751 ANATOMY OF THE MEDIUM-TERM NOTE MARKET

Over the past decade, medium-term notes (MTNs) have emerged as major sources of funding for U.S. and foreign corporations, federal agencies, supranational institutions, and sovereign countries. This article discusses the history and economics of the MTN market, analyzes statistics on MTNs collected by the Federal Reserve, and reviews recent developments in the U.S. and Euro-MTN markets.

769 INDUSTRIAL PRODUCTION AND CAPACITY UTILIZATION FOR MAY 1993

Industrial production increased 0.2 percent in May, a rise that matched the revised gains for March and April. Utilization of industrial capacity, at 81.6 percent, has been little changed since February.

772 STATEMENTS TO THE CONGRESS

John P. LaWare, member, Board of Governors, discusses issues associated with interstate banking and says that interstate banking promises wider household and business choices at better prices and, for our banking system, increased competitive efficiency, the elimination of unnecessary costs associated with the delivery of banking services, and risk reduction through diversification, before the Subcommittee on Financial Institutions Supervision, Regulation and Deposit Insurance of the House Committee on Banking, Finance and Urban Affairs, June 22, 1993.

777 Richard F. Syron, President, Federal Reserve Bank of Boston, presents remarks on issues related to the ways that interstate banking can improve credit flows, and says that current restrictions on interstate banking and branching are anachronistic, before the Subcommittee on Financial Institutions Supervision, Regulation and Deposit Insurance of the House Committee on Banking, Finance and Urban Affairs, June 22, 1993.

781 Governor LaWare discusses recent steps taken by the Federal Reserve, with the other federal bank regulatory agencies, to reduce regulatory burden on financial institutions and to facilitate an increased flow of credit, and says that the Federal Reserve is highly sensitive to the matter of regulatory burden and seeks to avoid imposing unneccessary or ineffective requirements or constraints on the banking system, before the Subcommittee on Financial Institutions Supervision, Regulation and Deposit Insurance of the House Committee on Banking, Finance and Urban Affairs, June 29, 1993.

788 ANNOUNCEMENTS

Request for nominations for appointments to the Consumer Advisory Council.

Availability of services to facilitate the sameday settlement of checks.

Availability of selected statistical data on computer diskettes.

Proposed interagency rule to amend regulations regarding real estate appraisals.

Publication of the Bank Holding Company Supervision Manual.

793 LEGAL DEVELOPMENTS

Various bank holding company, bank service corporation, and bank merger orders; and pending cases.

Anatomy of the Medium-Term Note Market

Leland E. Crabbe of the Board's Division of Research and Statistics prepared this article. Joyce A. Payne, administrator of the Board's survey of issuers of medium-term notes, provided assistance. Michael Schoenbeck provided research assistance.

Over the past decade, medium-term notes (MTNs) have emerged as a major source of funding for U.S. and foreign corporations, federal agencies, supranational institutions, and sovereign countries. U.S. corporations have issued MTNs since the early 1970s. At that time, the market was established as an alternative to short-term financing in the commercial paper market and long-term borrowing in the bond market; thus the name "medium term." Through the 1970s, however, only a few corporations issued MTNs, and by 1981 outstandings amounted to only about \$800 million. In the 1980s, the U.S. MTN market evolved from a relatively obscure niche market dominated by the auto finance companies into a major source of debt financing for several hundred large corporations. In the 1990s, the U.S. market has continued to attract a diversity of new borrowers, and outside the United States, the Euro-MTN market has grown at a phenomenal rate. By year-end 1992, outstanding MTNs in domestic and international markets stood at an estimated \$283 billion (table 1).

 Size of the worldwide medium-term note market, year-end 1992
 Billions of dollars

| Market sector | Amount outstanding, year-end 1992 |

Most MTNs are noncallable, unsecured, senior debt securities with fixed coupon rates and investment-grade credit ratings. In these features, MTNs are similar to investment-grade corporate bonds. However, they have generally differed from bonds in their primary distribution process. MTNs have traditionally been sold on a best-efforts basis by investment banks and other broker-dealers acting as agents. In contrast to an underwriter in the conventional bond market, an agent in the MTN market has no obligation to underwrite MTNs for the issuer, and the issuer is not guaranteed funds. Also, unlike corporate bonds, which are typically sold in large, discrete offerings, MTNs are usually sold in relatively small amounts either on a continuous or on an intermittent basis.

Borrowers with MTN programs have great flexibility in the types of securities they may issue. As the market for MTNs has evolved, issuers have taken advantage of this flexibility by issuing MTNs with less conventional features. Many MTNs are now issued with floating interest rates or with rates that are computed according to unusual formulas tied to equity or commodity prices. Also, many include calls, puts, and other options. Furthermore, maturities are not necessarily "medium term"they have ranged from nine months to thirty years and longer. Moreover, like corporate bonds, MTNs are now often sold on an underwritten basis, and offering amounts are occasionally as large as those of bonds. Indeed, rather than denoting a narrow security with an intermediate maturity, an MTN is more accurately defined as a highly flexible debt instrument that can easily be designed to respond to market opportunities and investor preferences.

The emergence of the MTN market has transformed the way that corporations raise capital and that institutions invest. In recent years, this transformation has accelerated because of the development of derivatives markets, such as swaps, options, and futures, that allow investors and borrowers to transfer risk to others in the financial system who have different risk preferences. A

growing number of transactions in the MTN market now involve simultaneous transactions in a derivatives market.

This article discusses the history and economics of the MTN market, analyzes statistics on MTNs collected by the Federal Reserve, and reviews recent developments in the U.S. and Euro-MTN markets.¹

BACKGROUND OF THE MTN MARKET²

General Motors Acceptance Corporation (GMAC) created the MTN market in the early 1970s as an extension of the commercial paper market. To improve their asset-liability management, GMAC and the other auto finance companies needed to issue debt with a maturity that matched that of their auto loans to dealers and consumers. However, underwriting costs made bond offerings with short maturities impractical, and maturities on commercial paper cannot exceed 270 days. The auto finance companies therefore began to sell MTNs directly to investors. In the 1970s, the growth of the market was hindered by illiquidity in the secondary market and by securities regulations requiring approval by the Securities and Exchange Commission (SEC) of any amendment to a registered public offering. The latter, in particular, increased the costs of issuance significantly because borrowers had to obtain the approval of the SEC each time they changed the posted coupon rates on their MTN offering schedule. To avoid this regulatory hurdle, some corporations sold MTNs in the private placement market.

In the early 1980s, two institutional changes set the stage for rapid growth of the MTN market. First, in 1981 major investment banks, acting as agents, committed resources to assist in primary issuance and to provide secondary market liquidity. By 1984, the captive finance companies of the three large automakers had at least two agents for their MTN programs. The ongoing financing requirements of these companies and the competition among agents established a basis for the market to develop. Because investment banks stood ready to buy back MTNs in the secondary market, investors became more receptive to adding MTNs to their portfolio holdings. In turn, the improved liquidity and consequent reduction in the cost of issuance attracted new borrowers to the market.

Second, the adoption by the SEC of Rule 415 in March 1982 served as another important institutional change. Rule 415 permits delayed or continuous issuance of so-called shelf registered corporate securities. Under shelf registrations, issuers register securities that may be sold for two years after the effective date of the registration without the requirement of another registration statement each time new offerings are made. Thus, shelf registration enables issuers to take advantage of brief periods of low interest rates by selling previously registered securities on a moment's notice. In contrast, debt offerings that are not made from shelf registrations are subject to a delay of at least forty-eight hours between the filing with the SEC and the subsequent offering to the public.

The ability of borrowers to sell a variety of debt instruments with a broad range of coupons and maturities under a single prospectus supplement is another advantage of a shelf-registered MTN program. Indeed, a wide array of financing options have been included in MTN filings.³ For example, MTN programs commonly give the borrower the choice of issuing fixed- or floating-rate debt.⁴ Furthermore, several "global" programs allow for placements in the U.S. market or in the Euromarket. Other innovations that reflect the specific funding needs of issuers include MTNs collateralized by mortgages issued by thrift institutions,

^{1.} The Federal Reserve Board conducts a survey of borrowing by U.S. corporations in the public MTN market, the largest sector of the worldwide market. The Federal Reserve collects these data to improve its estimates of new securities issues of U.S. corporations, as published in the Federal Reserve Bulletin, and to improve estimates of corporate securities outstanding, as shown in the flow of funds accounts.

^{2.} Material in this and the next two sections was originally presented in "Corporate Medium-Term Notes," Leland Crabbe, *The Continental Bank Journal of Applied Corporate Finance*, vol. 4 (Winter 1992), pp. 90–102.

^{3.} For example, MTNs have been callable, putable, and extendible; they have had zero coupons, step-down or step-up coupons, or inverse floating rates; and they have been foreign currency denominated or indexed, and commodity indexed.

^{4.} The most common indexes for floating-rate MTNs are the following: the London interbank offered rate (LIBOR), commercial paper, Treasury bills, federal funds, and the prime rate. MTN programs typically give the issuer the option of making floating-rate interest payments monthly, quarterly, or semiannually.

| Medium-term notes | Yield spread of MTN over | Treasury securities | | | |
|------------------------|-----------------------------|------------------------------------|-----------|--------------------|--|
| Maturity range | Yield (percent) | Treasury securities (basis points) | Maturity | Yield (percent) | |
| 9 months to 12 months | (¹) | (1) | 9 months | 3.35 | |
| 12 months to 18 months | (¹) | (1) | 12 months | 3.50 | |
| 18 months to 2 years | (1) | (1) | 18 months | 3.80 | |
| 2 years to 3 years | 4.35 | 35 | 2 years | 4.00 | |

2. An offering rate schedule for a medium-term note program

equipment trust certificates issued by railways, amortizing notes issued by leasing companies, and subordinated notes issued by bank holding companies. Another significant innovation has been the development of asset-backed MTNs, a form of asset securitization used predominantly to finance trade receivables and corporate loans. This flexibility in types of instruments that may be sold as MTNs, coupled with the market timing benefits of shelf registration, enables issuers to respond readily to changing market opportunities.

In the early and mid-1980s, when finance companies dominated the market, most issues of MTNs were fixed rate, noncallable, and unsecured, with maturities of five years or less. In recent years, as new issuers with more diverse financing needs have established programs, the characteristics of new issues have become less generic. For example, maturities have lengthened as industrial and utility companies with longer financing needs have entered the market. Indeed, frequent placements of notes with thirty-year maturities have made the designation "medium term" something of a misnomer.

MECHANICS OF THE MARKET

The process of raising funds in the public MTN market usually begins when a corporation files a shelf registration with the SEC.⁵ Once the SEC

declares the registration statement effective, the borrower files a prospectus supplement that describes the MTN program. The amount of debt under the program generally ranges from \$100 million to \$1 billion. After establishing an MTN program, a borrower may enter the MTN market continuously or intermittently with large or relatively small offerings. Although underwritten corporate bonds may also be issued from shelf registrations, MTNs provide issuers with more flexibility than traditional underwritings in which the entire debt issue is made at one time, typically with a single coupon and a single maturity.

The registration filing usually includes a list of the investment banks with which the corporation has arranged to act as agents to distribute the notes to investors. Most MTN programs have two to four agents. Having multiple agents encourages competition among investment banks and thus lowers financing costs. The large New York-based investment banks dominate the distribution of MTNs.

Through its agents, an issuer of MTNs posts offering rates over a range of maturities: for example, nine months to one year, one year to eighteen months, eighteen months to two years, and annually thereafter (see table 2). Many issuers post rates as a yield spread over a Treasury security of comparable maturity. The relatively attractive yield spreads posted at the maturities of three, four, and five years shown in table 2 indicate that the issuer desires to raise funds at these maturities. The investment banks disseminate this offering rate information to their investor clients. When an investor expresses interest in an MTN offering, the agent contacts the issuer to obtain a confirmation of

^{1.} No rate posted.

^{5.} SEC-registered MTNs have the broadest market because they have no resale or transfer restrictions and generally fit within an investor's investment guidelines.

the terms of the transaction. Within a maturity range, the investor has the option of choosing the final maturity of the note sale, subject to agreement by the issuing company. The issuer will lower its posted rates once it raises the desired amount of funds at a given maturity. In the example in table 2, the issuer might lower its posted rate for MTNs with a five-year maturity to 40 basis points over comparable Treasury securities after it sells the desired amount of debt at this maturity. Of course, issuers also change their offering rate scales in response to changing market conditions. Issuers may withdraw from the market by suspending sales or, alternatively, by posting narrow offering spreads at all maturity ranges. The proceeds from primary trades in the MTN market typically range from \$1 million to \$25 million, but the size of transactions varies considerably.6 After the amount of registered debt is sold, the issuer may "reload" its MTN program by filing a new registration with the SEC.

Although MTNs are generally offered on an agency basis, most programs permit other means of distribution. For example, MTN programs usually allow the agents to acquire notes for their own account and for resale at par or at prevailing market prices. MTNs may also be sold on an underwritten basis. In addition, many MTN programs permit the borrower to bypass financial intermediaries by selling debt directly to investors.

THE ECONOMICS OF MTNS AND CORPORATE BONDS

In deciding whether to finance with MTNs or with bonds, a corporate borrower weighs the interest

cost, flexibility, and other advantages of each security.⁷ The growth of the MTN market indicates that MTNs offer advantages that bonds do not. However, most companies that raise funds in the MTN market have also continued to issue corporate bonds, suggesting that each form of debt has advantages under particular circumstances.

Offering Size, Liquidity, and Price Discrimination

The amount of the offering is the most important determinant of the cost differential between the MTN and corporate bond markets. For large, standard financings (such as \$300 million of straight debt with a ten-year maturity) the all-in interest cost to an issuer of underwritten corporate bonds may be lower than the all-in cost of issuing MTNs. This cost advantage arises from economies of scale in underwriting and, most important, from the greater liquidity of large issues. As a result, corporations that have large financing needs for a specific term usually choose to borrow with bonds. From an empirical point of view, the liquidity premium, if any, on small offerings has yet to be quantified. Nevertheless, the sheer volume of financing in the MTN market suggests that any liquidity premium that may exist for small offer-

^{6.} Financing strategies vary among the borrowers. Some corporate treasurers prefer to "go in for size" on one day with financings in the \$50 million to \$100 million range, reasoning that smaller offerings are more time consuming. Furthermore, a firm may be able to maintain a "scarcity value" for its debt by financing intermittently with large offerings, rather than continuously with small offerings. Other treasurers prefer to raise \$50 million to \$100 million over the course of several days with \$2 million to \$10 million drawdowns. These corporate treasurers argue that a daily drawdown of \$50 million is an indication that they should have posted a lower offering rate. In regard to the posting of offering rates, some treasurers post an absolute yield, while others post a spread over Treasuries, usually with a cap on the absolute yield. A few active borrowers typically post rates daily in several maturity sectors; less active borrowers post only in the maturity sector in which they seek financing and suspend postings when they do not require funds.

^{7.} Apart from the distribution process, MTNs have several less significant features that distinguish them from underwritten corporate bonds. First, MTNs are typically sold at par, while traditional underwritings are frequently sold at slight discounts or premiums to par. Second, the settlement for MTNs is in same-day funds, whereas corporate bonds generally settle in next-day funds. Although MTNs with long maturities typically settle five business days after the trade date (as is the convention in the corporate bond market), MTNs with short maturities sometimes have a shorter settlement period.

Finally, semiannual interest payments to noteholders are typically made on a fixed cycle without regard to the offering date or the maturity date of the MTN; in contrast, corporate bonds typically pay interest on the first or fifteenth day of the month at six-month and annual intervals from the date of the offering. The interest payment convention in the MTN market usually results in a short or a long first coupon and in a short final coupon, Consider, for example, an MTN program that pays interest on March 1 and September 1 and at maturity of the notes. A \$100,000 MTN sold on May 1 with a 9 percent coupon and a fifteen-month maturity from such a program would distribute a "short" first coupon of \$3,000 on September 1, a full coupon of \$4,500 on March 1, and a "short" final coupon of \$3,750 plus the original principal on August 1 of the following year. Like corporate bonds, interest on fixed-rate MTNs is calculated on the basis of a 360-day year of twelve 30-day months.

ings is not a significant deterrent to financing. According to market participants, the interest cost differential between the markets has narrowed in recent years as liquidity in the MTN market has improved. Many borrowers estimate that the premium is now only about 5 to 10 basis points.⁸

Furthermore, many borrowers believe that financing costs are slightly lower in the MTN market because its distribution process allows borrowers to price discriminate. Consider a stylized example of a company that needs to raise \$100 million. With a bond offering, the company may have to raise the offering yield significantly, for example, from 6 percent to 6.25 percent, to place the final \$10 million with the marginal buyer. In contrast, with MTNs the company could raise \$90 million by posting a yield of 6 percent; to raise the additional \$10 million, the company could increase its MTN offering rates or issue at a different maturity. Consequently, because all of the debt does not have to be priced to the marginal buyer, financing costs can be lower with MTNs.

The Flexibility of MTNs

Even if conventional bonds enjoy an interest cost advantage, this advantage may be offset by the flexibility that MTNs afford. Offerings of investment-grade straight bonds are clustered at standard maturities of two, three, five, seven, ten, and thirty years. Also, because the fixed costs of underwritings make small offerings impractical, corporate bond offerings rarely amount to less than \$100 million. These institutional conventions impede corporations from implementing a financing policy of matching the maturities of assets with those of liabilities. By contrast, drawdowns from MTN programs over the course of a month typically amount to \$30 million, and these drawdowns frequently have different maturities and special features that are tailored to meet the needs of the borrower. This flexibility of the MTN market allows companies to match more closely the maturities of assets and liabilities.

The flexibility of continuous offerings also plays a role in a corporation's decision to finance with MTNs. With MTNs, a corporation can "average out" its cost of funds by issuing continuously rather than coming to market on a single day. Therefore, even if bond offerings have lower average yields, a risk-averse borrower might still elect to raise funds in the MTN market with several offerings in a range of \$5 million to \$10 million over several weeks, rather than with a single \$100 million bond offering.

The flexibility of the MTN market also allows borrowers to take advantage of funding opportunities. By having an MTN program, an issuer can raise a sizable amount of debt in a short time; often, the process takes less than half an hour. Bonds may also be sold from a shelf registration, but the completion of the transaction may be delayed by the arrangement of a syndicate, the negotiation of an underwriting agreement, and the "pre-selling" of the issue to investors. Furthermore, some corporations require that underwritten offerings receive prior approval by the president of the company or the board of directors. In contrast, a corporate treasurer may finance with MTNs without delay and at his or her discretion.9

Discreet Funding with MTNs

The MTN market also provides corporations with the ability to raise funds discreetly because the issuer, the investor, and the agent are the only market participants that have to know about a primary transaction. In contrast, the investment community obtains information about underwritten bond offerings from a variety of sources.

Corporations often avoid the bond market in periods of heightened uncertainty about interest rates and the course of the economy, such as the period after the 1987 stock market crash. Underwritings at such times could send a signal of finan-

^{8.} Commissions to MTN agents typically range from 0.125 percent to 0.75 percent of the principal amount of the note sale, depending on the stated maturity and the credit rating assigned at the time of issuance. Fees to underwriters of bond offerings are somewhat higher.

^{9.} The administrative costs may be lower with MTNs than with bonds. After the borrower and the investor have agreed to the terms of a transaction in the MTN market, the borrower files a one-page pricing supplement with the SEC, stating the sale date, the rate of interest, and the maturity date of the MTN. In contrast, issuers of corporate bonds sold from shelf registrations are required to file a prospectus supplement.

cial distress to the market. Similarly, corporations in distressed industries, such as commercial banking in the second half of 1990, can use the MTN market to raise funds quietly rather than risk negative publicity in the high profile bond market. Thus, during periods of financial turmoil, the discreet nature of the MTN market makes it an attractive alternative to the bond market.

"Reverse Inquiry" in the MTN market

Another advantage of MTNs is that investors often play an active role in the issuance process through the phenomenon known as "reverse inquiry." For example, suppose an investor desires to purchase \$15 million of A-rated finance company debt with a maturity of six years and nine months. While such a security may not be available in the corporate bond market, the investor may be able to obtain it in the MTN market through reverse inquiry. In this process, the investor relays the inquiry to an issuer of MTNs through the issuer's agent. If the issuer finds the terms of the reverse inquiry sufficiently attractive, it may agree to the transaction even if it was not posting rates at the maturity that the investor desires.

According to market participants, trades that stem from reverse inquiries account for a significant share of MTN transactions. Reverse inquiry not only benefits the issuer by reducing borrowing costs but also allows investors to use the flexibility of MTNs to their advantage. In response to investor preferences, MTNs issued under reverse inquiry often include embedded options and frequently pay interest according to unusual formulas. This responsiveness of the MTN market to the needs of investors is one of the most important factors driving the growth and acceptance of the market.

THE FEDERAL RESERVE BOARD'S SURVEY OF U.S. CORPORATE MTNS

The Federal Reserve surveys U.S. corporations with MTN programs. These companies provide data on a confidential basis on the amount of MTNs they issue; respondents report monthly, quarterly, or annually depending on how active they are in the market. At year-end, all MTN issuers are asked to

provide data on the amount of their outstandings. The data on gross issuance begin in January 1983, and the data on outstandings have been collected since year-end 1989. The Federal Reserve obtains information on new programs from announcements of SEC Rule 415 registrations and contacts with MTN agents.

Because the participation rate in the Federal Reserve survey is 100 percent, it provides an accurate measure of the volume of MTN financing by U.S. corporations in the U.S. public market. However, while the U.S. corporate sector is the largest segment of the MTN market, MTNs have been issued in other markets and by non-U.S. corporations. For example, several U.S. corporations have issued MTNs in the Euro-market. Also, the survey does not include MTNs issued in the U.S. public market by government-sponsored agencies, such as the Federal National Mortgage Association, by supranational institutions, and by non-U.S. corporations. Furthermore, although the database includes MTNs issued by bank holding companies, it does not include deposit notes and bank notes offered by banks because these securities are exempt from SEC registration. Perhaps most important, the database does not include privately placed MTNs. The private placement market is particularly attractive to issuers who wish to gain access to U.S. investors without having to obtain SEC approval for a public offering. According to MTN agents, non-U.S. corporations are the largest borrowers in the market for privately placed MTNs. Because the financing costs are usually lower in the public market than in the less liquid private market, most U.S. corporations choose to issue public, SEC-registered MTNs.

Issuance Volume and Industry of the Issuers

From 1983 through 1992, the volume of MTN issuance in the public market increased in each year, rising from \$5.5 billion in 1983 to \$74.2 billion in 1992, and totaled \$330 billion over the ten-year period (table 3). Similarly, the number of borrowers increased from 12 in 1983 to 208 in 1992, and totalled 402 corporations for the period (table 3).

Borrowers in the MTN market span a wide array of industry groups. In the financial sector, major borrowers include auto finance companies, bank

holding companies, business and consumer credit institutions, and securities brokers. In the nonfinancial sector, participants in the MTN market include utilities, telephone companies, manufacturers, service firms, and wholesalers and retailers. Within industry groups, the auto finance companies have been the heaviest borrowers, raising \$88 billion over the period. In relative terms, however, issuance by auto finance companies declined from an 87 percent share of the MTN market in 1983 to 18 percent in 1992.

In the early to mid-1980s, financial companies dominated the MTN market. Indeed, in 1983, only two nonfinancial companies issued MTNs, and they accounted for less than 1 percent of the issuance volume. In recent years, however, nonfinancial companies have increased their share of the market, and from 1990 through 1992, they accounted for about one-third of MTN issuance.

The increase in the volume of MTN issuance reflects a dramatic increase in the number of new borrowers in the market. In each year from 1984 through 1992, at least twenty companies issued

MTNs for the first time, and most of the new entrants have been nonfinancial companies. In 1991, for example, sixty-six new borrowers entered the market, of which fifty-five were nonfinancial companies. As a result of this trend, in each year beginning in 1990, the total number of nonfinancial firms issuing MTNs has exceeded the total number of financial issuers.

The Volume of Corporate MTNs Outstanding and the Components of Net Borrowing

Outstanding MTNs and issuer use of MTN programs have increased sharply since 1989. In the aggregate, outstanding MTNs increased from \$76 billion in 1989 to \$176 billion in 1992 (table 4). Over this period, outstandings of nonfinancial firms increased from \$18.5 billion to \$67.6 billion, while outstandings of financial corporations increased from \$57.5 billion to \$108.2 billion. For individual firms, outstandings of MTNs averaged \$504 million in 1992, compared with \$350 million in 1989.

The data on net borrowing, that is, the year-overyear change in outstandings, can be dissected to determine the sources of growth in the market. For the market as a whole, new entrants accounted for about one-third of net borrowing in 1990, onefourth of net borrowing in 1991, and less than one-fifth in 1992 (table 5). Thus, firms that had already issued MTNs accounted for most of the recent growth in the market. In the financial sector, in particular, new entrants accounted for only a small proportion of the growth, simply because a large share of the financial firms that could enter the MTN market did so in the 1980s. Among nonfinancial firms, in contrast, new entrants have continued to fuel a significant share of the growth in the market.

Credit Ratings

The corporations issuing MTNs have had high credit ratings. Since 1983, more than 99 percent of MTNs have been rated investment grade (Baa or higher) at the time of issuance (table 6). In 1992, \$51 billion of the \$74 billion in MTN offerings were rated single A, and six firms, issuing a total of \$540 million, had Ba ratings. Outstanding MTNs also tend to have high credit ratings, but not as high

as the ratings on new offerings because of the preponderance of rating downgrades in recent years. Nevertheless, 98 percent of outstanding MTNs were rated investment grade at year-end 1992 (table 7).

Maturities and Yield Spreads

Maturities on MTNs reflect the financing needs of the borrowers. Financial firms tend to issue MTNs with maturities matched to the maturity of loans made to their customers. Consequently, in the financial sector, maturities are concentrated in a range of one to five years, and only a small proportion are longer than ten years (chart 1). Nonfinancial firms, in contrast, often use MTNs to finance long-lived assets, such as plant and equipment. As a result, maturities on MTNs issued by nonfinan-

cial corporations cover a wider range, and in 1992, 25 percent to 30 percent were longer than ten years.

Yields on fixed-rate MTNs, commonly quoted as a yield spread over a Treasury security of comparable maturity, reflect the credit risk of the borrower. Other factors held constant, Baa-rated MTNs have higher yield spreads than A-rated MTNs, which in turn have higher yield spreads than Aa-rated MTNs (chart 2). Yield spreads also vary over time, particularly over the course of the business cycle. Spreads on A-rated MTNs increased from 60 basis points over Treasury securities in July 1990, a cyclical trough, to 140 basis points in January 1991. 10

The Relative Size of the MTN market

The MTN market accounts for a significant share of borrowing by U.S. corporations. One measure of the size of the market is the ratio of outstanding MTNs to the amount of outstanding public debt (MTNs plus public corporate bonds). According to this definition of market share, MTNs accounted for 16 percent of public corporate debt in 1992, compared with 9 percent in 1989 (table 8). This ratio understates the size of the MTN market, however, because the market is still relatively new, and outstandings are growing rapidly.

An alternative measure of the size of the market is the volume of investment-grade MTN issuance as a percentage of total investment-grade debt issuance (MTNs plus underwritten straight bonds). By this definition, the share of investment-grade debt issued as MTNs rose from 18 percent in 1983 to a peak of 42 percent in 1990 (table 9). In 1992, the

ratio fell to 37 percent, a decline that mainly reflects the heavy volume of refinancing in the corporate bond market, especially in the nonfinancial sector. This ratio of debt issuance may overestimate the size of the MTN market because MTNs typically have shorter maturities than corporate bonds.

MTNs represent an increasingly important source of credit to nonfinancial corporations, as companies have shifted funding from alternative credit markets. In general, nonfinancial corporations that borrow in the MTN market have access to other major credit markets: corporate bonds, commercial paper, bank loans, and privately placed bonds. From 1989 through 1992, net borrowing by nonfinancial corporations in the MTN market increased \$49 billion, while borrowing in the other four markets increased an estimated \$102 billion (table 10). Notably, corporate borrowing in the public bond market rose \$100 billion, while borrowing at banks fell \$35 billion. The shift to longterm financing (MTNs and bonds) over this period is a typical, cyclical phenomenon that occurs in periods of slow economic growth and falling longterm interest rates. However, some of the growth of the MTN market reflects a secular decline in the role of banks as financial intermediaries.

RECENT DEVELOPMENTS IN THE MTN MARKET

In recent years several changes have occurred in the MTN market as a result of innovations in other capital markets. Among the most important changes in the MTN market are the increasing use of "structured" MTNs, the increasing participation by banking organizations in the market, and the development of a system for book-entry clearing and settlement of MTN transactions. Also, foreign corporations have begun to use the MTN market more frequently since the adoption of SEC Rule 144A in April 1990.

Structured MTNs

In recent years, an increasing share of MTNs have been issued as part of structured transactions. In a structured MTN, a corporation issues an MTN and simultaneously enters into one or several swap agreements to transform the cash flows that it is obligated to make. The simplest type of structured MTN involves a "plain vanilla" interest rate swap. In such a financing, a corporation might issue a three-year, floating-rate MTN that pays LIBOR plus a premium semiannually. At the same time, the corporation negotiates a swap transaction in which it agrees to pay a fixed rate of interest semiannually for three years in exchange for receiving LIBOR from a swap counterparty. As a result of the swap, the borrower has synthetically created a fixed-rate note because the floating-rate payments are offsetting. (See the box for an outline of this transaction.)

At first glance, structured transactions seem needlessly complicated. A corporation could simply issue a fixed-rate MTN. However, as a result of the swap transaction, the corporation may be able

A Structured Transaction in the Medium-Term Note Market Involving an Interest Rate Swap

At time 0, an MTN issuer sells a three-year, \$50 million MTN that pays LIBOR plus 15 basis points semiannually. At the same time, the issuer agrees to an interest rate swap.

Payment obligations

The combination of the swap and the MTN result in the following semiannual cash flows for the MTN issuer:

Cash flows

- (LIBOR + 15 basis points) x \$50 million
- + (LIBOR) x \$50 million
- (5 percent) x \$50 million

Net

obligation = 5.15 percent on \$50 million

Because the floating-rate payments are offsetting, the MTN issuer has created a synthetic, fixed-rate note that pays 5.15 percent on \$50 million for three years.

to borrow at a lower rate than it would pay on a fixed-rate note. Indeed, most MTN issuers decline to participate in structured financings unless they reduce borrowing costs at least 10 or 15 basis points. Issuers demand this compensation because. compared with conventional financings, structured financings involve additional expenses, such as legal and accounting costs and the cost of evaluating and monitoring the credit risk of the swap counterparty. For complicated structured transactions, most issuers require greater compensation.

Many structured transactions originate with investors through a reverse inquiry. This process begins when an investor has a demand for a security with specific risk characteristics. The desired security may not be available in the secondary market, and regulatory restrictions or bylaws prohibit some investors from using swaps, options, or futures to create synthetic securities. Through a reverse inquiry, an investor will use MTN agents to communicate its desires to MTN issuers. If an issuer agrees to the inquiry, the investor will obtain a security that is custom-tailored to its needs. The specific features of these transactions vary in response to changes in market conditions and investor preferences. For example, in 1991 many investors desired securities with interest rates that varied inversely with short-term market interest rates. In response to investor inquiries, several corporations issued "inverse floating-rate" MTNs that paid an interest rate of, for example, 12 percent minus LIBOR. At the time of the transaction, the issuers of inverse floating-rate MTNs usually entered into swap transactions to eliminate their exposure to falling interest rates.

While structured transactions in the MTN market often originate with investors, investment banks also put together such transactions. Most investment banks have specialists in derivative products who design securities to take advantage of temporary market opportunities. When an investment bank identifies an opportunity, it will inform investors and propose that they purchase a specialized security. If an investor tentatively agrees to the transaction, the MTN agents in the investment bank will contact an MTN issuer with the proposed structured transaction.

Most investors require that issuers of structured MTNs have triple-A or double-A credit ratings. By dealing with highly rated issuers, the investor reduces the possibility that the value of the structured MTN will vary with the credit quality of the issuer. In limiting credit risk, the riskiness of the structured MTN mainly reflects the specific risk characteristics that the investor prefers. 11 Consequently, federal agencies and supranational institutions, which have triple-A ratings, issue a large share of structured MTNs. The credit quality profile of issuers of structured MTNs has changed slightly in recent years, however, as some investors have become more willing to purchase structured MTNs from single-A corporations. In structured transactions with lower-rated borrowers, the investor receives a higher promised yield as compensation for taking on greater credit risk.

Market participants estimate that structured MTNs accounted for 20 percent to 30 percent of MTN volume in the first half of 1993, compared with less than 5 percent in the late 1980s. The growth of structured MTNs highlights the important role of derivative products in linking various domestic and international capital markets. Frequently, the issuers of structured MTNs are located in a different country from that of the investors.

The increasing volume of structured transactions is testimony to the flexibility of MTNs. When establishing MTN programs, issuers build flexibility into the documentation that will allow for a broad range of structured transactions. Once the documentation is in place, an issuer is able to reduce borrowing costs by responding quickly to temporary opportunities in the derivatives market. The flexibility of MTNs is also evident in the wide variety of structured MTNs that pay interest or repay principal according to unusual formulas. Some of the common structures include the following: (1) floating-rate MTNs tied to the federal funds rate, LIBOR, commercial paper rates, or the prime rate, many of which have included caps or floors on rate movements; (2) step-up MTNs, the interest rate on which increases after a set period;

(3) LIBOR differential notes, which pay interest tied to the spread between, say, deutsche mark LIBOR and French franc LIBOR; (4) dual currency MTNs, which pay interest in one currency and principal in another; (5) equity-linked MTNs, which pay interest according to a formula based on an equity index, such as the Standard & Poor's 500 or the Nikkei; and (6) commodity-linked MTNs, which have interest tied to a price index or to the price of specific commodities such as oil or gold. The terms and features of structured MTNs continue to evolve in response to changes in the preferences of investors and developments in financial markets.

Bank Notes

Banking organizations are major participants in the MTN market. Like other corporations, bank holding companies must file registration documents with the SEC when issuing public securities. Consequently, the Federal Reserve survey captures MTNs issued by bank holding companies. Over the ten-year survey period, thirty-five bank holding companies raised funds in the MTN market, and from 1989 to 1992, outstanding MTNs of bank holding companies increased from \$8.3 billion to \$17.9 billion. Although most of these MTNs have senior status in relation to other debt outstanding, a few bank holding companies have issued subordinated MTNs. Subordinated MTNs of bank holding companies typically have long maturities of about ten years. Under regulatory capital requirements, subordinated debt with a maturity of five years or longer qualifies as tier 2 capital.

In contrast to public offerings by bank holding companies, securities issued by banks are exempt from registration under section 3(a)2 of the Securities Act of 1933. In recent years, a growing number of banks have issued exempt securities, called bank notes, that have characteristics in common with certificates of deposit (CDs), MTNs, and short-term bonds.

Like CDs, most bank notes are senior, unsecured debt obligations issued by the bank. In the event of the insolvency of the issuing institution, bank notes are likely to rank equal with deposits, except in states where deposits have priority over other debt obligations. As with institutional CDs, nearly all

^{11.} An additional reason for the high credit quality of structured MTNs is that some investors, such as money market funds, face regulatory restrictions on the credit ratings of their investments. See Leland Crabbe and Mitchel A. Post, "The Effect of SEC Amendments to Rule 2a-7 on the Commercial Paper Market," Finance and Economics Discussion Series 199 (Board of Governors of the Federal Reserve System, May 1992).

bank notes are sold to institutional investors in minimum denominations of \$250,000 to \$1 million. Bank notes are not covered by FDIC insurance, nor are they subject to FDIC insurance assessments. CDs, in contrast, are insured for \$100,000 per depositor. Furthermore, in the event of a bank failure, the FDIC could choose to protect the financial interests of some or all depositors or other creditors without treating bank notes in the same manner.

Like MTNs, bank notes may be offered continuously or intermittently in relatively small amounts that typically range from \$5 million to \$25 million. In addition, as with MTNs, most medium-term bank notes have maturities that range from one to five years. 12 However, ratings on senior bank notes are typically one notch higher than the ratings on senior MTNs, which are issued at the holding company level. Reflecting these differences in ratings and priority in the firms' capital structures, the yields on banks notes usually are significantly lower than the yields on MTNs of comparable maturity.

Some bank notes, which are similar to corporate bonds, are sold in large, underwritten, discrete offerings that range from \$50 million to \$1 billion. However, they differ from corporate bonds in that they are not registered with the SEC. From 1988 through 1992, banks issued \$14.3 billion of underwritten, senior bank notes, including \$7.8 billion in 1992. In the first half of 1993, they issued \$6.3 billion.

Book-Entry Clearing and Settlement of MTNs

In the early and mid-1980s, high administrative costs deterred some issuers from establishing MTN programs. Among the most significant of the administrative costs were those arising from transferring physical securities to investors. These costs

included printing, delivery, safekeeping, messengers, insurance, and recordkeeping. Moreover, issuers incurred significant costs in the disbursement of interest and principal payments to each individual noteholder. According to market estimates, the direct costs of transferring physical securities range from \$5 to \$30 per transaction. For small offerings, the costs of physical delivery can add significantly to the all-in cost of borrowing. As a result, many issuers refused to sell MTNs in denominations of less than \$1 million.

Since 1988, the costs of clearing and settlement of MTNs have decreased substantially as a computer-based system of book-entry recordkeeping has supplanted physical certificates. When an MTN is issued under the book-entry system, an agent bank for the issuer uses a computer link with The Depository Trust Company (DTC) to enter the descriptive information and settlement details of the transaction. The sales agent receives a copy of the computer record from DTC, and the investor receives a trade confirmation from the sales agent and periodic ownership statements from the custodian bank, in lieu of physical certificates. Secondary market trades are likewise recorded with computer entries. Under the book-entry system, an issuer makes one wire transfer to DTC that covers all interest payments on each interest payment date. This payment process contrasts with the process for physical certificates in which issuers make separate payments to each investor. Similarly, under the book-entry system, when the MTN matures, the issuer makes only one funds transfer to DTC. The DTC book-entry process costs \$4 for each issuance, and each participant in a transaction pays between \$1.29 and \$1.54 for subsequent deliveries

^{12.} Banks also issue bank notes with shorter maturities that range from seven days to one year. These short-term bank notes are sold to money market investors with interest calculated on a CD basis or discount basis. As with medium-term bank notes, short-term bank notes are issued at the bank level, and they are not insured. Short-term bank notes differ from commercial paper in that commercial paper is an obligation of the bank holding company.

in the primary and secondary markets. Besides reducing the direct cost of issuance, the book-entry system also lowers the likelihood of delayed delivery because of logistical problems and reduces the chances of failed trades arising from paperwork errors.

Book entry has become the preferred method of clearing and settlement in the MTN market. According to DTC, issuance of book-entry MTNs rose from \$600 million in 1988 to \$80 billion in 1992 (table 11). Moreover, outstanding MTNs under the book-entry system amounted to \$160 billion at year-end 1992, a total that includes 16,495 individual securities.¹³

Borrowing by Foreign Entities in the MTN Market and SEC Rule 144A 14

In the 1980s, SEC disclosure requirements associated with public offerings discouraged foreign corporations from issuing MTNs in the U.S. public market. For foreign corporations, the most burdensome requirement is that financial statements conform to U.S. generally accepted accounting principles. Most foreign issuers would have to incur considerable legal and accounting expenses to meet this requirement, and many would have to disclose more information about their operations than is required in their home markets. The expense of registering securities and satisfying ongoing reporting requirements has also deterred foreign entities from borrowing in the U.S. market. Foreign issuers could avoid the costs of a public offering by selling MTNs in the U.S. private placement market. However, yields on most private placements included an illiquidity premium resulting from regulatory restrictions on trading.

The adoption of SEC Rule 144A in April 1990 effectively created an alternative market in which foreign corporations could gain access to U.S. investors without having to satisfy the disclosure

requirements for public offerings. Rule 144A

allows institutional investors to trade private place-

ments among themselves with few restrictions. To protect less sophisticated investors, the SEC

requires that 144A securities be sold only to "qualified institutional buyers," which own and invest in

a minimum of \$100 million in securities. This

definition is broad enough to include most of the

institutions that buy MTNs, such as banks and bank

trust departments, insurance companies, pension

funds, mutual funds, investment advisers, and state

and local governments.15 A foreign issuer of a

144A security must provide, upon demand by a

security holder or potential purchaser, a brief description of the business and financial statements for the three most recent fiscal years, which can be

primary method of distribution: Typically, agents

placed MTNs in relatively small amounts continuously or intermittently, while underwriters placed

large, discrete amounts of corporate bonds. This

strict classification no longer applies, however. A growing number of MTN offerings have the characteristics of traditional corporate bonds, and

in the accounting format used in the issuer's home country. Privately placed MTNs are an example of a security that may be eligible for resale under Rule 144A. Since the adoption of Rule 144A, issuance of MTNs by foreign corporations in the U.S. private market has increased markedly. According to the Securities Data Corporation, issuance increased from \$2.2 billion in 1990 to \$10 billion in 1992. In general, MTNs issued by foreign corporations under Rule 144A have similar characteristics to those sold by U.S. corporations in the public market. Both typically are dollar denominated and investment grade, with standard covenants. DEVELOPMENTS IN THE DISTRIBUTION OF MTNS In the early and mid-1980s, the major difference between MTNs and corporate bonds was in their

^{13.} These figures on issuance and outstandings are not directly comparable with those reported in the Federal Reserve's survey because the DTC totals include bank notes and deposit notes issued by banks, as well as MTNs issued by foreign corporations.

^{14.} See Mark S. Carey, Stephen D. Prowse, John D. Rea, and Gregory F. Udell, "Recent Developments in the Market for Privately Placed Debt," *Federal Reserve Bulletin*, vol. 79 (February 1993), pp. 77–92.

^{15.} Besides meeting the securities test, banks and savings and loans must also have a net worth of at least \$25 million. In contrast to other investors, broker-dealers must own only \$10 million of securities.

regional dealers now sell a significant percentage of MTNs. Thus, as the MTN market has matured, it has become harder to define the securities and to describe their mode of distribution.

Principal Transactions

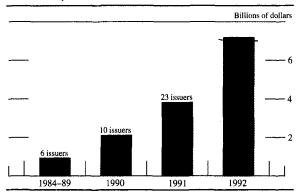

One important change in the distribution process is that a larger share of MTNs are now sold on a principal basis, rather than on an agented basis. In a principal transaction, the MTN dealer purchases an MTN for its own account and later resells it to investors. In a "riskless principal" transaction, when the dealer buys the MTN, it has already lined up an investor that has agreed to the terms of the resale. Riskless principal transactions often involve structured MTNs. In other principal transactions, dealers underwrite MTNs when they have not lined up investors but expect to do so easily and quickly.

Large, Discrete Offerings

Corporations now more often sell MTNs that are nearly indistinguishable from corporate bond offerings. These MTN offerings typically have large face amounts of \$100 million or more, the typical size of corporate bond offerings. They are sold on an underwritten basis, and they often have relatively long maturities of ten or thirty years. Furthermore, announcements of such offerings appear along with announcements of corporate bond offerings in financial publications. In 1992, thirty-one corporations issued \$7.14 billion of MTNs in large, discrete, underwritten offerings, compared with less than \$1 billion between 1983 and 1989 (chart 3).

Despite the similarities to corporate bonds, these large, discrete, underwritten securities technically are MTNs because they are issued from MTN shelf registrations. To most investors, this technical difference is largely irrelevant because the securities have the essential features of corporate bonds. As a result, the securities reportedly do not command a yield premium relative to the yield on corporate bonds.

As large, discrete offerings of MTNs have become more common, the distinction between MTNs and corporate bonds has blurred. As a result, the arguments for financing with MTNs have Large, discrete offerings of medium-term notes in the U.S. corporate market, 1984–92

become more compelling. By setting up an MTN program, a corporation does not give up the advantages of issuing large, underwritten securities that typically would be accomplished with a corporate bond offering. However, unlike a shelf registration for corporate bonds, an MTN program gives the corporation the flexibility to issue in small amounts continuously and to participate more actively in structured transactions.

Distribution through Regional Dealers

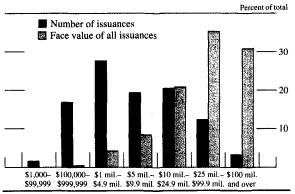

Through the mid-1980s, the major New York investment banks distributed nearly all MTNs to investors. As the market has matured, regional dealers have placed an increasing volume of MTNs. According to market estimates, placements through regional dealers now account for 5 to 15 percent of MTN issuance volume. In these placements, regional dealers receive information about issuers' offering rate schedules from MTN agents. In turn, the regional dealers communicate this information to their investor clients. When an investor buys an MTN through a regional dealer, the regional dealer receives a selling concession from the MTN agent. Placements through regional dealers improve efficiency in the market by broadening the investor base for MTNs. Many regional dealers have contacts with smaller institutional investors, such as small banks, municipalities, and individuals with high net worth, that represent a relatively stable source of funding.

Distribution of MTNs with Small Denominations to "Retail" Investors

When the market first developed, most MTNs were sold primarily to institutional investors. Indeed, most MTN programs had minimum denominations of \$100,000, which precludes small investors, sometimes called retail investors, from purchasing MTNs. In addition, some issuers declined to issue MTNs in denominations below \$1 million because bookkeeping and administrative costs become more burdensome with smaller offerings. In recent years, however, book-entry clearing through DTC and advances in computer bookkeeping have decreased the cost of issuing in small denominations. As a result, many issuers have registered MTN programs with minimum denominations of \$1,000, the standard in the corporate bond market. Although most MTNs are still sold to institutional investors, the lowering of minimum denominations has broadened the investor base to include smaller investors. Regional dealers place a significant proportion of the smaller offerings with small institutional investors.

Several MTN programs have recently been designed specifically to tap the retail market without significantly increasing the administrative costs to issuers. The process of issuing retail MTNs may differ slightly from that of MTNs sold to institutions. In one type of retail MTN program, an issuer will post rates weekly with retail brokers. For example, an issuer might post a rate of 4 percent for two-year MTNs and 5 percent for five-year MTNs. During the week that these rates are posted,

4. Distribution of offering sizes in the medium-term note market, March 1992–June 1993

Source. The Depository Trust Company.

regional brokerage firms market the securities to retail investors, who place orders in minimum denominations of \$1,000. At the end of the week, the regional brokerage firms will contact the corporate issuer and indicate the aggregate volume of orders for notes at each maturity, and the corporation will issue one security at each maturity. In the example, several hundred retail investors could place orders for MTNs with maturities of two and five years, but the administrative costs for the corporate issuer would reflect only two issues from the shelf registration. While this system has the potential to broaden the investor base for MTNs, the size of the retail MTN market is still small relative to the institutional market.

Although the size of MTN offerings has always varied considerably, the variation has become wider as a result of developments in the distribution of MTNs. In 1992, the size of MTN offerings ranged from less than \$5,000 to more than \$500 million (chart 4). In terms of dollar volume, about 65 percent of MTNs had an issue size between \$5 million and \$100 million. However, several firms have issued a large volume of MTNs with denominations of less than \$5 million. While these offerings account for less than 5 percent of the dollar volume of total proceeds, they represent 45 percent of the number of issues.

EURO-MTNS

MTNs have become a major source of financing in international financial markets, particularly in the Euro-market. Like Euro-bonds, Euro-MTNs are not subject to national regulations, such as registration requirements.¹⁶ Although Euro-MTNs and Euro-

^{16.} Bonds and MTNs may be classified as either domestic or international. By definition, a domestic offering is issued in the home market of the issuer. For example, MTNs sold in the United States by U.S. companies are domestic MTNs in the U.S. market. Similarly, MTNs sold in France by French companies are domestic MTNs in the French market. Bonds and MTNs sold in the international market can be further classified as foreign or Euro. Foreign offerings are sold by foreign entities in a domestic market of another country. For example, bonds sold by foreign companies and sovereigns in the U.S. market are foreign bonds, known as "Yankee bonds." Euro-bonds and Euro-MTNs are international securities offerings that are not sold in a domestic market. As a practical matter, statisticians, tax authorities, and market participants often disagree about whether particular securities should be classified as domestic, foreign, or Euro.

bonds can be sold throughout the world, the major underwriters and dealers are located in London, where most offerings are distributed.

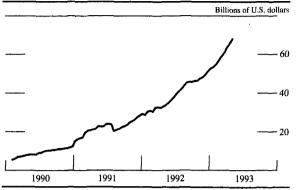

Although the first Euro-MTN program was established in 1986, the market represented a minor source of financing throughout the 1980s. In the 1990s, the Euro-MTN market has grown at a phenomenal rate, with outstandings increasing from less than \$10 billion in early 1990 to \$68 billion in May 1993 (chart 5). New borrowers account for most of this growth, as a majority of the 190 entities that have established Euro-MTN programs did so in the 1990s. As in the U.S. market, flexibility is the driving force behind the rapid growth of the Euro-MTN market. Under a single documentation framework, an issuer with a Euro-MTN program has great flexibility in the size, currency denomination, and structure of offerings. Furthermore, reverse inquiry gives issuers of Euro-MTNs the opportunity to reduce funding costs by responding to investor preferences.

The characteristics of Euro-MTNs are similar, but not identical, to MTNs issued in the U.S. market. In both markets, most MTNs are issued with investment-grade credit ratings, but the ratings on Euro-MTNs tend to be higher. In 1992, for example, 68 percent of Euro-MTNs had Aaa or Aa ratings, compared with 13 percent of U.S. corporate MTNs. In both markets, most offerings have maturities of one to five years. However, offerings with maturities longer than ten years account for a smaller percentage of the Euro-market than of the U.S. market. In both markets, dealers have committed to provide liquidity in the secondary market, but by most accounts the Euro-market is less liquid.

In many ways, the Euro-MTN market is more diverse than the U.S. market. For example, the range of currency denominations of Euro-MTNs is broader, as would be expected. The Euro-market also accommodates a broader cross-section of borrowers, both in terms of the country of origin and the type of borrower, which includes sovereign countries, supranational institutions, financial institutions, and industrial companies. Similarly, Euro-MTNs have a more diverse investor base, but the market is not as deep as the U.S. market.

In several respects, the evolution of the Euro-MTN market has paralleled that of the U.S. market. Two of the more important developments have

5. Euro-MTNs outstanding, January 1990-May 1993

Source. Websters Communications International.

been the growth of structured Euro-MTNs and the emergence of large, discrete offerings. Structured transactions represent 50 percent to 60 percent of Euro-MTN issues, compared with 20 percent to 30 percent in the U.S. market. In the Euro-MTN market, many of the structured transactions involve a currency swap in which the borrower issues an MTN that pays interest and principal in one currency and simultaneously agrees to a swap contract that transforms required cash flows to another currency. Most structured Euro-MTNs arise from investor demand for debt instruments that are otherwise unavailable in the public markets. To be able to respond to investor driven structured transactions, issuers typically build flexibility into their Euro-MTN programs. Most programs allow for issuance of MTNs with unusual interest payments in a broad spectrum of currencies and with a variety of options.

Large, discrete offerings of Euro-MTNs first appeared in 1991, and about forty of these offerings occurred in 1992. They are similar to Euro-bonds in that they are underwritten and are often syndicated using the fixed-price reoffering method. As a result of this development, the distinction between Euro-bonds and Euro-MTNs has blurred, just as the distinctions between corporate bonds and MTNs has blurred in the U.S. market.

The easing of regulatory restrictions by foreign central banks has played an important role in the growth of the Euro-MTN market. For example, over the past year MTNs denominated in deutsche marks have emerged as a major sector in the Euromarket as a result of regulatory changes made by the Bundesbank in August 1992. Under the previ-

ous rules, foreign borrowers could only issue debt denominated in deutsche marks through German subsidiaries or other German financial firms, and maturities could not be shorter than two years. Debt denominated in deutsche marks also had to be listed on a German exchange, and these offerings were subject to German law, clearing, and payment procedures. These rules effectively precluded issuers from establishing multicurrency Euro-MTN programs with a deutsche mark option.

In the August 1992 deregulation, the Bundesbank removed the minimum maturity requirement on debt denominated in deutsche marks issued by foreign nonbanks, and it eliminated or simplified issuance procedures for all issuers. Although the new rules require that a "German bank" act as an arranger or dealer, the definition is broad enough to include German branches and subsidiaries of foreign banks. The arranger is required to notify the Bundesbank monthly of the volume and frequency of issues denominated in deutsche marks. As a result of the Bundesbank's deregulation, from 1991 to 1992, the share of Euro-MTN offerings denominated in deutsche marks increased from 1.4 percent to 4.8 percent, while the volume of issuance in deutsche marks rose from \$268 million to \$1.69 billion. Other central banks have instituted similar liberalizations that may result in rapid growth of MTNs denominated in other currencies, such as the Swiss franc and the French franc.

OUTLOOK FOR THE MTN MARKET

Few innovations in finance have been as successful as the medium-term note. Its success derives from its remarkable adaptability to the needs of both borrowers and investors. The success can be measured by the number of borrowers, the diversity of note structures, and the amount of outstanding MTNs, all of which have increased dramatically over the past decade.

The adoption of SEC Rule 415 in 1982 was the key event that removed the regulatory impediments to continuous offerings of corporate notes. Other regulatory changes, such as SEC Rule 144A and liberalizations by European central banks, have been instrumental in the development of new sectors in the MTN market. As a result of these regulatory changes, financial markets have become more efficient. In 1992, the SEC eased restrictions on the types of securities eligible for shelf registration. As a result of this ruling, asset-backed MTNs may emerge as the next major growth sector in the public MTN market.

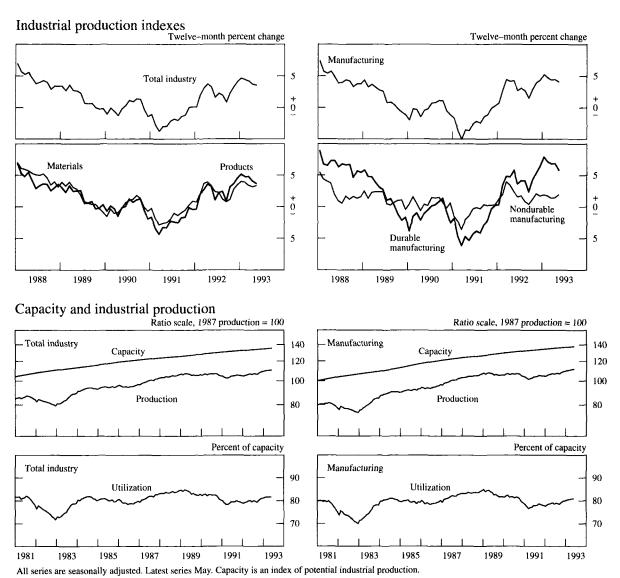

Industrial Production and Capacity Utilization for May 1993

Released for publication June 16

Industrial production increased 0.2 percent in May, a rise that matched the revised gains for March and April; the average monthly increase from October through February was about 0.7 percent.

At 110.4 percent of its 1987 annual average, total industrial production was 3.5 percent above its year-ago level. Utilization of industrial capacity, at 81.6 percent, has been little changed since February.

When analyzed by market group, the data show

^{1.} Data seasonally adjusted or calculated from seasonally adjusted monthly data

that the output of durable consumer goods declined 1 percent, as assemblies of motor vehicles fell back and the production of other durable consumer goods, on balance, was unchanged. Overall, the production of consumer durables, which rose strongly at the end of last year, has changed little since January. The output of nondurable consumer goods increased 0.2 percent in May, a move reflecting gains in the output of consumer chemicals. The production of business equipment rose 0.3 percent, a much weaker advance than in March and April. The output of industrial equipment and computers continued to climb, but production of other business equipment weakened. The production of transit equipment fell more than 1½ percent; the output of other equipment, which increased rapidly from February to April, was little changed. Within intermediate products, construction supplies showed widespread increases and rose 0.7 percent, a rebound from their declines in the previous two months. The output of products has shown little change over the past two months, but the production of industrial materials increased 0.4 percent in April and 0.3 percent in May. Gains in the production of computer-related parts and in iron and steel led the advance of 0.5 percent in the output of durable goods materials. The output of nondurable goods materials rose 0.2 percent, as chemical materials strengthened and paper materials weakened. Energy materials edged down because of a strike in coal mining.

When analyzed by industry group, the data show that production in manufacturing increased 0.2 percent in May; excluding motor vehicles, the gain was 0.3 percent. Capacity utilization in manufacturing was unchanged at 80.8 percent, a level about ½ percentage point below its 1967–92 average. Production gains in many areas pushed the utiliza-

^{2.} Change from preceding month.

Revised.

p Preliminary.

tion in primary-processing industries up 0.2 percentage point, to 84.3 percent, about 2 percentage points above its long-run average; operating rates in lumber, steel, and textiles were above their long-run averages. The utilization rate at advanced-processing industries, on balance, was unchanged. At 79.4 percent, the utilization rate for this group of industries was still below its 1967–92 average.

The output at mines increased 0.5 percent, despite the strike-related decline in coal production, because of increased extraction of crude oil and sharp gains in oil and gas well drilling. The output at utilities, which has been quite volatile in recent months, declined 0.3 percent in May; over the past year, production at utilities has risen about 2 percent.

Statements to the Congress

Statement by John P. LaWare, Member, Board of Governors of the Federal Reserve System, before the Subcommittee on Financial Institutions Supervision, Regulation and Deposit Insurance of the Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, June 22, 1993

I am pleased to appear before the subcommittee on behalf of the Federal Reserve Board to discuss issues associated with interstate banking. For many years, the Board has believed that full interstate banking would benefit bank customers and lead to a stronger and safer banking system. Although we have concerns about certain specific provisions of the bills before you, we strongly support the thrust of these legislative initiatives. I would like to explain the reasons for our support and to evaluate the concerns voiced by the critics of interstate banking. To assist the subcommittee in its deliberations, the appendixes to my statement provide an up-to-date summary of state laws regarding interstate banking, a discussion of recent trends, and several statistical tables that provide relevant information. 1

Interstate banking is now a reality and has been for some time. For years, both domestic and foreign banks have maintained loan production offices outside their home states, have issued credit cards nationally, have made loans from their head offices to borrowers around the nation and the world, have solicited deposits throughout the United States, have engaged in a trust business for customers domiciled outside the banks' local markets, and—through bank holding companies—have operated mortgage banking, consumer finance, and similar affiliates without geographic restraint. Since the early 1980s,

moreover, the individual states have modified their statutes to permit—under the Douglas Amendment to the Bank Holding Company Act—out-of-state bank holding companies to own banks within their jurisdiction. Indeed, to-day only Hawaii prohibits bank ownership by out-of-state bank holding companies.

Although state legislatures have supported interstate banking and more than one-fifth of domestic banking assets are already held in banks controlled by out-of-state bank holding companies, the Board believes that congressional action is needed. Our dual banking system has a desirable genius for resisting governmentimposed uniformity, but the large number of significant differences among the states impedes the interstate delivery of services to the public and reduces the efficiency of the banking business. The differences in state laws are discussed in the first appendix to this statement, but notable examples include restrictions on the home state of banking organizations allowed to enter some states, reciprocity requirements in some other states, the prohibition of de novo entry, and variable caps on the deposit shares of new entrants in still other states. In short, the states have made clear that they accept—and perhaps prefer-interstate banking, and their legislatures have made interstate banking a substantial reality today, but actions at the state level have resulted in a hodgepodge of laws and regulations that permit interstate banking in an inefficient and high-cost manner.

Restrictions on both intrastate and interstate banking were imposed in an era in which commercial banks were the dominant provider of financial services to households and businesses. These restrictions were clearly intended to limit competition and thereby insulate local banks from market pressures. Over time, branching and other geographic restraints became part of the totality of regulations designed to protect bank profits through limitations on entry and deposit

^{1.} The attachments to this statement are available from Publications Services, Board of Governors of the Federal Reserve System, Washington, DC 20551.

rate competition. In recent years, however, banks have seen their market position eroded by nonbank providers of financial services that are not subject to bank-like regulation. Indeed, the unwinding of the historically protected position of banks, such as the removal of deposit rate ceilings, has proceeded on most fronts as a lagged response to market developments that had themselves been encouraged by those same restraints on banks. Attempts to maintain antiquated geographic restrictions will only protect inefficient banks, disadvantage consumers of bank services (particularly those like small businesses that still have relatively few alternative sources of credit), encourage the entry of less regulated nonbank competitors, and increase the stress on the safety net as the long-run viability of banks is undermined.

Action to provide more uniform rules for interstate banking would provide several public benefits. First, reducing obsolete barriers to entry would increase actual and potential competition in the provision of financial services to those customers that for one reason or another have, at best, very limited access to out-of-market banks, nonbank lenders, or the securities markets. Bank customers would benefit from the resulting lower prices for credit, higher rates on their deposits, and improved quality and easier access to banking and related services. In addition, a significant proportion of our citizens live in areas in which state borders intersect; interstate banking would provide households and businesses in these regions with significantly increased convenience in conducting their banking business.

Second, greater opportunities for geographic diversification through interstate banking could help restore a level of stability to the banking system that once was accomplished, in part, through protection of local banks from competition. Although increased competition from nonbanks has undermined the protection intended to be provided to banks through controlled entry and geographic constraints, those same restrictions have made it more difficult for banks to diversify their risks and seek out new opportunities. Thus, many banks operating in a region that has experienced a local economic contraction have been neither protected by limits on bank competition nor able to avoid the disastrous

impacts of dependence on one market for both deposits and loans. Being able to cushion losses in one region with earnings in others would make banks better able to contribute to the recovery of their local economy, and more diversified banks would expose the federal safety net to fewer losses. Clearly, greater geographic diversification would have provided more stability over the past decade to banks operating in the agricultural areas of the Midwest, the oil patch of the Southwest, and the high tech and defense regions of New England and California. In short, the elimination of geographic restraints would provide an important tool in diversifying individual bank risk, thus providing for stability of the banking system and improving the flow of credit to local economies under duress.

Third, interstate banking would facilitate the allocation of resources to regions that offer both safety and higher return and would assist in the reduction of excess banking capacity. We hope that the United States will continue to be a dynamic economy. Such economies grow more rapidly but are characterized by both expanding and declining industries and by expanding and temporarily declining regions. Banks pinned by artificial geographic restrictions to local areas that experience difficulties have no choice but to pull in their horns, as it were, to protect their own viability. Only through interbank credit extensions and loan participations can they diversify their portfolio to move their assets to borrowers unaffected by the depressed local economy. Indeed, many of these institutions no doubt tend to have lower loan-to-deposit ratios in part because of their inability to find bankable local credits. Note that, given banks' long-run interest in geographic diversification, banking offices would still remain in regions experiencing difficulty but would be in a stronger position to finance local expansion when growth opportunities return.

The benefits from removal of restrictions on geographic expansion could occur through either the acquisition or de novo chartering of bank subsidiaries of bank holding companies head-quartered in another state or through the establishment of branches of a bank in another state. All the interstate banking laws enacted by the states provide for interstate banking through

bank subsidiaries of bank holding companies, although some states permit interstate banking through branches for state nonmember banks. Two of the three bills before the subcommittee, H.R.2235 and H.R.459, would authorize interstate banking on a nationwide basis through bank subsidiaries. This step removes the last few vestiges of restrictions on interstate banking through bank subsidiaries, and the Board strongly supports such statutory change. The Board also supports removing the McFadden Act's restrictions on interstate branching for national and state member banks. This removal would permit banks to choose between alternative combinations of subsidiary banks and branches in the manner that best balances their own perceived costs and benefits.

The evidence from virtually all of the limited number of studies that compare interstate banking to branching suggests that, on average, both delivery systems have about the same cost structure. However, such evidence is also consistent with the view that for some banks branching may have the lowest cost structure. Indeed, as a matter of logic, the Board believes that the cost savings from elimination of separate boards of directors, separate management teams, and separate capitalization for banks that could be branches would be significant for some organizations. In any event, we believe that no good public policy purpose is served by restraining the freedom of choice of individual banking organizations, which know best what is the least cost operating structure for them. We therefore applaud the provisions of H.R.256 and H.R.2235 that would permit, immediately upon enactment, interstate banking offices to be converted to branches, should a banking organization choose to do so.

We also support H.R.2235's approach that would extend interstate branching powers to only those banks that are at least adequately capitalized and adequately managed (which we assume means having acceptable supervisory ratings). In the Board's statements during the drafting of and debate about the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), the Board supported the principle of expanded activities only for strongly capitalized banks. In drafting recent regulations, the banking agencies have attempted, when possible, to apply this principle. Examples include the reduced documentation requirement on small medium-sized business loans and the Board's amendments to Regulation F implementing section 308 of FDICIA with regard to interbank liabilities. A policy that rewards stronger banks is a desirable supplement to the regulatory limits imposed on weaker banks. However, the subcommittee may wish to consider amending this provision of H.R.2235 to permit the banking agencies to authorize a less than adequately capitalized bank to expand into another state if it would, in the agency's judgment, improve the financial condition of the bank.

State supervisors would no doubt prefer interstate operations through separate banks in each state because it is much easier for them to supervise the activities of a single organization in their jurisdiction. It seems to the Board, however, that the criterion of ease of regulation for states is only one part of a broader cost-benefit test. So long as safety and soundness are not compromised, efficiency and least cost are far more important factors on which to base policy. We applaud the solution to this problem proposed in H.R.2235 and in the Nationwide Banking and Branching Act, H.R.459. As we understand it, under the provisions of both bills, the state in which branches of an out-of-state bank operate would negotiate a supervisory agreement with the supervisor of the bank's home state that is acceptable to both states and to the relevant primary federal regulator. Failure to reach agreement would require that the primary federal supervisor conduct examinations without deferring to the state authorities. Such an approach creates desirable incentives for the states to reach reasonable accord.

When interstate banking is implemented through bank subsidiaries, the bank in each state has all the powers that go with its charter national or state. However, should interstate banking occur through branches, legislation must clarify whether those branches must limit their activities to those permitted to banks chartered in their host state, to activities permitted to banks in their home states, or—for national or state banks—to the powers granted to national banks. The issue of the powers that interstate

branches should be permitted to exercise requires balancing several competing concerns, including preserving the dual banking system and creating incentives that could make certain types of bank charters more attractive than others. We read all three bills before the subcommittee as achieving the same balancing of the conflicting concerns. All the bills provide that interstate branches of state-chartered banks may not engage in any activities in the host state that are not permitted for banks chartered by the host state. National banks would still have the same powers regardless of which states they were in, except that, as at the present time, and consistent with the McFadden Act, branching within the host state would be limited by the laws of the host state. These provisions seem like a reasonable approach.

The interstate operations of foreign banks doing business in the United States raise issues similar to those for U.S. banks operating across state lines. It has been a long-standing policy of the U.S. government to grant foreign banks treatment equivalent to that given to U.S. chartered banks-so-called national treatment. In the present context, such an approach would permit foreign banks to operate interstate on the same basis as U.S. banks, and it is this position that the Board supports. We believe that the provisions of H.R.2235 and H.R.459 that require the banking agencies to consult the Treasury on the foreign bank's capital equivalency before approval of the first branch of the foreign bank are inconsistent with national treatment, as well as unnecessary. The Board recommends that these provisions be dropped. In addition, the Board believes that the requirement in H.R.2235 that branching be permitted only through a U.S. subsidiary bank if that structure is needed to verify adherence to U.S. standards by a foreign bank is also unnecessary. The Foreign Bank Supervision Enhancement Act of 1991 already provides that a foreign bank may not establish a branch in the United States unless its capital is determined to be equivalent to that required of a U.S. bank. Consequently, the Board recommends that this provision also be deleted.

Whether interstate banking is achieved through bank subsidiaries, bank branches, or both, and regardless of how powers are exported from the home state to the branching host state, the arguments used by opponents of interstate banking must be carefully reviewed.

The first concern is that interstate banking would result in undue concentration—and ultimately higher loan rates and lower deposit rates—as large out-of-state banks drive small in-state banks out of business. In-state market evidence simply does not support this contention. All the relevant evidence indicates that small banks generally survive entry by large out-of-market banks and are most frequently more profitable than the entrant. Similar evidence indicates that new large bank entrants to local markets, whether by de novo or by acquisition, are able to expand market share by only modest amounts, if at all.

In the 1970s, for example, when statewide branching was authorized in New York State, several large New York City banks sought an upstate presence by acquiring small banks in these markets. By the early 1980s, the acquired banks had gained on average less than one percentage point in market share, with the largest gain less than three percentage points. The acquired banks or branches continue to have small market shares or they have been sold to local banks, as the New York City banks have exited the market. Experience in California also illustrates the ability of small banks to remain viable in the face of competition from much larger organizations. California has permitted unrestricted statewide branching since 1927, and several of the state's banking organizations, most notably BankAmerica, have operated extensive branch networks for years. In spite of these extensive branch banks, California continues to have many successful independent banking organizations. For example, as of year-end 1992, 101 of the 395 banking organizations in California had less than \$50 million in assets. Moreover, over the period 1981 through 1991, about 311 de novo banks (almost 11 percent of the U.S. total of de novo banks) began operation in this unlimited branching state.

Besides their difficulties in winning customers away from existing banks, entrants by acquisition often are soon confronted with competition from a de novo bank organized by local citizens, at times led by the former managers of the bank acquired. The potential for entry—both de novo and by acquisitions by other banks outside the market—plus evidence of continued small bank success suggest it is unlikely that consumer harm would come from interstate banking. Although more than 5,000 banks have been absorbed by merger since 1979, about 3,500 new banks have been chartered. In addition, although almost 10,500 branches have been closed, 24,000 new ones have been opened during that period. The vast majority of local banking markets in the United States are incredibly dynamic and sensitive to consumer demand, and interstate banking seems likely to make them more so. The concern that interstate banking would lead to excessive concentration in local banking markets is mitigated further by the fact that antitrust enforcement in banking focuses on maintaining competitive local markets. Concentration ratios have not increased in local markets despite the substantial overall consolidation in banking in recent years. Local competition has been maintained, in part, because many bank mergers have been between firms operating in different local markets. In addition, increased concentration has been avoided by factors already noted: antitrust laws, limited ability of new large banks to increase market share, and continued vitality of small local competitors.

The importance of local markets and the evidence of little change in local market concentration suggest that attempts to ensure competition through statewide or national deposit caps are unnecessary at best and may, in fact, be anticompetitive to the extent that they prohibit entry. Indeed, the 30 percent individual bank cap that H.R.2235 would permit states to authorize would protect seventeen banks in thirteen states from out-of-state acquisitions; seven of the seventeen are already held by out-of-state banking organizations. The Board would recommend deletion of the imposition of statewide and national deposit share caps as contained in the Interstate Banking Efficiency Act. Similarly, H.R.2235 discourages entry by authorizing states to restrict entry only to acquisitions of banks or branches that are at least five years old. We see no public benefit from such restrictions, although entry is most likely to be by acquisition in any event.

Another concern of some is that new entrants

will vacuum up local deposits and channel them to out-of-market loans or that managers brought into local markets will be insensitive to, or have no authority to adjust to, local demands. However, it is important to recall that an insured bank must fulfill its Community Reinvestment Act (CRA) responsibilities in all the markets in which it operates. Moreover, the ease of entry, just discussed, should soften concerns that out-ofmarket entrants will ignore local customers. If a local branch does not meet both the deposit needs and credit demands of the community, it will not succeed and it will attract a rival that will.

However, because the Board realizes that the expansion of nationwide banking raises several issues regarding the impact on local community credit needs, it does support provisions of H.R.2235 and H.R.459 that would amend the CRA to require that performance of interstate institutions be assessed on a statewide or metropolitan area basis. This approach would maintain the concept embodied in the CRA that insured banks should be evaluated on overall performance without imposing arbitrary or costly regulatory requirements at the level of the individual branch.

On the other hand, imposing a regulatory regime that requires that individual out-of-state branches meet special credit availability requirements (H.R.2235 and H.R.459), or that establishes numeric tests for individual branch loan production (H.R.2235), would represent unnecessary and burdensome regulation of interstate branches. It would also be duplicative and unnecessary to impose new credit availability requirements on branches that are simply replacements for existing interstate banks of the same organization (H.R.2235). Evaluating the statewide or metropolitan area CRA performance of an out-of-state institution would, in the Board's view, provide adequate information to determine that an interstate institution is meeting community needs in the markets it serves.

Finally, in considering the needs of local markets, the Congress should consider the fact that large banks have higher loan-to-deposit ratios than do small banks. This could imply that large banks entering new markets would make both more in-market loans and more out-of-market loans. Many assume that most of the loans would, in fact, be made outside the community. However, as I noted, banks must both meet their CRA requirements and service their customers to remain competitive in the market. It should also be kept in mind that small, independent banks also export funds: They are relatively large lenders to other banks through the federal funds and correspondent deposit markets and purchase relatively more Treasury and out-of-market state and local bonds than large banks.

In sum, interstate banking promises wider household and business choices at better prices and, for our banking system, increased competitive efficiency, the elimination of unnecessary costs associated with the delivery of banking services, and risk reduction through diversification. By the record, most community banks are already providing services to their customers so efficiently that they have little to fear from out-of-market rivals. Those that are not providing such services *should* worry because interstate banking will—and should—mean either their displacement by a more efficient competitor or their rising to the competitive challenge and improving their own efficiency.

Statement by Richard F. Syron, President, Federal Reserve Bank of Boston, before the Subcommittee on Financial Institutions Supervision, Regulation and Deposit Insurance of the Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, June 22, 1993

I appreciate this opportunity to appear before you to discuss the issues surrounding interstate banking and branching. Today I will confine my remarks to issues related to the ways that interstate banking can improve credit flows, rather than to specific issues that are addressed in the various legislative proposals.

Current restrictions on interstate banking and branching are an anachronism; they reflect the state of banking when local banks were almost the exclusive source of loans, deposits, and services for both businesses and individuals. These restrictions are incongruous in the present banking environment, in which banking products have no geographic boundaries and are frequently provided by other financial intermediaries. The breakdown of geographic and institutional barriers is the inevitable outgrowth of improvements in technology and in information processing. As bank products have standardized and the economies of scale in information processing have grown, it has become much easier to provide cost-effective service independent of location.

Any new legislation should seek to promote the most efficient banking structure. By allowing bank management to choose a banking structure that improves its ability to diversify and that reduces its costs, banks will realize efficiency gains that will benefit borrowers and depositors alike. Alterations to our antiquated banking structure are already occurring without federal legislation. Not only do intermediaries far removed from the customer's location provide many banking products, but, in addition, a large number of states, including all six New England states, have adopted interstate banking laws. Thus, in many banking areas we already have de facto interstate banking.

I will first describe the limited interstate banking that has been in operation in New England for some time. Unfortunately, the expansion of New England bank holding companies under regional compacts has not extended much beyond the region.

Second, I will discuss the de facto interstate provision of many banking services that is already in place; for example, the markets for mortgage loans, consumer loans, and large business loans are now national in scope. Loans to small and medium-sized businesses remain primarily limited to local markets, however, and thus will continue to be adversely affected by any restrictions on the flow of bank capital across geographic boundaries.

Third, I will describe the ways in which the recent regional economic shock has affected the availability of credit to small and medium-sized businesses in New England. The economic shock would have been less severe if banks had been

better diversified through wider interstate banking and branching.

Finally, I will show that new evidence from New England suggests that large, multistate banks can offer improved services to borrowers and depositors without impairing the viability of small community banks because the markets served by smaller banks are often quite distinct from those in which the large banks operate.

LIMITED INTERSTATE BANKING IN NEW ENGLAND

New England has had limited interstate banking for some time. Maine first allowed nationwide reciprocal banking in 1978 and later dropped the requirement of reciprocity. Regional reciprocal banking was first allowed in Connecticut in 1983, in Massachusetts in 1984, and in New Hampshire in 1987. All three states revised their laws in 1990, as Connecticut and Massachusetts adopted nationwide reciprocal banking and New Hampshire adopted nationwide interstate banking without requiring reciprocity. Agreements that allowed regional reciprocal banking that later converted nationwide reciprocal agreements were adopted in Rhode Island in 1984 and in Vermont in 1988.

The laws adopted in the mid-1980s to allow regional mergers were utilized by many of our largest bank holding companies. For example, among the two largest bank holding companies in New England, Bank of Boston has subsidiaries in all six New England states, and Fleet Financial Group has subsidiaries in every New England state except Vermont. However, the period since the more recent adoption of laws permitting nationwide interstate banking has not been long enough to result in substantial diversification outside the region.

If New England's recent economic downturn had been limited to one state, our largest holding companies could have weathered the problem more easily and lending activities would have experienced less disruption. Unfortunately, the shock was not localized within one or even a few New England states. All six New England states experienced a severe economic slowdown and falling real estate prices. Although banks in New

England were diversified against very localized shocks, even large ones were not diversified against a widespread regional economic down-

The expansion of interstate banking and branching is not likely to have much effect on many aspects of bank lending. For example, pools of one- to four-family residential mortgages can be purchased from other parts of the United States, and credit card receivables are securitized and sold nationwide. However, the market for small to medium-sized nonresidential real estate loans is still primarily a local market. And, in particular, most small business loans depend on real estate for collateral. Because these loans cannot easily be securitized, portfolios of commercial and industrial loans tied to real estate cannot easily be diversified. Thus, the recent regional shock that deeply depressed real estate prices left many New England banking institutions quite exposed.

INTERSTATE BANKING SERVICES

Most consumers are well aware of the de facto interstate provision of banking services. Frequently, neither the owner nor the servicer of a residential mortgage is located in the same state as the borrower. Similarly, consumers with good credit ratings are likely to have access to consumer credit through a financial institution located outside the states in which they reside. Problems with the service provided by one credit card issuer can easily be rectified by responding to one of the many mail solicitations for credit cards from out-of-state banks or nonbank sources.

The same pattern has emerged on the other side of the balance sheet. In placing their deposits, consumers have an array of alternatives to local depository institutions. Mutual funds and brokerage houses provide numerous alternatives to bank deposit accounts. The plethora of banks offering money market and mutual fund services indicates how substitutable many of these accounts are in a consumer's portfolio. Again, these alternatives are frequently provided by intermediaries located outside the consumer's home state.

Businesses have even greater access to credit outside their state. Large corporations often obtain financing directly from credit markets by issuing commercial paper and bonds. It is not unusual for firms that are not quite large enough to access the financial markets directly to seek bank financing outside the confines of an individual state. In fact, because both bank management and bank regulators impose restrictions on how exposed a bank can be to a single borrower, large borrowers may pose too large a concentration risk to get all of their financing from in-state banks. Thus, in states with few large banks, large borrowers have long sought banking relationships outside their own state that can satisfy their loan demand without violating lending limits.

Table 1 illustrates this point by providing the results of a 1992 loan survey by the Federal Reserve Bank of Boston of sources of financing for small and medium-sized businesses in New England. 1 Among those businesses that sought short-term credit, only 55 percent of firms with sales between \$100 million and \$249 million obtained all their short-term credit from a New England-based bank. The same percentage received some or all of their short-term credit from one the three largest bank holding companies in New England. Thus, for many medium-sized as well as large firms only large banks can satisfy their lending needs, and their financing may not only be out-of-state but also out-of-region, thus insulating these firms from local shocks to credit supply.

Smaller business are much more dependent on local bank financing to meet their credit needs. Many small businesses have neither the collateral nor the track record to secure financing from lenders unfamiliar with their firm and the economic environment in which they operate. Such "character lending" requires an intermediary with substantial understanding of the local community that can only be obtained by maintaining a presence in the area. As a consequence, these local-bank-dependent borrowers have few alternatives should local lend-

ers be unwilling or unable to provide financing. Borrowers with annual sales ranging from \$10 million to \$49 million depend more on banks within the region than do larger corporations, but they are far less likely to borrow from the largest banking institutions. In addition, they most frequently mentioned having no short-term credit because their credit arrangements had been terminated within the past two years.

REGULATORY CONSTRAINTS IN BANKING

Most economics textbooks emphasize the role of reserve requirements in restricting expansion of bank assets and liabilities. Restrictions on capital ratios have received much less attention, even though currently they are having a substantial effect on the ability of many banks to expand.

A desirable feature of an efficient financial market is that scarce resources flow to the user that values them most highly. Unfortunately, there are many impediments to the flow of bank capital. Without nationwide banking and branching, regions of the economy experiencing severe regional shocks may be unable to attract additional bank capital when loan demand exceeds loan supply. Informational difficulties make new entry into a banking market particularly costly for a bank with little familiarity with the regional economic environment. Thus, even without regulatory impediments, the flow of bank capital is likely to be slow. In a region in which banks experience substantial losses, bank capital will be restored only with long time lags. However, if outside banks had already located branches or affiliates in the region, they would be in a position to quickly fill lending gaps.

The credit crunch experienced in New England over the past two years is an example of a severe regional economic shock that was magnified by the impaired capital position of most New England depository institutions. Figure 1 shows bank capital ratios for commercial banks in the United States and in the First Federal Reserve District, which encompasses New England. Capital ratios for commercial banks nationwide were largely unaffected by recession periods. However, as a result of the bursting of the real estate bubble and the consequent loss of bank capital, capital ratios

^{1.} The attachments to this statement are available from Publications Services, Board of Governors of the Federal Reserve System, Washington DC 20551.

declined dramatically for New England banks in 1989 and 1990.

This drop in bank capital was particularly untimely because it occurred while legislators, regulators, investors, and bank management were placing increased emphasis on improving bank capital ratios. Banks that were trying to improve capital ratios during a period of large loan losses were forced to dramatically decrease their assets. Research at the Federal Reserve Bank of Boston has found that banks with difficulty in satisfying capital ratios decreased their lending, particularly to bank-dependent borrowers.

If full interstate banking and branching had been available much earlier, these problems would have been mitigated for two reasons. First, many New England institutions could already have diversified outside the region. Although economic shocks that disproportionately affected New England would still have affected large New England institutions, the effect on their total capital position would have been lessened. And, with their overall capital position less impaired, they would have had a greater ability to lend to creditworthy borrowers. Second, outside institutions would have been able to establish branches or acquire subsidiaries to meet the demand for loans that could not be satisfied by capital-impaired banks in that locality.

Figure 1 illustrates the advantages of interregional diversification. Although New England banks suffered a severe capital shock, banks nationwide experienced no substantial reduction in capital ratios. Had some banks in other regions had a significant presence in New England, or had New England banks had a significant presence in other regions, capital ratios of individual banks would have been affected less, so that some banks would have been able to lend to borrowers that were cut off from financing primarily because of the impaired capital of their traditional local lender.

THE ROLE OF SMALL BANKS

A major concern of opponents of interstate banking and branching is the continued viability of small banks when they are forced to compete with large multistate holding companies. Evidence from New England suggests that small banks have no difficulty competing with their larger brethren. Table 2 lists the twenty most profitable commercial and savings banks in New England over the past five years. Sixteen of the twenty banks have less that \$500 million in total assets. Each New England state is represented, and most of these banks face competition from the area's largest bank holding companies, which have affiliates throughout New England.

Small banks can profit by serving market niches not easily satisfied by very large banks. To manage and control a large banking organization a certain degree of standardization must occur. Although standardization works well for larger, low-margin loans, often it is not appropriate for smaller loans that require specific knowledge about the management and economic circumstances of a particular business. Small banks that are well established in the community, and whose management is familiar with the borrower and his business, are often in a much better position to make loans when the character of the borrower is a critical component of the loan.

CONCLUSION

The question is not whether we should have interstate banking but rather the degree and the form it will take. Many bank services are already provided interstate, and intestate acquisitions have been widespread within New En-However, the remaining artificial constraints on the movement of bank capital contributed to the severity of the recent credit crunch in New England, and they continue to place banks at a competitive disadvantage with other financial intermediaries not so constrained. If we want to avoid future banking problems in other regions that experience economic downturns and if we want to prevent a further deterioration in banking in general, I strongly urge you to adopt legislation to permit interstate banking and branching.

Statement by John P. LaWare, Member, Board of Governors of the Federal Reserve System, before the Subcommittee on Financial Institutions Supervision, Regulation and Deposit Insurance of the Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, June 29, 1993

I am here this morning to discuss recent steps taken by the Federal Reserve, in cooperation with the other federal bank regulatory agencies, to reduce regulatory burden on financial institutions and to facilitate an increased flow of credit. The regulatory burden on depository institutions has taken on new importance after enactment of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA), the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), and the evidence of restrained lending by banks. The costs to commercial banks and to other depository institutions of adhering to banking laws and regulations continue to grow and, despite the industry's recent record profits, could begin to threaten the industry's long-term competitiveness. I have testified several times in recent months on these and related matters and would hope that the increased attention given to these topics can lead to meaningful reductions in regulatory burden for the banking system.

Having said that, and before discussing details of new initiatives, I would like to emphasize the limited ability of the regulatory agencies to encourage a pick-up in loan growth through administrative actions and also the inherent risks of attempting to reduce regulatory burden substantially by simply changing regulatory or supervisory policies and procedures. The results of lender surveys taken by the Federal Reserve have consistently indicated for several years that the slow or negative growth of bank lending has been more a result of weak loan demand than of any other factor.

Changes in supervisory or examination practices may help at the margin, but they are unlikely to produce fundamental changes in credit conditions. That is the case for many reasons, mostly dealing with the recent recession and the need and desire of both businesses and consumers to strengthen their balance

sheets. The large number of bank failures during the past half-dozen years also indicate that credit standards at many banks need to be improved. It is important, therefore, that any regulatory policy changes designed to spur additional bank lending not weaken the fundamental supervisory process. Recent actions we have taken have been carefully designed with that principle in mind.

RECENT POLICY ANNOUNCEMENTS

The federal bank regulatory agencies realized before passage of FDICIA that their supervisory actions may impose undue burdens on some banks and may unnecessarily constrain bank credit availability. Consequently, in late 1991 the agencies issued joint statements that clarified their examination policies regarding commercial real estate loans and encouraged banks to work with troubled borrowers to resolve problem loans.

More recently, we have jointly taken numerous other efforts to reduce regulatory burden, while still adhering to relevant banking laws and fundamental principles of bank supervision. Several initiatives were announced on March, and further details have subsequently been put forward, including a series of policy statements that was issued on June 10.

March Policy Statement

The March statement sought to improve credit availability to small and medium-sized businesses and farms, and it covered other supervisory issues as well. Perhaps the most important element of the statement was the announcement of forthcoming changes to agency rules regarding the need for real estate appraisals by certified or licensed appraisers. Such appraisals, which relate to a requirement of title XI of FIRREA, have been controversial and costly to banks and to their customers. If the proposed rules are adopted, appraisals will be required less often.

The proposed change, issued for comment on June 10, would (1) increase the threshold amount

for which such appraisals are required from \$100,000 to \$250,000, (2) expand the "abundance of caution" exemption so that an appraisal is not required when the value of the collateral is not material to the decision to make the loan, and (3) exempt from appraisals business loans of less than \$1 million when the principal source of repayment is not the sale of, or income from, the real estate held as collateral. These changes are designed to reduce burdens imposed by the appraisal regulation, while still requiring appraisals when they are needed to enhance the safety and soundness of financial institutions.

Another important provision described a policy change that would permit strong and wellmanaged banks to set aside a limited portion of their loans to small and medium-sized businesses. Examiners would then evaluate that selected portfolio of loans only on the basis of its performance and not on the level of loan documentation.

This change was intended to foster an environment in which banks could extend more so-called "character" loans to businesses with which they were familiar and to base their lending decisions principally on professional judgments about the borrower's overall creditworthiness without being exposed to examiner criticisms about the specific nature or lack of documentation about the borrower. change was consistent with an overall effort by the agencies to refocus supervisory attention to areas in which risks are high and to reduce regulatory burden to areas in which risks are less, such as with strong, well-managed banks. It was also part of a broad effort to increase the availability of credit to low- and moderateincome neighborhoods and disadvantaged rural areas.

Final elements of the March statement committed the agencies to enhance their examination appeals procedures and to take other steps to improve the examination process, reduce regulatory uncertainty, review certain accounting policies, and, in general, work to reduce regulatory burden. Some of these initiatives and others were expanded through a series of joint statements issued earlier in June. Because they are more recent actions, I will discuss them in greater detail.

June Policy Statements.

The series of June 10 policy statements dealt with various issues that were mostly intended to reduce impediments to the extension of credit and, in some cases, to conform supervisory and examination procedures to newly adopted accounting standards. The regulatory agencies also issued important new initiatives that were intended to detect and deter discriminatory lending practices. Finally, the agencies also reaffirmed earlier agreements to coordinate their examinations.

Much recent tightening of credit standards by banks and the subsequent reduction of bank credit to many borrowers can be traced to widespread problems in commercial real estate markets. In many cases, these problems resulted from weak underwriting standards that accommodated much overbuilding throughout the United States and created serious financial difficulties and even failures at some banks. Even institutions that were not materially affected by problem real estate credits were prompted by events to review their own lending standards in light of new developments and economic conditions. Similarly concerned by these events, many examiners also began to look more closely and to review more critically the strength of commercial real estate loans, in particular, and entire loan portfolios, in general. All of these factors prompted a tightening of the terms of lending and a subsequent reduction in the availability of credit.

In large part, many of these changes represented a reasonable and appropriate response to recent events and to the reduced ability of some banking institutions to incur additional risks. However, to some extent, they reflected an overreaction by both bankers and bank examiners that has required the banking agencies to review their supervisory policies and to clarify them when necessary.

Real Estate Loans

Because real estate loans have contributed to many of the recent problems within the banking industry, several of our policy statements have focused on that topic—in particular to problems

in accounting for and evaluating real estate collateral. These problems may be especially important to the financing of small and medium-sized businesses, which often rely heavily on real estate collateral to support bank loans.

One of the June 10 statements reaffirmed a November 1991 statement that emphasized it was *not* regulatory policy to value real estate collateral that underlies real estate loans on a liquidation basis. Rather, the evaluation should be based on the borrower's willingness and ability to repay and on the income-producing capacity of the underlying collateral over time.

A decline in the collateral value below the book value of the loan does not require an automatic write-down or increased loss reserve if the loan is performing and the cash flow appears adequate to service the outstanding balance. The portion of the loan balance that is adequately secured by the value of the collateral should generally be classified no worse than "substandard." Moreover, when an institution has taken a sufficient charge-off so that the remaining recorded balance of the loan is being serviced and its collection is reasonably assured, classification of that balance may not be appropriate.

The 1991 statement and the most recent reaffirmation intend to ensure that commercial real estate credits are evaluated in a consistent, prudent, and balanced fashion. The Federal Reserve will continue to ensure that these policies are appropriately implemented.

Other June statements relating to real estate credits involve the accounting treatment of loans collateralized by real estate and, more generally, the reporting of nonperforming loans. The collateralized loan issue relates to the matter of "insubstance" foreclosures and to the current accounting practice of transferring such loans to the "Other Real Estate Owned" (OREO) category with recognition of appropriate losses. This practice, which had been required under generally accepted accounting practices (GAAP), has increased the volume of OREO balances at banks and may have discouraged lenders from working with borrowers that are encountering cash flow or other financial problems.

Recently, the Financial Accounting Standards Board has issued Statement No. 114, "Accounting by Creditors for Impairment of a Loan" and has clarified that creditors should report a loan as OREO only when they have taken possession of the collateral. The policy statement applied this recent FASB change in accounting standards to the banking industry's regulatory reports. Although depository institutions must continue to recognize losses on real estate loans that meet the standards of in-substance foreclosure, the Federal Reserve believes that avoiding the designation of OREO—combined with other initiatives being taken—will reduce impediments to additional extensions of credit.

In a related area, the agencies have reached several agreements relating to "special mention" assets, which are assets that demonstrate weaknesses but that are not weak enough to warrant classification. We now have a common definition for special mention assets and will not assign loans to that status solely on the basis of documentation exceptions that are not material to the repayment of the asset. Moreover, the Federal Reserve will continue its long-standing practice of not including these assets in ratios used to measure asset quality.

Other Accounting Changes

The agencies have also revised the criteria required for banks to remove loans from nonaccrual status. Currently, banks must place loans for which payments are past due for ninety days or more on a nonaccrual status and must maintain that status until all overdue payments are received and full collectibility is assured. This requirement has sometimes overstated the severity of problem assets by failing to recognize losses that banks had taken on the loans and subsequent improvements in the ability of borrowers to service the remaining balance. In turn, the continued labeling of such loans as nonaccruing loans places pressure on banks to increase loan-loss reserves or capital levels and may tend to discourage additional loan growth.

Effective immediately, banks may return non-accruing loans to an accruing status under specified and less restrictive conditions than were previously required. Essentially, a bank may do so if a sufficient amount of a restructured loan has been charged off and the borrower's pros-

pects and recent payment experience indicate an ability to perform under the restructured agreement. Loans that have not been formally restructured and partially charged off may also be restored to accrual status if required payments are being made and full repayment is expected under the originally contracted terms.

Coordinating Examinations

The policy statement that relates to coordinating interagency examinations is principally intended to address costs to the industry of multiple or duplicative examinations. As required by law, various parts of a consolidated banking organization must be examined by different agencies the Office of the Comptroller of the Currency for national banks; the FDIC for state nonmember banks; and the Federal Reserve in the case of state member banks, parent holding companies, and nonbank subsidiaries. Reflecting this supervisory structure, for many years the banking agencies have had supervisory procedures designed to avoid, or at least to minimize, overlapping efforts by relying on examinations or inspections conducted by an entity's primary regulatory authority.

Nevertheless, industry trends have increased the real and perceived overlap in supervisory procedures. Banking organizations have become more complex and integrated in conducting their activities and have often given less consideration to the legal structure of their businesses. This pattern sometimes requires that examiners of one entity discuss or evaluate activities conducted elsewhere in the consolidated organization to understand and identify the risks. This situation increases the need for coordination among the banking agencies.

Looking forward, the requirement of FDICIA that the agencies conduct full scope, on-site examination of each depository institution every year may increase the perception of overlapping examinations and greater regulatory burden. Although annual examinations have been common for institutions that the Federal Reserve supervises, the legal requirement may increase the visibility and on-site presence of examiners at institutions that other agencies supervise.

To reduce or minimize regulatory burden on the banking system that can arise from multiple examinations, the agencies have clarified and reaffirmed the agreement that the federal regulatory agency that has primary supervisory authority for that entity will conduct the examination or inspection of a bank or bank holding company. Other agencies will rely on the reports of that agency and may, when necessary, participate in the examination or inspection by the primary regulator. Although coordinated examinations may not be practical in all cases, particular emphasis for implementing this program will be placed on large or weak institutions. The program also covers other information-sharing arrangements with both federal and state banking supervisors.

On a separate, but related, issue, the Federal Reserve is reviewing the merits of conducting on a more coordinated basis the various "special purpose" examinations, such as those for trust activities and computerized systems (EDP). The possibility of also combining examinations for consumer compliance with those for safety and soundness raises other issues, involving both logistics and policy, particularly in the present environment of emphasizing the enforcement of laws that prohibit discriminatory lending.

Although these different examinations have been traditionally conducted independently in recognition of the specialized training needed to review the disparate activities, in some cases it may be possible to perform two or more of these reviews simultaneously and with less disruption to the institution. Indeed, we are currently conducting on an experimental basis an examination of a state member bank in which several different examinations and the inspection of the parent bank holding company are being performed together. The initial reactions to this approach by bankers and staff members of the Reserve Bank have been positive.

Fair Lending Practices

A crucial element in the series of recent policy statements describes several initiatives related to fair lending practices. These initiatives were preceded in late May with a letter, signed by the

heads of all four federal bank and thrift regulatory agencies, to the chief executive officers of all U.S. depository institutions, which cited the importance of fair lending practices and stressed the commitment of the agencies to enforcing fair credit laws. The letter also urged special consideration to eleven specific fair lending activities, such as enhanced training, second review programs, and affirmative marketing and call programs.

Subsequently, on June 10, the agencies announced development of a new training program in fair lending for experienced compliance examiners and the initiation of related programs for senior industry executives. These efforts and others should increase the awareness of lenders to the often subtle practices that disadvantage low-income and minority individuals.

The agencies are also exploring additional methods of detecting discriminatory practices and will improve their procedures for referring violations of the Equal Credit Opportunity Act to the Department of Justice. Each agency will also evaluate its consumer complaint system to determine which improvements should be made to its own procedures. In the meantime, the Federal Reserve has referred ten complaints that allege mortgage credit discrimination to the Department of Housing and Urban Development under an interagency cooperation agreement signed last year.

In recent months the Federal Reserve has been testing a statistical model, similar to that used in a study by the Federal Reserve Bank of Boston, that is designed to assist examiners in analyzing the compliance of mortgage lenders with fair lending laws. This system does not, by itself, determine the presence of discrimination but would serve as a tool to lead examiners more effectively to loan files that warrant closer review for comparative analysis in making that determination. The Federal Reserve has had educational programs in place for some time and will continue to build upon them. For example, last year the Federal Reserve Bank of Kansas City sponsored a conference for bankers called "Credit and the Economically Disadvantaged," In addition, the Federal Reserve Bank of Boston recently published a brochure for bankers on lending discrimination called "Closing the Gap,"

which should help them recognize and correct potentially discriminatory policies and practices. Such educational programs for both bankers and examiners have been, and will continue to be, an important part of the Federal Reserve's effort to promote and enforce fair lending practices.

BANKING LAWS AND REGULATIONS

Banking laws and regulations exist for reasons that are critical to the smooth functioning of our economic and social structure. We must, for example, minimize or prevent significant disruptions to the nation's financial and payment systems; we must work to ensure that all citizens have fair access to credit; and we must also protect taxpayers, in general, from excessive costs of bank failures. Nevertheless, the Federal Reserve and the other banking agencies should continually review their policies and procedures to avoid placing unnecessary burdens on the banking system. As conditions change, the need for, or effect of, banking laws should also be reviewed.

In considering which steps to take, it is helpful to be guided by fundamental principles of supervision and regulation. Both the Congress and the regulatory agencies should have a clear understanding of why we supervise and regulate banks and what our goals are and should be. These goals should recognize the role of banks in our society and in financial markets. They should also recognize the high level of competition in these markets and the value of maintaining a strong, vibrant, and competitive banking system.

Our regulatory and supervisory goals should not be to prevent banks from taking risks or to have a system that is so restrictive that no bank ever fails. Risk-taking is essential for economic growth. Rather, the goals should focus on maintaining economic and financial stability, ensuring that businesses and consumers have adequate access to credit, and deterring excessive risk-taking that can arise because of the existence of deposit insurance and the overall structure of the federal safety net.

Banking laws and regulations should be compatible with social objectives, and they should also contribute to minimizing costs to the public when banks fail. However, they should not be unnecessarily restrictive or suppress innovation and growth by attempting to micromanage banking organizations. In view of this, it seems reasonable that new laws or regulations be subject to an appropriate cost-benefit analysis when they are considered.

The legislative and regulatory process should also recognize the role of supervisory actions, which can adapt to specific factors and conditions at individual institutions much better than can laws and regulations that are necessarily more formulaic and rigid. In this connection, banks that pose less risk to the safety net or that demonstrate superior performance in certain areas should be permitted greater flexibility or expanded powers than banks that have less favorable performance records or that present greater risks.

The Federal Reserve has often advocated several elements of legislative change that I believe the Congress should consider. They relate to the payment by the Federal Reserve of interest on required reserves, the elimination of barriers to interstate branching, and the expansion of powers—especially those regarding securities underwriting activities—for strong and well-managed banking organizations. Taking these steps would, I believe, improve the long-term outlook of the U.S. banking system by helping it compete more effectively with many nonbank institutions that are not similarly constrained in their activities or that do not incur these and other regulatory costs.

I would also hope that the principles I have outlined would be applied when considering the need for future legislative changes that affect banks. Some laws, including those designed to achieve desired social goals, have extracted high regulatory compliance costs on banks, often with questionable positive results.

Last year, for example, representatives of the Federal Reserve and the other federal banking agencies conducted a variety of "town meetings" throughout the United States on regulatory burden. I participated in those meetings and believe that they provided useful insights into the regulatory process and into areas that should be reconsidered. Discussions often turned to consumer compliance laws, with bankers generally

complaining about their high regulatory costs, and consumer advocates often stating that the requirements have not accomplished their intended goals. Unfortunately, when agency staff members revisit the relevant regulations, they continued to believe that most of our specific requirements are required to implement the laws.

As is often the case when making public policy, few clear and simple answers to important and complex problems are evident. Further efforts to reduce regulatory burden will undoubtedly raise difficult questions about the trade-offs to be made between competing public policies. As you know, I suggested to the subcommittee in February that one way of dealing with these issues may be to establish a nonpartisan commission to explore possible legislative changes. Regardless of the approach the Congress takes, the Federal Reserve looks forward to working to find ways to improve the framework of banking laws and regulations.

CONCLUSION

In closing, I would mention that the Federal Reserve has an ongoing program to review its regulations to monitor their effectiveness and related burdens. I would also assure the subcommittee that the Federal Reserve is highly sensitive to the matter of regulatory burden and that we seek to avoid imposing unnecessary or ineffective requirements or constraints on the banking system. Nevertheless, the level of regulatory burden has increased as new banking legislation and implementing regulations are imposed. This continuing and only additive process is taking a significant and undesired toll that is easily measured by the declining share of U.S. financial assets held by banks.

Banking institutions perform a vital and unique role in our economy by providing credit to all segments of our society, by facilitating payments of goods and services, and by providing the mechanism for the conduct of monetary policy. If the banking system is to continue its role, it is incumbent on bankers to remember their long-term interests and to conduct their activities responsibly. This means operating both prudently and fairly and being responsive to the

credit needs of their communities. In doing otherwise, banks risk the continued loss of market share and the prospects of still further rules and regulations.

Perhaps the most useful actions that bank regulators and lawmakers can take is to avoid imposing additional competitive disadvantages on banks and to conduct their activities in a balanced fashion and with a broad perspective on the role of banks in our society. Beyond that, to the extent existing laws and regulations can be reduced, made more efficient, or applied more equitably to broader segments of the financial industry, we may accomplish not only greater fairness in lending but also greater fairness in regulating.

Announcements

NOMINATIONS SOUGHT FOR APPOINTMENTS TO CONSUMER ADVISORY COUNCIL

The Federal Reserve Board announced on June 18, 1993, that it is seeking nominations of qualified individuals for seven appointments to its Consumer Advisory Council to replace members whose terms expire on December 31, 1993.

The Consumer Advisory Council comprises thirty representatives of consumer and community interests and of the financial services industry. The council was established by the Congress in 1976, at the suggestion of the Board, to advise the Board on the exercise of its responsibilities under the Consumer Credit Protection Act and on other matters on which the Board seeks its advice. The council by law represents the interests both of consumers and of the financial community. The group meets in Washington, D.C., three times a year.

Seven new members will be selected from the nominations to serve three-year terms that will begin in January 1994. The Board expects to announce the selection of new members by year-end 1993.

Nominations should be submitted in writing and should include the address and telephone number of the nominee. Also, past and present positions held, special knowledge, interests, or experience related to consumer credit or other consumer financial services should be included.

The written nominations must be received by August 30, 1993, and should be addressed to Dolores S. Smith, Associate Director, Division of Consumer and Community Affairs, Board of Governors of the Federal Reserve System, Washington, DC 20551. Information about nominees will be available for inspection on request.

NEW SERVICES AVAILABLE TO FACILITATE THE SAME-DAY SETTLEMENT OF CHECKS

The Federal Reserve Board announced on June 2, 1993, adoption of new and enhanced Federal

Reserve Bank services to facilitate the same-day settlement of checks.

These services, which are effective immediately, include the following:

- Primary and alternate presentment point services for payor banks
- Supplementary payor bank information services for checks not collected through the Reserve Banks
- A new Fedwire product code to facilitate settlement for checks presented to payor banks directly by private sector banks.

The services are designed to facilitate a paying bank's responsibility to settle for checks presented by private sector banks and to enable paying banks to continue to provide timely cash management information to their corporate customers.

The fee structures for the presentment point and information services include daily minima and variable fees.

SELECTED STATISTICAL DATA NOW AVAILABLE ON COMPUTER DISKETTES

The Federal Reserve Board announced on June 28, 1993, that historical data covering six major sets of statistics are now available on computer diskettes. Data are being provided in this format on flow of funds, industrial production and capacity utilization, monetary aggregates, reserves of depository institutions, bank credit, and selected interest rates.

The 3½-inch, high-density (1.4 megabyte) diskettes are formatted for MS-DOS compatible computers using DOS version 3.3 or higher. The data are contained in ASCII text files that have in some cases been compressed. Explanatory help texts are included on the diskettes, as well as the software necessary to expand the files if necessary.

Each diskette is available from the Board's Publications Services, mail stop 402, Board of Gover-

nors of the Federal Reserve System, Washington, DC 20551. The cost is \$25.00 per diskette.

A brief summary of the information contained on each diskette follows.

Flow of Funds (three diskettes, quarterly)

Seasonally adjusted quarterly flow of funds data from the Z.1 statistical release are contained on diskette 1. The Z.1 files begin with 1952:Q1 and end with the most recently published quarter. Unadjusted flow of funds data are on diskette 2.

Diskette 3 contains outstandings and annual data from 1945 on the Balance Sheets for the U.S. Economy that are published in the C.9 statistical release. Monthly debt aggregate statistics beginning with January 1955 are also on diskette 3. Updates to the debt aggregate are published weekly in the Board's H.6 statistical release.

Data are stored in compressed files that correspond to tables in the releases. The diskettes are reissued each quarter with revisions and updates at the time the Z.1 is released.

Industrial Production and Capacity Utilization (two diskettes, monthly)

These data have been divided between a historical diskette containing data before 1986 and a more current monthly diskette containing data beginning in 1986.

The monthly diskette is available around the eighteenth of each month and contains the data published in the Federal Reserve Board's G.17 statistical release on industrial output, capacity, and capacity utilization. Survey data on use of industrial electric power are also included. The data begin with January 1986 and end with the month of the most recently published industrial production index. Data and documentation files on the diskette correspond to tables in the G.17 release.

The April indexes that were first published on the diskette issued in May reflect a revision to the industrial production and capacity utilization indexes. The revisions primarily reflect conversion of the indexes from 1987 forward to the 1987 Standard Industrial Classification and the incorporation of more comprehensive annual and monthly source data, when these data are available, for the same period.

The historical diskette contains data with various starting dates (the earliest is 1919). The ending date is December 1985 for all data.

Mortgage and Consumer Finance (one diskette, monthly)

Monthly statistics on consumer installment credit from the Board's G.19 statistical release, including seasonally adjusted and not seasonally adjusted totals, along with not seasonally adjusted components, and interest rates, are contained on the diskette. Some series begin with 1943. Data on securitized assets are available from 1989, and data on interest rates are available from 1971.

Monthly consumer finance company statistics from the Board's G.20 statistical release, including seasonally adjusted and not seasonally adjusted totals along with not seasonally adjusted components, are also on the diskette, as well as not seasonally adjusted Finance Company Quarterly Report data. Data on outstandings are available from 1980, and the Quarterly Report data are available from 1985. Data are updated on a monthly basis at the time the G.19 and G.20 statistical releases are published.

Monetary Aggregates (one diskette, annually)

This data set contains aggregate data on money stock measures and liquid assets (M1, M2, M3, and L), as well as components of the money stock measures and related items, as reported on the H.6 statistical release. The historical data reflect revisions that incorporate annual seasonal adjustment and benchmark changes. Data are updated annually, generally in late February or early March.

Monthly data are shown for the period 1959 through 1992. Weekly data, shown for the period January 6, 1975, through January 4, 1993, are based on weeks ending on Mondays to correspond with the reporting cycle under contemporaneous reserve requirements. No data before 1975 have been reconstructed on a weekly basis.

Deposits have been benchmarked using Call Reports through June 1992 and incorporate data revisions from other sources also. Seasonal factors have been revised using the X-11 ARIMA procedure adopted in 1982 with prior adjustments for special events, such as the introduction of new deposit accounts.

Reserves of Depository Institutions (one diskette, annually)

This diskette contains data on aggregate reserves, borrowings from the Federal Reserve, and the monetary base, as shown on the H.3 statistical release. The data incorporate breaks in series resulting from the January 1993 indexations of the low reserve tranche and the reserve requirement exemption levels, as well as the annual review of seasonal factors. Data are updated annually, usually in late March or early April.

Monthly data are provided for the period January 1959 through March 1993. Weekly data are provided for the period January 7, 1959, to March 31, 1993.

Bank Credit (two diskettes, quarterly)

These diskettes contain aggregate historical data on bank assets and liabilities and on bank debits. Weekly assets and liabilities, not seasonally adjusted, for large domestic banks by national totals and by Federal Reserve District (as shown on the H.4.2 statistical release) are available from 1988 to date. Weekly assets and liabilities from large U.S. branches and agencies of foreign banks, not seasonally adjusted (also on the H.4.2), are available from 1989 to date. Weekly assets and liabilities for all commercial banks and major bank groups, not seasonally adjusted (as shown on the H.8 statistical release), are available from 1984 to date.

Monthly assets for all commercial banks and major bank groups, seasonally adjusted and not seasonally adjusted (as shown on the G.7 statistical release), are available from 1972 to date, as are monthly nondeposit sources, seasonally adjusted and not seasonally adjusted (as shown on the G.10 statistical release). Monthly debits and deposit turnover, seasonally adjusted and not seasonally adjusted (as shown on the G.6 statistical release), are available from 1970 to date.

Data and documentation files on the diskette correspond to the various statistical releases.

Selected Interest Rates (one diskette, quarterly)

The diskette contains all items shown on the weekly H.15 statistical release, "Selected Interest Rates." The data include historical observations for the interest rate variables at each available frequency of observation-generally business day, weekly, monthly, and annual. Updated diskettes are available the first week of each quarter and include data through the end of the previous quarter.

Both the starting dates for individual interest rate series and the frequencies of the observations vary. The less frequently observed transformations, such as monthly or annual, are usually available for longer periods. The selection of specific frequency transformations conforms to market conventions for quoting those rates. For example, the federal funds rate is quoted daily and for statement weeks ending on Wednesday in contrast to the more common convention of weeks ending on Friday for many other rates.

PROPOSED ACTION

The Federal Reserve Board requested public comment on a proposed interagency rule to amend regulations regarding real estate appraisals, which are contained in the Board's Regulations H (Membership of State Banking Institutions in the Federal Reserve System) and Y (Bank Holding Companies and Change in Bank Control). Comments were requested by July 19, 1993.

PUBLICATION OF THE BANK HOLDING COMPANY SUPERVISION MANUAL

The first revision to the December 1992 edition of the Bank Holding Company Supervision Manual has been published by the Board's Division of Banking Supervision and Regulation and is now available for purchase by the public. The *Manual* is used by Federal Reserve examiners in the supervision, regulation, and inspection of bank holding companies and their subsidiaries. A copy of the revision is available for \$4.00. The *Manual* and the

June 1993 revision may be obtained from Publications Services, mail stop 402, Board of Governors of the Federal Reserve System, Washington, DC 20551. A copy of the *Manual* and its June 1993 revision supplement are available at a cost of \$50.00.

Legal Developments

ORDERS ISSUED UNDER BANK HOLDING COMPANY ACT

Orders Issued Under Section 3 of the Bank Holding Company Act

Bank of Boston Corporation Boston, Massachusetts

Order Approving the Acquisition of a Bank Holding Company

Bank of Boston Corporation, Boston, Massachusetts ("BBC"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has applied under section 3 of the BHC Act (12 U.S.C. § 1842) to acquire all the voting shares of Multibank Financial Corp., Dedham, Massachusetts ("Multibank"), and thereby indirectly acquire South Shore Bank, Quincy; Mechanics Bank, Worcester; and Multibank West, Pittsfield; all in Massachusetts.¹

Notice of these applications, affording interested persons an opportunity to submit comments, has been published (58 Federal Register 13,265 (1993)). The time for filing comments has expired, and the Board has considered these applications and all comments received in light of the factors set forth in section 3(c) of the BHC Act.

BBC, with consolidated assets of \$31.6 billion, controls five banks in Connecticut, Massachusetts, Vermont, Maine, and Rhode Island.² BBC is the largest commercial banking organization in Massachusetts, controlling deposits of \$13.8 billion, representing approximately 26.7 percent of total deposits in commercial banking organizations in the state.³ Multibank is the sixth largest commercial banking organization in Massachusetts, controlling deposits of \$2.2 billion, representing approximately 4.2 percent of total deposits in commercial banking organizations in the state.

1. BBC proposes to merge its wholly owned subsidiary into Multibank, with Multibank surviving the merger. In connection with the proposed acquisition, BBC also seeks approval to acquire an option to purchase up to 19.9 percent of the voting shares of Multibank. This option will become moot upon consummation of the proposed acquisition of all the shares of Multibank.

Upon consummation of this proposal, BBC would remain the largest commercial banking organization in Massachusetts, controlling deposits of \$16 billion, representing approximately 30.9 percent of the total deposits in commercial banking organizations in the state.

BBC and Multibank compete directly in nine banking markets in Massachusetts.⁴ After considering the competition offered by commercial banks and thrift institutions⁵ in all nine banking markets, the number of competitors remaining in the respective markets, the increase in market share and market concentration in each market,⁶ and all other facts of record, the Board concludes that consummation of the proposal would not have a significantly adverse effect on competition in any relevant banking market.

In evaluating these applications, the Board is required, under the terms of section 3 of the BHC Act, to consider the financial resources of the companies and banks involved, and the effect of this proposed acquisition on the future prospects of those organizations and institutions. The Board previously has stated that a bank holding company should serve as a source of financial strength to its subsidiary banks and that the Board would closely examine the condition of an applicant and its subsidiaries in each case with this

^{2.} Asset data are as of March 31, 1993.

^{3.} State deposit data are as of June 30, 1992.

^{4.} These markets are Amherst/Northampton, Boston, Cape Cod, Fall River, Fitchburg/Leominster, Springfield, Taunton, Worcester and Providence.

^{5.} The Board previously has indicated that thrift institutions have become, or have the potential to become, significant competitors of commercial banks. See Midwest Financial Group, 75 Federal Reserve Bulletin 386 (1989); National City Corporation, 70 Federal Reserve Bulletin 743 (1984). Thus, the Board has regularly included thrift deposits in the calculation of market share on a 50 percent weighted basis. See, e.g., First Hawaiian Inc., 77 Federal Reserve Bulletin 52 (1991).

^{6.} Under the revised Department of Justice Merger Guidelines, 49 Federal Register 26,823 (June 29, 1984), a market in which the post-merger Herfindahl-Hirschman Index ("HHI") is above 1800 is considered to be highly concentrated. In such markets, the Justice Department is likely to challenge a merger that increases the HHI by more than 50 points. However, the Justice Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anti-competitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anti-competitive effects implicitly recognize the competitive effect of limited-purpose lenders and other non-depository financial entities. The increase in the HHI in each market in this case would be within the Justice Department guidelines.

consideration in mind. In this regard, the Board continues to believe that bank holding companies contemplating expansion proposals must demonstrate sufficient financial flexibility necessary to meet unexpected problems in all their subsidiary banks.

BBC maintains that its improved financial condition and the benefits to be derived by BBC from the acquisition, including, in particular, projected cost savings and increased penetration of the small business loan market, support approval of the proposal. The Board notes that BBC has capital levels well above the minimums set forth in the Board's capital adequacy guidelines,⁷ and that the acquisition will not significantly reduce its capital.

The Board has carefully evaluated this proposal in light of the Board's approval today of BBC's acquisition of Society for Savings Bancorp, Inc. ("Society"), and its savings bank subsidiary, Society for Savings, both in Hartford, Connecticut. In the case of the Society proposal, which represents a substantial acquisition of approximately \$2.5 billion in total consolidated assets, the Board concluded that considerations relating to the financial resources and future prospects of these institutions were, on balance, consistent with approval. BBC's proposal to acquire Multibank, with approximately \$2.4 billion in total consolidated assets, would, in combination with the acquisition of Society, lessen BBC's capacity to serve as a source of strength for its banking subsidiaries.

To address this, BBC has committed, in connection with its proposed acquisition of Multibank, to raise significant additional new capital prior to consummating this transaction. This new capital would provide additional financial flexibility to permit BBC to assimilate Multibank and Society into its organization and to serve as a source of strength to Multibank and Society and its other subsidiary banks after the acquisition. The Board believes that this new capital should be maintained to meet unexpected problems in BBC's subsidiary banks, if necessary. Accordingly, the Board conditions its action in this case on BBC raising the proposed additional capital on or before consummation of the acquisition of Multibank, and maintaining these funds exclusively for use in addressing problems at its subsidiary banks.

On this basis, and based on all the facts of record, the Board concludes that the financial and managerial resources and future prospects of BBC and Multibank, and their respective subsidiaries, and the other supervisory factors that the Board must consider under section 3 of the BHC Act are consistent with approval of these applications.

Based on the foregoing, including the representations and commitments described in this Order and those made in connection with these applications, and all the facts of record, the Board has determined that these applications should be, and hereby are, approved. The Board's approval is specifically conditioned upon compliance by BBC with all the commitments made in connection with these applications, including its capital raising commitments and the condition that this capital be maintained exclusively for use in addressing problems at BBC's subsidiary banks. For purposes of this action, these commitments and conditions will be considered conditions imposed in writing and, as such, may be enforced in proceedings under applicable law.

The acquisition shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or the Federal Reserve Bank of Boston, acting pursuant to delegated authority.

By order of the Board of Governors, effective June 9, 1993.

Voting for this action: Chairman Greenspan and Governors Angell, LaWare, and Phillips. Abstaining from this action: Governors Mullins, Kelley, and Lindsey.

JENNIFER J. JOHNSON Associate Secretary of the Board

Abstention Statement

Our abstention reflects our strong dissatisfaction with the way in which this application was considered. A majority of the Board voted to deny the proposal as originally structured. While the Board was in the process of drafting an order reflecting its decision, Applicant proposed a restructuring of its proposal to raise additional capital. On the basis of Applicant's proposal to raise new capital, a majority of the Board agreed to reconsider the proposal.

We disagree with the Board's decision to consider information that was submitted by the Applicant after the Board initially considered this case. Applicant had ample opportunity prior to the time that this matter was scheduled to be presented to the Board to make changes to its proposal. We believe that it impairs the integrity of the Board's decision-making process to permit an applicant to submit new information after the Board has considered the record of the case and

^{7.} Capital Adequacy Guidelines, 12 C.F.R. 225, Appendices A, B, and D.

while the Board is in the process of issuing its decision.

We are concerned that this permits the misuse of the application process. The Board expects applicants, prior to the time the Board considers an application, to submit a detailed proposal that addresses all issues that the Board must consider. To do otherwise would encourage applicants to submit marginal proposals and then attempt to negotiate an acceptable proposal directly with the Board. This cannot be permitted to happen if the Board is to act promptly, carefully and fairly on each application.

Thus, we believe that the Board should issue a decision regarding each proposal that is put before the Board, as that proposal is structured at the time of the Board's original consideration of the matter. Applicants that choose to restructure proposals are presently permitted to request that the Board consider new proposals developed in response to a published Board decision, but should not have an opportunity or any incentive to attempt to negotiate each proposal with the Board.

While we find the specific process followed in this case to be unacceptable, we also believe that the Applicant's new proposal, were it to be resubmitted in its current form, would be consistent with approval on the merits.

June 9, 1993

Bank of Boston Corporation Boston, Massachusetts

Order Approving the Acquisition of a Bank Holding Company

Bank of Boston Corporation, Boston, Massachusetts ("BBC"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has applied under section 3 of the BHC Act (12 U.S.C. § 1842) to acquire all of the voting shares of Society for Savings Bancorp, Inc. ("Society"), and thereby indirectly acquire Society for Savings ("Society Bank"), a state chartered savings bank, both of Hartford, Connecticut.¹

Notice of these applications, affording interested persons an opportunity to submit comments, has been published (58 Federal Register 6640 (1993)). The time for filing comments has expired, and the Board has considered these applications and all comments received in light of the factors set forth in section 3(c) of the BHC Act.²

BBC, with consolidated assets of \$31.6 billion, controls five banks in Connecticut, Massachusetts, Vermont, Maine, and Rhode Island.³ BBC is the seventh largest commercial bank or thrift organization ("depository institution") in Connecticut, controlling deposits of \$2 billion, representing approximately 3.4 percent of total deposits in depository institutions in the state.4 Society is the eighth largest depository institution in Connecticut, controlling deposits of \$1.8 billion, representing approximately 3.2 percent of total deposits in depository institutions in the state. Upon consummation of this proposal, BBC would become the fourth largest depository institution in Connecticut, controlling deposits of \$3.8 billion, representing approximately 6.6 percent of the total deposits in depository institutions in the state.5

Competitive Considerations

BBC and Society compete directly in five banking markets in Connecticut: Bridgeport, Danbury, Hartford, New Haven, and Waterbury. Upon consummation of this proposal, all banking markets would remain moderately concentrated or unconcentrated as measured by the Herfindahl-Hirschman Index ("HHI").6 After considering the competition offered

Banking Commissioner. The Connecticut Banking Commissioner also has approved BBC's acquisition of Society.

 The Board also has considered additional comments filed after the close of the public comment period. Under the Board's rules, the Board may in its discretion take into consideration the substance of such comments. 12 C.F.R. 262.3(e).

- 3. Asset data are as of March 31, 1993.
- 4. State deposit data are as of June 30, 1992.
- 5. The Board previously has determined that the interstate banking statute of Connecticut permits a Massachusetts bank holding company to acquire banking organizations in Connecticut. See Shawnut National Corporation, 74 Federal Reserve Bulletin 182, 183 (1988); Bank of New England Corporation, 70 Federal Reserve Bulletin 374 (1984); Bank of Boston Corporation, 70 Federal Reserve Bulletin 737 (1984). Thus, consummation of this transaction is not barred by section 3(d) of the BHC Act (12 U.S.C. § 1842(d)).
- 6. Under the revised Department of Justice Merger Guidelines (49 Federal Register 26,823 (June 29, 1984)), a market in which the post-merger HHI is less than 1000 is considered unconcentrated, and a market in which the post-merger HHI is between 1000 and 1800 is considered moderately concentrated. The Justice Department has informed the Board that a bank merger or acquisition generally will not be challenged (in the absence of other factors indicating anti-

^{1.} BBC proposes to merge its wholly owned subsidiary, Merger Subsidiary, into Society, with Society surviving the merger. BBC also proposes to merge Society Bank into BBC's subsidiary bank, Bank of Boston Connecticut, Waterbury, Connecticut ("Bank"), retaining the charter of Society Bank and the name of Bank. Bank will be owned jointly by Society and Colonial Bancorp, Inc., Waterbury, Connecticut ("Colonial"), a subsidiary bank holding company of BBC. In this regard, Colonial has applied under section 3 of the BHC Act (12 U.S.C. § 1842) to acquire at least 25 percent of the voting shares of Bank. The merger of Bank and Society Bank has been approved by the Federal Deposit Insurance Corporation and by the Connecticut

In connection with the proposed acquisition, BBC also seeks approval to acquire an option to purchase up to 19.9 percent of the voting shares of Society. This option will become moot upon consummation of the proposed acquisition of all of the shares of Society.

796

by other depository institutions in the market,⁷ the number of competitors remaining in the respective markets, the relatively small increase in market share and market concentration in the respective markets, and all other facts of record, the Board concludes that consummation of the proposal would not have a significantly adverse effect on competition in any relevant banking market.⁸

Convenience and Needs Considerations

In acting upon an application to acquire a depository institution under the BHC Act, the Board must consider the convenience and needs of the communities to be served, and take into account the records of the relevant depository institutions under the Community Reinvestment Act (12 U.S.C. § 2901 et seq.) ("CRA"). The CRA requires the federal financial supervisory agencies to encourage financial institutions to help meet the credit needs of the local communities in which they operate, consistent with the safe and sound operation of such institutions. To accomplish this end, the CRA requires the appropriate

competitive effects) unless the post-merger HHI is at least 1800 and the merger increases the HHI by 200 points. The Justice Department has stated that the higher than normal HHI thresholds for screening bank mergers for anti-competitive effects implicitly recognize the competitive effect of limited-purpose lenders and other non-depository financial entities.

7. Market deposit data are as of June 30, 1991. Market share data are based on calculations in which the deposits of thrift institutions are included at 50 percent. The Board previously has indicated that thrift institutions have become, or have the potential to become, major competitors of commercial banks. See Midwest Financial Group, 75 Federal Reserve Bulletin 386 (1989); National City Corporation, 70 Federal Reserve Bulletin 743 (1984). Thus, the Board has regularly included thrift deposits in the calculation of market share on a 50 percent weighted basis. See, e.g., First Hawaiian Inc., 77 Federal Reserve Bulletin 52 (1991). Because Society Bank would be merged with a commercial bank under BBC's proposal, the deposits of Society Bank are included at 100 percent in the calculation of the proforma market share. See First Banks, Inc., 76 Federal Reserve Bulletin 669, 670 n.9 (1990); Norwest Corporation, 78 Federal Reserve Bulletin 452 (1992).

8. Upon consummation of this proposal, BBC would become the fourth largest of 22 depository institutions in the Bridgeport banking market, controlling deposits of \$403.8 million, representing approximately 6.5 percent of total deposits in depository institutions in the market ("market deposits"). The HHI would increase 18 points to 1512. BBC would become the fourth largest of 25 depository institutions in the Danbury banking market, controlling deposits of \$167.2 million, representing approximately 7.4 percent of market deposits. The HHI would increase 15 points to 763. BBC would become the third largest of 54 depository institutions in the Hartford banking market, controlling deposits of \$2.3 billion, representing approximately 12.4 percent of market deposits. The HHI would increase 38 points to 1686. In the New Haven banking market, BBC would become the fifth largest of 24 depository institutions, controlling deposits of \$650.1 million, representing approximately 10.1 percent of market deposits. The HHI would increase 35 points to 860. Finally, in the Waterbury banking market, BBC would remain the largest of 15 depository institutions, controlling deposits of \$860 million, representing approximately 33.4 percent of market deposits. The HHI would increase 109 points to 1733.

federal supervisory authority to "assess the institution's record of meeting the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of such institution," and to take that record into account in its evaluation of bank holding company applications.⁹

The Board has received comments from two organizations ("Protestants") critical of the efforts of BBC and Society to meet the credit and banking needs of their communities. In particular, Protestants allege that BBC and Society have failed to meet the credit and banking needs of residents in the Charter Oak/Zion/Southwest Hartford community because both institutions recently closed branches that service this community. 10

The Board has carefully reviewed the CRA performance records of BBC and Society, and their respective subsidiary banks, as well as all comments received regarding these applications, BBC's responses to those comments, and all of the other relevant facts of record in light of the CRA, the Board's regulations, and the Statement of the Federal Financial Supervisory Agencies Regarding the Community Reinvestment Act ("Agency CRA Statement").11

Record of Performance Under the CRA

A. CRA Performance Examinations

The Agency CRA Statement provides that a CRA examination is an important, and often controlling, factor in the consideration of an institution's CRA record and that these reports will be given great weight in the applications process. 12 In this case, the Board notes that all of BBC's subsidiary banks have received "outstanding" or "satisfactory" ratings from their primary regulators during the most recent examinations of each institution's CRA performance. In particular, BBC's lead subsidiary bank, First National Bank of Boston, Boston, Massachusetts, received an "outstanding" rating for CRA performance from its primary regulator, the Office of the Comptroller of the Currency ("OCC"), in October 1992. Bank of Boston Connecticut, Waterbury, Connecticut ("Bank"), also received an "outstanding" rating for CRA performance from its primary regulator, the Federal Deposit

^{9. 12} U.S.C. § 2903.

^{10.} Protestants allege that, because of these branch closings and branch closings by other banks, the only source of banking services within walking distance of their community is a single automatic teller machine ("ATM").

^{11. 54} Federal Register 13,742 (1989).

^{12.} Id. at 13,745.

Insurance Corporation ("FDIC"), in February 1993.¹³ In addition, Society Bank received a "satisfactory" rating from its primary regulator, the FDIC, in August 1992.

B. Branch Closings

In response to Protestants' comments, BBC asserts that neither of the branches closed by BBC and Society were located in Protestants' community. ¹⁴ Moreover, BBC maintains that Bank continues to service the Charter Oak/Zion/Southwest Hartford community through its Goodwin Park branch at 2035 Broad Street ("Goodwin Branch"), which is located less than one-half mile from the described community.

The Goodwin Branch provides the community with many banking services, including services expressly designed to meet the needs of low- and moderate-income customers. In particular, the Goodwin Branch provides check cashing and food stamp services, as well as services geared to the needs of local small businesses. The Goodwin Branch also offers two drive-through teller stations, a 24-hour automatic teller machine ("ATM"), and a night depository.

Bank also has been involved in programs that help meet the credit needs of the Charter Oak/Zion/Southwest Hartford community. For example, Bank has endeavored to ascertain community credit needs by calling community organizations such as Project Hope on New Britain Avenue (a nonprofit organization providing educational and training services to lowincome clients); Warburton Community Church; and the Sisters of St. Joseph on Freeman Street. Bank also has conducted banking education seminars specifically designed for low- and moderate-income consumers, and has provided credit counseling and home buyer seminars in the neighboring Frog Hollow section of Hartford. Low- and moderate-income first-time homebuyers in the Charter Oak/Zion/Southwest Hartford community also are eligible for low-cost home purchase mortgages provided by Hartford Area Rallies Together ("HART"), a partnership in which Bank participates.

The record in this case indicates that in the most recent CRA examinations of Bank and Society Bank, the FDIC found that each institution's record of open-

13. BBC's other subsidiary banks have been most recently rated for CRA performance as follows: Bank of Vermont, Burlington, Vermont, received an "outstanding" rating from the FDIC in September 1991; Casco Northern Bank, N.A., Portland, Maine, received a "satisfactory" rating from the OCC in March 1991; and Rhode Island Hospital Trust, N.A., Providence, Rhode Island, received a "satisfactory" rating from the OCC in March 1991.

ing and closing offices was satisfactory. 15 BBC has committed that the CRA policies and programs employed at Bank will be implemented at Society Bank. In this regard, Bank, which is the institution that will survive the merger with Society Bank, has formulated a formal branch closing policy that requires Bank to consider how each closing would impact the affected communities. In particular, Bank, prior to a branch closure or reduction in service, reviews the viability of the existing office, as well as internal and external market conditions. Bank also has developed procedures to analyze the effects of potential closings, and, when a branch is to be closed, sets up a task force to coordinate such closing. This task force is responsible for providing advance notice of the closing to customers and appropriate banking regulators. In addition, the task force communicates with employees, community leaders and organizations to help minimize any negative impact the closing may have on the surrounding communities.

C. Additional Elements of CRA Performance

The Board also has considered other elements of the CRA performance of BBC, Society, and their subsidiary banks. The record indicates that BBC, Society and their subsidiary banks have in place the types of policies outlined in the Agency CRA Statement that contribute to an effective CRA program. For example, Bank has established two committees designed to ensure compliance with the CRA. The Board Community Investment Committee ("Board Committee") oversees Bank's CRA programs, reviews progress toward meeting goals, and sets new CRA-related goals when appropriate. The Community Investment Management Committee ("Management Committee"), which is made up of Bank business unit and department managers, is responsible for the implementation of Bank's CRA program. The Management Committee reports to the Board Committee at least quarterly to update the status of Bank's CRA program.

Bank ascertains the credit needs of its community through formal call programs and participation in various community and governmental organizations. For example, branch managers and business unit managers make calls in their communities to determine each community's needs and make recommendations to the Management Committee to fulfill those

^{14.} In March 1991, Bank closed its branch at 440 New Park Avenue located to the west of this community, and in May 1991, Society closed its Maple Avenue branch located to the community's east.

^{15.} The FDIC's most recent examination of Bank takes into account all branch closings by Bank since the 1990 examination, including the closing of Bank's 440 New Park Avenue office, located near the Charter Oak/Zion/Southwest Hartford community. In this regard, Bank's branch closing policy requires a 90-day advance notice to customers and to the Connecticut State Banking Commissioner.

needs. Bank also communicates with members of its community through the use of multilingual pamphlets on credit and deposit programs, and by hiring bilingual personnel.

Bank efforts for marketing its credit services and products include the use of neighborhood newspapers and radio advertisements to inform the community of its credit products. Bank also meets the credit needs of its communities through programs such as First Community Bank, which is expressly designed to serve the banking needs of low- and moderate-income consumers and businesses. This program includes access to commercial, mortgage, and consumer lenders, expanded outreach and personal service, educational credit seminars, services in English and Spanish, and special efforts to draw employees from the communities its serves. Bank also participates in various loan programs, including the Connecticut Student Loan Foundation's Stafford and PLUS Loan Programs, the Connecticut Housing Finance Authority mortgage program, as well as Federal Home Administration ("FHA"), Veterans Administration ("VA"), and Small Business Administration ("SBA") loan programs.

The Board has carefully considered the entire record of the CRA performance of BBC, Society and their subsidiary banks, including the comments filed in this case by Protestants, in reviewing the convenience and needs factors under the BHC Act. Based on a review of the entire record of performance by Bank, including the CRA examinations of the subsidiary banks of BBC and Society, the Board believes that the record of BBC, Society and their subsidiary banks in helping to meet the credit needs of all segments of the communities they serve, including low- and moderateincome neighborhoods, are consistent with approval. For these reasons, and on the basis of all the facts of record, the Board concludes that the convenience and needs considerations, including the CRA performance of BBC, Society, and their subsidiary banks, are consistent with approval of these applications. 16

Other Considerations

In evaluating these applications, the Board is required, under the terms of section 3 of the BHC Act, to consider the financial resources of the companies and banks involved and the effect of this proposed acquisition on the future prospects of those organizations and institutions. The Board previously has stated that a bank holding company should serve as a source of financial strength to its subsidiary banks, and that the Board would closely examine the condition of an applicant and its subsidiaries in each case with this consideration in mind. In this regard, the Board continues to believe that bank holding companies contemplating expansion proposals must demonstrate sufficient financial flexibility necessary to meet unexpected problems in all of its subsidiary banks.

The Board has carefully considered BBC's ability to serve as a source of strength to its subsidiary banks in this case. The Board believes that the plans and projections for Society, when considered in light of BBC's improved financial condition and recent equity raising efforts, demonstrate on balance a financial flexibility that is adequate to address unexpected problems that may be encountered after the Society acquisition in any of BBC's subsidiary banks. On the basis of these and all facts of record, the Board concludes that the financial and managerial and future prospects of BBC and Society, and their respective subsidiaries, and the other supervisory factors that the Board must consider under section 3 of the BHC Act are consistent with approval of these applications.

Based on the foregoing, including the representations and commitments described in this Order and those made in these applications, and all the facts of record, the Board has determined that these applications should be, and hereby are, approved. The Board's approval is specifically conditioned upon compliance by BBC with all the commitments made in connection with these applications. For purposes of this action, these commitments and conditions will both be considered conditions imposed in writing and, as such, may be enforced in proceedings under applicable law.

The acquisition shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or the Federal

^{16.} One of the Protestants has requested that the Board hold a public meeting or hearing on these applications. The Board is not required under section 3(b) of the BHC Act to hold a hearing on an application unless the appropriate banking authority for the bank to be acquired makes a timely written recommendation of denial of the application. In this case, the Connecticut Banking Commissioner has not recommended denial of the proposal.

Generally under the Board's rules, the Board may, in its discretion, hold a public hearing or meeting on an application to clarify factual issues related to the application, and to provide an opportunity for testimony, if appropriate. 12 C.F.R. 262.3(e) and 262.25(d). The Board has carefully considered this request. In the Board's view, interested parties have had a sufficient opportunity to present written submissions, and have submitted detailed written comments that have been considered by the Board. On the basis of all the facts of record, the Board has determined that a public meeting or hearing is not

necessary to clarify the factual record in these applications, or otherwise warranted in this case. Accordingly, the request for a public meeting or hearing on these applications is hereby denied.

Reserve Bank of Boston, acting pursuant to delegated authority.

By order of the Board of Governors, effective June 9, 1993.

Voting for this action: Chairman Greenspan and Governors Mullins, Angell, Kelley, LaWare, Lindsey, and Phillips.

JENNIFER J. JOHNSON Associate Secretary of the Board

Premier Financial Services, Inc. Freeport, Illinois

Premier Acquisition Company Freeport, Illinois

Order Approving the Acquisition of a Bank

Premier Financial Services, Inc., Freeport, Illinois ("Premier"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has applied under section 3 of the BHC Act (12 U.S.C. § 1842) to acquire First Northbrook Bancorp, Inc., Northbrook, Illinois ("First Northbrook"), and thereby indirectly acquire First National Bank of Northbrook, Northbrook, Illinois ("FNB Northbrook"), and First Security Bank of Cary-Grove, Cary, Illinois, a state nonmember bank ("FSB Cary-Grove").

Notice of the applications, affording interested persons an opportunity to submit comments, has been published (58 Federal Register 6640 (1993)). The time for filing comments has expired, and the Board has considered the applications and all comments received in light of the factors set forth in section 3(c) of the BHC Act.

Premier, with total consolidated assets of approximately \$361.7 million, is the 60th largest commercial banking organization in Illinois, controlling \$309.1 million in deposits, representing less than 1 percent of total deposits in commercial banks in the state.² Premier controls two bank subsidiaries in Illinois,³ and engages directly and through subsidi-

aries in a variety of permissible nonbanking activities. First Northbrook, with total consolidated assets of \$240 million, is the 87th largest commercial banking organization in Illinois, controlling \$228.6 million in deposits, representing less than 1 percent of total deposits in commercial banks in the state. Upon consummation of the proposal, Premier would become the 37th largest commercial banking organization in Illinois.

Premier and First Northbrook do not compete directly in any banking market. In light of all the facts of record, the Board concludes that consummation of the proposal would not have a significantly adverse effect on competition or the concentration of banking resources in any relevant banking market.

Based on all the facts of record, including all the commitments made in connection with these applications, the Board concludes that the financial and managerial resources and future prospects of Premier, its subsidiaries, and First Northbrook, as well as the convenience and needs of the communities to be served, and the other supervisory factors that the Board must consider under section 3 of the BHC Act, are consistent with approval of this proposal. Accordingly, and based on all the facts of record, and these commitments, the Board has determined that the applications should be, and hereby are approved.

The Board's approval of this proposal is expressly conditioned on compliance with the conditions referenced in this Order, and with all the commitments made in connection with this application, including the commitments made by Premier, PAC, and the proposed principal shareholders of Premier. The commitments and conditions relied on by the Board in reaching its decision are both deemed to be conditions imposed in writing by the Board in connection with its findings and decision, and, as such, may be enforced in proceedings under applicable law.

This transaction shall not be consummated before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Chicago, acting pursuant to delegated authority.

By order of the Board of Governors, effective June 14, 1993.

Voting for this action: Chairman Greenspan and Governors Mullins, Kelley, LaWare, and Lindsey. Absent and not voting: Governors Angell and Phillips.

JENNIFER J. JOHNSON
Associate Secretary of the Board

^{1.} As proposed, First Northbrook would be merged with and into Premier's wholly owned subsidiary, Premier Acquisition Company, Freeport, Illinois ("PAC"). Following the merger, PAC would be the surviving corporation, the separate corporate existence of First Northbrook would cease, and FNB Northbrook and FSB Cary-Grove would become wholly owned direct subsidiaries of PAC. PAC has applied under section 3 of the BHC Act to become a bank holding company.

Asset, deposit, and ranking data are as of March 31, 1993.
 Those banks are First Bank North, Freeport, Illinois, and First Bank South, Dixon, Illinois, both state member banks.

Orders Issued Under Section 4 of the Bank Holding Company Act

Barnett Banks, Inc. Jacksonville, Florida

Order Approving an Application to Engage in Private Placement and "Riskless Principal" Activities

Barnett Banks, Inc., Jacksonville, Florida ("Applicant"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has applied under section 4(c)(8) of the BHC Act (12 U.S.C. § 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) to engage de novo through its subsidiary, Barnett Securities, Inc., Jacksonville, Florida ("Company"), in acting as agent in the private placement of all types of securities, including providing related advisory services, and buying and selling all types of securities on the order of investors as a "riskless principal."

Notice of the application, affording interested persons an opportunity to submit comments, has been published (58 Federal Register 17,401 (1993)). The time for filing comments has expired, and the Board has considered the application and all comments received in light of the public interest factors set forth in section 4(c)(8) of the BHC Act.

Applicant, with total consolidated assets of \$39.6 billion, is the largest banking organization in Florida, and the ninth largest banking organization in Georgia. Applicant controls 29 bank subsidiaries in Florida, and four bank subsidiaries in Georgia, and engages directly and through subsidiaries in a broad range of permissible nonbanking activities.

Company is engaged in limited bank-ineligible securities underwriting and dealing activities permissible under section 20 of the Glass-Steagall Act (12 U.S.C. § 377).² Company also is, and will continue to be, a broker-dealer registered with the Securities and Exchange Commission ("SEC"), and a member of the National Association of Securities Dealers, Inc. ("NASD"). Accordingly, Company is subject to the record-keeping, reporting, fiduciary standards, and other requirements of the Securities Exchange Act of 1934 (15 U.S.C. § 78a et seq.), the SEC, and the NASD.

Private placement involves the placement of new issues of securities with a limited number of sophisticated purchasers in a nonpublic offering. A financial intermediary in a private placement transaction acts solely as an agent of the issuer in soliciting purchasers, and does not purchase the securities and attempt to resell them. Securities that are privately placed are not subject to the registration requirements of the Securities Act of 1933, and are offered only to financially sophisticated institutions and individuals and not to the public. Applicant has committed that Company will not privately place registered securities, and will only place securities with "institutional customers" as that term is defined in section 225.2(g) of the Board's Regulation Y (12 C.F.R. 225.2(g)).

"Riskless principal" is the term used in the securities business to refer to a transaction in which a broker-dealer, after receiving an order to buy (or sell) a security from a customer, purchases (or sells) the security for its own account to offset a contemporaneous sale to (or purchase from) the customer.3 "Riskless principal" transactions are understood in the industry to include only transactions in the secondary market. Thus, Applicant proposes that Company would not act as a "riskless principal" in selling securities at the order of a customer that is the issuer of the securities to be sold, or in any transaction where Company has a contractual agreement to place the securities as agent of the issuer. Company also would not act as a "riskless principal" in any transaction involving a security for which it makes a market.

The Board previously has determined by Order that, subject to prudential limitations that address the potential for conflicts of interests, unsound banking practices, and other adverse effects, the proposed private placement and riskless principal activities are closely related to banking as to be a proper incident thereto within the meaning of section 4(c)(8) of the BHC Act. The Board also previously has determined that acting as agent in the private placement of securities, and purchasing and selling securities on the order of investors as a "riskless principal", do not constitute underwriting and dealing in securities for purposes of section 20 of the Glass-Steagall Act (12 U.S.C. § 377), and that revenue derived from such activities is not subject to the 10 percent revenue limitation on bank-ineligible securities underwriting

Private Placement and "Riskless Principal" Activities

^{1.} Asset and ranking data are as of December 31, 1992.

Company may underwrite and deal in municipal revenue bonds, 1-4 family mortgage-related securities, commercial paper, and consumer-receivable-related securities. See Barnett Banks, Inc., 75 Federal Reserve Bulletin 190 (1989).

^{3.} See Securities and Exchange Commission Rule 10b-10. 17 C.F.R. 240.10b-10(a)(8)(i).

^{4.} See J.P. Morgan & Company Incorporated, 76 Federal Reserve Bulletin 26 (1990) ("J.P. Morgan"); Bankers Trust New York Corporation, 75 Federal Reserve Bulletin 829 (1989) ("Bankers Trust").

and dealing.⁵ Applicant has committed that Company will conduct its private placement and "riskless principal" activities using the same methods and procedures, and subject to the same prudential limitations established by the Board in Bankers Trust and J.P. Morgan,⁶ including the comprehensive framework of restrictions designed to avoid potential conflicts of interests, unsound banking practices, or other adverse effects imposed by the Board in connection with underwriting and dealing in securities.

Financial Factors, Managerial Resources, and Other Considerations

In order to approve this application, the Board is required to determine that the performance of the proposed activities by Applicant can reasonably be expected to produce public benefits that outweigh adverse effects under the proper incident to banking standard of section 4(c)(8) of the BHC Act. In this regard, in every case under section 4 of the BHC Act, the Board considers the financial condition and resources of the applicant and its subsidiaries, and the effect of the proposed transaction on these resources. Based on the facts of this case, the Board concludes that the financial considerations are consistent with approval of this application. The managerial resources of Applicant also are consistent with approval.

Under the framework established in this and prior Board decisions, consummation of this proposal is not likely to result in any significantly adverse effects, such as an undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices. Moreover, the Board expects that the *de novo* entry of Applicant into the market for the proposed private placement and "riskless principal" services in the United States would

provide added convenience to Applicant's customers, and would increase the level of competition among existing providers of these services. Accordingly, the Board has determined that the performance of the proposed activities by Applicant could reasonably be expected to produce public benefits that would outweigh possible adverse effects under the proper incident to banking standard of section 4(c)(8) of the BHC Act.

Based on the foregoing and all the facts of record, the Board has determined to, and hereby does, approve the application subject to all of the terms and conditions set forth in this Order, and in the above noted Board orders that relate to these activities. The Board's determination is also subject to all the terms and conditions set forth in Regulation Y, including those in sections 225.4(d) and 225.23(b), and to the Board's authority to require modification or termination of the activities of a bank holding company or any of its subsidiaries as the Board finds necessary to assure compliance with, and to prevent evasion of, the provisions of the BHC Act, and the Board's regulations and orders issued thereunder. The Board's decision is specifically conditioned on compliance with all the commitments made in connection with this application, including the commitments discussed in this Order and the conditions set forth in the above noted Board regulations and orders. These commitments and conditions shall be deemed to be conditions imposed in writing by the Board in connection with its findings and decisions, and may be enforced in proceedings under applicable law.

This transaction shall not be consummated later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Atlanta, pursuant to delegated authority.

By order of the Board of Governors, effective June 23, 1993.

Voting for this action: Chairman Greenspan and Governors Mullins, Angell, Kelley, LaWare, Lindsey, and Phillips.

Jennifer J. Johnson
Associate Secretary of the Board

Republic Bancorp, Inc. Ann Arbor, Michigan

Order Approving the Acquisition of a Savings Association

Republic Bancorp, Inc., Ann Arbor, Michigan ("Republic"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has applied pursuant to section 4(c)(8) of the BHC Act

^{5.} Id.

^{6.} Among the prudential limitations detailed more fully in Bankers Trust and J.P. Morgan are that Company will maintain specific records that will clearly identify all "riskless principal" transactions, and that Company will not engage in any "riskless principal" transactions for any securities carried in its inventory. When acting as a "riskless principal", Company will only engage in transactions in the secondary market, and not at the order of a customer that is the issuer of the securities to be sold; will not act as "riskless principal" in any transaction involving a security for which it makes a market; and will not hold itself out as making a market in the securities that it buys and sells as a "riskless principal". Moreover, Company will not engage in "riskless principal" transactions on behalf of its foreign affiliates that engage in securities dealing activities outside the United States and will not act as "riskless principal" for registered investment company securities. In addition, Company will not act as a "riskless principal" with respect to any securities of investment companies that are advised by Applicant or any of its affiliates. With regard to private placement activities, Applicant has committed that Company will not privately place registered investment company securities or securities of investment companies that are advised by Applicant or any of its

^{7. 12} C.F.R. 225.25.

(12 U.S.C. § 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23), to merge with Horizon Financial Services, Inc. ("HFS"), and thereby indirectly acquire its savings association subsidiary, Horizon Savings Bank ("Horizon"), both of Beachwood, Ohio. Horizon would be owned by Republic in accordance with section 225.25(b)(9) of the Board's Regulation Y (12 C.F.R. 225.25(b)(9)).

Notice of the application, affording interested persons an opportunity to submit comments, has been published (58 Federal Register 12,038 (1993)). The time for filing comments has expired, and the Board has considered the application and all the comments received in light of the public interest factors set forth in section 4(c)(8) of the BHC Act.

The Board has determined that the operation of a savings association is closely related to banking and permissible for bank holding companies. 12 C.F.R. 225.25(b)(9). In making this determination, the Board required that savings associations acquired by bank holding companies conform their direct and indirect activities to those permissible for bank holding companies under section 4 of the BHC Act.²

In considering an application under section 4(c)(8) of the BHC Act, the Board is required to determine that the applicant's ownership and operation of the acquired company "can reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." 12 U.S.C. § 1843(c)(8).

Republic, with total consolidated assets of approximately \$743 million, controls six banks in Michigan.³ Republic is the 16th largest banking organization in Michigan, controlling deposits of \$474 million, representing less than 1 percent of total deposits in commercial banking organizations in the state.⁴ Horizon is the 20th largest thrift organization in Ohio, controlling deposits of \$336.6 million, representing less than

Community Reinvestment Act Considerations

In considering an application to acquire a savings association under section 4 of the BHC Act, the Board reviews the records of performance of the relevant institutions under the Community Reinvestment Act (12 U.S.C. § 2901 et seq.) ("CRA").6 The CRA requires the Federal financial supervisory agencies to encourage financial institutions to help meet the credit needs of the local communities in which they operate, consistent with the safe and sound operation of such institutions. To accomplish this end, the CRA requires the appropriate Federal supervisory authority to "assess an institution's record of meeting the credit needs of its entire community, including low- and moderateincome neighborhoods, consistent with the safe and sound operation of the institution," and to take that record into account in its evaluation of bank holding company applications.7

In connection with this application, the Board has reviewed comments received from the Moorish Community Redevelopment Corporation, Painesville, Ohio ("Protestant"), regarding Horizon's performance under the CRA. In particular, Protestant alleges that Horizon does not have a formal program to ascertain the credit needs of the communities it serves, including low- and moderate-income neighborhoods, and that Horizon does not market all of its available credit products and services to these communities. Protestant also asserts that Horizon has not designed credit programs to attract low- and moderate-income and minority borrowers, does not participate in any governmentally insured loan programs, and does not participate in any local community development or redevelopment projects.

The Board has carefully reviewed the CRA performance records of Republic and Horizon, as well as Protestant's comments and Republic's responses to those comments, and all the other relevant facts in light of the CRA, the Board's regulations, and the Statement of the Federal Financial Supervisory Agen-

¹ percent of total deposits in thrift institutions in the state.⁵

In connection with the proposed acquisition, Republic also has requested Board approval to acquire an option to purchase 19.9 percent of the voting shares of HFS.

^{2.} Republic has committed to terminate all impermissible activities conducted by Horizon. In this regard, Republic has committed to terminate the annuities and mutual funds sales activities currently engaged in by Horizon through its subsidiary, Horizon Financial Insurance Agency, Inc., Beachwood, Ohio, upon or before consummation of this proposal. Republic also has committed to divest any impermissible real estate investments within two years of consummation of this proposal, and not to engage in any new impermissible real estate development projects or investments during this period.

^{3.} Asset data are as of March 31, 1993.

^{4.} State commercial bank deposit data are as of June 30, 1992.

^{5.} State thrift deposit data are as of September 30, 1992.

^{6.} The Board previously has determined that the CRA by its terms generally does not apply to applications by bank holding companies to acquire nonbanking companies under section 4(c)(8) of the BHC Act. The Mitsui Bank, Ltd., 76 Federal Reserve Bulletin 381 (1990). The Board also has stated that, unlike other companies that may be acquired by bank holding companies under section 4(c)(8) of the BHC Act, savings associations are depository institutions, as that term is defined in the CRA, and thus, acquisitions of savings associations are subject to review under the express terms of the CRA. Norwest Corporation, 76 Federal Reserve Bulletin 873 (1990).

^{7. 12} U.S.C. § 2903.

cies Regarding the Community Reinvestment Act ("Agency CRA Statement").8

The Board notes that Protestant's comments relate to weaknesses in the CRA performance of the institution Republic proposes to acquire. In this regard, the Board has reviewed the CRA performance record of Republic and Republic's commitment to implement its policies and programs at Horizon. The Board also has considered steps taken by Horizon to improve its CRA performance. Moreover, Horizon's primary regulator, the Office of Thrift Supervision ("OTS"), has advised the Board that these initiatives have addressed the CRA performance issues noted by the OTS in Horizon's last examination.

A. CRA Performance Examination

The Agency CRA Statement provides that a CRA examination is an important, and often controlling, factor in the consideration of an institution's CRA record and that these reports will be given great weight in the applications process.9 The Board notes that all of Republic's subsidiary banks have received "outstanding" or "satisfactory" ratings during the most recent examinations of their CRA performance. In particular, Republic's lead subsidiary bank, Premier Bank, Jackson, Michigan, received an "outstanding" rating for CRA performance from its primary regulator, the Federal Deposit Insurance Corporation ("FDIC"), in December 1992.10 Horizon received a "needs to improve" CRA rating in its most recent examination by its primary regulator, the OTS, in January 1992.

B. Other Aspects of CRA Performance

Policies and Programs. Republic has in place the types of policies outlined in the Agency CRA Statement to effectively monitor the CRA performance of each of its subsidiary banks. Upon consummation of this proposal, Republic will implement these policies at Horizon and has committed to report to the Federal Reserve Bank of Chicago on the progress of Horizon within six months of consummation of this proposal.

In this regard, the CRA compliance officers of each Republic bank subsidiary meet monthly to discuss Republic's corporate programs and policies. Each bank subsidiary also is required to submit periodic reports of its CRA performance ("CRA Reports") for review by Republic. These CRA Reports provide information on the bank affiliate's community involvement and service, marketing and special credit related programs, and a description of the banking products and services available at each affiliate's offices. The CRA Reports also provide specific information with respect to each affiliate's participation in community meetings and programs.

At the holding company level, the CRA Reports are reviewed by Republic's Management Council, which assesses each bank subsidiary's level of community involvement and CRA compliance. Following this assessment, the Management Council allocates resources to ensure that each bank affiliate meets the credit needs of its communities, including low- and moderate-income neighborhoods. Republic also employs two individuals who are responsible for implementing its corporate CRA program at each bank subsidiary. These individuals coordinate CRA training and testing of all loan officers at each Republic bank subsidiary, and conduct self-assessments of Republic's overall CRA performance. These individuals report directly to Republic's board of directors.

Republic will monitor Horizon's CRA performance through its corporate CRA program and through periodic telephone contacts with Horizon's newly appointed CRA officer. Republic's executive CRA compliance officer will have overall responsibility, subject to oversight by Republic's board of directors, for strengthening Horizon's CRA performance. In addition, Republic will add three individuals to Horizon's board of directors to monitor improvements in Horizon's CRA performance.

Ascertainment and Marketing. Horizon has taken a number of steps to improve its ascertainment and marketing efforts. In particular, Horizon has increased its CRA training for all officers and employees, and has enhanced its officer call program to ascertain community credit needs. In this regard, Horizon now emphasizes the submission of call reports by officers and directors, and has redesigned its reporting mechanisms to more effectively track loan officer calls in low- and moderate-income census tracts. Management also has expanded its marketing efforts to include calls on minority realtors and has allocated funds to advertise its credit products and services in media directed at low- and moderate-income neighborhoods.

To aid in ascertaining community credit needs, Horizon plans to distribute customer satisfaction questionnaires, and will hold town hall meetings in

^{8. 54} Federal Register 13,742 (1989).

^{9.} Id. at 13,745

^{10.} Republic's other subsidiary banks have received the following ratings from the FDIC in their most recent CRA examinations: Republic Bank, Flint Township, Michigan, received a "satisfactory" rating in October 1991; Republic Bank, S.E., Bloomfeld Hills, Michigan, received a "satisfactory" rating in January 1992; Republic Bank-Ann Arbor, Ann Arbor, Michigan, received a "satisfactory" rating in September 1992; Republic Bank-Central, Williamston, Michigan, received a "satisfactory" rating in October 1991; and Republic Bank-North, Bellaire, Michigan, received a "satisfactory" rating in January 1993.

municipalities where it has branch offices. In addition, Horizon continues to advertise available credit services through newspapers, statement stuffers, lobby handouts, trade journals, magazines, mass mailings, seminar presentations, broker sales calls, and realtor mailings.

Lending and Other Activities. Horizon has introduced products and services designed to meet the credit needs of low- and moderate-income consumers. For example, Horizon has developed a "Community Homebuyers Program" that features 10-year to 30year fixed rate mortgages, flexible underwriting criteria, and a reduction in the down payment requirement and closing costs. Horizon also participates in the Earned Home Ownership Program ("EHOP") through the Northeastern Ohio League of Savings Institutions. EHOP provides pre-purchase counseling and training to families unable to obtain traditional mortgages. Moreover, Horizon has adopted a formal branch closing policy that includes the views of local community groups.

In addition to implementing its corporate CRA program at Horizon, Republic has identified steps specifically designed to improve Horizon's existing CRA program. In particular, Republic:

- (i) Will appoint a new CRA officer at Horizon;¹¹
- (ii) Will develop additional procedures to improve Horizon's ability to make loans to minorities and to residents of low- and moderate-income neighborhoods;
- (iii) Will refocus Horizon on mortgage lending with further commercial lending oriented to SBAguaranteed lending; and
- (iv) Will consider participation in various special lending programs designed to assist residents of lowand moderate-income neighborhoods in purchasing homes.

Republic will implement a "second look process" in which denied loan applications from minority applicants or applicants from low- and moderate-income neighborhoods will be reviewed by a loan underwriting manager. Republic also will implement an alternative underwriting analysis in situations in which residents of low- and moderate-income neighborhoods are unable to establish creditworthiness by traditional means. In appropriate cases, individuals also will be given the opportunity to rebut negative credit information that may impact their ability to receive a loan.

Moreover, Republic will establish a Community Investment Committee to assist Horizon's board of directors in its oversight of the institution's CRA performance.

Upon consummation of this proposal, Horizon will offer FHA and VA guaranteed loans. In addition, Republic will consider participating in programs such as Cleveland Action to Support Housing ("CASH"), and the Afford-a-Home Program through the Cleveland Housing Network.

In light of all the facts of record, including the steps Horizon has taken to improve its CRA performance and the CRA programs that Republic will implement at Horizon, the Board believes that considerations relating to the convenience and needs of the communities to be served are consistent with approval of this application. 12

Other Considerations

The banking subsidiaries of Republic and HFS do not compete in any of the same banking markets. Accordingly, the Board concludes that this proposal would not have a significantly adverse effect on competition in any relevant banking market. The financial and managerial resources of Republic and its subsidiaries, and HFS and its subsidiaries also are consistent with approval.13

Based on all the facts of record, the Board has determined that the balance of the public interest factors it must consider under section 4(c)(8) of the BHC Act is favorable and consistent with approval of

^{11.} In this regard, Horizon, with Republic's assistance, recently has hired a new CRA officer to implement and oversee Horizon's CRA policy. This individual has extensive experience in mortgage banking in Cleveland, as well as lending to individuals in low- and moderateincome neighborhoods.

^{12.} Protestant has requested that the Board hold a public meeting or hearing on this application regarding Horizon's CRA-related activities in low- and moderate-income areas. The Board's rules provide that a hearing is required under section 4 of the BHC Act only if there are disputed issues of material fact that cannot be resolved in some other manner. In addition, the Board may, in its discretion, hold a public hearing or meeting on an application to clarify factual issues related to the application, and to provide an opportunity for testimony, if appropriate. 12 C.F.R. 262.3(e), 262.25(d), and 225.23(g). The Board has carefully considered this request. In the Board's view, interested parties have had a sufficient opportunity to present written submissions, and they have submitted detailed written comments that have been considered by the Board. Moreover, Protestant's allegations state conclusions about Horizon's CRA record without providing any underlying material facts. On the basis of all the facts of record, the Board has determined that a public meeting or hearing is not necessary to clarify the factual record in this application or otherwise required under the Board's rules. Accordingly, the request for a public meeting or hearing on this application is hereby denied.

^{13.} Upon consummation, Republic will meet all applicable capital requirements and has committed that Horizon will meet all current and future minimum capital ratios adopted for savings associations by the OTS or the FDIC. For purposes of this commitment, investments in impermissible real estate projects and developments will be excluded from the definition of capital.

Republic's application to acquire HFS.14 Accordingly, the Board has determined that the application should be, and hereby is, approved. This approval is specifically conditioned on compliance by Republic with all of the commitments and conditions made in connection with this application. The acquisition of Horizon also is subject to all of the conditions contained in the Board's Regulation Y, including those in sections 225.4(d) and 225.23(b)(3) (12 C.F.R. 225.4(d) and 225.23(b)(3)), and to the Board's authority to require such modification or termination of the activities of a bank holding company, or any of its subsidiaries, as it finds necessary to assure compliance with, or prevent evasions of, the provisions and purposes of the BHC Act and the Board's regulations and orders issued thereunder. All the commitments and conditions relied on in reaching this decision in this case are deemed to be conditions imposed in writing by the Board in connection with its findings and decision, and as such may be enforced in proceedings under applicable law.

The transaction shall not be consummated later than three months after the effective date of this Order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of Chicago, acting pursuant to delegated authority.

By order of the Board of Governors, effective June 14, 1993.

Voting for this action: Chairman Greenspan and Governors Mullins, Kelley, LaWare, and Lindsey. Absent and not voting: Governors Angell and Phillips.

JENNIFER J. JOHNSON Associate Secretary of the Board ORDERS ISSUED UNDER INTERNATIONAL BANKING ACT

Citizens National Bank Seoul, Korea

Order Approving Establishment of a Representative Office

Citizens National Bank, Seoul, Korea ("Bank"), a foreign bank within the meaning of the International Banking Act ("IBA"), has applied under section 10(a) of the IBA (12 U.S.C. § 3107(a)) to establish a representative office in Los Angeles, California. The Foreign Bank Supervision Enhancement Act of 1991 ("FBSEA"), which amended the IBA, provides that a foreign bank must obtain the approval of the Board to establish a representative office in the United States.

Notice of the application affording interested persons an opportunity to submit comments has been published in a newspaper of general circulation in Los Angeles (Los Angeles Times, April 23, 1992). The time for filing comments has expired and all comments have been considered.

Bank, with \$20.4 billion in consolidated assets,¹ is the largest in Korea in total domestic deposits and the seventh largest in asset size. Bank has representative offices in New York, London, Tokyo, and Singapore, and a banking subsidiary in Luxembourg. Bank does not engage, directly or indirectly, in any nonbanking activities in the United States. The proposed representative office would provide customer relations and other services and would conduct general financial and economic research. The majority of Bank's stock is owned by the Government of Korea.²

In acting on an application to establish a representative office, the IBA and Regulation K provide that the Board shall take into account whether the foreign bank engages directly in the business of banking outside of the United States, has furnished to the Board the information it needs to assess adequately the application, and is subject to comprehensive supervision or regulation on a consolidated basis by its home country supervisor (12 U.S.C. § 3105(d)(2); 12 C.F.R. 211.24). The Board may also take into account additional standards as set forth in the IBA (12 U.S.C. § 3105(d)(3)-(4)) and Regulation K (12 C.F.R. 211.24(c)).

The Board has previously stated that the standards that apply to the establishment of a branch or agency

^{14.} Protestant also asserts that Horizon has no affirmative action plan to employ minorities. Because Horizon employs more than 50 people and acts as an agent to sell or redeem U.S. savings bonds and notes, it is required by Treasury Department and Department of Labor regulations to:

⁽¹⁾ File annual reports with the Equal Employment Opportunity Commission; and

⁽²⁾ Have in place a written affirmative compliance program which states its intentions, efforts, and plans to achieve equal opportunity in the employment, hiring, promotion, and separation of personnel. Horizon also states that it contacts minority and women's groups in the Cleveland area when Horizon has job openings, that it takes steps to ensure that minorities and women are given full opportunities for promotions and transfers, and that its supervisors have been informed of the importance of promoting equal employment opportunities.

^{1.} Data are as of December 31, 1991, unless otherwise noted.

^{2.} The Government of Korea directly owns 72.58 percent of Bank. The Korean Government Pension Management Corporation owns an additional 6.42 percent of Bank.

need not in every case apply to the establishment of a representative office because representative offices do not engage in a banking business and cannot take deposits or make loans (see 58 Federal Register 6348, 6351 (1993)). In evaluating an application to establish a representative office under the IBA and Regulation K. the Board will take into account the standards that apply to establishment of branches and agencies, subject to the following considerations. With respect to supervision by home country authorities, a foreign bank that proposes to establish a representative office must be subject to a significant degree of supervision by its home country supervisor. Among the factors the Board may consider are the extent to which there is regular review of a substantial portion of the bank's operations by the home country supervisor through examination, review of external audits, or a comparable method, submission of periodic reports relating to financial performance, and assurance that the bank itself has a system of internal monitoring and control that enable bank management to administer properly the bank's operations. The home country supervisor must also have indicated that it does not object to the establishment of the representative office in the United States.

A foreign bank's financial and managerial resources will be reviewed to determine whether its financial condition and performance demonstrate that it is capable of complying with applicable laws and has an operating record that would be consistent with the establishment of a representative office in the United States. If the financial condition of the foreign bank significantly differs from international norms, the foreign bank would be evaluated to determine whether such difference can be justified in the context of the operations of the applicant and the proposed representative office. All foreign banks, whether operating through branches, agencies or representative offices, will be required to provide adequate assurances of access to information on the operations of bank and its affiliates necessary to determine compliance with U.S.

In this case, with respect to the issue of supervision by home country authorities, the Board has considered the following information. Bank is subject to the supervisory authority of the Korean Ministry of Finance ("Ministry"), the Board of Audit and Inspection, and the Bank of Korea, including the Superintendent of the Office of Bank Supervision and Examination (the "OBSE"), a section within the Bank of Korea. The Ministry has approved the establishment of the office by Bank. The Ministry and the OBSE perform annual, on-site examinations of Bank. In addition, the Board of Audit and Inspection performs annual examinations of Bank's head office. An annual examination includes a review of Bank's compliance with Korean banking laws, regulations, and orders issued by the Monetary Board, adequacy of the internal control system, accounting procedures, the acquisition, management, quality, and disposition of assets, capital adequacy, risk exposure, and liquidity. Bank is required to file periodic financial reports with both the Ministry and OBSE. These reports include information on loan status, changes in deposits, conditions of borrowers with large delinquent loans, new indices of borrowers with delinquent loans, and the status of internal auditing activities. The Ministry also receives regular reports on foreign operations, including audit reports and reports on transactions between Bank and its affiliates. Based on all the facts of record, which include the information described above, the Board concludes that factors relating to the supervision of Bank by its home country supervisors are consistent with approval of the proposed representative office.

The Board has also found that Bank engages directly in the business of banking outside of the United States through its commercial banking operations in Korea, and has provided the Board with the information necessary to assess the application through submissions that address relevant issues.

The Board has also taken into account the additional standards set forth in section 7 of the IBA and Regulation K (see 12 U.S.C. § 3105(d)(3)-(4); 12 C.F.R. 211.24(c)(2)). As noted above, Bank has received the consent of the Ministry to establish the proposed representative office. In addition, the Ministry and OBSE may share information on Bank's operations with other supervisors, including the Board.

With respect to the financial and managerial resources of Bank, Bank's overall record of operations in its home country is consistent with the operation of a representative office and demonstrates that Bank is capable of operating within applicable law. Although Bank has not demonstrated that its capital position is in conformance with standards under the Basle Capital Accord, given Bank's record of performance, its overall financial resources, and its standing with its home country supervisors, the Board has determined that financial and managerial factors are consistent with approval of the proposed representative office. Bank, which currently operates a representative office in New York, appears to have the experience and capacity to support this additional representative office. Bank has also established controls and procedures for the proposed representative office to ensure compliance with U.S. law.

Bank has committed that it will make available to the Board such information on the operations of Bank and any affiliate of Bank that the Board deems necessary to determine and enforce compliance with the IBA, the Bank Holding Company Act of 1956, as amended, and other applicable Federal law, to the extent permitted by law. The Board has reviewed the restriction on disclosure to information in Korea, and has communicated with certain government authorities regarding access to information. In addition, Bank has committed to cooperate with the Board to obtain approvals or consents that may be required for the Board to gain access to information that the Board may request. In light of these commitments and other facts of record, and subject to the condition described below, the Board concludes that Bank has provided adequate assurances of access to any necessary information the Board may request.

On the basis of all the facts of record, and subject to the commitments made by Bank, as well as the terms and conditions set forth in this Order, the Board has determined that Bank's application to establish a representative office should be, and hereby is, approved. If any restrictions on access to information on the operations or activities of Bank and any of its affiliates subsequently interfere with the Board's ability to determine the compliance by Bank or its affiliates with applicable federal statutes, the Board may require termination of any of the Bank's direct or indirect activities in the United States. Approval of this application is also specifically conditioned on compliance by Bank with the commitments made in connection with this application, and with the conditions contained in this Order.³ The commitments and conditions referred to above are conditions imposed in writing by the Board in connection with its decision, and may be enforced in proceedings under 12 U.S.C. § 1818 or 12 U.S.C. § 1847 against Bank, its offices, and its affiliates.

By order of the Board of Governors, effective June 25, 1993.

Voting for this action: Chairman Greenspan and Governors Mullins, LaWare, Lindsey, and Phillips. Absent and not voting: Governors Angell and Kelley.

JENNIFER J. JOHNSON Associate Secretary of the Board

Medium Business Bank of Taiwan Taipei, Taiwan

Order Approving Establishment of a Representative Office

Medium Business Bank of Taiwan ("Bank"), Taipei, Taiwan, a foreign bank within the meaning of the International Banking Act ("IBA"), has applied under section 10(a) of the IBA (12 U.S.C. § 3107(a)) to establish a representative office in Los Angeles, California. The Foreign Bank Supervision Enhancement Act of 1991 ("FBSEA"), which amended the IBA, provides that a foreign bank must obtain the approval of the Board to establish a representative office in the United States.

Notice of the application, affording interested persons an opportunity to submit comments, has been published in a newspaper of general circulation in Los Angeles, California (*Los Angeles Daily Journal*, April 30, 1992). The time for filing comments has expired and all comments have been considered.

Bank is a commercial bank that was chartered in 1976 through the reorganization of its predecessor, the Taiwan Mutual Loans and Savings Co., Ltd. Bank is owned by the Provincial Government of Taiwan ("Provincial Government") both directly and through the Bank of Taiwan, Taipei, Taiwan, which holds 42 percent of the voting shares of Bank.

Bank, with assets of \$20.4 billion on June 30, 1992, is the seventh largest bank in Taiwan. Bank has over 100 offices in Taiwan and operates a representative office in the Netherlands and an offshore banking unit in Taiwan. Bank does not engage directly or indirectly in any nonbanking activities in the United States. The proposed representative office would provide services that include acting as liaison with Bank's correspondents, providing customer relations services, and conducting research.

In acting on an application to establish a representative office, the IBA and Regulation K provide that the Board shall take into account whether the foreign bank engages directly in the business of banking outside of the United States, has furnished to the Board the information it needs to assess adequately the application, and is subject to comprehensive supervision or regulation on a consolidated basis by its home country supervisor (12 U.S.C. § 3105(d)(2); 12 C.F.R. 211.24). The Board may also take into account additional standards as set forth in the IBA

^{3.} The Board's authority to approve the establishment of the proposed representative office parallels the continuing authority of the State of California to license offices of a foreign bank. The Board's approval of this application does not supplant the authority of the State of California, and its agent, the California State Banking Department, to license the proposed representative office of Bank in accordance with any terms or conditions that the California State Banking Department may impose.

^{1.} The Board approved the establishment of a branch by the Bank of Taiwan under the FBSEA. See Bank of Taiwan, 79 Federal Reserve Bulletin 541 (1993).

and Regulation K (12 U.S.C. § 3105(d)(3)-(4); 12 C.F.R. 211.24(c)).

The Board has previously stated that the standards that apply to the establishment of a branch or agency need not in every case apply to the establishment of a representative office because representative offices do not engage in a banking business and cannot take deposits or make loans. See 58 Federal Register 6348, 6351 (1993). In evaluating an application to establish a representative office under the IBA and Regulation K, the Board will take into account the standards that apply to establishment of branches and agencies, subject to certain considerations relating to financial factors and supervision by home country authorities. See Citizens National Bank, 79 Federal Reserve Bulletin 805 (1993).

Bank is subject to supervision and regulation by the Ministry of Finance of Taiwan ("Ministry"), the Central Bank of China ("Central Bank"), and the Ministry of Audit of Taiwan in the same manner as other banks from Taiwan that the Board, in considering applications by those banks to establish branches or agencies, has determined are subject to comprehensive home country supervision on a consolidated basis.2 Because Bank is supervised by the Taiwanese authorities on the same terms and conditions set forth in the Board's Orders relating to those applications, the Board has determined that Bank is subject to comprehensive supervision or regulation by its home country supervisors on a consolidated basis.

The Board also has found that Bank engages directly in the business of banking outside of the United States through its commercial banking operations in Taiwan, and has provided the Board with the information necessary to assess the application through submissions that address relevant issues.

The Board has taken into account the additional standards set forth in section 7 of the IBA and Regulation K (see 12 U.S.C. § 3105(d)(3)-(4); 12 C.F.R. 211.24(c)(2)). In this regard, Bank has received the consent of the Ministry to establish the proposed representative office. In addition, the Ministry and Central Bank may share information on Bank's operations with other supervisors, including the Board.

With respect to the financial and managerial resources of Bank, Bank's overall record of operations in its home country demonstrates that Bank is capable of operating within applicable law and is consistent with the operation of a representative office. Although Bank has not demonstrated that its capital position is in conformance with international standards under the Basle Capital Accord, given Bank's record of performance, its overall financial resources, and its standing with its home country supervisors, the Board has determined that financial and managerial factors are consistent with approval of the proposed representative office. The proposed representative office would be Bank's second foreign office, and Bank appears to have the experience and capacity to support this additional representative office. Bank has also established controls and procedures for the proposed representative office to ensure compliance with U.S. law.

Bank has committed that it will make available to the Board such information on the operations of Bank and any affiliate of Bank that the Board deems necessary to determine and enforce compliance with the IBA, the Bank Holding Company Act of 1956, as amended, and other applicable Federal law, to the extent permitted by law. The Board has reviewed the restrictions on disclosure of information in Taiwan and has communicated with certain government authorities concerning access to information. The Ministry and Central Bank may share information on Bank's operations with other supervisors, including the Board. Bank also has committed to cooperate with the Board to obtain any approvals or consents that may be needed to gain access to information that the Board may request. In light of these commitments and other facts of record, and subject to the condition described below, the Board concludes that Bank has provided adequate assurances of access to any necessary information the Board may request.

On the basis of all of the facts of record, and subject to the commitments made by Bank, as well as the terms and conditions set forth in this Order, the Board has determined that Bank's application to establish a representative office should be, and hereby is, approved. If any restrictions on access to information on the operations or activities of Bank or any of its affiliates subsequently interfere with the Board's ability to determine the compliance by Bank or its affiliates with applicable federal statutes, the Board may require termination of any of the Bank's direct or indirect activities in the United States. Approval of this application is also specifically conditioned on compliance by Bank with the commitments made in connection with this application, and with the conditions contained in this Order.3 The commitments and

^{2.} See TaipeiBank, 79 Federal Reserve Bulletin 143 (1993); Chiao-Tung Bank, 79 Federal Reserve Bulletin 541 (1993); Bank of Taiwan, supra.

^{3.} The Board's authority to approve the establishment of the proposed representative office parallels the continuing authority of the State of California to license offices of a foreign bank. The Board's approval of this application does not supplant the authority of the State of California, and its agent, the California State Banking Department, to license the proposed representative office of Bank in accordance with any terms or conditions that the California State Banking Department may impose.

conditions referred to above are conditions imposed in writing by the Board in connection with its decision, and may be enforced in proceedings under 12 U.S.C. § 1818 or 12 U.S.C. § 1847 against Bank, its offices, and its affiliates.

By order of the Board of Governors, effective June 25, 1993.

Voting for this action: Chairman Greenspan and Governors Mullins, LaWare, Lindsey, and Phillips. Absent and not voting: Governors Angell and Kelley.

JENNIFER J. JOHNSON Associate Secretary of the Board

Singer & Friedlander, Ltd. London, England

Order Approving Establishment of a Representative Office

Singer & Friedlander, Ltd., London, England, ("Bank"), a foreign bank within the meaning of the International Banking Act ("IBA"), has applied under section 10(a) of the IBA (12 U.S.C. § 3107(a)) to establish a representative office in Miami, Florida. The Foreign Bank Supervision Enhancement Act of 1991 ("FBSEA"), which amended the IBA, provides that a foreign bank must obtain the approval of the Board to establish a representative office in the United States.

Notice of the application, affording interested persons an opportunity to submit comments, has been published in a newspaper of general circulation in Miami, Florida (*Miami Herald*, July 10, 1992). The time for filing comments has expired and all comments have been considered.

Bank is a merchant bank chartered in the United Kingdom. Bank, with assets of \$1.3 billion, is wholly owned by Singer and Friedlander Group, PLC ("Singer Group"), London, England, through two U.K. holding companies, Ancomass, Ltd., and Singer & Friedlander Holdings, Ltd.¹ The proposed representative office is intended to assist in the Bank's international financial and banking activities that are focused on Latin America and the United States. The office also will act as a liaison between Bank, its U.S. and Latin American customers, and its correspondent banks.

In acting on an application to establish a representative office, the IBA and Regulation K provide that the Board shall take into account whether the foreign bank engages directly in the business of banking outside of the United States, has furnished to the

Board the information it needs to assess adequately the application, and is subject to comprehensive supervision or regulation on a consolidated basis by its home country supervisor (12 U.S.C. § 3105(d)(2)). The Board may also take into account additional standards as set forth in the IBA and Regulation K (12 U.S.C. § 3105(d)(3)-(4); 12 C.F.R. 211.24(c)).

The Board has previously stated that the standards that apply to the establishment of a branch or agency need not in every case apply to the establishment of a representative office because representative offices do not engage in a banking business and cannot take deposits or make loans. See 58 Federal Register 6348, 6351 (1993). In evaluating an application to establish a representative office under the IBA and Regulation K, the Board will take into account the standards that apply to establishment of branches and agencies, subject to certain considerations relating to financial factors and supervision by home country authorities. See Citizens National Bank, 79 Federal Reserve Bulletin 805 (1993).

Bank is subject to supervision and regulation by the Bank of England. The Board has previously determined, in connection with an application involving a particular bank in the United Kingdom, that the U.K. bank was subject to home country supervision on a consolidated basis.2 In this case, the Board has determined that Bank is supervised in its banking operations by the Bank of England on the same terms and conditions as set forth in the earlier Order. Bank is also subject to rules of self-regulatory organizations that act under authority delegated by the Department of Trade and Industry to the Securities and Investment Board ("SIB"), The SIB establishes general principles that other self-regulatory organizations ("SROs") apply to firms engaged in particular types of investment activities. Bank is a member of two such SROs, the Securities and Futures Authority ("SFA") and the Investment Management Regulatory Organization ("IMRO").

With respect to the supervision of the investment activities of Bank, the Bank of England acts as the lead regulator of Bank.³ As lead regulator, the Bank of England meets with the SFA and IMRO periodically to discuss prudential and supervisory matters pertaining to Bank. In addition, the SFA and IMRO ensure that

^{1.} Data are as of December 31, 1992, unless otherwise noted.

^{2.} See Coutts & Co. AG, 79 Federal Reserve Bulletin 636 (1993), with respect to supervision of National Westminster Bank, PLC.

^{3.} The Bank of England has entered Memoranda of Understanding ("MOU") with the SFA and IMRO that create frameworks for the monitoring and assessment of financial soundness of institutions authorized under both the Banking Act and the Financial Services Act in order to avoid duplication of oversight. The MOU does not affect either the Bank's or the self-regulatory organizations' statutory duties to ensure that Bank remains "fit and proper" from both financial and managerial standpoints.

Bank is fit and proper to engage in securities and investment management activities through tests of the integrity and competence of Bank's management and the financial soundness of Bank. In light of all the facts of record, the Board has determined that Bank is subject to comprehensive supervision or regulation by home country supervisors on a consolidated basis.

The Board has also found that Bank engages directly in the business of banking outside of the United States through its commercial banking operations in England, and has provided the Board with the information necessary to assess the application through submissions that address relevant issues.

The Board has also taken into account the additional standards set forth in section 7 of the IBA and Regulation K (see 12 U.S.C. § 3105(d)(3)-(4); 12 C.F.R. 211.24(c)(2)). In this regard, the Board notes that the Bank of England does not object to the establishment of the proposed representative office. In addition, the Bank of England may share information on Bank's operations with other supervisors, including the Board. With respect to financial and managerial resources of Bank, given Bank's record of operations in its home country, its overall financial resources, and its standing with its home country supervisors, the Board has determined that financial and managerial factors are consistent with approval of the proposed representative office. Bank appears to have the experience and capacity to support the proposed office and has also established controls and procedures for the proposed representative office to ensure compliance with U.S. law.

Bank has committed that it will make available to the Board such information on the operations of Bank and any affiliate of Bank that the Board deems necessary to determine and enforce compliance with the IBA, the Bank Holding Company Act of 1956, as amended, and other applicable Federal law, to the extent permitted by law. The Board has reviewed the restrictions on disclosure in relevant jurisdictions in which Bank operates and has communicated with certain government authorities concerning access to information. The Board notes that certain of Bank's affiliates may not provide information without the consent of third parties. In this regard, each of Bank and Singer Group also has committed to cooperate with the Board to obtain any approvals or consents that may be needed to gain access to information that may be requested by the Board. In addition, the Bank of England and other regulators may share information on Bank's operations with other supervisors, including the Board. In light of these commitments and other facts of record, and subject to the condition described below, the Board concludes that Bank has provided adequate assurances of access to any necessary information the Board may request.

On the basis of all of the facts of record, and subject to the commitments made by Bank, as well as the terms and conditions set forth in this order, the Board has determined that Bank's application to establish a representative office should be, and hereby is, approved. If any restrictions on access to information on the operations or activities of Bank or any of its affiliates subsequently interfere with the Board's ability to determine the compliance by Bank or its affiliates with applicable Federal banking statutes, the Board may require termination of any of the Bank's direct or indirect activities in the United States. Approval of this application is also specifically conditioned on compliance by Bank with the commitments made in connection with this application, and with the conditions contained in this order.4 The commitments and conditions referred to above are conditions imposed in writing by the Board in connection with its decision, and may be enforced in proceedings under 12 U.S.C. § 1818 or 12 U.S.C. § 1847 against Bank, its office and its affiliates.

By order of the Board of Governors, effective June 25, 1993.

Voting for this action: Chairman Greenspan and Governors Mullins, LaWare, Lindsey, and Phillips. Absent and not voting: Governors Angell and Kelley.

> JENNIFER J. JOHNSON Associate Secretary of the Board

^{4.} The Board's authority to approve the establishment of the proposed representative office parallels the continuing authority of the State of Florida to license offices of a foreign bank. The Board's approval of this application does not supplant the authority of the State of Florida, and its agent, the Florida State Banking Department, to license the proposed representative office of Bank in accordance with any terms or conditions that the Florida State Banking Department may impose.

PENDING CASES INVOLVING THE BOARD OF GOVERNORS

This list of pending cases does not include suits against the Federal Reserve Banks in which the Board of Governors is not named a party.

Ezell v. Federal Reserve Board, No. 93-0361 (D. D.C., filed February 19, 1993). Action seeking damages for personal injuries arising from motor vehicle collision.

Amann v. Prudential Home Mortgage Co., et al., No. 93-10320 WD (D. Massachusetts, filed February 12, 1993). Action for fraud and breach of contract arising out of a home mortgage. On April 17, 1993, the Board filed a motion to dismiss.

Adams v. Greenspan, No. 93-0167 (D. D.C., filed January 27, 1993). Action by former employee under the Civil Rights Act of 1964 and the Rehabilitation Act of 1973 concerning termination of employment.

Sisti v. Board of Governors, No. 93-0033 (D. D.C., filed January 6, 1993). Challenge to Board staff interpretation with respect to margin accounts. The Board's motion to dismiss was granted on May 13, 1993. On June 3, 1993, the petitioner filed a notice of

U.S. Check v. Board of Governors, No. 92-2892 (D. D.C., filed December 30, 1992). Challenge to partial denial of request for information under the Freedom of Information Act.

CBC, Inc. v. Board of Governors, No. 92-9572 (10th Cir., filed December 2, 1992). Petition for review of civil money penalty assessment against a bank holding company and three of its officers and directors for failure to comply with reporting requirements. The Board's brief was filed on March 19, 1993.

DLG Financial Corporation v. Board of Governors, No. 392 Civ. 2086-G (N.D. Texas, filed October 9, 1992). Action to enjoin the Board and the Federal Reserve Bank of Dallas from taking certain enforcement actions, and seeking money damages on a variety of tort and contract theories. On October 9, 1992, the court denied plaintiffs' motion for a temporary restraining order. On March 30, 1993, the court granted the Board's motion to dismiss as to it, and also dismissed certain claims against the Reserve Bank. On April 29, the plaintiffs filed an amended complaint. The Board's motion to dismiss the amended complaint was filed on May 17.

Zemel v. Board of Governors, No. 92-1056 (D. D.C., filed May 4, 1992). Age Discrimination in Employment Act case. The parties' cross-motions for summary judgment are pending.

State of Idaho, Department of Finance v. Board of Governors, No. 92-70107 (9th Cir., filed February 24, 1992). Petition for review of Board order returning without action a bank holding company application to relocate its subsidiary bank from Washington to Idaho. On June 4, 1993, the Court of Appeals denied the petition for review.

In re Subpoena Served on the Board of Governors, Nos. 91-5427, 91-5428 (D.C. Cir., filed December 27, 1991). Appeal of order of district court, dated December 3, 1991, requiring the Board and the Office of the Comptroller of the Currency to produce confidential examination material to a private litigant. On June 26, 1992, the court of appeals affirmed the district court order in part, but held that the bank examination privilege was not waived by the agencies' provision of examination materials to the examined institution, and remanded for further consideration of the privilege issue. On August 6, 1992, the district court ordered the matter held in abeyance pending settlement of the underlying action.

Board of Governors v. Kemal Shoaib, No. CV 91-5152 (C.D. California, filed September 24, 1991). Action to freeze assets of individual pending administrative adjudication of civil money penalty assessment by the Board. On October 15, 1991, the court issued a preliminary injunction restraining the transfer or disposition of the individual's assets.

Board of Governors v. Ghaith R. Pharaon, No. 91-CIV-6250 (S.D. New York, filed September 17, 1991). Action to freeze assets of individual pending administrative adjudication of civil money penalty assessment by the Board. On September 17, 1991, the court issued an order temporarily restraining the transfer or disposition of the individual's assets.

FINAL ENFORCEMENT DECISION ISSUED BY THE BOARD OF GOVERNORS

On Certification of the Department of the Treasury—Office of the Comptroller of the Currency

In the Matter of a Notice to Prohibit Further Participation Against

John S. Knoerzer, Former Chief Executive Officer and Director Texas National Bank-Dallas, Dallas, Texas (Failed)

OCC No. AA-EC-91-166

Final Decision

This is an administrative proceeding pursuant to the Federal Deposit Insurance Act ("FDI Act") in which the Office of Comptroller of the Currency of the United States of America ("OCC") seeks to prohibit the Respondent, John S. Knoerzer, from further participation in the affairs of any financial institution as a result of his conduct as chief executive officer and director of Texas National Bank-Dallas, Dallas, Texas (Failed) (the "Bank"). The proceeding comes to the Board of Governors of the Federal Reserve System (the "Board") in the form of a Recommended Decision by Administrative Law Judge ("ALJ") Walter J. Alprin recommending that the Board issue an Order of Prohibition against Knoerzer by default pursuant to the provisions of 12 U.S.C. § 1818(e) and 12 C.F.R. 19.19(c).

Upon review of the administrative record, the Board issues this Final Decision adopting the ALJ's Recommended Decision and orders that the attached Order of Prohibition issue against Knoerzer.

I. Statement of the Case

A. Procedural History

On September 10, 1991, the OCC issued a Notice of Intention to Prohibit Further Participation (the "Notice") against Knoerzer pursuant to the provisions of 12 U.S.C. § 1818(e)(1), based on allegations that Knoerzer had engaged in misconduct during his tenure as chief executive officer and director of the Bank, which had failed on December 15, 1988. The OCC charged that Knoerzer caused, authorized, or ratified loans by the Bank to interrelated individuals and business entities in violation of the Bank's lending limit that resulted in a loss to the Bank of over \$1.6 million. The OCC alleged that this conduct violated laws and regulations applicable to national banks and constituted unsafe and unsound banking practices and breaches of Knoerzer's fiduciary duty. The OCC also alleged that the conduct caused substantial financial loss or other damage to the Bank, seriously prejudiced the interests of the Bank's depositors, and evidenced Knoerzer's personal dishonesty or a willful or continuing disregard for the Bank's safety or soundness. The Notice required that Knoerzer file an answer to the charges within 20 days of service of the Notice.

After a delay resulting from difficulty in locating Knoerzer, the OCC served the Notice by hand upon Knoerzer on June 23, 1992. Under the Uniform Rules

of Practice and Procedure ("Uniform Rules")² applicable to this proceeding, Knoerzer's answer was due to be filed on July 13, 1992, 20 days following the June 23, 1992 service upon Knoerzer. 12 C.F.R. 19.12(c)(1). The record contains a certificate from OCC Docket Clerk Lisa Chase, dated August 24, 1992, certifying that the OCC had received no answer to the Notice.

On August 28, 1992, OCC Enforcement Counsel filed with the ALJ a motion for entry of an order of default pursuant to the Uniform Rules, which provide that a failure to file an answer constitutes a waiver of a respondent's right to appear and contest the allegations in the notice. 12 C.F.R. 19.19(c). The motion indicated that Knoerzer had sent a letter to the OCC indicating his willingness to consent to an Order of Prohibition and that he had not filed an answer to the Notice of Prohibition. Knoerzer did not file any opposition to the motion for default.

On September 21, 1992, the ALJ granted the OCC's motion for default, finding that the Notice had been duly served upon Knoerzer, that Knoerzer had never filed an answer, and that no good cause had been shown for Knoerzer's failure to file a timely answer. Accordingly, ALJ Alprin issued a Recommended Decision recommending that the Board issue an Order of Prohibition against Knoerzer pursuant to the Uniform Rules provision for default upon failure to file an answer.

The Recommended Decision on Default was referred to the Board for final decision on March 10, 1993. Knoerzer has filed no exceptions to the Recommended Decision. On March 31, 1993, the Secretary to the Board notified the interested persons of record that the case had been submitted to the Board for final decision. A signed certified mail receipt returned to the Board indicates that Knoerzer received the notification on April 6, 1993.

B. Statutory Framework

The FDI Act sets forth the basis upon which a federal banking agency may issue against a bank official an order of removal from office or prohibition from further participation in banking. In order to issue such an order pursuant to section 1818(e)(1), the Board must make each of three findings:

^{1.} The record contains an affidavit from a private process server attesting to hand delivery of the Notice to Knoerzer on July 23, 1992.

^{2.} The Uniform Rules, adopted concurrently by each of the financial institution regulatory agencies, including the Board and the OCC, constitute a materially identical set of procedural rules that control most aspects of those agencies' enforcement proceedings. *Compure* 12 C.F.R. Part 19, Subpart A (OCC) with 12 C.F.R. Part 263, Subpart A (Board).

- (1) There must be a specified type of misconduct - violation of law, unsound practice, or breach of fiduciary duty;
- (2) The misconduct must have a prescribed effect - financial gain to the respondent or financial harm or other damage to the institution; and
- (3) The misconduct must involve culpability of a certain degree -- personal dishonesty or willful or continuing disregard for the safety or soundness of the institution. 12 U.S.C. § 1818(e)(1). In prohibition cases brought by the OCC with respect to a party affiliated with a national bank, the findings and conclusions of the ALJ are certified to the Board to determine whether any order shall issue. 12 U.S.C. 1818(e)(4).

The Uniform Rules provide that, following the issuance of a notice of intention to prohibit an institutionaffiliated party, a Respondent's failure to file an answer within the time provided constitutes a waiver of his or her right to appear and to contest the allegations in the notice. 12 C.F.R. 19.19(c). If no timely answer is filed, Enforcement Counsel is authorized to file a motion for entry of an order of default. Id. Upon a finding that no good cause has been shown for the failure to file a timely answer, the ALJ is directed to file a recommended decision containing the findings and relief sought by the agency. Id.

II. Discussion

In the circumstances of this case, it is clear that the OCC has established the basis for a default order of prohibition under the terms of the Uniform Rules. The fact that Knoerzer was duly served with notice of the proceeding and of his obligation to answer is supported by the notarized affidavit of the process server. Knoerzer has had repeated opportunities to respond to the charges and there is no basis for any inference that Knoerzer's default is the result of any mischance or inadvertence. The ALJ acted reasonably and in accordance with the Uniform Rules in finding that no good cause existed for relieving Knoerzer from the consequences of his failure to submit an answer to the Notice.

Conclusion

For these reasons, the Board orders that the attached Order of Prohibition issue.

Order of Removal and Prohibition

WHEREAS, pursuant to section 8(e) of the Federal Deposit Insurance Act, as amended, (the "Act") (12 U.S.C. § 1818(e)), the Board of Governors of the Federal Reserve System ("the Board") is of the opinion, for the reasons set forth in the accompanying Final Decision, that a final Order of Removal and Prohibition should issue against JOHN S. KNO-ERZER,

NOW, THEREFORE, IT IS HEREBY OR-DERED, pursuant to sections 8(b)(3), 8(e), and 8(j) of the Act, (12 U.S.C. § 1818(b)(3), 1818(e) and 1818(j)), that:

- 1. JOHN S. KNOERZER is removed from all offices he holds with any insured depository institution or bank holding company;
- 2. In the absence of prior written approval by the Board, and by any other Federal financial institution regulatory agency where necessary pursuant to section 8(e)(7)(B) of the Act (12 U.S.C. § 1818(e)(7)(B)), JOHN S. KNOERZER is hereby prohibited:
 - (a) From participating in the conduct of the affairs of any bank holding company, any insured depository institution or any other institution specified in subsection 8(e)(7)(A) of the Act (12 U.S.C. § 1818(e)(7)(A));
 - (b) From soliciting, procuring, transferring, attempting to transfer, voting or attempting to vote any proxy, consent, or authorization with respect to any voting rights in any institution described in subsection 8(e)(7)(A) of the Act (12) U.S.C. \$ 1818(e)(7)(A));
 - (c) From violating any voting agreement previously approved by the appropriate Federal banking agency; or
 - (d) From voting for a director, or from serving or acting as an institution-affiliated party as defined in section 3(u) of the Act, (12 U.S.C. § 1813(u)), such as an officer, director, or employee.
- 3. This Order, and each provision hereof, is and shall remain fully effective and enforceable until expressly stayed, modified, terminated or suspended in writing by the Board.

This Order shall become effective upon the expiration of thirty days after service is made.

By order of the Board of Governors, this 20th day of April, 1993.

> Board of Governors of the Federal Reserve System

> > WILLIAM W. WILES Secretary of the Board

On Certification of the Department of the Treasury—Office of the Comptroller of the Currency

In the Matter of a Notice to Prohibit Further Participation Against

Michael A. O'Connell, Former President and Director, Metropolitan National Bank, N.A. McAllen, Texas Respondent.

OCC No. AA-EC-92-22

Final Decision

This is an administrative proceeding pursuant to section 8(e) of the Federal Deposit Insurance Act ("FDI Act"), 12 U.S.C. § 1818(e), in which the Office of the Comptroller of the Currency of the United States of America ("OCC") seeks to prohibit Michael A. O'Connell from further participation in the affairs of any federally-supervised financial institution as a result of his conduct during his former affiliation as president and director of Metropolitan National Bank, N.A., McAllen, Texas (the "Bank"). As required by statute, the OCC has referred the action to the Board of Governors of the Federal Reserve System ("Board") for final decision.

The proceeding comes before the Board in the form of a Recommended Decision by Administrative Law Judge ("ALJ") Walter J. Alprin, issued following an administrative hearing held on September 29–30, 1992, in Corpus Christi, Texas, and the filing of post-hearing briefs by the parties. In the Recommended Decision, the ALJ found that as President of the Bank, O'Connell had, without authority, pledged a security belonging to a Bank customer as collateral for a margin account through which O'Connell engaged in unauthorized active trading of United States Treasury bonds that resulted in a \$219,000 loss to the Bank.

O'Connell has submitted exceptions to the Recommended Decision that are confined exclusively to objections to evidentiary rulings made by the ALJ during the course of the hearing. O'Connell requests that the Board decline the ALJ's recommendations and order a new hearing. Based on a review of the record and the arguments raised by O'Connell, the Board rejects these exceptions, finding in each case that the ALJ acted reasonably within the scope of his authority over the conduct of the hearing.¹

Accordingly, the Board hereby makes its Final Decision, and adopts the ALJ's Recommended Decision, Recommended Findings of Fact and Recommended Conclusions of Law together with the reasoning and citations contained therein, except as specifically supplemented or modified herein.² The Board therefore orders that the attached Order of Prohibition issue against Respondent prohibiting him from future participation in the affairs of any federally-supervised financial institution without the approval of the appropriate supervisory agency.

I. Statement of the Case

A. Standards for Prohibition Order

Under the FDI Act, the ALJ is responsible for conducting an administrative hearing on a notice of intention to prohibit participation. 12 U.S.C. § 18(e)(4). Following the hearing, the ALJ issues a recommended decision that is referred to the Board. The parties may then file with the Board exceptions to the ALJ's recommendations. The Board makes the final findings of fact, conclusions of law, and determination whether to issue an order of prohibition. *Id.*; 12 C.F.R. 263.40.

The FDI Act sets forth the substantive basis upon which a federal banking agency may issue against a bank official an order of prohibition from further participation in banking. In order to issue such an order pursuant to section 1818(e)(1), the Board must make each of three findings:

- (1) There must be a specified type of misconduct violation of law, unsafe or unsound practice, or breach of fiduciary duty;
- (2) The misconduct must have a prescribed effect — financial gain to the respondent or substantial financial harm or other damage to the institution; and
- (3) The misconduct must involve culpability of a certain degree personal dishonesty or willful or continuing disregard for the safety or soundness of the institution.

B. Relevant Individuals and Business Entities

At all times relevant to this proceeding, the Bank was a national banking association, chartered and examined by the OCC. The Bank was declared insolvent on October 19, 1990.

^{1.} Without stating any reasons, O'Connell has requested the opportunity to present oral argument before the Board with respect to his exceptions. Because the legal and factual issues have been fully and

adequately explained in the written submissions, the Board denies the request for oral argument, See 12 C.F.R. 263.40.

^{2.} The Board also adopts the technical correction submitted by the OCC in the form of an exception, as discussed below.

At all times relevant to this proceeding, Respondent O'Connell was President and a director of the Bank, and therefore an "institution-affiliated party" under the terms of the FDI Act subject to the OCC's supervisory authority. O'Connell resigned as president and director of the Bank on October 9, 1990.

Ernesto Ayala was the Finance Director of the City of Pharr, Texas, and represented Pharr in all respects in the events relevant to this case. Wayne and Joseph Moran were broker/dealers employed in Austin, Texas, by Spelman & Co., Inc., a brokerage firm headquartered in San Diego, California.

II. Findings and Conclusions

Upon review of the record of this proceeding, the Board hereby adopts such of the ALJ's recommended decision, findings, and conclusions as are not specifically modified herein as the findings and conclusions of the Board, and incorporates by reference the ALJ's reasoning and citations to the record.

A. Findings

On November 14, 1989, the Bank entered into a Depository contract with the city of Pharr, Texas, whereby the Bank would provide depository and funds management services to Pharr. In April 1990, O'Connell caused a meeting to be held at the Bank including O'Connell, Ernesto Ayala (Pharr's Finance Director) and Wayne and Joseph Moran, the Spelman & Co. stock brokers from Austin, Texas.3 O'Connell called the meeting to discuss the extension of Pharr's bank account into a "margin account" with Spelman, which would increase the capital available for trading by borrowing from the broker amounts secured by Pharr's collateral. No decision as to the margin account was reached at the meeting.

The ALJ found that, after the meeting, O'Connell contacted Wayne Moran, stated that the Bank was interested in opening a margin trading account, represented that the Bank was Pharr's agent, and represented that O'Connell had the authority to engage in actively trading in the market for United States thirtyyear bonds on a day trade basis. O'Connell further represented that the Bank would guarantee Pharr a 9 percent return from the trading program, with the Bank taking all profits over 9 percent and also assuming all the trading risks.

The margin trading account styled "Metropolitan National Bank, Agent for Pharr", was opened by O'Connell on April 30, 1990.4 On that day, the Bank wire-transferred \$400,000 from Pharr's account to the clearing agent, which was used to purchase for Pharr a United States Treasury Note with a yield of 8.7 percent to maturity of \$435,000 on May 15, 1991. The purchase price of the Note was \$398,156. The Note and the excess funds of \$1,844 remained in the margin account. The ALJ found that O'Connell directed that Pharr's note be used as the collateral required by the terms of the margin account. In order to open the account, O'Connell executed a Corporate Authorization to Trade form specifying that the Bank's board of directors had conferred upon him specific authorization to conduct a number of activities with respect to the account. O'Connell also executed a Customer/ Margin Agreement agreeing to maintain collateral in the margin trading account against which the account could be charged to satisfy any monthly debit/loss balance. The Agreement also provided that BCC, the clearing agent, would hold a lien on certain Bank property for the purpose of discharging all indebtedness on the margin trading account and authorized BCC to sell all securities or property in the margin account without prior notice, and that O'Connell and/or the Bank was liable for the payment of any debt balance in the margin trading account.

The ALJ found that O'Connell was not authorized by the Bank's board of directors or by the Pharr Depository Contract to open the margin account and to engage in such trading. The ALJ found that the Depository Contract between the Bank and Pharr did not grant the Bank or O'Connell the authority to participate in a trading program on behalf of or as agent for Pharr. Furthermore, the trading in the margin account exceeded the scope of the board of directors' authorization for O'Connell to engage in general trading activities. The ALJ found that the high-risk, speculative margin account was a departure from the Bank's normal practice of investing only in long-term high-quality securities and that it was unsafe and unsound for a bank of approximately \$400,000 in primary capital to maintain a trading account. The Bank's records, including its quarterly Call Reports, do not indicate the existence of any trading activity on behalf of the Bank.

When O'Connell failed to submit documentation supporting his representation that he was an agent for Pharr and that he was authorized by the Bank to open

^{3.} The Board adopts the OCC's exception noting that, contrary to the Recommended Decision, Bank outside director Dr. Casso was not present at this meeting.

^{4.} Three numbered and associated accounts were opened, one of which, Number 23D-11052, served as an interest-bearing account into which profits (or losses) from margin account 23D-11075 would be transferred on a daily basis. The accounts were established with Broadcort Capital Corporation ("BCC") a wholly owned subsidiary of Merrill Lynch & Co. that provided security clearing services for Spelman.

the account, Spelman became concerned as to whether Pharr was aware of O'Connell's trading activities. Spelman's compliance officer directed that documentation be obtained from O'Connell to clarify the ownership of the account. On June 18, 1990, Wayne Moran met with O'Connell to have O'Connell re-execute the Corporate Authorization to Trade form and the Customer/Margin Agreement. O'Connell represented to Moran that he had been authorized by the board of directors to execute the forms by the unanimous vote of the Bank's board of directors at a meeting on April 17, 1990. The ALJ found that the corporate resolution passed by the Board of Directors on April 17, 1990, did not authorize O'Connell to establish a trading account, but only authorized O'Connell to transact for funds on accounts held at other banks.

Pursuant to Spelman's direction, the Customer/Margin agreement was modified to reflect a change in name from "Metropolitan National Bank, Agent for the City of Pharr" to "Metropolitan National Bank (2)". The ALJ found that O'Connell later admitted to the Bank's board of directors that the reason for the change of name on the margin account was to avoid having to disclose the trading activities to Pharr. The re-executed Customer/Margin Agreement was backdated to show a date of April 27, 1990.

From on or about May 11, 1990 until approximately September 19, 1990 over 200 day trades involving the buying and selling of U.S. Treasury Bonds were made in the trading accounts using the margin supported by the Pharr note. The ALJ found that O'Connell specifically authorized day trading on margin by giving orders to Wayne Moran, and that all trades were made with O'Connell's express authority and at his instructions. Respondent agreed to the transfer of all profits or losses to an associated interest-bearing account each day.

The ALJ found that O'Connell was notified on a regular basis concerning the losses in the margin trading account. On May 25, 1990, O'Connell had a conversation with Wayne Moran regarding losses in the margin trading account of approximately \$35,469. O'Connell wanted to continue trading. On May 31, 1990, O'Connell reasserted to Wayne Moran that he was not overly concerned with the loss in the trading account. On June 6, 1990, Wayne Moran notified O'Connell that there was a loss in the margin trading account of \$76,438. O'Connell wanted to continue to trade to recoup the loss in the account, indicating that he was negotiating with potential purchasers for the Bank. On July 24, 1990, O'Connell stated that he was becoming more concerned about the loss in the account, that he thought he could still recover the loss, and that he intended to keep trading until he recovered the loss.

Pursuant to O'Connell's instruction, the Note was sold for \$408,694 on August 1, 1990 to cover losses in

the margin trading account. The proceeds from the sale of the Note were used to offset the loss in the margin account and the remainder of the proceeds were transferred to the interest-bearing account. On August 30, 1990, O'Connell stated that he had to recover the entire loss in the trading accounts before the new owners assumed control of the Bank. The total losses associated with the trading accounts were about \$219,109.

On September 21, 1990, O'Connell disclosed to the Bank's board of directors that he had traded in the bond market and had pledged Pharr's note as collateral. The ALJ found that prior to O'Connell's disclosure, the board of directors had no knowledge of the trading activities and that O'Connell admitted his activities because increasing losses in the trading account had reached the point where there was no hope of recouping the losses. On September 24, 1990, the Bank's board of directors suspended O'Connell, notified Spelman to cease all future trading activities, and notified the OCC. The Bank compensated Pharr for the trading loss, paying Pharr \$435,000, the value of the Note at maturity.

As a result of the loss attributable to O'Connell's trading activities, potential buyers of the Bank chose not to infuse the Bank with \$1 million in capital, and the Bank was not sold. The ALJ found that the \$219,000 in losses caused the Bank's subsequent insolvency.

III. Conclusions

The ALJ reasonably rejected as irrelevant O'Connell's arguments that brokers Wayne and Joe Moran were not credible, and that the brokers had overcharged O'Connell on the trades. The ALJ noted that O'Connell had conceded that, with knowledge of increasing losses, he had continued to trade in the margin account for months without authority, even after the Pharr note had been sold to satisfy losses. The ALJ also noted that O'Connell did not testify, and did not deny any of the relevant testimony. The ALJ therefore reasonably found that the OCC had supported its charges by a preponderance of the relevant credible evidence.

A. Misconduct

Upon these facts, The ALJ found that O'Connell's actions constituted both unsafe and unsound practices and breaches of O'Connell's fiduciary duty. With neither authority nor express permission, O'Connell caused the Note owned by Pharr, a Bank customer, to be pledged as collateral for the margin trading account. O'Connell also executed all the forms necessary to

open a margin trading account and actively engaged in an unauthorized scheme of trading which involved more than 200 trades of 30-year United States Treasury bonds. O'Connell initiated, controlled and directed each trade, each of which was evidenced by both a confirmation slip and monthly account statement which were delivered to O'Connell at the Bank. The ALJ found that O'Connell repeatedly misrepresented his authority to the Spelman brokers, misleading them to believe that he was authorized to act as agent for Pharr and to trade on behalf of the Bank. O'Connell also directed the sale of the note to satisfy the outstanding amount of the loss in the margin trading account. The ALJ reasonably found this misconduct to satisfy the applicable standards for an unsafe or unsound banking practice,5 and for breach of fiduciary duty.

B. Effects

The ALJ also found that O'Connell's misconduct satisfied the Effects tier of elements necessary for a prohibition in that the Bank lost over \$219,000 as a result of the trading losses incurred by O'Connell and reimbursed to Pharr by the Bank. Furthermore, the ALJ found that the losses caused the Bank to lose a potential investment of \$1 million in capital that investors had proposed to infuse into the Bank. Accordingly, O'Connell's misconduct was a contributing factor to the insolvency of the Bank.6

C. Culpability

The ALJ also reasonably found that O'Connell's misconduct satisfied the Culpability tier of elements for a prohibition order in that it evidenced personal dishonesty as well as a willful and continuing disregard for the Bank's safety and soundness.

The ALJ found that O'Connell's conduct in conducting active trading using the security of a bank customer without obtaining the authority of either the bank customer or the Bank, together with O'Connell's misrepresentations of his authority to the brokers constituted personal dishonesty. The ALJ found that conclusion supported by O'Connell's knowledge that Pharr did not wish to authorize active trading or trading on margin and that he knew of the Bank's delicate condition and of the impending sale of the Bank. Furthermore, the ALJ noted that O'Connell admitted to the board of directors that his reason for changing the name on the account was to avoid disclosing his unauthorized trading to Pharr.

The ALJ found that, for the same reasons that the conduct evidenced personal dishonesty, it also satisfied the remaining culpability standards of willful and continuing disregard for safety or soundness in that O'Connell's conduct was willful and in that he continued to engage in the conduct over a period of several months.

D. O'Connell's Exceptions

The only exceptions filed by O'Connell relate entirely to the ALJ's evidentiary rulings. Since O'Connell did not testify, and called only one person as an adverse witness, he relied almost entirely upon cross-examination. O'Connell objects that the ALJ was unduly restrictive in the scope of the questioning permitted to O'Connell's counsel. He lists 11 instances where he submits that the ALJ erred, and requests a new hearing.

The Administrative Procedure Act ("APA") that generally governs formal agency adjudications specifies that presiding officials may "rule on offers of proof and receive relevant evidence", as well as "regulate the course of the hearing." 5 U.S.C. § 556(c)(3), (5). The APA also specifies that "the agency as a matter of policy shall provide for the exclusion of irrelevant, immaterial or unduly repetitious evidence." 5 U.S.C. § 556(d).

This statutory authority is mirrored in the OCC's Rules of Practice and Procedure applicable to adjudicatory proceedings required to be conducted on the record. The ALJ is generally vested with "all powers necessary to conduct a proceeding in a fair and impartial manner and to avoid unnecessary delay." 12 C.F.R. 19.5(a). More specifically, the ALJ is vested with the power "to consider and rule upon all procedural and other motions [other than granting a motion to dismiss] appropriate in an adjudicatory proceeding. 12 C.F.R. 19.5(b)(7). The evidentiary standards permit the admission of all evidence that is relevant, material, reliable, and not unduly repetitive. 12 C.F.R. 19.36(a)(1),(c).

O'Connell first complains that his counsel was not permitted to elicit character and reputation evidence concerning O'Connell during his cross-examination of a Bank director. A review of the record demonstrates that the ALJ acted reasonably and within his authority in permitting limited questioning as to O'Connell's reputation as to the culpability elements at issue, but

^{5.} An "unsafe or unsound banking practice" has been defined as a practice "deemed contrary to accepted standards of banking operation which might result in abnormal risk or loss to a banking institution or shareholder.' First Nat'l Bank of Eden v. Comptroller of the Currency, 568 F.2d 610 (8th Cir. 1978).

^{6.} The ALJ also found that O'Connell received a financial gain from his misconduct in that he never reimbursed the Bank for the \$219,000 in trading losses the Bank had restored to Pharr. The ALJ noted that there is no indication that O'Connell would have claimed any profits that might have resulted from the trading as personal income. The Board declines to reach the question of O'Connell's financial gain in light of the conclusion that the alternative effects element of loss to the Bank has been satisfied.

in restricting the scope of questioning as to general questions of character as irrelevant.

The bulk of O'Connell's exceptions relate to instances where the ALJ restricted the scope of cross-examination by O'Connell's counsel to matters elicited on direct examination. The ALJ generally explained each such ruling as a relevance determination. In a number of instances, O'Connell joins these exceptions with objections to the ALJ's rulings forbidding O'Connell's counsel from questioning witnesses as to documents that did not appear on O'Connell's list of proposed exhibits.

The OCC's Rules of Practice and Procedure do not directly address the scope of cross-examination. The Rules provide generally that "Hearings shall be conducted so as to provide a fair and expeditious presentation of the relevant disputed issues. Each party has the right to present its case or defense by oral and documentary evidence and to conduct such crossexamination as may be required for full disclosure of the facts." 12 C.F.R. 19.35; see 5 U.S.C. § 556(d). Accordingly, the right to conduct cross-examination is generally qualified by the limitation of testimony to the relevant disputed issues, as determined by the ALJ.8 A party seeking cross-examination in an administrative hearing bears the burden of showing that crossexamination is in fact necessary, a decision committed to the discretion of the presiding officer. Seacoast Anti-Pollution League v. Costle, 572 F.2d 872, 880 n.16 (1st Cir.) cert. denied, 439 U.S. 824 (1978). A partial or complete rehearing on the basis of improperly excluded evidence will generally be provided only where the exclusion is so prejudicial as to result in an unfair hearing. See Jacob Stein, Glenn Mitchell and Basil Mezines, Administrative Law (1993) § 30.03.

The Board's review of each instance where the ALJ restricted the scope of cross-examination demonstrates that in each case the ALJ made reasonable relevance determinations after permitting O'Connell's counsel to explain what he hoped to elicit from a line of questioning. The ALJ reasonably concluded that O'Connell's attempt to establish wrongdoing by the

The same relevance issues prevent O'Connell from demonstrating any prejudice resulting from the ALJ's restriction on the use of documents not identified on O'Connell's pre-hearing exhibit list. Here, the ALJ acted in accord with the authority provided by Rule of Practice and Procedure 19.32(b), which specifies that "No witness may testify and no exhibits may be introduced at the hearing if such witness or exhibit is not listed in the prehearing submissions . . . , except for good cause shown." 12 C.F.R. 19.32(b). The ALJ did not apply the rule inflexibly, finding in at least one instance that such good cause had been shown where a document would not "expand the scope" of the proceeding. Transcript 386–87.

Accordingly, O'Connell has not demonstrated that he has suffered prejudice from the ALJ's evidentiary rulings rendering the proceeding unfair, and the Board denies O'Connell's exceptions and request for a new hearing.

Conclusion

For the foregoing reasons, the Board orders that the attached Order issue.

Order of Prohibition

WHEREAS, pursuant to section 8(e) of the Federal Deposit Insurance Act, as amended, (the "Act")(12 U.S.C. 1818(e)), the Board of Governors of the Federal Reserve System ("the Board") is of the opinion, for the reasons set forth in the accompanying Final Decision, that a final Order of Prohibition should issue against MICHAEL A. O'CONNELL,

NOW, THEREFORE, IT IS HEREBY OR-DERED, pursuant to sections 8(e), and 8(j) of the Act, (12 U.S.C. §§ 1818(e) and 1818(j)), that:

- 1. In the absence of prior written approval by the Board, and by any other Federal financial institution regulatory agency where necessary pursuant to section 8(e)(7)(B) of the Act (12 U.S.C. § 1818(e)(7)(B)), MICHAEL A. O'CONNELL is hereby prohibited:
 - (a) From participating in the conduct of the affairs of any bank holding company, any insured depository institution or any other insti-

Morans was simply beside the point in light of the ample documentary evidence establishing O'Connell's knowledge of the margin trading accounts and his own statement to the Bank's board of directors. Similarly, the ALJ reasonably restricted as immaterial questioning seeking to establish O'Connell's theory that he had no legal liability as a result of the Bank's decision to reimburse Pharr as a result of the losses for which he was responsible.

^{7.} O'Connell's reliance on Federal Rule of Evidence 608 in support of this exception is inapposite. Rule 608 does not address reputation evidence going to the merits of a proceeding, but deals narrowly with the submission of opinion or reputation evidence as to the character for truthfulness of a witness only when that witness's credibility is at issue. Here, O'Connell was not a witness in the hearing, and the evidence that O'Connell's counsel sought to elicit dealt not with his character for truthfulness as a witness, but his character as a banker.

^{8.} While the Federal Rules of Evidence are not applicable to these proceedings, the conclusion would be the same if they did apply. Rule 611(b) specifies that "Cross-examination should be limited to the subject matter of the direct examination and matters affecting the credibility of the witness. The Court may, in the exercise of discretion, permit inquiry into additional matters as if on direct examination." Federal Rule of Evidence 611(b).

tution specified in subsection 8(e)(7)(A) of the Act (12 U.S.C. § 1818(e)(7)(A));

- (b) From soliciting, procuring, transferring, attempting to transfer, voting or attempting to vote any proxy, consent, or authorization with respect to any voting rights in any institution described in subsection 8(e)(7)(A) of the Act (12 U.S.C. § 1818(e)(7)(A));
- (c) From violating any voting agreement previously approved by the appropriate Federal banking agency; or (d) from voting for a director, or from serving or acting as an institution-affiliated party as defined in section 3(u) of the Act, (12 U.S.C. § 1813(u)), including serving as an officer, director, or employee.
- 2. This Order, and each provision hereof, is and shall remain fully effective and enforceable until expressly stayed, modified, terminated or suspended in writing by the Board.
- 3. This Order shall become effective upon the expiration of thirty days after service is made.

By order of the Board of Governors, this 28th day of June, 1993.

1. Unless otherwise noted, rates of change are calculated from average

1. Unless otherwise noted, rates of change are calculated from average amounts outstanding during preceding month or quarter.

2. Figures incorporate adjustments for discontinuities, or "breaks," associated with regulatory changes in reserve requirements. (See also table 1.20.)

3. Seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted currency component of the money stock, plus (3) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits, and Vault Cash" and for all weekly reporters whose vault cash exceeds their required reserves) the seasonally adjusted, break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

4. Composition of the money stock measures and debt is as follows:

M1: (1) currency outside the U.S. Treasury, Federal Reserve Banks, and the vaults of depository institutions; (2) travelers checks of nonbank issuers; (3) demand deposits at all commercial banks other than those due to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float; and (4) other checkable deposits (OCDs), consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. Seasonally adjusted M1 is computed by summing currency, travelers checks, demand deposits, and OCDs, each seasonally adjusted separately.

M2: M1 plus (1) overnight (and continuing-contract) repurchase agreements (RPs)—in a mounts of less than \$100,000, and (3) balances in both taxable and tax-exempt general-purpose and broker-dealer money market funds. Excludes individual retirement accounts (IRAs) and Keogh balances and both taxable and tax-exempt general-purpose and broker-dealer money market funds. Excludes individual retirement accoun

tax-exempt, institution-only money market funds. Excludes amounts held by depository institutions, the U.S. government, money market funds, and foreign banks and official institutions. Also excluded is the estimated amount of overnight RPs and Eurodollars held by institution-only money market funds. Seasonally adjusted M3 is computed by adjusting its non-M2 component as a whole and then adding this result to seasonally adjusted M2.

L: M3 plus the nonbank public holdings of U.S. savings bonds, short-term Treasury securities, commercial paper, and bankers acceptances, net of money market fund holdings of these assets. Seasonally adjusted L is computed by summing U.S. savings bonds, short-term Treasury securities, commercial paper, and bankers acceptances, each seasonally adjusted separately, and then adding this result to M3.

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit-

this result to M3.

Debt: Debt of domestic nonfinancial sectors consists of outstanding creditmarket debt of the U.S. government, state and local governments, and private
nonfinancial sectors. Private debt consists of corporate bonds, mortgages, consumer credit (including bank loans), other bank loans, commercial paper, bankers
acceptances, and other debt instruments. Data are derived from the Federal
Reserve Board's flow of funds accounts. Data on debt of domestic nonfinancial
sectors are monthly averages, derived by averaging adjacent month-end levels.
Growth rates for debt reflect adjustments for discontinuities over time in the levels
of debt resented in other tables.

Growth rates for debt reflect adjustments for discontinuities over time in the levels of debt presented in other tables.

5. Sum of (1) overnight RPs and Eurodollars, (2) money market fund balances (general purpose and broker-dealer), (3) savings deposits (including MMDAs), and (4) small time deposits.

6. Sum of (1) large time deposits, (2) term RPs, (3) term Eurodollars of U.S. residents, and (4) money market fund balances (institution-only), less (5) a consolidation adjustment that represents the estimated amount of overnight RPs and Eurodollars held by institution-only money market funds. This sum is seasonally adjusted as a whole.

7. Small time deposits—including retail RPs—are those issued in amounts of less than \$100,000. All IRA and Keogh account balances at commercial banks and thrift institutions are subtracted from small time deposits.

8. Large time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international banking facilities.

9. Large time deposits at commercial banks less those held by money market funds, depository institutions, U.S. government and foreign banks and official institutions.

institutions (that is, those whose vault cash exceeds their required reserves) to

institutions (that is, those whose vault cash exceeds their required reserves) to satisfy current reserve requirements.

5. Total vault cash (line 2) less applied vault cash (line 3).

6. Reserve balances with Federal Reserve Banks (line 1) plus applied vault cash (line 3).

7. Total reserves (line 5) less required reserves (line 6).

8. Also includes adjustment credit.

9. Consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions deal with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as there is with traditional short-term adjustment credit, the money market impact of extended credit is similar to that of nonborrowed reserves.

^{1.} Data in this table also appear in the Board's H.3 (502) weekly statistical release. For ordering address, see inside front cover.

2. Excludes required clearing balances and adjustments to compensate for float and includes other off-balance-sheet "as-of" adjustments.

3. Total "lagged" vault cash held by depository institutions subject to reserve requirements. Dates refer to the maintenance periods during which the vault cash can be used to satisfy reserve requirements. The maintenance period for weekly reporters ends sixteen days after the lagged computation period during which the vault cash is held. Before Nov. 25, 1992, the maintenance period ended thirty days after the lagged computation period by "bound" institutions (that is, those whose required reserves exceed their vault cash) plus the amount of vault cash applied during the maintenance period by "nonbound"

^{1.} Available on a short-term basis to help depository institutions meet temporary needs for funds that cannot be met through reasonable alternative sources. The highest rate established for loans to depository institutions may be charged on adjustment-credit loans of unusual size that result from a major operating problem at the borrower's facility.

2. Available to help relatively small depository institutions meet regular seasonal needs for funds that arise from a clear pattern of intrayearly movements in their deposits and loans and that cannot be met through special industry lenders. The discount rate on seasonal credit takes into account rates on market sources of funds and ordinarily is reestablished on the first business day of each two-week reserve maintenance period; however, it is never less than the discount rate applicable to adjustment credit.

3. May be made available to depository institutions when similar assistance is not reasonably available from other sources, including special industry lenders.

^{3.} May be made available from other sources, including special industry lenders. Such credit may be provided when exceptional circumstances (including sustained deposit drains, impaired access to money market funds, or sudden deterioration in loan repayment performance) or practices involve only a particular institution, or to meet the needs of institutions experiencing difficulties adjusting to changing market conditions over a longer period (particularly at times of deposit disintermediation). The discount rate applicable to adjustment credit

ordinarily is charged on extended-credit loans outstanding less than thirty days; however, at the discretion of the Federal Reserve Bank, this time period may be shortened. Beyond this initial period, a flexible rate somewhat above rates on market sources of funds is charged. The rate ordinarily is reestablished on the first business day of each two-week reserve maintenance period, but it is never less than the discount rate applicable to adjustment credit plus 50 basis points.

4. For earlier data, see the following publications of the Board of Governors: Banking and Monetary Statistics, 1914–1941, and 1941–1970; and the Annual Statistical Digest, 1970–1979.

In 1980 and 1981, the Federal Reserve applied a surcharge to short-term adjustment-credit borrowings by institutions with deposits of \$500 million or more than borrowed in successive weeks or in more than four weeks in a calendar quarter. A 3 percent surcharge was in effect from Mar. 17, 1980, through May 7, 1980. A surcharge of 2 percent was reimposed on Nov. 17, 1980; the surcharge was subsequently raised to 3 percent on Dec. 5, 1980, and to 4 percent on May 5, 1981. The surcharge was reduced to 3 percent effective Sept. 22, 1981, and to 2 percent effective Cet. 12, 1981, As of Oct. 1, 1981, the formula for applying the surcharge was changed from a calendar quarter to a moving thirteen-week period. The surcharge was eliminated on Nov. 17, 1981.

1.15 RESERVE REQUIREMENTS OF DEPOSITORY INSTITUTIONS¹

| _ | | Requi | rements |
|-----|---|---------------------|----------------------|
| | Type of deposit ² | Percent of deposits | Effective date |
| 1 2 | Net transaction accounts ³ \$0 million-\$46.8 million. More than \$46.8 million ⁴ . | 3 10 | 12/15/92 12/15/92 |
| 3 | Nonpersonal time deposits ⁵ | 0 | 12/27/90 |
| 4 | Eurocurrency liabilities ⁶ . | 0 | 12/27/90 |

1. Required reserves must be held in the form of deposits with Federal Reserve Banks or vault cash. Nonmember institutions may maintain reserve balances with a Federal Reserve Bank indirectly on a pass-through basis with certain approved institutions. For previous reserve requirements, see earlier editions of the Annual Report or the Federal Reserve Bulletin. Under provisions of the Monetary Control Act, depository institutions include commercial banks, mutual savings banks, savings and loan associations, credit unions, agencies and branches of foreign banks, and Edge corporations.

2. The Garn-St Germain Depository Institutions Act of 1982 (Public Law 97-320) requires that \$2 million of reservable liabilities of each depository institution be subject to a zero percent reserve requirement. The Board is to adjust the amount of reservable liabilities subject to this zero percent reserve requirement each year for the succeeding calendar year by 80 percent of the percentage increase in the total reservable liabilities of all depository institutions, measured on an annual basis as of June 30. No corresponding adjustment is to be made in the event of a decrease. On Dec. 15, 1992, the exemption was raised from \$3.6 million to \$3.8 million. The exemption applies in the following order: (1) net negotiable order of withdrawal (NOW) accounts (NOW accounts less allowable deductions); and (2) net other transaction accounts. The exemption applies only to accounts that would be subject to a 3 percent reserve requirement.

3. Include all deposits against which the account holder is permitted to make withdrawals by negotiable or transferable instruments, payment orders of withdrawal, and telephone and preauthorized transfers in excess of three per month for the purpose of making payments to third persons or others. However, money market deposit accounts (MMDAs) and similar accounts subject to the rules that

permit no more than six preauthorized, automatic, or other transfers per month, of which no more than three may be checks, are not transaction accounts (such accounts are savings deposits).

The Monetary Control Act of 1980 requires that the amount of transaction accounts against which the 3 percent reserve requirement applies be modified annually by 80 percent of the percentage change in transaction accounts held by all depository institutions, determined as of June 30 each year. Effective Dec. 15, 1992, for institutions reporting weekly, the amount was increased from \$42.2 million to \$46.8 million 4. The reserve requirement was reduced from 12 percent to 10 percent on Apr. 2, 1992, for institutions that report weekly, and on Apr. 16, 1992, for institutions that report weekly, and on Apr. 16, 1992, for institutions that report weekly, the reserve requirement on nonpersonal time deposits with an original maturity of less than 1½ years was reduced from 3 percent to 1½ percent for the maintenance period that began Dec. 13, 1990, and to zero for the maintenance period that began Dec. 13, 1990. The reserve requirement on nonpersonal time deposits with an original maturity of less than 1½ years was reduced from 3 percent to zero on Jan. 17, 1991.

6. The reserve requirement on Eurocurrency liabilities was reduced from 3 percent to zero in the same manner and on the same dates as were the reserve requirement on nonpersonal time deposits with an original maturity of less than 1½ years was reduced from 3 percent to zero in the same manner and on the same dates as were the reserve requirement on nonpersonal time deposits with an original maturity of less than 1½ years was reduced from 3 percent to zero in the same manner and on the same dates as were the reserve requirement on nonpersonal time deposits with an original maturity of less than 1½ years was reduced from 3 percent to zero in the same manner and on the same dates as were the reserve requirement on nonpersonal time deposits with an original maturity of less th

Valued monthly at market exchange rates.
 Includes special investment account at the Federal Reserve Bank of Chicago in Treasury bills maturing within ninety days.
 Includes exchange-translation account reflecting the monthly revaluation at market exchange rates of foreign exchange commitments.

Some of the data in this table also appear in the Board's H.4.1 (503) weekly statistical release. For ordering address, see inside front cover.
 Includes securities loaned—fully guaranteed by U.S. Treasury securities pledged with Federal Reserve Banks—and excludes securities sold and scheduled to be bought back under matched sale-purchase transactions.

1. Latest monthly and biweekly figures are available from the Board's H.3 (502) weekly statistical release. Historical data and estimates of the impact on require reserves of changes in reserve requirements are available from the Monetary and Reserves Projections Section, Division of Monetary Affairs, Board of Governors of the Federal Reserve System, Washington, DC 20551.

2. Figures reflect adjustments for discontinuities, or "breaks," associated with regulatory changes in reserve requirements. (See also table 1.10)

3. Seasonally adjusted, break-adjusted total reserves equal seasonally adjusted, break-adjusted nonborrowed reserves equal seasonally adjusted, break-adjusted nonborrowed reserves equal seasonally adjusted, break-adjusted total reserves (line 1) less total borrowings of depository institutions from the Federal Reserve (line 17).

5. Extended credit consists of borrowing at the discount window under the terms and conditions established for the extended credit program to help depository institutions deal with sustained liquidity pressures. Because there is not the same need to repay such borrowing promptly as there is with traditional short-term adjustment credit, the money market impact of extended credit is similar to that of nonborrowed reserves.

6. The seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted, break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

7. Break-adjusted total reserves equal break-adjusted required reserves (line 9) plus excess reserves (line 16).

8. To adjust required reserves for discontinuities that are due to regulatory

plus excess reserves (line 16).

8. To adjust required reserves for discontinuities that are due to regulatory changes in reserve requirements, a multiplicative procedure is used to estimate what required reserves would have been in past periods had current reserve requirements been in effect. Break-adjusted required reserves include required reserves against transactions deposits and nonpersonal time and savings deposits (but not reservable nondeposit liabilities).

(but not reservable nondeposit liabilities).

9. The break-adjusted monetary base equals (1) break-adjusted total reserves (line 6), plus (2) the (unadjusted) currency component of the money stock, plus (3) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all weekly reporters whose vault cash exceeds their required reserves) the break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

10. Refects actual reserve requirements, including those on nondeposit liabilities, with no adjustments to eliminate the effects of discontinuities associated with changes in reserve requirements.

11. Reserve balances with Federal Reserve Banks plus vault cash used to satisfy reserve requirements.

12. The monetary base, not break-adjusted and not seasonally adjusted.

satisfy reserve requirements.

12. The monetary base, not break-adjusted and not seasonally adjusted, consists of (1) total reserves (line 11), plus (2) required clearing balances and adjustments to compensate for float at Federal Reserve Banks, plus (3) the currency component of the money stock, plus (4) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all those weekly reporters whose vault cash exceeds their required reserves) the difference between current vault cash and the amount applied to satisfy current reserve requirements. Since the introduction of changes in reserve requirements (CRR), currency and vault cash figures have been measured over the computation periods ending on Mondays.

13. Unadjusted total reserves (line 11) less unadjusted required reserves (line 14).

NOTES TO TABLE 1.21

Latest monthly and weekly figures are available from the Board's H.6 (508) weekly statistical release. Historical data are available from the Money and

1. Latest monthly and weekly figures are available from the Board's H.6 (508) weekly statistical release. Historical data are available from the Money and Reserves Projection Section, Division of Monetary Affairs, Board of Governors of the Federal Reserve System, Washington, DC 20551.

2. Composition of the money stock measures and debt is as follows:
M1: (1) currency outside the U.S. Treasury, Federal Reserve Banks, and the vaults of depository institutions; (2) travelers checks of nonbank issuers; (3) demand deposits at all commercial banks other than those due to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float; and (4), other checkable deposits (OCDs), consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. Seasonally adjusted separately.
M2: M1 plus (1) overnight (and continuing-contract) repurchase agreements (RPs) issued by all depository institutions and overnight Eurodollars issued to U.S. residents by foreign branches of U.S. banks worldwide, (2) savings (including MMDAs) and small time deposits (time deposits—including retail RPs—in amounts of less than \$100,000), and (3) balances in both taxable and tax-exempt general purpose and broker-dealer money market funds. Also excludes all balances held by U.S. commercial banks, money market funds. Also excludes all balances held by U.S. commercial banks, and the U.S. government. Seasonally adjusted M1 is computed by adjusting its non-M1 component as a whole and then adding this result to seasonally adjusted M1.

M3: M2 plus (1) large time deposits and term RP liabilities (in amounts of \$100,000 or more) issued by all depository institutions, (2) term Eurodollars held by U.S. commercial banks, and the U.S. government. Seasonally adjusted M2 is computed by adjusted M1.

M3: M2 plus (1) large time deposi

market fund holdings of these assets. Seasonally adjusted L is computed by summing U.S. savings bonds, short-term Treasury securities, commercial paper, and bankers acceptances, each seasonally adjusted separately, and then adding

summing U.S. savings bonds, snort-term treasury securities, commercial paper, and bankers acceptances, each seasonally adjusted separately, and then adding this result to M3.

Debt: Debt of domestic nonfinancial sectors consists of outstanding credit market debt of the U.S. government, state and local governments, and private nonfinancial sectors. Private debt consists of corporate bonds, mortgages, consumer credit (including bank loans), other bank loans, commercial paper, bankers acceptances, and other debt instruments. Data are derived from the Federal Reserve Board's flow of funds accounts. Debt data are based on monthly averages. This sum is seasonally adjusted as a whole.

3. Currency outside the U.S. Treasury, Federal Reserve Banks, and vaults of depository institutions.

4. Outstanding amount of U.S. dollar-denominated travelers checks of nonbank issuers. Travelers checks issued by depository institutions are included in demand deposits at commercial banks and foreign-related institutions other than those owed to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float.

5. Consists of NOW and ATS account balances at all depository institutions,

- Consists of NOW and ATS account balances at all depository institutions, credit union share draft account balances, and demand deposits at thrift institu-
- credit union share draft account balances, and demand deposits at thrift institutions.

 7. Sum of (1) overnight RPs and overnight Eurodollars, (2) money market fund
 balances (general purpose and broker-dealer), (3) savings deposits (including
 MMDAs), and (4) small time deposits.

 8. Sum of (1) large time deposits, (2) term RPs, (3) term Eurodollars of U.S.
 residents, and (4) money market fund balances (institution-only), less a consolidation adjustment that represents the estimated amount of overnight RPs and
 Eurodollars held by institution-only money market funds.

 9. Small time deposits—including retail RPs—are those issued in amounts of
 less than \$100,000. All IRAs and Keogh accounts at commercial banks and thrift
 institutions are subtracted from small time deposits.

 10. Large time deposits are those issued in amounts of
 story of the deposits are those issued in amounts of
 the deposits of \$100,000 or more,
 excluding those booked at international banking facilities.

 11. Large time deposits at commercial banks less those held by money market
 funds, depository institutions, U.S. government, and foreign banks and official
 institutions.

^{1.} Data in this table also appear in the Board's H.6 (508) Special Supplementary Table monthly statistical release. For ordering address, see inside front cover. Estimates are based on data collected by the Federal Reserve System from a stratified random sample of about 460 commercial banks and 80 savings banks on the last Wednesday of each period. Data are not seasonally adjusted and include

IRA/Keogh deposits and foriegn currency denominated deposits. Data exclude retail repurchase agreements and deposits held in U.S. branches and agencies of foreign banks.

2. Includes personal and nonpersonal money market deposits.

3. BIF-insured savings banks include both mutual and federal savings banks.

^{1.} Commercial banks are nationally and state-chartered banks in the fifty states and the District of Columbia, agencies and branches of foreign banks, New York investment companies majority owned by foreign banks, and Edge Act corporations owned by domestically chartered and foreign banks.

Data in this table also appear in the Board's G.10 (411) release. For ordering address, see inside front cover.

2. Includes federal funds, repurchase agreements (RPs), and other borrowing from nonbanks and net balances due to related foreign offices.

3. Reflects net positions of U.S. chartered banks, Edge Act corporations, and U.S. branches and agencies of foreign banks with related foreign offices plus net positions with own International Banking Facilities (IBFs).

4. Borrowings through any instrument, such as a promissory note or due bill, given for the purpose of borrowing money for the banking business. This includes

borrowings from Federal Reserve Banks and from foreign banks, term federal funds, loan RPs, and sales of participations in pooled loans.

5. Figures are based on averages of daily data reported weekly by approximately 120 large banks and quarterly or annual data reported by other banks.

6. Figures are partly averages of daily data and partly averages of Wednesday data.

o. Figures are paid; a condition of \$100,000 or more. Estimated averages of daily data.

7. Time deposits in denominations of \$100,000 or more. Estimated averages of daily data.

8. U.S. Treasury demand deposits and Treasury tax and loan notes at commercial banks. Averages of daily data.

A20 Domestic Financial Statistics □ August 1993

^{1.} Excludes assets and liabilities of International Banking Facilities.
2. Includes insured domestically chartered commercial banks, agencies and branches of foreign banks, Edge Act and Agreement corporations, and New York State foreign investment corporations. Data are estimates for the last Wednesday of the month based on a sample of weekly reporting foreign-related and domestic institutions and quarter-end condition reports.

This balancing item is not intended as a measure of equity capital for use in capital adequacy analysis.
 Includes all member banks and insured nonmember banks. Loans and securities data are estimates for the last Wednesday of the month based on a sample of weekly reporting banks and quarter-end condition reports.

A22 Domestic Financial Statistics □ August 1993

Includes certificates of participation, issued or guaranteed by agencies of the U.S. government, in pools of residential mortgages.
 Includes securities purchased under agreements to resell.
 Includes allocated transfer risk reserve.
 Includes negotiable order of withdrawal accounts (NOWs), automatic transfers revice (ATS), and telephone and preauthorized transfers of savings deposits.
 Includes borrowings only from other than directly related institutions.
 Includes federal funds purchased and securities sold under agreements to repurchase.

repurchase.
7. This balancing item is not intended as a measure of equity capital for use in capital-adequacy analysis.
8. Excludes loans to and federal funds transactions with commercial banks in

the United States.

^{9.} Affiliates include a bank's own foreign branches, nonconsolidated nonbank affiliates of the bank, the bank's holding company (if not a bank), and nonconsolidated nonbank subsidiaries of the holding company.

10. Credit extended by foreign branches of domestically chartered weekly reporting banks to nonbank U.S. residents. Consists mainly of commercial and industrial loans, but includes an unknown amount of credit extended to other than nonfinancial businesses.

Note. Data that formerly appeared in table 1.28, Assets and Liabilities of Large Weekly Reporting Commercial Banks in New York City, can be obtained from the Board's H.4.2 (504) weekly statistical release. For ordering address, see inside

The daily effective federal funds rate is a weighted average of rates on trades through New York brokers.
 Weekly figures are averages of seven calendar days ending on Wednesday of the current week; monthly figures include each calendar day in the month.
 Annualized using a 360-day year or bank interest.
 Rate for the Federal Reserve Bank of New York.
 Quoted on a discount basis.
 An average of offering rates on commercial paper placed by several leading dealers for firms whose bond rating is AA or the equivalent.
 An average of offering rates on paper directly placed by finance companies.
 Representative closing yields for acceptances of the highest-rated money center banks.
 An average of dealer offering rates on nationally traded certificates of deposit.

deposit.

10. Bid rates for Eurodollar deposits at 11 a.m. London time. Data are for

indication purposes only.

11. Auction date for daily data; weekly and monthly averages computed on an issue-date basis.

^{12.} Yields on actively traded issues adjusted to constant maturities. Source: U.S. Treasury.
13. General obligations based on Thursday figures; Moody's Investors Service.
14. General obligations only, with twenty years to maturity, issued by twenty state and local governmental units of mixed quality. Based on figures for Thursday.

state and local governmental units of mixed quality. Based on ngures for Thursday.

15. Daily figures from Moody's Investors Service. Based on yields to maturity on selected long-term bonds.

16. Compilation of the Federal Reserve. This series is an estimate of the yield on recently offered. A-rated utility bonds with a thirty-year maturity and five years of call protection. Weekly data are based on Friday quotations.

17. Standard and Poor's corporate series. Preferred stock ratio based on a sample of ten issues: four public utilities, four industrials, one financial, and one transportation. Common stock ratios on the 500 stocks in the price index.

Note. These data also appear in the Board's H.15 (519) and G.13 (415) releases. For ordering address, see inside front cover.

^{1.} Effective July 1976, includes a new financial group, banks and insurance companies. With this change the index includes 400 industrial stocks (formerly 425), 20 transportation (formerly 15 rail), 40 public utility (formerly 60), and 40

on securities other than options are the difference between the market value (100 percent) and the maximum loan value of collateral as prescribed by the Board. Regulation T was adopted effective Oct. 15, 1934; Regulation U, effective May 1, 1936; Regulation G, effective Mar. 11, 1968; and Regulation X, effective Nov. 1,

1971.

On Jan. 1, 1977, the Board of Governors for the first time established in Regulation T the initial margin required for writing options on securities, setting it at 30 percent of the current market value of the stock underlying the option. On Sept. 30, 1985, the Board changed the required initial margin, allowing it to be the same as the option maintenance margin required by the appropriate exchange or self-regulatory organization; such maintenance margin rules must be approved by the Securities and Exchange Commission. Effective Jan. 31, 1986, the SEC approved new maintenance margin rules, permitting margins to be the price of the option plus 15 percent of the market value of the stock underlying the option. Effective June 8, 1988, margins were set to be the price of the option plus 20 percent of the market value of the stock underlying the option (or 15 percent in the case of stock-index options).

case of stock-index options).

financial.

2. On July 5, 1983, the American Stock Exchange rebased its index, effectively

^{2.} On July 5, 1983, the American Stock Exchange rebased its index, effectively cutting previous readings in half.

3. Since July 1983, under the revised Regulation T, margin credit at broker-dealers has included credit extended against stocks, convertible bonds, stocks acquired through the exercise of subscription rights, corporate bonds, and government securities. Separate reporting of data for margin stocks, convertible bonds, and subscription issues was discontinued in April 1984.

4. Free credit balances are amounts in accounts with no unfulfilled commitments to brokers and are subject to withdrawal by customers on demand.

5. New series since June 1984.

6. These requirements, stated in regulations adopted by the Board of Governors pursuant to the Securities Exchange Act of 1934, limit the amount of credit that can be used to purchase and carry "margin securities" (as defined in the regulations) when such credit is collateralized by securities. Margin requirements

^{1.} In accordance with the Balanced Budget and Emergency Deficit Control Act of 1985, all former off-budget entries are now presented on-budget. Federal Financing Bank (FFB) activities are now shown as separate accounts under the agencies that use the FFB to finance their programs. The act also moved two social security trust funds (federal old-age survivors insurance and federal disability insurance) off budget. The Postal Service is included as an off-budget item in the Monthly Treasury Statement beginning in 1990.

2. Includes special drawing rights (SDRs); reserve position on the U.S. quota in the International Monetary Fund (IMF); loans to the IMF; other cash and

monetary assets; accrued interest payable to the public; allocations of SDRs; deposit funds; miscellaneous liability (including checks outstanding) and asset accounts; seigniorage; increment on gold; net gain or loss for U.S. currency valuation adjustment; net gain or loss for IMF loan-valuation adjustment; and

profit on sale of gold.
SOURCES. Monthly Treasury Statement of Receipts and Outlays of the U.S. Government (MTS) and the Budget of the U.S. Government.

Beginning December 1992, data are available on a quarterly basis and are no longer available monthly.
 Contra-assets are credit-balance accounts that must be subtracted from the corresponding gross asset categories to yield net asset levels. Contra-assets to loans in process, unearned discounts and deferred loan fees, valuation allowances for mortgages "held for sale," and specific reserves and other valuation allowances. Contra-assets to nonmortgage loans include loans in process, unearned discounts and deferred loan fees, and specific reserves and valuation allowances.

^{3.} Includes holding of stock in Federal Home Loan Bank and finance leases plus interest.

plus interest.

Note. Components do not sum to totals because of rounding. Data for credit unions and life insurance companies have been deleted from this table. Starting in the December 1991 issue, data for life insurance companies are shown in a special table of quarterly data.

Source. Office of Thrift Supevision (OTS), insured by the Savings Association Insurance Fund (SAIF) and regulated by the OTS.

^{1.} Functional details do not sum to total outlays for calendar year data because revisions to monthly totals have not been distributed among functions. Fiscal year total for outlays does not correspond to calendar year data because revisions from the Budger have not been fully distributed across months.

2. Old-age, disability, and hospital insurance, and railroad retirement accounts.

3. Old-age, disability, and hospital insurance.

4. Federal employee retirement contributions and civil service retirement and disability fund.

5. Deposits of earnings by Federal Reserve Banks and other miscellaneous receipts.
6. Includes interest received by trust funds.
7. Consists of rents and royalties for the outer continental shelf and U.S. government contributions for employee retirement.
SOURCES. U.S. Department of the Treasury, Monthly Treasury Statement of Receipts and Outlays of the U.S. Government, and the U.S. Office of Management and Budget, Budget of the U.S. Government, Fiscal Year 1994.

I. Includes (not shown separately) securities issued to the Rural Electrification Administration, depository bonds, retirement plan bonds, and individual retirement bonds.
 Nonmarketable series denominated in dollars, and series denominated in foreign currency held by foreigners.
 Held almost entirely by U.S. Treasury and other federal agencies and trust funds.

SOURCES. U.S. Treasury Department, Monthly Statement of the Public Debt of the United States and Treasury Bulletin.

^{4.} Data for Federal Reserve Banks and U.S. government agencies and trust funds are actual holdings; data for other groups are Treasury estimates.

^{5.} Consists of investments of foreign balances and international accounts in the United States.

6. Includes savings and loan associations, nonprofit institutions, credit unions, mutual savings banks, corporate pension trust funds, dealers and brokers, certain U.S. Treasurs deposit accounts, and federally sponsored agencies. Sources: U.S. Treasury Department, data by type of security, Monthly Statement of the Public Debt of the United States; data by holder, the Treasury Bulletin.

^{1.} Transactions are market purchases and sales of securities as reported to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers. Averages are based on the number of trading days in the period. Immediate, forward, and futures transactions are reported at principal value, which does not include accrued interest; options transactions are reported at the face value of the underlying securities.

Dealers report cumulative transactions for each week ending Wednesday.

2. Transactions for immediate delivery include purchases or sales of securities (other than mortgage-backed agency securities) for which delivery is scheduled in five business days or less and "when-issued" securities that settle on the issue date of offering. Transactions for immediate delivery of mortgage-backed agency securities include purchases and sales for which delivery is scheduled in thirty days or less. Stripped securities are reported at market value by maturity of coupon or corpus.

3. Includes such securities are collateralized mortgage obligations (CMOs), real estate mortgage investment conduits (REMICs), interest-only securities (IOs), and principal-only securities (POs).

^{4.} Futures transactions are standardized agreements arranged on an exchange. Forward transactions are agreements made in the over-the-counter market that specify delayed delivery. All futures transactions are included regardless of time to delivery. Forward contracts for U.S. Treasury securities and federal agency debt securities are included when the time to delivery is more than five business days. Forward contracts for mortgage-backed agency securities are included when the time to delivery is more than thirty days.

5. Options transactions are purchases or sales of put-and-call options, whether arranged on an organized exchange or in the over-the-counter market, and include options on futures contracts on U.S. Treasury and federal agency securities. NOTE. In tables 1.42 and 1.43, "n.a," indicates that data are not published because of insufficient activity.

Data for several types of options transactions—U.S. Treasury securities, bills; Federal agency securities, debt; and mortgage-backed securities, other than pass-throughs—are no longer available because activity is insufficient.

^{1.} Data for positions and financing are obtained from reports submitted to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers. Weekly figures are close-of-business Wednesday data; monthly figures are averages of weekly data.

2. Securities positions are reported at market value.

3. Net immediate positions include securities purchased or sold (other than mortgage-backed agency securities) that have been delivered or are scheduled to be delivered in five business days or less and "when-issued" securities that settle on the issue date of offering. Net immediate positions of mortgage-backed agency securities include securities purchased or sold that have been delivered or are scheduled to be delivered in thirty days or less.

4. Includes such securities as collateralized mortgage obligations (CMOs), real estate mortgage investment conduits (REMICs), interest-only securities (IOs), and principal-only securities (POs).

5. Futures positions reflect standardized agreements arranged on an exchange. Forward positions reflect agreements made in the over-the-counter market that specify delayed delivery. All futures positions are included regardless of time to

delivery. Forward contracts for U.S. Treasury securities and federal agency debt securities are included when the time to delivery is more than five business days. Forward contracts for mortgage-backed agency securities are included when the time to delivery is more than thirty days.

6. Overnight financing refers to agreements made on one business day that mature on the next business day; continuing contracts are agreements that remain in effect for more than one business day but have no specific maturity and can be terminated without advance notice by either party; term agreements have a fixed maturity of more than one business day.

7. Matched-book data reflect financial intermediation activity in which the borrowing and lending transactions are matched. Matched-book data are included in the financing breakdowns given above. The reverse repurchase and repurchase numbers are not always equal because of the "matching" of securities of different values or different types of collateralization.

Note. Data for futures and forward commercial paper and bankers acceptances and for term financing of collateralized loans are no longer available because of insufficient activity.

activity.

1. Consists of mortgages assumed by the Defense Department between 1957 and 1963 under family housing and homeowners assistance programs.

2. Includes participation certificates reclassified as debt beginning Oct. 1, 1976.

3. On-budget since Sept. 30, 1976.

4. Consists of debentures issued in payment of Federal Housing Administration insurance claims. Once issued, these securities may be sold privately on the securities market.

5. Certificates of participation issued before fiscal year 1969 by the Government National Mortgage Association acting as trustee for the Farmers Home Administration, the Department of Housing and Urban Development, the Small Business Administration, and the Veterans' Administration.

6. Off-budget.

7. Includes outstanding noncontingent liabilities: notes, bonds, and debentures. Some data are estimated.

8. Excludes borrowing by the Farm Credit Financial Assistance Corporation, shown on line 17.

9. Before late 1982, the Association obtained financing through the Federal Financing Bank (FFB). Borrowing excludes that obtained from the FFB, which is shown on line 22.

- 10. The Financing Corporation, established in August 1987 to recapitalize the Federal Savings and Loan Insurance Corporation, undertook its first borrowing in October 1987.

 11. The Farm Credit Financial Assistance Corporation, established in January 1988 to provide assistance to the Farm Credit System, undertook its first borrowing in July 1988.

 12. The Resolution Funding Corporation, established by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, undertook its first borrowing in October 1989.

 13. The FFB, which began operations in 1974, is authorized to purchase or sell obligations issued, sold, or guaranteed by other federal agencies. Because FFB incurs debt solely for the purpose of lending to other agencies, its debt is not included in the main portion of the table in order to avoid double counting.

 14. Includes FFB purchases of agency assets and guaranteed loans; the latter are loans guaranteed by numerous agencies, with the amounts guaranteed by any one agency generally being small. The Farmers Home Administration entry consists exclusively of agency assets, while the Rural Electrification Administration entry consists of both agency assets and guaranteed loans.

^{1.} Figures represent gross proceeds of issues maturing in more than one year; they are the principal amount or number of units calculated by multiplying by the offering price. Figures exclude secondary offerings, employee stock plans, investment companies other than closed-end, intracorporate transactions, equities sold abroad, and Yankee bonds. Stock data include ownership securities issued by limited partnerships.

Monthly data cover only public offerings.
 Monthly data are not available.

^{1.} Weighted averages based on sample surveys of mortgages originated by major institutional lender groups for purchase of newly built homes; compiled by the Federal Housing Finance Board in cooperation with the Federal Deposit Insurance Corporation.

2. Includes all fees, commissions, discounts, and "points" paid (by the borrower or the seller) to obtain a loan.

3. Average effective interest rate on loans closed for purchase of newly built homes, assuming prepayment at the end of ten years.

4. Average contract rates on new commitments for conventional first mortgages; from U.S. Department of Housing and Urban Development (HUD). Based on transactions on the first day of the subsequent month.

5. Average gross yields on thirty-year, minimum-downpayment, first mortgages insured by the Federal Housing Administration (FHA) for immediate delivery in the private secondary market. Based on transactions on first day of

subsequent month.

6. Average net yields to investors on fully modified pass-through securities backed by mortgages and guaranteed by the Government National Mortgage Association (GNMA), assuming prepayment in twelve years on pools of thirty-year mortgages insured by the Federal Housing Administration or guaranteed by the Department of Veterans Affairs.

7. Does not include standby commitments issued, but includes standby commitments converted.

8. Includes participation loans as well as whole loans.

mitments converted.

8. Includes participation loans as well as whole loans.

9. Includes conventional and government-underwritten loans. The Federal Home Loan Mortgage Corporation's mortgage commitments and mortgage transactions include activity under mortgage securities swap programs, while the corresponding data for FNMA exclude swap activity.

Based on data from various institutional and governmental sources; figures for some quarters estimated in part by the Federal Reserve. Multifamily debt refers to loans on structures of five or more units.

 Includes loans held by nondeposit trust companies but not loans held by bank trust departments.

 Includes savings banks and savings and loan associations.

 FmHA-guaranteed securities sold to the Federal Financing Bank were reallocated from FmHA mortgage pools to FmHA mortgage holdings in 1986:4 because of accounting changes by the Farmers Home Administration.

^{5.} Outstanding principal balances of mortgage-backed securities insured or guaranteed by the agency indicated.
6. Other holders include mortgage companies, real estate investment trusts, state and local credit agencies, state and local retirement funds, noninsured pension funds, credit unions, and finance companies.

SOURCE. Line 64, Inside Mortgage Securities.

^{1.} A major revision of the industrial production index and the capacity utilization rates was released in April 1990. See "Industrial Production: 1989 Developments and Historical Revision," Federal Reserve Bulletin, vol. 76 (April 1990), pp. 187-204.

2. Ratio of index of production to index of capacity. Based on data from the Federal Reserve, DRI McGraw-Hill, U.S. Department of Commerce, and other

6. Based on data from U.S. Bureau of the Census, Survey of Current Business.
7. Based on data not seasonally adjusted. Seasonally adjusted data for changes in the price indexes can be obtained from the Bureau of Labor Statistics, U.S. Department of Labor, Monthly Labor Review.

NOTE. Basic data (not indexes) for series mentioned in notes 4, 5, and 6, and indexes for series mentioned in notes 3 and 7 can also be found in the Survey of

Current Business

Figures for industrial production for the latest month are preliminary, and many figures for the three months preceding the latest month have been revised. See "Recent Developments in Industrial Capacity and Utilization," Federal Reserve Bulletin, vol. 76 (June 1990), pp. 411-35.

Persons sixteen years of age and older, including Resident Armed Forces. Monthly figures are based on sample data collected during the calendar week that contains the twelfth day; annual data are averages of monthly figures. By definition, seasonality does not exist in population figures.
 Includes self-employed, unpaid family, and domestic service workers.
 Includes all full- and part-time employees who worked during, or received

pay for, the pay period that includes the twelfth day of the month; excludes proprietors, self-employed persons, household and unpaid family workers, and members of the armed forces. Data are adjusted to the March 1984 benchmark, and only seasonally adjusted data are available at this time.

SOURCE. Based on data from U.S. Department of Labor, Employment and

<sup>sources.
3. Index of dollar value of total construction contracts, including residential, nonresidential, and heavy engineering, from McGraw-Hill Information Systems Co., F. W. Dodge Division.
4. Based on data from U.S. Department of Labor, Employment and Earnings. Series covers employees only, excluding personnel in the armed forces.
5. Based on data from U.S. Department of Commerce, Survey of Current Rutiness.</sup>

SOURCE. Census Bureau estimates for all series except (1) mobile homes, which are private, domestic shipments as reported by the Manufactured Housing Institute and seasonally adjusted by the Census Bureau, and (2) sales and prices of existing units, which are published by the National Association of Realtors. All back and current figures are available from the originating agency. Permit authorizations are those reported to the Census Bureau from 17,000 jurisdictions beginning in 1984.

^{1.} Not at annual rates.
2. Not seasonally adjusted.
3. Recent data on value of new construction may not be strictly comparable with data for previous periods because of changes by the Census Bureau in its estimating techniques. For a description of these changes, see Construction Reports (C-30-76-5), issued by the Census Bureau in July 1976.

^{1.} Seasonal factors not calculated for lines 12-16, 18-20, 22-34, and 38-40, 2. Data are on an international accounts basis. The data differ from the Census basis data, shown in table 3.11, for reasons of coverage and timing. Military exports are excluded from merchandise trade data and are included in line 6, 3. Reporting banks include all types of depository institution as well as some brokers and dealers.

4. Associated primarily with military sales contracts and other transactions arranged with or through foreign official agencies.

5. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.

^{1.} Government and nongovernment shipments of merchandise between foreign countries and the fifty states, including the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and U.S. Foreign Trade Zones. Data exclude (1) shipments among the United States, Puerto Rico, the U.S. Virgin Islands, and other U.S. affiliated insular areas, (2) shipments to U.S. Armed Forces and diplomatic missions abroad for their own use, (3) U.S. goods returned to the United States by its Armed Forces, (4) personal and household effects of travelers, and (5) in-transit shipments. Data reflect the total arrival of merchandise from foreign countries that immediately entered consumption channels, warehouses, or U.S. Foreign Trade Zones (general imports). Import data are Customs value; export data are F.A.S. value. Beginning in 1990, data for U.S. exports to Canada are derived from import data compiled by Canada; similarly, in Canadian statistics, Canadian exports to the United States are derived from import data compiled by 1. Government and nongovernment shipments of merchandise between foreign

the United States. Since Jan. 1, 1987, merchandise trade data have been released forty-five days after the end of the month; the previous month is revised to reflect late documents.

late documents.

Data in this table differ from figures for merchandise trade shown in the U.S. balance of payments accounts (table 3.10, lines 2 to 4) primarily for reasons of coverage. For both exports and imports a large part of the difference is the treatment of military sales and purchases. The military sales to foreigners (exports) and purchases from foreigners (imports) that are included in this table as merchandise trade are shifted, in the balance of payments accounts, from "merchandise trade" into the broader category "military transactions." Source. F7900, U.S. Merchandise Trade, (U.S. Department of Commerce, Bureau of the Census).

3.12 U.S. RESERVE ASSETS

5 currencies have been used. U.S. SDR holdings and reserve positions in the IMF also have been valued on this basis since July 1974.

3. Includes allocations of SDRs by the International Monetary Fund on Jan. 1 of the year indicated, as follows: 1970—\$867 million; 1971—\$717 million; 1972—\$710 million; 1979—\$1,139 million; 1980—\$1,152 million; 1981—\$1,093 million; plus net transactions in SDRs.

4. Valued at current market exchange rates.

3.13 FOREIGN OFFICIAL ASSETS HELD AT FEDERAL RESERVE BANKS¹

| Asset | 1989 | 1990 | 1991 | 1992 | | 1993 | | | | | | |

Excludes deposits and U.S. Treasury securities held for international and regional organizations.
 Marketable U.S. Treasury bills, notes, and bonds and nonmarketable U.S. Treasury securities payable at face value in dollars or foreign currencies.

^{1.} Gold held "under earmark" at Federal Reserve Banks for foreign and international accounts is not included in the gold stock of the United States; see table 3.13, line 3. Gold stock is valued at \$42.22 per fine troy ounce.

2. Special drawing rights (SDRs) are valued according to a technique adopted by the International Monetary Fund (IMF) in July 1974. Values are based on a weighted average of exchange rates for the currencies of member countries. From July 1974 through December 1980, 16 currencies were used; since January 1981,

^{3.} Held for foreign and international accounts and valued at \$42.22 per fine troy ounce; not included in the gold stock of the United States.

^{1.} Data on claims exclude foreign currencies held by U.S. monetary authorities

I. Includes the Bank for International Settlements.
 Principally demand deposits, time deposits, bankers acceptances, commercial paper, negotiable time certificates of deposit, and borrowings under repurchase agreements.
 Includes nonmarketable certificates of indebtedness (including those payable in foreign currencies through 1974) and Treasury bills issued to official institutions of foreign countries.

of foreign countries.

^{4.} Excludes notes issued to foreign official nonreserve agencies. Includes bonds and notes payable in foreign currencies; zero coupon bonds are included at current value.

^{5.} Debt securities of U.S. government corporations and federally sponsored agencies, and U.S. corporate stocks and bonds.
6. Includes countries in Oceania and Eastern Europe.
Source. Based on Treasury Department data and on data reported to the Treasury Department by banks (including Federal Reserve Banks) and securities dealers in the United States and on the 1984 benchmark survey of foreign portfolio investment in the United States.

^{2.} Assets owned by customers of the reporting bank located in the United States that represent claims on foreigners held by reporting banks for the accounts of the domestic customers.

^{1.} Reporting banks include all types of depository institution, as well as some brokers and dealers.
2. Excludes negotiable time certificates of deposit, which are included in "Other negotiable and readily transferable instruments."
3. Includes borrowing under repurchase agreements.
4. For U.S. banks, includes amounts due to own foreign branches and foreign subsidiaries consolidated in Consolidated Report of Condition filed with bank regulatory agencies. For agencies, branches, and majority-owned subsidiaries of foreign banks, consists principally of amounts due to head office or parent foreign bank, and foreign branches, agencies, or wholly owned subsidiaries of head office or parent foreign bank.
5. Financial claims on residents of the United States, other than long-term securities, held by or through reporting banks.

^{6.} Includes nonmarketable certificates of indebtedness and Treasury bills issued to official institutions of foreign countries.

7. Principally bankers acceptances, commercial paper, and negotiable time certificates of deposit.

8. Principally the International Bank for Reconstruction and Development, the Inter-American Development Bank, and the Asian Development Bank. Excludes "holdings of dollars" of the International Monetary Fund.

9. Foreign central banks, foreign central governments, and the Bank for International Settlements.

10. Excludes central banks, which are included in "Official institutions."

^{1.} The banking offices covered by these data are the U.S. offices and foreign branches of U.S.-owned banks and of U.S. subsidiaries of foreign-owned banks. Offices not covered include (1) U.S. agencies and branches of foreign banks, and (2) foreign subsidiaries of U.S. banks. To minimize duplication, the data are adjusted to exclude the claims on foreign branches held by a U.S. office or another foreign branch claims in table 3.14 (the sum of lines 7 through 10) with the claims of U.S. offices in table 3.18 (excluding those held by agencies and branches of foreign banks and those constituting claims on own foreign branches).

Since June 1984, reported claims held by foreign branches have been reduced by an increase in the reporting threshold for "shell" branches from \$50 million to

^{\$150} million equivalent in total assets, the threshold now applicable to all reporting branches.

2. Organization of Petroleum Exporting Countries, shown individually; other members of OPEC (Algeria, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, and United Arab Emirates); and Bahrain and Oman (not formally members of OPEC).

3. Excludes Liberia.

4. Includes Canal Zone beginning December 1979.

5. Foreign branch claims only.

6. Includes New Zealand, Liberia, and international and regional organizations.

organizations.

^{1.} For a description of the changes in the international statistics tables, see Federal Reserve Bulletin, vol. 65, (July 1979), p. 550.
2. Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).

Comprises Algeria, Gabon, Libya, and Nigeria.
 Includes nonmonetary international and regional organizations.
 Revisions include a reclassification of transactions, which also affects the totals for Asia and the grand totals.

^{1.} Rates shown are mainly those at which the central bank either discounts or makes advances against eligible commercial paper or government securities for commercial banks or brokers. For countries with more than one rate applicable to such discounts or advances, the rate shown is the one at which it is understood that the central bank transacts the largest proportion of its credit operations.

^{1.} Averages of certified noon buying rates in New York for cable transfers. Data in this table also appear in the Board's G.5 (405) monthly statistical release. For ordering address, see inside front cover.

2. Value in U.S. cents.

3. Index of weighted-average exchange value of U.S. dollar against the currencies of ten industrial countries. The weight for each of the ten countries is

the 1972-76 average world trade of that country divided by the average world trade of all ten countries combined. Series revised as of August 1978 (see Federal Reserve Bulletin, vol. 64, August 1978, p. 700).

1. Effective Mar. 31, 1984, the report of condition was substantially revised for commercial banks. Some of the changes are as follows: (1) Previously, banks with international banking facilities (IBFs) that had no other foreign offices were considered domestic reporters. Beginning with the March 31, 1984, Call Report these banks are considered foreign and domestic reporters and must file the foreign and domestic report of condition; (2) banks with assets of more than \$1 billion report additional items; (3) the domestic offices of banks with foreign offices report far less detail; and (4) banks with assets of less than \$25 million have been excused from reporting certain detail items.

The "n.a." for some of the items is used to indicate the lesser detail available from banks without foreign offices, the inapplicability of certain items to banks that have only domestic offices or the absence of detail on a fully consolidated basis for banks with foreign offices.

All transactions between domestic and foreign offices of a bank are reported in "net due from" and "net due to." All other lines represent transactions with parties other than the domestic and foreign offices of each bank. Because these intraoffice transactions are nullified by consolidation, total assets and total liabilities for the entire bank may not equal the sum of assets and liabilities for the entire bank may not equal the sum of assets and liabilities for the entire bank may not equal the sum of assets and liabilities for the entire bank may not equal the sum of assets and liabilities for the entire bank may not equal the sum of assets and liabilities for the entire bank may not equal the sum of assets and liabilities for the entire bank may not equal the sum of assets and liabilities for the entire bank may not equal the sum of assets and liabilities for the entire bank may not equal the sum of assets and liabilities for the entire bank may not equal the sum of assets and liabilities are precively of the domestic and foreign offices.

2. Fore

calendar year, were \$100 million or more. (These banks file the FFIEC 032 or FFIEC 033 Call Report.) "Under 100" refers to banks whose assets, on June 30 of the preceding calendar year, were less than \$100 million. (These banks filed the FFIEC 034 Call Report.)

4. Because the domestic portion of allowances for loan and lease losses and allocated transfer risk reserve are not reported for banks with foreign offices, the components of total assets (domestic) do not sum to the actual total (domestic).

5. Because the foreign portion of demand notes issued to the U.S. Treasury is not reported for banks with foreign offices, the components of total liabilities (foreign) will not sum to the actual total (foreign).

6. The definition of "all other" varies by report form and therefore by column in this table.

7. Equity capital is not allocated between the decreated the foreign.

- in this table.

 7. Equity capital is not allocated between the domestic and foreign offices of banks with foreign offices.

 8. Only the domestic portion of federal funds sold and securities purchased under agreements to resell are reported here; therefore, the components do not sum to totals.

 9. "Acceptances of other banks" is not reported by domestic banks having less than \$300 million in total assets; therefore the components do not sum to totals.

 10. Only the domestic portion of federal funds purchased and securities sold are reported here; therefore the components do not sum to totals.
- are reported here; therefore the components do not sum to totals.

 11. Components are reported only for banks with total assets of \$1 billion or more; therefore the components do not sum to totals.

NOTES TO TABLE 4.23

1. As of Sept. 30, 1990, assets of most of the large banks were at least \$7.0 billion. For all insured banks, total assets averaged \$275 million.

2. Average maturities are weighted by loan size and exclude demand loans.

3. Effective (compounded) annual interest rates are calculated from the stated rate and other terms of the loans and weighted by loan size.

4. The chances are about two out of three that the average rate shown would differ by less than this amount from the average rate that would be found by a complete survey of lending at all banks.

5. The most common base rate is that used to price the largest dollar volume of loans. Base pricing rates include the prime rate (sometimes referred to as a bank's "basic" or "reference" rate); the federal funds rate; domestic money market

rates other than the federal funds rate; foreign money market rates; and other base rates not included in the foregoing classifications.

6. Overnight loans mature on the following business day.

7. Demand loans have no stated date of maturity.

8. Nominal (not compounded) annual interest rates are calculated from the stated rate and other terms of the loans and weighted by loan size.

9. The prime rate reported by each bank is weighted by the volume of loans extended and then averaged.

10. The proportion of loans made at rates below the prime may vary substantially from the proportion of such loans outstanding in banks' portfolios.

^{1.} Data are aggregates of categories reported on the quarterly form FFIEC 002, "Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks." Details may not add to totals because of rounding. This form was first used for reporting data as of June 30, 1980, and was revised as of December 31, 1985. From November 1972 through May 1980, U.S. branches and agencies of foreign banks had filed a monthly FR 886a report. Aggregate data from that report were available through the Federal Reserve statistical release G.11, last issued on July 10, 1980. Data in this table and in the G.11 tables are not strictly comparable because of differences in reporting panels and in definitions of balance sheet items.

that no IBF data re reported for that item, either because the item is not an eligible IBF asset or liability or because that level of detail is not reported for IBFs. From December 1981 through September 1985, IBF data were included in all applicable

December 1981 through September 1985, IBF data were included in all applicable items reported.

4. Total assets and total liabilities include net balances, if any, due from or due to related banking institutions in the United States and in foreign countries (see footnote 5). On the former monthly branch and agency report, available through the G.11 statistical release, gross balances were included in total assets and total liabilities. Therefore, total asset and total liability figures in this table are not comparable to those in the G.11 tables.

5. "Related banking institutions" includes the foreign head office and other U.S. and foreign branches and agencies of the bank, the bank's parent holding company, and majority-owned banking subsidiaries of the bank and of its parent holding company (including subsidiaries owned both directly) and indirectly).

6. In some cases two or more offices of a foreign bank within the same metropolitan area file a consolidated report.

because of differences in reporting paners and in a summariations.

2. Includes the District of Columbia.

3. Effective December 1981, the Federal Reserve Board amended Regulations D and Q to permit banking offices located in the United States to operate International Banking Facilities (IBFs). As of December 31, 1985 data for IBFs are reported in a separate column. These data are either included in or excluded from the total columns as indicated in the headings. The notation "in.a." indicates

U.S. International Transactions in 1991. 5/92.

Maps of the Federal Reserve System

LEGEND

Both pages

- Federal Reserve Bank city
- Board of Governors of the Federal Reserve System, Washington, D.C.

Facing page

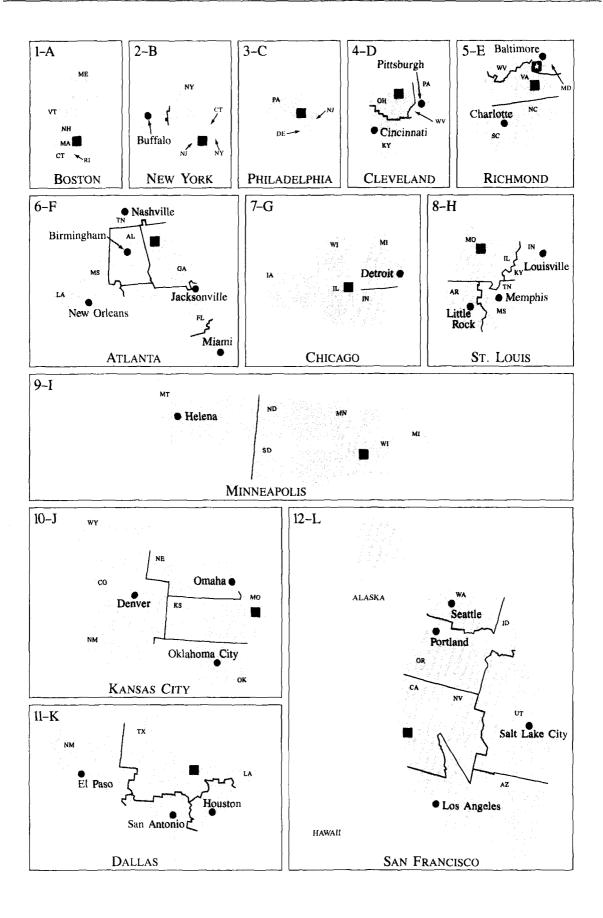

- Federal Reserve Branch city
- Branch boundary

Note

The Federal Reserve officially identifies Districts by number and Reserve Bank city (shown on both pages) and by letter (shown on the facing page).

In the 12th District, the Seattle Branch serves Alaska, and the San Francisco Bank serves Hawaii.

The System serves commonwealths and territories as follows: the New York Bank serves the Commonwealth of Puerto Rico and the U.S. Virgin Islands; the San Francisco Bank serves American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands. The Board of Governors revised the branch boundaries of the System most recently in December 1991.
