FEDERAL RESERVE BULLETIN

MAY 1937 Vol. 23 No. 5

REVIEW OF THE MONTH

During the month of April, open-market operations of the Federal Reserve System re-

Open-market operations

sulted in an increase in Reserve bank holdings of United States Government securities. During the preceding period

of over three years, open-market operations had effected shifts in maturities in the System's portfolio but had not increased or diminished the total holdings. In February and March, prices of United States Government and corporate bonds had shown sharp declines as the result of a considerable volume of sales, which, with other developments. had exerted an unfavorable influence on the capital market and resulted in a sharp reduction in flotations of new securities.

In these circumstances the Federal Open Market Committee on April 4 adopted the open-market policy set forth in the following statement issued at the close of the meeting:

"With a view (1) to exerting its influence toward orderly conditions in the money market and (2) to facilitating the orderly adjustment of member banks to the increased reserve requirements effective May 1, 1937. the Open Market Committee of the Federal Reserve System is prepared to make openmarket purchases of United States Government securities for the account of the Federal Reserve banks in such amounts and at such times as may be desirable. This purpose is in conformity with the policy an-January 30, 1937, which declared, with refer-lible instrument of credit policy than changes

ence to the increase in reserve requirements. that by this action the System would be placed in a position where such reduction or expansion of member bank reserves as may be deemed in the public interest may be effected through open-market operations."

Between April 4, when this statement was issued, and April 28, the Federal Reserve System increased its holdings of United States Government obligations by \$96,000,000.

When the Board of Governors on January 30 increased member bank reserve requirements to the full extent authorized by law. this action was taken for the purpose of removing from the credit base a large volume of unnecessary reserves arising entirely from the inflow of gold from abroad and constituting the basis of a possible injurious credit expansion. So long as member banks had a volume of reserves far in excess of legal requirements, the customary instruments of credit policy, open-market operations and discount rates, were wholly ineffective. This was for the reason that withdrawals of reserves through open-market sales could have been met by member banks out of excess reserves without the necessity of borrowing from the Reserve banks. Through the elimination of about \$3,000,-000,000 of excess reserves, the Federal Reserve System was brought into closer contact with the market and was placed in a position where sales or purchases in the open market could tighten or ease credit conditions in nounced by the Board of Governors of the accordance with the public interest. In this Federal Reserve System in its statement on way open-market operations, a far more flexin reserve requirements, have once more become an effective means of exerting the System's influence on credit conditions.

In the statement issued at the time when reserve requirements were increased, the Board announced that the Federal Reserve System proposed to continue its policy of exerting its influence toward the maintenance of easy money conditions for the encouragement of full economic recovery. In harmony with this policy, when disturbed conditions developed in the money market in March, the Federal Open Market Committee decided to increase the System's portfolio of United States Government obligations for the purpose of preventing disorderly conditions in the money market, and also facilitating the adjustment of member banks to the final increase in reserve requirements.

Excess reserves of member banks, which after the increase of 16% percent in reserve requirements went into effect on March 1 were \$1,300,000,000, in-Excess creased substantially in April, and reserves on April 28 were about \$1,640,000,-000. Several factors contributed to this growth in reserves. The Treasury's balance at the Reserve banks, which had increased from about \$200,000,000 at the beginning of March to over \$300,000,000 on March 31, declined to below \$100,000,000 by the end of April, and these disbursements by the Treasury added to the reserves of member banks. The increase in the Reserve System's holdings of Government securities of \$96,000,-000 also resulted in additions to member bank reserves. Member bank deposits declined in the period, largely as a result of reductions in bank holdings of Government securities, and this reduced by about \$60,-000,000 the volume of reserves that member banks were required to carry.

While all classes of member banks shared in this growth of excess reserves, the central

tive gain. The following table, showing the reserve position of the different classes of member banks for the week of April 23, indicates that for each class of bank taken as a whole excess reserves for that week were larger than the 14 2/7 percent by which requirements increase on May 1.

ESTIMATED RESERVE POSITION OF MEMBER BANKS [Daily averages for week ending April 23. Dollar amounts in millions]

			Excess	reserves
	Reserve balances	Required reserves	Amount	Percent of required reserves

All member banks	6, 888	5, 280	1,608	30

Total loans and investments of weekly reporting member banks in leading cities showed little change in the first three weeks of April, Member bank following a sharp decline in credit March. The March decline reflected a substantial reduction in holdings of Government obligations, following smaller decreases in other months since last July. For the period from January 6 to April 21 taken as a whole the amount of United States Government direct obligations held by reporting member banks declined by \$860,000. 000, most of which was in the central reserve cities of New York and Chicago. Holdings by banks in other leading cities declined in March but increased slightly in April.

Decrease in the investment portfolio of banks in recent months has been accompanied by an increase in all types of loans. Increases in real estate loans, loans to banks, and loans on securities to customers have been relatively small, and loans on securities to brokers and dealers have shown rather wide fluctuations. Most of the increase in reserve city banks showed the largest rela-bank loans has reflected extension of credit for commercial, industrial, and agricultural purposes, as indicated by a further growth in so-called "other" loans and by increased holdings of open-market paper. Holdings of acceptances and commercial paper bought by banks outside of New York City increased by \$76,000,000 from the first of the year to April 21, while banks in New York City showed a decrease of \$35,000,000 in their holdings. In the first quarter of the year an additional \$100,000,000 of bankers' acceptances and commercial paper became available in the market for bank purchase.

During the past year so-called "other" loans, which may be considered as roughly indicative of the extension of bank credit for commercial, industrial, and agricultural purposes, have increased steadily, except for a decline in January of this year. From early February to April 21 their growth amounted to \$360,000,000, about half of which was in New York City and the other half was spread over all the Federal Reserve districts with the largest percentage increases in the districts of Cleveland. New York (outside New York City). Atlanta, and Chicago. loans usually increase in the early spring, but the increase has been larger this year than is usual for the season and larger than during the corresponding period of 1936. year the increases in the agricultural districts of Atlanta, St. Louis, Kansas City, and Dallas were considerably larger than those during the same period a year ago.

Demand deposits, other than Government and interbank deposits, declined somewhat in April at New York City banks, reflecting in large part the sale of Government securities to depositors. At reporting member banks in other cities, there has been little change in deposits since the end of last year, except for wide fluctuations in Chicago around April Time deposits have shown moderate increases this year in New York City. Bal- a new high level since 1931.

ances due to domestic banks, after declining in the latter part of February and in March. owing mainly to withdrawals to meet the March 1 increase in reserve requirements and the payment of Federal taxes by depositors, showed little change in the first three weeks of April. Increases occurred during March and April in deposits due to foreign banks, reflecting an inward movement of short-term funds from abroad.

Prices of bonds, following sharp declines in March and early April, recovered somewhat and at the end of April were slightly above the lows reached Security markets early in the month. Yields on long-term United States Government bonds in April averaged about 23/4 percent, or about ½ percent above the low level of December. Corporate bond prices, which had moved downward from the middle of January to April 9, rose somewhat in the middle of April. Prices of lower grade bonds declined again in the last part of the month. while the highest grade issues remained firm. Yields on high-grade corporate bonds, as compiled by Moody's Investors' Service, averaged about 3.40 percent in April, approximately 3/8 percent above the January low. Moody's Baa bond-yield average of 4\% percent for the month, was likewise approximately 3/8 percent above the January low.

Stock prices and activity in the stock market have both declined since the second week of March when prices reached a new high In the last week of April average prices of common stocks reached the lowest level since early last autumn.

The amount of credit extended to customers by brokers carrying margin accounts, after increasing by \$200,000,000 in the six months ending with February, increased further during March by about \$65,000,000 to In March industrial activity and employment continued to increase, the volume of

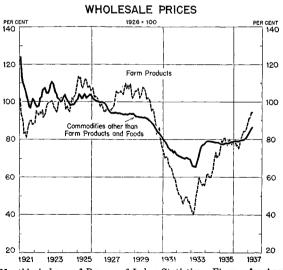

Business developments in March and April unfilled orders on producers' books remained at a high level, and commodity prices showed a further marked advance. During April prices

of commodities traded in on organized exchanges declined considerably both in this country and abroad, and the general level of domestic prices decreased slightly, while industrial production continued at about the March level. Further details concerning business developments in March and April are given in the national summary of business conditions on page 387.

Between October 1936 and March 1937 there was a general advance in wholesale com-

Recent course of domestic commodity prices modity prices for the first time since the summer of 1933. Increases in 1934 and in the summer of 1936

had reflected for the most part rising prices of agricultural products. In March 1937 wholesale prices for both agricultural and industrial products were at the highest level since the middle of 1930, as is shown in the chart.

Monthly indexes of Bureau of Labor Statistics. Figures for April 1937, the latest month shown, are estimated.

Prices of industrial raw materials and semifinished goods advanced from October to March more than those of finished goods, increases in nonferrous metals, iron and steel, lumber, wool, hides, and rubber being particularly large. Building materials as a group increased sharply. Grains, livestock, and other farm products also advanced in this period and foods showed some increase.

The general advance in prices from October to March was the result chiefly of a large volume of domestic and foreign buying, both for industrial and armament purposes. Increased purchases by consumers, replenishment of stocks of goods by manufacturers and distributors, and additions to plant and equipment were important factors in the increased demand. During this period production increased, in some instances to capacity levels, but the increase in orders was larger. Consequently a considerable volume of unfilled orders accumulated and in many instances buyers were not able to obtain prompt deliveries. These conditions brought about price advances and stimulated speculative buying, particularly of basic raw materials and semifinished products. Increases in prices of raw materials have resulted in increased costs for manufacturers of finished products, except to the extent that materials used had been purchased earlier at lower Costs have also been increased by advances in wage rates, and to some extent by the increasing use of less efficient plant and equipment. Fuel prices generally have shown little change, and in some instances costs have been reduced by refunding operations, reductions in freight rates, and fuller utilization of plant. Output of many minerals and manufactures is being expanded to meet increased demands and production of new and more efficient machinery has continued to increase.

The advance in prices of agricultural commodities has reflected increased consumer incomes and reduced supplies resulting in part from the drought last summer. Reports on intentions to plant indicate that crops this season may be considerably larger than in 1936, partly in response to the higher prices.

As a result of recent increases in wage rates, payrolls have continued to increase more than the number of persons employed. In the two years prior to October 1936 the more rapid increase in payrolls than in employment had reflected chiefly increases in the average number of hours worked. Since last October average hours for manufacturing industries as a whole have remained practically unchanged at slightly over 40 hours per week. Currently employment and payrolls in manufacturing are both at about the 1923-1925 average.

The larger volume of payrolls, increased corporate dividends, and higher farm incomes have been important factors in increasing the dollar volume of consumers' expenditures. While there has been a rise in rents, in prices of food and clothing, and in some other living costs, a considerable part of the increase in expenditures by consumers has been reflected in an increase in the volume of goods purchased.

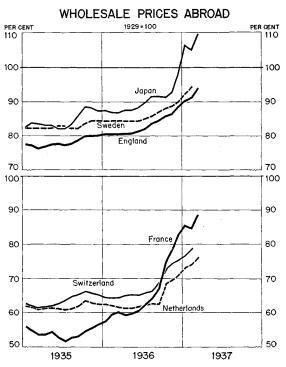

Advances in commodity prices have not been confined to the United States, but have

Wholesale prices abroad been world-wide. The chart shows the course of wholesale prices during the past two years in a group of foreign

countries which have relatively few exchange or price controls and which, therefore, are directly influenced by world developments. The upper half shows England, Japan, and Sweden, the last of which may be taken as typical of smaller countries in the so-called sterling area. The lower half shows France, Netherlands, and Switzerland—all members of the former gold bloc.

In each of the six countries shown the advance in prices has quickened since the mid-

rials or international commodities in general appear to be the chief factor in the rise. Typical commodities are nonferrous metals, iron and steel, timber, rubber, textile fibers, and cereals. .In Japan, where the decline in the exchange value of the currency has gone farthest, prices are now 10 percent above The rise in England and the 1929 level. Sweden has been less rapid, but in both these countries the price level of industrial raw materials and semimanufactures is now as high as in December 1929, and wholesale prices in general are at levels, relative to the predepression period, well above those in the former gold-bloc countries.

General indexes of wholesale commodity prices converted to 1929 base.

Prices in the gold-bloc countries were depressed during the long struggle to maintain established exchange parities. the sharp downward adjustment in the exchange rates of all three countries last Sepdle of 1936. In each, industrial raw mate- tember, a rise in prices occurred which has since continued under the stimulus of rising world markets. The course of French prices, however, differs from the movement of prices in Switzerland and Netherlands. The sustained rise began at an earlier date, and the recent movement has been more rapid. The rise of French prices beginning in the summer of 1935 appears to have been due to the short crops in that year and the agricultural policies of the government. It reflected domestic rather than international conditions. Early in 1936 the upward movement in agricultural prices was interrupted, but later in the year it was resumed, and in addition a general increase in labor costs caused industrial prices to advance. The continuance of developments in the labor field, readjustment of the French franc, rising world prices for raw materials, and greater business activity appear to be the chief factors in the further increase of French prices to a level 50 percent above that which obtained a year ago.

The strengthening of raw material markets, which has found reflection in the price

Improved position of the raw material countries

levels of the industrial countries, has considerably improved the position of those countries that produce

raw materials. Exports from these countries have been expanding since 1933, and the recent sharp advance in prices has accentuated the effects of the increased volume of commodities sold. Most of these countries have used their increased purchasing power to enlarge their purchases of manufactured goods in world markets, and some have been enabled to make reductions in their outstanding foreign indebtedness. To some extent reserves of gold and foreign exchange have been strengthened and free exchange markets widened. As a group these countries appear to be in a considerably better international position today than at any time within the past seven years.

The general level of domestic wholesale prices advanced 7 percent from October to

Domestic price changes by commodity groups March and indexes for all the major groups except fuel and lighting materials increased substantially in

this period. The extent of recent changes is shown in the accompanying table, in which the groups are arranged in order of their levels last October relative to 1926, the base period.

WHOLESALE PRICES (1926 = 100)

	October 1936	March 1937	Per- centage change

Source: Bureau of Labor Statistics.

The advance of 10 percent in prices of metals and metal products represented sharp increases in nonferrous metals and Metals in iron and steel, while such finished products as automobiles and agricultural implements remained unchanged. Copper, which in October was at 93/4 cents a pound as compared with a depression low of

about 5 cents, increased to 17 cents at the end of March. This price was the highest since the early part of 1930 and was above the level of most of the 1920's. The advance was due in part to exceptionally heavy foreign as well as domestic demand and to the reduced level of stocks reached last autumn. Both domestic and foreign production have increased considerably since the middle of 1936 and producer restrictions on output abroad have been removed. In April copper prices declined both in this country and abroad, the domestic price reaching 14 cents a pound. Zinc, lead, and tin prices, which

also had increased sharply, declined considerably after the middle of March.

Heavy demand for iron and steel products has been general among industrial nations and has reflected further increases in demands for industrial purposes as well as for armaments. Exports of machinery and other steel products from this country have continued the increase under way for several The bulk of the demand, however, has been from domestic consumers, with a rising volume of orders from the machinery industry, the railroads, the automobile industry, and many other sources. By October steel output had increased to 77 percent of capacity and prices of finished steel, scrap, and coke had also advanced. By March output was at 88 percent of capacity, prices of scrap and finished steel had increased further by a substantial amount and there had been a considerable advance in pig iron prices. In April, production continued to expand but prices of scrap declined and announcement was made that steel prices for third quarter delivery would be unchanged.

Building materials prices by March had advanced to the 1929 level, while the all-com-

modity index was 7 points lower than in that year. The advance of 10 percent in this group after

October reflected to some extent the sharp increases in prices of nonferrous metals and structural steel but to a much larger extent rapid advances in the price of lumber. Lumber supplies available on the market were reduced last winter by the maritime strike on the West Coast and by unusual weather conditions. In March production increased more than seasonally. With a larger volume of residential building, and larger demand for other purposes, the use of lumber has increased considerably from the extremely low level of the depression period, but it is still less than in pre-depression years. Cement prices have shown little change since as prices of materials.

the beginning of 1934 but are slightly higher than in 1929.

Data collected by the Home Loan Bank Board indicate that the increases in prices of building materials, together with increases in wage rates, have resulted in a large increase in costs of home construction since last summer and that since the latter part of 1936 increases in costs have been general throughout the country. Rates on mortgage money, on the other hand, have continued to decline.

Increases in prices of furniture, rugs, and stoves have accounted for most of the 7 percent advance since last October in the housefurnishings group.

In the nondurable goods industries also prices for both raw materials and finished goods have advanced. De-

Nondurable goods mand for these products
was large in this period, and

was large in this period, and production of finished goods showed a further increase to about the same volume as in 1929. Also, by last autumn stocks of leading raw materials used in these industries had been reduced to relatively low levels, principally by increased consumption and, in the case of some farm products, by drought conditions. With active demand and reduced supplies materials such as wool, hides and leather, rubber, and wood pulp have shown large price advances. Rayon, silk, and cotton prices have also advanced but are much lower than in 1929. Prices of woolen and worsted goods have advanced about 15 percent, and cotton goods have shown a similar increase following some rise during the summer of 1936. Advances reported for clothing prices have thus far been smaller than in textile yarns and fabrics, reflecting in part pricing on the basis of costs of materials purchased earlier and the fact that other costs have not advanced to the same extent

The increase of 8 percent since last autumn for hides and leather products represents increases of 22 percent for hides and skins, 14 percent for leather and 4 percent for shoes and other leather products. Shoe production has in recent months been the largest on record, and output of leather is at pre-depression levels. Since last autumn the Government has disposed of most of the substantial volume of hides purchased two years earlier.

The principal factors in the increase shown for miscellaneous products have been a sharp rise in the price of rubber and substantial increases for automobile tires and pulp and paper. Rubber export quotas of producing countries have been repeatedly enlarged, but supplies have not become available rapidly and prices advanced from 17 cents per pound in October to 27 cents at the end of March. Since that time the price has declined and in the last week of April reached 21 cents.

Altogether commodities other than farm products and foods have accounted for about

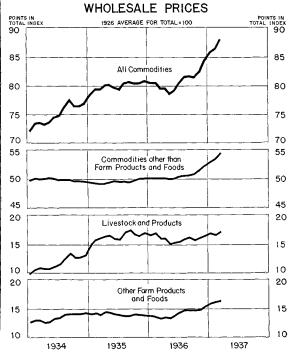

Farm products and foods

one-half of the increase in the all-commodity index since October, and the other half of the increase has been in live-

stock and products and other farm products and foods. This is indicated on the accompanying chart based on data supplied by the Bureau of Labor Statistics. The chart also shows that movements in prices of livestock and their products were responsible for most of the changes in the index for all commodities from the beginning of 1934 until the autumn of 1936. The figures in the chart are expressed in terms of points in the all-commodity index, so that it is possible to see how much of the movement in the general level is accounted for by changes in each of the groups shown.

Changes in prices of livestock and their products have been generally more products since the beginning of 1934 have reflected many influences, including increases in consumer income throughout the period, in response to the reductions in feed supplies

severe drought in the summers of 1934 and 1936, Government purchase of cattle and sheep in the summer of 1934, and the processing tax on hogs, which began in November

Monthly figures. The data used in preparing this chart were supplied by the Bureau of Labor Statistics. The commodities in the major groups of farm products and foods were regrouped to show livestock and their products separately from other farm products and foods. The new livestock group contains the commodities in the "livestock and poultry", "meats", and "dairy products" subgroups and also lard, eggs, and wool. The latest figures shown are for March 1937.

1933 and was removed in January 1936. The advance in prices of livestock and their products since the drought last summer has been considerably smaller than in the corresponding period following the drought of 1934. Prior to the recent drought prices were much higher than in the early part of 1934 and during the drought period marketings were lighter. Except for the first half of 1934 and the early part of 1936, prices of livestock and meats have moved closely together. Prices of dairy products have been generally more stable, and in both 1934 and 1936 rose more promptly than those of livestock and meats in response to the reductions in feed supplies

by drought conditions. With unusually large consumption of wool and reduced stocks. there was a substantial advance in wool prices toward the end of last year, and imports have increased considerably.

Movements in prices of other farm products and foods, principally cotton, grains and products, tobacco, vegetables, and fruits, have reflected primarily increased consumer incomes, drought conditions in 1934 and 1936, and crop control programs. Stocks of cotton in the United States. amounted to 10,000,000 bales in August 1932. have been sharply reduced and the Department of Agriculture estimates that stocks in August 1937 will be about 4,500,000 bales. Holdings of cotton by Government agencies have been reduced from a maximum of 6,500,000 bales to about 1,750,000 bales on April 22. The price of cotton, which had been around 12 cents a pound for three years, reached 143/4 cents at the end of March, then declined by about a cent and a half in April. Private estimates indicate that cotton acreage is being increased substantially this year.

Wheat prices have advanced materially in recent years. Since December hard winter wheat has been around \$1.40 a bushel as compared with \$1.20 last autumn and \$1.05 a year ago. Domestic stocks have been reduced by a series of small crops and are now at the lowest level since 1926. The Department of Agriculture estimate of the winter wheat crop indicates a yield of 656,000,000 bushels. about 140,000,000 more than last season. The spring wheat crop is also expected to be larger than last season and it appears that the total crop will be considerably in excess of domestic requirements. World output last year was small, and with active demand prices abroad have advanced more sharply than in this country, so that currently, for the first time in four years, prices of winter and machinery industries, and there have wheat in this country are approximately ad- also been advances in the clothing, leather, justed to an export basis. As a result of rubber tire, nonferrous metals, and petroreduced supplies, prices of feedstuffs have leum industries.

been unusually high this season and domestic supplies have been supplemented by imports.

Since last October costs as well as prices have been rising in many industries, but the

Costs and wages

movement of various costs has not been uniform. Higher costs have resulted in part from increased prices of materials, but

wage rates have also advanced, and in some lines, particularly those in which production has been close to capacity, less efficient plants have been brought into use. In other instances fuller utilization of plants, made possible by an increasing volume of production, has been a factor lowering costs per unit. Fuel prices have shown little change. Railroad freight rates on some commodities were reduced at the end of 1936 when the emergency rates granted in 1935 were discontinued. Interest charges have been lowered in many cases by refunding operations.

Wage rates have increased substantially since last October, following a period of about two years during which they had increased only slightly. The principal increases have been in manufacturing industries, but at public utilities, metal mines, and oil fields wages advanced somewhat in the latter part of 1936 and early this year, and at bituminous coal mines wages were increased considerably in April. Wages paid in the building industry also have increased in recent months, while in wholesale and retail trade average hourly earnings have remained practically unchanged.

Average hourly earnings increased in November and December at meatpacking establishments, at plants producing steel, machinery, automobiles, textiles, and chemicals, and in several smaller manufacturing industries. Since the first of the year wages have been raised further in the steel, automobile, For manufacturing as a whole the increase in wage rates from October to March was about 7 percent. Changes by industries are shown in the following table:

Appointment of Class C Directors at Federal Reserve Banks

On April 1, 1937, Mr. Carlyle Thorpe was appointed as Class C Director of the Federal Reserve Bank of San Francisco for the unexpired portion of the three-year term ending December 31, 1939.

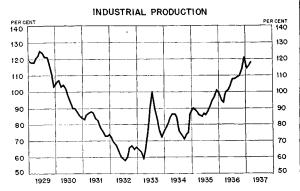

December 31, 1939.
On April 22, 1937, Mr. F. W. Peck was appointed as Class C Director of the Federal Reserve Bank of Minneapolis for the unexpired portion of the three-year term ending December 31, 1939.

NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled April 24 and released for publication April 26]

increase and payrolls at factories and mines showed a substantial rise. Prices of basic commodities after advancing rapidly March declined in the first half of April.

Production and employment.—Industrial production increased from February to March and the Board's seasonally adjusted index advanced from 116 percent of the 1923-1925 average to 118 percent. The rise reflected a

Monthly index of physical volume of production, adjusted for seasonal variation, 1923-1925 average

sharp increase in output of minerals, chiefly coal, and an increase of somewhat more than the usual seasonal amount in manufacturing. The larger output of coal in March was due in part to stocking by consumers in anticipation of a possible strike at bituminous coal mines on April 1 when the agreement between mine operators and the miners' union expired. A new agreement was reached on April 2 but, owing partly to the previous accumulation of stocks, production in the first ten days of April showed a sharp decline. During March activity at steel mills increased seasonally and in the first three weeks of April was over 90 percent of capacity. In the automobile industry output showed about the usual seasonal increase in March and the first three weeks of April, considerable fluctuations during this period being largely in response to developments in the labor situation. Lumber production expanded considerably in March, and there was a sharp rise in output of nonferrous metals. Cotton consumption, which which had advanced rapidly in March, dehas been at an unusually high level in recent clined considerably in the first half of April. months, increased further in March and in Since the middle of March prices of coke, tin

In March industrial activity continued to vious month. Production at woolen mills and shoe factories continued in large volume.

Value of construction contracts awarded in March, as reported by the F. W. Dodge Corporation, was at about the same level as in February and substantially higher than a year ago. Privately-financed work increased, while the amount of publicly-financed work The increase in pricontinued to decline. vately-financed projects reflected a larger volume of residential building and of factory and commercial construction.

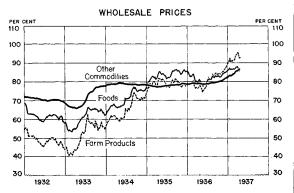

Employment and payrolls increased by considerably more than the usual seasonal amount between the middle of February and the middle of March. The expansion in payrolls was larger than in employment, reflecting in part a further rise in wage rates. In manufacturing, the principal increases in employment were in industries producing durable goods, particularly steel, machinery, and lumber. The number employed in the production of nondurable manufactures showed slightly more than the usual seasonal rise.

Monthly indexes of number employed and payrolls at factories, unadjusted for seasonal variation, 1923-1925 = 100.

Distribution.—Distribution of commodities to consumers showed about the usual seasonal increase from February to March. Mail-order sales expanded considerably but the rise in department store sales was less than seasonal, considering the early date of Easter this year.

Commodity prices.—Prices of nonferrous metals, steel scrap, rubber, cotton, and wheat, actual amount was larger than in any pre-|plate, and rayon have advanced and there of other industrial products. Dairy products have declined, reflecting in part seasonal developments.

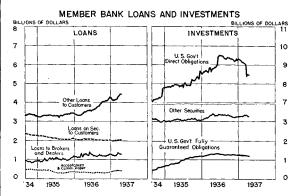

compiled by United States Bureau of Labor Statistics, 1926 = 100. By weeks, 1932 to April 17, 1937.

Bank credit.—In the four-week period from March 24 to April 21 excess reserves of member banks increased from \$1,270,000,000 to \$1,590,000,000, reflecting principally bursements by the Treasury from balances with Federal Reserve banks and purchases of U. S. Government obligations by the Federal Reserve System. The bulk of the increase in excess reserves was at banks in New York City and Chicago.

Total loans and investments of reporting member banks, which had declined sharply in March, reflecting sales of U. S. Government weeks ending April 14. Loans to brokers and of April.

have been smaller increases in a wide variety dealers in securities declined from the middle of March to the middle of April, while other loans, which include loans for commercial. industrial, and agricultural purposes, showed a substantial increase. These loans have increased almost continuously over the past year.

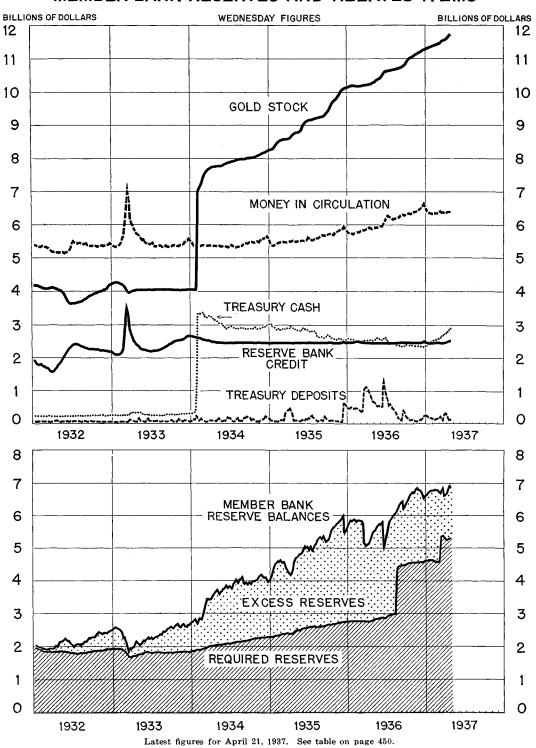

Wednesday figures for reporting member banks in 101 leading cities, September 5, 1934, to April 14, 1937. Loans on real estate and loans to banks excluded.

Demand deposits, after declining in March. increased somewhat in the first half of April, and there was an increase in foreign bank balances, reflecting an inward movement of short-term funds from abroad.

Money rates.—The rate on prime commercial paper advanced from ¾ percent to 1 percent in the latter part of March. Bond yields, which had advanced sharply in March, showed obligations, showed little change in the two no pronounced change in the first three weeks

LAW DEPARTMENT

23, 1937,

The Board recently adopted an amendment to its Regulation T, which relates to the extension and maintenance of credit by brokers, dealers and members of national securities exchanges. The amendment, which became effective April 23, 1937, reads as follows:

"Section 5 of Regulation T is hereby amended by striking out the date July 1, 1937' in subsections (c) and (d) of said section and substituting therefor the date 'January 1, 1938'."

The principal effect of this amendment is to extend from July 1, 1937, until January 1, 1938, the period within which brokers and dealers subject to Regulation T may hold unregistered securities as additional collateral in certain circumstances, such collateral being held merely for the brokers' or dealers' own protection and without being given any loan value or serving as the basis for any additional credit.

Necessity of Reserves against Deposits Securing Loans of Government Securities.

The Board of Governors has recently considered the question whether deposits received by a member bank as collateral to loans of United States Government securities constitute deposits against which reserves are required to be carried with the Federal Reserve bank of the district.

It was understood that the member bank lends United States Government securities to certain of its customers who are dealers in securities and as collateral for such loans accepts deposits from the customers. agreement under which the loans of United States Government securities are made contains, among others, the following provisions:

"To secure re-delivery as outlined in the preceding paragraph, and to secure performance and payment by you of any other of your obligations to us, you have deposited with us \$..... in cash and the following securities:

"Upon failure to make re-delivery as required above, we shall be entitled, at our option, to retain said cash and securities deposited by you as our absolute property in lieu of the securities loaned to

It was suggested that, so long as the bank's records indicate that the deposits made under to trust investment committees was to pro-

Amendment No. 9 of Regulation T-Effective April | this agreement are segregated for this particular purpose, the funds should be considered as collateral and not as deposits subject to reserve. It appeared, however, that the funds on deposit are mingled with the bank's other general assets.

In a ruling published at page 572 of the Federal Reserve Bulletin for 1922, the Board took the position that all funds received by a bank in the course of its commercial or fiduciary business must be considered as deposits against which reserves are required to be carried, unless such funds are trust funds and are actually segregated from the other assets of the bank. Since the date of the above ruling, the principle stated therein has been applied on a number of occasions and was recently applied in a ruling published at page 113 of the Federal Reserve Bulletin for February, 1937.

Since it appeared that the deposits in guestion create an ordinary debtor-creditor relationship between the bank and the customer and that the funds on deposit under the arrangement referred to above are not trust funds and are not actually segregated from the other assets of the bank, the Board expressed the view that the provisions of section 19 of the Federal Reserve Act require that reserves be carried against these deposits.

Quorum of Trust Investment Committee of National Bank; Written Approval of Transactions by Majority of Committee Without Meeting of Committee.

The Board recently considered two questions relating to the provisions of the Board's Regulation F pertaining to the trust investment committees of national banks.

The first question presented was whether it is proper for a national bank to provide that two of the six members of its trust investment committee shall constitute a quorum. In answer to this question, the Board expressed the opinion that a majority of the committee is necessary to constitute a quorum in order to comply with the requirements of the regulation. In this connection, the Board stated that the underlying purpose of the provisions of the regulation pertaining vide: (1) that collective rather than individual judgment govern the investment of trust funds; and (2) that responsibility for the investment of trust funds be definitely placed in a committee functioning as such, rather than in two or more officers acting as individuals.

The second question presented was whether it is proper for a national bank to provide that trust investments may be made or disposed of upon written approval of a quorum of its trust investment committee without a meeting of the committee. The Board stated that it does not consider it inconsistent with the purposes of the pertinent provisions of Regulation F, and will not deem it a violation of such regulation, for trust investments to be made or disposed of upon written approval by a majority of the members of the trust investment committee, provided such action is promptly reported to the committee and the report incorporated in its minutes.

Investment of Funds of Various Trusts by National Bank in Notes Constituting Part of Series Secured by Same Deed of Trust.

The Board recently considered an inquiry from a national bank presenting the question whether it is in conflict with the requirements of the Board's Regulation F for the bank to pursue the practice of purchasing from time to time for its various trusts one or more of a series of notes of the same obligor and secured by the same deed of trust on real estate, without purchasing all of the notes. The bank in its own right has no interest in any of the series of notes and such notes are purchased after an independent appraisal on behalf of the trust department.

The Board stated that the only provisions of Regulation F which might be construed as prohibiting such a practice are those contained in section 12 of the regulation, which are to the effect that securities and investments of each trust shall be kept separate from those of all other trusts. The Board expressed the opinion, however, that such provisions do not forbid the investment of trust funds in the manner described; it being understood, of course, that in any case the investments are otherwise proper investments for particular trusts in view of all the circumstances relating to each trust and that such investments are not otherwise subject to criticism.

Renewal of Real Estate Mortgage Notes Held by Trusts of National Bank at Time of Effective Date of Latest Revision of Board's Regulation F.

The Board recently considered an inquiry from a national bank relating to the renewal for trust accounts of real estate mortgage notes purchased prior to June 1, 1936, through a corporation which is principally owned by a director of the bank or his immediate family. Prior to such date the bank invested funds of trusts administered by it in real estate mortgage notes purchased through such corporation and the corporation receives a commission from the borrower as compensation for securing the renewal of such notes from time to time. The question presented was whether the renewal of the notes is forbidden by provisions of section 11 of the Board's Regulation F, added to the regulation when it was revised effective June 1, 1936, which provide that trust funds held by a national bank shall not be invested in property acquired from directors, officers, or employees of the bank or their interests.

The Board stated that such provisions relate to the investment of trust funds and do not require that assets which had already been acquired at the time of the effective date of the revised regulation shall be removed from trusts held by a national bank. The Board further stated that it does not feel that a renewal of a note held as an asset of a trust at the time of the effective date of the revised regulation should be considered as an investment of trust funds within the meaning of such requirements of the regula-The Board expressed the opinion, tion. therefore, that the regulation does not prevent the renewal of the notes held by trusts as described above; it being understood, of course, that the investments are otherwise proper investments for particular trusts in view of all of the circumstances relating to each trust and that such investments are not otherwise subject to criticism.

Application of Regulation U to a Loan to a Securities Dealer for the Purpose of Purchasing Both Registered and Unregistered Stocks.

The Board recently considered a question as to whether a certain loan to be made to a securities dealer and secured by stocks should be considered to be a loan for the purpose of purchasing or carrying stocks registered on a national securities exchange, and thus be considered to be subject to Regulation U.

It appeared that the proceeds of the loan would not be employed immediately but would be kept available for use in acquiring registered or unregistered securities. securities were only to be acquired when a quick sale was in prospect and they would be disposed of promptly. The securities purchased were often unregistered securities, but some registered stocks were so purchased and the inquiry was, in effect, whether such purchases of registered stocks caused the loan to be subject to the regulation. No question was presented to the Board as to whether | purchasing or carrying registered stocks.

or not, in the event the dealer should treat certain of the transactions separately and obtain loans from time to time for particular purposes, some of these loans to the dealer might be excluded from the operation of the regulation.

It seemed clear from the borrower's business as a dealer that one purpose of the loan in question was to purchase or carry registered stocks. Therefore, the Board expressed the opinion that, while the loan might also have certain other purposes, the loan should be considered to be a loan for the purpose of

STATISTICS OF INTERNATIONAL CAPITAL TRANSACTIONS OF THE UNITED STATES **MAY 1929—DECEMBER 1936**

tions of the United States during the last three months of 1936, recently released by the Treasury Department, are published in this issue of the BULLETIN, together with the figures for 1935 and the first nine months of 1936, published in the January BULLETIN. In order to make available to the public additional information regarding capital movements between the United States and foreign countries, there are also published in this BULLETIN for the first time statistics of the Treasury regulation are available. international banking funds collected from first table shows the total capital move-1929 to 1934 by the Federal Reserve Bank of New York in cooperation with a group of leading New York City banks and bankers.

Collection of these figures by the New York Reserve Bank was begun on a monthly basis in 1929. At first only short-term liabilities were reported, such as foreign deposits in this country, loans made to brokers on ing foreign liabilities and assets reported by behalf of foreigners, and acceptances and Treasury bills held for foreign account. In March 1931, however, the reports were expanded to cover the short-term assets abroad of the New York banks and their clients. Beginning July 15, 1931, all reports were put In December 1934 on a weekly basis. these reports to the Federal Reserve Bank of New York were supplanted by the figures gathered on similar forms by all twelve Federal Reserve banks in accordance with the Treasury Regulation of November 12, 1934.1

The weekly figures now compiled by the Federal Reserve banks for the Treasury cover not only banking funds but also brokerage balances, security transactions, and other foreign exchange data reported by banks and brokers in the United States. Most of the international capital transactions of this country appear to have been handled by these reporting institutions. Reports received from other sources, such as the larger exporters, importers, and commerthe net movement of capital through these July, and December 1936. agencies has been comparatively small. There are, however, unreported capital movements which may at some periods have been fairly substantial.

Most of the reported material for the period from January 2, 1935, to September

Statistics of international capital transac-30, 1936, was published by the Treasury on one of the United States during the last November 27, 1936. On April 5, 1937, the Treasury brought the published data down to the end of 1936, and publication will be continued on a quarterly basis.2

The eleven tables presented at the end of this article summarize the more significant statistics of international capital transactions since 1929. The first nine tables cover only the years 1935 and 1936, for which the comprehensive figures compiled pursuant to ment as reported by banks and brokers. The seven major forms which this movement has taken are also shown in the first table. Each of the eight columns is then made the subject of a succeeding table in which the data are classified according to leading countries and areas. Tables 10 and 11 show the outstandbanks for the entire period from May 1929 to December 1936, including figures collected by the New York Reserve Bank before December 1934, as well as those subsequently reported under the Treasury regulation. The material in these two tables is presented in the form of a chart on page 399. Four additional charts showing the capital movement to the United States in 1935-1936 and its principal components are presented on pages 400 and 401.

The movement of capital between the United States and foreign countries constitutes a major element in the balance of international payments of the United States. In recent years it has been the factor chiefly responsible for the gold flow to the United States and the growth of excess reserves in member banks of the Federal Reserve System. International capital movements have been discussed in several issues of the Fed-ERAL RESERVE BULLETIN on the basis of the figures published at the end of this article. Such discussions occurred in the Bulletins cial and industrial concerns, indicate that for October and December 1935 and for May,

DETAILED DESCRIPTION OF THE STATISTICS

Since the international movement of capital consists of transfers of ownership of balances, securities, properties, and other claims

¹This regulation (BULLETIN for December 1934, p. 780) was issued under authority of the Executive Order of January 15, 1934 (BULLETIN for February 1934, pp. 78-79).

² See documents published by the United States Treasury entitled "Statistics of Capital Movements between the United States and Foreign Countries and of Purchases and Sales of Foreign Exchange in the United States."

between the United States and foreign countries, the distinction between domestic entities and foreign entities must be precisely Banking institutions, security indicated. dealers, other concerns, and persons are regarded as domestic, whatever their nationality, if domiciled within the United States. Conversely, banking institutions, security dealers, other concerns, and persons are regarded as foreign, whatever their nationality, if domiciled outside the United States. Thus. the branches in the United States of foreign banking institutions are regarded as domestic, while foreign branches of domestic banking institutions are regarded as foreign.

Not every transfer of ownership between Americans and foreigners, however, involves an international exchange transaction. A foreign buyer of American securities with funds on deposit at an American bank, for instance, may use these funds to pay for the securities purchased; or, not having such funds, may borrow from an American bank or broker. Thus, the recorded inflow of capital represented by the security transaction would be offset by a recorded outflow of capital reflected, in the first case, in a decrease in American deposit liabilities to foreigners; and, in the second case, in an increase in the foreign assets of an American bank or broker. No foreign exchange transaction would have occurred, since what appear in the recorded figures as two separate operations are really two offsetting aspects of a single operation, transacted wholly in dollars. The net figures, which would show no movement of capital. would report this fact correctly.

The following paragraphs describe in detail the source and nature of the figures in the various tables. The figures in the first column of table 1, and in table 2, represent the summation of the several components described below.

Total banking funds (table 1, second column, and table 3).—The term banking funds is here used to cover short-term liabilities to foreigners reported by banks in the United States, and short-term claims on foreigners reported by such banks. The reports also cover accounts of clients so far as these are handled by the banks. The figures in table 3 show the net movement of capital to the United States in total banking funds since January 2, 1935, as represented by both the net inflow of foreign banking funds to the United States (table 4) and the return of

United States banking funds from abroad (table 5).

Foreign banking funds in the United States (table 1, third column, and table 4) and United States banking funds abroad (table 1. fourth column, and table 5).—These figures represent the net inflow of banking funds shown by the net *increase* since January 2. 1935, in short-term liabilities to foreigners (table 4) and the net decrease since January 2, 1935, in short-term foreign assets (table 5) as reported by banks and bankers in the United States: a net decrease in liabilities or a net *increase* in assets constitutes an outward movement of banking funds. Figures of the outstanding amounts of short-term foreign liabilities and assets. from which tables $\bar{4}$ and 5 are derived, are presented in tables 10 and 11, and the source and nature of these figures are described more fully in connection with those tables.

Brokerage balances (table 1, fifth column, and table 6).—The term brokerage balances is here used to cover balances due from foreigners to reporting brokers and dealers in securities domiciled in the United States, and balances due to foreigners by such brokers and dealers. Total brokerage balances due from foreigners include both debit balances in foreign accounts with domestic brokers and dealers (reflecting funds borrowed by foreigners, presumably for the purchase of securities), and funds held abroad in the form of balances with foreign banks and brokers. Total brokerage balances due to foreigners include both credit balances in foreign accounts with domestic brokers and dealers, and overdrafts carried abroad by such brokers and dealers.

The net movement of capital to the United States in brokerage balances represents the cumulated sum of (a) increases in balances due to foreigners by security brokers and dealers in the United States and (b) decreases in balances due from foreigners to such brokers and dealers. Decreases in (a) and increases in (b) constitute outward movements of capital and reduce the cumulative inward movement. A net outward movement of capital in brokerage balances has usually indicated that foreigners have bought securities on margin in the United States.

United States in total banking funds since January 2, 1935, as represented by both the net inflow of foreign banking funds to the United States (table 4) and the return of with this article, although they are available

in the Treasury reports referred to on page 394. Brokerage balances outstanding at the beginning and end of the period covered, and for the intermediate dates on which the cumulative net inward and net outward movements of capital in brokerage balances were largest, are given below.

TOTAL BROKERAGE BALANCES OUTSTANDING

[In millions of dollars]

	Due to foreigners	Due from foreigners
Jan. 2, 1935.	17. 0	94. 2
Oct. 9, 1935.	22. 3	68. 7
Feb. 19, 1936.	21. 9	102. 3
Dec. 30, 1936	38. 6	102. 9

Since changes in brokerage balances are closely related to security transactions, it appears desirable, for most purposes, to consider them as part of the net movement of capital in security transactions.3

Total securities (table 1, sixth column, and table 7).—The net movement of capital to the United States in security transactions represents the cumulated net purchases of both domestic and foreign securities 4 from Americans by foreigners, i.e., total foreign purchases minus total foreign sales, as reported by banks, bankers, brokers, and dealers in the United States. The reports cover (a) transactions executed in the United States for foreign account, or on behalf of a domestic trustee or nominee known to be acting for foreign account; (b) transactions executed in foreign countries for account of reporting institutions in the United States or their domestic clients; 5 (c) transactions executed for joint foreign arbitrage account, as reported by brokers and dealers in the United States who participate as principals in security arbitrage accounts jointly with brokers and dealers domiciled abroad.

The basic figures represent the total amount of money debited or credited (to either foreign or domestic account), i.e., the cost of purchases plus commissions, tax, etc., or the proceeds of sales less commissions, tax, etc. When security purchases in the United States

are partially financed by funds borrowed in this country, the full cost of the purchase is included in the security figures and the funds borrowed are reported by the lending bank or broker; and conversely when such securities are sold and the indebtedness is repaid.

Domestic securities (table 1, seventh column, and table 8).—The net movement of capital to the United States in security transactions during the period covered by the figures has represented principally net foreign purchases of domestic securities. The term 'domestic securities" is used to designate securities of the United States Government, States, and municipalities, and of corporations chartered in the United States, except that changes in foreign holdings of United States Treasury bills and certificates are largely reflected in the figures in table 10 (see below) and are not included in the figures of transactions in domestic securities.

Foreign securities (table 1, eighth column, and table 9).—The other component of the net movement of capital to the United States in security transactions represents net foreign purchases of foreign securities. The term "foreign securities" covers the securities of foreign governments and political subdivisions, and of corporations chartered in foreign countries, except that changes in American holdings of foreign government securities maturing within one year of the date of issue are largely reflected in the figures in table 11 (see below), and are not included in the figures of transactions in foreign securities. Foreign purchases of foreign securities include, in addition to ordinary investments, two special types of transaction: (1) the amounts of called or matured foreign securities redeemed in the United States, and (2) sinking fund purchases of foreign securities in the United States. New foreign security issues in the United States are included in the figure of foreign sales of foreign securities, and if foreigners subscribe to such issues the amounts are reported as foreign purchases.

Short-term foreign liabilities (table 10) and assets (table 11) reported by banks and bankers.—The figures in tables 10 and 11 represent, respectively, the short-term indebtedness to, or claims on, banks, governments, concerns, and individuals domiciled

⁸ See first chart, p. 400, and note. ⁴ The term "securities" is broadly interpreted to include rights, warrants, scrip, and trust certificates as well as stocks and bonds. ⁵ In general, transactions executed abroad otherwise than through the intermediary of a regularly reporting agency are not reported, though certain special transactions reported directly by industrial concerns are included in the figures.

^{6 &}quot;Short-term" is defined as relating to obligations maturing within one year of the date of report; except that long-term pub-licly offered securities are not regarded as short-term obligations, even when they come within one year of maturity.

abroad, recorded on the books of banks and bankers in the United States. Prior to December 5, 1934, the reports were confined to a group of leading banks and bankers in New York City where most of the international accounts of the country are held. Beginning with December 5, 1934, reports have been required by the Treasury from all banks and bankers in the United States that have international accounts and do a foreign exchange business of \$5,000 weekly. The New York City figures begin with the end of May 1929 for liabilities to foreigners and with the end of March 1931 for foreign assets. Although from the first these figures constitute a substantially complete record of the short-term foreign liabilities and assets of the reporting New York banks and their clients, it was not until September 7, 1932, that the reporting system was made virtually the same as that employed for all banks in the United States subsequent to December 5, 1934.

Figures for period beginning December 5, 1934. These figures are derived from weekly reports furnished by banks and bankers performing foreign banking operations, including domestically owned commercial banks and trust companies, private banks, domestic branches and agencies of foreign banks, and the Federal Reserve banks. The reports cover not only the reporting banks' own short-term liabilities to foreigners, but also short-term obligations held for foreign account which represent claims on institutions, firms, and individuals in the United States. Thus, for example, United States Treasury bills and certificates and commercial bills drawn on American firms are reported as liabilities to foreigners if held for foreign account by reporting banks and bankers. Similarly, the reports cover short-term claims on foreigners of domestic clients as well as those of the re-Thus, deposits maintained porting banks. abroad, or bills sent abroad for collection, for account of domestic clients, are included in The reports the figures of foreign assets. show short-term liabilities to, or claims on, all concerns and individuals, whatever their nationality, domiciled outside the United States, including foreign branches, subsidiaries, or affiliates of domestic banks and other concerns.

In considering the scope of these figures it should be recognized that, although they are believed to cover the most important portion of this country's short-term foreign liabilities

and assets, there are several classes of liabilities and assets that are not reflected in the records of domestic banks and bankers, and, consequently, do not enter their figures. Three such classes not included in the figures in tables 10 and 11 are: (1) the short-term foreign liabilities and assets on open account of commercial, industrial, and other concerns domiciled in the United States; (2) the foreign debit and credit balances of security brokers and dealers in the United States; and (3) foreign holdings of United States currency. Although reports are received from commercial, industrial, and other concerns, publication of the figures has been postponed, owing to certain statistical inadequacies, until necessary improvements have been developed. The net movement of capital in brokerage balances is given in table 6, however, and some idea of the net change in foreign holdings of United States currency may be obtained from figures published monthly in the FEDERAL RESERVE BULLETIN and annually by the Department of Commerce in The Balance of International Payments of the United

The detailed classification of foreign liabilities and assets as currently reported by banks and bankers is shown below. Weekly figures classified according to these headings are published in the Treasury reports of November 27, 1936, and April 5, 1937.

Short-Term Foreign Liabilities

Payable in dollars

1. Deposits for foreign account

2. Loans to brokers and dealers in securities for foreign account

Bills held for foreign account Short-term United States Government obliga-

tions held for foreign account 5. All other

Payable in foreign currencies

6. Borrowings from foreign banks 7. Acceptances made by foreign banks for U.S.

account 8. All other

Short-Term Foreign Assets

Payable in foreign currencies

Banks' own deposits abroad

2. Deposits abroad for account of domestic clients

3. All other (including publicly offered securities of foreign governments or political subdivisions maturing within one year of date of issue)

Payable in dollars

4. Loans to foreign banks

5. Acceptances made by domestic banks for foreign account

6. All other

ber 28, 1934.—These figures show the outstanding amounts of short-term foreign liabilities from May 31, 1929, to November 28, 1934, and of short-term foreign assets from March 31, 1931, to November 28, 1934, reported to the Federal Reserve Bank of New York by a group of banks and bankers in New York City and the Federal Reserve banks. The reporting banks in New York included the principal commercial banks and private bankers performing foreign banking operations and also the agencies of Canadian banks, but excluded the agencies of other foreign banks. For this reason, and because funds employed in this country by the New York agencies of foreign banks are of foreign origin, reporting banks which held funds for account of the non-reporting foreign agencies were asked to report such funds as "foreign." The only significant changes in the list of reporting banks during the period occurred on September 7, 1932, when three new banks were added to the list and five other banks began to report short-term foreign assets for the first time. At that time also the instructions to reporting banks were revised and clarified. It is estimated that the changes in the number of reporting banks and the revision of instructions resulted in increases of about \$30.000.000 in short-term foreign liabilities and of about \$55,000,000 in short-term foreign assets between August 31 and September 7, 1932

The revised instructions to New York banks which became effective September 7. 1932, were almost identical with those now in effect for the larger group of banks reporting on Treasury forms. The figures for the period from September 7, 1932, to November 28, 1934, therefore, are almost directly comparable to those currently reported except for the difference in the number of reporting institutions and, also, for the fact that short-term foreign assets in the form of bills sent abroad for collection for account of domestic clients were probably not as fully reported as at present.

Figures for period May 31, 1929-Novem-gressive improvement in the figures, but most of the changes were minor. The principal differences between the figures in this earlier period and later figures are noted below.

> a. American liabilities on acceptances made by foreigners for domestic account were reported for the first time beginning March 31, 1931. The total The total amount reported on that date was \$19,700,000; at the end of 1929 the corresponding figure for the banks reporting to the Department of Commerce was \$35,000,000 (see table, p. 399). The liabilities of foreigners on acceptances made by Americans for their accounts were included from the first in the figures of short-term foreign assets which began to be reported on March 31, 1931.

> b. Up to September 7, 1932, short-term was defined as "not exceeding one year to maturity from date of report." Thus, holdings of publicly offered securities, originally of longer term, may have been reported by some banks when they came within one year of maturity; such securities were specifically excluded from the New York figures beginning September 7, 1932, and are not included in the figures of short-term banking funds currently reported by banks in the United States (see note 6, p. 396).

> c. American liabilities in the form of bills payable in the United States acquired by foreigners elsewhere than in this market and sent here for collection, and American claims on foreigners represented by bills sent abroad for collection for account of domestic clients, were not fully reported before September 7, 1932, and even after that date, noted above, the latter were probably not as fully reported as at present.

> d. During the period through the end of February 1931, before short-term assets were reported, it is probable that most banks, in reporting liabilities to foreigners, deducted overdrafts in foreigners' accounts from "Deposits of Foreigners." Subsequently the gross deposit figure was reported and overdrafts of foreigners were included among shortterm foreign assets; except that the five banks which did not report short-term foreign assets until September 7, 1932, deducted overdrafts from deposit liabilities until that date.

There is presented on the next page a table showing the short-term foreign liabilities and assets reported annually to the Department of Commerce by banks in the United States and the corresponding year-end figures reported by leading banks in New York City. This table, which distinguishes the chief categories of liabilities and assets, has been carried forward to the end of 1936 on the basis Prior to September 7, 1932, there was pro- of the figures compiled for the Treasury.

¹ Included in other Europe prior to February 24, 1932.

* It is estimated that changes in the number of reporting banks and revision of instructions resulted in an increase in total liabilities of about \$30,000,000 between August 31, and September 7, 1932.

¹ Included in other Europe prior to February 24, 1932.

* It is estimated that changes in the number of reporting banks and revision of instructions resulted in an increase in total assets of about \$55,000,000 between August 31 and September 7, 1932.

^{*} Figures adjusted to the basis employed in previous weeks. Certain of the figures for August 12, 1936, and succeeding weeks are not precisely comparable to the corresponding figures for weeks preceding August 12, owing to a revision in reporting practice by one of the reporting banks.

BALANCE OF INTERNATIONAL PAYMENTS OF THE UNITED STATES

The Department of Commerce has published a preliminary summary of the international transactions of the United States in 1936. The summary is given below in substantially the same form as that employed by the Department of Commerce.

	Int	nillions of do	llars
Items	Dollar receipts	Dollar payments	Net receipts (+) or payments (-)
1. Trade and services: Merchandise	5 575	2, 419 125 495 143 200 220	+ 34 - 60 - 373 - 138 + 375 + 30
Trade and service transactions.	3, 470	3, 602	- 132

Gold and silver movement.			-1, 210
3. Capital: Reported long-term capital movement. Reported movement of short-term banking and brokerage funds. Paper currency movements. Miscellaneous capital transactions.	55	35	+ 792 + 404 + 20 - 75
Capital movement			+1, 141
4. Residual item			+ 201

STATISTICS OF ALL BANKS IN THE UNITED STATES

On the following pages are published detailed statistics on deposits, loans, and investments, of all banks in the United States, by kinds of banks, by States, and by Federal Reserve districts as of December 31, 1936, June 30, 1936, and December 31, 1935, and also complete condition statements as of December 31, 1936 and June 30, 1936 of commercial banks whose deposits are insured by the Federal Deposit Insurance Corporation. Summary tables of figures for all banks as of each call date, which are regularly published in the BULLETIN, are given on page — of this issue. Changes in deposits, loans, and investments at the different classes of banks during the last half of 1936 are given in the table below:

CHANGE IN DEPOSITS, LOANS, AND INVESTMENTS OF ALL BANKS

June 30-December 31, 1936
[In millions of dollars]

	Deposits	Loans	and Inv	estments
	excluding interbank deposits	Total	Loans	Invest- ments
All banks	+2,366	+1,066	+770	+297
Commercial banks	+2, 279	+946	+850	+96
Member banks Nonmember insured banks. Uninsured banks!	+1,795 +445 +39	+741 +215 -10	+818 +15 +17	-77 +200 -27
Private banks	+3	+21	-2	+23
Mutual Savings banks	+83	+100	-78	+178

¹ Figures for uninsured commercial banks, which are derived by deducting the figures for insured State banks as reported to Federal authorities from the aggregate figures for all commercial State banks as reported to the State banking departments, are subject to error, because of differences in reporting.

In the last half of 1936, deposits at all banks, excluding interbank deposits, increased by \$2,366,000,000 or by nearly 5 percent. This growth was chiefly at member banks and at nonmember insured commercial banks, while deposits at uninsured commercial banks, private banks, and mutual savings banks showed only small increases. Deposits at all banks, adjusted to exclude items in process of collection, as well as interbank deposits, increased by about \$2,300,000,000 in the six months and are about \$2,000,000,000,000 above the pre-depression level.

Total loans and investments of banks also showed considerable growth in 1936, as in other recent years. In the second half of 1936 the increase at all banks amounted to over \$1,000,000,000, about three quarters of which was in loans and the rest in investments. Again the increase was mostly at member banks and nonmember insured commercial banks, although there was a small increase at mutual savings banks. Member bank loans expanded by over \$800,000,000, while their investments declined somewhat. Growth in loans and investments at nonmember insured banks, on the other hand, was chiefly in investments, their loans showing little change. Mutual savings banks also acquired additional investments, while their loans were reduced. Growth in loans and investments at all banks in the latter half of 1936 was largely the result, therefore, of increases in loans at member banks and in investments at nonmember insured banks and mutual savings banks.

r Revised.

1 Comprises all licensed state commercial banks, trust companies, mutual and stock savings banks and such private banks and industrial banks as are included in abstracts issued by State banking departments.

2 Includes interbank deposits.

3 Includes cash depositories.

Note.—All figures in the December 1936 columns are as of Dec. 31, except as follows: New Hampshire, June 30: Massachusetts savings banks, October 31; Missouri, Nov. 25; Tennessee, Dec. 1; Colorado, Nov. 30. For call dates of figures included in the June 1936 and December 1935 columns, see footnotes on bottom of pages 778 and 397, respectively, of the October and May 1936 Bulletins.

REVISION IN WEEKLY REPORT OF MEMBER BANKS IN LEADING CITIES

with respect to changes in the volume of the various kinds of loans of member banks, the Board of Governors has revised the form of the weekly condition report of member banks Changes in the report in leading cities. form are confined to the classification of loans and discounts and are designed to obtain more information regarding the purposes for which credit is extended. The more important new classifications are (1) Commercial, industrial, and agricultural loans and (2) Loans (other than to brokers and dealers) for the purpose of purchasing or carrying securities. The report form will also include, with some small revisions, loans to brokers and dealers in securities, holdings of acceptances and commercial paper, real estate loans, and loans to banks, which are in the present report form, and a residual item of "other" loans.

The Board's weekly statement for May 12, 1937, will be issued in the present form in order that the usual comparisons may be made with the preceding week, but the following week's statement will show the loan figures in the revised form for both that week and the preceding week. Below is

In order to make available additional data shown the present and the new form in which ith respect to changes in the volume of the the weekly statement will be issued.

The classification of loans in the new report form may be described as follows:

The new item "Commercial, industrial and agricultural loans" will include all business loans to individuals, including farmers, and to partnerships and corporations. except paper purchased in the open market and loans secured by real estate. accordingly, include any commercial, industrial, or agricultural loans secured by stocks and bonds heretofore reported in "Loans on securities-To others". It will also include loans (not secured by real estate mortgages) made for the purpose of financing capital expenditures as well as loans to finance current operations. Direct loans to companies engaged in financing the sale of consumers' goods and durable goods will be included, but finance company paper purchased in the open market is to be reported as "Open market paper". The term "business", as applied to these loans, is construed to include farming, livestock raising, fishing and other related industries; mining, oil and gas producing, and quarrying industries; manufac-Below is turing of all kinds; construction industries;

transportation and other public utilities; for the purpose of enabling them to purchase wholesale and retail trade enterprises; service industries such as hotels, laundries, and service stations; amusement enterprises; real estate companies; etc. Loans to building and loan associations, credit unions, and similar organizations not engaged directly in financing the sale of consumers' or durable goods are not to be classed as "Commercial, industrial, and agricultural loans". For the in securities, whether secured by stocks, purpose of the weekly condition report the reporting bank is authorized to rely on such information as it has available in determining whether a given loan, whether secured or unsecured, is a "Commercial, industrial, and agricultural loan"

The item "Open market paper" will include all bankers' acceptances, both foreign and domestic, owned by the reporting member bank, and all commercial, finance, and other paper purchased in the open market. The new item will include own acceptances purchased or discounted by the reporting member bank, which heretofore have been included in "All other loans". The new item is not to include any loans payable abroad made

directly to customers of the bank.

The new item "Loans to brokers and dealers in securities" takes the place of two items in the present form, namely, "Loans on securities—To brokers and dealers in securities in New York City" and "Loans on securities—To brokers and dealers in securities outside New York City". It will include all loans to brokers and dealers in securities, whether located in New York City or outside New York City, and whether secured by mercial, industrial, and agricultural enterstocks, bonds or other collateral or unsecured, prises.

or carry stocks, bonds or other securities either for their own accounts or for the accounts of customers.

The new item "Other loans for the purpose of purchasing or carrying stocks, bonds and other securities" will represent the total amount of loans made by the bank for this purpose other than to brokers and dealers bonds or other collateral or unsecured. The item, accordingly, will include loans on stocks subject to the provisions of Regulation U of the Board of Governors of the Federal Reserve System and, in addition, any other loans, whether secured by stocks, bonds, or other collateral or unsecured, made for the purpose of enabling the borrower to purchase or carry stocks, bonds, or other securities. The determination of whether or not a given secured or unsecured loan was made for the purpose of purchasing or carrying stocks, bonds or other securities is to be made, for the purpose of the weekly condition report, on the basis of such information as the reporting bank has available.

The items "Real estate loans" and "Loans to banks" are identical with items in the present form.

The item "All other loans" will represent only such secured or unsecured loans (except open market paper, real estate loans and loans to banks) as were not made for the purpose of purchasing or carrying stocks, bonds or other securities and were not made to com-

ANNUAL REPORT OF THE GERMAN REICHSBANK

The annual report of the German Reichs-Inational economy in the reduction of unembank for the year ending December 31, 1936, was submitted to the general meeting of shareholders by Dr. Hjalmar Schacht, president of the Reichsbank, on March 16, 1937. The text of the report is given herewith:

Economic situation.—The German economy during 1936 was marked by an improvement which was brought about largely through far-reaching measures of the Reich Government. Rigid discipline and strict controls made possible the achievements of our

¹ The report, available in German, contains in addition a number of tables and charts showing the operations of the Bank in detail. For earlier reports, see BULLETIN for May 1936, 1935, April 1934, May 1933, April 1932, etc.

ployment and in rearmament, without disturbance to money and credit conditions or to the currency. The increase in the aggregate income of the workers raised the purchasing power of this group, so that manufacturers of consumers' goods as well as of producers' goods participated to a greater extent in the recovery. On the other hand, the priority given to rearmament, and the necessity of keeping individual consumption within the limits of our own production and our restricted capacity for importing, prevented the demand for consumption goods from becoming fully effective. With increasing economic activity, the strain of providing raw materials and foodstuffs continued to make itself felt in the current year; it not only brought to the fore the question of the return of her former colonies to Germany, but also showed the necessity of reducing Germany's dependence upon foreign imports as far as possible. With this end in view, the Government announced the second four-year The endeavor to increase our selfsufficiency is in no way inconsistent with German foreign trade policy. During the past year this policy was directed with increasing success toward extending our foreign trade relations and thus giving support and encouragement to international trade. which still suffers greatly under economic restrictions and unsolved debt problems. harmony with this policy, Germany maintained the stability of the reichsmark in spite of the new wave of devaluation which swept over Europe, and so avoided an aggravation of the new disturbances to international trade which were the result of devaluation by the so-called gold-bloc countries. The maintenance of currency stability also helped to prevent disturbances to German domestic business.

The tripartite agreement.—The joint announcement, made by the French, British, and United States Governments in September, of their "common desire to foster those conditions which safeguard business and will best contribute to the restoration of order in international economic relations and to preserve a policy which will tend to promote prosperity in the world and to improve the standard of living of peoples," was most welcome for the tendencies which it represents. The Government and the Reichsbank were not unwilling to participate in negotiations looking toward the freeing of trade and international payments. But the peculiar situation of Germany did not permit the abolition of foreign exchange control, which is the safeguard of German currency, until-apart from other indispensible conditions—there should be an easing of the unendurable burden of indebtedness resulting, in the last analysis, from the injustice of Versailles, and a marked lessening of Germany's difficulties in procuring raw materials. Events have shown that the anticipations, based upon the announcement of the three Governments, of a prompt and general currency stabilization and im-

were at least premature, in spite of the extension of the agreement to other countries.

Money market.—The further consolidation of short-term reconstruction loans became increasingly important in view of the continuing grants of credit for work creation, rearmament, and the four-year plan. Progress with this difficult problem was made easier by the steady improvement of the Reich budget.

The available resources of the money market were increasingly impressed into the service of great public undertakings, and the harmful effects of temporary financing upon the general economic situation were averted by recovering for investment purposes an ever-increasing proportion of the funds paid out by way of short-term credit. Thus, as a result of extending the maturity of bills of exchange arising out of Government contracts, and through the increased use of profits by business for its own financing, a situation developed in connection with further Government consolidation loans, which, it is true, sometimes made the market less liquid, but, on the other hand, showed that the German nation had a growing appreciation of the great and vital measures of the Reich Government. The methods of temporary financing of public undertakings were in general the same as they had been. This applies especially to the temporary provision of funds in the form of bills of exchange, with the support of the Reichsbank. The issue of new and the extension of maturing Treasury bills of a year's currency or more declined steadily, and at times during the second half of the year was entirely discontinued. The special promissory notes (Solawechsel) which the German Gold Discount Bank introduced again in 1935 provided the market with a suitable medium for the investment of short-term money, for they could always be discounted at the Reichsbank. Their volume outstanding furnished the Reichsbank at all times with an indicator enabling it to judge the situation and to take whatever measures were required for the money and capital markets.

from the injustice of Versailles, and a marked lessening of Germany's difficulties in procuring raw materials. Events have shown that the anticipations, based upon the announcement of the three Governments, of a prompt and general currency stabilization and improvement in international economic relations

The rate for day-to-day money was almost always less than 3 percent, and it was found possible to reduce the rate for discounting Reich Treasury bills.

Credit policy.—In the circumstances described, the total demand for accommodation at the Reichsbank, as a result of placing considerable amounts of special bills in other investment centers, was considerably less than the total volume of Government financing. The aggregate investments of the Bank in bills, securities, and lombard loans rosealthough the securities accounts declined—to 6,108,000,000 reichsmarks at the end of the year, an increase of about 808,000,000 reichsmarks as compared with the corresponding period of the year before. As a result of the continued concentration of funds and greater liquidity in all business circles, the demand for credit was shifted more and more to financing Government projects, and this shift became characteristic of the German credit structure as a whole.

To support the increased volume of business transactions a larger supply of money was required, especially as the Government's policy of work-creation and other measures had their effect on price and wage levels. The circulation of Reichsbank notes rose during the year by 695,000,000 reichsmarks. As a result of the replacement of private bank notes, which had been withdrawn from circulation, by Reichsbank notes, this sum is larger than the total increase of 574,000,000 reichsmarks in the monetary circulation. The giro and clearing account operations of the Reichsbank also showed an increased turn-In view of this development, it was gratifying also from the point of view of currency policy that rigorous efforts continued to be made within the framework of the fouryear plan to secure a wage and price level which could be supported by the national These efforts helped greatly in economy. maintaining stable economic foundations. which continues to be the chief aim of German economic policy.

The capital market.—On the capital market the measures of control and restriction, which had been systematically and consistently followed since 1933, gave the anticipated results. These measures, reinforced by the formation of new savings, guaranteed increasing liquidity and capacity for absorption to this market. Thus the most urgent with the reduction of interest rates of industask of the capital market, namely, the fund-trial obligations.

ing of short-term obligations of the Reich. could be successfully continued, and by relieving the Reichsbank and the money market to a corresponding extent, their capacity for further interim financing of Government projects could be constantly assured.

In conformity with market conditions, two issues of $4\frac{1}{2}$ percent Treasury bonds of the German Reich were floated during the year in an aggregate amount of 1,300,000,000 reichsmarks; in contrast to the loan of 1935, which carried the same interest rate, their maturity was extended from ten to twelve years. The greater part of the issues was taken up by a Loan Consortium for Public Subscription; the amount subscribed was considerably larger than the sum originally decided upon. The other part was taken over directly by important investing institutions. The total amount of Reich loans issued in the past two years, not including the 500,000,000 reichsmark loan of the German Railway Corporation, was about 3,800,000,000 reichsmarks. A further Government loan of 500,000,000 reichsmarks is open for subscription at the present time. The Prussian Finance Administration was able to effect an important funding operation toward the end of the year through the issue of a long-term loan of 200,-000,000 reichsmarks. Because of the continued favorable trend of Government revenue and expenditure, it was possible—in addition to funding operations—to effect a larger amortization of Government debt out of current budget resources.

A series of other measures had a similar effect in easing the financial position of public bodies. Among these were provisions for a better financial policy for the cities, whose budget position was further strengthened through the appropriate building up of reserves, reorganization and unification of tax collections, and raising the corporations tax.

In some cases the strict control of issues, designed to secure priority for the needs of the Reich Government over other requests for loans, was relaxed to permit access to the capital market for other public as well as private flotations. It is true that authorization for new issues had to be limited substantially to such securities as indirectly or directly served public purposes—for example, the construction of urgent building requirements—or seemed desirable in connection

A systematic reduction of interest rates was inaugurated early in 1935. During the past two years it was continued with excellent results and constituted one of the fundamental aims of capital market policy. By the law of July 2, 1936, respecting mortgage rates (Reichsgezetzblatt I, page 533), reductions were extended to the involved but important field of private mortgages, on which the interest was often much above the rates generally prevailing throughout the country. Thus one of the conditions was realized for the alignment of interest rates on mortgages bought and sold on the open market to the already lowered rates on mortgages arranged with credit institutions. Following the principle of voluntary cooperation, which had been observed in the case of earlier interest reductions, and because of the variety of credit conditions existing in the mortgage market, the manner and extent of interest reduction was left as a rule to voluntary agreement between creditors and debtors. An interest rate up to 5 percent for first mortgages, and up to $5\frac{1}{2}$ -6 percent for second mortgages, was considered reasonable. The movement, begun in 1935, to obtain lower rates on outstanding industrial obligations, which are so individual in character that general legislation is not applicable to them, achieved its objectives to a large extent, after lower interest rates had already been decided upon for new issues of such securities. Industrial corporations were uniformly successful in their conversion operations, and were able to obtain a rate of 5 percent and, in certain cases, even of $4\frac{1}{2}$ percent.

Measures of capital market policy were supported in their entirety by the confidence of the population in the currency and financial policy of the Government. This confidence was expressed not only in successful funding operations, but especially in the continued rise of quotations for Government loans and

fixed-interest-bearing securities.

Foreign exchange operations.—In general, the difficulties of the foreign exchange position continued undiminished. Although the surplus in the German balance of trade resulting from the operation of the New Plan continued and even increased considerably as compared with 1935, the demand for imports—in the face of rising international prices—also increased as a result of economic recovery to a greater extent than did the inflow of foreign exchange from exports, so page 1021).

that imports had to be further restricted along some lines; in addition, new difficulties for German export trade were created by currency depreciations in the gold-bloc countries.

In order to close the loopholes in the foreign exchange regulations, existing provisions had to be strengthened. Some temporary relaxation of the exchange provisions was permitted, but only in order to promote tourist traffic in connection with the Olympic Games, for the support of which the Reichsbank had set up a special service. For the purpose of improving its method of collecting all inflowing foreign exchange, the Reichsbank set up a stricter supervision of the entry into the country of the proceeds from exports. flight of capital frequently noted in connection with emigration, and especially the smuggling abroad of commodities, called for stricter measures. The existing embargo on the export of gold was made more complete in order to check the outflow of gold more effectively, and the list of foreign securities and gold stocks subject to declaration and surrender was extended. Domestic 10 and 20 reichsmark gold coins still outstanding were also made subject to surrender if they had been newly acquired by a German national after October 30, 1936. As a result of many abuses of the 10 reichsmark export limit, the employment of currency withdrawn within this limit was restricted to the payment of traveling expenses. Foreign securities were made subject to deposit. The law of December 1, 1936, (Reichsgezetzblatt I, page 999) respecting economic sabotage, which may also be applied to violations of foreign exchange regulations, and the law of December 1, 1936, (Reichsgezetzblatt I, page 1,000) amending the law on foreign exchange control, should provide a weapon with which to combat hostile attacks on our foreign exchange balance with the required severity. The law of December 5, 1936, on exemption from penalty for illegal foreign exchange operations (Reichsgezetzblatt I, page 1015), granted freedom from punishment to all Germans who surrendered their illegally hoarded foreign exchange to the State by January 31, 1937. The guiding rules of the foreign exchange control provisions of February 4, 1935, and the pertinent decrees were modified to conform to the new conditions by the decree of December 19, 1936, (Reichsgezetzblatt I. With the suspension of its proclamation of October 15, 1935, the board of directors of the Reichsbank, by proclamation of October 31, 1936 (Reichsanzeiger No. 255) respecting foreign exchange operations, gave a new ruling as to the competence of foreign exchange banks and exchange offices. Since then the status of a credit institution as foreign exchange bank is no longer based solely on the possession of a clearing account at the Reichsbank, but is dependent on special authority to deal in foreign exchange, granted by the board of directors of the Reichsbank.

The aim of the new four-year plan is to avert the dangers threatening our economic position, as a result of the worsening of the foreign exchange and raw material problem, by the efficient utilization of all available resources and instruments of production within Germany—decree of October 18, 1936 (Reichsgezetzblatt I, page 887). This program, with its far-reaching effects on finance, technical methods, prices and wages, will determine to a great extent the economic devel-

opment of the next few years.

With the cooperation of the Reichsbank and of the German Clearing Office, existing clearing agreements were adapted to our changing needs; this called for lengthy and often difficult negotiations. In addition, a series of new agreements was concluded. The trade pact concluded with Lithuania served to restore German-Lithuanian trade relations. and ended the situation of some years standing in which a treaty had been lacking. The new clearing agreement with Austria replaced the former agreement between the two central banks and, in addition to trade provisions, abolished the travel restrictions issued in May 1933. A previous clearing arrangement with Canada was superseded by the conclusion of an agreement providing for cash payments by each country for deliveries of commodities. The trade pact with Russia, which was concluded in April, was prolonged in December for the year 1937. A trade agreement was also concluded with Manchukuo.

Because of the difficult foreign exchange situation, transfer restrictions on the service of the foreign debt had to be continued without essential change. Accordingly, the transfer regulation set forth in the proclamation of the board of directors of the Reichsbank on June 22, 1935, was extended to obligations maturing in 1936. Besides this general regulation credits guaranteed by the German Gold Discount Bank, were continued as before. The Standstill creditors were granted the privilege of cancelling certain credit lines which had been unavailed for two years or longer. The commission previously charged in German Gold Discount Bank, were continued as before. The standstill creditors were granted the privilege of cancelling certain credit lines which had been unavailed for two years or longer. The commission previously charged in German Gold Discount Bank, were continued as before. The standstill creditors were granted the privilege of cancelling certain credit lines which had been unavailed for two years or longer. The commission previously charged in German Gold Discount Bank, were continued as before.

lation, special agreements were concluded in trade conferences with a number of countries (Denmark, England, Holland, Italy, Sweden, Switzerland), as had also been done the year before. In all these special agreements it was Germany's constant endeavor to avoid, so far as possible, any new issue of Government obligations. To the extent that domestic debtors profit as the result of depreciation of foreign currencies on contracts involving capital transactions, these profits, with few exceptions, are taken over and utilized for general economic purposes, under authority of the law of December 23, 1936, (Reichsgezetzblatt I, page 1126) respecting deprecia-

tion profits.

The quotation of the free reichsmark in foreign markets fluctuated very slightly and always stood near parity. Under the pressure of circumstances, foreign transactions in German currency were still further restricted. Effective as of June 1, 1936, the Fifth Executive Decree supplementing the law of May 25, 1936 (Reichsgezetzblatt I, page 467) respecting foreign exchange control, forbade anyone to bring in token currency—with certain necessary exceptions—or to receive token currency illegally brought into Germany from abroad. This prohibition was issued under the regulation governing foreign transactions in Reichsbank notes, for much the same reasons as imports of reichsmark notes were forbidden. It was absolutely forbidden to bring in reichsmark notes after January 1, 1937, and the regulation governing token currency was made still more strict.

Standstill Agreement.—The Standstill obligations of German banking, commercial, and industrial debtors declined further during the past Standstill year to approximately one billion reichsmarks, chiefly through conversion into registered mark balances for purposes of travel. The new German credit agreement of 1937 renewed the former arrangements with minor changes for another year, until February 28, 1938. The restrictions on foreign exchange transfers for reduction of the principal of the debt, even in the matter of credits guaranteed by the German Gold Discount Bank, were continued as before. The Standstill creditors were granted the privilege of cancelling certain credit lines which had been unavailed for two years or longer. The commission previously charged in Germany for cashing drafts and checks on regiswas abolished—partly to facilitate tourist traffic—and was replaced by a license fee charged at the source on all purchases of travel marks abroad; the foreign exchange thus obtained will be employed in reduction of certain credit lines which have not been used in recent years for the financing of merchandise trade.

The credit agreement for German public debtors, which covers a total amount of about 42,000,000 reichsmarks, was likewise extended without essential changes for another year, until March 15, 1938.

Bank law.—On January 30, 1937, as part dent of the program for restoration of complete nation German sovereignty, the Reichsbank, by proclamation of the Leader and Chancellor of the Reich, was declared free of all remaining international restrictions and was placed dissue.

rectly under the Government of the Reich. The law of February 10, 1937 (Reichsgezetzblatt II, page 47), reorganizing the status of the Reichsbank and of the German railways, and amending paragraphs 1, 6, 21, 25, 26, and 35, of the Bank Law, formally abolished the "Reichsbank's independence of the Government of the Reich," and made the president and board of directors of the Reichsbank immediately responsible to the Leader and Chancellor of the Reich, who already had the right to appoint and dismiss them. The legal obligations of the Reichsbank and the president of the Reichsbank to the Bank for International Settlements in Basel were annulled; cooperation with this institution will be continued on a voluntary basis and on the basis of complete equality with the other banks of

Total	154, 371	39	120, 326		396, 033	50

Figures represent customs valuations which, with some exceptions, are at rate of \$35 a fine ounce.
 Includes all movements of unreported origin or destination.

¹ Gold released from earmark at Federal Reserve banks less gold placed under earmark (with allowance when necessary for changes in gold earmarked abroad for account of Federal Reserve banks).

¹ Figures are derived from preceding columns and indicate net result of such factors as domestic production, movements into and out of nonmonetary use or unreported holdings, imports and exports that do not affect gold stock during the month or year, and increment resulting from reduction in weight of gold dollar.

Back figures.—See table p. 487, and Annual Report for 1935 (tables 34

ALL BANKS IN THE UNITED STATES

Comprises all national banks in the continental United States and all State commercial banks, trust companies, mutual and stock savings banks and such private and industrial banks as are included in abstracts issued by State banking departments. Also includes, during the period June 1934-June 1935, private banks which, pursuant to the provisions of sec. 21 (a) of the Banking Act of 1933, submitted condition reports to the Comptroller of the Currency. Under the amended provisions of Sec. 21 (a) private banks no longer report to the Comptroller of the Currency. For comparative figures of private banks included in the figures from June 1934 to December 1935, see Federal Reserve Bulletin for December 1935, p. 883, and July 1936, p. 535. Figures for nonmember banks are for dates indicated or nearest thereto for which figures are available.

Figures of preceding call carried forward.

Beginning June 30,,1933, all figures (other than for mutual savings banks) relate to licensed banks only, with some exceptions as to nonmember

banks.

Nonmember bank figures not available.

Prior to Dec. 30, 1933, member-bank figures include interbank deposits not subject to immediate withdrawal, which aggregated \$103,000.000 on that date.

Back figures. - See Annual Report for 1935 (tables 47-48)

¹ Prior to Dec. 31, 1935, excludes balances with private banks to the extent that they were then reported in "Other assets." Since Oct. 25, 1933, includes time balances with domestic banks which on that date amounted to \$69,000,000 and which prior to that time were reported in "Other assets."

² Does not include cash items in process of collection reported in balances with domestic banks. Prior to Dec. 31, 1935, includes cash items on hand but not in process of collection, amounting on that date to \$16,000,000.

³ Includes "Due to Federal Reserve banks (transit account)", known as "Due to Federal Reserve banks (deferred credits)" prior to Dec. 31, 1935, essee cash items reported on hand but not in process of collection.

⁸ Beginning June 1933 figures relate to licensed banks only.

⁹ Central reserve city banks.

Back figures.—See Annual Report for 1935 (table 53).

¹ Excluding balances with reporting firms (1) of member firms of New York Stock Exchange and other national securities exchanges and (2)

As reported by dealers; includes some finance company paper sold in open market.
 Since April 1935 Federal Reserve banks have not held any dollar acceptances for own account or for account of foreign correspondents. Back figures.—See Annual Report for 1935 (tables 66 and 67).

of firms' own partners.

Includes both money borrowed from banks and trust companies in New York City and elsewhere in the United States and also money borrowed from other lenders (not including member firms of national securities exchanges).

Note.—For explanation of these figures see "Statistics on Margin Accounts" in Bulletin for September 1936. The article describes the methods by which the figures are derived and reported, distinguishes the table from a "statement of financial condition," and explains that the last column is not to be taken as representing the actual net capital of the reporting firms.

FEDERAL RESERVE BANK DISCOUNT RATES

[Percent per annum]

¹ Rates indicated also apply to United States Government securities bought under repurchase agreement. Rack figures.—See Annual Report for 1935 (table 40).

BUYING RATES ON ACCEPTANCES

Buying rates at the Federal Reserve Bank of New York [Percent per annum]

Maturity	Rate in effect on Apr. 30	In effect beginning—	Previous rate
1-15 days 1 16-30 days 3 31-45 days 4 60-60 days 6 61-90 days 9 1-120 days 1 121-180 days 1	1/2 1/2 1/2 1/2 1/2 1/2 1/2 1/2 1/2	Oct. 20, 1933 do do do do do	1 1 1 1 1 1 1½4

¹ This rate also applies to acceptances bought under repurchase agreements, which agreements are always for a period of 15 days or less.

NOTE.—Minimum rates on prime bankers' acceptances payable in dollars; higher rates may be charged for other classes of bills.

Back figures .- See Annual Report for 1935 (table 41),

MAXIMUM RATES ON TIME DEPOSITS

Maximum rates that may be paid by member banks as established by the Board of Governors under provisions of Regulation Q.

[Percent per annum]

	Nov. 1, 1933 to Jan. 31, 1935	Feb. 1, 1935 to Dec. 31, 1935	In effect beginning Jan. 1, 1936
Savings deposits Postal Savings deposits Other time deposits pay- able in:	3 3	2½ 2½ 2½	2½ 2½ 2½
6 months or more 90 days to 6 months Less than 90 days	3 3 3	$2\frac{1}{2}$ $2\frac{1}{2}$ $2\frac{1}{2}$	$\frac{21}{2}$

Note.—Maximum rates that may be paid by insured nonmember banks as established by the Federal Deposit Insurance Corporation, effective February 1, 1936, are the same as those now in effect for member banks. In some States the maximum rates established by the Board and the Federal Deposit Insurance Corporation are superseded by lower maximum rates established by State authority.

RATES ON INDUSTRIAL ADVANCES

Rates on advances and commitments under Sec. 13(b) of the Federal Reserve Act as amended June 19, 1934. Percent per annum except as otherwise specified. In effect Apr. 30, 1937.

[Percent per annum]

	Advances	Advances ing instit		
Federal Reserve Bank	direct to industrial or com- mercial or- ganizations	On por- tion for which institu- tion is obligated	On re- maining portion	Commit- ments to make advances

Includes \$332,000,000 of Government liability for retirement of national bank and Federal Reserve bank notes, as a result of deposit of funds by banks; this compares with \$472,000,000 on Mar. 31, 1936.

¹ Issues classified as of date of final maturity; most issues callable at earlier dates; postal savings bonds only issues callable before 1940; adjusted service bonds and most of the U. S. savings bonds are redeemable at option of holder.
² Includes such issues as postal savings bonds and notes, retirement fund notes, and old age reserve account and unemployment trust fund services.

¹ Includes customs, processing taxes, taxes under Social Security Act, and miscellaneous receipts.
¹ Includes expenditures classified by the Treasury as agricultural aid, aid to home owners, and miscellaneous, which includes direct loans and expenditures of the Reconstruction Finance Corporation.
¹ Includes also increment resulting from reduction in the weight of the gold dollar, receipts from seigniorage, expenditures chargeable against increment on gold (other than for retirement of national-bank notes), transactions in checking accounts of certain special governmental agencies, and unemployment trust fund account.
¹ Expenditures include \$1,673,000,000 of payments to veterans under the Adjusted Compensation Payment Act of 1936.
¹ Excess of credits.
¹ Less than \$500,000

r Revised.

1 Some of the loans made by the regional agricultural credit corporations and the banks for cooperatives and most of the loans made by the production credit associations are discounted with the Federal intermediate credit banks. The amounts in this column are thus included in the 3 columns under those headings. Such loans are not always discounted in the same month in which the original credit is extended.

Revised.
 Principal amount of obligations guaranteed as to interest and principal. Also guaranteed are debentures issued by Federal Housing Administrator. The amount outstanding March 31, 1937, was \$59,427.
 Excludes obligations guaranteed as to interest only.
 Excludes obligations held by U. S. Treasury and reflected in the public debt. Figure for December 1933 includes notes given in purchase of gold which were retired in February 1934.

PRODUCTION, EMPLOYMENT, AND TRADE

[Index numbers; 1923-25 average=100. The terms "adjusted" and "unadjusted" refer to adjustment for seasonal variation]

p Preliminary.

P Preliminary.
 A verage per working day.
 For indexes of groups and separate industries see pp. 475-476; for description see BULLETIN for February and March 1927.
 3-month moving average of F. W. Dodge Corporation data centered at second month; for description see page 385 of BULLETIN for July 1931.
 The indexes for factory employment and pay rolls unadjusted for seasonal variation are compiled by the Bureau of Labor Statistics. For description and back figures for the seasonally adjusted index of factory employment compiled by F. R. Board of Governors see pages 950-978 of BULLETIN for December 1936. For current indexes of groups and separate industries see pp. 477-480. Underlying figures are for pay-roll period ending nearest middle of month.
 For indexes of groups see p. 482.
 Beech fourth. See ApproxII Report for 1025 (table 75). For description see BULLETIN for Payment ApproxII for ApproxII

Back figures.—See Annual Report for 1935 (table 75). For department store sales see p. 631 of BULLETIN for August 1936.

Without seasonal adjustment.
 January 1936, revised: 83.

Preliminary. .

 $[^]r$ Revised.

Note.—For descriptions see Bulletins for February and March 1927. For latest revisions see Bulletins for March 1932, pp. 194-196, September 1933, pp. 584-587, November 1936, p. 911, and March 1937, p. 255. Series on silk-loom activity and on production of book paper, wrapping paper, fine paper, box board, mechanical wood pulp, chemical wood pulp, paper boxes, and lumber, usually published in this table, are in process of revision.

Preliminary.
 See notes under Italy, Mexico and Spain.
 Figure for December 1935 carried forward for subsequent months.
 No statements have been received for Bank of Spain since Aug. 1, 1936. Figure as of that date is given for August 1936 and carried forward for subsequent months.

• Figure for March 1935 carried forward for subsequent months.

Note.—The countries for which figures are not shown separately are in Europe: Albania, Danzig, Estonia, Finland, Latvia, and Lithuania in Latin America: Bolivia, Brazil, Ecuador, El Salvador, and Guatemala; in Asia and Oceania: Australia, and Siam; and in Africa: Algeria, Belgian Congo, and Morocco.
For back figures and for full description of this table, see Bulletin for May 1932, pp. 311-318; June 1933, pp. 368-372; July 1936, pp. 544-547; and August 1936, p. 667.

¹ Differs from official customhouse figures in which imports and exports for January 1934 are valued at approximately \$20.67 a fine ounce. Note.—For gross import and export figures and for additional countries see table on page 458.

P Preliminary.

Revised. Estimated world production figures for 1935 and 1936 have been revised on basis of new estimates for the U.S.S.R. No regular statistics for the U.S.S.R. are available, but data irregularly given out by officials of the gold mining industry afford a basis for estimating annual production in 1935 as \$185,000,000 and for estimating monthly production in thousands of dollars for 1936 as follows: January, \$7,800; February, \$8,000; March, \$9,000; April, \$9,200; May, \$13,200; June, \$17,600; July, \$22,800; August, \$24,000; September, \$24,000; October, \$27,200; November, \$25,600; December, \$13,600; total, \$200,000. No official information is available regarding the scheduled output for 1937. Assuming an average increase over 1936 approximately equal to the average annual increase for 1935 and 1936 and same seasonal movement as for the two previous years, production is estimated in thousands of dollars for first two months of 1937 as follows: January, \$9,400; February, \$9,600.

Note.—For monthly figures back to January 1929 and for explanation of table see BULLETIN for April 1933, pp. 233–35. February 1934, p. 108, November 1934, p. 737, July 1936, p. 600, March 1937, p. 267, and April 1937. p. 363. For annual figures of world production back to 1873 see Annual Report of Director of the Mint for 1936, pp. 108–109. Figures for Canada beginning January 1936, are subject to official revision.

Preliminary.

1 Through March 1935 gold held by government; subsequently, gold held by Reserve Bank of India to which government gold was transferred.

2 Figures derived from preceding columns; net imports plus production minus reserves in India.

3 \$22,520,000 imported by United Kingdom from U. S. S. R. in March 1937.

4 \$85,390,000 imported by Germany from U.S.S.R. in 1934, and \$6,376,000 in 1935.

4 \$8,444,000 imported by Switzerland from Czechoslovskia in April and \$15,433,000 in May 1936.

4 \$15,322,000 exported by Switzerland to Germany in February 1937.

Note.—Germany, Switzerland, and United Kingdom.—In some cases the annual aggregates of the official monthly figures differ somewhat from the revised official totals published for the year as a whole. German gold movements by individual countries, beginning with January 1937, are subject to official revision. France and Netherlands.—No figures reported by France since September and by Netherlands since October 1936.

¹ Issue department also holds securities and silver coin as cover for fiduciary issue, which is fixed by law at £260,000,000. However, by direction of the British Treasury under Section 2, paragraph (2), of the Currency and Bank Notes Act, 1928 (see BULLETIN for August 1928, pp. 567-569), a reduction of £60,000,000 in the amount of the fiduciary issue (and the securities held as cover) has been in effect since December 16, 1936.

² By law of October 1, 1936, gold provisionally revalued at rate of 49 milligrams gold 0.900 fine per franc (see BULLETIN for November 1936, pp. 878-880). Of the total gold increment of about 17,000,000,000 francs, 10,000,000,000 francs was initially turned over to Stabilization Fund established by the law of October 1.

² Bills and warrants endorsed by the National Wheat Board (law of Aug. 15, 1936—see Bulletin for October 1936, pp. 785-786), and bills rediscounted for account of the Banques Populaires (law of Aug. 19, 1936—see Bulletin for October 1936, p. 788).

Note.—For explanation of table see Bulletin for February 1931, pp. 81-83, July 1935, p. 463 and July 1936, p. 603.

¹ Gold abroad revalued in December 1936.
² Items for issue and banking departments consolidated.
³ By decree of October 9, 1936 (see BULLETIN for January 1937, p. 15), gold revalued at rate of 31.21 milligrams fine gold per crown; resulting increment converted into foreign exchange and carried partly in that item and partly in other assets.
⁴ Bank reorganized under law of April 7, 1936 (see BULLETIN for July 1936, p. 537, and August 1936, p. 632). First balance sheet on new basis was as of June 30, 1936.

¹ From August 1933 to July 14, 1936, the Bureau of Labor Statistics published biweekly indexes. Figures given are for the date nearest 15th of month.

Prices derived from average yields for 60 corporate bonds as published by Standard Statistics Co.
 Exchange closed from July 13 to Sept. 2, 1931, and from Sept. 19, 1931, to Apr. 11, 1932. Index for 1931 represents average of months May-December.
 Index for 1932 represents average of months May-December.
 Index of reciprocals of average yields. Average yield in the base year 1929 was 4.57 percent.
 Sources.—See Bulletin for February 1932, p. 121, June 1935, p. 394, and April 1937, p. 373.

SUBSCRIPTION PRICE OF BULLETIN

The Federal Reserve Bulletin is the Board's medium of communication with member banks of the Federal Reserve System and is the only official organ or periodical publication of the Board. The Bulletin will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is \$2. Single copies will be sold at 20 cents. Outside of the United States, Canada, Mexico, and the insular possessions, \$2.60; single copies, 25 cents.
