FEDERAL RESERVE BOARD

Ex officio members:

A. W. MELLON,

Secretary of the Treasury, Chairman.

J. W. Pole,

Comptroller of the Currency.

EUGENE MEYER, Governor.

----, Vice Governor.

CHARLES S. HAMLIN.

ADOLPH C. MILLER.

GEORGE R. JAMES.

WAYLAND W. MAGEE.

———, Secretary.

E. M. McClelland, Assistant Secretary.

J. C. Noell, Assistant Secretary.

W. M. IMLAY, Fiscal Agent.

Chief, Division of Examination, and Chief Federal Reserve Examiner.

WALTER WYATT, General Counsel.

E. A. GOLDENWEISER, Director, Division of Research and Statistics.

CARL E. PARRY, Assistant Director, Division of Research and Statistics.

E. L. SMEAD, Chief, Division of Bank Operations.

FEDERAL ADVISORY COUNCIL

SUBSCRIPTION PRICE OF BULLETIN

The Federal Reserve Bulletin is the board's medium of communication with member banks of the Federal reserve system and is the only official organ or periodical publication of the board. The Bulletin will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is \$2. Single copies will be sold at 20 cents. Outside of the United States, Canada, Mexico, and the insular possessions, \$2.60; single copies, 25 cents.

² Controller.

FEDERAL RESERVE BULLETIN

Vol. 17 JUNE, 1931 No. 6

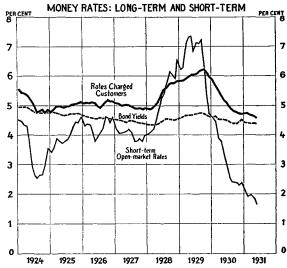

REVIEW OF THE MONTH

Open-market rates on short-term paper declined further in May, the rate on commercial paper showing a reduction to 2-2½ per cent, the rate on time money to 1½-1¾ per cent,

and the rate on bankers' acceptances to seveneighths of 1 per cent, while the rate on call money remained stable at 1½ per cent. These reductions in short-term money rates in the open market were accompanied by decreases in discount and buying rates at the reserve banks. At the New York bank the discount rate was reduced on May 8 to 1½ per cent, the lowest rate on record for any bank of issue, and the buying rate on acceptances was reduced to 1 per cent on all maturities up to 90 days. Nine of the other reserve banks also reduced their discount rates during the month. Rate reductions in this country were followed by declines on May 14 in the British bank rate from 3 to 2½ per cent and on May 16 in the discount rate of the Netherlands bank from 2½ to 2 per cent. Open-market rates on short-term money abroad also showed a slight downward tendency. There were further reductions at many centers in this country in rates paid on deposits, clearing house banks in several financial centers reducing the rate paid on bankers' balances to one-half of 1 per cent.

Declines in short-term money rates have been accompanied by less pronounced reductions in long-term rates and in rates charged by banks to their customers. Comparison of a weighted average of open-market rates on short-term money with average yields on 60 standard bonds and with an average of rates charged their customers by banks in the larger cities is made in the accompanying chart.

The chart shows that during the year and one-half between the autumn of 1929 and May, 1931, open-market rates on short-term money declined from 7½ per cent to 1½ per cent, while rates charged to customers declined from 6½ to 4½ per cent and rates on long-term money (bond yields) from 4½ per cent to 4½ per cent.

Rates charged customers by banks in principal cities—weighted average of prevailing rates; see p. 309. Bond yields—average yield on 60-high-grade bonds (Standard Statistics Co.); see p. 312. Short-term open-market rates—weighted average of prevailing rates on call and time loans on the stock exchange, bankers' acceptances, and commercial paper

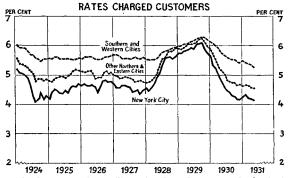

The relatively small decline in the yields of high-grade bonds included in the average corresponds to a relatively small rise in 1928 and 1929, when the rise in short-term money rates and the preference of the public for stocks resulted in a decline in bond prices and a rise in bond yields. In recent months the abundance of funds and the continuous decline in short-term rates has been reflected in increased purchases of high-grade bonds by banks and other investors, in a rise of prices of these bonds, and in a corresponding decline in their yields. This rise, however, has not extended to lower-grade

domestic bonds nor to most foreign bonds whose prices reflect primarily not the cost of longterm money, but the market estimate of risk involved in carrying the security under present conditions. Since the beginning of this year prices of the highest class of bonds have advanced steadily, United States Government securities have reached new high levels, and the best corporate bonds have also advanced in price. New bond issues, however (exclusive of United States Government securities), were considerably smaller during the first four months of this year than during the same period of the two preceding years, reflecting chiefly the reluctance of investors to participate in longterm financing of industry and trade during a period of depression and uncertainty about the future course of business.

In considering the line on the chart referring to rates charged to customers, it should be pointed out that the rates included are those charged on the bulk of their loans by banks in

cities with Federal reserve banks and branches. They are the rates shown on the face of the loans and do not necessarily represent the entire cost of the money to borrowers, which may include the requirements of minimum balances and other items of cost. These rates may be considered as representative of rates charged to customers by banks in all cities of considerable size, the aggregate of commercial loans made by these banks at these rates being equal to between one-third and one-half of all such loans made by banks in this country. While it is impossible to estimate the proportion of borrowers that pay these rates, this proportion is doubtless smaller than the proportion of the total amount of loans that are carried at these rates, because the banks included or represented in the sample are the larger banks and on the average make larger loans. The significance of the figures lies in the fact that the decline in open-market money rates in the past 18 months has been accompanied by considerable declines in rates charged by banks to customers whose borrowings in the aggregate constitute a large proportion of all commercial loans made by banks in this country.

Rates charged to customers by banks in the larger cities show considerable geographic differences. These differences are brought out by the next chart, which shows separately average rates charged customers by banks in New York City, in 8 northern and eastern cities, and in 27 southern and western cities. At New York City banks, rates charged to customers, after rising from 4½ per cent in 1927 to 6\% per cent in 1929, fell to 4\% per cent in May, 1931. In the other northern and eastern cities the rates rose from 4% per cent in 1927 to 6¼ per cent in 1929 and then fell to 4½ per cent at the present time. In the cities of the South and West rates charged customers did not decline below 5½ per cent in 1927, rose to just below 6\% per cent in 1929, and have since

Weighted averages of prevailing rates charged customers by banks in Federal reserve bank and branch cities: New York City, 8 other northern and eastern cities, and 27 southern and western cities. (See p. 308)

declined to 5\% per cent. It may be noted that for all three classes of banks rates charged to customers are now lower than at the low point of the previous low money period in 1927, and except in the case of New York City banks, lower than at the low point in 1924. The chart shows that fluctuations in the cost of banking accommodation to trade and industry become smaller as one moves away from the financial centers. Still smaller fluctuations, and in many cases complete stability, would doubtless be shown if data were available for smaller towns and for rural districts in the South and West, where rates to customers often remain at a customary level from year to year, regardless of advances and declines in rates at the larger centers. While the cost of bank credit to the average borrower in these localities is not much influenced by conditions in the money market, these conditions, nevertheless, exert an influence on the banks in the smaller places, because they influence the returns on the banks' surplus funds held either in the form of loans in the open market or in the form of deposits with city correspondents. The recent reduction to one-half of 1 per cent in the rate paid on bankers' balances at the New York clearing banks has resulted in a tendency to shift these balances to loans made to brokers by the New York banks for account of their country correspondents. rate on these loans is still 1½ per cent, and, even after deduction of the New York banks' commission, they yield a larger return to the country banks than do funds kept on deposit with city correspondents.

Notwithstanding the low rates established by the reserve banks for the purchase of ac-

Decline in reserve bank credit

ceptances, there was a further decrease in May in the reserve banks' holdings of these bills, and since the volume of dis-

counts and of United States Government securities has remained practically constant, there was a corresponding decrease in the total volume of reserve bank credit. decrease of about \$35,000,000 during May has accompanied a considerably larger addition to the country's stock of monetary gold, reflecting chiefly imports from Argentina.

Changes in the distribution of gold reserves among the different countries of the world at the

end of last year have recently Changes in gold become available in more comdistribution plete detail. During the year 1930 gold reserves of the principal countries of the world increased by \$600,000,000, compared with a total gold production of \$400,000,000 during the year. This increase in the central gold reserves during 1930 in excess of production was due to several factors, including a decrease in the demand for gold from industry, owing to the business depression. India, which in prosperous years absorbs a considerable amount

of gold that goes largely into hoards and thus

small taker of the precious metal in 1930. Furthermore, \$100,000,000 of gold was added to central reserves through the transfer of gold from the commercial banks in Australia to the Commonwealth Bank, which in turn exported it to England. In Russia the returns show an addition of \$100,000,000 to the gold stock of the State Bank, of which only about \$20,000,000 represented domestic production of gold. As no gold was shipped to Russia during the year from important gold producing or gold holding countries, the remainder was apparently drawn from unreported sources within the country. The central gold reserves were also increased by the shipment to this country of gold from China and other countries, where it had not been held in a central gold In addition, some gold was turned in from private use in this country, France, and England.

The character of the shift in gold holdings during the year has been commented upon on previous occasions. The more complete figures now available confirm the statements previously made that during 1930 the unusually large addition to the world's central gold reserves was for the most part acquired by France and the United States and that these countries in addition were the ultimate recipients of considerable amounts of gold exported by outlying raw-material producing countries, while the other large commercial countries have maintained their gold reserves at a fairly constant level.

Changes in Bill Rates and Discount Rates

At the Federal Reserve Bank of New York buying rates on bills of maturities to 90 days were reduced as follows: May 13, rates on 1 to 15 day maturities from 1% to 1 per cent; 31 to 90 day maturities from 1\% to 1\% per cent; May 19, rates on 16 to 90 day maturities from 1% to 1 per cent.

The discount rate on all classes and maturities of paper was reduced from 3½ to 3 per cent at the Federal Reserve Bank of Richmond ceases to count as gold reserves, was a relatively effective May 15 and at the Federal Reserve Bank of Kansas City effective May 21 and from 3 to 2½ per cent at the Federal Reserve Bank of San Francisco effective May 22.

Changes in Foreign Central Bank Discount Rates

The following changes have been reported in the discount rates of central banks in foreign countries: Central Bank of Chile, May 5, from 7 to 8 per cent, and May 7, from 8 to 9 per cent; Central Bank of Ecuador, March 14, from 9 to 10 per cent; Bank of England, May 14, from 3 to 2½ per cent; Imperial Bank of India, May 28, from 7 to 6 per cent; Netherlands Bank, May 16, from 2½ to 2 per cent.

Resignation of the Board's Secretary

Mr. Walter L. Eddy, secretary of the Fed- Federal Reserve E eral Reserve Board, resigned, effective May 31, December 31, 1930.

1931, on account of ill health. Mr. Eddy has been connected with the Federal reserve system since the beginning; he had served with the organization committee and had occupied various positions on the board's staff until October 1, 1923, when he became secretary of the board.

Annual Report of the Federal Reserve Board

The complete edition of the annual report of the Federal Reserve Board, covering operations for the year 1930, is now available. It contains, in addition to the text of the report, statistics relating to banking and business conditions generally. It also gives the recommendations made by the Federal Advisory Council during 1930, court decisions relating to the Federal reserve system, and the regulations of the Federal Reserve Board as they existed on December 31, 1930.

NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled May 23 and released for publication May 25]

Output of manufactures and employment at factories showed little change from March to April, and output of mines, which ordinarily decreases at this season, also remained unchanged. Wholesale prices continued to decline, and money rates eased further.

Production and employment.—Industrial production, as measured by the Federal Reserve Board's seasonally adjusted index, which covers both manufactures and mines, increased from 88 per cent of the 1923–1925 average in March to 89 in April, compared with 82, the low point reached last December. Steel-mill activity declined by considerably more than the usual seasonal amount, while in the automobile industry there was a larger than seasonal increase in output, according to preliminary reports. Consumption of cotton by domestic mills continued to increase, contrary to the usual seasonal movement, while there was a decrease in unfilled orders for cotton cloth, which was only partly seasonal in nature; consumption of wool, which ordinarily declines in April, increased considerably; at silk mills activity declined. There were large increases in the output of petroleum and anthracite coal, while production of bituminous coal declined by about the usual seasonal amount.

The number employed in factories at the middle of April was about the same as a month In car-building shops and in estabearlier. lishments producing machinery, employment decreased considerably, while in the automobile and cement industries there were seasonal increases, and in the fertilizer industry a larger than seasonal increase. Employment at textile mills declined by less than the seasonal amount, reflecting chiefly a slight increase in employment at cotton mills and a small decrease in the clothing industry; at mills producing woolen and silk goods declines in employment were larger than usual. Factory pay rolls declined somewhat in April.

Value of building contracts awarded, which fluctuates widely from month to month, declined considerably in April, according to the F. W. Dodge Corporation, and decreases were reported in all the leading classes of construction. In the first four months of the year total awards decreased 26 per cent from the corresponding period of 1930, reflecting declines of 10 per cent for residential building, 17 per cent for public works and utilities, 25 per cent

for educational building, 43 per cent for factories, and 57 per cent for commercial buildings.

Distribution.—Freight-car loadings showed about the usual seasonal increase in April. Department-store sales increased 9 per cent from March, and the board's index, which makes allowance for the usual seasonal variations, including changes in the date of Easter, stood at 105 per cent of the 1923–1925 average, compared with 97 per cent in March.

Wholesale prices.—The general level of wholesale prices declined 1.6 per cent further in April, according to the Bureau of Labor Statistics. In the first half of May prices of many leading commodities were reduced further, and for the 6-week period as a whole there were large declines in the prices of cotton, silk, and textiles; livestock and dairy products; cement, petroleum products, and nonferrous metals.

Bank credit.—Loans and investments of reporting member banks in leading cities declined by about \$150,000,000 between April 1 and the middle of May, reflecting substantial liquidation in loans on securities and in all other loans, largely commercial. This liquidation of loans was offset in part by further large additions to the banks' investments, which on May 13 were over \$1,000,000,000 larger than at the beginning of the year.

Volume of reserve bank credit declined somewhat in the six weeks ending on May 16. Contrary to the usual seasonal tendency, there was some further increase in currency demand for the period, reflecting chiefly banking disturbances in the Middle West. Gold imports continued in considerable volume and supplied the member banks with sufficient funds to meet the additional demand for currency, and also to reduce somewhat the amount of reserve bank credit outstanding.

Money rates declined to new low levels during May. Rates on bankers' acceptances, which had declined from 1½ per cent in the middle of April to 1½ per cent by the end of the month, were reduced to seven-eighths of 1 per cent by May 19. Rates on commercial paper declined from a range of 2½-2½ to a range of 2-2½ per cent.

At the reserve banks buying rates on bankers' acceptances were reduced in April and the first half of May, and in May discount rates were also reduced, the rate at the Federal Reserve Bank of New York being lowered to 1½ percent.

FEDERAL RESERVE BANK CREDIT

Based on weekly averages of daily figures; latest figures are for week ending May 27

RESERVE BANK CREDIT OUTSTANDING AND FACTORS IN CHANGES

Note.—Figures relate to rates charged by reporting banks to their own customers as distinguished from open-market rates (which are given in preceding table). All averages are based on rates reported for 3 types of customer loans—commercial loans, and demand and time loans on securities. The method of computing the averages takes into account (a) the relative importance of each of these 3 types of loans and (b) the relative importance of each of these 3 types of loans and (b) the relative importance of each reporting bank, as measured by total loans. In the two group averages the average rate for each city included is weighted according to the importance of that city in the group, as measured by the loans of all banks in the city.

Back figures.—See Annual Report for 1930 (Table 39).

NOTE.—Rates on prime bankers' acceptances. Higher rates may be charged for other classes of bills.

Back figures. - See Annual Report for 1930 (Table 34).

Stock exchange call loans; new and renewal rates.
 Stock exchange 90-day time loans.
 Sissues—336, 334, 4 per cent; yields calculated on basis of last redemption dates—1947, 1956, and 1954.
 Change of issues on which yield is computed.

Back figures .- See Annual Report for 1930 (Tables 36 and 37).

¹ For lenders other than member banks—i. e., nonmember banks, for-eign banks, corporations, etc.—only security loans to brokers in New York City are included in available reports. ² Revised figures, based in part on weekly returns of reporting member banks in addition to sources used for earlier dates. ^{*} Revised.

¹ Source: Commercial and Financial Chronicle.
² Issues publicly offered; annual totals are as finally reported by Department of Commerce; monthly figures are as compiled currently and are subject to revision.
³ Includes issues of Federal land banks and Federal interemediate credit banks, not shown separately.
⁴ Includes Treasury issues (exclusive of refunding) as follows: March, \$408,925,000; April, \$429,483,000.
• Revised. ፆ Preliminary.

¹ Without seasonal adjustment.

Note.—The combined index of industrial production is computed from figures for 57 statistical series (49 of manufactures and 8 of minerals) most of which are shown in this table. Adjustments have been made in the different industries for the varying number of working days in each month and for customary seasonal variations, and the individual products and industries have been weighted in accordance with their relative importance. The sources of data and methods of construction were described in the Bulletin for February and March, 1927. For recent revision see Bulletin for February, 1931 (p. 107).

 $^{^{2}}$ Includes also lead and zinc; see "Minerals."

 $[^]r$ Revised.

Preliminary.

¹ Based throughout on figures of daily average sales, which are computed on the basis of the number of week days in each month—Saturday being considered equivalent to one and one-third days—with allowance for six national holidays: New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas. Adjustment for seasonal variation makes allowance in March and April for the effects upon sales of changes in the date of Easter.

Preliminary.

FOREIGN BANKING AND BUSINESS CONDITIONS

ANNUAL REPORT OF THE BANK OF ITALY

The annual report of the Bank of Italy for 1930 was submitted to the general meeting of shareholders on March 28, 1931. Sections of the report dealing with the general situation, Government finance, credit to domestic industries, reserves of the Bank of Italy, and legislation affecting the bank, are given herewith:

General situation.—The acute depression which originated abroad has extended in varying degrees to our market, interrupting the movement already begun for restoration. It could not be otherwise in view of the character of our economy, its sensitiveness to foreign influences, and the incompleteness of its recovery. But recognition should be given to the effective resistance offered by our economic organism to the depression, whether by reason of the bases on which it is now established or as a result of the timely measures adopted by the National Government to alleviate the crisis and to promote gradual recovery.

Government finance.—For the fiscal year ended June 30, 1930, which closed with actual receipts totaling 19,897,000,000 lire (\$1,046,000,000) and expenditures of 19,746,000,000 lire (\$1,038,000,000), the surplus was only 151,000,000 lire (\$7,900,000) compared with the estimate for the year of 258,000,000 lire (\$13,500,000) and with a realized surplus in 1928–29 of 555,000,000 lire (\$29,200,000).

The present financial year has shown from the very beginning a decline in the ratio between receipts and expenditures, which, although it was only the natural result of worldwide forces affecting all countries, could not fail to impel the National Government to take speedy measures of defense. It was expected that the working out of the crisis here would permit a more normal rate of receipts while the public authorities endeavored to reduce expenditures.

During the first eight months of the fiscal year the actual increase from 1929-30 to 1930-31, of 1.62 per cent in receipts was accompanied by an increase of 8.27 per cent in expenditures undertaken. It is gratifying, however, to note that in the past few months

the deficiency of actual receipts has been shrinking, principally because of the better yield of the tax on exchange and of the duty on grain.

During 1930 the public debt increased by 1,092,000,000 lire (\$57,400,000) to 88,781,000,000 lire (\$4,669,800,000), an increase of 1.24 per cent. The funded debt was reduced by 40,000,000 lire (\$2,100,000) and the redeemable debt by 162,000,000 lire (\$8,500,000); on the other hand, the interest-bearing current accounts of the Royal Treasury—which under our system constitute the so-called floating debt, represented in other countries by ordinary treasury bills—increased during the year by 1,294,000,000 lire (\$68,000,000). This increase raised the proportion of the floating debt to the total public debt for 1930 from 3.6 to about 5 per cent.

During 1930, under the supervision of the Office of Amortization of the Public Debt, securities amounting to about 44,100,000 lire (\$2,300,000), almost exclusively in consolidated loans, were retired.

In regard to the foreign debt of the State, the so-called Morgan loan (\$100,000,000, 7 per cent, 1951), which constitutes the entire external debt, was reduced in the past year from \$93,340,089 to \$91,373,900, i. e., to 1,736,104,100 lire.

As to the war debts to the United States of America and to Great Britain, it is stated that the Royal Treasury, utilizing the payments in cash and in kind made by Germany on reparations account, had paid up to December 15, 1930, \$25,199,466 to the North American Government, and, up to January 15 last, £22,041,660 (\$107,265,738) to the British Government.

Syndicate for advances against industrial securities.—On December 31, 1930, the credit extended by the Syndicate for Advances against Industrial Securities totaled 671,200,000 lire (\$35,300,000) in comparison with 662,400,000 (\$34,800,000) at the close of the preceding year, as appears in the following table (in millions of lire):

	1929	1930	Differ- ence
Advances on securities Industrial bills Advances on commodities Shipping credits	180. 2 377. 4 8. 9 95. 9	109. 0 395. 9 7. 5 158. 8	-71. 2 +18. 5 -1. 4 +62. 9
Total	662. 4	671. 2	+8.8

¹ In addition the report deals with the Bank for International Settlements, foreign exchanges, money market, securities markets, currency in circulation, foreign trade, industry, agriculture, banking, and the detailed operations of the bank and its branches. For earlier reports see FEDERAL RESERVE BULLETIN, July, 1930, June, 1929, July, 1928, and August, 1927. The present report is available in Italian.

The noticeable reduction of advances on securities is due essentially to the careful selection of industrial securities offered as guarantee; while the increase, also notable, of transactions in shipping credits, has its origin in loans granted directly or through the intermediary of the Institute for Shipping Credit to the armament industry.

Reserve position of the Bank of Italy.—The proportion of gold in the total reserve at the end of December, 1930, stood at 55 per cent, whereas a year before it did not exceed 50 per cent. Since at the close of 1930 the notes of the bank in circulation and other demand liabilities amounted to a total of 18,101,000,000 lire (\$952,113,000), the proportion of the total reserve to the obligations to be covered worked out at 53 per cent, against 55 per cent at the close of 1929. The gold in vault alone represented 29.26 per cent of the liabilities, in contrast with 27.67 per cent the preceding year.

For the total of demand liabilities the legal reserve ² of 40 per cent amounted to 7,240,-600,000 lire (\$380,855,000). The excess above that figure, or free reserve of 2,383,700,000 lire (\$125,382,000), represents 453,900,000 lire (\$23,875,000) less than the excess last year.

An examination of the balance sheet shows that the gold reserve against our note circulation increased during the year 1930 from 30.94 per cent to 33.77 per cent. In contrast with a decline in note circulation from 16,774,300,000 lire (\$882,328,000) to 15,680,500,000 lire (\$824,-794,000), the amount of gold in vault increased from 5,190,100,000 lire (\$272,999,000) to 5,296,-800,000 lire (\$278,612,000). Of the increase of 106,700,000 lire (\$5,612,000), 77,900,000 lire (\$4,098,000) represents the conversion into metal of foreign credits belonging to the reserve and 28,800,000 lire (\$1,515,000) the return to the bank of a part of the gold coin previously transferred to London, following the settlement of the war debts. Correspondingly, the gold deposited abroad, owed by the State to the bank, was reduced from 1,813,100,000 lire (\$95,369,000) to 1,784,300,000 (\$93,854,000).

Legislation.—The principal legislative enactment of the year in connection with bank circulation is undoubtedly the decree law of December 26, 1930, No. 1693.

Article 1 of this decree extends until December 31, 1950, the power of the bank to issue bank notes and similar evidences of value, payable to bearer on demand; the legal tender

quality of the notes themselves is extended
² Gold and foreign currencies convertible into gold.

until the same date. At the time when our last extraordinary general meeting (June 18, 1928) was considering the extension of the life of the bank to the end of 1950 (art. 4 of the charter approved at that time) the note-issuing power reserved to the Bank of Italy had not yet expired, since by the terms of the decree law of September 27, 1923, No. 2158, that power was not to terminate until December 31 of last year; hence the necessity of the present enactment extending the power to the new date of expiration adopted by the bank for its own existence.

Article 2 of the decree law under discussion limits to December 31, 1935, the effectiveness of some provisions contained in the royal decree of June 17, 1928, No. 1377, which ratified the agreements between the Royal Government and the bank in connection with our monetary Thus, both as regards the tax on circulation and the distribution between the Government and the bank of the profits of a part of the foreign exchange reserves held by our bank, there will be a continuance for five years of the present régime which was sanctioned by the convention to which article 7 of the above-mentioned royal decree of June 17, 1928, As is known, the Royal Treasury was to receive the entire net return of that part of our reserve representing the \$90,000,000 already turned over by it to the bank in 1926 in partial cancellation of the debt of the State in existing notes; 4 while the net proceeds of the gold exchange obtained by the bank as a result of the monetary reform of 1927 were to be divided equally between the State and the bank through last year, subject to later decision as to their further use. The new provision assures, therefore, that there will be no change before December 31, 1935.

However, article 4 of the decree law in question, in view of the adoption of a new agreement covering the services of the bank as fiscal agent of the Royal Treasury, fixes at not later than the end of 1932 the duration of the rules which now govern its operations, giving to both the bank and the State the power to denounce the extension by notice at least six months in advance. The same article names the fixed sum of 21,900,000 lire (\$1,150,000) for each of the two years as the Government's contribution to the costs incurred by the bank for the said service.

By article 3 of the decree law in question the existence of the Institute of Liquidation is

³ The text of this decree, in translation, was published in the BULLETIN for September, 1928, pp. 643-644.
⁴ This transaction is described in the Annual Report of the Bank for 1926; see BULLETIN for August, 1927, p. 593.

extended for five years, through 1935; extension for a similar period being provided for the measures already taken to protect the credit of the bank with the institute. The latter, which it was hoped might be closed December 31, 1930, will have to remain open for a certain number of years.

Accordingly the bank and the State will continue for another five years to make contributions toward the earliest possible liquidation of the accounts which the institute has the task of winding up, the bank continuing to devote the surplus of the profits of operation and the proceeds of the public securities already received by it from the institute, to the reduction of its credit with the latter; the State continuing to forego three-quarters of the annual proceeds of the circulation tax and to provide for the payment on behalf of the

institute of interest charges previously assumed and now consolidated in the amount of 135,000,000 lire (\$7,100,000) annually.

A further provision affecting our bank is that contained in article 5 of the decree law of August 8, 1930, No. 1162, which fixes the rate of the stamp tax on drafts at not more than 90 days' sight, of Italian and foreign firms, accepted by Italian credit institutions authorized thereto by the Minister of Finance. article empowers the Bank of Italy to acquire or discount, sell or offer for discount at the market rates, such bills of exchange issued by Italian and foreign firms of known solvency and accepted by first-class Italian banks.⁵

ANNUAL REPORT OF THE CENTRAL BANK OF ECUADOR

The annual report of the Central Bank of Ecuador for 1930 was submitted to the general meeting of shareholders on February 16, 1931. Sections of the report dealing with the depression in Ecuador, the situation of agriculture and industry, balance of payments, interest rates, and foreign exchange are given herewith:

The economic situation of the country developed during the past year under generally adverse conditions. To domestic difficulties, which in recent years had led to a decline in exports, was now added the world crisis, which, by reason of its most marked characteristic—the fall of prices—seriously affected the income derived from production of commodities for

export.

Funds were accordingly withdrawn from the market in considerable volume, a movement which was immediately reflected in reduced deposits with commercial banks; in slow collections—especially in the case of discounted bills—because a period of tight money is apt to create frozen credits; and in a general reduction of consumption. The decline in the value of exports also created a strong demand for gold exchange at the Central Bank, which resulted in the withdrawal of bank notes and contraction of the circulation. All this produced uneasiness and uncertainty in commerce and other important lines of business and intensified the general depression with which the year had begun.

Policy of the bank.—At the beginning of the year the bank established a rate of 9 per cent for rediscounts of member banks and 10 per cent for direct transactions with the public. The directors were constantly watching the effect on our market of declining interest rates in the principal financial centers of the world in order to adopt such changes as might benefit the situation in Ecuador. Taking advantage, therefore, of some relaxation in the money market from May until the third week in August, the directors decided to establish varying rates of interest for different classes of bills; and, furthermore, varying rates for bills of the same class but of different maturities, to the end that business might profit from rapid turnover, and operations intended for industrial development might profit from moderate interest rates. The rates established were as follows: 7 per cent for transactions with member banks, up to 30 days; 8 per cent for transactions with member banks, up to 90 days, in rediscounting promissory notes for industrial purposes; 9 per cent for direct transactions with the public, up to 180 days, with agricultural security.

At the end of August the effects of the sharp decline in the prices of our exportable commodities began to be felt. This created a strong demand for gold exchange at the Central Bank and a consequent withdrawal of notes from circulation. Inasmuch as the demand for bills of exchange was heavy in the following months, the directors, in defense of the reserves, raised the rate for transactions with the public to 11 per cent in November, while retaining the rate of 9 per cent for rediscounts of member banks. This measure which, in a country so small and so limited in resources as Ecuador, did not prove entirely effective—as it does in other countries which have a complete financial organization was nevertheless the object of violent criticism on the part of some responsible organizations and influential newspapers, which contended with much heat that an excessive deflation was taking place in the country and therefore advised that the rate of interest be lowered. The matter was referred to the decision of Professor Kemmerer, whose opinion was directly opposed to this theory and who approved the rates of interest fixed by the directors.

A very important statement in the lengthy discussion over the question of interest rates was the unanimous opinion expressed in a meeting held by the managers of the commercial banks in Quito to consider the advisability of reducing rates. The statement was as follows:

The Central Bank, before recommending advances or reductions of interest rates, should study the movement of the market in connection with the free play of monetary supply and demand; under present circumstances—the demand for credit being heavy and available funds with the commercial banks being in small amount—it is inadvisable to make any reduction in the existing rates of interest.

Throughout the entire year the bank maintained the quotation of 5.05 sucres to the dollar, or at a selling price below the gold export point, and constantly intervened in the market to supply the demand for bills of exchange. By this policy the bank maintained the unrestricted redemption of its notes, eliminated speculation in foreign exchange, and thus performed its function of stabilizing the currency in spite of the difficult conditions prevailing in the principal lines of business and production.

¹ The report, available in Spanish, contains in addition tables showing the operations of the bank in detail, and discussion of foreign trade, agriculture and industry, the fiscal situation, Government debts, etc.

ANNUAL REPORT OF THE BANK OF PORTUGAL

The annual report of the Bank of Portugal for 1930 was presented to the general meeting of shareholders on February 4, 1931. Sections of the report dealing with the banking situation and the building up of a reserve for currency stabilization are given herewith:

In Portugal the world depression assumed a special aspect as a result both of the character of the country, which is agricultural rather than industrial, and also of the influence of the relations between the colonies and the mother country. The producer of foodstuffs—with exception of the wheat farmer—was seriously affected by the decline of prices in foreign markets; and the decline of purchasing power in the country districts, which occurred in spite of abundant grain harvests in the past year, was reflected in the commercial centers. These centers and the entire industrial organization felt the acute depression in colonial trade, caused by the sharp decline in the prices of crops of our overseas possessions.

Banking situation.—The depression was reflected not only in the trade situation throughout the country, but also, during the closing months of the year, in the decline of bank deposits. As a result, several banking establishments were compelled to rediscount a portion of their bill portfolios. The threat of a banking crisis was averted by the effective and timely intervention of the Bank of Portugal, and also by the able assistance of the

Government, which could not regard the situation of the money market with indifference.

As had been the case during the preceding year, and because of the abundant wheat harvest—which was even greater in 1930 than in 1929—large advances in the form of rediscounts had to be extended for crop-moving purposes. Liquidation of these advances proceeded very slowly because of the inactive demand for wheat.

The circumstances described above explain the unprecedented volume of demands on the bank for accommodation, either by discounting or rediscounting; and explain also the exceptionally high level shown by aggregate discount operations during 1930 as a result of efforts to meet demands so far as possible.

Agreements between bank and Government.—In accordance with the decision of the special meeting of shareholders, held on February 27, 1930, the two agreements between the bank and the Government, which were authorized by decrees No. 17,991 and 17,992 of February 24, 1930, were signed on March 6 of that year. According to these agreements, the allocation of funds accruing from interest charges at 1 per cent, levied by the bank on advances to the Government under the agreement of April 29, 1918, and subsequent agreements, has been altered. Such funds have now been allocated to the purchase of gold exchange either representing receipts from exports or acquired from other sources, and intended to build up a reserve for stabilization of the national currency.

¹ The report, available in Portuguese and French, contains in addition tables showing the operations of the bank in detail, discussion of discount operations, note circulation, branches, personnel, etc.

ANNUAL REPORT OF THE BANK OF SPAIN

The annual report of the Bank of Spain for 1930 was presented to the general meeting of shareholders on March 1, 1931. Sections of the report dealing with gold shipments and the increase of rates charged by the bank are

given herewith: 1

The royal decree of September 22, 1930, authorized the Secretary of the Treasury, in accordance with section 7 of article 1 of the bank statutes, to make such disposition of foreign balances of the treasury as circumstances might require. The management of these treasury balances was intrusted to the bank, chiefly for the purpose of centralizing in the bank all foreign exchange operations. For the implementing of the royal decree several royal ordinances had to be passed by the Council of Ministers. The ordinance of October 1 fixed the volume of funds to be placed abroad at £10,000,000; the ordinance of October 18

authorized the shipment to England of £1,000,-000 of gold belonging to the Spanish treasury; that of November 4 authorized the Bank of Spain to send to England an equal amount of gold from its own stocks; and that of December 19 authorized a third gold shipment of an equal amount, to be taken jointly from the gold stocks of the treasury and of the bank. On this last occasion, the Council of Ministers went on record to the effect that as a result of these shipments the metallic reserves of the Bank of Spain had not been diminished, and that the gold shipped by the Bank of Spain from its own stocks was to be kept intact and earmarked in the Bank of England, subject neither to pledge nor to withdrawal.

Still another measure for the support of the peseta was the raising by one-half of 1 per cent of the rate of interest on all credit operations of the bank, except those guaranteed by gold securities. This action was taken on July 17, following suggestions made by the Govern-

ment.

• Correction.

• Preliminary, based on latest available figures,

• No complete return of central gold holdings in Brazil is available for any date later than September 30, 1930; later figures shown represent gold holdings as of that date with deductions based on amounts of Brazilian gold subsequently received in the United States and Great Britain.

Note.—Table covers all countries for which satisfactory figures are available; see Bulletin for April, 1930, where separate figures for 44 countries are given by years back to 1913. The 16 countries here shown separately include all those which have held gold in recent years to the amount of \$90,000,000 or more. Figures are for central banks only except as follows: United States—Treasury and Federal reserve banks; Argentina—Government conversion fund and Bank of the Nation; Brazil—Bank of Brazil and Government stabilization fund; Canada—Government reserve against Dominion notes and savings-bank deposits, and gold deposits of chartered banks in the central reserve; India—paper currency and gold standard reserves of Government.

¹ A verages based on daily quotations of closing rates as published by New York Journal of Commerce.
2 Chervonetz quotations nominal.
3 Silver currency. The figure given for parity represents gold value of unit in May, 1931, computed by multiplying silver content of unit by New York average price of silver for May, 1931, which was \$0.27932 per fine ounce. On the same basis, parity in May, 1930, for the Chinese-Mexican dollar was 32.24 cents; for the Shanghai tael, 44.45 cents; for the Yuan dollar, 31.54 cents; and for the Hong Kong dollar, 32.01 cents.

Back figures.—See Bulletin for January, 1931, 1930, 1929, and 1928.
