that the pleadings themselves tend to cloud the true issue. In the complaint the note is described as a promissory note, and in the answer it is admitted to be a promissory note. In the evidence furnished by the note itself when

*This rule does not prevail in any State where the Negotiable Instruments Law has been adopted. That statute expressly provides that the negotiable character of the instrument is not affected by the fact that it bears a seal. (N. Y. Act, Sec. 25.)

it was introduced, it is shown to have been a sealed note or single bill. There is all the difference in the world, in law, between a promissory note and a single bill, for, when the former is passed for value before maturity into the hands of a new holder, the maker loses all right to question its character. Not so as to a single bill—a sealed note—for, when it is assigned to a third person, such third person or assignee takes it with all the infirmities it has when in the possession of the original obligee. The obligor can show that the single bill or sealed note was without consideration, or is void from any cause.

These matters are so fully discussed in the cases of Patterson vs. Rabb, 38 S. C. 138, and also in McLaughlin vs. Braddy, 63 S. C. 438, that it is useless to discuss them anew. We may therefore content ourselves with the bare announcement of the principles governing the two classes of notes.

The note made by Philip W. Bethea, defendant here, to B. S. Ellis, was as follows: "$1,000.00. Zion, South Carolina, June 19th, 1901. By first day of October after date I promise to pay to the order of B. S. Ellis, of Zion, S. C., the sum of one thousand dollars for value received with interest after maturity at the rate of eight per cent. per annum. The party or parties making this note agree to pay all attorney's fees and expenses which may be incurred in its collection. P. W. Bethea. [L.S.]"

It was transferred to the plaintiffs, J. S. Stevenson & Co., a few days after it was made. No notice was given by any one to P. W. Bethea of Ellis' assignment thereof. Under the principle of law governing choses in action in this State, the foregoing note was a sealed note; it was sealed by the defendant; and whatever infirmities or equities existed in favor of P. W. Bethea as to J. B. Ellis also existed in his favor against J. C. Stevenson & Co., as his assignee.

NATIONAL BANK IN LIQUIDATION—LIABILITY OF STOCKHOLDERS—SUITS AGAINST—JURISDICTION.

United States Circuit Court of Appeals, December 8, 1904.

GEORGE, *et al. vs.* WALLACE, *et al.* BROWNLEE, *et al. vs.* SAME. MORSMAN *vs.* SAME. POPPLETON *vs.* SAME. MORTON, *et al. vs.* SAME. M'GAGUE INV. CO. *vs.* SAME.

The provisions of the Act of June 30, 1876, chapter 156, § 2, conferring upon the Federal courts jurisdiction of suits in equity in the nature of a creditor's bill brought by creditors against the stockholders of National banks in liquidation, has not been repealed by any subsequent statute.

A suit against an insolvent National bank which has gone into voluntary liquidation to enforce a specific lien, or to enforce and judicially administer a trust previously created by contract, or to enforce and judicially administer the trust arising from the insolvency and proceedings in liquidation, is a suit arising under the laws of the United States, and also a suit to wind up the affairs of such bank, and hence is within the jurisdiction of the Federal courts.
