SUBSCRIPTION PRICE OF BULLETIN

The Federal Reserve Bulletin is the board's medium of communication with member banks of the Federal reserve system and is the only official organ or periodical publication of the board. The Bulletin will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is \$2. Single copies will be sold at 20 cents. Outside of the United States, Canada, Mexico, and the insular possessions, \$2.60; single copies, 25 cents.

FEDERAL RESERVE BULLETIN

Vol. 18 MAY, 1932 No. 5

REVIEW OF THE MONTH

Banking conditions, which had begun to improve in February, showed further progress in April for the third consecu-

Further improvement in credit conditions

tive month. The number of bank failures continued to be relatively small, and there was

a further return of currency from hoarding to the banks. Additional purchases of United States Government securities by the Federal reserve banks were reflected in a decrease throughout the country of member bank indebtedness: in addition, reserve balances of the member banks showed a considerable growth, and after the middle of April there was a substantial amount of excess reserves to the credit of member banks, particularly in New York City. In these circumstances money rates in the open market declined to low levels, with rates for prime bankers' acceptances of short maturity at seven-eighths of 1 per cent, the level in the middle of last year. Member bank credit, as measured by loans and investments, showed an increase at banks in New York City, but declined further at reporting member banks outside New York City.

An important factor in easing the money market during recent weeks, in addition to the

Reserve bank purchases of United States securities continued inflow of currency from circulation, was the purchase by the reserve banks of Government securities in the

open market. During the four weeks from April 6 to May 4 these purchases amounted to \$400,000,000, bringing the increase in the system's holdings since February 24 to \$550,000,000 and the total holdings of the system to approximately \$1,300,000,000, by far the largest that the reserve banks have ever had.

The immediate effect of these open-market operations has been to enable member banks to reduce their indebtedness at the reserve banks and to accumulate excess reserves. The table shows for the period from February 24 to May 4 changes in reserve bank credit, in money in circulation, and in member bank reserve balances.

RESERVE BANK CREDIT AND PRINCIPAL FACTORS IN CHANGES
[In millions of dollars]

Member bank reserve balances	1, 878	2, 147	+269

Liabilities of the reserve banks increased somewhat during March and April, reflecting Position of the Federal reserve banks and others with the Federal reserve banks showed

an increase larger than the decrease that occurred in the volume of Federal reserve notes Reserves of the reserve banks in circulation. increased somewhat during the period, with the consequence that the ratio of reserves to note and deposit liabilities combined showed little change. At the beginning of May the system's reserves in excess of the legal requirements of 35 per cent against deposits and 40 per cent against Federal reserve notes amounted to \$1,400,000,000. There was, however, a considerable reduction in the amount of eligible paper available as collateral against Federal reserve notes outstanding, as a consequence of the large decrease in the reserve banks' holdings of discounts and acceptances. While the amount of Federal reserve notes also declined

¹ Discounts for member banks declined in all Federal reserve districts, as shown by the chart printed at the end of this review.

somewhat, the decrease in eligible paper was larger than this decline, and consequently the reserve banks were obliged to take gold out of their deposit reserves and to pledge it with the Federal reserve agents as collateral for Federal reserve notes. As a result of this transfer of gold from the banks to the agents the ratio of gold reserves held exclusively against Federal reserve notes increased from 79.2 per cent on February 24 to 90 per cent on May 4, while the ratio of reserves available against deposits declined from 53.1 per cent to 40.2 per cent.

This increase in the amount of gold pledged with the agents and the corresponding decrease reserves available inagainst United States deposits reduced the margin of obligations as note collateral gold available for operating purposes to a point where the Federal Reserve Board found it necessary to consider whether it would be in the public interest under the terms of the Glass-Steagall Act, which permits such action until March 3, 1933, to authorize the Federal reserve banks to offer and the Federal reserve agents to accept direct obligations of the United States Government as collateral against outstanding Federal reserve Before giving this authorization, which was done on May 5, the Federal Reserve Board carefully considered the question of the principle upon which this action should properly be based and of a formula that would carry out this principle in an efficient manner with due regard to the position of each of the 12 Federal reserve banks. The principle upon which the board has proceeded is that the authority to pledge obligations of the United States Government should be exercised when, after the available eligible paper has been pledged with the Federal reserve agents, the operating margin of gold at the reserve banks shall have declined to a level which it is necessary to maintain in order to assure the efficient functioning of the reserve banks.

The formula used in determining the operating margin to be maintained has been derived

The formula used from a consideration of the legal and operative requirements within which the reserve banks have to func-

tion, including the requirement of 100 per cent collateral, consisting of gold and eligible paper, for outstanding Federal reserve notes. On May 4 the notes outstanding were \$2,736,-000,000 and the eligible paper available as collateral was \$510,000,000, leaving \$2,226,000,000 to be covered by gold. This gold, which under the law can be counted not only as collateral but also as reserve against Federal reserve notes, was more than ample to provide the 40 per cent reserve required against Federal reserve notes in actual circulation. When this gold is deducted from the total cash reserves of the Federal reserve banks the remaining reserves, \$977,000,000, must provide the 35 per cent necessary against the reserve banks' deposits, the amount necessary for the redemption fund held with the United States Treasury, and such a margin above these amounts as would permit of efficient operation without delay or inconvenience.

In determining upon a formula derived from these considerations the board decided that in existing circumstances when the margin between (1) total cash reserves of the reserve banks (in excess of the 35 per cent against deposits) plus eligible paper at the 12 Federal reserve banks, and (2) Federal reserve notes in actual circulation shall fall below \$400,000,000, the reserve banks shall be authorized to pledge a sufficient amount of United States Government securities with the Federal reserve agents to release enough gold to bring this margin up to the \$400,000,000 level.

This margin of \$400,000,000 is considered adequate to provide for (1) enough Federal reserve notes in the vaults of the reserve banks and branches to meet necessary operating requirements, (2) the redemption fund with the United States Treasury, (3) a reasonable margin above the required 35 per cent reserve against deposits, and (4) a slight margin above the necessary collateral requirements against Federal reserve notes.

In adopting \$400,000,000 as the operating margin for the 12 Federal reserve banks combined, the Federal Reserve Board has notified each bank of the amount that would be a

reasonable margin for that bank, in proportion to its requirements and its volume of operations. In practice, this decision of the Federal Reserve Board will mean that whenever a Federal reserve bank shall find, after having pledged its available eligible paper, that its operating margin has fallen below the amount determined for that bank, it may pledge with its Federal reserve agent enough United States securities to release an amount of gold that will bring the margin up to the specified amount.

In adopting this principle and this formula for determining the time and the extent of use of the authority granted under section 3 of the Glass-Steagall bill, the board has prescribed for the Federal reserve banks a mode of procedure by which they can determine quickly at any time the extent to which they may avail themselves of the authority under the law to pledge United States securities as collateral for Federal reserve notes. For the system as a whole the board has adopted the principle that in the present circumstances it deems it in the public interest to authorize the use of United States obligations as collateral against Federal reserve notes at such times and to such extent as may be necessary to enable the reserve banks to have available at all times a sufficient amount of Federal reserve notes and of gold not pledged as collateral to permit of unhampered operation of the Federal reserve system.

Gold reserves of the principal foreign central banks showed little change during the latter part of March and the early part of April, except for an increase between March 18 and April 22 of \$38,000,000 in the holdings of the

Preliminary.

Bank of France. The gold taken by France came principally from this country and from the London market, where bullion from India and South Africa continues to be sold in substantial amounts.

Financial conditions in England have continued to improve in recent weeks. British Treasury closed it fiscal Bank of Engvear on March 31 with a small land budget surplus and repaid on April 5 the remaining \$20,000,000 of the credit granted last autumn by private banks in this country. Sterling exchange, after its appreciation in March, fluctuated within the rather narrow range of \$3.75-\$3.80 in the first three weeks of April, but declined toward the close of the month. For the purpose of limiting fluctuations in the pound, the British Government has recently created an "exchange equalization account," amounting to £150,000,000, to be administered by the Bank of England.

Short-term rates on the London money market, which have declined almost without interruption since the first of the year, eased further during the four weeks ending April 20, and on April 21 the Bank of England lowered its rate of discount from 3½ to 3 per cent. As shown by the accompanying condition statement of the bank, notes returned from circulation after the passing of the temporary demand of the Easter trade for currency. These were

absorbed by the bank through a reduction in its security portfolio. Bankers' deposits, which are held almost entirely for the account of the London clearing banks, have continued to be large. On the other hand, the clearing banks

have been holding a smaller volume of notes in their reserves during recent months. Consequently the figure for note circulation as reported by the Bank of England understates the growth during the year of currency actually in the hands of the public. The recent increase has been particularly marked. Some demand for notes has probably come from individuals who have been selling gold from private stocks to London bullion dealers, but the recent increase in circulation appears to reflect in addition some growth in the currency requirements of trade and industry.

The Bank of France acquired 971,000,000 francs, or \$38,000,000, of gold in the five weeks Bank of France ending April 22. This gain was much less than that for any other similar period since the French private banks began repatriating their foreign assets in large volume last September. About one-third of the amount was accounted for by the conversion of foreign exchange by the bank. The remainder was presumably imported on private account—principally from this country during

the second week of April, when disturbing rumors concerning banking conditions in the United States were in circulation in Paris. The gold brought to the bank in this way went to swell "other deposits," which include the balances of the French commercial banks. These deposits, now at a peak of 25,975,000,000 francs, were also increased by a return of currency from circulation and by transfers from Government deposits.

The German Reichsbank again lost gold and foreign-exchange reserves in the month ending Reichsbank

April 23. Losses since January, however, have not been continuous but have taken place intermittently in connection with special payments abroad. The decline of 30,000,000 reichsmarks, or \$7,000,000, in the past month occurred in the week ending April 15 and was attributed to interest and sinking-fund payments made out-

side of Germany. On other report dates reserves increased somewhat. The Reichsbank lowered its discount rate on April 9 from 6 to 5½ per cent and on April 28 to 5 per cent.

Discounts and advances of the Reichsbank were reduced during the month, funds for this purpose being provided in about equal amounts by a return flow of notes from circulation and by drafts upon deposits.

Changes in Foreign Central Bank Discount Rates

The following changes in discount rates during the month ended May 1 have been reported by central banks in foreign countries:

National Bank of Czechoslovakia—April 12, from 6 to 5 per cent.

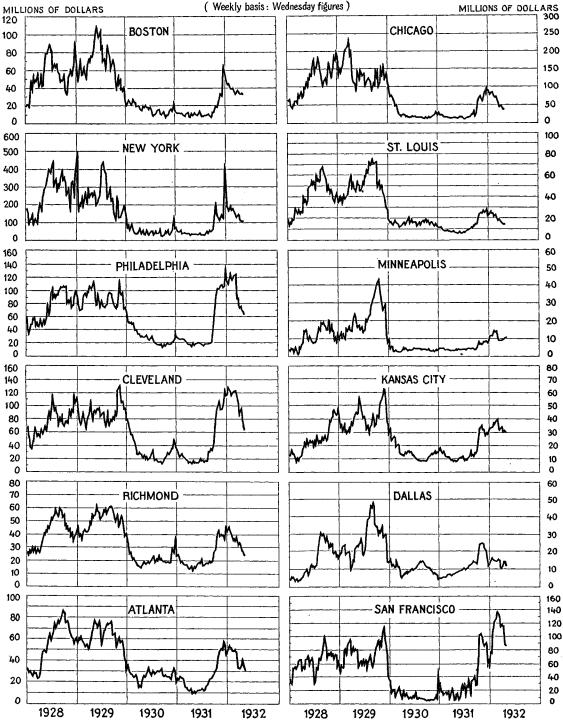

Bank of England—April 21, from 3½ to 3 per cent. Bank of Finland—April 19, from 7 to 6½ per cent. German Reichsbank—April 9, from 6 to 5½ per cent; April 28, from 5½ to 5 per cent.

National Bank of Hungary—April 18, from 7 to 6 per cent.

Imperial Bank of India—April 28, from 6 to 5 per cent.

Netherlands Bank—April 19, from 3 to $2\frac{1}{2}$ per cent. Bank of Portugal—April 4, from 7 to $6\frac{1}{2}$ per cent.

NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled April 25 and released for publication April 28]

Industrial activity was in smaller volume in March than in February, although usually little change is reported at this season, and the number of employees at factories was also reduced, contrary to seasonal tendency. Volume of reserve bank credit decreased in March, but showed a considerable growth in the first three weeks of April. Money rates continued to decline.

Production and employment.—Output of industrial products, as measured by the board's seasonally adjusted index, declined from 70 per cent of the 1923-1925 average in February to 68 per cent in March. Daily output at steel mills and automobile factories decreased, contrary to seasonal tendency, and activity at woolen mills declined sharply to the lowest level in recent years. Cotton consumption by domestic mills continued at the February rate, although sales of cotton cloth declined, and output of shoes increased considerably; in both these industries production was at about the same rate as a year ago. Activity in the lumber industry, which recently has been at a level about 45 per cent lower than last year, increased by more than the usual seasonal amount. Output of coal also increased considerably during March but declined in early April.

Volume of factory employment and pay rolls decreased from February to March, although an increase is usual at this season. There were substantial reductions in working forces in the steel, automobile, machinery, and furniture industries, as well as at woolen and silk mills, while clothing and shoe factories showed additions to their working forces.

Value of building contracts awarded, as reported by the F. W. Dodge Corporation, showed some increase of a seasonal character during March and the first half of April and was approximately one-third as large as last year.

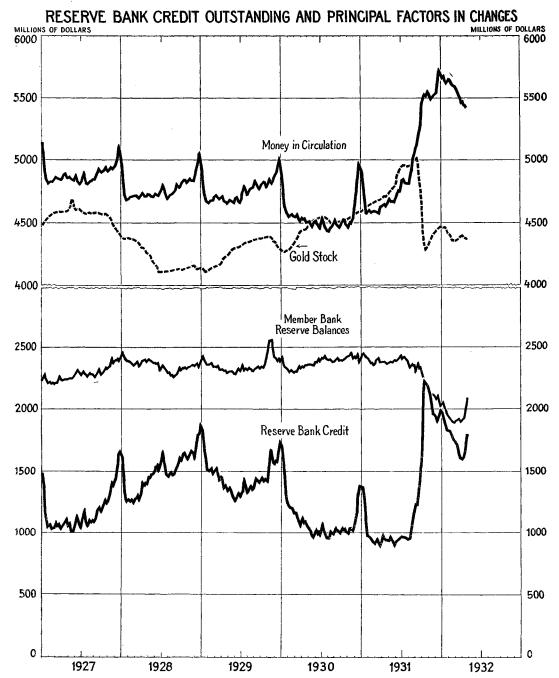

Distribution.—Rail shipments of merchandise, which ordinarily increase in March, showed little change, and sales at department stores in leading cities increased by less than the estimated seasonal amount.

Wholesale prices.—The general level of wholesale commodity prices showed little change between February and March, according to the Bureau of Labor Statistics. In the first two weeks in March prices of many commodities, including livestock and meats, advanced; between the middle of March and the third week in April prices of cotton, silk, wool, hides, sugar, silver, and tin declined considerably, while prices of coffee and petroleum increased. Wheat prices showed wide fluctuations but were at about the same level in the week ending April 23 as in the first half of March.

Bank credit.—The Federal reserve system's holdings of United States Government securities, after increasing continuously from early in March, totaled \$1,078,000,000 on April 20, an increase of \$338,000,000 since the end of February. This increase has been accompanied by some further decline in the reserve banks' holdings of acceptances and a reduction of \$264,000,000 in discounts. Member bank indebtedness to the reserve banks showed a considerable reduction in all of the Federal reserve districts. Total volume of reserve bank credit outstanding, which had declined in March, reflecting a continued return of money from circulation and an increase in the country's stock of monetary gold, increased by \$115,000,000 during the first three weeks of April. This increase was accompanied by a substantial growth in member bank reserve balances.

Total loans and investments of reporting member banks in leading cities continued to decline during the five weeks ending April 13. At banks in New York City, however, there was an increase in investment holdings both of United States Government securities and other securities, offsetting the decline in loans, which continued until the middle of April.

Open-market rates for bankers' acceptances showed successive reductions, and on April 21 the offering rate for 90-day bills was seven-eighths of 1 per cent, the same rate as prevailed between May and September, 1931. Rates on commercial paper also declined.

Based on weekly averages of daily figures; latest figures are for week ending April 30.

Total Treasury currency	1, 747	1, 730	1, 748
Total money in circulation	5, 464	5, 459	4, 652

Figures preliminary.
 For explanation of the term "Treasury currency" see Bulletin for July, 1929, p. 432.

¹ Gold released from earmark at Federal reserve banks less gold placed under earmark.
¹ This figure, derived from preceding columns, represents the excess of domestic production over nonmonetary consumption of gold—chiefly consumption in the arts. In any given month, however, it may be predominantly affected by the fact that on the final day of the month (a) gold bullion or foreign gold coin recently imported may not yet have reached a reserve bank or the Treasury, and (b) gold bullion recently withdrawn from stock for export may not yet have been actually exported. The figures are subject to certain unavoidable inaccuracies in official reports of gold imports and exports.

Back figures.—This classification of loans is not availabe for dates prior to Oct. 3, 1928, but comparable figures of total loans secured by stocks and bonds are given for June 30, 1925–1928, in the board's Annual Report for 1928 (Table 52); for separate figures of United States Government securities and other securities back to 1914, see Annual Report for 1930 (Table 47).

Loans (secured by stocks and bonds) to brokers and dealers in securities at New York City.
 Including loans to banks secured by stocks and bonds, reported separately after 1929 and estimated for preceding dates as one-half of total loans to banks.
 Central reserve city banks only.

ALL BANKS IN THE UNITED STATES-TOTAL LOANS AND INVESTMENTS, DEPOSITS

[In millions of dollars. Includes national banks, State commercial banks and trust companies, mutual and stock savings banks, and all private banks under State supervision. For back figures see BULLETIN for May, 1931 (p. 253), and Annual Report for 1930 (Tables 42-43)]

Preliminary.

Revised.

Banks suspended and banks reopened.—The statistics of bank suspensions relate to banks closed to the public, on account of financial difficulties, by order of supervisory authorities or directors of the bank. Some banks reopen before the end of the calendar month in which they were closed; such banks are included in the record of suspensions for the month as given in the table. Reopenings are recorded as of the month in which they occur, and include for any given month reopenings both of banks closed during the month and of banks closed earlier.

Deposits.—Figures of deposits in banks suspended are as of date of suspension whenever data as of this date are available; otherwise they are as of the latest available call date prior to suspension. For banks reopened the figures of deposits are not as of date of reopening, which are seldom available, but are taken from the record of suspensions.

Back figures.—See annual report for 1930 (Tables 66 and 67).

[·] Corrected.

Note.—Figures relate to rates charged by reporting banks to their own customers as distinguished from open-market rates (which are given in preceding table). All averages are based on rates reported for 3 types of customer loans—commercial loans, and demand and time loans on securities. The method of computing the averages takes into account (a) the relative importance of each of these 3 types of loans and (b) the relative importance of each reporting bank, as measured by total loans. In the two group averages the average rate for each city included is weighted according to the importance of that city in the group, as measured by the loans of all banks in the city.

Back figures.—See Annual Report for 1930 (Table 39).

FOREIGN BANKING AND BUSINESS CONDITIONS ANNUAL REPORT OF THE AUSTRIAN NATIONAL BANK

The annual report of the Austrian National Bank for 1931 was presented to the general meeting of shareholders on March 18, 1932. Sections of the report are given herewith: 1

During the past year the economic depression led to severe disturbances in the banking and currency systems of many countries and an increasing loss of confidence on the part of the public. New burdens were imposed on public finance by the increasing requirements of unemployment relief and emergency measures of assistance, while revenues constantly declined as a result of the business recession. In order to protect the currency and to maintain budgetary equilibrium, a number of countries were forced to take extraordinary measures which hampered business still further and complicated international trade.

Beginning of the crisis in Austria.—These new phases of the crisis developed first in this country, where they assumed a particularly aggravated form. They had their origin in the difficulties of our largest banking institutionthe Oesterreichische Credit-Anstalt für Handel und Gewerbe in Vienna. The directors of the Credit-Anstalt had applied early in May to the Austrian Government and to the Austrian National Bank for help in regulating a deficit of 140,000,000 schillings which had come to light in closing the accounts for 1930. desired assistance was so promptly given that, when a few days later the embarrassed position of the Credit-Anstalt was made public, it was possible to announce at the same time that a program had been adopted for its financial reorganization. The hope, however, of preventing further anxiety by this means and maintaining the confidence of the public in the Credit-Ansalt proved vain. After a four days' run on the bank, during which the claims of creditors and depositors were met through the assistance of the National Bank, the first excitement was allayed. Then, however, a gradual undermining of confidence began, as a result of which the current operations of the Credit-Ansalt were continually in a deficit. The only means by which the Credit-Ansalt could cover this deficit was by discounting finance bills with the National Bank.

Strain on the National Bank.—Evidences of the unusual pressure on the central bank appeared first in its weekly balance sheet of May 15, 1931. The very considerable increase in the bill portfolio and the total circulation. together with a decline in the foreign exchange holdings, produced a sharp drop of about 16 per cent in the percentage of foreign exchange The reserve ratio, it is true, was still reserves. very high, being 67.5 per cent. But its sharp reduction showed clearly the relation between the Credit-Anstalt problem and the problem of the currency. Very soon a flight of capital began, which led to large withdrawals from other credit institutions also. Consequently, in the course of the next few months the National Bank lost the greater part of its very considerable stock of foreign exchange.

The amount of this drain on the central bank was so excessive and its character so abnormal that some discussion arose as to the advisability of suspending the further extension of central bank credit to the Credit-Anstalt. Such a suspension, however, would have made the closing of the Credit-Anstalt inevitable and would certainly have done great harm to business. In this connection the discussion by the general public of the possibility of a moratorium heightened the prevailing distrust, which was thus constantly increased by developments for which it was itself responsible.

'Standstill' agreements.—The foreign creditors of the Credit-Anstalt had been approached directly after the difficulties of the bank were announced. They agreed to a moratorium of two years as soon as their claims had been guaranteed by the Finance Minister, who was authorized by the Federal law of May 28, 1931, to guarantee on behalf of the Federal Government the loans previously made to the Credit-The total foreign obligations of the Anstalt. Credit-Anstalt had declined from 466,000,000 schillings at the beginning of 1931 to 442,000,-000 schillings on April 30, and to 416,000,000 schillings on May 28, exclusive of obligations arising out of guarantees which it had assumed. Since the end of May they have not changed.

When the Credit-Anstalt crisis occurred, the other Austrian banks and banking houses started to pay off a very considerable part of their foreign liabilities without waiting to be called upon for payment. These foreign liabilities in the form of cash advances and accept-

¹ The report, available in German, contains in addition tables showing the operations of the bank in detail, and sections dealing with the commercial policy of the Republic, Government finance, budget proposals for 1932, building projects, foreign trade, prices, savings, agriculture, industry, railways, security market, etc. For earlier reports see BULLETIN for May, 1931, June, 1930, May, 1929, etc.

ance credits amounted to about \$54,000,000. or some 380,000,000 schillings at the end of Elsewhere in Central Europe, however, in view of the increasing breakdown of confidence, agreements for a prolongation of credit were being concluded with foreign creditors. The Austrian banks and bankers, therefore, at the request of the Austrian National Bank, also concluded agreements with their creditors abroad for a prolongation of their credits. The claims covered by these agreements had meanwhile been greatly reduced through partial repayments and now amounted to \$34,000,000, The agreeor about 230,000,000 schillings. ments provided for quarterly payments, by which the total was reduced to about \$22,000,-000, or 155,000,000 schillings, at the close of the Since the end of April, therefore, payments on foreign obligations have amounted to about \$32,000,000, or 225,000,000 schillings. This is a notable achievement, especially as it was accomplished under most difficult conditions and as the "standstill" agreements in other countries provided for no capital repayments during the second half of 1931.

Loss of National Bank reserves.—Part of the foreign exchange required for meeting capital and interest payments abroad was provided by the National Bank. In addition the bank's stocks of foreign exchange were drawn upon for the current requirements of business and for demands arising out of the flight of capital. Between April 30 and October 7, 1931—that is, approximately up to the day on which the first foreign exchange regulations were promulgated—the Austrian National Bank lost 847, 900,000 schillings of gold and foreign exchange, if allowance be made for the central bank credits.

At the beginning of October the stock of foreign exchange held by the bank unpledged against any liabilities of its own amounted to 203,000,000 schillings. This sum included the equivalent of 100,000,000 schillings arising out of the advance made to the Austrian Government by the Bank of England. Inasmuch as this advance, as well as the credit of the Bank for International Settlements, had been granted for only a short term, and had in fact been reduced by 50,000,000 schillings in September, the possibility that the remainder might be withdrawn had always to be considered. Meanwhile, in England the increasing loss of confidence compelled the Bank of England to suspend the gold standard on September 20. Eurthermore in the period from August 31 to

October 7 the National Bank had lost foreign exchange at the rate of 26,000,000 schillings per week, although, as a result of the "standstill" agreements, no capital payments were made to the foreign creditors of the Credit-Anstalt, and only relatively small capital payments to the foreign creditors of the other Austrian banks and banking houses.

Foreign exchange control.—Under these circumstances and in accordance with the advice of the National Bank, the Government issued regulations on October 9 similar to those already in force in other countries, providing for the control of foreign exchange. Following the suspension of the gold standard in Great Britain on September 20, the bank had delivered foreign exchange only after examining each application and approving only such as represented legitimate requirements. The decree, since amplified by three amendments, confined dealings in foreign currencies to the National Bank and persons whom it appointed; placed international clearing and credit operations under the control of the bank; and made it obligatory to declare existing stocks and future receipts of foreign exchange, and to surrender them to the National Bank on demand.

The system of exchange control has not accomplished all that was expected, inasmuch as it has been impossible to decrease imports or to realize the proceeds of exports in sufficient amount. In fact, imports during the last quarter of 1931 were considerably greater than in the corresponding quarter of the previous year, while receipts of foreign exchange in December, arising out of the proceeds of exports, amounted to less than 10,000,000 schillings—a result which was rarely exceeded in other On the other hand, the requisitionmonths. ing of those balances with foreign credit institutions which were declared—in accordance with the decree of October 9-was very successful. Exchange holdings and balances of this character were declared to a value of 306,000,000 schillings, of which 175,000,000 schillings were requisitioned. Declarations of claims against foreigners other than credit institutions totaled 115,000,000 schillings, of which 24,000,000 were requisitioned. The actual delivery of foreign exchanges on the basis of both requisitions amounted to about 75,000,000 schillings at the close of the year, but by the end of February, 1932, it exceeded the sum of 113,000,000 schillings.

confidence compelled the Bank of England to suspend the gold standard on September 20. during the period from October 9 to December Furthermore, in the period from August 31 to 31 shows receipts of foreign exchange by the

National Bank aggregating about 185,300,000 schillings, against deliveries of 53,600,000 schillings to cover Government liabilities and other Government demands, 13,900,000 schillings for the service of nongovernmental loans, and 109,300,000 schillings for commercial purposes, leaving a balance on hand of 8,500,000 schillings. The decline of 43,000,000 schillings in the bank's gold and foreign exchange holdings during the period is to be attributed chiefly to the settlement of forward transactions. amount of these holdings unpledged against foreign liabilities was about 203,600,000 schillings on October 7, and remained almost unchanged, since the liabilities of the bank arising from forward transactions declined as a result of the repayments already mentioned by about the same amount as did the aggregate foreign exchange of the bank. The system of control was at least effective during the last quarter of 1931 in checking the rapid decline in the bank's foreign exchange holdings.

Discounts of the Credit-Anstalt.—The discount obligations of the Credit-Anstalt-exclusive of the so-called special portfolio which had been included for some time among the "miscellaneous assets" and had been taken over from the Allgemeiner oesterreichische Boden-Credit-Anstalt—amounted to about 80,000,000 schillings before the beginning of the crisis. At the close of the year the total bill portfolio of the Oesterreichischer Credit-Anstalt für Handel und Gewerbe stood at 679,100,000 schillings, a portion of which was still included among the "miscellaneous assets," partly as investment of the capital and surplus of the bank, partly as discounts for account of third parties, but still under guaranty of the bank. On the day on which its books were balanced the total of these liabilities included 537,700,000 schillings of "mobilization" and finance bills covered by following page.

the guaranty of the Government. amount of 141,400,000 schillings not covered by this guaranty, 54,800,000 schillings were trade bills, 8,500,000 schillings were guaranteed Russian bills, and 78,100,000 schillings were finance bills. For the total of 141,400,000 schillings not guaranteed by the Government, the National Bank has at its disposal other cover, amounting at a careful estimate to 122,500,000 schillings, which was made available by the Credit-Anstalt itself. The greater part of this cover consists of securities.

Effects of the crisis on Austrian banking system.—The developments in connection with the Credit-Anstalt and the resulting loss of confidence inevitably had their effect on the other Austrian credit institutions. The banks have repeatedly had recourse in substantial amount to the discount credit of the Austrian National Bank, since they were called upon to satisfy not only an increased demand on the part of private clients in connection with the flight of capital and the temporary recurrence of alarmist rumors, but also greater calls on the part of savings banks and associations, which were forced to draw on their liquid reserves and emergency credits. Some of the savings institutions were granted credit directly by the National Bank to the extent of their eligible securities. At times the situation was made more difficult by the embarrassmentdue to increasing loss of confidence abroad—of foreign banking institutions which had somewhat close relations with the Austrian banks. On the whole, however, it may be said that the other Austrian credit institutions have shown a remarkable ability to resist the serious crisis created by the critical position of the leading bank of the country.

The balance sheet of the bank is on the

ANNUAL REPORT OF THE BANK OF JAPAN

The annual report of the Bank of Japan for 1931 was presented to the general meeting of shareholders on February 20, 1932. Sections of the address of Mr. Hisaakira Hijikata, governor of the bank, are given herewith:

The financial difficulties which began in Austria and Germany, and led eventually to the suspension of the gold standard by Great Britain, made their influence felt in Japan, where the situation was further aggravated by the outbreak of the Manchurian disturbance about the same time. Prices of staple commodities and securities underwent so sharp a decline that stock exchange transactions were temporarily suspended. Öwing partly to anxiety regarding the gold standard in Japan, the foreign exchange market had to meet a strong demand for dollars, which caused an outflow of gold in considerable amount and a decline in the volume of funds available to the market. Toward the end of the year money became tighter and dearer. With the change of Government on December 13, gold exports and the conversion of bank notes into gold coin were prohibited except under license, and thereafter the yen exchange declined steadily, while commodity prices advanced. The advance was most marked in prices of international commodities which were influenced by speculative dealings, and was reflected in a general rise in stock market values. The business situation thus underwent a marked change.

Money market.—In spite of the fact that bank deposits declined, the money market was easy during the greater part of the past year, partly because the credit requirements of business were smaller and partly because the uncertain outlook discouraged long-term lend-Interest rates declined rapidly—in fact, each succeeding issue of treasury bills carried a lower rate of interest. The average discount rate at which allotments were made declined from 0.93 sen per diem per 100 yen (3.39 per cent per annum) on January 17 to 0.38 sen (1.39 per cent) on June 19, when day-to-day loans were quoted at 0.3 sen (1.10 per cent). After April 1, the associated banks one after another throughout the country lowered their rates of interest on deposits. As a result of the low rates, funds were invested in Government bonds-which gradually rose in value and in foreign markets. On the whole, how-

ever, the position continued to be easy until the last quarter of the year, when several gold shipments aggregating 354,000,000 yen were made to settle dollar obligations. The resources of the market gradually became exhausted, and money tightened appreciably. The bank accordingly raised its discount rate on October 6 and again on November 5, while the associated banks advanced their interest rates on deposits about the middle of December. The customary year-end requirements for currency and the special demand for funds in settlement of foreign exchange contracts brought about a renewal of activity. Borrowings at the bank increased substantially, and the volume of advances outstanding on December 30 was greater than it had been since the financial panic of 1927. The rate for day-today loans on that day was 0.9 sen (3.29 per cent) higher than on December 31, 1930.

Foreign exchange.—During the greater part of the year the rate on New York fluctuated within narrow limits around \$0.49%. position of the money market, however, led banks, insurance and trust companies, and others to seek employment for their idle funds in London and New York. This created an increasing demand for foreign exchange, in spite of the fact that our foreign trade balance was fairly satisfactory and that the Taiwan Electric Power Co. had floated a foreign loan. After Great Britain suspended the gold standard and it became necessary to acquire foreign balances in place of those formerly held in London, dollar exchange was in great demand. When the gold embargo was imposed in December, the exchange value of the yen declined steadily and reached \$0.34½ at the end of the year.

Discounts; deposits.—Loans and discounts were relatively stable at about 600,000,000 yen until September, but gradually increased during the last quarter as a result of stringency in the market and of the export of gold. On December 31 they amounted to 964,000,000 yen, of which 575,000,000 yen represented discounts under the indemnity act. Government deposits maintained a monthly average of 100,000,000 yen during the first half of the year, but in the second half rose to 200,000,000 yen, whereas private deposits stood at approximately 200,000,000 yen during the first part of the year, rose to over 300,000,000 yen in May, and then gradually declined to about 100,000,000 yen toward the end of the year.

¹ Taken, with some textual revision and rearrangement, from the English version published (in abridged form) by the Bank of Japan. In addition to the address of the governor, the report contains numerous tables showing the condition and operations of the bank in detail. For earlier reports, see BULLETIN for July, 1931, May, 1930, April, 1929, etc.

Reserves and note circulation.—Additions to the specie reserve during the past year aggregated 72,000,000 yen, while the with-drawals amounted to 428,000,000 yen, so that on December 31 it totaled only 469,000,000 yen. The note circulation declined during the first nine months, owing chiefly to the increase | expansion in the note issue.

in deposits. By September it had fallen to 904,000,000 yen, which is the lowest amount recorded since May, 1919. During the last quarter, however, notwithstanding the gold withdrawals, the decline in deposits and the increase in loans and discounts caused some

GOLD RESERVES OF CENTRAL BANKS AND GOVERNMENTS—Continued

EXPLANATORY NOTES

The general principles according to which this table is made up are explained in the Bulletin for July, 1931, pages 392-393.

Dates to which figures relate.—The central banks and governments for which figures are given follow somewhat different practices in respect to the frequency of their official reports and the days of the week or month to which the figures relate. As a general rule, however, at the present time, figures are currently available as of the final day of the month for about twothirds of the countries shown in the table; for the other countries (14 in number) the figures as reported at present relate to the first day of the following month (U. S. S. R.), or to the last weekly report date in the month; this is Monday for Australia, Latvia, and New Zealand and is usually Monday (but sometimes Tuesday) for Netherlands; Wednesday for England and Portugal; usually Thursday (but sometimes Wednesday) for Belgium; Friday for Chile (except that a special report is made for December 31), France, and South Africa; and Saturday for Java, Rumania (except that a special report is made for December 31), and

Previous to March, 1931, the Latvian report was of Wednesday, and previous to November 22, 1930, when the Brazilian stabilization office (Caixa de Estabilisação)

was abolished, its reports were made as of Saturday.

For the period December, 1913-December, 1927, figures are given only as of the end of the calendar year and not by months, largely for the reason that during this period, on account of disorganization occasioned by the war, satisfactory figures are available for a considerable number of countries only for end-of-year dates. These end-of-year figures are as of December 31 for most of the countries; the exceptions (12 countries) are as follows: Belgium, Brazil, England, France, Greece, Java, Latvia, Netherlands, New Zealand, South Africa, Spain, and Russia (U. S. S. R.). The exact

dates to which the figures for these countries relate during this period, in those years for which December 31 figures are not available, are given in the BULLETIN

for July, 1931, page 395.1 The end-of-December figures for 1928, 1929, and 1930 as included in the series that give figures by months for the period June, 1928, to March, 1932, relate, like the other figures in these series, to the final day of the month, excepting for the 12 countries just

Derivation of figures.—For the purpose of showing in detail how the figures given in the table are obtained, a tabular statement is presented below giving for each country the institution or institutions represented, the sources of data, the balance-sheet items used in the compilation, and the rate used in converting figures of foreign currencies into dollar figures. While the tabular statement relates specifically to the end-of-December figures, whether these appear in the end-of-year series for 1913-1927 or in the monthly series for June, 1928, to March, 1932, the information which it gives relative to institutions represented and, in general, items included in the compilation is applicable also to the rest of the figures in the monthly series. The sources of these other figures are in all cases at present the official balance sheets currently issued by the institutions represented or items selected therefrom that are currently reported directly to the Federal Reserve Board. Official sources have been used for these figures for the whole of the period June, 1928, to March, 1932, except as follows: Commonwealth Bank of Australia, Issue Department, June-November, 1928, Australasian Insurance and Banking Record; Brazilian Caixa de Estabilisação, June, 1928, to September, 1930, Wileman's Brazilian Review; Indian Government gold standard reserves, June, 1928, to December, 1931, London Economist.

¹ Since the tabular statement cited by this reference was published, end-of-December figures for 1930 have become available for Colombia and Portugal.

Country	Institution	Source	Items	Rate of conversion into U. S. dollars

c Corrected.

Note.—The figure for total world production in 1930 is that published in the annual report of the Director of the Mint for 1931. The difference between this figure and the total production reported monthly in 1930 is \$94,601,000, or \$7,883,000 on a monthly average basis. The estimate of world production for each month in 1930 represents the sum of this average difference and the figure actually reported monthly. For 1931-32 this average difference, of which about half represents United States production, is increased by 3.5 per cent—the ratio of increase of United States production in 1931.

The figures reported monthly are not in every instance complete for the area indicated. Those for West Africa represent the output of the Gold Coast and Sierra Leone; those for the Belgian Congo, the output of the Kilo-Moto mines; those for Australia, total output with the exception of Tasmania and Northern Territory; those for Japan, the output of the leading mines; and those for India, the output of the Mysore State.

For annual figures of world production of gold extending back to 1873 see the annual report of the Director of the Mint for 1931, p. 241.

Preliminary. Corrected.

\$4,020,000 imported by Netherlands from Dutch East Indies.

\$5,3324,000 imported by Netherlands from British India.

\$6,733,000 imported by Switzerland from Australia.

\$7,293,000 imported by Switzerland from Australia.

\$7,293,000 imported by Switzerland from Norway.

Reported monthly production of the Mysore State plus \$82,000 representing the average monthly production of the rest of India in 1930.

Figures derived from preceding columns. Net imports plus production minus increase in Government reserves in India.

\$7,575,000 was exported from India to Netherlands.

\$1,81,891,000 was exported from India to Netherlands;

\$2,173,000 to France.

Beginning with September, 1931, figures for net imports from individual countries are preliminary and subject to revision. Figures for total net imports, gold production, and increase in Government and private holdings are final unless otherwise indicated.

Preliminary figures.
1 In addition the issue department holds Government and other securities and silver coin as cover for the fiduciary issue, which is fixed by law at £260,000,000. Since Aug. 1, 1931, however, an increase of £15,000,000 in the fiduciary issue (and securities held as cover) has been authorized by the British Treasury under section 8 of the Currency and Bank Notes Act, 1928; the maximum period for which such authorization may be granted is two years.
Issued by the independent office for retirement of public debt (caisse autonome d'amortissement).
Not yet available.

¹ Beginning with August, quotations are for silver peso.
2 Silver currencies—Figures given for parity represent gold value of unit in April, 1932, computed by multiplying silver content of unit by New York average price of silver for April, 1932, which was \$0.28610 per fine ounce.
3 Straits Settlements dollar is legally equivalent to seven-sixtieths of one English pound. Figure given for parity represents seven-sixtieths of average quotation of pound in New York for April, 1932.

Back figures.—See Bulletin for January, 1932, 1931, 1930, 1929, and 1928.

BANK SUSPENSIONS AND BANKS REOPENED

BANK SUSPENSIONS AND BANKS REOPENED, BY DISTRICTS

[Banks closed to public on account of financial difficulties by order of supervisory authorities or directors of the bank. Figures of suspensions during given period include any banks which may have been subsequently reopened. Figures for banks reopened during given period include reopenings both of banks closed during that period and of banks closed in prior periods. Deposits (including those of banks reopened) are as of date of suspension where available, otherwise as of the latest available call date preceding suspension]

[Figures for latest month are preliminary]
