Subscription Price of Bulletin

A copy of the Federal Reserve BULLETIN is sent to each member bank without charge. The subscription price in the United States and its possessions, Bolivia, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Republic of Honduras, Mexico, Newfoundland (including Labrador), Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and Venezuela is \$2.00 per annum or 20 cents per copy; elsewhere, \$2.60 per annum or 25 cents per copy. Group subscriptions in the United States for 10 or more copies to one address, 15 cents per copy per month, or \$1.50 for 12 months.

July 1949

Number 7

RECENT CHANGES IN PRODUCTION AND PRICES

Last year, as a result of increases in supplies of both agricultural and industrial products—and also of the satisfaction of many deferred demands—price changes became much more selective than they had been during the long period of widespread postwar shortages. Since late last summer, there has been a marked decline in demand for goods, and prices at wholesale have decreased considerably. Since autumn, production and employment have been materially reduced at factories, at mines, and on railroads, while elsewhere in the economy they have been generally maintained at earlier high levels.

The reduction in demand has been mostly in private domestic demand. Government demands quite generally have risen further and declines in some foreign demands in this period have been largely offset by increases in others.

Last autumn consumer demand stopped increasing and then declined, particularly for housefurnishings and meats. On the whole, however, consumer demand for goods has continued not far below the peak level of the postwar period. Retail sales of new passenger automobiles have risen to an exceptionally high level as more cars have become available. Average consumer prices have shown only small decreases as moderate declines which have occurred, chiefly in food, clothing, and housefurnishings, have been offset in part by increases in rents and

JULY 1949

other services. Personal savings out of current income increased substantially in the latter part of 1948 and also in the first quarter of 1949, despite a decline in the first quarter in personal income after taxes. Subsequently savings appear to have declined about as much as income but the savings rate in the second quarter apparently was still high relative to most prewar periods. Liquid asset holdings of individuals have continued at a very high level.

As a consequence of less urgent consumer demand and also of earlier developments within the business sector of the economy, business demands have declined sharply this year. In considerable part, reductions in demand of business enterprises have reflected a widespread shift in inventory policy-as shortages have disappeared many producers and distributors have tried, with considerable success in recent months, to reduce rather than increase inventories. This shift has been important in the widespread downward adjustments in industrial activity. In part, also, the declines in business demand have represented a reduction from earlier high levels in the placing of new orders for plant and equipment, especially by manufacturing concerns and railroads. Machinery production has been reduced, particularly during the second quarter of 1949. There has been a decline in the volume of new business construction being undertaken. Many postwar

expansion programs have been completed and some of the incentives for starting new projects have been diminished. Declines in takings of final products by producers and consumers, in inventory requirements, and in production for inventory, it may be noted, have been partly dependent on each other and on developments in the field of prices.

Demands for goods and services on the part of Government agencies—Federal, State, and local—have increased further. The main increases have been in defense and foreign aid programs and in public construction of schools, hospitals, and the like. To some extent Federal price support action has held up farm income, and Government programs, principally for unemployment compensation, have partially offset declines in nonfarm income.

Exports of goods, in considerable part financed by the United States Government, have remained at a high level. Abroad, however, increases in supplies, together with some reductions in demand, have been reducing inflationary pressures and raising important questions concerning the availability of markets, the continuance of current price levels, and the maintenance of foreign demand for goods produced in the United States.

As a consequence of the widespread changes which have occurred in the supplydemand situation, the general average of wholesale commodity prices in the United States at the end of June was down 10 per cent from the peak of last August. Consumer prices of goods and services were down about 3 per cent. Values in capital markets have not shown marked changes, although farm land values have decreased slightly since last November and there appears to have been some easing in urban real property values.

Market developments in the early part of July included some increases in nonferrous metal prices, which earlier had declined onethird to one-half from exceptionally high levels at the end of 1948. Steel scrap prices continued at the reduced level of mid-June, down more than one-half since the beginning of the year.

Changes in Total Production and Employment

As a result of reductions in output and transportation of industrial commodities, and of price declines, the gross national output of goods and services was reduced from a peak annual rate (seasonally adjusted) of 265 billion dollars in the fourth quarter of 1948 to a rate of 256 billion in the first quarter of 1949, according to the Department of Commerce. It appears that there was a further substantial reduction in the second quarter, making a total decrease of perhaps 15 billion dollars or 6 per cent from the fourth quarter of 1948 to the second quarter of 1949. In physical volume the decline was less than this. Also, in this period the decline in physical volume of gross national product was less than half as large, percentagewise, as the decline in industrial production-output at factories and mines.

Industrial production in June was about one-eighth below the peak reached last autumn. Changes in this field are discussed in some detail in the section following this.

Activity in the construction field as a whole has been maintained close to earlier levels. In the aggregate, private projects have been down from a year ago and public projects up. Private residential building in recent months has shown a more than seasonal rise from the reduced level of last autumn and winter, and by June the number of new housing units started was up to the high level of a year ago. Public utility construction has risen further. Prices of building materials have been lowered appreciably and the easing of supply conditions for materials and labor has made possible additional cost reductions through greater efficiency of operation.

In agriculture, output of crops this year will be close to the high level of 1948, if average growing conditions prevail during the remainder of the season. Feed supplies are ample and output of livestock products, which so far has been slightly above the moderate level of a year ago, is expected to increase further in the latter part of this year. Prices of agricultural products at the farm are down 15 per cent from year-ago levels, but for many products the decline has been limited by Federal price support action.

With a reduction in total output of goods, the volume of freight being transported is down from earlier high levels. Most of the decline has been in rail freight traffic. Passenger traffic, except on the airlines, has also decreased while private auto transportation has continued to increase.

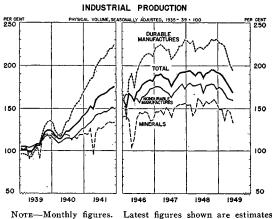

The decline in production and transportation has been accompanied by declines in the number employed and reductions in the working hours of many of those employed. Layoffs and shorter hours have occurred chiefly at manufacturing and mining establishments and on railroads. In the construction industry, public utilities, and other nonagricultural lines, employment has continued near earlier record levels. Total nonagricultural employment in the middle of June was below last autumn by about 4 per cent on a seasonally adjusted basis and 5 per cent on an unadjusted basis. The number unemployed, which reflects changes in the labor force as well as in all types of employment, according to the Census figures was about

JULY 1949

3.8 million in early June as compared with 2.2 million a year ago. Claims for unemployment insurance later in June showed little change.

DECLINE IN INDUSTRIAL PRODUCTION

The physical volume of industrial production-output at factories and mines-has declined markedly from the near-capacity levels which prevailed from the latter part of 1947 to the latter part of 1948. The Board's seasonally adjusted index in June is estimated at 169 per cent of the 1935-39 average as compared with 195 last November-a reduction of 13 per cent in 7 months. The decline was gradual through February and fairly rapid from March to June, as is shown on the chart. For the period since November, declines in industrial output have been quite general except for the aircraft, automobile, newspaper publishing, and food industries.

NOTE-Monthly figures. Latest figures shown are estimates for June. For listing of groups included in each of the lines shown see table on page 766.

In some industries, including apparel wool, rayon textiles, paperboard, petroleum, and lumber, marked curtailments earlier have been succeeded, beginning in April or May, by little change or some increase. On the other hand, output in certain other lines which showed little reduction or rose during the winter has recently declined quite rapidly. Steel is a conspicuous example, with ingot output rising to a peak of 103 per cent of capacity in March and declining since then to a scheduled rate of 78 per cent in mid-July.

The magnitude of the over-all decline in industrial output, the length of the period over which the reduction has extended, and the broad incidence of declines throughout industry reflect a marked weakening in markets for industrial products since the latter part of 1948. This weakening has been evident also in price reductions for industrial goods, and especially for materials. The decline in demand has resulted to some degree from smaller purchases of finished products by ultimate users and in part from a sharp shift in inventory policies of many distributors and manufacturers. The decline in demand from ultimate users has come at different times in different lines-last autumn for some consumer goods, last winter for railroad freight cars-and the significance of declines in new orders in many instances has been difficult to appraise promptly because of the large volume of unfilled orders on hand.

In June output in industries manufacturing nondurable goods was down about 10 per cent from the November level; in the durable goods group, 15 per cent; and at mines, 16 per cent. Most of the 10 per cent decline in nondurables had occurred by April while half of the decline in durables came after April. Output of minerals was particularly low in June, as it had been in March, as a result of work stoppages at coal mines.

The levels of total industrial production and of production in these broad divisions of industry in June were about the same as in

the middle of 1946, the early part of the postwar expansion period. They were still substantially above the levels of any prewar year except 1941, both in the aggregate and per capita.

Estimated June levels relative to the 1935-39 average are shown for all the major industry groups in the accompanying table. So also are percentage changes in the various groups since November and the effects of these changes on the total index.

Seasonally adjusted figures same as unadjusted.
 Includes also alcoholic beverages, not shown separately. NOTE.—June 1949 figures largely estimated.

Recent stability in nondurables. Output of nondurable goods apparently has leveled off in May and June following a large decline in the preceding five months. Activity in textile, paper, rubber, chemical, and petroleum products industries, which had been substantially curtailed earlier, has shown

a smaller decline or little change since April, and output of most other nondurable goods, mainly foods, has continued at a high level. In a few industries, notably apparel wool and rayon textiles, output has shown some recovery from the sharply reduced April rate.

As shown in the table, the production curtailments in the textile industries accounted for about half the total decline in nondurable manufactures after last November. At that time output in the textile industries was already almost 10 per cent below the exceptionally high levels at the beginning of 1948, because of substantial decreases in some divisions of the cotton and apparel wool industries. Subsequently, as demand weakened further, declines in these industries spread. Also, beginning in the first quarter of this year, there were substantial cutbacks in activity in the wool carpet and rayon industries, where output had increased until last By April activity at wool and autumn. cotton textile mills was 35 per cent below earlier postwar peak levels and not far above the 1935-39 level. Output of rayon textiles, although greatly reduced, was still about double the 1935-39 rate.

The large decline in chemicals reflected chiefly abrupt curtailments at rayon fiber and yarn mills this spring and smaller decreases in production of many other chemicals for industrial use. Petroleum refining activity declined from the record level at the end of 1948 mainly because of smaller demand for fuel oil for industrial and heating purposes. Gasoline production was somewhat reduced early this year but has advanced again in recent months. In the rubber products industry, tire production declined last winter, mainly because of reduced replacement demand, but in recent months has increased again; activity in most other rubber consuming lines has declined considerably

since last November. Output of paperboard and most types of paper fell considerably last winter from earlier record rates and, except for paperboard, production in this group has since continued downward. Because of increased newspaper advertising, newsprint consumption has continued to expand, limiting the decline in the printing and publishing group.

Further marked declines in durables. In all groups of durable goods industries except transportation equipment, output in June was much lower than in November. During the winter activity was reduced in a number of metal fabricating lines and in the lumber and furniture industries, reflecting a slackening in final demand for building supplies and many consumer durable goods together with a shift in inventory policies. Output of most other durable goods, however, was maintained at high levels during the winter or, as in the case of basic metals, increased. Most of the decline for machinery and nonferrous metals and products and all of the decline for iron and steel has come since March.

Machinery and transportation equipment. Over-all activity in machinery industries in June apparently was at a rate about 18 per cent lower than last fall, reflecting decreases in output of a wide range of products including household equipment such as washing machines and refrigerators as well as industrial equipment such as machine tools and textile machinery. Output of farm machinery has shown little decline.

With automobile production increasing and aircraft production being maintained, activity in transportation equipment industries as a group showed little change from November 1948 to June, despite a substantial decline in shipbuilding and, very recently, in railroad equipment production. Al-

JULY 1949

though few new orders for freight cars were placed after the end of the year, the backlog of orders was large and deliveries continued at a record rate through April before showing any decrease.

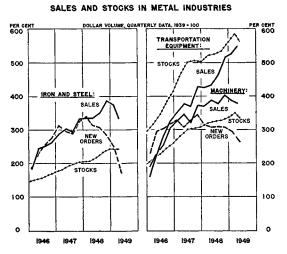

Output of passenger automobiles, which had been considerably limited in earlier postwar years by material shortages when many other consumer durable goods were being produced in record volume, has continued to advance since last November and in June was close to an all-time record rate. Production during the first half of 1949 totaled 2.4 million vehicles as compared with 1.8 million in the corresponding period of 1948 and the earlier record number of 2.8 million cars produced in the first half of 1929. Output of small trucks mainly for commercial use has been maintained at a high level. Production of heavier trucks, however, and of automobile replacement parts has contracted, and total activity in the automobile industry has increased only moderately since last autumn.

Iron and steel. Steel production, which had reached a new high last November, continued to rise during the winter and in March was at the highest rate on record-103 per cent of current capacity of 96 million tons per year. Shipments of finished steel continued at advanced levels to that time, partly because of a sustained high level of output in most steel consuming lines and partly because steel consuming industries and distributors were replenishing and building up their stocks of steel, which they had been unable to do earlier when demand for steel for current use had been in excess of supply. Premium prices for many steel products persisted for a time and some consumers could obtain supplies only by costly arrangements for buying ingots produced at one point and having them processed elsewhere.

Some easing and then definite weakening

in the steel situation became evident after the turn of the year when purchases of steel scrap by steel companies were curtailed and prices for scrap dropped sharply. Later developments in markets for finished steel and evidence of spreading reductions in activity in some important steel consuming industries confirmed this indication of a weakening in the steel market, and after the middle of March steel output began to be reduced. Steel mill operations in June were at 82 per cent of capacity, down about one-fifth from the March rate. Output of electric steel declined most rapidly and in June was three-fifths below the peak level.

The course of dollar sales (shipments), stocks, and new orders of companies classified in the iron and steel group, as reported by the Department of Commerce, is shown from 1946 to date in the left panel of the chart. Sales and stocks in the transportation equipment and machinery groups and new orders

NOTE.—Department of Commerce data. Stocks (book value of inventories) relate to end of quarter, and sales and new orders are quarterly averages. Latest sales and orders figures shown are preliminary averages for April and May only, while stocks data are preliminary for end of May. Sales and stocks for transportation equipment represent Federal Reserve combinations of "automobiles" and for the machinery group, of 'electrical machinery" and "machinery, except electrical." The level of the indexes for new orders compared with 1939, and with the corresponding sales and stocks levels, may be altered materially as a result of revisions now under way.

in the machinery group are shown in the right panel. Changes shown are affected by price changes such as the marked increase in prices for steel products last summer. The decline in sales shown for the iron and steel group for the first quarter reflects decreases in shipments of fabricated products such as heating and plumbing equipment. Slackening in demand for such products was probably also reflected in early declines in new orders received by companies in such industries in the iron and steel group.

Nonferrous metals. Output of nonferrous metals and fabricated products in June was about one-fourth below last November, although at that time output of copper and lead was reduced by strikes and aluminum production was limited by electric power shortages. During the winter, with elimination of these difficulties, production increased considerably, partly in the expectation that an expanded volume of Government purchases for stockpiling would largely offset the decline in private demands that was developing.

This spring, buying of copper, lead, and zinc came to a standstill as growing curtailment in output of many types of products using these metals indicated that prices of nonferrous metals, some of which had risen to very high levels, would fall. Activity was being curtailed at both the initial fabricating stages, such as brass mills and foundries, and at plants making finished products, such as electrical machinery, watches, and batteries.

Although prices of refined nonferrous metals were reduced beginning in early March, buying continued at a low ebb because stocks of copper, lead, and zinc held by fabricators were still sizable and also because buyers expected further price declines, which later did materialize. By May shipments of these metals to fabricators had de-JULY 1949

clined 40 per cent to the lowest levels since 1939. In June there was some recovery in such shipments.

After April refinery output of these metals as a group was reduced. Virgin aluminum production, however, advanced further and in May was at a new postwar peak rate, 9 per cent higher than last November.

Building materials. Output of many building materials including fabricated metal products showed much more than the usual seasonal decline last winter as a result of earlier increases in stocks and some reduction in demand, mainly for private residential and industrial building. Since the beginning of this year changes in lumber production have been largely seasonal, with output about 10 per cent below a year ago. Output of cement and some other building materials has been maintained at advanced levels partly as a result of an expanding volume of highway and other public construction.

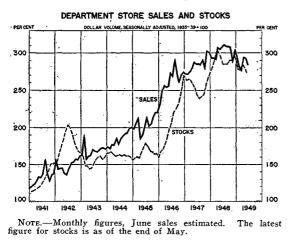

Curtailed output at mines. Output of minerals in June was estimated to be at a rate about 16 per cent below last autumn's level. Output was at a particularly low level in June, as in March, because of extended work stoppages at coal mines. In other months this year, however, coal production has been at a level about 10 per cent below that of last autumn and curtailed output generally has reflected reduced domestic and export demand for coal. Crude petroleum production by April was curtailed 12 per cent as demand for petroleum products other than gasoline dropped sharply. In May and June petroleum output showed little change but in early July declined further. Output at nonferrous metal mines was curtailed in May and June, but the June level was still above that of last November, when output was reduced by work stoppages. Iron ore

output has been at exceptionally high levels this spring despite curtailment in pig iron production.

MODERATE REDUCTION IN RETAIL TRADE

During the second quarter of 1949 consumer purchases of goods were below the postwar peak rates reached in the third quarter of 1948 by 4 or 5 per cent. The over-all decline in physical volume was smaller than this. Consumer expenditures for services continued to rise.

At department stores, according to the Board's seasonally adjusted index shown on the chart, sales decreased one-tenth from a level of 310 per cent of the 1935-39 average last summer to around 280 in February and March, rose to about 294 in April and May, and were estimated to be 284 per cent in June.

The total value of retail trade decreased to a smaller extent than department store sales, owing chiefly to relatively slight recessions in sales at food stores and to a further marked rise in output and sales of new passenger cars. Demand for new and used cars during the autumn and winter showed some seasonal decline for the first time in the postwar period. From March through June, however, most makes of new cars were being sold about as rapidly as they could be produced. Consumer purchases of other durable goods, chiefly furniture and household appliances, declined last autumn and then through June remained substantially below the exceptionally high levels reached in 1948.

Dollar sales of furniture at department stores during the April-June quarter were about one-eighth below the corresponding period a year ago; floorcoverings were off about one-fifth in the same period. Sales of refrigerators and other major household appliances during the first quarter of 1949 were at a level more than one-third below the corresponding period a year ago; during the second quarter they increased. In June the sales of these products were about one-fourth below year-ago levels but still far above prewar. Total sales of radios, phonographs, and television sets at department stores were above year-ago levels as a further sharp expansion for television sets more than offset declines in other items. Dollar sales of clothing and other semidurable goods, which make up the bulk of department store trade, were generally maintained at close to last year's levels, partly through the offering of better values than before to consumers.

The failure of consumer outlays for goods to increase last autumn as they had earlier reflected an important shift in the demand situation and in turn contributed to declines in prices and activity. In some lines, such as household appliances, curtailments in consumer purchases from earlier exceptionally high levels have had important direct effects. Reduced consumer purchases of goods have also tended to discourage business accumulation of inventories and expansion of productive capacity.

LARGE REDUCTIONS IN BUSINESS PURCHASES

While consumer purchases of goods have been reduced only moderately and Government purchases of goods have increased this year, there has been a marked decline in private business purchases. Distributors and manufacturers became more concerned by the prospects of inventory losses as the decline in prices spread and sharp breaks developed in a number of markets. In addition the outlook for earnings from current operations was being adversely affected by the prospect of reduced rates of activity and the development of competitive pressures.

The most pronounced curtailment in business demand has been evident in manufacturers' orders for raw and semifinished materials and in orders for capital equipment on the part of manufacturing, mining, railroad, and communication companies. This downward movement has had a major impact on the metal industries in recent months. While the average level of expenditures for capital goods in the second quarter had fallen only moderately from the peak level reached in the latter part of 1948, production of many of these goods had occurred in part in an earlier period and orders had been placed even earlier. Marked reductions in manufacturers' purchases of materials have occurred this year not only for ferrous and nonferrous metals but also for other materials such as lumber, woodpulp, and textile yarns and fabrics.

As supplies have become more readily available and demand has declined from postwar peak levels, wholesale and retail distributors have reduced their purchases, partly because their own sales were being reduced and partly because they wanted to shorten their total commitments in the form of inventories and outstanding orders. Last

JULY 1949

winter and spring commitments in many lines were being reduced and buying was in restricted volume. Distributors specializing in housefurnishings and construction items, for example, apparently reduced their commitments considerably. On the other hand, total department store purchases since last autumn have been not far below current sales, allowing for seasonal differences. By last November department stores had already reduced their total commitments sharply from the high levels prevailing two years earlier by cutting down their outstanding orders much more than they increased their inventories. At the end of May total commitments of department stores were about the same in relation to sales as they were in the corresponding month of 1940.

Cutbacks in business buying in order to reduce commitments have lowered outstanding orders—and their counterpart, unfilled orders—very greatly in many lines. Changes in inventories have been diverse, but beginning in April total business inventories have been reduced at a fairly rapid rate. The decline in the physical volume as well as the dollar amount of business inventories during the second quarter appears to have been greater than the increase which occurred in the first quarter.

RECENT PRICE DECLINES

Since last summer wholesale prices have generally receded from the record high levels reached at that time, reflecting a marked shift in the over-all demand-supply situation after seven years of war and postwar shortages in this country. Last autumn and winter important declines occurred in prices of farm products and of related foods. From February to May of this year prices of these commodities recovered somewhat, but decreases in industrial commodities became widespread and a very rapid decline developed in prices of all scrap metals and of most refined nonferrous metals. In June farm products and foods decreased again and the general wholesale price index of the Bureau of Labor Statistics at the end of the month was 153 per cent of the 1926 average as compared with nearly 170 last August. The index was thus down 10 per cent but it was still higher than in mid-1947 and about 90 per cent above the 1935-39 average.

Prices of basic commodities, as measured by the Bureau of Labor Statistics index of 28 items, were down considerably more than the average level of all commodities-about 30 per cent from last August and 35 per cent from their peak at the end of 1947. Prices of a number of these basic commodities in June were close to the levels prevailing prior to the elimination of wartime price controls in 1946. Some others were back to prewar levels. A few other commodities had shown little decline from postwar peaks. For a number of foodstuffs, and also for certain industrial materials like cotton and turpentine, decreases since last summer have been limited by Federal price support action.

Owing in part to the downward tendencies in domestic demand and increased competition in foreign markets, prices of exports have generally been reduced since last summer. Prices of imports have shown less uniformity of movement during this period as some commodities like cocoa, copper, and rubber have fallen sharply, while prices of others such as coffee, sugar, hides, and wool have shown relatively little change.

The decline in demand has been greater for materials than for finished products and in wholesale markets than in retail markets. Partly because of the greater decline in demand at wholesale and also because manu-

facturing and marketing costs have not declined as much as material costs, consumer prices for goods have shown less decline than prices in wholesale markets. Consumer prices for services, including rent, have risen somewhat, accounting in part for the limited extent of the decline in consumer prices as a whole. Price changes since August of last year, since the initial lapse in wartime price control in June 1946, and since the 1935-39 period are summarized in the table.

Changes	IN	PRICES

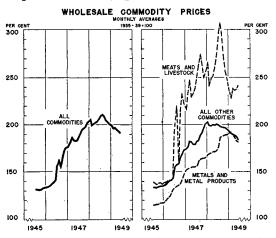

Group	Percentage increase or decrease to June 28, 1949 from								
	Aug. 1948	June 1946	1935-39						
Basic commodity prices (28 items)	28	+16	+ 93						
General wholesale index:									
Total	-10	+35	+ 90						
Farm products Foods Other commodities	14 15 5	+17 +43 +38	+116 +104 + 79						
Textile products Fuel and light Metals and products Building materials	$ \begin{array}{r} -7 \\ -4 \\ -3 \\ -6 \end{array} $	+27 +49 +48 +48	+ 95 + 73 + 81 +115						
Prices received by farmers Prices paid by farmers	-14 - 2	$^{+16}_{+30}$	+136 + 91						
Consumers' prices Foods Apparel Rent.	- 7	+27 + 38 + 21 + 11	+ 69 + 101 + 90 + 21						

NOTE.—Indexes of prices received by farmers and of prices paid, including interest and taxes, compiled by the Bureau of Agricultural Economics for midmonth periods. Other indexes compiled by the Bureau of Labor Statistics. Consumers' price indexes for June 1949 estimated by Federal Reserve.

Retail food prices decreased 8 per cent last autumn and winter, rose somewhat in the spring, and in June were probably down only 7 per cent from last August, or half as much as wholesale food prices. Retail prices of apparel have declined steadily since last October, but in June were only about 6 per cent below last autumn's peak levels. Declines in prices of housefurnishings were also generally small, although prices of some items like appliances and television sets were reduced substantially. After some further

increases in prices of passenger automobiles last winter, prices of certain makes were lowered. With stocks of fuels built up to high levels, prices of coal and fuel oil were reduced but gasoline prices were raised. Controlled rental rates were raised in some areas, and average prices of miscellaneous goods and services increased slightly. The average level of consumers' prices declined about 3 per cent from August to February and has shown little change since that time. Meanwhile, since the end of last year consumer incomes have been declining moderately.

Agricultural prices. Wholesale prices of farm products and foods at the end of June were about 15 per cent lower than last summer when their average levels were raised for a time by a substantial advance in prices of meats and livestock. During the autumn prices of meats and livestock declined rapidly, as shown in the accompanying chart, and further decreases occurred in January and the early part of February. Beginning last autumn, also, marked recessions occurred in prices of dairy products. Corn prices,

Note.—Federal Reserve regrouping of Bureau of Labor Statistics indexes. Latest figures, for June, are estimated by Federal Reserve. The meats and livestock group is a combination of the "meats, poultry, and fish" and "livestock and poultry" subgroups. The all other commodities group accounts for over two-thirds of the total index and includes such farm products and foods as grains and cereal products, dairy products, cotton, and sugar as well as "all commodities other than farm products and foods" exclusive of metals and metal products.

JULY 1949

which for several months had been around \$1.45 per bushel at Chicago, fell to a low of \$1.13 on February 8 (as compared with a Federal loan level equivalent to about \$1.60) and prices of some other farm products weakened.

A partial recovery soon occurred in prices of these products as the Government expanded its actions to prevent further declines and as consumer incomes and demands for food remained close to earlier peak levels. In April and May marketings of livestock, especially of lambs, were reduced and prices of meat and livestock advanced until the first week of June when they were 11 per cent above the low reached in February and 255 per cent of the 1935-39 average. During June, however, prices of meat and livestock moved downward for a time and in the last week of the month were 236 per cent of the 1935-39 average. Prospects of a larger supply of meats during the second half of the year were indicated by the June report that the spring pig crop was 15 per cent greater than in 1948 and by available information on increased supplies of poultry and on excellent range conditions for cattle. Consumer expenditures for meat, which a year ago were unusually high in relation to consumer income, have been at a relatively lower level this year.

Prices of most farm products and foods other than livestock products have declined since the beginning of the year but decreases have generally been small, owing in part to Federal price support measures, the expanded volume of exports of these goods under foreign-aid grants, and the relatively slow and moderate declines which have occurred in consumer incomes.

In the latter part of May cash winter wheat prices declined about 30 cents per bushel to \$1.95 at Kansas City, as marketings of the

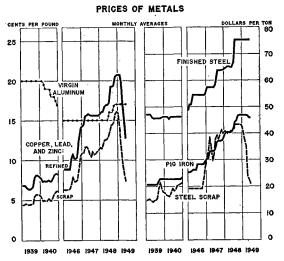

new crop expanded. During June prices averaged 15 cents below the Federal loan level despite a relaxation of storage standards for Government loans and indications at harvest time of heavy crop losses. If total wheat production this season is 1,189 million bushels, as forecast by the Department of Agriculture on the basis of July 1 conditions, even with exports in large volume, the domestic carryover on July 1, 1950 is likely to be in excess of the large carryover of 300 million bushels on July 1, 1949. Wheat production abroad and stocks of wheat in importing countries last year and this year have shown marked increases from earlier low levels.

Cotton prices during the past year have shown only small fluctuations, being close to the Federal support level and more than three times the 1939 level. Of last year's $14\frac{1}{2}$ million-bale crop and $\frac{1}{4}$ million bales of imports, about 7³/₄ million is being consumed by domestic mills, $4\frac{1}{2}$ million exported-largely under foreign-aid grantsand the remaining $2\frac{1}{2}$ million is being added to stocks in this country. Official estimates indicate that cotton acreage this year has been expanded further by 14 per cent. Accordingly, unless yields are exceptionally low, cotton production will be substantially in excess of disappearance in the 1948-49 season and the carryover may rise further.

Industrial commodities. Prices of some industrial commodities had been weakening before last August and declined more later in the year, with most of the reductions occurring in prices of lumber and nondurable products. The wholesale price index for commodities other than farm products and foods stopped advancing in August and then beginning early this year declined steadily.

Advances in prices of metals and metal products had continued during 1948 after 774 prices of most other commodities had leveled off or declined, as shown in the chart on page 773. During the first half of 1949, however, there has been a sharp reversal of developments in the metal markets. Some unfilled orders have been canceled and new purchases have been held below the current rate of metal consumption in order to reduce commitments and inventories; in addition, the rate of metal consumption has been reduced considerably. With the return of competitive conditions, following a period of marked price advances and of speculative buying, some metal prices declined rapidly and the prospect of additional price reductions accentuated the reversal in metal markets.

The reduction this spring in demand for and prices of basic metals was about as rapid as any decline on record. Scrap metals fell by more than 50 per cent in price from December to June, as is indicated in the accompanying chart, and refined copper, lead,

Note.—Monthly averages of weekly figures compiled by Federal Reserve. Latest figures shown are for June. Nonferrous metal prices as reported in *American Metal Market*. Refined and scrap composites are simple arithmetic averages of prices of items listed. Scrap quotations are dealers' buying prices at New York. Iron and steel prices are composites published in *Iron Age*. Prices of pig iron and steel scrap are reported per gross ton; finished steel prices per pound converted to 2,000 pound tons.

and zinc declined 30 to 50 per cent. Virgin aluminum prices, which at the end of 1948 were still below prewar levels, were unchanged in this period, but prices of remelted aluminum declined 45 per cent in the first half of 1949, following sharp advances earlier. Premium prices for pig iron and finished steel were eliminated during these months and list prices for some products, especially galvanized items, were reduced.

Reflecting in part declines in prices of metal products, average prices of building materials, according to the Bureau of Labor Statistics, have declined 7 per cent since last summer. The largest reduction has been in the lumber price index which has been about one-tenth below postwar peak levels although still three times the prewar level. Most other building material prices had advanced much less and have been reduced more moderately. Average prices of building materials, including lumber, were 212 per cent of the 1935-39 average at the beginning of July.

Prices of various other materials, like woodpulp, cotton and rayon gray goods, hides and leather, and fats and oils in June were also still substantially above their prewar levels but were down considerably from their postwar peaks.

In contrast, wholesale prices of various finished products, such as new automobiles, farm machinery, wool carpets, and paper products, were generally down only 5 per cent or less from earlier postwar levels. Reductions in prices of these products in retail markets have also been small, although in some lines distributors' margins have been lowered with the elimination of premium charges over list and the reintroduction of concessions from list. Although wage rates in manufacturing and distribution have risen somewhat further since last summer, overtime operations have been largely eliminated and average hourly earnings have shown little change. Reductions in material costs have been substantial in a number of lines, but not important in some others. Except where reductions in activity have resulted in higher overhead costs per unit, operations have generally been on a more efficient basis.

STATEMENTS ON RECENT FEDERAL RESERVE POLICY ACTIONS

Press Release of June 28, 1949

The Federal Open Market Committee, after consultation with the Treasury, announced today that with a view to increasing the supply of funds available in the market to meet the needs of commerce, business, and agriculture it will be the policy of the Committee to direct purchases, sales, and exchanges of Government securities by the Federal Reserve Banks with primary regard to the general business and credit situation. The policy of maintaining orderly conditions in the Government security market, and the confidence of investors in Government bonds will be continued. Under present conditions the maintenance of a relatively fixed pattern of rates has the undesirable effect of absorbing reserves from the market at a time when the availability of credit should be increased.

Press Release of June 29, 1949

The authority under which the Board of Governors of the Federal Reserve System issued Regulation W, establishing minimum down payments and maximum maturities for consumer instalment credit, expires June 30, 1949 and the regulation will not be effective after that date. Notice to this effect is being sent to those who, in accordance with the regulation's provisions, have filed registration statements with a Federal Reserve Bank.

The temporary authority granted by Congress for increased reserves likewise expires June 30 and the Board has accordingly revised the Supplement to Regulation D, under which the following reserve requirements will be effective with the beginning of the next reserve period (June 30 for central reserve city and reserve city members banks and July 1 for other member banks): Against net demand deposits—24 per cent for central reserve city member banks, 20 per cent for reserve city member banks, and 14 per cent for other member banks; against time deposits—6 per cent for member banks of all classes. The changed requirements will result in a reduction of approximately 800 million dollars in required reserves.

REVISION IN BANK EXAMINATION PROCEDURE

Joint Statement of the Comptroller of the Currency, The Federal Deposit Insurance Corporation, The Board of Governors of the Federal Reserve System, and the Executive Committee of the National Association of Supervisors of State Banks¹

The Comptroller of the Currency, The Federal Deposit Insurance Corporation, The Board of Governors of the Federal Reserve System, and the Executive Committee of the National Association of Supervisors of State Banks have adopted minor changes in the bank examination and reporting procedure which has been followed by the supervisory agencies since July, 1938.

The revision provides for abandonment of the use of Roman numerals II, III and IV in the examiners' classification of bank assets, and substitution of the terms "substandard", "doubtful", and "loss", and for discontinuance of the practice of appraising Group 2 securities on the basis of the 18-months average of market value. Such securities will be appraised at current market value.

There will be no change with respect to evaluation of U. S. Government and other Group 1 (investment quality) securities. This policy is intended to apply to recognized sound investment practices of banks, and is not intended to apply to undue concentrations in securities other than U. S. Government issues, nor to other cases where the condition of the portfolio requires special treatment by the supervisory agency or agencies concerned.

The revision involves no fundamental change in the present procedure nor does it signify any intention on the part of the supervisory authorities to become more severe in the classification of bank assets. Its purpose is clarification and simplification

¹ Released for morning papers of July. 15, 1949.

of procedure in the interest of more uniform application. It also recognizes the fact that use of the 18-months average price for Group 2 securities is no longer of practical significance since the banks of the country have only a nominal investment in such securities.

Bank Examination Procedure As Revised July 15, 1949

THE CLASSIFICATION OF ASSETS IN BANK EXAMINATION

The present captions of the classification units, namely, "I", "II", "III" and "IV" are to be abandoned.

The classification units hereafter will be designated as "Substandard", "Doubtful" and "Loss". The term "Substandard" will be defined as follows:

Book assets or portions thereof not classified as doubtful or loss and which involve more than a normal risk due to the financial condition or unfavorable record of the obligor, insufficiency of security, or other factors noted in the examiner's comments. These assets should be given special and corrective attention, for example, by obtaining suitable reductions in amount, additional security, more complete financial data concerning the obligor's condition, or other such action as the specific circumstances may require.

Present practice will be continued under which the totals of the three classifications are included in the recapitulation or summary of examiners' classifications.

Fifty per cent of the total of "Doubtful" and all of "Loss" will be deducted in computing the net sound capital of the bank. Amounts classified "Loss" should be promptly charged off.

THE APPRAISAL OF BONDS IN BANK EXAMINATIONS

Neither appreciation nor depreciation in Group I securities will be taken into account in figuring net sound capital of the bank. However, this policy is intended to apply to recognized sound investment practices of banks, and is not intended to apply to undue concentrations in securities other than U. S. Government issues, nor to other cases where the condition of the portfolio requires special treatment by the supervisory agency or agencies concerned.

Group I securities are marketable obligations in which the investment characteristics are not distinctly or predominantly speculative. This group includes general market obligations in the four highest grades and unrated securities of equivalent value.

The securities in Group II will be valued at the market price and fifty per cent of the net depreciation will be deducted in computing the net sound capital.

Group II securities are those in which the investment characteristics are distinctly or predominantly speculative. This group includes general market obligations in grades below the four highest, and unrated securities of equivalent value.

Present practice will be continued under which net depreciation in the securities in Group III and Group IV are classified as loss.

Group III securities: Securities in default. Group IV securities: Stocks.

Present practice will be continued under which premiums on securities purchased at a premium must be amortized.

Present practice of listing securities and showing their book value will be continued.

Present practice will be continued under which the establishment and maintenance of adequate reserves, including reserves against the securities account, are encouraged.

Present practice will be continued under which speculation in securities is criticized and penalized.

THE TREATMENT OF SECURITIES PROFITS IN BANK EXAMINATIONS

Until losses have been written off and adequate reserves established, the use of profits from the sale of securities for any purpose other than those, will not be approved.

1949 SURVEY OF CONSUMER FINANCES¹

PART III. Distribution of Consumer Income in 1948

Total United States output of goods and services was higher in 1948 than ever before. A record number of civilians were gainfully employed while unemployment was at a postwar low. Reflecting these developments, total consumer money income rose almost 15 billion dollars from 1947 to 1948. This substantial increase in income was widely distributed throughout the population. Roughly half of all consumer spending units reported receiving higher incomes in 1948 than in 1947 and there is some evidence that units whose incomes were below \$4,000 in 1947 obtained income increases more frequently than those who had higher incomes.

From the University of Michigan, Rensis Likert. Director of the Institute for Social Research, and Angus Campbell, Director of the Survey Research Center, were in general charge of the survey. The Survey Research Center is a division of the Institute for Social Research of the University of Michigan. Responsibility for detailed planning and supervision of the survey, including interviewing, editing, tabulation of survey results, and preparation of Survey Research Center studies was carried by George Katona in collaboration with Janet A. Fisher and James K. Dent of the Survey Research Center's staff. Charles F. Cannell served as head of the field staff and Roe Goodman as head of the sampling section of the Center.

The present article was prepared by Clarke L. Fauver and Irving Schweiger of the Consumer Credit and Finances Section of the Board's Division of Research and Statistics. The authors have necessarily maintained a close working relationship with the staff of the Survey Research Center at all stages of their work, and their analysis of survey tabulations has had the benefit of many suggestions from the Center's staff, particularly George Katona and Janet A. Fisher. This article is the third in a series presenting results of the Board's fourth annual Survey of Consumer Finances, conducted for the Board of Governors of the Federal Reserve System by the Survey Research Center of the University of Michigan.² The findings presented in this article provide statistical information about levels of money income in 1948, distribution of the total amount of income among groups of the population, and the extent to which various groups participated in the increase in money income. Estimates of consumer income both before and after Federal income taxes are included in the analysis.

As in the case of previous Surveys of Consumer Finances made for the Board, the present survey covered, on a sample basis, the entire population of the United States residing in private households during the January-March interview period. The following groups were omitted: (1) members of the armed forces and civilians living at military reservations; (2) residents in hospitals and in religious, educational, and penal institutions; and (3) the floating population, that is, people living in hotels, large boarding houses, and tourist camps. The interview unit was the consumer spending unit, defined as all persons living in the same dwelling and related by blood, marriage, or adoption who pooled their incomes for their major items of expense.

SUMMARY OF FINDINGS ON CONSUMER INCOME

1. About 26 million consumer spending units, or approximately half of the total number, had

¹This is the third in a series of articles presenting the results of the Board of Governors' Survey of Consumer Finances in 1949. The first two articles appeared in the June BULLETIN and covered the general financial position and economic outlook of consumers, their durable goods expenditures in 1948, and buying plans for 1949. A discussion of the technical aspects of the survey and the statistical limitations of its results was provided in the appendix to the first article. Subsequent issues of the BULLETIN will contain articles on consumer ownership and use of liquid assets, ownership of nonliquid assets, and consumer saving patterns during 1948.

From the Board of Governors, general supervision of the survey has been under the direction of Woodlief Thomas, Director, and Ralph A. Young, Associate Director, of the Division of Research and Statistics. The Division of Research and Statistics has responsibility for planning the over-all content of the survey, analyzing survey results for the Board's use, and preparing the special articles reporting survey findings that appear in the BULLETIN.

² Previous surveys were made for the Board of Governors early in 1948 and 1947 by the Survey Research Center and the results of those surveys were reported in the June, July, and August issues of the BULLETIN for those years. One additional article on the 1948 survey appeared in the September BULLETIN. The first survey was made for the Board of Governors early in 1946 by the Division of Program Surveys, Bureau of Agricultural Economics, U. S. Department of Agriculture. The Survey Research Center staff currently in charge of the survey work was associated with the Division of Program Surveys at the time of the first survey. Results of that survey were reported in the June, July, and August 1946 issues of the BULLETIN under the general title National Survey of Liquid Assets.

higher incomes in 1948 than in 1947. This was by a slight margin the highest number of spending units reporting year-to-year increases in incomes shown by any of the four annual surveys. In round figures, only 1 spending unit in 5 reported having made less money last year than in 1947. On the other hand, about 1 in 5 reported increases in incomes amounting to at least 25 per cent.

2. There are indications that higher incomes in 1948 were more frequently obtained by spending units whose 1947 incomes had been below \$4,000; conversely, declines were reported more frequently by those with 1947 incomes above that amount.

3. Professional persons and clerical and sales personnel reported receiving larger incomes in 1948 than in 1947 more frequently than did persons in other occupations. About 3 in every 5 members of these groups had increased incomes. Higher incomes were also reported by somewhat more than 1 of every 2 skilled and semiskilled workers, as well as by 1 of every 2 unskilled workers. Entrepreneurial types—farm operators and managerial and self-employed persons—were found to have fewer increases in income and more decreases in income in 1948 than other occupational groups. The proportion of these groups receiving increases in income, however, was somewhat larger in 1948 than in the preceding year.

4. Nearly half (47 per cent) of all spending units received \$3,000 or more last year, as compared with 42 per cent during 1947. In terms of numbers, roughly 3.5 million more spending units had incomes of \$3,000 or more in 1948 than a year earlier, and about 1.8 million fewer had incomes of less than this amount.

5. The median, i.e., middlemost, income of all spending units increased from about \$2,500 in 1947 to more than \$2,800 last year. The 1948 median income was about 10 per cent above the 1947 figure and nearly 25 per cent higher than in 1946. Because many families contain more than one spending unit, the median family income is always somewhat larger than the median spending unit income. The family median in 1948 is estimated at roughly \$3,300, or about one-sixth more than the spending unit median in 1948 and approximately \$400 more than the family median in 1947.

6. The survey results do not indicate any further concentration of income during 1948. As a matter

JULY 1949

of fact, there may have been a slight decrease in the proportion of total income going to the top three-tenths of the population. In 1948, this group received about 58 per cent of total consumer income as compared with approximately 60 per cent in 1947. The proportion of total income received by each tenth of the population has not changed to any substantial extent during the postwar period; however, relatively small changes in such proportions may be of great economic and social importance.

7. Consumer units with high incomes had considerably different characteristics than those with low incomes. Units with money incomes of less than \$1,000 tended to be small in size, to live in rural areas, and to be headed by persons who were at least 55 years of age. Farm operators, retired persons, and unskilled workers were the most frequently noted groups in this income bracket. Spending units with incomes of \$5,000 or more were more frequently larger in size and located in metropolitan areas. They tended to be headed by persons between the ages of 35 and 54 who followed a profession, occupied managerial positions, or were self-employed.

8. There was considerable shifting of spending units from one income level to another from 1947 to 1948. In certain income brackets, only about half of the spending units stayed in the same group for the two years.

9. It is estimated that about two-thirds of all spending units had Federal income tax liabilities for the year 1948. These tax liabilities amounted to 10 per cent or more of income before taxes for approximately 1 in every 5 spending units in the population. Median income for all spending units after deducting tax was roughly \$2,700, compared with \$2,800 before tax. The median income after tax for all families was about \$3,000, compared with \$3,300 before tax.

Levels of Income in 1948

The increase over 1947 of almost 15 billion dollars in consumer money income before taxes led to important shifts in the distribution of spending units by level of income. About 26 million, or approximately half, of all spending units reported receiving higher incomes in 1948 than in 1947. Roughly one-fifth said their incomes had declined from the previous year.⁸

As a result of the changes in consumer incomes, nearly half (47 per cent) of all spending units received \$3,000 or more last year, as compared with 42 per cent during 1947. The increase in the number of spending units with incomes between \$3,000 and \$4,999 accounted for most of this change, as can be seen in Table 1. The proportion of units with incomes of \$5,000 or more changed only slightly from 1947 to 1948. This was in contrast to the development from 1946 to 1947 when this income group increased from 10 to 14 per cent of all spending units.

¹ Income data for each year are based on interviews during January, February, and early March of the following year. ² The median amount is that of the middle spending unit when all units are ranked by size of income.

⁸ Total money income before taxes, as reported in this survey, is the sum of the net money earnings from civilian employment (including wages and salaries and net incomes or losses from farm and nonfarm business and professional self-employment), armed forces pay of civilians not in the services at the time of the interview and of members of the services living in private households, and net money income other than earnings. It does not include income received in kind, such as the value of home-produced food, free meals, or rent-free living quarters. Nor does it include the value of farm inventory changes or farm depreciation charges. Furthermore, it does not include capital gains or losses.

Heads of spending units (in some cases other members) were asked by interviewers to report separately the amount of money income received by each member of the spending unit from each of a number of specified types of income, such as: wages and salaries; interest, dividends, rents, or royalties; income from professional practice or unincorporated business; various types of allotments, pensions, retirement pay, contributions, and other income of this type; and income from work other than regular employment. In terms of number of units, roughly 24 million consumer spending units received incomes of \$3,000 or more in 1948, approximately 3.5 million more than in 1947. About 1.8 million fewer had incomes of less than \$3,000 in 1948. Almost 8 million spending units obtained incomes of \$5,000 or more. This was nearly 1 million more units than in 1947 and roughly double the number at this income level in 1945.

The movement of spending units into higher income groups as a result of increases in money income during the past two years is shown in the accompanying chart. This upward movement was reflected in a substantial increase in the amount of median income, i.e., the income of the middlemost unit when all spending units were ranked by size of income. In 1948, the median spending unit income was somewhat above \$2,800, which was more than 10 per cent larger than the 1947 figure of about \$2,500 and nearly 25 per cent above the 1946 middlemost income of \$2,300. The percentage increase in median income since 1946 has been roughly the same as the percentage increase in living costs as measured by the Consumers' Price Index of the Bureau of Labor Statistics.

Averages covering the entire population tell only part of the story, however. They do not reveal which groups in the population received substantial increases in income, which received

NGTE .--- Covers money income before taxes.

small increases, and which experienced declines in income. Some of these changes are presented in a later section of this article.

Composition of the Various Income Groups

It is useful to spell out the characteristics of the spending units in the various income groups. For example, were the spending units that made less than \$1,000 in 1948 mostly single-person units or were they mainly large but poor families? How old were these people and what were their occupations? The findings of the survey make it possible to provide some information, as shown in Table 13 at the end of this article, about the size of the spending units at the several income levels and the age, education, and other characteristics of the persons who headed these units.

Differences in the various characteristics of consumer units are most marked for those with high and with low incomes. Units with money incomes of less than \$1,000 tended to be small in size, to live in rural areas, and to be headed by persons who were at least 55 years of age. The groups most frequently noted in this income bracket were farm operators, retired persons, and unskilled workers. Spending units with incomes of \$5,000 or more were more frequently larger in size and located in metropolitan areas. They tended to be headed by persons between the ages of 35 and 54 who followed a profession, occupied managerial positions, or were self-employed. To some extent income groups next to the less than \$1,000 and \$5,000 and over groups had many of the characteristics of the lowest and highest income receivers, respectively.

More than 40 per cent of the units with incomes of less than \$1,000 were single-person units and these, together with two-person units, made up 75 per cent of this income group. Half of the units in this bracket were located in rural areas. However, it should be remembered that only money income is being considered here, and many units in rural areas have considerable amounts of nonmoney income. About 60 per cent of the persons who headed the spending units at this income level were 55 years of age or more. On the basis of occupation, farm operators and retired persons each accounted for roughly 20 per cent of the spending units in this group; unskilled workers, for about 16 per cent; and unemployed workers

JULY 1949

and housewives (including widows) each constituted about 10 per cent of this bottom income group. Only a scattering of persons with other occupations was found at this income level.

A considerably different type of spending unit was noted at income levels of \$5,000 and over. About 5 per cent of these spending units contained only one person, 35 per cent were two-person units, and about 60 per cent consisted of three or more persons. Approximately 75 per cent of the highincome units lived in urban areas and more than 40 per cent of them lived in large metropolitan areas. The persons heading spending units with \$5,000 or more income were between the ages of 35 and 54 in 60 per cent of the cases. Half of the units were headed by professional, managerial, and self-employed persons; another one-third by skilled and semiskilled workers and clerical and sales personnel. Only one-sixth of those with incomes of \$5,000 or more were classified as farm operators, unskilled workers, retired persons, housewives, students, or in other miscellaneous occupations which together made up five-sixths of the bottom income group.

The characteristics of spending units in the income range between \$1,000 and \$4,999 do not differ as sharply as do the low- and high-income groups. About 60 per cent of the spending units in this range were headed by skilled and semiskilled workers, unskilled workers, and by clerical and sales personnel.

Changes in Income from 1947 to 1948

As mentioned earlier, approximately half of all spending units reported receiving higher incomes in 1948 than in 1947. This was by a small margin the largest number of spending units with year-toyear increases in income shown by any of the four annual surveys. About 1 in 5 obtained at least a 25 per cent increase in income over 1947. However, it should also be noted that 1 in 5 spending units reported a decline in income from the previous year.

As shown in Table 2, about 60 per cent of professional persons and about the same proportion of clerical and sales personnel had larger incomes in 1948 than in 1947. In each of the three yearto-year comparisons afforded by the Surveys of Consumer Finances, these two occupational groups have reported the highest frequency of income increases. However, the margin of difference be-

 Table 2

 Income Changes from 1947 to 1948 and 1946 to 1947 as Reported by Spending Units in Various Occupational Groups ¹

¹ Based on changes in amount of annual income received as reported by spending units early in 1949 (fourth survey) and early in 1948 (third survey). Data for changes from 1946 to 1947 were obtained in response to the question. "Was your income in 1946 about the same as in 1947, or was it larger or smaller than in 1947?" In obtaining data on changes from 1947 to 1948, the amount of income in 1947 was obtained in about two-thirds of all cases and the percentage changes were then calculated. If the respondent could not supply an amount for 1947 income, he was then asked, "Was your income in 1948 larger, the same, or smaller than in 1947?" Data are therefore not strictly comparable.

tween increases for these two occupations and other groups was less in 1948 than in 1947 and 1946. Higher 1948 incomes were also obtained by somewhat more than 50 per cent of the skilled and semiskilled workers and by about the same percentage of unskilled workers. Entrepreneurial types—farm operators and managerial and selfemployed persons—were found to have fewer increases in income than other occupational groups, and more decreases.

The explanation most frequently given for larger incomes in 1948 was a higher wage or salary scale on the same job. Between one-half and two-thirds of the income increases in each occupation were explained on this basis. For persons in salaried professional, managerial, and clerical and sales categories, the next most important path to a larger income was transfer to a better-paying job. Roughly 1 in 5 of those with income increases in these occupations reported that they had followed this path. It was less important in the case of skilled and semiskilled workers, and unskilled workers, having been mentioned by only about 1 in 10 in these groups. More important as a means of increasing their incomes was a greater amount of overtime and steadier work. However, these factors were mentioned by only about 1 in 5 units with larger 1948 incomes in these occupations.

In three occupational groups—unskilled workers, farm operators, and managerial and self-employed persons—the proportion of units that reported income increases was higher from 1947 to 1948 than from 1946 to 1947 (see Table 2). The increase in frequency with which consumer units obtained larger incomes was greatest for unskilled workers. Last year, 54 per cent of unskilled workers had higher incomes than in 1947, while in 1947 about 44 per cent of this occupational group had reported having larger incomes than in 1946. Also, a slightly smaller proportion of this occupational group reported a decline in income in 1948 than had so reported the previous year.

Changes in income during 1948 were more diverse for farm operators than for other occupational groups. This was the only major group that experienced a higher frequency of both income increases and income decreases from 1947 to 1948 than from 1946 to 1947 (see Table 2) and, accordingly, the proportion reporting no substantial income change declined sharply. However, the proportion of the group having larger incomes increased slightly more rapidly than the proportion having smaller incomes. Also the additional units with higher incomes were all in the group receiving income increases of 25 per cent or more.

The managerial and self-employed group was

the only other group for which income increases were more numerous in 1948 than in 1947. Here, again, the additional increases were all of the magnitude of 25 per cent or more.

As Table 3 shows, the proportion of spending units headed by unskilled workers that reported incomes of \$3,000 or more increased significantly in 1948 over 1947, rising from 14 to 24 per cent. The number with incomes of \$2,000-\$2,999 increased only slightly, while the number with incomes of less than \$2,000 dropped sharply. The median estimated annual income of this occupational group increased about 20 per cent from \$1,750 in 1947 to \$2,100 in 1948.

Farm operators also showed a substantial rise in money income. Income data of this group for 1948, however, are not strictly comparable with earlier periods because of an improvement in the survey method of ascertaining farm operator income which is believed to have resulted in higher income than would have been obtained by previous methods.⁴ Median money income of farm operator spending units, as determined by two successive Surveys of Consumer Finances, showed an increase of about 20 per cent from 1947 to 1948, while Department of Commerce estimates of aggregate farm income, roughly adjusted to the survey definition, indicate very little change during these two years. It should be noted that in addition to a median money income in 1948 of \$1,800, farm operators had a substantial amount of nonmoney income, such as food produced and consumed on the farm. Their reported incomes, which refer to money income solely, are therefore not directly comparable with those of other occupational groups.

Skilled and semiskilled workers also had a sizable increase in median income from 1947 to 1948. Nearly two-thirds of this group reported incomes of \$3,000 or more in 1948 compared with one-half in 1947. Clerical and sales personnel had a slightly higher median income than in 1947, while professional persons and managerial and self-employed groups had the same median in both years. Both the professional and the clerical and sales groups had a somewhat smaller proportion of spending units that received incomes of \$5,000 or more in 1948 than in 1947.

Changes in income may also be presented according to the age of the person heading the spending As in previous years, tabulations on this unit. basis show that spending units headed by young persons received increases in income most frequently. About two-thirds of the units headed by persons less than 35 years of age had larger in-

TABLE 3

DISTRIBUTION OF SPENDING UNITS WITHIN DIFFERENT OCCUPATIONAL GROUPS, BY SIZE OF INCOME, 1948 AND 1947¹ [Per cent]

¹ Income data for each year are based on interviews during January, February, and March of the following year. Because of the small number of cases in the various occupational groups and also because of some differences in the coding by occupations between the two years, these distributions should be considered as approximations only and as very rough guides to general shifts in the distribution of income between 1947 and 1948. All the occupational groupings are in terms of the occupation of the head of the spending unit. For comparable 1946 income data, see June 1948 Federal Reserve BULLETIN, Table 7, p. 656; for 1945 income data, see July 1947 BULLETIN, Table 2, p. 792.
² As explained in the text, income distribution for farm operators is not directly comparable with the distribution for other groups because of the large amount of nonmoney income that farmers produce for their own consumption.
³ Lees than one-half of 1 per cent.

³ Less than one-half of 1 per cent.

JULY 1949

^{*}Methods of determining income were identical during the past three Surveys of Consumer Finances with the single exception that the 1949 survey included more detailed questions and checks about farm operators' gross cash receipts.

comes in 1948 than in the previous year. Where persons heading consumer units were between 35 and 54 years of age, income increases were obtained in about half the cases. Above the age of 54, the frequency of income increases declined considerably. Only a little more than one-fourth of the units headed by persons 65 years of age or older had higher incomes in 1948 than in 1947, but even in this age group, more units received increases in income than received decreases.

The proportion of units with stable or unchanged incomes tended to rise with the age of the spending unit head. More than four-tenths of the units headed by persons 65 or more years of age had stable incomes from 1947 to 1948 while this was true of a little more than one-tenth of those headed by persons from 18 to 24 years of age.

There was a tendency for decreases in income to be more frequent among spending units headed by persons in older age groups, but there was less of a contrast between the different age groups in the frequency of income decreases than in the frequency of increased incomes from 1947 to 1948.

Another way of studying changes in income is to relate the increases and decreases to the income level of the spending unit. For some purposes it is best to relate to the income level before the change; for other purposes it may be best to relate to the income level after the change. In this fourth annual survey, all respondents were asked for the first time to report their income not only for the current year (in this case 1948) but also for the preceding year (in this case 1947). This effort succeeded to the extent that two-thirds of the sample did provide data on 1947 as well as on 1948 incomes.

Income data for 1947, based on two-thirds of the sample, are not as representative as 1948 income data based on the full sample. Furthermore, because of the memory factor, the data are probably less reliable for 1947 incomes than for 1948 incomes. Therefore, these considerations necessitate a cautious appraisal of the significance of the findings.

When 1947 income is used as a base, it is found that consumer units whose 1947 incomes were below \$4,000 obtained income increases in 1948 with consistently greater frequency than units whose 1947 incomes were above that amount (see Table 4). Conversely, declines in income were reported more frequently by spending units with 1947 incomes of \$4,000 or more.

Roughly 60 per cent of all units having incomes below \$4,000 in 1947 increased their incomes in 1948. The increases reported were sizable, amounting to at least 25 per cent of 1947 income in approximately 1 of every 3 cases which experienced an increase. In contrast, somewhat less than half of the spending units with 1947 incomes of \$4,000 or more reported receiving an income increase. It also appeared that the more the income exceeded \$4,000, the fewer were the income increases.

The extent of shifting of specific spending units from one income level to another from 1947 to 1948 is brought out by Table 6. Here the units in each 1948 income group have been distributed according to their reported level of income in 1947. At certain income levels only about half of the units providing both 1947 and 1948 income data were in the same bracket in two successive years. Shifting from one income group to another appears to have been more pronounced if incomes were \$1,000 or more than if they were under \$1,000. This may be because the lowest income group contains a high proportion of retired persons, widows, and others whose incomes are more or less fixed. even though, as indicated by Table 4, almost threefifths of this lowest income group did increase their incomes from 1947 to 1948. It should be noted that the percentage of change in total income required to move into another income group is much larger at this level of income than at any other.

In Table 5, income change from 1947 to 1948 is related to 1948 income. More than half of the spending units with incomes of \$2,000 or more in 1948 had increased their incomes since the previous year—in a considerable number of cases by substantial amounts. Increases in income were less frequent among spending units having 1948 incomes of \$4,000 or more than they were among units having similar 1947 incomes. Conversely, for the most part units with incomes below \$4,000 in 1948 obtained more increases than had been noted at this level in the previous year.

It appears from data in Table 5 that when income changes from 1947 to 1948 were related to income levels *after* change, spending units in the higher brackets had considerably more frequent increases

1949 SURVEY OF CONSUMER FINANCES

JULY 1949

in income and fewer decreases than did units at lower income levels. Income changes in previous surveys have been presented on this basis and, as such, constitute important findings. However, if data in Tables 4 and 6 based on incomes before change are considered, it is evident that many units in higher 1948 income brackets who reported income increases had been at lower income levels before the change. Conversely, many of the units in lower 1948 income brackets were there as a result of declines in their incomes.

DISTRIBUTION OF INCOME IN 1948

The proportion of money income received in 1948 by each tenth of the nation's spending units when ranked by size of income varied only slightly from that in 1947. The change, however, was in the direction of a larger share for the seven-tenths of the population with lowest incomes, as shown in Table 7. The proportion of total consumer income obtained by this segment of the population rose from 40 per cent in 1947 to 42 per cent in 1948.

The lowest three-tenths increased their share of total consumer income from 9 per cent in 1947 to 10 per cent in 1948. This change appears small when stated as a percentage of total consumer income and is not significant in a statistical sense. If such a change is substantiated by later studies and by other evidence, even a change of this slight magnitude, however, would substantially raise the level of low incomes. An increase from 9 to 10 per cent of total income represents an increase of more than 10 per cent in the average income of the spending units in the lower three-tenths of the income scale. Moreover, since total consumer income rose by almost 15 billion dollars from 1947 to 1948, the lower income groups may have obtained a slightly larger share of a somewhat larger total income.

The effect of both factors may be demonstrated by comparing the incomes of the spending units at identical points in the 1947 and 1948 income distributions, as is done in Table 7. This shows that the income of the lowest spending unit in each tenth from the fifth down to the ninth was roughly 15 to 25 per cent larger in 1948 than in 1947, while in each tenth from the highest to the fourth highest the increases were 7 per cent or less. From this it appears that incomes for spending units in the lower half of the income scale increased more from 1947 to 1948 than incomes for those in the upper half.⁵

Year-to-year shifts in the proportion of income received by the tenths of the spending units are

TABLE 7

PROPORTION OF TOTAL MONEY INCOME RECEIVED BY EACH TENTH OF THE NATION'S SPENDING UNITS, WHEN RANKED BY SIZE OF INCOME, 1948, 1947, AND 1946¹

NOTE .--Detailed figures may not add to cumulative figures because of rounding.

⁵ The influence on this point of the improved method of income reporting for farm operators was checked and found to be of minor importance. This factor was of minor influence because approximately the same changes between 1947 and 1948 were found for the nonfarm population as for the entire population, including farm operators.

generally slight and it is unlikely that a change sufficiently large to be statistically significant in the technical sense would occur between successive surveys.6 The actual change in proportions of total consumer income received by the various income groups as found by the surveys represents, of course, the most probable direction of change. However, other evidence obtained in the fourth survey also indicates that there may have been a slight increase in the proportion of total income going to the seven-tenths of the population with the lowest incomes.

Naturally all survey information on income changes is interrelated and may be the result of random deviation between the samples of two successive surveys. Nevertheless, the following results of the 1949 survey are worth noting: (1) a statistically significant increase in the proportions of unskilled workers and farm operators who reported increases in income, and especially increases of 25 per cent or more; (2) a statistically significant increase in the proportion of spending units with incomes between \$3,000 and \$7,499 together with a statistically significant decrease in the proportion of units with incomes below \$2,000, and a practically unchanged proportion of units with incomes above \$7,500; (3) the smaller income share of the top decile which cannot be ascribed to the chance variation of spending units with the highest incomes represented in the two successive samples; (4) the higher frequency of income increases among units whose 1947 incomes had been below \$4,000, and the greater frequency of income decreases among units whose 1947 incomes had been \$4,000 or more; and (5) the greater rate of increase in incomes of units in the lower than in the higher income deciles.

FAMILY INCOME IN 1948

The income data reported by spending units in the Survey of Consumer Finances are tabulated by family units as well as by spending units since for some purposes data are needed on a family unit basis. A family is defined as all persons living in the same dwelling who are related by blood, marriage, or adoption. A single person may constitute a "family" if he is living by himself or with persons unrelated to him. A family unit as used in the survey, then, is equivalent to the "family" and "individual not in family" definitions of the Bureau of the Census, United States Department of Commerce.

There may be more than one spending unit in a family since a spending unit is defined as all persons living in the same dwelling and belonging to the same family who pool their incomes to meet their major expenses. For example, a grown son who is working and does not pool his income with his parents' income, even though he may pay something for board and room, constitutes a separate spending unit if he retains more than half of his income. Likewise, married children or other relatives who do not pool their incomes with that of the head of the family, even though living in the same dwelling, constitute separate spending units. In tabulating on a family basis, the incomes of all related persons living in the same dwelling are combined.

It is estimated that at the beginning of 1949 there were approximately 43.8 million family units and 50.4 million spending units. Because some families contain more than one spending unit, the same total amount of consumer income is distributed among the smaller number of family units. It is therefore to be expected that families will have somewhat higher average incomes than spending units.

¹ Income data for each year are based on interviews during Jan-uary, February, and early March of the following year. Family units are defined as all persons living in the same dwelling who are related by blood, marriage, or adoption. ² Includes single-person family units. ³ The median amount is that of the middle family unit when all units are ranked by size of income.

⁶A discussion of the problem of statistical significance of survey findings is presented in the June 1949 Federal Reserve BULLETIN, p. 645.

As shown in Table 8, the median family income in 1948 was \$3,320, which was roughly one-sixth greater than the median income for spending units. It was found that 54 per cent of all families had incomes of \$3,000 or more in 1948 compared with 47 per cent of spending units. The grouping of more than one spending unit into a family unit in some cases was responsible for the fact that 22 per cent of the family units had incomes of \$5,000 or more as compared with 15 per cent of the spending units. The same general shift toward higher income levels in 1948 was apparent in the income distributions for spending units as well as family units.

DISPOSABLE INCOME

Thus far this article has been discussing the distribution of money income before taxes. For some purposes it is more useful to know the distribution of income after taxes. A beginning step in this direction was made in the 1948 survey in which estimates of Federal personal income tax *liability* on 1947 income, apart from tax on capital gains or losses, were prepared for each spending unit. Following a somewhat improved procedure, the data of the 1949 Survey of Consumer Finances have been utilized to prepare like estimates of personal income tax liability for 1948 incomes.

Income after tax, called disposable income in this article, was estimated for each spending unit by deducting computed Federal income tax liability from money income before taxes.⁷ The tax estimates, unlike other survey data, were not based on special information concerning tax liabilities obtained during the interview. They were calculated on the basis of the income, size, and composition of each spending unit and the number of persons not living in the dwelling who were dependent on the members of the spending unit for support. A detailed presentation of the estimating procedure is given in the appendix to this article.

It should be stressed that these income tax estimates are only approximations; that they refer not to payments but to Federal personal income tax *liabilities*, apart from taxes on capital gains and losses; and that State and local income taxes are not included.

The distribution of spending units by income after Federal taxes shows, of course, a general downward shift from the distribution by income before taxes. The downward shift was most marked at the upper end of the income distribution, as can be seen in Table 9. The number of spending units with incomes of \$5,000 or more (before taxes) was reduced by one-fifth through taxation from 15 per cent to 12 per cent of the approximately 50.4 million spending units. Median income was lowered to \$2,700 from \$2,840.

Survey estimates show that about two-thirds of all consumer units had Federal income tax liabilities. As Table 10 indicates, these units come from the bottom as well as from the top of the income scale. The proportion of units incurring tax liability increased very sharply from lower to higher income groups. It is estimated that less than one-tenth of the units with incomes under \$1,000 had tax liabilities, while more than ninetenths of all units with incomes of \$4,000 or more incurred tax liabilities.

¹ Money income after deduction of estimated Federal personal income tax liability. See appendix, pp. 790-791, for method of estimating disposable income. Money income figures exclude capital gains or losses and tax estimates do not make any allowance for such gains or losses.

"The median amount is that of the middle spending unit when all units are ranked by size of income.

⁷ The U. S. Department of Commerce, in estimating disposable income for its national income series, deducts from income actual Federal personal income tax payments (not liabilities), including taxes on capital gains and losses, as well as other tax and nontax receipts, chief of which are Federal estate and gift taxes and State and local personal tax and nontax receipts.

For roughly 1 spending unit in 5 Federal income tax amounted to 10 per cent or more of income before tax. The number with higher rates of liability dropped sharply so that only about 1 unit in 100 incurred a tax liability of 20 per cent or more of income before tax (see Table 11).

Estimates from the survey data indicate that about three-fifths of the approximately 34 million spending units with tax liabilities had obligations of \$200 or more. For almost one-fourth of the units with tax liabilities, the amounts were \$500 or more.

The Revenue Act of 1948 revised Federal personal income taxes in a manner that reduced liabilities at all levels of the income distribution. The greater part of the downward shift in tax liabilities from 1947 to 1948 that is evident in Table 10 reflects this revision. However, improved methods of working out survey estimates of 1948 taxes also tended to lower slightly the level of 1948 tax liabilities compared with the estimates for 1947.

Despite an increase of almost 15 billion dollars in consumer income before taxes from 1947 to 1948, the downward revision in Federal personal income taxes in 1948 was sufficient to drop more than a million spending units from the tax rolls and to lower somewhat the level of tax liability of the remainder. The proportion of units with taxes of \$500 or more was reduced by about one-fifth and

JULY 1949

the proportion of units who had no tax liabilities, or whose obligations were relatively small (less than \$200), increased by roughly one-tenth.

The cut in liabilities was especially marked at the top and bottom of the income distribution. At the lowest income level (under \$1,000), the proportion of units with some income tax liability dropped by more than half. At the \$7,500 and over income level, only 25 per cent of the spending units incurred a tax liability of \$2,000 or more in 1948 compared with more than 40 per cent in 1947. These differences are due primarily to changes in tax laws although, to some extent, changes in the composition of spending units may also have been a factor.

As shown in Table 11, the effect of the Federal personal income tax in both 1947 and 1948 was to reduce somewhat the proportion of total income received by the units with the highest incomes. In 1948, the highest tenth of income receivers before tax obtained about 32 per cent of total personal income, while the tenth with the largest disposable incomes obtained approximately 29 per cent. Using unrounded figures, the difference was 2.4 percentage points. Spending units in the lower half of the income scale had a somewhat larger proportion of income when ranked by size of disposable income than when ranked by income before taxes.

The evidence in Table 12 indicates that the reduction in Federal income taxes may have had only a relatively small effect on the distribution of disposable income compared with the shift that seems to have occurred from 1947 to 1948 in the distribution of income before taxes.

Estimates of the tax liabilities and disposable incomes of family units have also been prepared and these are presented in supplementary Tables 14 and 15 at the end of this article.

APPENDIX

METHOD OF ESTIMATING DISPOSABLE INCOME

Estimates of disposable personal income, defined for purposes of the Consumer Finances Surveys as the total money income of a spending unit less its Federal income tax liability, were made for the second time in the 1949 survey. While no questions about Federal income tax payments were asked in the interviews, it was possible to estimate a rough tax liability figure for each spending unit by taking into account the number of income receivers and dependents in each unit and by making certain assumptions about the filing of joint returns, deduction allowances for contributions, and other considerations entering into the tax computations.

In the 1949 survey, but not in the preceding one, information was obtained on the number of dependents living outside of the dwelling. This improvement in method tended to lower estimated tax liabilities, although only about 5 per cent of the cases were affected. The estimates thus made represented the Federal tax liabilities on 1948 incomes, not the tax payments of spending units during 1948. No estimates were made for State and local taxes.

The disposable income figures shown in this report therefore represent total money income less estimated Federal tax liabilities. These disposable income figures differ from the disposable personal

income figures that are a part of the personal income series of the Department of Commerce in that the Commerce series excludes tax *payments* (not liabilities) and State and local as well as Federal taxes.

Certain information which would have been necessary in order to calculate personal income tax liability with precision was not available. The most important missing item was exact information on deductions claimed by spending units. The survey deduction allowance was the Treasury standard deduction on incomes up to \$5,000 and 10 per cent of incomes of \$5,000 or more. Some units undoubtedly claimed deductions that were larger than the amounts estimated for them, and some units with incomes of \$10,000 or more may have claimed less than the estimated deduction. Table 10 shows the amounts of tax liability estimated for spending units within various income groups.

The tax liability for each spending unit was estimated by using a standardized procedure of computation.¹ The steps in the calculation were as follows:

1. A table was prepared giving the amount of tax by size of income and by number of dependents (including an extra exemption where the head of the unit or his wife was over 65 years of age). The table provided for the Treasury standard deduction for contributions, medical bills, etc., on incomes up to \$5,000, and a deduction of 10 per cent of taxable income (excluding items in (2) below), for incomes larger than \$5,000.

2. Taxable income was calculated by deducting from total income amounts received by individual income recipients from social security benefits, sickness and injury benefits, armed forces pay and allowances up to the limit of their special exemption, contributions for support, and other allowable deductions. Tax-free interest was not deducted but would be received by only about 1 per cent of the income recipients.

3. In the case of spending units containing one person only, the tax was taken directly from the prepared table.

5. If persons other than the head of the spending unit and his wife received income in such amounts that filing separate tax returns reduced the tax liability of the entire spending unit, separate returns were calculated for the additional earners. Dependents were always included on the tax return of the main income receiver, unless a different handling was indicated by the interview.

6. Where more than one tax return was estimated for a given spending unit, the separate tax liabilities were computed and added together and the total was considered to be the tax liability of the spending unit.

7. Where a family contained more than one spending unit, the separate tax liabilities were computed and added together and the total was considered to be the tax liability of the family.

This method of estimating taxes made no provision for the following:

1. Special exemption for the blind;

2. Larger deductions than the Treasury standard deduction on incomes up to \$5,000, or larger or smaller deductions than 10 per cent on incomes greater than \$5,000;

3. Tax-free interest;

4. Taxes on alimony received;

5. Taxes on capital gains and losses;

6. Carry-over of business and capital losses from previous years;

7. Allocation of income among the taxpayers in a spending unit that may differ somewhat from the survey allocation;

8. Number of exemptions claimed for dependents not living in the dwelling that may differ from the survey figure because no question was asked in the survey about the relative size of contributions to dependents; and

9. State and local income taxes, which amount to about one-tenth of Federal personal income tax.

For individual spending and family units, taxes may have been over- or under-estimated. The limitations of these tax estimates should be recognized in making use of either the tax or disposable income data.

¹Acknowledgment is made of the assistance of members of the Division of Tax Research, Treasury Department, in formulating the method of estimate.

ESTIMATED LIQUID ASSET HOLDINGS OF INDIVIDUALS AND BUSINESSES¹

Liquid asset holdings of individuals increased during 1948 by an estimated 2.5 billion dollars while total business holdings decreased by 0.7 billion. The annual gain in individual holdings was the smallest since before the war and compares with an increase of 7.1 billion in 1947. In 1948 corporations added to their liquid assets for the first time since 1945 while unincorporated businesses continued to draw down their liquid funds for the third successive year.

Estimates of liquid asset holdings of individuals and businesses as of December 31, 1948, and for end-of-year and selected midyear dates from December 1939 to December 1948, are presented in the accompanying table. These estimates cover the principal assets which are most readily convertible for use and for which there are representative statistics of ownership. Currency and demand deposits are the basic forms of cash ordinarily used, and under existing practices time deposits, shares of savings and loan associations, and United States Government securities are readily convertible into cash.

Although individuals added a smaller amount to their store of liquid assets in 1948 than in 1947, total personal saving as defined by the Department of Commerce increased substantially. The growth in saving reflected primarily considerably larger investment in housing, farms, nonfarm unincorporated businesses, and securities of corporations and State and local governments. Also, the increase in personal indebtedness was somewhat smaller in 1948 than in the preceding year.

Unincorporated businesses continued to draw upon their accumulated liquid assets to help finance their continued high rate of investment in plant, equipment, inventories, and consumer receivables. The reduction of these assets was greater in 1948 than in 1947 chiefly because of less reliance on credit from corporate businesses and banks. In 1948 corporations increased their holdings of liquid assets by 0.5 billion dollars, reversing the decline of the two preceding years. In part, this reflected some reduction in the rate of their investment in inventories and customer receivables and an increase in their retained profits and allowances for depreciation and depletion.

Of the increase in assets of personal trust funds in 1948, only about half was held in liquid asset forms, primarily United States Government securities, as compared with about two-thirds in 1947. Other personal holdings of the two most liquid types of assets-currency and demand depositswere reduced in 1948 while holdings of other liquid asset types-time deposits, savings and loan shares, and United States Government securitieswere enlarged. Individuals added more United States Government securities and a smaller amount of time deposits to their accumulated liquid savings than they did in other postwar years. It is noteworthy in this connection, however, that according to the fourth Survey of Consumer Finances conducted early this year, the number of spending units holding United States Government securities showed a further decline in 1948, although this reduction was considerably smaller than in 1946 and 1947.²

The estimates presented in the accompanying table include liquid assets held by individuals (including farmers), unincorporated businesses, and corporations other than insurance companies. They do not include holdings of Federal, State, or local governments, Government agencies, foreigners, banks, savings and loan associations, insurance companies, or nonprofit associations. The estimates are approximations of amounts shown or implied in accounting records of the holders rather than those reported by banking and Treasury records, although they are derived primarily from bank and Treasury The deposit estimates, therefore, differ reports. somewhat from the figures reported by banks and regularly published among banking statistics.

The basic classifications used and method of estimate are the same as those employed previously. Some small revisions have been made in the estimates for December 1947.³

¹ A detailed description of the methods used to obtain the estimates, together with the basic worksheets, may be secured from the Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington 25, D. C.

² This survey, conducted for the Board by the Survey Research Center, University of Michigan, provides information on the distribution of holdings of liquid assets by individuals at the beginning of 1949 and their attitudes toward spending these assets. The survey data on liquid assets will be presented in the August issue of the BULLETIN.

⁸ See Federal Reserve BULLETINS for June 1945, February 1946, November 1946, September 1947, and June 1948 for previously published estimates.

Revised. p Preliminary.

^{*} Revised. ^{*} Preliminary.
 ¹ Figures for banks, insurance companies, savings and loan associations, nonprofit associations, foreigners, and governmental bodies and agencies are not included in the totals shown.
 ^{*} These figures are estimates of demand deposit balances as they would appear on the records of depositors. They differ from figures based on bank record as given in regular banking statistics. Depositor-record estimates are lower than bank-record estimates; for example, total demand deposits as of Dec. 31, 1948 on a holder-record basis (see table) amounted to 64.6 billion dollars while on a bank-record basis these deposits amount to 77.8 billion. This is because checks are constantly in the mail, i. e., deducted on payor's records and not yet added on payee's records, and because checks are constantly in the process of collection, i. e., added to payee's deposits as per bank records and not yet deducted from payor's deposits as per bank records.
 ^{*} Private share capital in all operating savings and loan associations including private repurchasable shares, deposits, and investment certificates.

THIRD ANNUAL REPORT OF THE NATIONAL CREDIT COUNCIL OF FRANCE

The formulation and coordination of credit policy in France is the function of the National Credit Council created by the Banking Law of December 2, 1945. The Third Annual Report of the Council reviews the principal changes in banking organization since inauguration of the Council, gives a detailed account of the development of the French economic and monetary situation during 1948, and describes the important changes in credit policy that were carried out in September 1948. The following passage is a translation of the conclusion of the report.¹

By virtue of the progressive recovery of industry and agriculture, as well as the repeated efforts of the country and the public authorities to restore financial equilibrium, the French economy last year made further progress toward the economic rehabilitation to which the country has been looking forward since liberation. This rehabilitation was aided by a series of measures designed to combat inflation and required the assistance of the authorities responsible for bank credit.

Credit policy, without adhering to any preconceived system, continued to play its auxiliary role and to be carried out by a variety of measures that has characterized the work of the National Credit Council since its creation. Adapting itself to the changing needs of the economic situation, this policy first encouraged economic recovery and reconstruction of plant and equipment by deliberately supplying credit to meet the inadequacy of savings. So long as major shortages prevailed, the main objective of this policy was to prevent the insufficiency of funds in certain industries from aggravating the grave physical deficiencies from which the country was still suffering. During this phase of reconstruction, credit policy could not be expected to become an important weapon against price inflation. In this period the price level was repeatedly driven upward by advances in the prices of foodstuffs on all markets (official, clandestine, or free), and credit plays a relatively minor role in these markets. The price increases in turn were regularly consolidated by upward adjustments in wages, exchange rates, the cost of public services, taxes, industrial prices, and profit margins.

The ensuing contraction of business working capital, which resulted for the most part because costs generally increased before selling prices, inevitably caused a nonspeculative demand for credit. It would have been dangerous, and no doubt impossible, not to satisfy this demand. At most it was possible to determine the genuineness of the needs for credit and to reject applications that were not well founded. This is what the Council did in the earlier stages of reconstruction.

With the considerable economic improvement during 1948, credit policy became a more direct part of the national effort to attain monetary equilibrium. In spite of inevitable hostility to this more active policy, its necessity is no longer contested.

The good harvest, which was the most important factor in the economic improvement, led to a decline in certain agricultural prices, insured an adequate supply of foodstuffs, and favored stability of wages. Nevertheless, it was to be expected that time would elapse before domestic industrial prices would decline in response to increased production and declining world prices.

For adjustment of the more plentiful but still dear supply of goods to a demand which was not only less urgent but also restrained by the expectations of lower prices or by lack of purchasing power, it was necessary that certain profits be partly sacrificed and even that losses be accepted in some sectors of the economy.

In the long run, this adjustment could no doubt have taken place of its own accord, without any

¹Translated from the *Troisième Rapport Annuel du Conseil National du Crédit, 1948* (Paris, 1949). For excerpts from the Second Annual Report of the Council, see Federal Reserve BULLETIN for August 1948, pp. 950-60.

A translation of the Banking Law of December 2, 1945 was published in the BULLETIN for May 1946, pp. 483-88. For an account of the changes in credit policy carried out in France in September 1948, see Albert O. Hirschman and Robert V. Rosa, "Postwar Credit Controls in France," Federal Reserve BULLETIN, April 1949, pp. 348-60.

limitation of credit. If such a limitation has nevertheless been undertaken—and if it has been applied with a strictness making the meeting of maturities difficult—this has been done because it was essential to hasten the process of adjustment, necessarily painful to producers and traders alike. The objective of this policy was to neutralize as much as possible the first defensive reaction against marketing difficulties—i. e., recourse to credit—and to provoke instead other reactions which were more desirable for the community in particular the reduction of costs and selling prices, and increased exports.

While slowing down of purchases is attributable partly to a perceptible return of confidence in the currency, this confidence is not yet sufficiently firm to permit all demands for liquid funds to be met unconditionally. Elements of uncertainty and instability still remain—the outcome of the next harvest, the level of tax receipts, the balance of payments, etc.—and call for continued vigilance.

If confidence in the currency is consolidated, however, and if savings leave their present hide-outs to flow into productive investments, this vigilance will shift to other aspects of the monetary problem of which the National Credit Council is keenly aware. The legitimate demand for means of payment will in time tend to bring the money supply to the level called for by the prices and expanding activity of a rehabilitated economy. Today, however, the money supply is considerably below the level that will have to be approached if a high degree of employment is to be maintained.

It cannot be predicted today when this change in the situation will come about. But at that point there would be danger that even the special measures already adopted by the Bank of France to spare the market certain too serious repercussions of the global limitation of credit would no longer permit normal cash requirements to be satisfied.

The Council holds that the credit ceilings at present applicable to banks and business enterprises could then be revised to allow for expansion insofar as it would no longer entail excessive risk. The Council is also of the opinion that internal credit should not be called upon to constitute the sole basis and counterpart for the necessary increase in the money supply. It would be desirable that the gold or foreign exchange reserves of the Bank of France be increased to permit the reconstitution both of means of international payments and of a genuine cover for the domestic currency circulation.

On a monetary foundation thus consolidated, with the possible help of national savings, credit policy could shift with more assurance from combating inflation toward the development of production and employment, the building up of the real income of the nation, and the attainment of a better standard of living.

LAW DEPARTMENT

Administrative interpretations of banking laws, new regulations issued by the Board of Governors, and other similar material

Termination of Consumer Credit Control and Temporary Authority to Increase Reserve Requirements

In connection with the expiration on June 30, 1949, of the temporary authority of the Board of Governors of the Federal Reserve System to regulate consumer instalment credit and to prescribe increased reserves for member banks, there is set forth on page 776 of this issue of the Federal Reserve BULLETIN the text of a statement for the press issued by the Board on June 29, 1949, regarding this matter. The text of the revised Supplement to the Board's Regulation D, mentioned in the press statement, is as follows:

SUPPLEMENT TO REGULATION D

Effective as to member banks not in reserve and central reserve cities at opening of business on July 1, 1949, and as to member banks in reserve and central reserve cities at opening of business on June 30, 1949.

RESERVES REQUIRED TO BE MAINTAINED BY MEMBER BANKS WITH FEDERAL RESERVE BANKS

Pursuant to the provisions of section 19 of the Federal Reserve Act and section 2(a) of its Regulation D, the Board of Governors of the Federal Reserve System hereby prescribes the following reserve balances which each member bank of the Federal Reserve System is required to maintain on deposit with the Federal Reserve Bank of its district:

6 per cent of its time deposits plus-

14 per cent of its net demand deposits if not in a reserve or central reserve city;

20 per cent of its net demand deposits if in a reserve city, except as to any bank located in an outlying district of a reserve city or in territory added to such city by the extension of the city's corporate limits, which, by the affirmative vote of five members of the Board of Governors of

JULY 1949

the Federal Reserve System, is permitted to maintain 14 per cent reserves against its net demand deposits;

24 per cent of its net demand deposits if located in a central reserve city, except as to any bank located in an outlying district of a central reserve city or in territory added to such city by the extension of the city's corporate limits, which, by the affirmative vote of five members of the Board of Governors of the Federal Reserve System is permitted to maintain 14 per cent or 20 per cent reserves against its net demand deposits.

Common Trust Funds

Distribution of Accrued Income

The Board has recently considered the question whether a bank operating a common trust fund may make advances to the fund for use in distributing accrued interest and declared dividends receivable on investments of the fund prior to the receipt of such income where such advances are made from a "general trust account" consisting of commingled uninvested funds of all trusts administered by the bank.

The Board has previously expressed the view that the use of uninvested cash in a common trust fund to distribute accrued interest and dividends receivable on investments of the fund prior to receipt is not inconsistent with the Board's Regulation F, and has stated that it would not object if uninvested cash in a common trust fund were so used in reasonable amounts.

The situation is different, however, where the bank operating a common trust fund makes advances to the fund for this purpose. Subject to an exception which is not pertinent here, subdivision numbered (3) of the fourth paragraph of section 17(a) of Regulation F provides as follows:

(3) A bank administering a Common Trust Fund shall not have any interest in the assets held in such Common Trust Fund, other than in its capacity as fiduciary, * * *.

797

Where a bank operating a common trust fund advances its own funds to the common trust fund in order to distribute accrued but uncollected income of the fund, the bank relies upon the assets of the fund for reimbursement of its advances; and, in the Board's opinion, the bank acquires an interest in assets of the common trust fund which is prohibited by the above-quoted provision of Regulation F.

Where a bank advances uninvested trust funds held in a "general trust account" of the kind referred to above, it is the Board's opinion that, in view of the bank's liability to the trusts whose funds are advanced, the bank acquires an interest in assets of the common trust fund which does not differ, in substance, from the interest which would be acquired by advances of its own funds, and that, in any event, this practice is not permissible because it violates section 11(c) of Regulation F which reads as follows:

(c) Dealings between trust accounts.—A national bank acting as fiduciary shall not make any advance to any trust from the funds belonging to any other trust, except when the making of such advances to a designated trust is specifically authorized by the trust instrument covering the trust from which such advances are made.

CURRENT EVENTS AND ANNOUNCEMENTS

Federal Reserve Meeting

A meeting of the Federal Open Market Committee was held in Washington on June 28, 1949.

Change in Board's Staff

Effective June 26, Mr. G. Howland Chase was appointed by the Board as Assistant Solicitor. Mr. Chase became associated with the Board's Legal Division on May 2, 1932, and served in that division until December 7, 1948, when he was appointed Attorney in the newly created Office of the Solicitor.

Admission of State Bank to Membership in the Federal Reserve System

The following State bank was admitted to membership in the Federal Reserve System during the period May 16, 1949 to June 15, 1949:

Michigan

Flat Rock-The State Savings Bank of Flat Rock

NATIONAL SUMMARY OF BUSINESS CONDITIONS

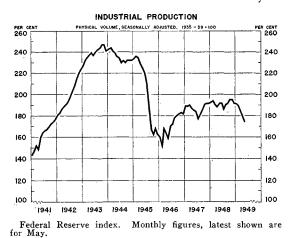

[Compiled June 24, and released for publication June 28]

Production at factories and mines declined further in May and June. Construction activity increased somewhat and employment in most other lines was maintained. Prices of industrial commodities continued downward and prices of farm products and foods declined in June following some advance in May. Department store sales were maintained at relatively high levels.

INDUSTRIAL PRODUCTION

The Board's seasonally adjusted index of industrial production declined 5 points in May to 174 per cent of the 1935-39 average and, according to present indications, may show a similar decrease in June. The May decline reflected mainly a further substantial reduction in activity in industries manufacturing durable goods. Output of nondurable goods and of minerals, which earlier had declined more than output of durable goods, showed only slight decreases in May.

Activity in the iron and steel, machinery, and nonferrous metals industries showed marked declines in May, reflecting a reduced volume of orders. Steel production averaged 93 per cent of capacity and since then has declined further to a scheduled rate of 84 per cent of capacity during the week beginning June 20, as compared with the peak of 103 in March. Machinery production has declined about one-fifth since the end of last year.

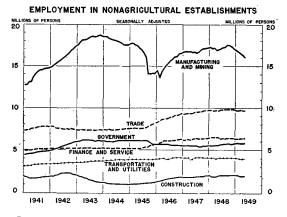

Output of passenger cars was temporarily curtailed in May as a result of a major work stoppage, but by mid-June increased to new record postwar rates. Activity in most other industries manufacturing durable goods declined slightly in May.

Activity in the cotton and rayon industries decreased further. Output of wool textiles, however, increased from the exceptionally low April rate, which was about 40 per cent below peak postwar levels. Cotton consumption in May was at the lowest rate since 1939. Petroleum refining activity showed a slight gain in May, and newsprint consumption rose further to a new record rate. Activity in most other nondurable goods industries showed little change.

Minerals output was slightly smaller in May. Activity at nonferrous metal mines was substantially curtailed and iron ore output, after allowance for seasonal changes, was slightly below the exceptionally high April level. Crude petroleum production showed little change. Coal output increased somewhat in May, but has been curtailed sharply in June.

CONSTRUCTION

Value of construction contracts awarded, according to the F. W. Dodge Corporation, rose slightly in May reflecting further increases in awards for

Bureau of Labor Statistics' estimates adjusted for seasonal variation by Federal Reserve. Proprietors and domestic servants are not included. Midmonth figures, latest shown are for May.

799

public construction. Private awards were slightly smaller than in April and continued considerably below a year ago. The number of new housing units started increased further in May and was close to the peak level of 100,000 units a year ago, according to estimates of the Department of Labor.

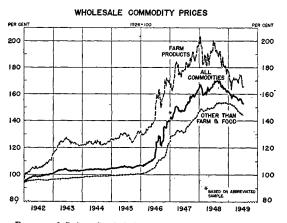

DISTRIBUTION

Value of department store sales in May showed little change from April, after allowance is made for the usual seasonal fluctuation. Sales in the first half of June were 7 per cent below the high level of the corresponding period in 1948, reflecting in part lower retail prices for apparel and housefurnishings.

Shipments of railroad freight declined in May and early June, reflecting mainly a marked reduction in loadings of miscellaneous products. Total carloadings, after allowance for seasonal changes, have declined about 12 per cent since last autumn.

COMMODITY PRICES

The general level of wholesale commodity prices declined 2 per cent from the middle of May to the third week of June. Meat and livestock prices showed small net change, as decreases in mid-June followed advances in the latter part of May. Cash wheat prices declined about 10 per cent as marketings of another large crop commenced. Prices of industrial commodities, especially textiles, paper, metals, and building materials, continued downward from May to June.

Bureau of Labor Statistics' indexes. "All items" includes fuel and housefurnishings groups not shown separately. Midmonth figures, latest shown are for July 5.

In May retail prices of most groups of consumers' goods were somewhat lower than in April. The B.L.S. index for all items, including rents and other services, was 169.2 as compared with 169.7 in April and the recent low point of 169.0 in February.

BANK CREDIT

Business loans at banks in leading cities declined substantially during May and by somewhat smaller amounts during the first half of June. Real estate and consumer loans increased slightly. Banks purchased about 2 billion dollars of Government securities of both long and short maturities, in part out of reserve funds released by the reduction in reserve requirements effective in early May.

Treasury expenditures were considerably greater than receipts in the first half of June, and Treasury deposits at the Reserve Banks declined substantially. This supplied banks with reserve funds and banks bought Government securities from the Federal Reserve System and increased their excess reserve balances. Subsequently banks lost reserve funds as Treasury balances at the Reserve Banks were built up by quarterly income tax payments. Reserve System holdings of Government bonds declined further during June.

SECURITY MARKETS

Common stock prices decreased about 9 per cent, with a moderate volume of trading, in the four weeks ended June 13 and recovered part of the decline in the following 10 days. Prices of highgrade corporate bonds changed little.

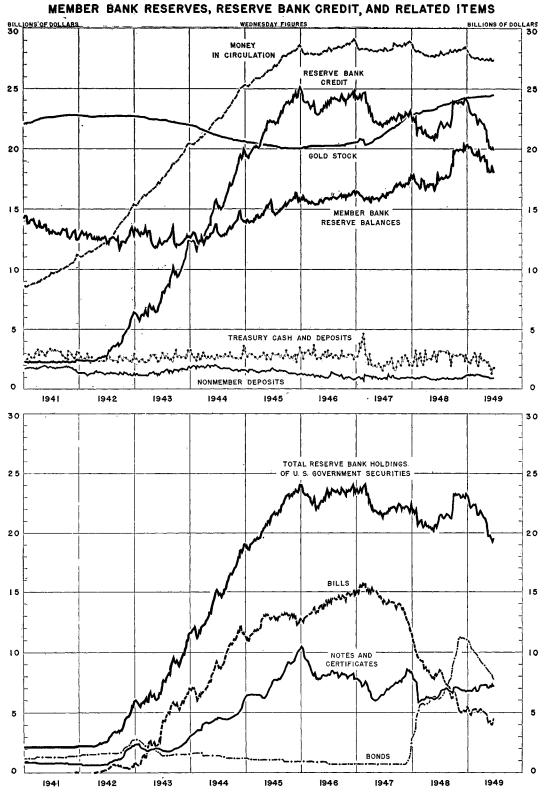

Common stock prices, Standard and Poor's Corporation; corporate bond yields, Moody's Investors Service; U. S. Government bond yields, U. S. Treasury Department. Weekly figures, latest figures are for June 29.

Government corporations and credit agencies.	834
Business indexes	835-844
Department store statistics.	845848
Cost of living	848
Wholesale prices	849
Gross national product, national income, and personal income.	850 - 851
Consumer credit statistics	852-854
Current statistics for Federal Reserve chart books	855-859
Member bank earnings by size of bank, 1948	860-862

Tables on the following pages include the principal available statistics of current significance relating to financial and business developments in the United States. The data relating to the Federal Reserve Banks and the member banks of the Federal Reserve System are derived from regular reports made to the Board; index numbers of production are compiled by the Board on the basis of material collected by other agencies; figures for gold stock, money in circulation, Treasury finance, and operations of Government credit agencies are obtained principally from statements of the Treasury, or of the agencies concerned; data on money and security markets and commodity prices and other series on business activity are obtained largely from other sources. Back figures for banking and monetary tables, together with descriptive text, may be obtained from the Board's publication, *Banking and Monetary Statistics;* back figures for most other tables may be obtained from earlier BULLETINS.

Wednesday figures, latest shown are for June 29. See p. 803.

In 90 days to 6 months	3	21/2	2
In less than 90 days	3	21/2	1

NOTE.—Maximum rates that may be paid by insured nonmember banks as established by the F. D. I. C., effective Feb. 1, 1936, are the same as those in effect for member banks. Under Regulation Q the rate payable by a member bank may not in any event exceed the maximum rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located.

MARGIN REQUIREMENTS 1

[Per cent of market value]

Prescribed in accordance with Securities Exchange Act of 1934	Jan. 21, 1946- Jan. 31, 1947	Feb. 1, 1947- Mar. 29, 1949	Effec- tive Mar. 30, 1949
Regulation T: For extensions of credit by brokers and dealers on listed securities For short sales Regulation U: For loans by banks on stocks	100 100 100	75 75 75	50 50 50

¹ Regulations T and U limit the amount of credit that may be extended on a security by prescribing a maximum loan value, which is a specified percentage of its market value at the time of the extension; the "margin requirements" shown in this table are the difference between the market value (100%) and the maximum loan value.

Back figures.—See Banking and Monetary Statistics, Table 145, p. 504, and BULLETIN for March 1946, p. 295.

¹ Rates shown also apply to advances secured by obligations of Federal intermediate credit banks maturing within 6 months.

Note: --Maximum maturities for discounts and advances to member banks are: 15 days for advances accured by obligations of the Federal Farm Mortgage Corporation or the Home Owners' Loan Corporation guaranteed as to principal and interest by the United States, or by obligations of Federal eral intermediate credit banks maturing within 6 months; 90 days for other advances and discounts made under Sections 13 and 13a of the Federal Reserve Act (except that discounts of certain bankers' acceptances and of agricultural paper may have maturities not exceeding 6 months and 9 months, respectively); and 4 months for advances under Section 10(b). The maximum maturity for advances to individuals, partnerships, or corporations made under the last paragraph of Section 13 is 90 days.

Back figures .- See Banking and Monetary Statistics, Tables 115-116, pp. 439-443.

FEDERAL RESERVE BANK EFFECTIVE MINIMUM BUYING RATES ON BANKERS' ACCEPTANCES [Per cent per annum]

(
Maturity	Rate on	In effect be-	Previous
	June 30	ginning—	rate
1- 90 days	1 1 1 / 8	¹ Aug. 13, 1948	$1\frac{1}{4}$

¹ Averages of daily *closing* figures for reserves and borrowings and of daily *opening* figures for other columns, inasmuch as reserves required are based on deposits at opening of business. ² Demand deposits subject to reserve requirements, i. e., gross demand deposits minus cash items reported as in process of collection and demand balances due from domestic banks. ⁸ Demand deposits adjusted (demand deposits other than interbank and U. S. Government, less cash items reported as in process of collec-tion) are estimated for all member banks, but not by class of bank. ⁴ Includes some interbank and U. S. Government *time* deposits; the amounts on call report dates are shown in the *Member Eank Call Report*.

 ¹ Outside Treasury and Federal Reserve Banks. Includes any paper currency held outside the continental limits of the United States; totals or other end-of-month dates shown in table above, totals by weeks in table on p. 803 and seasonally adjusted figures in table on p. 813.
 ² Includes \$156.039.431 held as reserve against United States notes and Treasury notes of 1890.
 ³ To avoid duplication, amount of silver dollars and bullion held as security against silver certificates and Treasury notes of 1890 outstanding is not included in total Treasury currency outstanding.
 ⁴ Because some of the types of money shown are held as collateral or reserves against other types, a grand total of all types has no special significance and is not shown. See note for explanation of these duplications.
 ⁵ Less than \$500,000.
 NOTE.—There are maintained in the Treasury—(i) as a reserve for United States notes and Treasury notes of 1890—\$156,039,431 in gold bullion; (ii) as security for Treasury notes of 1890—an equal dollar amount in standard silver dollars of a monetary value equal to the face amount of such silver certificates: and (iv) as security for gold certificates—gold bullion of a value at the legal standard equal to the face amount of such silver certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are selligible under the terms of the Federal Reserve Act, or of direct obligations of the United States. Federal Reserve in gold certificates of at leasen 150, did certificates of a leasen to for discusting and the deposite with the Treasurer of the United States, against Federal Reserve act, including the redemption fund, which must be deposite with the Treasurer of the united states, against Federal Reserve notes in actual circulation; gold certificates pledged as collateral may be counted with the Treasurer of the United States, as reserves. "Gold certificates" as herein used includes creatis with an Reserve Bank notes and national bank notes are in process of retirement.

¹ For end of year figures, represents change computed on absolute amounts in first column.

Norg.—For discussion of seasonal adjustment factors and for back figures on comparable basis see BULLETIN for September 1943, pp. 822-826. Because of an apparent change in the seasonal pattern around the year end, adjustment factors have been revised somewhat for dates affected, beginning with December 1942.

Revised.

¹ National series for which bank debit figures are available beginning with 1919.
 ² Number of centers reduced from 193 to 192 beginning December 1947, when one reporting bank was absorbed by a reporting bank in another city.
 ³ Weekly reporting member bank series.
 ⁴ Statistics for banks in leading cities revised beginning July 3, 1946; for description of revision and for back figures see BULLETIN for June 1947, pp. 692-693 and July 1947, pp. 878-883, respectively; deposits and debits of the new series for first six months of 1946 are estimated.

Nore.—Debits to total deposit accounts, except interbank accounts, have been reported for 334 centers from 1942 through November 1947, and for 333 beginning December 1947; the deposits from which rates of turnover have been computed have likewise been reported by most banks and have been estimated for others. Debits to demand deposit accounts, except interbank and U. S. Government, and the deposits from which rates of turnover have been computed have been computed have been reported by member banks in leading cities since 1935.

Preliminary. Corrected.
 ¹ Treasury funds included are the gold account, Treasury currency account, and Exchange Stabilization Fund.
 ² Demand deposits, other than interbank and U. S. Government, less cash items reported as in process of collection.
 ³ Excludes interbank time deposits; United States Treasurer's *lime* deposits, open account; and postal savings redeposited in banks.
 ⁴ Prior to June 30, 1947, includes a relatively small amount of demand deposits.
 NOTE.—For description of statement and back figures, see BULETIN for January 1948, pp. 24-32. The composition of a few items differs slightly from the description in the BULETIN article; stock of Federal Reserve Banks held by member banks is included in "Other securities" and in "Capital accounts," and balances of the Postal Savings System and the Exchange Stabilization Fund with the U. S. Treasury are netted against miscellaneous accounts instead of against U. S. Government deposits and Treasury cash. Except on call dates, figures are rounded to mearest 100 million dollars and may not add to the totals. See Banking and Monetary Statistics, Table 9, pp. 34-35, for back figures for deposits and currency.

* Partly estimated. r Revised. * "All 'banks" comprise "all commercial banks" and "all mutual savings banks." "All commercial banks" comprise "all nonmember com-mercial banks" and "all member banks" with exception of three mutual savings banks that became members in 1941. Stock savings banks and nondeposit trust companies are included with "commercial" banks. Number of banks includes a few noninsured banks for which asset and lia-bility data are not available. ¹ Beginning June 30, 1942, excludes reciprocal balances, which on Dec. 31, 1942, aggregated 513 million dollars at all member banks and 525 million at all insured commercial banks.

For other footnotes see following two pages.

² December 31, 1947 figures are consistent (except that they exclude possessions) with the revised all bank series announced in November 1947 by the Federal bank supervisory agencies, but are not entirely comparable with prior figures shown above; a net of 115 noninsured nonmember commercial banks with total loans and investments of approximately 110 million dollars was added, and 8 banks with total loans and investments of 34 million were transferred from noninsured mutual savings to nonmember commercial banks.

For other footnotes see preceding and opposite page.

* These figures do not include data for banks in possessions of the United States. During 1941 three mutual savings banks became members of the Federal Reserve System; these banks are included in "member banks" but are not included in "all insured commercial banks." ¹ Beginning June 30, 1948, figures for various loan items are shown gross (i. e., before deduction of valuation reserves); they do not add to the total and are not entirely comparable with prior figures. Total loans continue to be shown net. ² During the period Dec. 31, 1942–June 30, 1945, agricultural loans included loans to dealers, processors, and farmers' cooperatives covered by purchase agreements of the Commodity Credit Corporation, which are now classified as commercial and industrial loans; consequently, beginning Dec. 31, 1945, these items may not be entirely comparable with prior figures. ³ Central reserve city banks.

¹ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2) of

¹ Excluding balances with reporting hrms (1) of member hrms of new York book backing one of the second firms' own partners. ² Includes money borrowed from banks and also from other lenders (not including member firms of national securities exchanges). ³ As reported to the New York Stock Exchange. According to these reports, the part of total customers' debit balances represented by balances secured by U. S. Government securities was (in millions of dollars): March, 64; April, 68; May, 67. NOTE.—For explanation of these figures see "Statistics on Margin Accounts" in BULLETIN for September 1936. The article describes the method by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms. Back figures.—See Banking and Monetary Statistics, Table 143, pp. 501-502, for monthly figures prior to 1942, and Table 144, p. 503, for data in detail at semiannual dates prior to 1942.

¹ Monthly and weekly data are averages of daily figures, except for municipal bonds and for stocks, which are based on Wednesday figures.
 ² Average of taxable bonds due or callable in 15 years and over.
 ³ Prices derived from average yields, as computed by Standard and Poor's Corporation, on basis of a 4 per cent 20-year bond.
 ⁴ Prices derived from average yields, as computed by Standard and Poor's Corporation.
 ⁶ Prices derived from average sields, as computed by Standard and Poor's Corporation.
 ⁶ Prices derived from averages of median yields on noncallable high-grade stocks on basis of a \$7 annual dividend.
 ⁷ Average daily volume of trading in stocks on the New York Stock Exchange.
 Back figures.—See Banking and Monetary Statistics, Tables 130, 133, 134, and 136, pp. 475, 479, 482, and 486, respectively, and BULLETIN for May 1945, pp. 483-490, and October 1947, pp. 1251-1253.

 ⁷ Revised.
 ¹ Estimates of new issues sold for cash in the United States.
 ⁹ Gross proceeds are derived by multiplying principal amounts or number of units by offering price.
 ⁸ Estimated net proceeds are equal to estimated gross proceeds less cost of flotation, i.e., compensation to underwriters, agents, etc., and enses.
 ⁴ Includes repayment of other debt and other purposes. expenses. Source.-Securities and Exchange Commission; for compilation of back figures, see Banking and Monetary Statistics, Table 138, p. 491, a publication of the Board of Governors.

^{*} Revised. NOTE.—Manufacturing corporations. Data are from published company reports, except sales for period beginning 1946, which are from reports of the Securities and Exchange Commission. For certain items, data for years 1939-44 are partly estimated. Assets are total assets as of the end of 1946. Raihoads. Figures are for Class I line-haul railroads (which account for 95 per cent of all railroad operations) and are obtained from reports of the Interstate Commerce Commission, except that quarterly figures on operating revenue and profits before taxes are partly estimated by the Federal Reserve, to include affiliated nonelectric operations. Telephone. Figures are for 30 large companies (which account for about 85 per cent of all telephone operations) and exclude American Telephone. Telephone, Figures are for 30 large companies (which account for about 85 per cent of all telephone operations) and exclude American Telephone. Telephone, Tegures are for 30 large companies (which account for about 85 per cent of all telephone operations) and exclude American Telephone. Telephone, Fogures are for 30 large companies (which account for about 85 per cent of all telephone operations) and exclude American Telephone. Telephone, Fogures are for 30 large companies (and the second for dividends, which are from published company reports. All series. Profits before taxes refer to income after all charges and before Federal income taxes and dividends. For description of series and back figures, see pp. 662-666 of the BULLETIN for June 1949 (manufacturing); pp. 215-217 of the BULLETIN for March 1942 (public utilities); p. 1126 of the BULLETIN for November 1942 (telephone); and p. 908 of the BULLETIN for September 1944 (electric power).

7 Revised.

^r Revised.
 ¹ Including holdings by banks in territories and insular possessions, which amounted to 400 million dollars on June 30, 1948.
 ² Includes savings and loan associations, dealers and brokers, and investments of foreign balances and international accounts in this country. Nore.—Holdings of Federal Reserve Banks and U. S. Government agencies and trust funds are reported figures; holdings of other investor groups are estimated by the Treasury Department. The derived totals for banks and nonbank investors differ slightly from figures in the Treasury Bulletin because of rounding.

* Figures include only holdings by institutions or agencies from which reports are received. Data for commercial banks, mutual savings banks, insurance companies, and the residual "other" are not entirely comparable from month to month. Figures in column headed "other" include holdings by nonreporting banks and insurance companies as well as by other investors. Estimates of total holdings (including relatively small amounts of nonmarketable issues) by all banks and all insurance companies for certain dates are shown in the table above.
¹ Including Postal Savings and prewar bonds and a small amount of guaranteed securities, not shown separately below.

1

P Preliminary.
 ^r Revised.
 ¹ Excess of receipts (+) or expenditures (-).
 ² Excluding items in process of collection beginning with July 1947.
 ⁴ For description, see Treasury Bulletin for September 1947 and subsequent issues.
 ⁴ Including 3 billion-dollar transfer to Foreign Economic Cooperation Trust Fund, from which expenditures are made in later months.
 ⁶ Change in classification.
 ⁶ Including supplus property receipts and receipts from renegotiation of war contracts, which for fiscal years
 1946-1948 amounted to 501, 2,886, and 1,929 million dollars and 1,063, 279, and 161 million, respectively.
 ⁷ These are appropriated directly to the Federal old-age and survivors insurance trust fund.

¹ Assets are shown on a net basis, i. e., after reserve for losses.
 ² Totals for each quarter include the United States' investment of 635 million dollars in stock of the International Bank for Reconstruction and Development and its subscription of 2.750 million to the International Monetary Fund.
 ³ Includes "Deferred and undistributed charges," which were previously shown separately.
 ⁴ Less than \$500,000.
 ⁶ Includes Farm Security Administration program, Homes Conversion program, Public War Housing program, Veterans' Re-use Housing program, and Public Housing Administration activities under the United States Housing Act, as amended.
 ⁶ Assets representing unrecovered costs to the Corporation in its national defense, war, and reconversion activities, which are held for the Treasury for liquidation purposes in accordance with provisions of Public Law 860, 80th Congress.
 ⁷ Figures for one small agency are for a date other than Mar. 31, 1949.
 Norre —Statement includes for certain business-type activities of the U. S. Government. Comparability of the figures in recent

Nore.—Statement includes figures for certain business-type activities of the U. S. Government. Comparability of the figures in recent years has been affected by (1) the adoption of a new reporting form and the substitution of quarterly for monthly reports beginning Sept. 30, 1944, and (2) the exclusion of figures for the U. S. Maritime Commission beginning Mar. 31, 1948. For back figures see earlier issues of the BULLETIN and Banking and Monetary Statistics, Table 152, p. 517.

P Preliminary.
Revised.
For indexes by groups or industries, see pp. 836-839. For points in total index, by major groups, see p. 858.
Three-month moving average, based on F. W. Dodge Corporation data; for description of index, see BULLETIN for July 1931, p. 358.
Tor monthly data (dollar value) by groups see p. 843.
The unadjusted indexes of employment and pay rolls, wholesale commodity prices, and consumers' prices are compiled by or based on data of the Bureau of Labor Statistics. Nonagricultural employment covers employees only and excludes personnel in the armed forces.
For indexes by Federal Reserve districts and other department store data, see pp. 845-848.
Back figures in BULLETIN.—For industrial production, August 1940, pp. 825-882, September 1941, pp. 933-937, and October 1943, pp. 958-984;
for department store sales, June 1944, pp. 549-561.

ESTIMATED EMPLOYMENT IN NONAGRICULTURAL ESTABLISHMENTS, BY INDUSTRY DIVISION [Unadjusted, estimates of Bureau of Labor Statistics. Adjusted, Board of Governors] [Thousands of persons]

¹ Includes Federal Force Account Construction, * Revised.

Note.—Estimates include all full- and part-time wage and salary workers in nonagricultural establishments employed during the pay period ending nearest the 15th of the month. Proprietors, self-employed persons, domestic servants, and personnel of the armed forces are excluded. May 1949 figures are preliminary. Back unadjusted data are available from the Bureau of Labor Statistics; seasonally adjusted figures begin-ning January 1939 may be obtained from the Division of Research and Statistics.

LABOR FORCE EMPLOYMENT AND UNEMPLOYMENT

¹ Includes self-employed, unpaid family, and domestic service workers.
 ² Annual averages for 1940 include an allowance for January and February inasmuch as the monthly series began in March 1940.
 NOTE.—Details do not necessarily add to group totals. Information on the labor force status of the population is obtained through interviews of households on a sample basis. Data relate to the calendar week that contains the eighth day of the month. Back data are available from the Bureau of the Census.

¹Net proceeds to borrowers. ² Mortgages insured under War Housing Title VI through April 1946; figures thereafter represent mainly mortgages insured under the Veterans' Housing Title VI (approved May 22, 1946) but include a few refinanced mortgages originally written under the War Housing Title VI. Beginning with December 1947, figures include mortgages insured in connection with sale of Government owned war housing, and beginning with February 1948 include insured Joans to finance the manufacture of housing, ³ Less than \$500 000 ³ Less than \$500,000.

Nore.—Figures represent gross insurance written during the period and do not take account of principal repayments on previously insured loans. Figures include some reinsured mortgages, which are shown in the month in which they were reported by FHA. Reinsured mortgages on rental and group housing (Title II) are not necessarily shown in the month in which reinsurance took place.

¹ The ratio of stocks to sales is obtained by dividing stocks at the end of the month by sales during the month and hence indicates the number of months' supply on hand at the end of the month in terms of sales for that month. ² The 1941 average of monthly sales for each department is used as a base in computing the sales index for that department. The stocks index is derived by applying to the sales index for each month the corresponding stocks-sales ratio. For description and monthly indexes of sales and stocks by department groups for back years, see BULLETIN for August 1946, pp. 850-858. The titles of the tables on pp. 857 and . ⁸ For movements of total department store sales and stocks see the indexes for the United States on p. 845. ⁴ Index numbers of sales and stocks for this department are not available for publication separately; the department, however, is included in group and total indexes.

NOTE.—Based on reports from a group of large department stores located in various cities throughout the country. In 1947, sales and stocks at these stores accounted for about 50 per cent of estimated total department store sales and stocks. Not all stores report data for all of the departments shown; consequently, the sample for the individual departments is not so comprehensive as that for the total.

^{*} Revised.
n.a. Not available.
¹ Less than 50 million dollars.
² Includes employee contributions to social insurance funds.
³ Includes noncorporate inventory valuation adjustment.

NOTE .- Details may not add to totals because of rounding.

Source.—Figures in this table are the revised series. For an explanation of the revisions and a detailed breakdown of the series for the period 1929-43, see National Income Supplement to the Survey of Current Business, July 1947, Department of Commerce. For the detailed breakdown for the period 1944-47, see Survey of Current Business, July 1948. For a discussion of the revisions, together with annual data for the period 1929-43, and quarterly data for 1939, 1940, and 1941, see also pp. 1105-1114 of the BULLETIN for September 1947; data subsequent to 1943 shown in that issue of the BULLETIN have since been revised.

^p Preliminary.
 ¹ Figures include only personal instalment cash loans and retail automobile direct loans shown on the following page, and a small amount of other retail direct loans not shown separately. Other retail direct loans outstanding at the end of May amounted to 98 million dollars and loans made during May were 10 million.
 ² Figures include only personal instalment cash loans, retail automobile direct loans, and other retail direct loans. Direct retail instalment loans are obtained by deducting an estimate of paper purchased from total retail instalment paper.
 ³ Includes only loans insured by Federal Housing Administration.

Estimated. * Preliminary. * Revised.
Figures for other than Wednesday dates are shown under the Wednesday included in the weekly period.
Includes special certificates of indebtedness of 220 million dollars.
For charts on pp. 22, 29, and 35, figures for a more recent period are available in the regular BULLETIN tables that show those series. Because the Chart Book is usually released for duplication some time after the BULLETIN has gone to press, most weekly charts and several monthly charts include figures for a more recent date than are shown in this table.
Adjusted for seasonal variation.
Effective Mar, 30 margin requirements were reduced to 50 per cent.
Excenditures anticipated by business during the third quarter of 1949 are (in billions of dollars): All business, 4.6; manufacturing and mining, railroads and utilities, 3.2; manufacturing and mining, 2.0.
Monthly issues of this edition of the Chart Book may be obtained at an annual subscription rate of \$9.00; individual copies of monthly issues at \$1.00 each.

NOTE.—The figures for assets, deposits, capital accounts, number of officers and employees, and number of banks are as of the end of the year. Real estate assets are comprised of banking house and equipment, other real estate owned, and items indirectly representing bank premises or other real estate. Cash assets are comprised of cash, balances with other banks (including reserve balances), and cash items in process of collec-tion. Total capital accounts are comprised of the aggregate book value of capital stock, capital notes and debentures, surplus, undivided profits, reserves for contingencies, and other capital reserves. Tables showing member bank earnings and ratios by class of banks and by District for 1948 were published in the May BULLETIN, pp. 583–90. For other footnotes see preceding page.

INTERNATIONAL FINANCIAL STATISTICS

	PAGE
International capital transactions of the United States	864-869
Gold production .	869
Reported gold reserves of central banks and governments	870
Gold movements; gold stock of the United States	871
International Monetary Fund and Bank	872
Central banks	872-876
Money rates in foreign countries	877
Commercial banks	878
Foreign exchange rates	879
Price movements:	
Wholesale prices .	880
Retail food prices and cost of living	881
Security prices .	881

Tables on the following pages include the principal available statistics of current significance relating to gold, international capital transactions of the United States, and financial developments abroad. The data are compiled for the most part from regularly published sources such as central and commercial bank statements and official statistical bulletins, some data are reported to the Board directly. Figures on international capital transactions of the United States are collected by the Federal Reserve Banks from banks, bankers, brokers, and dealers in the United States in accordance with the Treasury Regulation of November 12, 1934. Back figures for all except price tables, together with descriptive text, may be obtained from the Board's publication, *Banking and Monetary Statistics*.

INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES

NET CAPITAL MOVEMENT TO UNITED STATES SINCE JANUARY 2, 1935

Preliminary.
 ¹ This category made up as follows: through Sept. 21, 1938, funds held by foreign central banks at the Federal Reserve Bank of New York and deposit accounts held with the U. S. Treasury; beginning Sept. 28, 1938, also funds held at commercial banks in New York City by central banks maintaining accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federal Reserve Bank of New York; beginning July 17, 1940, also funds in accounts at the Federal Reserve Bank of New York; beginning july 17, 1940, also funds in accounts at the Federal Reserve Bank of New York; beginning july 17, 1940, also funds in accounts at the Federal Reserve Bank of New York; beginning with the new series commencing with the month of July 1942, all funds held with banks and bankers in the United States by foreign central banks and by foreign central governments and their agencies (including official purchasing missions, trade and shipping missions, diplomatic and consular establishments, etc.).
 ³ Beginning with 1947, these figures include transactions of international institutions, which are shown separately in Tables 5 and 6. Securities of such institutions are included in foreign securities.
 ³ The weekly series of capital movement statistics reported through July 1, 1942, was replaced by a monthly series commencing with July 1942. Since the old series overlapped the new by one day, the cumulative figures were adjusted to represent the movement through June 30 only. This adjustment, however, is incomplete since at tables into account only certain significant movements known to have occurred on July 1. Subsequent figures are based upon new monthly series. For further explanation see BULLETIN for September 1945, pp. 960-974. For revision of earlier figures to include movement in official Philippine accounts held with U. S. Treasury, see BULLETIN for September 1945, pp. 960-974. For revision of earlier figures to include moveme

INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES—Continued

Revised.

^r Revised. Gold production in U. S. S. R.: No regular Government statistics on gold production in U. S. S. R. are available, but data of percentage changes irregularly given out by officials of the gold mining industry, together with certain direct figures for past years, afford a basis for estimating annual production as follows: 1934, 135 million dollars; 1935, 158 million; 1936, 187 million; 1937, 185 million; 1938, 180 million.
¹ Estimates of United States Bureau of Mines.
² Beginning 1942, figures reported by American Bureau of Metal Statistics. Beginning 1944, they are for Gold Coast only.
³ Reported by American Bureau of Metal Statistics.
⁴ Includes Philippine production received in United States through 1945. Annual figures through 1947 are estimates of United States Mint.
Figures for 1948 and 1949 are estimates of American Bureau of Metal Statistics.
⁵ Gold exports, reported by the Banco Nacional de Nicaragua, which states that they represent approximately 90 per cent of total production.
⁶ Monthly figures reported by the American Bureau of Metal Statistics.
⁸ Monthly figures reported by the American Bureau of Metal Statistics.

NOTE.—For explanation of table and sources, see BULLETIN for June 1948, p. 731; February 1939, p. 151; July 1938, p. 621; June 1938, p. 540; April 1933, pp. 233-235; and Banking and Monetary Statistics, p. 524. For annual estimates compiled by the United States Mint for these and other countries in the period 1910-1941, see Banking and Monetary Statistics, pp. 542-543.

Preliminary.
 ¹ Includes gold in Exchange Stabilization Fund. Gold in active portion of this Fund is not included in regular statistics on gold stock (Treasury gold) used in the Federal Reserve statement "Member Bank Reserves, Reserve Bank Credit, and Related Items" and in the Treasury statement "United States Money, Outstanding and in Circulation, by Kinds."
 ² Estimated dollar values derived by converting gold at home in amounts up to 1,224.4 million pesos at the rate of 3,0365 pesos per U. S. dollar and all other gold at the rate of 3,0365 pesos per U. S. dollar.
 ³ Figures as reported by Foreign Exchange Control Board and Minister of Finance.
 ⁴ Total gold holdings are not available. Beginning April 1946, the series is new and represents gold held as reserve (25 per cent minimum) less gold in foreign currency liabilities.
 ⁴ Figures are for following dates: 1942—Jan. 31; 1946—Mar. 31; and 1947—Mar. 31.
 ⁴ Gold holdings of Bank of England reduced to nominal amount by gold transfers to British Exchange Equalization Account during 1939.
 ⁴ These countries are: Algeria. Belgian Congo, Bolivia, Bulgaria, Costa Rica, Dominican Republic, Ecuador, Eire, El Salvador, Ethiopia, Finland, Guatemala, Iceland, Nicaragua, Pakistan beginning July 1948, and Siam. Figures for certain of these countries have been carried forward; from last official reports.
 MOTS,—For back figures, see *Banking and Monetary Statistics*, Table 160, pp. 544–555, and for a description of figures, including details regarding special internal gold transfers affecting the reported data, see pp. 524–535 in the same publication.

CENTRAL BANKS

¹ Through February 1939, valued at legal parity of 85 shillings a fine ounce; thereafter at market price, which fluctuated until Sept. 6, 1939, when it was officially set at 168 shillings per fine ounce; the latter rate remained in effect until June 9, 1945, when it was raised to 172 shillings and three pence.
 ³ Securities and silver coin held as cover for fiduciary issue, the amount of which is also shown by this figure.
 ⁴ Notes issued less amounts held in banking department.
 ⁴ On Jan. 6, 1939, 200 million pounds sterling of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1, 1939, about 5.5 million pounds sterling of gold (at legal parity) transferred from Bank to Exchange Equalization Account; on Mar. 1, 1939, about 5.5 million pounds (at current price) transferred from Exchange Account to Bank; on Sept. 6, 1939, 279 million pounds transferred from Bank to Exchange Account.
 ⁴ Fiduciary issue increased by 25 million pounds on Dec. 22, 1948, and decreased by 25 million pounds on Dec. 22, 1948, and decreased by 25 million pounds on previous changes see BULLETIN for April 1949, p. 450, and February 1948, p. 254.
 NOTE —For back forumes see Banking and Mondary Statistics. Table 164, pp. 638-640: for description of statistics, see pp. 560-561 in same.

NOTE.-For back figures see Banking and Monetary Statistics, Table 164, pp. 638-640; for description of statistics, see pp. 560-561 in same-publication.

¹ Securities maturing in two years or less.
 ² Includes notes held by the chartered banks, which constitute an important part of their reserves.
 ³ Includes notes held by the chartered banks, which constitute an important part of their reserves.
 ⁴ Beginning November 1944, includes a certain amount of sterling and United States dollars.
 ⁴ On May 1, 1940, gold transferred to Foreign Exchange Control Board in return for short-term Government securities (see BULLETIN for July 1940, pp. 677-678).
 ⁶ Less than \$50,000.
 ⁶ Composition of these items has been changed: Open market henceforth shows only open market portfolio proper and excludes 65 billion francs advanced to the Treasury and 5 billion frances advances for occupation costs and a number of perpetual and term loans to the Government. Other assets were reduced through the transfer to "Other advances" of several loans to Government.
 ⁷ Central Administration of the Reichskreditkassen.
 ⁸ Includes 9,293 million france, see BULLETIN for June 1949, p. 747; May 1948, p. 601; May 1940, pp. 406-407; January 1939, p. 29; September 1937, p. 853; and November 1936, pp. 878-880.
 NOTE.—For back figures on Bank of Canada and Bank of France, see Banking and Monetary Statistics, Tables 166 and 165, pp. 644-645

NOTE.—For back figures on Bank of Canada and Bank of France, see *Banking and Monetary Statistics*, Tables 166 and 165, pp. 644–645 and pp. 641–643, respectively; for description of statistics, see pp. 562–564 in same publication. For last available report from the Reichsbank (February 1945), see BULLETIN for December 1946, p. 1424.

¹ Government decree of Apr. 24, 1946, provided for the guarantee of all deposits registered in the name of the Central Bank. ^{*} By decree of May 24, 1946, the Central Bank became responsible for all subsidiary money. ^{*} In accordance with the law of July 28, 1948, the National Bank revised its weekly statement, effective Sept. 16, 1948. The new figures are therefore not comparable with those shown previously. Figures on the old basis through August 1948 are given in the BULLETIN for November 1948 and prior issues. A detailed description comparing the items in the new and the old form is given in the Belgian newspaper "Echo de la Bourse" for Sept. 20, 1948. ^{*} For last available report (January 1943), see BULLETIN for July 1943, p. 697. ^{*} Beginning January 1948, gold valued at 31 pesos per U. S. dollar, while previously it was valued at 4.855 pesos per dollar. ^{*} This figure represents the amount of the bank's subscription to the Fund less the bank's local currency liability to the Fund. Until_such time as the Fund engages in operations in this currency, the "net claim" will equal the country's gold contribution. ^{*} Gold not reported separately beginning May 31, 1948. ^{*} Gold not reported separately beginning Dec. 31, 1946.

¹ From September 1939 through November 1946, this table represents aggregates of figures reported by individual banks for days, varying from bank to bank, toward the end of the month. After November 1946, figures for all banks are compiled on the third Wednesday of each month, except in June and December, when the statements give end-of-month data. ³ Represent six-month loans to the Treasury at 1½ per cent through Oct. 20, 1945, and at ½ per cent thereafter.

NOTE.—For back figures and figures on German commercial banks, see Banking and Monetary Statistics, Tables 168-171, pp. 648-655, and for description of statistics see pp. 566-571 in same publication.

Preliminary. *Corrected

 New series beginning 1947, derived from average yields of 12 bonds on basis of a 2¾ per cent 30-year bond. Annual average for the old series for 1947 (121.5) and figures for years prior to 1947 are derived from average of 5 median yields in a list of 15 issues on basis of a 4 per cent 20-year bond. Source.—Standard and Poor's Corporation; for compilations of back figures on prices of both bonds and common stocks in the United States, see Banking and Monetary Statistics, Table 130, p. 475, and Table 133, p. 479.
 ^a This index is based on one 15-year 3 per cent theoretical bond. Yearly averages for 1939 and 1940 are based on monthly averages and thereafter on the capitalized yield as calculated on the 15th of every month.
 ^b This index represents the reciprocals of average yields for 13 issues, including government, provincial, municipal, mortgage, and industrial bonds. The average yield in the base period (January-March 1937) was 3.39 per cent.
 ^c This index is based on 95 common stocks through 1944; on 100 stocks, 1945-1948; and on 106 stocks beginning 1949.
 ^e In September 1946 this index was revised to include 185 metropolitan issues, 90 issues of colonial France, and 20 issues of French companies abroad. See ''Bulletin de la Statistique Générale.'' September-November 1946, p. 424.
 ^e This is a new index for 37 Netherlands issues (27 industrial, 5 banking, and 5 shipping shares) and represents an unweighted monthly average based on figures for 5 months; no data available January-February.
 ^s Average based on figures for 10 months; no data available January-February.
 ^s Average based on figures for 10 months; no data available January-February.
