SUBSCRIPTION PRICE OF BULLETIN

The Federal Reserve Bulletin is the board's medium of communication with member banks of the Federal reserve system and is the only official organ or periodical publication of the board. The Bulletin will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is \$2. Single copies will be sold at 20 cents. Outside of the United States, Canada, Mexico, and the insular possessions, \$2.60; single copies, 25 cents.

FEDERAL RESERVE BULLETIN

Vol. 17 SEPTEMBER, 1931

No. 9

REVIEW OF THE MONTH

Reserve-bank credit outstanding increased in August by about \$240,000,000 and amounted

Increase in reserve bank credit

at the end of the month to \$1,200,000,000. This additional demand for reserve-bank credit was caused in part by

continued transfers of funds by foreign correspondents of the reserve banks from the acceptance market to balances with the reserve banks, and in part by an increase of money in circulation, which during August was larger by \$100,000,000 than is usual at this season. In meeting this increased demand for reservebank credit the Federal reserve banks purchased \$115,000,000 of acceptances and \$50,-000,000 of United States Government securities and made additional loans of \$55,000,000 to member banks. At the end of August Government security holdings of the reserve banks at \$728,000,000 were close to the largest volume on record, while discounts for member banks, although somewhat larger than earlier in the summer, were still at a low level. monetary gold stock of the United States, which had increased very rapidly in June and remained practically unchanged during July,

RESERVE BANK CREDIT OUTSTANDING AND FACTORS IN CHANGES

Money in circulation Member bank reserve balances. Nonmember deposits—total Foreign. Other. Unexpended capital funds.	123 96 27	5, 013 2, 336 200 176 24 365	+201 -52 +77 +80 -3 -4

increased by \$40,000,000 during August and was early in September at the highest point ever reached—\$5,000,000,000. Of the gold imports in August \$25,000,000 was received from Japan and most of the remainder from Latin America. The course of reserve-bank credit and related items during the month is brought out in detail in the table.

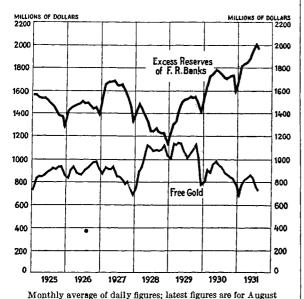

For more than two years, as a consequence of the increase in the gold reserves without a corresponding growth in either

Excess reserves and free gold

note or deposit liabilities, the reserve ratio of the reserve

banks has been at a very high level. For the month of August it averaged 81.4 per cent, and the amount of gold held by the reserve banks in excess of the required 40 per cent against notes and 35 per cent against deposits was about \$2,000,000,000. This volume of excess reserves is about \$400,000,000 larger than two years ago. Notwithstanding this increase in gold and some decrease in Federal reserve note circulation, the amount of so-called free gold at the reserve banks was about \$350,000,000 less than two years ago. The free gold comprises the gold held by the reserve banks above the amount required as 35 per cent reserve against deposits plus the amount that is pledged with the Federal reserve agent as collateral against Federal reserve notes and a 5 per cent gold redemption fund that must be carried with the Treasurer of the United States against the part of the notes that is not covered by gold. Under the law the Federal reserve banks are obliged to pledge with the Federal reserve agent eligible paper or gold up to the full amount of notes issued by the agent to the reserve bank, including notes held by the Federal reserve banks themselves as well as notes in actual cir-The reason that the amount of free culation. gold is smaller now than it was two years ago, notwithstanding the growth in reserves and the decrease in notes in circulation, is that eligible paper, consisting of discounts and acceptances, diminished by more than \$900,000,000 during the period.

The chart shows changes in excess reserves of the Federal reserve banks and in free gold for a period of years and indicates that at a time of active business, such as 1928 and 1929, when borrowings at the reserve banks are large, there is an abundance of eligible paper,

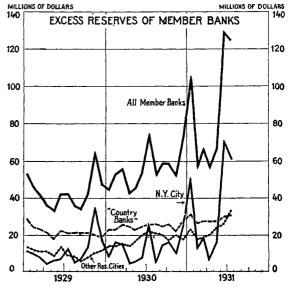

and the amount of gold that has to be pledged with the Federal reserve agent is relatively small, leaving a considerable volume of free gold. At a time like the present, when the volume of borrowings at the reserve banks is at a low level and the portfolio of the reserve banks consists to an unusually large extent of Government securities, the major part of the collateral back of the Federal reserve notes has to be held in gold, with the consequence that the amount of free gold available is considerably smaller than at a time of active business. Nevertheless, during the month of August the volume of free gold of the reserve banks averaged \$700,000,000, and when allowance is excess of their over-the-counter requirements, the amount was approximately \$1,000,000,000.

The reserve balances of the member banks continued in August to be larger than these

Reserve position of member banks

banks are required to hold by law, and the volume of their excess reserves, while not so large as in June and July when

they approximated \$120,000,000, were close to the \$100,000,000 level and were larger than at the same season in 1930 or 1929. This fact is indicated by the chart, which shows the excess reserves of the member banks for the period

Monthly averages of daily figures; latest figures are for July

since the beginning of 1929, with separate curves for banks in New York City, in other reserve cities, and elsewhere. The chart shows that since the autumn of 1929 there has been an irregular growth in the volume of excess reserves at all three classes of banks, with minimum figures in 1931 at about \$60,000,000 instead of the minimum of about \$35,000,000 that prevailed in certain months of 1929. This growth reflects in part the fact that since 1929 many of the member banks then borrowmade for notes held by the reserve banks in ing at the reserve banks have been able to get completely out of debt and consequently can not use surplus funds to retire rediscounts. may also reflect a disposition on the part of banks to maintain a stronger cash position at a time when banking disturbances have been recurring at intervals in different parts of the country. In addition to their reserve balances and their vault cash, the member banks at the present time hold a large amount of assets, carrying low rates of interest but available as a basis for obtaining credit at the reserve These assets include about \$5,000,000,-000 of United States Government securitiessome of which are yielding less than one-half of 1 per cent—and more than \$3,000,000,000 of loans eligible for rediscount, including more than \$500,000,000 of bankers' acceptances of which the larger part are yielding less than 1 per cent.

A more detailed classification of investments of all member banks has recently become available for the end of June. Member bank For the year ending at that investments time the member banks showed a growth of \$1,280,000,000 in United States Government securities, of which \$700,000,000 was in Government bonds and \$580,000,000 in short-term Government obligations, and a growth of \$380,000,000 in other securities. Among the different classes of domestic securities, other than United States Government securities, there were increases of \$300,000,000 State, county, and municipal bonds, \$100,000,000 in railroad bonds, and \$70,000,000 in other public service corporation bonds, while holdings of miscellaneous bonds decreased by \$75,000,000. Holdings of foreign securities decreased by \$47,000,000 to the level of \$642,-000,000.

The following table shows the composition of the investment holdings of the member banks at the end of June, 1931, in comparison with the corresponding figures for June, 1929:

Investments of Member Banks on June 29, 1929, and June 30, 1931

[Amounts in millions of dollars]

Government bonds	309	319	3.3	2. 6
Other foreign securities	326	323	3.3	2. 7

Member bank investments increased during the two years by \$2,060,000,000, reflecting increases of about \$1,190,000,000 in United States Government securities, \$860,000,000 in other domestic securities, and \$7,000,000 in foreign securities. The classes of securities to show a decrease for the 2-year period were industrial bonds, which declined by \$51,000,-000, miscellaneous securities, which declined from \$90,000,000 to \$43,000,000, and foreign securities other than Government bonds, which declined by \$3,000,000 to the level of \$323,000,-The proportion of total member bank investments represented by United States Government securities increased from 38.9 per cent in 1929 to 44.1 per cent in 1931, that of State, county, and municipal bonds from 11.8 per cent to 12.7 per cent, and that of corporation notes from 1.7 per cent to 1.9 per cent. All other classes of security holdings, although in most cases increasing in absolute amount during the two years, showed some decrease in relative importance.

Condition of All Member Banks on June 30, 1931

Detailed figures of condition of all member banks on June 30, including the detailed classification of loans, are given in this issue of the Bulletin, and in greater detail by States, cities, and class of bank in Member Bank Call Report No. 52.

Changes in Foreign Central Bank Discount Rates

The following changes have been reported in the discount rates of central banks in foreign countries:

Central Bank of Chile-August 25, from 9 to 7 per

National Bank of Czechoslovakia-August 5, from 4 to 5 per cent.

Bank of Danzig—August 10, from 10 to 7 per cent; September 1, from 7 to 6 per cent. Bank of Estonia—September 1, from 7 to 6½ per

cent.

German Reichsbank-August 12, from 15 to 10 per cent.

Imperial Bank of India-August 6, from 6 to 7 per cent.

Bank of Portugal-August 10, from 71/2 to 7 per

NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled August 24 and released for publication August 26]

Industrial production and factory employment declined by somewhat more than the usual seasonal amount in July, while the general level of commodity prices remained unchanged. Conditions in the money market continued

Production and employment.—Industrial production, as measured by the board's index, which is adjusted to allow for the usual seasonal variations, declined 1 per cent further in July to 83 per cent of the 1923–1925 average, compared with the low point of 82 for last December and the year's high point of 90 in April. Output of iron and steel, automobiles, lumber, and copper decreased further, while activity at textile mills and shoe factories was maintained at a high level.

Factory employment and pay rolls declined by somewhat more than the seasonal amount from the middle of June to the middle of July. Large decreases in employment were reported at car-building shops and machinery and automobile factories, and at lumber mills. In the textile industries as a whole employment decreased somewhat less than is usual in July; and there were increases in employment in the woolen goods and men's clothing industries.

Figures on the value of building contracts awarded during July and the first half of August, as reported by the F. W. Dodge Corporation, show a continuation of the downward movement of recent months.

Department of Agriculture estimates, based on August I conditions, indicated an unusually large crop of winter wheat, an exceptionally small yield of spring wheat, and a total wheat crop of 894,000,000 bushels—72,000,000 bushels larger than the 5-year average. The corn crop was estimated at 2,775,000,000 bushels, about the usual size and 700,000,000 bushels larger than last year's small crop. In spite of a 10 per cent reduction in acreage, the cotton crop

was estimated by the Department of Agriculture to be about 15,584,000 bales, an increase of 1,600,000 bales over last year.

Distribution.—Freight-car loadings increased by slightly less than the usual seasonal amount in July, and department-store sales, which ordinarily decline sharply at this season, apparently decreased somewhat more than usual.

ently decreased somewhat more than usual.

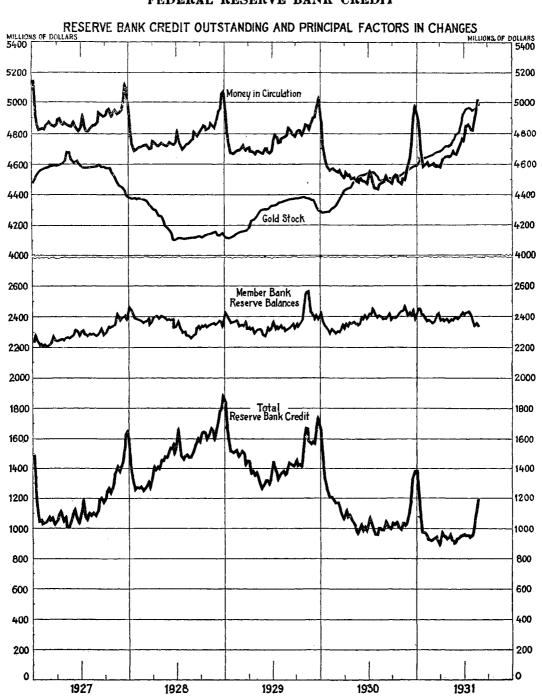

Wholesale prices.—The general level of wholesale prices in July continued at 70 per cent of the 1926 average, according to the index of the Bureau of Labor Statistics. Increases were reported in the prices of livestock and meats, while prices of building materials and of grains, particularly wheat, declined. During July and the first half of August prices of cotton and cotton textiles declined sharply, while prices of dairy products increased.

Bank credit.—Loans and investments of reporting member banks in leading cities declined by about \$340,000,000 between July 15 and August 12, reflecting chiefly further liquidation of loans on securities and a decrease in all other loans, which was partly a consequence of sales of acceptances to the reserve banks. The volume of the member banks' investments also showed a slight decline for the period.

At the reserve banks there was an increase in the total volume of credit of \$190,000,000 between July 15 and August 19. Demand for reserve bank credit during this period increased as a result of an outflow of \$144,000,000 of currency, which was larger than is usual at this season, and further transfers of foreign funds from the open market into balances at the reserve banks. This demand for reserve-bank credit was met by the reserve banks for the most part through the purchase of bills and United States Government securities in the open market, but also through increased discounts for member banks.

Money rates remained at low levels.

FEDERAL RESERVE BANK CREDIT

Based on weekly averages of daily figures; latest figures are for week ending August 20

[In thousands of dollars]

¹ Gold released from earmark at Federal reserve banks less gold placed under earmark.

1 This figure, derived from preceding columns, represents the excess of domestic production over nonmonetary consumption of gold—chiefly consumption in the arts. In any given month, however, it may be predominantly affected by the fact that on the final day of the month (a) gold bullion or foreign gold coin recently imported may not yet have reached a reserve bank or the Treasury, and (b) gold bullion recently withdrawn from stock for export may not yet have been actually exported. The figures are subject to certain unavoidable inaccuracies in official reports of gold bullion imported on Apr. 30 from France was not purchased by the New York Assay Office until May 1.

* Prelliminary figures.

¹ Includes all movements of unreported origin or destination.
² At New York—imports, \$26,408,000; exports, \$38,000. Elsewhere—imports, \$26,816,000.

MEMBER BANK BORROWINGS AT FEDERAL RESERVE BANKS

Note.—Figures relate to rates charged by reporting banks to their own customers as distinguished from open-market rates (which are given in preceding table). All averages are based on rates reported for 3 types of customer loans—commercial loans, and demand and time loans on securities. The method of computing the averages takes into account (a) the relative importance of each of these 3 types of loans and (b) the relative importance of each reporting bank, as measured by total loans. In the two group averages the average rate for each city included is weighted according to the importance of that city in the group, as measured by the loans of all banks in the city.

Back figures.—See Annual Report for 1930 (Table 39).

¹ Without seasonal adjustment.

¹ Includes also lead and zinc; see "Minerals."

Revised.

Note.—The combined index of industrial production is computed from figures for 57 statistical series (49 of manufactures and 8 of minerals) most of which are shown in this table. Adjustments have been made in the different industries for the varying number of working days in each month and for customary seasonal variations, and the individual products and industries have been weighted in accordance with their relative importance. The sources of data and methods of construction were described in the Bulletin for February and March, 1927.

¹ Based throughout on figures of daily average sales—with allowance for changes from month to month in number of Saturdays and for six national holidays: New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas. Adjustment for seasonal variation makes allowance in March and April for the effects upon sales of changes in the date of Easter.

FOREIGN BANKING AND BUSINESS CONDITIONS

ANNUAL REPORT OF THE NATIONAL BANK OF BULGARIA

The annual report of the National Bank of Bulgaria for 1930 was presented to the Minister of Finance on April 30, 1931. Sections of the

report are given herewith: 1

The world-wide crisis, which began in 1929, became still further intensified during the past It has especially affected this country, which is a producer of raw materials and agricultural products, the prices of which have declined sharply, and the sale of which, in consequence, has become more and more diffi-The reduction of the purchasing power of the agricultural population was reflected to a serious extent in every branch of the economic and financial life of the country.

Agriculture.—The great difficulties of agriculture, due not merely to a temporary overproduction but also to more permanent causesamong which are the increasing use of machinery and the rationalization of production of cereals in the principal agricultural countries have required and still require the adoption of emergency measures of assistance to the farmers adversely affected by the general crisis. For example, all the export duties remaining from pre-war or post-war times have been abolished. In order to maintain the prices of grain at a certain level, and to assist producers to pay their taxes, the law of December 26, 1930, created a managing board for the purchase of grain. In view of the disorganized state of the wheat market resulting from the rapid fluctuations and sharp fall in price, the new board, as the instrument necessary for unifying and organizing the export of grain and flour on a rational basis in this country, can render a lasting service to our small farmers.

Other important measures have been taken to improve agricultural production and to further its adjustment to the demands of the The considerable increase in the export of eggs and poultry, the prospects of exporting livestock and animal products more regularly, as well as the encouraging start made in exporting raisins, wine, fruits, legumes, etc., indicate clearly the new lines along which

Bulgarian agriculture is developing.

The difficulties against which the agricultural countries have to contend have compelled

their respective governments to seek through closer cooperation a more systematic and more profitable marketing of their farm products. To this end several conferences have been called, which brought together representatives from southeastern and eastern Europe. Although their discussions have not yet produced any practical results, the international character of the crisis requires, nevertheless, that some measures of an international scope should be taken. It is especially in the field of agricultural credit—so necessary for the relief of backward agricultural countries-that practical schemes are contemplated for closer cooperation with the richer industrial countries.

Studies and discussions of the existing economic crisis-which varies in each country according to conditions peculiar to that country-show more and more clearly that this crisis will not be quickly overcome by the action of any one factor or by any magic formula. On the contrary, the reestablishment of balance between production and consumption will only come slowly, as a result of the natural and beneficent reaction of all the factors in the economic situation. Some important improvements in this respect were to be noted during the past year.

Balance of trade.—Our merchandise balance, which in 1929 showed a very great increase in imports and closed with a deficit of about 2,000,000,000 leva (\$14,400,000), presented an entirely different picture during the past year. Imports declined from 8,300,000,000 leva (\$59,760,000) to the extremely low figure of 4,600,000,000 leva (\$33,120,000). Similarly, the quantity of imports fell from 508,000 tons to 317,000 tons.

Exports, on the other hand, increased in quantity from 313,000 tons to 543,000 tons. The aggregate value of exports, however, declined by about 208,000,000 leva (\$1,498,-000)—from 6,397,000,000 leva to 6,189,000,000 leva—as a result of the considerable fall in price of those commodities which we export. trade balance for 1930 closed with a surplus of about 1,600,000,000 leva (\$11,520,000).

Commerce.—The commercial position was marked by lowered sales, by reduction to the minimum of stocks of merchandise, by difficulty in collecting loans, and by great reluctance to make sales on credit. Manufactured articles, ironware, and other branches of trade

¹ The report, available in French, contains in addition tables showing the operations of the bank in detail and sections dealing with the merchandise balance by months for the past four years, prices, production, the Bank for International Settlements, the state budget, etc. For earlier reports see FEDERAL RESERVE BULLETIN for September, 1930, and July, 1928.

showed a sharp decline in sales. The marketing of consumers' goods was somewhat easier. During the second half year, when trade had become better adjusted to the new conditions, sales became more normal; the stocks of commodities in most branches of trade were reduced, harsh and unscrupulous competition disappeared and gave place to more normal trading conditions.

Industry.—The process of adjustment was considerably slower in industry. In many branches of industry the productive capacity and the number of enterprises far exceeded the extremely modest demands of the domestic market. On the other hand, the financial organization of most of the recently established industrial enterprises was very insecure. Owing to the lack of opportunities for export, flour milling found itself involved in great difficulties. The beer and alcohol industries as well as metallurgy also experienced an appreciable Industrial production as a whole, during the first half of the year, was marked by the limitation and the reduction to the minimum of stocks of raw materials. Something of an exception to this was noted in the copper industry, which has thus far withstood the crisis, and shown activity throughout the year, as its products have been in steady demand. The textile industry, however, subsisted to a very large extent on subsidies from the Government. The price of textiles fell by from 15 to 20 per cent. The efforts looking toward a union of the manufacturers of woolen textiles were unsuccessful. Similar associations for cooperative selling were successfully established in certain other branches of industry.

Reserves in gold and foreign exchange.—Although the balance of payments for 1929 was seriously adverse, the foreign exchange reserves of the National Bank of Bulgaria during 1930 showed only moderate fluctuations, and at the end of the year had declined by only 300,000,000 leva (\$2,160,000), as compared with a reduction of 1,500,000,000 leva (\$10,800,000) in 1929.

Gold holdings increased by 66,000,000 leva (\$475,200). They rose from 1,388,000,000 leva (\$9,994,000) at the end of 1929 to 1,454,000,000 leva (\$10,469,000) at the close of 1930. This increase is due to purchases of gold made in our market against leva.

Foreign bills of exchange on gold standard countries amounted to 424,000,000 leva (\$3,053,000) at the end of the year, as compared with 1,063,000,000 leva (\$7,654,000) in tutions to rediscount with the National Bank

1929. Other foreign exchange holdings rose from 246,000,000 leva (\$1,771,000) to 480,000,000 leva (\$3,456,000). Liabilities in foreign exchange at the end of the year amounted to 112,000,000 leva (\$806,400), against 152,000,000 leva (\$1,094,000) at the close of 1929.

Mention should be made of the disappearance since October, 1930, of the silver reserve—169,000,000 leva (\$1,217,000). Under article 80 of the bank law, the bank was obligated to dispose of its silver holding within a period of three years, especially by sales to the Government. The entire silver reserve has now been bought by the Government, at the market price, for the minting of new silver coins. Henceforth the bank is not permitted to buy silver for its own account.

The lowest level of the gold and foreign exchange reserves (deduction being made for liabilities in foreign currency) was 1,859,000,000 leva (\$13,385,000) on March 23; the peak was 2,503,000,000 leva (\$18,022,000) on November 23. The highest reserve ratio was 42.46 per cent on January 7 and the lowest 36.02 on August 31. Most of the time it fluctuated between 36 and 37 per cent.

During the course of the year 288,000,000 leva (\$2,074,000) of foreign exchange came into the coffers of the bank from the League of Nations loan for the settlement of refugees (1926). The available balance of this loan, in foreign currency, amounted at the end of the year to about 196,000,000 leva (\$1,411,000). From the stabilization loan, foreign exchange to the amount of 405,000,000 leva (\$2,916,000) was received during the year. The available balance of this loan, in foreign currencies, amounts to 215,000,000 leva (\$1,548,000).

amounts to 215,000,000 leva (\$1,548,000).

Discounts and advances.—The general economic depression, which began in the second half of 1929 and continued throughout the past year, brought about a large decrease in the volume of commercial transactions and a steady reduction in demands for commercial and industrial credit. As a result of reduced sales on credit by merchants and industrialists the offer of strictly commercial discounts and rediscounts declined steadily. This decline was further aggravated as a result of the sharp recession in prices and the reduced demand for currency. Because of this decline in the commercial and industrial portfolio, as well as the large increase of deposits with credit institutions and the smaller need of these instiof Bulgaria, the portfolio of the bank, as well as its advances, showed an almost uninterrupted downward trend throughout the past year.

At the close of the year the portfolio of the bank stood at 362,000,000 leva (\$2,606,000), as compared with 907,000,000 leva (\$6,530,000) at the end of 1929 and 588,000,000 leva (\$4,234,-000) at the close of 1928.

Bank amalgamations.—The hope expressed in last year's report for the restoration of the credit of the country, the reduction of the unduly large number of banks, and a stronger organization within the country of the individual banks, was fulfilled to a certain extent. The Bulgarian Bank, the Bank for National Credit, and the Franco-Bulgarian Bank for International Commerce amalgamated into

one credit institution—the Union of Bulgarian Banks—with a share capital of 100,000,000 leva (\$720,000). A number of small provincial banks also amalgamated. The past year showed considerable improvement of the banks from the point of view of their organization, even at the cost of some unavoidable liquidations.

The Hague convention.—Although the convention of The Hague in January, 1930, burdened this country with a very heavy annual payment of about 300,000,000 leva (\$2,160,000) payable for the next 36 years, it nevertheless removed the grave dangers of previous conventions and treaties, which in the past offered serious obstacles to our economic and financial development.

ANNUAL REPORT OF THE NATIONAL BANK OF RUMANIA

Rumania for 1930 was submitted to the general meeting of stockholders on February 15, 1931. The main text of the report is given herewith.1

The existence of large stocks of grain at the beginning of the past year and the prospect of an abundant harvest gave hope for improvement in the economic situation. This hope was not realized. Moreover, the American crisis, which has now continued for 16 months, has come to be recognized as having more fundamental and more general causes than were realized at its beginning. Hence, the anticipated resumption of capital movements from America to Europe, seeking investment in securities with fixed yield, failed to take place. Depression and uncertainty continued in the leading countries of the world, and this affected the economic situation in Rumania.

Prices.—During the first half year the continued downward trend of prices of raw materials on the world market was reflected in the prices of our own products, especially of grain. Exportation of the large grain reserves held over from 1929, which normally should have begun in April, was almost at a standstill. The producers, impelled by the necessity of recouping their high production costs on the one hand, and on the other hand influenced by the higher prices of former years, preferred to wait for a price recovery which did not materialize. Consequently, the general economic position derived none of the benefits that the export of these commodities could have ren-The period of capital outflow—nordered. mally the winter months—was thus prolonged almost to the end of the first half year. It was not until June that the export movement began again, bringing about an inflow of foreign bills.

In spite of these unfavorable circumstances the National Bank of Rumania had no difficulty in honoring all demands made upon it for foreign exchange, either by the market or by the Government, while it maintained the ratio of reserves against liabilities at a level considerably above the legal minimum of 35 per cent. Once more the elasticity and strength of our monetary system has been proved. Following its traditional policy of prudence, the National Bank has taken every means

The annual report of the National Bank of | necessary to maintain a perfectly sound currency, which is indispensable to the prosperity of the country. Yet it is obvious that the effectiveness of these means depends upon a genuine equilibrium in the State budget. In accordance with the stabilization program, however, the State and the National Bank should cooperate in the supervision of all foreign loans, both public and private, so that in future the country may assume no excessive obligations, nor any intended for other than strictly productive purposes.

An advance in the price of grain during the second semester led to increased exports of warehoused stocks. The new harvest, abundant and satisfactory both as to amount and quality, also augmented the export movement, which was particularly strong during August. The National Bank availed itself of the resulting inflow of foreign bills both to build up its own reserves and to provide the Government with foreign exchange in view of the approaching foreign debt maturities.

Foreign exchange policy.—Last year the Government, availing itself of the opportunities offered, created a permanent revolving fund for the Treasury, amounting to 1,000,000,000 lei (\$6,000,000), for the express purpose of providing for the foreign debt payments at maturity. This fund was established out of the payment due to the Government from the telephone concession. Built up by regular monthly payments from the Treasury in proportion to budget receipts, it is automatically renewed by the end of each year. The existence of this special fund enables the National Bank to purchase for account of the Government, in advance and at the most favorable rates, the foreign exchange required by the Government. This foreign exchange holding is entirely separate from that of the bank. Similarly, the National Bank provided the Autonomous Office of Government Monopolies with foreign exchange, by using for this purpose such funds as the office had deposited with the bank. In consequence, the foreign exchange holdings of the bank stood at a somewhat lower, but certainly more stable, figure than heretoforewhich enables the bank to pursue a more advantageous monetary policy.

The National Bank regulated its purchases of foreign exchange so that the course of the lei followed the export movement and the effective offer of foreign bills on the market. Thus at the end of August and the beginning of September the pound sterling declined almost to its

¹ The report, available in French, contains in addition tables showing the operations of the bank in detail, as well as sections dealing with international economic relations, personnel, agencies, participation of the bank in the Bank for International Settlements, etc. For earlier reports see FEDERAL RESERVE BULLETIN for September, 1930, August, 1928, and October, 1927.

parity, 813.75 lei. As a result of the new decline in the price of grain during September, sterling

advanced again to 817.50 lei.

Loans and discounts.—The volume of discounted bills fluctuated considerably—though less during the second half year—and showed a declining tendency. This decline resulted in the first place from the transfer to the Government, under the stabilization plan, of bills which had not a sufficient degree of liquidity; and to some extent from the creation of Government funds out of minting profits. transfer of nonliquid bills to the Government is especially important not only for the National Bank, which finds its portfolio relieved of mere "ballast" that can not be mobilized, but also for the general economic position of the country, inasmuch as these short-term credits are converted into long-term credits the advantage of which is beyond question. Companies which are in debt will benefit as a result of this joint action on the part of the Government, for it initiates a program of reorganization and gradual liquidation, which wisely applied will have excellent effects upon the Rumanian market.

In the second place, the portfolio of the bank, having thus acquired a sufficient degree of liquidity, could readily adapt itself to changes in economic activity. Thus, at the end of the first half year, the marketing of grain was fol-lowed by the repayment of discounted bills. This seasonal movement, which was normal and altogether satisfactory, and proof of a very liquid position, continued until a new price decline checked commercial operations.

In the third place, although in a smaller degree, the volume of our commercial portfolio declined as a result of assigning part of these bills to the Bank for International Settlements, as an investment in Bucharest of the funds of that institution. Mention should be made here of the undue caution of Rumanian banks in making new investments. This policy, which has served no good purpose, has now been recognized as unwise and is to be abandoned.

Finally, the development of discounting operations has been influenced by the general business recession, which has been serious even in countries with a far stronger economic organization than our own. In the case of discounts with the National Bank, means should be taken to insure their regular liquidation at maturity. For this purpose the bank has under consideration a plan by which it can make collections directly on bills placed in the portfolio. In this way the bank will be circulation through the purchase of foreign

able to exercise such control as pertains to a bank of issue.

We mentioned last year the prejudice of many business houses against giving promissory notes in payment for purchases of merchandise-bills which quite properly constitute the discount portfolio of the National Bank. We recognize, however, that a genuine effort has been made by a number of firms to overcome this prejudice, and we urge them to

continue their efforts in this direction.

Discount rates.—The discount rate of the National Bank stood unchanged throughout the year at 9 per cent, for monetary conditions up to the present time have prevented any reduction. In a number of foreign markets an improvement in exchange and an effective inflow of capital made it possible to reduce the rates of discount. As soon as similar conditions on our market justify the step, we shall not hesitate to follow this example; and we hope that, with the resumption of river navigation, the movement of our large stocks of grain will permit a rate reduction without danger to the currency. Reduction of the rate while the balance of payments is unfavorable, while high money rates prevail abroad and the greatest caution is necessary in currency affairs, would be most imprudent. On the other hand, we believe that, judging from the volume of available currency and credit with the banks, the existing rate is no handicap to business. Business is handicapped by the general depression—which Rumania is experiencing in common with other countries and perhaps to an even greater degree—and by the lack of assurance that loans will be paid when they fall due. This lack of assurance is owing in part to unsound legislation which all economic authorities insist should be amended. A reduction of the discount rate, in our judgment, would have no influence on the level of commercial interest. The official rate of the National Bank should be maintained at a level which will attract and retain the foreign funds which are indispensable to this market. By no creation of fictitious credits could the National Bank make good the lack of foreign funds and domestic capital, without which the Rumanian market can not function.

Note circulation.—The volume of notes in circulation was determined by the normal conditions of issue, and fluctuated according to the demands and the capacity for absorption of the market. The note issue has varied but slightly, owing to the fact that lei put into

bills have replaced those withdrawn from circulation through the repayment of discounted bills.

The Government used the entire credit provided by law under the account "Temporary advances to the Treasury" and repaid the advance in full before the end of the year, as required by the statutes of the bank.

Agricultural credit.—Agriculture, which is our principal branch of production, benefited greatly during the past year by the assistance which the National Bank was able to render. Although bills with a maturity of four and a half months—renewable for a similar period amounted to somewhat less than 25 per cent of the total portfolio, the inclusion with these of bills maturing in three months and bearing the indorsement of a farmer shows that agriculture availed itself to the extent of 43.1 per cent of the total discounts of the bank.

The organization of agricultural credit on broad foundations—as mentioned also in earlier reports-has still failed of achievement. As a result, the consuming power of our agricultural population suffers, as well as our economic situation as a whole. The Central Cooperative Bank, through its normal and systematic functioning, has achieved excellent results, but the demands to be satisfied are far in excess of its increasing capacity. In an attempt to organize all forms of agricultural credit under a financial institution capable of helping farmers to obtain mortgage credits in sufficient volume at more or less long term, as well as agricultural credits in proportion to the volume of production, the National Bank succeeded in establishing within the limitations of its statutes an agency for seasonal credit on a percentage basis against the harvest; this will enable holders of grain throughout the farming districts to obtain the credits which they need, at an annual maximum rate of 9 per cent.

The establishment of this seasonal credit was achieved in collaboration with the French Acceptance Bank of Paris, which placed at the disposal of the Rumanian market 200,000,-000 French francs (\$7,840,000). As a result of this credit and the method of its operation, all financial risk was avoided. This credit, because it was established so late, did not accomplish what it would otherwise have done. It can, however, be used from the beginning of the next harvest; it will undoubtedly meet all that could be expected from that type of

In this connection, also, every effort should be made to establish in due time a series of public warehouses for storing grain. mobilization of agricultural products in this way would facilitate the creation of credit instruments which would be eligible not only at the commercial banks but also at the bank of issue.

While the Government and the National Bank exerted themselves vigorously to establish the foundations of future prosperity—namely, a sound currency and order in public finance—private business was gradually adapting itself to the changed conditions, although it still suffered from the economic and financial distress of the past 15 years. The debts of the Government, the abuse of all forms of credit, the habit of speculation, and the illusion of great profits which is inevitable in a period of inflation—all these factors imperiled the situation in Rumania.

Under the stabilization program, large funds from the international loan were made available for economic rehabilitation. With this assistance and the abundant harvests of 1929 and 1930, it was reasonable to expect economic recovery and a return of prosperity. fortunately, the fall in prices of our agricultural products and the resulting decline in exports deprived the country of the anticipated The abuse of credit, especially in benefits. granting loans to enterprises which had proved unprofitable, weakened the confidence of lenders and resulted in unduly high rates of interest. Under these circumstances a return to saner policies was initiated by lowering the rates of interest paid to depositors, and to some degree, also, the rate payable by first-class borrowers. It is also important to take effective measures to strengthen the banking system through absorption or amalgamation of small banks, which have such insufficient capital and are so badly managed that they can hardly survive.

Business will have to adapt itself to the lower level of prices for raw materials, and to make its adjustment through increased production, lower costs, and better quality, if it is to hold its own on international markets. The confidence of capitalists must be won, and the scrupulous fulfillment of all obligations must be guaranteed. Only by these methods, slow the requirements of production and accomplish indeed but certain, can prosperity be assured.

¹ Conversion at par: 1 leu=\$0.006.
² The annual report of the bank for 1916 contains the following statement: "In order to provide against any eventuality, the board of directors with the approval of the Government decided upon the transfer of the bank's gold stock—which had been accumulated with so much persistence during a number of years—to Jassy; and finally, availing themselves of the great kindness of the Government of His Majesty the Emperor of Russia, who put at our disposal a special room in the Kremlin Palace (at Moscow), we transferred to that place, with the authorization of the Government and in conformity with the law of Dec. 25, 1916, the 314,580,457 lei which what had in our vaults at Jassy." The pre-war lei had a par value of \$0.193; thus the value of the gold stock deposited in Moscow was about \$60,714,000.

Averages based on daily quotations of closing rates as published by New York Journal of Commerce.

Chervonetz quotations nominal.

Silver currency. The figure given for parity represents gold value of unit in August, 1931, computed by multiplying silver content of unit by New York average price of silver for August, 1931, which was \$0.2.7842 per fine ounce. On the same basis, parity in August, 1930, for the Chinese-Mexican dollar was 27.90 cents; for the Shanghai tael, 38.46 cents; for the Yuan dollar, 27.28 cents; and for the Hong Kong dollar, 27.69 cents.

Quotation is for silver peso.

¹ In addition the issue department holds Government and other securities and silver coin as cover for the fiduciary issue, which is fixed by law at £260,900,000 (\$1,265,000,000). On August 1 and 21, however, permission was given to increase the fiduciary issue (and securities held as cover) by £15,000,000 for three weeks.

² Issued by the independent office for retirement of public debt (Caisse autonome d'amortissement).

¹ Converted to basis of new sol (par value \$0.2800) adopted May 18, 1931.
² Revised by transfer from "Other current accounts" to "Current account of the Treasury" of a special account for the purchase of silver amounting to 13,000,000 zlotys.
³ Figures for gold made comparable with current figures by conversion to new par effective July 1, 1931. Figures for May and June have been revised to include the gold acquired by the Bank of Portugal under agreement of Mar. 6, 1930, which was first shown on the bank statement of Apr. 22, 1931.
⁴ Figures published previous to reorganization of bank, July 1, 1931, are not comparable with current figures.
⁵ Revised to include "Due from foreign correspondents."
⁵ Figures not yet available.
⁵ Revised to include "Loans of branches."
⁵ Figures for gold made comparable with current figures by conversion to new par adopted June 28, 1931; information not available for converting figures of foreign exchange to new basis.
• Revised to include "Government deposits."
• Corrected.

¹ Approximate number; series originally included 208 issues, from which those bearing 10 per cent interest have been eliminated in recent revision. In 1928 the number of such issues was 31.

Stock price series for England, France, and Germany have been converted from original bases to a 1926 base; for original figures—except for revised series on German bonds—see Bulletin for February, 1931 (p. 91) and March, 1931 (p. 158).

LAW DEPARTMENT

Eligibility for rediscount at a Federal reserve bank of | other officer designated for the purpose by regulation a veteran's note on which the veteran has waived notice of transfer

The Federal Reserve Board was recently requested to rule upon the question whether, under the World War adjusted compensation act, the note of a veteran secured by his adjusted-service certificate is eligible for rediscount at a Federal reserve bank if the notice of transfer of such note required by the statute to be given to the veteran has not been given, but in lieu thereof the veteran has waived such notice.

Section 502 (b) of the World War adjusted compensation act, which authorizes loans to veterans on their adjusted-service certificates, contains the following provision:

In case the note is sold, discounted, or rediscounted the bank making the transfer shall promptly notify the veteran by mail at his last known post-office address.

The Assistant Administrator of the Veterans' Administration has advised the Federal Reserve Board that an attempted waiver by a veteran of the notification required under the abovequoted provision of section 502 of the World War adjusted compensation act would be without legal force or effect and that a failure on the part of any bank to comply with this statutory requirement will be considered as sufficient cause for the Veterans' Administration to refuse to make redemption of notes deficient in this regard.

Section III of the Federal Reserve Board's regulation G governing the rediscount of veterans' notes secured by adjusted-service certificates, provides in part as follows:

In order to be eligible for rediscount at a Federal reserve bank any such note must-

(i) Be accompanied by the evidence of eligibility required by this regulation and such other evidence of eligibility as may be required by the Federal reserve bank to which it is offered for rediscount;

Section IV of regulation G contains the following provisions:

(b) Affidavit of lending bank.—Any note offered to a Federal reserve bank for rediscount must be accompanied by the affidavit required by section 502 (h) of the act and the regulations of the director, in form approved by the director, made by an officer of the bank which made the loan, before a notary public or

of the director, stating that-

(4) Such bank has notified the veteran by mail at his last known post-office address of any sale, discount. or rediscount of such note by such bank, as required by section 502 (b) of the act.

In view of these provisions of regulation G and the position which the Veterans' Administration has taken in this matter, the board ruled that a note of a veteran secured by his adjusted-service certificate is not eligible for rediscount at a Federal reserve bank if the notice of the transfer of such note has not been given to the veteran but has been waived by him.

Reserves against deposits received by member banks in connection with certain "personal loans"

The Federal Reserve Board was recently requested to rule upon the question whether a member bank is required to carry reserves against amounts received on deposit in connection with loans made to individuals through its personal loan department. In order to provide for the repayment of such loans at maturity, borrowers are required to make term payments which, instead of being applied directly on their notes, are placed in special accounts evidenced by the issuance of special pass books. Interest at the savings department rate is allowed on these accounts and this, with accumulated payments, is held until there is a sufficient amount in the account to retire the loan. Funds so received are applicable only toward retiring the depositors' obligations to the bank and are not subject to withdrawal for any other purpose. In discounting the borrower's note interest is charged on the full amount of the loan until maturity.

After a consideration of this subject, the Federal Reserve Board expressed the opinion that payments made in connection with such loans in the manner above described are deposits within the meaning of section 19 of the Federal reserve act, and that accordingly reserves should be maintained against them by member banks. Whether or not these deposits are time or demand deposits should be determined in accordance with the usual principles laid down in section 19 of the Federal reserve act and in the Federal Reserve Board's regulation D.

DETAILED FEDERAL RESERVE, STATISTICS, ETC.
