FEDERAL RESERVE

August 1962

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

EDITORIAL COMMITTEE

Charles Molony

Ralph A. Young

Guy E. Noyes

The Federal Reserve Bulletin is issued monthly under the direction of the staff editorial committee. This committee is responsible for opinions expressed, except in official statements and signed articles.

Subscription Price of Bulletin

A copy of the Federal Reserve Bulletin is sent to each member bank without charge; member banks desiring additional copies may secure them at a special \$2.00 annual rate. The regular subscription price in the United States and its possessions, Bolivia, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Republic of Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and Venezuela is \$6.00 per annum or 60 cents per copy; elsewhere, \$7.00 per annum or 70 cents per copy. Group subscriptions in the United States for 10 or more copies to one address, 50 cents per copy per month, or \$5.00 for 12 months.

Recent Patterns of Demand

CYCLICAL RECOVERY and expansion have proceeded at an uneven pace since early 1961, with periods of rapid advance in production, employment, and incomes alternating with intervals of slow rise. After a period of slack at the beginning of this year, economic activity showed a strong rise during the spring. In recent months the rate of expansion has been moderate.

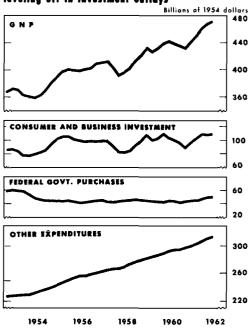

Expansion this year has been slower than during 1961. Such a development is not unusual at about this stage of a cycle. Gross national product in constant prices increased at an annual rate of 3.2 per cent from the fourth quarter of 1961 to the second quarter of 1962. This compares with a 9 per cent rate in the first three quarters of cyclical recovery.

The slower rate this year has reflected primarily a leveling off in the total of business investment expenditures and of consumer investment-type outlays. In the second quarter consumer purchases of durable goods, residential construction activity, and business outlays for fixed capital were only a little above the levels reached in late 1961, while the rate of inventory accumulation was down considerably. Throughout this article GNP and its components are stated in constant (1954) dollars unless otherwise noted.

Following a sharp increase in the preceding five quarters, Federal government purchases of goods and services increased only slightly during the second quarter of 1962, and new commitments for defense spending declined.

However, consumer expenditures for non-

SLOWING CYCLICAL EXPANSION reflects mainly leveling off in investment outlays

Note.—Department of Commerce quarterly figures, at annual rates, adjusted for seasonal variation. Consumer and business investment, as used here, represents personal consumption expenditures on durable goods; residential construction; other private construction; producers' durable equipment; and change in inventories. Other expenditures represent personal consumption expenditures on nondurable goods and services and State and local government purchases of goods and services. Latest figures shown, second quarter.

durable goods and services have continued the steady growth characteristic of the postwar period. So too have State and local government outlays. Such outlays are largely to provide public services for consumers.

Among monthly measures of business activity, industrial production has risen 3.5 per cent since December, compared with an expansion of 12 per cent from its low in February 1961 to the end of the year. Non-agricultural employment and personal in-

come have shown smaller increases in recent months than they had earlier. Unemployment showed little change between February and June, averaging 5.5 per cent of the civilian labor force, but declined to 5.3 per cent in July.

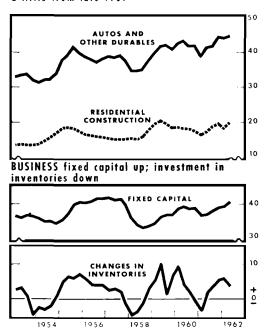

Average wholesale prices of industrial commodities have remained almost stable, as they have since early 1959. Indeed prices of some industrial materials have declined. Consumer prices have continued to drift up, mainly because of advances in prices of services.

Among the influences contributing to continued stability of prices of goods are the following: Available resources of manpower and industrial capacity have been ample for further expansion, even though growth in the labor force over the past year has been far less than that expected. Output per manhour has continued to rise. In manufacturing, labor costs per unit of output have shown relatively little change in recent years. In many lines domestic producers have been facing keen competition from abroad.

CONSUMER DURABLE GOODS

Consumer purchases of durable goods declined in the first quarter of 1962, after a substantial increase from early 1961 to the fourth quarter. In the second quarter of this year such outlays expanded again, to levels only a little higher than in the fourth quarter of 1961. The monthly pattern has been more irregular than the quarterly one; after declines in May and June there was a sizable increase in such purchases in July, when retail sales of consumer durable goods were above the second-quarter average.

The jagged contour of the expansion since early 1961 has reflected mainly alternating increases and decreases in auto sales, due CONSUMER durable goods and housing up only a little from late 1961

Note.—Department of Commerce quarterly figures, at annual rates, adjusted for seasonal variation. Business fixed capital represents producers' durable equipment and private non-residential construction. Latest figures shown, second quarter.

partly to supply problems in the industry, partly to general developments in the economy. The slow-down last winter was associated with a widespread pause in the economy. But it also may have represented some reaction to the sharp increase in auto sales in late 1961 after strikes had limited supplies of new models in the third quarter.

In the second quarter of this year sales of new domestic autos rose to a seasonally adjusted annual rate of 6.9 million units. If sales of imported cars are included, total new car sales were at a rate of 7.2 million, compared with 6.8 million in the fourth quarter of 1961 and 5.3 million at the recession low in early 1961.

Although total sales of new cars in June were moderately below the April-May

level, they rose to a rate of 7.4 million in July. It appears likely that auto sales this year will be second only to the 1955 total of 7.5 million units. Sales of used cars have also been strong, and used car prices have risen 9 per cent over the past year to a new high.

An upturn in spending on furniture, appliances, and other household equipment began early in 1961 and coincided with the recovery in residential construction activity. In the fourth quarter such spending was moderately above the earlier high reached in 1959. But in the first quarter of 1962 it weakened and remained soft through the second quarter. Sales of radio and television sets appear to have been stronger in recent months than sales of appliances and furniture.

RESIDENTIAL CONSTRUCTION

During the past year and a half residential construction activity has passed through a period of moderate expansion, from early 1961 through the fourth quarter; of pronounced weakness in the first quarter of 1962; and of strong recovery in the second quarter, to new high levels for this expansion period. Residential building was off a little in July, but remained well above the second-quarter average. As may be seen in the chart, such activity has not quite attained the record level of the spring of 1959.

Housing starts have shown unusually wide fluctuations, and this has led to considerable uncertainty about prospects for housing outlays in the current upswing. Private nonfarm housing starts were at a near-record seasonally adjusted annual rate of more than 1.5 million units in April and May, but declined to 1.4 million in June. In contrast to housing starts, building permits showed a steady rise

to early 1962; since then they have shown a small but irregular decline.

One feature of the housing market in this upswing has been the further shift to multifamily units. In the first 5 months of this year apartments accounted for 27 per cent of all private nonfarm housing starts, compared with 23 per cent in 1961 and 15 per cent in 1959.

Mortgage credit has generally remained in ample supply, and mortgage interest rates have tended to edge down this year. In addition, mortgage loans have had somewhat more liberal terms with respect to downpayments and contract maturities.

BUSINESS INVESTMENT

Expansion in business outlays for plant and equipment and for inventories slowed in the first quarter of 1962. In the second quarter, outlays for plant and equipment resumed a faster rate of increase, but investment in inventories dropped sharply after the steel settlement; and total business investment was not quite up to its level in the fourth quarter of 1961.

The internal cash flow to corporations tended to level off in the first half of this year following a sharp rise during 1961. Depreciation allowances continued their steady rise, but profits and retained earnings apparently declined somewhat from their late 1961 highs.

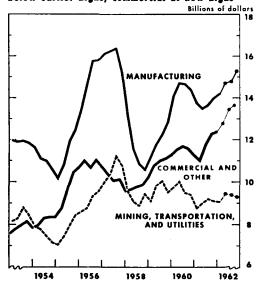

Plant and equipment. After a small decline in the 1960-61 recession, business expenditures for fixed capital have increased fairly steadily—though at a moderate pace—since the second quarter of 1961 as the chart on page 930 shows. In the second quarter of this year they were 3 per cent above their 1960 cyclical high but some 3 per cent below the record level reached in 1957. The latest Commerce-SEC survey of

nonfarm business plans for expenditures on new plant and equipment indicates a further advance for the last half of this year. If these plans are realized, such outlays, after adjustment for price changes, would be back by the end of 1962 to the high established in early 1957.

Thus far in the current upswing, as well as in the 1958-60 expansion, utilization of industrial capacity has been lower than it was through much of the postwar period. This reduced pressure on industrial capacity has been primarily responsible for the moderate nature of the expansion in business outlays for fixed capital. Since 1957 emphasis in manufacturing investment has been on replacement and modernization of facilities rather than expansion.

Since last fall manufacturing industries have been operating at an average rate of about 85 per cent of capacity, a rate that

FIXED CAPITAL OUTLAYS for most industries still below earlier highs; commercial at new highs

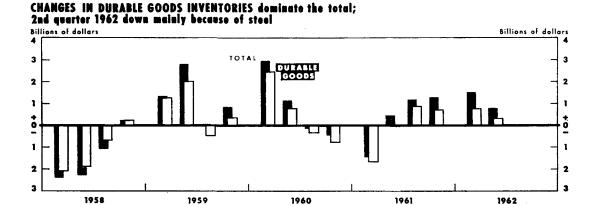

Note.—Department of Commerce and Securities and Exchange Commission quarterly estimates of expenditures on new plant and equipment by nonfarm business, at annual rates, adjusted for seasonal variation. Figures for last three quarters of 1962 represent anticipated spending.

has not generated strong pressure for expansion. In the second quarter of 1962, the rate of capacity utilization was a little above 85 per cent. The level of manufacturers' spending for plant and equipment now indicated for the end of the year—shown in current dollars in the preceding chart—is below the 1957 high, mainly because of less spending by durable goods industries. Unutilized capacity has also contributed to the pronounced lag in spending on plant and equipment by mining, transportation, and utility companies.

Firms in the commercial and other category, however, have been expanding their fixed capital outlays at a substantial rate—in keeping with the large further expansion in recent years in demands for services, broadly defined. The upward trend has reflected the large volume of construction of office buildings, shopping centers, communication facilities, and other commercial and service facilities.

The Federal government has taken steps to strengthen financial incentives for business spending on fixed capital. In July new depreciation schedules were established for tax purposes, permitting a faster write-off of machinery and other equipment. In addition, Congress is considering legislation giving businesses a tax credit for specified equipment purchases. These measures would substantially increase the cash flow to corporations.

Inventories. Businesses shifted unusually early from net decumulation to net accumulation of inventories at the time of the cyclical turn-around in early 1961. During the remainder of the year they added to their inventories at an increasing rate. As is typical of early cyclical recovery, the book value of inventories increased at a pace somewhat slower than sales. The magnitude

Note.—Quarterly changes in book value of business inventories, for manufacturers and distributors, based on Depart-

ment of Commerce monthly figures adjusted for seasonal variation. Latest figures shown, second quarter.

of changes in inventory investment compared with changes in business fixed capital outlays and consumer investment-type outlays is suggested in the chart on page 930.

Accumulation of inventories by manufacturers of durable goods was beginning to slow around the turn of this year, at a time when steel consumers were faced with the threat of a possible midyear strike in the steel industry. Demands for steel expanded sharply, and in the first quarter of 1962 the book value of business inventories increased at an annual rate of \$6 billion, the highest rate of this expansion period. About half of this represented accumulation of stocks by steel producers, consumers, and warehouses. Accumulation of steel, however, was substantially smaller than in the first half of 1959. Stocks of other durable goods showed little further rise in the first quarter of 1962.

Early agreement on a labor contract in late March was followed by an abrupt drop in demand for steel. Steel stocks were reduced beginning in the second quarter, as output was curtailed sharply while consumption was on the whole maintained. The rate of accumulation of nondurable goods stocks also declined. As a result, the book value of business inventories increased at an annual rate of \$3 billion in the second quarter, or half of the first-quarter rate.

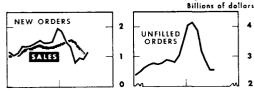

Fluctuations in dealers' stocks of autos have at times strongly affected the changes shown for durable goods. Auto stocks were down sharply in the first quarter of 1961, and this decline accounted for more than half of the decline shown for total business inventories. In recent months dealers' inventories have changed little, remaining at a level somewhat below that at the beginning of the year.

On the whole, stock-sales ratios in June were little changed from the year-end level. Business stock-sales ratios have tended to be somewhat lower in recent years, as a result of generally ample supplies, prompt deliveries, improved inventory management, and stable prices.

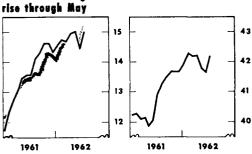

ORDERS AND SALES IN DURABLE GOODS INDUSTRIES

The durable goods sector of manufacturing absorbs much of the impact of changes in investment outlays and in Federal defense expenditures. The following chart compares recent fluctuations in sales and orders

STEEL ORDERS and sales down sharply

OTHER durable goods industries

Note.—Department of Commerce monthly figures for durable goods manufacturing industries. New orders and sales, adjusted for seasonal variation; unfilled orders, not adjusted for seasonal variation. Latest figures shown, July (partly estimated by Federal Reserve).

in the steel industry, which has been subject to abrupt shifts in inventory demands, with those in other durable goods industries. Although the data are in current dollars, they are an approximate measure of fluctuations in physical volume because price changes have been small in recent years.

New orders and sales generally showed strong cyclical recovery from early 1961 to last autumn. Then, around the turn of the year, there was a deluge of new orders in the steel industry although activity was slackening elsewhere. That bulge in orders for steel brought total new orders for durable goods to a peak in January 1962; then a sharp decline in new orders for steel led to a decline in total new orders for durable goods. The corresponding large rise and fall in unfilled orders for steel dominated changes in the order backlog for durable goods. Most recently, new orders for steel have moved up from their low.

Outside the steel industry cyclical expansion was resumed in late winter, and new orders and sales expanded through May—although not so rapidly as during most of 1961. Following a dip in June, new orders and sales recovered in July to about the May level.

CYCLICAL COMPARISONS

Postwar cycles in economic activity have been characterized by large fluctuations in consumer and business investment outlays and in purchases of goods and services by the Federal government. These fluctuations have taken place against a backdrop of relatively steady growth in other expenditures—consumer expenditures for nondurable goods and services and outlays of State and local governments. The generally sustained increase in such expenditures has been a major influence limiting cyclical declines.

The timing and amplitude of declines and expansions in investment outlays and in Federal government purchases have differed considerably, and these differences have led to variations in the timing and amplitude of recessions and expansions in GNP. Patterns of cyclical change in the recent recession and current upswing and in the two preceding cycles, measured from peak to peak, are shown in the accompanying chart.

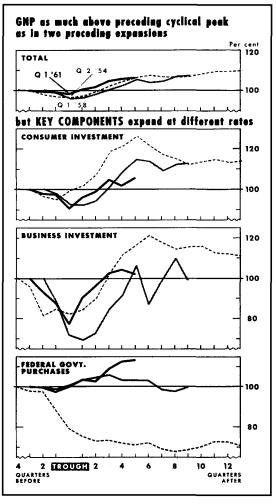

In the 1960-61 and 1957-58 recessions, consumer investment declined more than in 1953-54. The recovery thus far in the current upswing has been smaller than in the corresponding period of the 1958-60 upswing, and both recent expansions have been smaller than the 1954-55 rise.

Business investment turned up sooner in the current upswing than in either of the two preceding cycles. But the increase to date has not come up to that of earlier expansions. As was true of consumer investment, however, the main contrast is between growth in the 1954-57 upswing and in the two most recent expansions.

On the other hand, Federal government purchases have expanded more in the current cycle than in 1958-60, and this increase is in marked contrast to the decline in 1953-55 after the Korean War. Federal government purchases currently represent about 10.5 per cent of GNP.

Mainly because of the leveling off in consumer and business investment in the first half of 1962, the rise in GNP from the early 1961 recession low to the second quarter of 1962 was smaller than in the comparable phase of the two preceding cyclical upswings. Nevertheless, because the 1960-61 recession was unusually mild, GNP in the fifth quarter of recovery was as far above the preceding cyclical peak as it was in the fifth quarter after the 1958 and 1954 troughs.

The slackening in recent years in the growth of consumer investment and business investment, particularly the latter, has been a major influence making for smaller and less sustained cyclical advance in overall activity. Most of the economic growth from cycle to cycle has stemmed from expansion in the broad noncyclical area—that is, in other expenditures, shown in the chart on page 929. These expenditures have increased from 63 per cent of GNP in 1955 to 67 per cent currently.

NOTE.—Indexes based on preceding GNP cyclical peaks as 100, calculated by Federal Reserve from Department of Commerce quarterly figures, in 1954 dollars, adjusted for seasonal variation. Indexes (for 1953-57 cycle shown as green dashed line; for 1957-60, as green solid; for 1960-62, as black solid) centered at troughs in GNP. Consumer investment, as used here, represents personal consumption expenditures on durable goods and residential construction. Business investment represents other private construction, producers' durable equipment, and change in business inventories.

Economic and Credit Conditions

IT MAY BE that just about everything that can be said about matters of interest to the Members of this Committee has already been said by other witnesses, but I should like nevertheless to be as helpful as possible in discussing economic and credit conditions today.

Much in the recent flow of statistical information has indicated a definite loss of momentum in the pace of economic expansion. This was particularly true of the June reports. In that month there were declines in durable goods orders, average hours of work at factories, retail sales, and housing starts, and only small gains in industrial production, employment, and personal income. Altogether, the impression of slowdown seemed to be confirmed.

There has been a popular tendency to view the various signs of slowdown as fore-shadowing an imminent upper turning point in the economic cycle. Judged from the perspective of cyclical indicators, which in the past have shown a tendency to run ahead of the over-all data, this view has perhaps been reasonable.

I sometimes wonder though if we have not become overly sensitive to cyclical indicators—we read, watch, study, and talk about them so much that we may have become like medical students who acquire each disease as they read about its symptoms in their textbooks. We ought to remember that, while leading indicators have correctly fore-

told some recessions, they have also on occasions given portents of recession that did not occur.

In June our economic data were subject to certain special influences and, if allowance is made for these, the situation does not appear so persuasively discouraging as appeared at first sight. Thus, using up the inventory accumulated in anticipation of a steel strike that did not occur affected not only new orders for steel but also employment and hours of work in the steel industry and unemployment claims in steel centers.

The steel industry is so large that declines in that one industry can at times result in declines in over-all manufacturing orders, employment, hours of work, and many other measures of economic activity. Observers who simply count the pluses and minuses among the cyclical indicators run the risk of being overly influenced by the reflections of a decline in one industry, not of cyclical origin, showing up several times in their lists of unfavorable omens. In addition to the steel situation, though of less importance, a strike at some auto plants affected production and sales in June. The adverse effect of this on the June data should not be interpreted as being of cyclical significance.

Nevertheless, the June showing as a whole was not strong. And it certainly made clear that the economy was moving ahead more slowly than the optimistic goals widely discussed at the turn of the year.

From data now available for July, the economic situation appears improved. The unemployment rate was down slightly, non-

Note.—Statement of William McChesney Martin, Jr., Chairman, Board of Governors of the Federal Reserve System, before the Joint Economic Committee, Aug. 16, 1962.

agricultural employment rose somewhat further, and labor market data were definitely encouraging in another respect: they showed a fairly large decline in the number of longtime unemployed.

Among other information on July, retail sales rose briskly, with new domestic auto sales and department store sales both making a strong showing. Private construction activity, seasonally adjusted, held its advanced level. The Board's index of industrial production, which was released early this week, gained almost a full point, advancing to a new record high approximately one-fifth above the 1957 level.

Preliminary indications from production schedules and weekly sales reports suggest that the general improvement of the economy carried forward in early August.

The information on consumers' purchase plans obtained in July by the survey conducted for the Board each quarter by the Census Bureau gave two important indications. First, consumer buying plans had not been adversely affected over-all by the recent stock market decline and the mixed economic tendencies shown for June. Second, as you may recall from earlier testimony by a member of our staff, the data show some strengthening of consumer purchase plans since early this year, especially for household durable goods.

Consumers are in a good financial position. Their incomes rose further in July to a new record high, and so did their savings. The payments on debt that consumers are obligated to make each month have risen less rapidly than their incomes. Furthermore, defaults on instalment credit have declined sharply over the past 18 months to levels at or close to the lows for recent years.

Business concerns' retained earnings and depreciation allowances in recent months

have also been large, in many instances considerably in excess of current needs for replacement and expansion. This form of saving has been used in providing an additional flow of funds into credit markets and into extensions of trade credit as well. Meanwhile, business demand for bank loans has been less vigorous than in this stage of previous upswings. Banks, therefore, have sought other outlets for their funds and have increased other loans and investments, especially their holdings of State and local securities and real estate loans. Demand deposits have changed little so far this year, while time and savings deposits grew very rapidly in the first quarter and then continued to expand substantially but at a lesser rate.

Over the first half of the year, short-term interest rates fluctuated within a narrow range around a 2.75 per cent level. Since late June the level has been a little higher, with the range on 3-month Treasury bills running between 2.80 and 3 per cent. Yields on longer-term U. S. Government, State and local government, and corporate issues meanwhile declined through midspring and subsequently moved moderately upward, but they remain below the earlier highs for the year. Throughout the year mortgage yields have moved downward.

The decline that has taken place in longterm interest rates has reflected in large part the increased availability of funds in longterm sectors of the market, as the rapid increase in time and savings deposits at commercial banks was accompanied by continued large inflows of funds to mutual savings banks and savings and loan associations. Demand for long-term funds in recent months has been generally moderate.

My comments would be incomplete if I neglected to mention the persistent problem of restoring balance in our international

accounts. The problem of domestic expansion is interrelated with our international problems, and all of them must be thought about at the same time.

The United States has been making progress in reducing its over-all deficit in international transactions. The deficit came down from nearly \$4 billion in 1960 to about \$2.5 billion last year, and to an annual rate of just under \$1.5 billion in the first half of 1962. Even so, we have no grounds for complacency. We must move further towards international balance next year, and we must also achieve and maintain equilibrium in the accounts in future years.

U. S. foreign trade has developed in an encouraging way this year. Total exports have been rising, with exports to Western European countries especially strong. While imports also have risen, they have not spurted ahead as they did in the preceding period of cyclical expansion and so have remained lower in relation to the gross national product. Both our export and our import performances would indicate that we have been competing effectively in international trade, and international price trends support this interpretation. The level of wholesale prices has been stable in this country for some time, while prices in industrial countries abroad have risen.

The merchandise trade surplus, at an annual rate of \$5 billion in the first half of 1962, is large but not large enough to match our large net payments for aid, for military expenditures, and for net private U. S. lending and investment abroad. And it would probably be unrealistic to expect the whole of the remaining adjustment to come through yet further expansion of the trade surplus. That is why the Government has been working, both from the procurement side and through negotiations with our allies abroad,

to reduce the balance of payments burden of our foreign aid and military programs. That is why we have had to pay close attention to the possible effects that monetary and credit policies may have on international movements of capital.

Taken together, domestic economic and balance of payments developments have posed a problem for monetary policy, but in my judgment that problem has not yet constituted as clear-cut a dilemma as some observers suggest. While it has been necessary to formulate policy in the light both of the credit needs of the domestic economy and the potential effects on international capital movements, up to the present time it has not been a matter of choosing between domestic and international goals.

With the rare exception of an internal liquidity crisis, such as that experienced in the early 1930's, it is never helpful to sound recovery or economic expansion to flood credit markets with redundant funds. When resources are not fully employed, credit should be readily available to meet the legitimate needs of commerce, industry and agriculture—as it is now—but no constructive purpose is served by expanding the credit stream to the point where it overflows its banks. So far, we have been able to pursue policies which have not interfered with the ready availability of credit in the domestic markets at rates generally about even with those prevailing in early 1961, and in some critical areas substantially lower.

Fortunately, we have been free from inflation and the expectation of imminent inflation. This has made possible a more liberal policy with respect to reserve availability, a greater growth in bank credit, and less upward movement of interest rates than in any other recovery and expansion in recent history. In the last 12 months alone,

we have added almost a billion dollars to bank reserves, bank credit has expanded by \$17 billion, and yields on high-grade long-term corporate bonds and State and municipal securities are about ½ of 1 percentage point below their year-ago levels.

At the same time, we have generally maintained short-term rate relationships with other major financial markets such as to avoid encouraging outflows of short-term funds. The fact that we have done and are continuing to do this, as we strive to improve our basic balance of payments situation, is bound to strengthen confidence in the dollar at home and abroad. In my judgment, this enhanced confidence is essential if we are to solve our balance of payments problem and promote domestic prosperity.

This leads me to the matter of deficit financing. It now seems most likely that we shall experience some deficit in our budget for fiscal 1963. That deficit would, of course, be increased if taxes are reduced during the current fiscal year.

I have stated quite explicitly my belief that such deficits as we may experience, whether they are due to a shortfall of receipts under the existing tax structure, an increase in expenditures, or a reduction in tax rates, should be met by borrowing from the real savings of businesses and individuals, not through the creation of money through the banking system.

This does not mean that we will experience less easy conditions in credit markets. What happens will depend on many things—most importantly on the rate of activity in the economy: credit conditions may be tighter, or easier, or the same.

It is also helpful to recognize that in the American banking system there is an important distinction between total bank credit *expansion* and that portion of it which can

be traced to the *creation* of money and credit. The loans and investments of commercial banks in the United States can grow in two ways: (1) through people placing more savings in banks in the form of time and savings deposits; or (2) through the creation of demand deposits. Hence, bank credit can expand substantially without any significant money creation, as it has done in some periods. Alternatively, growth in bank assets can be—as at times it has been—associated almost entirely with money creation.

Analysis of these processes would be simpler if we had an institutional structure in this country in which the money creation function was entirely separate from what is called the savings intermediary function the collection of small savings and their investment for the benefit of depositors, of shareholders, and of policyholders—but that is not the case. To the extent that individuals place their savings with banks and that banks, in turn, invest these savings in Government securities, the deficit which led to the issuance of the securities is being financed by real savings just as surely as if the individuals had purchased savings bonds in the first instance.

Moreover, a certain amount of money creation to meet the legitimate needs of a growing economy is a necessary and normal function of the banking system, and it is expected reserves will be provided for expansion to meet such needs. Some part of the normal growth in banks' assets which accompanies this money supply expansion must, as a simple matter of banking prudence, take the form of additions to the secondary reserves of the banking system, which consist largely of Government securities. Additions to banks' holdings of Government securities due to additional flows of savings through this particular intermedi-

ary or to normal growth in the money supply do not represent the financing of Government deficits with bank-created or "printing press" money. Such additions are not inflationary and do not pose any threat to the soundness of the dollar.

What would be damaging to the strength of the dollar would be the deliberate expansion of the credit base, above and beyond the needs of the economy, in order to provide a ready market for the Government's borrowing. This was done in the United States during World War II, and in other countries both at that time and during the economic chaos that followed. It it still being done in some unfortunate countries today. The results have invariably been bad, and have ranged from damaging, as they were here, to nearly disastrous, as they have been in some other countries. The process of withdrawal and correction is always painful and difficult.

The only sure safeguard against the financing of deficits through bank credit creation lies in careful control over the process by which bank credit and money are created. As I have said, the Federal Reserve is determined to provide, on the one hand, the reserves needed to support the necessary and healthy expansion of bank credit and money required to meet the needs of a growing economy, and on the other, not to again become entangled in the vicious circle of financing Government deficits with

bank credit created solely for that purpose.

In closing, let me summarize as specifically as I can my view with respect to the economic situation today.

All in all, the performance of the economy has been disappointing in that it thus far has failed to reach the goals set for it by some and predicted for it by others. Yet the economy has withstood some rather severe shocks—last fall an auto strike, this year a major steel inventory adjustment and the sharpest stock market break since the 1930's -and still it has moved forward. On the one side, it has not achieved the levels of manpower or physical resource utilization we would all like to see; on the other, the latest data do not, in our judgment, confirm that we have reached or passed a turning point in the cycle at this time. The most likely possibility in the period immediately ahead seems to be for a continuation of mixed movements in the more sensitive indicators and some further growth in the broad aggregate measures of economic activities.

Now a final word, about monetary policy and credit conditions. The one factor over which the Federal Reserve has anything like complete control is the volume of reserves available to the banking system. In my judgment we have supplied—and are now supplying—all the reserves the banking system requires to meet the American economy's needs for credit today and to foster its further economic progress.

Revision of Money Supply Series

The daily average money supply series, first published in 1960, has been revised. The following are the major features of the revision:

- The factors for leveling out the statistical influence of seasonal fluctuations have been recomputed, as is planned about every two years, to take account of recent experience.
- The basic series has been adjusted to take account of new benchmark data and to use improved data that have become available for recent years.
- Small conceptual additions have been made to the groupings of deposits regarded as constituting a part of the money supply.
- In addition to these revisions in the money supply series, the related series on commercial bank time deposits has been revised to be consistent in coverage with the demand deposit component of the money supply. This series has also been seasonally adjusted, and current estimates will be released hereafter along with the daily average money supply series.

The chief merit of the revisions in the money supply lies in the early recognition of changes in seasonal patterns and in the greater consistency of coverage and concept with related series. The net alteration in the

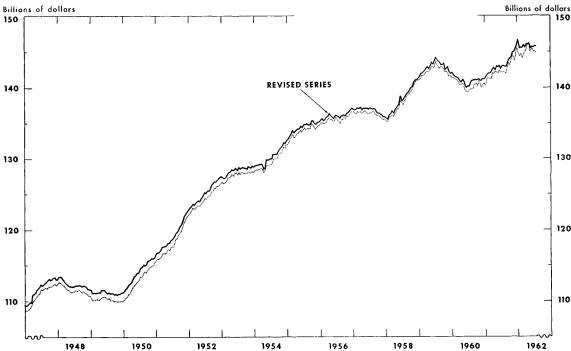

Note.—This revision of the money supply series was planned and executed by William J. Abbott, Adviser, Federal Reserve Bank of St. Louis, who was also chiefly responsible for constructing the original daily average series presented in 1960. Basic data and techniques employed in the original series have since been little changed, except as indicated in this article. For further information on the series, see "New Measure of the Money Supply" in the BULLETIN for October 1960, pp. 1102-21.

pattern of the money supply series stemming from the revisions is small, as the chart shows. The largest differences—\$1.3 billion—appear in 1950, and represent about 1 per cent of the level at that time. The smallest differences are those for the last few years. In two periods they are as little as \$100 million, and the average for the last 7 years is \$500 million.

Semimonthly series on the active money supply and on time deposits, adjusted for seasonal variation and unadjusted, and seasonal factors appear in the tables on pages 946-49. Unadjusted weekly figures appear on pages 950-51. A detailed presentation of components of the unadjusted data shown in these tables is available from the Board's Division of Research and Statistics on request.

Seasonal adjustment. In periodic revisions of seasonal factors, it is usually necessary to revise data only for recent years. In this revision, however, it has been necessary to recompute the factors for the entire series, because unadjusted data for both components of the money supply have been revised back to 1947, as indicated in later sections.

The revised seasonal factors were derived by the ratio-to-moving-average method, the same method used in adjusting the original daily average money supply series. As in the old series, it seemed desirable to calculate semimonthly factors in order to provide the earliest practicable indications of changes in the money supply. The procedure differed somewhat from that employed in adjusting the original series, however. In the revision seasonal patterns for monthly periods rather

CHANGES raise level of money supply only a little

than for semimonthly periods were first measured. This procedure took advantage of the greater stability of monthly movements and also made it easier to compare alternative computer methods for seasonal adjustment of raw data.

Monthly seasonal movements in the deposit component were isolated by a method long used by the Federal Reserve, in which judgment as well as mechanical computation is employed.¹ This procedure was chosen because of the sharply changing seasonal patterns and irregular fluctuations characteristic of the deposit series. For the currency

For a description of Census Method II, see Julius

component, monthly factors were derived by Census Method II.

After the monthly factors were established, semimonthly seasonal factors were computed by a procedure adapted from the Census Method II program.² These factors were then forced to equal the monthly factors.

Benchmark adjustments. In 1961, insured nonmember banks began to file condition reports four times each year, as member banks were already doing. Since deposit liabilities of insured banks constitute the largest proportion of total nonmember de-

¹ See "Adjustment for Seasonal Variation" in the BULLETIN for June 1941, pp. 518-28.

Results of three computer methods also were obtained for comparison—Census Method II, the Bureau of Labor Statistics Seasonal Method, and the X-9 variant of Census Method II. Principal differences in the results of these methods appeared to be in determinations of seasonal factors for terminal years.

Shiskin, Electronic Computers and Business Indicators, Occasional Paper 57, National Bureau of Economic Research, New York, 1957. For a summary description of the X-9 version of Census Method II, see Business Cycle Developments, Department of Commerce, March 1962, p. 62.

² For a description of this semimonthly program, see the BULLETIN for October 1960, p. 1112.

posits, four nonmember benchmarks can now be constructed each year. Thus, deposit figures for 1961 have been adjusted to benchmarks dated April 12, June 30, September 27, and December 30. Previously figures for nonmember banks had been available only from semiannual calls. The semimonthly estimates for these banks continue to be based on movements at country member banks adjusted to the condition report benchmarks.³

Changes in current reporting. Several changes in current reporting practices have provided a basis for more accurate estimation of the money supply totals. Most important has been the introduction of daily reporting and tabulation of various deposit and cash items for member banks.

Such daily figures are now available for the period 1959 to date. The totals of vault cash holdings of all member banks provide a reliable basis for estimating the daily levels of vault cash holdings for all commercial banks, and a better guide for estimating semimonthly movements for earlier years. These new estimates of bank vault cash have correspondingly altered the estimates for currency outside banks from 1947 to date and are the principal reason for differences between the new seasonal factors and those published previously; before this revision semimonthly estimates had been based largely on Wednesday figures from weekly reporting member banks, with daily averages available after 1958.

Daily deposit figures for member banks are now being used to derive semimonthly

averages for demand deposits, previously derived by averaging weekly data. The new procedure eliminates distortions due to intraweekly fluctuations, distortions which were occasionally sizable. Also, tabulations of daily figures for 1959 provide an additional year of weekly data in the money supply and time deposit series.

Another change was introduced on April 26, 1961, when weekly reporting member banks began reporting separate figures for demand deposits due to domestic commercial banks, mutual savings banks, and foreign banks. This change permitted more accurate estimating of weekly balances due to mutual savings and foreign banks, which are included in the deposit component of the money supply. Estimates of balances due to mutual savings banks were particularly improved, because reported figures had previously been available only from call reports for four dates a year at most.

A refinement has been made in the deduction for Federal Reserve float. Since February 1961, published figures for float have excluded collected funds that could not be remitted to other Federal Reserve Banks because of holidays that are not observed nationally. The amount of collected funds is small, but it tends to have a similar effect on monthly levels of float every year. For this reason, collected funds have been deducted from float back through 1952 to preserve comparability of seasonal factors and to be consistent with the published figures.

Changes in coverage. The coverage of the money supply series has been expanded slightly to bring the series into closer conceptual agreement with comparable data in the flow of funds/savings accounts. Foreign demand balances with Federal Reserve

³ Current information on changes in the banking structure which alter relationships of nonmember to member banks between condition reports also is used in preparing the estimates. A description of procedures for estimating components for which current data are not reported may be obtained from the Division of Administrative Services, Board of Governors of the Federal Reserve System, Washington 25, D. C.

⁴ For a description of Federal Reserve float and the reason for its deduction from the money supply, see the BULLETIN for October 1960, p. 1105.

Banks and demand deposits that banks in U. S. territories and possessions have at U. S. commercial banks have been added to the deposit component of the money supply. The table opposite shows the deposit and currency liabilities included in the daily average money supply series, the flow of funds/savings accounts, and the consolidated condition statement.

Foreign demand balances at Federal Reserve Banks—including those due to foreign governments, central banks, and international institutions—may be used for investments or other expenditures in much the same way as foreign demand balances with commercial banks. Hence, they have been added to the money supply series. With their addition the daily average series includes all demand deposit and currency liabilities to foreigners.

This change in coverage raises the deposit component by amounts ranging from \$1.2 billion in mid-1950 to around \$300 million since 1957. Over the 1950-57 period foreign balances at Federal Reserve Banks showed a fairly steady decline. However, estimates indicate that roughly offsetting increases occurred in foreign balances at commercial banks. Consequently, the estimated total of foreign demand balances was relatively stable and has not shared in the growth of the total money supply since 1947.5 The addition of foreign balances at Federal Reserve Banks to the demand deposit component has had no observable effect on seasonal factors for this series.

The inclusion of demand deposit liabilities of commercial banks in the United States to

banks in territories and possessions adds minor amounts to the money supply. Based on semiannual reports of condition, the revision adds \$75 million to \$100 million over the 1947-58 period. After admission of Alaska and Hawaii as States, the adjustment amounts to only \$25 million.

New series on time deposits adjusted. The time deposits series, now revised to exclude time deposits due to domestic commercial banks and to the U. S. Government, corresponds in coverage to that for the demand deposit component of the money supply. The revised series—time deposits adjusted—is lower than the original series—gross time deposits. Differences in level of the two series gradually increase from 1947 to 1962 and range from \$150 million in the early years to \$500 million currently.

The sources of the basic data are the same as those for demand deposits—that is, daily reports of member bank deposits, Wednesday data from weekly reporting member banks, and call reports. Procedures for estimating nonmember bank time deposits are similar to those used in estimating demand deposits, in that nonmember bank time deposits are based on reported figures for country member banks and on benchmarks derived from call reports for nonmember banks.

The time deposits series has been seasonally adjusted by the same method described above for the currency component of the money supply. Seasonal factors derived from the new series show that seasonal movements are relatively small. The greatest seasonal movement is the decline of 1 percentage point in the second half of November. The factors then increase gradually to their peak in the middle of the summer and begin to decline again in October.

⁵ Estimates for flow of funds/savings accounts indicate that total demand deposit and currency liabilities to foreigners averaged close to \$4.7 billion, 1947-50; \$4.3 billion, 1951-55; and \$4.7 billion, 1956-60.

COMPARISON OF COVERAGE AND TREATMENT OF SELECTED DATA

Sector or data	Money Supply Series: Commercial bank demand deposits and currency in circulation outside the Treasury, Federal Reserve Banks, and commercial banks.	Consolidated Condition Statement for Banks and the Monetary System (CCS): Demand deposits adjusted and currency outside banks.	Flow of Funds/Saving Accounts: Commercial banking and monetary authorities sector; demand deposits, net, and currency liabilities (exclud- ing "due to U.S. Government").
1. Type of data	Average of daily figures for semi- monthly (and weekly) periods.	Last Wednesday of the month except in December and most June dates when call report dates are used.	Values on last day in year or quarter and change between dates.
2. Timing of data	Opening of day.	Close of day.	Close of day.
3. Geographic coverage of data	United States. Banks in Alaska and Hawaii (and member banks in U.S. territories and possessions) are included when reporting on deposits as member banks or when brought into the CCS.	United States. All banks in Alaska included beginning 1959. (A national bank had been included beginning April 1954.) All banks in Hawaii included beginning August 1959 (a national member bank had been included beginning April 1959).	United States. Same as CCS.
Banks in territories and possessions Demand balances with U.S. banks (an asset of banks in territories and possessions)	Included in demand deposit liabili- ties. (Not deducted as an inter- bank item.)	Excluded; since the counterpart (due to banks in territories and possessions by U.S. banks) is subtracted from "gross demand deposits."	Included in demand deposit liabilities. (Not deducted as an interbank item.)
B. Currency and coin held (an asset of banks in territories and posses- sions)	Included in circulation outside banks.	Excluded.	Included in currency liabilities of consolidated banking system.
C. Demand deposit liability (a liability item of banks in territories and posses- sions)	Excluded (except for member banks in Alaska and Hawaii reporting deposits and related items before statehood; see Item 3, CCS)	Excluded (except for member banks in Alaska and Hawaii reporting deposits and related items before statehood; see Item 3 in this column).	Excluded from demand deposit liabilities (except for member banks in Alaska and Hawaii reporting deposits and related items before statehood; see Item 3, CCS).
5. Mutual savings banks	Excluded. Series covers only commercial banks.	Included in banking sector.	Excluded from commercial banking sector.
A. Demand balances with U.S. banks (an asset of the mutual banks)	Included in deposit liability of commercial banks and thus in money supply figure.	Excluded; netted out when "de- posits due to banks" are subtracted from "gross demand deposits."	Included.
B. Currency and coin held (an asset of the mutual banks)	Included as currency in circulation.	Excluded.	Included.
C. Demand deposits (a liability item of mutual banks)	Excluded from commercial banking deposit liability.	Included with demand deposits adjusted.	Excluded.
6. Foreign demand deposits of individuals, partnerships, and corporations with U.S. commercial banks	Included in deposit component of money supply series (not identified separately).	Included in demand deposits adjusted (not identified separately).	Included in demand deposits and currency; a liability to "the rest of the world."
7. Foreign bank demand balances with U.S. commercial banks	Included in deposit component of money supply series (not separately identified).	Part of "foreign bank deposits, net." The CCS nets "due from" foreign banks against "due to" foreign banks.	Included in demand deposits and currency; a liability to "the rest of the world."
8. Foreign balances with Federal Reserve Banks	Included as part of deposit component.	Part of "foreign bank deposits, net," except deposits of inter- national agencies.	Included as part of demand deposits and currency; a liability to "the rest of the world."
9. Federal Reserve float	Deducted from gross demand deposits; therefore lessens the demand deposit component.	Entered as a negative item in "capital and miscellaneous accounts, net"; does not reduce demand deposits adjusted.	Netted against gross demand de- posits; therefore lessens the series on "demand deposits, net."

Revision of Weekly Department Store Sales Index

THE BOARD'S WEEKLY INDEX of department store sales has been adjusted to Census of Business data for 1958, corrected to annual levels shown by the revised monthly index released in the BULLETIN for July, and shifted to a 1957-59 base. As a result, comparability between the weekly and monthly series is maintained.

The weekly series begins with 1937, but the benchmark adjustment does not affect years before 1955. However, indexes for the entire period have been shifted to the new base. Those for 1947 to date are shown on following pages. Data for earlier years may be obtained from the Division of Research and Statistics.

Characteristics of series. The weekly sales index is valuable as a prompt indicator of sales activity. It also is useful in studying intramonth sales movements, and it provides a basis for estimating a monthly sales index several weeks before monthly totals are available.

On the other hand, weekly figures are usually more difficult to evaluate than monthly data. Because they cover a shorter period, weekly data tend to fluctuate more sharply in response to both seasonal and random influences. Also, irregularities of the calendar—for example, the changing days and dates of the various holidays—have a more pronounced effect on them. Unlike the monthly series, the weekly index is not adjusted to take account of such factors.

The weekly reporting sample of more than 1,000 stores has the same general characteristics as the monthly sample. Both include independent department stores, units of local and regional chains, and retail outlets of large national chains. While the weekly sample is larger than would ordinarily be needed to measure changes in sales at the national level, the additional coverage is necessary to provide district and area sales information.

Benchmark adjustment. To determine the amount of adjustment required, the percentage change from 1954 to 1958 in the unrevised weekly index was compared with the change shown by Census data. As with the monthly series, there was a downward bias in the System's index, and it was assumed that the bias had accumulated in equal increments between benchmarks. This assumption permitted use of a straight-line adjustment technique.¹

As part of the present revision, annual averages of the weekly and monthly series were compared for years after 1958. Where significant differences were noted, the weekly indexes were adjusted to the level of the monthly series.

Shift in base. The weekly sales index has been shifted to a 1957-59 base period in accordance with a recommendation of the Bureau of the Budget. The new base will allow easier comparison not only with the monthly department store indexes but also with other economic series that are now on the recommended base.

¹ For a detailed description of the weekly series—including adjustment techniques—see BULLETIN for April 1958, pp. 412-21.

Quarterly Survey of Consumer Buying Intentions

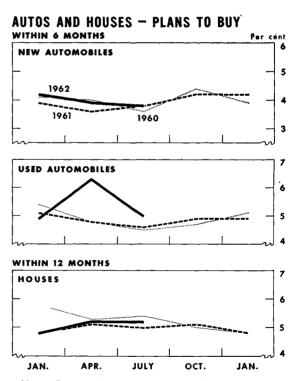

Consumers in July reported about the same number of plans to buy houses and new automobiles as in April, according to data from the most recent Quarterly Survey of Consumer Buying Intentions. Plans to buy household durable goods declined less than in the corresponding period of other recent years, and plans to buy used cars remained strong. In July plans to buy new cars equaled those a year earlier, and plans to buy used cars, houses, and household durable goods were somewhat higher.¹

Slightly fewer consumers than in other recent Surveys expected their incomes to increase over the coming year, and a correspondingly higher proportion expected their incomes to remain unchanged. There was no change, however, in the number expecting lower incomes or uncertain about their income prospects. Slightly fewer families than in other recent Surveys reported an increase in income over the preceding year.

Automobiles. Reports of plans to buy new cars within 6 months were unchanged from April to July this year, compared with increases in the corresponding period of the expansion years 1959 and 1961 and a reduction in 1960. Plans to buy within 3

months and in 6 to 12 months were down somewhat from April. Buying plans reported in July were about equal to those in July 1961 and higher than in either 1959 or 1960.

Plans to buy used cars declined from the abnormally high level reported in April but remained higher than in any of the three preceding July Surveys. In the January-July period, reported plans to buy used cars within 6 months increased slightly, compared with reductions in each of the three preceding years.

Note.—Plans to buy new automobiles and used automobiles include pro rata shares of planners undecided between new and used. These proportions differ from the proportions shown in Table 1, which include only specific plans to buy either new or used cars.

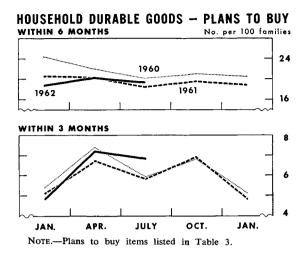

¹ This article presents the findings of the July 1962 Quarterly Survey of Consumer Buying Intentions, conducted for the Board of Governors by the Bureau of the Census. The Quarterly Survey is conducted under the supervision of Mona E. Dingle of the Board's staff and James C. Byrnes of the Bureau of the Census. Articles covering the previous Quarterly Surveys appeared in earlier issues of the BULLETIN. A description of the Survey appeared in the BULLETIN for September 1960, pp. 977-1003.

Plans on the part of the 22 per cent of all families with incomes of \$7,500 or more to buy new cars within 6 months were lower in July than in the corresponding period of other recent years. In interpreting changes for different groups of consumers, special caution should be exercised because of the increased sampling variability as numbers are reduced. Plans of families with incomes under \$7,500 showed little change this July from earlier years.

The proportion of all families that expressed dissatisfaction with the car currently owned, which had been above year-earlier levels, declined in July to a level below that in July 1961 but was above the 1959 and 1960 levels. The proportion of families that reported shopping for a car in recent weeks also declined and in July was about the same as in 1961 and lower than in the same month of other recent years.

Household durable goods. Plans to buy household durable goods declined less from April to July this year than in either 1960 or 1961 as there was a less than seasonal reduction in plans to buy air conditioners. and an increase in plans to buy most other items covered. In July reported plans to buy within 6 months were above year-earlier levels for the first time in the 1961-62 cyclical expansion. As in the second half of last year and the first half of this year, but in contrast to the 1959-early 1960 expansion period, plans to buy within 3 months and plans that were said to be definite showed more strength than total 6-month plans. Three-month plans were at the highest July level since the Survey began, while 6-month plans remained below the level of July 1960 and, for the items for which information is available, also lower than in July 1959.

The decline of 6-month plans for household durable goods compared with July

1960 was concentrated in refrigerators and washing machines; plans to buy television sets and "growth" items such as air conditioners and clothes dryers were generally close to or above 1960 levels. Refrigerators and washing machines, however, accounted for a substantial part of the rise in reported plans to purchase within 3 months.

Plans to buy household appliances reported by families with incomes of \$7,500 or more continued below the year-earlier level in July. While their plans to buy growth items—air conditioners, clothes dryers, dishwashers, and radio and phonographic equipment—increased, their plans to buy the items labeled as major durable goods—washing machines, refrigerators, and television sets—were at new lows for July.

Houses. As in each of the two preceding years, reported plans to buy houses within the next 12 months showed little change from April to July, but short-term plans and definite plans strengthened somewhat. In July total plans to purchase within a year were slightly higher than in 1961 but slightly lower than in 1960. In contrast to plans for most other items, plans to buy houses were above year-earlier levels for families with incomes of \$7,500 or more.

Sampling variability. Data from Quarterly Surveys are based on about 17,000 interviews and, as is true of all sample surveys, may differ because of sampling variability from data that would be obtained if a complete census were taken. The reliability of estimates of percentages obtained from the Survey depends on the size of the estimated percentage and the size of the total sample—or portion of the sample—on which the percentage is based.

SAMPLING ERRORS OF PROPORTIONS

The chances are 68 in 100 that the value being estimated lies within a range equal to the reported percentage plus or minus the number of percentage points shown below.

Number of households		Rep	orted perce	ntage	
(in millions)	2 or 98	5 or 95	10 or 90	25 or 75	50
1	.8	1.3	1.8	2.6	3.0
2	.6	.9	1.3	1.8	2.1
5	.4	.6	.8	1.2	1.4
10	.3	.4	.6	.8	1.0
20	.2	.3	.4	.6	.7
50	.1	.2	.3	.4	.4

Sampling errors are shown in the table for selected percentages and sample sizes. The sample sizes are expressed in terms of the estimated number of households represented by the Survey (or portion of the Survey) rather than in terms of the actual number of households sampled. The chances

are 68 in 100, or about 2 in 3, that an estimate from the Survey would differ from a complete census by less than the sample errors shown in the table and 95 in 100 that the difference would be less than twice the errors shown.

The second table shows the approximate number of households by income and age groups. The estimated size of each subgroup may be used in the first table to obtain the approximate sampling error for that subgroup in preceding Surveys as well as in the July 1962 Survey.

SAMPLE SIZE FOR SPECIFIED GROUPS

	Families	or households 1
Group characteristic	Proportion in July 1962 Survey	Approximate number applicable to all Surveys (in millions)
Total	100.0	54
Income: 2 Under \$3,000. \$3,000-\$4,999 \$5,000-\$7,499 \$7,500-\$9,999 \$10,000 and over Not ascertained.	28.0 20.0 24.0 11.1 10.7 6.3	15 12 12 6 5 4
Age of head: Under 35	22.7 41.8 35.5	13 23 18

¹ For the Quarterly Survey, data are collected only from the principal family in the household. Therefore the number of families is the same as the number of households.

² Total money income before taxes of family in 12 months immediately preceding interview.

Proposed Banking Legislation

MY APPEARANCE today is in response to the invitation of your Chairman to present the views of the Board of Governors on S. 1771, H. R. 8874, and H. R. 7796. These bills would amend the banking laws in response to developing needs in the fields of international finance, automation, and housing.

FOREIGN BRANCHES OF NATIONAL BANKS

S. 1771 would authorize the Board to permit foreign branches of national banks to exercise, in addition to powers that are otherwise authorized to national banks, such further powers "as may be usual in connection with the transaction of the business of banking in the places where such foreign branches shall transact business." The bill is consistent with legislative policy already expressed in the field of foreign banking operations in that it would extend to foreign branches of national banks the same kind of flexibility that is afforded to so-called "Edge Corporations" by Section 25(a) of the Federal Reserve Act. With safeguards similar to those found in Section 25(a) and the Board's Regulation K, the bill would make it possible for foreign branches to compete more effectively with foreign institutions.

The Board has become increasingly aware of the difficulties that foreign

Note.—Statement of William McChesney Martin, Jr., Chairman, Board of Governors of the Federal Reserve System, before Subcommittee No. 1 of the House Committee on Banking and Currency, on S. 1771, H. R. 8874, and H. R. 7796, July 19, 1962.

branches of American banks have encountered in competing abroad, and the problem has been the subject of extensive consideration for a period of years, both within the Federal Reserve System and by others, notably your Committee, who are concerned with the role of banking in the "furtherance of the foreign commerce of the United States"—the express statutory purpose for which national banks were originally authorized under Section 25 to establish branches abroad.

Business methods and operating conditions in foreign countries often differ considerably from those in this country, and banks in foreign countries are often subject to few if any of the rules that apply to national banks in this country. It is apparent that in this situation American banks may often find their effectiveness materially handicapped. I would like to emphasize, however, that I would not interpret this bill as a carte blanche for the full equalization of foreign branch powers with those of foreign banks. Apart from the fundamental limitations in the bill itself, it would not allow foreign branches to exercise any additional powers except as expressly permitted by Board regulations that would be formulated after consideration of actual conditions and with due regard for the integrity and soundness of the American banking system.

It would be extremely difficult to anticipate in comprehensive detail the various kinds of powers that might suitably be authorized under this bill in the various circumstances that may now exist or that may

develop in the future. To cite a few examples, however, it has been suggested that this legislation might appropriately be used to relax some existing restrictions on the issuance of certain types of guaranties, exchange of negotiable instruments with full recourse endorsements, and acceptance financing of foreign inland shipments. Powers granted would commonly relate to the forms in which banking business is transacted, and variations in substance from the practices now permitted to national banks would be authorized only with particular circumspection.

Various provisions of Section 25 of the Federal Reserve Act in its present form would assist in supervising activities that might be authorized under this bill. Although separate accounting is not required of national banks with respect to their domestic branches, the eighth paragraph of Section 25 requires that every national banking association "shall conduct the accounts of each foreign branch independently of the accounts of other foreign branches established by it and of its home office. . . ." In addition, under the sixth paragraph of Section 25, "every national banking association operating foreign branches shall be required to furnish information concerning the condition of such branches to the Comptroller of the Currency upon demand. . . ."

I might point out that State member banks would share in the benefits of this legislation, to the extent permitted by State law, because the third paragraph of Section 9 of the Federal Reserve Act provides that:

. nothing herein contained shall prevent any State member bank from establishing and operating branches in the United States or any dependency or insular possession thereof or in any foreign country, on the same terms and conditions and subject to the same limitations and restrictions as are applicable to the establishment of branches by national banks . . .

S. 1771 would be beneficial to American commercial activities abroad and to the national economic interest, and its enactment would not jeopardize the fundamental character of American banking. The Board of Governors, therefore, recommends its enactment.

BANK SERVICE CORPORATIONS

Next, I will offer some observations and suggestions concerning the bill H. R. 8874, which would authorize member banks of the Federal Reserve System to invest in "bank service corporations." As set out in its report on H. R. 8874 to your Committee. the Board favors the objective of the bill, but suggests some changes in it. The bank service corporations established under the bill would serve as a means whereby banks -and especially small and medium-size banks—and their customers could benefit from the improved efficiency and economies possible today only through automation. The operations of a bank entail a tremendous volume of data processing, such as the various kinds described in Section 2(a) of the bill. At one time much of this was associated with the high desk and quill pen. Today, high speed electronic and related mechanical equipment designed to handle this work is being used by banks with increasing frequency.

Notwithstanding the high initial cost of equipment of this kind, some banks—especially the larger banks—are purchasing or leasing this equipment. Other banks are gaining access to this equipment through various contractual arrangements with data processing centers operated by private com-

mercial concerns, and some banks that have purchased or leased this equipment are doing data processing for other banks and business concerns.

Under the bill, two or more banks would be able to pool their resources through the corporate device in order to gain the benefits-for themselves and for their customers —of this expensive equipment. This approach to the problem is not now open to member banks, because they are quite limited by the Federal banking laws as to the stock or securities that they may acquire. Of course, even if this bill is enacted, State member banks will be able to invest in bank service corporations only if authorized to do so by State law, but I understand that at least six States have recently enacted laws that specifically authorize such investments by State banks.

The Committee may be interested in some of the findings of a survey conducted by the System in March of this year concerning automation accomplishments and plans of commercial banks. This survey covered nearly all of the 975 banks with deposits of \$25 million or more. In Federal Reserve districts where interest in automation was believed to be relatively high, several hundred smaller banks also were surveyed.

Nearly 500 banks indicate that they either are already using electronic computers or some other form of automation equipment or have firm plans for automation within 3 years. Nearly all large banks are in this group, but the ratio of automating banks to the total number of banks falls rapidly as one moves down the scale in bank size, particularly among banks with deposits of less than \$50 million. Only about one-fifth of the banks with deposits of \$25 million-\$50 million have automation plans, and at smaller banks the proportion is negligible.

About one-fifth of the automating banks indicate that they are using or plan to use outside facilities for their automation operations, mainly those of an independent service bureau or a correspondent bank. Twenty-four banks, according to the survey, are planning to use some form of cooperative arrangement, despite the difficulties of doing so under present law.

I will not take the Committee's time to discuss the details of H. R. 8874 or to elaborate on the suggestions for changes which the Board set out in its report on the bill. These changes do not affect the bill's essential purpose. The Board's staff will be glad to be of all possible help to the staff of your Committee, Mr. Chairman, with respect to any of these changes.

REAL ESTATE LOANS BY NATIONAL BANKS

The third bill before you today is H. R. 7796, relating to real estate loans by national banks.

Under existing law, national banks may make construction loans on residential and farm buildings provided the maturities of such loans do not exceed 9 months. These loans are classified as ordinary commercial loans and are not subject to the various limitations which, under Section 24, apply to loans secured by real estate. Section 2 of H. R. 7796 would increase the permissible maturities of such loans from 9 to 18 months. This change would be helpful in meeting situations where, for some reason beyond the control of the contractor, it is not possible to complete construction within a 9-month period or where there are other unavoidable delays. National banks would continue to be limited in the aggregate amount of construction loans which may be made to 100 per cent of unimpaired capital and surplus.

Under the first paragraph of Section 24 of the Federal Reserve Act, a national bank may now make real estate loans in an aggregate amount not in excess of the amount of the capital stock of the national bank paid in and unimpaired plus the amount of its unimpaired surplus funds, or not in excess of 60 per cent of the amount of its time and savings deposits, whichever is greater. Section 1 of H. R. 7796 would increase the

second alternative to 70 per cent. Last year the Board reported to your Committee that it had no objection to this increase. The Board adheres to that view, but desires to call your attention to the fact that in the interim there has been a considerable increase in time and savings deposits, which may well reduce the need for relief in this form.

The Balance Sheet of Agriculture, 1962

The major factual portion of the 18th in a series of annual reports on the financial condition of agriculture, as issued by the U.S. Department of Agriculture, is given below. The full report has been published as an Agriculture Information Bulletin of the Department of Agriculture.

The study was prepared under the direction of Norman J. Wall, Chief, Agricultural Finance Branch, Farm Economics Division, Economic Research Service, by Fred L. Garlock, Philip T. Allen, Q. Francis Dallavalle, Lawrence A. Jones, William H. Scofield, and Frederick D. Stocker.

Data relating to the inventories of livestock, crops, farm machinery, and household equipment were prepared under the direction of the following persons: livestock—Emmett R. Hannawald of

the Agricultural Estimates Division of the Statistical Reporting Service; crops—Charles E. Burkhead and George D. Harrell of the Agricultural Estimates Division of the Statistical Reporting Service; farm machinery—Robert H. Masucci and Mardy Myers of the Economic and Statistical Analysis Division of the Economic Research Service; household equipment—Jean L. Pennock, Consumer and Food Economics Research Division, Agricultural Research Service. Data relating to farm income and expenditures were compiled under the direction of Mardy Myers and Albert Kendall of the Economic and Statistical Analysis Division of the Economic Research Service.

SUMMARY

During 1961, the value of farm assets rose from \$200.0 billion to \$207.3 billion (Table 1). Farm debts increased as well, though less than assets, with the result that the equities of farm operators and other owners of farm assets reached \$179.6 billion on January 1, 1962, up \$5.1 billion from a year earlier. Despite a rise in expenses, farm operators increased their realized net income by more than \$1 billion or almost 10 per cent during 1961.

Higher farm income in 1961, resulting from strengthened markets for farm products and from Government payments to farmers under the feedgrain program, eased the financial position of farmers. Thus, payments on farm mortgage debts rose, and currency and bank deposits owned by farmers, which had dropped in both 1959 and 1960, leveled off during the year.

In addition, improved farm income gave an added boost to the farm real estate market. A sharp rise—5 per cent—in farm real estate prices in 1961, compared with 1 per cent in 1960 and 3 per cent in 1959, accounted for about \$6 billion of the \$7 billion increase in total value of farm assets.

Inventories of livestock and crops also increased substantially in value during 1961. Both cattle and hogs increased in number, and prices—

In using and interpreting the balance sheet, it should be remembered that the data are aggregates and that they do not show the distribution of assets and debts among owner-operators, tenants, and landlords. Nor do the data permit full separation of the farm firm as a production unit from the farm family as a consumption unit.

The general financial and credit position of agriculture and how it varies among regions is given special attention in the *Agricultural Finance Outlook* issued in November of each year by the Farm Economics Division, Economic Research Service.

¹ The Balance Sheet of Agriculture brings together the assets and liabilities of U. S. agriculture as though it were one large enterprise. The data are for 48 States; Alaska and Hawaii are not included. The annual changes shown provide a means of appraising the effects of developments in both the farm and nonfarm sectors of the economy on the financial structure of agriculture.

This report shows farm assets and farm debts at the beginning of 1962 and selected earlier years. It deals mainly with changes in the financial situation of agriculture that occurred during 1961.

Total 4	r52.9	r200.0	207.3	291.1	3.7		

particularly of cattle-were higher at the end than at the beginning of the year. The rise in cattle and hog values more than offset a decline in sheep and poultry values. Crop inventory values were boosted chiefly by increased farmer-owned stocks of cotton and soybeans.

The drop in value of household furnishings and equipment was a result of the declining number of farm households.

Liquid financial assets held by farm people were the same at the end as at the beginning of 1961— \$13.3 billion, A small decrease in U. S. savings bonds was offset by an increase in time deposits.

Farm debts rose during 1961 from \$25.5 billion to \$27.7 billion. Half the increase occurred in real estate debt, with a sharp rise in volume of farm mortgage lending. A growing number of loans involved additional advances to existing borrowers who were expanding their operations. Farm debts owed to the Commodity Credit Corporation (CCC) increased about \$.5 billion, and non-realestate debts owed to other reporting lendersbanks, production credit associations (PCA's), other institutions that rediscount loans at the Federal intermediate credit banks, and the Farmers Home Administration (FHA)—rose about \$.6 billion. The increase in debt to the CCC chiefly reflected a greater volume of price-support loans on cotton and soybeans. The growth of non-realestate farm debt to other lenders was related to the continued upward trend of farm production expenses.

Farm debts on January 1, 1962, were equal to 13.4 per cent of the value of farm assets, compared to 18.9 per cent in 1940 and 9.5 per cent in 1950. Equities of farm operators and other owners were equal to about 87 per cent of the value of farm assets at the beginning of 1962.

Because of the continued advances in aggregate values of productive assets used in farming and the continued decline in the number of farms, the average investment per production unit has increased sharply in recent years. At the beginning of 1962, production assets per farm aver-

1 Computed from unrounded data.

2 Developed by Alvin S. Tostlebe from data for census years 1870–1950. (See Agricultural Finance Review, Nov. 1952.) Estimates for 1961 and 1962 are extensions of these data.

3 Beginning with 1961, horses and mules are excluded.

4 Total of rounded data.

aged \$47,600—an increase of 8 per cent from 1961 and 19 per cent from 1959.

The physical volume of total farm assets, as reflected by valuations in 1940 prices, declined slightly in 1961 because of reductions in farm machinery and motor vehicles and in household furnishings and equipment (Table 2).

INFLUENCE OF THE ECONOMIC SITUATION

These changes in the financial condition of farmers occurred in an economic environment of general recovery from the quite moderate 1960-61 recession. At the cyclical low in the first quarter of 1961, gross national product was at an annual rate of just over \$500 billion or about \$1 billion less than a year earlier. Recession weakness was most pronounced in producers' durable equipment, residential construction, and consumer purchases of durable goods; moderate liquidation of inventories was a major downward influence. The last three quarters of 1961 were characterized by rapid economic expansion, with GNP reaching a rate of \$539 billion in the final quarter. Nearly every major component of GNP contributed to the advance.

Industrial production, as measured by the Federal Reserve Board's seasonally adjusted index, reached a low of 102 (1957=100) in January and February of 1961. A broad advance in the remainder of the year brought the index to 115 by December, with production rates at or near previous highs for most industries.

Employment also increased during the year; civilian nonfarm employment in December was about 1.5 per cent above a year earlier. The unemployment rate remained above 6 per cent throughout 1961, but declined in the closing months and dropped below 6 per cent in January 1962.

Increases in unemployment benefits and farm program payments in 1961 helped mitigate the effects of the 1960-61 recession on the flow of disposable personal income. The first-quarter rate of \$354 billion, virtually unchanged from the second half of 1960, was about 2.5 per cent above a year earlier. Because of a steady advance in income throughout 1961, domestic demand for farm products was well sustained.

The Federal Reserve System continued its policy of easy credit and monetary conditions throughout 1961. From the end of 1960 to the

end of 1961, member bank reserves had increased sufficiently to permit an increase of \$16 billion in demand and time deposits of commercial banks. Interest rates in central money markets remained comparatively stable during most of the year, but began to rise in the closing months. In December 1961, the rate on newly issued 90-day Treasury bills averaged 2.6 per cent, compared with 2.3 per cent a year earlier.

FARM INCOME

Total gross farm income was \$40.2 billion in 1961, about \$1.9 billion higher than in 1960 (Table 3). Cash receipts from farm marketings increased by \$1.2 billion, and Government pay-

^{*} Revised.

Reflects the physical changes during the year in all livestock and crops on farms, except crops under Commodity Credit Corp. loan, with the changes valued at average prices for the year.

2 Goods and services purchased, and depreciation of capital

² Goods and services purchased, and depreciation of capital equipment.

³ To landlords not living on farms, after subtraction of taxes, mortgage interest, and other expenses paid by landlords.

ments by \$.8 billion. Production costs (other than wages, rent, and interest on mortgages) rose \$.6 billion. As a result, net income from agriculture as an industry totaled \$17.9 billion, or \$1.3 billion above 1960.

The purchasing power of the net income realized by farm operators in 1961 was 9 per cent higher than in 1960, a substantial increase. The better purchasing power resulted entirely from

higher income, because the average of prices paid by farmers for goods and services used for family living purposes showed a slight increase.

In addition to income from farming, farm people have been receiving a growing share of their total income from nonfarm sources. In 1961, these sources accounted for \$7 billion, about one-third of the personal income received by farm people from all sources.

THE 1962 BALANCE SHEET

In the preceding paragraphs, the 1962 balance sheet was summarized in general terms. In the sections that follow, each item is treated separately.

ASSETS

Assets fall into two general classes: (1) physical assets, which include both real estate and tangible personal property; and (2) financial assets, which include cash, bank deposits, U. S. savings bonds, and farmers' investments in cooperative associations.

Farm real estate. The total market value of farm real estate rose to a new record of \$138.0 billion on March 1, 1962, as a result of a 5 per cent increase in the average value per acre. This was \$6.2

billion above a year earlier, and one of the largest annual increases in recent years. The upward trend in per-acre values had slowed perceptibly in late 1959 and 1960, but resumed in response to the higher level of farm income realized in 1961. In the 12 months ending March 1, 1962, market prices showed their greatest strength in the Southeast and South Central parts of the country. The upturn was relatively small in the Corn Belt where some decline had occurred previously.

Estimates of market values of farm real estate by economic class of farm, derived from the 1959 Census of Agriculture, are given in Table 4. These estimates show the close relationships between the gross value of sales of farm products and the market value of real estate.

Between the census years 1950 and 1959, farm

¹ Includes Indian reservations and farms operated by various kinds of institutions such as schools and hospitals.

NOTE.—Derived from Table 17, Vol. 1, State reports, Census of Agriculture, 1959. Number of farms and value of farm real estate

differ slightly from similar data for all farms owing to sampling; details may not add to totals because of rounding. For detailed description of each economic class of farm, see Census

real estate values advanced considerably relative to gross sales. In 1950, farms with sales of \$20-000 or more had a real estate investment of about \$2,000 per \$1,000 of gross sales; the investment had risen to nearly \$3,100 by 1959, an increase of 55 per cent. There was no appreciable difference among the various economic classes of farms in the percentage increase in real estate value per \$1,000 of sales between 1950 and 1959.

Livestock and poultry. The inventory value of livestock and poultry on farms on January 1, 1962, was \$16.3 billion, up 5.1 per cent from a year earlier. A \$901 million increase in the value of all cattle and hogs more than offset a \$115 million decline in the value of sheep, chickens, and turkeys. The farm value per head of cattle and hogs on January 1, 1962, was higher than a year earlier, but that of chickens and turkeys was lower.

There were more cattle, hogs, and chickens on farms on January 1, 1962, than a year earlier but fewer sheep and turkeys. Cattle on hand totaled 99.5 million head, the highest number on record. This exceeded by 2 per cent or 2.2 million head the previous high reached on January 1, 1961. The index of the number of meat animals on farms at the beginning of 1962 was at 106 (1957-59=100), only 2 points below the record established in 1944, and 2 points above the level of January 1, 1961. The milk cattle and poultry indexes were unchanged from a year earlier, and were 37 and 53 points, respectively, below the 1944 highs.

Machinery and motor vehicles on farms. Farmers invested \$3,148 million in farm machinery and

motor vehicles in 1961, up slightly from 1960 but well below the peak outlays recorded in 1951. Expenditures for tractors were up 21 per cent from the very low 1960 level. Other changes were small, ranging from an increase of 2 per cent for motor trucks to decreases of 4 and 3 per cent, respectively, for automobiles and other farm machinery.

Estimated depreciation charges amounted to \$3,466 million in 1961, exceeding gross expenditures for the third consecutive year. Estimated depreciation for the year was about 2.5 per cent lower than in 1960 and 3 per cent below the estimate for the peak year of 1959.

Although depreciation exceeded expenditures in 1961, farm machinery inventory values rose .2 of a per cent in the year. The increase reflected the slightly higher prices at which the inventory was valued. In constant dollars, the value of all farm machinery declined slightly for the third consecutive year. Compared with 1940, however, the constant-dollar value of machinery and motor vehicles was up more than 100 per cent, a much larger increase than for any other physical asset used in agriculture.

Crop inventories. Farmer-owned crop inventories (including crops pledged under CCC loans) reached \$8.7 billion by the end of 1961, an increase of \$.7 billion for the year. Of this total, stocks valued at \$7.7 billion were stored on farms; the remainder were in off-farm storage under CCC loan.

The value of farmer-owned crop inventories has not changed greatly over the past decade, fluctuating from a high of \$9.6 billion at the beginning of 1955 to a low of \$7.6 billion in 1958. The increase in value during 1961 reflected large gains in cotton and soybean holdings, which more than offset a \$200 million decline in wheat stocks. To some extent these changes resulted from changes in crop production and marketings.

Soybean stocks expanded greatly from 1961 to 1962 as a result of a greater rise in output than in consumption. Wheat stocks declined because of a smaller crop and a new high in exports. The increase in cotton stocks reflected mainly an increase in CCC loans because of a change in the Federal support program.

The physical volume of farmer-owned crop inventories has increased 25 per cent from 1950,

TABLE 5
HOUSEHOLD FURNISHINGS AND EQUIPMENT ON FARMS
AS OF JANUARY 1

[In millions of dollars]

Year	Value	
rear	Current prices	1940 prices
1940 1950 1955 1955 1961	4,213 8,610 9,992 8,854 8,319	4,130 4,508 4,781 4,319 4,098

Note.—These figures have been revised to take into account estimates of the farm population based on the definition of a farm in the 1959 Census of Agriculture. In this revision all calculations were made in constant dollars, which were then converted to current dollars. In addition, the method of estimating the value of inventory carried forward was changed, and the adjustment for nonoperator families on farms—an element of the old series—was dropped. Values have been revised downward substantially; for example, the previous estimates in current prices were \$4,275 million for 1940 and \$11,348 million for 1955.

an increase similar to the rise in total farm output.

Household furnishings and equipment. The total dollar value of household furnishings and equipment on farms declined about \$.5 billion or 6 per cent during 1961, according to revised estimates which take into account the new Census definitions of farms and of the farm population (Table 5). The rate of decline was about the same as in 1960 but was more rapid than in the late 1950's, principally because of the increased rate of decline in the farm population.

On a per farm basis, the value of household furnishings and equipment has been rising, reflecting the purchase of more or better appliances and other household items by farmers. However, this increased value per household has been more than offset in the aggregate by the decline in the number of farm households. On a constant-dollar basis the aggregate value of household furnishings and equipment was less on January 1, 1962, than before World War II.

Liquid financial assets. Total liquid financial holdings of farmers were the same on January 1, 1962, as they had been on January 1, 1961—\$13.3 billion (Table 6). A small decrease in U. S. savings bonds was offset by an increase in time deposits owned by farmers. Holdings of currency and demand deposits showed no change between the two dates.

Estimates indicate that the cash value of U.S.

Table 6

¹Estimates for 1940 and 1962 from the Dept. of Agriculture; for other years, from the Board of Governors of the Federal Reserve System.

savings bonds held by farm people declined from \$4.6 billion on January 1, 1961, to \$4.5 billion by the end of the year. This mainly reflects the decrease in the farm population during the year. Series E bonds, which make up more than four-fifths of farm holdings, declined 4 per cent. Holdings of Series H bonds, which usually are of larger denominations, were about 5 per cent higher at the beginning of 1962 than they were a year earlier.

The sample of rural counties where total bond purchases are used as indicators of farmer purchases showed increased purchases of H bonds in all except the Appalachian and Mountain regions. Series E bond purchases decreased slightly for the sample counties as a group. The largest decline was 6 per cent in the Pacific region; the largest increase was 6 per cent in the Northern Plains.

Net worth of farmers' cooperatives. On January 1, 1962, net investments of farmers in their cooperative associations totaled \$4.5 billion. This represented an increase of 5.5 per cent from the previous year, about the same rise as in the preceding 12 months, but less than the average increase in the years from 1955 to 1960. Of the total net investment, about 50 per cent was invested in marketing and purchasing associations, 16 per cent in rural electric cooperatives, and about 20 per cent in cooperative credit institutions.

Since 1950, farmers' investments in cooperatives have risen more rapidly than their other investments. From 1950 to 1962, they rose from 1.6 per cent to 2.2 per cent of total assets. As a portion of financial assets, investments in coopera-

tives rose from 13 per cent in 1950 to 25 per cent in 1962.

In recent years, investments in rural electric cooperatives and PCA's have shown the fastest growth—each about 11 per cent in 1961. Those in marketing associations and most of the other cooperatives increased about 3 per cent.

Assets used in farm production. Higher per-acre prices for farm real estate were chiefly responsible for a \$6.8 billion increase in the market value of assets used in farm production in 1961. The total value of such assets reached \$162.5 billion on January 1, 1962.2 More than three-fourths of this investment was in land and service buildings; non-real-estate assets-chiefly livestock and farm equipment-totaled \$38.8 billion, only \$800 million higher than a year earlier.

The rate of increase in the value of production assets slowed perceptibly in 2 of the past 3 years, advancing less than 7 per cent in the 3-year period as a whole, compared with an increase of nearly 25 per cent from 1956 to 1959. Most of this difference was attributable to the sharper rate of increase in real estate values between 1956 and 1959.

As of January 1, 1962, assets per farm totaled \$47,632, and per worker, \$23,259—increases of 8 and 6 per cent, respectively, from a year earlier (Table 7). Over the latest 3-year period, investment in production assets per farm has increased 19 per cent, and per worker, 15 per cent. This increase is due to the continued decline in the number of farms—an annual decline of some 125,000 to 150,000 in recent years—together with the increased aggregate value of production assets.

After dropping to a low point of 3.4 per cent in 1959, the rate of return on total productive assets used in farming (after allowances for family labor) increased to 4.2 per cent in 1960, and to 5.0 per cent in 1961.8 The 1961 rate was about equal to the 1940 rate of 5.2 per cent.

TABLE 7 AVERAGE VALUE OF PRODUCTION ASSETS AS JANUARY 1 [In dollars]

Year	Farm real estate 1	Live- stock	Machinery and motor vehicles ²	Other 3	Total

1	Per farm worker					
1940 1950 1955 1961	2,476 6,463 9,949 16,530 17,701	453 1,295 1,297 2,183 2,336	219 996 1,605 2,228 2,275	201 676 862 931 947	3,349 9,430 13,713 21,872 23,259	

1 Excludes value of dwellings. Based on revised estimates of value of land and service buildings derived from final estimates from the 1959 Census of Agriculture.

2 Excludes 60 per cent of the value of automobiles.

3 Includes half of the Jan. 1 value of crop inventories of feed grains and hay stored on farms (excluding Commodity Credit Corp. loans), and the portion of demand deposits owned by farmers that were estimated as held to meet farm production costs.

NOTE.—Estimates for 1950 and 1955 differ slightly from those published previously because of use of revised estimates of number of farms.

Value of real estate per farm computed from number of farms.

of farms.

Value of real estate per farm computed from number of farms as reported in the 1959 Census, with numbers for 1961 and 1962 extrapolated by using changes in the Dept. of Agriculture series on number of farms. For other assets, values are based largely on Dept. of Agriculture estimates, with value per farm calculated from the Dept. of Agriculture estimates of farms.

Numbers of farm workers used for computing assets per worker are not wholly consistent with the revised estimates of number of farms.

The return on the portion of total productive assets represented by farm real estate has also improved considerably in the past 3 years. The rate in 1959 was 3.0 per cent, and for 1961 it advanced to 4.9 per cent. This was higher than in 1955, but still a little below the rate for 1940. The considerable increase in real estate prices from March 1961 to March 1962 suggests that a substantial part of the increased return on capital had been capitalized into land prices.

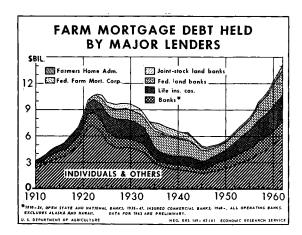

CLAIMS

Claims on agricultural assets are of two general kinds: (1) liabilities, which are divided into real estate and non-real-estate debt; and (2) equities, which represent the value of the residual rights in agricultural assets belonging to the proprietorsowner-operators, tenants, and landlords. Proprietors may be individuals, corporations, or Federal, State, or local government agencies.

² Market values of farm real estate were estimated on the basis of acreage and number of farms reported in the 1959 Census of Agriculture, which excluded about 62,000 soil bank farms, and which is also estimated to have inadvertently omitted approximately 331,000 farms. No adequate basis exists for the evaluation of these farms.

⁸ See U. S. Agricultural Research Service, ARS 43-118, Current Developments in the Farm Real Estate Market, Feb. 1960, for explanation of estimating procedures.

Farm real estate debt. The preliminary estimate of farm mortgage debt outstanding on January 1, 1962, was \$14.2 billion, an increase of \$1,107

million or 8.5 per cent from a year earlier. The dollar increase in 1961 was the third largest on record. Twice before in the post-World War II period the rise exceeded \$1 billion.

The dollar amount of farm mortgages recorded in 1961 was 17 per cent above the somewhat reduced 1960 level. In the first and second quarters of 1961, mortgage lending rose considerably, then remained at a high level through the second half of the year and into the early part of 1962. In the second quarter of 1962 there were some indications of slackening.

About half the total amount of farm mortgage loans made during 1961 was for refinancing mortgage or other indebtedness. Only about a third was used to purchase farm real estate.

Interest rates were unusually stable during the year. Rates ranged from 5.5 to 6 per cent on the bulk of the loans made by private and cooperative lenders.

All lenders increased their holdings of farm mortgages from the previous year, and the average size of new loans continued to rise. The FHA increased its holdings the most-18 per cent, compared with 10 per cent for the Federal land banks

TABLE 8 FARM MORTGAGE DEBT OUTSTANDING, BY LENDER, AS OF JANUARY 1

^p Preliminary.

¹ Computed from unrounded data.

² Includes regular mortgages, purchase-money mortgages, and sales contracts.

³ Data for 1940 include only tenant-purchase loans and direct soil and water loans to individuals. Thereafter, data include also farm-development, farm-enlargement, and project-liquidation loans; farm-housing loans beginning July 1950; and building-improvement loans beginning 1955.

⁴ Includes data for Federal Formation

4 Includes data for Federal Farm Mortgage Corp. as follows (in millions): 1940, \$713; and 1950, \$59. On June 30, 1955, loans of the Federal Farm Mortgage Corp. were sold to the 12 Federal land

and 6 per cent for insurance companies (Table 8). The increase in FHA loans resulted chiefly from an increase in loanable funds.

A further substantial expansion in FHA direct lending activity is occurring in 1962, partly because the FHA farm housing program now includes rural nonfarm housing. Insured farm ownership loans of the FHA in the first quarter of 1962 increased \$46 million in outstanding amount, compared with a \$35 million increase in the entire calendar year of 1961 and only \$6 million in 1960. The return to holders of these loans was increased in September 1961 from 4 to 4.5 per cent.

In 1961 payments on principal and payment of loans in full increased from the 1960 level, both in dollar amount and as a percentage of outstanding debt. However, principal repayment rates were not as high as in 1959 when farm income was lower. For the Federal land banks, total payments in 1961 equaled 8.4 per cent of outstanding debt compared with 8.1 per cent in 1960; for the insurance companies they were 10.8 per cent compared with 10 per cent. Typically, insurance company loans are written for shorter terms than are Federal land bank loans. Repayments by FHA borrowers also increased.

In 1961 delinquencies and foreclosures on

^{&#}x27;The farm mortgage debt figures are being revised on the basis of the 1961 Tax and Mortgage Debt Survey conducted by the Bureau of the Census in cooperation with the Dept. of Agriculture. The revisions, most of which do not involve substantial change, are expected to be available later this year.

mortgages and loans with interest overdue remained at insignificant levels.

The ratio of mortgage debt to land values rose —from 9.9 per cent on January 1, 1961, to 10.3 per cent on January 1, 1962—as farm mortgage debt increased more rapidly than farm real estate prices. This ratio, while much lower than in the 1920's and 1930's, has been rising in most of the years since 1951. On January 1, 1962, the ratio was relatively lowest in the Southern Plains States and highest in the Lake States.

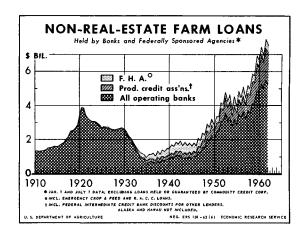

Non-real-estate debt. Farm debt not secured by real estate (excluding CCC loans) increased by \$673 million or 6 per cent during 1961. The increase was slightly larger than during the previous year but only about half as large as the rapid expansion in 1958 and 1959. In the first quarter of 1962, loans continued to expand at about the same moderate rate as in the spring of 1961. CCC loans increased about \$.5 billion during 1961 (Table 9).

TABLE 9 FARMERS' NON-REAL-ESTATE DEBT AS OF JANUARY 1 [In millions of dollars]

445	r1,723	r1,390	1,866
1,503	2,834	6,970	7,543
900	2,049	4,984	5,309
153	387	1,480	1,640
32	51	88	99
418	347	418	495
1,500	2,400	4,000	4,100
3,003 3,448	5,234 r6,957	10,970 r12,360	11,643 13,509
	1,503 900 153 32 418 1,500	1,503 2,834 2,049 153 387 32 51 418 347 1,500 2,400 3,003 5,234	1,503 2,834 6,970 2,049 4,984 153 387 1,480 32 51 88 418 347 418 1,500 2,400 4,000 3,003 5,234 10,970

At the beginning of 1962 farmers owed \$11.6 billion of non-real-estate debt excluding CCC loans. Commercial banks held about 45 per cent; merchants, dealers, and similar creditors, 35 per cent;5 and the PCA's, 14 per cent.

Regionally, above average increases in non-real-

estate loans during 1961 occurred in the central and western States and in scattered States in the south and east. Increases ranged from 36 per cent in Delaware and 21 per cent in Florida to no change in Nevada and a decline of 12 per cent in Massachusetts.

In recent years, the rate of increase in non-realestate loans has varied considerably among the different lenders. Loans outstanding at PCA's rose very rapidly in the 5 years from January 1, 1955, to January 1, 1960, increasing by 136 per cent or at an annual rate of about 19 per cent a year. In this same period bank non-real-estate loans to farmers increased 64 per cent or at an annual rate of about 10 per cent a year. FHA loans declined by 5 per cent over the 5-year period.

The rate of increase in total non-real-estate loans slackened considerably in 1960 and 1961, with PCA's showing annual increases of around 10 per cent and banks of about 5 per cent. FHA non-real-estate loans increased 6 per cent during 1960, and jumped 18 per cent during 1961. This expansion in FHA operating and emergency credit reflected both an increase in funds appropriated for these purposes and a strong demand by farmers for these loans.

One feature of the expansion in PCA loans in recent years has been a relatively faster growth in the dollar volume of loans renewed than in new cash advanced. In 1954 the renewal rate (the dollar volume of renewed loans as a percentage of total loans made, including renewals) was about 25 per cent. The rate declined to 23 per cent in 1957 and 1958 but has been rising since, reaching 28 per cent in 1961. No over-all information

¹ Although the Commodity Credit Corp. price-support loans are nonrecourse loans, they are treated as debts. Borrowers must either pay them in cash or deliver the commodities on which they were pay them in cool. 2 based.

2 Estimates based on fragmentary data.

⁵ These data on debts owed to nonreporting lenders are to be revised on the basis of the 1960 Sample Survey of Agriculture.

on renewals on farm loans at banks is available, but scattered reports indicate the trend may have been similar to that for the PCA's.

These trends probably indicate at least two causal factors. First, it appears that farmers are increasing their use of longer-term credit more rapidly than their use of short-term credit. Part of the increase in longer-term credit is being supplied by an increase in renewals. Secondly, some farm borrowers are probably finding it more difficult to meet their debt obligations.

In the year ending June 30, 1961, 14 per cent of the PCA loan volume carried terms exceeding 1 year, mostly 3 to 5 years. In the first few years after the beginning of the PCA intermediate-term loan program in 1954, the volume of these loans expanded rapidly. In the 2 years ending June 30, 1961, however, the volume of these intermediate-term loans increased no more rapidly than the total volume of PCA loans. Comparable recent data are not available for banks, but in 1956 some 14 per cent of the non-real-estate loans of banks had terms longer than 1 year.

Interest rates charged by the PCA's declined steadily during 1961. For the year, an average of nearly 90 per cent of the associations charged rates (excluding service fees) of less than 7 per cent, compared with about 45 per cent charging

less than 7 per cent during 1960. In the first quarter of 1962 PCA rates changed very little.

Interest rates charged by commercial banks on their non-real-estate farm loans during 1961, according to the sparse data available, did not change much.

Total farm debt. Total farm debt (excluding CCC loans) reached \$25.8 billion on January 1, 1962. This was a new high, up \$1.8 billion or 7 per cent from a year earlier. Farm mortgage debt had increased \$1.1 billion during 1961, other debt \$.7 billion. Since 1950 farm debt has more than doubled. Mortgage debt has increased at a slightly more rapid rate than non-real-estate debt. In 1961, the total debt/asset ratio rose about 1 per cent to 13.4 per cent—about half way between the 1940 ratio of 18.9 per cent and the 1950 ratio of 9.5 per cent.

The Corn Belt showed a relatively slower rate of increase in farm debt in 1960 and 1961 than any other major region. This may have been related to the reduced activity in the Corn Belt's farmland market. The Southeast had the largest increases in debt in 1960-61. Since 1950 debt expansion in the West and in the Delta and the Southeast has been considerably faster than elsewhere.

Law Department

Administrative interpretations, new regulations, and similar material

Amendment to Defense Production Act

The Defense Production Act of 1950 (Section 301 of which is the basis for guarantees of loans for defense production), which would have expired June 30, 1962, was amended so as to continue in force until the close of June 30, 1964, by act of June 28, 1962 (Public Law 87-505).

Purchase of Government Obligations by Federal Reserve Banks

By Act of Congress approved June 28, 1962 (Public Law 87-506), the authority of the Federal Reserve Banks under Section 14(b) of the Federal Reserve Act to purchase and sell direct or fully guaranteed obligations of the United States directly from or to the United States, which would have expired on June 30, 1962, was extended to June 30, 1964. The text of the Act is as follows:

AN ACT

To amend Section 14(b) of the Federal Reserve Act, as amended, to extend for two years the authority of Federal Reserve banks to purchase United States obligations directly from the Treasury.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Section 14(b) of the Federal Reserve Act, as amended (12 U.S.C. 355) is amended by striking out "July 1, 1962" and inserting in lieu thereof "July 1, 1964" and by striking out "June 30, 1962" and inserting in lieu thereof "June 30, 1964." Approved June 28, 1962.

Special or Limited Partner of Securities Company Serving Bank

The Board has been asked on several occasions whether Section 32 of the Banking Act of 1933 is applicable to a director, officer, or employee of a member bank who is a special or limited partner in a firm primarily engaged in the business described in that section.

Since the Board cannot issue an individual permit, it can exempt a limited or special partner only by amending Regulation R. After the statute was

amended in 1935 so as to make it applicable to a "partner," the Board carefully considered the desirability of making such an exception. On several subsequent occasions it has reconsidered the question. In each instance the Board has decided that in view of a limited partner's interest in the underwriting and distributing business, it should not make the exception.

Reserves of Member Banks

The Board of Governors of the Federal Reserve System, effective July 28, 1962, revised Regulation D pertaining to reserves of member banks and the Supplement thereto, to reflect changes in the law abolishing the designation of "central reserve cities," to set forth in Section 204.2(a) the factors considered by the Board in acting upon applications by individual member banks in reserve cities for permission to maintain the lower reserves applicable to member banks not in reserve cities ("country banks"), and to make certain minor clarifying changes in Sections 204.1(i), 204.2(a), 204.3(a), and 204.5.

In addition, the Board added the following paragraph to the Rule for Classification of Reserve Cities (1947 BULLETIN 41, as amended 1957 BULLETIN 522) to make possible the termination of the reserve city designation of certain cities which, at the request of member banks in such cities, were continued as reserve cities, effective March 1, 1957, although such cities did not fall within the standards of classification of reserve cities and which do not presently fall within such standards:

In any case in which a city is classified as a reserve city solely by reason of the continuance of its designation as such, effective March 1, 1957, pursuant to § 204.52(c), the reserve city designation of such city will be terminated, effective as of such time as the Board may prescribe, if a written request for such termination is received by the Federal Reserve bank of the district in which the city is located from one or more member banks with head offices in such city and if such request is granted by the Board of Governors

The revised Regulation reads as follows:

REGULATION D (12 CFR PART 204)

As Revised Effective July 28, 1962

RESERVES OF MEMBER BANKS

§204.1—DEFINITIONS

- (a) Demand deposits. The term "demand deposits" includes all deposits except "time deposits" as defined
- (b) Time deposits. The term "time deposits" means "time certificates of deposits," "time deposits, open account" and "savings deposits," as defined below.
- (c) Time certificates of deposit. The term "time certificates of deposit" means a deposit evidenced by a negotiable or nonnegotiable instrument which provides on its face that the amount of such deposit is payable to bearer or to any specified person or to his order-

(1) On a certain date, specified in the instrument, not less than 30 days after the date of deposit, or

(2) At the expiration of a certain specified time not less than 30 days after the date of the instrument, or

(3) Upon notice in writing which is actually required to be given not less than 30 days before the date of repayment,1 and

(4) In all cases only upon presentation and surrender of the instrument.

- (d) Time deposits, open account. The term "time deposit, open account" means a deposit, other than a "time certificate of deposit" or a "savings deposit," with respect to which there is in force a written contract with the depositor that neither the whole nor any part of such deposit may be withdrawn, by check or otherwise, prior to the date of maturity which shall be not less than 30 days after the date of the deposit,² or prior to the expiration of the period of notice which must be given by the depositor in writing not less than 30 days in advance of withdrawal.*
- (e) Savings deposits. The term "savings deposit"
- means a deposit—

 (1) Which consists of funds deposited to the credit of one or more individuals, or of a corpora-tion, association, or other organization operated primarily for religious, philanthropic, charitable, educational, fraternal, or other similar purposes and not operated for profit; or in which the entire

and not operated for profit; or in which the entire

1 A deposit with respect to which the bank merely reserves the right to require notice of not less than 30 days before any withdrawal is made is not a "time certificate of deposit."

2 Deposits such as Christmas club accounts and vacation club accounts, which are made under written contracts providing that no withdrawal shall be made until a certain number of periodic deposits have been made during a period of not less than three months constitute "time deposits, open account" even though some of the deposits are made within 30 days from the end of such period.

3 A deposit with respect to which the bank merely reserves the right to require notice of not less than 30 days before any withdrawal is made is not a "time deposit, open account."

4 Deposits in joint accounts of two or more individuals may be classified as savings deposits if they meet the other requirements of the above definition, but deposits of a partnership operated for profit may not be so classified. Deposits to the credit of an individual of funds in which any beneficial interests is held by a corporation, partnership, association or other organization operated for profit or not operated primarily for religious, philanthropic, charitable, educational, fraternal or other similar purposes may not be classified as savings deposits.

beneficial interest is held by one or more individuals or by such a corporation, association, or other organization; and

- (2) With respect to which the depositor is required, or may at any time be required, by the bank to give notice in writing of an intended withdrawal not less than 30 days before such withdrawal is made.
- (f) Gross demand deposits. The term "gross demand deposits" means the sum of all demand deposits, including demand deposits made by other banks, the United States, States, counties, school districts and other governmental subdivisions and municipalities, and all outstanding certified and officers' checks (including checks issued by the bank in payment of dividends), and letters of credit and travelers' checks sold for cash.
- (g) Cash items in process of collection. The term "cash items in process of collection" means:
 - (1) Checks in process of collection, drawn on a bank, private bank, or any other banking institution, which are payable immediately upon presentation in the United States, including checks with a Federal Reserve bank in process of collection and checks on hand which will be presented for payment or forwarded for collection on the following business

(2) Government checks and warrants drawn on the Treasurer of the United States which are in

process of collection;

(3) Such other items in process of collection, payable immediately upon presentation in the United States, as are customarily cleared or collected by banks as cash items.

Items handled as noncash collections may not be treated as "cash items in process of collection" within the meaning of this part.

- (h) Net demand deposits. The term "net demand deposits" means gross demand deposits as defined in paragraph (f) of this section less the deductions allowed under the provisions of § 204.2(b).
- (i) Currency and coin. The term "currency and coin" means United States currency and coin owned and held by a member bank, including currency and coin in transit to or from a Federal Reserve bank.

§ 204.2—computation of reserves

- (a) Amounts of reserves to be maintained.
- (1) Every member bank shall maintain on deposit with the Federal Reserve bank of its district an actual net balance equal to 3 per cent of its time deposits, plus 7 per cent of its net demand deposits if it is not located in a reserve city or 10 per cent of its net demand deposits if it is located in a reserve city, or such different percentages of its time deposits and net demand deposits as the Board of Governors of the Federal Reserve System, pursuant to and within the limitations contained in Section 19 of the Federal Reserve Act,5 may prescribe from

⁵ Any such different percentages prescribed by the Board may or Any such different percentages prescribed by the board may not be less than 3 per cent of time deposits, 7 per cent of net demand deposits of banks not located in reserve cities, or 10 per cent of net demand deposits in banks located in reserve cities, nor more than 6 per cent of time deposits, 14 per cent of net demand deposits of banks not located in reserve cities, or 22 per cent of net demand deposits of banks located in reserve cities.

time to time in § 204.5 (the Supplement to this part); Provided, That a member bank's currency and coin shall be counted as reserves in determining compliance with such requirements to such extent as the Board of Governors of the Federal Reserve System, pursuant to Section 19 of the Federal Reserve Act, may permit from time to time in § 204.5.

(2) Notwithstanding the provisions of subparagraph (1) of this paragraph, a member bank located in a reserve city may hold and maintain the reserve balances which are in effect for member banks not located in reserve cities if, upon application to the Board of Governors, the Board grants permission for the holding and maintaining of such lower reserve balances after consideration of all factors relating to the character of such bank's business, including but not limited to, the amount of such member bank's total assets, the amount of its total deposits, the amount of its total demand deposits, the amount of its demand deposits owing to banks, the nature of its depositors and borrowers, the rate of activity of its demand deposits, its geographical location within the city, and its competitive position with relation to other banks in the city. Any such permission shall be subject to revocation by the Board at any time in the light of changed circumstances, and all such grants of permission may be subject to annual review by the Board.

(3) For the purposes of this part, a member bank shall be considered to be in a reserve city if the head office or any branch thereof is located in a

reserve city.

- (b) Deductions allowed in computing reserves. In determining the reserve balances required under the terms of this part, member banks may deduct from the amount of their gross demand deposits the amounts of balances subject to immediate withdrawal due from other banks and cash items in process of collection as defined in § 204.1(g). Balances "due from other banks" do not include balances due from Federal Reserve banks, balances (payable in dollars or otherwise) due from foreign banks or branches thereof whereever located, or balances due from foreign branches of domestic banks. The word "banks" in term "due from other banks" refers to incorporated banks and does not include private banks or bankers.
- (c) Availability of cash items as reserve. Cash items forwarded to a Federal Reserve bank for collection and credit cannot be counted as part of the minimum reserve balance to be carried by a member bank with its Federal Reserve bank until the expiration of such time as may be specified in the appropriate time schedule referred to in part 210 of this chapter. If a member bank draw against items before such time, the draft will be charged against its reserve balance if such balance be sufficient in amount to pay it; but any resulting impairment of reserve balances will be subject to the penalties provided by law and by this part: Provided, however, That the Federal Reserve bank may, in its discretion, refuse at any time to permit the withdrawal or other use of credit given in its reserve account for any item for which the Federal

Reserve bank has not received payment in actually and finally collected funds.

- (d) Reserves against trust funds. A member bank exercising trust powers need not maintain reserves against trust funds which it keeps properly segregated as trust funds and apart from its general assets or which it deposits in another institution to the credit of itself as trustee or other fiduciary. If, however, such funds are mingled with the general assets of the bank, as permitted to national banks under authority of Section 11(k) of the Federal Reserve Act (40) Stat. 969; 12 U.S.C. 248(k)), a deposit liability thereby arises against which reserves must be maintained.
- (e) Continuance of "time deposits" status. A deposit which at the time of deposit was a "deposit evidenced by a time certificate of deposit," "time deposit, open account," or "savings deposit" continues to be a "time deposit" until maturity or the expiration of the period of notice of withdrawal, although it has become payable within 30 days. After the date of maturity of any time deposit, such deposit is a demand deposit. After the expiration of the period of notice given with respect to the repayment of any savings deposit or other time deposit, such deposit is a demand deposit, except that, if the owner of such deposit advise the bank in writing that the deposit will not be withdrawn pursuant to such notice or that the deposit will thereafter again be subject to the contract or requirements applicable to such deposit, the deposit will again constitute a savings deposit or other time deposit, as the case may be, after the date upon which such advice is received by the bank.

§ 204.3—DEFICIENCIES IN RESERVES

(a) Computation of deficiencies.

(1) Deficiencies in reserve balances of member banks in reserve cities shall be computed on the basis of average daily net deposit balances and average daily currency and coin covering weekly periods. To Deficiencies in reserve balances of other member banks shall be computed on the basis of average daily net deposit balances and average daily currency and coin covering biweekly periods.

(2) In computing such deficiencies the required reserve balance of each member bank at the close of business each day shall be based upon its net deposit balances and currency and coin at the opening of business on the same day; and the weekly and biweekly periods referred to in paragraph (1) hereof shall end at the close of business on days to be fixed by the Federal Reserve banks with the approval of the Board of Governors of the Federal Reserve System. When, however, the reserve computation period ends with a nonbusiness day, or two or more consecutive nonbusiness days, of the member bank or its Federal Reserve bank, such nonbusiness day or days may, at the option of the member bank, and whether or not it had a reserve deficiency in such computation period, be included in the next reserve computation period.

(b) Penalties.

(1) Penalties for such deficiencies will be as-

⁶ A member bank exercising fiduciary powers may not include in balances "due from other banks" amounts of trust funds deposited with other banks and due to it as trustee or other fiduciary. If trust funds are deposited by the trust department of a member bank in its commercial or savings department and are then redeposited in another bank subject to immediate withdrawal they may be included by the member bank in balances "due from other banks," subject to the provisions of § 204.2(b).

⁷ However, deficiencies in reserve balances of member banks in reserve cities which have been authorized by the Board of Governors, under the provisions of § 204.2(a) (2), to hold and maintain the reserve balances in effect for member banks not in reserve cities will be computed on the basis provided for such latter member banks.

sessed monthly on the basis of average daily deficiencies during each of the reserve computation periods ending in the preceding calendar month.

- (2) Such penalties will be assessed at a rate of 2 per cent per annum above the Federal Reserve bank rate applicable to discounts of 90 day commercial paper for member banks, in effect on the first day of the calendar month in which the deficiencies occurred.
- (c) Notice to directors of banks deficient in reserves. Whenever it shall appear that a member bank is not paying due regard to the maintenance of its reserves, the Federal Reserve bank shall address a letter to each director of such bank calling attention to the situation and advising him of the requirements of the law and of this part regarding the maintenance of reserves.
- (d) Continued deficiencies. If, after the notice provided for in paragraph (c) of this section has been given, it shall appear that the member bank is continuing its failure to pay due regard to the maintenance of its reserves, the Federal Reserve bank shall report such fact to the Board of Governors of the Federal Reserve System with a recommendation as to whether or not the Board should:
 - (1) In the case of a national bank, direct the Comptroller of the Currency to bring suit to forfeit the charter of such national bank pursuant to Section 2 of the Federal Reserve Act (38 Stat. 252; 12 U.S.C. 501a); or
 - (2) In the case of a State member bank, institute proceedings to require such bank to surrender its stock in the Federal Reserve bank and to forfeit all rights and privileges of membership pursuant to Section 9 of the Federal Reserve Act (46 Stat. 251; 12 U.S.C. 327); or
 - (3) In either case, take such other action as the Federal Reserve bank may recommend or the Board of Governors of the Federal Reserve System may consider advisable.

SUPPLEMENT TO REGULATION D

§ 204.5—SUPPLEMENT

Effective as to all member banks at the opening of business on July 28, 1962.

- (a) Reserve percentages. Pursuant to the provisions of Section 19 of the Federal Reserve Act and § 204.2 (a), but subject to paragraph (b) of this section, the Board of Governors of the Federal Reserve System hereby prescribes the following reserve balances which each member bank of the Federal Reserve System is required to maintain on deposit with the Federal Reserve bank in its district:
 - (1) If not in a reserve city-
 - (i) 5 per cent of its time deposits, plus
 - (ii) 12 per cent of its net demand deposits.
 - (2) If in a reserve city (except as to any bank located in such a city which is permitted by the Board of Governors of the Federal Reserve System, pursuant to $\S 204.2(a)(2)$, to maintain the reserves specified in subparagraph (1) of this paragraph)—
 - (i) 5 per cent of its time deposits, plus

- (ii) 16½ per cent of its net demand deposits.
- (b) Counting of currency and coin. The amount of a member bank's currency and coin shall be counted as reserves in determining compliance with the reserve requirements of paragraph (a) of this section.

Order Under Section 3 of the Bank Holding Company Act

The Board of Governors of the Federal Reserve System has issued the following Order and Statements with respect to an application to become a bank holding company through acquisition of voting shares of several banks:

FIRST BANCORPORATION OF FLORIDA, INC., ORLANDO, FLORIDA

In the matter of the application of First Bancorporation of Florida, Inc., for permission to become a bank holding company by acquiring stock of four banks in Florida.

ORDER DENYING APPLICATION UNDER BANK HOLDING COMPANY ACT

There has come before the Board of Governors, pursuant to Section 3(a)(1) of the Bank Holding Company Act of 1956 (12 USC 1842) and Section 222.4(a)(1) of Federal Reserve Regulation Y (12 CFR 222.4(a)(1)), an application on behalf of First Bancorporation of Florida, Inc., Orlando, Florida, for the Board's prior approval of action whereby First Bancorporation of Florida, Inc., would become a bank holding company through acquisition of not less than 51 per cent of the voting shares of The Barnett National Bank of Jacksonville, Jacksonville, Florida, The First National Bank of Miami, Miami, Florida, The First National Bank at Orlando, Orlando, Florida, and The Exchange National Bank of Tampa, Tampa, Florida.

A Notice of Receipt of Application was published in the Federal Register on December 12, 1961 (26 Federal Register 11881), which provided an opportunity for submission of comments and views regarding the proposed acquisitions, and the time for filing such comments and views has expired and all comments and views filed with the Board have been considered by it.

It is ordered, for the reasons set forth in the Board's Statement of this date, that said application be and hereby is denied.

Dated at Washington, D. C., this 30th day of July, 1962.

By order of the Board of Governors.

Voting for this action: Chairman Martin and Governors Balderston, Robertson, King and Mitchell. Voting against this action: Governors Mills and Shepardson.

(Signed) Kenneth A. Kenyon,

Assistant Secretary.

[SEAL]

STATEMENT

First Bancorporation of Florida, Inc. ("Bancorporation"), has applied to the Board of Governors, under the Bank Holding Company Act of 1956 ("the Act"), for permission to become a bank holding company by acquiring the majority of the stock in each of four banks located respectively in four major cities of Florida: Jacksonville, Miami, Orlando, and Tampa. In determining whether to approve the proposed acquisitions, the Board is required by Section 3(c) of the Act (12 U.S.C. 1842) to take into consideration the following factors: (1) the financial history and condition of the proposed holding company and the banks concerned; (2) their prospects; (3) the character of their management; (4) the convenience, needs, and welfare of the communities and the areas concerned; and (5) whether the effect of such acquisition or merger or consolidation would be to expand the size or extent of the bank holding company system involved beyond limits consistent with adequate and sound banking, the public interest, and the preservation of competition in the field of banking.

Over the past 20 years the State of Florida has experienced a relative population growth greater than that of any other State, moving from 27th place in 1940, with a population of less than two million, to 10th place in 1960, with a present population in excess of five million. Because the larger part of the State is a peninsula, certain aspects of the economy of Florida, including the banking industry, in some respects are less subject to out-of-State competition than is the case with respect to many States that are not so separated, in some measure, by natural geographical features from the main land mass of the continental United States. This is applicable, in varying degrees, to the four cities principally involved in this proposed holding company system.

Miami, Tampa, Jacksonville, and Orlando re-

spectively rank first, second, third, and fifth in size among the cities of Florida. (The fourth is St. Petersburg, which is part of the Tampa/St. Petersburg metropolitan area.) Jacksonville is the center of the principal urban area of northeastern Florida; Miami is in the southern portion of the State; Orlando is in the east-central area; and the Tampa/St. Petersburg metropolitan area, in the west-central section, is the chief urban center of the Gulf Coast of the State.

The four banks proposed to be controlled by the holding company are of substantial size, all of them ranking among the ten largest banks in Florida and among the three largest in their respective metropolitan areas. The total resources of the four, at the end of 1961, were in the neighborhood of \$800 million, of which about half are resources of the First National Bank of Miami, the largest bank in the State. The remainder are distributed among The Barnett National Bank of Jacksonville, The Exchange National Bank of Tampa, and The First National Bank of Orlando. Banks in Florida are prohibited by law from establishing branches, and consequently each of the four banks maintains only one office. Existing "affiliate" relationships would be continued between The Exchange National Bank of Tampa and a smaller bank, and between The First National Bank at Orlando and three smaller banks.

If the proposed holding company system were established, it would be the largest of three major groups of banks operating in Florida. The existing groups are the so-called Atlantic Group, the major bank of which is The Atlantic National Bank of Jacksonville, and the Florida National Group, the largest bank of which is the Florida National Bank of Jacksonville. The Atlantic Group (a bank holding company registered under the Act) as of September 27, 1961, included nine banks with total deposits exceeding \$300 million, approximately 7 per cent of the deposits of all banks in the State. The Florida National Group is controlled by trustees of a trust created by the late Alfred I. du Pont and is not a registered bank holding company. The latter group included 29 banks holding in excess of \$500 million of deposits, approximately 11 per cent of all bank deposits in Florida. The four banks that would form the proposed Bancorporation group held almost \$600 million, somewhat less than 13 per cent of bank deposits in the State, and in the four metropolitan areas (with 50 per cent of the State's population) they held 21 per cent of deposits.

If Bancorporation's plan becomes effective, shares of capital stock of that holding company would be offered to all stockholders of the four banks proposed to be controlled, in exchange for their shares in those banks. Bancorporation wishes to acquire substantially all of the stock of the four banks, and the plan would not be consummated unless at least a majority of the stock of each was exchanged by stockholders for shares of the holding company.

Views and recommendations of the Comptroller of the Currency. All of the banks to be acquired in this case are national banks. Accordingly, pursuant to the requirement of Section 3(b) of the Act, the Comptroller of the Currency was asked to submit his views and recommendations with respect to the pending application. The Comptroller stated that he had "no objection to approval of the application upon its merits."

Financial history and condition, prospects, and management. The financial history and condition of the four banks are good and the initial financial condition of Bancorporation, under the plan, would be satisfactory. The prospects of the holding company and the constituent banks are favorable.

Bancorporation would have twelve directors; each of the four constituent banks would be represented on the board by three persons heretofore closely related to its affairs. The men designated as prospective officers of the holding company are experienced and capable bankers. There appear to be no unsatisfactory aspects with respect to the character of the prospective management of Bancorporation. Likewise, each of the banks has capable management.

Convenience, needs, and welfare of the communities and the area concerned. Bancorporation's application for the Board's approval of the formation of the proposed holding company system rests chiefly on considerations relating to the fourth statutory factor. The application emphasizes Florida's rapid population growth in recent decades, the distinctive economies of the areas in which the four banks are located, and the character and importance of these cities, both individually and as major urban centers of the State. It is also pointed out that Florida has fewer banking offices, in proportion to population, than any other State, and that businesses located in the Sixth Federal

Reserve District (which includes Florida as well as other States) probably borrow a larger aggregate amount from banks in other districts than Sixth District banks lend to businesses. On the basis of such data, Bancorporation expresses the view "that banking has not kept pace, on the whole, with the general growth and development of Florida, and this despite the tremendous increase in the number of banking units and in the resources of the individual banks."

It is also contended that the establishment and operation of the proposed holding company would result in improvement and expansion of bank services, improvement of access to equity capital, facilitating the placement of larger loans, and providing for emergencies. Services that Bancorporation contends would be improved and expanded are enumerated as including investment, investment advice, trust service, lending activities, foreign departments, assisting municipalities, and providing services to the subsidiary banks.

Since the four proposed subsidiary banks already are in good condition, are capably managed, and compete strongly with other banks, whatever advantages might flow from establishment of the proposed holding company system must be found mainly in prospective benefits to the convenience, needs, and welfare of the relevant communities and areas. As previously mentioned, the application of Bancorporation enumerates a number of fields of banking service and activity, and alleges generally that the ownership of the four banks by the proposed holding company would yield benefits with respect to each.

There is little or no evidence that any of the four banks is not performing in a satisfactory manner in any of these fields as an independent institution, and there is a lack of concrete evidence that would justify the Board in concluding that the formation of the proposed holding company system would materially contribute to the general convenience, needs, or welfare of the cities and areas served by the four banks. This is true also of such contentions as that Bancorporation could more readily and conveniently obtain capital funds for subsidiary banks than could the banks acting independently. Even assuming that the equity capital market could be tapped somewhat more readily by a holding company representing a group of banks, it does not appear that the banks here involved are not in a position to obtain capital for themselves conveniently and effectively.

LAW DEPARTMENT 981

Neither is there convincing support in the record for Bancorporation's contention that the formation of the holding company group would yield substantial benefits through facilitating group loans to Florida customers whose credit requirements exceed the legal lending limits of the respective subsidiary banks. For these purposes, we cannot disregard the facilities that are available through the highly developed structure of correspondent banking that characterizes the American commercial banking system. Bancorporation itself concedes that each of the four proposed subsidiary banks has done an excellent job of keeping up with the need for improved banking services in the communities involved.

In these respects, the instant case is broadly comparable to the situation in *Matter of Morgan New York State Corporation*, and reference is made to the Board's Statement in the latter case. See 48 Federal Reserve Bulletin 567 (May 1962), particularly page 574.

The Board finds that the record does not justify the conclusion that the establishment of the proposed holding company would have a significantly favorable effect upon the convenience, needs, or welfare of the communities or areas concerned.

Effect on adequate and sound banking, public interest, and competition. The fifth statutory factor, previously cited, requires the Board to consider whether the size and extent of the proposed holding company system would be consistent with adequate and sound banking, the public interest, and the preservation of competition in the field of banking. As the foregoing discussion indicates, this factor is also involved to some extent in evaluating a proposal under one or more of the other factors prescribed by the Act.

The proposal in this case, if consummated, would result in the creation of a holding company system that would be exceptional, and in some respects without parallel, from the viewpoint of concentration of control of the largest banks in a particular State. This would be true not only with respect to Bancorporation itself but also with respect to the extent to which the largest banks in Florida would be units in group banking organizations. Of the eight largest banks in the State, four would be subsidiaries of Bancorporation, including three of the six banks in Florida that hold more than \$100 million of deposits. The three major banking groups in the State would control five of the six banks that hold \$100 million or more

of deposits.

The degree of group banking concentration would be particularly striking in Jacksonville, one of the two chief financial centers of the State. If the proposed holding company system were established, the three largest banks in that city would be units in major banking groups, and those three banks held, as of September 27, 1961, approximately 83 per cent of the banking deposits in the Jacksonville metropolitan area. The present relationship of The Barnett National Bank of Jacksonville with four smaller banks is of relatively slight significance from the viewpoint of banking concentration, in contrast to Bancorporation's proposal to unite Barnett with outstanding banks in Miami, Orlando, and the Tampa/St. Petersburg metropolitan area.

In its decision in Northwest Bancorporation v. Board of Governors of the Federal Reserve System (June 13, 1962), the United States Court of Appeals for the Eighth Circuit stated that "concentration of control has the natural and inherent effect of lessening competition" and that this tended to be true even where control of banks was concentrated in more than one group system. The court emphasized (quoting Senate Report No. 1095, 84th Congress, on the bill that became the Bank Holding Company Act) that the law requires this Board to aim at "the prevention of undue concentration of control in the banking field to the detriment of public interest and the encouragement of competition in banking." Accordingly, the Board is concerned not only with proposed concentration of several of the largest banks in Florida under Bancorporation control, but also with the fact that, if the proposal is carried out, most of the largest banks in the State will be controlled by one or another of the three major banking groups.

With respect to competition among the four proposed subsidiary banks, the record before the Board presents a complicated picture. As Bancorporation points out, each of these banks serves a separate and distinct primary service area (in this case, the area from which the bank derives at least 75 per cent of its business and personal deposits). However, Bancorporation estimates that almost 10 per cent of all loans to Florida borrowers, and almost 12 per cent of all such industrial and commercial loans, made by the four banks originate from counties other than the

counties in which these banks are located. The record supports the inference that the four banks do compete with each other for loans, particularly loans to medium-sized business borrowers in the State.

Borrowers of large size ordinarily have relatively ready access to sources of credit outside of the State in which they are located, and the small borrower is generally limited, as a practical matter, to local sources of credit. A large number of business borrowers between these extremes are in a position to seek credit from larger banks located in any part of the State but not so readily from out-of-State sources. Banking competition for business of the latter category is not to be measured by the extent to which such borrowers in the central part of the State, for example, actually borrow from banks located in cities such as Jacksonville and Miami. Potential competition also can be an effective force. The amounts lent, the interest rates exacted, and the services rendered to borrowers by a bank in one city may be significantly influenced by the fact that, if the customer is not satisfied, similar facilities are available to him in banks in other cities, to which ordinarily he would not turn for such accommodation. Potential competition of this character among Bancorporation's proposed subsidiary banks necessarily would be diminished, if not entirely eliminated, if all of those banks became units of the same holding company system.

Of particular importance in this case is the effect of the proposed holding company formation on competition in Florida for correspondent banking business—that is, the business of performing services for other banks and holding interbank deposits. These activities are an important part of the business of the proposed subsidiary banks in Jacksonville, Miami, and Tampa; in those banks the deposits of other banks constitute from about 17 per cent to 19 per cent of total deposits. As of September 27, 1961, the deposits of banks held by those three proposed subsidiaries amounted respectively to \$22 million, \$48 million, and \$19 million, which together constituted about 35 per cent of all interbank deposits held by banks in the State of Florida. Although these are not especially large amounts or proportions of interbank deposits to be held by major banks in metropolitan areas, they indicate the importance of competition for correspondent bank business in connection with the pending proposal.

To some extent, correspondent bank business is necessarily the object of competition between banks situated in the same locality rather than between banks in widely separated cities. For example, a bank in a smaller community in Florida, or a bank of any size in another State that maintains correspondent relationships in Florida, may be under economic compulsion to select and retain a correspondent bank in Jacksonville to perform customary correspondent bank services with respect to transactions in and around that metropolitan area. Competition for such business could take place only between banks in Jacksonville itself. However, to an important degree correspondent bank business is not so limited geographically, and substantially equivalent services for correspondent banks can be performed by a bank in Jacksonville, Miami, or Tampa with equal facility. Banks in these and other commercial centers of Florida actually do compete vigorously for correspondent business of this character. Since the proposed subsidiary banks in Jacksonville, Miami, and Tampa are among the five leading correspondent banks of the State, measured by volume of interbank deposits, concentration of control of those banks in the hands of Bancorporation would substantially diminish correspondent banking competition. The significance of this effect of the proposed acquisitions becomes even more apparent when it is borne in mind that not more than ten or twelve banks in the entire State are serious competitors in this major category of banking business.

In addition to these effects on competition between the proposed subsidiary banks themselves, the concentration in a single company of control over those banks could have an adverse effect on the general competitive situation regarding correspondent banking in Florida. Among relatively large and aggressive banks competing for the business of sophisticated customers such as other banks, small advantages can be decisive. Without the benefit of centralized control, Bancorporation's proposed subsidiary banks already hold almost twice as much of the correspondent bank deposits in Florida as does either of the existing major banking groups in that State (the figures as of September 27, 1961, were \$92 million, \$54 million, and \$53 million). If those banks, already so strongly entrenched, were in a position to offer,

983

in a single package, correspondent banking services covering all four of the State's largest metropolitan areas, it is probable that the competitive ability of the remaining major correspondent banks would be seriously diminished. In two important respects, therefore, consummation of Bancorporation's proposal would produce a holding company system of such size and extent as to jeopardize the preservation of competition in the correspondent banking field and the public interest in the maintenance of strong competition.

For the reasons stated, the Board finds that formation of the proposed holding company system would involve, to an undesirable degree, concentration of control over major banks in the State of Florida as well as substantial lessening of the vigor of banking competition among the large banks in that State, particularly with respect to business loans and correspondent banking. These adverse effects, the Board finds, clearly outweigh whatever relatively minor prospective benefits may be offered by the proposal relating to the convenience, needs, and welfare of the communities and areas concerned.

Conclusion. On the basis of all the relevant facts as contained in the record before the Board and in the light of the factors set forth in Section 3(c) of the Act and the underlying purposes of the Act, it is the Board's judgment that the transaction here proposed would not be consistent with the public interest and that the application should therefore be denied.

DISSENTING STATEMENT OF GOVERNOR MILLS

The rapid growth that the State of Florida has experienced, both economically and populationwise, is clearly and correctly brought out in the Statement of the majority of the members of the Board which denies approval of the subject application. In the face of these growth factors, denial of the application seemingly is based on the position that the State of Florida should not be regarded as a single economic unit entitled to a range of commercial banking facilities in keeping both with its separate and national importance in the galaxy of the States of the Union, but instead should be fragmented into geographically distinct compartments, each of which should be deemed to be financially self-sufficient as regards the availability and adequacy of its existing commercial banking facilities. The arguments for confining commercial banking growth in the State of Florida, which prohibits branch banking, to arbitrarily delimited areas might pass muster if it could be demonstrated that the existing groupings of commercial banking organizations, namely, the so-called Atlantic Group and the Florida National Group, or the creation of the First Bancorporation of Florida, Inc., as a new grouping would be detrimental to the public interest. That is not the case.

As also brought out in the majority Statement, approval of the application would do no more than produce a third grouping of commercial banks which would hold less than 13 per cent of bank deposits in the State and could in no way be regarded as representing a State-wide concentration in and control over financial resources that would be contrary either to the letter or the spirit of the Bank Holding Company Act of 1956. In fact, broader inter-group banking competition might be expected to flow out of the operations of the proposed First Bancorporation of Florida, Inc., that would help to stimulate economic development throughout the State of Florida. That is so because more active competition would result between relative equals, as regards the three groupings of commercial banks, without reducing consequentially the public's choice of alternative commercial banking facilities. Whatever fancied disadvantages might arise from centralizing the direction of the group of commercial banks proposed to be consolidated into the subject bank holding company, and thereby substituting unified for separate direction of the individual banks, are more than balanced by the advantages of pooling the managerial and financial resources of the separate banks involved so that in toto, or in part, they may be brought to bear effectively and constructively on the activities in most need of their use.

In the light of the economic and financial background against which the proposed First Bancorporation of Florida, Inc., would operate, the convenience, needs, and welfare of the communities and the areas concerned would surely be well served under the consolidated guidance of bankers of proven competence. Considering the large number of independent commercial banks serving the State of Florida, there are no grounds for fearing that a newly created bank holding company, such as that proposed, would unduly reduce the public's choice of alternative banking facilities, or that

interbank depository relationships would be shifted to the disadvantage of the public interest. For that matter, the part played by correspondent bank relationships in the structure of commercial banking in the State of Florida, and in its financial development, has been exaggerated in the majority Statement. Although interbank deposits can be an important segment of a bank's loanable resources, they are secondary to the deposits that are originated within the trade area served and which are its lifeblood and the denominator of the scope of its credit-serving capacity. A rearrangement of interbank depository relationships might very well follow establishment of the proposed First Bancorporation of Florida, Inc., but, even though its component banks might experience a reduction in this category of their deposits, the totals of such deposits and their availability as credit resources would merely be redistributed in their locations without any change in their over-all usefulness as banking resources.

The application should be approved.

DISSENTING STATEMENT OF GOVERNOR SHEPARDSON

Admittedly, this is a close case as shown in the record. The first three factors are not adverse although they do not lend strong support to approval. As to the fifth factor, the distance (96 to 350 miles) between the primary service areas of the proposed subsidiaries would seem to preclude the possibility of significant present or potential competition between them except for medium-size borrowers whose credit needs exceed the resources of their local areas, yet are too small to seek accommodation in the national market. In the field of interbank deposits, it seems probable that most country banks would be apt to carry accounts in at least three of the cities concerned (Jacksonville, Miami and Tampa) and that the competition for these accounts would be between banks in each city rather than between cities. The record in this case seems to support this conclusion.

It is true that the proposed organization would be the largest banking organization in the State, accounting for approximately 26 per cent of total commercial bank deposits in the four-county area involved and somewhat less than 13 per cent of total deposits in the State, with 4.7 per cent of the banking offices in the four-county area and 1.3 per cent of offices in the State, or 27 per cent, 13.2 per cent, 9.4 per cent and 2.6 per cent respectively if the four small affiliates of the proposed subsidiary banks are included. However, the size of the proposed organization is not considered sufficiently adverse to offset the potential contribution to the convenience, needs and welfare of the area to be served. As the record shows, Florida is one of the fastest growing areas in the country, both in population and economic development, and it would seem reasonable to expect that credit needs are expanding in proportion.

The record further shows that the banking community in Florida has not kept pace in size of banks or number of banking offices with this growth and that the aggregate deposits of the subsidiary banks of the applicant would be less than those of the largest banks in a number of States with smaller population than Florida. Since convenient credit sources are a significant factor in economic growth of an area and since larger credit needs are currently being met by out-of-State sources, it is my opinion that the potential contribution to the convenience, needs and welfare of the State outweighs the potential diminution of competition.

The fact that the applicant does not make exaggerated or dogmatic claims as to the needs to be served or convenience to be provided by a new and as yet untried organization evidences a sound and conservative approach rather than any lack of need for the expanded services that could be supplied. I would approve the application.

Orders Under Bank Merger Act

The Board of Governors of the Federal Reserve System has issued the following Orders and Statements with respect to applications for approval of the merger or acquisition of assets of certain banks:

DAUPHIN DEPOSIT TRUST COMPANY, HARRISBURG, PENNSYLVANIA

In the matter of the application of Dauphin Deposit Trust Company for approval of merger with The First National Bank of Mount Holly Springs.

ORDER DENYING APPLICATION FOR APPROVAL OF MERGER OF BANKS

There has come before the Board of Governors,

LAW DEPARTMENT 985

pursuant to the Bank Merger Act of 1960 (12 U.S.C. 1828(c)), an application by Dauphin Deposit Trust Company, Harrisburg, Pennsylvania, a member bank of the Federal Reserve System, for the Board's prior approval of the merger of The First National Bank of Mount Holly Springs, Mount Holly Springs, Pennsylvania, with and into Dauphin Deposit Trust Company, under the charter and title of the latter. Notice of the proposed merger, in form approved by the Board, was published pursuant to said Act.

Upon consideration of all relevant materials in the light of the factors set forth in said Act, including reports furnished by the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Department of Justice on the competitive factors involved in the proposed merger,

It is HEREBY ORDERED, for the reason set forth in the Board's Statement of this date, that the said application be and hereby is denied.

Dated at Washington, D. C., this 13th day of July, 1962.

By order of the Board of Governors.

Voting for this action: Vice Chairman Balderston, and Governors Robertson, Shepardson, and Mitchell. Voting against this action: Governor Mills. Absent and not voting: Chairman Martin and Governor King.

(Signed) MERRITT SHERMAN,

Secretary.

[SEAL]

STATEMENT

Dauphin Deposit Trust Company, Harrisburg, Pennsylvania, ("Dauphin Deposit"), with deposits of approximately \$108.5 million, has applied, pursuant to the Bank Merger Act of 1960 (12 U.S.C. 1828(c)), for the Board's prior approval of the merger of that bank and The First National Bank of Mount Holly Springs, Mount Holly Springs, Pennsylvania ("First National"), with deposits of approximately \$3.4 million. Under the Joint Plan of Merger, the banks would merge under the charter and title of Dauphin Deposit, and the Plan and application contemplate that the office of First National would become a branch of Dauphin Deposit, increasing from 10 to 11 the offices operated by the bank.

Under the Act, the Board is required to consider (1) the financial history and condition of each of the banks involved, (2) the adequacy of its capital structure, (3) its future earnings pros-

pects, (4) the general character of its management, (5) whether its corporate powers are consistent with the purposes of 12 U.S.C., Ch. 16 (Federal Deposit Insurance Act), (6) the convenience and needs of the community to be served, and (7) the effect of the transaction on competition (including any tendency toward monopoly). The Board may not approve the transaction unless, after considering all these factors, it finds the transaction to be in the public interest.

For convenience, the first five of these factors may be considered together as "banking factors." The two remaining factors are considered separately.

Banking factors. The financial history and condition and capital structure of both banks are satisfactory. The management of each bank is competent. Dauphin Deposit's earnings are good and its future earnings prospects are favorable.

The burden of one contention in support of the application is that consummation of the transaction would provide a basis for improved earnings prospects relative to what such prospects might be for First National as an independent unit bank. The Board is not satisfied on the basis of the record, however, that the future earnings prospects of First National are other than favorable, especially in view of the bank's good earnings and growth records, and the favorable considerations, previously noted, relative to other banking factors.

There is no evidence that the powers of the banks involved are or would be inconsistent with the purposes of 12 U.S.C., Ch. 16.

Convenience and needs of the communities. Mount Holly Springs, population about 1,900, is located in Cumberland County 23 miles southwest of Harrisburg, the seat of Dauphin County, and 6 miles south of Carlisle, the seat of Cumberland County. Mount Holly Springs serves a trade area of about 32,000 persons. The area is experiencing some growth of industry and economic conditions are favorable. First National is the only commercial bank in the community. The bank obtains almost 80 per cent or about 2,700 of its 3,330 deposit accounts from within a five-mile radius of Mount Holly Springs, and has a primary service area with a population approaching 7,500. Dauphin Deposit makes its services available in the Mount Holly Springs area through an office located at Carlisle. Offices of two other banks larger than First National also are located at Carlisle and a branch of another larger bank is located at Boiling Springs, a town five miles northeast of Mount Holly Springs.

In support of the application, it is contended that the convenience and needs of the area served by First National would be better served by the increased resources and loan limit and the expanded services which would be available through the Mount Holly Springs office of the resulting bank. There would be made available to customers of First National an increase in loan limit from about \$32,000 to over \$1,000,000, and the services of a trust department and a foreign department.

There is a lack of substantial evidence of a need for the broader services and greater resources of a larger bank in Mount Holly Springs. From the record it may be concluded that only in fairly isolated instances has First National found it necessary to participate the requirements of its borrowers with larger lending institutions or has otherwise found the services rendered by it too limited for its customers' needs. Moreover, the increased services and facilities that would be made available by the resulting bank are already provided in nearby Carlisle by Dauphin Deposit and another bank of comparable size. The record does not show that the banking needs of the Mount Holly Springs area are inadequately served or that such needs cannot be met satisfactorily by First National.

Competition. The area of chief concern as to possible competitive effects of the proposal is the Carlisle-Mount Holly Springs area in Cumberland County. It is contended, in effect, that consummation of the proposal should further stimulate competition in that area between Dauphin Deposit and The Harrisburg National Bank and Trust Company and provide more effective competition to the Boiling Springs Branch of The Cumberland County National Bank and Trust Company, New Cumberland.

There is substantial competition, however, between First National and Dauphin Deposit's Carlisle office, both of which serve essentially the same types of customers in much the same manner. The area between Carlisle and Mount Holly Springs is served by both of these banking offices, each of which obtains a substantial portion of its business from the area. Almost 30 per cent of the total amount of IPC (individuals, partnerships and corporations) deposits of Dauphin Deposit's

Carlisle office and slightly more than 41 per cent of its total number of such deposit accounts originate in the surrounding area outside the confines of Carlisle. This area includes that lying between Carlisle and Mount Holly Springs and portions of the area of trade from which First National obtains about 56 per cent of the total volume of its IPC deposits and about 58 per cent of its total number of such deposit accounts. Consummation of the transaction would eliminate this competition between First National and the branch of Dauphin Deposit at Carlisle. The record is persuasive that First National would continue as a sound, well-managed institution, competitive with the nearby banking offices at Boiling Springs and Carlisle.

The service area of Dauphin Deposit is described in the application as comprising the whole of Dauphin and Cumberland Counties. If the proposed merger should be consummated Dauphin Deposit, one of the three largest banks serving the area, would have over 27 per cent of the total IPC deposits and 19 per cent of the total offices of all commercial banks in the two-county area. Dauphin Deposit's primary service area seems limited to the southern section of Dauphin County and the eastern section of Cumberland County. On this basis, consummation of the proposed merger would result in Dauphin Deposit having over 30 per cent of the total IPC deposits and over 24 per cent of the total offices of all commercial banks in the smaller area. Consummation of the transaction would add to the concentration of banking resources and facilities in the three largest banks serving the area. Dauphin Deposit, The National Bank and Trust Company of Central Pennsylvania, York, and The Harrisburg National Bank and Trust Company would hold 65.3 per cent of the IPC deposits and 53.5 per cent of the offices of all commercial banks in the smaller area mentioned.

Summary and conclusion. Consummation of the proposed merger would eliminate the substantial competition existing between First National and Dauphin Deposit and result in further concentrating the banking resources and facilities in Dauphin and Cumberland Counties.

There is insufficient evidence to indicate that the banking needs of Mount Holly Springs require a local office of a larger bank. Broader banking services, for which there appears to be little demand, are already available with reasonable conLAW DEPARTMENT 987

venience to the Mount Holly Springs area through Dauphin Deposit's office in nearby Carlisle, and two offices of another large bank.

Any benefits that might accrue to the public as a result of approval of the merger would fall short of offsetting the diminution of competition and the elimination of one of the five banks serving the Carlisle-Mount Holly Springs area.

Accordingly, the Board is unable to find that the proposed merger would be in the public interest.

DISSENTING STATEMENT OF GOVERNOR MILLS

The geographical, financial and competitive conditions appertaining to this merger application are such as to emphasize the need for treating the seven factors required to be considered by the Board under the Bank Merger Act as inseparable parts of a broad, overall guide to decisions in cases arising under that statute. Analyzed from this viewpoint, there is an absence of compelling arguments as to why the public interest would not be served by consummation of a transaction representing, as this one does, the freely-expressed wishes of the parties thereto.

Harrisburg is located about 25 miles north of York. These cities, respectively, lie at the northern and southern ends of a cohesive trade area that extends westward from each city on an arc terminating in the other. Roughly, Mount Holly Springs lies to the west of Harrisburg and York, about the center of the arc. Harrisburg and York are the principal commercial and financial centers serving the entire area, which includes several smaller communities whose banking needs are met both by unit banks and by branches of the large Harrisburg and York commercial banking institutions. An evident tendency for the branch banking institutions to leapfrog each other in their endeavors to extend their facilities throughout the area by absorbing smaller commercial banks via merger transactions suggests that a concentration of and control over commercial banking resources of the area could be reached through this process at some point that would be adverse to the preservation of competition in the field of banking.

However, bearing in mind the difference in the service potential of a small bank as compared with the wider and more flexible range of banking services implicit in the operation of a branch banking organization closely connected with the immediate trade area involved, consummation of the transaction would be of benefit to the public in the community of Mount Holly Springs by substituting the facilities that would be available from the Dauphin Deposit Trust Company for those now provided by The First National Bank of Mount Holly Springs. The presence of alternative sources of banking service in the nearby community of Carlisle and other reasonably accessible communities, which include well-established unit banks and branches of more distantly headquartered commercial banks, indicates the existence of a soundly competitive grouping of banking facilities in and around Mount Holly Springs.

Viewed from a broad perspective that takes into account the entire Harrisburg-York trade area and its complex of commercial banking facilities, rather than focusing almost exclusively and too narrowly on the community of Mount Holly Springs, reveals no convincing arguments why the public interest would not be served by consummation of the proposed merger or any persuasive reasons that would justify interposing the authority of this Board to deny fulfillment of the express wishes of the banks whose property rights are at stake.

Accordingly, I would approve the application.

THE STATE BANK OF SALEM, SALEM, INDIANA

In the matter of the application of The State Bank of Salem for approval of acquisition of assets of State Bank of Hardinsburg.

ORDER APPROVING ACQUISITION OF BANK'S ASSETS

There has come before the Board of Governors, pursuant to the Bank Merger Act of 1960 (12 U.S.C. 1828(c)), an application by The State Bank of Salem, Salem, Indiana, a member bank of the Federal Reserve System, for the Board's prior consent to its acquisition of the assets and assumption of the liabilities of the State Bank of Hardinsburg, Hardinsburg, Indiana, and, as an incident thereto, The State Bank of Salem has applied, under Section 9 of the Federal Reserve Act (12 U.S.C. 321), for the Board's prior approval of the establishment of a branch by that bank at the location of the State Bank of Hardinsburg. Notice of the proposed acquisition of assets and assumption of liabilities, in form approved by the Board of Governors, has been published.

Upon consideration of all relevant material in the light of the factors set forth in said Bank Merger Act, including reports furnished by the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Department of Justice on the competitive factors involved in the proposed transaction,

It is hereby ordered, for the reasons set forth in the Board's Statement of this date, that said applications be and hereby are approved, provided that said acquisition of assets and assumption of liabilities and establishment of said branch shall not be consummated (a) within seven calendar days following the date of this Order, or (b) later than three months after said date.

Dated at Washington, D. C., this 13th day of July, 1962.

By order of the Board of Governors.

Voting for this action: Unanimous, with all members present.

(Signed) MERRITT SHERMAN,

Secretary.

[SEAL]

STATEMENT

The State Bank of Salem, Salem, Indiana ("Salem Bank"), a member bank of the Federal Reserve System, with deposits of approximately \$4 million, has applied, pursuant to the Bank Merger Act of 1960 (12 U.S.C. 1828(c)), for the Board's prior approval of its acquisition of the assets and assumption of the liabilities of State Bank of Hardinsburg, Hardinsburg, Indiana ("Hardinsburg Bank"), also a member bank of the Federal Reserve System, with deposits of approximately \$1.1 million. Each bank operates one office. As an incident to the foregoing, Salem Bank has applied, under Section 9 of the Federal Reserve Act (12 U.S.C. 321), for the Board's prior approval for the establishment of a branch at the location of Hardinsburg Bank.

Under the Bank Merger Act, the Board is required to consider (1) the financial history and condition of each of the banks involved, (2) the adequacy of its capital structure, (3) its future earnings prospects, (4) the general character of its management, (5) whether its corporate powers are consistent with the purposes of 12 U.S.C., Ch. 16 (the Federal Deposit Insurance Act), (6) the convenience and needs of the community to be served and (7) the effect of the transaction on

competition (including any tendency toward monopoly). The Board may not approve the transaction unless, after considering all of these factors, it finds the transaction to be in the public interest.

Banking factors. The capital structure, financial condition, and management of each bank are satisfactory, as would be true of the continuing bank. The earnings of both banks are satisfactory, and economies which are planned, together with a change in investment policies following consummation of the transaction, indicate prospects of increased earnings at the proposed Hardinsburg office. There is no indication that the powers exercised by the banks involved are or would be inconsistent with the purposes of 12 U.S.C., Ch. 16.

Convenience and needs of the communities. Salem, Indiana (population about 4,600), the seat of Washington County, is situated 38 miles northwest of Louisville, Kentucky. The economy of Salem's trade area (population approximately 10,000) is dependent primarily upon agriculture, although industry provides employment for about 1,100 persons. Hardinsburg (population 220) is located 18 miles southwest of Salem in an area of Washington County which is dependent on general farming.

Hardinsburg Bank's service area would be primarily affected by the proposed transaction. This bank now makes few instalment loans, does not make amortized real estate loans, does not accept savings deposits or furnish trust services, and has a loan limit of only \$10,000. Consummation of the proposed transaction would make available to customers of Hardinsburg Bank a larger loan limit and a more complete range of banking services.

Competition. Because the Salem Bank and the Hardinsburg Bank are separated by a distance of 18 miles and are not connected by a paved road, there is little competition between them. The proposed transaction would not substantially affect competition in Salem. The only other bank in Salem is slightly smaller than Salem Bank. However, when this other bank acquires a small bank in Campbellsburg (located 10 miles northwest of Salem), permission for which has been granted by the Federal Deposit Insurance Corporation, it would be somewhat larger than the bank which would result from the proposed transaction.

Competition in the Hardinsburg area would be stimulated by the consummation of the proposed LAW DEPARTMENT 989

transaction because of the more complete range of banking services expected to be offered in that area by the continuing bank. With the exception of the one other bank in Salem, each of the 11 banks now located in the Salem and Hardinsburg trade areas would be at least 9 miles from either of the continuing bank's offices, and consummation of the transaction would have no significant adverse effect on any of these small banks.

Summary and conclusion. The proposed acquisition would eliminate little competition, since competition between the two banks involved is nominal. The proposal should not adversely affect any of the banks that compete in the service area of the resulting bank, and in certain sections of such service area competition would be stimulated. Banking factors support approval of the proposed transaction, and the Hardinsburg area would benefit from the availability of a wider range of banking services.

Accordingly, the Board finds the proposed transaction to be in the public interest.

UNITED CALIFORNIA BANK, LOS ANGELES, CALIFORNIA

In the matter of the application of United California Bank for approval of merger with Farmers and Merchants Bank of Blythe.

ORDER APPROVING MERGER OF BANKS

There has come before the Board of Governors, pursuant to the Bank Merger Act of 1960 (12 U.S.C. 1828(c)), an application by United California Bank, Los Angeles, California, a member bank of the Federal Reserve System, for the Board's prior approval of the merger of that bank and Farmers and Merchants Bank of Blythe, Blythe, California, under the charter and title of the former and, as an incident to the merger, a branch would be operated at the location of Farmers and Merchants Bank of Blythe. Notice of the proposed merger, in form approved by the Board, has been published pursuant to said Act.

Upon consideration of all relevant material in the light of the factors set forth in said Act, including reports furnished by the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Department of Justice on the competitive factors involved in the proposed merger,

It is hereby ordered, for the reason set forth

in the Board's Statement of this date, that said application be and hereby is approved, provided that said merger shall not be consummated (a) within seven calendar days after the date of this Order or (b) later than three months after said date.

Dated at Washington, D. C., this 20th day of July, 1962.

By order of the Board of Governors.

Voting for this action: Chairman Martin, and Governors Balderston, Robertson, Shepardson, King, and Mitchell. Absent and not voting: Governor Mills.

(Signed) MERRITT SHERMAN,

Secretary.

[SEAL]

STATEMENT

United California Bank, Los Angeles, California ("United"), a State member bank, with deposits of approximately \$2.1 billion, has applied, pursuant to the Bank Merger Act of 1960 (12 U.S.C. 1828(c)), for the Board's prior approval of the merger of that bank and Farmers and Merchants Bank of Blythe, Blythe, California ("Farmers"), with deposits of approximately \$3.8 million. The banks would merge under the charter and title of United and, as an incident to the merger, the office of Farmers would be operated as a branch of United.

Under the Act, the Board is required to consider (1) the financial history and condition of each of the banks involved, (2) the adequacy of its capital structure, (3) its future earnings prospects, (4) the general character of its management, (5) whether its corporate powers are consistent with the purposes of 12 U.S.C., Ch. 16 (the Federal Deposit Insurance Act), (6) the convenience and needs of the community to be served, and (7) the effect of the transaction on competition (including any tendency toward monopoly). The Board may not approve the transaction unless, after considering all these factors, it finds the transaction to be in the public interest.

Banking factors. United has been authorized to establish 11 offices in addition to the 140 which it is presently operating and has other branch applications pending or to be filed. In connection with this program to provide additional facilities, United plans to issue additional capital stock when necessary, thus providing a desirable

strengthening of its capital position. The capital structure of Farmers is satisfactory, as would be true of the resulting bank under the program just described. The financial history and condition and earnings prospects of each of the banks are satisfactory, as would be true of the resulting bank. The management of each of the banks is regarded as satisfactory. However, Farmers does not now have a chief executive officer and in the past several months two of its directors have taken time from their principal business activities to operate the bank. Following consummation of the proposed merger, United, through its comprehensive management training and recruitment program, would be able to provide qualified personnel to operate the branch that would replace Farmers. The management of the resulting bank would be satisfactory. No inconsistency with the purposes of 12 U.S.C., Ch. 16, is indicated.

Convenience and needs of the community. Blythe, California (population about 6,000), is located in the Palo Verde Valley of Riverside County, 250 miles east of Los Angeles, and is separated from the populous coastal communities by mountain ranges. The main economic pursuit of the area consists of irrigation farming and cattle feeding. There is also some mineral production. The farms in the area, many of which exceed 1,000 acres, require lines of credit ranging from \$25,000 on a short-term basis for small operations to \$2 million for continuing lines of credit for large operations. Farmers' lending limits and its limited resources enable it to supply only a small part of the local requirements for cattle feeding and crop production. The bank presently makes no real estate loans on farm properties or FHA or VA mortgages, nor does it handle automobile "floor plan" or conditional sales contracts.

Most of the farm financing in the Blythe service area (population about 13,000) is provided by an office of Security First National Bank, Los Angeles, the second largest bank in the State. With the size of agricultural units rapidly increasing, there is demand for larger real estate loans to aid in the reclamation and development of additional land for agricultural use under irrigation, which at the present time can be satisfied by Farmers only through participations. Farmers, because of its relatively limited resources, is

additionally handicapped in that agricultural loans usually do not generate deposits, since as a rule they must be disbursed quickly for crop planting and purchasing of cattle. United would have ample resources to meet these credit demands and would offer a wider range of banking services.

Competition. United is the fourth largest bank in the State and one of three operating state-wide branch systems. Its present 140 operating offices are located in 29 of the 58 counties of the State. Its offices nearest to Farmers are at El Centro, 165 miles southwest, and Hemet, 161 miles west. The primary service area of Farmers includes all of the Palo Verde Valley, extending approximately 20 miles north and south and 15 miles east and west. There is virtually no competition between the two banks.

As previously mentioned, the only other banking office within Farmers' primary service area is the Blythe office of Security First National Bank, Los Angeles, and the proposed merger should result in a healthy increase in competition in the area. On a state-wide basis, the proposed merger would have virtually no effect on competition.

Summary and conclusion. The Palo Verde Valley is an isolated area where loan requirements are often quite large. The proposed merger would provide another bank which, under experienced and capable management, could offer the farmers and ranchers a wider range of banking services, including the relatively large loans needed in this area. While virtually no competition would be elimated, the merger should result in a healthy increase in competition with the office of the second largest bank in California that also serves the area.

Accordingly, the Board finds the proposed merger to be in the public interest.

THE CITIZENS BANK OF PERRY, N.Y., PERRY, NEW YORK

In the matter of the application of The Citizens Bank of Perry, N.Y. for approval of merger with The First National Bank of Perry.

ORDER APPROVING MERGER OF BANKS

There has come before the Board of Governors, pursuant to the Bank Merger Act of 1960 (12 U.S.C. 1828(c)), an application by The Citizens Bank of Perry, N. Y., Perry, New York, a

LAW DEPARTMENT 991

member bank of the Federal Reserve System, for the Board's prior approval of the merger of that bank and The First National Bank of Perry, Perry, New York, also a member bank of the Federal Reserve System, under the charter of the former and title of The Bank of Perry and, as an incident to the merger, a branch would be operated for one year at the location of The Citizens Bank of Perry, N. Y. Notice of the proposed merger, in form approved by the Board, has been published pursuant to said Act.

Upon consideration of all relevant material in the light of the factors set forth in said Act, including reports furnished by the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Department of Justice on the competitive factors involved in the proposed merger,

It is hereby ordered, for the reasons set forth in the Board's Statement of this date, that said application be and hereby is approved, provided that said merger shall not be consummated (a) within seven calendar days after the date of this Order or (b) later than three months after said date.

Dated at Washington, D. C., this 23rd day of July, 1962.

By order of the Board of Governors.

Voting for this action: Chairman Martin, and Governors Balderston, Mills, Shepardson, and King. Voting against this action: Governors Robertson and Mitchell.

(Signed) MERRITT SHERMAN,

Secretary.

[SEAL]

STATEMENT

The Citizens Bank of Perry, N. Y., Perry, New York ("Citizens"), with deposits of approximately \$3.2 million, a State member bank, has applied, pursuant to the Bank Merger Act (12 U.S.C. 1828 (c)), for the Board's prior approval of the merger of that bank and The First National Bank of Perry, Perry, New York ("First"), with deposits of approximately \$4.5 million. Under the application and Plan of Merger, the two singleoffice banks would merge under the charter of Citizens and the title of The Bank of Perry, which temporarily would occupy the office of First. As an incident to the merger, the office of Citizens would be operated as a branch until the branch quarters could be enlarged to house the resulting bank.

Under the Act, the Board is required to consider (1) the financial history and condition of each of the banks involved, (2) the adequacy of its capital structure, (3) its future earnings prospects, (4) the general character of its management, (5) whether its corporate powers are consistent with the purposes of 12 U.S.C., Ch. 16 (the Federal Deposit Insurance Act), (6) the convenience and needs of the community to be served, and (7) the effect of the transaction on competition (including any tendency toward monopoly). The Board may not approve the transaction unless, after considering all these factors, it finds the transaction to be in the public interest.

Banking factors. The financial condition and capital structure of each of the banks are satisfactory, as would be true of the resulting bank. Although the earnings of First are lower than the average for banks of similar size and comparable loan volume in the Second Federal Reserve District, Citizens has a good earnings record and the earnings prospects of the resulting bank are favorable. Consummation of the proposed merger would provide both strength and continuity of management to the resulting bank. This, together with increased resources, would permit the establishment of a consumer loan department and the improvement of all banking services, including those presently available in the agricultural field. No inconsistency with the purposes of 12 U.S.C., Ch. 16, is indicated.

Convenience and needs of the communities. The Village of Perry has a population of about 4,600. It is approximately 57 miles east of Buffalo and 42 miles southwest of Rochester. The co-terminus service area of Citizens and First has an estimated population of 7,500. The economy of the service area is supported primarily by diversified farming, as there are only a few small industries located there. The population and available employment of the area have shown only a slight increase in the past decade. Nevertheless, credit demands have expanded substantially in recent years, so that the two banks have participated with each other frequently in order to meet the credit needs of farmers and small businesses. Notwithstanding the banks' use of participations, many local businesses borrow both in Perry and from outside sources. The loan limit of Citizens is about \$38,000, while that of First is about \$30,000. The resulting bank would have a loan limit of approximately \$75,000. Consummation of the transaction also would permit improvement in other banking services, as noted above.

Competition. The two banks are competitive, serving a common area. The unusually large volume of loan participations between them, however, suggests that the competition is not particularly vigorous. In addition, Citizens has concentrated on commercial and instalment loans, while the greatest volume of First's loans has been in the real estate field. Accordingly, less competition would be eliminated by the proposed merger than would normally be expected in the case of a two-bank community. In view of the virtually static population and lack of industrial growth, there is doubt whether the area involved is such as to provide growth opportunities for both of the banks.

There are eight other banking offices located from 6 to 14 miles from Perry, and the resulting bank would have available fewer resources than five of these. The proposed merger should not have an adverse competitive effect on other banks in the area, but should stimulate competition.

Summary and conclusion. The present prospect for growth of the two banks is not encouraging. The proposed merger would provide the area with a bank having a larger loan limit and able also to offer a broader and more efficient range of banking services than is now available in the Village of Perry. The transaction would eliminate only a small amount of competition, and should have no serious competitive effects on the eight remaining banks located within the service area of the Perry banks.

Accordingly, the Board finds the proposed merger to be in the public interest.

DISSENTING STATEMENT OF GOVERNORS ROBERTSON AND MITCHELL

It is important to the public welfare that competition be maintained in the field of banking wherever this can be accomplished without entailing adverse "side effects." Competition not only provides the public with alternative sources of banking facilities, but also produces better banks—and usually better banking service.

A major argument of the applicants in this

case is that Perry and its immediate environs cannot adequately support two banks. In finding for the applicants, the majority has given credence to this argument and on this ground has taken away from a stable community of about 4,600 inhabitants (with a service area of 7,500) the benefits of competition in the provision of banking services. These benefits are more significant than any improvement in services that the combined institution can offer. The substantial competition which presently exists between these two institutions should be preserved.

Obviously there are some small communities which cannot support more than one bank. It is our judgment that the community in this case is not essentially a one-bank town. In fact, for many years this community has supported two banks which, though small from a "city" point of view, are nevertheless sound, well managed, and profitable institutions. On the basis of earnings records, one of the two banks is doing very well compared with those banks of similar size in New York and no evidence has been presented to show that the lower earnings of the other bank result from lack of opportunity rather than from failure to make adjustments in its portfolio. If we look to the experience of other small towns in the country, we find there are hundreds of such communities that are supporting two or more banking offices.

While this merger may seem relatively insignificant in the context of the country's overall banking structure, it may not be so small a matter to the long-run interest of the citizens of Perry. It will leave the community with only one bank—with no competition to spur it into providing the best possible public service.

The existence of banks in communities six and twelve miles away is a weak reed on which to lean as justification for permitting the elimination of competition in Perry. Admittedly, the presence of banks in nearby communities provides a potential source of competition that may deter a bank in a one-bank town from extreme abuse of its financial power over the community; however, banks in other towns can never be an adequate substitute for the competition—and accompanying economic benefits—that customarily result from the presence of two banks in the same community.

We would deny the application.

Announcements

DEATH OF DIRECTOR

Mr. Eugene B. Whittemore, President and Treasurer, The Morley Company, Portsmouth, New Hampshire, who had served as a Class B director of the Federal Reserve Bank of Boston since January 1, 1959, died on July 31, 1962.

APPOINTMENT OF DIRECTOR

On August 14, 1962, the Board of Governors announced the appointment of C. Caldwell Marks, of Birmingham, Alabama, as a director of the Birmingham Branch of the Federal Reserve Bank of Atlanta, for the unexpired portion of a term ending December 31, 1964. Mr. Marks is Chairman of the Board of Owen-Richards Company, Birmingham. As a director of the Birmingham Branch he succeeds Dr. Henry King Stanford, formerly President of Birmingham Southern College, Birmingham, Alabama, who resigned.

CHANGE IN CLASSIFICATION OF CENTRAL RESERVE CITY BANKS

Effective July 28, 1962, central reserve city banks in New York City and the city of Chicago became reserve city banks, and the authority of the Board of Governors of the Federal Reserve System to classify or reclassify cities as central reserve cities was terminated.

In order that users of Federal Reserve statistics may continue to follow developments in these two important financial centers, the Board will publish figures for reserve city banks in New York City and the city of Chicago separately from the totals for other reserve city banks. The new groupings, "New York City reserve city banks" and "city of Chicago reserve city banks," will include data for the former central reserve city banks in New York and Chicago plus data for the three banks in New York and the three in the city of Chicago that were already classified as reserve city banks and were therefore formerly included in the reserve city bank totals. Data for the New York City and Chicago banks that are classified as country banks will continue to be included in country bank totals instead of being added into the new city figures. Tables of historical data will show figures on both the old and new basis for the week or month in which the transfer occurred. In other tables, footnotes will indicate the relative size of the three banks in each District that are being transferred.

The changes will affect the following tables in the BULLETIN: (1) Reserves and Borrowings of Member Banks, pp. 1000-01; (2) Deposits, Cash, and Reserves of Member Banks, p. 1003; (3) Principal Assets and Liabilities and Number of All Banks, p. 1010; (4) Loans and Investments of Commercial Banks, p. 1013; and (5) Reserves and Liabilities of Commercial Banks, p. 1015. The changes will be made in the September BULLETIN, the first issue containing figures for periods after the change in reserve classifications. Similar changes are being made in appropriate statistical releases published by the Board.

SUPPLEMENT TO BANKING AND MONETARY STATISTICS

A third pamphlet, entitled "Gold," Section 14 of Supplement to Banking and Monetary Statistics, is now available for distribution. Copies may be obtained for 35 cents each from the Division of Administrative Services, Washington 25, D. C. For announcements of previous pamphlets, see January 1962 BULLETIN, p. 38, and March 1962 BULLETIN, p. 300.

GUIDE TO TABULAR PRESENTATION

Page 996 of this issue shows a list of symbols and abbreviations used in the tables, some items of general information, and the list of tables published annually, semiannually, or quarterly, with the latest BULLETIN reference. This information will be carried regularly in the BULLETIN in the same location. The footnotes in tables no longer explain the abbreviations listed.

ADMISSION OF STATE BANK TO MEMBERSHIP IN THE FEDERAL RESERVE SYSTEM

The following bank was admitted to Membership in the Federal Reserve System during the period July 16, 1962 to August 15, 1962: *Illinois*

Wheaton . Hawthorne Bank of Wheaton

National Summary of Business Conditions

Released for publication August 14

Economic activity generally increased further in July. Industrial production, employment and personal income rose. Commodity prices changed little. Seasonally adjusted total bank credit decreased, although loans increased somewhat.

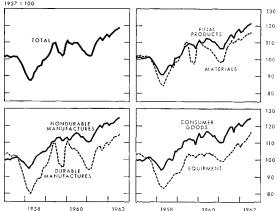

INDUSTRIAL PRODUCTION

Industrial production rose one point in July to a new high of 119 per cent of the 1957 average. Increases in output were widespread, with gains in final products and materials.

Auto assemblies rose 10 per cent following settlement of a strike in June and were slightly above the advanced May rate. Reported schedules for August indicate little change in output after allowance for a sharp reduction during the model changeover period. In July, output of other consumer goods was maintained at the record June level as declines in television and furniture were offset by moderate gains in consumer staples. In the equipment industries, there were further gains in output of industrial, commercial, and farm machinery as well as in freight and passenger equipment.

Production of iron and steel in July was about unchanged from the June level, following a curtailment of one-fifth from April to June. Output of other durable materials, as well as most nondurable materials, advanced further.

INDUSTRIAL PRODUCTION

Federal Reserve indexes, seasonally adjusted. Monthly figures, latest shown are for July.

EMPLOYMENT

Seasonally adjusted employment in nonfarm establishments rose 125,000 in July to 55.6 million, following a similar increase in June. Gains in July were largest in the construction, retail trade, and the service industries, and these more than offset declines in transportation and public utilities and in some nondurable goods manufacturing industries. The workweek in manufacturing was off slightly further. The unemployment rate declined somewhat to 5.3 per cent of the labor force.

Construction

The value of new construction activity, which had increased in each of the four preceding months, was off slightly in July to a seasonally adjusted annual rate of \$61.7 billion. Private construction expenditures were practically the same as in June, but public activity declined 5 per cent.

DISTRIBUTION

Retail sales in July recovered from the decline in May and June. Total sales increased 2 per cent with durable goods sales up 5 per cent and non-durables up 1 per cent. Sales of new domestic and imported autos rose to a seasonally adjusted annual rate of 7.4 million units. Department store sales improved and the Board's index advanced to 115 per cent of the 1957-59 average from 111 in June.

COMMODITY PRICES

Prices of steel scrap, which had declined by midyear to the lowest level since 1954, have risen moderately. Prices of most other sensitive industrial materials have continued at June levels.

While meat supplies have changed little, prices of livestock and meats have risen more than seasonally since June. The average level of wholesale meat prices in early August was about 5 per cent higher than in June or a year earlier. Prices of most other farm and food products have continued stable in recent weeks.

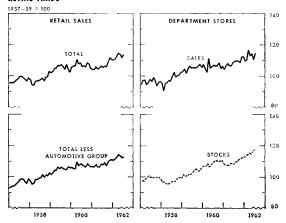

BANK CREDIT AND RESERVES

Total commercial bank credit, seasonally adjusted, declined in July following substantial

growth earlier in the year. Holdings of U. S. Government securities dropped, while holdings of other securities continued to expand rapidly. Total loans increased slightly further, with business, consumer, and real estate loans continuing to show moderate growth. The money supply declined somewhat, while time deposits at commercial banks rose further. U. S. Government deposits were reduced.

Total reserves and required reserves of member banks rose further in July. Excess reserves also increased somewhat while member bank borrowings from the Federal Reserve were about unchanged. Reserves were absorbed principally through an increase in currency in circulation

RETAIL TRADE

Federal Reserve indexes, seasonally adjusted; retail sales based on Department of Commerce data. Monthly figures; latest for stocks is June, for other series, July.

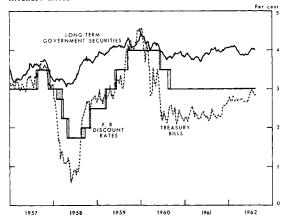

and an outflow of gold. They were supplied through an increase in float and a reduction in other Federal Reserve accounts.

SECURITY MARKETS

Yields on Treasury obligations edged lower from mid-July through early August. The rate on 3-month bills declined to 2.83 per cent and the average yield on long-term bonds was slightly lower at about 4 per cent.

Yields on both corporate and State and local government bonds increased moderately further. Common stock prices have changed little since mid-July.

INTEREST RATES

Discount rate, range or level for all F. R. Banks. Weekly average market yields for U. S. Government bonds maturing in 10 years or more and for 90-day Treasury bills. Latest figures shown are for week ending August 10.

¹ Beginning with 1960 reflects a minor change in concept, see Feb. 1961 Bull., p. 164.
² Includes industrial loans and acceptances, when held. (Industrial loan program discontinued Aug. 21, 1959.) For holdings of acceptances on Wed. and end-of-month dates, see subsequent tables on F. R. Banks. See also note 1.

³ Part allowed as reserves Dec. 1, 1959-Nov. 23, 1960; all allowed thereafter. Beginning with Jan. 1962 figures are estimated except for weekly averages.

¹ Based on figures at close of business through November 1959; thereafter on closing figures for balances with Reserve Banks and opening figures for allowable cash. Beginning with Nov. 24, 1960, all currency and coin held by member banks allowed as reserves; during the period Dec. 1, 1959–Nov. 23, 1960, only part of such holdings has been allowed. Monthly averages of currency and coin beginning January 1962 are estimated.

² Based on deposits as of opening of business each day. Monthly averages for all classes of banks beginning with January 1962 are estimated.
³ Monthly averages for all classes of banks beginning with January 1962 are estimated.
⁴ Based on closing figures.
⁵ This total excludes, and that in the preceding table includes, \$51 million in balances of unlicensed banks.

¹ Preferential rate of ½ of 1 per cent for advances secured by U. S. Govt. securities maturing in 1 year or less. The rate of 1 per cent was continued for discounts of and advances secured by eligible paper. Note.—Discount rates under Secs. 13 and 13a (as described in table above). For data before 1933, see Banking and Monetary Statistics, pp. 439-42.

The rates charged by the F. R. Bank of N. Y. on repurchase contracts

against U. S. Govt. securities was the same as its discount rate except in the following periods (rates in percentages): 1955—May 4-6, 1.65; Aug. 4, 1.85; Sept. 1-2, 2.10; Sept. 8, 2.15; Nov. 10, 2.375; 1956—Aug. 24-29, 2.75; 1957—Aug. 22, 3.50; 1960—Oct. 31-Nov. 17, Dec. 28-29, 2.75; 1961—Jan. 9, Feb. 6-7, 2.75; Apr. 3-4, 2.50; June 29, 2.75; July 20, 31, Aug. 1-3, 2.50; Sept. 28-29, 2.75; Oct. 5, 2.50; Oct. 23, Nov. 3, 2.75; 1962—Mar. 20-21, 2.75.

MAXIMUM INTEREST RATES PAYABLE ON TIME AND SAVINGS DEPOSITS

[Per cent per annum]

Type of deposit	Jan. 1, 1936– Dec. 31, 1956	Jan. 1, 1957 Dec. 31, 1961	Effective Jan. 1, 1962
Savings deposits held for: 1 year or more Less than 1 year	} 21/2	3	{ 4 3½
Postal savings deposits held for: 1 year or more Less than 1 year	} 2½	3	{ 4 3½
Other time deposits payable in: 1 year or more. 6 months-1 year. 90 days-6 months. Less than 90 days.	2 2 2	3 2½ 1	{ 4 3½ 2½ 1

Note.—Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q. Under this Regulation the rate payable by a member bank may not in any event exceed the maximum rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located. Effective Feb. 1, 1936, maximum rates that may be paid by insured nonmember commercial banks, as established by the F.D.I.C., have been the same as those in effect for member banks. Maximum rate payable on all types of time and savings deposits: Nov. 1, 1933–Jan. 31, 1935, 3 per cent; Feb. 1, 1935–Dec. 31, 1935, 2½ per cent.

per cent.

MARGIN REQUIREMENTS

Dec. 1	16½	161/2	12	5	5
Present legal requirement: Minimum		10 4 22	7 14	3 6	3 6

1 When two dates are shown, first-of-month or midmonth dates record changes at country banks, and other dates (usually Thurs.) record changes at central reserve or reserve city banks.

2 Demand deposits subject to reserve requirements are gross demand deposits minus cash items in process of collection and demand balances due from domestic banks.

3 Authority of the Board of Governors to classify or reclassify cities as central reserve cities was terminated effective July 28, 1962.

4 Before July 28, 1959, the minimum and maximum legal requirements for central reserve city banks were 13 and 26 per cent, respectively, and the maximum for reserve city banks was 20 per cent.

NOTE.—All required reserves were held on deposit with Federal Reserve Banks, June 21, 1917, until late 1959. Since then, member banks have also been allowed to count vault cash as reserves, as follows: Country banks—in excess of 4 and 2½ per cent of net demand deposits effective Dec. 1, 1959 and Aug. 25, 1960, respectively. Central reserve city and reserve city banks—in excess of 2 and 1 per cent effective Dec. 3, 1959 and Sept. 1, 1960, respectively. Effective Nov. 24, 1960, all vault cash.

² Paper currency only; \$1 silver coins reported under coin.

Nort.—Condensed from Circulation Statement of United States

Money, issued by the Treasury.

¹ Outside Treasury and F.R. Banks. Includes any paper currency held outside the United States and currency and coin held by banks. Estimated totals for Wed. dates are shown in table on p. 999.

² Includes \$156 million reserve against United States notes.

³ Consists of credits payable in gold certificates: (1) the Gold Certificate Fund—Board of Governors, F.R.S. and (2) the Redemption Fund for F.R. notes.

⁴ Includes \$1,141,667 of Treasury notes of 1890.

5 Redeemable from the general fund of the Treasury. (F.R. Banks and national banks no longer have liability for their currency included

herein, as payment therefor has been made to the Treasury as required by law.)

⁶ Represents only F.R. Bank notes and national bank notes; see also note 5.

⁷ These totals do not include all items shown, as some items represent the security for other items; gold certificates are secured by gold, and silver certificates by standard silver dollars and monetized silver bullion. Duplications are shown in parentheses.

Note.—Condensed from Circulation Statement of United States Money issued by the Treasury. For explanation of currency reserves and security features, see Circulation Statement or Aug. 1961 BULL., p. 936.

¹ Series begin in 1946; data are available only for last Wed. of the month. ² Other than interbank and U. S. Govt., less cash items in process of

² Other than interbank and U. S. Govt., less cash items in process of collection.
³ Other than interbank, Treasurer's open account, and Postal Savings System's in banks.
⁴ Before June 30, 1947, includes a small amount of demand deposits. Beginning with June 1961 includes amounts now reported by insured mutual savings banks as demand deposits previously reported as time deposits or other liabilities.
⁵ Beginning with May 1961 reclassification of deposits of foreign central banks reduced this item by \$1,900 million (\$1,500 million to time and \$400 million to demand deposits).

Note.—Includes all commercial and mutual savings banks, F. R. Banks, Postal Savings System, and Treasury currency funds (the gold account, Treasury currency account, and Exchange Stabilization Fund).

For description of statement and back figures (except for seasonally adjusted money supply), see Jan. 1948 Bull..., pp. 24-43, except that stock of F. R. Banks held by member banks is included in other securities and in capital and misc. accounts, net, and balances of the PSS and the ESF with the Treasury are netted against capital and misc. accounts, net. For description of seasonally adjusted money supply series and back data, see Feb. 1960 Bull..., pp. 133-36.

Except on call dates, figures are partly estimated and are rounded to nearest \$100 million.

1 Reciprocal balances excluded beginning with 1942. Reclassification of deposits of foreign central banks in May 1961 reduced interbank deposits by a total of \$1,900 million (\$1,500 million time to other time and \$400 million demand to other demand).
2 Includes other assets and liabilities not shown separately.
3 See note 4 on page 1009.
4 Beginning with Dec. 31, 1947, the series was revised. A net of 115 noninsured nonmember commercial banks with total loans and investments of about \$110 million were added, and 8 banks with total loans and investments of \$34 million were transferred from noninsured mutual savings to nonmember commercial banks.
5 Because preliminary data are rounded to the nearest \$10 million, no amount is shown except on call dates for amounts of less than \$5 million.
6 Beginning with February 1960 reserve city banks with total loans and investments of \$950 million and total deposits of \$1,070 million were reclassified as country banks.

Note.—Data are for all commercial and mutual savings banks in the United States (including Alaska and Hawaii, beginning with 1959).

Commercial banks include (1) all nonmember commercial and (2) all member commercial banks. Member banks include (1) a national bank in the Virgin Islands that became a member on May 31, 1957, (2) a noninsured nondeposit trust company, and (3) a mutual savings bank (2 before 1914) 1961 and 3 before 1960) that became a member in 1941 (these banks are excluded from commercial banks).

Stock savings banks and nondeposit trust cos. are included with commercial banks. Number of banks includes a few noninsured banks, for which asset and liability data are not available. Comparability of figures for classes of banks is affected somewhat by changes in F. R. membership, deposit insurance status, and the reserve classifications of cities and individual banks, and by mergers, etc.

Figures are partly estimated except on call dates.

For revisions in series before June 30, 1947, see July 1947 Bull, pp. 870-71.

¹ Beginning with June 30, 1948, figures for various loan items are shown gross (i.e., before deduction of valuation reserves); they do not add to the total and are not entirely comparable with prior figures. Total loans continue to be shown net.

² Breakdowns of loan, investment, and deposit classifications are not available before 1947; summary figures for earlier dates appear in the preceding table.

³ Central reserve city banks.

For other notes see opposite page.

Note.—Data are for all commercial banks in the United States. These figures exclude data for banks in U. S. possessions except for member banks. During 1941 3 mutual savings banks became members of the FRS; these banks (2 beginning with June 1960 and 1 beginning Sept. 1961) are included in member banks but are not included in all insured or total banks. Comparability of figures for classes of banks is affected somewhat by changes in F. R. membership, deposit insurance status, and the reserve classifications of cities and individual banks, and by mergers, etc.

etc.
For other notes see opposite page.

⁴ Beginning with 1942, excludes reciprocal bank balances, ⁵ Through 1960, demand deposits other than interbank and U. S. Govt., less cash items in process of collection; beginning with 1961, demand deposits other than domestic commercial interbank and U. S. Govt., less cash items in process of collection.

⁶ Beginning with June 1961, reclassification of deposits of foreign central banks reduced foreign interbank demand deposits by about \$400 million and interbank time deposits by about \$1,500 million. These amounts are now included in demand and time deposits of individuals, partnerships, and corporations.

Durable goods manufacturing: Primary metals. Machinery. Transportation equipment. Other fabricated metal products. Other durable goods Nondurable goods manufacturing: Food, liquor, and tobacco. Textiles, apparel, and leather. Petroleum refining. Chemicals and rubber. Other nondurable goods Mining, including crude petroleum and natural gas. Trade: Commodity dealers. Other wholesale. Retail. Transportation, communication, and other public utilities. Construction. All other types of business, mainly services.	-15: 25 -20: -44 -65: -11: 77 -22: 8 -7: 166: -96: -16: 16 -99: -3: -16: -96:	-14 -24 -89 -6 -9 -9 -5 -23 -27 -1 -7 -1 -7 -1 -3 -11 -29 -215	-1 -1 -24 2 124 -44 -6 10 -5 5 5 1 11 16 -92	-33 -17 -35 -2 -21 3 31 -1 -36 -20 -4 3 -2 -19 21 -6 -36 -36		-62 -40 -152 -26 -90 -101 9 -77 -35 -10 -18 3 10 21 -391	8 8 25 55 41 51 31 35 -12 14 68 -10 -34 22 2 2 24 28 62 424	-91 15 2 28 54 -37 -10 9 86 -8 -102 -7 12 -104 90 70	-119 -50 -50 112 -152 -142 -14 37 164 8 -161 52 52 -223 164 127	- 345 247 -53 39 10 170 -77 -18 10 -288 18	-75 26 -41 -103 397 -290 60 -25 -64	- 131 89 96 126 128 - 497 76 178 - 237 34 61 - 510 182 205	-100 -498 177 } 81 -249 -325
Commercial and industrial change—all weekly reporting banks	-78	-240	95	-171	26	-394	500	76	340	94	1,115	434	² – 387

¹ Because of reclassifications as of Sept. 27, 1961, many categories are not strictly comparable with prior data; for example, new "Mining" includes a part of old "Other manufacturing and mining," with which it is compared; a part of "Metals and metal products"; and coal, crude petroleum, and natural gas from old "Petroleum, coal, chemicals, and rubber." "Other durable" and "Other nondurable" were in old "Other manufacturing and mining."

Note.—Data for sample of about 200 banks reporting changes in their larger loans; these banks hold about 95 per cent of total commercial and industrial loans of all weekly reporting member banks and about 70 per cent of those of all commercial banks.

End-of-week date shown. Figures for periods other than weekly are based on weekly changes.

Stocks: Dividend/price ratios are based on Wed, figures; earnings/price ratios are as of end of period. Preferred stock ratio is based on 8 median yields for a sample of noncallable issues—12 industrial and 2 public utility; common stock ratios on the 500 stocks in the price index; both are Standard and Poor's Corp. series. Quarterly earnings are seasonally adjusted at annual rates.

Average of daily offering rates of dealers,
 Average of daily rates, published by finance cos, for varying maturities in the 90-179 day range,
 Average of daily prevailing rates.

⁴ Except for new bill issues, yields are averages computed from daily closing bid prices.

⁵ Certificates of indebtedness and selected note and bond issues.

⁶ Selected note and bond issues.

¹ Includes bonds rated Aa and A, data for which are not shown separately. Because of a limited number of suitable issues, the number of corporate bonds in some groups has varied somewhat.

NOTE.—Annual yields are averages of monthly or quarterly data. Monthly and weekly yields are computed as follows: U.S. Govt. bonds, averages of daily figures for bonds maturing or callable in 10 years or more. State and local govt. bonds, general obligations only, based on Thurs. figures. Corporate bonds, averages of daily figures, last two are Moody's Investors Service series.

Note.—Annual data are averages of monthly data. Monthly and weekly data are computed as follows: U. S. Govt. bonds, derived from average market yields in preceding table on basis of an assumed 3 per cent, 20-year bond, averages of daily figures. State and local govt. and corporate bonds, derived from average yields, as computed by Standard

and Poor's Corp., on basis of a 4 per cent, 20-year bond; Wed. closing prices. Common Stocks, Standard and Poor's index based on averages of daily figures; Securities and Exchange Commission index on weekly closing prices. Volume of trading, average daily trading in stocks on the N. Y. Stock Exchange for a 5½-hour trading day.

Bank loans to others than brokers and dealers: figures are for weekly reporting member banks. Before July 1959, loans for purchasing or carrying U. S. Govt. securities were reported separately only by N. Y. and Chicago banks. Accordingly, for that period the fifth col. includes any loans for purchasing or carrying such securities at other reporting banks. Composition of series also changed beginning with July 1959; revised data for the new reporting series (but not for the breakdown of loans by purpose) are available back through July 1958 and have been incorporated.

Note.—Data in the first three cols, and last col, are for end of month, in the other cols., for last Wed.

¹ Reclassification of loans reduced these items by \$66 million, see Dec. 1961 Bull., p. 1436, note 3.

Net debit balances and broker and dealer credit: ledger balances of member firms of the N. Y. Stock Exchange carrying margin accounts, as reported to the Exchange. Customers' debit and free credit balances exclude balances maintained with the reporting firm by other member firms of national securities exhanges and balances of the reporting firm and of general partners of the reporting firm. Balances are net for each customer—i.e., all accounts of one customer are consolidated. Money borrowed includes borrowings from banks and from other lenders except member firms of national securities exchanges.

¹ Includes securities of foreign governments and international organizations and U. S. Govt. agencies not guaranteed, as well as corporate securities.

² See note 4, p. 1009.

³ Commitments outstanding of banks in N.Y. State as reported to the Savings Banks Association of the State of New York.

⁴ Data reflect consolidation of a large mutual savings bank with a commercial bank.

Note.—National Assn. of Mutual Savings Banks data; figures are estimates for all savings banks in the United States and differ somewhat from those shown elsewhere in *Bulletin*; the latter are for call dates and are based on reports filed with U. S. Govt. and State bank supervisory agencies. Loans are shown net of valuation reserves.

³ Beginning with Nov. 1958, series includes all paper with maturity of 270 days and over. Figures on old basis for Dec. were (in millions of dollars): total 2,739; placed directly, 1,899.

Issues of foreign governments and their subdivisions and bonds of the International Bank for Reconstruction and Development.
NOTE.—Institute of Life Insurance data; figures are estimates for all life insurance cos. in the United States.

Year-end figures: Annual statement asset values, with bonds carried

on an amortized basis and stocks at year-end market value. *Month-end figures:* Book value of ledger assets. Adjustments for interest due and accrued and for differences between market and book values are not made on each item separately, but are included, in total, in "other assets."

Note.—Federal Savings and Loan Insurance Corp. data: figures are estimates for all savings and loan assns. in the United States. Data beginning with 1954 are based on monthly reports of insured assns, and annual reports of noninsured assns. Data before 1954 are based entirely on annual reports. Data for current and preceding year are preliminary even when revised.

¹ Includes other loans, stock in the Federal home loan banks and other investments, real estate owned and sold on contract, and office buildings and fixtures.

² Before 1958 mortgages are net of mortgage pledged shares. Asset items will not add to total assets, which include gross mortgages with no deductions for mortgage pledged shares. Beginning with January 1958, no deduction is made for mortgage pledged shares. These have declined consistently in recent years and amounted to \$42 million at the end of 1957.

³ Consists of FHLB advances and other borrowing.

¹ Adjusted to exclude certain interfund transactions.

² Primarily interest payments by Treasury to trust accounts and accumulations to U. S. employees trust funds.

³ Includes small adjustments not shown separately.

⁴ Primarily (1) intragovt. transactions, (2) net accruals over payments

of interest on savings bonds and Treasury bills, (3) budget expenditures involving issuance of Govt. securities, (4) cash transactions between International Monetary Fund and Treasury, (5) clearing accounts, and (6) net operating transactions of govt. sponsored enterprises.

² First reported separately in the Dec. 1961 Survey. Monthly figures for Dec. 1960-Sept. 1961 shown in the Feb. 1962 Treasury Bull., pp. 59-60. Note.—Direct public issues only. Based on Treasury Survey of Ownership.

Data complete for U. S. Govt. agencies and trust funds and banks, but for other groups are based on Treasury Survey data. Of total marketable issues held by groups, the proportion held on latest date and the number

of reporting owners surveyed were: (1) about 90 per cent by the 6,207 commercial banks, 509 mutual savings banks, and 814 insurance cos. combined; (2) about 50 per cent by the 474 nonfinancial corps. and 488 savings and loan assns.; and (3) about 60 per cent by 485 State and local

govts.

Holdings of "all others," a residual throughout, include holdings of all those not reporting in the Treasury Survey, including investor groups not listed separately.

¹ Only bonds sold pursuant to 1949 Housing Act; secured by contract requiring the Public Housing Administration to make annual contributions to the local authority.

² Beginning with 1957 coverage is considerably broader than earlier.

³ Classifications before 1957 as to use of proceeds and type of issuer are based principally on issues of \$500,000 or more; smaller issues not classified. As a result some categories, particularly education, are understated relative to later data.

⁴ Municipalities, counties, townships, school districts, and, before 1957, small unclassified issues.

⁵ Excludes U. S. Govt. loans. Based on date of delivery to purchaser (and payment to issuer), which occurs after date of sale.

⁶ Water, sewer, and other utilities.

⁷ Includes urban redevelopment loans.

⁸ Beginning with 1957 this figure differs from that shown on the following page, which is based on Bond Buyer data. The principal difference is in the treatment of U. S. Govt. loans.

Note.—Beginning with 1957 Investment Bankers Assn. data; par amounts of long-term issues. Based on date of sale unless otherwise indicated. Before 1957 based on Bond Buyer data.

Note.—Securities and Exchange Commission estimates of new issues maturing in more than 1 year sold for cash in the United States.

¹ Gross proceeds are derived by multiplying principal amounts or number of units by offering price.
2 Includes guaranteed issues.
3 Issues not guaranteed.
4 Foreign governments, International Bank for Reconstruction and Development, and domestic nonprofit organizations.
5 Estimated net proceeds are equal to estimated gross proceeds less cost of flotation.

<sup>For plant and equipment and working capital.
Beginning with 1957 this figure differs from that shown on the previous page because this one is based on Bond Buyer data.
All issues other than those for retirement of securities.</sup>

¹ Includes 17 cos. in groups not shown separately.

Telephone. Data obtained from Federal Communications Commission on revenues and profits for telephone operations of the Bell System Consolidated (including the 20 operating subsidiaries and the Long Lines and General departments of American Telephone and Telegraph Co.) and for 2 affiliated telephone cos. Dividends are for the 20 operating subsidiaries and the 2 affiliates.

All series. Profits before taxes are income after all charges and before Federal income taxes and dividends. For description of series see June 1949 BULLETIN, pp. 62–66 (manufacturing); Mar. 1942 BULLETIN, pp. 215–17 (public utilities); and Sept. 1944 BULLETIN, p. 908 (electric power). Back data available from Division of Research and Statistics.

² Includes 27 cos. in groups not shown separately.

Note.—Manufacturing corps. Data are obtained primarily from published co. reports.

Railroads. Interstate Commerce Commission data for Class I line-haul railroads.

Electric power. Federal Power Commission data for Class A and B electric utilities, except that quarterly figures on operating revenue and profits before taxes are partly estimated by the Federal Reserve to include affiliated nonelectric operations.

fourth quarter) commercial and mutual savings banks in the United States and possessions, and estimates based on FDIC data for insured banks (first and third quarters) beginning in 1962. For earlier years the basis for first and third quarter estimates included F. R. commercial bank call data and data from National Assn. of Mutual Savings Banks.

assns.

² U. S. agencies are FNMA, FHA, VA, PHA, Farmers Home Administration, and Federal land banks, and in earlier years FRC, HOLC, and FFMC. Other U. S. agencies (amounts small or current separate data not readily available) included with individuals and others.

³ Derived figures, include small amounts of farm loans held by savings and loan serve.

and loan assns.

⁴ Derived figures, include debt held by Federal land banks and Farmers Home Administration.

Note.—Based on data from Federal Deposit Insurance Corp., Federal Home Loan Bank Board, Institute of Life Insurance, Depts. of Agriculture and Commerce, Federal National Mortgage Assn., Federal Housing Administration, Public Housing Administration, Veterans Administration, and Comptroller of the Currency.

Figures for first three quarters of each year are F. R. estimates.

¹ Includes I oans held by nondeposit trust cos. but not bank trust depts.
² For 1941 and 1945, except for totals, data are special F. R. estimates.
³ Reflects a \$40 million reclassification by I bank from commercial and industrial to real estate loans.

Note.-Federal Deposit Insurance Corp. series for all (second and

¹ Certain mortgage loans secured by land on which oil drilling or extracting operations in process were classified with farm through June 1959 and with "other" nonfarm thereafter. These loans totaled \$38 million on July 31, 1959.

Note.—Institute of Life Insurance data. For loans acquired, the

monthly figures may not add to annual totals and for loans outstanding, the end-of-Dec. figures may differ from end-of-year figures, because monthly figures represent book value of ledger assets whereas year-end figures represent annual statement asset values, and because data for year-end adjustments are more complete.

Monthly figures do not reflect mortgage amendments included in annual totals.
 Not ordinarily secured by mortgages.
 Includes a small amount of alteration and repair loans, not shown separately; only such loans in amounts of more than \$1,000 need be secured.
 Note.—Federal Housing Administration and Veterans Administration data. FHA-insured loans represent gross amount of insurance written; VA-guaranteed loans, gross amount of loans closed. Figures do not take account of principal repayments on previously insured or guaranteed loans. For Va-guaranteed loans, amounts by type are derived from data on number and average amount of loans closed.

financing charges. Renewals and refinancing of loans, purchases and sales of instalment paper, and certain other transactions may increase the amount of extensions and repayments without affecting the amount outstanding.

For a description of the series in this and the following table see Jan. 1954 Bull., pp. 9-17. For back data see the following Bulls., Oct. 1956, pp. 1043-48, and Dec. 1961, pp. 1393-96.

¹ Includes adjustment for differences in trading days.
2 Includes data for Alaska and Hawaii beginning with the months in which they became States. The differences between extensions and repayments do not equal the changes in outstanding credit for 1959 because such differences do not reflect the effect of the introduction of outstanding balances for these States.
3 Credit extended less credit repaid, except as indicated in note 2.
Note.—Estimates are based on accounting records and often include

¹ Data includes Alaska and Hawaii beginning with 1959. Note.—Bureau of I abor Statistics; data include all full- and part-time employees who worked during, or received pay for, the pay period

ending nearest the 15th of the month. Proprietors, self-employed persons, domestic servants, unpaid family workers, and members of the armed forces are excluded.

¹ Includes self-employed, unpaid family, and domestic service workers.

² Per cent of civilian labor force. Monthly data seasonally adjusted.

³ Inclusion of figures for Alaska and Hawaii beginning with 1960 increased population by about 500,000 and total labor force by about 300,000. Most of the increase was in nonagricultural industries. In-

Note.—Sales, stocks, and outstanding orders. Actual dollar amounts reported by a selected group of department stores whose 1961 sales were about 45 per cent of estimated total department store sales. Sales are total for month, stocks and outstanding orders are as of end of month.

Receipts and new orders. Monthly totals derived from reported figures on sales, stocks, and outstanding orders.

For further description see Oct. 1952 Bull., pp. 1098-1102. Back figures may be obtained upon request.

Note.—U= uses of funds; S= sources of funds. Financial uses of funds represent net acquisitions of assets; financial sources of funds, net changes in liabilities.

For discussion of saving and investment concepts see pp. 831-43 of BULLETIN for August 1959.

For discussion of saving and investment concepts see pp. 831-43 of Bulletin for August 1959. Descriptions of sectors and of transaction categories are given in notes to tables and in "Technical Notes," pp. 846-59 of Bulletin for August 1959.

In Tables 3-4, figures for 1959 have been adjusted to eliminate the effect of certain structural changes, in order to reflect only transaction flows. Structural changes are (1) the shift of banks in Alaska and Hawaii from the finance n.e.c. sector to the commercial banking sector (2) and the shift of a large mutual savings bank to the commercial banking sector resulting from a bank merger early in 1959. The adjustments apply to the first three quarters and to the annual totals for 1959.

For other notes see pp. 1057 and 1059.

Note.—Descriptions of sectors and of transaction categories are given in notes to tables and in "Technical Notes," pp. 846-59 of BULLETIN

for August 1959. For other notes see below and second page following. Back data available in Flow-of-Funds Supplement No. 5.

- in notes to tables and in "Technical Notes," pp. 846-59 of Bulletin Notes to Tables 1, 2, and 3.

 1 Net saving of, and consumer investment in, unincorporated business discussed on p. 838 of Bulletin for August 1959. See note 32, p. 1059.

 2 For govt. sectors, saving is excess of all nonfinancial receipts over all nonfinancial outlays; investment, changes in financial assets and liabilities only. Govt. current outlays include, and govt. (and national) investment excludes, govt. purchases of tangible assets.

 3 Consolidated account for monetary authorities (Federal Reserve System, ESF, and Treasury currency accounts) and commercial banks in United States (excluding territories and possessions).

 4 Mutual savings banks, savings and loan assns., and credit unions.

 5 Life and nonlife insurance companies and private pension plans.

 6 Finance companies, open-end investment companies, security brokers and dealers, banks in U. S. territories and possessions, and U. S. agencies of foreign banks.

 7 For discussion, see p. 857 of Bulletin for August 1959.

 8 Totals for domestic sectors; financial entries are net uses plus items in discrepancy column. For comparison with national saving and investment in national income accounts of Dept. of Commerce, see p. 842 of Bulletin for August 1959.

Back data available in Flow-oi-Funds Supplement No. 5.

9 For content of sector saving, see Tables 1 and 4 and pp. 833 and 849 of BULLETIN for August 1959.

10 Rest-of-world surplus on current transactions with United States, 11 Discrepancy between total nonfinancial sources and uses of funds (Line A minus line E in "all sectors" column).

12 Depreciation, accidental damage to fixed capital, and capital outlays charged to current account. Annual data in Table 2 are from Dept. of Commerce national income accounts except for F. R. estimates of depreciation on consumer durable goods. Depreciation on latter item and on farm assets at current cost; other depreciation, in general, at original cost. Line H in Table 2 includes amounts for financial sectors not shown separately.

13 Transactions in land excluded from sector investment for statistical reasons. Such transactions, when recorded as capital flows, affect

reasons. Such transactions, when recorded as capital flows, affect sector allocation of investment but not the national total.

14 For consumers, 1- to 4-family dwellings completed and purchases of additions and alterations. Investment of nonfarm business sectors includes work in process on 1- to 4-family dwellings and other private residential construction.

For other notes to Tables 1-3 see second page following.

For notes see opposite page.

Notes to Tables 1, 2, and 3—cont.

15 After inventory valuation adjustment.

16 Financial component of national investment equals net lending to rest of world; financial flows among domestic sectors cancel out in national total. (Discrepancies in financial transactions attributed entirely to domestic transactions.) Differs from U. S. "net foreign investment" (net exports minus net unilateral transfers in national income accounts) by discrepancy in rest-of-world account, which equals "errors and omissions" in Dept. of Commerce balance-of-payments statement for the United States.

17 "Liabilities" cover equity as well as debt claims.

18 For description, see p. 852 of BULLETIN for August 1959.

19 Demand deposit liabilities of banking system are net of F. R. float and cash items in process of collection as reported by commercial banks. Sum of sector holdings (partly on holder-record basis) differs from liability total mainly because of mail float (checks in transit from drawers to drawees). See Table 4 (G), lines Y-a, for sector allocation of demand deposit and currency liability on a net bank-record basis. For further discussion, see p. 852 of BULLETIN for August 1959.

20 At commercial and mutual savings banks and Postal Savings System.

21 Shares in savings and loan associations and credit unions.

22 Consumer-held only; includes net interest accruals. Savings bonds held by other sectors included in Federal obligations category.

23 Private and Federal Government life insurance. Estimated as equal to changes in reserves against life insurance policies and supplementary contracts and in policy dividend accumulations.

24 Private pension plans and railroad and govt. employee retirement funds. Estimated as equal to changes in reserves of pension plans administered by life insurance companies and in assets of other private plans and of railroad and govt. employee retirement funds.

26 Loans from banks for purchasing or carrying securities and customer debit and net free credit balances on books of security brokers and dealers.

27 Mainly commercial, industrial, and agricultural loans (other than open market paper and CCC-guaranteed loans); includes loans to foreign banks, loans to individuals (other than consumer credit), and other loans. Gross of valuation reserves. Loans to domestic commercial banks excluded in consolidated banking statement.

28 Mainly Federal Government loans (other than mortgages), CCC-guaranteed loans, open market paper, finance company loans to business, and policy loans on life insurance.

29 Trade debt net of trade credit.

30 For coverage, see p. 856 of BULLETIN for August 1959. See also notes for this category in individual sector statements in Table 4.

31 Saving and investment are equal in concept but may differ statistically because of discrepancies. See p. 857 of BULLETIN for August 1959.

32 Farm and noncorporate business net saving are zero on annual basis. Quarterly figures represent only seasonal net saving.

33 Data for excluded categories—trade credit, proprietors' net investment, gold, Treasury currency, and misc.—appear in Tables 1 and 4 and Supplement No. 5.

34 For sector transactions in specific instruments, see Tables 1 and 4.

35 Mainly time deposits of State, and local governments, corporate businesses, and savings institutions.

36 Includes life insurance issued by fraternal orders not shown separately. All assets in these categories are treated as consumer holdings.

37 Marketable issues maturing within one year.

38 Excludes loans to domestic commercial banks. Consists of mortgages, consumer credit, security credit, other loans, and bank loans, n.e.c. Gross of valuation reserves.

Note.—Back data available in Flow-of-Funds Supplement No. 5.

1 Payrolls, interest, dividends, and income withdrawals from unincor-

Payrolls, interest, dividends, and income withdrawals from unincorporated business.
 2 Grant and donation receipts of consumers and nonprofit organizations (net of transfers within the sector), social insurance benefits, and benefits from private pension and government retirement funds.
 3 Federal, State, and local income and estate and gift taxes.
 4 Mainly employee contributions to OASI and to private pension and government retirement funds.
 5 Figures include net operating outlays of nonprofit organizations and net transfer payments abroad.
 6 Net of dividends on and benefits from private life insurance and individual annuity policies and Government life insurance.
 7 In connection with consumer saving through life insurance, private pension funds, railroad retirement, and government employee retirement.
 8 For details, see Table 2, lines J-L.
 9 Breakdown by consumer and nonprofit not available.
 10 Includes net accruals of interest.
 11 Includes net free credit balances with brokers not shown separately.
 12 Policy loans and hypothecated deposits.
 13 Consists of commercial mortgages, bank loans, loans, from Government, and trade debt.
 14 Estimated as equal to seasonally adjusted net farm income.
 15 See Table 2, note 32.
 16 Includes farm residential construction.
 17 Mainly demand deposits and currency.
 18 Excludes CCC-guaranteed loans. See p. 840 of BULLETIN for August 1959.
 19 Government loans; excludes CCC nonrecourse loans.

- 1959.

 19 Government loans; excludes CCC nonrecourse loans.
- 20 After inventory valuation adjustment.
 21 Estimated as equal to seasonally adjusted business net income.
 22 Includes business residential construction.
 23 Mainly REA and other loans from Federal Government and loans

from finance companies.

- from finance companies.

 24 Net of trade receivables.

 25 Federal, State, and local taxes on profits.

 26 Includes profits paid by U. S. branches to foreign parent corporations less profits paid by foreign branches to U. S. parent corporations.

 27 Includes State and local obligations not shown separately.

 28 Miscellaneous financial assets (direct investments in foreign branches and holdings of foreign cash.)

 29 Includes direct investments from abroad not shown separately.

 30 Mainly commercial paper and loans from finance companies.

 31 Mainly excise taxes and customs receipts: also includes estate and gift taxes.

- gift taxes.

 32 OASI, disability insurance, and unemployment programs. Line E includes Federal employment taxes; line F, Federal benefit payments to
- 32 OASh, (asability insurance, and unemployment programs. Line E includes Federal employment taxes; line F, Federal benefit payments to consumers.

 33 Veterans' life insurance and Government employee and railroad retirement funds. Line G excludes Government contributions to these funds.

 34 Transfer payments (other than insurance benefits) to individuals, plus net cash unilateral transfers to foreign countries, grants-in-aid to State and local governments, and subsidies to business.

 35 Includes net accruals on savings bonds and Treasury bills.

 36 Purchases less sales for general govt, and govt. enterprises, including outlays for tangible capital and (for Federal Govt.) net disbursements to farmers in form of CCC-direct and guaranteed loans.

 37 In connection with saving through Government life insurance and Government employee and railroad retirement funds.

 39 Mainly loans to business sectors, to foreign and State and local governments, and to savings and loan associations (by FHLB). Excludes CCC-guaranteed loans other than those on tobacco.

 40 Treasury currency assets, time deposits, trade credit, and miscellaneous (mainly foreign cash and subscription to IMF).

 41 See Table 1, note 25.

 42 See Table 3, note 37.

 43 Securities and notes issued by FNMA, Federal land banks, home loans banks, intermediate credit banks, banks for cooperatives, and TVA.

 44 CCC-guaranteed bank loans and CCC certificates of interest.

- 45 Treasury currency liabilities, trade debt, and misc. liabilities (special IMF notes, misc. deposits, and private equity in Govt. enterprises).

 46 Excludes employment taxes.

 47 Receipts of Federal Government grants; payments of direct relief and other transfers; and receipts and payments in connection with government employee retirement, unemployment insurance, and cash sickness compensation programs.

 48 In connection with saving through govt. employee retirement funds.
 49 Corporate bonds and mortgages.
 50 Trade debt and loans from Federal Government.
 51 Includes payment to Treasury on F. R. notes outstanding.
 52 Net saving is less than line C by the amount of capital consumption, about \$0.1 billion a year.
 53 Includes misc. and Treasury currency assets not shown separately.
 54 Open market paper, CCC-guaranteed loans, and CCC certificates of interest.

interest.
55 Net of Federal Reserve float and cash items in process of collection

55 Net of Federal Reserve float and cash items in process of conection as reported by commercial banks.
56 Bank-record basis, net of bank float; differs from sector demand deposits and currency assets (shown in Table 3 and in nonbank sector accounts in Table 4) principally because of mail float.
57 Mainly stock issues and balances due to own foreign branches.
58 Includes premiums on life insurance and private pension plans, less benefit payments and policy dividends.
59 In connection with consumer saving through life insurance and premium funds

59 In connection with consumer saving through life insurance and pension funds.
60 Mainly finance company loans to business and insurance policy loans.
61 Trade credit, time deposits, savings shares, and miscellaneous assets.
62 Lines f, j, and most of i are liabilities of finance companies; line, shares of open-end investment companies; and line h, liabilities of security brokers and dealers.
63 Part of "other loans" category.
64 Deposits at banks in U. S. possessions and agencies of foreign banks.
65 Consolidated; records only transactions with U. S.
66 Excludes unilateral transfers in kind, shown in line S.
67 Corporate securities, security credit, and acceptances.
68 Direct investments, unidentified assets, IMF holdings of special U. S. notes, and miscellaneous deposits.
69 Convertible foreign currencies held by U. S. Monetary Authorities.
70 Security credit, bank loans n.e.c., and other loans (consisting of loans from U. S. Government and acceptances).
71 Direct investments, foreign currency and deposits held by U. S. domestic sectors, and other liabilities.
72 "Errors and omissions" in U. S. balance-of-payments statement.
73 Grants in the form of goods and services by U. S. Government and private individuals and institutions.
74 For detail by subsector, see Supplement No. 5.
75 Table 8E is derived partly from national income data and partly from the data underlying the Treasury Dept. cash budget; discrepancy (line i) represents differences in treatment between these two sources of information. Lines B and D through M are from national income; since line C is profit tax payments rather than accruals, line N is Federal surplus in national income accounts plus excess of profit tax receipts over accruals.
Net cash borrowing in Treasury cash budget corresponds closely to

accruals.

Net cash borrowing in Treasury cash budget corresponds closely to lines Y+c-k. Cash deficit is net cash borrowing less line S except for minor differences in treatment. Lines T, W, g, and h are components of outgo in cash budget except for small amounts included in cash receipts.

Lines O and b are imputed transactions not recorded in either national income accounts or Treasury cash budget.

NOTE.—"Liabilities" covers equity as well as debt claims. For descriptions of sectors, of capital expenditures, and of financial transaction categories, see notes to corresponding items in Tables 1, 2, and 3, pp. 984, 985, 987, and "Technical Notes," pp. 846-59 of BULLETIN for August 1959. For discussion of saving and investment concepts, see p. 834 of BULLETIN for August 1959.

Back data available in Flow-of-Funds Supplement No. 5.

A=Assets, L=Liabilities.

¹ Lines identified alphabetically correspond to lines in Table 5; unlettered lines indicate detail not shown in Table 5.

² Consolidated account for monetary authorities (Federal Reserve System, ESF, and Treasury currency accounts) and commercial banks.

3 Mutual savings banks, savings and loan associations, and credit unions.

4 Life and nonlife insurance companies and private pension plans. ⁵ Finance companies, open-end investment companies, security brokers and dealers, banks in U. S. territories and possessions, and U.S. agencies of foreign banks.

6 Changes in amounts outstanding for year-end dates do not agree with corresponding flows for some categories. See pp. 851-59 of BUILETIN for August 1959.
7 Demand deposit liabilities of banking system are net of F. R. Float and cash items in process of collection as reported by commercial banks. Sum of sector holdings (partly on holder-record basis) differs from liability total mainly because of mail float (checks in transit from drawers to drawees).
8 At commercial and mutual savings banks and the Postal Savings System.

9 Shares in savings and loan associations and credit unions.

10 Consumer-held only; includes accrued interest. Savings bonds held by other sectors included in Federal obligations category.

11 Estimated as equal to reserves against life insurance policies and supplementary contracts and policy dividend accumulations.

12 Private pension plans and railroad and govt, employee retirement funds. Estimated as equal to reserves of pension plans administered by life insurance companies and assets of other private plans and of railroad and govt. employee retirement funds.

13 Excludes Federal debt held by Federal agencies, consumer-held savings bonds, special notes issued to IMF, and currency items in public debt; includes Federal agency debt and accrued interest on Treasury bills and on savings bonds (other than consumer-held).

14 Loans from banks for purchasing or carrying securities and customer debit and net free credit balances with security brokers.

15 Mainly commercial, industrial, and agricultural loans (other than open market paper and CCCguaranteed loans); includes loans to foreign banks, loans to individuals (other than consumer credit), and other loans. Gross of valuation reserves. Excludes loans to commercial banks.

16 Mainly Federal Government loans (other than mortgages), CCC-guaranteed loans, open market paper, finance company loans to business, and policy loans on life insurance.

Note.—For further descriptions, see "Technical Notes," pp. 846-57 of Bulletin for August 1959. Back data available in Flow-of-Funds Supplement No. 5.

[†] See p. 1072 note †.

1 Alphabetic designations of categories correspond to those in Table 3.

2 Demand deposit liabilities of banking system are net of F. R. float and cash items in process of collection as reported by commercial banks. Sum of sector holdings (partly on holder-record basis) differs from liability total mainly because of mail float (checks in transit from drawers

to drawees). See Table 8(G), lines d-1, for sector allocation of demand deposit and currency liability on a net bank-record basis.

³ Consumer-held only; includes accrued interest. Savings bonds held by other sectors included in Federal obligations category.

For other notes see p. 1067.

† See p. 1072, note †.

1 Lines identified alphabetically correspond to lines in Table 4 (A); unlettered lines indicate detail not shown in Table 4.

2 Excludes proprietors' net investment in noncorporate business for which no amount outstanding is available.

3 Consumer-held only; includes accrued interest, and armed forces leave bonds prior to 1954.

⁴ At estimated market price. Annual changes differ from flow figures shown in Table 4 (A), which reflect only net funds put into securities.

⁵ Predominantly loans on insurance policies.

NOTE.—Definitions of sectors and transaction categories are given in "Technical Notes," pp. 846-59 of the BULLETIN for August 1959.

Back data available in Flow-of-Funds Supplement No. 5.

Notes to Table 7 (cont.).

4 For sector assets and liabilities for each instrument, see Tables 6 and 8 and Supplement No. 5.

5 Mainly time deposits of State and local governments, corporate businesses, and savings institutions.

6 Includes life insurance issued by fraternal orders not shown separately. Assets in these categories shown as consumer holdings.

7 Beginning with 1951, direct marketable issues maturing within one year; prior to 1951, issues maturing or callable within one year. Includes savings notes prior to their retirement in 1956.

§ At market value.

§ No amounts included for corporate stock.

10 Includes corporate stock at market value.

11 Excludes loans to domestic commercial banks. Consists of mortgages, consumer credit, security credit, other loans, and bank loans, n.e.c. Gross of valuation reserves.

12 Discontinuity in level of series; change from 1960 inconsistent with flows shown in other tables.

Note.—For descriptions of sectors and of transaction categories see "Technical Notes," pp. 846–59 of the Bulletin for August 1959.

Back data available in Flow-of-Funds Supplement No. 5.

8 Construction loans.

9 Mainly loans from finance companies, commercial paper and Government loans.

10 Direct investments of foreign affiliates.

11 Federal taxes on profits.

Note.—Definitions of sectors and transaction categories are given in "Technical Notes." pp. 846-59 of the Bulletin for August 1959.

Back data available in Flow-of-Funds Supplement No. 5.

Details may not add to totals because of rounding.

Lines identified alphabetically correspond to lines in Table 4(B)-(D); unlettered lines indicate detail not shown in Table 4.
 Includes equity in Federal land banks not shown separately.
 Excludes proprietors' net investment for which amounts outstanding are not estimated.
 Excludes CCC-guaranteed loans. See p. 840 of the BULLETIN for August 1959.
 Government loans; excludes CCC loans.
 Mainly REA and other loans from Federal Government and loans from finance companies.
 Foreign currency and deposits and direct investments abroad.

¹ Lines that are identified alphabetically correspond to lines in Table 4(E) and (F); unlettered lines indicate detail not shown in Table 4.
2 Prior to 1950, includes small amounts of savings and loan shares not shown separately.
3 Mainly farm mortgages.
4 Silver bullion held at cost in account of Treasurer of the United States

⁴ Silver bullion held at cost in account of Treasure.

5 Prepayments and advances to corporations.

6 Mainly Subscriptions to International Monetary Fund and International Bank for Reconstruction and Development; capital stock of Exchange Stabilization Fund; and holdings of foreign cash assets.

7 Prior to 1954, includes armed forces leave bonds.

8 Includes accrued interest.

9 Excludes Federal debt held by Federal agencies, consumer-held savings bonds, special notes issued to IMF, and currency items in public debt; includes Federal agency debt and accrued interest on Treasury bills and on savings bonds (other than consumer-held).

¹⁰ Beginning with 1951, direct marketable issues maturing within one year; prior to 1951, issues maturing or callable within one year. Includes savings notes prior to their retirement in 1956.

11 Securities and notes issued by FNMA, Federal land banks, home loan banks, intermediate credit banks, and banks for cooperatives.

12 CCC certificates of interest and liability for CCC-guaranteed loans. See discussion on p. 840 of the BULLETIN for August 1959.

13 Payable to corporations.

14 Seigniorage on silver, deposits with Federal Government for redemption of Federal Reserve Bank notes and national bank notes, and liability of Federal Government in connection with minor coin and U.S. notes not backed by gold reserves.

15 Private equity in Government enterprises, and miscellaneous trust and deposit liabilities.

Note.—Definitions of sectors and transaction categories are in "Technical Notes," pp. 846-59 of the BULLETIN for August 1959.

Back data available in Flow-of-Funds Supplements.

¹ Lines identified alphabetically correspond to lines in Table 4(I); unlettered lines indicate detail not shown in Table 4.

unlettered lines indicate detail not shown in Table 4.

² Excludes amounts for unidentified assets (in miscellaneous category) for which estimates of amounts outstanding are not available.

³ Holdings of international institutions and foreign central banks and governments, excluding U.S.S.R. Reflects net foreign gold production (output plus net U.S.S.R. gold exports, less consumption and net increase in private holdings) as well as gold transactions with the U.S.

⁴ At estimated market value; annual changes thus differ from corresponding flows, which reflect only net funds put into securities.

⁵ Commercial paper, corporate bonds, and security credit.

⁶ Mainly direct investments in U.S., deposits with U.S. agencies of foreign banks, and notes of the International Monetary Fund.

⁷ Beginning with 1961, includes official U. S. foreign exchange holdings P Beginning with 1961, includes official U. S. foreign exchange holdings not shown separately below. Excludes amounts for corporate stock and unidentified liabilities (in miscellaneous category) for which estimates of amounts outstanding are not available.
 8 Includes security credit not shown separately.
 9 Predominantly U. S. Government loans.
 10 Includes subscriptions to IFC (1956) and IAB (1959).
 11 U. S. direct investment abroad and holdings of foreign currency.
 12 Discontinuity in level of series; change from 1960 inconsistent with flows shown in other tables.
 NOTE.—"Liabilities" cover equity as well as debt claims. Definitions of sectors and transaction categories are given in "Technical Notes," pp. 846-59 of the BULLETIN for August 1959.
 Back data available in Flow-of-Funds Supplement No. 5.

Notes to Table § (G), (G.1), and (G.2) on second preceding page.

1 Alphabetic identification of lines does not correspond to that in Table 4(G).

2 U. S. gold stock and, beginning 1961, convertible foreign currencies held by U. S. Monetary Authorities.

3 Silver and claims on Federal Government sector representing backing (other than small gold reserve) for U. S. currency other than Federal Reserve notes. See note 14 to part E of this table.

4 Change in amount outstanding beginning 1958 differs from flows due to valuation adjustment.

5 Beginning with 1951, direct marketable issues maturing within one year; prior to 1951, issues maturing or callable within one year; prior to 1951, issues maturing or callable within one year.

6 Securities and notes issued by FNMA, Federal land banks, home loan banks, intermediate credit banks, and banks for cooperatives.

7 Nonprofit organizations and rest of the world.

8 Includes CCC certificates of interest.

9 Commercial bank balances with foreign banks and branches; also Exch. Stab. Fund deposits with U. S. Treasury and foreign currency holdings not included in line B.

10 Net of Federal Reserve float and cash items in process of collection as reported by commercial banks.

11 Bank-record basis, net of bank float; differs from sector demand deposits and currency assets principally because of mail float.

12 Deposits of foreign banks and international organizations at Federal Reserve Banks, and U. S. currency held abroad.

13 Mainly consumers and corporate business sector. Includes a small amount of hypothecated deposits.

and Exchange Stabilization Fund stock held by U. S. Treasury (\$1.8 billion through 1946 and \$0.2 billion thereafter).

15 Each subsector statement is consolidated. For example, gold certificates held by Federal Reserve (a Federal Reserve asset and a Treasury gold-account liability) are excluded from assets and liabilities in monetary authorities subsector, and interbank loans and interbank deposits of commercial banks are excluded from assets and liabilities in commercial banks subsector. Debt and equity relationships between the subsectors, shown under "Excluded from consolidated sector account" in the stub for each subsector, are eliminated in derivation of consolidated account for the commercial banking and monetary authorities sector.

16 Lines B, C, and F, small amounts of foreign and industrial loans in line S and of acceptances in line Y, and Exchange Stabilization Fund deposits in line a.

deposits in line a.

17 Lines e, h, and l, and Exchange Stabilization Fund stock component

of line r.

18 Includes small amounts of nonmember bank deposits at F. R. banks

18 Includes small amounts of nonmember bank deposits at F. R. banks not shown separately below.

19 Lines I through a, except as indicated in note 16.

20 Vault cash and reserves and other balances at Federal Reserve Banks; differs from sum of lines y, z, and aa because of timing differences in recording reserve balances at Federal Reserve Banks and at member banks.

21 Lines I, k, and m; and r, except as indicated in note 17.

22 Notted against commercial bank demand deposits in deriving the commercial banking and monetary authorities sector.

Note.—Definitions of sectors and transaction categories are in "Technical Notes," pp. 846-59 of the Bulletin for August 1959.

Back data available in Flow-of-Funds Supplement No. 5.

Notes to Table § (H), (H.¹), (H.²), and (H.³) on preceding page.
† Beginning in 1955, the pension fund subsector includes estimates for multiemployer and union administered plans, resulting in small discontinuities in the insurance sector assets and liabilities and in consumer

1 Alphabetic identification of lines does not correspond to that in Table 4(H).

² Detailed subsector accounts for this sector are shown in Supplement

No. 5.

3 Time deposits held by mutual savings banks and savings and loan association shares held by credit unions.

4 Includes small amount of other loans held by mutual savings banks

not shown separately.
5 Holdings of mutual savings banks only.

6 Savings and loan association equity in, and deposits at, Federal home

6 Savings and loan association equity in, and deposits at, Federal home loan banks.
7 Bank loans, and advances from Federal home loan banks to savings and loan associations.
8 Mainly policy loans; includes small amount of open market paper.
9 Receivables from agents.
10 Mainly finance company loans to business; also loans of banks in territories and possessions and acceptances.
11 Lines N, P, and Q are liabilities of finance companies. Line O is liabilities of brokers and dealers.
12 Deposits at banks in U. S. possessions and agencies of foreign banks. Note.—Definitions of sectors and transaction categories are in "Technical Notes," pp. 346-59 of the BULLETIN for August 1959.
Back data available in Flow-of-Funds Supplement No. 5.

¹ State member bank and insured mutual savings bank figures both include, 1941 to 1959 inclusive, 3 member mutual savings banks not included in the total for commercial banks; and subsequent figures reflect the withdrawal of 1 from membership in 1960 and 1 in 1961. State member bank figures also include, since 1954, 1 noninsured trust company without deposits.

² Series revised as of June 30, 1947. The revision resulted in a net addition of 115 banks and 9 branches.

³ Exclusive of liquidations incident to succession, conversion, and absorption of banks.

⁴ Exclusive of conversions of State member banks into national banks

that are shown separately under conversions.

⁵ Exclusive of insured nonmember banks admitted to Federal Reserve membership.

⁶ Banking facilities (other than branches) that are provided at military and other Government establishments through arrangements made by the Treasury Department.

NOTE.—Beginning with 1959, figures include all banks in Alaska and Hawaii. One national bank in Alaska with no branches and 1 in the Virgin Islands with 1 branch (2 in 1961) have been included in this series sions are excluded. sions are excluded.

¹ Puerto Rico and the Virgin Islands assigned to the N. Y. District for purposes of Regulation J, "Check Clearing and Collection." Member branches in Puerto Rico and all except 2 in the Virgin Islands are branches of N. Y. banks,

NOTE.—Includes all commercial banking offices in the United States,

Puerto Rico, and the Virgin Islands on which checks are drawn, including 275 banking facilities. Number of banks and branches differs from that in the preceding table because this table includes banks in Puerto Rico and the Virgin Islands but excludes banks and trust companies on which no checks are drawn and I member mutual savings bank.

¹ Data for individual States represent bank holding cos. having subsidiary banks in the respective States rather than registered bank holding cos, whose principal offices are located in such States. Total does not equal sum of State figures because it has been corrected for duplications; that is, holding cos. that have subsidiary banks in more than one State are included in the total only once.

The 46 bank holding cos, included in the total represent only 41 separate bank groups because in 5 cases the bank group is controlled by a bank holding co. that is in turn controlled by another bank holding co. These groups are located in the following States: Fla. 1; Ga., 2; Ind., 1; and Mass., 1.

Note.—Holding companies registered pursuant to Bank Holding Company Act of 1956. The data include: (1) banks of which the bank holding cos. owned or controlled 25 per cent or more of the outstanding stock, and (2) 8 domestic commercial banks that are themselves bank holding cos. (A list showing the names and total deposits of the banks is available upon request.) The 8 banks have 67 branches and deposits aggregating \$1,848,785,000. Exclusion of these 75 banking offices and their deposits from the data in the table would reduce the percentage ratios shown in the table as follows: holding company groups to all commercial banks in 31 States—number of banking offices, from 9.3 to 8.8; deposits from 10.6 to 9.6; holding co. groups to all commercial banks in United States—number of banking offices, from 6.3 to 6.0; deposits from 8.0 to 7.2.

Financial Statistics

★ International **★**

Reported gold reserves of central banks and governments	1078
Gold production.	1079
Net gold purchases and gold stock of the United States	1080
Estimated foreign gold reserves and dollar holdings.	1081
International capital transactions of the United States	1082
U. S. balance of payments.	1091
Money rates in foreign countries.	1091
Foreign exchange rates	1093

¹ Includes gold in Exchange Stabilization Fund, which is not included in statistics on gold stock (Treasury gold) used in the F. R. statement "Member Bank Reserves, Reserve Bank Credit, and Related Items" or in the Treasury statement, "Circulation Statement of United States Money."

² For holdings of F. R. Banks only see p. 1004.

Arabia.

² Includes Canada, countries in Africa, Oceania, and Eastern Europe, and all Western European dependencies located outside Europe and Asia.

³ Proceeds from this sale invested by the IMF in U. S. Govt. securities; upon termination of the investment the IMF can reacquire the same amount of gold from the United States.
⁴ Payment to the IMF of \$344 million as increase in U. S. gold subscription less sale by the IMF of \$300 million (see also note 3).

³ Includes payment of \$344 million as increase in U. S. gold subscription to the International Monetary Fund.

⁴ Gold held under earmark at the F. R. Banks for foreign and international accounts amounted to \$12,678 million on July 31, 1962. Gold under earmark is not included in the gold stock of the United States.

¹ The first column continues the series based on a 1955 survey and reported securities transactions; the second on a survey as of Nov. 30, 1960, and reported securities transactions in Dec. Data are not available to reconcile the 2 series or to revise figures for earlier dates.

² Gold reserves are estimated.

³ In addition to other Western European countries includes—unpublished gold reserves of certain Western European countries; gold to be distributed by the Tripartite Commission for the Restitution of Monetary Gold; European Fund; and the Bank for International Settlements (the figures for the gold reserves of the BIS represent the Bank's net gold assets; see note 1 to table on gold reserves).

⁴ Includes other Latin American republics and the Inter-American Development Bank.

⁵ Includes unspecified countries in Africa, Oceania, and Eastern Europe, and all Western European dependencies located outside Europe and Asia.

⁶ Excludes gold reserves of the U. S. S. R., other Eastern European countries, and China Mainland.

Note.—Gold and short-term dollars include reported and estimated official gold reserves, and official and private short-term dollar holdings (principally deposits and U. S. Treasury bills and certificates). U. S. Govt. bonds and notes are official and private holdings of U. S. Govt. securities with an original maturity of more than 1 year.

Note.—Short-term claims are principally the following items payable on demand or with a contractual maturity of not more than 1 year: loans made to and acceptances made for foreigners; drafts drawn against foreigners where collection is being made by banks and bankers for their own account or for account of their customers in the United

States; and foreign currency balances held abroad by banks and bankers and their customers in the United States. Excludes convertible currencies held by U. S. monetary authorities.

See also Note to Table 1.

U. S. notes held by the Inter-American Development Bank.

4 Includes \$2,735 million of nonnegotiable, non-interest-bearing special U. S. notes held by international organizations.

5 Includes amounts shown in notes 3 and 4.

¹ On June 24, 1962, the bank rate on advances to chartered banks was fixed at 6 per cent. Rates on loans to money market dealers will continue to be .25 of 1 per cent above latest weekly Treasury bill tender average rate but will not be more than the bank rate.

² Beginning with Apr. 1, 1959, new rediscounts have been granted at the average rate charged by banks in the previous half year. Old rediscounts remain subject to old rates provided their amount is reduced by one-eighth each month beginning May 1, 1959, but the rates are raised by 1.5 per cent for each month in which the reduction does not occur.

³ Rate shown is for advances only.

4 Rate applies to advances against commercial paper as well as against government securities and other eligible paper.

5 Beginning with June 1, 1962, the rediscount rate for commercial bank loans financing the purchase of surplus agricultural commodities under U. S. Law 480 was reduced from 6 to 3 per cent.

6 On Mar. 8, 1962 the discount rate had been reduced to 5.5 per cent. NOTE.—Rates shown are mainly those at which the central bank either discounts or makes advances against eligible commercial paper and/or government securities for commercial banks or brokers. For countries with more than one rate applicable to such discounts or advances, the rate shown is the one at which it is understood the central bank transacts the largest proportion of its credit operations. Other rates for some of these countries follow:

Argentina—3 and 5 per cent for certain rural and industrial paper, depending on type of transaction;

Brazil—8 per cent for secured paper and 4 per cent for certain agricultural

paper; Colombia—3.5 per cent for agricultural and industrial development paper of up to 150 days, 3 per cent for economic development paper of up to 5 years, and 2 per cent for specific small business, cooperative and employee paper; Costa Rica—5 per cent for paper related to commercial transactions (rate shown is for agricultural and industrial paper); Cuba—5.5, per cent for sugar loans and 5 per cent for loans secured by national public securities; Ecuador—6 per cent for hank accentence for commercial transactions.

national public securities; Ecuador—6 per cent for bank acceptances for commercial purposes; Indonesta—various rates depending on type of paper, collateral, commodity involved, etc.; Japan—penalty rates (exceeding the basic rate shown) for borrowings from the Central bank in excess of an individual bank's quota; Peru—8 per cent for agricultural, industrial and mining paper; and Venezuela—4 per cent for rediscounts of certain agricultural paper and for advances against government bonds or gold and 5 per cent on advances against securities of Venezuelan companies.
