RHODES' JOURNAL OF BANKING.

NEW SERIES. }
VOLUME X. }

JANUARY, 1883.

No. 1.

NOTICE TO SUBSCRIBERS.—New Features in 1883.

Attention is directed to the (5) Departments of the JOURNAL as shown in this Number; these are intended to include all the important points of information likely to arise in banking and financial operations.

On account of the JOURNAL's exceptional success, its Publishers and Editors are now enabled to bring out a publication which will (measurably) satisfy themselves, and, they hope, will prove to be of such positive value as to *commend itself* to bankers generally. We have set up a high standard for 1883, and entertain the hope that we will be able, by unremitting effort, to conduct a bankers' magazine of the *highest order of merit*.

Subscription price, \$6 a year. *Subscribers now on our books* will be continued for 1883 at the old rate, \$5 a year. This applies to all last year's subscribers, either for the entire year or less.

According to the statistics prepared by the "Railway Age," the number of miles of main track laid during the year 1882 was 10,821, the lines which acquired the new mileage numbering 316, and being located in 44 of the States and Territories. It is supposed that the complete returns will run the total up to 11,000, or some 1,500 miles more than the "Age" reckoned as the total for 1881, the new mileage of which year exceeded that of any previous year. The following shows the new mileage of the States in which building operations have been most active: Iowa, 953; Texas, 817; New York, 752; Ohio, 555; Arkansas, 529; Indiana, 529; Colorado, 500; Dakota Territory, 480; Pennsylvania, 464, and Minnesota, 444. Of the 316 roads noted 140 are still incomplete. The capital invested during 1882 is estimated at \$270,000,000, exclusive of the amounts expended in the preparation of the road-beds on which tracks are not yet laid. This immense amount represents a portion of the surplus capital or savings of the country, which have been spared from active business or luxury to be invested in permanent improvements. That the people can afford this outlay without pinching, is an evidence of great prosperity. So far as the new

lines have been judiciously projected they will add to the country's wealth amounts far beyond the cost of the roads, in the farms, mineral wealth, towns, etc., opened up to settlement and improvement.

The action brought against the Mutual Union Telegraph Company, in the interest of the Western Union, is a fresh illustration of the cynical indifference with which the great financiers of the day regard the better sentiment of the public at large. The proceeding in question, may or may not be legal and proper, but it certainly comes with very bad grace from the persons who began it. It only lends force to every charge that has recently been made of the dangerous power which is exercised or is attempted to be exercised by the principal telegraph company of the country. The revelations that have been made with respect to the arrangements between the Atlantic cable companies are enough to awaken the deepest suspicion in the public mind, as well as resentment at the astounding impertinence of the men who have manipulated them. The attention of Congress has been called to the abuses alluded to, and it is possible that something may be done to bring the offenders to a sense of what is due to the public. An instance of the perfect disregard of public obligations is afforded in the case of the French cable last laid. The company was chartered by Congress, and at the time much stress was laid upon the fact that the charter strictly enjoined the company from combining with other companies to increase the charges. In the face of this, the company entered the present combination, and no secret is made of the fact. The only remedy for the evils of monopoly in the telegraph business that appears feasible to many people, is the appropriation of the lines by Government. This is a measure that is for some reasons to be dreaded. There have been certain indications from time to time to arouse a suspicion that the secret object of the managers of the Western Union was to manufacture a public opinion in favor of the purchase of the company's property by the Government. It is much to be preferred that the public opinion should insist upon the several companies carrying on their business as at present, but with a due regard for the rights of the people.

The way in which Congress has, up to the holidays, taken hold of the taxation question, illustrates most forcibly the lamentable deficiency of statesmanship in the principal legislative body of the nation. On this most important matter, on which every intelligent man in the country has a pretty decided opinion, no party in Congress seems to have any settled policy whatever. The claims of party or the persuasions of private interests are so pressing upon the individual members, as to make them dubious and hesitating, at the least, when the public welfare happens to clash with other considerations. The matter of

the reduction of internal taxation is certainly not so difficult but that some avowed policy should have been carried well forward in the first three weeks of the session. It needs no great acumen to discern that while there is only a slight popular demand for the total abolition of internal taxes, yet that a decided reduction is demanded alike by the people and the condition of the public finances.

The Ways and Means Committee deserve credit for the industry with which they have labored upon the tariff bill. Their industry was worthy of a better cause, for the lack of a policy, which their work exhibits, makes it very doubtful if it will prove acceptable to any one. They might have extended the free list to cover a large number of additional articles upon which there is not the shadow of an excuse for a tax, while the abolition of the duties upon many raw materials would have proved a positive benefit to many languishing industries. The country is certainly not ready for anything like free trade, but there is certainly a very positive demand for the removal of war taxes, and for the exercise of a little common sense in reforming the tariff.

The features of the case of the latest important bank failure—that of the City Bank of Rochester—are, unfortunately, not novel, but perhaps for that very reason they are all the better adapted “to point a moral.” There are, scattered all over the country, banks in which the President or Cashier bears the same kind of relation to the bank and its Directors which Baldwin did to the Mechanics’ National of Newark, or Benyon to the Pacific National of Boston, or Lee to the First National of Buffalo, or Upton to the City Bank of Rochester. The officer is allowed to manage the bank as if it was his private concern, and almost entirely without the oversight or co-operation of the other persons interested. Of course, it is generally the case that the person so implicitly trusted is reputed to be an able financier and a man of good character. But it goes without saying that those who carry on business in this manner work on an entirely false and vicious theory. Neither joint-stock banks nor stock companies of any kind were ever devised to be managed in such a manner, and the idea never would have succeeded if they had.

The number of cases in which the one-man-power idea has led to disaster proves that it will not do. There is entirely too strong a temptation in these times for those who are entrusted with money to use it for purposes of speculation, to admit of their being left unwatched. And, besides, it often happens that a man who is trusted with large interests, develops, in time, faults of character formerly unsuspected. In the case of Mr. Upton, it might have been expected that he could be

trusted without oversight as well as almost any man. He had been connected with the banking business of Rochester since boyhood, and enjoyed the confidence of everybody. He was reputed to be an excellent financier, and was popular in both social and business circles. In short, he was just the kind of man who is often allowed to manage a bank without interference of the Directors. But, under the test of experience, every inference that was made from the reputation which he enjoyed proved fallacious. His character could not bear the strain of the temptation to risk other people's money in order to reap enormous profits for himself. In so far people were deceived as to the reliability of the delinquent. But they were just as much mistaken in the matter of his financial ability, for the merest tyro in speculation could not have made a grosser blunder than to hold on for "\$1.50 oil" when he could have reaped a splendid profit before the reaction in the price came. We do not intend to animadvert too strongly on a man who is in a very unpleasant position. It is not even claimed here that he was the only one to blame. The Directors can hardly be exculpated, and the public opinion which overlooks and approves the carrying on of speculations like Mr. Upton's is also largely responsible.

The Rochester "Union" speaks thus in regard to the matter: "The City Bank has been embezzled. The embezzler is Charles E. Upton, its Cashier for many years in the past and its President for the past few years. He took—stole—the money of men, women, children and public institutions entrusted to his care as chief officer of the bank, and appropriated it to his own use. That use was gambling. He gambled in oil and other marketable commodities through bits of paper representing them, just as men gamble in money through chips of ivory that stand for dollars and cents. He lost. He was unable to replace what he had taken—to make restitution for what he had stolen. He stands towards all directly affected by his falseness to his trust, and before the entire community indirectly affected thereby, a criminal embezzler, who should be held to the fullest accountability and visited with the extreme penalty the law will allow."

This may be all very true, and no more than just, but it at the same time proves that the "Union" entertains the same false idea regarding the management of a bank that is argued against above. It recognizes no obligation on the part of the Directors to guard the interests of the stockholders. There is nothing to show that the most ordinary precautions would not have saved the bank from disaster.

The Secretary of the Treasury estimates the surplus for the fiscal year at \$120,000,000. In the past one-half year the reduction was \$81,000,000, leaving only about \$39,000,000 of reduction in the remainder of the year, or less than \$7,000,000 per month.

THE PAST FINANCIAL YEAR.

To any one who wishes to have an intelligent view of the condition of business and of the future outlook, it is quite necessary to take a glance backward from time to time, in order to recall the more or less important events of the immediate past, which have all had their effect in producing the existing conditions. To enable the reader to do this the more readily, a short review is offered of the chief financial events of the past year.

Late in 1881 the era of wild speculation that had been existing in France was coming to a head, and toward the close of January, 1882, the bubble burst with the suspension of the *Union Generale*. Paris was in a condition of panic for a short time, but by the end of March matters were settled back into comparative quietness. A result of the flurry and of the increased rates of discount in Europe was a drain of specie from this country which continued until August. This fact may be taken as containing the secret of much that would be otherwise unexplainable. The withdrawal of specie was followed by a slight contraction of prices of merchandise. This in turn caused a certain slackness in business, and an increased number of failures throughout the year.

The reports of the Bureau of Statistics show that there was an excess of exports of coin and bullion in each month of the year up to September 1st, the total excess at that time being \$41,437,318. Since that time, beginning with the marketing of the cotton crop, the movement has been reversed, but the imports up to the end of the year were light.

The demand for gold abroad was increased by the call of London bankers who had contracted to supply Italy with gold in order to resume specie payments. The English operations in Egypt also tended to deplete the coffers of the Bank of England, which consequently raised its rate of discount on August 23 from 3 to 4 per cent., and again, on September 20th, to 5 per cent., where it has remained since.

As regards the number of business failures, the computation by Bradstreet's Agency shows that the total in 1882 was 7,574, against 5,929 in 1881, and 4,350 in 1880. The assets during the past year amounted to \$47,267,674, against \$35,964,180 in 1881, and \$27,430,072 in 1880. The general liabilities of failed concerns amounted, in 1882, to \$93,599,936; in 1881 they were \$76,094,667, and in 1880, \$57,120,995. This large increase in mercantile disasters is accounted for by the very gen-

eral decrease in the prices which occurred during the year, and which was probably largely induced by the withdrawal of specie.

By comparing the prices of some of the principal articles of merchandise at the close of 1882, with the prices at the close of 1881, it will be noticed that a moderate, but decided reduction occurred in the majority of articles: Wheat flour, State, per barrel, 1882, \$3.75; 1881, \$5.00; rye flour, 1882, \$3.80; 1881, \$5.10; cornmeal, Brandywine, 1882, \$3.85; 1881, \$3.85; spring wheat, per bushel, 1882, \$1.08; 1881, \$1.39; Western mixed corn, 1882, 68 cents; 1881, 70 cents; middling uplands cotton, per lb., 1882, 10 1-4 cents; 1881, 12 cents; hay, shipping, per 100 lbs., 1882, 65 cents; 1881, 70 cents; pig iron, per ton, Scotch, 1882, \$23; 1881, \$25; American, 1882, \$25.50; 1881, \$26.50; New Orleans molasses, per gallon, 1882, 58 cents; 1881, 63 cents; linseed oil, 1882, 53 cents; 1881, 64 cents; sugar, refined hards, per lb., 1882, 9 1-8 cents; 1881, 9 1-2 cents; wool, Ohio fleece, per lb., 1882, 41 cents; 1881, 43 cents. Some articles, such as hops, whale and sperm oil, petroleum, and certain grades of provisions increased in price, but, as has been intimated, these cases are exceptional.

The inducements which this country offers to the people of other nations to emigrate have been availed of by the immense number of about 735,000 persons during the past year. This number is 16,000 greater than that for 1881, and they were distributed through the different nationalities as follows: Germany, 232,000; England and Wales, 81,000; Ireland, 70,000; Scotland, 17,000; Sweden, 59,000; Norway, 27,000; Canada, 89,000; all other countries, 160,000. The arrivals in the last three months show a decided falling off, and it is supposed by some that the immigration has reached its maximum for the present. But this is a matter which seems to strictly depend upon the prosperity of this country, relatively to that of other countries. The figures given are official up to December 1, the numbers for December being estimated.

The public debt has been largely reduced during the year, the debt, less cash in the Treasury, being \$1,607,543,677 against \$1,765,491,717 on January 1, 1882, showing a decrease of \$157,948,040. The decrease in the interest charge has been still greater than this reduction would indicate, by reason of the exchange of 3 1-2 per cent. bonds for 3 per cent. in accordance with Section 11 of the National Bank Extension Act, approved July 12, 1882. The amount of 3 per cents so exchanged up to December 29 was \$289,841,150.

The passage of the act mentioned, which provides the conditions under which national banks may extend their corporate existence for twenty years, is one of the events of the year deserving notice. A matter of less importance was the passage of the law in New York State to allow freedom as regards the rate of interest to be charged on call loans of \$5,000 and over. The law to establish a commission to revise the tariff was subject of hot debate in the spring of 1882, and their labors in col-

lecting evidence, as well as their report to Congress, have been watched and read with great interest.

The money market was unusually feverish, taking the year as a whole. The call for loans was active in January in consequence of the crisis in Europe, and the rates did not become easy until May. The usual fall demand for money in the West occurred earlier than usual, and was facilitated by regulation of the Treasury Department which allowed persons to deposit gold at any Sub-Treasury and receive orders in exchange, payable in silver at any other Sub-Treasury. The object was to put into circulation the silver dollars, and the inducement was the saving of expressage on shipments of money. There were about \$27,000,000 of these silver dollars coined during the year, and the fact that the price of silver in London fell to about 50d. per ounce at the extreme end of the year, has caused renewed misgivings respecting the danger that the continuance of the coinage offers to the present currency system. The loan market was active in June but, after a period of comparative ease, it was subject to manipulation and high rates were realized. For the remainder of the year the pressure was not extraordinary, although the rate of discount on commercial paper continued high.

By comparing the prices of railroad stocks at the end of 1882 with those at the end of 1881, it is seen that the year's operations have acted unfavorably upon prices. A railroad war was in progress at the opening of the year, but on January 16 an agreement was made to refer the question of differential rates to an advisory commission. The effect was favorable to the market; but the troubles in Paris caused a panicky condition during February. The feeling was improved in the next month, the upward tendency being seemingly accelerated after the 13th, when Mr. Jay Gould called together a few friends and showed them an immense amount of stock and bond certificates to prove that he had not been "unloading." In April the market was weak again owing to the opinion that the heavier holders had withdrawn their support, and there was no improvement in May. The fine crop prospects and the Egyptian war caused an upward movement in June and July which continued through August. The influences were unfavorable in September, and evident manipulation of the money market was employed to break prices. The impression was that heavy holders having sold out during the previous rise were ready to purchase again. Toward the end of October it transpired that the New York, Chicago and St. Louis railroad had been purchased in the Vanderbilt interest, and this strengthened the other connected properties. But in November a war sprung up between the Omaha and St. Paul roads which caused a sharp decline in stocks generally. Peace was declared early in December, but the talk of tariff reform and the threatened closing of iron mills, etc., prevented any considerable reaction up to the close of the year.

RAILROAD WARS.

The latest important contest between the railroads was ended on or about December 13, after a duration of only about three weeks. We say "only," because, as no one needs to be reminded, some previous wars have lasted for months, during which time thousands of shippers could never tell what the rates of fare or freight were to be from day to day. The recent trouble seems to have been caused by cutting of the rates agreed upon between the roads west of Chicago, and when it seemed as though a new arrangement was about to be concluded, the negotiations were suddenly broken off by the President of one of the lines. The explanation given of his conduct, that another company was trenching upon the territory claimed by his company, has been severely commented upon by the newspapers generally. For this reason it is passed over here, with the remark that his reason was as good a one as is often given for beginning or continuing railroad wars. We have no quarrel with him or his reason. If he has the right to upset the transportation business of the country for weeks together, it does not matter what the excuse may be for any particular war. The main question for the public to consider is, is it right and proper that such immense interests should be put in the power of one man.

As it is, the railroad managers generally scorn the proposition that they are not at liberty to do as they will with their railroads. And preposterous as, in view of all the circumstances, their claim is, they have hitherto pretty uniformly made it good. The gravity of the evils of the present conditions have lately, however, begun to be realized by the people, and the great railway kings take a much humbler tone than they did a few years since. Nevertheless, none of the bills that have been proposed in Congress to regulate inter-state commerce have managed to get passed.

It forms a strong comment upon the legislative system of this country, that it is the only important one which exercises no governmental control of the railroads, although the roads form a more vital part of the general well-being here than in any other country. The latest statistics attainable show that the United States now outstrip Europe in railway mileage, and, in fact, there are nearly as many miles of railroad in this country as in all the rest of the world. Their value has been estimated at about one-ninth or one-tenth of the wealth of the nation, and whether this be correct or not, it is hard to exaggerate their importance to the welfare of a country where the large towns lie

at such long distances apart and the population is so scattered. There are few princes of the old world who can boast a sway more extensive than that exercised by the president of a railroad with from 50 to 150 million dollars of capital. It is not by any means in railroad wars and treaties alone that this power is shown, but it is when they occur from time to time that the wrongs which the public is made to suffer come up for discussion in the newspapers.

The evils resulting from a contest like the recent one are well set forth in a recent article in the Chicago "Tribune." As Chicago lies right in the midst of the region of the difficulty, the results are better appreciated there than elsewhere, and it is perhaps for this reason that they are presented so pointedly in the following extract:

There is one aspect of the railroad war which has been lately raging in the Northwest that the public does not seem to fully comprehend. For several weeks, throughout the richest territory tributary to Chicago and along the lines of railroads extending thousands of miles, all business interests have been kept in a state of feverish uncertainty by the constant arbitrary changes made in the rates of transportation from day to day by the managers of the railroads involved in the "war." Country merchants who came to Chicago before the cutting of rates began, and paid full prices for the transportation of themselves and their goods, find that their less forehanded competitors in business are now obtaining the same service from the railroads at a fraction of what they were compelled to pay. The merchant who procrastinated about laying in his goods because he was lazy, or had not the money for what he bought, is enabled by the reductions he obtains from the railroads to undersell his prompter neighbor. The farmers who sold their wheat before rates were cut have the satisfaction of seeing those who waited till now to sell getting higher prices, since every reduction in freights is an addition to the interior price of wheat.

No merchant, no grain shipper, no lumber dealer, no farmer, no one who has anything to buy or sell knows where he stands as long as the managers of the contending corporations can exercise the prerogative of changing at any hour any transportation tax as seems good to them. These managers not only change the rates for freight and passengers from hour to hour if they choose, but they assume to say that some of the communities they serve shall have the lower rates and others shall not. People at competitive points where two antagonistic railroads meet can, while the fun lasts, pay about what they choose for going to Chicago or St. Paul or bringing goods from those places, but persons in the very next township who have but one railroad are compelled to continue to pay the old rates. Often they have to pay more, so that the collector of the transportation tax may make out of them what he has lost by his concessions to their more lucky neighbors.

This power of capricious taxation, which not even the Czar of Russia could assume for twenty-four hours without creating a worse than Nihilistic revolution, is exercised by our railroad managers at their own discretion. They have seized it as one of the prerogatives of their crowns, and so far the public have submitted.

Besides the general public, however, there is another class whose rights are often overridden by the railroad managers, viz.: the shareholders. There was a time when it was supposed that the arbitrary proceedings of the officers might be curbed by laws to protect the rights of stockholders, and that the public interests would be better subserved at the same time. Mr. Herbert Spencer, who, during his recent visit to America was struck by the dangers to be apprehended from the consolidation of the railroads, many years ago, in an article treating of the evils of railway management in Great Britain, proposed that remedy mentioned for those evils. But the time has gone by when any one

supposed that it would prove an adequate remedy, and, although it must be acknowledged that the interests of stockholders are often scandalously disregarded, yet the relations of the roads to the public cannot be arranged through the means mentioned.

The State Legislatures have of late years been rapidly taking up the device of Railroad Commissions, which, in its modern sense, was first begun in this country in the State of Massachusetts. It is expected that a law will soon be passed establishing a railroad commission in South Carolina, and then twenty-two States will possess such a tribunal to arbitrate differences between the public and the roads, and to see the laws properly executed.

Several attempts have been made to pass laws in Congress to deal with the matter, and two bills have been introduced in the House of Representatives at the present session. Mr. Townshend, of Illinois, has presented a resolution directing the Committee on Commerce to report a bill to prohibit and punish combinations of roads for the purpose of preventing the construction of competing roads into the Territories and through States. A bill introduced by Representative McCoid provides that each railway shall, on the 1st of March of each year, publish a schedule of rates, 50 per cent. of the schedule of rates shall be the minimum of rates, and 50 per cent. above the maximum, allowed to be charged in any case. These rates are to be charged for loading, a mileage rate for hauling, and are to be fixed upon the principle of impartial service for a fair corporate profit from honest public service. Consolidating, discriminating, pooling, &c., are prohibited and punished; a committee of nine members, one from each judicial circuit of the United States, shall be appointed by each Congress to supervise, investigate and report to Congress as to the management and control of railways under the law, and recommend amendments thereto.

Regarding Mr. Townshend's resolution, it need only be said that it does not approach the root of the difficulty it is intended to correct, and it would prove ineffectual. The committee proposed in Mr. McCoid's bill would be changed too often to be able to take hold of the difficult railroad problem in the way that the circumstances demand. No ordinary committee of any Congress that has sat within the present generation has possessed the character and attainments necessary to deal with the railway question in a satisfactory way. The men who are to do that must give their whole time and attention to the matter, and must not be distracted with the cares of a politician's life.

In his annual report Mr. W. H. Armstrong, the Government Commissioner of Railroads, makes the following judicious remarks: "Rates and discriminations are not entirely within the arbitrary determination of railroad companies. They are subject to competitions which they cannot control—upon the ocean, upon the lakes, and upon the rivers. The great lakes and rivers, so peculiarly advantageously located as to trade, with their numerous, far-reaching, and widely extended navig-

able tributaries, carry water competition into almost every portion of the country, with the effect of so reducing the general rates that the United States enjoys the cheapest railroad transportation in the world. As yet no just basis of general application for the adjustment of rates and discriminations has been found, and it is undeniable that there are hardships neither few nor small arising from existing discriminations, often arbitrarily imposed, which affect disastrously local trade at non-competing points. There is a growing and clamorous demand among the people that railroad management shall be subjected to the restraints of law, nor is railroad management averse to reasonable control. On the contrary, as I believe, a judicious law would be most acceptable. It has become a necessity that 'wars' of rates shall be controlled in the interests of both the people and the roads. Such 'wars' for the time unsettle, with their operation, commercial values, affording sudden and unreasonable profits to a few, and entailing heavy losses upon others."

Regarding the State Railroad Commissioners, he says: "The general scope of the laws under which these Commissioners are appointed is to control railroads within the State, and they exercise, in many instances, a healthful influence over railroad management. But railroad transportation, strictly confined within State jurisdiction, is so limited that it leaves the real difficulties unsolved and nearly unaffected. It cannot be said the State laws have been successful in dealing with the subject. Their limited jurisdiction involves conflicts with both the general Government and their sister States. Diverse decisions have been rendered by the highest judicial tribunals of neighboring States upon States laws of like import and purposes * * * The power of Congress over the whole subject can hardly be questioned. The Supreme Court of Illinois concedes it, and the decisions of the Supreme Court of the United States seem to render it indisputable. * * * I therefore respectfully recommend that a commission be appointed to take into consideration the whole question, and report to Congress the facts necessary for intelligent and efficient action upon the subject."

There is no more important subject, next to the reduction of taxation, to which the attention of Congress has been directed, and the appointment of a commission is a measure so conservative, and promises so well, that it should at least be tried. Only evil can result from further delay in acting upon the matter.

The fact that the price of silver in London has recently fallen to 50d. per ounce, making the bullion price of the "standard" silver dollar about only 82 cents, brings up more forcibly than ever the unwisdom of the present course of this Government in purchasing silver on a falling market for coinage. The immediate result is the debasement of the coinage, but the remote consequences may be still more deplorable.

THE LOW RATE OF INTEREST ON INVESTMENTS.

That the prevailing rates of interest realized on investments are unprecedentedly low in this country is a fact so well known to every one that it needs no proof. For some years past it has become more and more difficult for savings banks, holders of trust funds, and others seeking safe and steady investments, to place their money where it can earn a moderate rate of interest. It appears as though the payment of the national debt must increase the difficulty in the future, unless an unexpected event occurs which will change the whole aspect of the financial world. Under the circumstances anything that may throw light upon the causes of the present peculiar conditions is of special interest. For this reason the following article on "The Drop in the Rate of Interest on Investments" is republished from the December number of the London "Bankers' Magazine":

There has been for some years past, as is well known to all our readers, a gradual rise in the market value of all securities of a permanent and dependable character. Consols, which have rarely been below par for a considerable time, are at the present date quoted at a fraction over 102. Other securities of a solid description follow Government securities closely in this rise. If peace is maintained, and this country remains prosperous—and there seems, fortunately, no anxiety on either of these two heads—there appears to be no reason to doubt that the present scale of quotations will be continued, at all events for a considerable time to come. As a natural consequence, the yield obtainable as dividend drops in a corresponding proportion. It is difficult to obtain 4 per cent. on an investment in any really sound security. At no very distant date it was possible to invest money in very substantial securities, such as those which many of our Colonial Governments issued, to return 5 per cent., and even more. But an investment on these terms is no longer possible.

The fundholders and those who place their money in securities of a similar character, are, as a rule, persons to whom the amount of the return from their capital is of less importance than the certainty of that return and the security of the capital itself. Even among smaller investors the same reasons for seeking an investment of that class frequently are found. They place their money where they believe it will remain safe till the time comes when a use for it is found. The constant flow of accumulation in fractional sums, which takes place through the agency of the savings banks, provides means for the purchase of

amounts in the public funds which are large in the aggregate, and thus continually acting on the market, tend to maintain prices at a high point. The fact that Consols are held up in price in this manner assists to keep other securities on a proportionate elevation. The amount of Government stock at any time floating in the market is believed to be comparatively small. So much stock of that description is absorbed by various public bodies, banks, and others, that the balance available for sale is but a narrow one.

Apart from these causes, it is worth considering the more general subject as to the rate of interest payable on securities, and how far it may not be likely to drop at the present time. Such a drop in the return from new investments would naturally tend to raise the selling price of all older ones, especially those whose stability is undoubted. The question is often asked whether there are laws which govern the rate of interest, and further, if such laws exist, what their effects may be. This is a practical question. It may be answered, in the first place, that such laws undoubtedly exist. We may begin our endeavor to find their basis by stating in a general way that the rate of interest on money, that is to say, the price which is paid for the use of it, is fixed, like the price of any other article, by the operation of the wider law of demand and supply; but this truly is only a part, and indeed a small part of the question. The rate of interest depends on three causes: the abundance of capital relatively to the demand for it—that is to say, as previously mentioned, on the law of demand and supply—and beyond this, on the productiveness of the employments in which it is used, and the stability—or rather, perhaps, on the opinion which exists of the stability—of the investments in which it is placed.

Let us take the influence of the causes just named. In all young countries, in all new colonies, which are peopled by emigrants from older civilized communities, the rate of interest is always very high. The causes which render the rate of interest thus high under these circumstances are not so much the insecurity of the capital—though it may, perhaps, be not quite as secure as in the mother country—but rather because capital under such circumstances is relatively smaller to the employment for it, and that it finds unlimited channels for use which are also singularly productive. The period during which this process lasts is rarely long, and for this reason. In the first place, the demand for the use of capital under such circumstances is quickly supplied through its rapid growth, owing to the productiveness of the investments in which it is placed; and in the next, capital naturally flows in fast from places where the proceeds from it are less to places which promise such an abundant return. We have seen of recent years our Australian Colonies, which some time ago could not place their loans under 6 per cent., now able to borrow easily at 4 per cent., while they are reckoned quite among the securities of the highest class. The security which they offer is now not only so good, but also so well

known, that they will probably, unless some great alteration in the home market takes place, be long able to borrow all they may require at rates much like those existing at the present time. Even if the home supply of loanable capital were not open to them, accumulation has proceeded so rapidly in the colonies themselves that they could obtain what they need easily from within their own boundaries. The United States offer on this subject a good instance in point. While the war with the Southern States was proceeding the Union was compelled to borrow at high rates of interest, and to draw capital from Europe to a great extent to supply their needs. It was but little, comparatively, that they could furnish themselves while all their energies were being strained to the utmost to continue the conflict. Gradually, as peace returned and the natural productiveness of the country was allowed fair play, and its resources were again developed by the population, no longer engaged in destructive war, it became possible to lower the rate of interest from 6 per cent. to 4 per cent., from 4 per cent. to 3 1-2 per cent., till now 3 per cent. is fairly in view. Meanwhile the public securities of the United States have been to a great extent bought back by Americans themselves, and are far less held beyond the limits of the Union than they used to be. The country, in fact, to a large extent, is the holder of its own public debt, as is the case in this country, in France, in Holland, and generally in all old and settled countries. The railway bonds of the United States will probably to a great extent, in a similar manner, pass into the hands of Americans themselves. This is very natural. Such securities are best understood in their own countries, and their stability being perfectly recognized there, a lower rate of interest satisfies the investor. The constant growth of capital seeking employment, together with the gradual filling up of the channels for employment, tend thus to lower the rate of the return for investments. Thirty years ago, for instance, our Australian Colonies were in their infancy. The Cape Colony was still unfilled, railways in India were scarcely begun. Canada was far less occupied than at present. The same in a great degree may be said of the United States, to which a special reference has just been made. All these countries have absorbed a vast amount of capital from the older and long settled parts of the world, besides immense sums which they have raised themselves. And though the countries we have just named are still far from being completely filled up, a great deal has been done towards supplying their needs.

The next point is the productiveness of the employment in which the capital is placed. And here, again, it seems not unlikely that we may see a diminution in the power of yielding a return, from causes which are in many respects very similar to those we have referred to above. The great industrial discoveries, such as the application of steam to manufacturing employments, to locomotion, and of electricity to facilities for communication, which have played such important

parts in finding occupation for capital during the last forty or fifty years, do not seem likely to be followed by similar or equally useful inventions, while the field to which they may be advantageously applied has been already filled up to a great extent. An amount of capital about equal to the British National Debt has, during the last forty years, found employment in Great Britain in forming the great system of our railroads. This capital has found, on the whole, profitable employment, though greater judgment, especially in the earlier days of railway development, would have saved many companies from serious losses, which have had to be met by the subscribers. No doubt some further amounts will, from time to time, be required to keep the existing works in repair and for such further extensions as may be needed; but it would seem in the highest degree improbable that anything like the amount which has already been invested can be required for the purpose, or that it could be employed to such advantage as that hitherto laid out.

The subject of which we have given this slight sketch is a very large one, and we have been far from covering the whole of it. There were three causes, as we mentioned at the commencement, on which the rate of interest depends—the abundance of capital relatively to the demand for it, the productiveness of the employments in which it is used, and the stability—or perhaps, rather, on the opinion which exists of the stability—of the investments in which it is placed.

We have seen in respect of the first of these three causes—the abundance of capital relatively to the demand for it—that a vast number of the channels for the use of capital which existed some years since, both in this country, in our colonies, and abroad, have been greatly filled up, and that it is hardly likely that similar outlets will be found in any fresh direction. In respect of the second of these reasons—the productiveness of the employments in which capital is used—we have seen that the great industrial discoveries which have provided such large opportunities for the profitable use of capital during the last half-century have mainly been filled. In respect to the last—the stability, or perhaps the opinion of the stability, of the investments in which the capital is placed—we have seen that a greater knowledge of the resources of our colonies, and of other countries in which many of our investments have been placed—has increased the feeling of stability as regards their investments, and that hence a smaller interest need be offered to attract money to them. The investments themselves are more largely held within their own boundaries than they used to be, and hence being better known they need to offer smaller inducements in the way of interest to those who hold them. All these causes, it will thus be observed, work in one direction, and that is towards a gradual lowering of the rate of return on investments of capital. This is by no means an unmixed evil in itself; but it presents difficulties which many investors will feel. Among the reasons which induce people to

save money for purposes of investment, there are two which are generally prominent—a desire to provide against their own probable wants in old age or infirmity, and a desire to make a provision of a similar character for those whom they may leave behind them. The power of making a provision of this nature is curtailed by the reduction in the rate of interest; but the desire for accumulation is so powerful that it is hardly likely to be checked by reason of the smaller return to be received from the investments themselves.

THE FINANCIAL OUTLOOK IN EUROPE.

The items of foreign banking business in another column show some of those straws which tell how the financial current is running. There is no longer any use in disguising the fact that general trade, and especially the speculative forms of it, are in anything but a satisfactory condition. The outlets for capital are proportionately as numerous as its accumulations, but the conditions presented by them are woefully lacking in conservative and remunerative elements. Foreign countries offer, of course, an almost boundless field for the expenditure of money, but one great factor, time, has to be taken into consideration. Half-naked savages are very poor customers, even for light cotton goods, and thus the superfluous manufactures of Europe find no new markets.

Although there is no immediate prospect of war, the whole of Europe continues in the state of an armed camp, and the seeds of future political troubles may be said not only to be sown, but to be actively germinating. The financial position of France is considered to be in a most dangerous state—another example of the proverbial frivolity and carelessness of the people. That a crisis is almost inevitable may be safely assumed, as the credit of the country has gone down enormously within a very short time. If we look at the financial field proper, we find that the public has turned a cold shoulder to all the allurements of the Bourse, to all the promises of “founders.” Continental banks, on the other hand, are gradually losing all conservative principles, and conceal, beneath a high-sounding title, the wily speculator, the polite and skilful embezzler.

While England is also exposed to baseless speculations, the old-established banks show a very high degree of prosperity, as may be seen from the following table :

	<i>Profits of Half Year.</i>	<i>Dividend. Per cent.</i>
London & Westminster.....	£231,036	.. 18
London & County	210,281	.. 22
Union	133,556	.. 17½
London Joint Stock	133,203	.. 15

Profits at the rate of from 1 1-2 to 3 million dollars per annum may be considered as something exceptional, even in the banking business.

BANKRUPTCY LEGISLATION.

The vigor with which the Senate has acted, during the first few weeks of the present session, upon the bankrupt bills, is an earnest that a bankruptcy law will be passed at the present session. It will be remembered that, at the last session, a sub-committee of the Senate Judiciary Committee, with Mr. Ingalls as Chairman, reported a bill, embodying what is known as the equity system. The Committee thus discarded the recommendations of a large number, if not a majority, of the mercantile exchanges of the country, which, to be sure, were by no means unanimous as to the necessity for a bankrupt act, nor as to what the provisions of it should be. But, although the business community was not agreed upon any form of bill, the Ingalls bill was a general surprise, and not a welcome one. Some of the objections to it have been already mentioned in this Journal, and were well presented in the speech of Senator Hoar, of December 10, which is quoted in this article.

After the committee's bill had been taken up and amended for several days in succession, some decisive action was finally had on December 11. Speaking upon a motion of Mr. Brown to indefinitely postpone the matter, Mr. Lapham, of New York, said that after the repeal of the law of 1867, owing to the hardships and abuses that had grown up under it, he had entertained the idea that no other bankruptcy law would be or need be enacted until it should be rendered necessary by some new financial revulsion, but the demand for a new law had become so general and so urgent as to force him to the conclusion that such a law ought now to be passed. Indeed, the appeals from the great commercial emporium of the country were so urgent that they almost amounted to an instruction to him, as a Senator from New York, to do his best to secure the passage of a law on this subject. The New York Produce Exchange, the Stationers' Board of Trade, the New York Board of Trade and Harbor Transportation, the Merchants' Club, the Chamber of Commerce, the Leaf Tobacco Board of Trade, a convention of merchants held at Rochester, and the Oil Exchange at Olean, N. Y., all asked for a bankrupt law and all favored the Lowell bill. Mr. Lapham criticised the bill reported from the Judiciary Committee which amounts, he said, simply to a provision that whenever a debtor becomes insolvent, according to the definition of insolvency contained in the bill, the courts of equity shall take charge of his estate and dispose of it at discretion. Indeed, there might well be some ques-

tion as to the constitutionality of the bill, because the power given to Congress was to make uniform laws in relation to bankruptcy, not to leave the matter to the discretion of the courts in different parts of the country. The Lowell bill on the other hand, did provide a uniform system of law on the subject, and was in other respects so superior to the bill of the committee that he would give it his earnest support as being the best bankruptcy law that could be passed under existing circumstances.

The motion to postpone was lost by a vote of 26 to 34, and a motion to substitute the "Lowell" bill, introduced by Judge Hoar, was carried by a vote of 34 yeas to 30 nays. This action was a surprise to the newspaper correspondents and to those who were not informed of the pressure that was being brought to bear upon the members from outside, and who did not appreciate the dislike which business men entertained for the committee's bill. The substitute bill was referred to the Judiciary Committee for revision and reported back on December 18. Having made such good progress so early in the session, the prospect is fair for the passage of the bill at the present session.

The extracts from Senator Hoar's speech, which are referred to above as stating very forcibly the advantages of the "Lowell" bill over the one offered by Senator Ingalls, are as follows:

"I suppose there are in this country at this moment at least 100,000 persons, a number increasing by many thousands every year, who have failed in business and are now owing debts which they are unable to pay, by means of misfortunes which have come upon them since the repeal of the bankrupt law of 1867. This class of unfortunates, unable, without a life of fraud, to engage in any commercial transaction or in any but the simplest methods of earning a living, go on through life dragging 'at each remove a lengthening chain,' and their number is constantly increasing. I hold it a disgrace to a civilized country, I hold it an especial disgrace to a republic, to withhold under its laws relief for this class of unfortunate and meritorious citizens. I can not understand the state of mind of men who would deny to their own constituents, to their own neighbors, to their own friends, the exercise of the constitutional power which our fathers, the framers of the Constitution, thought too clearly beneficial even for argument or defense, to relieve them from the burden of debt and to enable them to engage in the honest avocations of life without the resort to subterfuge and concealment and fraud.

"The substitute which I have had the honor to offer has been criticised by several senators, and the first point which has been made against it is its length. It contains a large number of sections prescribing with a good deal of minuteness the legal rights, the legal proceedings, the legal duties of debtors, creditors, and officials, and it encounters a proposition, which is supposed by its distinguished and able authors to have the merit of simplicity, in enacting a few brief sections

and leaving everything else to be done by the court. But let us look for a moment in the outset at the strength of this objection. This bill is not a code proposed by some theorist, like Mr. Locke's code for South Carolina, or Mr. Livingstone's for Louisiana, or Jeremy Bentham's for England. It is the taking by one of the ablest bankruptcy and equity jurists in this country, who has himself exercised jurisdiction in nearly nine thousand bankruptcy cases, of the decisions of courts which have come up in practice upon doubtful points, the selections of those decisions in the various States and the various countries where bankruptcy has been in force, of those which have best approved themselves to the mind of the profession and of the public, the submission of his draft to the representatives of the great mercantile interests and classes all over the country, the scrutiny of that draft by these classes and by their agents and counsel, and embodying the result of years of patient consideration in this bill. It is therefore a digest of the best and most improved rules on practical questions which must come up under any bankruptcy system made in this way.

"Now, what is to be done if the committee's bill is to be preferred to this proposition? Why, you are to take the mechanism of courts of equity, and every one of those questions settled by the law-making power of the Government under the Lowell bill is to be settled by forty lawsuits growing up in the different districts of this country, decided in different ways at the cost and at the expense of unfortunate debtors or unfortunate creditors, and carried, before any ultimate decision can be reached which shall bind the whole country, to the Supreme Court of the United States. It is not too much to say that every section of the Lowell bill rejected by the Senate involves a hundred costly lawsuits, if not a thousand, which are to terminate for final decision in the Supreme Court of the United States before the question is definitely settled. The question is to be put in regard to every detail embraced in the Lowell bill as soon as the committee's bill goes into effect, if it is enacted, how shall this be; how shall this be; how shall this be; how shall this be; and instead of sending out by the law-making power of the country a clear, simple, practical and wise rule in advance, the community is to grope for a generation before its bankruptcy system, under which men are to live, is finally settled.

"The senator from Kansas [Mr. Ingalls], in his brilliant address to the Senate the other day, said that the measure proposed by me contained those provisions which have been the subject of great complaint, and have resulted in great abuse in England and in this country. I think that senator failed to advert to a consideration which runs all through the history of bankruptcy legislation in this country and in England. There are two things which you want in a bankrupt law; first, rules of law determining the rights of creditors, what are acts of bankruptcy, what are the conditions of relief, what are the rights of company creditors and private creditors, what creditors shall be pre-

ferred, and so on. Those rules of law in the English bankruptcy system and in the American bankruptcy statutes, so far as I am aware, have given rise to no complaints. Where do you find in any treatise on bankruptcy, where do you find in any of the angry criticisms cited by the honorable senator from Kansas, any statement "this rule of law is unjust," "that rule of law is unjust," "that provision touching the rights of creditors and the rights of debtors has been the subject of public complaint?" It is the mechanism, it is the administration, it is the fees, it is considering the debtor and creditor alike as victims to the prey of rapacious assignees or favored officials, which has been the subject of English complaints.

"What the Lowell bill adopts from prior legislation is the system of law. The system of administration, the mechanism of the Lowell bill, is new, and carefully and with pains framed to avoid all the complaints of the past. The honorable senator from Kansas attacks, when he attacks this substitute offered by me, what Judge Lowell not only attacks but cuts up the roots in the measure which, from the stores of his large experience, he has framed for the consideration of the National Legislature. What is it the senators from Kansas and Arkansas have cited from fiction, from satire, from history, from the press, and from the writers of treatises? Complaints of English administration. And what is the one thing which the genius of Dickens and of Byron and of Warren, and the eloquence of Brougham have held up to public condemnation? It is the abuse and delay and cost of the administration of the English court of chancery. Does not every senator know that? *Jarndyce vs. Jarndyce* is a chancery suit; *Miss Flyte* is a chancery ward; and yet the senators who cite these things come to the Senate with a bill which is nothing else but a chancery suit, to be conducted by the court of chancery on old chancery principles, without any guide from legislation, or any aid from modern experience, or any control from the law-making power of the Government. In other words, this sub-committee in their bill preserve the liability to the very abuse which they attack, and destroy everything which has not been a subject of complaint in the past. The bill picks out and preserves what in its essence has caused complaint, and leaves to be done over again in the slow progress of years, at great cost, what has already been satisfactorily accomplished.

"The honorable senator from Louisiana [Mr. Jonas], who I wish was within the sound of my voice at this moment, cited the other day what I myself know something about from report, the abuses which existed in that State in its bankruptcy administration after the war. I suppose there were years when in the court of bankruptcy in Louisiana there was not a dividend, there was not a dollar paid to a creditor. Now, I should like to have that honorable senator take the bill of the sub-committee, and take the condition of things which existed in his State, and see how easily that condition of things might be repeated

with a dishonest or a weak district judge in that State, under the bill reported by the committee. There is not a protection, there is not a safeguard, there is not an enactment which would prevent the repetition of the scandalous history of bankruptcy administration in New Orleans. * * * On the other hand, take the Lowell bill, with its commissioner paid a moderate salary, with every dollar paid at once into the Treasury, with a supervisor reporting once in three months the condition of every bankrupt estate throughout the district, and I ask if it is possible, whether the judge be weak or strong, whether the judge be corrupt or honest, that such abuses could go on for six weeks with the safeguard that the Lowell bill imposes. And yet when we come in and propose a measure intended to fence all around the rights of the debtor and the rights of the creditor alike, and the honesty and integrity of administration, we are met by the suggestion that it is better to have a simple bill that has no such protection or safeguard in it. * * The proposition of the senator from Kansas is simply this: That whenever a man is put into bankruptcy, the court appointing its own master without restraint, fixing the fees of that master without limit, selecting its own receivers and fixing their fees, excluding the creditors who own the property, either from voice or choice, is to proceed to direct the administration of that estate. * * *

MONOPOLY IN FINANCE.

The "*Allgemeine Zeitung*" had a very bitter article lately, not on the great powers in the Bourse, but on one all-pervading, all-powerful house, before whom even kings must bow, the firm of Rothschild. When James Rothschild, the founder of the Paris house, died, he left a fortune estimated at 1,700,000,000 francs, but to form an estimate of the real capital of the house, that of the brothers and cousins in Paris, London, Frankfort, Vienna, and the branches in Berlin, St. Petersburg, Rome, Madrid, Amsterdam, Brussels, New York, &c., would have to be added. This compact mass of capital, says the German paper, forms a bulwark against which every attack is powerless, and it is steadily and enormously increasing. States may be jealous of another's might, but this power grows and throws out its roots in every land. The Bank of France is ruled by the Rothschilds, the Ministers of France are swayed by their counsels, the great railways of France and an enormous amount of real estate are owned by the firm. Of course such phenomenal power has excited jealousy and envy, but it does not appear to us that any very well-founded charge of great injury to society at large can be made against the firm. That there are great evils possible from the possession of such vast wealth and influence is very evident, but still it would appear, despite the tone of the article in question, that the policy of the Rothschilds has been conser-

vative, and that, although their influence is shown in many ways, they follow the traditions of the house to abstain from obtrusive action. In fact, hundreds of unscrupulous speculators are kept in check and sometimes crushed by the Rothschilds—but all this is done quietly by the mysterious power of Croesus. But this question of financial kings has been brought home to ourselves—it is one almost peculiar to the present century, and is attracting universal attention, but without even any acceptable solution being offered. The danger arises from the alarming tendency of wealth to concentrate in the hands of a few, and the tyrannical power which wealth, no matter how judiciously used, must always exercise in many ways.

STATE BANKS OF NEW YORK.

SUPERINTENDENT HEPBURN'S REPORT.

Following is the full text of the Annual Report of Superintendent A. B. Hepburn, of the Bank Department of the State of New York, in relation to incorporated banks, banking associations, individual bankers, and other moneyed corporations, transmitted to the Legislature on January 3, 1883. It should be understood that these do not include savings banks, a separate report being devoted to them somewhat late during the session:

To the Honorable the Legislature of the State of New York :

Seventy-six banks of discount and deposit, organized under the laws of this State, were engaged in active business, at the close of the fiscal year, September 30, 1882.

NEW BANKS.

During the year the following named banking associations were organized, viz.:

<i>Name.</i>	<i>Location.</i>	<i>Capital.</i>
Dundee State Bank.....	Dundee.....	\$50,000 00
German American Bank of Buffalo.....	Buffalo.....	100,000 00
The Madison Square Bank.....	New York City.....	200,000 00
State Bank of Bolivar.....	Bolivar.....	100,000 00
The Bank of East Aurora.....	East Aurora.....	80,000 00
The Manufacturers' Bank of Amsterdam.....	Amsterdam.....	80,000 00
*Bank of Niagara.....	Niagara Falls.....	50,000 00
†Bank of the State of New York.....	New York City.....	800,000 00

The five first named are new associations. The Manufacturers Bank of Amsterdam was converted from a national into a State Bank.

BANKS CLOSED.

The Island City Bank of the City of New York changed from a

* The Bank of Niagara was granted the Superintendent's certificate of authorization on December 1, 1882.

† The Bank of the State of New York changed from the national system December 7, 1882.

State bank to a national association under the title of "Garfield National Bank."

The Merchants' Bank of Watertown failed February 18, 1882, and William H. Kimball was appointed its Receiver on February 21. I quote from his report to me the following: "The sole cause of its failure was the reckless lending of money, without security, for speculative purposes—two individuals (Directors of the bank), having received loans which exceeded in the aggregate the whole capital stock of the bank (\$210,000). The general business of the bank was good, and was yielding a fair return to the stockholders. The result of the loose and almost criminal management which characterized the last year of its existence is a loss to the stockholders of their entire investment, and a loss to general creditors of from twenty to thirty per cent. of the amounts due them. At the time of the failure there was due to this bank from Directors H. W. Eddy on discounts, overdrafts and indorsements, \$130,811 78; H. O. Kenyon on discounts, overdrafts, loans and indorsements, \$102,061 31; J. F. Moffett, on discounts and indorsements, \$25,670 41."

These Directors had been continuously debtors to the bank for some time previous. After paying secured and preferred claims to the amount of \$130,000 the Receiver paid a dividend of twenty-five per cent. April 10, and a second dividend of twenty-five per cent. May 25, aggregating \$305,000.

On the 17th of December, 1881, two months before the failure of the bank, its quarterly report, verified by the oath of both President and Cashier, was filed in this Department. That report solemnly set forth that there was nothing "due from Directors of the bank;" that there was no "loan upon paper, made, accepted or indorsed by directors, individually or as members of firms;" that their "surplus fund" was \$13,849 07, and "undivided profits" were \$18,180 39, making the bank solvent, with a margin over of \$31,929 46. And this report was made in face of the facts shown by the Receiver's report, to have then existed. These debts due from the Directors may have been *paid* by a check given the day before the report was made only to be restored by protest of the check the day after, or some other legerdmain of book-keeping resorted to, to make the report technically correct.

But it was essentially false and misleading in the extreme. The statutes as to examination of banks read: "Whenever, in the opinion of the Superintendent, there shall be good cause to suspect that any bank, banking association or individual banker has made an incorrect or imperfect quarterly return, or is in an unsound or unsafe condition to do banking business, it shall be his duty to have the books, papers and affairs of such bank, banking association or individual banker examined," etc.

The statutes provide for examinations only when from quarterly reports or some extrinsic source the Superintendent shall have "good

cause to suspect." There was nothing to excite alarm in this quarterly report, and the bank enjoyed the confidence of the community where located. The fact that the Superintendent orders an examination is evidence of "suspicion" to the bank being examined, and to all who may know of the examination. This makes the task of ordering an examination a very delicate one. Had this particular bank expected regular examinations they would hardly have resorted to such recklessness. Had regular examinations been made, it certainly would have been detected. This Department has many times urged upon the Legislature the policy of providing for regular examinations of State banks, precisely the same as national banks are examined. The evidence accumulates that such an enactment would redound alike to the benefit of the banks and the public.

INCREASE OF CAPITAL.

The Cataract Bank of Niagara Falls increased its capital from \$50,000 to \$100,000.

REDUCTION OF CAPITAL.

The Nassau Bank of New York from \$1,000,000 to \$500,000.

The Flushing and Queens County Bank from \$100,000 to \$80,000.

CONDITION OF THE BANKS.

Following is a summary of the quarterly reports of all of the banks for the days nearest the close of the last two fiscal years:

	Condition September 24, 1881.	Condition September 30, 1882.
RESOURCES.		
Loans and discounts, less due from Directors.....	\$74,745,135	\$80,248,514
Due from Directors.....	3,084,151	2,770,486
Overdrafts.....	105,011	95,468
Due from trust companies, State, national and private banks and brokers.....	8,587,787	8,886,161
Real estate.....	2,038,638	1,984,153
Bonds and mortgages.....	385,725	470,351
Stocks and bonds.....	3,960,568	2,998,902
Specie.....	5,293,929	3,879,297
U. S. legal-tender notes and circulating notes of national banks	4,617,703	5,378,356
Cash items.....	10,082,069	15,309,421
Loss and expense account.....	345,549	325,397
Assets not included in either of the above heads.....	277,078	216,717
Add for cents.....	244	289
Total resources.....	\$113,463,572	\$122,563,460
LIABILITIES.		
Capital.....	\$19,025,700	\$18,805,700
Surplus fund.....	5,065,147	5,790,400
Undivided profits.....	3,833,023	3,867,302
Circulation.....	83,926	29,698
Due depositors on demand.....	75,717,120	82,050,980
Due to trust companies, State, national and private banks and brokers.....	7,589,383	8,453,344
Due individuals and corporations other than banks and de- positors.....	877,694	1,957,533
Due Treasurer of the State of New York.....	756,887	764,883
Amount due not included in either of the above heads.....	534,550	843,885
Add for cents.....	187	185
Total liabilities.....	\$113,463,572	\$122,563,460

There are five more banks in operation now than at the date of the last report. The net increase in capital from October 1, 1881, is \$430,000. Loans and discounts have increased \$9,856,323, profits and surplus \$1,901,574 and deposits \$22,036,362. The total increase in assets was \$28,361,964. In the year 1876 the number of banks was eighty-four, with assets of \$100,759,644. The number of banks decreased to sixty-eight in 1880. Since that year the number has increased to seventy-seven and the assets have increased \$41,974,781. The State banks are prosperous and strong, and their present resources exceed that of any year since the imposition of the national tax on State bank circulation and the enactment of provisions for converting from the State to the national system, although the number of banks is much less.

TRUST, LOAN AND MORTGAGE COMPANIES.

The following is a list of such companies that are regularly organized and under the supervision of this Department, viz.:

American Loan and Trust Company, New York City.
 Brooklyn Trust Company, Brooklyn.
 Buffalo Loan, Trust and Safe Deposit Company, Buffalo.
 Central Trust Company, New York City.
 Farmers' Loan and Trust Company, New York City.
 Mercantile Trust Company, New York City.
 Metropolitan Trust Company, New York City.
 New York Life Insurance and Trust Company, New York City.
 Real Estate Trust Company, New York City.
 Trust and Deposit Company of Onondaga, Syracuse.
 Union Trust Company, New York City.
 United States Trust Company, New York City.
 Equitable Trust Company of New London, Conn., New York City.
 United States Mortgage Company, New York City.

The Legislature of 1882 chartered the Franklin Loan and Trust Company of the City of New York and the German-American Loan and Trust Company of the City of New York; neither company has as yet perfected its organization and entered upon active business.

CONDITION OF THE TRUST, LOAN AND MORTGAGE COMPANIES.

The following summary shows the condition of the Trust, Loan and Mortgage Companies of the State on the first days of July, 1881 and 1882:

RESOURCES.	July 1, 1881.	July 1, 1882.
Bonds and mortgages.....	\$10,768,288 44	\$9,987,562 65
Stock investments.....	17,188,985 40	17,007,174 30
Loaned on collaterals.....	72,700,650 88	76,719,216 17
Loaned on personal securities, including bills purchased.....	11,607,738 06	20,847,008 48
Real estate.....	5,110,198 65	5,299,085 44
Cash on deposit in banks or other moneyed institutions.....	6,342,434 08	6,245,889 96
Cash on hand.....	50,590 79	68,776 17
Suspended loans on real estate.....	859,923 47	857,885 37
Other assets.....	1,265,144 24	2,606,405 60

None of the trust companies commencing business during the year have fully perfected their organization. The companies reported last year show an increase of resources this year of \$13,869,620 53.

MUTUAL TRUST COMPANY.

This institution was incorporated by chapter 279 of Laws of 1868, under the name of "Public Exchange." Its name was subsequently changed by order of court to "Mining Trust Company," and again in 1881 to "Mutual Trust Company." Many inquiries were made as to its condition, on the assumption that it was a regular trust company and subject to my supervision. I accordingly made a requisition for a report, which the company refused to make. On April 12, 1882, I submitted the question of the jurisdiction of this Department over said corporation to Attorney-General Russell, who decided that it was bound to report to this Department, to submit to examination and make a deposit of securities with the Superintendent, as required by chapter 324, Laws of 1874. Accordingly, on June 7, I made a formal requisition upon said company for a report and a deposit of securities, which requisition they refused to comply with. On June 13, I went to their place of business in the City of New York, and demanded admittance, for the purpose of making an examination of the affairs of said company, which admittance and examination were refused. I reported the facts to the Attorney-General, who commenced suit against said company under said chapter 324. On a preliminary motion for a receiver the questions of law involved were submitted to Mr. Justice Potter on the 18th day of July, and the case was finally tried and submit-

ted to Mr. Justice Landon on November 25. No decision has yet been rendered.*

CORPORATIONS FOR THE SAFE-KEEPING AND GUARANTREING OF PERSONAL PROPERTY.

Of the fourteen institutions of this class in operation October 1, ten were organized prior to October 1, 1881. The following-named four were organized during the last fiscal year, viz.: Manhattan Safe Deposit and Storage Company, Knickerbocker Safe Deposit Company, American Safe Deposit Company, and Mount Morris Safe Deposit Company, all being located in the City of New York. The following table shows the title, location, and amount of capital of each company on October 1, 1882:

<i>Name.</i>	<i>Location.</i>	<i>Capital.</i>
American Safe Deposit Company.....	New York City.	\$200,000 00
Bankers' Safe Deposit Company.....	New York City.	100,000 00
Brooklyn City Safe Deposit Company.....	Brooklyn.....	100,000 00
Central Safe Deposit Company	New York City.	98,000 00
Grand Union Safe Deposit Company.....	New York City.	300,000 00
Knickerbocker Safe Deposit Company.....	New York City.	200,000 00
Lincoln Safe Deposit Company.....	New York City.	300,000 00
Long Island Safe Deposit Company	Brooklyn.....	200,000 00
Manhattan Safe Deposit and Storage Company	New York City.	150,000 00
Mercantile Safe Deposit Company.....	New York City.	300,000 00
Mount Morris Safe Deposit Company.....	New York City.	150,000 00
Safe Deposit Company of New York.....	New York City.	232,300 00
Safe Deposit Company of Rochester	Rochester.....	100,000 00
Stuyvesant Safe Deposit Company	New York City.	200,000 00

\$2,676,900 00

BUILDING, MUTUAL LOAN AND ACCUMULATING FUND ASSOCIATIONS.

I renew my recommendations of last year, that the law requiring these companies to report to this department be repealed. I have no

* Since writing the above, Mr. Justice Landon rendered his decision, from which I quote the following:

"The power of the company, however, to receive moneys on deposit seems to be limited to earnest moneys."

"The power to receive deposits of earnest money necessary to consummate an agreement of purchase and sale, which otherwise might be void by the statute of frauds, and useful as a margin or security for the performance of a contract of the like kind which otherwise might be unsecured, is believed to be essentially different from receiving deposits as a banking power, or to receive them upon the trust to pay interest or dividends upon them, which latter powers seem to have been aimed at in the Act of 1874."

"There can hardly be a doubt that this company has, by virtue of this section" (sec. 10, chap. 279, Laws of 1868), "all the powers of a loan company, not as merely incidental to its business as a public exchange but as a business complete in itself."

And concludes: "An interlocutory judgment will therefore be directed, to the effect that the defendant submit to such jurisdiction" (of the Superintendent of the Banking Department) "and make reports as may be required of it as a loan company under the Act of 1874, etc."

power to compel a report or to make an examination except upon *request of the stockholders in writing*. The law as it now stands is a dead letter.

BANK BILLS RETURNED AND BURNED.

Of the outstanding notes issued by incorporated banks, banking associations or individual bankers, the time for the redemption of which at this department has not expired, but a single \$5 note was received during the year for redemption or burning.

The total circulation cancelled during the year by reason of the expiration of the legal time for redemption, by the Superintendent, was \$7,987, all of which was secured circulation issued by banking associations and individual bankers.

The total outstanding circulation of the State banks, on September 30, 1882, was \$340,102; at the close of the previous year it was \$348,089.

The circulation outstanding September 30, 1882, was divided as follows, viz.: Secured, \$44,282; unsecured, \$295,820.

BANK NOTE PLATES.

In the appendix will be found a table of bank-note plates destroyed during the year. This includes all of the plates in the custody of the Superintendent belonging to the several banks. By non-use they fall within the provisions of the law directing their destruction. I have also destroyed \$1,451,762 of impressions printed therefrom.

SECURITIES HELD IN TRUST.

On September 30, 1882, \$1,214,658.43 of securities were held by the Superintendent in trust for banking associations and individual bankers and trust companies, divided as follows, viz.: Bonds and mortgages, \$68,867; United States stocks, \$1,114,400; New York State stocks, \$9,900; cash, \$21,491.43—total, \$1,214,658.43. The net increase in securities during the year was \$88,391.

Of the securities deposited with the Superintendent, \$74,400 is held as a guaranty of good faith on the part of banking associations and individual bankers; \$53,536 is held as security for the redemption of outstanding circulation, the time for the redemption of which has not expired; \$1,000,445.98 is held for trust companies. The remaining \$86,276.45 is held subject to the orders of its owners.

PRIVATE BANKS WITH CORPORATE NAMES.

By an amendment to the laws of last year, private bankers were placed on a par with State and national banks with respect to usury, that is, they forfeit only the interest on a usurious contract before payment if pleaded as an offset; twice the interest after payment upon suit brought to recover the same. By another act any rate of interest may be agreed upon and paid on demand loans of \$5,000 and upward, secured by collaterals. From this it will be seen that next to nothing

remains of our usury law. It can have little application except in rural portions of the State and in transactions involving small amounts, and even here methods of evasion are not difficult. These corporations and private bankers, whose business is loaning money, are exempt from its provisions, while individuals are not, except that individual calls himself a banker. A private banker, according to the decision of the Court of Appeals, is a person who does some or all of the business usually done by banks. Having accorded to individuals all these privileges, the State certainly owes it to her chartered institutions to distinguish them from these private bankers. And to this end private bankers should be forbidden to advertise or assume corporate names. Regularly organized banks should be protected in the additional credit which organization under and compliance with the law insures. I discussed this subject at length in my report of last year. The Commission to revise the banking laws also recommended the enactment of such a law. I trust the proposition may receive favorable consideration at your hands.

RELATIVE ADVANTAGE OF THE STATE AND NATIONAL SYSTEMS.

While it is probable that we shall never return to the old system of State bank currency, regulated and secured by the varying laws of the different States, it is certain that the present system of national currency must undergo material changes, and that too in the immediate future.

The utter impotency of State boundaries to do aught save to regulate the civil relations of our citizens, is fast being demonstrated. In a commercial sense we are pre-eminently a Nation—under one Government. The necessities of commerce are working a centralization of power in the national Government, over all questions relating to transportation and the interchange of commodities. And our currency, which is the great motive of commerce, as well as all business enterprises, must be regulated by the same central power.

Whether Congress will continue by an exercise of its power of taxation to prohibit State banks from issuing circulation, and confine the same to banks of its own creation, or whether all banks will be given circulation upon complying with certain general requirements, as suggested by Senator Bayard, certain it is that the currency of the future will have some central place of redemption, where bills issued by all banks, wherever located, shall be redeemed, thus preserving the national features of the currency of the present. Our present currency consists of gold, and gold certificates, silver, and silver certificates redeemable only in silver, greenbacks and national bank notes, redeemable in gold.

Our general Government has been and is coining and circulating two distinct qualities of money, each bearing the impress of Government, each made a legal-tender in payment of debts due from one in-

dividual to another, but differing widely in intrinsic value, and not interchangeable at the Government treasury.

Such an anomaly as this cannot long survive—a Government forcing its people to take a coin at a statutory valuation, and which itself refuses to exchange for another coin of the same statutory valuation.

The wealth and resources of our country may tide us over the evils of such financiering for a time, but the natural laws of trade will in the end assert themselves. The gold dug from our mines, and realized from our agricultural resources, may for a time supply the demands of trade and commerce, but when brought face to face with silver, as at present coined, it will refuse to be measured by the cheaper standard. The cheaper standard money will inevitably drive from circulation that possessed of greater intrinsic worth. Before Congress will see our pride humiliated and our credit impaired, by possessing, as compared with other nations, an inferior currency, it is probable that legislation will establish our currency upon the only proper basis, that of gold. There are \$346,681,016 of greenbacks outstanding. They were issued during the rebellion as a "military necessity" and made a legal tender to enable the Government to meet its expenditures in excess of its income. They are based upon the faith of the Government.

Were these to be increased, they could only be disbursed by the Government in payment of its bonds falling due or some other form of Government indebtedness. In no other way could they be gotten into circulation unless the Government is prepared to go into the business of banking and furnish a currency for the country, a proposition which I apprehend would find little countenance in any quarter.

The national bank notes outstanding November first, 1882, aggregated \$362,727,747, and the amount of Government bonds held as security for these notes was \$360,722,700. Of this sum \$142,198,150, consists of bonds not yet matured. Two hundred and twenty million dollars are due and payable at the option of the Government.

The total amount of "3's" and "3 1-2's" outstanding on December first was in round numbers \$414,000,000. Over one-half of this is held to secure circulation. Should the debt continue to be paid off as rapidly for the next two and a half years as it has been for the past, all that is now due will have been fully paid by July, 1885. And certainly their payment is a question of the immediate future. If the National bank currency is to be maintained the national banks must purchase "4 1-2's" maturing in 1891, "currency 6's" maturing in 1895-9, and "4's" maturing in 1907. These bonds aggregate \$1,053,000. On July first, 1882, the New York savings banks and trust companies held \$116,036,560—one-ninth of the whole amount. These will be held until maturity. The extent to which they are similarly held by trust companies and savings banks of other States and invested in trust funds is a guarantee that the present high premiums will, in the absence of unlooked for complications, be gradually increased.

Comptroller Knox, in his annual report, says: "The banks hold \$220,000,000 of United States bonds which are subject to the call of the Government, and these bonds can be replaced only by other bonds bearing a high premium and payable after a fixed date. If these latter bonds are not substituted for the former, the circulation, of the banks will be reduced about \$200,000,000.

"The profit upon circulation upon the four and four and a half per cent. bonds, where the rate of interest is six per cent., is not much in excess of three-fifths of one per cent., and where the rates of interest are above eight per cent. the profits are nominal, and are not sufficient to induce the banks to purchase large amounts as security for circulation. Where the profits are so small there is a serious objection to the investment of so large an amount of capital in premium, which in the case of four per cent. bonds amounts to one-fifth of the face value of the bonds."

There is also the risk of loss in premium which would certainly follow the rupture of peaceful relations with any other country. The advantage which national banks possessed over State banks on account of profits arising from circulation, at one time enormous, has ceased to exist. Their circulation once so great an advantage is now a source of anxiety.

The uncertainties and possibilities of impending legislation, legislation which a review of the situation shows to be inevitable, may be almost counted a disadvantage. Certain it is that our State system to-day offers facilities and advantages for making money, for doing good and safe banking, fully equal to the national system. The average capital of the national banks is \$212,915.03. The average capital of our State banks is \$251,996.15. The average capital of the chartered banking institutions of the State, to wit, banks and trust companies, is \$354,232.97.

BANKING LAWS.

The Legislature, last year, having codified all laws relating to banks, savings banks and trust companies, I print such revision properly indexed as an appendix to this report. The question having been raised whether section 179 of said revision does not limit the "amount of loans and discounts" which a bank may make to "three times its capital stock then paid in and actually possessed"—let me say—the Court of Appeals, in *Leavitt v. Blatchford*, 17 N. Y., holds that "the Legislature which enacted the General Banking Law (1838) undertook to initiate an entirely new system of banking. Under that system banks were to be organized and conducted upon a theory entirely distinct and different from that which had hitherto prevailed. It was evidently intended that the act itself should contain within itself all the provisions necessary to carry this new scheme into effect. There is nothing in the act which justifies the inference that the Leg-

islature intended in any way to connect it with the banking system then in existence, or of any provision of law relating thereto. * * * That the Legislature did not intend thus to apply any of the provisions of the Revised Statutes in relation to moneyed corporations has, I think, been demonstrated. * * * " Article two, title two, chapter eighteen, part one of the Revised Statutes, in relation to moneyed corporations, is incorporated into the revision of the banking laws as chapter eight. And this article the above case holds does not apply to banks organized under the general Banking Laws of this State. The fact that said article is included in the revision of the Banking Laws does not make it apply to banks, or affect its original force, or application in the least. Bringing several laws together in a revision does not change their chronology, or affect their construction in the absence of a well-defined intention on the part of the Legislature so to do. Spencer, Justice, in *Taylor v. Delancy*, 2 Caines, Cases, holds, "where the law antecedently to the revision of the statutes is settled, either by clear expressions in the statutes, or by adjudication on them, the mere change of phraseology shall not be deemed or be construed as a change of the law, unless such phraseology evidently purports an intention in the Legislature to work a change." Chancellor Kent, in the case of *Yates*, 4 of Johnson, 359, decides that including several statutes in a revision does not change their construction. See, also, *Ex parte Brown*, 21 Wend. 316; *Hall v. Western Transportation Co.*, 34 N. Y., 284; *Davis v. Davis*, 75 N. Y., 221. The Legislature had by chapter 160, Laws of 1847, made banks subject to said article of the Revised Statutes so far as it applied to the election of directors. And for that reason and for the purpose of bringing all laws governing banks together, said article was included in the revision. That the Legislature did not intend thereby that the whole article should apply to banks is clearly apparent from the language of section fifty-seven of said revision, which reads—"Every banking association which has been formed or organized under the provision of the act, entitled "An act to authorize the business of banking," passed April 18, 1838, or of any act amending the same, or which shall hereafter be organized under this act, shall be subject to the provisions of sections 195 to 213, inclusive, of this act." When the Legislature specifically said that banks should be subject to the provisions of sections 195 to 213, inclusive, of this act," it "evidently purports an intention in the Legislature" that banks should not be subject to the remaining sections of chapter 8, that is, sections 179 to 194, inclusive.

Respectfully submitted,

A. B. HEPBURN, *Superintendent*.

BANKING LAW—LATEST CASES.

REPLIES TO LAW AND BANKING QUESTIONS.

[The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of subscribers, further information regarding any case referred to herein, and will answer such questions in banking law as may be of sufficient general interest to warrant publication. A charge is made for special replies when not to be published.]

1. BANKING—VALIDITY OF NOTE DISCOUNTED—KNOWLEDGE OF DIRECTOR. 2. GAMBLING—PURCHASE AND SALE OF "WHEAT OPTIONS."

SHAW V. CLARK.

(*Supreme Court of Michigan, October, 1882.*)

The mere fact that a director of the bank discounting a note knew that it was given for a "margin" in "wheat options" will not charge the bank with knowledge of the invalidity of the paper.

When a piece of commercial paper which has been given for a speculative transaction, and is therefore invalid, has been taken or discounted by any one in good faith, a subsequent purchaser thereof from the first taker, though he knows the character of the paper, will have the like unimpeachable title as his vendor.

Commercial paper given as a "margin" in "wheat options" is not invalid under the statute against gaming or betting. The common meaning of words must be given to the ordinary terms used in an enactment of a legislature; "gaming," in common speech, is applied to games of chance, with stakes, as at cards, dice and the like; and "betting," in the common understanding of the term, means the staking of money or some other valuable thing on the happening or not of an uncertain event.

A note was given for a "margin" in "wheat options," and it was discounted at bank. It was paid at maturity by the father of one of the firm who had taken it, who was a director in the bank, and had recommended the discount. The defence to the action brought upon it was that it was not a valid instrument as it had been given for a gambling transaction, and that the plaintiff was not a holder for value, in good faith, because he knew the character of the note from his son. Judgment was entered for the plaintiff, and the defendant carried the case to the Supreme Court of the State.

Judge Cooley, in affirming the judgment, said: 1. If the plaintiff as officer or agent of the bank had discounted the note in person, the bank might have been charged with constructive notice of such facts as were within his knowledge; *Bank v. Davis*, 2 Hill, 451; *Bank v. Cushman*, 121 Mass., 490; but the mere fact that he was a director did not charge the bank with knowledge. This was so held in *Custer v. Bank*, 9 Penn. St. 27, though the director was present when paper obtained without consideration was discounted, and was in fact an indorser upon

it. To the same effect are *Bank v. Lewis*, 22 Pick. 24; *Terrell v. Bank*, 12 Ala. 502; *Bank v. Norton*, 1 Hill, 572. In this case the plaintiff did not act for the bank at all; he recommended the paper to the proper officers as suitable paper to be received and discounted by them; and they took it, acting upon his recommendation, as they might have done on the recommendation of any other person, but in the exercise of a discretion which the plaintiff did not control. Nothing therefore appears to impeach in any way the holding of the bank as a holding in good faith.

But it is further claimed that even if the bank was holder in good faith, plaintiff, with his knowledge of the want of legal consideration, could not acquire a good title by assignment. The general rule is admitted to be, that one who holds negotiable paper by unimpeachable title may transfer a like title to any other person, and that knowledge on the part of the transferee of original defects or equities will be of no moment. *Kost v. Bender*, 25 Mich. 516; *Wood v. Starling*, 12 N. W. Rep. 866. But this case is said to be taken out of the general rule by the express provisions of § 1996 of the Compiled Laws; and we are referred to that section as being conclusive against a recovery. The provision is as follows: "All notes, bills, bonds, mortgages, or other securities or conveyances whatever, in which the whole or any part of the consideration shall be for any money or goods won by playing at cards, dice, or any other game whatever, or by betting on the sides or hands of such as are gaming, or by any betting or gaming whatever, or for reimbursing or repaying any money knowingly lent or advanced for any gaming or betting, shall be void and of no effect as between the parties to the same, and as to all persons except as to those who hold or claim under them in good faith and without notice of the illegality in such contract or conveyance." It is said by the defence that the purchase of options is nothing but betting on a future market, and that the case is directly within the terms as well as the mischief of the statute. There is no doubt that a purchase of options is opposed to public policy by reason of its demoralizing character, and that any contract which has no other consideration is void in law. This was in effect decided in *Gregory v. Wendell*, 39 Mich. 337; S. C. 40 Mich. 432. But that decision was grounded on general principles of the common law; and the statute now brought to our attention was not relied upon or referred to by counsel or by the court. It was shown in that case that such a purchase was in the nature of a gambling contract, and that the evils of ordinary gaming inhered in it. But it was not said or intimated that it was gaming in the ordinary sense of that term, or that the parties to it could be considered as parties to a bet or wager. And as the statute now invoked was not then before the court, nothing said in the opinions can be considered as expressly designed to throw light upon its construction.

In common speech, gaming is applied to play with stakes at cards,

dice, or other contrivance, to see which shall be the winner and which the loser. A contract for the purchase of options is not gaming within this meaning of the term. In form it is the purchase and sale of a commodity to be delivered at a future day, and it only resembles gaming in that the parties take a chance of gain or loss without intending that the sale which they nominally make shall ever become a legitimate business transaction. Betting, in common speech, means the putting of a certain sum of money or other valuable thing at stake on the happening or not happening of some uncertain event. A purchase of options is not betting in this sense, though it resembles it in the fact that risks are taken on uncertain events, and that the tendency to those engaged in it is demoralizing. The statute does not reach this case.

-
1. BANKING—NOTICE OF PROTEST BY MAIL—LOCAL CUSTOM. 2. SAME—EFFECT OF DIRECTION ON ENVELOPE TO RETURN LETTER IF NOT DELIVERED. 3. RIGHT OF JUDGE TO CHARGE JURY AS TO FACTS.

BENEDICT V. ROSE.

(*Supreme Court of South Carolina, 1893*).

Though the general rule is that a notice of protest must be delivered to the person to whom it is addressed, or, in his absence, left at his residence or place of business, if there is an established usage of any place of another method of service, that may be followed; as, for instance, mailing the notice.

A memorandum on an envelope containing a notice of protest directing the return of the letter if not delivered in a specified time, will not affect the force or value of the notice of protest.

The judge trying a case cannot instruct the jury as to his opinion of the facts; the jury alone must determine the value of the testimony.

Action on a promissory note made by Neagle and indorsed by Carpenter and Rose, and payable at one of the banks in the city of Columbia, where all the parties reside. Rose, the appellant here, denied his signature and notice of protest. The plaintiff proved demand, non-payment, and notice of protest sent through the mails addressed "W. E. Rose, Columbia, S. C.," with printed notice on the back of the envelope requesting a return if not delivered in five days, and that it had never been returned. Plaintiff also proved that such service was according to the custom of all the Columbia banks; and he also produced witnesses, including Neagle, who testified that the signature of Rose was genuine. Defendant, as a witness, denied the signature, and denied receiving notice of protest, and his son testified that his father had not indorsed the note. Verdict for plaintiff. Rose appealed to the Supreme Court of the State. Judge McGowan, in considering the judgment, said: The general rule, undoubtedly, is that parties residing in the same town or city should be notified personally, or in case a party is absent, notice should be left at his residence or place of business. But there are exceptions to the rule, and one of them is where there is

an established usage to the contrary. *Bank v. Wallace*, 13 S. C., 347, and authorities cited. That was a case on reference to this very alleged usage in the city of Columbia, and it cannot be necessary to do more than refer to it. We do not see how the memorandum, indorsed on the back of the envelope, to return in five days if not delivered, could affect the validity of a notice otherwise good. That memorandum was addressed to the officers of the post-office department, and was only intended to prevent the loss of the letter in case it should not be delivered in the time indicated—if delivered the indorsement amounted to nothing. It did no harm, for the letter was never returned. That fact, if it did not raise a probability that the letter was received, at least showed that the indorsement was entirely without effect, and should not be held to defeat the notice assumed by law from the deposit. *Gaffney v. Bigelow*, cited for the defendant from 48 Howard Prac., 476, was the case of a service of demurrer, by mail, under the New York Code, as to which very strict compliance is required, and yet upon the exact point ruled it seems to be an isolated case, unsupported by authority. The first and second exceptions complain that the judge erred in charging the jury upon the facts. Rose denied his signature as indorser. Whether he signed the note was a question of fact. The plaintiff swore that he saw Rose sign it, and called several witnesses, who testified that they were acquainted with his handwriting, and that the signature was genuine. Upon this issue the judge charged "that the jury should regard both plaintiff and defendant as interested witnesses, and should therefore inquire which of them was corroborated by witnesses not interested in the case. The plaintiff was sustained by Neagle and by witnesses claiming to know the handwriting of the defendant. In such case it was usual for defendant to produce other witnesses, either skilled in detecting false signatures or acquainted with defendant's handwriting, to support his allegations of forgery, and the jury had the right, from the defendant's failure to do so in this case, to conclude that he could not corroborate his testimony on that point." The question is, Was this error? The fundamental principle of our system of administering justice is, that the judge shall decide the law, and the jury determine the facts, as expressed in § 26, art. 4, of the Constitution, which declares that "judges shall not charge juries in respect to matters of fact, but may state the testimony and declare the law." This is plain enough in theory, but it is not always easy to carry it out in practice. In most transactions which fall under the cognizance of courts in the administration of justice, law and facts are so intermingled and blended that it is difficult to draw clearly the line that separates them. The judge is required to announce the law, but that cannot be done properly until the facts are established. He cannot be expected in every case to announce all the law, but only so much of it as is applicable to the case made by the facts. It is therefore absolutely necessary for him, in discharging his

part of the duty, not only to understand but to make reference to the facts which must constitute the basis of the law he announces. Accordingly the Constitution declares that he has the right "to state the testimony and declare the law." What is the proper extent and scope of this power? It has been properly held that "stating the testimony" means more than repeating it. It includes the idea of stating it in its logical relations to the propositions which it is to support or contradict, as well as to the principles of law by which its bearing and force ought to be controlled, or as it is expressed by the technical phrase "summing up." But while it means more than merely repeating the testimony, the other part of the provision negatives the right to invade the proper province of the jury by expressly declaring that "judges shall not charge juries in respect to matters of fact." It may be difficult, or even impossible to define with precision the exact limits of the distinction indicated, but it is important, for many reasons, that it should be maintained. [The judge then cited and stated the ruling of this court in *State v. Bailey*, 1 S. C., 1; *Redding v. R. R. Co.*, 5 Ib., 67; and *State v. White*, 15 Ib., 392.] In view of the provision in the Constitution, and in the light of these interpretations, we are of the opinion that the judge transcended the prescribed limits when he charged that "in such cases it was usual for the defendant to produce other witnesses," etc. This was not merely arranging the testimony in proper and logical order, with a view to apply the law, but was, in effect, the expression of an opinion to the jury, drawn from the supposed existence of a usage in such cases and the absence of all testimony of a particular character.

REMITTANCE OF DEPOSIT BY REQUEST—MAIL RISKS— ADDRESS OF LETTER.

JUNG V. SECOND WARD SAVINGS BANK.

(*Supreme Court of Wisconsin, September 19, 1881*).

A remittance of a deposit which is payable at the counter of the bank, at the request of the depositor, is payment thereof. The risks of the mail are those of the depositor.

The address used by the depositor in the letter which directed the remittance may be adopted by it; no more particular designation or address need be used to effect a sure delivery of the letter.

The plaintiff in this case had on deposit to his credit in the savings department of the bank \$954, and being at Weisbaden, Germany, he wrote to the cashier: "Remit to me the sum which may be due to me upon my bank-book by draft, or in such manner as you think is best, so that I can draw the money at Frankfort-on-the-Main." Pursuant to this request the defendant drew its bill of exchange on a bank at Frankfort for the amount, payable at sight to the order of the plaintiff, inclosed the same in a sealed envelope addressed to Mr. Philip Jung, Weisbaden, Germany, Europe, and transmitted the same by

mail in the usual course of business. In due time the drawee in said bill returned the same to the defendant, indorsed "paid." In point of fact, however, the bill never came to the hands or possession of the plaintiff, but was delivered by the officials of the postal department of Weisbaden to another person of the name of Philip Jung, who indorsed the same and obtained the money thereon without the knowledge, consent, or authority of the plaintiff.

The Chief Justice (Cole) said: "Under these circumstances, is the defendant bank bound to make good the loss, the money having been paid by the drawee to the wrong person? We fail to perceive upon what principle of law it can be held liable. The learned Circuit Court decided that the bill of exchange was issued and transmitted, in conformity to the written directions of the plaintiff, in the usual and ordinary course of business, and that in so transmitting the same the defendant used ordinary care and diligence to the end it might reach the plaintiff. It seems to us this view of both the law and facts of the case is indubitably correct. The money was remitted to the plaintiff in strict conformity to his express written direction. It was remitted "by draft" on a Frankfort bank, as he requested, in the usual way, by mail. If a loss has happened it is certainly not through the fault of the defendant; for certainly the plaintiff's letter to the cashier clearly authorized or justified the bank in remitting the money as it did, if language means anything. The plaintiff saw fit to take the risk of this mode of transmission. When the draft was properly mailed and addressed to him at Weisbaden it became his property, and the defendant discharged its obligation to him. It can not be held liable to pay the money again because the draft came to the possession of the wrong party. It is true the plaintiff directed the cashier to remit "by draft or in such manner as you think is best, so that I can draw the money at" Frankfort. But in this he clearly indicated one mode of transmission, namely, by draft. This mode the bank adopted. If the bank had selected some other usual and proper way of transmitting the money, as by letter of credit, it would doubtless have been within the direction given. But it did not see fit to exercise any discretion in the premises, but remitted the money by draft, as the plaintiff requested. It fully performed its duty and discharged its debt.

But the learned counsel for the plaintiff insisted that the officers of the bank were guilty of negligence, because they did not in some way more clearly designate the person for whom the letter was intended. It is said they should have addressed it to Philip Jung, of Milwaukee, Wisconsin, or should have adopted some other address which would have secured its right delivery. It is sufficient to say, in answer to this argument, that the plaintiff did not direct the bank to use any such designation or mode of address in sending the draft to him. The defendant was surely authorized to adopt the address contained in the letter sent to it. It is further said the evidence shows that Weisbaden

was a large city, which is resorted to during the summer season by thousands for the purpose of bathing; that there might have been a dozen persons by the name of Phillip Jung in the city at the time, to whom the draft was liable to be delivered. Assuming this to be so, and that the officers of the bank had knowledge of these facts, still, did the rule of diligence require them to do more than adopt the address furnished in the letter itself? It seems to us not. It was the duty of the plaintiff, under the circumstances, to take precaution that the letter should not be delivered by the post-office officials to the wrong person. The same counsel further relied upon the rule that where payment is made by remittance by mail to the creditor the transmission is ordinarily at the risk of the debtor. This is doubtless so in the absence of an express direction of the creditor to remit in that way, or where there is no usage or course of dealing from which the authority of the creditor to so remit may be inferred. *Burr v. Sickles*, 17 Ark. 428, and authorities cited in the opinion. Here there was express authority to remit by draft in the usual way. Besides, it must be observed that by the rules of the defendant the money was payable at its counter, and it was not its duty to seek the plaintiff and pay him. The money was transmitted by the defendant by draft on the Frankfort bank, solely for the accommodation of the plaintiff. And as this was done in accordance with the plaintiff's letter in the usual way, the draft was at his risk while in the course of transmission. *Graves v. American Exchange Bank*, 17 N. Y., 205. In any view of the case, we think the defendant has fully discharged its obligation to the plaintiff.

BANK BALANCE—DEBT OF CORRESPONDING NATIONAL
BANK—SECURITY—INSOLVENCY—DIVIDEND.

DUMONT V. FRY.

(*United States Circuit Court, November 10, 1882*).

The dividend made by the Comptroller of the Currency on winding up the affairs of an insolvent national bank, and received by the trustee of an insolvent creditor who is secured, will be first applied to the payment of his unsecured indebtedness.

Bonds were deposited by C with S to secure any indebtedness which might arise to S from a national banking association whose correspondent, S, was in New York City. The association became insolvent, owing S \$195,315.63, and his trustee in bankruptcy, Fry, received from the Comptroller of the Currency fifty per cent. on this indebtedness. Fry claimed that he had the right to apply the amount received to the payment of the unsecured indebtedness to S, and the other creditors of the association opposed this position, and insisted that the payment should be applied to the secured debt as well as to the unsecured indebtedness. Judge Wallace, in deciding against the creditors, said: "The payment here was not made by the debtor, and the case therefore is not controlled by the rules ordinarily governing

the appropriation of payments made to creditors by debtors. The payment here was made by the law, the statutes of Congress, which vested the Comptroller with authority to distribute the assets of the banking association, and which prescribed the mode of distribution. Neither the debtor nor the creditor could exercise the right to determine the application of the dividends. If the case turned merely upon the law of the appropriation of payments it would not be a doubtful one. The general rule is, that where a payment is not a voluntary one, but is made under legal proceedings, it is to be appropriated to all the demands against the debtor ratably. *Blackstone v. Hill*, 10 Pick. 129; *Commercial Bank v. Cunningham*, 24 Ib. 270. And it would seem clear that as each dollar of the demand earned its ratable proportion of the sum realized from the assets of the debtor, the sum earned by one portion of the demand could not be credited to the other, but should be applied ratably upon each dollar of the demand whether secured or unsecured. The question here depends not upon the law of the appropriation of payments, but upon the effect of the agreement between the sureties and the creditor. If Cavaroc & Son had become sureties for \$100,000 of any advance that Schuchardt & Sons should make to the New Orleans National Banking Association, and Schuchardt had advanced \$200,000, it would be plain, upon authority, that the dividend earned by the whole advance should be applied ratably." But here the Cavarocs agreed with the Schuchardts that the latter might advance any sum they might see fit to the New Orleans National Banking Association, and that the Cavarocs' bonds to the extent of \$100,000 should be security for any unpaid balance of the advances. The law can make no application of the payments received on account of the advances contrary to the agreement between the parties, and as it was agreed that the Cavarocs should be sureties to the extent of \$100,000 for any unpaid balance arising between the primary parties, the general doctrines of the appropriation of payments cannot be invoked to defeat the agreement. A careful reading of the English authorities supports this conclusion. The result is determined by the character of the undertaking of the surety in each case. *Ex parte Hope*, 3 M. D. & De G. 720; *Midland Banking Co. v. Chambers*, 38 L. J. Ch. 478, *Ellis v. Emanuel*, 1 L. R. Exch. Div. 157; *Hobson v. Bass*, 6 L. R. Ch. Ap. 792; *Rushford ex parte*, 10 Ves. Jr. 409; *Paley v. Field*, 12 Ib. 434; *Bardwell v. Lidall*, 5 M. & P. 529; *Raikes v. Todd*, 8 A. & E. 846; *Thornton v. McKeever*, 1 H. & M. 525; *Gee v. Pack*, 33 L. J. N. S. 49. In all these cases an advance was made in excess of the sum guaranteed, and upon the debtors becoming insolvent the creditor received a dividend on the whole advance, and it was held that the dividend was to be applied ratably on the secured and unsecured portion of the whole demand. They all proceed upon the distinction that the surety had guaranteed a limited part of a debt, and not the unpaid balance of a debt with a limitation as to the amount of

liability, a distinction which seems subtle, but which rests upon the supposed intention of the parties. In a guarantee of a limited part of a debt the parties to it do not contemplate, as between themselves, any augmentation of the debt. Whatever is paid, therefore, as a dividend arising from that part of the debt must be applied to discharge that portion. As between the surety and creditor it is as though any other debt as held by the creditor against the debtor. To apply the same rules when the guarantee contemplates the protection of the creditor against any ultimate balance that may arise upon the dealings between the debtor and creditors would be to ignore the intention of the parties to the guarantee. The conclusion is therefore reached that the bonds of the Cavarocs having been pledged to secure any unpaid balance arising upon the account of the New Orleans National Banking Association to Schuchardt & Sons, it is quite immaterial to the former how, when, or by whom part of that balance has been paid, so long as \$100,000 remains unpaid. If, however, the dividends reduce the balance below the amount of the pledge, the sureties are to have the benefit of the reduction, because upon payment of the debt they would be subrogated to the creditor's lien upon the bonds.

CONTRACTS—VALIDITY—"GRAIN OPTIONS."

EVERINGHAM V. MEIGHAN.

(*Supreme Court of Wisconsin, September, 1888.*)

A course of business in which A buys and sells for B "options" to take or deliver grain creates gambling contracts, the agreements being for the payment of differences only, and a compromise by which B undertakes to pay A a sum of money for losses cannot be made the ground for an action for the amount; such a compromise will not purge these illegal transactions, and make B a debtor to A.

Meighan was engaged in the grain and produce trade at Cresco, Iowa, in 1876, and he made consignments to Everingham, a commission merchant in Milwaukee, to be disposed of by him, drawing drafts against the shipments. At the same time he employed Everingham to buy and sell grain for him, in form, for future delivery. This business was known as "scalping," "deals," "options," "speculating deals," &c., and the accounts of it were kept separate from the regular business transactions, in the books and accounts. A dispute arising as to the losses in the speculations, Meighan agreed to pay Everingham \$1,000, which he failed to do, and suit was brought for it, and judgment recovered. Meighan appealed to the Supreme Court, who reversed the judgment.

Judge Orton, in the opinion, said: Suppose A employs B to bet for him at faro, or any other game of chance, and B loses a large sum of money in the game, which he has paid, and demands payment of the losses of A, and there is a difference of opinion between them as to the validity of the claim, and A finally agrees to pay one-half of it and B agrees to bear the other half of the loss himself, does this com-

promise make the claim legal? By all authorities and in common reason it does not, for both parties are equally guilty by entering into such a gaming contract, being presumed to know that the transaction is illegal, and neither can enforce the contract or the terms of any agreement or compromise arising therefrom. In such a case if B had won at the game a large sum of money, most certainly A could not recover it by action, or any part of it, which might be the result of a compromise of a pretended difference between them as to the validity of such a claim. Where there is no difference between the parties as to the facts which make the claim valid or invalid, legal or illegal, then there can be no basis of compromise on the question of its validity, for both parties are presumed to know whether the claim in such a case is valid or not. It follows that the opinion of the learned judge as an instruction to the jury is erroneous, and the point in the brief of the learned counsel of the respondent in relation to the compromise of claims of questionable validity, and the authorities cited to sustain it, are inapplicable to this case, unless there was a reasonable question and uncertainty at the time as to the validity of the claim, which there was not and could not be.

It may be proper to say here, once for all, that we are satisfied as to the correctness of the decision in *Barnard v. Backhaus*, 52 Wis. 493, as applicable to the facts of that case, and do not believe that it requires any vindication, support, or revision. Here the testimony of the defendant makes just such a case. The transaction, according to his testimony, was just as clearly gambling by betting on the differences of market prices of grain at the Chamber of Commerce, between two fixed dates, as gambling by betting at *faro*, poker, or other game of chance, or on a horse-race, or an election, or any other uncertain and future event; and there can be no question of it in any intelligent mind, and quite likely there is not in the minds of those who operate in such "speculative deals;" and the danger of such a flagrant example of gambling so destructive to the public morals, because practised by persons of accepted high standing and influence, consists in its being obscured by appearances of respectability and of lawful contracts. It is the duty of the courts to apply the law against gambling in all cases impartially, irrespective of the specious and seductive forms of this vice and crime, or of the social standing of those who are guilty, whether they are high or low, rich or poor, or whatever their standing in society, Church, or State. It is apparent that this is precisely such a case as the learned counsel of the respondent concedes in his brief to be outside of the law making obligatory claims which result from a compromise of differences between the parties. He says, with his characteristic candor, "We do not claim that the compromise of an avowed and confessed illegal claim is sufficient consideration for a promise." This compromise is not different in any respect from a compromise of gains or losses of any other kind of gambling, and to hold

it different would necessitate also the holding that this transaction is not less or other than a gambling transaction. The authorities cited by the learned counsel of the respondent, and his able and plausible argument on this question, are inapplicable to this case, and only apply to a case where the claim arose from a transaction or contract of a doubtful character, and which is not certainly illegal or invalid. I will not cite the numerous authorities which hold such dealing in options or betting on market differences are gambling transactions, for the question is at rest in this State by the decision in *Barnard v. Backhaus*, and I will not cite any of the numerous and uniform authorities which hold that a compromise of any pretended differences, in respect to clearly illegal contracts and transactions, cannot purge them and produce a valid claim, for the case of *Melchoir v. McCarty*, 31 Wis. 252, sets that question also at rest; and it is expected that these decisions will be hereafter accepted as the law of this State, without cavil or criticism by inferior courts, and it is hoped that they will be so accepted by the bar.

DRAFT—LIABILITY OF DRAWER SIGNING AS TREASURER.

OHIO NATIONAL BANK V. COOK.

(*Supreme Court of Ohio. December 12, 1884.*)

The addition of "treasurer," "agent," or the like term to the name of the drawer of a bill of exchange without any words or other information indicating who his principal is, will not relieve him from his personal liability as drawer.

No one can be required by the holder of commercial paper to pay him except those whose names appear upon the face of the instrument.

Cook was sued on three bills of exchange substantially alike except as to date, amount, and acceptors. One was as follows:

\$723.25.—

CLEVELAND, OHIO, Aug. 31, 1876.

Forty-five days after date pay to the order of W. P. Cook, Treas., seven hundred and twenty-three 25-100 dollars, value received, and charge the same to account of

W. P. COOK, Treas.

To

H. C.

A. S. MAIR & Co., Austin, Texas.

This draft and the others were duly accepted, and not being paid suit was brought. Cook filed his answer, averring therein that he was the Treasurer of the Missouri, Kansas and Texas Tank Line Company, a corporation duly organized under the laws of the State of Missouri, and as such was authorized to draw drafts and bills of exchange, and that the several drafts described in the petition, were by him drawn as such treasurer, for and on behalf of said company, as the plaintiff knew, and that the plaintiff had full knowledge that said drafts were by the defendant so drawn, solely on behalf of said company, as its said treasurer, etc. The court decided against Cook, but the District Court on the appeal reversed the judgment. The bank then carried the case to the Supreme Court of Ohio, who also decided against Cook. Judge White in the opinion, said: The character of the liability of the

drawer of a bill of exchange must be determined from the instrument itself, and the addition of the word "agent" to his name, without anything else on the instrument indicating his principal, does not relieve him from personal liability as drawer of the bill.

The name of the alleged principal of Cook,—The Missouri, Kansas and Texas Tank Line Company—nowhere appears on the bill as party to it. Parol evidence is not admissible to add a party to the instrument who does not appear upon its face. *Anderson v. Shoup*, 17 Ohio St., 125; *Arnold v. Sprague*, 36 Vt., 402. Whoever takes negotiable paper, enters into a contract with the parties who appear on the face of the instrument, and can look to no other persons for payment. *Pass v. O'Brien*, 12 Gray, 481; *Slawson v. Loving*, 5 Allen, 341, 342; *Backham v. Drake*, 9 M. & W., 92, 96. Hence the only drawer of the bill in question is Cook, the defendant in error. The addition of the word "agent" to his name does not relieve him from personal liability. That is merely *descriptio personæ*. *Anderson v. Shoup*, *supra*; *Collins v. Ins. Co.*, 17 Ohio St., 215. It is true, as claimed by the defendant in error, that the case last cited is where the word "agent" was added to the name of a maker of a promissory note; but there is no distinction in this respect between the drawer of a bill of exchange and the maker of a promissory note. *Tucker Manufacturing Co. v. Fairbanks*, 98 Mass., 104.

NOTES ON RECENT BANKING CASES.

Promissory Note—Material Alteration—Recovery of the Original Amount.

In an action on a promissory note it was shown that its amount had been increased, but the holder of the note and his agent, who had had possession of it for a time, both testified that the alteration had not been made by them, or by their direction. The trial court charged the jury that "as the note appeared to be materially altered it was void, unless the plaintiff proved that it was altered with the consent of the defendant, or proved the circumstances of its alteration, as well as the fact that he did not make it or procure it to be done; and that the alteration would not be sufficiently explained by proof that he did not make it or direct it to be done." The jury found in favor of the defendant, and the plaintiff carried the case, *Drum v. Drum*, to the Supreme Judicial Court of Massachusetts, who decided in his favor. Judge Colburn, in the opinion, said: If the plaintiff proved that the note had never rightfully been out of his possession, or to his knowledge been in the possession of any one but himself and his agent, he was entitled to recover on the note as originally written, though he might not be able to prove the circumstances of its alteration.

1. *Savings Bank—Conditional Salary.* 2. *Same—Liability of Sureties after Official Term.*

O, as the President and General Actuary of the Saratoga Savings Banks

was to receive for his services such sum as the net profits of the institution would warrant, but not to exceed \$1000 per annum. He gave security, and a suit was brought upon the bond to recover moneys wrongfully taken by him after his term of office had expired. In this case, *Jennery v. Olmstead*, the question of the amount of the salary was also determined by the Court of Appeals of New York. The Chief Judge (Andrews), in the opinion, said: 1. The contract was to pay O \$1,000 in annual payments out of the profits of the preceding year if earned, and the bank could not charge against the profits of one year the losses of the following year. 2. The sureties were only bound for the conduct of O while President and General Actuary, and they could not be held liable for moneys wrongfully used by him after the expiration of his term of office.

1. *Promissory Note—Tender of Amount—Days of Grace—2. Collateral Security—Lien of Holder for Another Claim.*

On the refusal to return bonds which has been deposited as collateral security for a note, though the amount of the note had been tendered on the day when by its express terms it was due, the holder, a banker, claiming that he could keep the bonds until he was paid another claim against the owner, an action was brought for the conversion of the bonds. In this suit, *Wyckoff v. Anthony*, the defendant denied that a proper tender had been made, as the note was not actually due until the expiration of the days of grace, but the Court of Appeals of New York decided against him. The Chief Judge (Andrews), in the opinion, said: 1. The parties having treated the note as due on the day when by its express terms it was payable, the rights of third persons not having intervened, the days of grace must be considered to be waived. 2. The holder of the bonds has no lien on them for another debt due him. A banker or broker has no lien upon securities pledged with him for the payment of a particular debt for a general balance due him, or for the payment of any other claim whatever.

Partnership—Public Notice of Dissolution—Information from Commercial Agency.

Three persons did business in fish and oysters at Indianapolis, and two of them informed an agent of "Bradstreet's Commercial Agency," when he inquired about their financial condition and the membership of the firm, who composed the partnership, and this information was communicated to the principal office of the "Agency," and from thence transmitted to its branches. Two of the three members retired from the firm, and having paid all of its debts, gave written notice to all of their creditors of the dissolution of the firm. But the remaining partner continued to do business in the old name, S. & Co., using the old firm's letter and bill heads, and on one of these letter heads he ordered, in the firm's name, goods of T., at Baltimore. Before filling this order, T. inquired at the Baltimore office of "Bradstreet's" as to the membership and responsibility of S. & Co., and was told that the partners were as its agent had been informed, and that the concern was good. Relying on this information, T. sent the goods, and not receiving full payment he sued the members of the

firm, and was defeated except as to S. He carried the case, *Taylor v. Backus*, to the Supreme Court of Indiana, who reversed the judgment. Judge Howk, in the opinion, said: Public notoriety of the existence of a firm is sufficient to justify any one dealing with the members of it, and the firm will be bound in all transactions pertaining to the business of the partnership. The declaration of one person who knows the fact of the partnership, or the records of a mercantile agency as to its existence, in many cases would be more satisfactory evidence to a business man than such notoriety. He may rely upon the information of the Agency as to the fact of the partnership, and in a suit by him, unless the dissolution has been given public advertisement in the usual way and to the usual extent, the old members of the firm will have judgment entered against them as well.

Insolvent Corporation—Authority to Appoint Receiver—Statute.

Stockholders of a corporation who held full-paid shares, alleged that the company had ceased doing business and was insolvent; that the officers willfully avoided and refrained from liquidating its affairs by calling in the unpaid assessments, and after paying the debts, distributing the surplus equitably; that the majority of the directors and stockholders held only half-paid stock, and were, therefore, interested against enforcing the liquidation; that the Attorney-General had refused to take proceedings to forfeit the charter, and asked for the appointment of a receiver to wind up the affairs of the corporation. In this case, *Baker v. Louisiana Portable R.R. Co.*, the Supreme Court of Louisiana dismissed the bill. Judge Fenner, in the opinion, said: It is well established that courts have no jurisdiction to appoint receivers for corporations in the absence of express statutory authority. To this doctrine, in its broadest statement, there may be some exceptions, confined, however, to cases of extreme necessity, such as an abandonment of the corporate property, or when there is no person authorized to have charge of and conduct the affairs of the corporation. A corporation is a person whose possession and control of its property and affairs must be respected, like similar rights of individuals. It cannot be interfered with, in preliminary proceedings and in advance of judgment, except in cases specially provided for by law, and in strict compliance with the statute. In this State there is no statute authorizing the appointment asked.

Superintendent Hepburn, of New York, in his annual report, which is published in the present number, makes a recommendation which deserves the prompt attention of the Legislature. The law at present requires the Superintendent to cause a bank to be examined only when, in his opinion, there is good reason to suspect an unsound condition, or false reports. The Superintendent shows very clearly that examinations under such conditions are quite inadequate. He has no means of judging of the condition of the banks excepting their reports to him, and these may be "cooked" so as to make a good showing when matters may be in a very bad way. He shows that in the case of the Merchants' Bank of Watertown the officers swore falsely in order to cover up transactions of the most reckless, if not criminal, kind.

BANKING AND FINANCIAL NEWS.

(With Comments on the more important matters. This Department also includes General Business News—Notes from Foreign Banking Centres, including Canada—A Complete List of New Banks, Changes in Officers, Dissolutions and Failures—Banking and Monetary Tables—Bankers' Obituary Record, &c.)

Failure of the City Bank of Rochester.—Through an appropriation of the funds of the City Bank of Rochester by its President, C. E. Upton, to carry on oil speculations—the appropriation amounting to about \$350,000—the bank closed its doors on December 20. The amount of deposits is stated at \$500,000, and the amount of paper held by the bank at \$800,000. Upton was Treasurer of the Western New York Episcopal Diocese, and had its funds in the bank. The savings banks of the city had large sums on deposit in the bank.

Judge Landon, at Schenectady, has appointed Hobart F. Atkinson, President of the Commercial Bank of Rochester, Receiver of the City Bank of Rochester. Patrick Barry, President of the Flour City Bank, declined the appointment.

For some time past rumors have been current affecting the soundness of the bank, and it is said that prudent men dealt cautiously, other banks handling its paper with reluctance, but without desiring to question its responsibility, and it was on account of the lack of confidence felt in the bank that a movement had been started to establish a clearing-house in Rochester, so that uncertain paper would have to be guaranteed by a deposit to secure it. The City Bank was weak a year ago, and the Directors were obliged to put up collateral. It applied to the Comptroller of the Currency in March, 1880, for conversion into a national bank, but its business was so extended by re-discounts and loans upon real estate that the application was denied.

J. Breck Perkins, the attorney of the broken bank, and one of its Directors, makes the following statement of the cause of the suspension: "A month ago I considered the bank perfectly sound. The cause of the failure was speculation with the funds of the bank by the President, C. E. Upton, in oil. Lately he has speculated to the amount of hundreds of thousands of barrels—200,000 barrels, he said, for himself, and a great deal more for other parties not connected with the bank. Two or three weeks ago there was a heavy fall in prices. He took the money from the bank to carry this. Immediately after that we, the Directors, were informed that checks of the City Bank had been thrown out by the American Exchange Bank in New York, its correspondent. We then commenced an investigation to get what information we could, and found everything in confusion. We wished Mr. Upton to make a statement, and he finally said that he owed about \$200,000 and had property of the value of about \$150,000, which he agreed to secure to the bank. His statement was indefinite as to the amount of the debt, and there was apparent equivocation. Mr. L. P. Ross and myself went to New York and saw the officers of the American Exchange Bank. They gave us such information as they

could, and advised us to try and carry Upton through and get in what money we could. We came back and got in what money we could. We tried to furnish ourselves with ready money. On Sunday, at a meeting of the Directors, Mr. Upton agreed to execute various conveyances on Monday at 10 o'clock. He did not do it. He stated that his house on East Avenue was deeded to his wife some years ago, originally an unrecorded deed, and we find this to be a fact, and that \$10,000 of stock in the Charlotte Iron Works was in her name. On Tuesday morning the directors agreed to raise \$100,000, go on with business, and let Mr. Upton step out, we thinking that amount would enable the bank to continue business. We met again at 3 o'clock in the afternoon and it was then stated that Mr. Upton's liabilities to the bank were, in his own name and in the names of other parties, whose names only represented his, \$330,000. Mr. Upton then executed a mortgage on some property, a half in the Rochester Hydraulic Company and various other pieces of property, which may perhaps aggregate in value between \$50,000 and \$100,000. We understand from the statement made to us that the deposits amount in round numbers to \$500,000, and that the bank holds about \$800,000 of paper, which, outside of Mr. Upton's amount, we considered would have been collectible at face value, if the bank had not been compelled to close its doors. We have not examined the books as closely as we should like to, not having had time, but we think the above figures are a true representation of the situation."

Massachusetts Savings Banks.—The advance sheets of the report of the Commissioner of Savings Banks of Massachusetts for 1882, show \$10,000,000 increase in deposits and over \$8,000,000 in loans on personal securities. Real estate mortgages show an increase of over \$3,000,000. The decrease in investments in public funds is over \$3,000,000. The greatest amount of loans are placed at about 5 per cent.; the next largest at 6 per cent. The average dividends are 4 per cent., against 3 97-100 last year. Out of 166 banks 127 pay 4 per cent. Only three banks fail to pay. The showing is regarded as very satisfactory.

The large increase in deposits is an evidence of the prosperity of the working class. The decrease in investments in public funds is probably caused by the scarcity and high prices of the only bonds that are suitable for the investment of savings bank funds. It is a somewhat unfortunate thing that this is the case, because the above report shows that while the increase in investments on real estate mortgages was only \$3,000,000, the increase in loans on personal security (probably an inferior class of security to the other), was over \$8,000,000. The reason for this may be, however, the desire to pay dividends of 4 per cent. or more, and this is a bad reason.

Pacific National of Boston.—In conformity to instructions from the Comptroller of the Currency the following circular, dated December 1, was issued by the Receiver, Mr. Linus M. Price: "You will please take notice that the Comptroller of the Currency has levied an assessment upon the stockholders of the Pacific National Bank of \$100 a share, payable at the office of the Receiver, as follows: \$50 a share within 30 days of the date hereof, and \$50 a share within 60 days. You are, therefore, requested to pay the amount of your assessment according to the aforesaid notice; otherwise the whole assessment will bear interest from Nov. 27, 1882, and suit will be commenced to enforce payment."

A few days afterward a committee of an association of stockholders of the defunct bank, which was organized to resist attempts to assess the shares held by its members, received from Judge Hoar an opinion indorsing the position taken by the association regarding assessments, and also the liability of the bank to pay moneys subscribed for new stock and assessments upon the same. This opinion, if upheld, would occa-

sion a great difference in the amount of dividends to be paid to depositors, as the holders of new stock would come in with the depositors for a share in the division of the funds of the bank. The association believes likewise that the Directors are personally responsible for the losses of the bank while they were its officers.

In the meantime Receiver Price filed a number of civil libels against various parties, including the National Security Bank, which was attached for \$20,000 on account of securities transferred to it, as alleged, to give that bank a fraudulent preference.

On December 21 a large and excited meeting of the stockholders of the defunct bank was held to determine how to meet the second assessment laid upon them by the Comptroller of Currency, and to determine the liability of Directors. A long and desultory discussion ensued, and resolutions were presented condemnatory of Bank Examiner Needham, pronouncing him incompetent and unworthy of confidence for his failure to properly investigate and report upon the affairs of the bank. An Executive Committee was appointed, and a resolution was adopted urging that suits be brought against the Directors of the bank if the Receiver or Comptroller shall refuse to do so. Also, that the Receiver and United States Attorney be requested to inquire into and criminally prosecute all persons who are found responsible for the disaster to the Pacific National Bank.

We had occasion to make some remarks upon the conduct of Examiner Needham at the time of the suspension of the bank, and it was pretty clearly shown that he had done his full duty in the premises. It is absurd to suppose that an Examiner can prevent the ruin of a bank when its Directors and shareholders allow an unreliable executive officer to run it at his own sweet will.

Examiner Needham has published a reply to the statements made at the meeting of the stockholders reflecting upon himself. He reviews at length his proceedings in connection with the bank's troubles, denies the charges affecting himself, and places the responsibility on the Directors.

Receiver Price's report to the Comptroller upon the condition of the Pacific Bank as he found it has been made public, with the statement that the facts presented are true of its condition at present. The assets are rated as follows: "Good," \$648,709; "doubtful," \$1,416,792; "worthless," \$1,896,221—total, \$3,461,723; liabilities, exclusive of capital stock and circulation, \$2,470,356.

First National of Buffalo.—The first dividend of 25 per cent. of the city of Buffalo's special account with this bank, amounting to \$3,969 41, was paid to Controller Mahoney on December 7. The city Treasurer received 25 per cent. of his account, amounting to \$6,743 63, and other depositors also received a *pro rata* dividend.

In the United States Circuit Court at Syracuse the jury in the case of R. Porter Lee, the defaulting President of the First National Bank of Buffalo, returned a verdict of guilty, and Judge Wallace sentenced the prisoner to ten years' imprisonment.

Judgment has been entered in the County Clerk's office of Buffalo in favor of Eliza T. Smith, Receiver of the Bank, against Charles C. Sears and R. Porter Lee. The amount of the judgment is \$10,521 88, together with costs. Another judgment in favor of the receiver against Charles C. Sears for \$61,969 65 has also been entered.

The sentence pronounced against Mr. Lee of ten years' imprisonment will, perhaps, be considered a severe one by those who look only at the excellent position he occupied a few months ago and compare it with his present degraded condition. But crimes like his are too frequent to be passed over lightly, and only the sternest severity of the law is calculated to give some people a proper sense of the seriousness of offences such as he was guilty of. At the same time the shareholders and directors to whose laxness such crimes are largely due should not be freed from blame.

Bull's Head Bank.—Judge Donohue, in the Supreme Court, on December 19, made a decree authorizing the voluntary dissolution of the Bull's Head Bank.—*Exchange.*

For the reason that its capital had become impaired through the negligence of some of its officers, the Bull's Head Bank of New York stopped doing business on January 1, 1878. All but a few of its depositors withdrew their money. There now remains \$2,259 awaiting some depositors who have not presented themselves. After spending about four years in winding up its affairs, its Directors asked the Supreme Court several months ago to dissolve the bank. Judge Donohue made a decree of dissolution and appointed Mr. O'Brien as Receiver of the affairs of the bank. The Referee's report shows that the bank has \$4,660 62 in cash, \$5,290 16 in over-due notes, and \$44,483 83 in worthless judgments; and that it owes in addition to the unclaimed deposits, \$1,096 50 on unclaimed dividends, has no real estate or any judgments against it, and is defendant in only one suit, which was brought to restrain it from paying a certain dividend. Since the bank gave up business its stockholders have received back 25 per cent. of the value of their stock.

Retirement of Russell Sturgis.—Baring Brothers & Co., to-day announce that the senior partner, Russell Sturgis, retires from active commercial pursuits. The business will be carried on by the remaining partners.—*Dispatch from London, January 1.*

Mr. Russell Sturgis has long been well known in social as well as business circles of London. His connection with the firm of Barings which began when he was a young American starting business life, is alleged to have been due to a Boston expressman taking his luggage to a wrong wharf. This caused him to be detained in London awaiting it—for his destination was some other point—and while there the Barings took such a fancy to him that they offered him a place in their house. Mr. Sturgis' retirement is a decided loss to Barings, all the more so in view of the death of Mr. Kirkman Hodgson soon after he joined the firm. Barings are now more than a century old. Two peerages, Ashburton and Northbrook, have their dignity supported by money made in the great house, whose members, helping one another along, have become notable in Church and State, as well as in commerce. Their American connections date a number of years back.

Compromise of Bank Taxes.—Manager Camp, of the New York Clearing House, said yesterday morning (December 29) that most of the banks have accepted the proposition of Geo. P. Andrews, Counsel to the Corporation, for a settlement of the pending litigations between the banks and the city with respect to the taxes of 1880, upon the basis of the payment of a sum equal to the taxes levied upon their shareholders for 1880, without interest and without costs, providing that a settlement should be consummated before January 1, 1883.—*Exchange.*

The litigation in this case had been going on for two years. Suits were begun in 1880 by various banks in New York in the State Courts against the city for excessive taxation, on the ground that the Tax Commissioners had not complied with the Federal law giving shareholders in banks the right to deduct their debts from the amount of property assessed, as is done in the cases of taxation of individuals. Before a decision was rendered, a decision was reached in a similar suit, brought by an Albany bank in the United States Circuit Court in that city against the city of Albany, in favor of the bank. The city of Albany appealed the case to the United States Supreme Court, and the

suits in the State courts in this city were held in abeyance to await the result of the appeal to the higher tribunal. Had the Albany bank won its case the city of New York, under the same ruling, would have been compelled to refund about \$10,000,000 or \$12,000,000 of taxes previously paid. The decision of the Circuit Court was reversed, and it was decided that the State law of 1866 was not entirely void because it did not, in terms, allow the deduction from assessments for debts. The suits in the State courts were continued. Finally, the counsel for the banks suggested to Corporation Counsel Andrews that perhaps the banks would be willing to pay the taxes for the year 1880, and terminate the seemingly endless litigation in the State courts in this city, if they were not compelled to pay interest on the amount of their taxes for the time which has elapsed since the taxes became due. It was finally determined to make this offer to the banks, and nearly all have accepted it. About \$1,400,000 or \$1,500,000 will be recovered by the city.

State Banks of New York.—Following is a statement showing the aggregate of resources and liabilities of the State Banks of the City of New York, on December 16, 1882, as exhibited by their reports to the Superintendent of the Bank Department, together with the totals on September 30, for comparison :

		Liabilities.			
		Sept. 30, 1882.	Dec. 16, 1882.	Comparisons.	
Capital		\$10,987,700	\$11,787,700	Inc	\$800,000
Net profits	5,812,500		6,418,700	Inc	606,200
Circulation	13,700		13,700		
Due banks	4,762,500		6,017,700	Inc	1,255,200
Due depositors	41,485,800		42,796,900	Inc	1,311,100
Unpaid dividends	215,400		180,800	Dec	34,600
Totals		\$63,278,600	\$67,215,500	Inc	\$3,936,900
		Resources.			
		Sept. 30, 1882.	Dec. 16, 1882.	Comparisons.	
Loans and discounts	\$49,545,500		\$50,816,900	Inc	\$1,271,400
Other stocks and bonds and mortgages	801,000		1,111,200	Inc	310,200
Due from banks	3,885,700		4,495,700	Inc	610,000
Real estate	1,297,700		1,644,900	Inc	346,900
Cash items and bank notes	200,900		257,100	Inc	56,200
Specie	3,480,800		4,738,100	Inc	1,257,500
Legal tenders	4,022,100		4,083,400	Inc	61,300
Overdrafts	45,100		63,500	Inc	18,400
Totals		\$63,278,600	\$67,215,500	Inc	\$3,936,900

Directors Taken Individually and Collectively.—Years ago when there were not so many banks here on Cape Ann as now, a young man who had just gone into business wished to get his note discounted, and in order to make a sure thing of it he interviewed the Directors personally, and each told him that it would be all right. Going to the bank on the morning after the Directors had met, the Cashier informed him very blandly that nothing had been done for him. At the next meeting of the Directors, just as they were commencing business, the door opened and in walked the young man. Removing his hat he advanced to the table and remarked: "Messrs. Directors, individually you are clever sort of men, but collectively you are a set of darned liars, and I can prove it." With this he went out, and the Directors gazed at each other in blank astonishment as they inwardly acknowledged the justice of the remark.—*Cape Ann Advertiser.*

Winding Up the Dry Goods Bank, of New York.—On December 4, 1879, this bank was dissolved by a decree of the Supreme Court, issued on a petition of the Directors. Mr. Wm. P. Brintnall, the Receiver, recently petitioned for a discharge

from his duties, and Judge Lawrence appointed Mr. Edward Patterson as Referee to pass upon the Receiver's accounts. The Referee reported that the accounts were correct, and that he found that the Receiver had in his possession the sum of \$33,414 08 left after the payment of all the bank's debts. Judge Lawrence made an order, on December 21, discharging Receiver Brintnall from his trust after he shall have declared a dividend of 3 25-100 per cent. upon the bank's capital stock, payable by him on Dec. 27. The order directs the Receiver to pay over to the City Chamberlain the money representing dividends not claimed by stockholders or their representatives.

The Bank Clerks' Mutual Benefit Association, of New York, varied their usual custom this year. In place of long speeches at their fourteenth anniversary, celebrated at the Lexington Avenue Opera House on December 1, they gave a concert and reception. The hall was crowded with guests of the association, who listened to piano solos by Miss Elvira Hard, glee by the Dudley Buck Quartet Club, vocal solos by Mrs. Jessie Palmer Clayton, and part songs by the members of the Musical Association. Afterward the floor was cleared for dancing. The Benefit Association has now 1,155 members; there were 19 deaths during the year. The receipts amounted to \$23,478, of which \$19,800 was paid on death claims and \$91 for the special relief of clerks out of employment. The Trustees now hold, as the principal of the permanent fund, \$39,932 20.

Freedmen's Savings Bank.—The Comptroller of the Currency has completed his annual report as Commissioner of the Freedmen's Savings and Trust Company. The cash receipts during the past year have been \$455,334 82, including the sale of the bank building and adjacent real estate to the United States for \$250,000. A dividend of 15 per cent. was declared payable on June 1, 1883. The total payments on account of the dividends during the year were \$371,720 80, distributed among 21,183 depositors. The Commissioner has now on hand in available securities the sum of \$184,804 55, and hopes to pay a further and final dividend of from 7 to 7½ per cent. early in the spring, making a total of from 62 to 62½ per cent. in all paid and to be paid to the creditors of the company.

A Clever Fraud.—A successful fraud was practiced upon the First National Bank of Detroit, on December 22. A few days before a stranger sold some bonds to George K. Sistare's Sons, brokers, and received two or three of their checks in payment. These were subsequently cashed at different times at the First National Bank. On the 21st another check was presented for \$1,180, and paid. Soon after the check was discovered to be a forgery of so skilful a character that one of the clerks of Sistare's Sons pronounced it genuine, and it was only after a close inspection of his own writing that he discovered the fraud. It is believed that the check was photo-lithographed, and a remarkable exhibition of skilful penmanship completed the fraud.

A New Bank.—The Gainesville National Bank, Gainesville, Texas, has been recently organized, succeeding the firm of Lindsay, Hemming & Co. Mr. C. Chambers, managing partner of late firm of Putnam, Chambers, & Co., is one of the Directors. The cash capital of the bank is \$250,000; President, J. M. Lindsay; Vice-President, J. R. Stevens; Cashier, C. C. Hemming. The bank commences business under very favorable auspices, and is the only bank now in Gainesville.

Seamen's Savings Bank, New York.—The Trustees of the Seamen's Bank for Savings have ordered that interest be paid depositors at the rate of 4 per cent. per annum on sums of \$1,000 and under, at the rate of 3 per cent. per annum on sums ranging between \$1,000 and \$3,000, and at the rate of 2 per cent. per annum on sums exceeding \$3,000, payable on and after January 15.

MISCELLANEOUS BANK ITEMS.

- School savings banks are to be established in Iowa.
- The Citizens' Bank of Louisiana has voted to increase its capital from \$700,000 to \$1,500,000.
- The Bank of Breckenridge, at Breckenridge, Col., suspended on December 8. The failure was regarded as unimportant.
- A new bank at the Stock Yards, Chicago, will be known as the Drovers' National Bank; capital stock, \$100,000.

— D. G. Thomas, President of the Bank of Abingdon, Va., has failed, with liabilities said to amount to \$80,000. George W. Palmer, of Saltville, has been elected President of the bank in his stead.

— A dispatch from Jefferson, Ohio, states that the community there is much exercised over the defalcations of S. J. Fuller and H. L. St. John, the Cashier and the Assistant Cashier of the Second National Bank, and the suspension of the bank pending an investigation. Fuller has fled. He has been speculating and used \$50,000 to \$75,000 of the bank's funds. St. John, on learning that the crime was discovered, had a stroke of paralysis. The depositors are not likely to lose their money, the stockholders being liable for \$200,000, which is far more than the average amount of deposits.

THE BEST PUBLICATION.

WINONA DEPOSIT BANK, }
WINONA, MINN., DEC. 19, 1882. }

Messrs. BRADFORD RHODES & Co., NEW YORK.

Gentlemen:—Enclosed I hand you our No. 17,113 on First National Bank, New York, for five dollars, with which to renew our subscription to your JOURNAL OF BANKING for 1883.

We find the JOURNAL a very interesting and instructive periodical, each number containing a vast amount of useful and practical information to those engaged in banking, or interested in monetary affairs, and we cheerfully commend it as the best publication of the kind which has come under our observation.

Very respectfully yours,

W. C. BROWN, Cashier.

GENERAL BUSINESS NEWS.

End of the Railroad Contest.—Presidents Keep, Porter, Randall and Mitchell, representatives of the Northwest, Omaha, Rock Island and St. Paul railroads, met at the Windsor Hotel yesterday morning, and attached their signatures to the agreement which will uphold the restoration of railroad rates in the Northwest for the next twelve months. Everything is now settled so far as the late difficulties are concerned.
—*Exchange, Dec. 15.*

This latest railroad war was settled much sooner than some previous ones, having lasted only about three weeks, but, all the same, it serves to illustrate the evils prevailing in the present management of railroads. What is called "bossism" is not by any means confined to politics. It exists in the management of banks and other corporations, but is found in full force in the great railroad companies. The Chicago "Tribune" discusses the matter in an able article, from which we give the following excerpts:

"One does not have to call himself a reformer or a political economist to see that this method of regulating the supply of transportation and its terms to the demand is an exceedingly costly one to the public. In his recent report the Railroad Commissioner of Michigan states that the cost of railroad freights has been reduced 50 per cent. since 1873, but he might have added that most of the important steps in this decline have been accompanied by struggles between the railroads so injurious to themselves and the public as to be equivalent to a series of industrial civil wars. It is of the highest importance that too many railroads be not built in this country. He is not a public benefactor who makes two railroads grow where there was one before that did all the work. The railroad history of the world bears unvarying testimony to the fact that hopes of permanent competition from parallel roads are never fulfilled. Competition always runs, sooner or later, into combination. Railroad rates must

be reduced, and extravagant railroad building must be checked, but it is intolerable that these public questions be settled by private war, originating in the whims and jealousies, the love of power, the private ambitions, or the stock-gambling enterprises of the fortuitous individuals who manage our railroads. From epoch to epoch railroad rates may be controlled by the "laws of trade" and the "forces of competition," but every well-informed man knows how remote from all considerations of public policy, how mean and sinister the motives often are which determine railroad management from day to day. And we do not live by epochs, but by days. * * *

"A new figure is rising in our polity, though as yet he is a man without a shadow. It is the statesman who is to bring the railroad king within the pale of public control, who is to deprive him of the right of private combat, and compel him to submit to public tribunals questions which, though they arise between one king and another, are really questions of public rights and interests. America is the only civilized country in which the right of railroad kings to wage private war has not been taken away."

Reduction of Postage.—The action of the House, in granting by a well-nigh unanimous vote to the Appropriation Committee the right of incorporating in the General Post-office Appropriation bill a clause reducing letter-postage to two cents, is accepted here as an indication that the House will adopt the proposition when it comes formally before that body. It is the prevailing opinion that the Senate will concur.—*Dispatch from Washington.*

The report made by Mr. Bingham, of the House Committee on Post-Offices and Post Roads, recommending the Anderson bill for reducing postage on letters now sent for 3 cents to 2 cents, comprises an elaborate review of Post-Office statistics in regard to rates of postage, and takes the ground that, with a surplus of revenue in the Treasury as well as a reported surplus from the Post-Office Department, this is the proper time to effect a reduction in rates, as it can well be afforded. This surplus revenue from the Post-Office Department is the first reported since the three-cent uniform rate was adopted in 1851, with one exception, which was in 1865, when there was a slight profit owing to a suspension of mail-carrying in the Southern States. The report explains that while it is, of course, desirable that the department shall be self-sustaining, it was never intended that it should become a source of revenue. It assumes that the department is now on a surely paying basis, with its principal item of cost, that of transportation, gradually growing less as the population becomes more evenly distributed, and the means of communication more extended. The statistics are taken from a date as far back as 1792, when the rate for carrying a letter was 6 cents for a distance of 80 miles, and 25 cents for 450 miles. There is also a careful estimate based on the history of reductions in the past, which sustains the theory of the report that the stimulus to letter writing, which would naturally be caused by a reduction, would greatly lessen the estimated loss for the first year, which (not counting such increase of letters) would only reach \$8,000,000. The entire loss, the report assumes, could be offset by a fair allowance for carrying the official mail matter of the Government. It is also estimated that should the reduction not take effect until January 1, 1884, as provided in the amended Anderson bill, the surplus of the first half of that financial year would balance the loss of the last half, and there would be ample time to exhaust or call in the printed supply of Government stamped three-cent

envelopes. Calculations are made from which it appears that the surplus of the Post-Office Department in 1883 will be fully doubled in 1883. It is suggested, in closing the report, that when the loss experienced by this reduction shall be fully made up, and when there shall again be a surplus, a reduction of postage on drop letters should be made.

The Petroleum Market.—Another disastrous decline caused a wild panic in the Oil Exchange to-day. The market opened at 98, 1 above yesterday's closing price, then crept up to 98, and afterward began to drop off at a rate which caused consternation. The cause of the demoralization was the intelligence that a new gusher had been tapped in Forest County, and that another was about ready to flow.—*Pittsburgh Dispatch, December 19.*

The bull movement by the Standard monopoly, predicted in these dispatches yesterday, was begun to-day. The organs of the giant corporation this morning contained tabulated statements to show that the production of the Northern and New York fields had fallen off considerably, with a further decline certain. This had the desired effect.—*Pittsburgh Dispatch, December 21.*

The above fairly represent the condition of the oil market from day to day for a number of weeks past. Between November 2 and 4 the price of crude petroleum advanced from 95 5-8 cents to \$1 36 per barrel, and the lively speculation that has been kept up since has made prices more unstable than ever. Many fortunes have been lost and won in the game, the case of Mr. Upton, President of the ruined City Bank of Rochester, well illustrating the wild and blind way in which it has been carried on.

The reason given for the sudden advance in prices of petroleum is that the production in the Pennsylvania oil regions fell off from 105,000 barrels on September 1, to 71,000 barrels on October 13, and 66,000 on November 1. It is doubtful, however, if the latter number was not the result of manipulation for the purpose of affecting the market. For instance, it is stated that the pipelines of the Standard Oil Company to some of the wells were cut, so as to reduce the production. The average daily output in 1880 was 72,587 barrels, and in 1881, 77,738 barrels. The daily product on September 1 last was, therefore, much higher than in last year, but on November 1 it was 11,000 barrels lower. Unless a new oil field is struck before long, the price must evidently advance, but as there is at present a supply in tank sufficient to fill the probable demand for a year and a half, there is no proper cause for such a jump in prices as the recent one. The fact that the price had receded to less than 80 cents per barrel on December 26, confirms the suspicion that it was the result of manipulation.

Canadian Canals.—The Corn Exchange Council here has petitioned the Government to release the canals from tolls, and to assume the Lake St. Peter debt in order to reduce the harbor dues.—*Dispatch from Montreal, December 13.*

Under the head of "Free Navigation from Lake Superior to the Sea," the Montreal "Shareholder" says:

"This subject has, since our last, engaged the attention of several influential bodies, including the Boards of Trade of Toronto and London, the Corn Exchange of Montreal, and others. So far as our observation has reached, the feeling in favor of the abolition of tolls on the Canadian canals is universal, though the desire has in more than one instance been expressed that this immunity should not extend to American bottoms. The Montreal Corn Exchange among others takes this view, supplementing it also with the entirely novel

suggestion that the dues on the Welland Canal shall continue to be generally collected irrespective of nationality, but wholly refunded to all such vessels as shall prosecute their voyage until they have passed the whole of the St. Lawrence canals clear to Montreal. * * * That part of our Corn Exchange memorial which prays for the further enlargement and deepening of our canals is hardly likely to be at present listened to. We have already paid out \$40,000,000 on these works, and though the money has been well spent, it is about time to hold our hand till we see what deficiencies, if any, peremptorily require to be remedied. Such economy becomes all the more necessary should Parliament receive favorably the further suggestion of the same body of the building of a canal at Sault St. Mary on Canadian territory. Of all our many great national needs, in the shape of public works, we have none which is at once so urgent as this, and at the same time so little heeded. * * * We shall never be really independent of the foreigner, so far as this part of our national prosperity is concerned, until we have our own Canadian Sault St. Mary Canal, and if the suggestions of our Corn Exchange had been confined to this point alone it would still have deserved well of the public. It is, however, by no means thus limited, for its views as to the Lake St. Peter Channel, and the revival of a Reciprocity Treaty with our neighbors, are also worthy of the deepest reflection."

FOREIGN BANKING AFFAIRS.

I. CANADA BANKS AND BANKERS.

[A digest of Banking and Financial News of the British Provinces. By the JOURNAL'S Correspondent at Montreal.]

DEATH OF A USEFUL MAN.—Sir Hugh Allan, who recently died in Edinburgh, though not in any sense a popular man, was a prominent figure in Canadian mercantile and financial circles. He was a resident of Montreal—the chief commercial city of the Dominion—almost continuously for a period of 56 years, and the principal owner of the Allan Line of Ocean steamers, a fleet whose tonnage amounts to some 100,000 tons. Beside being President of the Merchants' Bank of Canada, Sir Hugh was President of seventeen other extensive joint-stock companies and Vice-President and Director of many more. He has passed away full of honors, leaving behind him a matchless record of well-applied industry, enterprise, and far-reaching sagacity. He left his children a fortune of some six millions of dollars.

Mr. Horatio Admiral Nelson is another of Montreal's honored citizens whose recent loss is deeply deplored. Mr. Nelson was American by birth, but settled in Montreal in 1840, when 24 years old. He was a director of the Molson's Bank and of other monetary institutions, was 14 years an alderman of the City of Montreal, and also served as one of the representatives of the city in the Provincial Parliament. His career both as a merchant and as a man of the people was eminently successful, and in his private as well as his public life he was *sans peur et sans reproche*, and many will miss the kindly, good old man.

EXCESSIVE BANK LOANS.—Our correspondent referred in our November number to the excessive inflation indulged in by the banks in Canada during the last three years. An attempt has been made to check the torrent, but without success. During November and December public opinion in Canada was strongly aroused and the newspapers rang with denunciation of the policy of the banks, but the appearance of the November bond statement showed that no real work of contraction had been going on. It is true that call loans had been reduced by \$635,216 and current discounts by \$1,237 17, but this was rather the result of the withdrawal of Government deposits in the banks than of any settled policy. The banks continue in the same deplorable

state of weakness. The gross liabilities to depositors, noteholders, etc., are \$151,785,458 at the end of November, against which were held \$6,643,002 in specie—less than 4½ cents on the dollar on the liabilities. Nearly one-third of the specie reserve, or about seven cents on the dollar of its liabilities, was held by the Bank of Montreal; the Bank of British North America held about the same proportion, leaving the majority of the banks with specie resources of two and three cents on the dollar. It is true that there is also a reserve of \$11,025,296 in Government notes and \$14,894,225 in the hands of foreign bankers, but Canadian Government notes are based upon a small reserve of specie, and the funds in the hands of foreign bankers may be unavailable when wanted. The situation has lost none of its gravity since we last pointed out its weakness. The more conservative banks have been unable to do more than temporarily arrest the tide of inflation. The stringency created by their attempt is over for the present, and, with accumulating deposits, the younger and more restless of the banking fraternity will hoist all sail and run before the wind till another and more serious crisis impends.

LOANS TO DIRECTORS.—One of the banks of the Province of Ontario has incurred special and severe censure at the hands of the financial press of that part of the Dominion. The bank in question has a capital of \$1,500,000, and by its August statement was found to have advanced to its own Directors \$1,500,000—a trifle of \$90,000 more than its paid-up capital. It was thought that this was contrary to the charter, but it appears that on the renewal of the bank charters in 1871 the clause referring to loans to Directors was left out. Whatever be the law on the subject, it is clear that loans to Directors are not the most legitimate form of investment for Canadian banks, and the bank referred to has acknowledged the influence of the press by promptly reducing these loans to about one-half. The general impression was that the Directors had used the funds at their command for their own benefit in manipulating the stock market, and the fact that the shares of the bank were quoted at a higher price than those of any other Canadian bank gave force to this impression. It is regrettable that though the "loans to Directors" of this bank have been reduced over three quarters of a million of dollars, there has been no reduction of moment in its aggregate loans, and it has in consequence been insinuated that the reduction referred to is more apparent than real.

SPECULATION IN BANK STOCKS.—It is said that the Finance Minister (our Canadian Secretary of the Treasury) has in view some special legislation on the subject of speculation in bank stocks. It is difficult to believe that Sir Leonard really hopes to accomplish anything useful by such a measure. The whole history of banking legislation in Canada has been a series of blunders. The excellencies of the system, such as they are, are due to the management, and the defects largely to the attempts on the part of Government to regulate and control it. The bank act of 1871 was hailed as the perfection of legislation, but the horrors of previous banking disasters were eclipsed by those which took place under the new legislation. Restrictions can scarcely be thrown around speculation in bank stocks without weakening the force of public opinion as to the conduct and policy of the bankers, and legislating out of existence a class of men who, whatever their faults may be, are largely the mouth-piece of public opinion. But it is just possible that some bankers wish to escape criticism, and Sir Leonard good-naturedly accedes to their wishes.

THE BANK TAX MATTER.—It has been estimated that the expense of resisting the attempt of the Quebec Government to impose a tax on joint-stock companies and banks doing business in the Province of Quebec, will amount to \$600,000. It will be remembered by readers of the JOURNAL that the banks offered to prepare a test case to decide the constitutionality of the tax, and that the Government refused this offer and insisted on separate suits against each company. About four hundred suits have been entered, and a sum sufficient to maintain all the law courts, and all the barristers too, of the Province, for a year, will be neatly extracted from the banks and transferred to the pockets of the legal fraternity by this harassing attempt at taxation.

— The Bank of Halifax has established an agency in Windsor, N. S.

— The shareholders of the Bank of Nova Scotia have passed resolutions authorizing amalgamation with the Union Bank of Prince Edward Island.

— The Canadian Government Savings Bank statement shows a balance at the credit of depositors on October 30 of \$12,900,044, an increase of \$32,978 over the preceding month.

— It is stated that the following changes have taken place in the Merchants Bank of Canada; Mr. John Gault, Manager of the Hamilton Branch, appointed Inspector for the Bank, removes to Montreal, and will be succeeded at Hamilton by Mr. Meredith, late of the Chicago Branch; and Mr. Plummer has been appointed Assistant General Manager.

II. NOTES FROM FOREIGN BANKING CENTRES.

[Compiled from Correspondence and other sources for the JOURNAL OF BANKING.]

— The creditors of an old Paris banker, Joly de Marval, received an only dividend of 1.25 per cent.

— The Commercial Bank of Alexandria has declared a dividend of 5 per cent. for the past year—bombardment notwithstanding.

— Pessimism is now a word as familiar in European financial circles as it is in philosophical phraseology. Still, many maintain that there are no apparent causes for another period of commercial depression.

— A few more items about banks going into industrial speculations: The Anglo-Austrian Bank is to work the Servian salt monopoly; the Credit-Anstalt is to start a large petroleum refinery; Belgium is to have a bank for the export trade.

— The affairs of the greatest bank failure, since that of Overend, Gurney & Co., have now been practically wound up. The City of Glasgow Bank cost its solvent shareholders £2,450,855, although they held only £41,122 of stock, while the surrendering contributors as holders of £757,342 of stock contributed £2,540,910. The cost of liquidation was £194,086.

— The Hong Kong and Shanghai Banking Corporation will have an increase of capital from \$5,000,000 to \$7,500,000. A meeting will be held in Hong Kong on December 30, when it will be proposed to issue 20,000 new shares of \$125 each at the price of \$40 per share, the premium to be added to the reserve fund. The shares will be offered to the present shareholders.

— A letter from Berlin says: "The most remarkable thing on our Bourse is the collapse in bank shares. The financial situation in general has been such for some time past that credit institutions cannot find a favorable opportunity for concluding large speculations. The Hungarian loan has been withdrawn owing to this very difficulty. But this general tendency is more observable in German banks, for special reasons: The Deutsche Bank has lost heavily in a business in New York in which it was a silent partner; the desperate situation of the Berlin Trading Company is also discouraging; the balance sheet of the Imperial Bank will also show a decrease in the cash reserve.

— French finances are attracting much attention just now. The *Economiste Français* says: "The total amount required for the contemplated public works is ten milliards. When the Freycinet plan was first broached only four milliards were asked. M. Say, some months ago, informed us that seven milliards were requisite, and now M. Tirard brings the figure up to 9,150,000,000 francs. Some 700 or 800 millions will be required for new schools within a few years, so that the whole amount, not to speak of the cost of ordinary highways, will amount to more than double the war indemnity. Only 1,367,000,000 francs have been as yet expended, so that we are only at the beginning. We have now an ordinary budget that is over three milliards, a floating debt of three milliards, and three budgets, ordinary, extraordinary, and special, amounting to four milliards, a programme for public works that is over nine milliards, a national public debt of twenty-six milliards, and of the departments and communes, making a total of 32 or 33 milliards, while the scheme of buying up the railways would require 13 or 14 milliards." The writer calls this a regular "milliard indigestion," and that the way in which money is voted away reminds one of the stories in the Arabian Nights. The public Treasury cannot continue to pay out in this manner, grievous mistakes have been made, and unless there is a sudden curtailment and return to common sense, we may look for great financial disasters in France.

NEW BANKS, CHANGES, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National Banks organized since our last report:

- 2833—Creston National Bank, Creston, Iowa. Capital, \$100,000. James B. Harsh, President; Addison V. Scott, Cashier.

JOHN JAY KNOX,
Comptroller of the Currency.

BANKERS' OBITUARY RECORD.

Park.—Trenor W. Park, President of the First National Bank, of North Bennington, Vt., and Vice-President of the Wall Street National Bank, New York, died December 15, 1882, aged fifty-nine years.

Mr. Park was so well known as a great capitalist for many years that a fit notice of his career would occupy far more space than can be afforded here. He was born at Woodford, Vt. Was admitted to the bar, and went to San Francisco, where he quickly became eminent. In 1863 he abandoned the law, and became interested in many successful railroad, mining, and banking enterprises. He was President of the Panama Railroad Company, and was largely interested in the Pacific Mail Steamship Company. Latterly he resided in New York, and his death occurred on the steamer *en route* to Aspinwall. He organized some prominent charities in his native State.

Perkins.—George Welles Perkins, President of the Mercantile National Bank, of New York, died December 27, 1882, aged thirty-nine years.

The deceased was born at Athens, Pa. He volunteered when only seventeen and at the close of the war was brevetted Colonel. Coming to New York he entered the Importers' and Traders' National Bank as clerk, and in 1871 was made Assistant Cashier. Two years later he was appointed Cashier of the Hanover National Bank, and in 1880 was elected President of the Mercantile National. His untimely death was caused by consumption. He was brother to E. H. Perkins, Jr., President of the Importers' & Traders' National Bank.

Post.—Alfred Post, President of the Highland National Bank, Newburgh, N. Y., died December 20, 1882, aged seventy-one years.

Mr. Post was born at Warwick, N. Y., and in early life was engaged in the freight-ing business. He entered the Highland Bank as a Teller in 1869, and was soon after made Cashier. Twenty-seven years later, in 1877, he was elected President. He was a highly-esteemed citizen, and held many places of public trust during his long and honorable business career.

Stone.—Richard Stone, formerly Treasurer of the Institution for Savings, Newburyport, Mass., died November 20, 1882, aged eighty-four years.

With the deceased Newburyport has lost one of its oldest and most respected inhabitants. He was at one time interested in the Essex Mills, the pioneer cotton mill of the town. Later he was somewhat unfortunate and was engaged as bookkeeper in the Savings Institution, and in 1856 was made Treasurer, which position he held until January, 1882.

Coudry.—John Coudry, Vice-President of the First National Bank of Warwick, N. Y., died December 20, 1882, aged sixty-seven years.

The deceased was born in New York city, but had resided in Warwick nearly fifty years. He was the oldest merchant in the place, and had held many offices of trust and responsibility. He was Sheriff of Orange County from 1859 to 1862, President of the village several terms, and Vice-President of the First National Bank from its organization in 1864. He was beside a public-spirited and charitable man.

Bill.—George Woods Bill, President of the Massachusetts Loan and Trust Company, of Boston, Mass., died November 14, 1882, aged fifty-four years.

Mr. Bill was born in Boston, began business as a boy in the store of C. N. Thayer, oils and manufacturing supplies, and afterward became a partner under the firm name of Thayer & Bill, who dissolved in 1860. He then became a member of the firm of Bill & Davis, in the cotton commission business, and when it dissolved in 1875 he was made President of the above company.

RAILROAD FINANCES AND NEWS.

(A synopsis of Railroad finances and affairs of interest to Bankers, Investors, &c. including a Table of Earnings in 1881 and 1882. *Classification*: I. New Issues. II. Reports. III. Miscellaneous R. R. News).

I. NEW ISSUES.

WESTERN MARYLAND.—The city of Baltimore has voted to indorse this company's bonds to the amount of \$384,000, for the purpose of providing means to lay steel rails, build iron bridges and provide additional rolling stock. The city already owns a large interest in the road.

PENNSYLVANIA, SLATINGTON AND NEW ENGLAND.—This company proposes to borrow \$1,300,000 on a mortgage on its road, which is about half finished from Pine Island, N. Y., to Slatington, Pa., 74 miles. The mortgage is to the Metropolitan Trust Company, of New York.

A consolidation has been agreed on between this company and the Bangor and Portland, a short line reaching important slate quarries in Northampton County, Pa.

WEST VIRGINIA CENTRAL AND PITTSBURGH.—This company has authorized the execution of a mortgage covering 50 miles of railroad and 37,200 acres of coal lands. For the nine months ending Sept. 30 the net earnings from the road were \$24,823; from coal sales, \$77,783, making a total of \$102,565.

OREGON IMPROVEMENT CO.—This company offers to its stock and bondholders \$1,500,000 new stock at par. The total issue authorized is \$2,000,000 making the stock \$7,000,000, of which \$500,000 will be retained in the treasury for the present. The proceeds of the new stock will be used in paying for new steamers, and for the purchase and extension of the San Luis Obispo & Santa Maria Valley road in California.

CENTRAL IOWA.—This company has recently issued \$3,700,000 new stock. The object of the issue is to pay for a new line (built under other organizations), now nearly completed, from Oakaloosa, Ia., to Peoria, Ill., 213 miles, giving the road an outlet eastward. The contractors who are building this line receive in payment first-mortgage bonds to the amount of \$20,000 per mile on the road built, and also the \$3,700,000 Central Iowa common stock.

KANSAS CITY, SPRINGFIELD & MEMPHIS.—This company, which is building the Kansas City, Fort Scott & Gulf's extension from Springfield, Mo., to Memphis, Tenn., will issue \$1,000,000 new bonds in addition to the amount already taken.

ARCHISON, TOPEKA & SANTA FE.—This company has negotiated with Kidder, Peabody & Co., of Boston, an issue of \$1,500,000 new 6 per cent. trust bonds, secured by deposit of bonds of leased and controlled lines. The proceeds are to be used for new construction, new rolling stock and advances to the Atlantic & Pacific road.

ALLEGHENY EXTENSION.—At the recent annual meeting of this company in Richmond, Va., the directors were authorized to make contracts for the construction of the road and to issue first-mortgage bonds to the amount of \$20,000 per mile of road, and income bonds to the amount of \$15,000 per mile. The road is to extend the Richmond & Allegheny from Clifton Forge through West Virginia to the Ohio River.

II. REPORTS.

NEW YORK CENTRAL & HUDSON RIVER.—This company reports for the year ending Sept. 30, 1882, its stock and debt as follows:

Stocks.....	\$86,428,800
Funded debt.....	48,473,083
Total.....	\$137,901,883

The funded debt was increased during the year by the sale of \$5,000,000 new bonds for \$6,500,000, the proceeds being applied to the building of additional tracks, the purchase of stock in other companies, etc.

The earnings were as follows:

	1881-82.	1880-81.		Difference.	Per ct.
Earnings	\$30,628,781 ..	\$32,345,897 ..	Dec....	\$1,717,116	5
Expenses.....	19,805,974 ..	19,464,787 ..	Dec....	68,813	—
Net earnings	\$11,232,807 ..	\$12,881,110 ..	Dec....	\$1,650,808	13

The loss in earnings was due to the very low rates on through business caused by the railroad war which prevailed during the first part of the year.

The income statement is as follows:

Net earnings.....	\$11,232,807
Interest.....	\$3,250,101
Rentals.....	1,937,528
Taxes.....	801,274
	5,488,903

Surplus.....	\$5,743,904
Dividends paid, 8 per cent	7,145,513

Deficit.....	\$1,401,608
---------------------	--------------------

This deficit, after the payment of dividends, contrasts with a surplus of \$754,484 the previous year, showing a difference of \$2,156,082 in all.

NEW YORK, PROVIDENCE & BOSTON.—This company owns a line from Providence, R. I., to Groton, Conn., 62½ miles, with a branch of 10 miles. It also owns nearly all the stock of the Providence and Stonington Steamship Company, which runs lines from Providence & Stonington to New York.

At the close of the last fiscal year, Sept. 30, the stock and debt were:

Stock.....	\$3,000,000
Bonds.....	1,900,000
Total.....	\$4,900,000

There was no change in stock or debt during the year.

The earnings were as follows:

	1881-82.	1880-81.		Difference.	Per ct.
Earnings.....	\$1,065,650 ..	\$957,718 ..	Inc....	\$107,932	11
Expenses.....	690,571 ..	602,473 ..	Inc....	88,098	15
Net earnings.....	\$375,079 ..	\$355,245 ..	Inc....	\$19,834	6

Interest paid was \$78,402, leaving a surplus of \$296,677, from which 8 per cent. dividends were paid on the stock.

EASTERN.—This company's report for the year ending Sept. 30, shows 284 miles of road worked, of which 118 miles are owned directly, 73 miles owned through ownership of stock, and 94 miles leased. The stock and debt are as follows:

Stock.....	\$4,997,800
Funded debt.....	13,624,006
Mortgage notes.....	684,300
Total:	\$19,305,906

The earnings and expenses for the year were as follows:

	1881-82.	1880-81.		Difference.	Per ct.
Earnings.....	\$3,403,678 ..	\$3,084,274 ..	Inc....	\$308,804	10
Expenses.....	2,532,968 ..	1,969,673 ..	Inc....	563,295	16
Net earnings....	\$1,110,110 ..	\$1,124,601 ..	Dec....	\$14,491	1

The gross earnings are the largest ever reported for this road. Interest and rentals for the year amounted to \$302,780, leaving a surplus of \$217,341, of which the sum of \$181,638 was expended for improvements on the road.

At the close of the year the cash and cash assets were \$51,472 in excess of all current accounts and balances due.

NEW YORK & NEW ENGLAND.—For the year ending Sept. 30, this company operated 399 miles of road, of which 333 miles are owned and 66 leased. It also leases the

Norwich & Worcester road, but does not include the operations of that line in its reports.

The stock, debt, and floating debt are as follows:

Stock.....	\$30,000,000
Funded debt.....	11,742,900
Floating debt.....	\$3,571,888
Less cash and cash assets, stock, subscription, &c.....	1,801,807
	<u>770,283</u>
Total.....	\$32,512,623

Of the stock reported, shares to the amount of \$16,502,000 have been issued; the remaining \$3,498,000 are old Boston, Hartford & Erie "Berdell" bonds, convertible into stock.

During the year the company bought the 34,750 shares held by the State of Massachusetts, paying for the same \$1,787,000 new second-mortgage bonds and \$500 cash. This stock has since been sold at 50.

The earnings were as follows:

	1881-82.		1880-81.		Difference.	Per ct.
Earnings.....	\$3,302,789	..	\$2,682,374	..	Inc.....\$610,415	.. 23
Expenses.....	2,350,616	..	1,841,496	..	Inc..... 518,118	.. 28
Net earnings.....	\$943,173	..	\$850,878	..	Inc.... \$92,297	.. 11

Receipts from premium, &c., were \$152,170, making the total net income \$1,095,343. The taxes, interest, rentals, and all charges were \$998,300, leaving a surplus of \$97,184 for the year, equivalent to about one-half of 1 per cent. on the stock.

WILMINGTON & WELDON.—At the close of the year ending Sept. 30, this company's report shows the stock and debt as follows:

Stock.....	\$2,082,400
Sterling mortgage bonds.....	231,400
General mortgage bonds.....	988,000
Total stock and bonds.....	<u>\$3,299,800</u>

A further issue of \$464,000 general mortgage bonds is authorized for the purpose of taking up the sterling bonds when due, building branches, &c.

The earnings for the year were as follows:

	1881-82.		1880-81.		Difference.	Per ct.
Earnings.....	\$788,790	..	\$750,917	..	Inc..... \$37,873	.. 4
Expenses.....	574,818	..	447,084	..	Inc..... 127,734	.. 29
Net earnings.....	\$203,472	..	\$303,833	..	Dec. ... \$94,361	.. 38

Expenses were increased by heavy renewals of track and new buildings. The income statement is as follows:

Earnings as above.....	\$309,472
Interest premium, &c.....	64,611
New stock sold or exchanged.....	628,200
Total.....	<u>\$998,283</u>
Interest, &c.....	\$100,740
New branches built.....	79,880
Bonds paid off.....	461,700
	<u>642,400</u>
Surplus.....	\$355,883

From this surplus 6 per cent. dividends were paid on the stock, and the balance applied chiefly to purchase of new rolling stock.

CANADA SOUTHERN.—The following statement has been made for 1882, December estimated.

	1882.		1881.		Difference.	Per ct.
Earnings.....	\$3,462,795	..	\$3,369,250	..	Inc..... \$93,545	.. 3
Expenses.....	2,563,997	..	2,672,346	..	Dec..... 118,349	.. 4
Net earnings.....	\$898,798	..	\$696,913	..	Inc..... \$201,885	.. 29
Charges.....	671,151	..	668,989	..	Inc..... 2,162	.. —
Surplus.....	227,647	..	\$27,944	..	Inc..... \$199,708	718

The surplus was equivalent to 1.52 per cent. on the stock; it was expended for improvements of road and new cars.

MICHIGAN CENTRAL.—The following statement is made for the year 1882, December estimated:

	1882.		1881.		Difference.	Per ct.
Earnings.....	\$3,950,000 ..		\$3,954,333 ..	Inc....	\$15,673 ..	—
Expenses.....	6,525,000 ..		6,732,006 ..	Dec....	207,006 ..	8
Net earnings.....	\$2,425,000 ..		\$2,202,236 ..	Inc....	\$222,764 ..	10
Interest and rentals....	1,800,000 ..		1,598,936 ..	Inc....	107,074 ..	6
Surplus.....	\$625,000 ..		\$603,300 ..	Inc....	\$21,600 ..	23

The surplus was equivalent to 3.33 per cent. on the stock. One dividend of 2 per cent. has been declared.

III. MISCELLANEOUS R. R. NEWS.

NEW YORK & NEW ENGLAND.—This company receives \$415,000 for the 5¼ miles of its Woonsocket Division from Brookline to Needham, which are transferred to the Boston & Albany. The sale was agreed on some time ago, but the two companies could not agree on the price, and left the question to Trunk Line Commissioner Albert Fink as arbitrator. He has made the award as above. The money will be used by this company in paying for new second track, etc.

MARIETTA & CINCINNATI.—Holders of about 95 per cent. of the stock and debt have agreed to the plan of reorganization. The time for signature and assent to the plan closed Dec. 15.

The road was sold at foreclosure sale, Dec. 9, and was bought by the bondholders' committee. The new organization will be completed soon as the court has confirmed the sale.

LOUISVILLE, NEW ALBANY & CHICAGO.—A recent statement shows that the yearly charges upon this company for interest and rental of terminal facilities in Chicago and Louisville are \$470,500. An agreement has been made with the Pennsylvania Company for the use of tracks from New Albany to Louisville on very advantageous terms, saving this company the building of some eight miles of new road, which was proposed.

COLUMBUS, CHICAGO AND INDIANA CENTRAL.—A decree of foreclosure has been entered in the United States Circuit Court, which provides for the sale of the road on 30 days' notice, at a minimum price of \$13,500,000, the purchaser to have the right to affirm or disaffirm the lease of the road to the Pittsburgh, Cincinnati & St. Louis Company. The decree finds that there is now due on the first-mortgage bonds \$10,478,000 principal and \$4,834,230 interest, \$15,312,230 in all.

The road will doubtless be bought in for account of the Pennsylvania Railroad Company, which now holds a large part of the bonds. The sale will take place in January.

EASTERN.—A circular has been issued by several large stockholders requesting proxies for the coming annual meeting from those who wish to elect a board of directors in favor of a lease of the road to the Boston & Maine on equitable terms. Negotiations for the proposed lease are suspended for the present, the directors of the two companies having failed to agree upon terms.

At the annual meeting of the Eastern last month several new directors were chosen, and it is understood that a majority of the board is now in favor of the lease.

CHICAGO & ALTON.—The suit brought by the Massachusetts Mutual Life Insurance Company to set aside the foreclosure sale by which this company acquired the Chicago & Illinois River road some years ago, has been compromised and withdrawn. The Massachusetts Insurance Company received about \$300,000 in settlement of its claims as a bondholder.

NEW YORK, NEW HAVEN & HARTFORD.—The directors have resolved to make extensive improvements, shortening the road, improving the location at several points, reducing grades and building additional tracks. Money for these improvements will be borrowed. The company's credit is such that it should be able to get any reasonable amount at 4 or 4½ per cent.

SYRACUSE, CHENANGO & NEW YORK.—The New York Supreme Court has granted an order directing the receiver to sell this road to satisfy the mortgages, as soon as the necessary public notice can be given.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, JANUARY 2, 1883.

The past year closed rather quietly so far as business was concerned. The volume of transactions has been very large, but profits have been small, and there has been a good deal of complaint regarding the fall trade. The imports of merchandise have been heavy, but are falling off somewhat, so that a considerable import of gold is not considered unlikely to occur soon. In that case an improvement in prices may be looked for, which will supply the stimulus to trade which is now lacking.

Here and there hints and surmises are made as to the probability of another business crisis. There are at present only a few of the usual indications of such a thing, and some of the most prominent are lacking. For instance, there is no such inflation of prices caused by overdue speculation as generally precedes a crisis, and neither does the credit system appear to be so unduly expanded that an ordinary disaster would throw it into chaos. It is a question whether the recent unfavorable symptoms are not amply accounted for by doubts as to what action Congress will take upon the tariff and internal revenue taxation. A reduction to about the amount already recommended (to such an extent as would leave \$50,000,000 of surplus to be applied to debt reduction) would prove a double benefit to business. By relieving many industries and articles of commerce from taxation, the trade in them would be increased, and, again, a more steady and moderate inflow and outflow of money to and from the Treasury would leave the loan market in a much more healthy and natural condition.

THE PUBLIC DEBT.—The reduction for the month of December amounted to almost \$15,500,000, making the decrease of the debt for the first half of the fiscal year more than \$81,000,000, or an average of more than \$13,500,000 per month. The large amount of the reduction for December is accounted for by a remarkable decrease in the ordinary expenditures for the month, the payments for pensions having been less than \$60,000, while they were more than \$8,500,000 in November. The reduction of the debt in November was about \$5,500,000, and it is expected that the average monthly reduction for the remaining seven months of the fiscal year will be small, perhaps between \$7,000,000 and \$8,000,000.

It may be useful, for the purpose of estimating the probable future rate of decrease in the debt, to notice the amount of Government receipts and expenses during the half of the fiscal year ended December 31. The following shows the receipts for

the six months ending December 31, 1882, as compared with the receipts for the corresponding six months of last year:

	Six Months. 1881.	Six Months. 1882.
Customs	\$107,895,988	\$118,888,145
Internal revenue.....	76,562,681	75,819,427
Miscellaneous.....	18,410,644	17,121,972
Total.....	\$300,869,263	\$305,827,544

The expenditures for the six months were as follows:

	Six Months. 1881.	Six Months. 1882.
Ordinary.....	\$97,687,449	\$105,795,176
Interest on public debt.....	38,301,374	30,999,794
Total.....	\$135,988,823	\$136,794,970

The debt statement shows that the interest-bearing debt was decreased nearly \$26,000,000 during the month of December. The five per cents, continued at $\frac{3}{4}\%$, were decreased about \$25,000,000, of which about \$9,000,000 were converted into 3 per cents, the rest being either redeemed, or called, and placed under the head of debt on which interest has ceased. The debt bearing no interest has been increased more than \$28,000,000, owing to the issue of gold certificates. For this reason the principal of the public debt appears to be about \$8,000,000 greater, but, on the other hand, the cash in the Treasury has increased \$25,000,000. The available cash balance has decreased, however, nearly \$9,000,000, so that no assistance to the money market may be expected from this source, for the present.

The Treasury Department has issued the following circular respecting the exchange of $\frac{3}{4}\%$ into 3 per cent. bonds:

TREASURY DEPARTMENT,
WASHINGTON, D. C., December 18, 1882. }

Notice is hereby given that in order to allow the preparation of the schedules and interest checks for the payment of the dividends due February 1 on the United States registered bonds of the acts of July 14, 1870, and January 20, 1871—continued at $\frac{3}{4}\%$ per cent.—and on the United States registered bonds of the 3 per cent. loan of 1882, the exchange of $\frac{3}{4}\%$ per cent. bonds into 3 per cent. bonds will be suspended from December 30, 1882, until February 1, 1883.

Between the above dates, $\frac{3}{4}\%$ per cent. bonds intended for exchange will be received and filed in the order of their receipt; the exchange being effected upon the reopening of the books, February 1, 1883.

Upon the resumption of the exchange of bonds, and until further notice, the interest on the three and a half per cent. bonds surrendered for exchange into three per cent. bonds will cease February 1, 1883, and the three per cent. bonds issued therefor will bear interest from that date; and Department circulars heretofore issued concerning the exchange of three and a half per cent. bonds are modified accordingly.

The books of the three per cent. loan of 1882 will be closed during the months of January, April, July, and October in each year, during which months bonds will not be transferred.

CHAS. J. FOLGER, Secretary.

GOVERNMENT BONDS.—The demand continues strong; and the price for four per cents reached 131 at one time in December. The highest price they ever reached was 121 $\frac{1}{4}$ in April last.

The following table shows the closing bids for the principal issues of Government

bonds on each day of the month of December, and the highest and lowest during the month:

3 per Dec.	5s, '81. cents.	5s, '81. cont'd.	4½s, '91. coup.	4s, 1907. coup.	C'y 6s. 1899.	3 per Dec.	5s, '81. cents.	5s, '81. cont'd.	4½s, '91. coup.	4s, 1907. coup.	C'y 6s. 1899.
1	101½	101½	112½	119½	128	18	103½	103½	112½	120½	133

MONEY AND DOMESTIC EXCHANGE.—The rates for loans have slackened since the beginning of December, and call loans on Government bond collateral were as low as 2 per cent. recently. The January payments will keep the market easy for the time being.

The following table shows the range of call loans, and rate on prime paper, in each week of December:

	Dec. 1.	Dec. 8.	Dec. 15.	Dec. 22.	Dec. 29.
Range of call loans	2@10	3@6	3@6	3@6	2@5
Rate of discount.....	6@7	6@6½	5½@6	5½@6	5½@6

Following are the rates of domestic exchange on New York on January 2: Savannah, buying, ¼; selling, ½ discount @par. Charleston, buying, ¼; selling, ½ discount @par. New Orleans commercial \$20@25.00 per \$1,000 discount; bank, par. St. Louis, 75c. per \$1,000 discount. Chicago, 25c. per \$1,000 discount. Boston, par@8c. per \$1,000 premium.

FOREIGN EXCHANGE continues low, and there is a fair probability of its reaching the gold importing point, if the imports of merchandise continue to decrease as they have been doing recently. Following are the posted and actual rates of foreign exchange on January 2: Bankers' sterling, 60 days, nominal, \$4.81; bankers' sterling, sight, nominal, \$4.85; bankers' sterling, 60 days, actual, \$4.80¼@4.80½; bankers' sterling, sight, actual, \$4.84¼@4.84½; Cable transfers, \$4.85@4.85½; Prime commercial sterling, long, \$4.79@4.79½; documentary sterling, 60 days, \$4.78¼@4.79; Paris, bankers', 60 days, \$5.29@5.29½; Paris, bankers', sight, \$5.20½@5.20; Antwerp, commercial, 60 days, \$5.29@5.29½; Swiss, bankers', 60 days, \$5.29@5.29½; Swiss, bankers', sight, \$5.20@5.18½; Reichsmarks (4), bankers', 60 days, 94¼@94½; Reichsmarks (4), sight, 95¼@95½; guilders, bankers', 60 days, 39¼@40; guilders, bankers', sight, 40@40¼. Paris dispatches quote exchange on London, 25f. 22¼c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days and sight, cable transfers, and prime commercial sterling at 60 days, together with exchange on Paris on December 1, the changes in the rates as they occur—

red during the month, and the highest and lowest during the months of November and December:

	Bankers		Cable	Commercial.	Paris	
	60 days.	Sight.	Transfers.		60 days.	Sight.
Nov.—

RAILROAD AND MISCELLANEOUS STOCKS.—The settlement of the railroad contest about the middle of December lent a stronger tone to the market, but the feeling of depression that exercised such an influence through most of the year 1882 was not to be thrown off at the close. The weakness of prices has not been confined to the fancy stocks, some of the stronger kind being noticeably depressed. The outlook is good, however, as the trunk lines are doing a paying business, and the movement of agricultural produce should be much larger in the next few months, than in the corresponding time last year.

The following table shows the highest, lowest, and closing prices of the most important railway and miscellaneous stocks at the New York Stock Exchange during the month of December:

Companies.	Highest.	Lowest.	Clos'g.	Companies.	Highest.	Lowest.	Clos'g.

THE NATIONAL BANKS.—The amount of greenbacks held on deposit on January 1 by the Treasurer, to redeem National bank notes, was \$39,940,815, against \$38,390,114

on December 1. The amount of bonds held to secure bank circulation has decreased, being \$360,531,650, against \$362,174,250 a month ago.

The following will show the amount of each description of bonds held by the Treasurer to secure national bank circulation, on or about the dates indicated :

	Oct. 1.	Nov. 1.	Dec. 1.	Jan. 1.
Currency 6 per cents.....	\$3,326,000	\$3,526,000	\$3,526,000	\$3,526,000
5 per cents	15,000	15,000	15,000,000	15,000
4½ per cents.....	32,861,960	38,669,650	34,761,650	25,915,500

5 per cents extended at ¾%.....	91,574,300	41,254,450	29,344,900	20,805,950
6 per cents extended at ¾%.....	130,000,000			1,494,900
3 per cents.....		179,070,550	188,820,400	192,693,700
Total ..	\$361,772,250	\$362,878,150	\$362,174,250	\$360,531,650

NEW YORK CITY BANKS.—The deposits and loans were increased during December. The reserve was strengthened, especially in specie, and a fair surplus reserve is held.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1881 and 1880 :

1883.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Dec. 30.....	\$311,071,300	\$57,627,100	\$18,664,200	\$291,663,600	\$17,625,500	\$3,375,400
Dec. 23.....	309,774,400	59,148,900	18,885,500	290,848,900	18,163,100	5,272,175

LATE QUOTATIONS

— OF —

Bank, Government, Railroad and Miscellaneous Stocks and Bonds.

The following tables give the latest quotations of stocks and bonds at the New York Stock Exchange. In the case of all but the New York bank stocks (of which the full number is given—listed and unlisted), the highest and lowest actual prices of a year ago are also given, for comparison. Where bonds are embraced by brackets the first-named company is lessee of the others.

BANK STOCKS.—NEW YORK CITY BANKS.

The Capital and Surplus given below are from last official report:—National Banks, October 3; State Banks, December 16, 1882. The Surplus includes, in the case of Clearing-House Banks, the undivided net profits, and, in the case of other banks the undivided profits. The Banks which are not members of the New York Clearing-House Association are indicated by a (*). Not listed at the Stock Exchange by a (†).

DAILY RECORD OF FINANCIAL EVENTS.

DECEMBER, 1892.

1. FRIDAY.—Decrease in the public debt in November, \$5,584,142; since July 1, \$65,957,561.

2. SATURDAY.—Discount on prime commercial paper in New York, 7@8 per cent.; call loans, 5@2½@3 per cent.

Discount in London on 60 days to 3 months' bank bills, 3½ per cent., and trade bills, 4¼@5 per cent.

The British Parliament prorogued until February 15, 1893.

Arabi Pasha condemned to death; the sentence commuted to banishment to Ceylon.

4. MONDAY.—The Forty-seventh Congress re-assembled in second session.

The upper Hudson closed by ice.

5. TUESDAY.—The Welland Canal closed.

6. WEDNESDAY.—The transit of Venus observed.

7. THURSDAY.—New York canals closed.

A destructive fire occurred in London, England; loss estimated at over £2,000,000.

9. SATURDAY.—Discount on prime commercial paper in New York, 7@8 per cent.; call loans 5@6 per cent.

Discount in London on 60 days to 3 months' bank bills, 8½@9½ per cent., and trade bills, 4¼ per cent.

12. TUESDAY.—The business part of Kingston, Jamaica, destroyed by fire; estimated loss, £3,000,000.

13. WEDNESDAY.—The railroad war in the West ended.

14. THURSDAY.—Right Hon. Hugh C. Childers succeeded Mr. Gladstone as Chancellor of the Exchequer.

16. SATURDAY.—Discount on prime commercial paper in New York, 7@8 per cent.; call loans, 5@6½ per cent.

Discount in London on 60 days to 3 months' bank bills 9½ per cent., and trade bills 4@4½ per cent.

19. MONDAY.—Notice issued that exchanges of 3¼ into 3 per cent. bonds will cease from December 30, 1883 to February 1, 1884.

19. TUESDAY.—Rumors of the probability of war with Russia caused agitation on the Berlin Bourse.

20. WEDNESDAY.—M. Bontoux, President, and M. Feder, Manager of the collapsed Union Generale, Paris, were sentenced to five years' imprisonment and to pay a fine of \$600.

The City Bank of Rochester, N. Y., and the Second National Bank of Jefferson, O., suspended.

21. THURSDAY.—Meeting of shareholders and bondholders of the New York, Pennsylvania and Ohio Railway Company in London, England.

23. SATURDAY.—Discount on prime commercial paper in New York, 6@6½ per cent.; call loans, 6@6½ per cent.

26. TUESDAY.—The failure of peace negotiations between Chili and Bolivar is reported.

The Co-operative Dress Association, New York, suspended.

28. THURSDAY.—A proclamation summons the British Parliament to meet on February 15.

29. FRIDAY.—Bar silver is quoted at 15 1-16d. per ounce in London.

30. SATURDAY.—Discount on prime commercial paper in New York, 6@6½ per cent.; call loans, 7@4 per cent.

Discount in London on 60 days to 3 months' bank bills, 4½ per cent., and trade bills, 4½@5 per cent.

31. SUNDAY.—Leon Gambetta, French statesman, died at Ville d'Avray, at 11.55 P.M.

RHODES' JOURNAL OF BANKING.

NEW SERIES. }
VOLUME X. }

FEBRUARY, 1883.

No. 2.

In various quarters the matter of the probability of a crisis in this country in the near future is being discussed, and several of those who have written on the matter, conclude that there is some danger of it. Their opinions are of little weight, however, as the reasons they give seem quite inadequate to produce the effects that are dreaded. A crisis does not occur, any more than anything else in nature, without an adequate cause, and the conditions which produce a crisis have been made the subject of considerable study by economists. Now it is only fair to expect that any one who attempts to put his opinions on so important a subject as the probability of a crisis into print shall have first made himself acquainted with the views of those who have previously studied the subject in general, or, at least, that he shall have given some study to the general principles governing the subject for himself. But, unfortunately, it is too often not necessary for a man to have given any serious thought to the matter whatever, in order that he may be able to have published where it will be read by thousands, ideas on such weighty matters as the currency, or the condition of the finances.

One of the reasons given for believing that a crisis must be at hand is the change that has lately occurred in the foreign trade, the imports being about equal to the exports, or, for some months, even greater. During each of the seven fiscal years from 1876 to 1882, inclusive, there was an excess of exports of merchandise from the country over the imports, the average excess being \$156,543,883. By reason of a decline in the exports since the crop of 1881 and an increase in the imports, the change mentioned has come about recently. In the spring of 1882 there was an actual excess of imports. During the eleven months ended November 30, 1882, the excess of imports was \$18,289,205, but judging from the numbers for November last, it is likely that the December balance will wipe out this difference and make a total excess of exports during the calendar year 1882. The change from 156 millions

(for the six years ended June 30, 1881, the average excess of imports was \$221,951,897) balance in our favor on the foreign trade, to nothing, or an adverse balance, is worthy of attention, and every business man should endeavor to understand its full significance.

It is the custom to look upon an "adverse" balance of trade as an unfavorable symptom, and yet during some of the most prosperous years within the memory of the present generation there was an "adverse" balance. In fact, in the twenty-six years, 1848 to 1863, inclusive, there were only two fiscal years in which the balance was in favor of this country. In 1858, which included half of the disastrous year 1857, there was an excess of exports amounting to \$8,672,620, and again in 1862 there was a similar excess of \$1,313,824. In the other years of the period mentioned the excess of imports over exports ranged as high as 182 millions, that being the amount in 1872. These facts would seem to indicate that the normal condition of the foreign trade, was more consistent with an "adverse" than with a "favorable" balance. It does not need much study to convince anyone that a profitable trade necessitates so called "adverse" balance. If the goods exported are sold abroad for a higher price than they are valued at here, and the proceeds are invested in foreign goods which are valued above their cost on their arrival here, the total difference between exports and imports is certain to be considerable, the latter being the greater. It should be remembered that the era between 1873 and 1881 was a peculiar one, and the same conditions may never again occur. During that time the currency was reduced from an inflated paper to a solid specie basis. This involved a large reduction in the prices of merchandise, real estate, and almost everything salable which had been further increased by speculation. Thus, at the same time that there was a demand for gold to strengthen the Treasury and the banks, the prices of goods became such as to render large exports possible. During the same period, also, a series of bad harvests in Europe accelerated the movement of breadstuffs, and the payment of United States bonds held in Europe tended to aid the export movement. Thus there were many forces at work at the same time, and all with the same tendency. Having expended their full force, the foreign trade is now left in a more natural and healthy condition, regarded either in itself, or in its relation to the general business interests of the country.

A meeting of bankers and brokers was held at the New York Clearing-House on January 3rd, to once more take into consideration the matter of adopting the Osterberg plan for a Stock Clearing-House. It was resolved to draw up a subscription list, and as soon as 100 names are subscribed, to take measures toward putting the proposed system into operation. Since the opinion of the Attorney-General was promul-

gated deciding that "accepting" checks by national banks was illegal, two of the banks who did business for brokers have relinquished the national system and have reorganized under the State law. In spite of disclaimers on the part of the officers, it was evident that the principal reason for the change at the time was the restrictions of the national bank law against over-certifying. In the number of RHODES' JOURNAL OF BANKING for December last, it was remarked that the "likelihood of a State law to prohibit State banks from over-certifying has never been taken into consideration. It would not be surprising if such an act should be passed this winter." A bill for the purpose has now actually been proposed in the Legislature, but, of course, no one yet knows what will come of it. We always shall, as heretofore, deprecate any attempt of Legislature or Congress to interfere with private business without good cause, but in the present instance it is a question whether every interest would not be better subserved if the brokers were in a manner compelled to test the proposed clearing system for stocks. The reasons, given in its favor are strong, and the principal one against it is the mere difficulty in getting it started. There are doubtless many cases in which over-certifying might be done quite legitimately, and probably the law would never have enjoined it had it not been for the brokers' banks. In so far, they are in a sense responsible for a feature of the law which may interfere with the legitimate business of other banks or persons.

For some months back our Canada correspondence has given expression to a feeling of solicitude respecting the condition of the banks of the Dominion. This feeling, while it can hardly be said to be general there, is certainly not uncommon, and has begun to be remarked in various quarters. Not long since the attention of the authorities was drawn to the fact that many banks had been making loans to directors for amounts far above the maximum allowed by law, but measures have since been taken to reduce such loans considerably. But this is a matter of minor importance in view of the general condition of the banks. The returns of the chartered banks to the Finance Department on December 30, 1882, show that the total capital paid up was \$61,039,657; circulation, \$36,501,694; deposits (including Government deposits) \$108,685,869. The smallness of the cash reserve has given occasion for remark, the total being \$23,785,576, of which only \$6,555,761 was specie, \$10,463,843 Dominion notes, and \$6,765,973 notes of other banks. The amount of specie on hand certainly appears to be small for the amount of deposits. The discounts amounted to \$147,545,660, besides which there were loans on stocks and bonds \$16,861,583, and loans to municipal and other corporations \$14,142,448.

It is thought that the banks have been granting loans too freely for the sake of paying good dividends, and the condition of things in

the year 1875, when a very trying period of stringency occurred from this cause, is pointed out as an example to be avoided. It may be remembered that Mr. Smithers, President of the Bank of Montreal, at the annual meeting of shareholders several months since, called attention to the increase in banking business to what he considered a dangerous extent. He said that it was impossible for the banks to continue the expansion for another year, and the sooner this fact was realized the less chance there would be for a repetition of the conditions which followed the expansion of 1875. But there seems to be no improvement in the condition of things since.

A comparison of the last statement of the banks with the statement for December 31, 1879, will show very plainly the extent of the change which has aroused the apprehension of conservative men. During the three years the total capital has increased less than a million dollars, but the circulation has risen from 22 to 36 millions. The public deposits are 96 millions against 68 millions in 1879. But, in spite of this increase, the cash reserve is only 3 1-4 millions greater, and the amount of specie is actually smaller than in 1879. The discounts were increased from 97 millions to 144 millions.

There is a single remark to be made upon this showing. During a time of speculative expansion there is generally every present inducement for a newspaper to help it along. It is an unpopular thing to try to stem the current. But, all the same, it is the duty of financial papers, especially, to tell the exact truth to their readers. That is what they are for. They have, properly speaking, no other *raison d'être*. It may sometimes be unpopular, but all permanent success must be based on this principle. These words are addressed to our esteemed contemporaries across the border in the most friendly spirit.

News comes from Minnesota to the effect that there has been a renewed outbreak of the spirit of Grangerism of a very radical kind. Up to January 28, seven railroad bills were offered in the Legislature, five of which are intended to deal with the matter of regulating of fares and freight charges. One bill, for instance, provides that all railroad companies shall charge equal and reasonable rates under a penalty of \$1,000 for each refusal to accept freights offered, or for exceeding the rates named in the bill. The "reasonable" rates are given at length—so much for fourth class freight (to consist of articles mentioned) for distances under ten miles, 6 cents per ton per mile; 10 and not exceeding 20 miles, 4 cents, etc., etc. This bill is a sample of the five. They are merely the crude attempts at legislation of people who have not learned by experience the limits to which law-making can profitably be carried.

IS TAXATION NECESSARY FOR PROSPERITY?

The current number of the "North American Review" contains an article by Hon. George S. Boutwell on "The Political Situation," in the course of which the writer makes some notable remarks upon the financial outlook. The fact that he was formerly Secretary of the Treasury will give the views set forth all the more influence, and the channel which they occupy is certain to give them currency. A few words of comment upon them may, therefore, not appear out of place here. First, the passage referred to is given in full:

"The great error of the Republican party, an error whose fruits have not yet been gathered, was in its neglect to revise the tariff and revenue systems when the country was restored to prosperity; or, if it were not then possible, at the earliest moment after the restoration of the Republicans to power. This duty has not been performed, and we are now confronted with an alternative which offers no choice that is not fraught with peril. The enormous surplus of revenues available for the liquidation of the public debt portends the overthrow of the national banking system, and the consequent re-adjustment of a thousand million dollars of credits now granted by national banks to the business men of the country. On the other hand, a considerable reduction of the revenues will lead to evils no less grave.

"The returns indicate that the country has built nine thousand miles of railway in 1882. If these roads were built at a cost of twenty thousand dollars per mile, the consumption of capital was at the rate of half a million dollars a year. [This evidently means half a million dollars a day.—ED. RHODES' JOURNAL.] From what source has this capital been drawn? Very largely from the Treasury of the United States. The Government has been gathering from distant, and unobserved sources ten or twelve million dollars per month, in excess of its needs, and using it for the redemption of its outstanding bonds. The payees have been compelled to receive this money, and, receiving it, they have applied it to such undertakings as promised the best results.

"When the revenues shall not exceed the current expenses of the Government the redemption of bonds will cease, the supply of free capital will diminish proportionately, new enterprises will not be undertaken, and many old ones will be brought to a disastrous conclusion.

"But, whether the evils now suggested are real or imaginary, a

revision of the revenue system is a necessity and a duty. Moreover, the party is responsible for the system of protection, and it is its duty in the few remaining days of its power to re-adjust that system to the new condition of things. Its duty is two-fold : It must reduce the revenues ; and it will fail in its duty if it does not preserve that system by which we have demonstrated and made matter of history the apparent paradox in political economy, that it is possible, at the same time, to advance the wages of the laborer and to reduce the price of the products of his labor. The construction of railways has furnished support during the last year to a million or a million and a half of persons, either by direct or indirect employment. The sudden suspension of the business will diminish the means of subsistence of a body of our inhabitants equal to one-third or one-half of the population of New England. The loss of labor in so vast a body of people is a loss of means to buy the products of the labor of others, and then the evil extends until every branch of industry is involved in the common catastrophe. A public debt is not a public blessing, but our national banking system is ; and inasmuch as that system rests upon the public debt, and for the moment can rest safely nowhere else, it is the part of wisdom to allow the debt to remain, that the banking system may continue."

According to the above, the country is between the two horns of a dilemma : To continue the present rate of taxation and payment of the debt, implies the destruction of the national banking system ; but to reduce taxation will diminish "the supply of free capital," throw a million and a half of persons out of employment, and involve every branch of industry in a common catastrophe.

Upon examining the problem here presented somewhat closely it appears that, between the devil upon one side, and the deep sea on the other, a way may be found, a somewhat uncertain one, it is true, but still a way which will avert destruction for the time being, at least. Suppose that the taxation be continued, but the debt be not paid off. There are ways which the ingenuity of lobbyists and congressmen are capable of inventing for disposing of the surplus revenue, beside the old-fashioned and dangerous one of paying off the debt. Probably all the surviving persons who were alive in the country when the war of 1812 was fought are already pensioned (at least 44,000 of them are), but there are many people still existing who remember the Mexican war and are living without Government pensions ; or very likely the descendants of some of them exist in that melancholy condition. Besides, how many nameless streams have flowed obscurely from the hills and through the meadows of their native country unaided by an appropriation ? What a broad vista of possibilities is at once opened to the view, when the question comes up of how to dispose of a troublesome surplus !

But if the matter be looked into still more closely, it might be

asked: Is it the Treasury which now supplies, "very largely" the sums which are being expended upon railroads and other enterprises? Or, if they do come out of the Treasury, would not the same money (or, properly speaking, capital) be, and remain in the country, if it was not collected into the Treasury by means of extortionate taxation? To answer "no" would be the same thing as to argue that a country must be heavily taxed in order to be in a condition of prosperity. The fact is that every dollar which is now collected in taxation comes out of either the earnings or capital of the people of the country, and if the taxes were either reduced, or altogether abolished, business would not be injured, on the contrary, every industry would feel the beneficial effect of the relief. Neither the fixed nor the free capital would be reduced, and, besides, the national banks would have a longer existence upon their present basis.

INTEREST ON BANK DEPOSITS.

Public attention has, within a year or two past, been occasionally called to the matter of the payment of interest upon deposits by commercial banks. It does not appear that the practice is generally followed excepting in the case of private banking houses, some of which allow interest on daily balances. But many other banks allow interest on deposits of unusually large amounts, under special agreement, or on amounts deposited for special periods of time during which they are not to be withdrawn. The idea has been sometimes mooted of preventing by law the payment of interest on deposits in any case by commercial banks. The ostensible reason for this proposal is, that the practice is liable to lead to a competition between banks to secure deposits, and that some of them will be tempted to offer higher rates than they can afford. The result of such a course would be disastrous to the bank immediately involved, while other banks (and, indeed, business generally) would suffer more or less injury. The banks which followed a more conservative policy would be deprived of the deposits which of right belonged to them, as many depositors would naturally be tempted by the high rates offered by other institutions. If matters should come to such a pass, the business of banking would lose much of the reputation for high-toned conservatism which it now, especially in the larger cities, enjoys, and would become a scramble for money, demoralizing, and in every way deplorable.

But, notwithstanding the very positive evils that are liable to flow from undue competition, it is very doubtful if such a law as that suggested would be wise or expedient. The State laws do not now enjoin the commercial banks from paying interest, and even the national banking law, which is more stringent for the most part, makes no re-

striction of the kind. But it does not appear that the present freedom is hurtful to the business, or that undue advantage is taken of it to such an extent as to call for legislative interference.

On the other hand, there is no reason in the nature of things why a business bank ought not to pay interest in certain cases, as well as savings banks. As being benevolent institutions the savings banks are carefully restricted by law in many respects, yet it has never been proposed to prohibit them from paying interest on deposits. To be sure the savings banks have their rules as to what amounts they will allow interest on, and as to what time the money must be left intact. These rules are necessary in order to make it possible for the banks to pay interest safely and profitably. But there is no good reason why another bank may not also allow interest under proper restrictions.

Some writers ascribe the wretched condition of the banking business in most of the States in old times to the high rates of interest paid on deposits, rather than to excessive note issues, but it must be acknowledged that much has been learned by experience since, as none of the bank failures of recent years can be traced to that cause.

As a matter of fact, in other countries, where the banking business is and has been carried on to the very best advantage of all concerned, it is a common thing to allow interest on deposits. The system is of great general utility in drawing into the banks and centres of commerce sums of money that may be lying idle, in times of monetary stringency. This is a means of relieving a tight money market and preventing panics which does not seem to be fully appreciated in this country, and of which the usury laws have in some measure prevented the free play. The people's banks of Germany, which have proved so beneficial to the depositors as well as to the small shopkeepers and others who are the principal borrowers, are founded upon a principle which admits of the payment of interest to depositors, and the Scotch system, which in many respects is almost ideally perfect, makes regular provision for crediting interest on the balances of customers who have "cash credits," just the same as they are charged interest on debit balances. Of course the interest charged is at a higher rate than that credited, the difference being enough to pay the bank's expenses and a fair profit.

It is the London market, however, that probably affords the best example of banks paying a rate of interest constantly regulated by the requirements of business. In a recent number, however, the London "Economist" makes the curious remark that by a survival of habits formed thirty or thirty-five years ago, the interest on the deposits in London banks is fixed with a reference to the minimum rate of discount charged by the Bank of England. It seems that at that period the principle was adopted by the joint-stock banks of allowing one per cent. below the Bank of England minimum discount rate. For a good many years this rule worked fairly well, as a sufficient margin was allowed to meet the expenses and the risks of business. At that time

the Bank of England rate was always pretty close to the market rate, but since 1876, or earlier, the Bank has been compelled to largely ignore the regular market rate on good bills, and to charge higher rates in order to protect the reserve of its banking department. For this reason the Bank of England rate has ceased to afford a safe or profitable guide for the dealings of the outside market. But, notwithstanding this acknowledged fact, the banks still for the most part adhere to the old rule from sheer force of habit. It may be mentioned that the Bank of England itself has, of late years, ceased to be entirely governed by its own published rate in its transactions with its customers, concessions being made to regular customers so as to place them in as good a position in discounting bills as other parties in the open market.

The article already referred to contains some tables showing to what extent the Bank of England rate of discount has been gradually growing away from the market rate, and how the rate of interest allowed on deposits by the banks has been gradually approaching the open market rate of discount, etc. Some of the figures may be useful to show to what extent banks have been able to safely and profitably pay interest on deposits. In the first place it appears that the average Bank of England rate in 1873 exceeded the average open market rate 6 shillings per £100, and in 1874, 6 shillings 6 pence per £100; but in 1881, the difference was 11s. 5d. and in 1882, 15s. 5d. per £100. The difference in 1873 was 6 per cent., and, in 1882, 19 per cent. We will next see how narrow the margin has been growing between the market rate and the bankers' deposit rate. In 1873 the average market rate for best three months' bills was £4, 10s. per cent.; the bankers' deposit rate £3, 9s. per cent., leaving a difference of £1, 1s., being the margin left for the banks' expenses, risk, and profit. In 1882 the market rate was £3, 7s. per cent. and the bankers' deposit rate £2, 17s. 5d. per cent., leaving a difference of only 9s. 7d. per £100. The percentage of difference in 1873 was 23, in 1874, 21; but in 1881 18, and, in 1882, only 14. In other words the banks had in 1873, a margin of over 1 per cent. between the interest which they allowed on deposits and the rate at which their funds could be lent in discounting first-class paper, but in 1882 the margin was only a little over 1-2 per cent. The banks have other means of using their money than in discounting bills, but the level of the rate on loans follows in a general way the rate of discount, and whatever margin the banks had from this source ten years ago has been narrowed in the same way as has that between the rate of discount and the rate of interest on deposits, as shown above. So far as amounts loaned by the banks to brokers on call are concerned, they earn considerably less than the rates allowed on deposits. It is pointed out that the London banks by adhering to an antiquated rule have allowed the rates allowed on deposits to be fixed at too high a point, and some change is called for by the changed conditions. But, notwithstanding this, the banks are prosperous and pay good dividends, and

the facts would appear to prove that commercial banks can, under some circumstances, safely allow interest on deposits.

The Institute of Accountants and Book-keepers of the city of New York have taken a step outside of their usual course of proceedings, which have hitherto consisted of the transaction of business and reading of essays, for the most part of special interest to the members exclusively. They have determined to prepare a memorial to the Legislature asking for an amendment to the State laws which will abolish "days of grace" on commercial paper. It is very likely that the gentlemen who have taken up this matter underestimate the extent of the difficulties that lie in their way. There are no private interests to be subserved by carrying out the measure, and there are no rich firms willing to be assessed to pay the lobby expenses that are generally found to be necessary at Albany. But, beside this, there is to be overcome the mass of conservative opinion, supported by the majority of lawyers and of other people who have no interest in the change, and which is bound to be thrown against any attempt to reform an abuse which has existed long enough to be venerable. But the Institute should not be deterred by these obstacles, nor be discouraged if they find that much time and effort will have to be expended in order to accomplish the end they have in view. It should be remembered that it is very desirable, if the measure should be carried in New York, that it should also be enacted in other States, as the lack of uniformity in the commercial laws of the various States is at present a prolific source of trouble.

Regarding the desirability of the proposed change there seems to be hardly any room for dispute. "Days of grace" were originally intended as a means of easing the pressure of a debt, and as an indulgence to debtors. The idea was founded on the same vicious principle which gave rise to usury laws and many other legal interferences with the freedom of trade. Whatever effect it ever had has wholly passed away long ago, and the practice remains a mere hollow fraud, around which cluster a multitude of miserable little technicalities, to vex the souls of men, and delight mere lawyers. The law might just as well prescribe that a note could be paid with three dollars less than its face value, than that it may run three days longer than the time set down. Of course, the result would be that all notes would be drawn to include the extra three dollars, so that maker and payee would be on exactly the same footing as if there were no such law, excepting that an element of mischief would be introduced into every transaction to raise doubts and disputes, worry and litigation. It is not likely that any living being is willing to say that "days of grace" ever proved of the slightest use to him; and, still, it does not follow that they will be easily abolished.

PROPOSED CURE FOR REPUDIATION.

The recent wretched developments in the State of Tennessee have given renewed vigor to the movement in favor of making a State suable at law by private individuals. The action of the State in repudiating its own agreement for a compromise, in pursuance of which the creditors had made a large abatement from their legal claims, has brought matters to such a point as to make it doubtful if the bonds of some States are worth anything at all. Congressman W. R. Moore has proposed a somewhat drastic method of dealing with the subject, by introducing a joint resolution in the House proposing a constitutional amendment granting power to Congress to provide by appropriate legislation for the legal enforcement of the obligation of contracts entered into by any State. A meeting of bankers and capitalists was held at the New York Clearing-House, on January 29, to lend their aid to this project. The resolutions passed at this meeting present the matter of the liability of States for their debts in a somewhat fresh aspect, and one which deserves attention. They say that Section 10 of Article I. of the Constitution of the United States provides that no State shall pass any bill or law impairing the obligation of contracts; it is also provided in Section 1 of Article IV. that full faith and credit shall be given in each State to the public acts of every other State; and, again, in Article V. of the amendments to the Constitution, it is provided that no person shall be deprived of property without due process of law, nor shall private property be taken for public use without just compensation. These solemn guarantees of the rights of citizens are, it is claimed, nullified by Article XI. of the amendments, which deprives the citizen of any redress in the courts of the United States for any infraction of the rights mentioned, so that if a State passes a law impairing the obligation of its contract with him, or even depriving him of his property without due process of law, he has no redress. It is shown that some of the States, by taking shelter behind this amendment, have for many years scandalized the country by repudiating their just obligations, have done great injustice to those who have given credit to their public acts, and by a wanton disregard of their pledged faith have deprived many persons of their property, causing great distress in many cases, and corruption of public morals within their borders to an alarming extent. There is no denying that a strong case is made out against the Eleventh Amend-

ment, and it appears as though a strong effort may now be made to repeal it. There are many others besides the repudiators and their victims, who are interested in the matter. The credit of every honest debt-paying State would be raised to some extent, if they were made as responsible for their debts before the law as private parties. But more important than this is the pride which every American takes in the good name of his country, which is disgraced by these acts of repudiation, as well as the sense of common honor and decency which is felt by every honest man.

AN ENGLISH VIEW OF THE NATIONAL BANKING SYSTEM.

The last report of Comptroller Knox has attracted large attention abroad, as well as in this country. Among the comments upon it that of the London "Economist" will be considered of special value by American readers. Following is the main part of it:

The annual report of Mr. J. Jay Knox, the Comptroller of the Currency of the United States, at all times interesting, is this year invested with even more than usual importance. With our money market, hanging as it now is upon the question whether gold will or will not be taken hence for export to America, it is of moment for us to know whether or not the condition of the United States currency is such as to require any addition to be made to their stock of the precious metals. Then, again, renewed issue of gold certificates by the United States Treasury and the consequent displacement of silver certificates is a change which may produce very important and far-reaching results, and the rapidity with which the debt of the United States is being redeemed threatens before long to sweep away the basis upon which the paper currency of the States rests, and, unless provided against in time, to produce a financial disturbance which could not fail to make its influence very distinctly felt here. In all these changes, actual or impending, we are largely interested, and the information regarding them which Mr. Knox affords is thus almost of as much value to us as to those to whom it is more specially addressed.

On the first point to which we have alluded—that of the sufficiency of the currency for the requirements of the country—what Mr. Knox has to say is reassuring. From the date of the resumption of specie payments in 1879 to the 1st of November last, the total excess of imports of gold into the States over exports has amounted to 32,262,000*l*., and during the same period the total gold product of the United States mines is estimated to have been 29,502,000*l*.. In somewhat less than four years, therefore, the stock of gold in the country has been increased by about 61,764,000*l*..

Within four years the volume of the currency has increased by 86,698,000*l*., of which the bulk is in gold; and great although the expan-

sion of trade has been during that period, there is no reason to doubt that the expansion in the currency has fully kept pace with all legitimate requirements. At present, therefore, gold exports hence to the States are not likely to be stimulated by any lack of currency on the other side.

It is to be noted, however, that the addition to the silver coinage has not been altogether an effective addition, and it is not unlikely now to prove still less effective. Since the law authorizing the issue of standard silver dollars was passed in February, 1878, the total value of these coins minted has been 25,700,000*l*. Of this issue, however, no less than 19,500,000*l* remains in the Treasury, so that the total in the hands of the public is only 7,200,000*l*. It is true that even the dollars held by the Treasury have been partly utilized for currency purposes, as they have been made the basis of an issue of silver certificates, which constitutes a species of paper money.

It is very doubtful indeed whether this mode of utilizing the silver in the Treasury will now be found practicable. The issue of gold certificates, which had been suspended for some years, has again been resumed, and the probability is that these will largely supplant the silver certificates, since it is only natural that people will prefer to have a certificate which is based upon a deposit of gold, and which can thus at any time be made to realize its full face value, to a certificate which represents a deposit of silver worth intrinsically only about 88 per cent. of its face value. What we must now expect to see, therefore, is an accumulation of silver coin in the Treasury for which no use can be found, and this accumulation must stimulate the efforts of those who wish to have repealed the absurd Bland Law, which compels the Treasury to go on coining at the rate of about 5,000,000*l* a year silver dollars which the country will not accept for purposes of circulation. It is, doubtless, too much to expect that these efforts will be immediately successful, for the interests of the producers of silver are powerfully represented in the Legislature. But even now they are an important factor in the silver question, and one the importance of which is likely to increase.

The increase in the note issues, it will be observed, has been very slight indeed, amounting to less than 8,000,000*l* during the four years, and from accompanying tables it is seen that the amount of notes actually in circulation on the 1st November last was fully 3,700,000*l* less than it was at the corresponding date last year. That this does not arise from any disinclination on the part of the people to use paper money is evident from the avidity with which so unsatisfactory a paper currency as the silver certificates has been taken up. There is indeed in the States a marked preference for paper as opposed to metallic money. But the system of note issue is one which has become singularly inelastic. The intention was that alongside of a fixed and rigid issue of Government notes there should be a varying issue of national

bank notes, which should accommodate itself to all the varying needs of commerce, expanding when business was brisk, and contracting in times of depression. That this intention has not been realized, the fact that there has been practically no expansion during the recent years of business activity sufficiently shows, and the reason is not far to seek. The bank issues are based upon deposits of Government bonds, and this basis the redemption of the debt threatens to destroy. At present the banks hold as security for their circulation about 40,000,000*l* of 3 and 3 1-2 per cent. bonds. These categories of bonds, however, have of late been redeemed at the rate of about 3,000,000*l* per month, and if this rate of repayment were maintained, the date of their total extinction would not be far distant. The probability, of course, is, that the redemption will not be anything like so rapid in the future as it has been in the past, for the Government surpluses will now be curtailed by the increase that has taken place in the expenditure, and will no doubt be still further diminished by an early reduction of taxation. Besides, the greater portion of the bonds held by the banks are of the categories which are to be paid off last of all. The danger of an immediate contraction of the paper currency by the wiping off of the debt upon which it is based, is thus not so immediately imminent as many suppose. Still, the banks seem to have come within a measurable distance of the time when their powers of issue, if maintained on their present basis, must be greatly curtailed. It is imperative, therefore, that the whole system of note issue in the States should be revised, for if the present note currency were swept away and nothing else substituted for it, the inevitable result would be serious financial disturbance and stringency. It is not at all necessary in order to retain the paper currency to discontinue the redemption of the debt. Other and possibly better bases for a circulation can be found, for no one will dream of arguing that a country which has no debt can have no paper currency. But whatever is to be done should be done in time, for if matters are allowed to drift, they are likely to drift to trouble.

It appears that considerable progress had been made toward framing a reciprocity treaty between the United States and Mexico, but as soon as it transpired that some articles of Mexican production were to be admitted to this country free of duty, the persons interested in the same products here immediately took measures to hinder the negotiations. The little trade that is at present carried on is highly profitable to this country, from the most conservative point of view, our exports to, largely exceeding our imports from, Mexico; the balance being paid to us in specie. Private interests should not be allowed to stand in the way of an arrangement which promises so much benefit to two whole nations.

THE BANKS OF MINNESOTA.

We are indebted to Mr. Henry M. Knox, Public Examiner of the State of Minnesota, for a copy of his fifth annual report, being for the year ended November 30, 1882. In addition to full statistics showing the condition of the banks of the State, the report contains some conclusions and suggestions that are well worthy of the attention of the authorities. The portion of the report relating to the banks is given in full below :

THE STATE BANKS.

The number of banks organized under the State banking laws has been increased during the year from nineteen to twenty-four.

"The Dover Bank" has been withdrawn, and from it has sprung both a private bank at Dover Centre, and a national bank at Fergus Falls. Six new banks have received charters, as follows: The State Bank of Anoka; the German-American Bank, Hastings; the Rock County Bank, Luverne; the Stevens County Bank, Morris; the Bank of Pelican Rapids, and the People's Bank of Waseca, each with a paid-up capital of \$25,000, the first-named increased during the year to \$31,250.*

The aggregate resources and liabilities of all the banks as tabulated from the detailed statements appears in the following:

SUMMARY OF STATE BANKS.

RESOURCES.		LIABILITIES.	
Loans and discounts	\$7,250,497 31	Capital stock paid in.....	\$2,333,750 00
Overdrafts.....	40,593 24	Surplus fund.....	294,964 04
Stocks and bonds.....	248,051 05	Other undivided profits.....	224,287 47
Due from other banks.....	1,232,315 58	Dividends unpaid ..	1,379 00
Banking house, furniture and fixtures.....	221,576 31	Due to depositors.....	6,883,497 87
Other real estate.....	17,670 63	Due to other banks.....	462,321 05
Expenses and taxes paid....	52,196 68	Bills payable and re-discounts.....	67,006 29
Checks and cash items.....	151,315 90	Other liabilities.....	255 31
Exchanges for clear'g house	54,964 04		
Cash on hand.....	745,029 28		
Other resources.....	2,480 88		
Total.....	\$10,068,151 03	Total.....	\$10,068,151 03

As compared with the similar summary of last year's report, the

*Several changes have occurred also since the rendering of the reports of the banks for compilation herein. The Bank of St. Cloud and the State Bank of Anoka have reorganized under the National Act, and two banks have organized under the State law, viz.: The Bank of Minnesota, St. Paul (succeeding the private bank of Dawson, Smith & Scheffer), with a capital of \$300,000.00, and The People's Bank of St. Paul, with a capital of \$100,000.00.

changes are as follows:

Increase in number of banks...	5	Increase in Clearing-House ex-	
Increase in loans and discounts.	\$755,649	changes.....	\$54,964
Increase in stocks and bonds...	89,371	Increase in cash on hand.....	47,265
Increase in due from banks.....	298,953	Increase in capital stock.....	155,450
Increase in banking house, fur-		Increase in surplus fund.....	190,542
niture and fixtures.....	19,767	Increase in deposits.....	1,164,077
Increase in other real estate....	10,993	Increase in due to banks.....	67,043
Increase in checks & cash items	63,142	Decrease in overdrafts.....	68,146
		Decrease in re-discounts.....	216,366

The six new banks named above and included in this report have added \$156,250 to the aggregate of capital stock. The American Exchange Bank, Duluth, has increased its capital from \$75,000 to \$100,000. The losses from capital have been \$25,000 by withdrawal of the Dover Bank, and \$800 by decreased capital of the Citizens' Bank, Minneapolis, leaving the net gain as given above (\$155,450).

The net increase in surplus fund is made up as follows:

Bank of Farmington, increase.....	\$1,000	
City Bank, Minneapolis, increase.....	8,000	
Security Bank, Minneapolis, increase.....	143,964	
Capital Bank, St. Paul, increase.....	15,000	
German-American Bank, St. Paul, increase.....	25,000	
Kandiyohi County Bank, Willmar, increase.....	15,000	
	<hr/>	\$207,964
The Dover Bank (withdrawn), decrease.....	\$9,010	
Meeker County Bank, Litchfield, decrease.....	900	
Bank of Zumbrota, decrease.....	7,511	
	<hr/>	17,421
Net increase.....		\$190,543

There is no provision in our laws requiring the setting apart of any surplus fund by the State banks, but for the encouragement of this commendable practice it is provided by sec. 47, chap. 77, Laws of 1881, that "the permanent surplus fund" of any association may be aggregated with the capital stock in order to determine the limit of loans to any one person, company, corporation or firm. The language of the law is undoubtedly intended to give this benefit only to those banks whose surplus is held inviolate and indivisible, and as a working fund scarcely less permanent than the capital itself, and the changes noted are presumed to have been made intelligently with this provision in view.

The increase in capital, surplus and deposits of individuals and of banks aggregates nearly \$1,600,000, which amount, by the decrease in bills payable and in profits at the date of the reports, is reduced to nearly \$1,300,000, on the strength of which over three-quarters of a million of additional loans have been made, \$90,000 of stocks purchased, \$30,000 added to bank buildings and furniture and other real estate, nearly \$300,000 added to deposits in other banks, and \$165,000 held as additional cash on hand. It is gratifying also to note that the over-

drafts have been decreased over \$68,000 as compared with the aggregate statements of last year.

RESERVE OF AVAILABLE FUNDS.

The statutes (chap. 77, sec. 49, Laws 1881) require that "each association shall at all times have in hand in available funds an amount equal at least to twenty per centum of all its immediate liabilities."

The "immediate liabilities" (as defined in the statutes) of the twenty-four banks included in this report amount to the sum of \$7,147,197.92, being made up in this instance of "all deposits due to individuals, firms or corporations, or to banks," and of dividends unpaid. The twenty per cent. of this sum to be held by the banks as reserve is \$1,429,439.58. The amount actually held by the banks on September 30 last, as verified by them, was \$2,027,588.80, or nearly twenty-eight and four-tenths (28.4) per cent. of immediate liabilities. Whether this is only a curious coincidence, or is to be regarded as indicating a general rule of the banks, it is perhaps too soon to determine, but the percentage is the same as reported last year.

Ten per cent. of the liabilities (\$714,719.79) may consist of deposits in good solvent banks, and ten per cent. shall be held in reserve as cash on hand. The total amount of cash on hand (as defined in the law) held by the banks at the date of the reports, was \$745,029.28, or over ten and four-tenths (10.4) per cent. of their immediate liabilities, and the aggregate deposits in "good solvent banks" was \$1,282,559.52, or over seventeen and nine-tenths (17.9) per cent. of such liabilities.

As to the above percentages as they regard the individual banks, one bank shows but 15.1 per cent. of its immediate liabilities on hand in available funds, one held but 18.8 per cent., two had 19.5 per cent., and one had 19.8 per cent., while six banks had between twenty and thirty per cent., four banks held between thirty and forty per cent., two banks between forty and fifty per cent., five banks between fifty and sixty per cent., one bank between sixty and seventy per cent., and one bank held nearly ninety per cent. of such liabilities in cash on hand or credits in good solvent banks.

Seven of the banks fall below the statutory ten per cent. required to be held as cash on hand, the amounts so held ranging from seven (7) to nine and seven-tenths (9.7) per cent. of their immediate liabilities.

It is evident from the returns made that several of the banks have misapprehended the language of the law through neglect to consider the same, or otherwise, although its very plain words are transferred to the schedule of the blank report calling for the calculations of reserve. Six of the banks omit their time certificates from their immediate liabilities, two omit their dividends unpaid, and one omits the item "due to banks" from their calculations, although the italicized legal wording before them reads, "immediate liabilities shall include all deposits due to individuals, firms or corporations, or to banks, and all items in the nature of claims payable on demand."

So, also, on the other hand, five banks count their "checks and cash items" in cash on hand, though the quotation from the law transferred to the blank report reads, "in cash on hand shall be counted specie, legal-tender notes, and all bills of solvent banks." It is to be expected hereafter that the banks will regard these definitions as technical only, and therefore capable of only a literal construction, meaning exactly what they say. Two banks also reckon their Clearing-House exchanges in cash on hand, although it is evident that whether such exchanges are really cash or not cannot be determined until the balance is struck at the clearings of the next morning.

LIMITATION ON LOANS.

In my reports to you of examinations of the banks, which are by law required to be rendered "forthwith," I have had occasion to criticise the excessive favors granted to single individuals, firms and companies by some few banks. In almost every one of these cases the point raised by the banks was as to the classes of paper which are excepted from the limitations of sec. 47, chapter 77, G. L. 1881. The banks in all such cases have held that loans secured by warehouse or elevator receipts were exempted from the limitation imposed by that section, although it is impossible to see how its language would bear them out in any such interpretation.

That this recent provision of our statutes might, however, receive a construction which had the weight of authority, the opinion of the Attorney-General was at once sought and received under date of March 6, 1882, as follows:

"You ask my opinion as to the limitation imposed on State banks by sec. 47, chapter 77, G. L. 1881.

"This section seems to me to be reasonably clear. The first clause provides plainly and specifically that 'the total liabilities to any association of any person * * * * for money borrowed * * * * shall at no time exceed fifteen per cent. of aggregate amount of capital stock of such association actually paid in, and of the permanent surplus fund of such association.' If the provisions of the section stopped here it seems to me clear that the gross amount of money which any one individual could legally borrow in any manner from a State bank would be fifteen per cent. of the capital paid in and of its permanent surplus, irrespective of the character, kind, or amount of security given or offered. The limitation is absolute and unconditional. From this positive and sweeping restriction, however, the last clause of this section makes two exceptions and only two.

"First. 'The discount of bills of exchange drawn in good faith against actually existing values.'

"Second. 'The discount of commercial or business paper actually owned by the person negotiating the same.'

"The first of these exceptions needs no elucidation. The meaning of 'bills of exchange' is well known in the commercial world. The

second is equally clear. It must be 'commercial or business paper actually owned by the person negotiating the same.' This would exclude accommodation paper, and by no possible fair construction could be twisted so as to include a person's own note, however well secured. If the latter construction were given it would nullify the body of the act.'

This opinion conforms to the invariable rulings under the national act from which the language was taken, a less restricted limit for loans being fixed by our statute, however, in consideration of the more limited capital of the majority of the State banks.

As to whether the above class of paper should be excluded from the limitation, a question arises of an entirely different character, and upon which much may be said. Some difficulty in enforcing the same provision of the national act (sec. 5,200, R. S. U. S.) has been experienced. I quote from the recent report of the Comptroller of the Currency on this point. "In cities where large amounts of produce are received and stored, it is represented that it is impossible for the banks to transact this class of business if restricted to loans for an amount not exceeding one-tenth of their capital. It is true that the limitation does not apply to loans upon produce in transit, where the drafts are drawn on existing values; but if produce is stored instead of being shipped, large loans cannot be made except in violation of law. * * * * It is evident that the law should be so amended as to exclude from the limitation mentioned legitimate loans upon produce or warehouse receipts and some other classes of collateral security, as well as loans upon United States bonds."

This language is equally pertinent as it regards loans under our State law. A serious objection, however, to excluding from the limitation the class of loans under consideration arises from the fact, as found in my experience, that the makers of the loans are oftentimes large stockholders in, or even entire owners of, the elevators whose receipts are held by the banks as collateral security. In these cases both the money and the security therefor seem to be in the borrower's hands, and a disaster damaging to, or destroying, the produce stored might seriously affect at the same time the value of the security and the credit of the borrower.

As the section regarding the amount of capital stock to be paid in cash before a State bank can be granted a certificate of authorization to commence business (sec. 10, chap. 77, G. L. 1881) is capable of misconstruction, I would respectfully recommend that its language should be so changed as to leave no doubt in any mind upon this point.

BANK REPORTS.

Public attention has been called to the subject of the quarterly reports of the State banks, published during the present year, and for the first time for many years, in the newspapers at the capital of the State. I quote literally from the law (sec. 34, chap. 33, G. S. 1878) under which this publication is made. Each bank is required to make

and transmit to the State auditor, a report, sworn to by the President and Cashier, "containing a true statement of the following items on the morning of the first Monday of January, April, July, and October, before any business of that day: Loans and discounts, overdrafts, due from banks, due from directors of said bank, due from broker, real estate, specie, cash items, stocks, and promissory notes, bills of solvent banks, bills of suspended banks, loss and expense account, capital, circulation, amount due to State treasurer, amount due to depositors on demand, amount due not included under either of the above heads; and the auditor shall publish said report once in some newspaper printed at the capital of the State, and in the county in which said bank or banks are located, if any, and the expense thereof shall be defrayed by the banks."

I would respectfully submit that a report of the above character is almost wholly without value, in that, being rendered at a fixed date, it may be prepared for in advance, and in that it may fail, if the law is fully complied with, to give any satisfactory knowledge of the condition of the bank. In the form here legalized a bank may struggle on the verge of insolvency for months, and neither public or official attention be called to the fact by the report.

To possess value, the report should be called for by the auditor on any past day by him selected, and under penalties for delay, and the report be forwarded to that officer, accompanied by such proof of publication in the vicinity of the place of business of the bank as the auditor may require. Such reports, if properly detailed, could hardly fail to indicate the direction in which the examiner's services should be required.

THE SAVINGS ASSOCIATIONS.

The number of these organizations remains the same as at the date of my last report. It is a cause of congratulation that under the provisions of the act of 1879 (chap. 109, G. L. of that year) no more of these mixed organizations, which under the name of savings banks are transacting a large business of a commercial character, can be organized, and it is to be hoped that the Legislature will be wise enough to refuse all applications for special laws, exemption from penalties, &c., under which risks are incurred by savings banks not contemplated in the name, and under which some of our State banks are exercising the functions and using the methods which distinctively belong to savings associations. In this I wish to cast no discredit upon existing organizations, as they are well and ably and safely managed, and are as free from objections as they can well be while doing business under assumed names, or while their business is involved in other organizations which the examiner has no power to inquire into. It is my hope that the few savings associations now existing will soon become strong enough to stand alone, as it is my recommendation that they be consolidated wherever possible, or separated from private, State and national banks,

and reorganized under the act of 1879, made, if need be, acceptable to all, while retaining every safeguard needful for the full protection of the interests of the smallest and most dependent depositors.

A statement of the condition of each of the six savings associations of the State on September 30th last will be found in Appendix E.

A summary of these statements is here given:

SUMMARY OF REPORTS OF SAVINGS BANKS.

September 30, 1882.

RESOURCES.	LIABILITIES
Invested in mortgages (6 banks) \$1,148,480	Capital stock paid in (2 banks) .. \$150,000
Invested in stocks and bonds (4 banks) 202,293	Surplus fund (2 banks) 22,910
Loans on personal and collateral security (4 banks) 638,208	Other undivid'd profits (3 banks) 14,094
Total investments..... \$1,988,981	Savings deposits (6 banks) \$1,681,530
Overdrafts (1 bank) 8,475	Subject to check (2 banks) 279,869
Furniture and fixtures (4 banks) 6,796	Certificates (3 banks) 120,189
Real estate other than banking house (three banks) 7,129	Total deposits 2,081,589
Expenses and taxes (5 banks) ... 12,198	Due to other banks (3 banks) .. 11,759
Due from other banks (5 banks) 170,470	Notes and bills re-discounted (1 bank) 85,000
Cash on hand (4 banks) 54,744	Other liabilities (2 banks) 2,774
Other resources (4 banks) 68,329	
Total..... \$2,318,128	Total... .. \$2,318,128

Number of open savings accounts, 7,140; average amount due each depositor, \$235.51; interest accrued and not credited (three banks), \$24,370.

"Other resources" is principally made up of checks, cash items and exchanges for Clearing-House, commissions and interest paid, and of stocks and bonds purchased by the banks, as distinguished from loans upon the same as security.

As compared with last year's statements, the material changes are as follows:

Increase in loans upon mortgages.....	\$380,870	
Increase in loans upon stocks and bonds.....	105,755	
Increase in loans upon personal or collateral security.....	55,963	
Increase in total investments.....		\$522,589
Increase in capital stock.....		24,950
Increase in surplus.....		5,183
Increase in savings deposits.....	\$442,521	
Increase in check deposits.....	70,737	
	\$518,258	
Decrease in certificates.....	11,855	
Increase in total deposits.....		\$501,402
Increase in due from banks.....		38,653
Increase in due to banks....		2,492
Decrease in cash on hand.....		68,343
Decrease in other real estate		12,992
Increase in number of open savings accounts.....		1,898

It appears from the above summaries and the detailed statements of the banks, that while the savings deposits exceed four-fifths of the whole amount deposited in the six banks, and that notwithstanding the great preponderance of increase in the savings deposits during the year, yet half of the number, or three of the banks, held in deposits subject to check, or on certificate, the sum of \$400,058.96.

It also appears that while the mortgage loans comprise nearly three-fifths of the whole amount of loans, and notwithstanding also the great preponderance of increase in this class of investments, yet that the amount loaned on other securities equals the sum of \$840,501.52.

As it regards conformity with the laws regulating the investments of savings banks, the only bank organized under the act of 1879 has savings deposits amounting to \$1,014,972.99, which sum is nearly equal to the aggregate of all the deposits of the other five banks. This bank, while exceeding somewhat the seventy per cent. of deposits which the law permits to be invested in mortgage securities, has but one-eighteenth part of its deposits loaned upon personal securities, one-fourth part of such loans being allowed under certain restrictions by law. The remainder of its loans are predicated upon the bonds and other interest-bearing obligations of counties, cities and villages, towns, and districts, under sub-division 3 of section 26 of chapter 109, General Laws of 1879.

The total mortgage investments of the other five banks amount to the sum of \$407,874.47, their savings deposits to \$666,557.75, and their total deposits to \$1,066,616.71. The requirement of the law in regard to these banks is that they shall invest at least one-half of the whole amount deposited in the stocks or other securities of the United States, or that they shall loan the same on unincumbered real estate worth at least double the amount to be secured. The above figures show that but thirty-eight and two-tenths (38.2), instead of fifty per cent. "of the whole amount deposited" is so invested. The language quoted probably was used many years ago when the acts were drawn on the supposition that the banks were saving banks only and would receive savings deposits only. The percentage of mortgage investments to savings deposits alone is sixty-one and two-tenths (61.2) per cent.

THE BANKING STATISTICS OF THE STATE.

I continue the tables showing the statistics and the growth of the banking business of the State in its most important particulars, viz. : the annual increase in the number of banks, in capital and surplus, and in deposits and loans.

The figures for the national banks are collated by the favor of the Comptroller of the Currency from the official reports of the banks rendered to him for the morning of Tuesday, October 3, 1882. Those representing the State and savings associations of Minnesota are taken from appendices D and E of this report, being from official statements of

their condition on (practically) Monday morning, October 2, 1882. As heretofore, the figures of the private banks are unofficial, and pertain only to the total number of such banks and their capital and surplus (as far as given) in the July, '82, edition of Rand, McNally & Co.'s "Bankers' Directory." Unfortunately my application was deferred to too late a date to enable me to obtain the official returns of their capital and deposits as returned by the private banks to the Internal Revenue Department for taxation. The official figures may be presumed to differ somewhat from those here presented.

The statistics of all the banks for 1881 are here repeated for comparison with those of 1882, and as exhibiting the remarkable growth that is annually taking place in these institutions:

NUMBER OF BANKS IN THE STATE.

	1881.	1882.	Increase.
National.....	27	33	6
State.....	19	24	5
Savings.....	6	6	0

63 Banks. Totals.....	\$22,910,809	\$27,147,343	\$4,236,534

SUMMARY OF INCREASE.

Increase in number of banks.....	27
Increase in capital stock (97 banks).....	\$1,360,358
Increase in surplus fund (51 banks).....	409,553
Increase in individual deposits (63 banks).....	2,700,871
Increase in loans and discounts (63 banks).....	4,236,534

The grand total of the combined capital, surplus and deposits of the banks of the State, so far as they can now be tabulated, is shown to be thirty-three millions, seven hundred and sixty-two thousand, four hundred and ninety-one dollars (\$33,762,491). The total amount of loans predicated thereon is twenty-seven millions, one hundred and forty-seven thousand, three hundred and forty-three dollars (\$27,147,343). The deposits and loans of the 116 private banks not attainable would add most materially to the very respectable and gratifying exhibit here made of one branch of our commercial activities.

UNINCORPORATED BANKS.

It is to be regretted that the statistics above cannot from year to year be made complete by the addition from official sources of the returns of private banks. It is a matter not easily explainable why so respectable a class of these institutions, numbering nearly double the three classes of banks rendering official reports and subject to examination at all times, should not also be regulated by law.

In my opinion the minimum amount of capital stock now required in order to a successful application to the State for a charter might well be so reduced as to encourage the private banks to organize under our laws. To the general public but little distinction is made between them and corporate institutions, especially as they almost invariably assume corporate names. In the list of the 116 private banks of the State referred to above, only twenty-one indicate their personal or co-partnership character. Forty-eight have taken the name of "the bank of" the place of location. Twenty-two assume the title of the bank of the county within which they are situated, and the remaining twenty-five have adopted a variety of other corporate names. It is evident that in the allowance of this practice a great injustice is done to the legalized banks, and that all private banks should be brought into this class, or forbidden names which fail to distinguish them as owned and operated by individuals or firms, and as not subject to any legal regulations.

The matter of the continuance of the silver coinage has been brought up before committees of both houses of Congress with a result that does not indicate a satisfactory conclusion. The total coinage of silver dollars up to February 1 was \$135,405,080. Of this amount 97 1-2 millions are in the Treasury, and 38 millions in the hands of the people. Of the amount in the Treasury 68 1-2 millions are held against certificates outstanding, and 29 millions are owned by the Government. The forced coinage of silver will soon cause such an inflation of the currency that an export of coin will be necessary, and it is certain to consist of gold. The substitution of debased silver coinage for the existing gold currency can no longer be contemplated without disquietude.

A BANK PRESIDENT'S SALARY.—An Inquiry.

A valued correspondent and friend of the JOURNAL, makes one or two inquiries which, being of a general character, admit of a reply that may meet the case of others, as well as his own.

The inquiries relate to the remedy under a Savings Bank Law similar in terms to that of the State of New York, against unreasonable or needless expenditure in the way of salaries &c.

It is claimed that the President * receives a salary for little more than nominal services. Also that a relative of the President receives a salary larger than is given in National Banks or other financial institutions, for like services and responsibilities.

As this can only be done by the action of the Board of Trustees, of course we must look to the law for the remedy against the trustees.

Probably, we may say, an action might be maintained by any depositor, for such useless or needless or excessive expenditure as would either materially diminish his profits, or dividends, or, by preventing the accumulation of surplus, impair the security of his deposit. But the practical difficulty in such a proceeding would be that the interest of any one depositor would be so small that it would be no object for him to institute an action. In short, it would be like many other cases in which the law may be invoked, there is no doubt of the *right*, and little or no doubt that the courts would enforce the right, but the trouble and expenses of the proceeding would be a great deal more than the recovery. Hence a prosecution for malfeasance, while doubtless maintainable under the conditions above stated, is hardly practicable.

The Superintendent of the Bank Department in this State, or corresponding official in other States having similar laws, could doubtless reach the difficulty, if the evil were brought to his notice through an examination under the law, and he should find the abuse such as in his judgment demanded correction.

He might, however, decline to interfere unless the abuse was very palpable and gross, or the condition of the bank such that the utmost economy was necessary for security. Thus, if he should find that the rate of expenditure was such as to leave very little or no margin for surplus, he might very naturally and properly hold that the action of

* Readers of the JOURNAL know that we have consistently advocated the payment of ample (not extravagant) salaries to the officers of banks who really have the work and responsibility of the conduct of the business. But mere figure-heads should either consider the honor of holding fine positions as a full consideration for their services, and should therefore receive no salary, or else step down and out.

the trustees in paying larger salaries than was usual in banks in that locality, was conducting business in an unsafe manner. When satisfied of that it would then be his duty, and within the scope of his authority, to direct a discontinuance of the unsafe practice. Should his order in the premises be disregarded then he could report the facts to the Attorney-General, whose duty it would be to commence such action as he should deem best calculated to correct the abuse. It might be for the removal of the trustees or such of them as had offended, or such other remedy as he might deem most effective. The first step is to get the facts of the abuse before the examining officer through an official examination. He then has a clearly defined legal basis on which to act, if he finds the *facts* such as to warrant action.

There is cause for much satisfaction that the liquidation of the City of Glasgow Bank has been brought to a termination. The rapidity with which this has been accomplished reflects great credit both on the shareholders of the bank and on the liquidators. Among the many gigantic swindles that have disgraced the fair name of the greatest commercial nation the world has ever seen, this bank has had pre-eminence for the severity with which its misdeeds have pressed on its innocent victims. The number of proprietors when the bank closed its doors on 1st October, 1878, was about 1,270; and the number of separate individuals who were placed on the list of contributories (as originally framed) was 1,819. Some alterations were afterwards made, but the latter number may be taken as practically representing the number of individuals who were called on to meet the liabilities of the bank. These contributories held £846,464 of the bank's capital, the balance being represented by stock held in name of the bank. Calls to the amount of £2,750 per £100 of stock were made. After paying up £3,540,910, about 1,570 contributories, holding £757,342 of stock, were exhausted, and had to surrender their interest in the bank. The contributories remaining solvent, numbering seemingly about 250, paid £2,450,855 on £89,122 of stock. Thus almost six millions of pounds sterling were wrung from the unfortunate shareholders, without taking into account the price paid for the stock. The total amount of liabilities met—including all expenses of the liquidation—has been £13,644,856, as against £12,404,297, the estimated amount of liabilities at the date of stoppage. The difference in these sums consists chiefly of expenses and interest. The assets of the bank have thus produced £7,653,091.

Notwithstanding the great exertions made by the shareholders, there was for some time grave fear of a further call being necessary. This was averted by the expedient of forming a company to take up the unrealized assets of the bank.—*Scottish Banking and Insurance Magazine*.

BANKING LAW—LATEST CASES.

REPLIES TO LAW AND BANKING QUESTIONS.

[The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of subscribers, further information regarding any case referred to herein, and will answer such questions in banking law as may be of sufficient general interest to warrant publication. A charge is made for special replies when not to be published.]

RATE OF INTEREST—AFTER MATURITY OF PROMISSORY NOTE.

SHAW V. RIGBY.

(*Supreme Court of Indiana, November 27, 1883.*)

The rate of interest stipulated in a promissory note will be the rate to be paid after the maturity of the note, when by its terms it is evident that it was the intention of the parties that that rate should be paid.

A suit was brought upon a note and mortgage. The note was as follows :

\$723.00.

JANUARY 12, 1872.

One day after date, we promise to pay to the order of Elias Rigby seven hundred and twenty-three dollars, with 10 per cent. interest, value received, without any relief from valuation or appraisal laws.

HARRIET E. SHAW,
GEORGE P. SHAW.

The plaintiff recovered the principal with interest at ten per cent. and that the mortgage be foreclosed. The defendants appealed on the ground that the interest after the maturity of the note was the legal rate of six per cent. not the rate (ten per cent.) stated in the note.

Judge Howk: In *Kilgore v. Powers*, 5 Blackf. 22, the note in suit, a copy of which is in the opinion, contained the same stipulation, in the same words and figures, in regard to interest, as is contained in the note sued upon in the case at bar. The point was made, in the case cited, that interest at ten per cent. should only have been allowed up to the time when the note became due, and from that period that only six per cent. should have been allowed. The trial court had given interest at the rate of ten per cent. from the date of the note to the time of judgment, and the defendant claimed that this was error. Upon this point the court said: "In this the defendant is mistaken. The interest is correctly calculated, conformably to the terms of the contract." For more than forty years the doctrine of the case cited was the rule, recognized and acted upon by the courts of this State, in determining the amount of interest to be allowed in suits upon interest-bearing contracts. In *Burns v. Anderson*, 63 Ind. 202, decided in 1880, this

court overruled the case of *Kilgore v. Powers*, *supra*, and prescribed a different rule for the computation of interest on an interest-bearing contract, after its maturity, where the contract itself did not in terms provide the rate of interest, if any, it should bear after it became due. In *Burns v. Anderson*, *supra*, this court adopted and followed the rule laid down by the supreme court of the United States in *Brewster v. Wakefield*, 22 How. 118. In that case, in pronouncing the opinion of the court, Mr. Chief Justice Taney said : "The contract being entirely silent as to interest, if the notes should not be punctually paid, the creditor is entitled to interest, after that time, by operation of law, and not by any provision in the contract." The rule thus declared was to give the contract rate up to the maturity of the contract, and thereafter the rate prescribed by statute, in cases where the parties themselves have fixed no rate ; and this rule has since been approved and followed by the supreme court of the United States in the later cases of *Burnhisel v. Furman*, 22 Wall. 170 ; and *Holden v. Trust Co.*, 10 Otto, 72. If we adhere to the rule declared in *Burns v. Anderson*, *supra*, there can be no doubt but that the trial court erred, in the case now before us, in assessing the amount of appellee's recovery. For, in that event, we must hold that the appellee was entitled to recover interest, at the rate of ten per cent. per annum, for only one day, and that for the eight years, nine months, and thirteen days, which intervened between the maturity of the note in suit and the date of the rendition of judgment thereon, he was only entitled to recover interest at the rate of six per cent. per annum. We are earnestly requested by the appellee's counsel to overrule the case last cited, upon the point under consideration, and to reassert the rule declared in *Kilgore v. Powers*, *supra* ; and this, we think, ought to be done. In the recent case of *Union Institution, etc. v. Boston*, 129 Mass. 82, upon the question we are now considering, Gray, C. J., said "that the interest after the breach of the contract, though not strictly recoverable as part of the debt, but rather as damages, is ordinarily to be measured, according to the intention manifested by the contract, by the standard thereby established." This view of the question meets our full approval.

In this case the intention of the parties to the contract is clearly shown by the record. Although the note in suit was made payable one day after date, yet the execution of the mortgage by the appellants and the recording of the mortgage by the appellee, as it seems to us, clearly indicate that it was not the intention nor the expectation of the parties to the note that it should be paid at maturity, or, if not then paid, that it should bear a less rate of interest than the stipulated rate of ten per cent. The interest on the note at ten per cent., for one day only, would not pay the one half of the ordinary expenses of the parties in the drafting, acknowledgment, and record of the mortgage. It is evident, we think, that it was the intention of all the parties that the debt, evidenced by the note and secured by the mortgage, should

be allowed to stand for an indefinite period of time, perhaps for years, as a debt secured and bearing interest at the rate of ten per cent. per annum. If the intention of the parties as shown by their contract should be regarded, as in our opinion it should be, as the proper standard for the measurement of the plaintiff's damages, after the maturity of the note in suit, then it is clear that the trial court committed no error in this case in its assessment of the amount of the recovery. Upon the point under consideration we are satisfied that this court fell into an error in *Burns v. Anderson*, supra; and therefore, upon that point, that case, and the case of *Richards v. McPherson*, 74 Ind. 158, must be and are overruled.

The rule now declared has been approved by the decisions of the courts of last resort in many of the States of the Union. See *Brannon v. Hartsell*, 112 Mass. 63; *Corcoran v. Doll*, 32 Cal. 82; *Hopkins v. Crittenden*, 10 Tex. 189; *Wilson v. Marsh*, 2 Beasley, 289; *Heartt v. Rhodes*, 66 Ill. 361; *Spencer v. Maxfield*, 16 Wis. 541; *Pruyn v. Milwaukee*, 18 Ib. 367; *Hand v. Armstrong*, 18 Iowa, 324; *Thompson v. Rickel*, 20 Ib. 490; *McLane v. Abrams*, 2 Nev. 199; *Overton v. Bolton*, 9 Heisk. 762; *Monnett v. Sturges*, 25 Ohio St. 384; *Marietta Iron Works v. Lottimer*, 25 Ib. 621; *Warner v. Julif*, 38 Mich. 662; *Cecil v. Hicks*, 29 Gratt. 1; *Entyre v. McDaniel*, 28 Ill. 201. *Judgment affirmed.*

BANKING—PROTEST—SEAL. 2.—SAME—PRESENTATION OF DRAFTS IN FOREIGN COUNTRIES.

PIERCE V. INDSETH.

(*Supreme Court of the United States, February, 1883.*)

The impression of a notary's seal need not be made on wax or any other separate impressionable material; it is sufficient if made on the paper itself by means of a die.

When the laws of a foreign country give the holder of a foreign sight bill of exchange a year in which to present it for payment, unless the maker is injured by the delay in presentation, no advantage can be taken of this delay by him.

Indseth brought an action to recover from the drawers of a sight bill of exchange on a bank in Norway, the amount of the draft, it having been protested. The defendants, below, were bankers at Red Wing, Minnesota, and made the draft on the Christiana Bank of Kredit Kasse, Christiana, Norway, for 15,441.50-100 kroner (\$4,469.35) in favor of Indseth, who resided near Eldsvold, Norway. It was purchased by his agent in Minnesota and sent to Indseth in Norway; he received it February 27, 1877, but did not present it for payment until April 12. The drawers were notified by letter from the plaintiff, and by the original certificates of protest of the non-payment of the drafts about May 15, 1877. There was no money to meet the draft when it was made, but Skow, Petersen, Isberg & Co., bankers, at Chicago, were to provide for it. This firm failed and made an assignment on March 21, 1877, and the money to their credit in the bank in Norway, which

was sufficient to pay this draft, but no part of which had been set apart to meet it, was paid over to the assignee. The residence of Indseth was about fifty miles from Christiana, with which there was daily communication by mail and railway. A copy of the protest was put in evidence by the plaintiff, and the original was afterwards produced in evidence by the defendants, and by that it appeared that the seal of the notary was impressed, not on wax or any other separate impressionable substance, but was stamped on the paper by a die, with which ink was used. To meet the objection of unnecessary delay in presenting the bill for payment, the plaintiff produced evidence that by the laws of Norway the holder of a foreign bill of exchange, payable at sight, is allowed a year after its date to present it for payment; and that the drawer is not relieved from liability if the presentation be not made within the year, unless he can prove that owing to the delay he has suffered a loss in his accounts with the drawee. The plaintiff recovered a judgment in the United States Circuit Court D. of Minnesota, and the defendant carried the case to the Supreme Court of the United States, by whom the judgment was affirmed. Mr. Justice Field, in the opinion, said:—The certificate of the protest of the bill of exchange by the notary in Norway was properly received in evidence. It is in due form and bears what purports to be the seal of the notary. The seal, it is true, is impressed directly on the paper by a die with which ink was used. This is evident from inspection of the original, which has been transmitted to us from the court below for our personal examination. The use of wax, or some other adhesive substance upon which the seal of a public officer may be impressed, has long since ceased to be regarded as important. It is enough, in the absence of positive law prescribing otherwise, that the impress of the seal is made upon the paper itself in such a manner as to be readily identified upon inspection. The language used in *Pillow vs. Roberts*, reported in 13 Howard, as to the sufficiency of a seal of a court impressed upon paper instead of wax or a wafer, is applicable here. Said the court, speaking by Mr. Justice Grier: "Formerly, wax was the most convenient and the only material used to receive and retain the impression of a seal. Hence it was said: *Sigillum est cera impressa; quia cera, sine impressione non est sigillum*. But this is not an allegation that an impression without wax is not a seal, and for this reason courts have held, that an impression made on wafers or other adhesive substances capable of receiving an impression, will come within the definition of *cera impressa*. If, then, wax be construed to be merely a general term including within it a substance capable of receiving and retaining the impression of a seal, we cannot perceive why paper, if it have that capacity should not as well be included in the category. The simple and powerful machine, now used to impress public seals, does not require any soft adhesive substance to receive or retain their impression. The impression made by such a power on paper, is as well defined, as durable, and less likely to be

destroyed or defaced by vermin, accident, or intention, than that made on wax. It is the seal which authenticates, and not the substance on which it is impressed, and where the court can recognize its identity, they should not be called upon to analyze the material which exhibits it." Here there is no difficulty in identifying the seal. The impression, which is circular in form, has within its rim the words "Notarial Seal, Christiana." Besides, the court will take judicial notice of the seals of notaries public, for they are officers recognized by the commercial law of the world. We thus recognize the seal to the document in question as that of the notary in Norway, and as such authenticating the certificate of protest and entitling it to full faith and credit. *Greenleaf's Ev.*, sec. 5; *Story on bills*, sec. 277; *Townsley vs. Sumrall*, 2 Peters, 179; *Chanoine vs. Fowler*, 3 Wend., 173; *Carter vs. Burley*, 9 N. H., 559, 568; *Holliday vs. McDougal*, 20 Wend., 81.

The certificate being admitted proved the presentation of the bill to the bank on the 12th of April, 1870, and its non-payment. That this presentation was made within the period allowed by the law of Norway appears from the deposition of a lawyer of that country, taken under a commission from the court. That law allowed a year after the issue of the bill for its presentation; and on the question of timely presentation the law of the place where a foreign bill of exchange is payable governs, and not the law of the place where it is drawn. In giving a bill upon a person in a foreign country, the drawer is deemed to act with reference to the law of that country, and to accept such condition as it provides with respect to the presentment of the bill for acceptance and payment. Thus, where days of grace on bills are different in the two countries, the rule of the place of payment must be followed. In England and the United States three days of grace are usually allowed; in France there are none, and in some places the number of days varies from three to thirty. Whatever is required by law to be done at the place upon which the bill is drawn, to constitute a sufficient presentment either in time or manner, must be done according to that law; and whatever time is permitted within which the presentment may be made by that law, the holder may take without losing his rights upon the drawer, in case the bill is not paid. So, also, if the bill be dishonored, the protest by the notary must be made according to the laws of the place. It sometimes happens that the several parties to a bill, as drawers or endorsers, reside in different countries, and much embarrassment might arise in such cases if the protest was required to conform to the laws of each of the countries. One protest is sufficient, and that must be in accordance with the laws of the place where the bill is payable.

In this case the bill having been protested the drawers were notified of its dishonor by letter from the payee, received by them on the 15th of May following, and also by personal delivery at about the same time of the original certificate of the protest, with a translation of it

into English, to one of the drawers by an agent of the payee, to whom they were transmitted for that purpose. No question is made that this notice was not sufficient to charge the drawers.

We have thus far assumed that the drawers were entitled to notice of the presentation and non-payment of the bill. But it may be doubted whether such was the fact. They had no funds with the bank in Norway when the bill was drawn, or at any other time, and they relied for its payment upon the advices of third parties. Although such third parties had funds at the bank after the bill had been received by the payee in Norway, there is no evidence that they ever advised the bank to pay the bill out of such funds. It is found by the court that the bank never set apart any portion of them to meet the bill. The cable dispatch of the drawers, of which the letter of February 15th speaks, if it ever reached the bank, does not appear to have induced it to give them any credit. In the most favorable view, therefore, which could be taken of the position of the drawers, we see nothing which relieves them from liability.

DIVIDENDS ON PREFERRED STOCK—APPROPRIATION OF NET EARNINGS TO IMPROVEMENTS.

NICHOLS V. THE NEW YORK, LAKE ERIE, AND WESTERN R. R. CO.

(United States Circuit Court, S. D. New York, January 1, 1885.)

Preferred stock of a railway corporation was issued under a agreement that dividends should be paid upon it out of the net earnings, in preference to the common stock. The report of the board of directors for the year 1880 stated the amount of the net earnings, and the sum was sufficient to pay the dividend on the preferred stock, but they applied the entire net profits of the business to laying a double track, erecting buildings, and acquiring property. On a bill in equity to compel the payment of the dividend it was *Held*, that the complainants were entitled to a decree that the net profits for 1880 be ascertained, and the dividends due the preferred stockholders be paid.

Bill in Equity to compel the payment of dividends on the preferred stock of a corporation. The defendant was organized as a railway corporation under the laws of the State of New York, by the preferred and common stock and security holders of the Erie Railway Company, pursuant to a plan of reorganization which became a part of its charter. Among other stocks and securities of the new company provided for in the plan to be issued and delivered there was to be specified "preferred stock to an amount equal to the preferred stock of the Erie Railway Company now outstanding, to wit, 85,369 shares of the nominal amount of \$100 each, entitling the holders to non-cumulative dividends, at six per cent. per annum, in preference to the payment of any dividend on the common stock, but dependent on the profits of each particular year as declared by the board of directors. The board of directors in their statement of the operations of the company for the fiscal year ending September, 1880, report : Earnings \$18,693,108.86 ; operating expenses, \$11,643,925.35 ; net earnings from traffic, \$7,049,-

183.51; earnings from other sources, \$783,956.65—making a total of \$7,883,140.16. From this is to be deducted interest on funded debt, etc., \$6,042,510.45, leaving net profit from the operations of the year of \$1,790,620.71. A dividend of six per cent. upon the outstanding preferred stock would amount to \$489,403.50. This whole amount of net profit, together with \$737,119.34 received during the year from assessments on stock, was applied by the directors to the building of double track, erection of buildings, and acquiring of other property. And they “resolved that in the present condition of the property of the New York, Lake Erie & Western Railroad Company its directors do not deem it wise or expedient to declare a dividend upon its preferred stock.” The complainants are holders of the preferred stock transferred to them since the close of the fiscal year 1880, and since the report of their directors, and by their bill of complaint seek among other things that the net profits of that fiscal year be ascertained, and the dividends due the holders of preferred stock in respect thereof be paid.

Judge Wallace, in deciding in favor of the stockholders, said: “There is no question of separating one part of the business from the rest, as there was in *St. John v. The Erie Railway Co.* 10 Blatchf. 271; 22 Wall. 136. There is here a net profit over all expenses of all the operations by which profit was made. It is wanted for judicious improvements of the property looking to future profits. This does not take away its character as a present profit. It would be a profit whether it should be laid out upon the property to enhance its value, or left in the treasury of the company, or divided among the stockholders. This question is somewhat like that in *Union Pacific R. R. Co. v. United States*, 99 U. S. 402. There the question was as to net earnings. There is a difference in some respects between net earnings and profits, but not in this respect. What would be net earnings would be a profit, unless there should be some liability outside the earnings to be met before there could be any profit left. When it comes to the question of using the profits which would go to one set of stockholders for the benefit of another set a more rigid rule should be applied. The question becomes more one of right to be determined by law, than one of policy to be determined by the discretion of the directors. Here were profits in fact, and the preferred stockholders had rights dependent upon this fact. These rights could not lawfully be passed by for the benefit of other interests, however intimately connected, any more than other property of the preferred stockholders could be appropriated to the same purpose, on the ground that such appropriation of it would be for the best good of the whole. These rights are the rights of stockholders and not of creditors, and it is said that stockholders are not entitled to receive dividends until they have been in some manner declared. This is doubtless in general true. It grows out of the contract by which stockholders

became such. Each stockholder in effect agrees to be bound by the corporate action within the scope of the corporate powers ; but there may be other agreements limiting what shall be done in special cases. A corporation may doubtless accumulate its profits instead of dividing them, and a common stockholder would by the determination to do so, however much he might prefer to have his share of them divided out to him, but here was another agreement among the shareholders made a part of the framework of the corporation, that when there were annual profits shown by the official declaration of the directors they should to the extent of six per cent. on their stock be divided among these stockholders. This agreement was warranted by the law of the State, and as embedded in the charter is as binding as any involved in its enterprise. It applies to this first accumulation of profits with the same force as the others do to the rest of the profits. It was not made with the corporation, but was made between the shareholders in prospect before there was a perfected corporation ; therefore the corporation cannot be sued for the breach of it, but it attaches to and affects the profits as they came to the hands of the corporation. This amount of annual profits is received by it in trust for the preferred stockholders, the same as the general profits are for the body of the stockholders. No declaration of a dividend was necessary to complete the equitable right of these stockholders to this amount. *Boardman v. Lake Shore and M. S. R. R. Co.* 84 N. Y. 159 ; *Richardson v. Vermont and Massachusetts R. R. Co.* 44 Vt. 613 ; *Dent v. London Tramways Co.* 16 L. R. Ch. Div. 353. It is further suggested that if these profits were so situated that any one became entitled to share in them on account of the preferred stock, that right would attach to the holders at that time, and would not pass to the orators by a mere transfer of the stock afterwards. Fully declared dividends might not so pass ; but here was no declaration of a dividends upon this stock separating the share of the profits from the other assets belonging to the stocks. The right to share in these profits remained as a mere increment of the stock, and would pass as incident to it. *Boardman v. Lake Shore and M. S. R. R. Co.* supra."

PROMISSORY NOTE—SIGNED BY ATTORNEY—USED BY HIM PERSONALLY.

CANADA SAFE DEPOSIT AND TRUST COMPANY V. ABBOTT.

(*Supreme Court of New Jersey, June Term, 1888.*)

The holder of a promissory note signed by an attorney in fact for his principal, which was issued by the attorney for his own benefit, cannot recover upon it from the principal unless he shows that he took it for value before maturity and in good faith.

An action was brought upon a note drawn to the order of J. R. Abbott and signed T. Abbott by Jesse R. Abbott, who had the following power of attorney : " Sir : This is to certify that J. R. Abbott . . .

is this day appointed with power of attorney, and authorized by me to sign my name to any paper or papers, notes etc. T. Abbott." This note had been discounted by the plaintiff, and it recovered a judgment. The defendant moved for a new trial and succeeded. It appeared by the evidence that the note was given by the attorney, not for the purposes of his principal's business, but for his own benefit.

Judge Dixon, in the opinion, said:—On the trial a question was raised whether the words "notes, etc.," were not added fraudulently after the defendant had executed the instrument, but the jury found against this proposition. Such an inquiry seems scarcely important, for the language of the power, without those words, is so general that it is hardly possible to interpret them in such manner as to exclude an authority to sign notes on proper occasions. But in whichever form the instrument was delivered, it did not justify the signing of notes for purposes outside of the principal's business. *Gulick v. Grover*, 4 Vroom, 463; *Stainer v. Tysen*, 3 Hill, 279. The note in suit was not given for such a purpose, but was put forth for the personal benefit of the attorney, who converted its proceeds to his own use. It was therefore issued under an apparent authority, but in fraud of the principal. The holders of such notes can recover of the principal only on showing that they took them for value, before maturity, and *bona fide*. *Bank v. Aymar*, 3 Hill, 262; *Duncan v. Gilbert*, 5 Dutcher, 521; *Hamilton v. Vought*, 5 Vroom, 187; *Bird v. Daggett*, 97 Mass. 494. The only evidence touching this matter, in the record before us, is that the attorney received the amount of the note, but when, from whom, and under what circumstances do not appear.

1. DELIVERY OF LETTERS AND TELEGRAMS—PRESUMPTION. 2. AGENCY—BORROWING MONEY—RATIFICATION. 3. SAME—EXPENDITURE OF MONEY.

BREED V. FIRST NATIONAL BANK OF CENTRAL CITY.

(*Supreme Court of Colorado, November, 1882.*)

A letter sent by the mail to the usual address of a person will be presumed to have been received by him in due course of delivery; and the same presumption applies to the delivery of telegrams.

Money borrowed by an agent and used in the business and to the advantage of his principal, though he had no authority to make the debt, will be chargeable on the principal, if after notice of the loan, he makes no reply; for his ratification will be inferred from his silence.

Dawley, the mining superintendent of Breed, who resided at Cincinnati, borrowed money from the bank to pay the miners, and gave promissory notes therefor in the name of the mining company of which Breed was the owner, and he and one Thatcher sent letters and telegrams of advice to Breed, addressed to his post-office and residence. No replies were received from Breed. The notes were not paid, and the bank brought suit against Breed and recovered judgment. An appeal was taken but the judgment was affirmed.

The Chief Justice, Elbert, in the opinion, said: Was the jury warranted in believing that Breed received any or all of the several letters and telegrams sent by Dawley and Thatcher. Mr. Greenleaf says that if a letter is sent by post it is presumed from the known course in that department of the public service that it reached its destination at the regular time, and was received by the person to whom it was addressed, if living at the place and usually receiving letters there. This presumption has also been held to apply to telegrams. 1 Greenleaf on Ev., § 40. All of these letters were mailed to Mr. Breed at Cincinnati, Ohio, and there can be no doubt on the evidence but what that city was his usual post-office address. He directed Dawley to send his payrolls to that address, and an extensive correspondence with Dawley extending through several years was put in evidence, and is chiefly dated at that city. In the article of agreement put in evidence by Breed he is described as of the city of Cincinnati. Upon this point the evidence is satisfactory. It seems that about the time of the first overdraft in December Breed was believed by Thatcher to be in California, and he tried to reach him there by telegram as well as by letter directed to Cincinnati. It does not appear that he was absent any considerable length of time. He telegraphed Dawley to stop work on the tunnel about the 27th of April, 1875, and wrote him from Cincinnati, under date of May 11, 1885, acknowledging the receipt of a letter from Dawley dated May 3d. Again, the correspondence of Breed shows him to have been actively engaged in business, and it is hardly to be presumed that he would leave home for any considerable time without arrangements for forwarding or preserving his business letters. It will also be observed that several of Breed's letters are in answer to Dawley's letters received while absent from Cincinnati, and show that they were either forwarded to him or were preserved for him until his return. When it is remembered in connection with these facts that Thatcher's letter was a return letter and never came back to him, and that the letters from Dawley, both prior to and after the overdraft, appear to have reached Breed with due regularity and without any instances of failure, whether in Cincinnati or absent therefrom, the fact of his absence for a time in California does not in our view destroy, or to any great extent weaken, the presumption that the letters containing notice of the overdraft were received by him. As bearing on the question of ratification by appellant, the court admitted testimony showing that the money so drawn was expended upon the appellant's tunnel, upon which the appellant was prosecuting work under the superintendence of Dawley. This was not error. *Union Mining Co. v. Rocky Mountain National Bank*, 2 Colo. 260. *Harris v. School District*, 28 N. H. 58; *Wilson v. School District*, 32 Ib. 118; *Phila.*, etc., *R. R. Co. v. Cowell*, 28 Penn. St. 329.

BANKING AND FINANCIAL NEWS.

Annual Meetings and Elections of National Banks.—The Comptroller of the Currency has replied to an enquiry on the above subject as follows:

TREASURY DEPARTMENT, OFFICE OF THE COMPTROLLER OF THE CURRENCY, }
WASHINGTON, JANUARY 12, 1888.

Sir.—I have received your letter of the 10th. A majority of the stock of a bank should be represented at a regular annual meeting of the shareholders. If a majority of the stock is not represented the meeting should adjourn to a subsequent date. I do not consider that an election of directors by a minority of the stock would be legal. Very respectfully,

JNO. JAY KNOX, Comptroller.

W. D. Munsenden, Cashier First National Bank of Bath.

The national bank law does not seem to prescribe that a majority of the stock must be represented at an annual meeting, but the above ruling has doubtless been made for the best reasons. It is one that should be enacted into law by Congress as well as by every State Legislature. The bane of the banking business is the habit of shareholders of leaving their affairs in the hands of others absolutely without any control or oversight.

We understand that the decision of the Comptroller was based on the following reasons:—The law does not specifically state what amount of stock shall constitute a quorum at the annual meeting of stockholders of a national bank for the election of directors. Section 5,136 of the U. S. revised statutes provides, however, that the association has power "to prescribe, by its board of directors, by-laws, *not inconsistent with law*, regulating among other things, the manner in which its directors shall be elected or appointed." The by-laws can therefore fix what *majority* of stock shall constitute a quorum. But a by-law constituting the representatives of a minority of stock a quorum would be inconsistent with the general principles governing representative bodies, and acts done under such a by-law would be illegal. If there be no by-law governing the point, then acts done at a meeting where less than a majority of the stock was represented would for the same reason be illegal. It would be much better in all cases to have either in the by-laws or in the articles of association a requirement that two-thirds or four-fifths, or some such considerable majority of the stock, should constitute a quorum.

The Silver Dollar in Congress.—The House Committee on Coinage, Weights, and Measures held another meeting to-day to consider the silver coinage question, and adopted resolutions which Representative Belford was instructed to report to the House. The resolutions set forth that in the judgment of the committee it would be

inexpedient at this time to suspend the coinage of silver as now authorized by law. In view of the statement of the Secretary of the Treasury that more storage room is necessary for the accumulated specie, they recommend that the Appropriation Committee make such appropriation as may be necessary to provide additional storage-room, and they further suggest that the proper location is the Mississippi Valley.—*Washington Dispatch, February 5.*

The statement of the Secretary referred to above shows the urgent necessity for providing additional vault room at once for storing silver, or for discontinuing the coinage of the standard silver dollar. He gives the following as the amount in the Treasury January 1, 1883; Standard silver dollars, 94,016,842; fractional silver, \$26,521,692 20; total silver, \$120,538,534 20, or about 3,500 tons.

The action taken by the House Committee on Coinage has been taken to imply that no measure to stop the standard dollar coinage will be passed this session. It should be remembered that the House Committee was named by Speaker Keifer, and it has been pretty well agreed by the independent press that no measure of reform could be expected under such auspices. But the Senate has taken the matter up, and, in spite of the shortness of the time before adjournment, something may be done to prevent the further debasement of the coinage.

The Committee on Coinage on February 7, listened to a statement of Mr. Burchard, Director of the Mint, on a resolution offered by Mr. Payson, which declares that should there be any change in the laws relating to silver, the change should provide for the issuing of silver certificates, upon deposits of silver bullion nine-tenths fine in an assay office, and based upon the weight of the standard silver dollar, 412 1-2 grains.

Mr. Burchard did not favor this idea, deeming the present bullion certificates amply sufficient for every purpose. His theory is that without the international agreement as to the relative values of gold and silver a continuance of the coinage would tend to make this country a dumping ground for the silver of all nations, while the gold would find its way out of the country as fast as imports come in.

President Crane.—The following notice is appended to the resolutions (published on another page) presented to Mr. Stout on his recent retirement from the presidency of the National Shoe and Leather Bank of this city. * * * * "At the same meeting Mr. John M. Crane, who has been connected with the Bank for nearly thirty years—the last seventeen as Cashier—was, on motion of Mr. A. V. Stout, unanimously elected President, and Mr. Henry M. Knapp, late General Bookkeeper, was appointed Cashier."

In nearly every issue the JOURNAL announces the promotion of some tried Cashier to the position of bank President, or some other under officer, faithful to his trust, who has been promoted to a better position. The chance of getting ahead, in large city banks especially, is slow enough at best; and when some favorite of an influential Director is jumped over the heads of faithful employees, they grow sick at heart, their hairs rapidly whiten, and hope gives way to despair. Once in a while we are obliged to record such cases, but happily they are not frequent. Bank managers and directors see that it pays to reward faithful service. Aside from the plain justice of the step, it means dollars and cents in their pockets.

The notice which introduces this comment explains itself. Mr. J. M. Crane has been practically the head of the bank for sometime past. He has

fully earned his promotion, and is already well-known as an officer of marked ability. Mr. Henry M. Knapp, the new Cashier, has filled every place in the bank from office-boy up to his present position. He has not simply occupied these various places, but he has *filled* them, performing faithfully and well the duties of the lowest as well as the highest. This record furnishes the best evidence of his fitness to assume the greater responsibilities to which he has been called.

Amount of the Circulation.—According to a tabulated statement submitted by Mr. Burchard, Director of the Mint, to the Committee on Coinage, Weights and Measures, the amount of circulation in the United States on February 1, 1883, was as follows:

	<i>In Treasury.</i>	<i>In banks and active circulation.</i>	<i>Total.</i>
Gold bullion.....	\$51,449,382	\$51,449,382
Silver bullion.....	3,761,958	3,761,958
Gold coin.....	121,863,451	\$405,510,541	527,373,992
Silver dollars.....	97,530,969	37,874,111	135,405,080
Other silver.....	27,135,244	53,428,257	80,563,501
Gold certificates.....	25,107,300	47,669,640	72,776,940
Silver certificates.....	4,306,650	68,438,820	72,745,470
United States notes.....	33,592,236	313,088,780	346,681,016
National Bank notes.....	10,486,291	350,972,960	361,459,151
Fractional currency.....	7,101	7,010,992	7,018,093
	<u>\$375,245,583</u>	<u>\$1,283,994,001</u>	<u>\$1,659,239,583</u>

The amount of the circulation, \$1,659,239,583, or about \$32 for each man, woman and child in the country, might be expected to satisfy the most ardent inflationists, but it is proposed to issue certificates against deposits of silver bullion on the basis of the weight of the silver dollar. It is certain that there is no use for much more money in the country, and any further inflation will only force an export of gold.

Marking Light Weight Coin.—Treasurer Giffillan has made a statement to the Secretary of the Treasury in regard to the manner of marking light weight gold coin and redeeming clipped silver coin at its bullion value, instead of at its coinage value by weight. He states that "it is the practice of sub-treasury officers to mark gold coins which when tendered at their full face value in payment of public dues, upon being weighed are found to be short of the weight at which they can, under the law, be accepted at their full face value. This is done because of the action of banks, and others in paying out at full face valuation, coins which have been repeatedly returned by the Treasury officials because below the least current weight. To avoid the labor of weighing the same coins over and over again, the coins are marked when they are rejected. The mark is in no sense a mutilation, as it takes away none of the substance of the coin. It does not destroy the legal-tender quality of the coin; nothing under the law can do that which does not destroy the identity of the piece as a gold coin. Gold coins however mutilated or abraded are a legal-tender at their weight. The marking does not affect their value. They are not light because they are branded, but they are branded because they are light. As to silver coins the principle was established nearly two hundred years ago, that the public should bear the loss upon the clipped silver pieces. There is no existing law authorizing the Treasury to take mutilated coin otherwise than by weight, and if the history of clipped coin in England in 1696 is regarded, there probably never will be. Since the action of the mint in receiving mutilated silver coin at its bullion value by weight, such coin has been discredited by the public and has virtually disappeared from circulation. Silver coins, however much reduced in weight by natural abrasion, are redeemable at any sub-treasury at full face value. It would be small penalty or none at all against clipping, should clipped pieces be redeemed at their coinage value by weight.

The hardship that is sometimes complained of in regard to receiving

clipped coin at the Treasury at its bullion value only, arises primarily from the coinage by the Government of a silver dollar worth far less than a dollar's worth of silver bullion. The Treasurer says, "It would be small penalty or none at all against clipping, should clipped pieces be redeemed at their coinage value by weight." But there are other and much more effective penalties against clipping. The penalty mentioned by the Treasury is nearly always imposed upon innocent holders instead of the guilty parties. The decline in the price of silver and the standard dollar coinage have increased this penalty above what the law ever intended.

A Maine Savings Bank Stops.—A run on the People's Twenty-five Cent Savings Bank has caused that institution to stop payment. The run has been quite light, but on account of the prevailing rumors depositors were becoming nervous, and there was an immediate prospect of a general clamor for money. To protect itself and its creditors the bank has early stopped payment until the excitement should subside.—*Dispatch from Bath, Me., January 20.*

The trouble with this institution is that it had \$42,000 on deposit with the Pacific National Bank, of Boston, which failed so disastrously some months since. The State Bank Examiner says that the concern is solvent and that there is no cause for alarm. The deposits amount to \$400,000. The officers probably acted wisely in stopping payment promptly.

Misappropriation of Bank Funds.—An indictment has been found against Abner I. Benyon, President, and Edwin M. Fowle, a Director of the Pacific National Bank, and George R. Eager, Treasurer of the Bay of Fundy Quarrying Company, for wilful misappropriation of bank funds.—*Dispatch from Boston, Jan. 22.*

The indictment was obtained upon the evidence of a written agreement that was recently found by Mr. Linus M. Price, Receiver of the Pacific National Bank. The document is dated Jan. 22, 1880, and its terms called for the purchase of 900 shares of Chrysolite Consolidated Mining Company's stock at \$20 per share. To pay for the same Abner I. Benyon, President, and Edwin M. Fowle, a Director of the Pacific National Bank, discounted four notes, three of which were made by Eager and indorsed by H. F. Miller, and one by John Lothrop. These notes were for \$18,000, and by the terms of the agreement the three were to share equally in the profits of the speculation.

Bank Cashiers' Bonds.—In the New Jersey Senate Mr. Taylor, of Trenton, offered a bill requiring bank cashiers, before entering upon their duties, to give satisfactory security in the amount of \$20,000. There are a number of special provisions by which the bondsmen of a cashier are made responsible for any guilty knowledge which he may possess and refrain from disclosing to the prejudices of the interests of depositors.—*Dispatch from Trenton, January 24.*

The reason for this proposal is doubtless the number of cases of delinquency on the part of cashiers in New Jersey, but it is doubtful if any good would result from it. Large bonds will not compensate for deficiency of character. Safety can only be assured by making close inquiry into the character and antecedents of those who are entrusted with large sums, and then by keeping continuous watch upon their proceedings.

Ruin of Two Jersey City Banks.—The doors of the City Bank of Jersey City, N. J., and of the Fifth Ward Savings Bank in the same building, did not open on December 10, Garret S. Boice, President of the City Bank was also Treasurer of the savings bank, and his son-in-law, Edward E. Shaw, was Cashier of the former. On the previous day the First National Bank, which cleared for the City Bank, refused

to further honor the latter's paper, and upon a meeting of some of the stockholders being held Boice appeared and confessed that he had taken about \$22,000 of the capital. Shaw confessed to a default to the amount of \$24,000. It was said also that Beach the bookkeeper, had been allowed to overdraw for \$3,100. Boice and Shaw have both been living in elegant style. The nominal capital of the City Bank was \$100,000, of which \$50,000 was paid up.

The Directors of the savings bank suspecting trouble immediately made an examination of its condition, and found that bonds belonging to it had been hypothecated by Boice valued at \$25,000, and besides over \$24,000 were deposited with the City Bank.

Chancellor Runyon has appointed Mr. Washington B. Williams Receiver of the City Bank, and has issued an injunction restraining all persons from interfering with him in the discharge of his duties, or from bringing suit against the bank.

Further examination showed that the total amount of the defalcations by the three parties implicated was nearly \$100,000, and all of them were arrested and held, in default of bail, to await the action of the Grand Jury.

The developments in this case prove how loosely the affairs of a bank may sometimes be carried along for years, without any effective oversight by the Directors. Some of those whose names have appeared as Directors of the City Bank claim that they never accepted the position or else withdrew long ago. Mr. Boice, the President, says that he cast the ballots himself on proxies given him by these persons. There had been no regular meeting of Directors for years, so that the business of this concern was left to be the prey of the three officers, who it appears ran it solely for their own benefit.

The cure for this kind of thing, appears to lie in laws that will hold Directors to a stricter responsibility. Men of means should not allow themselves to be used as stool-pigeons, to entrap the unwary. If they do not want the trouble or responsibility of directing they should not be Directors.

Mr. Best's Extortionate Fees.—The Attorney-General of New York through his deputy, moved before Judge Barrett, on January 23, for a re-settlement of the order of Judge Donohue, made August, 1879, under which William J. Best took \$88,000 for his services as Receiver of the National Trust Company. The object of the motion was to reduce the fees from 5 per cent. to 1 per cent., which is allowed in the case of executors and administrators. Judge Barrett denied the motion, saying that the proper course for the Attorney-General was to move before Judge Donohue for a re-settlement of his order. Mr. Keeler said he had done this, but that Judge Donohue had kept the papers so long that the motion was withdrawn, in the hope of having it settled by some Judge before the reference to determine the correctness of Receiver Best's accounts is closed.

This case indicates one of the methods by which the grossest injustice is sometimes aided by the law, and its administrators.

German Up-Town Savings Bank (New York).—The State Bank Department has received from the Receiver all the unclaimed dividends of the German Up-Town Savings Bank of New York, which failed in December, 1875, and the Bank Superintendent will pay these dividends to the depositors entitled to the same if application is made to him. Four dividends have been declared of 2½, 2½, 10 and 4 per cent. respectively.

Now, when the affairs of this institution are finally closed, it may be well to recall a circumstance in connection with the receivership, of so unusual a nature as to be well worthy of remembrance. When the bank suspended the late Mr. Herman Uhl was appointed Receiver, and before he died, in 1881, he had practically wound up its affairs. The referee appointed to pass upon his accounts reported that owing to the complicated and onerous character of the trust, 5 per cent. on all sums passing through his hands would be a reasonable compensation to the Receiver.

Mr. Uhl, instead of asking for the confirmation of this report, entered a petition to the effect that, although he believed his services had been properly appraised, yet that (he says): "There are circumstances which make your petitioner unwilling to accept of such commission of 5 per cent. The object of your petitioner in accepting his appointment as such Receiver was, if possible, to be of service to the large number of Germans, of whom mainly the depositors of said bank consisted, a large number of whom were of very moderate means, and many of whom were poor and needed all that could be realized from the assets of said bank on account of the deposits. Your petitioner has therefore determined only to ask that there shall be allowed to him a commission at the rate of 1 1-2 per cent. upon all sums of money which have passed through his hands, and which shall pass through his hands as such Receiver, and to forego any claim to the residue of such 5 per cent." The result of this unusual, though commendable, action was to materially increase the percentage of dividends to depositors of the bank.

A Bank Ruined by Defalcations.—The stockholders of the Second National Bank of Jefferson met and voted to go into voluntary liquidation and close up the business, in consequence of the defalcations of the Cashier and Assistant Cashier. The depositors will be paid in full and the stockholders will receive about 50 per cent. on their stock.—*Dispatch from Jefferson, O.*

The fact that about 50 per cent. of the stock is gone indicates that about \$50,000 had been embezzled by the Cashier, S. F. Fuller, and his accomplice, Assistant-Cashier H. F. St. John. The money was used in stock speculations in New York.

A New Safe Deposit Company.—Sir Edward M. Archibald, K. C. M. G., was on January 23 elected President and Manager of the American Safe Deposit Company. Among his associates are Elliott F. Shepard, Frederick Billings, Henry E. Russell, Isaac N. Seligman, Robert Lenox Belknap, John Roach, John D. Prince, Joseph W. Drexel, William L. Strong, John H. Van Antwerp, William H. Fogg, and Walter S. Gurnee.

This is a new company. They are erecting a massive fire-proof building at the southeast corner of Fifth Avenue and Forty-second street, New York, which will contain extensive vaults. The new American Savings Bank, which is under the same management, will also occupy the building.

City Bank, Rochester, N. Y.—Charles E. Upton, late President of the defunct City Bank, was indicted by the Grand Jury to-day for embezzlement and fraud. The first indictment charges grand larceny in stealing \$40,000. The second indictment charges him with embezzling \$40,000. The third charges him with embezzling \$7,500 worth of Central Railroad stock, and the fourth charges him with embezzling \$24,000. The fifth indictment charges him with overdrawing his accounts at the City Bank, and also with receiving deposits from various persons amounting to \$14,470 62 shortly before the failure of the bank, knowing then that the bank was insolvent. Upton pleaded not guilty to each indictment. The trial was set down for the March term. He gave bail in the sum of \$25,000.—*Dispatch from Rochester, January 20.*

At a recent meeting of the depositors a committee was appointed to confer with the late President and Directors and ascertain what terms of settlement could be obtained. It was thought that 50 cents on the dollar in cash, and 25 cents additional in notes to run three years, would be offered.

Henry Barnard, Cashier of the broken bank, has been arrested.

Savings Banks of Connecticut.—The Bank Commissioners' recent report shows 84 savings banks, with total assets of \$88,915,875 50, an increase over last year of

576,018. The deposits are \$84,942,410 55, an increase of \$4,420,109.68. In the increased deposits are 10,508 new accounts, each of less than \$500. The total number of depositors is 237,993, of whom 187,471 have each less than \$500. The banks have reduced their real estate mortgages about \$1,427,000, and their real estate owned about \$310,000. The total loans on real estate are now \$38,381,000. The other assets are loans on stocks and bonds, \$6,310,608; on indorsed notes, \$4,404,361 26; bank stocks, \$5,366,500; railroad stocks and bonds, \$7,041,311 35; United States bonds, \$5,650,000; State, town, and other bonds, \$12,692,441. The value of the real estate owned, including banking-houses, is \$5,306,521; cash in bank, \$3,189,000, and miscellaneous assets, \$332,065. The savings banks paid an average interest of 4 1-4 per cent. to depositors last year. The Commissioners recommend legislation to prevent them buying commercial paper, and say that a further reduction of interest dividends is probable, if Government bonds remain at 3 per cent. rates.

Larimore, Dakota.—The "Larimore Pioneer," of January 1, shows the rapid growth of the town in a very short time. It says: "Since the first of last March Larimore has had a strong and prosperous bank, with C. C. Wolcott as proprietor. Mr. Wolcott is from Michigan, a man of ample capital and splendid ability. His business has been very large—several times larger than was anticipated. He has been ably assisted by Charles G. Reynolds, Assistant Cashier, who is an honor to any town or business. Mr. Reynolds is from Syracuse, N. Y., and is possessed of large means, which are liberally invested in Larimore lots. J. F. Stevens is also a capable assistant, whose friends are everywhere." The Bank of Larimore was reorganized on December 30 as a National Bank, A. J. Bowne, of Hastings, Mich., being elected President; C. C. Wolcott, Vice-President; Chas. A. Bowne, Cashier; Chas. G. Reynolds, Assistant Cashier, and J. F. Stevens, Teller.

Thirty Years in One Bank.—The Corn Exchange Bank, at No. 13 William street this city, very seldom makes any change in its officers and clerks, and when a vacancy does occur it is owing to the death or retirement of some trusted officer on account of ill-health after years of faithful service. Such a change took place on Jan. 20, when the Board of Directors met to accept the resignation of the veteran President, Mr. William A. Falls. Mr. Falls was born in this city, and is about 57 years of age. His father was the President of the Tradesmen's National Bank. Mr. Falls was graduated from Columbia College, and went into business as a clerk in the Tradesmen's Bank, and then accepted a position in the Mercantile Bank. In 1853 he went to the Corn Exchange Bank, and became its Teller the same year. In 1863 he was promoted to the office of Cashier, and in 1871 was elected its President, which office he held continuously until his retirement last month. He has been in delicate health for a year, and his retirement was caused by his absolute need of repose.

The Directors elected in his place Mr. William A. Nash, the Cashier of the bank, who has been in its service for nearly 28 years. Mr. Nash is only 43 years of age, and though yet a young man he is not the youngest bank President in the city, there being another President who is about seven or eight years his junior. Mr. Nash was only 15 years of age when he entered the Corn Exchange Bank. He left this place and got a position in the Oriental Bank, where he staid for about three years, after which he returned to the Corn Exchange Bank. He has trod on every rung of the ladder, having served both as Teller and Cashier, and now finds himself at the top rung as President in the full prime of manhood and the enjoyment of robust health.

St. Paul's New Bank.—An important consolidation of banking interests has taken place at St. Paul, Minn. The capital stock of one million dollars subscribed for the new national bank to be organized by Walter Mann, late Vice-President of the Merchants' National Bank, St. Paul, is to be united to that of "The German-American Bank of St. Paul," which is also to be increased to one million dollars. The latter bank, a State bank organization, had voted to increase its capital to five hundred thousand dollars, but will at once make it as above. The new organization thus formed will be "The National German-American Bank of St. Paul," with paid-up capital of two million dollars. Mr. Ferdinand Willius, President of the German-American Bank, retires for rest, and the new officers will be, Walter Mann, President; Byron C. Howes, Vice-President, late President Farmers and Traders' Bank, Hastings, Minn.; Gustave Willius, Cashier (now Cashier of the German-American Bank). The new bank will open for business about May 1st.

A New Officer.—Mr. Joseph Lockey, the present National Bank Examiner for Minnesota and Dakota, has been elected and has accepted the position as Assistant Cashier of the new (\$2,000,000 capital) National German-American Bank of St. Paul. This is a fortunate man for the new bank. Mr. L. has decided ability in the banking line.

New York and Brooklyn Trust Companies.—The reports of the ten institutions reporting to the Superintendent of the Bank Department, showing their condition on December 16 last, give the following totals: They have aggregate resources of \$120,377,844 56, a capital of \$11,400,000 83, surplus and profits of \$11,256,003 00, and hold deposits of \$100,011,476 58. They have invested in stocks and bonds, \$20,499,531, and in real estate, \$5,427,755 30, and lent on collaterals, \$82,517,772 92, and on bond and mortgage, \$3,861,081 45.

Mutual Trust Company, New York.—The trustees of the Mutual Trust Company have elected Hon. Henry D. Moore, ex-State Treasurer of Pennsylvania, as President, and ex-Secretary Geo. S. Boutwell, of Mass., and Chas. B. Farwell, of Illinois, Vice-Presidents. Mr. A. B. Hepburn, Superintendent of the Banking Department, recently visited New York to make an examination of the Mutual Trust Company. By the ruling of Judge Landon, in an interlocutory judgment, the concern was declared to be a loan company and not a trust company, and bound to report to the department. When an Examiner went to the institution to make the examination he was shown an order by Judge Landon staying all proceedings. This was obtained in order to permit the company to make an appeal to the General Term.

Pacific National Bank (Boston).—Ex-President Benyon has been indicted for making false returns to the Comptroller of the Currency. It is understood that he is in Canada.

Jesse F. Frisbie, one of the stockholders, has brought a bill against the Receiver to recover back \$10,000 paid for stock of the new issue, on the ground that it was illegally issued. The suit is considered a test one.

Connecticut Mutual Life.—The report of this company for the year 1882 makes a remarkable showing. The net assets amount to the huge total of \$50,172,371. The surplus, estimated by the New York standard, is \$6,850,000, having increased nearly \$400,000 during the year. Perhaps the most noticeable item of the statement is "Net premiums in course of collection—None;" evidencing a remarkable attention to the details of the business. The life insurance business is of such a nature that the principal fair advantage which one company can present over another must arise from economy of management, and it will be noticed that 8.75 per cent., the ratio of expense to receipts, compares very favorably with the showing of other companies.

Mr. Cyrus Clarke, Jr., whose sudden death is noticed under the head of Obituary Record, we understand left his widow and young children in easy circumstances. Among his assets is a life insurance policy for \$30,000.

Identification by Handwriting.—A good handwriting is getting to be one of the lost arts. The fathers and grandfathers of the present generation, as a general thing, wrote a handsomer and more legible hand than do the children and grandchildren. There is one point in penmanship to which I have just been giving some attention. It relates to the testimony of handwriting. Not long ago a man was hanged in New England by handwriting experts. As a class, such experts ought not to have influence enough to hang a cat. And now it is claimed that some Brussels murderers have been run down by tell-tale tricks of their penmanship. The readers of this little note may be assured that the writer of it knows individuals who can write other people's names so cunningly that these other people cannot decide whether the signatures are their own or not. I have actual cases in mind where this puzzle has been tried. One notable instance I must mention. The State of Massachusetts not many years since had two of its bonds presented for redemption which seemed precisely alike. One was a forged bond throughout. The officers whose names appeared upon these bonds could not tell "which was which." But this is nothing. I have a man near me who can write your signature and mine, or the signature of any person that may be placed before him as a study, so cunningly that neither you nor I can tell which is which. It is lucky that he is an honest man, or he might do dangerous work with

your name on a big check or note. Bankers in the United States place little reliance upon signatures as a means of identification in payment of checks, &c. The person who presents a check to a Boston bank for payment must be positively identified before the money will be paid to him. It is in vain for him to offer as evidence that he is the right man any handwriting testimony. And it does not make any difference whether the check is payable to order or to bearer. Identification in both cases is demanded. In England one finds a most marked difference from this way of doing business. The Paying Teller of a London bank tries to assure himself that the face of a check is all right, both in point of signature of drawer and as regards drawer's balance, and then slaps out the money to whoever presents the check. It matters not whether the check is payable to bearer or order. He demands no identification in either case. He only looks upon the back of the order check to see if it has the name indorsed. This check-paying custom did not always prevail in England. At one time the English practice in these premises was the same as ours is now. At that time we copied our custom from them. They have since progressed out of it. We remain tied to their own style. We shall get out of this rut one of these days. The great bankers of London long ago found they could never get through their business if the identification responsibility was to remain upon them. They pressed the matter upon the attention of Parliament. Parliament came to their relief. It said, pay checks to whoever presents them, and your whole duty is done. If I to-day drop my check in London, made payable to order of W. B. Morrill, the first rascal that picks it up in the streets and puts Mr. Morrill's name on the back may collect that check—and get imprisoned for life for so doing. It is, of course, the imperative duty of any person who has lost a check to have its payment stopped at once.—*A Boston Banker in Exeter (N. H.) "News Letter."*

MISCELLANEOUS BANK ITEMS.

— Mr. J. S. Bache, who is well known in New York financial circles, has been admitted to an interest in the stock brokerage firm of Leopold Cahn & Co.

— The Lincoln National Bank, of Boston, organized for business January 9 with an authorized capital of \$1,000,000. Joseph Davis is President, and the Tradesmen's National Bank is their New York correspondent.

— The annual report of the Rhode Island Bank Commissioners shows the total amount of savings bank deposits to be \$48,330,673, an increase in the past year of \$5,548,948; the whole number of depositors is 112,472, an increase of 9,481. The total resources of savings banks are \$50,655,876.

— The bank property of the defunct First National Bank of Buffalo was sold January 15 at auction for \$33,350, and the private property of the ex-President, R. P. Lee, who is now serving a term in the penitentiary, for \$7,500.

— The Seaboard Bank, connected with the New York Petroleum Exchange, opened its doors in the new Welles building on January 17. It makes advances on warehouse receipts and pipe-line certificates.

— Speaking of his forthcoming report Superintendent Hepburn, of the New York Bank Department, says that it will show the banks to be in fine condition. A large increase would be shown in the deposits in savings banks, and in discount banks and trust companies, besides increased surpluses.

— On January 9 forty-nine out of sixty-one banks of Boston held their annual meetings. All the reports presented showed them to be in an excellent condition. As a whole the showing was better than for 1881 in every respect. The changes made at the meetings, as compared with past years, were few in number and were confined almost entirely to the directories, the old officers, with hardly an exception, being unanimously re-elected for the ensuing year.

— A bill has been introduced in the New York Legislature providing for semi-annual examinations of banks by the Bank Superintendent, making stockholders of banks liable to the amount of their stock, and defining the liability of directors.

— Judge Boardman has dismissed with costs the complaint in the action brought by Hon. Charles Patterson, as Receiver of the Merchants' and Mechanics' Bank of

Troy (N. Y.), against the officers of that institution, to recover \$450,000. The complaint charged that the defendants conspired to defraud the bank of that amount. Judge Boardman finds that there was no conspiracy.

— Samuel Ruth, the defaulting Cashier of the Washington Savings Bank (Pa.), had hearing on January 20 on two charges of forgery and two of larceny. W. A. Micokey, a stockholder of the bank, was the prosecutor. John Hall, Receiver, testified that his first statement showed the deficit to be \$148,000, but that some assets would make the amount of defalcation less. Ruth was then held in \$8,000 bail for his appearance in court.

— A committee of the New York Produce Exchange, consisting of Messrs. James Melgee, Samuel Jacoby and Alexander E. Orr, have issued a circular recommending the building of a safe deposit vault in the new Exchange building. A company will be formed under the legislative laws of 1875 with a capital of \$150,000 in 3,000 shares of \$50 each. Every member of the Exchange is invited to subscribe.

— The most important news of the day is the transfer of the control of the Financial American Loan and Trust Company from the leading shareholders of the Maverick National Bank to parties representing Messrs. Lee, Higginson & Co., who have purchased at 102, for themselves and associates, a controlling interest in the stock. Messrs. Asa P. Potter, Jonas H. French and Thomas Dana, the retiring directors, will probably devote themselves more closely than ever to the interests of the Maverick National Bank, with which they have been so long identified.—*Boston Transcript*.

— The Traders' National Bank of Charlotte, N. C., has decided to go into liquidation.

— Jonathan E. Pierpont, Secretary and Treasurer of the Monroe County Savings Bank (Rochester, N. Y.) has tendered his resignation, which has been accepted. He was an indorser of President Upton's paper (of the failed City Bank), and he feared his connection therewith would injure the credit of the bank.

— The new Chicago National Bank, of which C. T. Wheeler is to be President, will have a capital stock of \$3,000,000, and some of the largest capitalists of the city are interested in it.

— Mr. William P. St. John, elected President of the Mercantile National Bank of New York, to fill the vacancy caused by the death of George W. Perkins, is a son of the late Newton St. John, of the old Mobile banking house of St. John, Powers & Co., and for twenty-five years before the war agent of Baring Bros. & Co., London.

THE NATIONAL SHOE AND LEATHER BANK.

NEW YORK JANUARY 31, 1883.

At a regular meeting of the Directors of this Bank, held on the 30th instant, the following communication was presented:

To the Directors of "The National Shoe and Leather Bank of the City of New York:—"

GENTLEMEN—In view of the impaired state of my health, and having passed the limit of three-score years and ten, being desirous, as far as practicable, to relieve myself from care and responsibility, I heroby tender to you my resignation, to take effect on the first proximo, as President of this Bank, a position which, by the kindness and partiality of its Directors, I have held, uninterruptedly, for twenty-eight years last past.

In thus taking my official leave I desire to express to each and all of you, gentlemen, my appreciation of the courtesy and consideration which I have uniformly received at your hands, and, as an evidence of my continued interest in the institution which, I flatter myself, has prospered under my administration, I purpose, if it be your pleasure, to retain my membership in your Board.

Wishing you, personally, the blessing of health, and the Bank of which you are the trusting guardians increased and ever-increasing prosperity,

I am, gentlemen, with great respect,

A. V. STOUT.

At a special meeting, held this day, with reference to the resignation of Mr. Stout,

the following preamble and resolution were unanimously adopted :

Whereas, Andrew Varick Stout, one of the incorporators of this Bank, and for twenty-eight years last past its Chief Executive, has felt, by reason of ill-health, impelled to resign the position of President : therefore

Resolved, That, in accepting such resignation, the members of this Board desire to give expression to their great regret for the cause which removes from the head of this institution one who has been so long and conspicuously identified with its interest, and to whom is due so much of its prosperity.

While we rejoice to know that Mr. Stout will continue his membership of our Board, and thus lend us the aid of his experience and the prestige of his name in administering its affairs, and while we beg leave to assure him that his presence will, at all times, be most pleasurable to us, we yet congratulate him upon the relief from care and responsibility, which he so much desires and deserves, and he will carry with him to his retirement from active business life our united prayers that his health may become completely restored, and that, during the residue of his days, he may be able to review a long, useful, and honorable career with that satisfaction which shall bring "peace at the last."

It is directed that these resolutions be entered in our records, and that a copy thereof, suitably engrossed and signed by the members of this Board, be transmitted to Mr. Stout.

At the same meeting Mr. John M. Crane, who has been connected with the Bank for nearly thirty years—the last seventeen as Cashier—was, on motion of Mr. A. V. Stout, unanimously elected President, and Mr. Henry M. Knapp, late General Book-keeper, was appointed Cashier.

CHARLES SPEAR,
Vice-President.

GENERAL BUSINESS NEWS.

The Tenth Census.—The Senate Appropriations Committee had before them this morning the Secretary of the Interior, and Mr. Richards, the Acting Superintendent of the Census, with a view of obtaining from them some information as to the state of the Census Office and its work. It is found that the work of collating and preparing the results of the census for publication is in a backward and greatly confused condition. The fact has become so manifest to the committee that it is not likely that the pending Census Deficiency bill will be recommended for passage, until substantial assurances are furnished that the proposed appropriation will be employed in such a manner as to produce clearly defined results, and bring the work speedily to a close.—*Dispatch from Washington, January 25.*

We have already had to comment upon the unwieldy character of the work which is laid out for the Census Bureau every ten years. The tenth census has already prostrated by illness three successive chief clerks, and the Secretary of the Treasury has been compelled to recall General Walker, who resigned the position of Chief of the Bureau some time since. It is hoped that he will bring order out of seeming chaos, and he promises that if he is granted the necessary money he will bring the main part of the work to a close before next January. The main Compendium, a work of 1,800 pages, is now nearly ready to print.

It is ridiculous to make the census so huge that it takes three or four years to get it into print. Its value as a statistical work is largely gone before it can be used.

Failure of the Union Iron and Steel Works.—The Union Iron and Steel Works closed to-day. The following judgments against the company were entered : Amasa Stone, of Cleveland, \$260,000; Bank of New York, \$35,000; American Exchange National Bank, \$70,000; Russell Sage, \$16,800; Second National Bank of Boston, \$12,500;

Union National Bank of New York, \$32,500—total \$1,066,800.—*Chicago Dispatch, Feb. 2.*

The closing of this large concern is a significant fact indicative of the feverish condition of some kinds of business at present. The failure is attributed partially to the fall in the price of steel rails, but, in a greater degree, to the exorbitant rate of wages demanded by the workmen. The intense activity in railway construction has caused an immense demand for the product of Iron Works for a year or two past, but in spite of this the production has outrun the demand until, at last, the company in the weakest position had to go to the wall. The folly of running the mills to their fullest capacity under the circumstances in which the bankrupt concern was placed has been so well demonstrated that it may be a useful warning to others.

Foreign Trade in 1882.—The chief of the Bureau of Statistics in his sixth monthly statement for the current fiscal year of the imports and exports of the United States says: The excess of exports of merchandise was as follows:

Month ended December 31, 1882.....	\$33,458,618
Month ended December 31, 1881.....	19,724,040
Six months ended December 31, 1882.....	54,572,222
Six months ended December 31, 1881.....	65,339,713
Twelve months ended December 31, 1882.....	15,135,192
Twelve months ended December 31, 1881.....	163,339,679

The excess of imports or exports of gold and silver coin and bullion was as follows:

Month ended December 31, 1882 (excess of imports) ..	\$1,280,368
Month ended December 31, 1881 (excess of imports).....	2,116,282
Six months ended December 31, 1882 (excess of exports).....	75,338
Six months ended December 31, 1881 (excess of imports).....	26,516,794
Twelve months ended December 31, 1882 (excess of exports).....	33,537,221
Twelve months ended December 31, 1881 (excess of imports).....	49,327,448

The values of imports of merchandise into the United States during the twelve months ended December 31, 1882, were \$752,841,145, and for the corresponding months of the preceding year, \$670,209,448.

The value of the exports of domestic and foreign merchandise from the United States during the twelve months ended December 31, 1882, were \$767,976,337, and for the twelve months ended December 31, 1881, \$833,549,127.—*Washington Dispatch, February 10.*

It will be seen from the above that the value of the merchandise imports in the calendar year 1882 was \$752,841,145, and of the exports, \$767,976,337, making the total foreign trade, \$1,520,817,482. The balance shows an excess of exports valued at \$15,135,192; but, in spite of this, gold and silver left the country to the amount of \$33,537,221.

The Proposed Mexican Treaty.—There is some delay in the matter of the proposed Mexican treaty. The State Department has not yet sent it to Congress, but it is ascertained that so many objections have been made to it on the part of certain influential Senators, that inquiry has been made whether Mexico would recede from her demands. It is ascertained that Mexico will not make any further concessions, and that the treaty must stand or fall as it is. A number of business enterprises in which Americans are engaged are said to be dependent upon this treaty.—*Washington Dispatch, January 29.*

The merchandise imports from Mexico in the last fiscal year amounted to about 8 1-2 million dollars. The exports were valued at 15 1-2 million dollars, of which 4 millions were iron and steel, 2 1-2 millions cotton and cotton goods, and 1 1-2 million wood, lumber and furniture. The balance was paid to this country by an import of 6 1-2 millions in coin. The trade between the two

countries is remarkable for its small amount, and there is a splendid field for the sale of American manufactures in Mexico if the barriers to trade were once broken down. Mexico would repay us, as at present, chiefly with coffee and raw materials. There are in every case where a commercial treaty is proposed, private interests which may be affected, but the public good alone should be considered by legislators.

FOREIGN BANKING AFFAIRS.

[A digest of Banking and Financial News of the British Provinces. By the JOURNAL'S Correspondent at Montreal.]

A PRESENT REFUSED.—A money grant was made at the annual meeting of *Le Credit Foncier du Bas Canada*, of Montreal, held last month, to Mr. A. Desjardine, the President, for his services, but that gentleman refused to accept any remuneration.

CANADIAN PACIFIC STOCK.—The successful floating of some \$30,000,000 of Canadian Pacific Railway stock in New York and Europe has been the signal for renewed confidence in Canadian financial circles. All classes of securities have felt the impulse and a new era of inflation has probably set in. The expenditure on the road so far is said to amount to \$30,000,000.

MERCHANTS' BANK OF CANADA.—The Hon. J. J. C. Abbott, M. P., has been appointed a director of the Merchants' Bank of Canada in place of the late Sir Hugh Allan, the President. Mr. Abbott is an able lawyer and also solicitor for the Canadian Pacific Railway, and his accession to the Board of the "Merchants" will, it is thought, add strength to the institution. No choice of a President has yet been made, and it is suggested that Mr. Hague, the present General Manager, be appointed to that position. Such an appointment would be a well-deserved and graceful tribute on the part of the shareholders to Mr. Hague's successful efforts on their behalf, and would be received with unqualified approval by the public. The Merchants' Bank called upon Mr. Hague about seven years ago to extricate it from embarrassments of the most serious nature. Mr. Hague, who had just retired from a similar position in another bank with the intention of entering into private life, undertook the task and with his indomitable energy has succeeded in bringing the bank to the front rank among the financial institutions of the Dominion. Until recently the position of Bank President in Canada has been pretty much that of an ornamental sign-board, and the American system of making the President an executive officer was looked upon as Americanizing in its tendencies, but the promotion of Mr. Smithers, of the Bank of Montreal, some two years ago, to that position, has upset the tradition and shown that a President may be useful as well as ornamental. The Merchants' Bank will act wisely in copying the example of the Bank of Montreal.

MESSRS. M. FISHER, SON & Co., of Montreal, are not bankers, but would honor the profession if they were. During our recent depression the firm compromised with their English creditors at 55 cents on the dollar. On New Year's day last they sent to each of these creditors a check in full of the balance due, over and above the compromise. There are one or two firms in New York who might copy their example. This piece of honorable dealing cost Messrs. Fisher \$82,000.

MARITIME BANK OF NEW BRUNSWICK.—The bills of the Maritime Bank of New Brunswick were recently thrown out by the teller of the Bank of Nova Scotia, but with the aid of a little assistance from another institution the difficulty was tidied over and the Bank of Nova Scotia resumed accepting the bills. The Maritime Bank has had a checkered career, but about two years ago it was taken hold of by new men whose names inspired confidence, and it has been charged upon the Nova Scotia Bank that its action in the matter has been prompted by jealousy. The fact that the Maritime Bank did require assistance should refute this insinuation.

NEW BANKS.—The Brant County Bank of Canada is the somewhat lengthy name chosen by the applicants for a charter for a new bank to have its headquarters in the City of Brantford, with a nominal capital of \$1,000,000. A charter is also to be applied

for to incorporate the First 'National Bank' of Hamilton, to have its headquarters in the City of Hamilton. It is to be hoped the Legislature will seriously consider the latter application. The name chosen would sound well if it were not a weak piece of plagiarism and did not look so like a fraud. The name of the bank would probably secure for its notes a circulation in the United States, where their resemblance to your national bank currency would give them a credit and currency not their own. There is no analogy between our banking laws and your national bank act. The notes of this bank would simply be a first charge on the assets in case of failure, and if our Legislature is well advised they will give no authority to the ambitious would-be founders of a national bank in Canada to sail under false colors.

MR. ANDREW GAULT, of the well-known and enterprising firm of Gault Brothers & Co., Montreal, has been selected to succeed the late lamented Alderman Nelson on the board of the Molsons Bank.

MR. D. MCARTHUR, for many years Manager of the Merchants' Bank at Winnipeg, Manitoba, has retired. He is succeeded by Mr. Millar, his late Assistant Manager, and Mr. Arthur Wickson, formerly Agent of the Merchants' Bank of Canada in Chicago, will be the Assistant Manager. Mr. McArthur takes a seat on the board of local directors of the bank as President.

THE BANKS OF CANADA deserve credit for their audacity if for nothing else. With liabilities of \$150,000,000, and immediately available assets of only \$40,000,000, of which not more than \$6,555,761 are in specie, their loans continue to expand. In December the loans on margins increased a million; those to "Corporations," (whatever these may be) another million; and their "other assets," namely: such as cannot under the act be classified, three hundred and fifty thousand dollars. These three items are usually considered as among the most objectionable of banking investments. The object of some of the banks appears not to be safety, but profits—profits at any risk. The note circulation fell off \$626,000, and the Government supplied the banks with funds to meet this falling off. Current loans were reduced \$1,280,000, leaving the situation comparatively little changed, what change there was having been in the wrong direction. Meantime there has been no little uneasiness in the retail trade. In Montreal especially there have been a large number of failures in the dry goods trade. The excessive importations induced by the bank inflation of the past three years is beginning to have its legitimate results in embarrassments and falling values. On the other hand, however, the result of the increase in bank loans on margins and the floating of the Canadian Pacific Railway stock before referred to, is seen in the buoyant tone of the stock market, and in the face of a rather pronounced business depression the bull cliques in Montreal and Toronto have scored a triumph. Bank stocks and all other investments have been marked up from 6 to 10 per cent. in January, and this at a season when, in the absence of investment demands, a fall in prices might have been reasonably looked for. The railway bonanza comes in most opportunely for the views of inflationists, and will enable us to swim with the stream for another twelve months—twelve months of opportunity for making the fortune of a few—twelve months of abundant money and of employment for the masses, to be followed, if the voice of prudence is not heeded, by a collapse of unexampled magnitude.

THE HUNTER EMBEZZLEMENT.—It is now said that the proceeds of the estate will not pay the lawyers' fees of the claimants. The defaulter is still on the safe side of the border.

BRITISH MORTGAGE LOAN COMPANY OF ONTARIO.—The annual report makes a good showing, the dividend was reduced from eight to seven per cent., and the reserve fund has been increased to \$27,000. In the report kindly reference is made to Mr. Wm. Buckingham, the retiring manager, who did much towards putting the company on its present basis.

LA BANQUE DE ST JEAN.—The statement submitted at the annual meeting showed the profits of the year to have been \$27,707. The old board was re-elected.

ST. LAWRENCE AND OTTAWA RAILWAY.—The Bondholders' Committee recommend the bondholders to decline the offer of the Canadian Pacific to purchase the coupons of their bonds, and advise an application to the Dominion Legislature for an act giving bondholders voting powers or powers to sell the railway.

NEW BANKS, CHANGES, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National Banks organized since our last report:

JOHN JAY KNOX,
Comptroller of the Currency.

NOTICES OF NEW BOOKS.

Political Economy. By FRANCIS A. WALKER. Author of "The Wages Question," "Money," "Money, Trade and Industry," etc. New York: Henry Holt & Co. 1882. Pp. 490.

This work is a number of the American Science Series, the object of which is to supply the lack "of authoritative books whose principles are, so far as practicable, illustrative by familiar American facts, and also to supply the other lack that the advance of science perennially creates, of text-books which at least do not contradict the latest generalizations." The promise of the publishers, implied in the above, is more than fulfilled in this book. It not only gives a fair view of the principles of Political Economy as laid down by the masters of the science, but, on a number of points views are set forth that may be fairly claimed as original, but which are certainly highly suggestive and valuable. On the vexed question of the logical method of Political Economy, we are happy to find that the author takes his stand on such solid ground. On the question of wages and the Wage Fund Theory he of course agrees with the views put forth in his previous works. The book is recommended especially to those who find the subject, as generally treated, dry and difficult to understand, on account of its admirable clearness and freedom from dogmatism.

The Bankers' Directory and List of Bank Attorneys. January, 1883. Chicago: Rand, McNally & Co.

The eighth annual number of this publication more than sustains its previous reputation, and is a new evidence of the enterprise and energy of the publishers. A new feature is a colored map of each State. The revision includes the addition of a large number of new banking concerns and the elimination of many that have recently quit business.

The Literary History of England in the end of the Eighteenth and beginning of the Nineteenth Century. By Mrs. OLIPHANT. Author of "Makers of Florence," "St. Francis of Assisi," etc. New York: Macmillan & Co. 1882. 2 vols. 12mo.

The period which the above work covers, was a most fruitful one in literary genius, surpassing, in that respect, any other in the history of England, excepting, perhaps, the Elizabethan era. The author has undertaken to give a view of the more eminent poet and prose writers of that time, beginning about 1785 with the birth of a new school of poets, and ending with the last generation. The lesser lights are also noticed, but, of course, a picture which includes Cowper and Burns, Scott, Byron and Moore, Shelley and Keats, Wordsworth, Coleridge and Southey, Bentham, Mackintosh, and James Mill, leaves many talented and interesting contemporaries in the background. While the critic may find things to object to in this work, he cannot deny that the author understands her subject and has made a very readable and interesting book. It will be valuable to all who are not acquainted with the subject (as no well-informed person can afford to be), and we know of no better means to become so than by reading the above work.

The American Citizen's Manual. Part 1. Governments (National, State and Local); the Electorate; the Civil Service. Edited by WORTHINGTON C. FORD. New York: G. P. Putnam's Sons. 1882.

This is a real "manual," being a handy volume, with a great deal of useful matter in comparatively small space. The compression has not, however, been done at the expense of the reader's eyes, as the type is large, but has been managed by the judgment and labor of the author. It evidently requires no ordinary pains to place an intelligent account of the governmental institutions of the country in such a moderate space, and still leave out nothing of great importance, and yet it seems to have been done. There are few people, even among the well-informed, who cannot learn something useful from this volume.

BANKERS' OBITUARY RECORD.

Buffum.—David H. Buffum, President of the Great Falls National Bank, Great Falls, N. H., died December 23, 1882, aged sixty-two years.

The deceased was born at North Berwick, Me. He was connected with the above bank from its organization as a State bank in 1846 onward, as Cashier, Director and President. He also, for many years, filled the offices of Treasurer, Trustee and Vice-President of the Somersworth Savings Bank, successively.

Norris.—John Saurin Norris, President of the First National Bank, of Baltimore, Md., died December 22, 1882, aged sixty-nine years.

Mr. Norris was born in Harford County, Maryland, and became connected with the above bank in 1864, serving first as Cashier, afterwards as Vice-President, and finally, up to the time of his decease, as President.

Wilcox.—Harvey R. Wilcox, member of the New York Stock Exchange, died December 11, 1882, aged seventy-three years.

Mr. Wilcox was born in Madison, N. Y., and when young engaged in the jewelry business in Utica. He afterward came to New York, and was employed in the same business. He was at one time Superintendent of the wholesale department of A. T. Stewart & Co., and subsequently joined the dry-goods firm of Mayer, Hathaway & Wilcox. In 1840 he entered the stock-brokerage business as partner of Richard Schell, and continued in it until his death.

Rice.—George Woods Rice, President of the Massachusetts Loan and Trust Company, of Boston Mass., died November 14, 1882, aged fifty-four years.

Mr. Rice was born in Boston, began business as a boy in the store of C. N. Thayer, oils and manufacturing supplies, and afterward became a partner under the firm name of Thayer & Rice, who dissolved in 1869. He then became a member of the firm of Rice & Davis, in the cotton commission business, and when it dissolved in 1875 he was made President of the above Company.

Chauncey.—Daniel Chauncey, President of the Mechanics' Bank of Brooklyn, N. Y., died January 29, 1883, aged sixty-one years.

Mr. Chauncey was a native of Ireland, and came to Brooklyn with his two brothers over forty years ago. They engaged in the building business, but afterward went into banking and were very successful. The deceased was President of the Mechanics' Bank nearly fourteen years, and was officially connected with a number of other financial institutions. His death, the result of apoplexy, was very sudden. It occurred in the bank building.

Shanks.—John H. Shanks, President of the Farmers' National Bank of Stanford, Ky., died January 3, 1883, aged fifty-four years.

The deceased was born in Lincoln county, Ky., the same county in which the bank is located. He was President of the bank twelve years.

Koch.—Theodore Koch, Cashier of the Fifth National Bank of St. Louis, Mo., died December 23, 1882, aged fifty-two years.

Mr. Koch was born in Hanover, Germany, and came to America about thirty-five years ago. He was one of the founders of the Tenth Ward Savings Bank in 1860, which he was instrumental in changing recently into the Fifth National, serving as Cashier in both concerns from the first. The new Cashier writes: "His administration of his office in our bank was eminently satisfactory to the Board, and his demise was very much regretted by all connected with the bank, as well as by a large portion of our business community."

Sniffen.—John Sniffen, President of the Long Island Bank, Brooklyn, N. Y., died January 14, 1883, aged sixty-three years.

Mr. Sniffen was born in New York City, and was engaged for a number of years in the oil business as a member of the firm of E. H. Swain & Co. He relinquished the business some years ago, and, being a Director of the Long Island Bank, was elected Cashier and afterward President. He was highly esteemed by all who knew him.

Carr.—George E. Carr, Cashier of the Everett National Bank of Boston, Mass., died January 15, 1883, aged forty-three years.

Mr. Carr was a son of Mr. Samuel Carr, Cashier of the Shoe and Leather Bank, and a brother of Mr. Samuel Carr Jr., President of the Central National Bank, both of Boston. He was born in Charlestown, (near Boston). After leaving school he entered the Bunker Hill Bank, of Charlestown, as clerk and was afterward employed in the Tremont Bank of Boston. At the age of twenty-seven, on January 15, 1867, he was called by the Everett National Bank to be its Cashier. His death occurred on the fifteenth anniversary of this appointment, very suddenly, immediately after taking his seat in the morning train for Boston, which he had run to catch. He was a faithful and able officer, and is mourned by a wide circle of friends.

Gray.—John Gray, Vice-President of the Bowery Savings Bank, New York City, died January 21, 1883, aged about eighty-two years.

Mr. Gray was born at Stamford, Conn., in the year 1800, and came to New York in 1815. In 1840 he retired from a successful commercial business, and since that time he has been a Director in the Bowery Fire Insurance Company and sat in the Board of Directors of the Butchers and Drovers' Bank, the American Institute, and Rutgers Female College. In 1836 he became a Trustee of the Bowery Savings Bank, and was elected to the Vice-Presidency of that institution in 1858. Mr. Gray was an active member of the old Public School Society, out of which the present public school system grew.

Clarke.—Cyrus Clarke, Jr., Cashier of the Tradesmen's Bank, Pittsburgh, Pa., died January 16, 1883, aged thirty-six years.

Mr. Clarke was born in New Castle, Pa., his father being a prominent resident of Lawrence county. He was educated at Alleghany College, and graduated with honor. Soon after, when only twenty years of age he was made Cashier of the bank with which he remained connected up to the time of his decease. During the fifteen years that he held that position he maintained a rare reputation for helpfulness and courtesy, and much of the success of the bank is attributed to the estimation in which the young Cashier was held by business men. He had the interests of the bank, and its customers equally at heart, and the knowledge of this fact made men anxious to do business with the institution. He was well-read and possessed broad views; was a churchman without being churchy, and a faithful religious worker without a trace of asceticism. Last year he made a tour in Europe and returned re-invigorated, but during the Christmas holiday he contracted typhoid fever which resulted in his untimely death. Some years ago he married a daughter of Bishop Kingsley, who, with four children, survives him.

Ludington.—Nelson Ludington, late President of the Fifth National Bank of Chicago, Ill., died January 15, 1883, aged sixty-four years.

Mr. Ludington was born at what is now known as Ludingtonville, N. Y. In 1840 he came to New York, and a year later settled in Milwaukee where he carried on a general business until 1848. He then organized the firm of N. Ludington & Co. in the lumber trade, which in 1868 had increased its business so largely that it was changed to an incorporated company with Mr. Ludington as President. Soon after the panic of 1873, he became President of the Fifth National Bank, and resigned upon the expiration of its charter on January 1, last, when it became the National Bank of America.

Burdett.—George C. Burdett, President of the Central National Bank, Troy, N. Y., died January 22, aged sixty-five years.

Mr. Burdett was born at Grafton, Vt., and began business at Whitehall in the grocery trade. He afterward engaged in transportation and milling, and in 1868 began the manufacture of stoves, being chief partner of Burdett, Smith & Co. He was chosen Vice-President of the Central National Bank in 1864, and President in 1874. He was very successful financially, and was a highly respected and kind-hearted man.

Brigham.—Henry Brigham, President of the Merchants' National Bank of Savannah, Ga., died January 8, 1883, aged seventy-one years.

Caldwell.—J. L. Caldwell, President of the Farmers and Traders' Bank, Shelbyville, Ky., died November 22, 1882, aged fifty-seven years.

Helm.—W. D. Helm, President of the Delaware County National Bank, Delaware, Ohio, died January 1, 1883, aged seventy years.

RAILROAD FINANCES AND NEWS.

(A synopsis of Railroad finances and affairs of interest to Bankers, Investors, &c.
Classification: I. New Issues. II. Reports. III. Miscellaneous R. R. News).

I. NEW ISSUES.

THE MEMPHIS, SELMA AND BRUNSWICK RAILROAD COMPANY filed, on January 26, a first mortgage for \$6,000,000 upon all their property and franchises, to guarantee the Trust and Safe Deposit Company of Philadelphia, for the purpose of raising funds to build and equip the road from Memphis to Holly Springs, and thence on to the western line of Alabama, a distance of 175 miles, only 75 of which are graded. This road constitutes a portion of the system controlled by the Erlanger syndicate.

TOLEDO, CINCINNATI AND ST. LOUIS.—The time for paying the first call of 15 per cent. on the Company's subscription expired December 10; several thousand dollars more than the entire amount called for was received.

MASSACHUSETTS CENTRAL.—The Directors of this road, which has labored under financial difficulties for some months, have issued a circular recommending the conversion of the existing bonds into the form of a security to rank second to the new bonds to be issued to pay indebtedness, finish the road, &c. A large number of the heaviest bondholders are ready to co-operate in the new movement. It is estimated that about \$2,000,000 will be required to complete and equip the railroad and to discharge the floating indebtedness. It is the intention of the Directors to use every endeavor to complete the original line during the coming Summer.

THE MEXICAN CENTRAL RAILWAY COMPANY has issued a subscription for \$6,082,500, which amount the company consider to be sufficient to complete the main line by the first quarter of the year 1884.

CANADIAN PACIFIC.—A special cable dispatch to the Toronto "Globe" says: "Although no official announcement has yet been made, it has been currently stated in financial circles that the Canadian Pacific Railway Company has successfully completed all negotiations to issue its new stock in New York and Amsterdam."

OREGON IMPROVEMENT COMPANY.—In pursuance of the arrangement already announced, 15,000 additional shares of the capital stock will be offered for subscription at par to the stockholders of the company of record on January 8, 1883, in proportion to their respective holdings of the stock on that day, to wit: For each 100 shares, 30 shares of new stock, or three-tenths of present holdings, may be subscribed for.

THE NEW YORK AND NEW ENGLAND RAILROAD Directors have voted to issue \$1,250,000 of 6 per cent. second mortgage bonds, the proceeds to be applied to the completion of a double track between Boston and Newington, five miles west of Hartford, Conn.

FITCHBURG RAILROAD.—At the annual meeting on January 30, the Directors were authorized to issue \$800,000 twenty-year 5 per cent. bonds to fund floating debt. They were also authorized to request the Vermont and Massachusetts Railroad to issue its bonds to an extent not exceeding \$1,000,000, for the purpose of paying the bonds of the Vermont and Massachusetts Railroad Company falling due in July next, and

also to be applied toward the payment of the Fitchburg Railroad Company for the improvements made upon the Vermont and Massachusetts Railroad.

NEW YORK, CHICAGO AND ST. LOUIS.—The Directors have voted to issue \$10,000,000 of second-mortgage bonds, but it is understood that only about \$3,000,000 worth will be placed on sale now. The time of the annual meeting was fixed for the first Monday in May in order to be near the date of the Lake Shore meeting. The Nickel-Plate stockholders will meet next in May, 1884.

II. REPORTS.

PITTSBURGH AND LAKE ERIE.—The report for the year ending December 31, 1882, shows the stock and debt to be:

Stock.....	\$2,050,000
Bonded debt.....	2,196,643
Total.....	\$4,246,643

A scrip dividend of ten per cent. was declared from the earnings of 1881, making the total scrip debt \$410,000. There are also bills payable for the balance due on equipment \$114,503, a temporary loan, \$250,419.

	1882.	1881.
Earnings.....	\$1,265,748	\$1,041,062
Expenses.....	757,044	608,764
Net Earnings.....	\$508,704	\$432,298
Deduct interest on bonds and floating debt.....	164,033	140,635
Surplus	\$344,671	\$291,663

The operating expenses of the company were during the year, 59 8-10 per cent. of the gross earnings, against 58 4-10 per cent. in 1881. Adding to the above surplus the net earnings of previous years leaves a surplus undivided on December 31, 1882, of \$543,367. The net earnings were 16 8-10 per cent. on the capital. A scrip dividend of 10 per cent. was recommended to be declared from the earnings of 1882.

LEHIGH VALLEY.—The report for the year ended November 30, 1882, shows that the largest business was done and the largest earnings made of any single year. Owing to the large expenditures on permanent improvements there was a slight falling off in net earnings. The coal tonnage was 6,336,141 tons, against 5,870,701 in 1881, and 4,672,724 in 1880. The income from all sources was \$11,230,312; operating expenses, \$5,833,677; leaving a balance of \$5,406,635. The income account is as follows:

Net income.....	\$5,406,635
Interest on bonds.....	\$2,019,733
Dividends on preferred and common stock.....	2,350,515
General expenses, interest on floating debt, taxes, &c.....	875,490
Estimated depreciations.....	554,348
Balance to credit of profit and loss account.....	\$106,546
Following is the capital account:	
Preferred stock.....	\$106,300
Common stock, including scrip.....	27,493,395
	\$27,603,195
Mortgage bonds.....	25,013,000
Total	\$52,616,195

NORFOLK AND WESTERN.—The earnings and expenses in 1882 and 1881 were as follows:

	1882.	1881.
Gross earnings.....	\$2,429,740	\$2,267,238
Expenses.....	1,322,576	1,156,432
Net earnings.....	\$1,107,163	\$1,110,856

NORTHERN CENTRAL.—The earnings and expenses for the years 1882 and 1881 were as follows:

	1882.	1881.
Gross earnings.....	\$5,800,176	\$5,443,700
Expenses.....	3,842,323	3,787,445
Net earnings.....	\$1,957,853	\$1,656,254

PENNSYLVANIA RAILROAD.—A compilation of the earnings during 1882 shows that there was an increase of \$4,956,651 in gross earnings, and an increase of \$1,018,056 in net earnings.

ST. LOUIS, VANDALIA AND TERRE HAUTE.—The report of the operations by the lessee for the year ended October 31, 1882, shows that the gross earnings during the year were \$1,596,125.

Thirty per cent. rental was.....	\$478,837
Total charges (interest, taxes, etc.).....	350,493
Surplus.....	\$128,343

This surplus was applied as follows:

Suspended taxes.....	\$17,956
Liquidation of balance to debit of profit and loss Oct. 31, 1881.....	91,018
	108,975

Surplus over all charges Oct. 31, 1882.....\$19,368

The result to the lessee in operating the road during the year was as follows:

Total expenses.....	\$1,187,580
Percentage of earnings (70) allowed therefor.....	1,117,287

Loss for 1882.....\$70,272

Loss for 1881.....261,080

Decrease in loss.....\$210,807

The gain in freight earnings was wholly in the local business, being not so much the result of an increase in tonnage, as of an additional haul per ton.

BALTIMORE AND OHIO.—The report for the year ending Sept. 30, shows that during the year payments of \$617,712 were made to the various sinking funds, which now amount to \$3,491,063. The surplus fund now amounts to \$43,907,659; this is chiefly invested in improvements and extensions of the road, and in leased and controlled lines.

The earnings of the main stem and laterals, 591 miles, for three years were as follows:

	1881-82.	1880-81.	1879-80.
Earnings.....	\$10,556,570	\$11,122,290	\$11,229,881
Expenses.....	5,983,629	6,275,644	6,056,900
Net earnings.....	\$4,572,944	\$4,846,646	\$5,172,981

The decrease has been due to the prevalence of lower rates on an increased traffic. In spite of the low rates, expenses have been reduced; they were 56½ per cent. of earnings in 1879-80 and 1880-81, and 54 per cent. last year.

The earnings of the whole system, 1,613 miles were as follows:

	1881-82.	1880-81.	Difference.	Per ct.
Earnings.....	\$18,338,876	\$18,463,877	Dec.... \$24,001	—
Expenses.....	10,929,214	11,390,479	Dec.... 461,265	4
Net earnings.....	\$7,454,662	\$7,073,398	Dec.... \$381,264	5

The increase came chiefly from the Pittsburgh Division, but partly also from the Trans-Ohio lines.

The net earnings were sufficient to pay all interest and rental charges, the usual 10 per cent. dividends on the stock, and to add \$1,648,978 to the surplus fund.

BOSTON AND ALBANY.—This company's report for the year ending Sept. 30 last, shows that during the year the company bought from the State of Massachusetts 24,115 shares of its own stock at 160, paying for them by an issue of \$3,858,000 new 5 per

cent. bonds and \$400 in money. Otherwise, the capital account is unchanged. It now stands as follows:

Stock (\$2,411,500 held by the C.)	\$20,000,000
Bonds	10,858,000
Total	\$30,858,000

The earnings for the year were as follows.

	1881-82.	1880-81.		Difference.	Per ct.
Earnings	\$7,790,373	\$7,975,285	Dec....	\$84,912	1
Expenses	5,600,991	5,688,413	Dec....	86,254	2
Net earnings	\$2,189,382	\$2,186,873	Dec....	\$2,509	—

Interest and rentals required, \$641,450, leaving a balance of \$1,547,932, from which 8 per cent. dividends, amounting to \$1,508,550, were paid, leaving a balance of \$44,382 to profit and loss.

NEW YORK, LAKE ERIE AND WESTERN.—The report of this company for the year ending Sept. 30, shows the capital account at the end of the year, with the increase during the year, as follows:

	Amount.	Increase.
Common stock	\$77,087,000	\$144,500
Preferred stock	7,987,500	855,300
Funded debt	70,267,138	8,101,472
Total	\$155,342,238	\$3,001,272

Arrangements have been made to extend the third mortgage 7 per cent. bonds (\$4,882,000), which will mature March 1, 1883, for 40 years from that date at 4½ per cent. per annum.

The earnings of the railroad for the year were as follows:

	1881-82.	1880-81.		Difference.	Per ct.
Earnings	\$19,975,774	\$20,715,605	Dec. . .	\$739,831	4
Expenses	13,088,094	13,256,230	Dec. . .	168,136	1
Net earnings	\$6,887,680	\$7,459,375	Dec....	\$571,696	8

Of the receipts from sources outside of the operations of the road (\$780,555 in all) the chief items are: Pavonia Ferry, \$281,151; interest on securities, \$238,593. The expenses of the Pavonia Ferry were \$245,108, the net earnings being \$36,043.

The statement of income given in the President's report is as follows:

Net earnings from traffic	\$6,887,680	07
Earnings from other sources	780,655	08
Total	\$7,668,335	09
Interest on funded debt, rentals of leased lines and other charges	6,501,693	07
Surplus from the operations of the year	\$1,166,642	02
Sale of \$600,000 second-consolidated bonds	603,816	00
Sale of \$2,500,000 reorganization first lien bonds	2,466,395	84
Balance remaining from fund advanced to construct New York, Lake Erie and Western Coal and Railroad and other improvements	624,129	18
Estate of the Erie Railway Company		
Sale of the Grand Opera House property	\$715,000	00
Sale of 2,766 shares of Cleveland, Columbus, Cincinnati and Indianapolis stock	231,762	75
Sale of premises, 331 West Twenty-third street	20,000	00
Total	\$5,827,745	79

This amount has been applied largely to improvements of the road and property, the acquisition of necessary equipment and real estate, the purchase of the capital stock of the lossburg Coal Company, and stock of other companies in which it was advisable for this company to have a controlling interest.

BOSTON AND PROVIDENCE.—The report for the year ending Sept. 30, shows that the stock is unchanged at \$4,000,000, and the bonds at \$860,000.

The earnings for the year were as follows:

	1881-82.	1880-81.		Difference.	Per ct.
Earnings	\$1,584,839	\$1,419,313	Inc....	\$165,526	12
Expenses	1,232,509	1,023,910	Inc....	208,599	20
Net earnings	\$352,330	\$395,403	Dec....	\$43,073	11

Interest accrued (less interest received on investments) amounted to \$22,816, leaving a balance of \$329,514, from which 8 per cent. dividends, amounting to \$320,000, were paid.

NEW HAVEN AND DERBY.—This company's report for the year ending Sept. 30, shows \$447,100 stock, \$525,000 bonds, and \$72,258 due the city of New Haven.

The earnings were as follows:

	1881-82.		1880-81.		Difference.	Per ct.
Earnings.....	\$165,403	..	\$147,564	.. Inc.....	\$18,838	.. 13
Expenses.....	88,013	..	92,297	.. Dec.....	11,284	.. 11
Net earnings.....	\$78,389	..	48,267	.. Inc.....	\$30,122	.. 62

The net earnings, after paying \$27,314 interest, were used for renewals of road and new rolling stock.

OLD COLONY.—This company's report for the year ending Sept. 30, shows that it operates 469 miles of road, or more than any other company in New England.

The stock and bonds are as follows:

Stock.....	\$7,538,800
Bonds.....	5,824,000
Total.....	\$12,857,800

The bonds are all plain bonds, not secured by mortgage.

The earnings were as follows:

	1881-82.		1880-81.		Difference.	Per ct.
Earnings.....	\$4,125,258	..	\$3,746,443	.. Inc....	\$378,815	.. 10
Expenses.....	2,820,809	..	2,499,601	.. Inc....	321,208	.. 13
Net earnings..	\$1,305,449	..	\$1,246,847	.. Inc....	\$58,602	.. 5

Payments from net earnings include \$267,709 for interest, \$449,730 for rentals, \$95,000 for improvements, and \$489,697 for dividends (6¼ per cent), leaving a balance of \$3,258.

LAKE SHORE & MICHIGAN SOUTHERN.—The following statement is published for the year 1883, December earnings partly estimated:

	1882.		1881.		Difference.	Per ct.
Earnings.....	\$18,275,000	..	\$17,971,391	.. Inc.....	\$303,609	.. 2
Expenses.....	11,126,000	..	11,378,429	.. Dec....	152,429	.. 1
Net earnings....	\$7,150,000	..	\$6,602,962	.. Inc....	\$547,038	.. 7
Interest and rentals....	2,990,000	..	2,725,828	.. Inc....	264,174	.. 10
Surplus.....	\$4,160,000	..	\$3,987,636	.. Inc....	\$172,364	.. 5

This surplus was equivalent to 8.37 per cent. on the stock. The dividends paid have been 8 per cent. in all.

III. MISCELLANEOUS R. R. NEWS.

PITTSBURGH SOUTHERN.—This road, running from Pittsburgh to Washington, Pa., with several branches, has been sold to the Baltimore & Ohio Company, and will be made a branch of that road.

MOBILE & OHIO.—On January 24, the United States Court at Mobile discharged the Receiver of the Mobile and Ohio Railroad, W. Butler Duncan, and his sureties, and turned over the entire property in its possession to the original company, without extinguishing the rights of the holders of the securities or stock of the company which united in the reorganization.

SOUTHERN PACIFIC.—The Senate Committee on Railroads, on January 27, authorized Senator Kellogg to report to the Senate a substitute for the bill introduced in the Senate by Mr. Miller, of California, which authorized "the Southern Pacific Railroad Company and other railroad companies to unite and consolidate so as to form a continuous line of railway between the tidal waters of the Atlantic and Pacific oceans." The object of the substitute is to enable the Southern Pacific Railroad to effect a consolidation under one general management of the continuous line of road now virtually controlled by that company under eight different charters, State, territorial and national, from San Francisco to New Orleans. The main features of the substitute for the bill are as follows: The consolidation of parallel lines of road for the leasing or control by purchase is prohibited, and the right is reserved to

the Government to regulate the rates of freight and passage and the right to alter and amend the act of consolidation.

DENVER AND RIO GRANDE.—A change was made in the Directory of the Denver and Rio Grande Railroad, on January 30, by which L. K. Bass, H. A. Risley, J. W. Gilluly, and J. E. Lundstrum, all of Colorado, retired, and William L. Scott, Louis H. Meyer, A. J. Cassatt, and Peter Geddes, of New York and Pennsylvania, took their places. Mr. Meyer was made First Vice-President in place of W. A. Bell, who resigned several months ago. It was said the new Directors were put in so as to have a working board in New York. By some it was supposed that close relations with the Chicago, Burlington and Quincy might result.

NEW YORK, CHICAGO AND ST. LOUIS.—At the annual meeting in Cleveland on January 30, the following directors were elected:—W. K. Vanderbilt, Cornelius Vanderbilt, F. W. Vanderbilt, Augustus Schell, H. McK. Twombly, Anson Stager, and W. C. Whitney, of New York; James Tillinghast, of Buffalo, and Gen. J. H. Devereux, Judge Stevenson Burke, D. W. Caldwell, J. H. Wade, and Charles Hickox, of Cleveland. Mr. Tillinghast was elected Chairman of the meeting, and Mr. Schwann, the former Secretary, by virtue of the by-laws, acted as Secretary. Mr. Tillinghast moved that a mortgage of \$10,000,000 be placed on the road, and asked a vote on it. William K. Vanderbilt said: "I vote 382,491 shares of the full amount voted, or a total of more than \$38,000,000 of stock. While we voted a portion of this by proxy in the previous vote, and do not own it all, we control it." In order to secure this control, as stated by Mr. Vanderbilt, the Lake Shore has issued \$6,500,000 second mortgage bonds, thereby increasing the fixed charges of the Lake Shore road \$435,600 per annum. The Directors chose W. K. Vanderbilt President, D. W. Caldwell Vice-President and Gen. Manager, F. W. Vanderbilt Secretary and Treasurer, and H. H. Hammersley, Assistant Treasurer.

THE CHICAGO, SPRINGFIELD AND ST. LOUIS Railroad has been incorporated. It will run from Springfield to St. Louis and be operated in connection with the Illinois Central Road, giving the latter a direct line from Chicago to St. Louis, and the shortest route between the two cities.

UNION PACIFIC AND KANSAS PACIFIC.—The lower house of the Kansas Legislature has passed a concurrent resolution setting forth that the consolidation of the Union Pacific and Kansas Pacific Railway Companies is a violation of the law of Kansas, and with a view to definitely determining the matter, the Attorney General is directed to institute proceedings in the nature of a quo warranto in the Supreme Court of the State, and prosecute the matter speedily and vigorously to a final judgment.

RAILWAY FORECLOSURES IN 1882.—The computation of the "Railway Age" shows that the foreclosures were much smaller than those of any year since the era of railway bankruptcy set in. The entire number of roads sold during 1882 was sixteen—most of them of minor importance—with a total mileage of 867 1-2 miles, and represented by \$26,160,500 of capital stock, and \$39,265,600 of bonds and other debts. This last item would be somewhat increased by adding the arrears of interest on defaulted bonds, which in several cases were not included. The total capital stock and debt was \$65,426,100. The great decrease in the foreclosure sales, compared with previous years, as well as the great mortality which has attended railway investments within the last seven years, is indicated by the following summary:

Years.	No. roads.	Mileage.	Capital invested.
1876.....	80	3,846	\$217,848,000
1877.....	54	3,875	198,984,000
1878.....	48	3,902	311,631,000
1879.....	65	4,909	243,288,000
1880.....	81	3,775	263,882,000
1881.....	29	2,617	127,923,000
1882.....	16	867	65,426,000
Total.....	273	23,791	\$1,428,962,000

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, FEBRUARY 3, 1893.

The condition of business is not yet satisfactory, the doubts about what Congress will do with the tariff, internal taxation, etc., tending to unsettle the feeling regarding the future prospects.

The general slackness of trade has had an unfavorable effect upon the prices of stocks, even the very strongest having declined very considerably of late. Every interest seems for the time being to be more or less under the influence of rumors having more or less basis in truth, but often very little.

Among these may be mentioned the report that great disasters may follow the refusal of Congress to grant an extension of the time which whiskey may remain in bond. It is said that the banks in the West have lent 25 million dollars on whiskey now in bond, and if it is forced to sale the proceeds will hardly pay the tax, and the banks will be ruined by the loss of their advances. It is very evident that this talk is intended for effect, and the dangers are grossly exaggerated for the purpose of creating sentiment in favor of the measure before Congress.

The failure of a large iron mill at Chicago is a more tangible indication of unsoundness, and it shows that the over-production which caused a considerable fall in the price of iron and steel a few months ago, has been carried forward to a ruinous extent in that particular trade. In all probability there will have to be a slackening in railroad construction before very long, and ordinary prudence should have prompted manufacturers to curtail instead of increasing their production in time. Perhaps the present difficulties may prove of actual benefit, and, by serving as a warning, prevent greater ones in the future.

If the matters which Congress has under consideration were finally decided, there is no reason apparent why business should not be prosperous during the remainder of this year. The relief from the burdens of taxation which is to be expected, should impart to trade a healthy stimulus which is now lacking.

THE PUBLIC DEBT.—The reduction of the public debt of the United States in the month of January amounted to a little more than \$13,500,000, making the reduction for the first seven months of the current fiscal year \$95,000,000, or an average monthly reduction of \$13,500,000. If this rate could be maintained until July the total re-

duction for the year would amount to nearly \$163,000,000, or only \$3,000,000 less than the amount applied to the redemption of Government obligations in the last fiscal year, although in that year \$20,000,000 was taken from the cash balance and added to the surplus revenue to be used in that way. If this monthly rate could be maintained until the end of the year the surplus available for redemption purposes would far exceed the surplus, as estimated by the Secretary in November, which was only \$120,000,000.

The total receipts of the Treasury for the seven months of the fiscal year, which have expired, were \$237,873,010, against \$234,019,426 in the corresponding period of last year. The ordinary expenditures this year were \$118,949,743, against \$106,867,451 last year. The pension payments continue much lighter than was expected, the amount in January being only \$1,315,563. The average for the past seven months has been \$4,800,000 per month, at which rate the total for the fiscal year would be 58 million dollars, instead of the 100 millions which was appropriated at the recommendation of the Commissioner.

The following will show the amount of the recent bond calls, the date of maturity and the amount paid on each up to January 27:

Call.		Matured.		Amount.		Amt. paid.
114th	Aug. 1, 1883	\$15,000,000	\$14,801,800
115th	Sept. 13, 1882	15,000,000	15,451,650
116th	Oct. 4, 1882	4,693,200	2,930,450
117th	Dec. 23, 1882	25,000,000	21,577,250
118th	Jan. 18, 1883	15,000,000	12,198,600
119th	Feb. 10, 1883	15,000,000	11,100,500
120th	May 1, 1883	15,000,000	

In addition to the above is an offer to pay any bonds presented before February 22, up to \$10,000,000, in response to which \$5,993,950 have been presented.

On February 1 the Secretary of the Treasury issued the one hundred and twentieth call for the redemption of bonds of the 5 per cent. funded loan for 1881, continued at $3\frac{1}{4}$ per cent. from August 12, 1881. The call is for \$15,000,000, and notice is given that the principal and accrued interest will be paid at the Treasury on the 1st of May next, and that the interest on said bonds will cease on that day. The bonds called are registered bonds of the acts of July 14, 1870, and January 20, 1871, continued during the pleasure of the Government under the terms of circular No. 52, dated May 12, 1881, to bear interest at the rate of $3\frac{1}{4}$ per cent. per annum from August 12, 1881, as follows:

\$50—No. B 401 to No. B 473, both inclusive.

\$100—No. B 3,101 to No. B 3,650, both inclusive, and No. B 13,333 to No. B 13,358, both inclusive.

\$500—No. B 1,601 to No. B 1,960, both inclusive, and No. B 5,965 to No. B 5,973, both inclusive.

\$1,000—No. B 7,501 to No. B 9,400, both inclusive, and No. B 20,814, to No. B 20,840, both inclusive.

\$5,000—No. B 2,001 to No. B 2,500, both inclusive, and No. B 5,811, to No. B 5,815, both inclusive.

\$10,000—No. B 5,001 to No. B 9,000, both inclusive, and No. B 18,486 to No. B 18,490, both inclusive.

\$30,000—No. B 1,501 to No. B 1,537, both inclusive, and No. B 2,249 to No. B 2,250, both inclusive.

\$50,000—No. B 3,051 to No. B 3,900, both inclusive, and No. B 4,047 to No. B 4,056, both inclusive.

Total, \$15,000,000.

The bonds described above are those last dated and numbered as required by section 3 of the act of July 14, 1870; and those embraced in the highest numbers in the several denominations as given above are the bonds which have been issued on transfers since the one hundred and nineteenth call was issued.

Many of the bonds originally included in the above numbers have been transferred or exchanged and cancelled, leaving outstanding the amount above stated.

The three months' interest due May 1, 1883, on the above described bonds will not be paid by checks forwarded to the holders of the bonds, but will be paid, with the principal, to the holders at the time of presentation.

GOVERNMENT BONDS have been in considerable demand. This was especially the case with the continued bonds until the issuing of the 120th call, which under the existing condition of the Treasury, was unexpected.

The following table shows the closing bids for the principal issues of Government bonds on each day of the month of January, and the highest and lowest during the month:

3 per Jan.	5s, '81. cents. cont'd.	4½s, '91. coup.	4s, 1907. coup.	C'y 6s. 1890.	3 per Jan.	5s, '81. cents. cont'd.	4½s, '91. coup.	4s, 1907. coup.	C'y 6s. 1890.	
2	x102¾	x102	113¼	x119¾	133	18	103¼	102¾	113¼	131

THE NATIONAL BANKS.—The following will show the amount of each description of bonds held by the Treasurer to secure national bank circulation, on or about the dates indicated:

	Nov. 1.	Dec. 1.	Jan. 1.	Feb. 1.
Currency 6 per cents.....	\$3,526,000	\$3,526,000	\$3,526,000	\$3,526,000
5 per cents	15,000	15,000,000	15,000	15,000
4½ per cents.....	33,699,650	34,761,650	25,915,500	26,210,200
4 per cents.....	104,712,500	105,806,300	106,080,600	105,179,700
5 per cents extended at ¾.....	41,254,450	29,244,900	20,905,950	18,924,850
6 per cents extended at ¾.....			1,494,900	
3 per cents.....	179,670,550	188,820,400	192,693,700	195,379,700
Total.	\$362,873,150	\$362,174,250	\$360,531,650	\$359,235,455

MONEY AND DOMESTIC EXCHANGE.—Money has been easy both at home and abroad. The Bank of England has reduced its rate of discount from 4 to 5 per cent., and the great banks of England, France and Germany are in a strong condition

The following table shows the range of call loans, and rate on prime paper, for the past five weeks:

	Dec. 20.	Jan. 6.	Jan. 13.	Jan. 20.	Jan. 27.
Range of call loans	2@8	3@12	2@6	2@6	2@5
Rate of discount.....	5½@6	5½@6	5½@6	5@6	5@5½

Following are the rates of domestic exchange on New York. Savannah, par; selling ¼@¼ premium. Charleston, par; selling ¼ premium. New Orleans commercial, 75c. @ \$1 per \$1,000 premium; bank, \$2 per \$1,000 premium. St. Louis, 75c. per \$1,000 discount. Chicago, 80c. per \$1,000 discount. Boston, 80@40c. per \$1,000 premium.

FOREIGN EXCHANGE is higher than might have been expected under such large shipments of breadstuffs and cotton, but more securities have been coming from abroad than have been sent out, including called Government bonds. Following are the posted and actual rates of foreign exchange on February 3: Bankers' sterling, 60 days nominal, \$4.83½. Sight, nominal, \$4.87; 60 days, actual, \$4.82¼@4.82¾. Sight, actual, \$4.85¼@4.86¼. Cable transfers, \$4.86¼@4.87. Prime commercial sterling, long, \$4.81¼@4.81¾. Documentary sterling, 60 days, \$4.81@4.81¼. Paris, bankers', 60 days, 5.21¼@5.21¾; sight, 5.18¼@5.17¼. Antwerp, commercial, 60 days, 5.25@5.24¾. Swiss, bankers', 60 days, 5.21¼@5.20¾; sight, 5.18¼@5.17¼. Reichsmarks (4), bankers', 60 days, 94½@94¾; sight, 95¼@95½. Guilders, bankers', 60 days, 40@40½; sight, 40¼@40¾. Paris dispatches quote exchange on London 25f. 20c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days and sight, cable transfers, and prime commercial sterling at 60 days, together with exchange on Paris on January 1, the changes in the rates as they occurred during the month, and the highest and lowest during the months of December and January:

DEC.—	Bankers		Cable Transfers.	Commercial.	Paris	
	60 days.	Sight.			60 days.	Sight.
Highest.....	4.81½	4.85½	4.86	4.79¾	5.24½	5.21½
Lowest.....	4.80½	4.84½	4.84½	4.78¾	5.23½	5.19¾
Jan. 2.....	4.81	4.85	4.85¼	4.79¼	5.23¾	5.20¼
" 9.....	4.81½	4.85½	4.85¾	4.79½	5.23¾	5.20¼
" 10.....	4.82	4.86	4.86¼	4.79¾	5.23½	5.20¼
" 11.....	4.82	4.86	4.86¼	4.79¾	5.22¾	5.19¾
" 15.....	4.82	4.86	4.86¾	4.80¾	5.22¾	5.19
" 16.....	4.82½	4.86½	4.86¾	4.81¾	5.22¾	5.19
" 17.....	4.83	4.87	4.87¼	4.81¾	5.22¼	5.18¾

" 30.....	4.83½	4.87	4.86¾	4.81¾	5.21¾	5.17¾
Highest.....	4.83½	4.87	4.87¼	4.81¾	5.23½	5.20¼
Lowest.....	4.81	4.85	4.85¼	4.79¼	5.21¾	5.17¾

RAILROAD AND MISCELLANEOUS STOCKS.—The market is unsettled and weak. This condition is attributed, not to the poor business of the railroads, for the earnings are satisfactory, but to the same causes that have induced a degree of depression in business generally. It is said that the hesitancy of the public to invest its stocks is also partly owing to the great increase in the properties that have come under the control of a few men, whose interests often clash with those of other shareholders.

The following table shows the highest, lowest, and closing prices of the most important railway and miscellaneous stocks at the New York Stock Exchange during the month of January:

Companies.	Highest.	Lowest.	Clos'g	Companies.	Highest.	Lowest.	Clos'g.

NEW YORK CITY BANKS.—The loans have been increased five millions since a month ago, but the reserve is much strengthened, so that there is a large surplus above the legal requirement.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1882 and 1881:

1883.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Feb. 3.....	\$316,480,800	\$61,806,200	\$23,030,400	\$307,182,200	\$16,645,200	\$7,840,050
Jan. 27....	316,905,400	63,987,700	23,351,400	309,126,100	16,985,800	10,007,575
Jan. 20.....	317,459,800	63,687,700	23,064,400	308,309,300	17,470,200	8,674,775
Jan. 13.....	317,891,200	62,477,800	22,372,900	307,920,000	17,528,700	7,870,700
Jan. 6....	317,419,200	60,152,800	20,204,700	308,881,100	17,537,600	4,637,255

Bank, Government, Railroad and Miscellaneous Stocks and Bonds.

LATEST QUOTATIONS AND OTHER INFORMATION.

The following tables give the latest quotations of stocks and bonds at the New York Stock Exchange. In the case of all but the New York bank stocks the highest and lowest actual prices of a year ago are also given, for comparison. The quotation tables on the following pages include *all securities listed at the Stock Exchange*.

NEW YORK BANKS.—CAPITAL AND SURPLUS, QUOTATIONS OF STOCK, and LAST DIVIDEND.

The Capital and Surplus given below are from last official report:—National Banks, December 30, 1882; State Banks, December 16, 1882. The Surplus includes, in the case of Clearing-House Banks, the undivided net profits, and, in the case of other banks the undivided profits. The Banks which are not members of the New York Clearing-House Association are indicated by a (*). Not listed at the Stock Exchange by a (†). This table includes all the Commercial banks of New York.

BOSTON BANKS.—CAPITAL and SURPLUS, QUOTATIONS OF STOCK, and LAST DIVIDEND.

The following table gives the latest quotations of Bank Stocks in the Boston Market, which are mainly sold by auction. The Capital and Surplus given are from the last official report, December 30, and all the banks are National. The surplus includes the undivided net profits. All the banks belong to the Clearing-House, except Bunker Hill, First Ward, Mechanics', National Market of Brighton, People's, and Rockland, which are located out of the city proper, but within city limits, and they clear through other banks.

DAILY RECORD OF FINANCIAL EVENTS.

JANUARY, 1883.

1. MONDAY.—Decrease in the public debt in December, \$15,413,223; since July 1, 1882, \$81,370,784.
2. WEDNESDAY.—Heavy and disastrous floods occurred in Germany and Austria.
4. THURSDAY.—The Tennessee Legislature adopted a resolution to suspend payment of the January interest on the State debt.
A tariff bill reported in the Senate.
5. FRIDAY.—The Eastern Pig Iron Association formed in New York by the representatives of about seventy corporations.

6. SATURDAY.—Discount on prime commercial paper in New York, 60@6½ per cent.; call loans, 6@4@5 per cent.

Discount in London on 60 days to 3 months' bank bills, 3½@3¾ per cent., and trade bills, 3¼@4¼ per cent.

The Spanish Ministry offered their resignations.

A new Cabinet formed in New South Wales with Mr. Stuart as Premier.

8. MONDAY.—A new Ministry formed in Spain, with Senor Sagasta as Premier.

10. WEDNESDAY.—The Columbus, Chicago and Indiana Central Railroad was sold at Indianapolis, under foreclosure, to representatives of the Pennsylvania Railroad, for \$13,500,000.

The Newhall House, Milwaukee, destroyed by fire, and many lives lost.

11. THURSDAY.—Drought in New England causes serious trouble.

12. FRIDAY.—England has withdrawn from the European control of Egypt.

13. SATURDAY.—Discount on prime commercial paper in New York, 5½@6 per cent.; call loans, 5@3 per cent.

Discount in London on 60 days to 3 months' bank bills, 5½ per cent.; trade bills, 4@4½ per cent.

15. MONDAY.—Bar silver is quoted in London at 50 1-16d. per ounce, and Mexican silver dollars at 49d. per ounce.

16. TUESDAY.—Prince Jerome Napoleon issued a Napoleonic manifesto in France, and was arrested.

18. THURSDAY.—Large amounts of Mexican silver continue to pour into Havana.

19. FRIDAY.—The Hamburg-American Company's Steamship *Ombria* collided and sunk in the German Ocean; probably over 400 lives lost.

20. SATURDAY.—Discount on prime commercial paper in New York, 5½@6 per cent.; call loans, 4@3 per cent.

Discount in London on 60 days to 3 months' bank bills, 3¼@3½ per cent.; trade bills, 4¾ per cent.

24. WEDNESDAY.—The North Carolina Legislature has extended for two years the law providing for the compromise of the State debt.

25. THURSDAY.—The minimum rate of discount of the Bank of England reduced from 5 to 4 per cent.

27. SATURDAY.—Discount on prime commercial paper in New York, 5@5 per cent.; call loans, 4@2 per cent.

Discount in London on 60 days to 3 months' bank bills, 3¼ per cent., and trade bills, 3¼@4 per cent.

28. SUNDAY.—The French Ministry resigned. Profound agitation has existed for several days.

29. MONDAY.—A new French Ministry formed by Mons. Fallieres.

31. WEDNESDAY.—The State Treasurer of Alabama disappeared, leaving a large deficit.

RHODES' JOURNAL OF BANKING.

NEW SERIES. {
VOLUME X. }

MARCH, 1883.

No. 3.

It was very evident for some time before Congress adjourned that a determined effort would be made to pass some kind of a bill to reduce taxation before the final adjournment. Although the law passed will probably prove very faulty and will find plenty of critics, the public should take into consideration the numerous and very powerful obstacles that stood in the way of a scientific revision of the tariff and internal revenue laws, and not deal too harshly with those who were willing to vote for the bill rather than to do nothing toward reducing taxation. The banking community, for its part, is to be congratulated upon the abolition of the check-stamp tax and of all the taxes on State and national banks, excepting the tax upon circulation. These war taxes have hitherto been a clog upon a business which is probably the most important of any in the country, and the tax on capital was especially harmful, as it tended to reduce the capital upon which banking was done, and, consequently, to reduce the security of depositors and creditors. RHODES' JOURNAL OF BANKING has always urged this reform upon the public and Congress, in season and out of season, and may fairly claim credit for doing its part in bringing it to pass.

Up to February 25th, 313 national banks were reorganized under the law of July 12, 1882. On the first of March the funded debt of the United States was \$1,354,895,750, being nearly 109 millions less than on July 1 last, leaving so many fewer bonds available as a basis for circulation. Notwithstanding this fact the number of national banks has been increasing recently, the reports returned to the Comptroller for December 30th last (just published), showing that at that date there were 2,308, against 2,269 on October 3, and 2,223 on May 19, last. The provision of Section 8, of the National Bank Extension Act alluded to, allowing banks, having a capital of \$150,000 or less, to reduce their bonds held to secure circulation to one-fourth of their capital (the amount of the issue being one-tenth still less), seems, however, to have

led to a reduction in the bank circulation, notwithstanding the increase in the number of banks. The amount of circulation outstanding on March 1st was \$360,566,380, being a decrease of \$448,406 since March 1st, 1882. Upon comparing the report of December 30, 1882, with that of December 31, 1881, we find that the banks increased in number from 2,163 to 2,308, or 145; the capital increased 18 3-4 millions, to \$484,883,492; the surplus fund gained 6 millions; the loans and discounts increased from \$1,164,648,043 to \$1,225,889,530, but the individual deposits decreased from \$1,102,251,920 to \$1,066,901,719. In brief it may be said that while a tendency to reduce circulation is apparent, yet that the national banks have not as yet begun to lose ground. But it may be doubted if their business is growing in the same ratio as that of the State and private banks.

In another part of this number will be found full reports of the Trust companies of New York State on January 1 last, together with some figures showing the immense increase in their business during the past few years. It is shown that in the last eight and a half years the aggregate resources have increased over 86 million dollars, and the deposits nearly 69 millions. The fact that the amount of the deposits held on January 1st was over one-third of the amount held by the Associated Banks of New York City, shows that the business of the companies is a very important factor in the financial system, and one deserving of more attention than it generally receives. In 1874 the proportion was one-sixth, instead of one-third, which shows that the trust companies are not only growing rapidly, but are gaining upon the banks. About July 1st, 1882, the bank deposits were 41 million dollars less than in July 1881, but the deposits of the trust companies were 11 millions greater. The reason for this increase in volume of business, as compared with that of the banks, is doubtless caused in large part by the fact that the trust companies are free from many of the legal restrictions which hamper the former, and especially the national banks. But, so far as the matter of holding a cash reserve against deposit is concerned, there is some doubt whether the growth of the companies does not call for some change, either in the law or the voluntary custom. As it is at present, the cash reserve of the trust companies is deposited in the banks, so that in case of panic or great monetary pressure the bank reserves will have to bear the strain both for themselves and the companies. In this respect the latter bear to the banks much the same relation as that which the joint-stock banks of London bear to the Bank of England, which is obliged to hold a reserve to supply the other banks as well as its own needs. The Bank of England, for this reason, seldom in ordinary times allows its cash reserve to fall below 35 per cent. of the deposits, which is 10 per cent. more than law and custom require here. But if the business of the trust companies continues to increase at the expense of the banks, it

may be prudent, if not strictly necessary, to require that a larger cash reserve be held somewhere. If such a step is to be taken it ought to be done before the anticipated necessity arises, and while business is, as at present, in a comparatively tranquil condition.

It was considered a fine example of "Jersey justice" when the President, Cashier, and bookkeeper of the late City Bank of Jersey City, were recently sentenced to hard labor in the State Prison for ten years, six years and four years respectively. So far as appears the prisoners are deserving of no special commiseration, their punishment being no more severe than that which is usually meted out to more vulgar persons who make too free with the money of other people, in large amounts. No more leniency should be shown to bank thieves who work from the inside than to those who work from the outside, and bank officers who swear to false reports so as to mislead their depositors and the public are especially deserving of exemplary punishment. But the culpability of the sentenced officers does not relieve the Directors or the public at large from their share of responsibility in the matter. It is hardly possible that the affairs of the two ruined banks could have continued in the condition in which they were for years, if the Directors had given the smallest share of attention to the management which the public had the right to expect from them. But aside from the Directors and the officers, there are others at fault. The misfortunes of so many of the banks of the State of New Jersey are proof of the fact that the oversight by the State officials is inefficient, either on account of a defect in the law, or in laxness of those charged with its execution. It would appear that the trouble is owing to the first and not the latter reason, as the Secretary of State is charged with the care of the reports of the banks, and there is no superintendent or other similar officer. The mere compilation and publication of reports of banks has so far proved of little use in preventing mismanagement, and even the power to examine by a State officer at his discretion is not enough. Superintendent Hepburn of New York State has recommended a law to require periodical examinations of all the State banks, and it is likely that such an act will be passed this year. It can easily be imagined that a very effective check would be exercised upon the management of such a bank as the defunct City Bank, if such a law were enacted in New Jersey. In some respects the management of the affairs of failed banks in that State has been admirable, and it must be acknowledged that there has been no disposition to let defaulters off easily, but there seems to be a defect in the law at the point above indicated. It should be remembered that no provision of law or supervision of officials can prevent disasters to banks. A proper regard for their own rights and interest on the part of shareholders and depositors, aided by a public opinion which will demand

the most rigid integrity and correct business methods from those who hold positions of trust—these are the only things which will make defalcation impossible. But, nevertheless, the safeguards that the law can provide without interfering with legitimate business should not be neglected.

In the discussion of the policy of this country, regarding the tariff, frequent allusion is made to the policy of England and to its commercial relations to other countries. Such allusions often contain incorrect assumptions of fact, which, of course, vitiate the inferences that are drawn. For this reason, if for no other, it may be interesting to glance at some statistics of the British foreign trade during the year 1882. The total value of the imports to the United Kingdom during the year was \$2,060,008,400, being about \$76,000,000, or nearly 4 per cent., greater than the amount in the previous year. The exports of home products amounted to \$1,207,385,700, being about \$37,000,000, or more than 3 per cent., greater than during 1881. The re-exports, or exports of foreign imported goods, were valued at \$329,135,000; so that there was a balance of imports to the amount of \$523,467,700. The total of the imports and exports was nearly 3,600 million dollars, against which, for the sake of comparison, may be placed the amount for the United States for the same time, something over 1,500,000 dollars, showing that, in spite of the large increase in our foreign trade since the war, the mother country still leads by over 2,000 million dollars a year. But the more suggestive comparison is furnished by the difference in the foreign trade balance of the two countries. The excess of imports over exports of the United Kingdom of over 500 million dollars is not considered unnatural or dangerous there, but, on the contrary, many newspapers speak of it as a "favorable balance." In this country, as is well known, a "favorable balance" means only an excess of merchandise exports. The opinion is very commonly held that an excess of imports must be followed by an export of specie, but Great Britain actually gained over \$13,000,000 in gold and silver, on balance last year.

According to revised record of the "Railway Age," new railway track was laid on main lines during 1882 in 45 out of the 47 States and Territories, upon 342 different lines, to the aggregate extent of 11,343 miles. This surpasses the remarkable record of the preceding year by some 2,000 miles, or over 20 per cent., while the new mileage of 1881 exceeded by 2,000 miles, or over 27 per cent., that of any previous year in the history of the country.

SUPERINTENDENT HEPBURN'S REPORT.

NEW YORK SAVINGS BANKS.

It would be unreasonable to expect, from the report of the Superintendent on Savings Banks, anything either in the way of facts or suggestions, of marked novelty or startling interest. Concerning the facts, the people have become so accustomed to the massive aggregates of this interest, and to the increase of these aggregates by millions from year to year, that the figures of the Superintendent's report, which, if they were something new or exceptional, would startle the reader with wonder, now, by reason of the very commonness of the story, fail to excite even a languid surprise. And yet it requires but a little reflection to impart the assurance that this constant and massive growth is, in fact, the wonder of our financial history.

From 1858 to 1883, a period of twenty-five years, there has been an arrest of the progress and growth of Savings Banks, as shown by the amount due to depositors, in each of four years only. The first check was in 1861, when the deposits fell off \$3,357,278. This was, of course, caused by the uncertainties which the opening of the war created. But as soon as the character and magnitude of the struggle were defined and known, although vastly exceeding the apprehensions of even the most timid, confidence was so far restored that Savings Banks received an impetus from it, and the gain in 1862 was nearly \$12,000,000, and exceeded the gain of any previous year.

From this period we have an unbroken record of increase—checked in ratio only during the panic period of 1873 to 1875—until 1876. Yet the falling off in that year was only apparent, resulting from the failure of Savings Banks with over \$5,000,000 of deposits, which at once were struck from Savings Bank records and history. In the banks continuing in business there was a gain in deposits of \$2,514,393. In the following year there was an apparent decrease of \$3,854,227, and an actual decrease in banks doing business of \$1,776,080, the first decrease since 1861, and the second in the history of Savings Banks after they commenced reporting to the Bank Department.

The year 1878 was phenomenal in its record, the total falling off in deposits being \$13,748,419, of which amount \$10,578,402 was in Savings Banks which continued in business. Of course, the effect of the failures of Savings Banks from 1873 to 1876 was not only to close the very large deposit accounts of the institutions which went into liquidation, but to create a distrust which affected the growth, for a time, of the soundest banks. This feeling of distrust seems to have

reached its culmination in 1878, the year above mentioned, as the increase in the following year of over \$20,000,000, and the still greater annual increase since, abundantly shows.

The aggregate of deposits on the 1st of January of the present year, \$412,147,213, whilst a source of pride and gratification to all who have contributed in the past to place our Savings Bank system upon a basis so impregnable as to justify as well as to secure the confidence of the people in its stability, nevertheless presents features of grave concern, which the Superintendent does not fail to notice. The difficulty which confronts the system with the most serious embarrassment, in view of the rapid increase of deposits demanding investment, is how, under the present limitations of the law, these investments can be made. It is comparatively easy for Savings Banks like the Bowery and Bank for Savings to meet the existing, or even a more difficult condition of affairs. With millions of surplus they can procure Government or State bonds, or bonds of cities in this State, so long as any of these securities are in the market for anybody at *any* price; hence, it is not surprising that, in answer to the Superintendent's inquiries of Savings Bank officers, as to how the area of investment might, with safety, be enlarged, twenty-three institutions, averaging deposits for each of over \$8,000,000, should be opposed to any change. To them the situation presents no difficulties which their ample resources of surplus do not enable them to meet. Of those to whom the situation does present embarrassments, it was to be expected that their views would be varied, colored perhaps by their peculiar surroundings, and the conditions which would most easily and certainly give them relief. On the whole, we do not find that this contribution to the question of investments adds much of value to our previous stock of knowledge, nor does the Superintendent contribute anything material in addition to his discussions of the question in former reports. In short, the subject is one likely to remain within the border land of discussion and theory, until the imperative needs of a number of institutions shall compel them to agree upon a mode of relief, and to unite in demanding it, in the form agreed upon, from the Legislature.

The suggestions of the Superintendent, concerning the policy of scaling the deposits of Savings Banks whose assets have become seriously impaired, and concerning more frequent examinations, and the examination of the affairs of Receivers, though not new, are wise and timely, and should be repeated in every report until the subject shall receive consideration and favorable action at the hands of the Legislature.

Bills covering and conforming to the suggestions of the Superintendent, or to some of them, have, we believe, been introduced in the Legislature, and it is to be hoped will pass.

In closing, we cannot forbear to express our gratification in view of the administration of Supt. Hepburn, in such striking contrast with

that of his immediate predecessor. Quiet and unobtrusive, yet vigilant and firm, the Superintendent, whose term is about to expire, has commended himself to the favorable, and we may say, grateful, appreciation of Savings Bank officers, depositors, and the people. It is to be regretted that political exigencies and usage should demand his retirement from a position which he has filled with such credit to himself and satisfaction to the people; but, as we suppose these exigencies are imperative, we can only express our hope that Governor Cleveland will do himself the honor, and the people that justice which is their due, to appoint as good a man as Mr. Hepburn to succeed him.

FOREIGN COMMERCE IN 1882.

A special report prepared by Joseph Nimmo, Jr., Chief of the Bureau of Statistics, on the foreign commerce of the United States for the six months ended December 31, 1882, gives considerable information of interest regarding the condition of the foreign trade and specie movement, and completes the data for the last calendar year. Taking this as a basis, some conclusions may be drawn bearing upon the prevailing condition of business, and of the national finances.

Beginning with July 1, 1882, the beginning of the current fiscal year, there was a steady and, toward the end of the year, a somewhat rapid increase in the value of the exports of merchandise from this country. During the month of December the value of such exports amounted to \$92,960,433, or very nearly three million dollars a day. This amount was exceeded only once in the history of the country. The half year mentioned forms a contrast with the corresponding time of the preceding year as, in 1881, the increase in exports toward the close of the year was much smaller, the difference being due, to a large extent, to the comparative abundance of the harvests on both sides of the Atlantic in 1882.

The value of the merchandise exports during the latter half of the calendar year 1882 exceeded the value of such exports in the corresponding period of the previous year by \$17,434,080. During the latter half of 1882, the imports of merchandise exceeded the value of such imports in the latter half of 1881 by \$28,201,571.

A comparison extending for some years back shows that, from August, 1877, to January, 1882, there was during each month, with a single exception, a considerable excess in the value of exports over that of imports. From February to September, 1882, there was, on the contrary, during each month an excess in the value of imports over that of exports. This change, as will be shown, was due to diminished exports of agricultural products following the comparatively small crops of 1881. In the last quarter of 1882 another change occurred, and there was a considerable and rapidly increasing excess in the value of exports over that of imports of merchandise.

Upon collating a table contained in the report, we find that the excess of merchandise imports from July, 1881, to January, 1882, inclusive, was \$73,304,540; from February to September, 1882, there was an excess of imports amounting to \$62,197,084, and from October to December, 1882, inclusive, the excess of exports was \$69,357,459.

In the year and a half included in the above there was a net excess of exports of \$80,474,905. The excess of the value of merchandise exports over the imports in the six months ended December 31, 1882, was \$54,572,222, against a similar excess of \$25,902,683 during the entire fiscal year ended June 30, 1882.

In order to illustrate the increase in the foreign trade of this country since 1860 it may be said that in the fiscal year ended June 30, 1860, the value of the total imports and exports was \$687,192,176; in the fiscal year 1869 the total was \$703,624,076; whereas in the six months ended December 31, 1882, the total was \$796,678,920. In fact, the foreign trade of this country has nearly doubled within the last thirteen years.

It has been mentioned that during the greater part of 1882 there was an excess of imports to, over exports from, this country, a result which is attributed by Mr. Nimmo to the decreased returns from agriculture during the crop season of 1881. This was doubtless largely accountable for the change, but at the same time, there was a large increase in the imports, which can hardly be attributed to the same cause. The merchandise imports during the calendar year 1882 were valued at \$752,841,145, against \$670,209,448 in 1861, an increase of \$82,631,697. The exports in 1882 were \$767,976,337, against \$833,549,127 in 1881, a decrease of \$65,572,790. We do not subscribe to the idea that the exports can long continue to exceed the imports in any condition of crops, or under any other imaginable circumstances. The contrary opinion, which appears to be supported by a large portion of the press, does not seem reasonable, and is certainly opposed to all experience.

As the crops of 1881, are, however, credited with largely influencing the export trade last year, a statement is given in the report, comparing the crops of 1882 with those of the former season, with a view to showing what the prospects are for the export trade in the current year.

Following is the statement alluded to, showing the relative magnitude of the crops of cotton, wheat and corn in the United States during the seasons of 1881 and 1882 respectively, as compiled from data supplied by the Department of Agriculture.

Commodities.	Season of—		Increase.	Per cent. of	
	1881.	1882.		Increase.	
Cotton—bales....	*5,456,048 ..	6,700,000 ..	1,243,952 ..	22.8	
Wheat—bushels.	380,280,090 ..	502,789,600 ..	122,509,510 ..	32.2	
Corn—bushels...	1,194,916,000 ..	1,624,917,800 ..	430,001,800 ..	36.0	

[*Crop of 1881 as reported by the National Cotton Exchange of America.]

It is evident that the increase in the products of agriculture shown will have an important effect on the export movement since, ordinarily, the value of the exports of agricultural products constitute about 80 per cent. of the total value of the exports of merchandise from the United States.

The relation which the value of the exports of cotton, breadstuffs and provisions bears to the value of the total exports of products of agriculture, and to the total value of merchandise is exhibited as follows :

<i>Exports.</i>	<i>—Year ended June 30.—</i>	
	<i>1881.</i>	<i>1882.</i>
Total merchandise.....	\$902,377,846 ..	\$750,542,257
Products of agriculture.....	730,394,943 ..	552,219,819
Cotton.....	247,695,746 ..	199,812,644
Breadstuffs.....	270,332,519 ..	182,670,528
Provisions.....	146,206,193 ..	115,016,929

The value of the exports of cotton during the six months ended December 31, 1882, (\$124,265,602) exceeded that for the corresponding months of the preceding year (\$99,438,155) by \$24,827,447.

The value of the exports of breadstuffs during the six months ended December 31, last, (\$120,467,835) exceeded that for the corresponding time of 1881 (\$115,407,926) by only \$5,059,909; but the value of the exports of provisions in the six months ended December 31, last, (\$53,315,006) was less than during the corresponding period of 1881 (\$67,193,275) by \$13,883,265. These data show that the more abundant crops throughout the country during the season of 1882, than in 1881, have already led to a considerable increase in the exports of cotton, and a small increase in the exports of breadstuffs, but that no reaction had, up to January 1, been exhibited in the exportation of provisions.

From the facts shown, it is reasonable to infer that the quantity of breadstuffs and provisions available for exportation during the current fiscal year will be larger than the quantity exported during the last fiscal year, as the wheat crop of 1882 exceeded that of 1881 by 32 per cent., while the corn crop of 1882 was 36 per cent. greater than that of 1881. An increased exportation of provisions appears to be probable in view of the largely increased crop of corn, and the fact that the hay crop of 1882 was large and the pasturage generally abundant.

The concluding paragraph of the report says: "It is proper, however, to observe that the magnitude of the exports of grain and provisions from the United States depends upon many and variable conditions, the most important of which are the extent of the supply and of the demand both in this country and in other countries, and the quantity on hand at different times." This is very true, and it might also be remarked that large exports are naturally followed by large imports, the differences being settled in the precious metals only to a very limited extent.

The totals for the year show that in the calendar year 1882 there

was an excess of exports of gold and silver coin and bullion, over the imports, of \$33,537,221, against an excess of imports in 1881 of \$49,327-448. For some time past many financial writers have been promising an import of coin, but it does not come. The amount of circulation in the country (\$1,422,373,622 on February 1, 1883, exclusive of trade dollars and fractional silver, against \$948,882,816 on January 1, 1879) indicates that there is no effective call here for coin from other countries. If the important questions now in doubt regarding national taxation were once well settled and business again active, it is not improbable that a considerable export of coin might occur this year. It is this possibility, which is always present, that makes the silver dollar coinage so dangerous.

RESUMPTION OF SPECIE PAYMENTS IN ITALY.

On February 17th, a decree was issued by King Humbert announcing that specie payments would be resumed in Italy on the 16th of April next. This is somewhat later than was expected, as the long looked for event has generally been mentioned as to occur on April 1. As the preparations for it have had considerable influence on the money markets of the world, on the value of silver, and the movement of gold for instance, and besides, as it is a financial operation of great importance in itself, a few facts in regard to it may be of interest.

The Government will have in order to carry its purpose into effect about \$120,000,000 in coin, proceeds of the recent loan, (after paying about \$8,750,000 which is due to the National Bank) besides an amount of \$20,000,000 saved from revenue and customs receipts. Of this amount of coin, making a total of \$140,000,000, \$90,000,000 is gold, and the remainder silver, \$26,000,000 being fractional coin.

Besides the amount of metallic money held by the Government, the six note-issuing banks have been providing themselves with coin to meet the emergency. The "Economist" estimates the reserve of the banks to be \$60,000,000 in gold and silver; but, as the Government is indebted to them in \$10,000,000 gold, in order that this amount shall not be counted twice in reckoning the total amount available for resumption purposes, the amount held by the banks should be placed at \$50,000,000. Probably somewhat over \$30,000,000 of this amount is gold.

The amount of specie held by individuals has been roughly estimated at \$16,000,000 in gold, and \$10,000,000 in silver.

By adding these amounts it appears that the aggregate amount of specie held in Italy on the day of resumption will be about \$230,000,000 of which \$156,000,000 will be gold, \$60,000,000 silver and \$14,000,000 in copper currency.

The paper circulation which has to be provided for consists of

\$188,000,000 in Government notes, and \$162,000,000 in notes and paper obligations of the banks. Of the Government notes \$120,000,000 are to be withdrawn from circulation, leaving \$68,000,000 afloat. Some decrease in the amount of bank notes is also expected, but the amount of it is doubtful.

With regard to the chances of success of the resumption operations, the authority above quoted says: "If a circulation of about \$440,000,000, about equally divided between paper and specie, is left, there should be both circulation enough for the wants of the country, and a specie basis sufficient to assure its solidity. It remains, however, to be seen how far the course which Italy has taken in basing the return to specie payments so largely on gold will be consistent with remaining permanently a member of the Latin Union, and equally how long the country will retain the gold which has been so sedulously imported for the purpose. The operation is on a far smaller scale than either the change in standard carried out by Germany, or the resumption of specie payments in the United States, but hitherto it has been carried out with a skill and care which have successfully avoided placing any great stress on the money market of Europe, and we may fairly expect this skill and care to attend it to the end."

INTEREST.*

Several distinct yet fundamentally related inquiries arise with respect to interest. What are the causes that determine in a given age and country its general or average rate? What are the causes that determine its tendency to rise, to fall, or to remain stationary in the progress of society? What are the causes that determine its temporary fluctuations?—The causes determining its average rate have differed essentially in different ages, and even in different parts of the same country in the same age. At a primitive social stage interest was unknown, and when the practice of exacting it emerged, it was considered immoral and generally prohibited by law. Archbishop Whately incorrectly defined man as an exchanging animal; exchanges did not take place in the earlier communistic stages of human progress. For a similar reason man can not be defined as an animal that pays interest on loans. The owner of superfluous wealth was in primitive times considered bound to lend it or give it gratuitously to any one in need; a distinct conception of individual proprietary right not having been developed. It was not until late in the reign of Henry VIII. that the

* This article is printed from advance sheets of the second volume of the "Cyclopedia of Political Science, Political Economy, and of the Political History of the United States," edited by John J. Lalor. The publishers of the first volume, Rand, McNally & Co., have transferred their interest in the work to Messrs. Melbert B. Cary & Co., of Chicago. The second volume, which will soon appear, is expected to even exceed the first in interest and value.

payment of interest was legalized in England; a maximum rate of 10 per cent. being at the same time fixed. Before this act the receipt of interest was branded as usury, and contrary to both the common law and the canon law; although social exigencies, stronger than law, had in the later middle ages firmly established the practice of paying it, subject, however, to very different conditions throughout the country generally on the one hand and among mercantile people in the principal towns on the other. Throughout the country generally, there was but little accumulation in the middle ages. If we take the produce of taxes as evidence, the pecuniary value of the whole movable property of England during the thirteenth and fourteenth centuries never amounted to a million. So late as 1523, it was estimated in Parliament that all the movable wealth of the kingdom, money included, was under the value of three millions. A case, indeed, is reported in one of the year books of the reign of Edward III. from which it would appear that a deceased person had left goods and chattels to the value of 200,000 marks (£133,333), of which his widow claimed a moiety; but the amount is incredible, and is probably ascribable to some mistake of a copyist in the numerals. But if there was little accumulation, there was still less loanable capital. The great mediæval landowner was commonly needy, and his accumulations, if any, took the form not of loanable capital but of castles or manor houses, cattle, sheep, horses, arms, clothing, together with some plate and jewelry. One of the most instructive inquiries in economic history relates to the forms of accumulation in different states of society and different countries, and their causes; and it is an inquiry closely connected with variations in the rate of interest. One can without difficulty understand that the feudal lord built strong and imposing dwellings for power, consequence and security; and his possessions in cattle may also be easily explained. They were the natural produce of his land, and they fed a host of dependents in his hall. But if he rarely amassed money, it was not that the love of money was not strong in his breast, but because it was so scarce that even a thrifty noble with immense landed estates found it hard to procure. From the reign of Edward I. to the accession of Henry VIII. the entire amount of silver loaned in England was below £1,200,000, and the drain of money to the continent, especially by the papal court, during that period, was relatively enormous. Hence there was little money to lend in the country. Land, houses, cattle, sheep, and such kinds of property, movable or immovable, did not constitute loanable wealth. Loans, too, could not be effected by means of credit; the actual intervention of coin was necessary, and few persons had sums by them to put out to interest. The risk of the penalties on usury, and the rigor of the terms extorted by lenders under various covert devices, contributed to the difficulty of procuring loans, but the scarcity of money was a principal cause of the exorbitant rates of interest prevailing throughout Europe in the middle ages. Payments

even to mercantile people in London itself were sometimes made partly in skins for lack of coin. Had banking and instruments of credit made it possible to effect loans without money, much lower rates of interest might have prevailed in spite of the penalties on usury. Hence the fall in the rate of interest in England in the latter part of the sixteenth century was undoubtedly caused, in a great measure, by the increase in the accumulation of money, and the greater quantity entering the loan market after the influx of the precious metals from the mines of Potosi and the new coinage of Elizabeth's reign. In later times the growth of a system of credit has added so vastly in effect to the amount of loanable capital, that, unless in critical times when credit collapses, the quantity of loanable coin has no appreciable influence on the rate of interest, and would hardly be missed from the loan market.

It should be added, with respect to mediæval interest, that the customs of trade at length established in the commercial towns a rate with which the ordinary tribunals did not interfere. In England, in the reign of Edward III., the customary rate in London was 10 per cent., or half the customary rate of profit. We find here the emergence of the condition which in modern times has become the dominant one determining ordinary interest, but which in the middle ages operated only among the small number of trading people in towns, namely, the rate of commercial profit. The ordinary borrower in old times did not borrow to make profit, but because he was in immediate need of money to pay his debts. In modern times the fluctuations of interest are often caused by borrowing, irrespective of profit, on the part of persons or governments in immediate want of advances; but unless in critical states of trade, or on other extraordinary occasions, modern borrowing is chiefly on the part of people in business seeking to make profit on the capital thus obtained, and the interest they can pay is accordingly limited by the profit they can make. Thus, one of the fundamental differences between the causes determining mediæval and modern interest is, that the greater part of the capital lent in our age is lent to producers, and the main source of interest is the profit they make on production. There are still some unproductive private borrowers, and governments may pay interest out of taxes, but the general rate is determined by a commercial or industrial standard. There is no other country in the civilized world in which the modern movements of interest, and the conditions affecting them, can be so advantageously studied as in the United States. Here the causes governing the rates in both old and new countries, and the course they follow as social and economic progress advances, can be investigated together. For, relatively speaking, the eastern States form an old country, the western States a new one; and again in the latter we can observe new regions at different stages of early development. The salient facts as regards interest are, in the first place, in the eastern States, an average rate of interest not much above that prevailing in the chief countries of Eu-

rope ; secondly, in the newest regions of the west an extraordinarily high rate, which has sometimes reached 25 per cent. ; thirdly, a fall of interest in these new regions after cultivation and industrial development have gained considerable ground. To understand the significance of these economic phenomena we must take in connection with them some others no less remarkable. Wages, too, are found at their highest point in the new regions of the west at the beginning of their industrial career ; they are lowest in the long-settled eastern States ; and they begin to decline in the western States when the first stage of their development has been passed. The explanation of the concurrent phenomena thus exhibited in the movements of interest and wages is simple. With the aid of the scantiest supply of capital the first Californian gold diggers might count on winning, on an average, an ounce of the precious metal, equal to sixteen dollars, a day. The first farmers could raise enormous cereal crops by merely plowing and sowing ; and horses and herds, which they had only to take possession of, covered rich natural grass lands. Out of such returns both high wages and high interest could easily be afforded, and the scarcity of capital enabled lenders to exact a considerable proportion of the whole produce. But when the cream, as it were, had been skimmed by the first comers, both capital and labor had to content themselves with a poorer and harder earned yield. Gold was no longer to be won by mere digging, and needed deep and costly mining. The soil was found to require irrigation after a few crops had been raised, and even manure came into request. Not a herd was to be seen on the plains that was not marked with an owner's name. Capital was no longer scarce, but the returns were comparatively scanty. Nature did less and less to assist the advance of each successive wave of immigrants, until the difference between the productiveness of capital and labor in the new State and the old eastern States became one only of degree, not of kind.

It is objected, however, to this simple explanation of the phenomena of the coexistence of extraordinary high interest and extraordinary high wages in new and naturally prolific regions, and of the decline of both as such regions are peopled, brought under cultivation and developed by capital, so as to begin to display the features of long settled and advanced States, that the productiveness of labor and capital, that is to say, their wealth-producing power is not less but greater in old than in new countries. In old countries, it is argued, the subdivision of labor is carried to a much farther point and directed with much greater skill, and their wealth is such that they not only support a large unproductive population, but have a numerous and rich idle class : whereas in new countries in their earliest stage every one is a producer. The richest States of America, it is pointed out, are not the western but the eastern, and the richest State in the world is Great Britain, with natural resources far inferior to those of Mexico or Brazil. But the single

fact that labor and capital desert Great Britain for new countries affords conclusive proof that they are more productive, and therefore find more remunerative employment, in the latter. The wealth of England is no doubt greater than that of any new country, but a great part of its wealth is made not in England but in the very new countries in question. And the total wealth of England would be much less than it is were the returns to English capital no greater in any other region than in England itself, England is rich because, on the one hand, it reaps harvests all over the world, and gathers the produce together into its granaries, and because, on the other hand, the aggregate capital it employs in production transcends calculation, although part of it yields but scanty returns from poor soils and inferior mines. A million might return 25 per cent, to the Californian corn-grower and only 5 per cent. to the farmer in Middlesex, yet if for every million in California there be a hundred millions in Middlesex, with London in its midst, Middlesex may have a revenue equal to that of twenty Californias; no inconsiderable fraction of it being, perhaps, actually drawn from California. In these facts we find also a refutation of the theory that the appropriations of land and the growth of rent are the causes of the decline of interest in new countries in proportion as cultivation, industrial progress and population advance. When the farmer and the miner are compelled to resort to much more laborious and costly methods than those by which they gathered the first fruits that Nature laid at their feet, wages, profit and interest must decline, whether land be appropriated or not, and whether there be or not some fortunate owners of virgin soil and rich deposits of gold, from which a large rent can be drawn. There might be no rent were all the more fertile soils and mines so exhausted that capital and labor were driven altogether to parts of the new State which the earlier immigrants had passed by with contempt, but the absence of rent would not prevent a fall of both wages and profit, and of the interest which the lender of capital derives from the gross profit it yields. To call the rise of rent the cause of the fall of interest, is to mistake the effect for the cause. As population advances, land with inferior natural powers or advantages is resorted to, and superior fields for the employment of labor and capital can thus afford a rent. Whether this rent is appropriated by the central government, or belongs to the first settlers, wages and interest must fall. It is true that were the Government to become the sole land-owner, its revenue in rent might enable it to dispense with taxation, thereby setting trade free from fiscal burdens and fetters, and so raising indirectly the return to labor and capital. But this would be the result of the absence of taxes and restraints on production and commerce, not of the absence of rent. The general rate and movement of interest thus depend mainly on the profit which the capital employed in production holds out, and the movement will be downward, as resort to less productive natural resources becomes requisite, unless

science and art supply the deficit created by the failure of the bounty of nature. In the infancy of their development new countries afford a rate of interest which will never again be attained in later stages of their career, but whether interest must continue to decline throughout every stage of social advancement, is a question that can not be decisively answered, because the resources of science and art and the future powers of production of the human mind are beyond prediction. The human mind is a source to which capital may look for profit after some of the chief material sources at present known shall have begun to fall.

Although, however, the rate of profit determines the limit or maximum of interest, because the managers or employers of borrowed capital can not pay more than they make by its use, and must reserve part for their own remuneration, it does not determine either the proportion of gross profits that interest absorbs, or the temporary fluctuations of the latter, which often bear no relation to profit. The proportions of profit falling to the share of lenders as interest depends on the amount of loanable capital, on the one hand, and the demand for it on the part of both productive and unproductive borrowers, on the other hand. A high rate of interest tends to diminish the number of persons engaged in business and employing their own capital, and therefore increases the supply of loanable capital; while a low rate forces a greater number of capitalists to employ it themselves and to add the remuneration of management to interest, and thereby diminishes the supply feeding the loan market. Temporary fluctuations of the rate of interest result from a variety of causes, of which the chief is the state of the credit. In ordinary times considerable loans are for the most part effected without the intervention of money in the proper sense of the term, but when credit collapses, nothing but cash is an available medium. The need of loans on the part of traders in difficulty becomes at the same time more and more urgent in proportion as credit contracts, so that at such periods the interest even people in business are ready to offer may bear no relation to the rate of profit in commerce. There are occasions, too, on which an urgent demand on the part, not of people in trade but of Governments, is the chief condition operating on the loan market, and trade profit here again supplies no standard by which to estimate the terms on which loans are effected. Many other causes produce sudden divergences of interest from the rate which the standard of commercial profit would fix. The supply of money at call, for instance, may be abundant, and loans for a few days be obtained at little above 1 per cent., while the rate of discount on advances for 3 months may exceed 3 per cent. It must not be forgotten that the profit which trade offers is, after all, speculative only; it holds out, not a certainty, but a probability or expectation. The interest therefore, which lenders of capital can look for is likewise speculative or probable only. Nevertheless this speculative interest

is the principal condition governing the rate on the safest investments, such as the Government stocks of countries like the United States, Great Britain and France, and determining their price in the market. If a man has drawn a ticket in a lottery which gives him an even chance of winning \$100, the ticket is worth \$50, and he is not likely to part with it for \$40. In like manner, if he has a probability of making 20 per cent. on an investment in trade, he will give only half the price for Government stock that he might have given were 10 per cent. only the expectation, on equal probability, held out by trade.

T. E. CLIFFE LESLIE.

SAVINGS BANKS OF NEW YORK.

The reports of Superintendent A. B. Hepburn, of the Bank Department of the State of New York, are always full of interest and of suggestions useful alike to bank officers of this and other States, legislators and depositors. For this reason, as well as to supply full data regarding the Savings Institutions of the State, it has been thought well to give the report transmitted to the Legislature on February 14, 1883, (practically) *in toto* :

REPORT.

The following table shows the aggregate resources of all institutions (Building, Mutual, Loan and Accumulating Fund associations excepted) subject to the supervision of the Superintendent of the Bank Department, for the past four years. The statistics as to discount banks is from data obtained from the December preceding the date for which it is given.

RESOURCES.*

	January 1, 1880.	January 1, 1881.	January 1, 1882.	January 1, 1883.
Savings banks.....	\$354,222,376	\$400,944,380	\$443,047,414	\$472,927,867
Banks of discount and deposit.....	94,022,238	107,448,724	113,498,972	149,261,869
Trust companies.	82,010,248	96,779,101	122,011,860	143,889,348
Safe deposit companies.....	1,583,346	1,926,107	2,021,836	2,067,966
	\$531,839,809	\$607,098,312	\$680,580,082	\$768,146,493
Increase in resources.....		\$75,259,103	\$73,481,769	\$87,566,411
Total increase for the last three years.....				236,307,284

The number of savings banks reporting January 1, 1883, is one hundred and twenty-seven, being the same number which reported January 1, 1882. During the year the Morrisania Savings Bank went into voluntary liquidation, and has paid its depositors in full with interest, excepting \$2,248.71 yet uncalled for, which will be paid, upon application to the bank.

CLOSING BANKS.

Thirteen of the savings banks of the State are in process of vol-

[* The cents are generally omitted in the tables.]

untary liquidation. They do no new business, and have but nominal existence. The transfer to the Superintendent of the trifling balances held by each is all that is required to effect their final dissolution. The names and amount of deposits held by each is as follows:

<i>Names.</i>	<i>Amount due depositors.</i>
Hope Savings Bank, Albany.....	\$320
Chautauqua County Savings Bank, Fredonia.....	43
Southern Tier Savings Bank, Elmira.....	671
Clinton County Savings Bank, Plattsburgh.....	725
Mechanics Savings Bank, Brooklyn.....	363
Park Savings Bank, Brooklyn.....	329
Equitable Savings Institution, New York city.....	171
Morrisania Savings Bank, New York city.....	2,248
Whitestone Savings Bank, Whitestone.....	502
Central Savings Bank, Troy.....	539
Manufacturers' Savings Bank, Troy.....	486
Mutual Savings Bank, Troy.....	8,129
White Plains Savings Bank, White Plains.....	466

The number of savings banks engaged in active business January 1 was one hundred and fourteen.

NEW BANKS.

The American Savings Bank, New York city, was granted a certificate of authorization to do business January 31, 1882. The bank has not as yet opened for business.

CLOSED BANKS.

Since the passage of the act of 1869 (chap. 424), providing for the closing and dissolution of savings banks, the representatives of eleven banks have transferred the remaining deposits and unclaimed dividends to me, and have been discharged from their respective trusts. They are as follows:

Richard M. Bent, Receiver of the failed New Amsterdam Savings Bank, of the city of New York, October 9, 1879, deposited \$429.79 of unclaimed dividends due to four hundred and fifty-nine depositors. Seventy-seven cents have been repaid to one depositor.

William M. Banks, Receiver of the failed Security Savings Bank, of the city of New York, December 16, 1879, deposited \$1,865.72 of unclaimed dividends due to eleven hundred and eighty depositors. \$365.24 have been repaid to twenty-six depositors.

The trustees of the Newtown Savings Bank, of Winfield Junction, having voluntarily closed that bank, on December 27, 1879, deposited \$1.40 of unclaimed balances due to two depositors. No application has been made for either balance.

B. Platt Carpenter, Receiver of the failed Haverstraw Savings Bank, of Haverstraw, January 23, 1880, deposited \$596.04 of unclaimed dividends due to two hundred and fifty-one depositors. \$264.06 have been repaid to eleven depositors.

The Receivers of the Oriental Savings Bank, of New York city,

November 15, 1880, deposited \$2,255.50 of unclaimed dividends due to six thousand and ninety-three depositors. \$140.36 have been repaid to twenty-six depositors.

Frank Thompson, Receiver of the Abingdon Square Savings Bank, New York city, June 13, 1881, deposited \$930.37 of unclaimed dividends due to four hundred and fifty-two depositors. \$122.03 have been repaid to nine depositors.

The trustees of the Port Jervis Savings Bank of Port Jervis, having voluntarily closed that bank, on December 22, 1881, deposited \$251.97 of unclaimed balances due to five depositors. \$140.67 have been repaid to two depositors.

Samuel B. White, Receiver of the Trades Savings Bank, of the city of New York, December 30, 1881, deposited an assignment of a judgment against Alex. M. Lesley, and \$547.32 of unclaimed dividends due to four hundred and eighty-seven depositors. \$3.72 have been repaid to three depositors.

D. O. Bradley, Receiver of the Mutual Benefit Savings Bank, of New York city, December 31, 1881, deposited \$7,554.86 of unclaimed dividends due to thirteen hundred and forty-six depositors. \$1,115.82 have been repaid to one hundred and one depositors.

Edward S. Parris, Receiver of the Clinton Savings Bank, of New York city, March 6, 1882, deposited \$831.91 of unclaimed dividends due to six hundred and thirty-three depositors. \$5.73 have been repaid to two depositors.

Adolph Dengler, Receiver of the German Up-Town Savings Bank, of New York city, December 28, 1882, deposited \$5,598.70 of unclaimed dividends due to fifteen hundred and ninety-two depositors; no payments have been made therefrom.

There is now in my possession \$18,705.18 belonging to twelve thousand three hundred and twenty depositors. I am required to pay this out upon such evidence of ownership as is to the Superintendent satisfactory. The correspondence upon this subject is voluminous, and the expense considerable. As the law now stands, this expense is borne by the solvent banks. This is wrong. I suggest that the law be so amended as to allow the Superintendent to cover the interest upon this fund into the Treasury. It would equal the actual expense incurred in handling the fund and be a simple act of justice.

INSOLVENT SAVINGS BANKS.

The utter disregard of the public and depositors' interests that has characterized so many savings bank receiverships has elicited the greatest indignation, and widest discussion. The evils existing under present laws have been exposed by special investigations made by the Legislature and otherwise, and yet the laws governing receiverships remain unchanged.

I have carefully considered this subject, and believe that the fol-

lowing proposed laws will measurably, at least, prevent the recurrence of like abuses. The fundamental principle of supervision is that wrong practices will not be indulged in with impending certainty of exposure to public contempt. Regular reports, examinations and their publication, not only enable a supervising officer to supplant the power with a better method of business, but restrain and correct evil practices which strong temptation or positive dishonesty might otherwise induce.

Prior to 1881 the history of savings banks was a blank from the time of their failure until the deposit by the receiver, upon his discharge, in this department, of the final modicum of unclaimed dividends. In 1881 a law was passed requiring receivers to report to this department.

Of the twenty-nine failed banks, nine have by their receivers, been finally closed, by the transfer to me of the unclaimed balances due to the depositors of their respective banks. Of the remaining twenty, one was closed by the trustees of the bank under an agreement with its depositors, three were closed through proceedings in bankruptcy, and of the status of these I have been unable to obtain information. The reports directed by law to be made to me semi-annually have been received from but eleven of the receivers. Those which had not reported to this date (February 9), were Sixpenny, *Mechanics and Traders,' *German of Morrisania, Rockland, and New Rochelle.

It seems strange that reports made by the different receivers under oath, in response to the same printed series of questions, should not admit of tabulation and comparison, yet such is the case. I am unable to gather but vague knowledge of their past, and still more vague ideas of their future. The imperfect condition of their reports is measurably excusable, so far as some receivers are concerned, owing to the position in which they found their trusts. For instance, the Guardian Savings Institution was placed in the hands of a receiver, November 17, 1871. The amount due to the depositors was \$561,651.74. Jeremiah Quinlan was appointed receiver. Walter Roche, one of the trustees, made a trust deed of property worth \$328,000 in order to secure payment of depositors in full, and providing that claims paid from this fund should be assigned to him—Roche—other parties released claims against the bank until the amount due depositors was reduced to \$480,000.

Quinlan collected over \$300,000 from the assets of the bank, embezzled over \$98,000, resigned, and fled the State. Peter J. O'Donahue was appointed his successor, January 13, 1875; was removed for cause by order of court, confirmed June 1, 1877, and John T. McGown was appointed July 2, 1877.

Ninety-five per cent. has been paid to depositors and it is estimated that five per cent. more will be paid. About one and a half times the

[*W. J. Best, whose reputation is not unknown to readers of the JOURNAL, is receiver of both these banks.—Ed.]

amount due depositors is known to have been available for their payment, so it is confidently hoped that this remaining five per cent. will be paid. Only a little less than twelve years have elapsed since the bank went into a receiver's hands. Money doubles itself at six per cent. in twelve years. When credit is claimed for paying nearly one hundred cents on the dollar to depositors, the intervening years during which their funds have been in receiver's hands should be borne in mind, as materially affecting the amount which they receive. But for the generosity of Mr. Roche depositors in this bank would not be paid in full (if paying the original amount due them at intervals during a period of twelve years can be called payment in full) and indeed it is probable the several receivers might have been embarrassed in their operations for want of funds.

A law passed in 1879 enacts that receivers shall render a full account of all their proceedings and make final distribution within eighteen months from the time of their appointment, unless the court, upon application by the receivers and notice to the Attorney-General, shall give additional time for that purpose. No application has been made by the receiver in this case and his time has not been extended, but still the trust drags its slow length along.

If there ever was a time in the history of savings banks when the State owes it to depositors to expose the management of their funds to the light of publicity, it is while those funds are in the hands of a receiver. This is true as a general proposition—its truth is only too apparent in the light of the history of the failed banks. The public press, ever vigilant in obtaining news and daily carrying it into every hamlet, given access to the actual management of these trusts would have built up around these funds a wall of criticism that would have protected them alike from dishonesty and rapacity.

Regular examination of savings banks funds in the hands of receivers should be made and annually reported to the Legislature.

Other States have such laws and New York should. No one can make a study of the failed savings banks without perceiving how much better it would have been for depositors, in many instances, had the deposits been scaled so as to render the banks solvent, and they have been allowed to continue business.

This department and the courts now have, by law, sufficient power over the tenure of office of savings bank managers to secure the removal of incompetent or unfaithful men. With the funds still in the hands of trustees, under the direction of the court and subject to the supervision of the superintendent, the depositors would have realized much more money, and the expensive management and costly and interminable litigation which succeeds insolvency, as the night the day, would have been avoided.

It seems that our courts now have the power to reduce each individual deposit to an amount sufficient to render an insolvent savings

bank solvent, and authorize the managers of the bank to charge against each separate deposit such amount. It would seem, also, that the trustees of a savings bank possess the power, as trustees, to make such reduction by a simple vote to that effect. A power, I think, dangerous were it likely to be exercised.

This question was decided by the court of last resort in the State of Connecticut in *Bunnell v. Collinsville Savings Sy.* (38 Conn. 203.)

The defendant, a savings bank, in the course of its business, met a loss equal to twenty-four per cent. of the amount of its deposits, which sum was, by vote of the managers, apportioned *pro rata* among the depositors, and this action of the directors was afterward validated and confirmed by resolve of the general assembly.

The bank did not go into bankruptcy, nor was it placed in the hands of a receiver, but continued business upon the basis of liabilities, as fixed by the vote of its managers, *i. e.*, reduced twenty-four per cent.

Bunnell, a depositor, brought suit to recover the twenty-four per cent. reduction charged against his account. The court decided, PARK, Justice:

"We think the facts found by the court below clearly show that judgment should be rendered for the defendant. In the case of *Cotte v. Society for Savings*, 32 Conn. 173, the court say, that savings societies 'are, in fact, large incorporated agencies for receiving and loaning money on account of their owners. They have no stock and no capital.' * * * 'They are merely places of deposit where money can be left to remain or be taken out at the pleasure of the owner.' Their assets consist in loans of money made by them for the benefit of their depositors from whom the money was derived. In case of loss they have no property out of which it can be paid, and if the claim of the plaintiff is correct these institutions would have to go into insolvency and wind up their affairs whenever a loss occurs, however small it may be; in which case depositors would have to bear their proportion of the loss. Had this institution wound up its affairs in consequence of this loss, the plaintiff would not have received any portion of the sum he now seeks to recover, for his proportion of the loss would have been the sum now in controversy. Why should he be benefited because the defendant did not go into insolvency? He knew, when he deposited his money, that he was placing it at hazard. He put it into the hands of the defendant to be used by it, substantially, as his agent, for his benefit; and in the use so much of it had been lost. What ground has he to complain? The assets this institution now has belong, substantially, to the present depositors. How can he obtain his loss? Shall he be paid out of their money? They have an equal right to be paid out of his. Substantially, he has lost the sum he now seeks to recover by his own act, through the instrumentality of his agent, and he has no cause to complain. The view we have taken of the case renders it unnecessary to consider whether the act of the Legislature validating and confirming the action of the board of trustees apportioning the loss of defendant among the depositors in due proportion, was valid or not. It may well be questioned, however, whether the act would prevent the plaintiff's recovery if he otherwise was entitled to recover; for it is obvious if it should have that effect it would impair the obligation of the contract between the parties.

In the case of the Newark Savings Bank, Newark, N. J., upon an application to scale deposits, made December 12, 1877, Chancellor Runyon rendered the following opinion:

"Application is made by the Newark Savings Institution for judicial intervention and direction in the management of its trusts. The state of circumstances presented by the petition as the occasion for invoking the aid of this court is therein wholly attributed to the very great depreciation of property which has occurred within the last few years, and which is an unavoidable concomitant of the commercial depression which the country has suffered, and under which it is still laboring. In these days, as is well known, mortgaged investments, originally carefully and judiciously made on property generally and properly regarded as furnishing ample security, in very many instances, from the cause just referred to, not only prove unproductive of income, but fail to secure repayment of the principal itself, so that on foreclosure the lender is

compelled to purchase the property to save the original investment. Other securities justly accepted as the most stable (to say nothing of those which, though of a lower grade, were nevertheless considered safe) have fallen in value. Such a condition of affairs cannot fail to produce embarrassment in the administration of extensive trusts for investment. Under such embarrassment the petitioner seeks the assistance of this court. It alleges that it is the owner of assets (including certain depreciated securities) to the amount of about \$12,000,000, besides a large sum (hundreds of thousands of dollars) of accrued interest on investments other than the depreciated securities, and that its total deposits amount to about \$11,000,000; that these assets consist of mortgages and public and railroad bonds, and that it has now in its possession Government securities amounting, with the premiums thereon, to more than \$2,000,000, and also a very large amount of other securities immediately available, and that the rest cannot be realized upon at once, and cannot be converted into cash without loss if the collection be forced or the securities be put into the market. The institution is the oldest of the savings banks in the city of Newark. Its managers have been from the beginning some of the very best citizens, and during the thirty years of its existence it has had the full confidence of the public, as evidenced by the amount of its deposits and the number of its depositors. These latter are twenty-five thousand, very many of whom are poor people, whose entire savings have been placed there for safe-keeping. Induced by rumors of the embarrassment of the institution, depositors of large amounts are withdrawing their deposits. To pay them it is necessary to convert available assets into cash. Obviously in a very short time the institution must succumb under this process of depletion; and then the least available assets will be all that will be left for the unpaid depositors. The unfairness of such a result is manifest. The institution is a general or public trustee. It holds the money of its depositors in trust for investment. Its charter, by its fourth section, provides (Laws of 1847, p. 105.) that the corporation may receive, as deposits, all sums of money which may be offered for the purpose of being invested in such sums, and at such times, and on such terms as the by-laws shall prescribe, which shall be invested accordingly, and shall be repaid to such depositors at such times, and with such interest, and under such regulations as the board of managers shall from time to time prescribe, and the corporation may accept and execute all such trusts of every description as may be committed to it by any person by will or otherwise, or be transferred to it by order of any court. By the fifth section it is provided that it shall be the duty of the managers to regulate the rate of interest to be allowed to the depositors so that they shall receive a ratable proportion as near as may be of the profits after deducting therefrom all necessary expenses, and a reasonable surplus or contingent fund. This court has jurisdiction over all trusts, as well where the trust is held by a corporation, as where the trustee is an individual. A saving institution, such as the petitioner, is a mere trustee. *Cotte v. Society for Savings*, 32 Conn. 173; *Bunnell v. Collinsville Savings Society*, 38 Conn. 203. It has no stock. It receives the money of depositors for investment, and invests it on securities taken for the general benefit of the depositors. "It is merely a large incorporated agency for receiving and loaning money on account of those to whom the money belongs." *Cotte v. Society for Savings*. The interest received upon the investments is to be ratably divided among the depositors. It is so expressly provided by the charter of the petitioner. The depositors in the absence of fraud on the part of the managers from which personal liability would arise, have no recourse whatever for repayment of their principal or interest to anything except the general investment of the institution. The institution now before me was incorporated for the sole purpose of receiving and investing deposits. The design of the Legislature in granting the charter was to promote industry and frugality, and preserve and husband the fruits of honest toil. It contemplated no benefit to the managers, but looked only to the security and advantage of the depositors. The trust thus created is a general or public trust. No depositor has under the charter or in equity any right to any particular security in the hands of the institution for his deposit, more than any other depositor. All the assets, after deducting necessary expenses, are held as a common fund for the security of all the depositors. It follows that no depositor has any reason for complaint if he is not permitted to receive his deposit in full, if there be even any uncertainty as to whether there will be assets enough to pay all the others in full. It follows, also, that the institution ought not, under such cir-

cumstances, be permitted to exhaust such of its securities as are immediately convertible into cash without loss, in the payment in full of clamorous or alert depositors, and leave for those who are less vigilant, or who may be less informed of the situation, those which are less available and on which such loss may be sustained, as that the latter may fail to realize the full amount due them. In other words, the vigilant depositor ought not to be permitted to devolve all the losses of the trust on the others, who are as much entitled to payment in full as they are. To insure justice to the helpless is one of the most valuable prerogatives of this court. Equality in this case is equity. I have no doubt as to the jurisdiction of this court over the subject, and I have no hesitation whatever in exercising it. Under the circumstances I deem it my duty to see to it that the assets of this trust in the hands of the institution are not inequitably administered. I shall, therefore, control the management in this respect. Those of the assets, which are immediately convertible into cash without loss, amount, as before stated, to more than \$2,000,000. The managers will be required to pay, on demand, to all depositors who shall apply for it, eighteen per cent. of their deposits, with two per cent. interest or dividend, payable on the 1st day of January next, on their deposits, and will be restrained by injunction from paying any more than that percentage and interest to any one until the further order of this court. This will enable every depositor, who desires it, to receive so much of his deposit at once, and will protect all and prevent any unfair advantage of one over another. It is, and will be, held to be equivalent to a declaration of a dividend of that amount on all deposits now held by the institution. Those who shall not now receive it will be entitled to receive it hereafter in any event, and it will be secured to them by the power of this court. I also direct that the managers shall, until further order of this court, keep separate from the deposits hitherto received all deposits which they may hereafter receive, and that they safely and securely invest such new deposits separately in the bonds of the United States, or of this State, or of the city of Newark, and in such manner that the investments may be identified, in order that they may not be liable to be subjected to the payment of or affected by any loss which may be sustained on investments taken by the institution in the past administration of its trusts. This court will protect such new depositors from any such liability.

This bank continuing, from December 12, 1877, to manage its assets under control of the court showed at the close of the year 1880, a period of about two years, of *new accounts*, the following balance:

Aggregate of new accounts stated at their actual value.....	\$2,781,618
Due depositors—principal and interest.....	2,772,402
Surplus.....	\$9,216

The management of the old accounts has also been very satisfactory.

The decisions in both of these States were rendered in the absence of any statutory authority, whatever, and are enunciations of the law as it exists, applicable to such trusts apart from legislative enactment. Savings banks in New Jersey and Connecticut are organized precisely the same as in New York. If this be law in New Jersey and Connecticut, it is equally law in New York.

In one instance the courts of this State have exercised the same power. January 24, 1879, upon application of the Oswego City Savings Bank, Justice Landon of the Supreme Court issued an order that ten per cent of the aggregate deposit or balance standing to the credit of each and every depositor in said bank upon its books January 14, 1879, be charged to every such depositor and credited to the bank, and that no portion of the ten per cent. so charged and credited should be

paid or be payable to any such depositors until further order of the court. And that not to exceed fifty per cent of the amount due any depositor should be paid until the further order of the court. All the trustees and officers of the bank were required to resign, and a new board of trustees selected who elected new officers. It was further ordered that the bank might apply to the court from time to time for such order and directions as might be advisable, upon five days' notice to the Attorney-General.

In pursuance of this order the bank opened its doors February 20, 1879, with a new board of trustees and new officers. August 1, 1879, the injunction order was so modified as to permit the payment of twenty-five per cent. additional and on March 28, 1881, again modified so as to permit the payment of fifteen per cent. additional—ninety per cent. in all. The bank expects presently to pay an additional five per cent. It is sound and strong now and in good condition.

The eminent success attending the scaling process, in the only instance in which it has been tried in this State, is a strong practical argument in favor of providing by statute for carrying out what seems to be the law already. I recommend the passage of a law providing that, whenever a savings bank becomes insolvent through depreciation of its securities from any cause, without fault on the part of the trustees, that the Supreme Court, upon application of a majority of the trustees, and the Superintendent of the Banking Department, shall ascertain the condition of said bank by examination or otherwise, and may, in its discretion, enter an order scaling the amount due to depositors so as to render said bank solvent, and conferring upon said court power to remove trustees and to appoint others in their stead, and such other powers over the management of the bank as shall best conserve the interest of the depositors. The Legislature can and should reduce the expenses of receiverships, by reducing the fees of receivers; but the litigation, procrastination and attending expenses cannot be regulated by law. The best way to avoid the disasters of a receivership is to avoid, if possible, the receivership itself.

July 11, 1876, Wm. J. Best entered upon his duties as Receiver of the Mechanics & Traders' Savings Bank. The amount due depositors was \$1,454,029 28. October 2d, fifty per cent. dividend was declared. December 23d, fifteen per cent. was declared. In a little over five months sixty-five per cent. was paid to depositors. The ensuing six years brought forth another dividend of six per cent., and the receiver is of opinion that no further dividend can be paid; which opinion, being the result of six years' deliberation, is entitled to weight.* I think

[* It is to be hoped that the Senate Committee, charged with the duty of looking into receivership methods will make a note of W. J. Best's *weighty opinion*, so nicely brought out by Mr. Hepburn's incisive remarks.

Probably Henry L. Lamb, acting Superintendent of the Bank Department, during the period of bank wrecking in this State, would enjoy working up a little more notoriety after reading this report. Mr. Best was one of his Examiners, and to use a trite phrase, they were "as thick as thieves."]

this is an instance in which the scaling process might have been judiciously applied.

William F. Russell was appointed Receiver of the Sixpenny Savings Bank, March 29, 1878. The amount due depositors was \$1,787,825 53. The receiver reports total cash receipts up to January 1, 1882, \$1,729,609 39. A final dividend has been declared, aggregating 85.55 per cent. A slight glance at the very superior character of the assets of this bank will suffice to convince any one that with a very slight scaling of its deposits, and with good management, depositors might have been saved from loss. There are other equally marked instances. The worst wrecks found among the failed banks resulted from management prior to the passage of the present savings bank law in 1875. Under present regulations as to investment and supervision, no serious wreck can occur, and I think the law suggested will prove wise and beneficial.

TABLES.

Table No. 1 is a recapitulation of the reports of savings banks, showing their condition in aggregate by counties* on the morning of January 1, 1883.

[Table No. 2, giving the prominent features reported by the savings banks from January 1, 1858, to January 1, 1883, inclusive, is omitted here for lack of space.]

Table No. 3 is a comparison of the condition of the savings banks on January 1, 1883, with their condition January 1, 1882.

CHARACTERISTICS OF 1882.

1. *Deposits and depositors.*—The increase of the deposits is \$24,314,320; the increase in deposits in New York city, is \$14,374,529; in the rest of the State, \$9,939,791; the increase in deposits, from January 1, 1882, to July, was \$12,910,945.42.—From July to January 1, 1883, \$11,403,374.58.

In 1878 the Legislature limited the amount of deposits which Savings Banks may hold, to the credit of any one individual, or pay interest upon, to \$3,000. Owing to certain infelicity of expression in the act, a former Attorney-General expressed the opinion that banks might continue to receive in the aggregate \$5,000. Since July 1, the \$3,000 limitation has been enforced, which compelled the withdrawal of very considerable amounts. Notwithstanding, the increase in the volume of deposits, which has been a constant characteristic of our banks for some years, was but slightly diminished.

The number of depositors is larger by 59,865, equaling 1,095,971.

2. *Investments.*—The mortgage loans have increased nearly eight per cent; the amount of Government bonds has decreased over

[* We have obtained, through the courtesy of the Bank Department, a more complete table than that contained in the Report, showing the condition of each bank as well as the aggregate for each county. This table will appear in the next number of the JOURNAL.]

TABLE No. 5.—Condition of the Savings Banks January 1, 1888, and January 1, 1889.

Resources.	January 1, 1888.	January 1, 1889.	Increase.	Decrease.
Bonds and mortgages.....				
Stock investments.....				
United States.....	\$91,401,641	\$107,812,214	\$16,410,573	
District of Columbia 3 65 bonds.....	Par value			
New York State stocks.....	\$155,133,760	\$140,564,910		
Stocks of States other than New York.....	1,762,000	2,047,000		
Bonds of cities in this State.....	4,319,600	4,357,500		
Bonds of counties in this State.....	11,918,370	13,684,370		
Bonds of towns in this State.....	72,923,101	81,094,645		
Bonds of villages in this State.....	9,760,496	12,072,110		
Estimated market value of stock investments.....	3,419,936	8,531,081		
Amount loaned on public stock as authorized by section 261, chapter 409 Laws of 1889.....	494,990	583,408		
Banking houses and lots and other real estate at estimated market value.....	\$259,734,082	\$257,937,024		
Cash on hand not deposited.....	294,019,895	299,846,592	5,826,697	
Assets of every description not stated above.....	17,638,228	22,245,595	4,607,373	
	9,827,517	8,630,319		\$397,198

Average amount of each account.....	384,853	367,362	2,589	
Real estate, other than banking houses and lots, at cost.....	1,287,424	1,377,906	90,382	
	374,382	376,05	1,73	
	\$,686,868	\$,686,846		\$89,082

nine per cent.; real estate acquired has decreased \$829,022. Total transactions of the year, amounts withdrawn and deposited, equal \$299,470,589; these amounts are about sixteen and a half per cent. more than in 1881.

3. *Dividends*.—The advertised rates of interest to depositors, in the several banks, were as follows:

Seven banks advertised to pay at the rate of .03; ten at .03 1-2; forty-nine at .04; two at 5; two from .02 to .04 (according to amount); one from .02 1-2 to .03 1-2; two at .03 and .03 1-2; thirty at .03 and .04; two from .03 to .04; one from .03 to .05; seven at .03 1-2 and .04; five at .04 and .05. Nine closing banks paid no interest to depositors. The average interest actually paid was .0354.

4. *Resources*.—The aggregate resources of savings banks have increased \$29,879,905.

5. *Expenses*.—The expenses for the year 1882 were \$1,377,806, an increase of \$90,382. The percentage of expenses for the years 1880, 1881 and 1882 to the number of open accounts January 1, 1881, 1882 and 1883, respectively, were 1.31, 1.24 and 1.26. The percentage of expenses for the years 1880, 1881 and 1882 to the amounts due to depositors January 1, 1881, 1882 and 1883, respectively, were .003538, .003320 and .003342.

While depositors are paid .0013 less dividends, there is no reason why the cost of management should show an increase of two cents per account, and a percentage increase of .000022.

6. *Surplus*.—The surplus is increased \$5,586,071; the aggregate surplus upon market value of securities is \$60,630,827; upon par value, it is \$19,221,259. As to surplus it should be stated that a few of the banks, and by no means weak ones, place an unwarranted market value upon their securities, as will be seen by reference to the tables in the appendix. It is a laudable pride to make a bank's surplus appear as large as facts will warrant, but, in fixing market values, the market should be the criterion. A five per cent. city or county bond with ten years to run may command such premium as to yield but three and one-half per cent. on the investment, but thereupon to assume the value of money to be three and one-half per cent. and proceed to figure out the market value of a bond having forty or fifty years to run so as to yield an annual interest of three and one-half per cent., is to discount the future to an extent that investors will not do. Bonds bearing a low rate of interest command a higher proportionate premium than bonds bearing a higher rate of interest, for the reason that in case of a shrinkage in values the loss of the amount paid for premiums would be but slight.

INVESTMENTS AND DIVIDENDS.

I discussed this subject exhaustively in my two preceding reports, to which reports I respectfully refer. The available fund held by the

savings banks January first was \$52,299,786, being \$11,085,065 in excess of the amount allowed by the statute. In calling attention of banks to this undue surplus, I have been so generally met with the complaint that the scope of investments needed enlarging, that I sent a letter to each bank asking whether any change was desired, and if so, to state specifically what securities should be added to the present list of investments. Banks representing \$348,869,210 replied, and banks representing \$124,058,109 made no reply. Of those replying, twenty-three banks, representing \$186,805,951, were opposed to any change. Nine banks, representing \$60,309,895, were opposed to any change, but if a change was to be made, offered certain suggestions, making \$247,115,846, or a little over seventy per cent. of those answering, opposed to a change. Thirty-five banks, representing \$113,013,619, favored investments in the bonds of certain cities outside of this State, with proper restrictions. A change, that with a carefully drawn bill, applying only to cities of a specified population, in certain States to be named in the bill, and with a proper and specified ratio of indebtedness to valuation, would, I think, be perfectly safe. Municipal obligations of the South or of the far West would be undesirable on account of distance alone, were there no other reasons. The history of certain cities of the South, of New Jersey, Long Island city and others, teach us that any such measure must be drawn with the utmost caution, and be very stringent in its safeguards. Six banks (\$4,091,828) favored bonds of counties in other States. One bank (\$1,390,664) favored town and village bonds of other States. Two banks (\$499,294) favored investment in bank stock. Such a security, where the savings bank would be liable to lose not only its whole investment, but suffer in addition an assessment equal to the par value of the stock held, cannot be desirable. Two banks (\$332,923) favored increasing the percentage of deposits which may be loaned on real estate. Very few banks can even approximate the amount of real estate loans which they are now allowed to make. One favored railroad stock. Three (\$5,674,856) urged that they be allowed discretion in paying the expense incurred in searching title, etc., in making real estate loans.

One favored Dominion of Canada bonds, an excellent investment, but placed on the London market and not attainable here.

Three (\$6,906,466) favored loaning to the amount of sixty per cent. of the value of real estate instead of fifty. Three (\$32,071,833) favored loaning on real estate to the amount of seventy-five per cent. of its value if improved, and fifty per cent. if unimproved, instead of fifty per cent. and forty per cent. as now provided.

Considering the elasticity of judgment shown by some appraisal committees in fixing the value of premises upon which loans are sought to be made, I think a change in this limit would be unwise.

Two banks (\$1,580,910) favor loaning on real estate of other States contiguous to New York—very objectionable. Three banks (\$11,377,-

366) favor temporary loans on dividend-paying stocks, listed on the New York stock exchange with margin of not less than twenty per cent., market value, and not exceeding par.

This would allow savings banks to enter into competition with discount banks, and trust companies, and do a business, which, though not hazardous, is not at all consonant with the proper functions of provident institutions. Discount banks while dealing almost exclusively in personal securities and investing their entire capital as they see fit, protect their bill-holders and creditors by means of their reserve.

Trust companies are required to have large capital, which must be permanently invested in the best of securities. Their trust-funds must be invested in the same manner and cannot be suddenly called for. Their general deposits are not payable upon demand, as in case of savings banks, and as a rule discount banks, but upon a specified number of days' notice. Deposits should be invested with as much permanency as is consistent with availability. They should be removed from the influences of a fluctuating market and ephemeral changes in the rates of interest. These three classes of institutions are rendered perfectly safe factors in our monetary system, each in a different way, under present laws. I think those distinctions should be preserved.

Three (\$2,462,857) favor loaning on bond and mortgage as collateral. Unobjectionable with preliminary appraisal of property, careful search as to title, and recorded assignment to the bank, so far as security is concerned. Real estate mortgages are not, however, a good investment for an available fund, from which, only, such loans could be made.

Two banks (\$1,431,195) favored temporary loans on bonds of cities of other States.

Three banks (\$27,236,879) favored temporary loans on certain specified railroad bonds.

One bank favored temporary loans on their own pass-books.

Three banks (\$21,169,190) favored loaning on Government bonds upon less margin than now required. Perfectly safe and proper amendment, I think.

Three banks (\$11,096,327) favor increasing the amount which may be kept on hand as an available fund in order to allow increased investment in temporary loans.

The safety of the banks require no relaxation of the present limit, ten per cent. All the permanent investments of our banks, save real estate mortgages, are an available fund, easily convertible into cash, at pleasure. It is impossible to embarrass any solvent savings bank with a "run," as our banks are now managed.

All the other banks would stand ready to loan upon or purchase its securities to an extent necessary to afford relief and protection.

MISSOURI BONDS.

For many years the bonds of the State of Missouri were an

authorized investment for our savings banks, and are now largely held by them. The State defaulted in the payment of the interest in July last, on \$3,000,000 bonds, issued in aid of the H. & St. Jo. R. R., and hence the bonds of Missouri fall within the prohibition contained in section 260 of the bank code,—a prohibition designed to prevent investments in the stocks of States guilty of repudiation. Said railroad claimed that it had the right, under the laws of Missouri, to pay to the State of Missouri at any time the principal and interest of these bonds, and that, thereupon, the State must assume the obligation of the bonds and release the road from all claims. The road paid into the treasury \$3,090,000, the principal and interest then due. The bonds bore interest at the rate of six per cent. payable semi-annually. The State could not invest this money so as to realize an equal amount of interest, and hence its acceptance involved an annual loss to the State, until said bonds should be finally retired. The question whether the State was bound to accept said sum in payment of said bonds and release the road from all claims or not, was submitted to the courts. Pending litigation the State Treasurer, without any authority or direction from the Legislature, or the people, or any public sentiment justifying his action, refused to pay interest upon the bonds. Here was no spirit of repudiation, but rather a desire to anticipate payment, and yet the circumstances bring Missouri bonds within the prohibition mentioned. The financial history of the State is good, the bonds are an excellent security. Our banks need such securities and the Legislature should open them to investment. The State has an indebtedness of \$14,483,000. Most of these bonds are presently redeemable at the option of the State. Steps are now being taken with a view to calling in outstanding bonds and replacing them with securities bearing a lower rate of interest. It is very desirable that our savings banks should be in position to take these new securities.

MINNESOTA BONDS.

Nothing can be said in extenuation of the repudiation record of Minnesota. Last year she adjusted her indebtedness and issued new bonds, with which her former obligations were retired. These adjustment bonds amount to \$4,253,000. The State has only \$86,000 of additional indebtedness. The validity of this issue of bonds has already been tested in the courts of Minnesota, and sustained. The State has invested \$1,300,000 of its school funds in these securities. I think there is no more danger of default in the payment of these bonds, than there is in the payment of the stock of our own State. Whatever we may think of the financial history of Minnesota, we cannot afford to adopt a punitive policy. If these securities answer the demands of savings bank investments, safety and availability, that is that all the Legislature in the exercise of sound discretion can ask. That the securities of

both of these States answer such demands, is the **universal opinion** of financial men, and all the banks.

RAILROAD BONDS.

Twenty-five banks, representing \$107,136,102, **avored investing** in railroad bonds with varying conditions, but mainly conforming to the Connecticut law. Less than fifty per cent. of railroad securities pay interest or dividends. Our laws provide no means whereby the investing public who, as individuals, own these roads and furnish the funds with which to build the same, can obtain the data upon which to determine, in their own minds, upon business principles, the value of these securities, and distinguish a good investment from a doubtful one. Such information is possessed only by directors and managers. New York Central and Hudson River R. R. bonds are a perfectly good and safe investment. Still, they are not a first mortgage bond. The Central and Hudson River respectively issued bonds before consolidation, which are still outstanding.

The Erie first mortgage bonds are perfectly safe, but amount to less than two and one-half millions. The road does not, and for a long time to come cannot, pay dividends upon its common stock. So the Connecticut law allowing investments in first mortgage railroad bonds of roads that have never defaulted in payment of interest, and have paid a dividend of at least five per cent. for the preceding five years, even if enacted here, would exclude nearly every railroad in our own State. The clause as to payment of dividends would exclude Lake Shore and Delaware and Hudson. Such a law would afford no relief whatever. Investment in railroad bonds of other States, in respect to whose condition not even the Legislature itself has any power to inquire, should not be resorted to until necessity compels it.

The railroad indebtedness of the United States, stocks and bonds, has been increased during the past year \$550,000,000. The addition of so vast an amount in the space of one year, whose earning capacity is yet to be demonstrated, must have an unsettling and depressing effect upon the value of the whole. I showed, in my last report, the total amount of securities in which savings banks could invest aside from real estate mortgages. The resources of our savings banks are more than twenty-five per cent. of this entire amount.

With our savings bank funds constantly increasing and the volume of investment fund constantly diminishing, it is evident that some decided enlargement of the scope of investments must at some time be made. The time for it has not yet arrived. Our courts hold trustees to a stringent accountability for the result of their official acts. Removing restrictions as to investments would largely increase their responsibilities and render it still more difficult to get good men to act. Any radical change in the law would tend to depreciate the value of securities now held, since one cause of the high premiums they command, is the fact that savings banks are compelled to buy them. I

think allowing a wide range of investment would be followed sooner or later by taxation, which is properly escaped so long as these banks are managed purely as provident institutions.

Again I fear that the additional element of risk involved would nearly counterpoise the additional gain to depositors in interest earned.

Our banks are strong, our system is admirable. Our deposits are safe, and our depositors are paid a rate of interest greater than is yielded by Government bonds. A condition of affairs which may be safely and wisely left undisturbed. Better present safety with reduced dividends, than increased dividends with increased risk.

Respectfully submitted,

A. B. HEPBURN, *Superintendent.*

Edwin Dennison Morgan, of E. D. Morgan & Co., who will be known in history as the War Governor of New York, was born in Washington, Berkshire County, Mass., in 1811. His father, Jasper Morgan, was a New England farmer, and his early childhood was passed, much like that of the sons of all farmers, working in the field in Summer and attending the village school during the Winter months. He early developed a fondness for mathematics and an aptitude for trade, which foretold that he would not always be content to pass his life on a farm. In 1828, at the age of seventeen, he started out to seek his fortune with his common school education, a capital of 37 1-2 cents, and a firm determination to achieve success. He went to Hartford, Conn., where he had an uncle named Nathan, a wholesale and retail grocer. Young Edwin engaged himself, to his uncle as a clerk, binding himself for three years at a salary of \$60 for the first year, \$75 for the second, and \$100 for the third. He worked hard and soon mastered the business, and at the beginning of the third year he was sent to this city to buy tea and sugar, and also corn, which was then an article of import instead of export, for his employer. Edwin returned to Hartford in due time, and his uncle asked him about the corn. The quality and price paid were satisfactory to the old gentleman, and he then asked his nephew how much he had purchased. It had been usual for dealers to buy two or three hundred bushels at a time, and the uncle was somewhat startled when the young man replied that he had bought two cargoes, and that the vessels were probably in the river. "Why, Edwin," exclaimed the old gentleman, "what are we to do with two cargoes of corn?" "Oh," answered the young man, "I have disposed of all that you don't want at an advance. I could have sold three cargoes if I had had them. I stopped in the stores as I came from the stage office and made sales." It was a new idea to his employer, and quite out of the old routine of trade, but the gains and results were not to be questioned. The next morning Edwin was at the store bright and early as usual, and had taken the broom to sweep out the counting-

room, when his employer entered. "I think," said the old man, "we can find some one else to do the sweeping here. A man who can go to New York and buy two cargoes on his own responsibility, and sell them without consulting his principal, can be better employed than in sweeping out a store." Although Edwin was then only 20 years old he was made a partner in the business, and his success in life began with his purchase of those two cargoes of corn.

Readers of the JOURNAL have doubtless noticed, with regret, the published accounts of the death, on February 17, of the Rev. Lyman H. Atwater, D. D., LL. D., Professor of Logic and Moral and Political Science at Princeton College. Doctor Atwater was a man of singular versatility and breadth, as well as depth, of mind. Thus, although his studies lay, for probably the greater part of his career, in the direction of theology and metaphysical science, yet his writings on economical and financial subjects showed as thorough a knowledge of the necessary principles as if these were his special studies. He was born at Cedar Hill, now forming part of New Haven, Conn., in 1813, of Puritan stock, his ancestors being among the first settlers of New Haven. After graduating from Yale with high honors, he studied theology and entered the ministry, where he became famous as a preacher and contributor to the religious press. In 1854 he was appointed to the Chair of Mental and Moral Philosophy at Princeton. He was not only instrumental in reviving the financial condition of the college, but was intrusted with a large share of the professorial labor. For ten years he was editor of the "Princeton Review." Since 1869 he had been Professor of Logic, Metaphysics, Ethics, Economics and Political Science. It was his intention, had he lived, to publish his views on a certain branch of political science. He delivered, at the last convention of the Bankers' Association, an address which was acknowledged on all sides to be most able, combining correct theories with practical good sense. It may be remembered that he expressed his approval of the JOURNAL in a letter published in the number for September, 1882.

The tenth census shows that the total mileage of completed railroads in the United States on June 30, 1880, was 87,891 miles. On this basis the mileage on the first of January, 1883, is estimated at 113,000 miles. The entire number of persons employed on the railways on June 30, 1880, was 418,957, and the number on the first of January last is estimated at 537,000. This last estimate is much lower than that published in the last number of "Poor's Manual," and which was extensively republished. The figures found there were more than double those given above, the employes of railways being estimated at 1.32 of the entire population.

BANKING AND FINANCIAL NEWS.

(With Comments on the more important matters. This Department also includes General Business News—Notes from Foreign Banking Centres, including Canada—A Complete List of New Banks, Changes in Officers, Dissolutions and Failures—Banking and Monetary Tables—Bankers' Obituary Record, &c.)

TRUST COMPANIES OF NEW YORK.

There is perhaps nothing in connection with banking affairs in New York more noticeable than the rapid increase in the business of the trust, loan, and mortgage companies within a few years past. There were fifteen of them doing business in the State, and reporting to the Bank Department on January 1, last, two of the newly chartered companies, the Franklin Loan and Trust and the German-American Loan and Trust not having completed their organization. The Mutual Trust Company continues to decline to report to the Bank Department, and, as was mentioned last month, it has appealed from the judgment against it to the General Term of the State Supreme Court.

Of the fifteen companies reporting, two were organized and began business within the year 1882, viz.: The American Loan and Trust Company of New York, and the Buffalo Loan and Safe Deposit Company.

The total resources of the fifteen companies on January 1, 1883, were \$143,889,348; the total capital \$13,457,301; deposits \$107,416,453; other liabilities \$12,331,245; surplus and profits \$10,720,444. During 1882 the total assets increased \$21,877,488, and the surplus and undivided profits, \$1,963,108. The dividends declared during the latter half of 1882 aggregate \$626,000.

To realize the extent of the increase of the business of these companies, however, it is necessary to look back some years. On June 30, 1874, there were eleven companies reporting, with an aggregate capital of \$11,752,040. Up to January 1, last, the capital increased by considerably less than 2 million dollars; but the total resources increased from \$57,761,109 to \$143,889,348, which shows the huge difference of \$86,178,239 in the eight years and a half. In the same period the deposits grew from \$38,479,791 to \$107,416,453, a difference of \$68,936,662. There was an increase in the total surplus and undivided profits from \$4,797,196 to \$10,720,434, or \$5,923,238.

Following are the official reports of the trust, loan and mortgage companies of the State of New York, as made to the Superintendent of the Bank Department, showing their condition on January 1, 1883, and which we are enabled to publish so fully through the kindness of the Superintendent in furnishing the necessary data:

FARMERS' LOAN AND TRUST COMPANY.

<i>Resources.</i>		<i>Liabilities.</i>

Abolition of Bank Taxation.—The first Section of the Act to reduce internal revenue taxation, passed just before the adjournment of Congress, reads as follows:

Be it enacted etc.: That the taxes herein specified imposed by the laws now in force be, and the same are hereby, repealed, as hereinafter provided, namely: On capital and deposits of banks, bankers and national banking associations, except such taxes as are now due and payable; and on and after the first day of July, eighteen hundred and eighty-three, the stamp tax on bank checks, drafts, orders and vouchers, and the tax on matches, perfumery, medicinal preparations, and other articles imposed by Schedule A following section thirty-four hundred and thirty-seven of the Revised Statutes: Provided, That no drawback shall be allowed upon articles embraced in said schedule that shall be exported on and after the first day of July, eighteen hundred and eighty-three. Provided further, That on and after May fifteenth, eighteen hundred and eighty-three, matches may be removed by manufacturers thereof from the place of manufacture to warehouses within the United States without attaching thereto the stamps required by law, under such regulations as may be prescribed by the Commissioner of Internal Revenue.

It will be noticed that the law provides for the repeal of the check stamp tax on and after July 1, next. There is no ambiguity on this point, but the provision for abolishing the tax on capital and deposits of banks, bankers and national banking associations has given rise to much question. The question from what date taxes are to cease, whether, in the case of national banks, it is from the first of January, 1883, or March 3, when the bill passed, or July 1, is said to have aroused a difference of opinion among some of the chief officers of the Treasury Department. It is reported that in an interview with the Secretary of the Treasury, the Comptroller of the Currency maintained that the abolition should date from January 1, while the Commissioner of Internal Revenue held a contrary opinion; and that the matter would probably have to be left to the decision of the Attorney-General.

An opinion on the point in question expressed by Senator Sherman, in an interview on March 8, seems to give the intention of Congress in passing the act, as well as the plain interpretation of the language. The Senator, who was a member of the Conference Committee to whom the bill was referred, says: "The bill repeals all taxes named from the date on which they were last due and payable. The law prescribes semi-annual periods for these collections, and the fact that the bill passed in March does not mean that taxes are to be collected for January and February. That could not be done. All taxes, however, which were due on January 1, and which have not been paid, must be collected."

Free Transfer of Money by the Treasury.—The Treasury regulations governing the distribution of standard silver dollars and the law authorizing the issue of silver certificates are being used by New York and Boston banks to obtain the transfer of large amounts of money from one city to another without expense to themselves, but with considerable cost to the Government for transportation charges. The manner of doing this is to deposit currency in the sub-treasury in one city, and obtain an order for standard silver dollars to be sent to the correspondent in the other city from the mint, and the correspondent, immediately upon receipt of the coin, presents it to the sub-treasury in his city and asks for silver certificates. Several million dollars have been transferred in this way recently, costing the Government several thousand dollars, without lessening the number of silver dollars in the Treasury, but with the effect of completely glutting the vaults of the New York sub-treasury with them.—*Dispatch from Washington, February 8.*

The above has gone the rounds of the newspapers, in some cases under some such head as "Shrewd Bank Operations." It is hard to see what there is to complain of in the action of the banks criticised. The Treasury regulations

alluded to, under which persons are allowed to transfer money without expense, have been in operation for some time; they have been frequently commented upon in RHODES' JOURNAL, and in other respectable papers, and they have always been supposed to have been made for the very purpose of allowing such "shrewd operations" as the one described in the dispatch. Of course there was an object in view in making the regulations, and that was to facilitate the circulation of silver dollars. In the case illustrated the bank sending the money parted with currency, and the receiving bank got in exchange depreciated silver. This silver was for convenience sake exchanged for silver certificates.

The writer of the dispatch intimates that the receiving bank ought not to exchange the coin for certificates, so as to save the Treasury Department from building more vaults to hold the silver dollars. But, certainly, if the Government does not expect certificates to be called for, it ought not to issue them. It is idiotic to expect that private parties or banks are going to build vaults to accommodate the unwieldy coins which the Government insists upon manufacturing, if they can avoid doing so.

The whole difficulty arises from the Bland silver law, and the strenuous exertions that have been put forth to circulate a coin in no way adapted for use in this country, and made of a depreciated and depreciating metal.

Days of Grace.—We take pleasure in publishing the following letter, from the Cashier of the bank of which the Hon. Luke P. Poland is President, at the same time asking the writer's pardon for doing so without permission :

THE FIRST NATIONAL BANK OF ST. JOHNSBURY, {
ST. JOHNSBURY, VT., FEBRUARY 27, 1883. }

Publisher Rhodes' Journal of Banking :

In remitting for our subscription for 1883, I can but express pleasure in reading the paragraphs on page 106 of the February number, relating to "grace," and hope the movement for the abolishment of this now worthless custom may prevail.

Our Legislature, in 1872, passed a law allowing grace, simply that our State should not stand alone as it previously had done in not having such a law. Now, if other States abolish the custom, ours will, without doubt, quickly follow suit.

Very truly yours,

GEO. MAY, Cashier.

Since the last issue of the JOURNAL a committee of the Institute of Accountants and Bookkeepers of the City of New York have prepared a petition addressed to the State Legislature for the abolition of days of grace on notes, etc. It sets forth the probable reason for the origin of the custom, and the fact that the reason for its further existence is gone. Also the absurdity of enacting that the word sixty, for example, shall, in certain documents, denote *seven times nine* instead of *five times twelve*, which is as unreasonable as to enact that one hundred dollars shall in certain connections mean ninety-seven dollars. The result of the abolition of this custom, which is so unsuited to modern business, would be to simplify calculations connected with interest, and to make the tenor of commercial documents more intelligible to the people in general, the burden of losses arising from such anomalies in law generally falling upon the poor and the ignorant. The change could be made without confusion or inconvenience, as it would merely conform commercial paper to bonds and mortgages, leases, and other documents, which are virtually as much entitled to "grace" as notes. In France "all days of grace, of favor, or usage, or of local custom" on bills of exchange have been abolished; and the same has been done in several of the States. The petitioners believe that the reform

would become universal if New York State would take the initiative. Means are being now taken to have the petition signed by business men in this and other States.

The Broken Jersey City Savings Bank.—After the failure of the Fifth Ward Savings Bank, caused by the default of President Boice of the City Bank, the Trustees and Directors applied to Chancellor Runyon for leave to wind up its affairs themselves. Mr. William Muirhead, who had been appointed to examine the condition of the concern, reported that the liabilities were \$448,439 and the assets \$323,121, leaving a deficiency of \$125,333. The assets were composed of good securities. The Chancellor accordingly made an order that the Board of Managers be allowed to liquidate the affairs of the bank.

It has transpired that Robert Z. Cook, the Teller of the bank, had robbed it of \$10,300. It is supposed that he knew of the thieving that was being carried on by Boice, Beach and Shaw, and like them, began to live extravagantly and speculate on the bank's funds. He was arrested on February 27, pleaded guilty on the 28th, and was sentenced to five years imprisonment.

If New Jersey is unfortunate in its bank officers, it is singularly fortunate in the management of its broken banks. The assets have not been considered as fair prey for sharks under the name of receivers, nor have the judicial officers of the State lent themselves to the schemes of bank, and insurance company plunderers. Would that as much could be said for every State! Under the decision of Chancellor Runyon the depositors of the ruined bank are likely to get a fair share of the remaining assets.

The Stock Exchange in Court.—In the suit of Mr. W. J. Hutchinson against the New York Stock Exchange, through its President, Mr. F. N. Lawrence, Judge Lawrence decided on February 23th that the order for the examination of the defendant should not be vacated, and that the examination should cover all the grounds which were presented in the affidavit of the plaintiff, and all the records of the Stock Exchange relating to this case.

Unless there is an appeal from this decision, or a compromise, the proceedings under which Mr. Hutchinson was expelled from the Exchange are likely to be reviewed by the courts. It will be remembered that this action was taken on the report of a committee sitting with closed doors, according to the rules. In proceedings since taken by Mr. Hutchinson against his former partners some strange transactions have come to light, which make it doubtful whether the committee got to the bottom facts in the matter. It is a question whether the Exchange would not have done better to give him a rehearing, instead of allowing the case to get into the courts.

Extension of National Banks.—The Comptroller of the Currency, on February 25, issued certificates authorizing the extension of the corporate existence of 269 national banks. Of these banks sixty-six were located in the New England States, fifty-three in New York, fifty in Pennsylvania, seven in Indiana, thirty-two in Ohio and sixteen in Illinois. The whole number whose corporate existence has been extended under the act of July 12, 1882, is 313, all of which banks were organized under the first National Bank act of February 25, 1863, and the certificates issued on the day named are the last to be issued for the extension of the existence of the banks authorized under that act.

The first bank whose charter is to expire under the act of June 3, 1864, will expire on June 10, 1884. During that year the charters of 249 banks with a capital of \$89,000,000 are to expire, and during the year 1885, 734 banks with a capital of \$188,286,775.

The large number of banks applying for extension proves what a serious disturbance would have been caused to the money market if they had been compelled to liquidate, either to go out of business or to reorganize under the

law. The latest statistics show that while the number of national banks is increasing, the aggregate capital remains about the same, while the amount of circulation is decreasing.

Troubles of a Chicago House.—About February 20th rumors began to be put in circulation affecting the financial standing of the private banking firm of Messrs. Preston, Kean & Co., of Chicago. They immediately issued a statement that the rumors arose from the fact that a clerk, F. M. Kerr, had absconded with \$20,550 in cash, and \$35,000 of bonds belonging to customers, and had threatened to spread injurious reports if they attempted to arrest him. They state that their surplus over liabilities is \$271,240, less the amount abstracted, and their good assets are \$2,400,000.

A day or two later the firm requested the Clearing-House to investigate their affairs, presumably for the purpose of satisfying the public of their entire solvency. The examination was accordingly undertaken. The prompt action of the firm in the circumstances was commendable.

Failure of a New York Stock Firm.—Messrs. Hatch & Peters, stock brokers, of 25 Pine street, sent notice to the Stock Exchange, on February 23, of their suspension on account of embezzlement, which occurred in the office some months ago and proved larger than was at first supposed.

The firm was composed of Wm. B. Hatch and J. Hugh Peters, who began business about two years ago with a capital of \$50,000. Their confidential clerk, Geroge W. Tompkins, gambled away over \$75,000 of the firm's assets, (it is claimed), and hence the failure. Rather a sad commentary on the business methods of a firm that such a thing was possible.

The Bank of Banks.—Steps have been taken toward organizing a bank with the above title, to be located at the corner of Fifth Avenue and Forty-second Street, New York. The capital is \$100,000, and it is the purpose to do, not only a discount and deposit business (including, especially, household and ladies' accounts), but to do up-town collecting for down-town banks, and the clearing-house business for the up-town banks.

There seems, just at present, to be a sort of rage for starting new banks in New York. Since January 1st, one has been started and at least three others are organizing. Some of the new concerns are beginning under very good auspices, but, generally speaking, the starting of new banks at the same time is not a healthy sign.

A New Produce Exchange Bank in New York.—For some time past the project of starting a new bank for the particular accommodation of members of the Produce Exchange has been discussed, and it has finally taken such shape that it will probably soon be organized and started in the splendid new building of the Exchange. A sub-committee composed of Messrs. F. H. Parker, E. S. Whitman, J. A. Bostwick, Munroe Crane and Alexander Munn, reported on February 24, in favor of making the capital stock \$1,000,000 and organizing under the State law.

This bank will, of course, start under exceptionally good conditions as the shares will be owned by members of the Produce Exchange, and it is sure of a good business from the start. But this business will be gained at the expense of other banks. It is notable that so many of the new banks in this part of the country decline to organize under the national laws; this is especially so of institutions seeking to obtain a large share of their business from the various exchanges.

The Case of Cashier Barron Again.—Nearly five years have elapsed since John Wilson Barron's death. It was on the 22d day of February, 1878, that he was found dying in the vault of the Dexter Savings Bank, a contusion on the side of his head, his hands shackled, his false teeth knocked out and lying on the floor, a gag in his

mouth—all the terrible particulars of the scene will readily be recalled by every reader. It was nearly a year after the tragedy that charges of defalcation were made against Barron. It was then intimated that Barron's true pose should be that of a man who had killed himself to avoid exposure, rather than one who was faithful unto death, as the public had heretofore regarded him. The detectives demonstrated the physical possibility of their suicide theory. Finally, after an examination of the late Treasurer's accounts by experts, and the alleged discrepancies in his accounts, a suit was brought in December, 1879, by the Dexter Savings Bank against Samuel Copeland, Executor of Barron's estate. The suit was entered at the April term of the Penobscot County (S. J.) Court, 1880. A demurrer was filed by the defense. It was passed upon by the Law Court, which sustained one count in the writ—the count of money had and received. At the January term, 1882, the court appointed Messrs. S. F. Humpfrey and J. S. Rieker, of Bangor, auditors, who should give a hearing to the parties, decide upon the claims, and report to the court. In July last the first hearing was held at Dexter. It was adjourned before the plaintiffs (the bank folks) had finished their side of the case. The hearing was reopened Tuesday forenoon. The Hon. Josiah H. Drummond, of this city, and Josiah Crosby, Esq., of Dexter, appear for the plaintiffs, and D. D. Stewart, Esq., of St. Albans, and T. H. B. Pierce, Esq., of Dexter, for the defendant. The amount of claims made by the bank against Mr. Barron's estate on account of alleged defalcations are about \$6,000. The defense claims that Mr. Barron did not owe the bank a dollar; that his memory has been cruelly wronged, and that, best of all, they can prove it. Among the important witnesses are the Hon. W. W. Bolster, of Auburn, ex-Bank Examiner; Mr. Piper, the Boston expert, and Dr. Fitzgerald.—*Portland (Me.) Argus, February 1.*

Three Defaulters Punished.—On February 1st indictments were presented against Garret S. Boice, President, Edward A. Shaw, Cashier, and John A. Beach, bookkeeper, of the failed City Bank of Jersey City. When called for trial on the 19th they all pleaded guilty, and were sentenced to State prison—Boice for 10, Shaw for 8, and Beach for 4 years.

First National Bank of Newton, Mass.—The stockholders of this bank, which failed in 1867, owing to the robbery of \$311,000 by the Cashier, met on February 23d for a final settlement. The amount stolen had been used to cover a deficiency in the accounts of Hartwell, a clerk in the Boston Sub-Treasury. The United States Government discovered this fact and retained all the money. The suit brought by the bank in the Court of Claims went against the Government. The appeal which was then taken to the Supreme Court the Attorney-General has recently withdrawn, and the judgment of the lower court stands. The committee reported that the depositors will be paid in full, and that the stockholders will receive par for their shares. The robbery was in connection with the great Mellen, Ward & Co. copper corner, when \$1,250,000 was stolen from the Sub-Treasury.

Mining and Petroleum Exchanges.—Negotiations are said to be in progress to consolidate the New York Mining Stock Exchange, the New York Petroleum Exchange, and the National Petroleum Exchange, under the name of the New York Mining Stock and Petroleum Exchange. The proposition was broached some time ago, but now prominent members of the three have the subject under consideration, with a view to carry out the plan. The Mining Stock Exchange has made petroleum a feature for some little time, and the business in it has increased very rapidly. The speculation in oil is controlled at Bradford and Oil City, Penn., but it is thought by combining the divided interests in New York the volume of business will be so great as to make it the principal speculative point.

An Awful Example.—The Best receivership case is on again. The Attorney General has gone to the General Term of the Supreme Court, hoping to make Mr. Best return \$72,000 from the enormous fees he made out of that unfortunate National Trust Company. Whether this portion of the vast amount paid Mr. Best is recovered or not the case will serve at least as an eloquent appeal to the Legislature in favor of laws, such as we have urged again and again, calculated to save the people in the future from the double losses incurred in the past by faithless bank officials and almost equally expensive bank receivers. Mr. Best may be regarded in anything but a favorable light by the impoverished "Trust" stockholders and depositors, but he

will not have lived altogether in vain if the Legislature accepts him as "an awful example" of a receivership system which should be abolished at once and forever. A receiver is dear at any price, but Mr. Best is cheap even at \$72,000 if the payment of the amount works the suppression of a baleful system.—*New York Herald*.

Rates of Interest Realized on Government Bonds.—A table has been prepared by Mr. E. B. Elliott, Government Actuary, showing the average price and rates of interest realized on certain grades of Government bonds in January.

The average price, including accrued interest (flat) of four per cent. bonds, in the New York market, was 119.3702. The price, not including accrued interest (net), was 119.1006. The average rate of interest realized to investors at the average price of the month was 2.916 per cent per annum.

The average price of 4½ per cent. bonds including accrued interest (flat), was 113.3221. The average price, not including accrued interest (net), was 112.7427. The rate of interest realized by investors at the average price was 2.911 per cent.

Freight on Gold for Coinage.—The regulations governing the mints and assay offices have been amended by the Director of the Mint, with the approval of the Secretary of the Treasury, so that on and after the first of January, 1883, no charge at the assay offices has been, or will be collected from depositors of gold for the transportation of their bullion to the mint for coinage, the cost of which under the provisions of existing laws as constructed by the Director and Secretary, are required to be paid from the appropriation for freight on bullion and coin between the mints and assay offices.

Mr. Best's Railroad Projects.—Judge Phillips, of the Superior Court of this county, has decided to appoint a Receiver to manage the Atlantic and North Carolina Railroad, running from Morehead to Goldsboro. This is a virtual decision that the terms of the lease by W. J. Best and his Boston syndicate have been violated, and that it is necessary for the protection of all parties in interest that a Receiver shall be appointed. There are three parties to the suit—the State, Appleton Oak Smith and the Midland Company, and W. J. Best and associates. This is about the end of Mr. Best and his railroad projects in North Carolina.—*Dispatch from Raleigh, February 21.*

The First National Bank of St. Johnsbury has had its corporate existence extended for twenty years from February 24. The bank began active business in February, 1865, succeeding the old Passumpsic Bank, and of the thirty-one persons who signed the articles of association fourteen have since died. Hon. L. P. Poland, President, Horace Fairbanks, Vice-President, and George May, Cashier, have held these offices since the start. The original capital of \$100,000 has been increased to \$500,000. The bank has paid, in all, \$151 in dividends on each share of stock, and the surplus and undivided profits amount to \$110,000.

City Bank of Rochester, N. Y.—Receiver Atkinson publishes a detailed statement of the condition of the institution as shown by the books. The liabilities amount to \$635,127. Of this amount \$130,000 is preferred to savings banks. There is a probability that depositors will receive about 20 per cent.

The Hon. A. B. Hepburn, whose term of office as Superintendent of the New York Banking Department soon expires, has been appointed Receiver of the Continental Life Insurance Company, in place of J. P. O'Neil, deceased. The appointment was made at the instance of the Attorney-General, and Mr. Hepburn took possession of the company's effects. The able administration of the Bank Department since his appointment is an earnest that the duties of the new position will be fulfilled with like zeal and discretion.

A Clearing-House for Detroit.—For years the bankers of Detroit have been in the habit of settling the balances between themselves every day in the most primitive manner, their messengers carrying greenbacks and coin about in sums ranging into hundreds of thousands every day. Many banks have attempted to establish a more expeditious way of doing business, and at last it has been accomplished. The principal banks have signed an agreement for the Clearing-House system, the Merchants' and Manufacturers' Bank to temporarily act as a medium of exchange for balances; the medium settling the balances is exchange on New York, and thus the transfer of currency and gold is stopped. The representatives of all the banks

assembled at 12:15, on February 2, and adjusted their differences in a short time. The total transactions aggregated over \$600,000. This is the first time any one has been able to form an accurate idea of the business done by the Detroit banks. The new system worked to satisfaction.

Failure of a Pennsylvania National Bank.—The First National Bank of Union Mills, Union City, Pa., closed its doors on February 26. It is believed that the depositors will be paid in full, but the stockholders will lose something. The suspension is thought to be due to a depreciation in the value of real estate. The capital was \$50,000.

Value of Foreign Coins.—The Director of the Mint has, under date of January 1, 1883, submitted to the Secretary of the Treasury an estimate of the value of the standard coins in circulation of the various nations of the world, made in pursuance of section 3,564 of the Revised Statutes. For purposes of reference it is republished below:

Country.	Monetary unit.	Standard.	Value in U. S. money.	Standard coin.
Argentine Re- public	Peso.....	Gold and silver	.96,5	1-20, 1-10, 1-5, $\frac{1}{2}$, and 1 peso. $\frac{1}{2}$ Argentine and Argentine.

TREASURY DEPARTMENT, WASHINGTON, D. C., }
JANUARY 1, 1883. }

The foregoing estimation, made by the Director of the Mint, of the value of the foreign coins above mentioned, I hereby proclaim to be the values of such coins expressed in the money of account of the United States, and to be taken in estimating the values of all foreign merchandise, made out in any of said currencies, imported on or after January 1, 1883.

CHAS. J. FOLGER, Secretary of the Treasury.

A Successful Bank.—The First National Bank, of Grand Rapids, Mich., has been succeeded by the Old National Bank, the charter of the former having expired by limitation. The First National paid annual dividends to stockholders of 12 per cent. during the nineteen years of its existence, and probably 75 per cent. in addition will be paid from the undivided earnings. The new Old National begins with a new stock list, but remains under the same management, and the capital will soon be increased to \$800,000. Mr. Harvey J. Hollister, known to many of the JOURNAL's readers, is the Cashier and managing officer.

An Opinion from Over the Border.—The following is from the Montreal "Shareholder" of February 23rd: RHODES' JOURNAL OF BANKING has commenced its tenth volume, introducing some new features and improving even upon itself in the others. The editorial comments and leading articles are most carefully digested as well as admirably written, and though this periodical addresses itself mainly to American financiers and American banking interests it is full of matter of great utility to the same class and the same interests in Canada.

The "adverse balance of trade" question in the February number is cleverly handled, and if its deductions will not obtain many proselytes they may at least enlist the wavering, and will confirm all others who may have arrived at similar conclusions.

The "banking law department" is one of the most important features of the JOURNAL, and is scarcely less valuable to such members of the legal profession in this country as make the commercial branches of law a specialty, than to those lawyers on the other side for whose benefit it is more specially prepared.

A Canadian Failure.—The Mahon Banking Company has made an assignment. Their failure will probably affect several other firms.—*London, Ont., Dispatch, February 20.*

One of the members of the company was arrested on February 27, and committed for trial on a charge of fraud in receiving deposits shortly before the bank suspended. Again, on March 1st, James A. Mahon, another member of the company, was arrested. It was stated that the liabilities of the company to the Bank of Montreal are nearly \$300,000, and to private depositors, \$75,000.

Travelers Insurance Company of Hartford, Conn.—The progress of this company during the last ten years is remarkable. Ten years ago the total assets were \$2,230,786; now they are \$6,067,394. Its surplus then was \$747,436; now it is \$1,675,290. During the last year it paid \$925,000 for claims in the Life and Accident Departments. During the month of January, 1883, its claims in both departments amounted to \$137,890.22; and up to the 1st of March the total of payments by the company, in both departments, had swollen to \$8,000,000.

The Cashier Ahead.—A new bank which had been established in a town in Indiana had engaged the services of a watchman who came well recommended, but who did not seem over-experienced. The president therefore sent for him to post him up a bit, and began:

"James, this is your first job of this kind, isn't it?"

"Yes, sir."

"Your first duty must be to exercise vigilance."

"Yes, sir."

"Be careful how strangers approach you."

"I will, sir."

"No stranger must be permitted to enter the bank at night under any pretext whatever."

"No, sir."

"And our cashier—he is a good man, honest, reliable and thoroughly trustworthy; but it will be your duty to keep an eye on him."

"But it will be hard to watch two men and the bank at the same time, sir."

"Two men—how?"

"Why, sir, it was only yesterday that the cashier called me in for a talk, and he said you were the squarest man in Indiana, but that it would be just as well to keep both eyes on you and let the directors know if you hung around after hours!"—*Wall Street gossip after bank hours.*

MISCELLANEOUS BANK ITEMS.

- New reading—Where the Treasurer is, there the cash is also.—*Boston Transcript*.
- A lady, Miss S. C. Clark, has been appointed Treasurer of a savings bank in Exeter, N. H.
- According to a Boston paper, the former Cashier of one of the large Boston banks is now a porter in a New York hotel.
- New Jersey has the most thorough-going bank officials. They leave nothing behind them when they go.—*Lowell Citizen*.
- Mr. Thomas W. Williams, of New London, has been appointed by Governor Waller, Bank Commissioner of the State of Connecticut for the two years ending July 1, 1885.
- The joint assignees of Alonzo Follett, the Wall Street note broker, who failed in September last, report that the liabilities are \$3,252,593; nominal assets, \$2,126,798; real assets, \$1,090,355.
- A new State bank has been organized in New York to be known as the Home Bank, and to be located in Forty-second Street. The capital is \$300,000, and among the Directors are some prominent capitalists.
- Gilbert L. Crowell, President of the Empire Mine, who misappropriated nearly \$600,000 belonging to the Tallman estate, of which he was Trustee, was formerly Teller in the People's Bank, New York, and Cashier from 1861 to 1866.
- The Hon. B. F. Bancroft, President of the National Bank of Salem, Washington County, N. Y., has presented a memorial chapel to the Presbyterian Church of that town, as a memorial to Mr. Bancroft's deceased wife, Mrs. Mary Bulkely Bancroft.
- William J. Munn, of Brooklyn, entered the Mechanics' National Bank in February, 1883, as a clerk, at the age of fifteen years. For forty years he has been the discount clerk for that institution. Last month he began his fifty-first year of service in the bank.
- Oby E. Owen, the Teller of the Third National Bank of St. Louis, Mo., who embezzled \$203,000 (of which \$80,000 was recovered), pleaded guilty on February 8. Sentence was deferred. He says the money was lost in speculation begun seven years ago, and that no one shared in his crime.
- The Boston Clearing-House has voted to remove to the Mason Building, Liberty Square, but some of the larger banks will try to prevent the change. It is proposed that new quarters be secured in the projected building of the Massachusetts Hospital Life Insurance Company, at 50 State Street.
- A suit has been brought against the President and Directors of the Mechanics' National Bank of Newark (N. J.) to compel them to make good the losses of creditors. The bank officials have, since the failure, made a settlement with the depositors; but the present suit is on behalf of all creditors of the institution. The allegation is that the failure of the bank was due to the negligence of the directors.
- The Boston "Journal" says: "A correspondent from a New England city inquires if it is the custom among banks in Boston to pay a fee to the directors each time they attend a stated meeting of the Board. Upon inquiry, we find there is no established custom, but that it is a practice of long standing with some banking institutions to pay a dollar to members present."
- Governor Butler sent to the Massachusetts Legislature February 26, a message vetoing the bill to incorporate the Union Safe Deposit Vaults Company of Boston, capital \$300,000, because, while forbidding the company to do a "loan and trust" business, the bill enables it to become the proprietor of a manufactory, a publishing house or an inn, or to engage in several other callings other than that indicated by its ostensible purport.
- The Pacific Bank difficulties continue to thicken and daily look more disagreeable, if such a thing is possible. Arrangements are being made by prominent parties in Boston to buy up the assets of the broken bank and raise the rest of the necessary money from the directors and stockholders. It is to be hoped that the syndicate will keep back its offer until the list of assets has been made public. There

is a strong undercurrent of feeling among the better financial circles which demands a full scouring out of this nest of filth.—*Boston Economist*.

— Some ingenious calculations have been made regarding the British National Debt: "Its weight in gold would be 6,282 tons; in silver, 120,000 tons; its transportation in gold would require twenty-six ships of 250 tons each; 12,581 horse-carts, each carrying half a ton, and forming a procession of twenty-five miles in length, or 281,760 soldiers, each carrying 50 pounds; in sovereigns, piled one upon another, they would be 710 miles in height; laying them side by side and touching each other they would form a chain of gold of 11,048 miles in length, or nearly twice the circumference of the moon; the same amount in £1 notes, sewed together, would carpet a turn-pike road 40 feet broad and 1,040 miles long, or from Land's End to John O'Groat's and half-way back again."

— The bill offered by Mr. Taylor, of Trenton, to the New Jersey Legislature, which contemplates the placing of all Cashiers in that State under \$20,000 bonds, is viewed by local depositors with some misgivings. The sum named would certainly be large under some circumstances, but as a guarantee to the New Jersey public that their savings will not be found wanting when the next bank official takes a pleasure trip, it is somewhat inadequate. Some seven hundred years ago in China, Li-Tuk-Ho, the able Prime Minister of the renowned Emperor Wan-Lung, devised a law so simple and yet binding that since its adoption no Chinese bank has been known to fail. It provided that upon a bank's suspending payment the heads of the President, Cashier, and Directors should be neatly lopped off and piled up in one corner with the assets. This gave great satisfaction to the creditors of several banks which unluckily happened to fail just as the law went into effect, but from that time to the present day no Chinese depositor has ever had cause to regret his confidence. It may be impracticable to introduce this really excellent law into New Jersey, but certainly if any measures of security are necessary, bonds of \$20,000 will be found to be about as powerless to hold a speculating Cashier as a straw rope to restrain Jumbo.—*New York Times*.

NATIONAL BANK STATISTICS.—Statement of the Comptroller of the Currency on March 1, 1883, showing the amounts of the National Bank Notes and of Legal-Tender Notes outstanding at dates of the passage of the Acts of June 20, 1874, January 14, 1875, and May 31, 1878, together with the amounts outstanding at date, and the increase or decrease.

NATIONAL BANK NOTES.

Amount outstanding June 20, 1874.....	\$349,894,182
Amount outstanding January 14, 1875.....	351,861,450

CAMBRIDGE.—Dela-tour & Babcock (Republican Valley Bank); dissolved. S. P. Dela-tour continues.

FALLS CITY.—First National Bank; D. R. Holt, Cashier, in place of R. Nims; J. W. Holt, Vice-President.

JUNIATA.—C. R. Jones & Co.; dissolved.

NEBRASKA CITY.—Nebraska City National Bank; Jno. W. Steinhart, Cashier.

NEW HAMPSHIRE.

EXETER.—National Granite State Bank; Benjamin L. Merrill, President, deceased.

FRANKESTOWN.—First National Bank; M. L. Morrison, President, in place of J. D. Butler.

GREAT FALLS.—Great Falls National Bank; A. A. Perkins, President, in place of D. Buffum, deceased.

NEW JERSEY.

FREERHOLD.—First National Bank. Jos. T. Laird, President, in place of J. B. Rue; no Cashier, in place of J. T. Laird.

JERSEY CITY.—First National Bank; charter extended.

PATERSON.—First National Bank; John Reynolds, Vice-President, in place of E. T. Bell.

NEW MEXICO.

LAS VEGAS.—San Miguel National Bank; M. S. Otero, President, in place of M. A. Otero; M. A. Otero, Jr., Cashier, in place of J. Gross; Jacob Gross, Vice-President, in place of J. Rosenwald.

SOCORRO.—First National Bank; T. J. Terry, Cashier, in place of N. S. Ernst; M. Fischer, Vice-President.

NEW YORK.

ARCADE.—B. F. Hurty & Co; assigned to Marvin Austin. Liabilities, about \$30,000.

CLYDE.—Aaron Griswold; deceased.

ONEIDA.—National State Bank; S. H. Farman, President, in place of S. H. Fox; R. S. Burr, Vice-President, in place of S. H. Farman.

ROME.—Fort Stanwix National Bank; H. G. Utley, President, in place of D. Utley; James S. Whaley, Vice-President, in place of H. G. Utley.

SPRINGVILLE.—Springville Bank; now First National Bank. Capital, \$50,000. President, William O. Leland; Cashier, Elmer O. Leland.

TONAWANDA.—Evans, Schwinger & Co; succeeded by State Bank of Tonawanda. Capital, \$100,000. President, J. H. Degraff, Cashier, B. L. Band. Commences business May 1.

TROY.—Central National Bank; Moses Warren, President, in place of G. C. Burdett; Joseph B. Wilkinson, Vice-President, in place of M. Warren.

Manufacturers' National Bank; S. O. Gleason, Cashier, in place of C. M. Wellington.

National State Bank; Charles Warner, President, in place of H. Ingram; Lyman R. Avery, Vice-President, in place of C. Warner.

NEW YORK CITY.—Bank of Banks; this is the title of a bank now being organized, to be incorporated under the State laws.

Home Bank; a new bank under this title has been authorized by the Bank Department. Capital, \$300,000. Will commence business about May 1, at 42d Street and Fifth Avenue.

Mercantile National Bank; Chas. P. Burdett, Vice-President, in place of Wm. P. St. John; no Assistant Cashier, in place of F. B. Schenck.

Mechanics' National Bank; Alexander E. Orr, Vice-President.

National Broadway Bank; J. L. Everitt, 2d Vice-President; A. T. J. Rice, Cashier, in place of J. L. Everitt; no Assistant Cashier, in place of A. T. J. Rice.

Phoenix National Bank; Eugene Dutilh, President, in place of P. M. Bryson; Wm. Bryce, Vice-President.

Wall Street National Bank; J. P. Dickinson, Cashier, in place of M. F. Reading; C. F. Timpson, Vice-President, in place of T. W. Park; no Assistant Cashier, in place of J. P. Dickinson.

Hatch & Peters; assigned to Wm. A. Booth.

Edward F. Watson (Bond Broker); assigned to Harold Clemens.

Schott & Knight; C. M. Schott, Jr., of the New York Stock Exchange, and Thos. C. Knight, of the Philadelphia Stock Exchange, have formed a partnership, under above style, with offices in this city and Philadelphia.

NORTH CAROLINA.

WILMINGTON.—Bank of New Hanover; Isaac Bates, President, in place of C. M. Stedman.

OHIO.

CAMBRIDGE.—Central National Bank has been authorized to commence business. Capital, \$60,000. President, Andrew J. Hutchinson; W. E. Boden, Cashier.

CINCINNATI.—Metropolitan National Bank; Wm. Means, President, in place of J. F. Larkin.

DELPHOS.—First National Bank; now Delphos National Bank. Capital, \$60,000. Same officers.

FELICITY.—Waterfield's Bank; now First National Bank. Capital, \$50,000. President, David H. Hoover; Cashier, Samuel F. Waterfield.

GALLON.—Citizens' National Bank; A. F. Lowe, Cashier; no Assistant Cashier, in place of A. F. Lowe.

GARRETTSVILLE.—First National Bank; Wm. B. McConnel, President, in place of W. C. Thrasher; E. C. Smith, Vice-President, in place of W. B. McConnel; W. E. Agler, Assistant Cashier.

GEORGETOWN.—First National Bank; Joseph Cochran, President; H. C. Loudon, Vice-President; J. C. Dunn, Assistant Cashier.

LANCASTER.—Hocking Valley National Bank; H. C. Drinkle, President, in place of T. Mithoff; W. D. Kutz, Cashier, in place of J. W. Faringer; Thos. Mithoff, Assistant Cashier.

MCCONNELLSVILLE.—First National Bank; James K. Jones, President, in place of A. Alderman; E. W. Colton, Vice-President; J. T. Stanton, Assistant Cashier.

MONROVILLE.—First National Bank; S. D. Fish, President; James Green, Vice-President, in place of S. D. Fish.

MT. GILEAD.—Morrow County National Bank; Wm. G. Beatty, President, in place of M. B. Talmage; no Vice-President, in place of L. H. Rowland.

SPRINGFIELD.—Second National Bank; Amos Whiteley, President, in place of S. A. Bowman.

WARREN.—Trumbull National Bank; Harmon Austin, President, in place of C. Smith.

OREGON.

SALEM.—First National Bank; Jno. Moir, Cashier, in place of W. Lowe; Wm. N. Ladue, Vice-President.

PENNSYLVANIA.

GAP.—Gap National Bank; B. Maurice Herr, Cashier, in place of C. Himes.

INDIANA.—First National Bank; Dan S. Porter, President, in place of S. M. Clark.

MILLERSTOWN.—German National Bank; G. F. Fitzer, President, in place of H. L. Westerman; H. L. Westerman, Vice-President, in place of G. F. Fitzer.

PENNSBURGH.—Farmers' National Bank; James M. Slifer, Cashier, in place of A. F. Day.

PHILADELPHIA.—Beneficial Savings Fund; Charles A. Repplier, President, deceased.

R. D. Jones & Co., dissolved.

PITTSBURGH.—Allegheny National Bank; W. McCandless, President, in place of J. W. Cook; George A. Cook, Cashier, in place of W. McCandless; Joshua Rhodes, Vice-President.

N. Holmes & Sons; John G. Holmes, deceased.

READING.—Commercial National Bank; Wm. Young, President, in place of A. Bard.

UNION CITY.—First National Bank of Union Mills; suspended.

WILKES-BARRE.—Second National Bank; E. W. Mulligan, Cashier; R. F. Walsh, Vice-President, in place of W. Mulligan.

RHODE ISLAND.

SLATERSVILLE.—First National Bank of Smithfield; John W. Slater, President, in place of W. S. Slater; no Vice-President, in place of J. W. Slater.

TENNESSEE.

PULASKI.—Giles National Bank; Jno. D. Flautt, Cashier, in place of S. E. F. Rose; W. C. Rose, Assistant Cashier.

KNOXVILLE.—East Tennessee National Bank; no President, in place of J. Jaques.

TEXAS.

COLORADO.—F. W. James & Co.; succeeded by First National Bank. Capital, \$100,000. President, W. Scott; Cashier, F. W. James.

GALVESTON.—National Bank of Texas; I. Dyer, Acting President, during absence of President; J. J. Hendley, Vice-President.

PARIS.—Paris Exchange Bank; H. A. Clement, formerly Assistant Cashier, now Cashier.

SAN ANTONIO.—Traders' National Bank has been authorized to commence business. Capital, \$100,000. President, John M. Brownson; Cashier, James S. Thornton.

UTAH.

OGDEN.—Guthrie, Dooly & Co.; succeeded by Utah National Bank. Capital, \$100,000. President, John W. Guthrie; Cashier, Richard M. Dooly.

VERMONT.

BURLINGTON.—Howard National Bank; Curtis Wells, Cashier, in place of C. A. Sumner.

CHESHAM.—First National Bank; John B. Bacon, President, in place of S. Ely; A. M. King, Vice-President, in place of J. B. Bacon.

BANKERS' OBITUARY RECORD.

Morgan.—Edwin D. Morgan, Banker, of New York city, died February 14, 1883, aged seventy-two years.

Ex-Governor Morgan was a man of national reputation, his fame in other directions having overshadowed his repute as a highly successful man of business. He was born in Washington, Berkshire county, Mass., and at the age of seventeen became clerk in the grocery store of an uncle in Hartford. In a few years his genius for business asserted itself and he was made partner. In 1836 he came to New York and began business as a wholesale grocer, and a phenomenal success resulted. In 1847, having amassed a fortune, he formed the firm of E. D. Morgan & Co., leaving the active conduct of the business to his three partners while he devoted himself to politics. The firm has long been known as one of the soundest in New York, and it is estimated that Mr. Morgan has left 8 to 10 million dollars. His political career belongs to history. He was Governor of New York at the beginning of the war, served a term in the United States Senate, and was offered, but declined, the office of Secretary of the Treasury, tendered by President Lincoln in 1865, and again by President Arthur in 1881.

Mason.—John C. Mason, President of the Central National Bank, of Worcester, Mass., died February 17, 1883, aged seventy-two years.

Mr. Mason was born in Shrewsbury, Mass. At the age of twenty he went to Keene, N. H., and in 1835 removed to Worcester, Mass., where he became partner in the firm of Nourse & Mason (afterward Ruggles, Nourse, Mason & Co.), manufacturers of agricultural implements, whose business was afterward merged in the Ames Plow Company. Mr. Mason was elected a Director of the Central Bank in 1851, and President in 1858, holding the office until his death. He was also the first President of the People's Savings Bank of Worcester, which was incorporated in 1864, and held that office until he resigned, in 1877, since which time he has been its First Vice-President, and also a member of the Board of Investment.

Pratt.—W. H. Pratt, President of the Bank of Mobile, died February 3, 1883, aged about seventy-one years.

The deceased was born in New York city in 1811, and moved to North Carolina at the age of 22, and thence to Mobile in 1836. He was a member of the largest and most flourishing cotton house there for 16 years, and then resided in Europe until the end of the war. In 1866 he planted sugar in Louisiana, and remained in that State until the crisis of 1873 called him to Mobile to take charge of the embarrassed affairs of the Bank of Mobile, and was elected President in January, 1874. He was very successful in managing the affair of the bank, and placed the institution on a solid basis. He was also Vice-President of the Mobile and Montgomery Railroad. He met his death by being crushed under a freight train at Birmingham, Ala.

Paxton.—John R. Paxton, Secretary of the Harlem Savings Bank, New York city, died January 13, aged about sixty-eight years.

Mr. Paxton was born in New York, of Scotch parents, in 1814. He was a real estate agent previous to his becoming Secretary of the Harlem Savings Bank, several years ago. About twenty-five years ago he was one of the Aldermen of the city.

Griswold.—Aaron Griswold, a banker, and one of the oldest business men of Clyde, N. Y., died February 1, 1883, in the eighty-fourth year of his age.

Tallant.—D. J. Tallant, a pioneer banker of San Francisco, and founder of the house of Tallant & Co., died February 13, 1883, aged seventy-one years.

Bartholow.—E. M. Bartholow, of Bartholow & Co., proprietors of the Williamsburg Bank, Williamsburg, Kan., died January 10, aged sixty-seven years.

Willets.—Samuel Willets, one of the best known and most respected of the old merchants of New York, died on February 6. He was largely interested in banking and insurance interests of the city, and was one of the original Directors of the American Exchange National Bank, being also once, for a short time, its President.

Brookfield.—Moses A. Brookfield, a well-known resident of Morristown, N. J., and at one time a stock broker in Wall Street, died on February 23, aged eighty-two years.

Vickery.—Charles R. Vickery, President of the Machinists' National Bank of Taunton, Mass., died January 16, last, aged eighty-two years.

Bishop.—On February 12th died Gabriel Bishop, who had been for fifteen years Cashier of the Cuba National Bank, Cuba, N. Y. He was esteemed as a faithful, efficient and genial officer.

Marye.—George T. Marye, of the firm of George T. Marye & Co., bankers, of San Francisco, Cal., and Virginia City, Nevada, died February 17, aged sixty-five years.

Hoyt.—William C. Hoyt, Treasurer of the Citizens' Savings Bank of Stamford, Conn., died February 22 aged seventy years.

Howe.—John B. Howe, formerly President of the La Grange Bank, of Lima, Ind., died on January 23d.

NOTICES OF NEW BOOKS.

Debt Statement of Cities. By J. G. Martin. Boston: Published by the Author. March, 1883.

This work seems to be a careful and thorough compilation, the subject being indicated in the title. It covers the cities of the United States, from Maine to Missouri, 120 in all; besides seventeen States and numerous towns, the latter mainly in New England. It gives a very clear detail of the debt of each city, its valuation, tax rate and other facts of interest. Further description of the work will be found in the advertisement in this number. The author has a high reputation in New England as a compiler of statistics, and his work, which is general, not local, will be found useful and valuable by banks, bankers, and general investors.

Tables for Calculating the Value of American Shares and Stocks at the Various Rates of Exchange, viz:—From \$4.80 to \$4.91½. By G. B. GLADDING. Published by John Gladding, 28A, Paternoster Square, London, E. C. Price, 40s.

This is an English publication the use of which is indicated by the title. It might perhaps be equally valuable to dealers in securities on this side the water, to indicate the actual value of the daily cable quotations from England.

Caucus System. By FREDERICK W. WHITEBRIDGE. New York. The Society for Political Education, 1883.

This is number VIII. of the Economic Tracts, several of which have received mention here already. It is an essay prepared for the first volume of the "Cyclopædia of Political Economy," etc., edited by John J. Lalor. It gives a succinct account of the rise and progress of the caucus system in State and national affairs, recites the evils that grew up under it, and prescribes the remedies. The Society for Political Education should receive the support of all reformers.

The Financial History of the United States from 1789 to 1866. By ALBERT S. BOLLES, Professor, etc., etc. New York: D. Appleton & Company. 1883.

Judge Bolles is well known as a writer on economic and financial subjects, whose essays we find always readable even though we cannot always agree with the conclusions. The present work is the labor of years and is to be supplemented with another volume which will bring the history down to the refunding operations of 1881. Of the usefulness of the work it is unnecessary to speak. In order to hold intelligent views on the tariff, the national banks, the currency, or any of the financial topics of the day, it is necessary to know what has been done in the past; and here is a clear and readable account. The chapters on tariff legislation are perhaps especially interesting at present, but they should be regarded as the work of a believer in protection, although evidently a candid and honest one.

The Industrial Monitor is a new Chicago monthly paper devoted to the interests of manufactures, mechanics and railroads. If it continues in the direction in which it has started, we look forward to a successful future for it. The publisher intends that it shall ultimately be changed to a weekly.

RAILROAD FINANCES AND NEWS.

(A synopsis of Railroad finances and affairs of interest to Bankers, Investors, &c.
Classification: I. New Issues. II. Reports. III. Miscellaneous R. R. News).

I. NEW ISSUES.

THE NEW YORK AND NEW ENGLAND RAILROAD second mortgage loan recently advertised has been taken by a syndicate.

BOSTON AND ALBANY.—At the annual meeting on February 14, it was voted to ratify the recent issue of bonds for stock. It was also voted that Moses Kimball, John Cummings, and Charles S. Sargent be appointed to approve and certify all bonds and all notes payable at periods of more than 12 months from the date thereof which may hereafter be issued by the road, and that the approval and certificate of either of them shall be sufficient.

CHICAGO AND WESTERN INDIANA.—It has been decided to cancel the old \$10,000,000 mortgage and issue therefor a new one for \$10,500,000, making it flexible, so that the amount can be raised to any extent if it becomes necessary. This mortgage covers both the main line and the belt line, but if more money is raised it will be used upon the main line only. The belt line has been leased to the Chicago Belt Line Company, of which Mr. George L. Dunlap is the President, for ninety-nine years, the Western Indiana Railroad Company receiving an annual rental of \$100,000. All future improvements on the belt line will have to be made by the new company.

NEW YORK, LAKE ERIE AND WESTERN.—It transpired recently that the company was endeavoring to negotiate in Philadelphia, through Drexel, Morgan & Co., the sale of \$5,000,000 new collateral trust bonds. Mr. Jewett said it was true that some of the stocks and bonds deposited as collateral security for the new loan were included in the new second consolidated mortgage, but that the right of the company to use them was fully reserved to it. They included the Blossburg Coal Company shares and the Buffalo, Bradford, and Pittsburgh bonds. The object of the new loan, he said, was to return to the company's treasury the sums it had spent in acquiring the Blossburg coal property, extending the Bradford branch, improving the Weehawken docks, etc. So far as the company was concerned, the bonds had already been negotiated.

VERMONT AND MASSACHUSETTS.—A new issue of \$1,000,000 Vermont and Massachusetts Railroad 5 per cent. 20 year bonds has been authorized. The funds derived from the new issue will be used to pay off \$550,000 of an old issue of bonds, and the remainder will go to the Fitchburg Railroad Company for improvements made in the Vermont and Massachusetts Division. Up to the present time less than \$800,000 of first mortgage bonds of the Massachusetts Central Railroad have been deposited with the New England Trust Company under the terms of the reorganization scheme.

THE CONNOTTON VALLEY RAILWAY COMPANY has issued a circular soliciting subscriptions to the amount of \$760,000 to be applied to the purchase of more rolling stock, the establishment of improved terminal facilities at Cleveland, and to an extension from Coshocton to Zanesville. For these purposes there are to be organized, first, the Boston Car Trust Association, with an issue of 14,000 shares of \$10 each, with an annual dividend of 8 per cent. payable semi-annually; second, the Cleveland Terminal Trust Association, with an issue of 21,000 shares of \$10 each, with a like dividend; third the Coshocton and Southern Railway Company, which corporation it is proposed to

organize with 3,000 shares of full-paid stock at \$10 each; 1,000 bonds of \$500 each at 76 per cent.—a total of \$410,000 and a grand total of \$760,000. These bonds are to be secured by a mortgage upon the property of the Coshocton and Southern Railway Company and by a lease in perpetuity of the Coshocton and Southern Road to the Connotton Valley Company, by the terms of which an annual rental of 35 per cent. of the gross earnings is to be paid to the Connotton Valley Company.

KENTUCKY CENTRAL.—The managers have negotiated bonds to the amount of \$1,800,000, thus realizing enough to pay the bonded indebtedness due on March 1, and leave a balance sufficient to complete the road to connect with the Knoxville extension of the East Tennessee, Virginia and Georgia system.

THE RAILROAD CAPITAL raised in Europe in 1882, according to the Belgian "Moniteur des Interets Matériels," was \$584,084,000, \$164,000,000 of which was for America, while \$225,000,000 was for Great Britain and its colonies. The Russian roads raised \$25,000,000; Holland and Austria-Hungary each about \$16,000,000. The total issues of new capital in Europe for new railroads, government and municipal loans and banking establishments for five successive years are reported as follows, in millions of dollars:

1878.....	\$86,900,000	1881.....	\$140,280,000
1879.....	86,000,000	1882.....	93,506,000
1880.....	106,040,000		

The amount is thus smaller last year than in either of the two previous ones.

ST. LOUIS AND SOUTHERN.—Advices state that there has been recorded in the Clerk's office at Berryville, Ark., a mortgage executed by the St. Louis and Southern Railway for bonds to be issued by said company for building a railroad from Newport, in Jackson County, to Eureka Springs. The new road will be known as the White River Branch of the St. Louis, Iron Mountain and Southern Railroad. The survey is to commence at once, and work will begin shortly.

II. REPORTS.

CHICAGO AND ALTON.—The report for the year ended December 31, 1882, shows that the bonds redeemed and canceled amounted to \$1,458,000. The replacement of iron with steel rails on main lines was completed. The earnings from leased lines other than the Joliet and Chicago (of which no separate account is kept), were \$3,056,945, against \$2,791,385 in 1881, and were 43 55-100 per cent. of the gross earnings. Following is an abstract of the Income Account:

	1882.		1881.
Total income.....	\$4,062,160	..	\$3,714,818
Total disbursements.....	3,645,518	..	3,772,788
Balance, surplus or deficiency.....	Sur. \$416,642	..	Def. \$57,970
The stock and bonds were as follows:			
	1882.		1881.
Common Stock.....	\$12,504,600	..	\$11,181,472
Preferred.....	2,425,400	..	2,425,400
Bonds.....	11,432,850	..	11,501,850

DELAWARE, LACKAWANNA AND WESTERN.—The operations for the year ended December 31, 1882, resulted as follows:

	1882.		1881.
Gross receipts, all sources.....	\$27,006,267	..	\$27,396,526
Operating expenses.....	20,163,078	..	19,632,662
Net earnings.....	\$6,843,189	..	\$7,763,864
The income account makes the following showing:			
	1882.		1881.
Net earnings.....	\$6,843,189	..	\$7,763,864
Interest and rentals.....	3,630,708	..	3,558,494
Surplus.....	\$3,222,481	..	\$4,205,370
Dividends.....	2,096,000	..	1,768,500
Balance.....	\$1,126,481	..	\$2,436,870

The dividends were in 1881, 6%, and in 1882, 8 per cent. The following shows the stock, funded debt and surplus account:

	1882.	1881.
Stock.....	\$26,200,000 ..	\$26,200,000
Funded debt.....	4,044,900 ..	4,044,900
Surplus account.....	8,711,777 ..	7,585,297

LEHIGH COAL AND NAVIGATION COMPANY.—The report for the year ended December 31, 1882, shows the following earnings:

	1882.	1881.
Total receipts.....	\$1,939,212 ..	\$1,875,592
Total disbursements...	1,279,919 ..	1,281,688
Balance, earnings.....	\$659,298 ..	\$613,924
Less sinking fund and depreciation.....	149,190 ..	130,148
Surplus for 1882.....	\$510,118 ..	\$483,776
Balance to credit of dividend fund Jan. 1.....	471,445 ..	194,236
Total.....	\$981,568 ..	\$678,012
Dividends..	(4) 446,101 ..	(2) 206,567

Balance to credit of dividend fund December 31..... \$535,457 .. \$471,445

NORTHERN CENTRAL.—The report for the year ended December 31, 1882, shows the following earnings:

	1882.	1881.
Gross earnings.....	\$5,800,175 ..	\$5,443,700
Operating expenses.....	3,842,323 ..	3,787,448
Net earnings.....	\$1,957,852 ..	\$1,656,254
Following is an abstract of income account:		
Total income.....	\$2,241,820 ..	\$1,917,454
Total disbursements.....	1,956,673 ..	1,809,935
Surplus.....	\$285,147 ..	\$107,510

SOUTH CAROLINA.—The earnings for the year ended December 31, 1882, were as follows:

	1882.	1881.
Total earnings.....	\$1,313,820 ..	\$1,245,238
Operating expenses.....	812,630 ..	744,335
Net earnings.....	\$501,190 ..	\$500,951

The increase in expenses was largely caused by outlay for permanent improvements. The mortgage debt is \$5,962,402; income bonds \$2,588,000; capital stock \$4,204,160; balance to credit of profit and loss \$21,173.

DELAWARE AND HUDSON CANAL.—The earnings for the year ended December 31, 1882, were as follows:

	1882.	1881.
Total receipts.....	\$10,804,251 ..	\$11,083,547
Total disbursements.....	8,966,050 ..	8,981,083
Balance.....	\$1,838,201 ..	\$2,102,464

The following shows the amount of stock and bonds and the balance to the credit of profit and loss:

	1882.	1881.
Stock.....	\$20,000,000 ..	\$20,000,000
Bonds.....	18,763,000 ..	18,848,000
Profit and loss.....	1,488,087 ..	1,236,431

CHESAPEAKE AND OHIO.—Following is a comparative statement of earnings and expenses for the years 1881 and 1882:

	1882.		1881.		Increase
Earnings.....	\$3,334,976	..	\$2,706,343	..	\$628,633
Expenses.....	2,302,448	..	2,267,408	..	35,045
Net earnings.....	\$1,032,528	..	\$437,939	..	\$594,589

The interest charges in 1882 were \$831,000.

OHIO AND MISSISSIPPI.—The report of the Receiver for the year ended December 31, 1882, shows the earnings for two years past as follows:

	1882.		1881.
Earnings... ..	\$4,225,499	..	\$4,074,407
Expenses	3,163,836	..	3,115,354
Net earnings.. .	\$1,061,663	..	\$990,053

The accruing interest for 1882 was paid, and one of the deferred coupons on Springfield Division bonds, due May 1, 1878. He was paying (February 12) the deferred coupons due October 1, 1877, for \$134,000. This leaves deferred coupons unpaid \$683,000, which can probably be paid during the present year, thus leaving the line nearly free from debt, except its first, second and Springfield mortgage bonds.

PHILADELPHIA AND ERIE.—The report for the year ended December 31, 1882, shows earnings as follows:

	1882.		1881.
Gross earnings.....	\$4,011,414	..	\$3,454,309
Operating expenses.....	2,599,534	..	2,430,069
Net earnings.....	\$1,411,880	..	\$1,024,250

The income account is as follows:

	1882.		1881.
Total income.....	\$1,415,466	..	\$1,029,085
Total disbursements.....	1,317,767	..	1,424,328

Balance.....	Sur. \$97,699	..	Def. \$396,243
--------------	---------------	----	----------------

The following shows the amount of stock and funded debt:

	1882.		1881.
Common stock.....	\$7,015,000	..	\$7,013,700
Preferred stock.....	2,400,000	..	2,400,000
Funded debt	17,919,000	..	17,923,000

BANK OF PRINCE EDWARD ISLAND.—At a recent meeting of the creditors a statement of the present assets, as estimated by the liquidators, was submitted as follows: Shipping, \$70,000; mortgages and judgments, \$29,000; book accounts, \$100,000; cash on hand, \$61,170, cash yet to be paid by contributories, \$90,000; total, \$350,170. It is calculated that the bank will pay at least one-half of its liabilities. The liquidators hope soon to be able to pay another dividend of 10 cents on the dollar. It has been proposed that the directors, in addition to the payment on their shares, shall pay out of their own pockets \$63,000.

LE CREDIT FONCIER DU BAS CANADA.—At the annual meeting of the shareholders, the report of the directors was presented, showing that the "debenture" account had been reduced by an amount of \$9,733,33, and the deposits \$8,484 52. The total amount of the company's liabilities to the public was now \$3,660 39. The "real estate" account had been reduced by an amount of \$21,356 37. Out of the profits of the year, after payment of all expenses, an amount of \$3,412 23 was written off for losses. Two half-yearly dividends, equal to 6 per cent. per annum had been declared, and the reserve fund had been increased by \$1,500.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, MARCH 3, 1883.

The early revival of trade from the depression that has been very general since the beginning of the year, is confidently expected after the adjournment of Congress. The passage of the law reducing the internal revenue and tariff makes it certain that no extra session will be held, and, while the act will in all probability prove unsatisfactory in some respects, the country will feel relieved that the matter is out of the way for the time being. It is reported in the iron market that the stocks on hand are low, and parties have been waiting to see what Congress would do before putting in their orders. The same is probably the case in other kinds of business, so that a speedy renewal of activity is confidently looked for.

A portion of the tax law that is unexceptionable is that which wipes out the taxes on banks, which have been such a dead weight on the business for many years. This of itself will doubtless prove to be of no inconsiderable benefit to general trade, as it will enable the business to be done to the best advantage of not only bankers but of all who deal with them.

THE PUBLIC DEBT.—The decrease during the month of February was \$7,630,679. The total decrease since July 1, 1882, was \$102,638,346, the reduction for February being only about one-half the average for the first seven months (ending January 31) of the fiscal year. It is the pension payments that make the debt reduction hard to calculate for this year. The Commissioner's first estimate was \$100,000,000, but this was since reduced to \$85,000,000. They have so far amounted to only about 35 million dollars, but in February they approached \$10,000,000 and it is supposed that they will continue at that rate for the rest of the fiscal year. The Secretary of the Treasury estimated the surplus to be applied to the reduction of the debt for the year at \$120,000,000, but this amount is likely to be increased at least \$15,000,000, although the effect of the Tax Reduction law is not yet estimated. The debt statement for March 1, shows that the amount of 5 per cents, continued at 3½, was decreased in February from \$81,000,000 to \$64,000,000, over 5¼ millions having been converted into 3 per cents.

TREASURY MATTERS.—The total cash in the Treasury was reduced from 318 to 306 millions, and the available cash balance from \$143,000,000 to \$131,000,000. The silver dollars held in the Treasury amount to about \$125,000,000, an increase of nearly 2¼ millions during February; and there are 48 millions of certificates outstanding

against these. The silver dollars owned by the Government increased about 3 millions during the month. The amount of gold and gold bullion in the Treasury is greater by about 4 million dollars than it was a month ago, and the excess of gold coin and bullion above outstanding certificates is \$125,000,000, or 10 millions more than it was one month ago.

GOVERNMENT BONDS.—The dealings have been light and prices irregular owing to the doubts in regard to the action of Congress. The reduction of taxation at the estimated rate of 60 to 70 million dollars per annum will, of course, necessitate a reduction in the rate of payment of the bonds, and this assurance of comparative permanence should cause higher prices, unless the effect has already been discounted.

The following table shows the closing bids for the principal issues of Government bonds on each day of the month of February, and the highest and lowest during the month :

Feb.	3 per cents.	5s, '81. cont'd.	4½s, '91, coup.	4s, 1907, coup.	C'y 6s, 1899.	Jan.	3 per cents.	5s, '81. cont'd.	4½s, '91, coup.	4s, 1907, coup.	C'y 6s, 1899.
1	104½	103¾	113¼	118¾	132	15	104	103¾	113¾	119¾	130
2	104	103¾	113¾	119¾	132	17	104	103¾	113¾	119¾	132
3	104½	103¾	113¼	119¾	130	19	104½	103¾	114	119¾	130

THE NATIONAL BANKS.—In other portions of this number will be found a summary of their last report to the Comptroller, and also remarks on this and other statistics regarding their condition.

The following will show the amount of each description of bonds held by the Treasurer to secure national bank circulation, on or about the dates indicated :

	Dec. 1.	Jan. 1.	Feb. 1.	March 1.
Currency 6 per cents.....	\$3,528,000	\$3,528,000	\$3,528,000	\$3,528,000
5 per cents	15,000,000	15,000	15,000	15,000
4½ per cents.....	34,761,650	35,915,500	36,210,300	36,755,300
4 per cents.....	105,806,300	106,080,600	106,179,700	104,950,950
5 per cents extended at 3¼.....	20,244,900	20,805,950	18,924,850	14,733,350
6 per cents extended at 3½.....		1,494,900		
3 per cents.....	188,820,400	192,693,700	195,379,700	197,953,300
Total. ...	\$362,174,250	\$390,531,650	\$356,236,455	\$357,983,800

MONEY AND DOMESTIC EXCHANGE.—The rates for loans have been hardening here recently while they have been easier abroad, the discount rate of the Bank of England being down to 3 per cent. Call loans on stock collateral are made at 5 to 6 per cent., but higher rates have been paid occasionally. On Government bonds collateral, 3 to 4 per cent. is paid. Prime commercial paper is quoted at 5¼ to 6 per cent.

The following table shows the range of call loans, and rate on prime paper, for the past five weeks:

	Jan. 27.	Feb. 3.	Feb. 10.	Feb. 17.	Feb. 24.
Range of call loans	2@5	2@5	2@5	2@5	2@5
Rate of discount.....	5@5½	5@5½	5@5½	5@5½	5@5½

Following are the rates of exchange on New York: Savannah, buying ¼ discount; selling par@¼ premium. Charleston, buying par@¼ discount; selling ¼@¼ premium. New Orleans commercial \$1 per \$1,000 discount; bank, \$1 per \$1,000 premium. St. Louis, 75c. per \$1,000 discount. Chicago, 80c. per \$1,000 discount. Boston, par @30c. per \$1,000 discount.

FOREIGN EXCHANGE is low and active, and so near the gold importing point that the probability of an import has again been discussed, in a languid way, it is true, because so many recent prognostications have failed of verification. The matter depends largely upon the movement of American securities, and for the time being, it must be confessed, they do not seem to be in special favor across the water. Following are the posted and actual rates of foreign exchange on March 3: Bankers' sterling, 60 days, nominal, \$4.82½; sight, nominal, \$4.85; 60 days, actual, \$4.81¼@4.81½. Sight, actual, \$4.83¼@4.84¼; Cable transfers, \$4.84¼@4.85; Prime commercial sterling, long, \$4.80¼@4.80½; Documentary sterling, 60 days, \$4.79¼@4.80; Paris, bankers', 60 days, 5.23¼@5.22½; Paris, bankers', sight, 5.20½@5.20; Antwerp, commercial, 60 days, 5.26¼@5.26½; Swiss, bankers', 60 days, 5.22¼@5.21¼; Swiss, bankers', sight, 5.19½@5.18½; Reichsmarks (4), bankers', 60 days, 94½@94¼; Reichsmarks (4), sight, 94½@95; Guilders, bankers', 60 days, 40@40½; Guilders, bankers', sight, 40¼@40½; Paris dispatches quote exchange on London 25f. 21c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days and sight, cable transfers, and prime commercial sterling at 60 days, together with exchange on Paris on February 1, the changes in the rates as they occurred during the month, and the highest and lowest during the months of January and February:

	Bankers			Cable			Paris	
	60 days.	Sight.		Transfers.	Commercial.		60 days.	Sight.
JAN.—								
Highest.....	4.83½	4.87	4.87½	4.81½	5.23½	5.20½		
Lowest.....	4.81	4.85	4.85½	4.79¼	5.21½	5.17½		
Feb. 1.....	4.88½	4.87	4.86½	4.81½	5.21½	5.17½		
" 5.....	4.83	4.86½	4.86½	4.81½	5.21½	5.17½		
" 8.....	4.83½	4.87	4.86½	4.81½	5.21	5.17½

" 19.....	4.83	4.86	4.85½	4.81¼	5.21½	5.17½		
" 27.....	4.82½	4.85½	4.85½	4.81½	5.22½	5.20½		
" 28.....	4.82½	4.85½	4.85½	4.79½	5.22½	5.20½		
Highest.....	4.84	4.87	4.86½	4.82½	5.22½	5.20½		
Lowest.....	4.82½	4.85½	4.85½	4.79½	5.21	5.17½		

RAILROAD AND MISCELLANEOUS STOCKS.—Up to about a week ago the market continued dull and uncertain; but a stronger tone has been developed since in anticipation of the adjournment of Congress, as well as an improvement in freight business. A little "boom" is not unexpected soon; but large amounts of stock have been carried for a long time past by certain persons who will probably take the first opportunity to unload, so that a quick reaction is likely to follow a sudden rise.

The following table shows the highest, lowest, and closing prices of the most important railway and miscellaneous stocks at the New York Stock Exchange during the month of February:

Companies.	Highest.	Lowest.	Clos'g.	Companies.	Highest.	Lowest.	Clos'g.

NEW YORK CITY BANKS.—The loans have been considerably increased of late, while the reserve has fallen off, so that the surplus over 25 per cent. of the deposits of nearly eight million dollars a month ago has been wiped out, and there is a deficit, on the same basis, of over two millions. This condition is accounted for by the call for money to meet an increased movement of cotton and grain to the seaboard, and the expected opening of navigation soon.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1882 and 1881:

	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res

BOSTON BANKS.—CAPITAL and SURPLUS, QUOTATIONS OF STOCK, and LAST DIVIDEND.

The following table gives the latest quotations of Bank Stocks in the Boston Market, which are mainly sold by auction. The Capital and Surplus given are from the last official report, December 30, and all the banks are National. The surplus includes the undivided net profits. All the banks belong to the Clearing-House, except Bunker Hill, First Ward, Mechanics', National Market of Brighton, People's, and Rockland, which are located out of the city proper, but within city limits, and they clear through other banks.

Clearing-House Exchanges.—The exchanges for the month of February, and for the week ending March 3d, vary in detail, but point to the same conclusions. The volume of business at New York has been greatly affected by uncertainty as to the tariff, now happily ended. But the volume of business elsewhere, though somewhat ragged and unsteady, has, on the whole, exceeded that of the corresponding month or week last year by about 3 per cent. The "Public" says that there is no point of importance in the whole commercial horizon where evidence appears of a real shrinkage of business that is not attributable to local or temporary causes. This is in spite of great depression in the iron and other important industries, and the general check which the expectation of important legislation gave to business. These causes seem to have affected New York more than other places.

DAILY RECORD OF FINANCIAL EVENTS.

FEBRUARY, 1883.

1. THURSDAY.—The 120th call issued for \$15,000,000 5 per cent. bonds, continued at $3\frac{1}{4}$, to mature May 1, next.
Reduction in the public debt in January, \$13,636,884; since June 30, 1882 \$95,007,668.
2. FRIDAY.—The Union and Steel Works, Chicago, suspended, judgments being entered against the company for over \$1,000,000.
3. SATURDAY.—Discount on prime commercial paper in New York, $5\frac{1}{2}$ @6 per cent.; call loans, $5\frac{1}{2}$ @3 per cent.
Discount in London on 60 days to 3 months' bank bills, $3\frac{1}{4}$ per cent., and trade bills, $3\frac{1}{4}$ @4 per cent.
5. MONDAY.—Great damage is reported from floods in the West.
6. TUESDAY.—It is announced that Nihilism is suppressed in Russia. The Czar's coronation appointed for May 27.
9. FRIDAY.—Bar silver quoted in London at $50\frac{1}{4}$ d. per ounce.
10. SATURDAY.—Discount on prime commercial paper in New York, $5\frac{1}{2}$ @6 per cent.; call loans, $3\frac{1}{4}$ @ $2\frac{1}{4}$ per cent.
Discount in London on 60 days to 3 months' bank bills, $3\frac{1}{4}$ @ $3\frac{1}{8}$ per cent., and trade bills, $3\frac{1}{4}$ @4.
12. MONDAY.—Cincinnati, Louisville, and other points on the Ohio, suffered greatly from flooding.
13. TUESDAY.—The new French Ministry resigned.
An agreement concluded to lease the Mutual Union to the Western Union Telegraph Company.
14. WEDNESDAY.—The Philadelphia and Reading Railroad receivership terminated.
15. THURSDAY.—The Bank of England rate of discount reduced to $3\frac{1}{2}$ per cent.
The English Parliament re-assembled.
17. SATURDAY.—Discount on prime commercial paper in New York, $5\frac{1}{4}$ @7 per cent.; call loans, $73\frac{1}{4}$ @3 per cent.
A decree issued providing for the resumption of specie payments in Italy on April 13.
18. SUNDAY.—M. Jules Ferry has undertaken the formation of a new French Cabinet.
19. MONDAY.—Bar silver quoted in London at $50\frac{1}{4}$ d. per ounce.
20. TUESDAY.—The flood at Cincinnati subsiding. Damage was caused by a freshet in the Missouri.
The Tax and Tariff bill passed the Senate, and goes to the House of Representatives.
24. SATURDAY.—Discount on prime commercial paper in New York, $5\frac{1}{4}$ @7 per cent.; call loans, $3\frac{1}{2}$ @2 per cent.
Discount in London on 60 days to 3 months' bank bills, 3 per cent., and trade bills, $3\frac{1}{4}$ @ $3\frac{1}{4}$ per cent.
27. TUESDAY.—The Tariff and Revenue reduction bill went to a conference committee of both Houses of Congress.
The Senate decided to postpone consideration of the Mexican commercial treaty until next December.
28. WEDNESDAY.—The receivership of the Philadelphia and Reading Railroad and Iron and Coal companies formally ended.

R H O D E S ' JOURNAL OF BANKING.

NEW SERIES. }
VOLUME XI. }

APRIL, 1883.

No. 4.

The relations of the Treasury to the loan market have been even more strained and unnatural within the last few months than in a long time previous, and the conditions have been such as to make thinking people ask if it is not time that a reform should be attempted in the present system. During most of the month of March there has been an unusual and pretty sharp monetary stringency, and business in every department has felt the consequences. Not only has the rate in New York for call loans on stock collateral ranged as high as 25 per cent. per annum, but there has been a great deal of complaint on the part of merchants because they could hardly get their good paper discounted at fair rates. There was at first a good deal of speculation in regard to the cause for this unusual state of things at this time of the year, for although there is always a demand for money at about the opening of navigation in the Spring, yet the demand now came earlier and was sharper than usual.

Upon examining all the surrounding circumstances it has been found that the Treasury is the factor that had not been counted upon, and which is accountable for, at least, a considerable part of the trouble. For what reason it is not, and was not, apparent, the Secretary of the Treasury some months since issued calls for bonds in such rapid succession that the available balance in the Treasury was much reduced. This balance was on September 1, last, 139 1-2 million dollars, but was gradually reduced by bond payments until on January 2 it was only 111 1-2 million dollars, the coin reserved against the legal-tenders being lower than ever before. The action of the Secretary, which was not taken apparently to relieve any strain upon the money market, gave rise to some mild criticism at the time, and lately he has followed a different policy. Up to March 1 the balance had again been increased (at the expense of the general market) to nearly 129 million dollars, and we are informed by telegraph that about March 27 it was 140 millions. (These figures, excepting the last, are obtained by tak-

ing the "balance, including bullion fund" shown in the Treasurer's monthly statements, and deducting the item on the other side "United States bonds and interest," which means bonds the payment of which has been anticipated, but which for book-keeping purposes are not deducted from the "interest-bearing debt" until the calls mature.) Since the end of January the New York banks have been drained of 21 1-2 millions of specie and legal-tenders. Of this amount only 8 millions went to the West, while about 20 millions went to swell the Treasury balance.

Now, it is certain that a serious mistake has been made in the Treasury Department, either last Fall or this Spring. During the Winter there was an unnatural expansion, and later there has been an unnatural contraction of the circulating medium, which are traceable directly to the action of the Department. Other, less important, consequences have followed, but too weighty to be overlooked. During the month of March the officials of the Department have been subjected to the most powerful importunities to lend some ease to the market. We do not know whether there have been as urgent demands by the "bears" on the other side, but false reports have been sent repeatedly by telegraph to the effect, first, that the Secretary had determined not to anticipate the next call, maturing May 1, and then that the Acting Secretary was going to follow the same policy, which reports affected the market until they were contradicted by the officials mentioned. It is said that the illness and enforced vacation of Secretary Folger were partly caused by the worry to which he was subject in the meantime. There can be no question that this is very demoralizing, and wrong from every point of view. The blame in the present case belongs partly to the Department. A steady policy should have been decided on, and then carried out. If so large a coin balance as had previously been carried was not considered necessary, the reduction having once been made, the policy of the Department should not have been immediately changed, and just at the worst season. But under the present conditions such things are sure to happen from time to time. A remedy is very decidedly needed, and it does not necessarily require a very great change in the Treasury system. The most necessary thing first is, that the business public shall recognize the fact that there is an important evil to be corrected; then the remedy will probably be not far to seek.

During the past month there have come from Washington many accounts of the physical condition of Secretary Folger, to the effect that he was suffering the consequences of overwork due to the attempt to give his personal attention to many matters of detail, which his predecessors were used to leave to subordinates. About the same time

reports were received that the President, although not actually sick, was quite worn out with the various labors of the past winter, nervous and used up, seeking rest and finding none. Again, word comes from Albany that Governor Cleveland is in danger of apoplexy unless he restricts his hours of labor within a more moderate compass, and takes more exercise, working as he does from 8:30 A. M. until after midnight day after day. These are only prominent examples of what is occurring in ordinary business life, in how many cases who can determine? The temptations to overwork in this live country, in these stirring times, with so many incitements to ambition, and such a strong competition between man and man, are so powerful that it often needs a very strong will and the exercise of large self-denial to overcome them. Under the circumstances advice is of little avail. But it should never be forgotten that a man in sound health can do more work, and better work for the time being than one who is ailing, or half-well, and, besides, he will live longer and his time of usefulness will be prolonged in an indefinite proportion. To keep up a sound condition of body, and consequent vigor of mind (*mens sana in corpore sano*), it is strictly necessary for most to take regular exercise in the open air. The time thus spent is not wasted; far from it. Of any kind of severe mental labor a man can do more, and do it better, in six to eight hours a day than he can in eight to ten, if the time spared from business is employed in the right kind of relaxation. A great deal of the worry and overwork, however, is due to the lack of proper system in doing business, and methodical habits of working. We remember that the late Walter Bagehot, of the London "Economist," and a practical banker, in a passage not now at hand, says that when a banker is habitually hurried, and overrun with matters of routine, it is a sure sign of bad management. Routine work and matters of detail should be turned over to subordinates, leaving the manager free to oversee and direct as well as to think and plan. This is true of every similar business, and it is presented as the opinion of a very able man in matters both of speculation and practice.

A somewhat belligerent contemporary quotes a passage from RHODES' JOURNAL OF BANKING which purports to show to what a large extent fiduciary money had replaced metallic money (by the use of checks and clearing-houses) in England as compared with France. The comment upon the passage begins as follows: "We are not induced to republish the foregoing merely to correct its statistics, which we may note are not accurate in any respect, but chiefly to suggest that if France is behind England in such monetary appliances or substitutes, as 'checks or clearing-houses,' France is certainly amply compensated by the possession of so much more of the substance itself than England is, with all the activity and scope of British trade, in-

dustry and commerce. * * * " This, be it remarked, is under date of March 17, 1883. The unfortunate passage that comes up for such severe censure has been found, after a somewhat toilsome search, in an obscure part of our number for May, 1882. It occurs at the end of a notice of a paper prepared by Mons. A. de Malarce, of Paris, and read by him before the French Academy of Sciences on March 27, 1882. The statistics criticised are plainly attributed to him in the article from which our contemporary quotes, and he alone should be held responsible for them. Whether or not a statistician of reputation, and living on the spot, is to be trusted in preference to a New York editor, in regard to European financial statistics, we leave to all candid readers to judge. So far as the main point at issue is concerned, it is useless for us to argue for our readers the relative value of checks, etc., and coin for commercial purposes. To those who understand banking, checks (in large transactions) imply progress; coin, retrogression. There are people, however, who would not even be satisfied though (to paraphrase Milton's words)

"Time should run back and fetch the age of gold."

They want something more cumbrous still—a style of coin which the irreverent are often tempted to compare to a stove-lid. This desire is often (perhaps to some extent justly) attributed to the wish to help the silver industry. Those who object to this policy are apt to think that we might with equal propriety return to a copper currency in order to aid the copper producers, or a leather currency in order to stimulate the struggling leather industry. After all, "There's nothing like leather."

Comptroller Knox, in a letter to a bank president, gives his reasons for believing that there will not, during the coming year, be any dangerous or troublesome diminution of currency by retirement of bank circulation. He shows that of \$54,000,000 of 3 1-2 per cent. bonds outstanding on March 1, 1883, the national banks hold only about \$14,000,000, while they hold \$198,000,000 of threes out of \$297,000,000. Nearly three-quarters of the three per cent. bonds held by the banks are among the first bonds issued. The securities held by national banks will, therefore, not be affected to a great extent during the coming year by the payment of bonds. The Comptroller also finds a basis for confidence in the fact that the greater part of the circulation is held by banks in geographical locations where the profit upon it is sufficient inducement for them to continue to hold the high-priced bonds, and to replace such small amounts as may be called with others. The subject is more fully treated in the article, "Profits on Circulation," contained in this number.

PROFITS ON CIRCULATION.

Since the passage of the law repealing the tax upon the capital stock of banks, national and others, not invested in United States bonds, there has been some discussion as to the effect which this repeal will have upon profits derived by national banks from their circulation based upon United States bonds at their present market value, and there has been some apprehension expressed lest this profit would become so small as to lead to a severe contraction of the national bank circulation.

In the report of the Comptroller of the Currency for 1882, the profit on circulation based on four and four and one-half per cent. bonds, the former at a premium of 19 per cent. and the latter at a premium of 13 1-2 per cent., was estimated at about 3-5 of one per cent., assuming that the bonds would be held until maturity, and six per cent. as the rate of interest on loans.

The process by which these figures were obtained is as follows :

\$100,000 four and one-halves, annual interest.....		\$4,500
Circulation received.....	\$90,000	
Deduct premium, 13½ per cent.....	\$13,500	
Deduct reserve.....	4,500	18,000
Leaving loanable circulation.....	\$72,000 at 6 prot.	4,320
Total receipts.....		\$8,820
Deduct one per cent. tax on circulation.....	\$900	
Deduct expenses of redemption.....	81	•
Deduct ¼ of premium.....	1,088	2,069
Net receipts.....		\$6,151
CONTRA.		
\$100,000 loaned direct at 6 per cent.....	\$6,000	
Deduct ¼ of one per cent. tax on capital.....	500	5,500
Leaving profits on taking circulation.....		\$651

This sum indicates a profit of about 3-5 of one per cent., and a similar process will show a similar profit (\$649) on fours at 19 per cent. premium, charging off 1-25 of the premium each year.

Since the date of the above computation there have been changes in some of its elements. The premium on four and one-halves has gone down, the expenses of redemptions have for the year 1882 been found to be about \$30 for each \$90,000 of circulation, instead of \$81 as then estimated, and last and most important, the law requiring the tax of 1-2 of one per cent. annually upon the capital of all banks, not invested in United States bonds, has been repealed, which will add \$500 an-

nually to the profits of all banks, national and others, upon each \$100,000 of capital not previously invested in United States bonds.

In the following computation, which shows the profit on circulation based on four and one-half per cents at a premium of 12 1-2 per cent., when the rate of interest on loans is 6 per cent., assuming that the bonds will be held until their maturity, the indicated changes have been made.

\$100,000 four and one-half per cent. bonds, annual interest...			\$4,500
Circulation received.....		\$90,000	
Deduct premium, 12½ per cent.....	\$12,500		
Deduct reserve.....	4,500	17,000	
Circulation loanable at 6 per cent.....		\$73,000	4,380
Total receipts.....			\$8,880
Deduct one per cent. tax on circulation.....	\$900		
Deduct expenses of redemption.....	80		
Deduct ½ premium.....	1,563		2,498
Net receipts.....			\$6,387
CONTRA.			
\$100,000 loaned direct at 6 per cent.....			6,000
Leaving profits on taking circulation.....			\$387

or about 2-5 of one per cent.

By the same process and at the same rate of interest the profit on four per cent. bonds at 19 per cent. premium is (\$266) about 1-4 of one per cent., and the loss upon three's at 3 1-2 per cent. premium, assuming that the three's held by the banks will not be redeemed for three years is \$309, or a little less than one-third of one per cent. In this estimate the whole premium is sunk in annual installments in number corresponding with the number of years the bonds have to run; in the case of 4 1-2's eight years, in that of 4's twenty-four years, and in that of 3's three years (the latter estimated).

As a matter of fact, however, it is not probable that the premium will fall off in exact ratio as the bonds approach their redemption. In the case of the three's there is a large element of uncertainty. There are causes which affect the premium other than the length of time they may have to run. Alexander Hamilton, in his report on the public credit in 1790, says "it is a well known fact, that in countries in which the debt is properly funded, and the object of established confidence it answers most of the purposes of money," and suggests that it is in some cases more valuable. When held by those engaged in trade and commerce it serves as money when actually engaged in commercial operations, and brings them interest in the intervals between the closing of one operation and the beginning of another. On this account there is a large and increasing demand for these bonds on the part of the public outside of the banks, which will probably cause them to command a premium not much below what they now command, until they are much nearer their redemption than at present. The high premium now commanded by three's indicates this."

For any single year, therefore, no correct estimate can be made of the amount of premium which will be lost during that year. For the next year or two it is not probable that there will be any great reduction in the premium on any class of bonds, unless it be in that upon the three's.

Assuming that at the end of one year the premium will be the same as now, and omitting, therefore, the deduction of the average annual amount sunk in premiums where bonds are held until redemption, the profit on circulation based upon four and one-half per cent. bonds at 12 1-2 per cent. premium when the rate for loans is six per cent. will, for the next year, be one and 9-10 per cent. Where the rate of interest is seven per cent. the profit will be one and 68-100 per cent.; at eight per cent. interest it will be one and 41-100 per cent.; at nine, one and 14-100 per cent.; at ten, 87-100 of one per cent.

Upon similar assumptions the profit on circulation based on four per cents at 19 per cent. premium will, for the next year, interest at six per cent., be one and 6-100 per cent.; at seven per cent., 726-1000 of one per cent.; at eight per cent., 49-100 of one per cent.; and at nine, it will be 155-1000 of one per cent.

On threes at 3 1-2 per cent. premium, at six per cent. interest, the profit will be 98-100 of one per cent.; at seven, 81-100; at eight, 63-100; at nine, 45-100; and at ten, 27-100 of one per cent.

For the banks which now hold them the profits which can be strictly calculated if the premium continues the same as now, are greater upon four and one-half than upon fours or threes, but it is very probable that the premium on fours will continue at its present rate longer than that upon four and one-half or upon threes. The prospect of loss of premium is greatest on threes, next greatest on four and one-half, and least on fours. Whatever may be the prospect for a future gradual reduction of bank circulation there is no sufficient ground for apprehending any sudden reduction within the next one or two years. Any sudden surrender of a large amount of circulation, if it were possible under existing law, would imply an equally sudden sale of a large amount of bonds, which would depress the rate of premium below what was normal at that time, and would tempt other banks to increase their circulation, if it did not prevent the sale of the bonds by the holders.

In the foregoing calculations, the amount held as reserve on circulation in the five per cent. redemption fund, has been treated as a deduction from loanable circulation. This is absolutely fair only in case of a bank having no deposits, inasmuch as the amount of the five per cent. fund is available as a portion of the reserve required to be kept on deposits. On this account, the banks are enabled to loan a correspondingly larger amount of their deposits. The profits on circulation may, therefore, fairly be estimated to be in excess of those here-

tofore stated, by 6, 7, 8 per cent. as the case may be, on the amount of the five per cent. redemption fund.

It is nevertheless true that though there is no good reason for apprehending any great reduction in national bank circulation immediately, there is ground for believing that if the operations of the tariff bill do not effect a reduction in the revenues of the Government, that the redemption of three and one-halves and threes will be as rapid as heretofore, and that within the next three years at most the banks holding these bonds will, if they retain circulation, be obliged to invest in high-priced four and one-halves or fours, probably higher than now. If the present laws as to the proportion of circulation issued and as to the annual U. S. tax upon it continue, these banks will find it to their advantage to do without circulation, and, as a consequence, the national bank notes outstanding will eventually be largely reduced. Congress have it in their power to prevent any apprehended danger by authorizing the issue of circulation in proportion to the market value of the bonds, and by repealing the one per cent. annual tax on circulation, or by at least reducing that tax to one-half of one per cent.

In concluding an article on "Virginian Efforts at Repudiation," the London "Economist" says:

"But records of this character--and Tennessee, North and South Carolinas, Louisiana and others afford equally discreditable examples--have a wider significance than is to be measured by the depreciation in the market of some \$15,000,000 of Virginia Funded Bonds. It tells our bondholders that dishonesty may, if it so chooses, walk abroad openly in many an American State, and bondholders here cannot tell in how many, neither are they in a position to detect those impurities of administration which usually precede open repudiation, as they can detect them in America. Until dishonesty--whether in State, or railroad administration--is found to be more amenable to national laws, the taint attaching to such States as Virginia--which is at the present day as openly eager to repudiate as ever--will affect credit over a far wider area. The assets of an apparently bankrupt State should be administered by an authority which is above suspicion; when, indeed, we believe it would be found that Virginia and other States have defaulted not from any necessity at all, but from simple preference for dishonesty."

It may be very true that dishonesty, or at least the lack of any high standard of integrity is accountable for the examples of repudiation mentioned, but still our respected contemporary seems to hardly take the right view of the matter. The adverse decisions against the bondholders prove that the States are independent sovereignties so far as the contracting and paying debts is concerned. National debts are never collectible at law or by processes in court. Money should be

lent to States on this understanding—that the lender takes the risk of repudiation. There can then be no complaint, if the national courts do not compel payment. Men have no right to lend to dishonest borrowers, and then complain that the law does not save them from the consequences of their imprudence.

THE NARROWING FIELD FOR INVESTMENT.

The rapid extinguishment of the public debt for some years past, and the consequent redemption of Government bonds, as well as the accumulation of the profits of business and savings of industry, have for some years past been gradually but steadily narrowing the opportunities for the secure investment of capital. It has often been noticed that since the civil war there has been a rapid multiplication of large fortunes, a certain portion of which the owners naturally seek to place as far as possible beyond the reach of ordinary business disasters, the amount of interest earned being a matter of inferior importance. At the same time there has been an immense increase in the amount of assets in the hands of life insurance companies, trust companies and similar concerns, which have to be invested securely where they will draw interest. In view of these facts the rapid redemption of the Government bonds, (between July 1, 1880, and March 1, 1883, the reduction being \$369,097,350) has had a reflex influence of great importance in the financial world.

But it should not be understood that this is by any means the sole cause of the difficulty in investing trust funds, savings bank assets, etc., for the difficulty would probably have arisen even had the amount of the public debt remained unchanged since 1865, although not so soon. For the accumulation of capital in the hands of owners who desired safe investments would have gone steadily forward, and there is no reason to suppose that any other outlet would have appeared to absorb it. This experience is being gone through the world over, and at the great financial centres the demand for first-class Government securities has increased, while the supply has decreased. As in this country, so it has been in other countries that were formerly borrowers, the people have been buying up the securities of their respective Governments, leaving a comparative scarcity in great centres like London and Paris.

It seems hardly worth the trouble, in view of the public sentiment in the matter, to argue the policy of paying off the national debt. The traditions of the Government, the sentiment of the people and the existing machinery for raising taxes and protecting manufactures all tend to the same result—the extinction of the debt, although at a more moderate rate than for the last few years. But, as a financial study, we ask a few minutes' attention to the point.

When a man is beginning business he very frequently borrows part of his capital—perhaps raises the money on a mortgage on his house, or obtains a loan from a friend. He generally says to himself something like this: “Now, if I have any success, in six months I will begin to pay off the debt. In a year so much will be paid, and in two years (or three, or any number as the case may be) it will be wiped out and I shall pay no more interest.” But if his business pays a good profit and if he is a man of enterprise, it is very likely that he will be disinclined to pay off the debt when it becomes due, and will gladly continue to pay interest. What is the reason of this? It is that he can use the extra capital to advantage, and gain a profit that will enable him to well afford to pay interest.

The point of the present argument is, does the business man used as an illustration correctly represent the industries of the country. The money that is being raised by the Government to pay the debt comes from the industries of the country, and is paid to the bondholders. The debt may, therefore, be considered as owed by the business concerns of the country directly to the bondholders, as, in effect, the case is just the same as if they did. Now, if the bonded debt were continued, interest on it would have to be paid at not over 3 per cent., and the question is, could not the industries of the country better afford to pay this 3 per cent. for a long time to come than to pay the principal? There is little doubt that most business men would be glad to pay 3 per cent. interest on money steadily invested with them, or that with ordinary success they could make it pay to do so.

But this is a matter of the merest speculation, as there is no present probability of a decided change in the policy of the nation in regard to the debt. We therefore pass to some of the more practical considerations that spring out of the subject.

A natural and inevitable result of the scarcity of good means of investment is a rise in the prices of good securities, among which may be counted good State and railroad bonds. This obvious fact has received probably sufficient notice hitherto, but another effect has been comparatively overlooked. That is, that the prices of real estate and all stable forms of property that will pay a steady profit on the investment, are forced upward. As four per cent. bonds go up, property that will net four per cent., without depreciating in value by holding, is likewise appreciated. At the same time an intense impulse has been given to building operations in cities, and the construction of public improvements of all kinds. These improvements have to some degree relieved the demand for safe investments by offering a large amount of mortgages to insurance companies, savings banks, etc. This is a form of permanent investment which, when judiciously made, is probably as safe as any other except Government bonds.

There is another broad field for investment to which savings bank officers and others look with longing eyes, but from which they have

been hitherto largely debarred. This is railroad bonds. The attempts to bring this class of securities within the category of allowable investments for savings banks have, in States where these institutions are made the subject of special legislation and State supervision, so far generally, if not always, proved unsuccessful. It is very likely that the reason for this is the difficulty of winnowing the wheat from the chaff, for there are certainly a large amount of railroad bonds which form a first-class investment. To be sure the management of very many railroads in the past has not been such as to inspire confidence, and perhaps no greater misfortune could occur to the savings banks than the passage of laws to allow indiscriminate investments in railroad bonds. But it must be that a change will come about in the feeling regarding this class of security, as the country in time settles down more and more into regular business methods. Honest and business-like management of railroads is so strongly demanded by the circumstances of the times, the suspicion of indirection or unsoundness making such an immense difference in the price of a railroad's securities, that the axiom "Honesty is the best policy" will certainly prevail in the end.

Leaving out of account the newer railroads and those which are involved in litigation, a very respectable portion of the railroad bonds in the country are now held at high prices, so that the holders receive only about 5 per cent. on their investment. True, the best railroad bonds here do not rank so high as the best British railway debentures, which yield very little over 3 1-2 per cent. per annum to investors at present prices, but the difference is, no doubt, largely due to the difference in the earning power of capital (or prevailing rate of interest) in the two countries. The 3 per cent. Government bonds of England and the United States are so nearly the same price that it may possibly be questioned if the prevailing rates of interest are much different. But an actual comparison proves the fact, for the average rate of discount on first-class commercial paper in New York during the calendar year 1882 was 5.4 per cent., while the rate of the Bank of England was only 4.01 per cent., and this latter was generally above the market rate. It is probable that United States bonds are about on a par, so far as credit is concerned, with British consols. The reason why the former rate is higher as compared with other securities in the country, than consols do as compared with other British securities probably is, the much larger supply of consols. The demand for Government bonds here for national bank purposes, etc., keeps them at what may be considered a "fancy" price. These facts are so well known that perhaps an apology should be offered for recounting them.

But to return to the matter of railroad bonds: it has been mentioned that some are selling at prices which yield only 5 per cent. to investors. But there is a very large quantity which sells at lower prices, and a contemporary has taken the pains to enumerate some of

them. The list includes only bonds listed at the New York Stock Exchange, of which the amount outstanding of the issue is at least \$1,000,000, that have ten years or more to run, and on which the interest is regularly paid as it falls due.

On collating the figures we find that there are seven per cent. bonds answering the above description amounting to 179 million dollars which are selling at below 115, and most of them considerably below. When bought at 115 a seven per cent. bond having fifteen years to run yields to the investor nearly 5 1-4 per cent. per annum. There are 386 millions of six per cents selling at 108 or less, a number of them at considerably less than par. At 108 a six per cent. bond having fifteen years to run yields a little over 5 per cent. Of five per cents there are 116 millions, most of them selling at much below par, so that they yield at least 5 per cent. to investors.

These give a total of 681 million dollars of bonds which can be purchased at prices to yield 5 per cent., and most of them considerably over 5 per cent. That they are not held higher is a proof that an element of distrust enters into the consideration when they are bought and sold. It is a positive misfortune to the railroads, as well as the investing public, that this is the case, but we have ventured the prediction above that the country will in time outgrow this condition of things.

During the recent period of stringency in the loan market there has been a good deal of complaint because business men had some difficulty in getting their paper discounted by the banks, while there was always money to be obtained upon stock or bond collateral by paying high rates of interest. It is doubtful, however, if accommodation was refused in any case in which it could fairly be demanded. It seems that it has become the habit of many business men to keep very small balances with their banks, depending upon the note brokers to discount their paper when necessary. In such cases when a pinch comes and the brokers cannot help them, they are relegated to the banks, who, of course take care of their regular customers first. There is no just cause for complaint here. The reason why the merchants alluded to keep such small balances with their banks is that they use the money for stock, or other investment, or speculation. By this means they are able to use their whole capital to the best advantage; but if they deprive the banks of the means to accommodate them, they must not complain when they have to suffer the consequences. The only real and radical cure for the difficulty of discounting good paper in New York has not been mentioned by any of the writers on the subject. It is to leave the rate of discount free and open, and not restrict the banks with antiquated and absurd usury laws.

METHOD OF POLITICAL ECONOMY.

The old objections which used to be made to Political Economy, especially in England, by writers like the late Thomas Carlyle and others of less note, have been for a long time antiquated, if not forgotten. Time was when an allusion to the "Dismal Science" awakened a sympathetic chill in the breast of most readers, whose ideas of it had been gained from the sharp criticisms of clever writers such as Lockhart (the son-in-law of Sir Walter Scott, and who so mercilessly attacked some of Miss Martineau's economical works), who wrote more from the heart than the head. But in place of the old objectors there has since sprung up a race who do not absolutely reject the writings of the masters of Political Economy, but who, perhaps, do the science as much injury as did their predecessors.

The class in question find the various definitions of Political Economy of the writers of the so-called English school, of which Ricardo and John Stuart Mill, after Adam Smith, were the chief exponents, to be too hard and unsympathetic. It is charged that these writers assume that man is a purely selfish enlightened being, and on this basis build up a system which is either useless or vicious in practice, because it does not apply to man as he actually exists. They generally place the matter of the price of labor on the same level as the price of commodities, and say that both are settled by the law of supply and demand. So heartless a system, of course, taking no account of feelings of benevolence, or of sumptuary laws for the benefit of the working class.

The objections to this system begin at the very threshold, the very definition of Political Economy as laid down by Mill (for instance) having given rise to very sharp criticism, accompanied with scorn, contumely and sarcasm by numerous writers.

To give an instance of this kind of criticism will illustrate it far better than would many pages of our own. For this purpose we quote from a little work which happens to be just at hand, but numerous citations might be made from other books that would be at least equally as applicable. It is an essay on The Relation of Political Economy to the Labor Question, by Mr. Carroll D. Wright, Chief of the Bureau of Statistics of Labor of the State of Massachusetts. He says :

"The old school has been content to teach the laws that regulate the production, distribution, and exchange of wealth; and these laws

have formed the whole of the science of political economy, so far as it can be called a science. It has studiously avoided all other matters, and, in the endeavors of its devotees to constitute it a science, has taken no cognizance of the conditions which, favorable and unfavorable, must attend the participators in the production, distribution, and exchange of commodities. It has been content to limit itself to things and their relations to individual and national wealth, more particularly the latter, rather than to include in its sphere of creed the vital relations of men. Even Mr. Mill, perhaps the most brilliant writer of the age upon the topic we are considering, informs us that 'Political Economy is concerned with man solely as a being who desires to possess wealth, and who is capable of judging of the comparative efficacy of means to that end. It makes entire abstraction of every other human passion or motive, except those which may be regarded as perpetually antagonizing principles to the desire of wealth; namely, aversion to labor, and desire of the present enjoyment of costly indulgences. * * * Political Economy considers mankind as occupied solely in acquiring and consuming wealth.'

"Professor John K. Ingram calls this a vicious abstraction, which meets us on the very threshold of political economy: and Professor F. A. Walker, commenting upon this saying of Mill's, remarks: 'If Mr. Mill had merely meant that the political economist should begin by inquiring what such a monstrous race would do under the impulse of the antagonizing forces of greed and indolence, no one could have taken exception. But Mr. Mill did not mean this. He meant that the political economist should end there; should literally make entire abstraction, once for all, of every other human passion or motive; and at no point in his reasoning should take account of any one of a score of recognizable and appreciable motives and feelings which enter to influence the actions of men in respect to wealth, love of country, love of home, love of friends, mutual sympathy among members of the same class; respect for labor, and interest in the laboring class, on the part of the community at large; good will between landlord and tenant, between employer and employed; the power of custom and tradition; the force of inertia, ignorance, and superstition.'"

This quotation contains, in brief, the opinions of three American writers on the subject in question, and is a fair example of the way in which it is treated by a large class of contemporary writers. It ought to be said here that there is also a wide divergence between the old English school and the principal German economists, the latter maintaining that the science should begin with a broader definition, and, in fact, some German writers confound Political Economy and Sociology. In this respect it will be noticed that the American writers above mentioned partly agree with them.

Upon examining impartially the difference between the two parties, it quickly becomes evident that the discussion should begin farther

back toward first principles. Those who criticise Mill's definition should begin by asking why he formulated it, instead of beginning by deriding or condemning it. Their treatment even in some cases gives rise to the suspicion that they totally misapprehend the purport of Mill's definition quoted above. In the passage quoted from Professor Walker he characterizes the abstraction used by Mill as a "monstrous race." Another recent writer says: "It will not be denied that the method employed by Mill, and by most of his followers, consists in constructing a man impelled by enlightened, selfish motives, and in deducing therefrom the principles which it is believed such a man will follow. * * * The consequence of deducing rules of conduct from such an imaginary economic man is, they do not correspond with the rules observed by real men, and the latter, seeing the palpable variations, laugh at those who busy themselves in this manner and regard them as simple-minded creatures, who mean well, but who for the most part are engaged in a very silly business, and whose speculations are too empty and worthless to repay serious study."

Without stopping to question whether any thinkers worth noticing laugh at the speculations of Ricardo, Mill, and their followers, it may be worth while to attempt here to explain in what manner the serious difference of opinion originated.

The writers quoted say in effect that Mill created in his imagination a certain kind of man, or a "monstrous race." Mill said, "Political Economy is concerned with man solely as a being who desires to possess wealth. * * * It makes entire abstraction of every other human passion or motive, except those which may be regarded as perpetually antagonizing principles to the desire of wealth," etc. Mill does not here say that he thought man was a being whose sole desire was to possess wealth, but many writers of the day seem to assume that he did put forth such a bald absurdity. He says of Political Economy that "it makes entire abstraction of every other human passion or motive," acknowledging at once that man is a creature of many passions and motives. But, why does Mill in his study of the science prefer to begin by considering man in this peculiar way? Purely for the reason that he considered that by this means he could arrive at better results than in any other manner. That he could dive deeper into his subject and bring up treasures of knowledge that ordinary fishers would pass over unsuspected.

The principle upon which this was done is one of the most familiar ones in human experience in these times, and it is amazing that it seems to be so frequently overlooked by men of intelligence. It goes by the name of abstraction, and is the result of analysis. In all but the very simplest forms of reasoning it comes into play, and it is indispensable in nearly all, if not all science.

To take a simple instance: "Two and two are four." If this proposition were put to a barbarian, he would ask, "Two what, and two

what?" In order to explain it to the child in school he is told that two apples and two apples make four apples; then that two pears and two pears make four pears, etc. It is only gradually that he comes to grasp the idea that two of anything added to two others will always make four, but so soon as he is able to abstract the idea of quantity from the object, and consider numbers purely in themselves, then he has begun to learn abstraction and to study scientifically.

As Sir William Hamilton, the philosopher, and great opponent of Mill's metaphysical theories says, "abstraction is no positive act; it is simply the negative of attention." The student or scientist constantly finds it necessary to eliminate from his subject all extraneous matter so as to arrive at any conclusion, and the skill and correctness with which he analyzes for this purpose will be the measure of his success. Even in sciences which consist almost entirely in the enumeration and classification of objects into genera and species, abstraction is necessary. By this process the ideas of the qualities of certain objects which are of the same kind have to be separated from others that are different in each, and those having the same properties are classified together.

It may be tedious to the reader to have to dwell so long on so abstract a point, but it seems to be necessary in order to make the meaning clear to those who may be unfamiliar with such subjects. To take one more illustration: let it be supposed that Mill had written a treatise on human physiology instead of political economy. He might have begun by saying that Human Physiology "is concerned with man solely as" an animal. * * * "It makes entire abstraction of every other human passion or motive, except those" which affect the physical system. Now man is not purely an animal, and scoffers, noticing the absurdity of considering him as such, might "laugh at those who busy themselves in this manner, and regard them as simple-minded creatures * * * engaged in a very silly business."

Of course, it is always open to question whether political economy is equally capable of being treated abstractly, like other sciences, or not. But those who contend that it is not, should content themselves with arguing that point, and not continue to turn out books without end under the title of "Political Economy" when they do not believe there is any such thing. The ideas of some authors on the matter could be put into a single chapter similar to the celebrated chapter on "Snakes in Iceland," and it would read thus: "POLITICAL ECONOMY. There is no such thing as Political Economy."

Of course writers like Professor F. A. Walker (quoted above) are not intended to be placed in that category. If he believes that the definition and treatment of Mill is too narrow, and that Professor Cairnes came nearer to the truth, that is a matter on which many other earnest thinkers of recent years agree with him.

For the purpose of summing up the matter as briefly as possible (for, of course, it cannot be treated very fully here) we quote the defini-

tion given by Dr. William Elder, of Washington, in his recently published "Conversations on the Principal Subjects of Political Economy:" "Political Economy is primarily occupied with the laws, natural and social, which govern in the production and distribution of wealth in material things, with a constant outlook to the general welfare of society, so far as that welfare depends upon the necessities, comforts, and luxuries of physical life." It will be noticed that the first and principal part of this is very similar to Mill's definition, although the writer of it is a strong opponent of the Mill school, and shrinks with horror from considering man for a moment as a purely money-making and spending animal. For this reason he tacks on the addendum "with a constant outlook to the general welfare," etc. From a scientific standpoint this proviso might, with equal propriety, be added to the definition of "human physiology" given above. Political Economy is a body of knowledge of a certain kind, and, as such, has no more to do with the case of the general welfare, than has the science of mathematics.

Most assuredly the general welfare should be looked after, and all our civil institutions are created with that object. Economists like other good citizens should strive after honest government, and the good of their country; and as citizens of the world, should do their share toward the enlightenment of mankind. Who will attempt to deny that they have done so? But what is to be gained by confounding their particular study with ethics, jurisprudence, practical legislation, religion, and what not?

As regards the question of the particular boundaries of the science, whether they should be widened or narrowed, that is a matter which is best to be judged by the results. If more valuable deductions can be made or laws discovered by one method than by any other, that fact proves that this is the best method. To judge beforehand what is the best method, as original investigators have to do, it requires the highest talent and the closest application of brain power. Any infusion of gush, or sentiment into such questions can only do harm by making correct reasoning impossible.

INVESTIGATOR.

POPULAR BANKS, says a writer in "*L'Economiste Francais*" are now a fixed institution in Germany, Belgium and Russia. That much progress in this respect could have been made in the latter country is rather surprising, when its unsettled condition is taken into consideration.

The first idea of popular banks originated with Sculze-Delitzsch, and the emancipation of the serfs prepared a fruitful ground for the operation of these banks in Russia. Several essays to found such banks were made in 1865 and 1866, but their real growth begins with the year 1870, and under the impulsion of the governing, or rather the

leading classes of the country—a limited number of influential persons, who were authorized and supported by the Government. The Agricultural Society of Moscow took a leading part in the organization, and one kind of the banks is under the Agricultural Society, the other under the ministry. The latter have a limited responsibility, and depend on the solidarity of the members towards each other. The members must furnish a share of 50 roubles, but this small sum may be paid in annual fractions of 3 roubles. Thus a degree of self-dependence and economy is fostered before having recourse to the aid of the bank, which is a kind of savings bank. The personal loan made to a member must not exceed one and a half times the amount of his share, but from three to six times the amount may be obtained by furnishing guarantee.

It may be said that the Russian banks are in reality popular since they are in the hands of a necessitous class. The share of each is limited, and cannot be ceded, and they are so organized that speculation can have no dealings with them. A part of the profits is applied to the reserve, and the remainder divided between the shareholders. Each bank has a managing board composed of three members, and an auditory board of six.

In 1872 there were only 162 banks, with 14,000 members, and an aggregate capital of 187,000 roubles; in 1878 there were 1,039 banks, with 153,000 members, and a capital of 3,783,000 roubles. In 1881 the number of banks had increased to 1,230, with a capital of over five million roubles. The profits in 1880 were 796,000 roubles, and upwards of 20 million roubles had been loaned. The low level—social, intellectual and financial—of the Russian peasants has alone prevented a far greater degree of progress from being attained. As it is, however, such banks are a blessing in regions where savings banks do not exist, or where the lack of trade prevents any regular banking business.

SAVINGS BANKS OF MASSACHUSETTS.

We are in receipt of the Seventh Annual Report of the Commissioners of Savings Banks of the Commonwealth of Massachusetts for 1882, which is dated January 31, 1883. It shows that there are 167 savings banks and institutions, an increase of two during the year. The new banks are the Warren Savings Bank which organized and commenced business at Warren in August last, under favorable conditions, and the Lexington Savings Bank, which was placed in the hands of receivers in December, 1878, and was restored to its corporate powers on August 15, 1882. The deposits received since the resumption have been nearly double the withdrawals, and the bank seems to be again in a fair way to success.

The number of banks now in the hands of receivers is seven, being five less than at the same date last year. The five receiverships closed

during the year were those of the West Boston Savings Bank, which paid in all 85 per cent. to its depositors; Rockport, 84 7-10 per cent.; Hyannis, 77 6-10 per cent.; Mercantile of Boston, 83 55-100, and the Lexington, mentioned above, which resumed payment in full.

The amount of deposits in the savings banks doing business October 31, 1882, was \$241,311,362.49, being \$10,866,883.39 more than at the same date of the previous year.

The surplus was \$5,032,414.74, showing an increase of \$141,814.07 for the year.

The guaranty fund was \$4,027,205.28, which was an increase of \$686,142.93 for the year.

The number of open accounts was 772,518, an increase of 33,567 for the year; which would make the average of the accounts \$312.37, an increase from the average of the previous year of \$0.52.

The amount of deposits during the year was \$49,234,652.63, \$1,011,155.77 more than the previous year, and the number of deposits (677,422) increased 61,908. The average of deposits was \$72.68. The average the previous year was \$78.35, being a decrease of \$5.67 for the year.

The total of withdrawals was \$44,318,521.56, showing an increase of \$4,105,735.12 from that of the previous year. The number of withdrawals was 458,494,—38,535 more than the previous year.

The average of the withdrawals was \$96.66, an increase of \$0.91 from the previous year, when it was \$95.75.

Investments in United States bonds have decreased \$3,712,882.08. State and municipal bonds have increased \$433,288.60.

Loans on public funds have decreased \$842,375.38. Investments in bank stock have increased \$363,256.01.

Loans on bank stock have increased \$113,747.76. Investments in railroad bonds have increased \$1,214,352.06.

Loans on mortgages of real estate have increased \$3,611,069.57, and \$850,845.29 have been deducted from real estate acquired by foreclosure, which is \$7,201,605.50.

Loans on personal security have increased \$3,578,519.05. The deposits in banks bearing interest are \$12,907,905.40, an increase from the previous year of \$1,137,490.13.

The percentage of assets in the various classes of investments is about fourteen and seven-tenths per cent. in public funds, and loans on public funds; ten and fifty-four one-hundredths per cent. in bank stock, and loans on same; three and fifty-nine one-hundredths per cent. in railroad bonds; thirty-four and thirty-six one-hundredths per cent. in loans on mortgages of real estate; three and seven-eighths per cent. invested in real estate, including foreclosures; twenty-two and seven tenths per cent. in loans on personal security; three and three-fourths per cent. in loans to counties, cities and towns; five and fifteen one-hundredths per cent. in deposits in banks on interest; one and

thirty-three one-hundredths per cent. in cash on hand and sundry items.

The earnings of the banks were \$12,645,648.65—\$360,303.30 more than the previous year. The amount of dividends was \$8,530,385.21, an increase of \$236,610.84.

Seven banks paid the highest rate of dividend of interest allowed—five per cent.; seventeen banks paid dividends between four and five per cent.; one hundred and twenty-seven banks paid four per cent. dividends; two banks paid three and three-fourths per cent. dividends; six banks paid three and one-half per cent. dividends; four banks paid three per cent. dividends; three banks paid no dividend of interest, but of these, one was organized the present year; two were temporarily enjoined by decrees of the Supreme Judicial Court, one of which has resumed business during the year, and the other is being wound up by its officers.

The average rate of ordinary dividends was three and ninety-seven one-hundredths per cent., or three one-hundredths per cent. less than the previous year.

The condition of the savings banks is generally satisfactory. They are gradually but continually increasing the guaranty fund, and slowly disposing of the real estate acquired by foreclosure. A few of them have suffered considerable loss by the failure of the Pacific National Bank, and by the assessment on the stock of that and another bank considerably involved with it.

The tendency of the act of last year, restricting the investments of savings banks in the stock of any one national banking association to three per cent. of the deposits, will be conservative in its effect; but authority still exists to invest in bank stock to an amount that could absorb the entire deposits of a majority of the banks, if the management so desired.

We respectfully renew the recommendation made in our last annual report, that investments in the shares of national banks be limited to one-quarter of the deposits of any one savings bank.

LOAN AND TRUST COMPANIES.

The number of loan and trust companies now doing business in the Commonwealth is six.

There is nothing of special importance to be reported relative to any of them,

The last legislature passed a resolve requiring the Commissioners of Savings Banks and the Commissioner of Corporations to consider the subject of a general law for the regulation of these institutions, and to report a bill therefor to this general court. This duty has been attended to, and a bill will soon be reported.

CO-OPERATIVE SAVING-FUND AND LOAN ASSOCIATIONS.

There are now twenty-five co-operative saving-fund and loan asso-

ciations doing business in the Commonwealth, seven more than last year.

These associations have continued to prosper, and have increased their assets \$382,992.51 during the year, which now amount to \$1,036,135.31.

BANK CLERKS' MUTUAL BENEFIT ASSOCIATION OF THE CITY OF NEW YORK.

The fourteenth annual report of the Board of Management of this excellent institution (being for the year ended December 1st, 1882) is somewhat late in making its appearance, but its affairs are of such interest to a large proportion of the banking community of New York and its vicinity that they deserve more than passing notice here.

The report shows that the annual business meeting was held at the New York Clearing-House on November 28, 1882, when the President submitted a brief statement of the transactions of the year and of the arrangements made for the anniversary meeting. A resolution was adopted in favor of the work of the Union of the Mutual Benefit Societies of the State of New York, and "the necessity of separation of societies which are fraternal and industrial, from those which are conducted for the pecuniary benefit of stockholders, officers, and agents." This resolution seems to have been elicited by a proposal made in the State Legislature which, if successful, might have ruined the mutual benefit societies in the State. The meeting was then adjourned, and resolved into a convention for the nomination of officers, directors and inspectors of election for the ensuing year.

Following is a list of the executive officers for 1883: President, P. G. Dodd (Phenix National Bank); Vice-President, J. C. Parsons (Chemical National Bank); Recording Secretary, George M. Halsey (Seamen's Savings Bank); Financial Secretary, Franklin C. Elder (Gallatin National Bank); Treasurer, John H. Carr (Marine National Bank).

The fourteenth annual anniversary of the Association was held at the Lexington Avenue Opera House on December 1st, 1882, Mr. F. D. Tappan, President of the Gallatin National Bank, presiding. The annual report was read by the President of the Association, Mr. John P. Ritter. This was followed by a concert and reception, under the direction of the musical branch of the Association. This part of the programme was generally acknowledged to be both entertaining and useful, giving a pleasant opportunity for social intercourse, and encouraging a feeling of fellowship that is calculated to prove a decided advantage to the Association and its members.

The report of Mr. Ritter first calls attention to the Musical Society, auxiliary to the Association, and urges upon the young men to join it, membership in it being free to all active members of the Association. He bears testimony to the faithfulness exhibited by the Board in the

performance of their duties. They held fourteen meetings with an average attendance of nine members throughout the year.

He shows from the report of the Financial Secretary, Mr. George A. Zabriskie, that the total membership on November 20, 1881, was 1,153; the admissions during the ensuing year numbered 32, making a total of 1,185. There were 19 deaths, and the number dropped for various causes 11, making a total of 30, so that the present membership was 1,155. During the fourteen years since the first organization 154 members died, an average of 11 per year. The average age of members admitted was 29 years; of deceased members, 48 years. The Financial Secretary received from the members during the year, for dues \$7,135.50; 15 assessments, \$7,753.50; total, \$14,889, or about \$13 paid by each member for the year.

The Treasurer, Mr. A. Trowbridge, received during the year from various sources, \$28,478.97, out of which death claims of \$19,800 were paid; sundry expenses, \$1,025.65; transferred to disability account, \$2,200.

The family or legal representatives of each deceased member was paid the sum of \$1,100, and members permanently disabled received \$25 per month, which amount is deducted from their certificate for \$1,100. There is a special relief fund to aid members out of employment by paying their dues and assessments, which has proved of great benefit by enabling them to preserve their standing in the Society. It amounts now to \$1,342.

The principal of the Permanent Fund amounted to \$62,419; Permanent Fund Interest, \$27,574; total, \$89,993.

In reply to a circular letter addressed to the banks by Mr. Ritter there were eighteen responses and contributions to the Assessment Fund, amounting to \$1,650. [It appears by the Treasurer's Report that the total subscriptions of this character were \$3,450.] The President's Report concludes with an appeal to the young bank clerks who are not members to join the Association, and it would certainly appear for their interest to do so, as they cannot insure their lives safely in any other manner at so low a cost. The objection to mutual benefit insurance societies is that they generally lack the element of permanency, which is a very important consideration. In this case, however, the large and growing permanent fund, as well as the character of the membership, is a sufficient guarantee of stability. The voluntary contributions from outsiders are an additional inducement that is not to be overlooked.

The business failures during the first quarter of the present year were much greater in number and amount of liabilities than in the same period for several years past. The fall in prices last year is largely accountable for this fact. The former half of the quarter was much worse than the latter, and it is hoped that the worst is well over.

BANKING LAW—LATEST CASES.

REPLIES TO LAW AND BANKING QUESTIONS.

[The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of subscribers, further information regarding any case referred to herein, and will answer such questions in banking law as may be of sufficient general interest to warrant publication. A charge is made for special replies when not to be published.]

1. ALTERED CHECK—ALTERATION OF DATE, ONLY.
2. SAME—RATIFICATION.

CRAWFORD V. WEST SIDE BANK.

(*New York Superior Court, General Term. February 6, 1885.*) A

The changing of the date of a check to an earlier date by the drawer is a material alteration, and will invalidate it; and if the bank pays it no charge therefor can be made against the drawer.

Taking a forged check and receipting therefor, and causing a warrant to be issued for the forgery, will not bind the drawer as a ratification of the forgery.

The plaintiff was a depositor with the defendant, and on April 20, 1882, being about to leave town for a day or two, he gave to his book-keeper, to his order, his check for \$700, dated April 22, 1882, with instructions to draw it, if he did not return by noon of that day, and give the amount to his foreman to pay off the workmen in his, plaintiff's, employ. On the next day, April 21, the book-keeper altered the date of the check to that day, and after drawing the money absconded. On Monday, following, plaintiff got the check from the teller and gave him another paper on which was written the form of the altered check, and then got a warrant for the arrest of the book-keeper for cheating and defrauding him by means of this alteration in the check. The bank had charged the check to plaintiff's account, and on refusing to strike it off, suit was brought to recover that amount. The bank claimed that it had the right to make the charge, and that if it had not, the taking of the check and the complaint on it was a ratification of the alteration. The trial court found that the paper given for the check was a receipt, but gave the defendant a judgment, and the plaintiff appealed and succeeded. Judge Sedgwick, in the opinion, said: My opinion is that the judgment should be reversed. Beyond controversy the alteration of the date was a material alteration. The effect was that from the time of the alteration the instrument ceased to be the act of the plaintiff and was void against him. When the defendant, after paying

the amount written in it to Morgan, charged the sum to the plaintiff, as the payment was not made upon the order of the plaintiff, the charge was not justified by the contract between the parties.

As a part of the argument of the learned counsel for respondents, it was urged that the defendant was bound to know only the signature upon the check. The leading case of *Hall v. Fuller*, 5 Barn & Cress., 750, is that the banker is bound to ascertain that the check is genuine in all respects. Bankers cannot charge checks paid by them that have been forged as to their amounts, or to holders that claim through a forged indorsement of the payee. The principle of this is that the money was not paid upon the depositor's order. The instance of a date being changed is not an exception to the rule; when the date is forged, the instrument ceases to be the order of the depositor. In this respect checks are like notes and bills. The well known text of Chitty on Bills, 181, is: "If a bill of exchange or promissory note be altered without the consent of the parties in any material part as in the date, sum, or time when payable, or consideration or place of payment, such alteration at common law and independently of the Stamp acts, renders the bill or note wholly invalid as against any party not consenting to such alteration, and this although it be in the hands of an innocent holder," citing the leading case of *Martin v. Miller*, 4 T. R., 320; 1 Smith's Lead. Cas.

It was also argued that the "bank is entitled to charge it against the account of the maker for the correct amount and at the true time he made it payable." This implies, as I understand, that the bank had a right to keep the check, as it did in fact, until the day of the true date, and then to charge its amount against plaintiff's account. This does not appear to me to be correct in principle or to regard the nature of the transaction.

The check, if unaltered, could not legally be paid out of the funds of the plaintiff on a presentation for such payment before the true date of April 22. *Godin v. Bank of Commonwealth*, 6 Duer, 76. Any one acquiring the check before that day would have, in the implied obligation of the drawing of the check, a promise of the drawer that the bank would pay upon presentation on or after the date of April 22. The bank on which it was drawn, that is the present defendant, would have no further right. If the bank had cashed the check unaltered, but on April 21, and on that day the whole of the account had been assigned or paid out, so that the bank had been driven to an action upon the check, of course it would recover judgment. But the check being forged as to its date, the answer of the plaintiff that the check was void as to him, that is that it was not his check, must have prevailed. The defendant, by keeping the forged check one day, could not transform the promissory instrument that was invalid into an instrument that was valid to justify such a payment upon demand. In the present case, at the time of the actual payment, there was not and

never had been in existence a genuine instrument, which would have justified any payment out of plaintiff's credit with defendant. *Godin v. Bank of Commonwealth*, supra. The defendant would have bought a post-dated check, if it had not been altered. It having been altered, they must abide the consequences appropriate to the fact that they bought a forged chose in action. If they should be allowed to charge its amount against the plaintiff, because they had the power of keeping it until the next day, and then use the forgery instead of treating it as void, they would at least use a power that belonged solely to the plaintiff, as drawer, of creating a genuine instrument to bind him.

It may be argued that if, after altering it, Morgan had presented it on the 22d, the defendant would have had a right to charge its amount to plaintiff. The proposition presents an improbable speculation that Morgan would forge with no object. But I do not assent to an inference that the present case is like the hypothesis. The fact that it was altered and presented before the day of its true date has significance in favor of the plaintiff. The plaintiff, by making the day of presentation the 22d secured, except as against forgery, that perhaps he might be home and prevent the necessity of Morgan using the check, or that he would not use it until a time when there would exist the strongest probability that the proceeds could not be misapplied. The foreman would be looking for the money on that day, and would arrange with Morgan when and where to receive it. The testimony of the foreman and his brother in this case illustrates this. The earlier payment of the check assisted unintentionally Morgan's fraud, and deprived the plaintiff of the benefit of those circumstances that would have tended to prevent Morgan's attempting to defraud on the 22d. Of this the defendant took the risks. *Cowing v. Altman*, 71 N. Y., 442.

I am of opinion, therefore, that the plaintiff should have had judgment in the case as presented, unless it appeared that the plaintiff was guilty of such laches in respect of the forgery that it should suffer rather than the defendant. The plaintiff so wrote the date April 22, that the forgery was accomplished by erasing the second figure. The figure 1, that was placed instead of the erased figure, was not written in a blank space, which a person to whom the check might be presented would have a right to believe would be filled up by the maker when drawing the instrument, or by his authority afterward. The circumstances presented to the plaintiff and to the defendant the same considerations that would apply to the erasure of the amount of a genuine check. The plaintiff gave no facility for the accomplishment of the forgery. The trust he placed in the forger led to the forgery or caused or aided it, in no other sense, than that it was one circumstance of the many, that must exist to render the crime possible. It is usual to have employees and usual to believe that they will not forge. The fact that he made the check to the order of his clerk was an act of prudence rather than of negligence, in respect of the course the check might take in

general. But he was not bound to entertain the likelihood of such a forgery as did take place. No one would think of it as being likely to be perpetrated. The general honesty of men and the improbability of dishonesty of the clerk in such a respect, the restraints of conscience and of the penal laws, would prevent a business man entertaining the idea that such a forgery was probable, if it came into his mind, casually. I am, therefore, of the opinion that the amount of the check should not have been charged against the plaintiff.

On the findings of the Court below, I also think that the plaintiff's action in taking the custody of the check for the purpose of prosecuting Morgan, did not ratify the alteration or the change, or estop him from bringing this action.

SAVINGS BANKS—CREDITORS AND DEPOSITORS.

THE PEOPLE V. MECHANICS' AND TRADERS' SAVINGS INSTITUTION.

(New York Supreme Court, General Term, Third Department. January, 1883.)

Creditors of a savings bank must be paid before its depositors: the latter are entitled to the property of the bank but no more; its debts must be first paid.

The savings bank was incorporated by chap. 368, Laws of 1852. Its business, as expressed in sec. 6, is to receive on deposit such sums of money as may be offered for the purpose of being invested in government securities, etc. The rate of interest is to be so regulated that the depositors shall receive, as nearly as may be, a ratable proportion of all the profits after deducting the necessary expenses. The corporation had no capital. Mr. Sistare was a New York broker, and in 1872, the savings institution employed him as such broker to sell certain stock. The result of the transaction was that on the 5th of April, 1872, the savings institution became liable to him for a large sum. For this Mr. Sistare commenced an action against the savings institution in November, 1872. The action was pending in 1877, when on the 28th of December an order was entered in the matter above entitled, dissolving the corporation and appointing Mr. Best receiver. On the 29th of April, 1878, an order was made substituting Mr. Best as receiver in place of the corporation in the action brought by Mr. Sistare. After that the action was twice tried and twice appealed, and was finally appealed by the receiver to the Court of Appeals. There it was finally decided in favor of Mr. Sistare, about the 14th of April, 1882. Mr. Sistare, therefore, has a judgment of April 28, 1879, for \$6,874.13, and two subsequent judgments for costs. Upon these appeals Mr. Sistare waived the security to which he would have been entitled on the stipulation of the receiver that he would keep on deposit, in the United States Trust Co., the amount necessary to pay the judgment. Mr. Sistare applied to the Court to have his judgments paid in preference to the claims of depositors. But the motion was denied, and he

appealed. The appellate court decided in his favor. Judge Larned, in the opinion, said: A savings institution is incorporated for the purpose of managing and investing the small savings of persons of moderate means who cannot well invest for themselves. The only property which it has is that to which the depositors are pro rata entitled. It has no capital. Although each depositor has a claim against the corporation for the amount standing to his name; yet on the other hand the aggregate of the property of the corporation belongs to no one else than the depositors. When the corporation is dissolved and closed the depositors are entitled to all that the institution honestly owns. The question is whether they are entitled to anything more. The charter of this corporation says (and the law would be so, even if this were not expressed), that the depositor shall receive his pro rata, after deducting the necessary expenses. Now expenses, unless paid the very moment they are incurred, would create a debt, and such a debt would by the very terms of the charter be paid before the depositors receive their money. Again, let us suppose that the savings institution had purchased and received Government bonds from Mr. Sistare, but had not paid for them. Would it be just that the depositors should share in the assets thus received, and yet should require Mr. Sistare to take a pro rata dividend on his debt? Certainly not. The management of the institution is really a management of the depositors' money for their benefit. Unless there be some statute or some positive decision to the contrary, the depositors should share only in the assets after all the debts are paid. We are cited to section 90, art. 3, tit. 4, chap 8, part 3 of Rev. Stats. But that is under the head of voluntary dissolution, and the preceding section, 69, shows that the article refers to stock corporations. Chap. 336 of Laws of 1855 is also cited; but that was repealed by chap. 371, Laws of 1875. Sec. 44 of the last chapter was amended by chap. 422, Laws of 1879. That requires the receiver to make distribution of the assets, not specifying the manner. In matter of Franklin Bank, 1 Paige, 249, to which we are cited, was a case in regard to depositors in a bank of issue and deposit—not a savings bank; and the difference is that in such a bank the depositors are nothing but creditors. They have no share in the profits and are not to bear the losses. The stockholders in such a bank are the persons who benefit and who, therefore, should lose by the losses. It is their property which is to pay the expenses and debts. The contrary is the case in a savings bank. The depositors in such an institution are like the stockholders in a bank of issue and deposit. They share the profits, they bear the losses and they pay the expenses. *Huntington v. Savings Bank*, 96 U. S., 388. We are also cited to the case of *People v. Security Life Ins. Co.*, 78 N. Y., 122, to show that policyholders are not partners, but creditors, in a mutual life insurance company. But it is to be noticed that many companies called mutual are yet stock companies; and such was the case with the Security Company. The head-note to

the case shows that the decision is qualified by limiting the language on this point to stock companies. It is not, however, necessary to say that these depositors are partners. It is enough that the savings institution is only an organization to manage their money for their benefit, and that Mr. Sistare's claim is a debt contracted in such management. It should then be chargeable on the fund. To this effect is *Stockton v. M. & L. Sav. Bank*, 32 N. J. Eq., 163. Mr. Sistare must be paid his claim in full.

MUNICIPAL BONDS—RIGHT TO ISSUE—PURCHASER'S RISKS.

MERRILL V. TOWN OF MONTICELLO.

(United States Circuit Court, District of Indiana. January, 1883.)

Unless municipal bonds show upon their face that they have been issued by authority of the State Legislature purchasers, take them only as certificates of ordinary indebtedness, to which the town can set up any defences at law or in equity it may have.

On May 20, 1878, the town of Monticello made and issued a series of coupon bonds, each for \$100, and amounting in all to \$21,000, payable in gold, to bearer, at New York, in ten years, with interest at the rate of seven per cent. per annum, in gold, at the same place. The principal of each bond was to become due and payable, at the option of the holder, on the non-payment of any coupon thereto attached for ninety days after maturity. The words "Funding Bonds of the Town of Monticello" appeared at the top of each bond, and each recites that "This bond is one of a series of \$21,000 authorized by said town by an ordinance passed by the board of trustees thereof on the 13th day of May, 1878, for the purpose of funding the indebtedness of said town." Payment on the coupons was refused, and the plaintiff, as holder of the entire series, elected to declare the principal due, and this suit was brought. The town set up as its defences: 1. That there was no legislative authority to issue the bonds. 2. That the town did not get any benefit from the bonds. The plaintiff asked for judgment on the ground that these were not sufficient defences, but the court decided that the case should be tried. The question of authority to issue them as commercial paper was ruled in favor of the town. Judge Gresham, in the opinion, said: The bonds in suit recite that they were issued to fund the town's indebtedness, and purchasers assumed at their peril that the Legislature had authorized the issue of the bonds for that purpose. No such power had been granted, and whether these bonds were intended to take the place of the outstanding series of 1869, or for some other indebtedness, notwithstanding their form, they were taken as non-negotiable paper, and subject to all legal and equitable defences in favor of the maker. Municipal cor-

porations have no general power to issue commercial paper. *Hopper v. Covington*, 8 Fed. Rep. 777.

CHECK—AUTHORITY OF ATTORNEY AT LAW TO ENDORSE
FOR HIS CLIENT—FRAUD.

CHATHAM NATIONAL BANK V. HOCHSTADTER.

(New York Court of Common Pleas, General Term. January, 1888.)

An attorney at law who has received a check for a claim due his client, drawn to the order of the client, has no authority to indorse the check as attorney. And if he does indorse it as "Atty," such indorsement will represent that his is an attorney in fact, and be a fraud upon any one paying the amount to him.

Hochstadter as attorney at law received from James R. Hills his check on the Chemical National Bank, for \$120, dated May 1, 1878, payable to the order of George W. Bruce. This check was given by Hills in payment of a claim held by Bruce against one Fairchild, an insolvent. The defendant Hochstadter received the check as attorney at law for Mr. Bruce in the collection of the claim, that is to say, he drew up a statement of the claim, procured Mr. Bruce's proof to it, sent it to Hills and got Hills' check to the order of Bruce. There was a dispute on the trial as to whether Bruce had employed him to act in this matter, but the complaint alleges that he was attorney at law for Bruce in receiving the check, and that fact is to be deemed established as far as this action is concerned. Hochstadter claimed a commission of ten per cent. from Bruce for collecting the claim, and on receiving Hills' check as aforesaid sent it to Bruce with a demand for \$12. Bruce refused to pay and defendant took away the check. It was sent to Bruce again with a similar demand two or three times and taken away by defendant each time, as Bruce refused to pay his bill. Finally, after two weeks, defendant indorsed the check, "George W. Bruce, per Oscar J. Hochstadter, Atty.," and deposited it with the plaintiff, the Chatham National Bank, to the credit of the account of "A. McFadden, per Oscar J. Hochstadter, Atty." an account kept in said bank by defendant. The amount of the check was credited to that account and subsequently drawn out by defendant. The Chatham National Bank, in due course, collected the check from the Chemical National Bank, on which it was drawn by Hills, the maker. The Chemical Bank subsequently demanded back the amount of the check from the Chatham National Bank, on the ground of forged indorsement, and the latter having refunded the amount to the Chemical Bank and having demanded it from defendant, brought this action on his refusal. The complaint charged that the defendant made the indorsement to deceive and defraud the plaintiff, who relied on the representation that he was attorney in fact of Bruce, whereas he was not such attorney nor authorized to indorse for Bruce. The Justice who

tried the cause found that the defendant, as attorney at law, under the circumstances of the case, was authorized and had a right to indorse the check and deposit and receive the pay thereon; that he acted in good faith, and that plaintiff had no cause of action against the defendant, and certainly not one in fraud.

J. F. DALY, J.—An attorney at law, employed to collect a claim, who receives in payment thereof a check payable to the order of his client, has no authority to indorse it in his client's name and cash it. The power to indorse checks and bills must be expressly conferred. *Filly v. Gilman*, 34 Supr. Ct., 339. A power of attorney to collect moneys due and to compound, discharge and give releases therefor, does not authorize the attorney to indorse a bill drawn to the order of his principal. *Hogg v. Snaith*, 1 Taunton, 347; *Murray v. East India Co.*, 5 B. & Ald., 204. Nor does the power to receive a check in payment give the attorney the right to assign it or indorse it, if it be payable to the order of the principal. *Holtzinger v. Nat'l Com. Ex. Bank*, 6 Abb. N. S., 292; *Graham v. U. S. Savings Inst.*, 46 Mo., 186; *Milard v. Nat'l Bank Republic*, 4 Nash. Law R., 209. There is nothing in the authority of an attorney at law as such that confers power to indorse checks, drawn to his client's order, which he has received in payment of claims placed in his hands for collection. On the contrary, nothing is better settled than that an attorney at law employed to collect a demand has not even authority to receive a check, bill or note from the debtor in payment. How then can any authority to indorse such an instrument be implied? And if special authority were conferred on him by his client, to receive such an instrument, he would not be permitted, as the cases cited show, to indorse it in his client's name, if it were drawn to the order of latter. It was suggested in the Court below that the attorney of a non-resident or absent client might risk the loss of a debt if he had to send the check abroad or wait the client's return. The sufficient answer is that the difficulty suggested need never arise; the attorney may always refuse to receive a check and may insist upon payment of the claim in money.

An objection to the recovery of the amount of the check in this action is made on the ground that the complaint alleges fraud on the part of defendant in indorsing the check as attorney for George W. Bruce, and collecting it through his own bank; and it is claimed that the evidence shows that defendant indorsed the check in good faith, upon the supposition that he had the right to indorse his client's name. The bad faith and fraud of defendant are conclusively proved. As an attorney at law, he knew he had no right to indorse his client's name, not being thereto authorized by his client. In indorsing as "Att'y" he purposely omitted to state that it was attorney at law, but left it so in order to deceive the bank into the belief that he was attorney in fact for Bruce. His account was kept in the name of McFadden, from whom he had a power of attorney, and he knew that

such a power was necessary to indorse checks, and that the presumption was that he indorsed the check as attorney in fact, just as he drew or indorsed for McFadden. But the strongest evidence of his bad faith is that he did not attempt at first to indorse and draw his check, but sent it repeatedly to Mr. Bruce, and only after the latter had refused to pay his bill, resorted to the desperate step of indorsing it fraudulently as a pretended attorney in fact, and drawing the money.

OPTION CONTRACTS—WHEN VALID.

UNION NATIONAL BANK OF CHICAGO V. CARR.

(United States Circuit Court, District of Iowa. February, 1888.)

Whenever the validity of a contract for the future delivery of property is assailed the evidence must show clearly that the intention of both parties was that the transaction was to be settled by the payment of differences only, otherwise the contract will be sustained.

The validity of certain contracts for the sale and delivery of grain, upon which margins had been deposited, was attacked. Further margins were demanded because of a variation in the market, but they were not deposited. Judge Love gave a decree which defeated this objection to the contracts, and, in the opinion, said: It is insisted that the contracts in question were illegal because they were "option" contracts, and because the defendant was charged with certain losses by reason of his failure to put up "margins," etc. The evidence, however, falls far short of what is necessary to establish illegality in contracts of this kind. All "option" contracts are not illegal, and the incident of putting up margins amounts to nothing unless the contract itself is illegal. The validity of "option" contracts depends upon the mutual intentions of the parties. If it be not their intention in making the contract that any property shall be delivered or paid for, but that the pretended and fictitious sale shall be settled upon differences, the agreement amounts to a mere gambling upon the fluctuation of prices, and the contract is utterly void. But if it is the bona fide intention of the seller to deliver, or the buyer to pay, and the option consists merely in the time of delivery within a given time, the contract is valid. If the contract itself is lawful, the putting up of margins to cover losses which may accrue from the fluctuation of prices, the final settlement of the transaction according to the usages and rules of the board of trade is entirely legitimate and proper. Nothing whatever appears in the present case to impeach the validity of the transactions in question, except that the defendant was dealing in options through his broker on the board of trade; that he failed to put up required margins; and that his transactions were settled at heavy losses which were charged to him. This is entirely insufficient to invalidate the charges made in the account against him.

NOTES ON RECENT BANKING CASES.

Interest Upon Promissory Note After Judgment.

B made his note for \$2,500 payable one year after date "with interest at the rate of ten per cent. per annum after date until paid." A judgment was recovered on the note and the maker having died his executor refused to pay more than the legal rate of interest, seven per cent. In an action brought to recover the additional three per cent., *Jameson v. Barber*, the plaintiff was defeated, and on his appeal to the Supreme Court of Wisconsin, the judgment was affirmed, the court saying: The claim upon the note was merged in the judgment recovered upon it, and it was, with all its incidents, extinguished; and the rate of interest upon the judgment is the legal rate only.

Debtor and Creditor—Loan—Liability of Income of Estate Transferred to Trustees.

W transferred all of his property to trustees, providing in the deed that the trustees should pay him the net income semi-annually during his life, upon his order or receipt, but no payment was to be made by way of anticipation, and then to pay the principal to his children at his death. After having made this settlement, he borrowed money from a bank, and transferred to it his right to the income to the extent of the loan. The trustees refused to pay the income to the bank, on the ground that by the deed to them it was inalienable, and the bank sued them. In this case, *Pacific National Bank v. Windram*, the Supreme Judicial Court of Massachusetts, in September, decided in favor of the bank. The Chief Justice, Morton, in the opinion, said: To permit a man to attach to a valuable interest in property, retained by himself, the quality of inalienability and of exemption from his debts, seems to us to be going further than a sound public policy will justify. He may, when he is out of debt, create a trust by which the principal of his property may be transferred to others at his death, and his subsequent creditors will not be able to reach it, but the income of the property is liable for his debts, and it may be reached by a bill in equity, and applied to the payment of them.

Criminal Liability of National Bank Officers.

Decisions were rendered by the United States Supreme Court, on April 2, in the Missouri bank cases—a series of criminal suits brought in the name of the United States against some of the officers and directors of the National Bank of Missouri for alleged fraudulent misappropriation of the funds of that institution. The effect of the decisions in these cases (No. 406 and 407, *The United States*, plaintiffs, against James H. Britton, and No. 409, *The United States*, plaintiffs, against James H. Britton and Barton Bates), which all came up on demurrers, will, it is thought, be to strengthen the defense in all the cases, although thirty-six counts of the indictment against J. H. Britton, the President of the bank, are held to be good in case No. 406. These thirty-six counts charge the defendant with making false entries in the books of the bank with intent to deceive the Comptroller and to injure and defraud the association.

BANKING AND FINANCIAL NEWS.

(With Comments on the more Important matters. This Department also includes General Business News—Notes from Foreign Banking Centres, including Canada—A Complete List of New Banks, Changes in Officers, Dissolutions and Failures—Banking and Monetary Tables—Bankers' Obituary Record, &c.)

The Bank Taxation Matter.—About March 22d Treasurer Giffillan received a letter from the First National Bank of Troy, N. Y., in which that bank takes the ground that under section 1 of the act entitled "An act to reduce internal revenue taxation, and for other purposes, approved March 3, 1883," all taxes and deposits of banks, bankers and national banking associations are abolished, and that there can be no tax legally due and payable if all the former returns have been made and the tax levied upon them satisfied. The charter of the First National Bank of Troy expired on the 24th ult., and the bank is in liquidation under section 7 of the act of July 12, 1862. Its final deposit of lawful money for the retirement of circulation has been made in pursuance of section 5,222 Revised Statutes, and the bonds deposited by that association to secure the payment of its notes have been reassigned to it and surrendered. It has been customary during the existence of the national banking system for any national bank winding up its business to make to the Treasurer the return of its average circulation, deposits and capital, required by section 5,215 Revised Statutes, and at once pay to the Treasurer of the United States the duty levied upon such return under section 5,214 Revised Statutes. There are at this time thirteen national banks in addition to the one named above which have gone into liquidation since January 1, 1883, all of which have paid the semi-annual duty in full to January 1, 1883. Some of these banks have made returns for the period beginning with that date and ending with the date of final deposit of lawful money for retirement of their circulation. Treasurer Giffillan is in doubt whether he shall for the period subsequent to January 1, 1883, levy a tax upon their deposits and capital or only upon their circulation. He has therefore requested an opinion from the Attorney-General whether, in view of the passage of the act, taxes can, subsequent to the approval of that act, be levied "on capital and deposits of banks, bankers and national banking associations," and if, in his opinion, they can be so levied, at what time the provisions of that act—repealing the taxes on capital and deposits—takes effect.

On this matter, of what date the repeal takes effect, we have asked the opinion of Commissioner Raum, and received the following reply:

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE, }
WASHINGTON, D. C., MARCH 22, 1883.

BRADFORD RHODES, ESQ., NO. 78 WILLIAM ST., NEW YORK CITY:

Sir:—I acknowledge the receipt of yours of the 21st instant, and fully note contents. In reply I will state that I have this day requested the Hon. Secretary of the Treasury to refer the question to the Attorney-General for his opinion as to whether the banks and bankers who have heretofore made returns to this office are liable for taxes for the months of December, January and February, and the days in March prior to the passage of the Act relieving them from further taxation.

The question involves a large sum of money, and I have not felt disposed to assess the banks for the period mentioned without first having the opinion of the Attorney-

General that they are liable to further taxation. His decision will no doubt be rendered without unnecessary delay. Very respectfully,

GREEN B. RAUM, Commissioner.

A later dispatch says that the matter has been left to the decision of the Attorney-General. It does not appear that argument has been made before him on behalf of the banks, but it would probably be allowed, on application.

The law makes provision for the decision of such questions in another way, viz.: by referring it to the Court of Claims, as will be seen by Section 2 of the Act of March 3, 1883, and the rules of the Court thereon. These are printed below for the information of our readers, as they have not been generally published. The act is entitled:

"An Act to afford assistance and relief to Congress and the Executive Departments in the investigation of claims and demands against the Government." Section 2 is as follows:

SEC. 2. That when a claim or matter is pending in any of the Executive Departments which may involve controverted questions of fact or law, the head of such Department may transmit the same, with the vouchers, papers, proofs, and documents pertaining thereto, to said court, and the same shall be there proceeded in under such rules as the Court may adopt.

When the facts and conclusions of law shall have been found, the Court shall not enter judgment thereon, but shall report its findings and opinions to the Department by which it was transmitted for its guidance and action.

Following are the rules adopted by the Court of Claims for departmental cases:

I. Cases involving controverted questions of fact or law in any claim or matter, transmitted to the court under the provisions of section 2 of the act of March 3, 1883, shall be proceeded with, in like manner, and subject to the same rules so far as applicable, as other cases in the court under its general jurisdiction, except as herein provided.

II. When a case is so transmitted the clerk shall examine the papers and send notice thereof by mail to every person, whose post-office address is given, who appears therefrom to be directly interested therein, and to the Attorney-General, noting the fact on the records, and specifying the names of the parties notified, and the date of notice.

III. Within two months after the mailing of such notices, or within such further time as the court may allow, any person directly interested in the case may appear as a party therein, by filing his petition, under oath, setting forth concisely and specifically his interest and claim.

IV. Any person claiming to be indirectly interested in any question involved in such case may, by leave of court, be permitted to appear and be heard on one side or the other, as his interest may require, upon filing a petition, under oath, setting forth specifically and concisely how he claims to be so interested, and submitting the questions raised to the decision of the court.

V. If no claimant, directly or indirectly interested, appears and files his petition within said two months, the Attorney-General, or Assistant Attorney-General charged with defending the Government in this court, may set the case down for trial upon such evidence as he may submit.

National Banks of New York City.—The Comptroller of the Currency has just completed his abstract of the reports of the national banks of New York City for March 18. The capital is exactly the same as on Dec. 30. The loans have increased about \$1,700,000. There is a large reduction in the individual deposits, the amount of such deposits, not including certified checks, on Dec. 30, being \$214,900,698, and on March 18th, \$169,845,263, showing a reduction since December 30 of \$45,115,435. There has been a large reduction in the amount of certified checks. The amount on Oct. 3, 1882, was \$137,208,350; on Dec. 30th, \$54,081,103, and on March 18th, \$47,163,086, the reduction since Oct. 3 being more than \$90,000,000, and since Dec. 30 nearly \$7,000,000. There has been a large reduction in the amount of certified checks issued by every national bank in New York, except one, in which there has been an increase. The reports show that in the aggregate the lawful money reserve actually held was \$3,527,866 too little, the proportion of reserve actually held to liabilities requiring reserve being 23.59 per cent.—*Washington, March 24.*

The full abstract appears on another page of this number. The great decrease in individual deposits is evidently only apparent, being offset by a decrease of 40 millions in exchanges for the Clearing-House. During the week ended March 17, the average deposits of all the Clearing-House banks was \$289,615,500, against \$311,071,200 on December 30, 1882, a trifling difference as compared with that shown in the dispatch. The reduction in certified checks, however, is probably genuine, as it has been steady since the Comptroller took action upon the matter, and, besides, all the national banks, excepting one, have joined in it. The deficiency shown in the reserves arises from the returns having been made in the midst of the recent pinch in the money market.

Retirement of Treasurer Gilfillan.—James Gilfillan, Treasurer of the United States, has tendered his resignation to the President, to take effect on April 1. Mr. Gilfillan has accepted the position of treasurer and manager of the Mutual Trust Company, of New York, at a higher salary than he has been receiving.

In Treasurer Gilfillan the Government loses a very faithful and efficient officer. He rose to the office he now holds from the ranks, having entered the Treasury Department as a clerk at a salary of \$1,200. His progress up the official ladder has frequently been pointed out as an excellent example of promotion in accordance with the principles which ought to prevail in the civil service. Mr. Gilfillan was graduated at Williams College in the same class with the late President Garfield, and before taking a clerkship he studied law and conducted a weekly newspaper. He has been in the service of the Government for 17 years, and has been Treasurer since July 1, 1877. He has won the sincere respect of all who have had business with his office, even when they have been compelled to differ with him.

The President has appointed as his successor Hon. A. U. Wyman, now Assistant Treasurer of the United States. The bond of the Treasurer is \$150,000, and must be approved by the Secretary of the Treasury before he can qualify. It is also necessary for the Secretary to appoint a committee to verify the Treasury balance of March 31, so that the funds may be transferred to the new incumbent for the opening of business on April 1, when he assumes the duties of his office.

The New Five-Cent Piece.—The Secretary of the Treasury having directed that the word "cents" be added to the new five-cent piece, the Superintendent of the Philadelphia Mint, who designed the original coin, is engaged in preparing a device for the back of the proposed coin which will include the denomination of its value in

unmistakable terms. No order has, however, been made suspending the coinage of the new five-cent pieces.—*Dispatch from Washington, March 12.*

It was announced at the time the five-cent piece of a new design was authorized by the Secretary of the Treasury, in January last, that it was considered as being more in compliance with the law as regards weight and inscriptions than the old coin. In view of this fact the blunder of leaving out the proper designation seems the more extraordinary. Superintendent Snowden, of the Philadelphia Mint, says the new pieces of the altered design will be ready early in April. The changes are confined to the reverse side. The legend, "E Pluribus Unum," has been taken from below the wreath and placed above the same, and the word "cents" is inscribed below the Roman numeral V. It may be mentioned that the new coin weighs twenty-one millimetres, which is one millimetre more than the five-cent coins that have been in circulation for some years past.

Market Savings Bank of New York.—The Speaker of the Assembly presented a communication from the Superintendent of the Banking Department, in answer to a resolution of the House inquiring into the condition of the failed Market Savings Bank of the city of New York.—*Albany, March 12.*

The communication says that no report has been received from receivers of that bank since 1871, and that its condition on January 1 of that year was as follows: Resources, \$1,060,173; surplus, \$45,655. Number of depositors, 2,690. The bank failed January 20, 1872, and James Dennis was appointed receiver by Judge Barnard, and in March, 1872, Dennis was succeeded by Frank Worth, and on September 20, 1873, John H. Platt was appointed assignee in bankruptcy by Judge Blatchford. Mr. Platt in March, 1879, made a statement that a dividend of 30 per cent. had been paid in 1872, and an additional dividend of 8 per cent. in July, 1873. The statement closed with a remark that "Owing to the small value of the assets it is impossible to estimate a future dividend."

Since this last statement has been made by Mr. Platt, the Banking Department has repeatedly asked him to make an additional report, which he has as repeatedly declined to make, and since the United States Government has assumed control it is impossible to compel him to make a report.

The outrageous way in which bank and other receiverships have been managed under the supervision of courts, which have allowed receivers to follow their own sweet will, makes a decided reform imperative. Outsiders are, of course, not positive that this is one of the cases of wholesale plunder, but it is seen that no accounting can be had.

Freedman's Savings Bank.—Comptroller Knox is more successful with the assets of the Freedman's Bank than was expected. He is about to declare another dividend of 7 per cent., which will make 72 per cent. thus far saved from the wreck. The great majority of the depositors' claims throughout the South have been purchased by speculators at a very small percentage.—*Washington, March 26.*

The final liquidation of the affairs of this unfortunate concern reflects very high credit upon Comptroller Knox, and forms a strong argument in favor of the formation of State bureaus to wind up insolvent corporations, instead of leaving such affairs to receivers who are accountable only to the courts which appoint them. But it can hardly be expected that officers so competent as Mr. Knox could be found and appointed for the purpose. Seventy-two per cent.

is more than anyone expected would ever be realized on the Freedman's Bank assets, a few years ago.

Gold Certificates.—Mr. H. F. French, Acting Secretary of the Treasury, has received communications from the officers of several banks in Chicago asking that gold certificates issued by the Assistant United States Treasurer in that city be made to bear some mark of identification; that the gold received therefor be held to redeem such certificates and no others; that the Assistant Treasurer in Chicago be supplied with a reasonable amount of both large and small certificates, and that the different denominations be made interchangeable. The Acting Secretary has replied that it is not expedient to place a distinctive mark on the current series of gold certificates for the purpose of identifying them as an issue of the Chicago office; that such a mark would in his opinion lead to complication and tend to discredit these certificates in other cities, where in the ordinary course of circulation they might go. The department, he says, is not at present prepared to authorize the issue of a distinctive series for Chicago alone, as that would involve the question of a separate and distinct series for each Sub-Treasury. If, however, the bankers of Chicago wish to exchange one denomination of certificates for another, and will so inform him, the department, in view of existing circumstances, will cause the Chicago office to be supplied with gold certificates of the smaller denominations, and authorize the desired exchange.—*Washington, March 23.*

We are not informed upon what grounds the bankers of Chicago asked for a special issue of certificates for that city, but it is plain that the present arrangement may lead to complications. It will be remembered that the gold certificates are issued only against deposits of coin with the Treasurer or Assistant Treasurer. They may be counted in national bank reserves; are receivable for taxes and public dues, but are not a legal-tender and are not taxable by States or municipalities. Now as they are all issued as from Washington and are payable at any Sub-Treasury, there is no reason why they cannot be used by bankers as a cover for exchange. It appears, according to the San Francisco "Bulletin", that one of the local banks has been advised by the Secretary of the Treasury that they are not intended for New York exchange. But there is nothing in the law to prevent it, and it is said that certificates sent on from San Francisco have been accepted for public dues in New York. If they should come into use largely for this purpose, the Government might be put to the expense of moving large amounts of gold from time to time, as it is now for moving silver.

A Swindling Assessment Insurance Company.—The Marion Trust Company, one of the leading wild-cat assessment insurance companies, operated almost solely by a fellow named Alexander Collier and his family, has been placed in the hands of a Receiver, who finds an astonishing condition of things. The concern has been in existence a little over a year, and in that time it has acquired 5,000 certificate-holders in the States of Indiana, Illinois, Ohio, Kentucky, Missouri, Alabama, and Mississippi. Its receipts have been over \$200,000 and it has paid out only \$50,000, yet its present assets amount to only \$300. The Receiver's investigation shows how wide-spread and successful are these swindling schemes. At least a score of similar companies have been and are being operated in this city.—*Indianapolis, March 17.*

The above dispatch has been widely published under the heading "A Swindling [or A Rotten] Trust Company." There was nothing about the concern in the nature of a Trust Company excepting the name. The officials, or else the laws under which such a swindle could be incorporated and palmed off upon the community under a false title, were at fault.

A Worthy Charity.—The New York Home for Convalescents, No. 433 East One Hundred and Eighteenth street, New York, is intended to meet the wants of

persons just discharged from hospitals, but who need a home in which thoroughly to recover from the effects of disease. The limited funds of the institution—founded some years ago by Miss Louisa Houghton—at present confines its charity to women. The managers are anxious to extend its aid to men also, and contributions for this purpose are solicited. They may be sent to the Treasurer, Mrs. Bradford Rhodes, No. 78 William street, or to any of the managers.—*New York Times*, April 6.

There are a great many worthy charities in New York, and the one above-mentioned is certainly among the most deserving. It does a great deal of good in a practical, common-sense manner. Write for a Report.

Exchange of Government Bonds Suspended.—The Acting Secretary of the Treasury has issued the following circular concerning the suspension of exchanges of $3\frac{1}{4}$ per cent. bonds into 3 per cent. bonds from March 31, 1883, to May 1, 1883, and the adjustment of interest on exchanges made thereafter:

TREASURY DEPARTMENT, WASHINGTON, D. C., MARCH 21, 1883.

Notice is hereby given that, in order to allow the preparation of the schedules and interest checks for the payment of the dividend due May 1 on the United States registered bonds of the acts of July 14, 1870, and January 20, 1881—continued at $3\frac{1}{4}$ per centum—and on the United States registered bonds of the 3 per cent. loan of 1882, the exchange of $3\frac{1}{4}$ per cent. bonds into 3 per cent. bonds will be suspended from March 31, 1883, until May 2, 1883.

Between the above dates $3\frac{1}{4}$ per cent. bonds intended for exchange will be received and filed in the order of the receipt—the exchange being effected upon the re-opening of the books May 1, 1883.

Upon the resumption of the exchange of bonds, and till further notice, the interest on the $3\frac{1}{4}$ per cent. bonds surrendered for exchange into 3 per cent. bonds will cease May 1, 1883, and the 3 per cent. bonds issued therefor will bear interest from that date, and Department circulars heretofore issued, concerning the exchange of $3\frac{1}{4}$ per cent. bonds, are modified accordingly.

The books of the 3 per cent. loan of 1882 will be closed during the months of January, April, July and October each year, during which months bonds will not be transferred. (Signed.) H. F. FRENCH, Acting Secretary.

Up to March 19th, the total amount of 3 1-2 per cent. bonds exchanged into 3 per cents was \$299,600,400. Of this amount \$8,156,050 were exchanged since February 1. The reason for the discontinuance of the exchange is simply the convenience of the transaction of the routine business of the Treasury Department. The officers of the bond-office cannot be occupied in making the exchanges when they are preparing the schedules for the called bonds, which are redeemable on May 1.

Effect of Tax Repeal.—The first effect of the repeal of the bank taxation law is manifested in the following circular: "International Trust Co., Boston, Mass., March 8, 1883. The United States law taxing deposits having been repealed, we shall give our depositors the benefit of said repeal, and will increase the rate of interest to 3 per cent. per annum on deposits subject to check. John M. Graham, President.—*Boston Economist*."

We only quote the above because it happens to be the first case noticed in which the effect of the repeal of bank taxes was practically shown, but doubtless the business public will soon experience the benefit in many other ways. This case proves that what we often argued was strictly true:—that the repeal was as much, or more, for the interest of general business as for the banks.

The "Days of Grace" Matter.—Mr. Roosevelt has introduced a bill in the Assembly abolishing days of grace on drafts, bills of exchange and promissory notes after January 1, 1884.—*Albany, N. Y., March 23*.

This proposed reform is meeting such favor as to encourage those who have promoted it. It is hoped that bankers of other States will put forth an

effort to have uniform action on the subject. If there are any valid objections to the change we should be glad to have them stated in a clear and brief form by any friend of the JOURNAL.

The New York Stock Exchange in Court.—William J. Hutchinson's suit in the Supreme Court against Frederick N. Lawrence, as President of the New York Stock Exchange, came up in several forms during March. By this suit Mr. Hutchinson seeks to regain his seat in the Stock Exchange, and be recognized as a member, and he also seeks to recover personal damage against the members of the Governing Committee of the Exchange who voted for his expulsion last year. The complaint in this suit has not as yet been served, and some time ago an order was made by Judge Donohue, upon the application of the plaintiff, that President Lawrence should be examined before trial. The counsel for the Stock Exchange then applied to Judge Lawrence to vacate or modify the order for the examination of Mr. Lawrence. Judge Lawrence denied this application, and then an appeal was taken to the General Term of the court. Meantime the case came before Judge Donohue in Chambers, upon an order to show cause why all proceedings should not be stayed pending the appeal to be taken from the order for the examination of the defendant. This motion was denied on March 3. On March 8, the General Term affirmed Judge Lawrence's order directing the examination of President Lawrence before trial.

The examination was begun on March 12, at the offices of Evarts, Southmayd & Choate. Mr. Lawrence brought with him the book containing the minutes of proceedings in the Hutchinson case, but on advice of counsel he refused to produce it. He testified that the Governing Committee of the Exchange met on June 5 and heard Mr. Hutchinson's answer to the charge against him. They met again the next day and examined Mr. John Duff and Mr. Brouwer. They took a vote and decided to expel Mr. Hutchinson. The witness, by advice of counsel, declined to answer about nine-tenths of the questions asked him. He was asked to read the proceedings as recorded in the Hutchinson case, but he refused to do so. He also refused to give any details of the proceedings resulting in Mr. Hutchinson's expulsion. The examination, after a series of wrangles between the counsel, came to a close.

The case then went back to Judge Lawrence upon a motion to compel Mr. Lawrence to answer, and repeated postponements carried it over into April. On April 23, Judge Lawrence decided that the plaintiff was entitled to the record of the proceedings of the Governing Committee of the Stock Exchange, and that Mr. Lawrence must answer the questions put.

Anecdotes about the Bank of England.—In the course of five years the paid notes amounted to 77,745,000 in number, and they fill 13,400 boxes, which, if placed side by side, would reach two and one-third miles. If the notes were placed in a pile they would reach to a height of five and two-thirds miles, or, if joined end to end, they would form a ribbon 12,445 miles long. Their superficial extent is said to be rather less than that of Hyde Park. They weigh over ninety and two-thirds tons, and their original value was over £1,750,628,000.

The greatest of rogues might be inclined to find some comfort in the extent and intricacy of such a store of old paper. Of course, however, they are most systematically arranged, and any note of the 77,000,000 may be pounced upon with the utmost celerity and precision. At the end of five years these old notes are thrown into a furnace specially constructed for the purpose, and burned. It is a curious fact, however, that so firm in texture is the paper of a genuine Bank of England note, that burning alone can hardly destroy it. The authorities have in a little glazed frame the remnants of a note which was in the great fire of Chicago. Though completely charred and black, the paper still holds together, and the printing of the note is said to be sufficiently legible to establish its genuineness and to warrant its being cashed. There are some other notes here which were cashed after having gone down with the *Kurydice* a few years ago, and reduced to little better than pulp. Indeed the scraps and fragments which sometimes come into the Bank to be cashed have a really ridiculous appearance.

On the occasion of a recent visit, for instance, the officials had under examination a number of fragments of discolored paper, none much bigger than a sixpence, and,

when put together, presenting to the unskilled eye not the slightest resemblance to a note. And yet it was pretty confidently asserted that the paper would be cashed. It is beneath the dignity of the Bank of England to take, or even to appear to take, advantage of accidents to their notes, and if there is any possibility of establishing the identity of one of them, it is sure to be duly honored. Even where a note is entirely destroyed, proper evidence of destruction will be accepted and payment made.

A lost note will in some cases be paid, and there is one case recorded upon which the liberal attitude of the directors in a case of this kind involved them in a loss of £30,000. A bank director declared that he had lost a note for that amount, and upon his giving an indemnity for the sum in the event of the note ever turning up, the money was paid to him. Many years after his death an unknown person presented the missing note. The paper was undeniably good, and the Bank had no alternative but to cash it, as it was payable to bearer on demand, and as the heirs of the bank director who had lost it repudiated all liability, the money could not be recovered.—*London Globe*.

The announcement recently made in our financial columns that \$4,000,000 were subscribed to the capital of the new Produce Exchange Bank, when only \$1,000,000 has been called for, shows, that with the reduction of the taxes on banks there is a substantial inducement offered for the investment of money in banking capital, so much needed in this city. The shrinkage of \$16,000,000 in our bank capital during the past ten years, coincident with an increase of \$63,000,000 in deposits, to whatever cause or causes it may be attributed, is a bad sign. That it has been due mainly to overtaxation there is little doubt. With the repeal of internal-revenue taxes the \$16,000,000 which had melted away from the banking resources of the city and gone into other investments ought to be gradually replaced, together with as much more, in order that banking capital may keep pace with the growth of the city in other directions. The eagerness with which the capital of the Produce Exchange Bank has been subscribed gives promise of return to the former heathful condition of banking in New York—a condition which can only subsist when there is a due proportion between capital and deposits.—*N. Y. Evening Post, Apr. 7.*

Appropriations for the Coming Fiscal Year.—The aggregate of appropriations at the second session of the Forty-seventh Congress was \$229,327,511, as against \$295,510,639 at the first session of the Forty-seventh Congress, and as against \$219,367,983 appropriated by the last session of the Forty-sixth Congress. In last year's appropriations, however, there were \$24,000,000 in round numbers to be charged to the previous year, rendered necessary by the fact that the second session of the Forty-sixth Congress failed to make the necessary appropriations for the fiscal year 1882, for the payment of pensions and for branches of the service where the expenditure is not discretionary, but regulated by law. If that amount is deducted from last year's appropriations, the appropriations, in round numbers, are less by \$41,000,000. Of this difference \$14,000,000 is in the pension appropriations, and \$18,738,000 in the appropriations for rivers and harbors. The appropriations, therefore, for the expenses of the Government and miscellaneous purposes for the next fiscal year are about \$9,000,000 less than for the current year. The appropriation, moreover, for pensions was last year \$66,000,000, while for the next fiscal year \$86,000,000 have been appropriated. Adding this difference (\$20,000,000) to the appropriations for the fiscal year 1882, exclusive of rivers and harbors, the aggregate is \$227,924,683 as against the appropriations for the next fiscal year, \$229,327,511. In the bill for the coming fiscal year \$2,000,000 have been provided for the increase of the Navy.

Names of New York Banks.—Speaking of banks in New York city one is led to notice those peculiar names which are assumed no one knows why, and which really have no real meaning. The Shoe and Leather Bank, for instance, is not supported by the shoe trade, nor is the Mechanics' Bank supported by mechanics. The Marine Bank has nothing to do with marines. The Corn Exchange Bank does a large business outside of the corn trade, the Leather Manufacturers' Bank does not depend upon the swamp men, and the Broadway Bank is a still greater misnomer, since there is nearly a score of such institutions in the same street. The Manhattan Company was incorporated for the purpose of supplying the city with water, but the charter included banking privileges. The company sank a well in Chambers Street and erected a reser-

voir, but the water works proved a failure, and hence the banking privileges were developed. The Manhattan is one of the oldest banks in the city.

One of the banks in this city is so peculiar as to suggest a brief notice. It issues no bills, and its name does not appear on the list of banks. It has no board of directors, and never publishes its dividends, and never had a defalcation. It also declines printing its deposits and discounts in the usual weekly column, and yet it does a regular business, and has a very desirable class of dealers. Reference is here made to the Dry Dock Bank, which was for forty years the property of George Law, and is still in the family. The stock had fallen to a low quotation owing to mismanagement, and Law purchased it, thus becoming sole owner. The Dry Dock Bank in his hands soon became highly remunerative, and as it has all the deposits of the Eighth Avenue Railroad this gives it a large increase of capital. Law's success in making the road help his bank led William H. Vanderbilt to organize a similar institution, which enjoys the benefit of the Central & Hudson funds, and at the same time gives employment to some of his favored *protégés*.—*Troy Times*.

National Bank of Oshkosh.—The charter of the First National Bank of Oshkosh, Wis., expired on February 24, and a new organization has been effected under the above title, but with the same officers and nearly the same shareholders. The capital stock was increased from \$100,000 to \$200,000, which is as large as that of any other bank in the State. It is the lineal successor of the first bank of the city, started in 1852 by Darling, Wright, Kellogg & Co., with a capital of \$4,000. In 1856 it was continued by Kellogg, Fitzgerald & Co., with a capital of \$30,000. In 1867 it was incorporated as The Bank of Oshkosh, with \$50,000 capital, and was changed into a national bank in 1868.

Failure of a Pennsylvania Private Bank.—R. E. & H. Hoopes, private bankers, of New Brighton, Pa., suspended on March 20. The firm had been in business for a number of years and was highly esteemed. The liabilities were estimated at \$50,000 to \$100,000, and it is supposed that the amount recovered by depositors will be small.

The Cincinnati National Bank was organized on March 17, with a capital of \$500,000. The officers are:—President, J. F. Larkin; Vice-President, Karl F. Benndorff; Cashier, Edgar Stark. There are 168 stockholders, among whom are many of the best men in the city. Mr. Larkin has been in the banking business in Cincinnati for twenty-nine years, and Mr. Stark, the Cashier, was with the firms of Larkin, Wright & Co. and Joseph F. Larkin & Co., bankers, for twelve years. The bank will begin business on April 16.

The Exchange Bank of Denver, Col., A. J. Williams, President, and J. M. Strickler, Cashier, suspended payment on March 20, and was placed in charge of the Cashier as Receiver. It began business in 1876 with a paid-up capital of \$200,000. The former Cashier loaned the funds so recklessly that the capital had to be reduced to \$100,000 about three years ago. The report of February 2, 1882, showed liabilities of \$261,825, exclusive of capital stock and surplus fund \$82,544; assets \$444,371.

Banking in Selma, Ala.—A correspondent writes: "Selma has two banks, the aggregate capital of which is \$450,000. I have no means of finding the sum total of the larger of her two banks but herewith hand you the business of the smaller of the two, namely, the Commercial. The New York exchange bought during the year 1882 was \$4,098,000; total deposits for the year 1882, \$14,518,000; total volume of business for the year 1882, \$22,169,000. The presumption is that the larger of the two banks does the leading business, but putting the two on the same footing, we have the sum total of say \$45,000,000."

He thinks that when it is considered that Selma has only 7,500 inhabitants the above figures indicate a very active condition of business.

First National Bank of Concord, N. H.—It will be seen by a notice in another column that the application of the First National Bank of this city, for an extension of its charter for twenty years has been approved by the Comptroller of the Currency. This bank has been in business nineteen years to-day, and has been very successful. It now stands at the head of such institutions in the State. While its managers have looked after the interests of the stockholders and depositors, they have been oblig-

ing and courteous to its patrons and the public, and have won for the bank numerous and strong friends. The public cannot afford to lose such an institution. We trust that the coming twenty years may be as prosperous as the past have been.—*Concord "Daily Monitor."*

Verification of National Bank Returns.—The following circular has been issued from the office of the Comptroller of the Currency :

TREASURY DEPARTMENT, OFFICE OF COMPTROLLER OF THE CURRENCY, {
WASHINGTON, MARCH 10, 1883. }

The attention of the officers of national banks is called to the following Act, from which it will be seen that the oath of affirmation required by the officers of national banks must be taken before some person, having an official seal, who is not an officer of the bank.

Special attention is called to this Act, and such reports as are not verified in accordance therewith will be immediately returned to the banks for correction.

JOHN JAY KNOX, Comptroller.

AN ACT DEFINING THE VERIFICATION OF RETURNS OF NATIONAL BANKS.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress Assembled, That the oath or affirmation required by section fifty-two hundred and eleven of the Revised Statutes, verifying the returns made by national banks to the Comptroller of the Currency, when taken before a notary public properly authorized and commissioned by the State in which such notary resides and the bank is located, or any other officer having an official seal, authorized in such State to administer oaths, shall be a sufficient verification as contemplated by said section fifty-two hundred and eleven : *Provided, That the officer administering the oath is not an officer of the bank.* Approved, February 26, 1881.

Property in a Stock Exchange Seat.—On the 9th of September, 1878, the firm of Davidson & Jones, brokers, of New York, became insolvent, and John H. Platt was appointed assignee. E. R. Jones, one of the members of the firm, was a member of the Stock Exchange, and owned a seat, which was valued at \$30,000. He, however, refused to transfer his certificate of membership in the Exchange to Platt, claiming that it was not property which could be claimed by the assignee. Consequently Platt began an action in the Superior Court against Jones for a transfer of all the rights of the latter's seat in the Exchange to him. The case was tried in the Special Term of the Superior Court, and recently a decision was rendered by Judge Freedman in favor of the assignee, holding that a seat in the Stock Exchange is property which should be handed over to an assignee. The Judge directs Mr. Jones to surrender his certificate to the assignee.

Grand Rapids (Mich.) National Bank.—We are sorry to hear that Mr. T. C. Sherwood, the Cashier, has been compelled to resign, the condition of his health necessitating a vacation of a year at least. His salary was raised last New Year's, and a highly complimentary set of resolutions was passed by the Board of Directors (when accepting his resignation) in which the success of the bank is largely ascribed to his ability and business tact. When he entered the bank, three years ago, it had only \$250,000 of deposits, and it now has about \$1,000,000. He was succeeded on April 1 by Mr. Wm. Widdicomb, one of the Directors.

The Check Stamp Tax.—The Comptroller of the Currency has received many letters in reference to the redemption of the two-cent check stamp. He says that the two-cent check stamp is not required by law to be used after July 1 next. The law provides for the redemption of stamps not used, provided they are presented for payment within three years from the time of purchase from the Government.

Italian Savings Banks.—Italy is so "sunny," lazy, and happy-go-lucky a country, that the extent of thrift and savings there, as shown by figures reported, is somewhat surprising. At the end of June last the savings banks of Italy, including branches and agencies, were 357; besides these there were 64 credit institutions, 191 popular banks, paying interest on deposits and designed for the wage-earning classes; and 3,449 Post-offices which receive savings deposits. The savings banks had \$141,621,996; the credit institutions held \$15,027,251; the popular banks, \$24,664,085; the

Post-offices, \$14,364,700. The average amount of account in these institutions was, respectively, \$138, \$158, \$203, and \$28, so that the postal feature of the system distributes itself over a wider area even than the institutions known as savings banks, especially; the average deposits made during the first half of 1882 was from \$17.08 to \$19.30 in the Post-offices, against \$40.23 in the savings banks. The figures of withdrawals for the six months also indicate progress of thrift in Italy when set off against the deposits, and Luzzati declares that "the laboring hero of savings has fought and won a battle which leaves no traces for the proud historian to record, but which will exercise a great influence upon national temper and character."

Internal Revenue Receipts.—A statement has been prepared by the Commissioner of Internal Revenue which shows that the receipts of that office during the last fiscal year, were \$146,400,000. The receipts from July 1, 1882, to March 21, 1883, exceed the receipts for the corresponding period of last year by \$2,200,000. It is estimated that the receipts for the current fiscal year, if there had been no reduction in taxation, would amount to \$148,625,000. Deduct on account of changes in the revenue laws \$5,000,000. Total estimated receipts for the current fiscal year \$143,625,000. The estimated increases or decreases of revenue during the remainder of the current fiscal year, as compared with last year, are as follows: Increase on spirits, \$1,500,000; decrease from banks or bankers, \$2,400,000; decrease from special taxes, \$1,600,000; decrease from adhesive stamps, \$500,000; decrease from tobacco, \$2,000,000; total increase \$1,500,000; total decrease, \$6,500,000; net estimated decrease, \$5,000,000.

Summary—The total internal revenue receipts from July 1, 1882, to March 21, 1883, were \$106,225,000; estimated receipts for the rest of the current fiscal year, \$38,400,000; total, \$143,625,000.

MISCELLANEOUS BANK ITEMS.

— The Institute of Technology, of Boston, received a gift of \$25,000 from Mr. Nathaniel Thayer (banker) the day before he died.

— Oby E. Owen, the defaulting Teller of the Third National Bank of St. Louis, was, on March 17, sentenced to eight year's imprisonment.

— The Garfield National Bank was admitted to a seat in the New York Clearing-House on March 19. It formerly cleared through the First National Bank.

— The Arcade Bank, of Arcade, N. Y., a private concern, owned by B. F. Hurty and Andrew Knight, failed and assigned on March 3, with liabilities of \$30,000.

— A bill has been introduced in the New York Assembly by Mr. Roosevelt to abolish days of grace on drafts, bills of exchange and promissory notes after January 1, 1884.

— The Managers of the Fifth Ward Savings Bank of Jersey City began on March 16, in accordance with an order of Chancellor Runyon, to pay a dividend of 15 per cent.

— The will of the late John Holmes (banker), of Pittsburgh, Penn., divides his property, estimated at \$450,000, into 20 equal parts, 6 of which are bequeathed to benevolent institutions in that city.

— The bank of E. S. Comstock, at Ravenna, O., was robbed of \$600 on March 22, by a couple of thieves, one of whom called Mr. Comstock out to speak to the other, who was in a buggy. The robbers were not caught.

— Two brothers named Ferté, cashier and paying teller respectively of the Second National Bank of St. Paul, have been discharged under charge of carrying on a system of thieving from the bank. Thus far \$15,000 are missing.

— Simon Philippart, the famous and daring speculator, was arrested in Paris on Wednesday, April 4, upon a charge made by the Belgian Public Prosecutor that he falsified accounts at his bank. His extradition is demanded.

— Out of 3,000 notes due in the leading banks at Montreal, on April 4, all were retired, except eighteen, before the close of business. This shows a healthy condition of business affairs.

— About March 30 W. W. Gilla, a banker, of Clifton Springs, N. Y., disappeared, and all assets discovered were placed in the hands of the Sheriff. It is reported that he had forged notes for \$9,000.

— The amount of capital stock subscribed for the new Produce Exchange Bank, N. Y., up to March 18, is \$4,125,000. It was taken by 2,200 persons. It is proposed to increase the amount of the capital stock from \$1,000,000 to \$2,000,000.

— Early in March a sneak thief stole from the Philadelphia Guaranty Trust and Safe Deposit Company a package containing \$70,000 first mortgage bonds of the People's Passenger Railway Co., worth \$35,000. They were recovered on the 19th.

— Mr. Frederick Billings, President of the Woodstock (Vt.) National Bank, who bought the library of the late George P. Marsh for \$15,000 and gave it to the University of Vermont, has now given the university \$75,000 for the erection of a library building.

— Mr. Thomas B. Best, for the past twenty years in the employ of Messrs. James B. Colgate & Co., has been unanimously elected a member of the New York Stock Exchange. He was initiated with due ceremony on March 15, and greeted by the members as "Colgate's Best."

— A run was started on the Newburgh Savings Bank on March 24, and lasted a few days. It was supposed to have resulted from the rumors regarding the affairs of the late Judge Taylor, whose office happened to be in the same building. The bank was in a good position and confidence was soon restored.

— Eli Gott, Cashier of the Rockport (Mass.) National Bank, is reported to be a defaulter in between \$8,000 and \$15,000 on authority of Bank Examiner Needham. The deficiency has been made good by his father and father-in-law, and he will probably not be prosecuted.

— The officers of the Equitable Trust Company, of New York, discovered recently that a clerk named J. B. Marston, formerly in their employment, had been carrying on a system of swindling for about four years, about \$80,000 being taken in all. He has disappeared. The loss will not affect the company's standing.

— It is reported that the estate of Judge James W. Taylor, Vice-President of the Highland National Bank, of Newburgh, N. Y., who died on March 1, was left in a very confused condition. He always paid his engagements promptly, but it is feared that the assets will not cover the sums intrusted to his care during the thirty years in which he carried on the business of conveyancing, investing money, caring for estates, &c.

— It has been discovered that there was a deficit of \$57,000 in the accounts of the late Moses T. Ray, book-keeper and Assistant Cashier of the Merchants and Planters' Bank, of Montgomery, Ala. When the trouble was discovered he committed suicide. The bank will meet the loss by using \$30,000 of the reserve and accumulation and by reducing the stock \$25,000. These amounts will obviate any demands on the stockholders for additional payments. Ray's bondsmen will pay \$10,000. Speculation in cotton futures, cards, &c., was the cause of the deficit.

— Mr. B. Ogden White has resigned his position of Secretary to the New York Stock Exchange to become a member of the firm of Poor, White & Co., bankers and brokers, of which Messrs. Henry W. Poor and Henry V. Poor, late of Poor & Oliphant, are the other members. Mr. White has been a member of the Exchange since 1855. Twenty years ago he was elected Second Vice-President, and in 1870, Secretary. His resignation was received with regret.

— The Manhattan Company Bank and the Merchants' National Bank have arranged to build a joint bank and office building upon the property they now occupy at Nos. 40 and 42 Wall Street respectively. The Manhattan Company Bank is the oldest in New York, and the Merchants' is the next oldest, and since their organization they have done business adjoining each other at their present location. The deed of the Manhattan Company's lot to that company is dated 1749, and the Merchants' Bank has owned its lot nearly as long. Each lot has a frontage on Wall and Pine streets of about forty feet.

— The sworn schedule of the assets and liabilities of C. E. Upton, the defaulting President of the City Bank of Rochester, shows that the assets are composed almost entirely of fully mortgaged real estate and hypothecated securities, including United Pipe Line certificates. The 216,000 barrels of crude petroleum also held as collateral, will make but a drop in the bucket toward paying the personal liabilities, which are extensive, and cannot at present be determined by the Assignee.

BANKS OF CALIFORNIA.

In their annual report, just received, the Board of Bank Commissioners of the State of California renew their former recommendation that the law be changed so that instead of semi-annual, only annual examinations be required, and as often as the Commissioners deem necessary.

The number of banks, incorporated and in active business, was eighty-two on January 1, 1888, of which number sixty-five are commercial, and seventeen are savings banks.

Within the past year eight new banks were organized, as follows : (1.) The Bank of Benicia ; (2.) The Farmers' Bank of Fresno ; (3.) The California State Bank, of Sacramento ; (4.) The Commercial Bank of Santa Ana ; (5.) The Stockton Savings Bank ; (6.) The Bank of St. Helena ; (7.) The Siskiyou County Bank, of Yreka ; and (8.) The California Safe Deposit and Trust Co., San Francisco ; representing in the aggregate a paid-up capital of one million one hundred and sixty-seven thousand (1,167,000) dollars, of which amount \$800,000 is represented in the paid-up capital of the California Safe Deposit and Trust Co., of San Francisco, which has re-incorporated to transact a banking business.

The following named banks have, within the past year, voluntarily retired from business ; (1.) The Bodie Bank ; and (2.) The Bank of Stockton. The latter named has organized under the National Bank Act, with the title of the Stockton National Bank.

There have been some changes in bank capital during the past year, although the increase or decrease is comparatively slight, as shown by the following sums, with the names of the banks ; The Consolidated Bank of San Diego, capital increased \$10,000 ; The Fresno County Bank, increased \$10,000 ; The Grangers' Bank of California, increased \$15,000 ; The Kern Valley Bank, increased \$5,000 ; and The Bank of San Luis Obispo, increased \$12,000 ; while the following named banks, with the amounts as stated, have decreased their capital during the past year : The Farmers' Savings Bank, of Lakeport, \$1,000 ; The Bank of Lake, \$3,500 ; The Merced Savings Bank, \$3,000 ; and the Bank of San Jose, \$13,000.

The Commercial and Savings Bank of San Jose, formerly doing a commercial and savings business, has discontinued its savings department, and is now doing a commercial business exclusively, and is classed as such in this report.

There are now six banks in liquidation, who owe a portion or all of their liabilities to depositors.

The comparative statement of the business of the banks of San Francisco shows a gradual increase in the resources and liabilities during the past year. The amount due depositors has increased during that time over \$2,800,000, and the increase in capital and reserve is more than \$2,500,000 ; while the net increase in liabilities amounts to \$4,700,000, thus making an excellent showing

for the year. It is an indication of a revival of business prosperity. The most important item of increase in the resources, is that of stocks and bonds.

The amount invested in that class of security has increased during the year over \$2,000,000. The decrease in amount of loans aggregates nearly \$500,000, which is comparatively slight when we take into consideration that the total amount of loans is more than \$54,800,000.

The several items of liabilities of all the incorporated banks show a considerable increase—the most noticeable being the increase in deposits during the year, amounting to more than \$6,600,000. The gross increase in loans aggregates over \$3,800,000 during 1882; while the amount loaned on "other securities," such as grain, wool, etc., has decreased over \$3,400,000 and was presumably invested in such securities as stocks and bonds, which was increased proportionately, or deposited in other banks; at all events the comparison indicates that for the past year the banks of the State have the confidence of the people, and have substantially increased their business.

The total number of depositors of the seventeen live savings banks, on January 1, 1883, was 74,250; and the total amount due to depositors in the savings banks was \$55,223,000, being an average of \$743 75 due to each depositor.

The net earnings of the savings banks for 1882 was \$2,400,000, and the dividends that were declared and paid to depositors for the year amounted to \$1,966,000, at an average rate per annum of about four per cent.

The Commissioners desire to state in conclusion, that they have found the banks of the State, generally, in a sound and prosperous condition, owing principally to the faithful and honest labors of their officers and managers.

NATIONAL BANK STATISTICS.—Statement of the Comptroller of the Currency on April 1, 1883, showing the amounts of the National Bank Notes and of Legal-Tender Notes outstanding at dates of the passage of the Acts of June 20, 1874, January 14, 1875, and May 31, 1878, together with the amounts outstanding at date, and the increase or decrease.

NATIONAL BANK NOTES.

Amount outstanding June 20, 1874.....	\$349,894,182
Amount outstanding January 14, 1875.....	351,861,450
Amount outstanding May 31, 1878.....	322,555,965
Amount outstanding at date*.....	359,065,781
Decrease during the last month.....	1,500,599
Decrease since April 1, 1882.....	1,620,187

LEGAL TENDER NOTES.

Amount outstanding June 20, 1874.....	\$382,000,000
Amount outstanding January 14, 1875.....	382,000,000
Amount retired under Act of January 14, 1875, to May 31, 1878.....	35,318,984
Amount outstanding on and since May 31, 1878.....	346,681,016
Amount on deposit with the Treasurer U. S. to redeem notes of insolvent and liquidating banks, and banks retiring circulation under Act of June 20, 1874.....	39,653,990
Decrease in deposit during the last month.....	1,122,814
Increase in deposit since April 1, 1882.....	9,690,754

*Circulation of National Gold Banks not included in the above.....\$729,284

JOHN JAY KNOX,
Comptroller of the Currency.

GENERAL BUSINESS NEWS.

Importance of Ensilage.—Mr. Edward Atkinson, the original proposer of the Atlanta Exhibition, has written to a director of the Southern Exposition at Louisville, Ky., as follows:

You ask if I have any pet theory which I would like to have elaborated. I have, and I submit it: During the last twenty years three events have occurred in the United States of transcendent importance in their effect upon the material welfare of the people. First, The establishment of personal liberty, without distinction of race, color, or condition, assured by manhood suffrage. Second, The consolidation and extension of the railroad service. Third, The adoption of the rediscovered method of saving green crops in pits, known as "ensilage." To the first is due the doubling of the cotton crop, but, what is yet more important, the introduction of a diversified system of agriculture and the introduction of varied arts and manufactures in States where previous conditions had forbidden them. To the second is due the saving in the cost of transportation in a single year (1881) of a sum amounting to not less than \$800,000,000, or \$100,000,000 more than the whole burden of National, State, city and town taxes combined. To the third will soon be due a change in the equation from one cow to ten acres or more, to ten cows to five acres or less. In view of the future potentiality of such a State as Kentucky, if this statement of an economic situation even approximates the truth, I beg to suggest that silos of various kinds be constructed near or alongside the main exhibition buildings; that special and varied crops be planted to be used therein, and that cattle, sheep, and hogs be fed upon the contents during the exhibition, with the usual ration of cottonseed meal served with the ensilage.

Iron and Steel Production.—The Secretary of the American Iron and Steel Association reports that returns have been received from all the mills in the United States which rolled iron and steel railway bars in 1882. The total production of iron and steel rails last year was 1,683,794 net tons, being a falling off, as compared with 1881, of 153,806 tons. No rails were made during the year in New Jersey, Virginia, and Georgia. Of the entire out-put, 1,438,155 tons were Bessemer steel rails, 227,874 tons iron rails, and 26,765 tons open hearth steel rails. The five leading rail-making States were Pennsylvania, which produced 850,908 tons; Illinois, 362,250 tons; Ohio, 113,806 tons; New York, 155,021 tons, and Missouri, 85,528 tons.—*Philadelphia Dispatch of February 20.*

The large production of steel in 1882 shown above, although it was less than that for 1881, was far beyond the normal requirements of trade. The large extension of railroads in the last two years has stimulated to a dangerous extent the product in this country, while the high prices have aided the import trade in foreign steel. The prospective reduction in the tariff has, of course, largely stopped future contracts for the present, and the consequence is a number of failures of iron mills. The pig iron production was greater in 1882 than in any previous year, being 4,623,323 gross tons, against 4,144,254 in 1881, an

increase of 11 per cent. The stock unsold at the end of 1882 was 429,694 ten tons, against 210,896 at the end of 1881.

Mr. Gould's Views.—The news that Mr. Jay Gould was about to make a yachting tour around the world has aroused much interest in financial circles. His views of the present outlook as expressed in an interview on the matter are, perhaps, worth recording.

He intended to start about July, not for health's sake, but for recreation. He did not expect his going to have any effect on the market, as he had not been an active operator in stocks for two years. In the meantime he intended making one of his usual trips to the Southwest. "I have no projects or plans in connection with the trip. I like to go out once or twice a year and see the towns springing up. They grow faster than they do in the long-settled regions. Six months often make great changes. I am very well pleased with the Southwestern system. It has gone ahead of my expectations in the development of the country and the financial results that come from it. I do not think there is a railroad in the country that will make as fine a showing in earnings as the Missouri Pacific for the past year."

He proposed to hold his present interest in Western Union, although he never had an important voice in its control. Neither did he intend to part with his moderate interest in the Union Pacific. His views on the general business outlook are:

"The outlook is good so far as the business of the country is concerned. The exports are larger than the imports, and the balance of trade is running largely in our favor, and likely to increase during the coming Summer. The changes in the tariff and the effect on the commercial and manufacturing interests are unsettling. The action of the State Legislature adds something to this feeling, but it is only a ripple. The country will go on and keep growing."

"Do you fear disaster?"

"No, I do not. The country is too rich. I do not think there will be enough securities made in the next 12 months to supply the regular home demand. There are now less of the dividend-paying stocks in Wall Street than I have ever known before. The securities are held for investment. The Government has been calling in its bonds and that money has gone into dividend-paying stocks and bonds."

"How do you look upon American securities?"

"I regard them as the best we have."

"And American railroads?"

"The American railroads are equal to the best roads in Europe, both in respect to equipment and superstructure, and are built at less cost."

"Do you think there is an excess of railroads?"

"I think a percentage of the new roads are useless. Competing parallel roads are a mere waste of capital. The majority of the roads, however, are pretty well situated and will pay."

The Best Publication.—Bradford Rhodes, Esq., a native of this county, is editor-in-chief and principal owner of "RHODES' JOURNAL OF BANKING," a monthly periodical published in New York city, which has a larger circulation among banks, bankers and capitalists than any other American publication. It is pronounced by those competent to judge, the best publication of the kind to be found anywhere.—*Beaver (Pa.) Times, March, 1883.*

Still Ahead of the Bank.—Smith Washington, an aged colored African, white-washed the fence of an Austin banker for a dollar and a quarter, which the banker paid him in Mexican quarters at par. Several days rolled away into eternity before Smith Washington had any occasion to put one of those Mexican quarters into circulation, but when he attempted to do so, he was shocked at the twenty per cent. discount. His feelings were hurt, too. He lifted up his voice and said: "Jees ter think ob a banker, in whom I had ebbery confidence in de world, beating me out ob a quarter ob a dollar. I 'lowed he was an honest man. I hadn't orter tuck de job in the fust place," and then he added more cheerfully; "But ef I hadn't tuck de job to white-wash the fence, I nebber would hab found out whar de chickens roosted, and as I sold four dollars wuff ob chickens next morning, de bank hain't cotched up wid me yet."—*Texas Siftings.*

FOREIGN BANKING AFFAIRS.

I. CANADA BANKS AND BANKERS.

[A digest of Banking and Financial News of the British Provinces. By the JOURNAL'S Correspondent at Montreal.]

THE MONTREAL BOARD OF STOCK BROKERS will leave the discreditable den on St. Francois Xavier Street, which they have occupied for many years, on the first of May next, having secured commodious premises in the Merchants' Exchange Building on St. John Street.

MR. J. S. LOUDON, agent of the Standard Bank at Harriston, Ont., was presented by his customers with a silver tea service on the occasion of his being promoted to the agency of the same bank at Picton, Ont.

MR. H. W. BREEDON, manager of the Bank of British North America, at Kingston has been appointed agent of the same bank at Chicago, Illinois.

THE CENTRAL BANK OF CANADA, the London Bank of Canada, and the Brant County Bank are applying for incorporation. The North Western Bank seeks an amendment to its charter. The Union Bank of Nova Scotia wants permission to amalgamate with the Bank of Prince Edward Island. The Farmers' Bank of Rustico asks for an extension of its charter.

A REMINISCENCE OF THE BANK TROUBLE OF '79.—Mr. John Rankin, of Montreal, who was elected President of the Consolidated Bank, in liquidation, is suing the estate of the bank for \$2,128 for his services in connection with winding up its affairs. The claim is resisted on the ground that it was understood, at the time the new board was appointed, none of the members of the old board that was in office before the failure were to have any remuneration. The defence appears somewhat strained as an answer to a claim for constant attention to duty and for the anxieties of the position.

MR. INGRAM, manager of the Federal Bank, Montreal, has entered an action for damages against the Montreal "Journal of Commerce" for an alleged libellous article in that paper.

A SEAT IN THE MONTREAL STOCK EXCHANGE, which cost a year and a half ago \$1,500, was sold recently for \$4,000.

INSOLVENCY LAWS.—Bills have been introduced into Parliament to remove the existing anomalies in the laws, one looking to the equitable distribution of the insolvent's estate, and the other to the discharge of the insolvent when he has had his property and the conduct of his affairs taken out of his hands. It is to be hoped that the assembled wisdom of the Dominion will be rightly guided in this important subject. It could have been better discussed a year or two ago, when bankruptcies were less frequent and passion and prejudice less strongly excited than at the present. The press is besieged with letters from correspondents on the subject.

BANK DEFALCATIONS.—Quite a saturnalia of defaults among bank employes has marked the monetary depression of the last two months. Weak-minded youths, who, as tellers, had the handling of large sums of money, have been speculating on the miniature Bourses of Toronto and Montreal. What little brains they had were set on fire by the example, I grieve to say, of men above them, who using their official positions have amassed fortunes in the last two years by speculating in the stock exchange. One of these defaulters, whose peculations amounted to about \$20,000, turned up in Kentucky, but returning to Buffalo was arrested, and disgorged the bulk of his plunder. Another was quietly ruminating at his desk on the ups and downs of life when the manager asked him to hand over his cash for verification. He also has been heard from at Buffalo. A third has given no sign, but his relationship to the general manager will probably account for that. In all these cases the banks claim

to have been indemnified by the North American Guarantee Company. The escape of the youthful desperadoes, however, affords food for serious thought. Their escape must have been connived at by the officials, and the question occurs, "Why?" As is usual in such cases the press is appealed to on behalf of the innocent bank clerk, and one gentleman roundly asserts that the cause of all these defaults is the inadequacy of the salaries paid. "Imagine," says this advocate of high salaries, "paying an accountant \$1,200 per annum." "Surely, a clerk with the necessary qualifications for this position should be worth to his employers \$1,500 at least." Appeals to the public in matters of this kind between employer and employed are in the worst possible taste, and the ignorance displayed of the principles that regulate the wages question is remarkable.

HEAVY BANKING FAILURES.—The Mahon Brothers Bank, at London, Ont., a private banking firm, closed its doors to the public on the 21st of February last. The failure was precipitated by the action of the Bank of Montreal, which had demanded additional collaterals as a condition of carrying the account. The liabilities are not yet known but are currently reported to be half a million of dollars. The manager of the Bank of Montreal at London has tendered his resignation in consequence of the failure, and the assistant inspector of the bank has relieved him of his charge. It is said that the firm of Mahon Brothers has been speculating in Northwest lands, and that the salvage of the wreck will be small. It has been suggested, in connection with this failure and in view of the extensive development of private banking in Canada during the last year or two, that these banks be compelled to furnish security to their depositors. This, it is needless to remark, would legislate them out of existence.

LOANS ON BANK SHARES.—The question of bank loans on the security of their own shares is likely once more to engage the attention of the Dominion Parliament now sitting in Ottawa. The law has, more than once, properly enacted that these loans are illegal, and has prescribed certain pains and penalties on offenders in this respect. After enacting these wholesome provisions the House, with sundry virtuous reflections on its own conscious integrity, has left the matter to regulate itself, in the profound conviction that could be required of it in such case made and provided. But somehow the law was weak, it did not work, and if there ever was a time when a law was systematically disregarded the present is that time. About a twelvemonth ago Sir Leonard Tilley, the Minister of Finance, in the guilelessness of his heart, directed a note to every bank cashier in the Dominion, asking to be informed, in strict confidence, of course, how much of this illicit lending he had been guilty of, and, equally of course, after a liberal allowance of winks and smiles at the old gentleman's winning and childlike confidence the banks refused the information. Sir Leonard returns to the charge, however, and is going to pass a law this session that will compel the banks to be honest in spite of themselves.

BANK CIRCULATION.—Another amendment to the bank charter is on the tapis. Under present arrangements Canadian banks are not allowed to issue notes for circulation to an amount greater than the amount of their paid-up capital. That there is some show of justice in restricting the amount of such issues few will deny. But there does not seem to be any scientific reason for fixing the limit just where it is more than there would be at any other point. As banking is practiced in Canada a limit is most inconvenient at certain periods of the year, not only to the banks but to the public. Many of the banks, having their parent offices in the large cities, have twenty or thirty branches in outlying districts scattered over an immense territory. The Bank of Montreal, for example, has offices on the Eastern seaboard as well as at points two hundred miles beyond Winnipeg, Manitoba, in the heart of the Continent. Its most distant offices are thus separated by close on to two thousand miles, while the bank carries on an extensive business in nearly every important centre of the provinces of Ontario and Quebec. Certain sections of the country may have a larger harvest and need more money than others, and these sections may be occupied to a great extent by the agencies of one particular bank. The inhabitants of such sections may be, and often are, by the working of such a restriction deprived, at the time they most require them, of banking facilities, and the general prosperity of the country is thus retarded. Again there are vast differences in the policy of different banks—not to mention those institutions that seek most of their profits from specu-

lative enterprises, or in the recondite purlieus of the Stock Exchange—one bank cultivates the accounts of wholesale merchants and finds a large share of its profits in the sale to them of sterling exchange; another favors the manufacturing, and a third the produce trade. Restriction of the note circulation is a farce as applied in the cases of the two former whose circulation never exceeds a small proportion of their capital, and is a positive injury to the community in that of the latter class of banks. Under the present Canadian law the holder of the bank note has a first lien on the assets of the bank, and, with reasonable prudence this affords an ample guarantee of sound banking in this particular.

The careful consideration of these amendments to the banking act will test the financial skill of Parliament, and it is satisfactory to note that so eminent a jurist as the Hon. John J. C. Abbott, the recently-elected director of the Merchants' Bank, has been selected as chairman of the Banking Committee of the House of Commons.

The Bank Statement for January shows a falling off in circulation of \$2,800,000, a reduction seven times as great as that of January, 1882. This gives the key to the great reduction in the volume of the retail trade before alluded to, which has caused so much surprise and disappointment to traders generally. Deposits are unchanged. There is a reduction in specie of \$484,000, and in Dominion notes of \$211,000. Loans on stocks, bonds or debentures have been called in to the extent of \$1,580,000, and loans to municipal and other corporations are also reduced some \$510,000. Business discounts have increased \$186,000. These figures indicate extreme pressure on the money market, and though the banks are in the aggregate well able to stand the pressure there cannot be a doubt that the unsound banking of the past twelve months is bearing its fruit. From now to the opening of navigation—that is till the middle of April—the pressure will continue to increase in intensity, and more than one respectable establishment will bow before the storm. Whether those banks whose reckless overtrading has precipitated the present crisis will profit by the lessons they are now reading, remains to be seen. If they do not, the handwriting is on the wall and their day of retribution approaches.

II. NOTES FROM FOREIGN BANKING CENTRES.

[Compiled from Correspondence and other sources for the JOURNAL OF BANKING.]

THE QUESTION who is the owner of a note during its transit is to be laid before the next International Post-office Congress. Hitherto such notes have been returned to the sender, but as the law varies in the different countries, the proposition to have the State considered as proprietor of the remittances, will be offered as a solution.

NATIONAL BANK OF THE ARGENTINE REPUBLIC.—The capital of the National Bank of the Argentine Republic is to be increased to \$20,000,000. This bank has been established only ten years and has fifteen branches, but the creation of these was imposed by the Government in consideration of getting the right to issue notes. The original capital was only eight million dollars. The National Treasury subscribes six millions to the increase.

NEW FRENCH COMPANIES.—The Parisians have been very backward in their formation of new companies during the last quarter of 1882. The amount of capital asked for was 195,965,000 francs, which is far below that of former years for same period. The result for the year 1882 was also inferior, as may be seen from the following table:

Years.		No. of issues.		Capital asked for—France.
1882	90	845,485,100
1881	173	3,096,162,325
1880	210	2,467,626,017
1879	179	2,590,923,333

These figures show in a very striking light the comparative paralysis that now affects French finance. Looking over the list of the companies (14) formed from October 1 to December 31, 1882, we find them to include: An oyster-breeding enterprise; one denominated "Seine Sand and Pebble Co.;" a trans-Caucasian railway; an Italia-French Co. for working Italian petroleum wells (!); an international company for oil gas illumination; a sewerage company, and the Ottoman 5 per cent. preferred bonds.

SAVINGS BANKS AND THE STATE.—The last sitting of the French Society of Political Economy was mostly taken up with a discussion of the question whether savings banks' funds should be managed by the State. The subject was introduced by A. M. Courtois, who seems to be opposed to savings banks. Our friend, Monsieur Malarce, one of the most competent defenders of school and general savings banks was absent. The French Minister of Finance has some 500 million francs belonging to the savings banks in his possession at present, but, as one speaker said, the French have no confidence except in institutions managed by the State. One of the speakers alluded to the fact that shareholders of banks could not be found in France. There is no law even to prevent private individuals from establishing institutions for savings. But the State in France exercises too narrow a policy over the banks in the investment of their funds. The following remarks by one of the debaters presents some effects of savings banks which have not, perhaps, been hitherto presented in the same form: "The purpose of a savings bank is not to enrich economical people, nor even to offer them a profitable investment. It simply replaces the legendary old stocking, and the money drawer. Working people place their money in it so as to take it away from out the current of daily expenses, while, at the same time, it remains at their disposal. But, besides that, the money brings them in an interest which they could not find elsewhere. A certain delay and certain formalities are required for its withdrawal, so that they often change their intention and let it remain. It is thus that many of them are brought to save—sometimes a little despite themselves.

THE ENGLISH FINANCIAL PAPERS continue to call attention to the financial dangers of some of the electric light enterprises. One company wanted to give \$350,000 for an utterly untried patent, and has now been wound up.

THE VICTORIA LOAN of £4,000,000 was only partially placed in the London market, owing to the small advantages offered the financial syndicates.

FRENCH RAILROADS obtain loans in a somewhat different manner from American lines. The bonds are offered at the stations along the line. This would hardly be successful in such an immense and undeveloped country as the United States.

A COMPANY is to be established in Paris with a capital of four million dollars for acquiring the Lexington Mines, Montana, and the Old Telegraph Mines, Utah.

POST-OFFICE SAVINGS BANKS have been opened in Austria. They are on the English system and three per cent. is paid.

THE AMOUNT RECEIVED by the Paris Savings Bank in 1882 was some \$2,350,000. The total deposits on hand are only \$14,500,000.

The Guarantee Company of North America.—The annual report for the year 1882, of this largest and oldest guarantee company of this country, and the only one doing an exclusively guarantee business, makes a very favorable showing. When it is remembered that there has been a good deal of competition in the business and cutting of rates to an injurious extent by competitors in their effort to obtain patronage, while this company has adhered to its standard rates, the result is highly complimentary to the management and indicative of the estimation in which it is held by the public.

During 1882, 7,874 bonds were issued for new business, amounting to \$8,879,125, the annual premiums on which amount to \$72,003. The total business in force on January 1, was 10,659 bonds, covering \$13,623,100, and the total annual revenue was \$122,878. The result for the year is epitomized as follows: After payment of all losses and expenses, making provision for outstandings and reserves for unearned premiums, and paying 6 per cent. on the paid-up capital, the surplus to shareholders was increased to \$31,029, against \$19,368 in 1881. The resources for the security of policyholders consisted of net assets, \$386,286; capital subscribed and subject to call, \$368,600, making a total of \$754,886.

The dividends have been wisely restricted to 6 per cent. per annum, in order to strengthen the surplus. They have thus far been paid out of interest on investments and claims recovered, the premium income having never been used for the purpose. This conservative management is not the least of the company's claims to favorable notice.

NEW BANKS, CHANGES, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National Banks organized since our last report:

- 2897—**First National Bank, Aurora, Nebraska.** Capital, \$50,000. T. A. McKay, President; Wm. C. Wentz, Cashier.
- 2898—**Saxton National Bank, St. Joseph, Missouri.** Capital, \$100,000. A. M. Saxton, President; R. W. Hocker, Assistant Cashier.
- 2899—**Penn National Bank, Reading, Pennsylvania.** Capital, \$100,000. Isaac W. Levan, President; Calvin D. Moses, Cashier.
- 2900—**Farmers' National Bank, Boyertown, Pennsylvania.** Capital, \$50,000. Thos. J. B. Rhoads, President; William R. Grim, Cashier.
- 2901—**Second National Bank, Lexington, Kentucky.** Capital, \$100,000. David H. James, President; W. D. Nicholas, Cashier.
- 2902—**First National Bank, David City, Nebraska.** Capital, \$50,000. Thomas Wolfe, President; J. W. Gross, Cashier.
- 2903—**First National Bank, North Manchester, Indiana.** Capital, \$50,000. Jesse Arnold, President; John R. Wallace, Cashier.
- 2904—**Chester National Bank, Chester, Pennsylvania.** Capital, \$100,000. Samuel A. Dyer, President; Richard Wetherill, Cashier.
- 2905—**Killington National Bank, Rutland, Vermont.** Capital, \$100,000. Redfield Proctor, President; Edson P. Gilson, Acting Cashier.
- 2906—**Farmers' National Bank, Oxford, Pennsylvania.** Capital, \$75,000. James Wood, President; David M. Taylor, Cashier.
- 2907—**Roanoke National Bank, Roanoke, Virginia.** Capital, \$50,000. E. G. McClanahan, President; P. J. Wright, Cashier.
- 2908—**People's National Bank, Barnesville, Ohio.** Capital, \$50,000. J. S. Ely, President; A. E. Dent, Cashier.
- 2909—**Collin County National Bank, McKinney, Texas.** Capital, \$75,000. Girard A. Foote, President; Wm. L. Boyd, Cashier.
- 2910—**Commercial National Bank, Waterloo, Iowa.** Capital, \$50,000. John D. Platt, President; Frank L. Gilbert, Cashier.
- 2911—**First National Bank, Chamberlain, Dakota.** Capital, \$50,000. David H. Henry, President; Patrick Henry, Cashier.
- 2912—**First National Bank, Washington, Kansas.** Capital, \$50,000. J. G. Lowe, President; F. H. Head, Cashier.
- 2913—**Atlantic National Bank, Providence, Rhode Island.** Capital, \$225,000. Caleb G. Burrows, President; Henry S. Mansfield, Cashier.

ALABAMA.

MOBILE.—Bank of Mobile; Albert C. Danner, President, in place of W. H. Pratt, deceased.

ARKANSAS.

NEWPORT.—L. Hirsch & Co. (Jackson County Bank); succeeded by Wolff & Goldman.

CALIFORNIA.

ANAHEIM.—Bank of Anaheim; P. James, President, in place of S. H. Mott.

SAN FRANCISCO.—Bank of British North America; W. Lawson, and C. E. Taylor, Agents, in place of A. McKinlay.

Pacific Bank; Louis Vesaria, Vice-President; Z. S. Eldredge, Acting Cashier, in place of L. Vesaria; H. H. Reynolds, Assistant Cashier.

WOODLAND.—Bank of Woodland; C. F. Thomas, Cashier, in place of C. W. Bush.

COLORADO.

DENVER.—Exchange Bank; assigned to J. M. Strickler, late Cashier.
DURANGO.—Bank of Durango; J. L. McNeil, Vice-President, in place of W. Barth.
LEADVILLE.—First National Bank; O. M. Webster, Assistant Cashier.
RICO.—Rico Banking Co. has been recently organized.

DAKOTA.

CHAMBERLAIN.—First National Bank has been authorized to commence business. Capital, \$50,000. President, David H. Henry; Cashier, Patrick Henry.
GRAND FORKS.—Vermont Loan & Trust Co.; Bosard & Clifford, attorneys, retire.
LISBON.—Frank S. Allen's Sons; dissolved. Drew B. Allen continues.
SIOUX FALLS.—Dakota National Bank; Porter P. Peck, Cashier, in place of T. H. Brown; C. A. Greeley, Vice-President.
WATERTOWN.—Walrath & Sheldon (Codington County Bank); about to organize under National Bank Act.

ILLINOIS.

CHICAGO.—Merchants' National Bank; Jno. C. Neely, Cashier; F. W. Crosby, 2d Vice-President.
 Bank of British North America; H. M. Bredon, Agent, in place of R. Steven.
 R. H. Parks & Co.; dissolved.
HENNEPIN.—Hennepin Bank has been established. President, John Berkstresser; Cashier, Ira B. Lesh.
STREATOR.—Union National Bank; no Vice-President in place of I. Ames.
WATERLOO.—Commercial Bank is reported as recently established.

INDIANA.

EVANSVILLE.—Citizens' National Bank; S. P. Gillett, President, in place of M. Henning; no Cashier in place of S. P. Gillett; C. P. Bacon, Vice-President; W. L. Swormstedt, Assistant Cashier.
HOPE.—Citizens' Bank has been recently established.
NORTH MANCHESTER.—Manchester Bank; now First National Bank. Capital, \$50,000. President, Jesse Arnold; Cashier, John R. Wallace.

IOWA.

BURLINGTON.—Commercial Bank has been recently established. President, John M. Gregg; Cashier, E. McKitterick.
COUNCIL BLUFFS.—Iowa State Savings Institution has been opened for business. Capital, \$50,000. President, L. W. Tulleys; Cashier, J. V. McDowell.
EXIRA.—Bank of Exira; sold out to Watson & Henshaw.
INDIANOLA.—First National Bank; J. G. Sandy, President, in place of A. R. Henry; Elisha Hardin, Vice-President, in place of J. G. Sandy.
KNOX.—J. A. Garner & Co. (Exchange Bank); sold out to Samuel Beatty.
MT. PLEASANT.—First National Bank; T. J. Van Horn, Cashier, in place of H. S. Clarke; no Assistant Cashier in place of T. J. Van Horn.
SPIRIT LAKE.—Dickinson County Bank; M. E. Duff, President; W. E. Odell, Vice-President; George E. Pearsall, Cashier.
UNION.—Citizens' Bank has been established. Capital, \$25,000.
WASHINGTON.—First National Bank; Norman Everson, President, in place of J. Keck; Wm. Blair, Vice-President; Frank Knox, Assistant Cashier.
WATERLOO.—Commercial Bank; succeeded by Commercial National Bank. Capital, \$50,000. Same officers.
WEST UNION.—Bank of West Union and the Union Banking Co. are reported as recently established.

KANSAS.

CAWKER CITY.—First National Bank; E. E. Parker, Cashier, in place of H. P. Stimson; H. P. Stimson, Vice-President, in place of E. E. Parker.

BANKERS' OBITUARY RECORD.

Champlin.—John S. Champlin, President of the Ashaway National Bank, of Ashaway, R.I., died March 14, 1883, aged seventy-one years.

Mr. Champlin was born in Lebanon, Conn., and removed to Rhode Island at the age of 14, where he learned the trade of tanner and currier. He was a Director of the bank since its organization in 1855, and was for eighteen years its President. Among other responsible positions he held that of member of the Town Council 19 years, member of the General Assembly 5 years, and was Town Treasurer for nearly 20 years up to the time of his death.

Thayer.—Nathaniel Thayer, of John E. Thayer & Bro., bankers, of Boston, Mass., died March 7, 1883, aged 75 years.

The deceased was equally well-known as a munificent patron of learning and a successful man of business. Of old Puritan descent, born at Lancaster, Mass., he early established the above firm at Boston, in connection with his brother. They were for many years interested in many railroad enterprises, chiefly in the West, and were thus instrumental in developing the industries of the country. Mr. Thayer was much interested in Harvard College, his direct benefactions to it exceeding \$250,000. He defrayed the expenses of the late Professor Agassiz's scientific expedition to Brazil.

Orvis.—Joseph Upham Orvis, of the firm of J. U. Orvis & Co., bankers, of New York, died March 30, 1883, aged sixty-six years.

The deceased was for the past thirty years closely identified with the commercial and financial interests of the country. He was born at Granville, N. Y., and early in life entered the dry goods business. For 23 years he was connected with this business in Troy, where he was also Vice-President, and virtual manager, of the Mutual Bank, and Vice-President of the Troy Savings Bank. Removing to New York in 1854, he aided in organizing the Park Bank, and, in 1864, projected and organized the Ninth National Bank, of which he was President until 1867. In this period he rendered valuable financial aid to the Government. After this he was connected with a number of institutions, and in 1870 established with his two sons the private banking firm of J. U. Orvis & Co. His death occurred at Palatka, Fla. He was active in benevolent works, and was esteemed a kindly, courteous gentleman.

Parker.—John Parker, Cashier of the Phenix National Bank, New York, died April 1, 1883, aged sixty-five years.

Mr. Parker was born at Curaçoa, W. I., and came to this country when very young. He entered the Phenix Bank at the age of 19, remaining in its service 47 years. He was made Cashier 19 years ago, and was reputed an excellent financier, as well as a courteous and friendly man.

Throckmorton.—A. R. Throckmorton, President of the Freehold National Banking Company, of Freehold, N. J., died March 3, 1883, aged sixty-four years.

The deceased came of good New Jersey stock. After a few years' business experience he studied law, and began to practice in 1841; was elected Secretary of the State Senate in 1854, and served three years; served as Surrogate from 1867 to 1882, when he became President of the above bank, of which he had been a Director since its incorporation. By his influence the "citizens" movement in favor of non-partisan elections in Freehold has long been successful. He was foremost in all public objects, and much beloved in private life.

Kingsbury.—Asa Kingsbury, President of the First National Bank of Cassopolis, Mich., died about the middle of March.

Prescott.—A. Prescott, head of the late firm of Prescott & Co., bankers and loan agents, of Topeka, Kans., committed suicide by shooting himself on February 23d, last. He was a victim of nervous disorders which caused aberration.

Merrill.—Benjamin L. Merrill, President of the National Granite State Bank, of Exeter, N. H., died in February last.

Smith.—Charles W. Smith, a prominent cotton manufacturer, of Worcester, Mass., and until recently President of the Mechanic's National Bank, committed suicide on March 3. He was in shattered health, and probably temporarily insane.

Taylor.—James W. Taylor, Vice-President of the Highland National Bank, of Newburgh, N. Y., died March 1, aged 55 years. He was a prominent member of the Bar, and was for some years Register in Bankruptcy.

Matthews.—John Matthews, Vice-President of the Murray Hill Bank, New York, who died in March, was a member of the old and respected soda-water manufacturing firm that was established by his father. He was very highly esteemed both as a business man and friend.

Chapman.—Henry G. Chapman, who died while on a voyage for health, at Manila, on March 14, was formerly a member of the banking firm of Ward, Campbell & Co., of New York. A son of Maria Weston Chapman, and born in Boston, he was while young employed by Barings, of London. He was President of the New York Stock Exchange during the panic in 1873, when his decided action elicited much praise.

Rathbone.—George W. Rathbone, formerly President of the Bank of the State of Indiana, and afterward President of the Evansville National Bank, died March 11, in New York, where he had resided since 1869.

Janis.—Jules F. Janis, of Harris & Janis, bankers, of St. Genevieve, Mo., died on March 4.

Allen.—Luke F. Allen, President of the First National Bank of Grafton, Mass., died February 11, aged 68 years.

Ganson.—James M. Ganson, who died in Buffalo on March 19, was connected with banks in Batavia and Buffalo for many years. In 1850 he assisted in organizing the Marine Bank, Buffalo, and managed it for 10 years. He was afterward President of the Bank of Attica, Buffalo, but retired from business some years ago.

Moore.—The death, at the early age of 33, of Horace Moore, accountant of the Hong Kong and Shanghai Banking Corporation, a few weeks since, was regretted by a wide circle of friends in and around New York.

Morgan.—Henry T. Morgan, an old member of the New York Stock Exchange, died January 27, at the age of sixty-eight. He was a native of Massachusetts, but spent a large part of his life in Wall Street. He was formerly one of the best known brokers on the Exchange, but more latterly dealt almost exclusively in investment securities. He amassed a large fortune and was esteemed for his integrity. The head of the present firm of A. C. Morgan & Co., is his nephew.

Stickland.—John D. Stickland, a well known member of the New York Stock Exchange, died January 11, aged forty-two years. He was born in London, England, but came to this country in early youth and entered the house of which Colonel Henry G. Stebbins was the head. Here he remained until he engaged in business for himself. He was highly respected for his honesty and sincerity of character.

Loughead.—George P. Loughead, Cashier of the Penn National Bank, Philadelphia, Pa., died January 5, 1883, in his sixty-first year. The deceased was born in Philadelphia, and had held his position for fifteen years.

Jarreau.—Mr. J. E. Jarreau, Assistant Cashier of the State National Bank, New Orleans, La., died December 6, 1882, aged fifty-two years.

Tilton.—Benjamin Tilton, President of the First National Bank of Cambridge, Cambridgeport, Mass., died November 23, 1882, aged seventy-seven years.

Sache.—William Sache formerly manager of the ill-fated Royal Canadian Bank in Montreal, died at Montreal on the 26th of January, at the age of fifty-eight. Mr. Sache had been ailing for some time but his decease was unexpected.

Benson.—Gustavus A. Benson, of the firm of Benson & Townsend, bankers, of Philadelphia, Pa., died on March 22, aged seventy-six years. He was connected with the Presbyterian Bible Society and the Board of Home Missions.

Mills.—James W. Mills, sometime President of the Mechanics and Traders' National Bank of New York, died March 11, aged sixty years.

Beardsley.—Joseph A. Beardsley, who died in Brooklyn on March 19, aged sixty-six years, was for twenty-seven years connected with the Bank of North America, and for fourteen years held the position of Cashier. He retired a few years ago.

Stewart.—Solomon P. Stewart, President of the Citizens' Bank of Northfield, Minn., died February 23, 1883, aged nearly sixty years.

Mr. Stewart was born in Massachusetts; and went to Wisconsin in 1844, but finally settled in Northfield in 1857. He was President of the Citizens' Bank since its organization, and was in the lumber business since 1866. He sat in the Legislature, and also served as mayor several times. A man of high character, he was regretted by a wide circle of friends.

NOTICES OF NEW BOOKS.

Cyclopædia of Political Science, Political Economy, and of the Political History of the United States. By the best American and European writers. Edited by JOHN J. LALOR. Vol. II. Chicago: Melbert B. Cary & Company. 1883.

This second volume of a work, of the first volume of which we had to speak so highly when it appeared, more than fulfils its first promise. First, as to mere bulk, this volume contains 1055 pages (exclusive of index), being over 200 pages more than the first contained, and including the heads from "East India Company" to "Nullification." The number of subjects treated does not bear the same proportion of increase, as the present volume contains a large number of articles requiring full treatment. Among these, for instance, are the following countries: East Indies, Ecuador, Egypt, France, German Empire, Great Britain, Greece, Guatemala, Honduras, Ireland, Italy, Liberia, Mexico, Morocco, Netherlands, New Granada, Nicaragua and Norway. Among contemporary American writers who are represented by contributions, we notice the following: Hon. D. A. Wells ("Free Trade," etc. We are informed that the subject of Protection will be treated in the third volume), Hon. A. R. Spofford, R. W. Raymond ("Mines"), Prof. E. Munroe Smith ("Nationality"), Simon Sterne ("Monopolies"), J. D. Weeks, Horace White ("Money & its Substitutes"), Frederick W. Whitridge, Edward Atkinson, Albert S. Bolles ("American Finance"), Worthington C. Ford ("Internal Revenue of the United States," etc.), Alexander Johnston (a number of articles concerning the political history of the United States, etc.), John W. Clappitt ("Law," etc.), E. J. James ("Science of Finance," etc.), Max Eberhardt ("German Empire"), Hon. Horatio C. Burchard ("Gold"), John Fiske ("Great Britain," etc.), George Walton Green ("Municipal Bonds"), W. E. Griffis ("Japan"), Edward Cary, Hon. Dorman B. Eaton, and others. Among the distinguished foreign writers on foreign and economic subjects, we find the well-known names, Right Hon. Henry Fawcett, A. M. Sullivan, M. P., Ernest Renan, Saint-Hilaire, Bastait, Bloch, Bluntschli; Clément, Royer-Collard, Signor Finali, Garnier, Horn, Cliffe-Leslie, Roscher, Leon Say, Jules Simon, etc. Of course no review of any of the articles would be of use here, as among such a mass of matter it would be almost impossible to know where to begin. It will be seen that the labor has been done by the most eminent writers in their several departments. The editorial part evidences great industry and excellent judgment on the part of Mr. Lalor.

A New Political Economy. By JOHN M. GREGORY, LL. D., Ex-President of Illinois Industrial University. Ex-Superintendent of Public Instruction for Michigan. Van Antwerp, Bragg & Co. Cincinnati. New York.

This work, which forms a volume of moderate size, containing 383 pages and a full index, is offered as an essentially new statement of the facts and principles of Political Economy. The new features are: (1) The clear recognition of Wants, Work, and Wealth as constituting the field of economic science; (2) The division of the science into three distinct fields, recognizing man, and the two great crystallizations of man into society and States as each having its separate problems; (3) A new definition and description of value as made up of the factors, Utility, Effort, and Ownership; (4) The new division of the discussion arising out of these new definitions; (5) The

aid rendered to the reader and student by the diagrams and synoptical views. Partly from the force of habit the author has given his book a form adapting it to the use of schools and colleges. It will be remembered that he is a member of the new Civil Service Commission.

Proposals for an American Bi-metallic Union. By WILLIAM BROWN. Montreal John Lovell & Son.

In this pamphlet the author proposes a union of all the countries of this continent similar to the Latin Monetary Union, with "a series of international coins of gold and silver known at a glance by every dweller from Cape Horn to Labrador;" these to be coined at the ratio of $15\frac{1}{4}$ to 1. The writer is evidently an earnest student of finance, but, at present, his project seems no nearer accomplishment than Mr. Helper's proposed railroad along the backbone of the continent.

Paths to Wealth. By JOHN D. KNOX. Illustrated. Printed for the Author. New York: Phillips & Hunt. Cincinnati: Walden & Stowe. Topeka, Kans.: John D. Knox & Co. 1883.

This book is the result of the labors of the spare hours of a busy practical banker, and was written and published because he had seen so much misery grow out of poverty and bad management that he felt constrained to do all he could to improve matters. He has attempted to adapt the style to young beginners, as well as to interest maturer minds. His book is full of judicious advice, and bristling with apt quotations, and illustrations from the experience of distinguished men. It would make a very appropriate gift-book to young men, but no doubt many of the "old boys" would find much in it to instruct and amuse.

The New Tariff and Revenue Bill. Also a *Synopsis of the New Postal Law.* Published for their customers, by Fisk & Hatch, New York.

Journal of the Institute of Bankers. Vols. I. and II. Vol. 3, parts 1-9. London: Waterlow & Sons, Limited; Effingham Wilson, Royal Exchange.

This Journal is adapted to form a highly valuable addition to the library of every banker, containing, as it does, valuable papers and essays read before the London Institute of Bankers, and discussions on points of practical interest, as well as legal decisions.

The Statesman's Year-Book. Statistical and Historical Annual of the States of the Civilized World for the Year 1883. London: Macmillan & Co. 1883.

This invaluable compilation has recently lost, by death, its founder and editor, Mr. Frederick Martin, who has had charge of it for the past nineteen years. It is so well known as to hardly require description. Suffice it to say that it is an epitome of knowledge respecting every country in the world, giving a compact description of the constitution, government, and church, and statistics of education, army and navy, area and population, trade and industry, etc., etc. We believe it to be the best work of its kind in the English language (if not in the world), and it recommends itself as much on account of what it does not, as what it does, contain.

Ideas for a Science of Good Government, in Addresses, Letters, and Articles on a Strictly National Currency, Tariff, and Civil Service. By Hon. PETER COOPER, LL.D. New York: Trow's Printing and Bookbinding Company. 1883.

This is a compilation of ideas derived from the intercourse of the venerable author of the book with statesmen, divines, scholars, etc., on the subjects mentioned in the title, and which he considers it his duty to transmit to posterity. The value of the book is much impaired from the lack of a systematic arrangement of the matter and table of contents.

Financial Review. (Annual) 1883. Commerce, Banking, Investments. William B. Dana, & Co., Publishers, Office of the Commercial and Financial Chronicle. New York.

This well known compilation, the value and correctness of which are acknowledged by all who use it (and they are many), is fully up to the usual standard. The tables, showing the highest and lowest prices of railroad bonds and stocks in each month, go back to the year 1873; the prices of Government and State securities are shown since the year 1860: foreign exchange quotations are carried back to include 1870, and the banking and financial review, as well as the review of foreign trade and commerce and of the money market, are very complete.

RAILROAD FINANCES AND NEWS.

(A synopsis of Railroad finances and affairs of interest to Bankers, Investors, &c.
Classification: I. New Issues. II. Reports. III. Miscellaneous R. R. News).

I. NEW ISSUES.

PHILADELPHIA, GERMANTOWN AND CHESTNUT HILL.—At a meeting of stockholders, on March 26th, of the Germantown, and Chestnut Hill Railroad Company the lease of that road and its franchises to the Pennsylvania Railroad Company, for the period of 30 years, from May 1, 1883, was ratified. The issue of \$1,000,000 in bonds, on which the Pennsylvania Railroad Company guarantees $\frac{4}{8}$ per cent. per annum, was also approved.

PORTAGE, WESTBOURNE AND NORTHWESTERN.—At the annual meeting of the stockholders held in Winnipeg, Man., on March 23d, it was resolved to increase the capital stock to \$5,000,000 and to vigorously prosecute the work of the construction from Gladstone, the present terminus. The directors subsequently met and elected the following officers: *President*, Andrew Allen, of Montreal; *Vice-President*, Duncan MacArthur, of Winnipeg; *Secretary and Treasurer*, F. H. Brydges, of Winnipeg. Some of the Board of Directors will proceed to England shortly after the adjournment of the Canadian Parliament, to float the bonds of the company.

THE LOUISVILLE, NEW ALBANY AND ST. LOUIS RAILROAD COMPANY will ask its bondholders to fund their coupons for the next two years. This is the road which was built by Boston capitalists east from St. Louis through Southern Illinois to New Albany on the Ohio River in Indiana, opposite Louisville, Ky.

THE ALLEGANY CENTRAL RAILROAD was merged, on March 24, with the Lackawanna and Pittsburgh Railroad by vote of the stockholders of the two corporations. The consolidated road will bear the name Lackawanna and Pittsburgh. It will form a line of about 120 miles, extending from Perkinsville to Olean, which joins the Delaware, Lackawanna and Western Railroad at the former point, and the Buffalo, New York and Philadelphia system at the latter point. The Lackawanna and Pittsburgh is to make an issue of \$1,500,000 of preferred stock. Of this amount \$1,000,000 will be issued share for share for the stock of the Allegany Central, and the remainder will be deposited in the treasury of the company. The road will be practically under control of the Buffalo, New York and Philadelphia.

CHATTEROI RAILROAD, AND CINCINNATI AND EASTERN.—A combination has been formed between some of the heavy stockholders of these roads by which the control of both will be placed in the hands of the new company, with the intention of completing the Cincinnati and Eastern. The two roads will thereafter be operated as one line. It is the intention of the company to extend the Chatteroi Road through the mountains to the East, where a junction will be made with the Virginia roads, and Cincinnati will have a new trunk line to the sea-board and the lower Atlantic coast States. The two millions in bonds recently issued by the Cincinnati and Eastern, but only a part of which have been sold, will be negotiated by the new company.

THE CINCINNATI, WHEELING AND NEW YORK RAILROAD, which is now building, forms the western part of a new trunk line between Cincinnati and New York, by way of the Reading system. With its two branches, one tapping the Cleveland, Tuscarawas Valley and Wheeling Road at Freeport, and the other extending South from the main line at McConnellsville to Marietta, it will be 300 miles in length. Of this

only 12¼ miles, from Senecaville to Cumberland, is built and in operation, though 29 miles are graded for track-laying and will soon be ready for business. The road will be capitalized at \$33,333.33 per mile, and will be bonded at \$20,000 per mile first mortgage, and \$10,000 per mile income bonds, as constructed.

THE GRAND TRUNK RAILWAY report of the working of the combined lines from Aug. 12 to Dec. 31 was issued March 22. The gross receipts, as compared with those of the corresponding period in the previous year, show an increase of 14 per cent. The working expenses have decreased 6 per cent. The Directors propose at an early date to invite subscriptions for £750,000 perpetual 4 per cent. debenture stock for the redemption of pre-preference securities now maturing, and to provide for other capital requirements. The President will submit at a meeting the views of the Board respecting the consideration of the debenture and other stocks of the company, and the separation of the contingent from the more immediate rights of the share capital.

THE PONTIAC RAILWAY COMPANY has raised \$1,500,000 in London, England, on 6 per cent. bonds, and is paying off its liabilities.

THE MONTREAL AND SOREL RAILWAY COMPANY has authorized the issue of \$2,000,000 worth of bonds, in order to pay off claims.

NORTHWESTERN MINNESOTA AND RED RIVER VALLEY RAILROAD COMPANY.—The articles of incorporation were filed by New York parties with the Secretary of State of Minnesota on March 15. The line is to run from Brainerd and the crossing of the Crow Wing River by the Northern Pacific Railway Company to a point on the northern boundary of the State. The principal offices of the company are to be in St. Paul. The capital stock of the company is \$5,000,000, (which is also the limit of indebtedness) and is divided into 500,000 shares of \$100 each.

COLUMBUS, CHICAGO AND INDIANA CENTRAL.—A final meeting of the bondholders was held on March 20, at which the action of the Purchasing Committee, in buying in the road, and arranging for the conversion of the old bonds and stocks into new securities, was approved. The road will be reorganized under the name of the Chicago, St. Louis and Pittsburgh Railroad, and will remain a part of the Pennsylvania Railroad system. It will be bonded for \$22,000,000. Its capital stock will be \$31,000,000—\$20,000,000 in preferred and \$10,000,000 in common stock. It will begin with a surplus of over \$3,500,000. Almost the entire amount of stock, bonds, and miscellaneous liabilities were converted under the plan of the committee. The certificates of the new company will be ready for listing on the Stock Exchange by April 15.

PONTIAC AND PACIFIC JUNCTION.—Bonds for the construction have been successfully floated in the English market. They are for \$20,000 per mile, and are guaranteed by the Quebec Government. This insures the construction of the entire road between Hull and Pembroke.

ATLANTIC CITY NARROW GAUGE.—Mr. Gowen, as Trustee of the Jersey Central interest, has completed negotiations for the purchase of this railway. The bonds of the company, amounting to \$330,000, are to be retired, and in lieu thereof \$500,000 of 5 per cent. bonds issued to cover the present indebtedness, and also to provide funds for improving the condition of the line and changing the gauge to standard.

ALBANY AND SUSQUEHANNA.—A resolution was adopted at a meeting of the Board of Directors to publish the fact that counterfeits of the second mortgage bonds of the company have been detected. The issue of the bonds amounts to \$2,000,000, and there are outstanding \$1,700,000. The Board of Directors decided to ask the holders to present them for verification. Holders who desire will receive par and interest for their bonds, or the consolidated first mortgage bonds will be issued in place of them. All classes of bonds bear 7 per cent. interest. The second mortgage, amounting to \$2,000,000, falls due in 1885; the first mortgage, \$1,000,000, in 1885, and the consolidated first mortgage, \$3,000,000 issued to take the place of the other two classes, in 1906. By this arrangement the second mortgage bonds can be entirely wiped out and trouble from counterfeits avoided. There are several discrepancies in the counterfeits, including the color of the paper and the signatures.

WESTERN NORTH CAROLINA.—The North Carolina Legislature has passed a bill, allowing this company to market its bonds, and relieving it from its contract to build its line to Murphy.

THE CHICAGO, ST. LOUIS AND PITTSBURGH RAILROAD COMPANY has made to Conrad Baker, of Indianapolis, and the Union Trust Company, of New York, as Trustees, a first mortgage for \$22,000,000, due and payable Oct. 1, 1933, with interest at 5 per cent. The mortgage covers all the property of the company.

PHILADELPHIA AND LONG BRANCH.—The stockholders, on March 16, authorized the capital stock to be increased from \$200,000 to \$400,000. The object of the increase is to liquidate the cost of construction, which, including several extensions not at first contemplated, has been about double the original estimate. The road has no bonded debt.

OREGON AND CALIFORNIA.—The lease to the Oregon and Transcontinental was ratified March 17. A contract was also entered into by which the lessee company agrees to complete and equip the remaining 12½ miles of the Oregon and California Southern extension necessary to give connection with the Central Pacific Road. For this work the Oregon and Transcontinental Company will receive first mortgage bonds issued at the rate of \$20,000 per mile and second mortgage bonds issued at the rate of \$10,000 per mile, which will amount in the aggregate to about \$7,000,000.

COUNTERFEITED RAILROAD BONDS.—It was discovered recently that Dewitt County (Ill.) Railroad bonds issued in 1880 have been extensively counterfeited and put on the market.

MEXICAN CENTRAL.—The entire subscription to the securities under circular No. 4 amounted, at the close of the books, to \$7,229,500, or \$1,197,000 more than was asked for.

CHARLESTON AND SAVANNAH.—At the recent annual meeting it was resolved to issue \$150,000 of first mortgage bonds, to take up pressing judgments; also to increase the authorized amount of bonds to \$1,000,000, to provide new equipment and improve the road.

II. REPORTS.

CLEVELAND, COLUMBUS, CINCINNATI AND INDIANAPOLIS.—For the year ended December 31, 1882, the gross receipts were \$4,441,600; total expenses, taxes, interest, etc., \$3,582,938; net surplus income, \$858,662; dividend No. 17 of 2 per cent. payable Feb. 1, 1883, \$299,984; balance for the year, \$558,678. The following shows the earnings:

	1882.	1881.
Total gross earnings	\$4,838,476	\$4,290,360
Operating expenses.....	2,962,778	2,907,169
Net earnings.....	\$1,875,697	\$1,383,191

The income account gives the following summary:

Total income.....	\$1,572,127	\$1,441,963
Total disbursements.....	632,204	588,174
Balance surplus.....	\$939,923	\$853,789

The stock and bonds were as follows:

Common stock.....	\$14,991,600	\$14,991,700
Bonds.....	6,285,000	6,408,000

WABASH, ST. LOUIS AND PACIFIC.—The net earnings for the year ended December 31, 1882, show an increase of \$1,512,002, with an increase of 622 miles in the average length of road operated. Notwithstanding this gain in the profits, the interest charges and rentals increased in a larger ratio, and, therefore, the result was less satisfactory than was expected. The mileage operated increased from 3,348 to 3,518 in the year. Following shows the earnings:

	1882.	1881.
Total gross earnings.....	\$16,861,689	\$14,467,789
Total operating expenses.....	11,664,723	10,792,943
Net earnings.....	\$5,196,967	\$3,674,846

Summary of income account:

Total income	\$5,515,697	..	\$3,952,091
Total disbursements.....	6,098,719	..	6,424,128
Balance deficit.....	\$583,022	..	\$2,472,037

Stock and bonds:

Common stock.....	\$27,140,500	..	\$26,921,500
Preferred stock.....	23,034,200	..	23,033,200
Funded debt.....	70,937,854	..	66,291,858

ILLINOIS CENTRAL.—The gross traffic in the year ended December 31, 1882, shows an increase over 1881 of \$318,914. Two dividends of 3½ per cent. were paid and permanent improvements made, costing \$1,271,451. Following shows the earnings:

	1882.	..	1881.
Total gross earnings.....	\$8,905,312	..	\$8,586,397
Total operating expenses.....	3,998,566	..	4,158,168
Net earnings.....	\$4,906,746	..	\$4,428,231

Summary of income account:

Total net income.....	\$5,234,303	..	\$4,875,560
Total disbursements.....	5,078,429	..	4,824,428
Balance surplus.....	\$155,874	..	\$51,132

Stock and bonds:

Common stock.....	\$29,000,000	..	\$29,000,000
Bonds.....	9,831,000	..	9,919,500

ST. LOUIS AND SAN FRANCISCO RAILWAY.—The report for the year ended December 31, 1882, shows that mileage increased from 661 to 725 in the year. The earnings were:

	1882.	..	1881.
Total gross earnings.....	\$3,572,240	..	\$3,160,523
Total operating expenses.....	1,625,781	..	1,617,968
Net earnings.....	\$1,946,459	..	\$1,542,557

Income account:

Total net income.....	\$2,003,316	..	\$1,593,205
Total disbursements.....	1,499,754	..	1,408,932
Balance surplus.....	\$503,562	..	\$184,273

Stock and bonds:

Common stock.....	\$10,500,000	..	\$10,500,000
Preferred stock.....	10,000,000	..	10,000,000
1st Preferred stock.....	4,500,000	..	4,500,000
Funded debt.....	20,364,000	..	18,650,000

PENNSYLVANIA RAILROAD.—The report for the year ended December 31, 1882, shows that the earnings on all lines east of Pittsburgh and Erie were:

	1882.	..	1881.
Gross earnings.....	\$49,079,834	..	\$44,124,182
Operating expenses	30,647,405	..	26,709,809
Net earnings.....	\$18,432,429	..	\$17,414,373

Following were the earnings on all the lines east and west of Pittsburgh and Erie:

Gross traffic earnings.....	\$79,889,068	..	\$75,182,973
Operating expenses.....	50,737,534	..	46,243,277
Net earnings.....	\$29,151,534	..	\$28,939,696

Summary of income account:

Balance to credit of income account.....	\$8,514,520	..	\$8,080,968
Dividends..... (8½ per cent.)....	6,890,715	(8 p. c.)	5,861,718
Balance to credit of profit and loss for year.....	\$1,623,805	..	\$2,199,265
Add profit on sale of securities, etc.....	268,755	..	350,866
	<hr/>		<hr/>
	\$1,850,560	..	\$2,550,131
Add amount to credit of profit and loss, Jan. 1.....	10,344,079	..	7,798,949
	<hr/>		<hr/>
Balance to credit of profit and loss, Dec. 31.....	\$12,194,639	..	\$10,344,079

Stock and bonds:

Capital stock.....	\$85,301,300	..	\$77,672,750
Funded debt.....	57,323,920	..	57,906,186

PHILADELPHIA, WILMINGTON AND BALTIMORE.—The report for the year ended October 31, 1882, shows that the total earnings of all the lines were \$5,428,062; expenses, \$3,676,494; net earnings, \$1,751,568. In 1880-81 the gross earnings were \$4,578,622; and net earnings, \$1,551,431. After deducting fixed charges and two dividends of 4 per cent. each, the surplus for the year was \$333,013. The final balance on November 1, 1882, was \$1,465,585. The stock, \$11,795,060, and bonds, \$3,723,416, were unchanged during the year.

UNION PACIFIC.—The report for the year ended December 31, 1882, shows the following earnings:

	1882.	..	1881.
Total gross earnings.....	\$22,823,884	..	\$24,258,817
Total operating expenses, including taxes.....	10,727,049	..	12,480,343
	<hr/>		<hr/>
Net earnings.....	\$12,096,835	..	\$11,778,474

Summary of income account:

Total income.....	\$14,307,934	..	\$13,111,152
Total disbursements.....	11,967,827	..	10,972,817
	<hr/>		<hr/>
Balance surplus.....	\$2,340,107	..	\$2,138,335

The stock, \$30,868,500, was unchanged. The funded debt was decreased from \$82,118,123 to \$81,845,507. Seven per cent. was paid in dividends.

HANNIBAL AND ST. JOSEPH.—The earnings in the year ended December 31, 1882 were:

	1882.	..	1881.
Total gross earnings.....	\$2,419,600	..	\$2,257,281
Operating expenses and taxes.....	1,375,776	..	1,437,298
	<hr/>		<hr/>
Net earnings.....	\$1,043,824	..	\$819,983

Summary of income account:

Total income.....	\$1,048,570	..	\$1,188,271
Total disbursements.....	1,008,760	..	1,134,457
	<hr/>		<hr/>
Balance surplus.....	\$39,810	..	\$53,814

The common stock, \$9,168,700; preferred stock, \$5,063,024; and bonds, \$8,633,000, were unchanged during the year. Dividends were paid on preferred stock of 6½ per cent. in all, against 7 in 1881.

III. MISCELLANEOUS R. R. NEWS.

NEW CONSTRUCTION.—Preparations are being made for building about 600 miles of new railroad in Michigan alone, this year, whereas less than 300 miles of new track were laid last year. The Chicago "Railway Age" says: "This statement may be taken as suggestive of the prospects generally."

KANSAS.—The Legislature has passed a law for the appointment of a board of railroad commissioners, with general supervision over the railways, but without the dangerous power to fix the rates.

NEW YORK, WEST SHORE AND BUFFALO.—The negotiations with the Boston, Hoosac Tunnel and Western have been concluded. The latter has disposed of all the interests west of Hoffman's Ferry to the former company, and also agrees to extend its road from Schenectady to a connection with it. The West Shore is to pay \$400,000 in cash, and \$70,000 in its stock to the Continental Construction Company, which was building and controlled the Hoosac Tunnel road.

NEW ORLEANS PACIFIC.—The President has approved the application of this company for a transfer to itself of the land granted to the New Orleans, Baton Rouge and Vicksburg Railroad. This action in favor of the New Orleans Pacific (now owned and operated by the Texas Pacific) is said to be final.

MASSACHUSETTS CENTRAL.—The bonds heretofore issued were ratified and approved at a special meeting of the stockholders on March 17. The directors have decided on a plan of re-organization, and have secured the consent of the holders of nearly \$3,000,000 bonds.

THE ATLANTIC AND PACIFIC RAILWAY will be completed to the terminus at the Colorado River about June 1. It will there connect with the Southern Pacific line, which is building eastward from San Francisco, and which will probably be completed to the Colorado River by June 1; so that this new route to the Pacific is expected to be open by July 1, 1883.

THE WESTERN OF ALABAMA has been held by the Central of Georgia and Georgia Railroad Companies as joint owners since its purchase some years since. It is now decided to capitalize the ownership and issue \$3,000,000 stock, one-half to each company.

BOSTON AND MAINE.—EASTERN.—An agreement for the consolidation of these two roads was approved by the directors of the latter on March 13, and is to be submitted to the stockholders. It has already been ratified by the Boston and Maine.

AFTER BANK HOURS.

— Children of wealth—The Rothschildren.—*Life*.

— Why was Pharoah's daughter like a broker? She got a little "prophet" from the rushes on the banks.—*San Francisco News Letter*.

— There have been a large number of failures recently. The one that made most stir on "the street," about March 10, was—Wiggins'.

— It was a Boston widow who tripped into a broker's office the other day with \$5,000 in a reticule, and said:

"Mr. Brown, I'm going to be married this Spring."

"Is that possible! Allow me to congratulate the lucky man."

"Certainly—thanks. Here is \$5,000 in cash. I want to be worth at least \$15,000 by April 1. Won't you please take this and invest it in some stocks which will raise three hundred per cent? Do, that's a good man, and you may take out \$25 for your trouble!"—*Wall Street News*.

— A Connecticut banker, always rigidly accurate, quoted two lines of a hymn sung at a funeral: "Ten thousand, thousand (10,000,000) are their tongues. But all their joys are one (1)."

— When Ex-Secretary Evarts visited the Natural Bridge of Virginia the story was told by one of the party that George Washington once threw a silver dollar over the Bridge standing where they were. As it was a rather remarkable feat some of the listeners doubted. "You forget," said Mr. Evarts, "how much farther a dollar went in those days."

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, APRIL 3, 1883.

The predominating feature of the business outlook for some weeks past has been the scarcity of money, and, now that this is passing away, the future prospects have a constant reference to the probabilities of the next harvests. The monetary stringency was partly caused by a flow of cash to the West to move grain to the seaboard, the movement being very heavy for the time being, but it seems that the trouble was also largely due to Treasury operations. For a few months past the balance in the Treasury has been steadily augmented until the reserve has been built up to about the same condition it was in before it was reduced toward the end of last year. Of course the open market has felt the effect of the withdrawal of money, coming, as it did, just when a large amount was required for other purposes. The shipment of gold from Europe helped to supply the deficit, however, and, after a good deal of delay and some figuring, the Acting Secretary of the Treasury, on March 22, ordered the Assistant Treasurer to begin on the 26th to anticipate the payment of the interest due on April 1, amounting to \$7,375,785. This action, together with the arrivals of gold materially assisted to allay the trouble, and the following circular issued from the Treasury Department had a like tendency:

TREASURY DEPARTMENT, WASHINGTON, D. C., MARCH 27.

Notice is hereby given that on Wednesday, April 4, 1883, and on each of the following Wednesdays, United States bonds embraced in the 120th call will be redeemed at the Treasury Department in Washington to the amount of \$5,000,000, with interest to the date of payment.

Bonds presented at the Department at 10 o'clock A. M., on the day before each day named for redemption will be paid in the order of their presentation, and if an excess of \$5,000,000 be presented on either day such excess will be first paid on the next redemption day.

Parties transmitting bonds for redemption should address them to the "Secretary of the Treasury, Loan Division, Washington, D. C.," and the bonds should be assigned to the "Secretary of the Treasury, for redemption." Where checks in payment are desired in favor of any one but the payee, the bonds should be assigned to the "Secretary of the Treasury, for redemption for account of ——" (here insert the name of the person or persons to whose order the check should be made payable).

(Signed)

H. F. FRANCH, Acting Secretary.

Late reports received from various parts of the country indicate a decided revival of business activity in some sections, while in others there is a confident feeling regarding the near future. The feeling in the East is said to be decidedly better, and

in the Middle States there is a moderately increased activity. There is yet, however, a disinclination to anticipate future wants, and buyers are somewhat conservative. In the West there has been a good movement of staple merchandise, which has been hindered in some sections by bad weather. In the South business is fair, being improved in some parts, but in others rather dull, although the feeling is confident. The fears that were lately expressed for the crops in California on account of the dryness of the season, have been dispelled by the recent rains.

BUSINESS FAILURES.—The statistics of business failures which have been completed for the first quarter of the year indicate very plainly the importance of the recent depression in business. The number of failures, as reported to "Bradstreet's" was 3,189, against 2,146 and 1,986 for the first quarters of 1882 and 1881 respectively. The increase in number over the record for the first quarter of 1881 was 1,203, or 60 per cent., and over the first quarter of 1882 the increase is 1,043, or 49 per cent. The liabilities for the past quarter amount to \$43,335,535, against \$29,010,944 in the corresponding quarter of last year, an increase of 45 per cent. The increase in failures over the number for several years back is thus seen to be a very serious one, but it should be noted that by far the greater part of them occurred in the first half of the quarter, the number for several weeks back being comparatively moderate.

So far as the transactions at the bank clearing-houses go to indicate the condition of trade, the month of March in New York does not compare well with the corresponding month last year, but the returns from other points indicate an increase in trade.

FOREIGN TRADE AND GOLD MOVEMENT.—The latest report of the Bureau of Statistics, being for the month of February last, shows a continuance of an excess of merchandise exports over imports. The exports for the month were valued at \$66,856,279; imports, \$56,302,669; excess of exports, \$10,553,610. The excess of exports from January 1 was \$33,989,664, against \$5,744,434 in the corresponding time last year.

The receipts of gold from England up to March 24 amounted to something over 3 million dollars, and has stopped since. On this matter it may be interesting to see what the London "Economist" of the same date says: After saying that there was a good call for money at three per cent., and that the pressure for money here had tended to stiffen the rate, it continues: "We must not lose sight of the fact that the foreign trade of the United States, since the great fall in the prices of commodities over there at the close of last year, has turned very much against this country, and that we are now fast running into debt to that country. Hence, if there is pressure for money in New York, there is more reason for New York to call upon us to cover their requirements. Nor can it be supposed that the new tariff, whatever may be its after effects, can do other than tend to check our exports to America before it comes into force on the 1st July next. There is thus no early prospect of a reaction in the balance of trade, and until money becomes easy again in New York there will remain the probability of gold exports to sustain this market."

TREASURY MATTERS.—The United States Treasurer held on March 31, in United States bonds to secure national bank circulation, \$357,286,400; United States bonds to secure public moneys in national bank depositories March 31, \$16,849,000. The national bank circulation outstanding was: Currency notes, \$359,065,781; gold notes, \$729,284.

The amount of money on deposit in the Treasury for the redemption of notes of

banks reducing circulation was \$32,771,560; banks in liquidation, \$15,310,042; failed banks, \$364,673; making a total fund of \$39,016,275.

The statement of the United States Treasurer shows gold, silver, and United States notes in the Treasury at the same date as follows: Gold coin and bullion, \$184,324,360; silver dollars and bullion, \$107,170,664; fractional silver coin, \$27,802,422; United States notes, \$44,536,262; total, \$363,833,738. Certificates outstanding: Gold, \$42,170,910; silver, \$70,568,490; currency, \$9,680,000.

The following will show the amount of the recent bond calls, the date of maturity and the amount paid on each up to March 31:

Call.		Matured.		Amount.		Amt. paid.
113th	\$11,133,150
114th	Aug. 1, 1882	\$15,000,000	14,908,300
115th	Sept. 13, 1882	15,000,000	15,812,300
116th	Oct. 4, 1882	4,693,300	3,156,700
117th	Dec. 23, 1882	25,000,000	23,474,100
118th	Jan. 13, 1883	15,000,000	14,747,500
119th	Feb. 10, 1883	15,000,000	14,061,550
120th	May 1, 1883	15,000,000	

GOVERNMENT BONDS.—Our intimation of a month since has been verified in the increased demand for this class of security and the higher prices realized.

The following table shows the closing bids for the principal issues of Government bonds on each day of the month of March, and the highest and lowest during the month:

Mar.	3 per	5s, '81.	4½s, '91.	4s, 1907.	C'y 6s.	Mar.	3 per	5s, '81.	4½s, '91.	4s, 1907.	C'y 6s.

THE NATIONAL BANKS.—The following will show the amount of each description of bonds held by the Treasurer to secure national bank circulation, on or about the dates indicated:

	Jan. 1.	Feb. 1.	March 1.	April 1.
Currency 6 per cents.....	\$3,526,000	\$3,526,000	\$3,526,000	\$3,509,000
5 per cents.....	15,000	15,000	15,000	15,000
4½ per cents.....	35,915,500	35,210,200	35,755,200	37,630,400
4 per cents.....	106,080,000	105,179,700	104,950,950	104,948,550
5 per cents extended at 3½.....	20,805,950	18,324,850	14,733,350	11,238,550
6 per cents extended at 3½.....	1,494,900			640,700
3 per cents.....	122,668,700	126,379,700	127,953,300	129,169,200
Total.....	\$360,531,650	\$359,235,455	\$357,983,800	\$357,301,400

MONEY AND DOMESTIC EXCHANGE.—While, as mentioned before, there has been some easing of the pressure for loans, yet matters have not yet regained the normal condition. This can hardly be expected until the current of money turns from the West, which ought to occur soon. Money is loaned on call at as high as 14 per cent. in some cases, and the rates of discount on prime commercial paper is $6\frac{1}{2}$ to 7 per cent.

The following table shows the range of call loans, and rate on prime paper, for the past five weeks:

	Mar. 3.	Mar. 10.	Mar. 17.	Mar. 24.	Mar. 31.
Range of call loans	3@7	4@15	5@17	5@25	4@7
Rate of discount.....	5½@6	6@6½	6@7	6@7	6@6½

Following are the rates of domestic exchange on New York: Savannah, buying $\frac{1}{2}$ discount; selling par@ $\frac{1}{2}$ premium. Charleston, buying par; selling $\frac{1}{8}$ @ $\frac{1}{4}$ premium. New Orleans commercial, 50c. per \$1,000 premium; bank, \$1 50 per \$1,000 premium. St. Louis, 50c. per \$1,000 premium. Chicago, 25c. per \$1,000 premium. Boston, 30@33c. per \$1,000 premium.

FOREIGN EXCHANGE, after fluctuating about the gold importing point for some weeks, has gone up a little within a few days, but the market is dull. Following are the posted and actual rates of foreign exchange on April 3: Bankers' sterling, 60 days, nominal, \$4 82½; sight, nominal, \$4 85; 60 days, actual, \$4 81¼@ $4\ 81\frac{1}{2}$; sight, actual, \$4 83¼@ $4\ 84$; cable transfers, \$4 84½@ $4\ 85$; prime commercial sterling, long, \$4 80@ $4\ 80\frac{1}{2}$; documentary sterling, 60 days, \$4 79¼@ $4\ 80$; Paris, bankers', 60 days, 5.23¼@5.23½; sight, 5.21¼@5.20½; Antwerp, commercial, 60 days, 5.26½@5.26¼; Swiss, bankers', 60 days, 5.23¼@5.22½; sight, 5.20½@5.20; reichmarks (4), bankers', 60 days, 94¼@94½; sight, 94¼@94½; guilders, bankers', 60 days, 39½@40; bankers', sight, 40½@40¼. Paris dispatches quote exchange on London, 25f., 23½c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days and sight, cable transfers, and prime commercial sterling at 60 days, together with exchange on Paris on March 1, the changes in the rates as they occurred during the month, and the highest and lowest during the months of February and March:

FEB.—	Bankers		Sight.	Cable Transfers.	Commercial.	Paris			
	60 days.					60 days.	Sight.		
Highest.....	4.84	4.87	4.86¾	5.22¾	5.20¼
Lowest.....	4.82½	4.85½	4.85¼	4.79½	5.17½
Mar. 1.....	4.82½	4.85	4.84¾	4.79½	5.20¼

Lowest.....	4.81	4.83½	4.83½	4.79½	5.20¼

RAILROAD AND MISCELLANEOUS STOCKS.—After a considerable period of great dullness in transactions, accompanied with somewhat remarkable stability in prices, there has been quite recently a renewal of activity, with an upward tendency. This has been most noticeable in the case of the Northern Pacific, and what are known as the "Gould" and the "Vanderbilt" stocks, but it has affected the whole list more or less.

The following table shows the highest, lowest, and closing prices of the most important railway and miscellaneous stocks at the New York Stock Exchange during the month of March:

Companies.	Highest.	Lowest.	Clos'g	Companies.	Highest.	Lowest.	Clos'g.
Canada Southern....	69½	68¾	67¾	Lake Shore	111¾	108¾	108¾

NEW YORK CITY BANKS.—There has been a gradual contraction of the loans since March 1, from 327 millions to 310 millions, but it is a long time since the cash reserve has been so small as compared with the deposits, so that during the month the proportion varied from 4 to 7 millions under the 25 per cent., which is, for convenience' sake, taken as the standard. A change is, however, expected soon.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1882 and 1881:

1883.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Mar. 31.....	\$310,130,100	\$49,086,800	\$16,801,600	\$279,944,200	\$16,574,800	\$* 4,097,450
Mar. 24.....	312,879,100	47,997,400	17,025,400	281,911,500	16,356,200	* 5,455,075

Bank, Government, Railroad and Miscellaneous Stocks and Bonds.

LATEST QUOTATIONS AND OTHER INFORMATION.

The following tables give the latest quotations of stocks and bonds at the New York Stock Exchange. In the case of all but the New York bank stocks the highest and lowest actual prices of a year ago are also given, for comparison. The quotation tables on the following pages include *all securities listed at the Stock Exchange*.

NEW YORK BANKS.—CAPITAL AND SURPLUS, QUOTATIONS OF STOCK, and LAST DIVIDEND.

The Capital and Surplus given below are from last official report:—National Banks, December 30, 1882; State Banks, December 16, 1882. The Surplus includes, in the case of Clearing-House Banks, the undivided net profits, and, in the case of other banks the undivided profits. The Banks which are not members of the New York Clearing-House Association are indicated by a (*). Not listed at the Stock Exchange by a (†). This table includes all the Commercial banks of New York.

BOSTON BANKS.—CAPITAL and SURPLUS, QUOTATIONS OF STOCK, and LAST DIVIDEND.

The following table gives the latest quotations of Bank Stocks in the Boston Market, which are mainly sold by auction. The Capital and Surplus given are from the last official report, March 12, and all the banks are National. The surplus includes the undivided net profits. All the banks belong to the Clearing-House, except Bunker Hill, First Ward, Mechanics', National Market of Brighton, People's, and Rockland, which are located out of the city proper, but within city limits, and they clear through other banks.

Some Late Counterfeits.—There appeared recently in New Orleans, La., a counterfeit gold piece, representing a quarter eagle, or two-and-a-half dollar coin. It has an excellent appearance, but no ring, and is about thirteen grains light. It bears the date of 1879.

A second edition of the photographic counterfeit five dollar United States Treasury note, series 1875, has appeared. It is in all respects like its predecessor, except that it bears the check letter A, the former issue being on the check letter D. Its execution is poor, its appearance greasy, and yet it is likely to deceive the average merchant if presented to him in the hurry of business. In the paper upon which the counterfeit note is printed there seems to have been no attempt to imitate the localized fibre which appears in the genuine.

A most dangerous counterfeit of the standard silver dollar has made its appearance in Ohio and Indiana. The base coin has the exact weight, ring, and appearance of the genuine, and resists the acid test unless the outer coating of silver is penetrated. It would readily be accepted as genuine by merchants. Several of the pieces have only been discovered upon reaching the Sub-Treasury.

Banks of Missouri.—We are indebted to the Hon. Michael K. McGrath, Secretary of State of the State of Missouri, for a copy of the "Official Directory of Missouri for 1883." It contains tables showing the condition of the State banks and bankers on December 15, 1882, which give the following aggregates: Loans and discounts, \$39,604,546; loans on real estate, \$2,561,094; stocks and bonds, \$4,645,800; real estate, \$1,582,373; cash and cash items, \$24,300,382; sight deposits, \$42,702,088; time deposits, \$10,683,792; due banks, \$4,330,334; surplus, \$5,386,878; capital, \$11,636,438; total assets, \$75,151,293. By adding the totals for the national banks, as shown in their reports to the Comptroller of the Currency on December 30, 1882, the following aggregates are obtained, being for all the banks in the State: Loans and discounts, \$52,391,913; loans on real estate, \$2,561,094; stocks and bonds, \$6,232,474; real estate, \$1,979,919; cash and cash items, \$23,720,509; sight deposits, \$53,008,121; time deposits, \$10,683,792; due banks, \$9,233,973; surplus, \$6,496,688; capital, \$16,711,438; total assets, \$99,591,611.

The Paper Money of Peru is crisp and clean, and much of it bears the engraving stamp of the American Bank Note Company. It is, however, almost worthless as currency, being valued at less than six cents on the dollar. For a twenty-dollar gold-piece, the money-changers, numbers of whom have little stands, not unlike the Italian peanut stands of this country, count out as many bills as there are days in the year.

DAILY RECORD OF FINANCIAL EVENTS.

MARCH, 1883.

1. **THURSDAY.**—Reduction in the public debt during February, \$7,630,679; since June 30, 1882, \$102,638,346.
The rate of discount of the Bank of England reduced to 3 per cent.
2. **SATURDAY.**—Discount on prime commercial paper in New York, 6 per cent.; call loans, $5\frac{1}{4}$ @3 per cent.
Discount in London on 60 days to 3 months' bank bills, $2\frac{3}{4}$ per cent., and trade bills, $2\frac{3}{4}$ @3 per cent.
The Tax and Tariff Reduction Bill passed both Houses of Congress.
4. **SUNDAY.**—The Tax and Tariff Reduction Bill (which abolishes the bank taxes) signed by the President.
Alexander H. Stephens, Governor of Georgia, and ex-Vice-President of the Southern Confederacy, died.
6. **MONDAY.**—A shipment of £100,000 gold made in London for America; the first in some months.
7. **WEDNESDAY.**—A conference representing nineteen powers, including the United States, to secure uniform rights regarding patents, trade-marks, etc., began its sessions in Paris.
8. **THURSDAY.**—Destructive floods are reported in the Presidency of Bombay, India.
10. **SATURDAY.**—Discount on prime commercial paper in New York, 6 per cent.; call loans, $7\frac{1}{4}$ @4 per cent.
Discount in London on 60 days to 3 months' bank bills, 3 per cent.; trade bills, $3\frac{1}{4}$ per cent.
11. **SUNDAY.**—Prince Gortschakoff, ex-Chancellor of the Russian Empire, died.
12. **MONDAY.**—Recent riotous demonstrations in Paris are ascribed to the fact that 60,000 persons are out of employment.
14. **WEDNESDAY.**—The Bank of the Netherlands reduced its rate of discount to 5 per cent.
15. **THURSDAY.**—Unsuccessful attempts made to blow up a Government office in London, and the office of the London "Times."
A. W. Wyman (Assistant Treasurer), appointed to be Treasurer of the United States, vice James Gilfillan, resigned.
17. **SATURDAY.**—Discount on prime commercial paper in New York, 6 per cent.; call loans, $4\frac{1}{2}$ @15 per cent.
Discount in London on 60 days to 3 months' bank bills, $2\frac{3}{4}$ per cent., and trade bills, $3\frac{1}{4}$ per cent.
20. **TUESDAY.**—Germany and Spain are reported to be preparing to adopt hostile tariff laws because of the failure of treaty negotiations.
21. **WEDNESDAY.**—The Spanish Chamber of Deputies approved a bill reducing the import duties on raw material.
The German Bundesrath approved a bill to increase duties on Spanish goods 50 per cent.
22. **THURSDAY.**—The Haytian Chambers passed a bill reducing the export duties 50 per cent., and raising the import duties 33 per cent.
23. **FRIDAY.**—Good Friday; most of the exchanges closed.
24. **SATURDAY.**—Discount on prime commercial paper in New York, $6\frac{1}{2}$ @7 per cent.; call loans, $12\frac{1}{2}$ @3 per cent.
Discount in London on 60 days to 3 months' bank bills, $2\frac{3}{4}$ per cent., and trade bills, $3\frac{1}{4}$ per cent.
25. **SUNDAY.**—Postmaster General Howe died suddenly.
27. **TUESDAY.**—Notice issued that the 120th call, maturing May 1st, for Government bonds, would be anticipated to the amount of \$5,000,000 per week, in order to relieve the money market.
31. **SATURDAY.**—Discount on prime commercial paper in New York, $6\frac{1}{2}$ @7 per cent.; call loans, $10\frac{1}{2}$ @6 per cent.
Discount in London on 60 days to 3 months' bank bills, $2\frac{3}{4}$ per cent., and trade bills, $3\frac{1}{4}$ @ $3\frac{1}{4}$ per cent.

RHODES' JOURNAL OF BANKING.

NEW SERIES. }
VOLUME XI. }

MAY, 1883.

No. 3

The latest statement published showing the condition of the national banks partly confirms our predictions regarding their immediate future. The statement published in this number, is (as usual) made up from the reports made to the Comptroller of the Currency, and shows the condition of the banks on March 13, last. We find that the number of banks increased since the time of the last previous report (December 30, 1882) from 2,308 to 2,343 and the aggregate capital stock from \$483,883,492 to \$490,456,932; so that in the 2 1-2 months 35 more banks were organized than retired, the increased capital invested being \$5,573,440. The amount of United States bonds held to secure circulation amounted on March 13, to only 354 3-4 millions, however, against 357 millions, on December 30, the exact decrease being \$2,301,150. The circulation issued was reduced, accordingly, from \$319,738,180 to \$317,447,055, a decrease of \$2,291,125. On comparing these data and other known facts together we find that there is a tendency among the larger banks of the East to discontinue under the national system, but that this tendency is balanced by the organization of smaller national banks, for the most part in the West.

It may be remarked that this, if it is not fortunate for the East, is especially fortunate for the West. The banking business is now so well organized in the older and more thickly populated portions of the country, and is generally carried on in such a comparatively safe and conservative way, that were it not for the matter of providing a good substitute for the national bank currency, the need for the safeguards provided by the Government has almost passed away. In the West however, where the rates of interest are high and capital scarce, the temptations to wild-cat banking are so great that the people should welcome the formation of new national banks. Especially in the newer districts national banks should, and doubtless do, inspire a degree of confidence which private and State concerns can command only

after they are long and favorably known. The far West is now very fortunate in this regard as compared with Ohio, Indiana and Kentucky in their early days.

The bill to levy a tax on the sales of stock, petroleum, cotton, provision and grain brokers, has appeared once more in the New York Legislature. It provides that each broker shall pay an annual license fee of \$25 (under penalty of \$100 fine) and shall make monthly reports of all wares sold, upon which a tax of two cents on each \$100 of the selling value shall be paid. The objections to this measure have been urged so often that it is superfluous to mention them again. It is hardly necessary to say that the bill is calculated to injure the business upon which the prosperity of New York depends. But, as it is understood that there is no chance of its passage this spring, it has excited comparatively little attention. There is one side of the matter, however, which it is the duty of all organs of public opinion to never weary in teaching and preaching. That is, that a great deal of the vicious legislation that is enacted could and should be prevented by our business men. People are only too apt to let things take the old course, stopping only occasionally to grumble at or curse the "politicians." The existence of such a word, in its present American meaning, is a reproach to our people. The "politicians," after all, are the men who are chosen by the citizens of the United States to govern them, and if they are ignorant and unprincipled the blame lies with those who elect them. Of the egoistic indifference of many business men regarding these matters it is useless to speak, but, at least, it might be expected that intelligent men would free themselves from the grossly superstitious habit of voting on city or State affairs according to the party names. So long as local affairs are to be run for the benefit of political parties no reform need be expected. A highly respected member of the New York Legislature, Mr. Theodore Roosevelt, being recently asked why so little attention was paid to commercial bills replied: "It is because of the intense prominence given to political matters, and a growing tendency to disregard commercial measures generally. Unimportant bills, relating to anything where politics enter, are pushed along with astonishing quickness, while the important ones lag constantly in Committee of the Whole." Speaking of commercial questions, he further said: "The majority of the New York members are absolutely incompetent to decide upon anything of this nature." Are these statements not true of every other State, and are not matters of real moment constantly sacrificed to the exigencies of parties and partisans?

A matter in connection with the interesting subject of defalcations has come up recently which deserves some attention. A New York

daily in speaking of a recent case of embezzlement took occasion to say that "one plan offered to a well-known bank is to employ professional experts to go over the accounts at unexpected intervals. This has been indignantly rejected by directors of the board as insulting to their dignity, since it proposes to hire outsiders to perform the duties they have sworn to fulfill." While it may be true that some Board of Directors has declined the proposal to have their books examined by experts, it is doubtful if they gave any such reason as the one stated. The one weak point in bank examinations by directors is the ledger accounts, which it is practically impossible for them to test thoroughly. While there may often be objections to bringing in outside experts, yet there is certainly nothing improper in it, and very likely many embezzlements would have been prevented had the practice been followed in this country. We understand that it is a regular custom in England to have the accounts of the banks examined by public accountants, and that it extends to the larger private business concerns. In the case of banks having a number of branches it would seem that they sometimes have a regular examiner to inspect each branch in turn. By this means an embezzlement of an amount of cash, which had been cleverly covered, was recently discovered in the branch of the Anglo-Californian Bank at San Francisco.

Mr. I. W. Sylvester, of the United States Assay Office at New York, has issued a pamphlet entitled "Bullion Certificates: A Safe Currency for the People," which seems to be the outcome of an honest attempt to elucidate some of the difficulties surrounding the currency question, and, as such, deserves respectful attention. He proposes, in brief, (1) that gold bars manufactured at any United States Mint or Assay Office, of the fineness of 900-1000 or over, and having the American eagle, together with the bar's weight, fineness and gold coin value stamped thereon, be declared a legal-tender by law; (2) that silver bars under similar conditions be declared a legal-tender at their relative market value (compared with similar gold bars) on the day of tendering payment, as ascertained and posted by the Secretary of the Treasury; (3) that the officers of the United States Treasury and the officers of such sub-treasuries, mints and assay offices as the Secretary of the Treasury shall designate shall receive bars of the above descriptions on deposit, and keep them under such conditions as to safety as the Secretary shall provide; (4) that certificates shall be issued to depositors of gold bars, showing the weight and value of the bullion deposited, calculated in gold dollars and cents, these certificates to be fractional if desired, in which case they will correspond with the ordinary denominations of United States money; (5) that certificates shall be issued against deposits of silver bars in like manner for their approximate value; (6) that the certificates shall be made either to the order of the depositor

or to bearer; (7) that the Secretary shall ascertain the relative value of fine gold and silver bars in New York every business day and post the same in the Sub-Treasury building, and send it by telegraph to such other departments of the Treasury as he shall deem proper, the value so ascertained being deemed the relative legal value for the next succeeding business day; (8) that the "approximate" value of the silver bars shall be calculated by ascertaining the average value for the year ending July 4, 1883, and using this as a standard; (9) that in each succeeding year the average value shall be calculated in order to obtain the standard approximate value of silver for the next succeeding year.

This proposal is enforced by arguments which cannot be recounted at length here. It may be said in its favor, however, that it provides for a very safe, elastic and convenient currency. It would be safe, because every certificate would be backed by its value in solid gold or silver; elastic, as it would oppose no obstacle to the import or export of the metals deposited in the Treasury; convenient, as it would consist of paper of such denominations as were called for. So far as the proposal to issue certificates against deposits of gold bars is concerned, the act of July 12, 1882, should have provided for this instead of restricting the issue of certificates to the amount of deposits of *coin* only. The present arrangements in many particulars seem to be calculated to cause a great deal of unnecessary work of coining at the mints, and this is one instance in point. So far as the proposal concerns silver, however, there is cause for hesitation. It may be doubted if a paper representative which is liable to fluctuate in value from day to day, and on which a calculation as to its exchangeable value would have to be made with every exchange, is well adapted for use as a currency. While there may be no strong reason why the Government should object to the proposal on its own behalf, yet it is doubtful if anybody would be benefitted. Silver certificates of the kind proposed would never, we think, be received in large amounts without a protest from the receiver, and, as the payer would gain nothing by offering this currency, he would prefer to pay in some other. By the means proposed, however, no doubt silver certificates in small denominations could be put in circulation, just as trade dollars were, and they would prove just such an unmitigated nuisance to the people as the latter.

Some agitation is being started—and it is a subject of perennial interest—on the matter of introducing the custom of a general business half-holiday on Saturdays. The suggestion has been made in one quarter, that if the banks would begin by closing at one o'clock on Saturdays, other business concerns would follow the example. It is worthy of consideration.

GOLD CERTIFICATES.

In our last number it was stated that communications had been received by Acting Secretary French from several banks in Chicago, asking that the gold certificates issued by the Assistant Treasurer in that city be made to bear some mark of identification, and that the certificates should be issued, in small and large denominations, as desired. The reason why the Chicago bankers wanted distinctive gold certificates does not appear. The object possibly was to preserve them for home circulation, and prevent their being sent away. At presents the certificates are all issued as from Washington, and are payable at any Sub-Treasury, so that there is nothing to prevent their entering largely into circulation, and it is reported that they have sometime been used as a cover for exchange.

However, the Acting Secretary replied that it was not expedient to change the rule and have a distinct series for each Sub-Treasury; but if it was the desire of the bank he would cause the Chicago Sub-Treasury to be supplied with small denominations of the certificates, so that they could be exchanged at will.

It appears since, however, that on April 5th, the President of the National Bank of America, presented a ten-thousand-dollar gold certificate to the Assistant-Treasurer at Chicago, for interchange into smaller denominations. That official refused to make the exchange on the ground that he had instructions from the Treasury not to do so. The reason given was that application should be first made by the Clearing-House before arrangements for the exchange could be made, the desire of individual bankers not being held sufficient to warrant it. We hear that, on the next day, the bankers of Chicago, in view of the action of the Secretary of the Treasury in the premises, decided to send all their certificates to New York for exchange into gold, and in future to have nothing to do with the certificates.

From all that appears it would seem that the action of the bankers was somewhat hasty. It is very likely that the officials were unreasonable, and it is doubtful if the intention of the law which will be quoted below has been carried out; but, if the certificates have been of much service to the bankers, (or were calculated to be useful if they were interchangeable), then the Clearing-House might have made application to the Secretary, and he would probably have acceded to their request.

That there was a real demand for gold certificates is sufficiently

proved by the fact that, although the present issue has been only a few months in existence, it now (April 23) amounts to 47 or 48 million dollars. The silver certificates which began to be issued some years ago amount to 71 or 72 millions.

A report comes from Washington about the middle of April, pertinent to this matter, which deserves notice for the reason that it is calculated to mislead those who, from its semi-official tone, may think it reliable. It is to the following effect:

"The Treasurer of the United States is considering the question of gold certificates. Secretary Folger has not himself given the subject his personal attention, but it is probable that he will do so if his strength shall hold out. The certificates do not meet with the same favor which they did at first. A prominent Treasury officer said to-day: 'The Government can never gain anything by taking care of the gold of other people. When the certificates were first issued, they were given out so rapidly as to diminish the reserve to the amount of \$22,000,000 before it was discovered that the issue of these certificates was practically the same as issuing gold.' "

Now, in order to show exactly what discretion the Secretary and the Treasurer have with regard to the issue, we quote the section of the act approved July 12, 1882, authorizing it:

Sec. 12. That the Secretary of the Treasury is authorized and directed to receive deposits of gold coin with the Treasurer or assistant treasurers of the United States, in sums not less than twenty dollars, and to issue certificates therefor in denominations of not less than twenty dollars each, corresponding with the denominations of United States notes. The coin deposited for or representing the certificates of deposit shall be retained in the Treasury for the payment of the same on demand. Said certificates shall be receivable for customs, taxes, and all public dues, and when so received may be reissued; and such certificates, as also silver certificates, when held by any national banking association, shall be counted as part of its lawful reserve; and no national banking association shall be a member of any clearing-house in which such certificates shall not be receivable in the settlement of clearing-house balances: *Provided*, That the Secretary of the Treasury shall suspend the issue of gold certificates whenever the amount of gold coin and gold bullion in the Treasury reserved for the redemption of United States notes falls below one hundred millions of dollars; and the provisions of section fifty-two hundred and seven of the Revised Statutes shall be applicable to the certificates herein authorized and directed to be issued.

The old certificates that were discontinued by Secretary Sherman were legally issued at the option of the Secretary, and could be refused by him at discretion, but it will be seen that the present law is mandatory. He is not only "authorized," but he is "directed" to issue the certificates against receipts of coin, unless the coin reserve is less than

100 millions. As the certificates were issued only in exchange for gold coin received by the Treasurer, it is ridiculous to say that the Treasury reserve was reduced by the issue, and that it "was practically the same as issuing gold."

There is one view of the matter which, although it has received slight attention, is of large importance. Of course, the gold received for the certificates should be held in the Treasury separate and distinct from the ordinary reserve. If this is done, this gold, being, through means of its representatives, in active circulation, is not so likely to be exported, or to be superseded by other paper of a less stable character. It is, therefore, in some degree, a guaranty of the stability of the currency.

One other point on the matter of gold certificates has been brought before our attention by a subscriber in California, which we are glad to present in his own language. Under date of San Francisco, April 7, he says:

BRADFORD RHODES, ESQ., EDITOR "JOURNAL OF BANKING," NEW YORK CITY.

Dear Sir:—I desire to call your attention to a very important matter that affects the question of revenue in this city and State, and if you consider the matter of consequence enough to the public to notice it in the columns of your widely circulating journal I should be pleased to have you do so, for I think something should be done to prevent the recurrence of the same thing in the future.

The facts of the case are briefly these: As you are aware, the Secretary of the United States Treasury has issued under authority of Congress, gold notes, amounting to millions of dollars (I think), and which by Act of Congress are exempt from taxation. Under the provisions of the State Constitution of California every taxpayer is compelled to make a statement to the city or county assessors of the taxable property possessed by each—its character and value in detail—on the first Monday of March at 12 o'clock, noon, of each year. The fact that the gold notes are exempt from taxation, and are on hand in the Sub-Treasury of San Francisco, for distribution or exchange at any time, gives those who desire to evade their just taxes, an opportunity to do so, and makes the Government of the United States a party to that questionable proceeding. It is a notorious fact in this community that at least \$4,000,000 of gold was deposited in the Sub-Treasury in San Francisco in March last, and an equal amount of gold notes exchanged for the same, for the avowed purpose of escaping taxation to that extent. The exchange was not confined to individuals, but corporations—banks, insurance, etc., took advantage of the opportunity to thus defraud the city and State governments.

The only way to prevent this in the future is, either to make the gold notes taxable, the same as gold coin, or to prevent by law the exchange of gold notes for coin within certain dates, at least in this city. After the parties were supplied with the notes, they of course did not enter them as money on hand subject to taxation, and after retaining them until after the first Monday of March, they went and exchanged the notes for the gold deposited.

This certainly is a question that should receive consideration from Congress, and the wrong should be prevented from occurring again. At least the Government should not be a party to such practices, or give any citizen assistance in evading taxation.

A VISIT TO THE BANK OF ENGLAND.

The Bank of England is pre-eminently one of the sights of the metropolis, for in no other financial institution is such a keen and world-wide interest taken. But most visitors to London, and especially colonists or foreigners, have to be content with merely a glimpse of the exterior of the edifice. Certain portions of the building are open to public inspection, but to view even these an order from one of the Governors of the bank is required, and I need hardly say that few strangers when they come to the metropolis are in a position to obtain such a permit. In explanation of that circumstance it is only fair to remind you that though the bank is the great channel through which the financial business of the Government is transacted, it is in itself essentially a private undertaking quite independent of Government control. Hence it is purely an act of courtesy on the part of the Governors to allow any inspection of its interior. This being the state of the case it has occurred to me that a brief outline of some of the chief features of the bank's internal arrangements will be of interest to many of your readers.

Let me first state one or two facts as to the growth of the bank's business and the erection of the building it at present occupies. It is nearly two centuries since the first start was made, for it was in 1695 that the bank began operations in the Grocers' Hall, Poultry. Its staff then numbered fifty-four; the salaries paid amounted to £4,350. Thirty or forty years later it was found absolutely necessary to remove to larger premises which could be exclusively devoted to the interest of the concern. A site on Threadneedle street was chosen, and here the first stone of the new building was laid on August 3, 1732. Within a couple of years the work was complete, and the removal was made from Poultry to the spot which has long been so intimately connected in the public mind with the fortunes of the bank. From time to time since then extensions and improvements have been called for, and have been carried out, until at the present moment, the area covered is nearly equal to three acres, and constitutes by far the greater part of the parish of Lothbury.

One incident in this connection deserves special mention. In 1780 the directors rather suddenly perceived the dangerous facilities which the adjacent church of St. Christopher le Stocks gave to the mob possessed of the slightest military skill, and accordingly they entered

into negotiations with the rector. Eventually the necessary powers were obtained. The church was pulled down, offices were erected on its site, and the small churchyard which formerly surrounded it is now known as "the garden" of the bank. Alterations and additions are still going on, and some idea of the accommodation necessary will be gathered from the fact that the total number of assistants and employees of all grades is now about 950.

The portions of the establishment possessing the greatest interest, which are shown to visitors, are the apartments in which sovereigns and half sovereigns are weighed by machinery, the bullion vault, and the bank note printing department. But before reaching either of these a glimpse is obtained of the bank parlor. Here the weekly meetings of the directors, and the half-yearly and quarterly meetings of shareholders, are both held. The chamber is spacious and handsome, and overlooks "the garden;" its decorations are very fine, and altogether it strikes one as being in every way a fitting assembly-room for our great bank. While in it my attention was called to an interesting instance of city conservatism. The carpet now covering the floor of the parlor was specially made, I was told, some few years back as an exact reproduction from a precisely similar design of the floor covering originally laid down more than a century ago. Evidently the thirst for novelty which is supposed to be so characteristic of the present age has not yet penetrated to this portion of the bank.

But a few minutes later we are brought face to face with a sight that is strikingly novel. For one glance round the gold-weighing room, when the visitor enters it, is enough to convince one that here at least is something to be seen quite unique in its way. For, to the right and left of him the visitor observes some sixteen little machines, all busily at work weighing sovereigns and half-sovereigns with the utmost accuracy and with astonishing rapidity, but apparently without any human aid or control whatever. No wonder that the bank officials are proud of these remarkable specimens of mechanical genius, and no wonder, too, that everybody who sees them wants to know "how it is done." Well, although exceedingly simple in construction, I can hardly hope to give a very lucid explanation of this clever mechanism without the help of illustrations. I must content myself with saying to each machine is attached a kind of spout, some three feet in length, and forming a slight incline. In this are piled sovereigns or half-sovereigns, which quite unassisted steadily slide down it on to the small plate of a carefully-balanced scale. Here, by an ingenious adjustment, each coin as it falls is poised for a moment, and then as the balance shows whether it is correct in weight or light, it is deftly shot off into the proper receptacle—to the right if accurate, to the left if deficient. It is most interesting to watch the unerring regularity with which these machines swiftly accomplish the work. So closely are they adjusted that when in perfect order—as needless to say, they

almost invariably are—they test the weight of each coin to within the one-hundredth part of a grain. And with such celerity do they act that in the course of a single day as many as 100,000 coins can be put to the test, and condemned or approved, by the sixteen machines in use. I need not add a word by way of comment on these facts to show what invention has accomplished here in the economy of time and labor.

The next chapter in the history of our sovereigns and half-sovereigns seems, by comparison, decidedly dull and prosaic. If right as regards weight, they are packed into small canvas bags holding £1,000 each, and are then passed on to the Treasury or storeroom. Here in cupboards are packed rows of these canvas bags of gold and bundles of notes ready for issue. Usually some ten millions sterling are packed round the walls of this apartment in this way and the visitor may perhaps for the moment have the pleasure of handling half a million of money in paper form. But a less pleasant fate awaits those coins which have been tried and found wanting, for they are not permitted to leave the weighing-room until they have been notched by a little engine which does the work of defacement very promptly and efficiently. Having been thus converted into bullion, they are sent on to the mint to be worked up again.

The words "bullion" and "mint" should prepare the mind for the next in order of the bank's sights, namely the bullion vault. I suppose most Canadians are aware that the mint is supplied from the Bank of England with the wherewithal for making coin. The bullion vault, as its name implies, is the chamber in which these materials are stored. It is guarded by a slight railed door, and proves on entrance to be a low, vaulted room, not of very large dimensions, lighted by gas, and with whitewashed wall and ceiling. Along one side are ranged a number of trucks, on each of which are one hundred bars of pure gold. There is something very alluring in the appearance of these shining slabs of gold, and it is a great relief to find that the familiar request "visitors are particularly requested not to touch," is not enforced here. On the contrary, the attendant generally makes a point of allowing each visitor to handle one of the bars for a moment or two, at the same time volunteering the information that each similar lump of bullion represents some £850, and that each truck when fully loaded carries gold to the value of between eighty and ninety thousand pounds. The other side of the apartment presents a great contrast to this striking display. Instead of trucks of bullion one finds only canvas bags of foreign coins—French, German, Dutch, and Russian—and these scarcely induce the visitor to linger. As he leaves the chamber he will probably observe that during his stay in the room he has been favored with the presence of an additional attendant.

While his original guide led the way and expatiated on the sights exhibited, another official silently followed very closely in the rear

of the party—a precautionary measure not much open to criticism perhaps. Near the vaults the visitor is sometimes shown the machine by which the bars of gold are weighed. It is specially designed to detect the difference between the ingots of gold when delivered at the bank. It is worked by a current of water acting on a turbine, and though somewhat ponderous in appearance, its action is so delicate that even differences as slight as the thousandth part of an ounce are detected and indicated.

Next a movement is made upstairs to the printing department of the bank. Here some hundred and fifty hands are employed in the production of bank notes, dividend warrants, and postal orders. This is a work the history of which visitors are always curious to trace. To begin then, at the beginning. The special paper on which the Bank of England notes are printed is made by hand at a small town in Hampshire. The sheets are small in size, being only sufficient for two notes, and the water-marks vary according to the value of notes. A large stock of this paper is always kept in a special storeroom in the bank, whence the supplies required each day are taken. Until recently the printing process was not completed until each note had passed through two machines. By the first of these all but the signature and number was printed, and to fill these two blanks a second cylindrical machine was brought into requisition. But an improvement has since been effected upon this method. A machine has been invented, and is now in use, which performs both of the operations I have just described. Thus a sheet for two notes is laid on at one end of the machine, and at the other end is thrown off with two notes completely printed and registered. This is done at the rate of three thousand notes an hour; a registering apparatus records each impression, and as each note is taken off its number is checked by an employee, who has thus to account for every sheet placed upon the machine. On an average about fifty or sixty thousand notes a day are turned out by the department, and it will therefore be obvious that a pretty complete system of checks is required to prevent the occurrence of any irregularities.

I need say but little about the other work of the department—the commercial printing of the bank, &c., the production of postal orders, Indian Government notes, and the dividend warrants. But a word or two to the ultimate fate of the Bank of England notes may be of interest. Immediately after the payment by the bank of any note on presentation at Threadneedle street, its date and number are posted in a series of ledgers kept specially for this purpose. Next, it, and hundreds of others which have attained a similar stage in their career, are carefully sorted, previous to being packed in small wooden boxes, which are stored in the vaults of the bank. In this latter condition they remain five years. Should during that time a forged note bearing the number of any that has already been paid be presented at the bank

the fraud is immediately detected on reference to the ledgers I have mentioned, and can be proved beyond doubt by the production of the original note. However, it is not considered necessary to preserve those paid notes for a longer period than five years, and perhaps it is fortunate that this is the case, as the accommodations of the bank in this respect would be severely taxed. For, in the course of that time, something like seventy-seven million notes were received, weighing over ninety tons, and worth originally more than seventeen hundred millions, sterling. When at length this period of probation expires, the last stage of the note's history is attained; they are destroyed by fire in a furnace specially constructed for the purpose.

Such are some of the interesting sights and facts visitors to the bank are enable to see and learn when, through the courtesy of the Governors and the officials, they are permitted to inspect the building; and I think I have said enough to show, that those who are so favored will spend a very pleasant hour within the bank's walls.—*London Correspondence of the Toronto Globe.*

An address was delivered before the London Institute of Bankers, on April 18, by Mr. Goschen, the statesman and financier, in which was treated in an exhaustive manner the subject of the appreciation which he believes to have taken place during the past ten years or so in the value of gold. Italy, Germany and the United States, he reminded his audience, have all, during recent years, absorbed immense quantities of gold for currency purposes. Their aggregate requirements have amounted to about £200,000,000, and concurrently with the upspringing of this enormous new demand there has been a falling off in the annual gold production. That now amounts to not more than £20,000,000 a year, the output having gradually diminished to this point from an average of £30,000,000 per annum in the five years 1852-6. Upon the available gold supplies, therefore, a great strain has been put, and the tension has been all the greater because, year by year, population has grown and the volume of the world's trade has expanded. On the other hand, it is true, considerable economies in the use of gold have been effected. Banking facilities have been extended, payment by checks has, to an increasing extent, superseded payment in coin, and stock exchange securities have been made to play a far more important part in the settlement of international transactions. In Mr. Goschen's opinion, however, these economies have not counterbalanced the reduction in the available gold supplies and the increase in the currency requirements, and the result of this is, he holds, that gold has appreciated in value. This is, of course, equivalent to saying that there has been a fall in the gold prices of commodities; and Mr. Goschen, by comparing the prices of a large number of representative articles now and in 1873, shows conclusively that there has been.

WALL STREET METHODS.

AS EXPLAINED BY THOSE WHO UNDERSTAND THEM.

The investigation that was undertaken by a committee of the New York State Senate into the matter of "corners" in agricultural products and stocks, and speculation in "futures" has been discontinued without any practical result. The hearings before the committee continued during several months of 1882, and there was about as much variety in the nature of the testimony as is to be found in the story of Tristram Shandy. Not only were the complaints of the forwarders of Buffalo against the wicked "scalpers" listened to, but reformers like Mr. F. B. Thurber, lambs like Mr. William H. Vanderbilt, distinguished philanthropists like Mr. Jay Gould, humorous writers like Mr. Rufus Hatch, merchants like Mr. Jas. R. Keene, and bankers like Mr. Henry Clews each received a share of attention. At the same time due regard was paid to the religious questions involved, by giving a number of the best known clergymen of the various denominations a chance to present their opinions on the matters under enquiry, each one prefacing his testimony by saying that he knew nothing personally about them.

Of course a complete and satisfactory description of the proceedings of the committee cannot be expected here. An account was given from day to day in the newspapers after the usual fashion, and everyone knows how imperfect such accounts usually, and necessarily are. Enough was given to show that the proceedings if published in full would form a volume unique in interest and of great practical value. But we are informed that the proceedings have not been printed for public distribution, and it now appears somewhat doubtful if they will be. At the same time we are informed by a well known and veracious writer for the daily press that there are thousands of men and women all over the South and West going barefooted because their stockings are filled with the money that they are anxious to speculate with in stocks and bonds on Wall street. In such a critical condition of affairs how important it is that the views of those navigators who have traversed safely the maelstrom of Wall street should be spread abroad, so that everybody may be able to stem its torrents with ease and avoid its rocks and shoals. Urged by these, and other conclusive reasons, we have endeavored to select from a complete official report of the pro-

ceedings, some of the most valuable and interesting of the testimony given by certain of the most distinguished financiers of America, and to present it in a fair (though abridged) form in such shape as will be somewhat more permanent than a daily newspaper. No doubt that it will be read with thrilling interest, and perhaps with as much care between the lines as on the lines, for what some of them do not know on certain points is as significant as what they do know.

The persons selected are Messrs. Vanderbilt, Hatch, Gould, Keene, and Clews, and in order that no charge of favoritism can be brought, they are taken in the order in which they appeared before the committee.

Mr. William H. Vanderbilt appeared before the committee at the Metropolitan Hotel, New York, on December 14, 1882. His business (he testified) is "railroading"; it has been the same for about 19 years, and he is President of the New York Central and Hudson River Railroad. His opinion on the system of making corners in produce and other commodities and dealing in future in the same is given as follows.

"Well, gentlemen, I will premise what I have to say by stating that you have got me on a subject that I don't know much about. I never dealt in the grains and I can't tell much about the effect, only as a general principle. Corners, as the gentleman formerly remarked, I think are very injurious to any trade. All I can speak of is the general effect upon railroads, and what affects railroads probably affects all the trades. This buying and selling grain on delivery may have a very injurious effect upon the railroads, and through the railroads upon the public at large, by furnishing in very large quantities transportation for the railroads when they are unable to carry it, and at other times leaving them comparatively nothing to carry and their rolling stock idle."

He then explained how, for convenience sake in elevating and storing, the grading of grains had been established. There was no conflict of interest between the railroad and the canal. He declined to say whether dealing in futures was, in his opinion, legitimate, preferring to speak only of the effect upon the railroads. On the matter of differential rates from the West, as between Baltimore and New York, he said that the port charges were much less in the former place; "in fact, we think that all the ports, not only Baltimore, but all the ports of entry in this country are very much more favorable in every other place than they are in New York, simply because the great bulk of the business comes to New York; in our opinion, without regard to other people, we think that New York, in that respect, stands very much in her own light."

He did not know enough about the subject of cornering to make any suggestions as to legislating on it. His testimony regarding stock speculation is as follows :

Q. You have had experience in the dealing in stocks, have you not ?

A. No, sir. People give me the credit of being a great speculator in stocks. I am very glad to testify on that subject. I am a first rate buyer of stocks or anything else, but I am a mighty poor seller. I never in my life bought a stock to speculate on, and there are thousands of things that you see in the papers about me every day that there ain't a word of truth in. Newspaper reporters are like a great many other men : they are all very good men in their way, but they get their living by making up a sensational article, and they are pretty good at that. They are good men ; they make their living in that way. Everybody has a way of making his own living. I oftentimes take up a paper and see things about myself that haven't a word of truth in them, and this morning, in one of the papers I picked up, I found many things in it that there was no more truth in than I tell you.

Q. But you understand the system of dealing in stocks the way it is conducted by other men ; do you not ? A. No. I tell you what I understand about it. My experience in the stock business, if you want it, I will give it to you in a very few words. I never bought stock in my life that I didn't have to put up twenty per cent. margin ; if I didn't pay for it altogether, I would have to put up twenty per cent. margin ; there are a good many hundreds and thousands of men that don't put up any margin. I make up my mind that I am like the man that goes to the tailor ; I pay for my clothes, or pay for those who do not pay. We are all alike about that. You are just as likely to do it as I am ; but they think it is just as well for me to put up twenty per cent. margin as any other one, and I put it up and pay it.

Q. They sell stocks for future delivery, do they not ? A. They sell stocks short. I never sold a share of stock short in my life ; never sold what I didn't have to sell.

Q. I am not referring directly to yourself. A. I believe they do. Yes, sir. They depreciate property in all sorts of ways. There are all kinds of ways of getting a living, and all kinds of people to follow them.

Q. The stock of your own railroads—the railroad of which you are President—is subject to this same sort of dealing, is it not ? A. Certainly : I remarked to a man day before yesterday—he said so-and-so was going down. Said I : “I suppose it is going down on that.” He asked what I thought. I said : “It is its great prosperity. That is the only thing to make a thing go down in Wall street—for it to be prosperous. It is more prosperous now than it ever has been, and I suppose that will make it go down.”

Q. I want to get at your opinion concerning the system of dealing in futures, and your experience of that system as conducted in dealing in stocks. Morally speaking they are about the same thing. A. I admit that I am very much prejudiced, and I don't know that my opin-

ion is a fair opinion to give. I admit that I am very much prejudiced against a bear of any kind. I go for upholding properties and sustaining them. Every man that invests \$100 in anything, no matter what it is, is looking for a fair return from it, either from the comfort he derives from it or from something else, and I believe he should have it, and I am down on any man that undertakes to depreciate property.

Q. From your opinion and from your knowledge of this system of dealing you think it is wrong and immoral? A. I do. I think it has a bad effect. I think it has a bad tendency. I think it has a bad tendency upon all the young men, and there is not anything we are all more or less interested in than that. I think it has a bad moral effect because it tends to idleness and it tends to people getting money very easily, all this kind of speculation. They shouldn't do it. Somehow or other, in the end it is different. You very seldom see one man in ten that goes in Wall street or into any business of that kind, but what he comes out the loser in the end. He can't be successful long. * * *

Q. Do you recollect any notable instance of corners in railroad stocks? A. Yes, I do. I recollect there was a corner in Northwest stock ten years ago. I don't think that there have been any corners lately except the Hannibal and St. Jo., and I think those people that have generally been engaged in corners have got their fingers burnt so badly that they will let them alone. At least so I have always heard.

Q. And what effect have these corners of railroad stocks upon the railroads? A. I don't think any; because the corners are generally gotten up by people who have nothing to do with the road—that is, I mean, the practical running of the road * * *

The above gives in full the part of Mr. Vanderbilt's testimony relating to speculation in Wall street, and, although it may be disappointing to those who expected to gain much information from it, yet it must be a great pleasure to know that he never speculates in stocks, and to read his fatherly advice on that subject. The views of Mr. Rufus Hatch, however, are more interesting reading, as he is not afraid to tell what he knows about himself and others, and additional interest is lent to what he has to say by the original style in which it is put. It may be remarked, by the way, that his opinion on the effect of grain speculation on commerce and the public interest, (aside from those of the speculators), as well as his views with regard to the way in which the law should treat speculators, coincide substantially with those heretofore expressed in this Journal.

Mr. Hatch, appearing before the committee on December 14, was asked:

Q. What is your business? A. That is a pretty difficult question. I am in the cattle business.

He had been a dealer in cattle for two or three years. He was also familiar with the grain and produce business to a certain extent,

having bought and sold grain for the last 20 or 30 years. He also had "a little experience" in the stock business, having been engaged in it about 20 years. He had heard of people making corners in grain, stock, etc., but never made one himself.

Q. Will you please explain to the committee what a corner means?

A. Well, that is a pretty big question. I should understand it to mean that it was buying more than there was in existence of some certain commodity—stocks, bonds, corn, wheat, oats, rye, barley, or cabbage heads.

Q. For what purpose? A. Well, for home consumption. From the fact that you can sell it to somebody else at a profit, or sell it to the man that had sold what he did not have to you. * * *

Q. Do you know of any transactions that have occurred similar to that, in this country? A. Well, they had Hannibal and St. Jo. pretty tight last year. * * * I had no interest in it. I was neither short nor long.

Q. Do you know of any corners being made in grain? A. I do not. They say here, a few weeks ago—while I was out West, I think—some parties owned a great deal more grain than there was here; but that is the misfortune of the man that sold what he didn't have.

Q. What is your opinion of the effect of making corners as you have described upon commerce and the public welfare generally? A. I think it is very detrimental. That has been my experience, looking at what other people have done. I never have known of but one corner that was a success, and that was the Harlem corner by Vanderbilt. That was a success because he had the money to carry it through. * *

Q. Can you give a general outline of the transaction? A. It is a matter of memory. I could not be reliable. It seems to me that there was some legislation at Albany and it was adverse to the property, and the Albany legislators and senators and governors and all the followers and all the Wall street men sold the stock, and he bought it two or three times over, and he made them settle at 285. That is as I remember it. I was a member of the Exchange at that time [1863-4].

Q. What effect had that upon the railroad interests? A. Well, it was disastrous. There was a great panic took place right after that.

Q. And who suffered chiefly? A. Those that sold what they did not have.

Q. You mean on speculation? A. I mean on speculation. And then, of course, when he got control of the property, he advanced rates 200 or 300 per cent., and he has made the road pay since on assessing the community.

Q. In the original part of the transaction did the stockholders suffer? A. No, I should say not. They suffered afterward.

Q. I presume those who were compelled to sell— A. Suffered. The men that held on and got 285, of course, made money.

Q. Do you understand the system of dealing in futures? * * *

A. Well, we will suppose a man goes down on 'change and buys ten or twenty or fifty boat-loads of corn for delivery next May. He may be buying of a man who has got it to deliver to him, or he may be buying it of a man who is selling what he has not got. It is a straight-out gamble on whether corn is higher or lower when the contract matures.

Such transactions witness said were of frequent occurrence in the city of New York and in other cities.

Q. What is your opinion of the effect of such transactions upon our commerce? A. Well, I don't know that I could express an intelligent opinion on that—effect on commerce. I will only express it in this way: that had we shipped 25,000,000 bushels more of wheat in the fall of 1880, we would have seen wheat sell for \$2.50 in this country for home consumption. They brought wheat from San Francisco and shipped it to Minneapolis to supply the mills there. They took wheat from Chicago and from St. Paul back to Minneapolis to supply their mills there, simply from the fact of a short crop. Had we shipped 50,000,000 more corn, corn would have sold at \$1.50 a bushel. There is a great deal of cant about putting up the price of grain and stopping exports. Had those things happened—had grain been low and had there been no speculators buying for a higher market and holding this property here, we would have brought grain from Europe here, as we did bring potatoes. So it is a pretty hard question to answer, and a big problem to solve—what the effect on commerce is of dealing in futures.

Q. I just want the benefit of your experience. A. Well, still further then, I owned, last June, a year ago, three times as much corn as there was in the city of Chicago. I bought it on the imagination or idea of other people that corn was going to decline. Well, I made no corner in it. When it was at a satisfactory price, I sold it. Had I held it thirty days longer I would have made \$600,000 more. I didn't tell anybody that I bought it, and I didn't tell anybody when I sold it. That is one experience that I can show by my books.

Q. That, we have no doubt, was perfectly legitimate. We want to get at the illegitimate features of this transaction. A. Well, that was as illegitimate as anything could be. I bought what I didn't want, and the other man sold me what he didn't have.

Q. Then you did not have that actual amount of corn? A. No. I didn't have any; I only had their contracts for futures. They could not have delivered it to me had I asked them to, and I didn't expect to have them deliver it. I didn't have the money to pay for it.

Q. Suppose you had been called on to pay for it; what would have been the result? A. I should have had to pay for it, or sold it out for what it would have brought.

Q. Of course; at a terrible sacrifice? A. No: it was not a sacrifice as it happened. It went up about thirty points. It was a sacrifice on the other side.

Q. The dealing in futures has been characterized by some of the witnesses who have appeared before this committee as a system of gambling. What is your opinion about that. A. Well, I think that a man who sells what he has not got ought to be made to deliver it or go to prison. A man that buys what he don't want ought to be made to pay for it. But you might just as well try to make the Mississippi river run up to Minneapolis over the falls, as to prevent men from buying and selling on that basis, grain, coffee, tea, dry goods, or anything else. It is history from the time of Adam, and going back to the Mosaic theology.

Q. Are you familiar with any corners that have occurred in stocks? A. I only know from hearsay. I never have been in a corner in stocks. I have owned a good many more stocks than there was in a good many pieces of property—I mean myself and associates. I have had something to do with it. Take Northwestern in 1867 and '68, when Henry Keep was President of it. You remember him? We owned a great deal more stock than there was, but we never cornered it. We always loaned it to anybody that wanted it, and when it got up high enough, we settled with the boys and took their checks.

Q. How many shares did you own? A. We owned 24,000 more shares than there was of the stock. * * *

Q. How did it happen that so much stock had been issued? A. There wasn't any issued. We owned contracts. The other gentleman sold what he didn't have, and we bought it.

Q. Do you think the system of speculating, such as you have been describing, is beneficial to the country, or otherwise? A. I don't think it is. It is beneficial to a very few individuals; the others we can call "lambs", and we fleece them when they come down to Wall street.

Q. Do you know of failures resulting from such speculation? A. Oh, yes, lots of them. They are as thick as the sands on the seashore.

Q. About how many, to your knowledge, have occurred within the last year? A. That I could not tell. I don't remember. I don't keep track of those things. It would require a double-entry book-keeper to do that on both sides of the ledger—those that sell short, and those that buy long.

Q. What effect have all these transactions in breadstuffs upon the prices to the consumer? A. Well, on a short crop he has to pay more. On a big crop he gets them less, because the gambler on a big crop is pretty certain to be on the short side, and he sells what he has not got—sells the crops of the farmers before they come to market. On the other hand, when you have a short crop the speculator usually knows it before the consumer does, and he lays in his store—fills his larder, and puts up the price.

Q. Is the producer benefitted in any way by such speculations?

A. He is benefitted on a short crop; he gets a higher price for it. On a large crop, I should say he would get a lower price.

Q. What ought to regulate the price of breadstuffs to the consumers? A. Supply and demand; the freights that you pay for transportation from city to city, and from the United States to Europe. * * *

Q. The speculator comes in — A. And puts up the market, or pulls it down, as I have always tried to do when I have been speculating.

Q. How often have you succeeded in changing the market? * * * —about how often? A. Well, I can't tell you that because I don't remember. When I am on the bull side I write on that side, get every statistic and figure to show that that is the side to be on, and I convert a great many people. When I am on the bear side I show the other side of the question, and I get a great many people to believe that that is true, too.

Q. And by that means the market is fixed? A. No. It is fixed only in people's minds or imagination on either side.

Q. But it has a great tendency to fix it, hasn't it? A. Well, that is according to how many newspapers you can get your effusions in and how much they copy; how many dispatches are copied on what you say upon the subject. I try to never tell a lie, but then I know of people who do tell lies, because they have told me lies. But the majority of the human race is on the bull side, and that is why you see stock lithographs, and chromos, and undiscovered railroads, and gift enterprises selling at the price they are on Wall street to-day. * * *

Q. How many transactions have you known to occur in a single commodity without actual delivery? A. Well, I could not tell you. I have known nineteen hundred thousand bushels that I have sold in fifteen minutes. In two hours I got my reports back from Chicago.

Q. And was that delivered? A. I suppose it was delivered. There wasn't any of it delivered to me. I had the grain bought, and I sold it to some other fellow; but it is no uncommon thing to have 5,000,000 of bushels of grain change hands on Wall street in the Chicago markets in a day. I think there is one house that has done that in a day.

Q. Five million? A. Yes; just marginal checks that passed back and forth. One man bought what he didn't want, and the other man sold what he hadn't got.

Q. That was purely a speculation? A. That was purely a speculation.

Q. And what do you designate such a speculation? A. Well, I should designate it as purely a speculation.

Q. Gambling? A. Well, I don't know. The word "gambling" has a very wide definition to it. It would take the whole dictionary to fill that up. * * *

Q. In what cities of the United States are such speculations as you

have described carried on chiefly? A. Well, Chicago is the headquarters—St. Louis, Toledo, Detroit and Milwaukee. Those are the four or five large cities in the West. They have changed their rules at Chicago, and played “heads I win, and tails you lose.” I mean, outsiders lose so often there that their speculation is very much less than it was a year and a half ago. People are afraid that they [the brokers?] will revamp the rules again if they have a contract coming due, so that if they are on one side or the other side, it lets them or their friends out. * * *

Q. What effect has the legislation which has taken place in the State of Illinois in regard to those speculations had upon them? A. It has not had any—not a drop in the bucket, or in the ocean—not a particle.

Q. There have been some judicial decisions also. What effect have they had? A. They have had none. The only effect that they have had is that the governors, or trustees, or whatever they are designated, have changed the rules, and by those rules, after a contract is made, they have varied it. For instance: a large amount of No. 2 spring wheat was sold, and the officers of the board and their associates were all short of it. So they passed a resolution, or rule, or by-law, that No. 2 red winter wheat should be delivered on that spring wheat. Well, in equity, of course, a man was not losing anything, because he was getting a better grade of wheat for the same amount of money, but that broke the corner, and wheat declined from \$1.35 down to \$1. The winter wheat comes in about four weeks earlier than the spring wheat. But they had sold the whole crop of spring wheat short, and the farmers got no benefit from it.

Q. What cities in the East are chiefly engaged in this business? A. Oh, all of us here—Baltimore, Philadelphia, New York, and Boston, but principally New York. Baltimore does a large grain business, but futures are more dealt in here and in Chicago. They are the two speculative points.

Q. What proportion does the city of New York bear to Chicago in these transactions? A. Very small. * * * Chicago is the greatest primary receiving port for grain, cattle, hogs, and lumber of any in the world; there is no city in the world that compares with Chicago. * * *

Q. How are the ordinary dealers in grain affected by the operations of the speculative dealers? A. Well, I don't think there are any legitimate dealers. I never heard of one yet, if you mean commission houses.

Q. I mean the merchant who goes into this business and sells in accordance with the law of supply and demand. A. Oh, he don't exist. There isn't any such merchant.

Q. There is not? A. Oh, no; he is of the last generation. He hasn't been here for the last generation.

Q. Then you think they all speculate in this way? A. Oh, yes; with no exception.

Q. Such a system of speculation is not necessary, is it, to carry on the business of the country? A. No, sir.

Q. You are not in favor of it? A. Only so far as it is for my interest.

Q. I now speak, taking the moral view of the question. A. *Well, financial morals are at a pretty big discount!**

Q. As a matter of political economy what is your opinion about it? A. Well, I think if there were *more producers* and *less speculators* it would be better for the country.

Q. In what way better? A. Well, there would be more produced, and less consumed; and we would have more to export.

Q. Do you mean by that to imply that the speculators consume more? A. *And produce nothing. If they will all go to producing they will produce all that they want themselves and have a surplus.*

Q. Can you suggest any remedy for the evils which you have been describing? A. No. I do not think it is a possible thing. * * * Because I don't think there is any man or any set of men who can cope with the idea of other people's minds, when it amounts to *a nation of speculators*. I don't think you can legislate on it to do any good. * * *

Q. Can you tell us where we are going to end if we continue to indulge in our speculative propensities? A. Well, every few years we will have a smash down, as we did in '73—"Black Fridays" and every thing of that sort. You must remember that this country has got great recuperative power and we can get on our feet very quick again.

Q. Do the speculative interests of the country in any way antagonize the industrial interest? * * * A. Always.

Q. Please explain how? A. Well, the speculative man is a minority. He has got to control all the legislative acts to continue his speculation. (I am speaking more of Wall street—of issuing stocks and bonds, three, four, or five for one—watering everything). He has always succeeded so far, not only in every State and Territory, but in Congress.

Q. How does that antagonize the industrial interest? A. Well, it makes him pay three or four times as much for the transportation of Western produce to the Eastern seaboard as if the thing was done on a square deal.

Q. Please explain the system of stock watering? A. Well, you are quite as familiar as I am with Vanderbilt's watering New York Central. He declared an 85 per cent. scrip dividend one day, when he knew it was illegal. Then he attached that certificate to the original New York Central, and went to the next session of the Legislature and got that legalized. * * *

* Italics in the official copy.

Q. That is, legalized what you say was 85 per cent. profit? A. Eighty-five per cent. profit.

Q. Upon the gross earnings? A. No, no. He put that much water under every tie. Now, Mr. Wm. H. Vanderbilt has got to charge just that much more and give just that much poorer accommodation in his cars. He has to take that off from his employes, hire boys to do men's work, so that he can pay a dividend on this trash. * * *

Q. Is there any other information you would like to give the committee? A. I didn't like to give you this. You go down and interview Mr. Vanderbilt's clerk. He can give you the whole thing, from A to Z. I wish to qualify the answer I made that I thought all stocks were 50 per cent. too high, by saying that *some* of them are.

[To be concluded in June number.]

FLUCTUATIONS IN DISCOUNT RATES.

The subject of the periodical fluctuations in the rate of discount in England, France, Germany and the United States, has been recently treated in a series of articles in the London "Economist." The writer shows that in New York, during the period of 29 years, from 1854 to 1882, the rate of discount was evenly high in both halves of the year during only one year; in 10 years it was higher in the first half of the year, while in 18 years it was higher in the second half. Comparing this with the corresponding results shown in the case of the other three countries mentioned, it appears that the rate is far less often even in both half years in America than in France or Germany, but that in this point, as well as in the preponderance of the higher rate in the second half of the year, the character of the New York market is far more like that of England than those of the other two countries. In Germany, however, the same feature of a higher rate in the second half of the year, is likewise prominent.

Although the condition of the American money market differs in many respects from that of England, we here find one point in common. It is very natural that the pressure in New York should be sharper in the autumn, as this is the time when the great agricultural harvest is reaped, housed, and, to a large extent, carried. This carrying is a very different thing in the United States from what it is abroad, implying, as it does, a transit of hundreds and thousands of miles. This country being so largely agricultural, the demand for money to move the crops becomes more and more extensive every year, and money flows westward, and back again, almost as regularly as the seasons come and go.

Notwithstanding the large growth of banking capital and banking accommodation in the Western States, the demand for capital in the fall is not likely to diminish, nor the influence which will thence be exercised on the New York money market. When it is considered how

close the connection between New York and England is, it cannot be wondered at if the natural tendency to a period of greater pressure in the autumn in England is enhanced by the influence of the New York market.

A comparison of the data on this subject, as pertains to the Bank of England, Bank of France and Bank of Germany, from 1844 to 1882, shows that the fluctuations in the rate of discount at the first have been more numerous by far than in the case of the other banks. Further, that though the proportion of the reserve maintained by the Bank of Germany has been nearly as large as in the case of the Bank of France, and more equable in character, the fluctuations in its rate since it came under the regulations prescribed by the German Bank Act of 1875, have increased considerably.

It appears, also, that the business done by the Bank of England differs very widely from that done by the other two banks, the reserve of the Bank of England (for instance) being marked off by an artificial arrangement depending on the Act of 1844. In the case of the Bank of Germany, the reserve, though marked off in the accounts, and though worked on a system more elastic than that in force in England, is also one dependent on legislative enactment and the maintenance of a fixed proportion between the reserve and the note circulation. The question is asked, whether this class of legislative action, intended to preserve the integrity of a note circulation, does not interfere with the ordinary operations of the bank, and whether the unfettered system of the Bank of France is not followed by more equable results? Legislative interference with trade having been abandoned in almost all other directions, it is doubted if it fully attains, in this instance, the object desired.

The London "Saturday Review" makes a series of comparisons of results achieved in the way of reduction of the national debt in England and the United States. In twenty-five years the net decrease of the English debt amounts to £75,872,503. Since the close of the civil war the debt of the United States has been reduced 222 1-2 millions sterling. The difference in the geographical position of the two nations is commented upon to the disadvantage of England. The United States are united into a compact mass, so to speak. The British empire covers about an eighth of the world's surface, but is scattered over all parts of the globe, "temptingly inviting aggression from all sorts of envious neighbors." The "Review" finds a grain of comfort, however, in the reflection that much has been accomplished during a quarter of the century in England, in the way of reducing taxation. The burdens lifted from the people within this period have amounted to some thirty-three millions sterling. As matters now stand, taxes are levied mainly upon articles of luxury, pressing very

lightly upon the poor, and not at all upon industry. The "Review" believes that it would have been wiser to retain some of the abated taxes and apply them to the reduction of the debt, and doubts whether such retention would have in the least checked the growth of wealth. Its arguments are directed to the point that too little has been done for the redemption of debt; and that now, while taxation is light, while wealth is rapidly growing, and while peace is for the time assured, there should be taken such measures that, if ever England is compelled in self-defence largely to increase its debt, it can be done with high credit and unexhausted resources.

BANK OF FRANCE IN 1882.

The Paris correspondent of the London "Economist" gives a summary of the printed report of the Bank of France for 1882, as recently read in the meeting of the shareholders:

The total book entries for the year amounted to 14,867 millions of francs, which was an increase of 479 millions on 1881, but it was almost wholly in bills sent in to be encashed, notes to order, transfers and checks. The discounts decreased and the loans on security marked only a small increase, notwithstanding the requirements that might have arisen from the crisis. The business transacted gratuitously for the Treasury amounted to 5,291 millions. The cash reserve on the 31st December, 1882, was 2,042 millions, an increase of 240 millions in the year. The maximum during the year was 2,158 millions on the 17th of August, and the minimum 1,791 millions on the 10th of January. The gold during the year increased from 645 millions of francs to 954 millions; while the silver fell from 1,155 to 1,087 millions. The rate of discount was changed three times during the year; it was reduced from 5 per cent. to 4 1-2 on the 23d of February; to 4 per cent. on the 2d of March; and to 3 1-2 per cent. on the 23d of the same month. The discounts in the year amounted to 11,322 millions, against 11,373 millions in 1881. The amount at the head office was 5,139 millions, and in the branches 6,182 millions, the average being 1,043f per bill in Paris and 1,010f in the departments. About one-fourth of the discounts in Paris were in bills of 100f and under, the number of which augments every year. It was 1,014,412 in 1880; 1,160,945 in 1881, and 1,224,362 in 1882. The loans on public securities amounted to 509 millions in 1882 and 476 millions in 1881. The increase was in some measure due to the crisis at the commencement of the year, and the payment of the last instalments of the loan of one milliard, which fell due on the 16th of January. The loans reached the maximum of 376 millions on the 4th of February. From that date the reimbursements commenced, and on the 26th of May the balance due was only 278 millions. The circulation of notes reached its maximum of 2,953 millions on the 20th of January, and fell to the min-

imum of 2,626 millions on the 23d of March. At the date of the meeting of shareholders on the 25th of January, 1883, the amount was 2,899 millions, composed as follows:

<i>Notes of</i>	<i>25th Jan., 1883.</i>	<i>26th Jan., 1882.</i>
5,000 francs	25,000	25,000
1,000 "	1,263,226,000	1,365,028,000
500 "	312,378,500	344,200,000
200 "	550,400	564,200
100 "	1,081,223,400	962,665,200
50 "	236,257,450	173,216,450
25 "	571,600	602,750
20 "	3,929,460	4,676,900
5 "	883,120	913,500
Old notes	423,275	424,275
	<hr/> 2,899,528,205	<hr/> 2,852,316,675

The book transfers in the year amounted to 57,494,766,800f, against 66,735,592,100f in 1881. The number of deposit accounts opened was 2,395 in Paris and 5,448 in the branches; the maximum amount standing to the credit of depositors, including the Treasury, was 1,004 millions on the 4th of February, and the minimum 341 millions on the 30th of September. The service of collecting matured bills obtained a considerable development; from 670,709 bills for a sum of 444,430,000f in 1881, it increased to 836,845 bills, for 572 millions in 1882. The largest receipt of bills was on the 29th of April, when it amounted to 156 millions of francs, in 183,431 bills, at 62,691 different domiciles. The account of overdue bills in Paris on the 26th of December, 1881, amounted to 5,800,979f; a further sum of 6,019,233f was added during the year, making a total of 11,820,212f. A sum of 3,417,028f was recovered, and 1,869,190f was written off, leaving a balance of 6,533,994f. In the branches the sum overdue at the commencement of the year was 671,886f; bills to the amount of 2,062,801f were returned in the course of the year, making together 2,734,688f; 1,420,230f was recovered, and 130,000f written off, leaving a balance of 1,184,397f. A sum of 34,972f was recovered on bills that had been previously amortised from the reserve or from profits. The alarm that existed during the financial crisis, relative to the situation of some joint-stock banks, caused many persons to transfer their securities to the Bank of France for safety. The number of deposits of securities during the year was 42,450, or 10,671 more than in 1881. The number of public securities deposited at the bank at the end of the year was 2,392,283, representing a value of 1,742 millions of francs, and belonging to 24,544 persons, or 2,280 more than in 1881; 10,535 deposits consisted of a single share or bond, or inscription of from 3f to 15f of Rente. The working expenses of the bank amounted to 15,336,275f against 13,156,188f in 1881, and of this 2,731,855f was for taxes paid to the State. The salaries of all the bank staff were increased 10 per cent. The dividend for the year was 298f 96c, or 290f net per share of 1,000f. The capital of the bank is divided into 182,500 shares, of which 65,208 are immobilized, belonging to public establishments, married women, or minors.

BANKING AND FINANCIAL NEWS.

(With Comments on the more important matters. This Department also includes General Business News—Notes from Foreign Banking Centres, including Canada—A Complete List of New Banks, Changes in Officers, Dissolutions and Failures—Banking and Monetary Tables—Bankers' Obituary Record, &c.)

Boston Clearing-House.—At the annual meeting on April 9 the following officers were chosen: *Chairman*, James H. Beal; *Secretary*, N. G. Snelling; *Clearing-House Committee*, John Cumming, President of the Shawmut National, Chairman; George Whitney, President National Union; R. E. Demmon, President Howard National; C. O. Billings, President Globe National; Charles A. Vialle, President Bank of the Republic. Plans of the new quarters, soon to be occupied, at No. 66 State Street, were exhibited and approved.

The result of the election is said to imply a radical change in the policy of the association, the younger element having outvoted the elder. The retiring members of the committee are Thomas Lamb, President of the New England National, Chairman, who has been on the committee since the formation of the Clearing-House Association in 1856, William Perkins, President of the Tremont National, and A. W. Stetson, President of the State National.

On and after May 1 the Boston Clearing-House Association will abandon the practice of issuing certificates for use in settling balances between banks, it having been decided to use hereafter the Government gold certificates in ordinary business between banks, and each bank must store its own gold. The certificates now in use are of value only between Boston banks which are members of the association, and any loss results in inconvenience only. A gold certificate such as will be used is cash in the hands of the holder.

Consolidation of Exchanges.—A large majority of the members of the New York Mining Exchange voted in favor of the proposed consolidation with the National Petroleum Exchange on April 3. The Petroleum Exchange subsequently voted on the question with a like result.

The negotiations for the union had been carried on for some months, and were concluded on the following basis: Members of the Petroleum Exchange to become members of the Mining Exchange on paying \$100 each and also a sum equal to the net reserve of the Gratuity Fund of the Mining Board on the basis of the former membership. This would be about \$28 apiece. The Governing Committee was increased from twenty-seven to twenty-nine members, upon the consolidation. The surplus in the treasury of the Mining Exchange in excess of \$100 apiece (about \$40) is to be credited to the old members and applied in payment of future dues or other indebtedness by them to the Exchange. The new body assumes the title of The New York Mining Stock and National Petroleum Exchange, and business is to be transacted in the

rooms of the New York Mining Exchange. It has a list of 970 members (including some of the strongest houses in the city) with a cash capital of \$97,000 and a gratuity fund having a surplus of about \$23,000, with an insurance to the heirs of each member of \$8,000.

The New Superintendent of the Assay Office.—The President has appointed Andrew Mason, of Pennsylvania, to be Superintendent of the New York Assay Office, to succeed Pierre C. Van Wyck, deceased. Mr. Mason is at present Assayer in the New York Assay Office, and is regarded as a faithful and competent officer. He will be required to give a bond of \$50,000.

Mr Mason has been connected with the Assay Office since it was opened, October 10, 1854. He was appointed Assistant Assayer under Dr. Torey and held that office until 1865. After the death of Dr. Edward N. Kent he was appointed to his present position of melter and refiner. Mr. Mason introduced sulphuric in place of nitric acid in the process of separating gold and silver. For this valuable improvement, by which the Government has saved many thousands of dollars, he was presented with \$10,000 by Congress. He is a native of Scotland and is fifty-four years old. In addition to this we can say that Mr. Mason is an unassuming gentleman of agreeable manners.

Small Sums by Mail.—Ever since the fractional paper currency was withdrawn from circulation people who have frequently to send small sums by mail have complained of the lack of a convenient medium for the purpose, the formalities surrounding the money-order system being too troublesome in the case of small sums. It is believed that the form adopted by the Government, and which will be issued just as soon as proper arrangements can be made for manufacturing the blanks, will answer all requirements.

The form suggested is virtually a postmaster's check payable to bearer, and drawn upon the postmaster at some other office, and payable only at that office. In order to guard against alterations in the check, the amount is not only written out in the body of the paper, but the exact sum is indicated by punching holes in certain figures in the margin. This postmaster's check will be sold for three cents more than the amount called for. There is no provision against loss in case the letter containing the check is lost, and no duplicates will be issued. The order is good for three months after the last day of the month of issue. For every period of three months, or fractions of such periods, after the first three months have expired, an additional charge of three cents will be required. More than half the money-orders issued are for sums of less than \$5. Safety is less essential in matters concerning those small sums than the saving of time effected by the use of a simpler system of money-orders, and the officers of the New York Post-office believe that the new orders will wholly take the place of money orders for small sums.

The Religious Savings Bank Failure.—Sheriff Briggs, acting as messenger of the Court of Insolvency, took formal possession of all the property owned by the Augustinian Society, also of the books of the banking institution. The Rev. D. D. Regan is authorized to act as custodian of the property until assignees are appointed.—*Lawrence, Mass., April 10.*

There is nothing singular in the fate of this institution which failed toward the end of February, excepting the fact that it was allowed and was able to continue so long. The financial statement, published on March 1, shows that the liabilities consisted of open accounts, \$405,400; interest to January last, \$31,900; mortgages, \$130,000; total, \$567,300. The assets consist of

churches, schools, a cemetery, etc., valued at \$560,000, but, if they are sold by order of the court, it is supposed that the depositors will receive little over five per cent.

Such cases as this are proper ones for the interference of the law. The idea upon which the savings institution was founded was thoroughly unsound. Religious banking concerns, under any denomination, should be prohibited as contrary to public policy.

Philadelphia Bankers Arrested.—George F. Work and Samuel Work, bankers, who had charge of the finances of the People's Passenger Railway Company, have been arrested on charges of conspiracy and embezzlement of the funds of the company.—*Philadelphia, April 25.*

Since the middle of January a committee of the stockholders of the railway company have been investigating charges of fraud that were brought against the Messrs. Work. Their report sustained the charges of dealing improperly in the company's securities, and mismanagement of its finances. They claimed that the consequent losses to the company amounted to \$963,000. A resolution was therefore taken by the company to prosecute the alleged offenders with the above result.

Failure of Toledo Bankers.—The private banking-house of C. H. Coy & Co., of Toledo, Ohio, suspended on April 3. It was reported that the failure was caused by the declination of a New York bank to honor the drafts of the firm.

It appears that C. H. Coy was the President of the Commercial National Bank of Toledo, of which the Chase National Bank of New York was the correspondent; but, it is said, he, on finding that the rules governing national banks were too restrictive, severed his connection therewith and started the banking house of C. H. Coy & Co., which house made large advances to the Toledo & Indianapolis Railway Company, the bonds of which it has negotiated. L. K. Parks, the assignee of the insolvent firm, has submitted a statement of their affairs which shows total liabilities of \$291,000; assets, \$128,000.

Cancellation of Coupons.—The fact was made public on April 11, that a heavy defalcation had been discovered in the Finance Department of the City of New York. The amount has been stated at \$148,000. The frauds are stated to have been carried on since 1879, by collusion of William B. Carroll, the coupon clerk, with some other clerk in the department, who failed to cancel coupons paid, thus making it possible for a confederate to collect the coupons over again.

The fact that a fraud of this kind has occurred makes it a question of some interest whether it is also possible in financial institutions where interest is paid on bonds in large amounts. With this view the officers of the Farmers' Loan and Trust Company, which pays out millions of dollars every month upon the coupons of different railroads and other corporations, were recently asked what precautions were taken by their company to prevent such a theft as that which has occurred in the Comptroller's office. Mr. W. D. Searles, the Second Vice-President, said that, although no one could tell what might happen, he could not conceive of any scheme by which money could be lost in their office through the payment of cancelled coupons, and the loss in the Comptroller's office was an inexplicable one to him. The system of dealing with coupons in the Farmers' Loan and Trust Company is extremely simple. When the company undertakes to pay a lot of coupons falling due on a certain date, a page, or a number of pages, in a ledger is devoted to a record of the transaction and

each line of the page or pages is numbered and reserved for one coupon. When a coupon is presented for payment at the paying-teller's desk, a glance at this ledger, in case of doubt, would show whether that particular coupon had been paid before. But in ordinary cases the coupons are presented for payment in envelopes bearing the name of the company or person presenting them and the number, value, and character of the coupons. The teller examines and counts them, and if the endorsement on the envelope is correct, stamps the date upon the envelope, and puts the bundle of coupons under a stamp which cuts a hole the size of a dime in them. It is only after doing this that the check is drawn and paid out. The envelope of cancelled coupons then goes to a clerk, who enters the date of payment and to whom paid upon the appropriate lines reserved in the ledger for the transaction, and at the end of a certain time the coupons are returned to the company which issued them, as vouchers for the money paid out. The collusion of several clerks and of the paying-teller would be necessary to make fraud possible by the payment of cancelled coupons, and could not remain undiscovered more than a few weeks.

In some of the railroad offices a still more perfect method is pursued, because the corporations issuing the bonds have the right to keep the cancelled coupons, whereas the trust companies have to return them as vouchers. The system consists in preserving a dummy bond, with coupons for each bond issued, being a duplicate of the real bond, except as to signatures. When a coupon is paid it is punched with a hole, stamped with the date, and pasted over its duplicate on the dummy bond. The officers of the company can thus see at a glance what coupons have been paid and what remain unpaid.

Death of Schultze-Delitzsch.—A dispatch from Potsdam announces the death of Hermann Schultze-Delitzsch, the founder of the system of "credit banks" which have been so successful in Germany.—*Cable Dispatch, April 30.*

Hermann Schultze-Delitzsch, whose death was announced in this dispatch, was born at Delitzsch, in Saxony, on the 29th of August, 1808, studied law at Leipzig and Halle, and entered the ranks of the magistracy, employing his leisure in the study of philosophy and economic science. He was already known as an active worker for the welfare of the laboring classes when, in 1848, he was sent to the National Assembly at Berlin by his native town, and made Chairman of the commission charged with the task of inquiring into the condition and needs of the workingmen. In the great volume of evidence and opinion submitted to him he found a confirmation of his economic theories, which were opposed alike to the old system of industrial corporations and to the Utopian theories of the time, and so promptly set himself to establish workingmen's associations for the common relief and advantage of their members, unaided by the State. Co-operation of the kind which Morier called "the child of Socialism, rescued by the economists from the dangerous custody of its parents," was urged by Schultze-Delitzsch in opposition to the Socialism of Lassalle and Marx, which underlay the International Association.

While in England the tendency was to societies of consumers and in France to associations of producers, in Germany the co-operative idea found its most notable development in societies of credit, possibly because of the less abundant capital and the want of bank facilities in the smaller towns. The little "Credit-Union" of Delitzsch, which was founded in 1852, was the parent of many hundreds of these beneficent institutions.

The Credit Society of M. Schultze, says Somers, is practically a bank, but a bank organized on principles especially adapted to the working classes within certain limits of transaction, to which it is strictly confined. The members of the society must be men of "self-help," able to work and in regular employment, and they must hold each one equal share of the stock capital of the society, which may be paid up in full or by regular instalment. Dividends are only paid to the members who have paid in full, the profits due on the partly paid shares being added to these till they reach their full amount. It follows, from the principle of the society—"in proportion to the chance of gain, the risk of loss"—that when the share capital had to be called upon to liquidate the debts, it is the capital actually paid in that loses. Equality of shares and equality of advantages and risks are thus attained. But in addition to the share capital there is a reserve fund formed out of entrance fees and a percentage of the net profits.

The order of liability for deficits in the balance sheet is thus: First, reserve fund; second, paid in capital, and third, private property of the members, the final principle being that of unlimited liability. Every member is responsible for the debts of the society, and the society for the debts of every member. It is obvious that a company thus constituted and composed of the most saving and industrious workmen of a town or district offers a solid security, and consequently the share capital is supplemented by loans for given periods of time, debentures and saving deposits, the last having to be guarded by conditions as to notice of withdrawal. At the beginning of a society the paid-up share capital may not be more than the proportion of 10 to 90 of borrowed funds, but it has to be brought up as rapidly as possible to 25 per cent. and should reach a maximum of 50 per cent. The share capital as originally fixed has also to be increased, as the business and the amount of funds necessary to its transaction increase, so that the amount of each share has thus to be supplemented, plus the increase of business, minus the increase of numbers. By these means the society is protected from too small a share capital for its liabilities and from the temptation of appropriating large dividends out of the surplus profit accruing from borrowed funds.

Another peculiarity of the German "Credit-Union" is that it makes advances of the funds of which it is possessed to its own members only, the two great ends to be secured being the minimum of risk and the maximum of responsibility. The first is promoted by advancing money only for industrial purposes within due limits among borrowers whose requirements and circumstances are or may be thoroughly known to the society, and the second by the fact that every member of the society is unlimitedly responsible for any errors or losses that may arise in the administration. The advances are made in the usual form of promissory notes, with the indorsation of sureties, ordinary bills of exchange and occasionally mortgages over real property in current account. Advances are not made for longer periods than the society itself can borrow. Partial repayment at dates is sometimes conditioned within the period of advance, and the interest charged follows the public money rate.

The example of Schultze-Delitzsch was speedily and widely followed throughout Russia. While each society had full powers of self-regulation, all were on the same general model, and a general affiliation was naturally

brought about for mutual advice and encouragement. In 1865 M. Schultze, who had already obtained corporate rights for the associations, established a central credit bank at Berlin, by which the societies, while depending mainly on local credit supplies, might have access in case of need to the general loan market. There are now about 3,000 "banks" of this sort in Germany, to say nothing of those in other European countries.

M. Schultze, it need scarcely be said, was a confirmed Liberal. He was one of the forty-two members of the Second Chamber who in 1849 refused, on constitutional grounds, the payment of taxes, and were acquitted after a trial in the Criminal Court, where his speech made a notable sensation. When he began his self-chosen work he retired from the judiciary. In 1859 he became Solicitor of the League of German Associations and publisher of its organ, "Die Innung der Zukunft." At the same time he was elected to the national Legislature, of which he remained a member during its different phases, always acting with the party of progress. In 1863 the workmen of Germany, knowing that his slender fortune was not adequate to the demands imposed upon it by his patriotic and philanthropic labors, raised a fund of 50,000 thalers for him, the interest of which he accepted for his life, the principal belonging to the original subscribers. He was the author of numerous books and tracts, the best known of which are "The Association Book," "The Laboring Classes and the Question of Association," "The Loan of Credit Unions as People's Banks," "The Development of Associations," "A Course of Political Economy for Workingmen," and a "Catechism for German Workingmen," which involved him in a sharp controversy with Lassalle, the brilliant and cynical leader of the Socialists.

Non-Taxability of Gold Certificates.—The Cashier of a State bank in Indiana writes as follows: "MESSRS. BRADFORD RHODES & CO. *Dear Sirs:*—In the April number of RHODES' JOURNAL OF BANKING, page 317, in your comments on gold certificates you say that they are not taxable by States or municipalities. Will you please refer me to the law or authority exempting them from such taxes, and oblige," etc.

We presume the following section of the Revised Statutes of the United States covers the point inquired about:

"Section 3701. All stocks, bonds, Treasury notes, and other obligations of the United States, shall be exempt from taxation by or under State or municipal or local authority."

A proviso contained in the Act of June 30, 1864, Section 1, is as follows: "And all bonds, Treasury notes, and other obligations of the United States shall be exempt from taxation by or under State or municipal authority."

George K. Sistare's Sons have opened a branch office at 59 East One-hundred-and-twenty-fifth Street (Harlem), New York, connected by telephone with their main office. It will be in charge of Mr. George Simonson, formerly a member of the New York Stock Exchange, and who is favorably known in financial circles. Messrs. Sistare do a general banking business, and deal in first-class securities on the Stock Exchange.

The Produce Exchange Bank, of New York, is to start under the following conditions: 1. The name of the organization shall be the New York Produce Exchange Bank. 2. The bank shall be organized under the State law. 3. The capital stock shall be primarily fixed at one million dollars (\$1,000,000), with the right reserved to increase, as provided by law, to five million dollars. 4. That the committee, to-

gether with such other stockholders as the committee may elect, shall constitute the Board of Directors for the first year. As has already been mentioned, the capital stock was subscribed for four times over. The committee has allotted three shares to each subscriber.

A Stock Exchange for Cincinnati.—At the time the Cincinnati, New Orleans and Texas Pacific over-issue was made public some time ago a committee was appointed by the brokers doing business in Cincinnati to report a plan for the establishment of a Stock Exchange and registry office. This committee from some cause have delayed making their report, but it is understood that some action is to be taken soon toward the establishment of a Stock Exchange, and that the rules and regulations now in use on the New York Stock Board will be adopted by the Cincinnati Exchange.

Postal Savings Banks in Holland.—In Holland the postal savings bank system was founded by the law of May 26, 1880, and came into operation April 1, 1881. The management is conducted in Amsterdam by a Director, subject to supervision by a board of five, all of the six being appointed by the King. Deposits, limited to a minimum of 10 cents, are received at any of the 809 Post-offices. For further encouragement of small savings, small cards have been prepared for affixing twenty stamps of the value of one "stiver," or five cents, of Dutch currency each; the cards, when all the spaces on it are covered, represent and are receivable for a deposit of one florin, or about forty cents of our money, and these are furnished gratuitously by every Post-office and every licensed vendor of stamps. Deposits can be made by any person, of any age, and can be withdrawn at any Post-office. Interest is paid at the rate of 2.44 per cent. per year. At the end of every year, after the first entry in the book which is furnished with the first deposit, the book is to be sent to the Director, who has the interest written up, and all accrued interest is withdrawable at any time with the principal. As a rule, one-half the deposits has to be invested in the 2½ per cent. public debt of the Netherlands; the remainder can be used in purchasing the bonds of provincial and municipal Governments. Principal and interest are guaranteed by the State. A pamphlet descriptive of the system has been officially prepared, which has been largely scattered gratuitously; all important companies have also been requested by circular (as also have local authorities and officials and other persons of influence) to do all in their power to bring the subject to the attention of their employes. For the eleven provinces of the kingdom the deposits up to 1882 aggregated \$450,784; the withdrawals were only \$110,648, leaving \$340,136. The books issued were 23,773; those returned were only 942. It thus appears that the Government pays at least as much interest as it receives, and charges nothing for operating expenses. Authorized representatives of Holland and Belgium met at The Hague, some months ago, to perfect arrangements between the two countries, with the object of planning for making deposits in the postal savings banks of either country payable in the other.

MISCELLANEOUS BANK ITEMS.

- The Hamilton (Mo.) Savings Bank was burnt out on April 9.
- The Cincinnati Oil Exchange is a new organization just beginning business.
- The estate of the late Nathaniel Thayer, of Boston, is estimated at \$17,000,000.
- Mr. John D. Ellis, banker, of Antwerp, New York, has been nominated by the Governor as a State Assessor.
- The merchants of Manasquan, New Jersey, have subscribed \$40,000 for the establishment of a bank at that place.
- Mr. Daniel Needham has returned to Boston from a southern trip thoroughly recuperated, and has resumed his duties as Bank Examiner.
- A. K. & E. B. Yount, bankers at Fort Collins, Col., and owners of flour mills at Boulder, have made an assignment. Their failure has been long anticipated.
- A check for \$2,500,000 passed though the New York Clearing-House on April 21. It was drawn by C. P. Huntington as the first instalment on the purchase of the Morgan steamship line.

- The Philadelphia banks pay out in May about \$600,000 in semi-annual dividends.
- Governor Cleveland, of New York State, has vetoed a bill to compromise with the sureties of the failed First National Bank of Buffalo, where some of the State funds were kept on deposit.
- The Farmers' Loan and Trust Company of New York has moved into its new building. The Merchant's National Bank will occupy the Loan Company's old premises until its new building is completed.
- The Metropolitan Bank, of New Orleans, was robbed by burglars on the night of April 15. They seized and gagged the watchman and blew open the vault, but the loss to the bank is said to be less than \$2,000.
- Charles Baldorf, the 19-year-old son of Zachariah Baldorf, the leading banker of Tremont, Penn., committed suicide on March 31. The act was ascribed to a love affair. He was a remarkably intelligent young man.
- William C. Russell (*alias* Bullard, etc.) who has for many years past been swindling banks and private persons by means of forged and raised checks, has been arrested in New York and sent to State Prison for five years.
- The subscribers to the Produce Exchange Safe Deposit and Storage Company of New York have organized and elected directors. The company proposes to erect massive vaults in the new Produce Exchange Building for the safe keeping of valuables.
- Mr. Edward Gould has completed fifty years of service as Cashier of what is now the National Traders' Bank of Portland, Me. He was first elected Cashier on March 9, 1833, when the institution was called the Manufacturers' and Traders' Bank. Mr. Gould is seventy-eight years old and in excellent health.
- The Commissioner of Internal Revenue has decided to redeem, after July 1, checks and drafts imprinted with the two-cent revenue stamps when desired. The word "Redeemed" will be stamped upon each check. This will enable banks and bankers to use the stamped checks after their redemption.
- The Boston "Transcript" says that Steadman & Tufts, the recently suspended stock brokers, have liabilities of \$12,200, and beyond a seat at the Board (already sold for \$5,000), assets of \$160 in bank. Their total shorts aggregate nearly 7,000 shares, most of which were the best dividend-paying stocks in the market.
- The suit brought by the City National Bank of Dallas, Texas, against the National Park Bank of New York, for the recovery of \$26,109 12, a balance which the plaintiff had on deposit with the defendant bank, on trial before Judge Larremore and a jury in the Supreme Court Circuit, at New York, came to a close, on April 19, with a disagreement of the jury.
- In the Court of Claims on April 16 judgment for \$13,230 was rendered in favor of the Manhattan Savings Bank of New York against the United States. This case, which was referred to the court by the Secretary of the Treasury, involved the ownership of sixteen United States bonds which were in controversy between the Manhattan Bank and L. Von Hoffman.
- The certificate of incorporation of the Home Bank has been filed in the office of the County Clerk of New York. The capital stock is fixed at \$125,000, with provision for increase, and is divided into 1,250 shares. The principal stockholder is George I. Seney, who has 300 shares. Other stockholders are William Campbell, 75 shares; Edmund Stephenson, 50 shares; W. P. Esterbrook, 50 shares; S. V. Tripp, 50 shares; George E. Ketchum, 50 shares; Henry A. Hurlbut, 50 shares; George Starr, 50 shares.
- During the month of April, 29 new national banks were organized. The number organized during the six months ending May 1, was 132, with a capital of \$14,958,500. Of these, 10, having a capital of \$1,005,000, are in New York; 11, with a capital of \$785,000, in Pennsylvania; 16, with a capital of \$2,090,000, in Ohio; 10, with a capital of \$2,970,000, in Illinois; 9, with a capital of \$860,000, in Iowa; 6, with a capital of \$325,000, in Nebraska; 8, with a capital of \$400,000, in Dakota, and 9 in Texas, with a capital of \$850,000. The increase in the capital of the national banks during the last six months has been \$8,677,500, and the decrease in circulation \$3,399,791.

THE NEW STOCK CLEARING HOUSE.

It is well known that the proposition has been brought up many times within a few years past to introduce a system of clearing stocks among members of the New York Stock Exchange. The action taken by the authorities to prevent the over-certification of checks by national banks has made the matter more pressing recently, and now it seems probable that a thorough practical trial is to be made of the project.

It may be remembered that the Governing Committee of the Stock Exchange passed a resolution in favor of the idea late in 1882. Since that time a number of meetings of members have been held, and they have concluded that the plan of Mr. H. Osterberg was the best offered, for the reason that (1) neither stocks nor money would pass through the Clearing-House; (2) due secrecy of transactions was provided for; (3) differences would be settled in hundreds (instead of thousands) of dollars, and before 10:30 A. M., and (4) the risk of the loss of securities was lessened, while not more than 10 percent. of the certification now used would be required. Accordingly a number of subscribers to the new scheme met on April 9 and determined to secure the exclusive use of the Osterberg system for \$50,000, of which \$10,000 was to be paid in cash, and the remainder from the profits of the Clearing-House. The charges for clearing were settled at 10 cents per 100 shares, the maximum charge to be \$50 per month, and 75 per cent. of the net earnings are to be applied to the balance due Mr. Osterberg. The stock is divided into 2,500 shares at \$20 per share. It was all taken by April 14, and it is expected that operations will be begun about the middle of May, 75 houses having, up to April 25, consented to give the project trial.

Mr. J. D. Probst, President of the Stock Clearing Association, has appointed the following committees: Executive Committee, E. K. Willard, J. D. Smith and S. V. White; Rules and Regulations, W. C. Kellog, Moritz Meyer, A. L. Thompson, R. Keppler and R. L. Anderton, jr.; On Admissions, A. A. Drake, W. T. Colbron, A. A. Lockwood, F. R. Sturgis and D. A. Boody.

The working of the proposed system is described in the "World" as follows:

Suppose we take an extreme case, that each of the 400 active members of the Stock Exchange should during to-day buy 100 shares Lake Shore and sell 100 shares Lake Shore. Under the present system, while a certain number of brokers would doubtless arrange to match off their transactions, it is fair to suppose that at least 100 of the traders would wait receipt of the 100 shares which they had bought and then deliver it to the party to whom they had sold it, thus making 100 checks of \$11,000 each to be certified by the banks; while by the proposed system there would be absolutely no stock passed, each broker's statement showing 100 shares to receive and 100 shares to deliver. This, of course, is carrying the system to a point which never would be reached, but shows theoretically its advantage. In the case of brokers doing business for investors, in which case the stocks sold are actually ready for delivery, and the stocks bought are paid for and taken out of the street, there is no special advantage in the proposed Clearing-House system, but this element represents a very small percentage compared with the business of the commission houses, who buy and sell stocks on margins and who are constantly borrowers and lenders of stocks which they bought or sold for their customers.

If a broker should buy 10,000 shares of Jersey Central on a Monday, which he was proposing to carry on a margin, he would on Tuesday morning, provided there was a good demand from borrowers of J. C., lend the same amount of stock. His statement would then show 10,000 shares J. C. to receive, which he had bought, and 10,000 shares

J. C. to deliver, which he had loaned, and the extent of his check-drawing would be confined simply to the difference in the prices.

There are two special advantages which this proposed system possesses: First—That all actual deliveries of securities are ex-Clearing-House, and one does not part with his securities until the check is ready for him, and the second that all clearances of any particular stock on any day would be at the same price.

The first point will recommend itself especially to brokers who were in the gold business on Black Friday in 1869, when under the old Gold Exchange Bank system a man delivered the amount to the bank at say 12:30 and received the amount due him at 1:45. A great many of the brokers on September 24, 1869, delivered the bank the amount due to the bank, but the amount due them by the bank was not received for several days and during the intervening time, which was one of the greatest excitement, they were left with a serious impairment of their capital, for which they were in no wise responsible. It was specially on account of the omission of this feature that the present system of clearings has been selected.

The other point—that all clearances of say, for example, Western Union, on any particular day, are to be made at a fixed price (which will usually be the closing bid price of the previous day—say, 83.) serves to conceal from the clerks of the Clearing-House the nature of the business which has been transacted by the members. A broker may buy 1,000 shares Western Union at $83\frac{1}{4}$ in the morning; he may sell the same 1,000 shares in the afternoon at $85\frac{1}{4}$, yet beyond those of the group who saw the purchase and the sale there would be no one, under the proposed Clearing-House system, who would be aware of the details of the transaction. The broker's statement would show 1,000 shares to receive and 1,000 shares to deliver, with no price attached, and as the amounts offset each other he would have no stock to receive or deliver.

Of course, however, there would be a difference in the prices to adjust and this would be done as follows: Each afternoon the tape will give the settlement price for the following day of the stocks which are cleared. This price will be approximately the bid price of the stock at the close of the day. The difference between the statement price and the price of the actual transaction is to be adjusted by the debtor giving the creditor a check for that difference between 10 and 10:30 of the following morning. Thus, in times of violent fluctuations and great transactions of the Stock Exchange, instead of being obliged to wait until 2:15 P. M. to see whether a broker is going to be able to fill his contracts, which show a loss, under this system, unless he sends his check for differences due by him before 10:30 A. M., he has virtually failed. This advantage of nearly four hours will be of the greatest importance in excited times. Taking the Western Union case mentioned above, we will suppose after opening at $83\frac{1}{4}$, when Mr. A buys of Mr. B 1,000 shares, it sells up to $85\frac{1}{4}$, when A sells to C 1,000 shares, and the stock closes at 85 bid, which is reported on the tape after 3 o'clock as the settlement price for the following day. Mr. B, between 10 and 10:30 A. M., sends to Mr. A his check for $1\frac{1}{4}$ per cent. on 1,000 shares—\$1,500. C sends to A a check for $\frac{1}{4}$ per cent., or \$500; and at say 10:30 A has his \$2,000 difference and his Western Union transactions for the day are over. He has no receiving or delivery to do.

The actual working of the system would be somewhat as follows: After 3 o'clock, as at present, comparisons would be made between buyers and sellers, and it could be arranged whether they were to be "in" or "ex" clearing. The following morning the people who bought stocks at a given settlement price and those who sold them below the settlement price send checks for the differences to their respective creditors, the broker thus making up his Clearing-House statement, showing from whom he has bought or borrowed and to whom he has sold or lent the various stocks that are being cleared. On the back of his statement he indorses a statement of balances of the net amount of each particular stock in which he has transactions, as to who are to receive or to deliver. This statement is to be at the Clearing-House by 12:30 and by 1:30. The Clearing-House manager will be prepared to deliver him notifications as to whom he has to deliver the various stocks. The delivery is then made at the adjusted price of each stock, as advised the previous evening.

In addition to this, any cash transaction made in the morning of the clearance—which presumably would consist almost entirely of lending and borrowing stocks—could also be cleared, provided it was mutually agreed upon with the Clearing-House that same day.

GENERAL BUSINESS NEWS.

Report on Corners and Futures.—The committee of the New York State Senate, which has had the subject of "corners" and dealing in "futures" under consideration for a year back and have heard a great deal of testimony on it, submitted the report of their investigations to the Senate on April 20. A minority report was also submitted. The first report condemns the practice of buying for future delivery, which is characterized as gambling. The report says that "corners" occur frequently from accidental causes, and that such cannot be prevented; that the consuming public are not so much affected by the operation of "corners" which are the result of conspiracy as the outcry against them might lead many to suppose, for the reason that they are swift of culmination and when ended prices for a time generally recede below legitimate values in proportion to their previous enhancement; that they are nevertheless exceedingly demoralizing and hurtful in their tendencies. The majority of the committee condemns the reckless spirit of speculation and the craze to acquire wealth suddenly which exist to such a great extent and lead men to buy or sell for future receipt or delivery large amounts in value of property without the least intention of receiving or delivering the property so purchased or bought. They say this is not legitimate business but gambling, and that if there is any way in which it can be suppressed without an undue interference with legitimate business it ought to be done. They recommend:

1. That a tax should be laid upon certain sales for future delivery, to be collected at the time of settlement in all cases where an actual delivery does not take place.
2. That *bona fide* sales of merchandise for future delivery are lawful and beneficial, when there is evidence that it is the intent of the contracting parties to deliver and receive the property sold and bought.
3. That "puts" and "calls" and bucket-shop operations are gambling transactions, and should be treated accordingly.

Mr. Boyd agrees with the propositions of the majority of the committee, but does not indorse the preliminary matter in the report.

In connection with the report Mr. Browning introduced three bills carrying out the recommendations of the committee.

One bill levies a tax of one cent on every transaction to the amount of \$100 in "future" sales of either grain, flour, pork, lard, eggs, butter, cheese, petroleum, oils, cotton or other soil products.

The second measure provides that all contracts, written or verbal, for the sale, purchase or transfer of any certificate or other evidence of debt, or of any shares, interest or privilege in the stock of any company or corporation incorporated under any law of the United States or of any State, shall be absolutely void if based upon the fluctuations to occur in the prices of particular or of any stocks sold or dealt in in the New York Stock Exchange in the city of New York, upon what is commonly known and termed in said city as the "bucket-shop" plan of business.

The third bill provides that any person who keeps any room or place to carry on this kind of business or for the sale of pools on races, elections, etc., shall be guilty of a misdemeanor, punishable by imprisonment for a year, or a fine not exceeding \$2,000, or both.

The first bill proposed is contrary to the spirit of the report, which recognizes that *bona fide* sales for future delivery are legitimate. The tax proposed is calculated to unduly interfere "with legitimate business," and is, besides, very objectionable on the ground that it would be impossible to collect it, and dealers who made honest returns would be at a disadvantage as compared with those who made dishonest ones. The business of the "bucket-shops" is so like pool-selling and keno that laws that provide for the latter should also cover the former.

Postal Matters.—It is estimated that under the new law reducing letter postage and regulating the pay of postmasters, the receipts of not more than one office in every four, on an average, will be in excess of postmasters' salaries. Under existing law, all post-offices, however insignificant, contribute about two-fifths of their receipts to the Government.—*Washington, April 6.*

It appears that the principal part of the deficiency expected will be caused by the change in the law regulating the postmasters' salaries, and not by the reduction in the postage. It is amazing what an immense stir the fear of a slight deficiency in the Department, following the reduced postage, has raised; whereas the same amount squandered in any other direction would generally pass unnoticed. In view of this we quote some pertinent remarks made by Dr. A. Leffingwell in the "Laws of Life":

We are undoubtedly a smart people, and yet an incomprehensible reluctance to adopt any Governmental methods for public benefit seems always to characterize our national legislators. Penny postage was effected in England several years before we could see any good in it. Postal cards were in use over half of Europe before the convenience was recognized in this country. An improvement in the ordinary postal card, by which the sender can prepay a reply, has just been effected by the English Postmaster-General. After it has been in use some six months or a year in Europe, the Department of our own country may be expected to take it up and introduce it with a flourish. Switzerland has added the advantages of a parcel-express system to the General Post-office. I once started to walk over a mountain pass from one town to another, and upon taking my portmanteau to the Post-office, duly labelled, it was stamped like a huge letter, and I found it awaiting me when I reached my destination. In New York when I post a letter at the corner lamp-post, there is the warning that it must not contain anything valuable, since the collector who handles all the mail may easily abstract it. When one goes to Germany, however, his letters thus posted drop into a locked tin box within the other receptacle, and the collector, who drives about in a light cart, has only to substitute an empty case for the one that he takes. Do you wish to mail a newspaper or small parcel in any of our large cities between New York and San Francisco? If at a distance from an office you must lay it outside, on the top of the box, to be wet by rain or stolen by pilfering boys. In Austria, on the contrary, you will find a large receptacle for newspapers and parcels, always by the side of the letter-box. Do you wish to buy postage-stamps in New York? You must either go to an office or beg the convenience of a friend or stranger; yet in every large city on the continent of Europe, you may find them for sale on nearly every block.

The Chicago Board of Trade Sustained.—The Supreme Court sitting at Springfield, Ill., has filed an opinion in the case of Lester and others against the Chicago

Board of Trade, in favor of the latter. The lower court had previously decided that members were amenable to the rules of the Board, and the Court could afford them no relief from the obligations voluntarily taken in joining it. The Supreme Court now sustains this decision.

This decision shows what results from the attempt of a Legislature to protect men from the effects of their own deliberate acts. Very stringent laws have been passed in Illinois to make void "future" contracts, and intended to cover cases like the one in point, but they have failed when put to the test. The suits, twenty in number, grew out of what was known as the July wheat corner, the market price for July wheat at the close of that month having reached \$1 36. A large number of operators refused to settle at that figure, and the amount thus held back is estimated at between \$2,000,000 and \$3,000,000. The matter was taken before the Arbitration Committee of the Board, and the hearing extended over nearly a month, the losing operators urging that the market had been cornered by a clique, and citing as an instance the price of cash wheat. The case gained additional interest from the fact that it was deemed a test one. The Arbitration Committee fixed the settling price at \$1 35, at which figure operators were ordered to make good their differences.

In anticipation of the report of the committee the matter was carried into court, and the Board of Trade was enjoined from attempting to discipline members for failure to pay the differences, and to restrain any action tending to deprive them of board membership. The same allegations were urged in court, to the effect that the market had been cornered and that the transactions were of a gambling nature. To this the Board of Trade urged no defense, citing the board rules as sufficient under which to discipline board members. The lower court decided that members were amenable to the rules of the board and that the court could afford them no relief from the obligations voluntarily taken in joining the board. The Supreme Court sustains this view. Mr. Armour, who was alleged to have engineered the supposed corner, said that no defense had been urged to the allegation that the market had been manipulated, so as to definitely settle the question whether contracts could be invalidated on the board, even though the fact of a corner was transparent and notorious.

A New Counterfeit.—A photographic counterfeit of the new five-dollar national bank note was recently received at the Treasury Department for redemption. It was sent to the Treasury by the Broadway National Bank of New York, and is a counterfeit on the First National Bank of Milwaukee, Wis. It is regarded as very poorly done.

The First Census of India.—The first census of all India on a uniform system, and at one fixed date for the whole of that continent, was taken on February 17, 1881, and the report will be published about June 30. The preliminary volume of statements, which has by this time appeared in Calcutta, contains statistics for the population of British India, of the Feudatory States, and, with the exception of the small territories administered by the French and Portuguese Colonial Offices, of the entire Continent of India proper, including, however, the territory forming the Chief Commissionership of British Burmah, but excluding Cashmere to the northwest, and the small Kingdom of Munnipore on the northeast frontier. The population of this great country numbers 253,891,821 persons, occupies 1,372,588 square miles, inhabits over forty-three and a half millions of dwellings varying in kind and magnitude from the palace of the king to the hut of the savage, is massed together, where not scattered in jungles or the forests of the plains, in 714,707 towns or villages, and is made up of 129,941,851 males and 123,949,970 females.

FOREIGN BANKING AFFAIRS.

I. CANADA BANKS AND BANKERS.

[A digest of Banking and Financial News of the British Provinces. By the JOURNAL'S Correspondent at Montreal.]

LONDON, ONTARIO, feels, it is reported, the want of a local bank, and the want is probably soon to be supplied.

THE OPEN BOARD OF TRADE AND STOCK EXCHANGE, at Winnipeg, has forty members. The provisional directors are applying for a charter.

BANK OF MONTREAL.—The Directors, on April 20, declared a dividend of 5 per cent. The amount placed to rest is \$250,000, and it is said that much disappointment is felt that the amount at rest is not brought up to \$6,000,000, whereas it only reaches \$5,750,000.

COMMERCE OF CANADA.—The value of goods entered for consumption in the Dominion during the six months ended December 31, 1882, was \$64,763,486, upon which a duty of \$12,249,231 was collected. The value of the exports during the same period was \$62,535,910.

HON. S. C. WOOD.—This gentleman has resigned his position of Provincial Treasurer and accepted the management of the Freehold Loan & Savings Co., Toronto. His career has been characteristically American. Commencing life as a teacher in a rural section, he successively and successfully filled the occupations of store-keeping, general agency, County Treasurer, Member of the Ontario Parliament, and Provincial Treasurer. Still in the prime of life and full of vigor, he promises many years of successful service.

LAND LAW AMENDMENTS.—The Land laws of the most of the provinces of Canada being based on those of England, are encumbered with many of the old abuses and difficulties handed down from feudal times. The operation of these laws is attended with delay, uncertainty, and expense. The omission of one or two words, the absence of evidence of marriage or non-marriage of a vendor, the age of the vendor; these and many other things all combine to render land increasingly difficult and expensive to sell or mortgage. An association has been formed in Toronto for the purpose of having the Australian method, known as the Torrens system, introduced into the Dominion. By this method the transfer of land is made almost as simple as that of bank stock or a horse. A bill to effect this object is now before the Dominion Parliament, but its passage at this late period of the session is somewhat doubtful.

RAILWAYS AND THE GOVERNMENT.—The negotiations carried on for some weeks looking to a working agreement between the Grand Trunk and the Canadian Pacific railway companies, have, according to the latest accounts, been broken off, but Mr. Stephens has assured Sir Henry Tyler that his endeavor will be constant to maintain the most friendly relations with the Grand Trunk Railway Company in every way consistent with the interests of the Canadian Pacific.

The knowledge that the negotiations were going on gave some impetus to the demand for a railway commission. The bill for that purpose introduced in Parliament received, however, only 12 out of 90 votes. Notwithstanding this failure it is

not to be supposed that Canada will escape from the difficulties that every other country has experienced in dealing with the dispute that arises between the railways and the people. We predict that when this question is brought up in Parliament again, a very different result will ensue, and that before many years.

THE HODGSON CASE.—The celebrated case of the Bank of Montreal against T. H. Hodgson, one of the greatest of produce speculators of Montreal, came to an abrupt close on April 5. Some weeks before T. H. Hodgson was arrested at the bank's instance for having given warehouse receipts for \$140,000 advanced by the bank to him, and having afterward sold the goods unknown to the institution. The bank charged that he professed to hold the goods in his warehouse, while he really had exported them to the house of Hodgson & Co., in Liverpool. They imprisoned him upon a *capias* in the amount, and then the representative of the New York house of Hodgson and also his Liverpool brother came to Montreal. The result was that J. H. Hodgson was liberated, and left Montreal for New York in order to avoid complications with other creditors, of whom there are many. The bank claimed that there was really nothing to cover Hodgson's indebtedness to them, and hence his arrest. It is said the bank will likely lose nearly \$90,000, and probably more.

PROGRESS OF INDUSTRIES.—According to advance sheets of the third volume of the Dominion census, the total amount of capital invested in Canadian industries was in 1881 \$165,302,623, or more than double the amount invested in 1871. This capital was distributed as follows: Ontario, \$80,950,847; Quebec, \$59,216,992; Nova Scotia, \$10,183,000; New Brunswick, \$8,425,282; British Columbia, \$952,835; Prince Edward Island, \$2,065,776; Manitoba, \$1,383,331, and North-west Territories, \$104,500. In the United States, according to the last census return, capital invested increased during the last decade less than 30 per cent., while in Canada the increase has been more than 100 per cent. The value of products in the Dominion, \$309,676,068, has increased 35 per cent., against an increment of 27½ per cent. in the United States. Assuming that the wages and the value of raw material bear the same relation to the capital invested and value of products in Canada as they do in the United States, it appears that the value of the raw material used in the Dominion industries in 1880 was \$192,000,000; that \$55,750,000 was paid out in wages during that year; that 158,000 hands are employed in the factories, and that the average wages are \$350 per hand.

THE OFFICIAL BANK STATEMENT for March shows an increase of \$473,000 in circulation (\$34,517,813). Government deposits remained about stationary during the month, having at the close decreased only \$100,000. Public deposits have taken an upward turn, showing an increment of \$335,000, a result probably intimately connected with the accretion in circulation of currency passing through the farmer's hands into the banks in shape of deposits. The cash reserves at the close of March were \$39,100,000 against \$38,692,000 at the close of February, an increase of \$408,000. The most important changes in accounts, however, arise out of remittance of sterling in payment of Fall importations; from this cause mainly current discounts, \$147,330,239, increase \$1,823,000, and loans to commercial corporations, \$147,330,239, increase \$128,000, making a total increment of nearly \$2,000,000. The overdue debts unsecured are up to \$250,000, and those secured have increased \$31,000 as a consequence, it is to be inferred, of failures during the month, which were somewhat numerous. The condition of foreign exchanges is hardly so favorable. The amount due to banks in the United States increased \$108,000, and those due from these agencies decreased \$300,000, making a net reduction of \$408,000, in the balance due. On the other hand, while the amount due to banks in Great Britain increased \$370,300, the amount due from these agencies increased \$366,700.

II. NOTES FROM FOREIGN BANKING CENTRES.

[Compiled from Correspondence and other sources for the JOURNAL OF BANKING.]

THE United States contributed the sum of 65,334,932 francs to the resumption of specie payments in Italy. No less than 491 million francs in gold were required.

THE Government of Hungary has called in for redemption \$50,000,000 florins of the 6 per cent. rentes.

SPECIE payments were resumed in Italy on April 12, without difficulty, so far as the latest accounts show.

In the French Chamber of Deputies, on April 19 M. Tirard, Minister of Finance, introduced a bill providing for the conversion of the 5 per cent. rentes into $4\frac{1}{2}$ per cents. The bill passed the Senate on the 21st by a vote of 200 to 71.

In order to increase their business and give employment to their large sleeping capital, the Board of Directors of the Bank of the Island of Cuba have determined to re-enter the market at an early date and conduct, as formerly, an extensive business in bills of exchange.

The profits of the syndicate for the Italian loan of 644 million of francs—said syndicate was composed of the Banque Nationale, of Italy; the Italian Credit Mobilier, Messrs. Baring, Hambro and the Paris Discount Bank—amounted to 1.0904 per cent. or 6.444,000 francs.

WHAT is the role of savings banks seems to be a question not very well settled in some countries—that is to say, the investment of the funds. The Italian savings banks are going to be the guarantors of accident insurance for workmen. The savings banks interested are those of Milan, Turin, Bologna, Rome, Venice, the banks of Naples and of Sicily. The Milan Savings Bank contributes 600,000 lire, and all the banks will contribute *pro rata* to the expenses of the insurance. The question of the cash in the French Savings Bank being called up by the Government is also mooted. Such measures we believe highly detrimental to the fundamental idea of a savings bank.

ONE of the most serious signs of the times in some countries of Europe is the continual increase in the amount of mortgages. This is especially the case in Switzerland. The total estimated value of rural property in the Canton of Berne, in 1856, was 630 million francs, and the mortgages footed up 181 millions. In 1875, real estate had risen to 788 millions, but the debts had grown to 329 million francs; in 1882 with 992 million francs of property, the mortgages have risen to 417,000,000 francs. The situation is about the same in Zurich, where mortgages have trebled within thirty years and where 6,300 persons are in arrears for taxes, while the whole number of taxpayers is only 10,500. Various remedies—such as a forcible reduction of the rate of interest—have been proposed, but the evil lies in the bad situation of agriculture, and the lack of great industries.

THE situation of French finances is far more grave than is generally supposed, and outside of the war debt, there can be no doubt that state socialism is one of the great causes. The "Economiste Francais" says: "Never, in this century, except the morning after great disasters and revolutions, have French finances been so embarrassed; so much at the mercy of the slightest event, as they are at the present moment. State, Department, and Commune finances are all and each in a very precarious condition, and it is really surprising that after the bringing forward of the budget of M. Tirard, that every one does not perceive the real condition of affairs." The railroad companies have also reduced their dividends, and some have declared none at all. The state deficits—those of the budgets of 1882, '3, '4, are estimated each at 150 million francs, or say 100 million dollars for the three years. The result of all this is seen in the rumors of new loans, conversion and consolidation of some portions of the debt, &c.

THE BRITISH BUDGET.—In the House of Commons, on April 5, Mr. Hugh C. Childers, Chancellor of the Exchequer, laid before the House the budget for the fiscal year ending March 31, 1883. The revenue was £39,004,000. This exceeded the estimate by £4,069,000. The decrease in the consumption of spirits had made a reduction of £5,000,000. The expenditures had been £38,906,000, showing a surplus of £98,000. For the coming year he estimated that the expenditure would be £38,789,000. The national debt was reduced the past year by about £7,100,000, and he expected to make a further reduction this year of about £8,000,000. He expected to see the debt reduced during the next 20 years by £172,000,000. He estimated that the coming year would bring the Government a revenue of £38,480,000, giving a surplus of £2,691,000. Mr. Childers proposed that the duties on goods made from silver should be charged only on goods actually sold, and that eventually they should be abolished altogether. He proposed

that the tax on railway earnings, where the fares were small in amount, be abolished, and the standard moisture of tobacco and snuff on which exemption was allowed be raised 1 per cent.; that a provision be made looking toward the reduction of the rate for telegrams to 6d. each; that $1\frac{1}{4}$ d. of the income tax be removed. This last measure would reduce the revenue of the Government £2,135,000. These reductions, if made, would reduce the surplus to £240,000. The report was received with loud and prolonged cheers.

MEXICAN FINANCES.—The second session of the Eleventh Congress of Mexico began on April 1. In the course of his message President Gonzalez said:

“As to the condition of the national finances, I have the honor to inform you that the revenue during the first six months of the current fiscal year was greater than that of the corresponding period last year, for it amounted to \$14,406,102, while the other was \$13,733,949. This rate of increase may not be maintained in the second half, as there has been a certain decline in imports, owing to circumstances which I will summarize briefly. At the outset of the railroad movement in this Republic, the Central and the National companies, which represent the two great international trunk lines, accumulated capital abroad. And in consequence Mexican merchants were able to procure drafts from them, which they used instead of silver to pay for their imports. This facilitated trade, and as the consumption of foreign goods increased the merchants sent larger orders abroad, which was followed by an increase in the imports. The establishment of the banks took place at the same time. In beginning business the banks reduced the rate of interest below, perhaps, the proper sum, which gave a powerful impulse to commercial transactions. But the situation has become less favorable for the import trade since the railroads began to earn money and to receive the subsidies to which they are entitled, and since the banks raised the rate of interest in order to place themselves more in accord with the economic condition of the country. Still, except recently, the expenses of the public service have been paid regularly, and without anticipating positively pecuniary difficulties, the Executive is confident that any trouble which may arise will be only temporary. The increasing development of the country, at all events, affords a firm basis for defraying promptly the regular expenses of the Government. It may here be proper to inform Congress that the money due the railroad at the end of last year has been paid, except that which is due the Central and Sonora companies. But the subsidy of the Central is payable from 6 per cent. of the customs, which it receives regularly, while the payment of the Sonora subsidy is to be made as agreed between the Executive and the grantees of that line.”

In speaking of tariff reform he said:

“The revision of the tariff is being carried on steadily, and although the subject is complicated and beset with difficulties, the Executive expects good results. It may, however, be necessary to ask for more time.”

The President then referred to the Mortgage Bank as follows:

“It has already begun business, and it may be expected that it will afford great service to agriculture, which, stimulated by it and the low railroad freights, may increase the exportation of our home products.”

On April 20, President Gonzalez issued a decree declaring that the new postal code will go into operation January 1, 1884. The new regulations embody the best features of the American and English systems. They reduce inland postage and entirely reform the postal system.

CONDITION OF THE NATIONAL BANKS.—Abstract of reports made to the Comptroller of the Currency, showing the condition of the National Banks in the United States, at the close of business on March 13, 1883, together with the figures of the previous statement of December 30, 1882, for comparison (cents omitted).

NEW BANKS, CHANGES, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National Banks organized since our last report:

- 2914**—First National Bank, Stanton, Michigan. Capital, \$50,000. Henry H. Hinds, President; A. D. F. Gardner, Cashier.
- 2915**—First National Bank, Urbana, Illinois. Capital, \$50,000. Chas. L. Burpee, President; P. Richards, Cashier.
- 2916**—Lake Shore National Bank, Dunkirk, New York. Capital, \$105,000. Truman R. Colman, President; William T. Colman, Cashier.
- 2917**—National Bank of Hustonville, Hustonville, Kentucky. Capital, \$50,000. J. P. Riffe, President; J. W. Hocker, Cashier.
- 2918**—Vineland National Bank, Vineland, New Jersey. Capital, \$50,000. Benjamin D. Maxham, President; no Cashier.
- 2919**—Third National Bank, Sedalia, Missouri. Capital, \$100,000. Albert Parker, President; Reuben H. Moses, Cashier.
- 2920**—Merchants' National Bank, Amsterdam, New York. Capital, \$100,000. John N. Visscher, President; William J. Taylor, Cashier.
- 2921**—National Bank of Ashland, Ashland, Nebraska. Capital, \$50,000. Jno. R. Clark, President; Samuel Waugh, Cashier.
- 2922**—Cincinnati National Bank, Cincinnati, Ohio. Capital, \$500,000. Joseph F. Larkin, President; Edgar Stark, Cashier.
- 2923**—Swedesboro National Bank, Swedesboro, New Jersey. Capital, \$53,000; Isaac H. Vanneman, President; Jno. C. Rulon, Cashier.
- 2924**—Tacoma National Bank, New Tacoma, Washington Territory. Capital, \$50,000. John W. Sprague, President; Isaac W. Anderson, Cashier.
- 2925**—Citizens' National Bank, Whitewater, Wisconsin. Capital, \$50,000. John S. Partidge, President; Edgar M. Johnson, Cashier.
- 2926**—First National Bank, Paxton, Illinois. Capital, \$50,000. Sherrill P. Bushnell, President; John B. Shaw, Cashier.
- 2927**—First National Bank, Georgetown, Kentucky. Capital, \$50,000. H. P. Montgomery, President; N. Spears, Cashier.
- 2928**—First National Bank, Albany, Oregon. Capital, \$50,000. Jno. Connor, President; Henry F. Merrill, Cashier.
- 2929**—Amesbury National Bank, Amesbury, Massachusetts. Capital, \$100,000. Alex. M. Huntington, President; F. F. Morrill, Cashier.
- 2930**—First National Bank, Silverton, Colorado. Capital, \$50,000. M. D. Thatcher, President; Jno. H. Werkheiser, Cashier.
- 2931**—Planters' National Bank, Henderson, Kentucky. Capital, \$60,000. Montgomery Merritt, President; David Banks, Jr., Cashier.
- 2932**—Xenia National Bank, Xenia, Ohio. Capital, \$120,000. Andrew H. Baughman, President; John W. Nichols, Cashier.
- 2933**—First National Bank, Morris, Minnesota. Capital, \$50,000. Robert C. Moore, President; Frederick B. Kenner, Cashier.

- 2934—Citizens' National Bank, Fergus Falls, Minnesota. Capital, \$75,000. James Compton, President; C. C. Warfield, Cashier.
- 2935—First National Bank, Watertown, Dakota. Capital, \$50,000. Homer D. Walrath, President; Samuel B. Sheldon, Cashier.
- 2936—First National Bank, Corning, Iowa. Capital, \$50,000. Lew E. Darrow, President; Charles C. Norton, Cashier.
- 2937—First National Bank, Brownwood, Texas. Capital, \$75,000. Jasper L. Vaughn, President; Brooke Smith, Cashier.
- 2938—Los Angeles National Bank, Los Angeles, California. Capital, \$100,000. George H. Bonebrake, President; F. C. Howes, Cashier.
- 2939—Ennis National Bank, Ennis, Texas. Capital, \$100,000. Joseph Baldrige, President; Mark Latimer, Cashier.
- 2940—First National Bank, Decatur, Texas. Capital, \$50,000. Henry Greathouse, President; John W. Walden, Cashier.

ARIZONA.

TUCSON—First National Bank; J. C. Handy, President, in place of P. R. Tully, resigned; Thos. Belknap, Vice-President.

CALIFORNIA.

FOREST CITY.—Heintzen & Miller succeed Charles Heintzen.

LOS ANGELES.—Los Angeles National Bank has been authorized to commence business. Capital, \$100,000. President, George H. Bonebrake; Cashier, F. C. Howes.

COLORADO.

CHAFFE CITY.—James P. True and G. L. Smith, under style of True & Smith, succeed A. W. Harrington & Co.

FORT COLLINS.—A. K. & E. B. Yount; assigned.

SHERBROOKE.—Merchants' Bank of Canada have opened a branch here.

MANITOBA.

BRANDON.—Wallis, Ramsay & Co.; transfer business here to the Merchants' Bank, and are now located at Minnedosa, where they established a bank about a year ago.

NOTICES OF NEW BOOKS.

Telegraphic Code to Insure Privacy and Secrecy in the Transmission of Telegrams. By FRANK MILLER. 4to., pp. 118. New York: Charles M. Cornwell. (\$5.)

In this carefully prepared work the author has embodied the principle of not allowing a cipher word to be used twice with the same signification, as he claims that any system which allows this to be done "is open to detection." In carrying out this idea he has contrived not only to make the meaning of the ciphers variable, but to make the key for translation vary with every word. By this means it is rendered impossible for any one to decipher a dispatch, however many he may have previously read passing between the same two persons. For the description of the system we refer the reader to the work itself, but it should be mentioned that provision is made for a simplified mode of using the code in cases where extraordinary precautions are not required. We are informed by an authority on such matters that this is the safest mode that he has ever seen. It is now in use by a large number of the banks in our principal cities. Mr. Miller is connected with the National Gold Bank of D. O. Mills & Co., of Sacramento, Cal.

Congres Scientifique International des Institutions de Prévoyance, tenu a Paris du ler, au 7 Juillet 1878. Paris: Imprimerie Nationale. MDCCCLXXXI.

This is a full report of the proceedings of the International Congress on Savings Institutions held at Paris in 1878, and forms an instructive and interesting review of the savings institutions of various kinds, co-operative societies, etc., in the countries of Europe and in the United States, for which we are indebted to the Secretary-General of the Congress, Mons. A. de Malarce.

We see that a new Congress is called for July next at Paris, but proper mention of it has to be reserved until next month.

The Banking Almanac, Directory, Year Book, and Diary for 1883. Edited by R. H. INGLIS PALGRAVE, F. R.S. London: Waterlow and Sons, Limited.

This is the thirty-ninth number of a well known publication which is edited by one of the best known financial writers of Great Britain. It contains an immense mass of information in regard to the banks of that country, and of other matters interesting and useful to bankers. It reflects just credit upon its editor and publishers.

Woman's Place To-Day. By LILLIE DEVEREUX BLAKE. New York: John W. Lovell Company (20 cents).

These four lectures, which have excited considerable notice, were delivered in answer to a series of lectures on the subject of Woman, by the Rev. Morgan Dix, of New York. The form in which they are presented (Lovell's Library) is judicious, as the volume is cheap, handy and well printed. Mrs. Blake is well known as a strenuous advocate of women's rights. We can only say here, however, that we can endorse all that she says with regard to the impossibility of every woman, under existing conditions, depending upon some man for a living, and the need of widening the field for their employment. The author apologizes for the crudity of the style, as the lectures are printed nearly as delivered, without notes. We wish, however, that some other name than Danton's had been used to illustrate bloodthirstiness in man.

Monnaies (Metalliques et Fiduciares), Poids et Mesures des Divers Etats du Monde, et leur Rapport Exact avec les Monnaies, Poids, et mesures de France. Par A. DE MALARCE. Paris: Firmin-Didot et Cie; Gillaumin et Cie.

The purport of this work is indicated in the title. It is a résumé of the researches of the author into the monetary systems of the world, as well as weights and measures, after recent official reports on finance in France, England and Germany, the documents of the Paris Congress on weights, measures and money held in September, 1879, the Monetary Conference of 1881, and a number of other sources.

BANKERS' OBITUARY RECORD.

Gage.—James P. Gage, President of the Farmers and Citizens' Savings Bank, of Clinton, Iowa, died April 2, 1883, aged seventy-two years.

Mr. Gage was born at Stony Creek, near Hamilton, Ontario, on June 10, 1810, and died at his home in Lyons, Ia., April 2, 1883. He came to Iowa in 1855 and settled on a farm in Jackson County. In 1858 he moved to Lyons, and became interested in the old State bank there in 1859. In 1863 he assisted in founding the First National Bank, of which he became President, retaining that position until 1881 since which he has been Vice-President. Meantime, while remaining a resident of Lyons, he had transferred his active business efforts to Clinton, where, with his son Bidwell, in 1874, he established the Farmers and Citizens' Savings Bank, of which he was President up to the time of his death. He never held civil office, but always occupied a foremost position among the business men of the city, being frequently identified with public enterprises. He leaves a family consisting of his wife, two sons and two daughters.

Stephens.—Hon. R. D. Stephens, President of the First National Bank of Marion, and of the Merchants' National Bank of Cedar Rapids, Iowa, died March 30, 1883, aged fifty-three years.

The deceased was born in Greenwood, N. Y. He was one of the most successful financiers of the West; was interested in various manufacturing enterprises, and leaves a large estate. He was President of the first-mentioned bank for twenty years, and of the other for nearly two years.

Repplier.—Charles A. Repplier, President of the Beneficial Saving Fund Society of Philadelphia, Pa., died February 25, 1883, aged seventy-nine years.

Mr. Repplier was born at Reading, Pa., but was engaged in business at Philadelphia for the greater part of his life. He was largely interested in the coal business up to ten or twelve years ago. He was elected President of the above institution, when it was incorporated in 1863, and remained such up to the time of his decease.

Bradley.—S. L. Bradley, President of the National Bank of Auburn, N. Y., died April 17, 1883, aged sixty-six years.

The deceased was born in New Haven, Conn., and settled in Auburn in 1837. He was chosen a director of the above bank in 1860; Vice-President in 1873, and President in the following year. He held other offices of trust, and was esteemed a courteous, careful, upright and benevolent man.

Hatch.—William B. Hatch died suddenly at the residence of his brother, Mr. A. S. Hatch (of Fisk & Hatch), at Tarrytown, N. Y., on April 15. His health had been more or less impaired for several years, but his more recent illness was aggravated by the business misfortunes of the firm of which he was a member. Mr. Hatch was a native of Vermont and first commenced business near Burlington, in that State; came to New York about 1852, and soon afterward became connected with and subsequently a partner in the scale house of Fairbanks & Co. He retired from that firm about four years ago and organized the banking firm of William B. Hatch & Co., which was subsequently changed to that of Hatch & Peters, whose suspension in February last was traceable to a heavy defalcation of the confidential clerk, who fell into the hands of gamblers. His business life was characterized by great energy and activity, and by an earnest devotion to the interests committed to his care.

Habicht.—Announcement was recently made of the death of the Chevalier Claudius Edward Habicht, in London, Eng. He was a native of Sweden, but came to this country when a boy and began life as a clerk in the office of the agent of the Baring Brothers in Boston. He was appointed Consul for Norway and Sweden in New

York about 1848, and held the office for nearly 20 years. In 1868 Mr. Habicht resigned his consulate, and went to London to establish the banking house of Clews, Habicht & Co., which was to be a branch of the house of Henry Clews & Co., of New York. The firm lasted only about four years, being brought to grief by the misfortune of the New York house. Mr. Habicht remained in London after the dissolution of the firm* engaged in business in a small way for himself. He was a genial, courtly gentleman, who gained the esteem of all with whom he came in contact.

Turner.—Hon. Seth Turner, Treasurer of the Randolph (Mass.) Savings Bank, and ex-President of the Shoe and Leather Bank, of Boston, died April 8, last. He was a public spirited man, sat once in the Massachusetts Legislature, and was well known in the financial circles of Boston and New York.

Dinsmoor.—Daniel S. Dinsmoor, Cashier of the Laconia (N. H.) National Bank, who died March 24 last, aged about forty years, was born and always resided in that town. He had been Cashier since the first organization of the bank, about 16 years ago.

Beardsley.—Joseph A. Beardsley, who died in Brooklyn, L. I., on March 29, aged sixty-five years, was formerly for 27 years connected with the Bank of North America, New York, and for 14 years held the office of Cashier.

Buford.—Gen. Napoleon B. Buford, who distinguished himself during the civil war, and who died in Chicago on March 28, was from 1858 to 1861 President of the Bank of the Federal Union at Rock Island, Ill.

Burt.—James Burt, of Warwick, Orange County, N. Y. who died on April 7, aged eighty-five years, was 25 years President of the Chester Bank.

Hungerford.—We notice the death of Mr. J. N. Hungerford, President of J. N. Hungerford's Bank, at Corning, N. Y. early in April.

Henderson.—We are advised of the death of Mr. Alexander Henderson, President of the First National Bank of Cadiz, Ohio.

Vermilye.—William H. Vermilye, Treasurer of the Orange (N. J.) Savings Bank, died on April 3, of pneumonia.

NATIONAL BANK STATISTICS.—Statement of the Comptroller of the Currency on May 1, 1883, showing the amounts of the National Bank Notes and of Legal-Tender Notes outstanding at dates of the passage of the Acts of June 20, 1874, January 14, 1875, and May 31, 1878, together with the amounts outstanding at date, and the increase or decrease.

*Circulation of National Gold Banks not included in the above.....\$718,559

JOHN JAY KNOX,
Comptroller of the Currency.

RAILROAD FINANCES AND NEWS.

(A synopsis of Railroad finances and affairs of interest to Bankers, Investors, &c.
Classification: I. New Issues. II. Reports. III. Miscellaneous R. R. News).

I. NEW ISSUES.

OREGON AND CALIFORNIA.—The preferred stockholders in London have authorized the issue of 7 per cent. bonds due 1933 to the extent of \$10,000 per mile of constructed road, so that the aggregate prior lien (over preferred stock) shall not exceed \$30,000 per mile.

BOSTON AND LOWELL.—The stockholders have voted to accept the act of the Legislature authorizing the road to purchase the franchise and property of the Middlesex Central Railroad Company, and to authorize the issue of bonds of the corporation, bearing interest not exceeding 5 per cent., and payable in not more than twenty years, to the amount of \$250,000, for the purpose of providing means to purchase the franchise and property.

CHICAGO, MILWAUKEE AND ST. PAUL.—It was recently reported that this company has placed \$1,700,000 of 7 per cent. collateral trust bonds secured by pledge of land notes and redeemable at 105 at the company's option within five years.

THE RICHMOND AND DANVILLE EXTENSION COMPANY has been offering for sale by subscription, \$3,000,000 of the first mortgage 6 per cent. gold bonds of the Georgia Pacific Railway Company.

THE BALTIMORE AND OHIO RAILROAD COMPANY has filed a mortgage deed to cover an issue of \$2,400,000, 4½ per cent., 10 year bonds. The proceeds are to be used for constructing the Philadelphia Branch, which is mortgaged to the amount of the bonds.

THE ST. LOUIS AND SAN FRANCISCO RAILWAY COMPANY has negotiated for the sale to a syndicate of bankers of \$2,500,000 general mortgage 6 per cent. 50-year bonds. These bonds are issued under the company's general mortgage, which provides for \$30,000,000, of which \$5,000,000 have now been negotiated. All the residue of the \$30,000,000, over and above a sufficient amount to refund the old indebtedness, is to be appropriated and can be used only to pay for new lines, extensions and acquisitions, on all of which as well as on the present property the bonds will constitute a first mortgage.

PHILADELPHIA & READING.—The differences between the Schuylkill and Lehigh Railroad bondholders and this company have been adjusted, the latter agreeing to reduce the original amount of bonds from \$1,000,000 to \$600,000, cancelling \$400,000, and to pay the holders of the \$600,000 4½ per cent. interest up to May 1, and 4¼ per cent. thereafter.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA.—Recently \$756,000 of the consolidated mortgage bonds of this company from Nos. 20,202 to 20,957 inclusive, of \$1,000 each, bearing interest at 6 per cent., and falling due June 1, 1930, were listed at the New York Stock Exchange. The bonds are issued on account of extensions.

THE GRAND TRUNK RAILWAY COMPANY announces in London an issue of £750,000 perpetual 4 per cent. debenture stock. The issue price will be 90 per cent. The money is required to meet bonds maturing and for other purposes.

WABASH, ST. LOUIS AND PACIFIC.—In order to pay off the floating debt a collateral

trust loan for \$10,000,000 has been created bearing 6 per cent. interest and running 30 years. The sum of \$4,000,000 will be reserved to pay off car trust obligations as they mature, and such portion of the remainder as may be necessary to pay off the floating debt will be sold. The bonds will be guaranteed principal and interest by the St. Louis, Iron Mountain and Southern, and secured by deposit in the Mercantile Trust Company of mortgage bonds, real estate, stocks, and an assignment of the interest of the Wabash in the rolling stock to come into its possession on payment of the car trust obligations.

CHICAGO AND NORTHWESTERN.—It is reported that Mr. Vanderbilt has decided that the Chicago and Northwestern shall create at its next meeting (in May) \$10,000,000 of new stock, to be placed in the treasury to represent new roads acquired. This stock is independent of the \$10,000,000 bonds recently authorized for the purchase of Omaha stock. The roads represented by this issue of stock are the Chicago, Milwaukee and Northwestern Railway and Elgin and State Line Railroad.

CHICAGO, BURLINGTON AND QUINCY.—The recent purchase of the Hannibal and St. Joseph will call for \$2,000,000 of the Chicago, Burlington and Quincy 5 per cent. bonds, the annual interest on which, \$450,000, added to the interest guaranteed, \$354,610, makes the annual obligations of this company on account of this purchase, \$1,100,000.

OLD COLONY.—At a special meeting of the stockholders in Boston, on April 16, it was voted to issue \$500,000 in notes and bonds, to meet maturing indebtedness; also to increase the capital stock of the company to \$12,000,000.

EASTERN.—The stockholders of the Eastern Railroad voted unanimously to accept the legislative act of 1882 authorizing the directors to issue preferred stock in exchange for certificates of indebtedness. The meeting approved the lease of the road to the Boston and Maine Road, subject to the approval of the New Hampshire Legislature. The stockholders of the Boston and Maine Railroad have voted to approve the lease of the Eastern Railroad.

CINCINNATI NORTHERN.—A circular has been issued saying that it will issue scrip in denominations of \$30, \$90 and \$120 to fund the coupons on the first mortgage bonds of that road maturing in October, 1882, April and October, 1883, and April, 1884. This is in accordance with terms of consolidation between the Cincinnati Northern and the Toledo, Cincinnati and St. Louis Railways.

THE KANSAS CITY, SPRINGFIELD AND MEMPHIS RAILROAD COMPANY has filed a mortgage to secure a loan of \$7,000,000. The bonds for \$1,000 each will run forty years and bear 6 per cent. interest.

II. REPORTS.

CUMBERLAND VALLEY.—The gross earnings of the main line in the calendar year 1882 were \$689,305; net earnings, \$229,452; surplus for the year, \$13,311. The net earnings of the Dillsburg and Mechanicsburg Railroad were \$13,012; Railroad of the Southern Pennsylvania Company, \$2,268; Martinsburg and Potomac Railroad, \$1,734.

THE ATCHISON, TOPEKA AND SANTA FE RAILROAD system comprises 2,620 miles, which is divided into four systems: (1) the parent line and its auxiliaries, 1,820 miles; (2) Southern Kansas system, 398 miles; (3) Sonora system, 350 miles; (4) two small roads owned jointly with other companies, 54½ miles.

Earnings of main line for the year ended December 31, 1882:

	1882.	1881
Total gross earnings.....	\$14,773,305	\$12,584,509
Total operating expenses.....	8,662,756	8,063,326
Net earnings.....	\$6,110,549	\$4,521,183
Income account:		
Total income.....	\$7,007,237	\$4,751,020
Total disbursements.....	5,918,857	3,618,948
Balance, surplus.....	\$1,088,380	\$1,132,072

In addition to the above surplus, the surplus receipts of the land department were

\$417,058. The total net revenues of the Kansas City, Lawrence and Southern Kansas system in 1882 were \$670,760; disbursements, \$626,677; surplus, \$44,082.

CHESAPEAKE AND OHIO.—The gross earnings for the calendar year 1882 were \$3,384,978, an increase of \$629,633 over those of the previous year. The operating expenses were \$2,302,448, an increase of \$35,045. The net earnings were \$1,082,523, being \$594,588 greater than those for 1881. The interest requirements of the funded debt for the year were \$728,030.

DETROIT, LANSING AND NORTHERN.—The annual interest paid is \$223,540. Dividends amounting to 7 per cent. were paid on preferred stock August 15, 1882, and February 15, 1883, and a 3 per cent. dividend on common stock on the latter date, leaving the balance to credit of income account \$59,048. The earnings in the calendar year 1882 were:

	1882.	1881.
Total gross earnings.....	\$1,597,142	\$1,377,698
Total operating expenses (incl. taxes).....	1,136,060	934,429
Net earnings.....	\$461,082	\$443,269
Income account:		
Total income.....	\$471,507	\$446,912
Total disbursements.....	409,206	410,757
Balance, surplus.....	\$62,302	\$36,156
Stock and bonds:		
Common stock.....	\$1,825,600	\$1,825,600
Preferred.....	2,503,300	2,503,300
Bonded debt.....	3,257,000	3,213,000

NEW YORK, PENNSYLVANIA AND OHIO.—The earnings during the calendar year 1882 were:

	1882.	1881.
Total gross earnings.....	\$5,831,062	\$5,494,112
Total operating expenses (not incl. taxes).....	3,838,297	3,864,885
Net earnings.....	\$1,992,765	\$1,629,227
Income account:		
Total income.....	\$2,028,045	\$1,650,348
Total disbursements.....	2,111,691	1,643,435
Balance, surplus.....	*\$86,354	\$6,913
Stock and bonds:		
Common stock.....	\$34,999,350	\$34,999,350
Preferred stock.....	10,000,000	10,000,000
Funded debt.....	90,871,000	86,610,000

MEXICAN CENTRAL.—The road was open for business only four months in 1881, so the report for the calendar year 1882 is the first complete one. The total commercial earnings were \$1,178,899: from the company's material, \$545,081; total, \$1,723,980; operating expenses, \$1,024,076; net earnings, \$699,904, which was equal to \$612,793 in United States currency. The net revenue for the year, including cash collected on subsidy certificates, was sufficient to pay all the coupon interest to January 1, 1883, inclusive (\$866,566) and leave a net surplus of \$588,961 in United States currency.

CHICAGO, BURLINGTON AND QUINCY.—The mileage operated during the calendar

* Deficit. The accumulated surplus January 1, 1882, was \$86,426, leaving, after deducting the above, a balance of \$2,780 surplus.

year 1882 increased from 2,826 to 3,131. Dividends amounting to 8 per cent. were paid. The earnings were:

	1882.	1881.
Total gross earnings.....	\$22,003,304	\$21,324,150
Total operating expenses.....	10,668,341	10,574,357
Net earnings.....	\$11,334,963	\$10,749,793
Income account:		
Total income.....	\$12,664,688	\$11,920,230
Total disbursements.....	11,053,224	10,269,808
Balance, surplus.....	\$1,611,464	\$1,650,422

The common stock was increased from \$55,263,790 to \$69,578,340, and the bonds from \$51,927,725 to \$62,421,050.

MISSOURI PACIFIC AND THE "SOUTHWESTERN SYSTEM."—The report for the year ended December 31, 1882, shows that the length of main track was as follows: Missouri Pacific, 990 miles, increase in 1882, 205 miles; Central Bank Union Pacific 388 miles; Missouri, Kansas and Texas, 1,374 miles, increase 167; International and Great Northern, 775 miles; Texas and Pacific, 1,487 miles, increase 258; St. Louis, Iron Mountain and Southern, 882 miles, increase 163; total, 5,896 miles, increase 793. The statement for all the roads (which were operated in 1882 under one management) shows the following transportation earnings:

	1882.	1881.
Gross earnings.....	\$32,373,304	\$27,282,587
Total expenses.....	19,811,035	18,384,440
Net earnings.....	\$12,562,319	\$8,922,630

The income account of the Missouri Pacific shows that dividends amounting to \$1,946,419 were paid, and there was a balance to the credit of income account on December 31, of \$4,635,161. The balance to the debit of income account of the Missouri, Kansas and Texas on January 1, 1882, was \$4,184,640 and was increased to \$4,282,281 during the year. The balance to credit of income account of the International and Great Northern on January 1, 1882, was \$3,212,440, and was decreased to \$3,101,075 during the year. The balance of income account of the St. Louis, Iron Mountain and Southern on January 1, 1883 was \$1,199,792, and of the Texas and Pacific, \$1,212,062.

III. MISCELLANEOUS R. R. NEWS.

THE LOUISVILLE AND NASHVILLE has completed a through line from Savannah to Mobile and New Orleans by the extension of the Savannah, Florida and Western to Chattahoochee, where it connects with the new Pensacola and Atlantic road. This line is much shorter than any previous route from Savannah to New Orleans.

NEW MILEAGE TO APRIL FIRST.—The "Railway Age" says: The first quarter of the year 1883 has been unusually unfavorable to railway construction in the greater part of the country. The last winter was marked by intense cold and heavy snowstorms, freezing the ground very deep, blocking the railways, and almost completely suspending out-door work in the northern latitudes. Extraordinary floods also have done much damage in some sections of the West and South. A temporary flurry in the iron market, causing some timid persons to anticipate a panic, and a depression in the railway stock market which still continues, have joined to interfere with railway building. In spite of these things, however, grading has continued to be done, and steel rails have continued to go down in almost every State of the Union west of New England, and we have already received definite information showing that nearly 800 miles of new main-line track, on forty-nine different roads, have been added this year to the railway mileage of the United States in the inclement period from January 1 to March 31.

Considering the drawbacks mentioned, this shows remarkable activity, and indicates that the aggregate of mileage for the year will be much larger than has been anticipated. The previous winter, it will be remembered, was extraordinarily mild, allowing work to be prosecuted without difficulty, and up to April 1 about 1,200

miles of new track had been laid. This, however, was only about one-tenth of the total mileage laid during the year, and even at this rate, without making any allowance for the impediment of severe weather, the mileage for 1883 will reach nearly 8,000 miles. But that a severe winter and late spring do greatly retard building is proved by the fact that in 1881, after a very cold winter, less than 600 miles of new track were reported for the first quarter, while the aggregate for the entire year was no less than 9,358 miles. At the same rate of increase, compared with the first quarter, the total for 1883 will be nearly 12,000 miles.

EARNINGS FOR MARCH.—The analysis of railway earnings for March, made by the "Railroad Gazette," is summarized as follows: The eleven principal lines and system of lines traversing the territory west of Chicago and north of (but including) the Burlington and Quincy, after showing a decrease of earnings in both January and February, as compared to last year, have in March shown an increase of more than double the decrease of the two previous months.

The change here is amazing. In January seven out of these eleven roads had a decrease in total earnings, and their aggregate decrease was \$225,618; in February nine out of eleven had a decrease, and their aggregate decrease was \$338,341; but in March every one of the eleven has an increase, and their aggregate increase is \$1,391,572, or \$795,013 (more than double) more than the sum of the losses in January and February. We see here the effect of the unprecedented March grain movement, and also of the beginning of an emigration from the East and the older Western States to the Northwest—to Iowa, Minnesota, Dakota, and Montana. Not all the roads wiped out in March the decrease of the two previous months, but some of them did much more, the Milwaukee and St. Paul transforming a loss of \$193,912 at the end of the first two months of the year into a gain of \$238,702 at the end of the third month, and the St. Paul and Manitoba gaining three times as much in March as in January and February. The roads which have shown the largest and most continuous increase of business since the beginning of the last harvest have been the nine Southwestern. The country which these roads serve have had magnificent crops of all kinds last summer, and wretched ones of all kinds the year before. All nine of them had increases in January and March, and only one a small decrease in February. In the aggregate their increase was 60 per cent. less in February than in January. In March they gained \$449,530 more than in February, but only about 4 per cent. more than in January. March was for them, too, a worse month than the earlier ones last year. But the Northwestern roads, which for a time seemed not to have profited by last year's better crops, in March ranged themselves alongside the Southwestern roads; and of the latter it was the more Northern ones, which are grain-carriers and not cotton-carriers, which did best in March.

The roads south of the Ohio and Potomac and east of the Mississippi have generally been doing very well since last summer, the crops being good and the country prosperous. The seven reporting have all made an increase in each of the last three months, the aggregate increase being \$292,734.

Two railroads of the Far West, the Union Pacific and the Denver and Rio Grande—should reflect quite completely the condition of business in the grazing districts of the great plains and the mining districts of the Rocky Mountains. They have not been gaining lately, and it is an improvement for them to equal their last year's earnings, though they have a considerable increase in mileage.

CANADIAN PACIFIC AND GRAND TRUNK.—At last accounts there was a hitch in the negotiations for an agreement between these companies.

HANNIBAL AND ST. JOSEPH.—The Chicago, Burlington and Quincy purchases of Mr. Jay Gould the common stock at about 45 and the preferred stock at par. It pays for these in its 5 per cent. bonds.

CENTRAL OF NEW JERSEY.—At a meeting of the directors, held late in April, the quarterly report was read, showing an increase of \$160,000 in the net earnings. A resolution was passed authorizing the pledging of the unincumbered assets of the company, amounting to about \$5,000,000, in order to raise an amount sufficient to pay off the floating indebtedness, which is said to amount to \$2,000,000. If this loan can be made the road will be taken out of the hands of the Receiver. No proposition was made at the meeting in regard to leasing the road to the Reading Company.

CONSOLIDATED RAILROAD COMPANY OF VERMONT is the title of a new corporation formed on the reorganization of the Central Vermont and Vermont and Canada Companies. Articles of association were filed with the Secretary of the State of Vermont on April 24th, and the terms of the association, as contemplated by the act of the Legislature, have been accepted by most of the bondholders.

ITHACA, AUBURN AND WESTERN.—The lease of this railroad to the Southern Central has been ratified by the stockholders. The latter company guarantees the payment of 4 per cent. interest on the 7 per cent. first mortgage bonds of the leased road, which amount to \$315,000.

MASSACHUSETTS CENTRAL.—About 2,950 only, of the 3,500 bonds, assented, in order to prevent the foreclosure of the mortgage; so the trustees will proceed to take possession of the road and advertise it for sale. They purpose, as soon as they have bought it, to raise \$2,500,000 by mortgage, and complete the road and an extension to Holyoke. It is expected that this amount will do the work and leave about \$500,000 for equipment.

MANHATTAN ELEVATED.—The new Board of Railroad Commissioners of the State of New York have presented to the Legislature majority and minority reports on the question, What rate of fare would yield 10 per cent. on the capital invested in the elevated railroads of New York? The majority report shows that the cost of construction, as claimed by the companies, was \$30,646,650, which was capitalized at \$47,318,000. The Board finds the total cash cost to be \$22,683,253, and conclude that it would be unjust and illegal to reduce the fare yet.

DENVER AND RIO GRANDE.—The road is open to the Haileywood River region in Idaho. It will be completed to Ogden by May 10th.

AFTER BANK HOURS.

— At the time Mr. Cooper bought the Canton property near Baltimore an old resident of that city, a well-known humorist and ne'er-do-weel, said to him: "Mr. Cooper I remember the time when I could have bought that property for a pair of boots." "Well, didn't you think it worth that?" "Oh, yes," he replied; "I knew it was sure to be very valuable before long." "Then why didn't you buy it?" "Well—I hadn't the boots!"

— ONE OR THE OTHER.—He was a young man who had just come into possession of a legacy of \$15,000, and he went to a retired Wall street speculator for advice.

"You think of going into Wall street, eh?"

"Yes, sir."

"You yearn to double your money?"

"I do."

"Well—let's see; this is Wednesday. There's plenty of time before Saturday night. Begin this afternoon."

"Yes, sir."

"And by Saturday you'll either have to go to work by the day to earn your living, or you'll be in a position to invest about \$25,000 in something that will pay somebody to scoop you.—*Wall Street News.*

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, MAY 2, 1883.

The hopes that were generally entertained a month ago that the adjournment of Congress would be followed by an immediate improvement in business have not been gratified. Dealers in most departments of trade have given up hoping for good results this spring, and are looking forward, generally with confidence, toward the autumn for a recompense for the unsatisfactory returns in this portion of the year.

There are several causes that may be held accountable for this condition of things. That a strong tendency to overproduction was prevalent in certain trades was proved some few months ago. The large whiskey distillers of the West, who were unable to get a law passed at the last session of Congress extending the time during which their enormous accumulations of stock could remain in bond, have been unable to make contemplated arrangements for shipping them to Canada with the object of escaping the immediate payment of the tax. It is now reported that they intend to send their goods to Bermuda for the purpose named. Now, it was reported some time ago that the banks had loaned large amounts based on this security, and, however true this is, the troubles of the distillers must have an unfavorable effect on business.

It is equally well known that there has been a tendency to the investment of capital in iron production to an undue extent. The great decrease, as compared with last year, in railroad construction has, of course, aggravated the difficulty. The demands of workmen for higher wages in this and other trades, accompanied with strikes and lock-outs have, coming in a most inopportune time for their own interests, doubtless also injured business considerably.

The tax and tariff law, affecting many trades to a large and uncertain extent, was calculated to temporarily unsettle the conditions under which business was carried on, and must be credited with its share in producing the present state of things.

There is a general inclination at present to base the outlook on the condition of the crops, and this is considered just now not very good, but by no means very bad. On the contrary the prospect for the future is very fair.

THE PUBLIC DEBT.—The April debt statement shows less than \$3,000,000 reduction for the month, which is in marked contrast with the reduction made in April, 1882, when the public debt was decreased over \$14,000,000. This comparatively unfavorable showing for the month just closed is due to the fact that the receipts, compared with the same month last year, fell off about \$8,000,000, while the expenditures for

last month exceeded those for April, 1882, by over \$5,000,000. The large amount disbursed for pensions is accountable for the increase. For the first time for many months, the expenditures exceeded the receipts, the excess of expenditures being about \$400,000. The available cash balance is, in round numbers, \$135,000,000, against \$140,000,000 on April 1, a decrease of \$5,000,000. The bonded debt shows a decrease for the month of about \$5,000,000, while the debt on which interest has ceased shows an increase of nearly \$1,500,000. The amount of $3\frac{1}{2}$ per cent. bonds outstanding is reduced to \$46,000,000.

THE TREASURER'S STATEMENT of liabilities and assets shows important changes. In gold coin and gold bullion there is a decrease since April 1 of \$3,000,000, and an increase of outstanding gold certificates of about \$5,000,000, the amount of these certificates now outstanding being \$48,398,200. The gold coin and gold bullion now held by the Treasury amounts to nearly \$188,000,000, against which there are outstanding in certificates about \$48,000,000. The standard silver dollars on hand now number 106,366,348, against which there are outstanding about \$72,000,000 of certificates.

TREASURY MATTERS.—For the ten months expired of the fiscal year the receipts were \$333,230,801, being 5 millions short of those for the corresponding period of the last fiscal year. The expenditures in the past ten months amount to \$225,121,566, or nearly 9 millions less than in the similar period last year. The interest charge has decreased at the average rate of \$1,000,000 per month, while the increase in payments for pensions has increased at the rate of \$1,000,000 per month.

GOVERNMENT BONDS.—There was a slight yielding in prices recently, consequent on free selling, but this was soon overcome. The exchange of $3\frac{1}{2}$ per cent. bonds into 3 per cents, which was suspended during the month of April, has been resumed. The amount of bonds surrendered for exchange on May 1 was about \$700,000, which swell the total amount of exchanges to nearly \$131,000,000.

The following table shows the closing bids for the principal issues of Government bonds on each day of the month of April, and the highest and lowest during the month:

3 per 5s, '81. 4½s, '91, 4s, 1907, C'y 6s,					3 per 5s, '81, 4½s, '91, 4s, 1907, C'y 6s

16	103¾	102¾	113¾	119½	131	Low	102¾	101	113	119½	131

THE NATIONAL BANKS are keeping their holdings of Government bonds to secure circulation well up, although there is certainly no inclination to increase them much under the present circumstances. The amount held is now about $2\frac{1}{4}$ millions less than on January 1, but is a little greater than one month ago. As the $3\frac{1}{2}$ per cents are called, the deficiency is made good by purchases of 3, 4, and $4\frac{1}{2}$ per cents.

The following will show the amount of each description of bonds held by the Treasurer to secure national bank circulation, on or about the dates indicated :

	Feb. 1.	March 1.	April 1.	May 1.
Currency 6 per cents.....	\$3,526,000	\$3,526,000	\$3,509,000	\$3,502,000
5 per cents	15,000	15,000	15,000	15,000
4½ per cents.....	38,210,200	38,755,200	37,630,400	38,180,400
4 per cents.....	105,179,700	104,950,950	104,948,550	105,242,950

6 per cents extended at 3½.....			640,700	
3 per cents.....	195,379,700	197,953,300	199,169,200	199,795,950
Total.	\$360,531,050	\$359,235,455	\$357,933,800	\$357,228,750

NEW YORK CITY BANKS.—The reserve of both specie and legal-tenders has been considerably strengthened within the past few weeks, and while the deposits have increased within a month, the reserve has increased in a still larger proportion. There is now a small surplus above 25 per cent. of the deposits, which is the legal minimum for national banks in the larger cities. A year ago the loans were about the same as at present, the deposits were 11 or 12 millions greater, there was 12 millions more of specie and a surplus of \$10,895,600.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1882 and 1881:

1883.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Apr. 28.....	\$312,895,000	\$53,736,800	\$19,639,000	\$289,922,400	\$16,342,400	\$495,200

* Deficit.

MONEY AND DOMESTIC EXCHANGE.—The loan market has almost, if not quite re-

covered from the stringency of a few weeks ago, the movement of money having set in toward New York from most of the interior cities of the country. Call loans were made in New York on May 1 at $8\frac{1}{2}\%$ per cent. Prime commercial paper was discounted at $5\frac{1}{2}\%$ per cent.

The following table shows the range of call loans, and rate on prime paper, for the past five weeks:

	Mar. 31.	Apr. 7.	Apr. 14.	Apr. 21.	Apr. 28.
Range of call loans	4@7	4@15	4@8	3@6	3@6
Rate of discount.....	6@6 $\frac{1}{2}$	6@6 $\frac{1}{2}$	5 $\frac{1}{2}$ @6	5 $\frac{1}{2}$ @6	5@6

The following are the rates of domestic exchange on New York: Savannah, buying $\frac{1}{2}\%$ premium; selling $\frac{1}{4}\%$ premium. Charleston, buying par; selling $\frac{1}{4}\%$ premium. New Orleans commercial 75c. @ \$1 per \$1,000 premium; bank, \$1 50 per \$1,000 premium. St. Louis, 75c. per \$1,000 premium; Chicago, 25@30c. per \$1,000 premium; Boston, par@17c. per \$1,000 premium.

FOREIGN EXCHANGE is dull and irregular, but has been above the gold importing point for some weeks. Following are the posted and actual rates of foreign exchange on May 1: Bankers' sterling, 60 days, nominal, \$4 84; sight, nominal, \$4 86 $\frac{1}{2}$; 60 days, actual, \$4 82 $\frac{1}{2}$ @\$4 83 $\frac{1}{2}$; sight, actual, \$4 85@4 85 $\frac{1}{2}$; cable transfers, \$4 85 $\frac{1}{2}$ @\$4 86 $\frac{1}{2}$; prime commercial sterling, long, \$4 81 $\frac{1}{2}$ @\$4 82; documentary sterling, 60 days, \$4 81 $\frac{1}{2}$ @\$4 81 $\frac{1}{2}$; Paris, bankers', 60 days, 5 21 $\frac{1}{2}$ @5 20 $\frac{1}{2}$; sight, 5 18 $\frac{1}{2}$ @5 18 $\frac{1}{2}$; Antwerp, commercial, 60 days, 5 25@5 23 $\frac{1}{2}$; Swiss, bankers', 60 days, 5 20 $\frac{1}{2}$ @5 20; sight, 5 18 $\frac{1}{2}$ @5 17 $\frac{1}{2}$; reichsmarks (4), bankers', 60 days, 94 $\frac{3}{4}$ @94 $\frac{1}{2}$; sight, 94 $\frac{3}{4}$ @95 $\frac{1}{2}$; guilders, bankers', 60 days, 40@40 $\frac{1}{2}$; sight, 40 $\frac{1}{2}$ @40 $\frac{1}{2}$. Paris dispatches quote exchange on London 25f. 20 $\frac{1}{2}$ c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days and sight, cable transfers, and prime commercial sterling at 60 days, together with exchange on Paris on April 1, the changes in the rates as they occurred during the month, and the highest and lowest during the months of March and April:

	Bankers		Cable	Commercial.	Paris	
	60 days.	Sight.	Transfers.		60 days.	Sight.
Mar.—						
Highest.....	4.82 $\frac{1}{2}$	4.85	4.85 $\frac{1}{2}$	4.81	5.24	5.21 $\frac{1}{2}$

FOREIGN TRADE.—The total value of exports of merchandise from the United States during the month of March was \$77,650,374; imports, \$60,737,871. The excess of the value of exports over imports of merchandise was as follows:

Month ended March 31, 1883.....	\$16,912,703
Three months ended March 31, 1883.....	50,900,163
Nine months ended March 31, 1883.....	105,475,632
Twelve months ended March 31, 1883.....	66,284,097

The total value of the imports for the twelve months ended March 31, 1883 was

\$742,442,259, and for the twelve preceding months, \$700,842,874, an increase of \$41,599,385. The exports for the same periods were \$308,723,356 and \$790,809,020, showing an increase for the year ended March 31 last of \$17,917,336.

The total values of the exports of domestic breadstuffs from the United States during the month of March, 1883, and during the three and nine months ended March 31, 1883, as compared with similar exports during the corresponding months of the preceding year, were as follows:

	1883.	1882.
March.....	\$17,802,275	\$12,414,906
Three months ended March 31.....	49,410,862	35,567,623
Nine months ended March 31.....	167,233,418	147,711,538

The total values of the exports of domestic provisions, tallow and dairy products during the month of March, and during the three months ended March 31, also of the provisions and tallow, and of dairy products, for the periods shown were as follows:

	1883.	1882.
March.....	\$9,941,425	\$7,993,329
Three months ended March 31.	30,050,303	30,440,290
Provisions and tallow:		
Five months ended March 31.....	46,143,021	48,103,255
Dairy products:		
Eleven months ended March 31.....	12,093,972	17,456,313

RAILROAD AND MISCELLANEOUS STOCKS.—After a short period of comparative activity the stock market has once more settled down into a decidedly stagnant condition. During April there was, on the whole, a perceptible strengthening of prices, but people are now holding off, seemingly watching the crop reports, and the further course of the market depends upon the abundance of the harvests.

The following table shows the highest, lowest, and closing prices of the most important railway and miscellaneous stocks at the New York Stock Exchange during the month of April:

Companies.	Highest.	Lowest.	Clos'g.	Companies.	Highest.	Lowest.	Clos'g.
Canada Southern....	69½	65½	66¾	Lake Shore	114¼	108	111¾

RAILROAD AND STATE BONDS.—Tennessee 6s sold recently at 41; Virginia 6s, deferred, at 10; Arkansas 7s, Little Rock & Fort Smith, at 51.

Railroad bonds are held at good prices, considering the dullness of the stock market, and they seem likely to be so held in the future.

COINS AND BULLION.—Bar silver is quoted in London at 50½ per ounce, and Mexican dollars at 49 5-16 per ounce.

The following are quotations in gold for other coins and bullion:

Trade dollars... ..\$	99¼ @ \$	99½	English silver.....	\$4 75 @ \$4 85
New (412½ grains) dollars.	99¼ @ 1	00	Five francs.....	98 @ 95
American silver ½s & ¼s..	99¼ @ 1	00	Victoria sovereigns.....	4 83 @ 4 87

Bank, Government, Railroad and Miscellaneous Stocks and Bonds.

LATEST QUOTATIONS AND OTHER INFORMATION.

The following tables give the latest quotations of stocks and bonds at the New York Stock Exchange. In the case of all but the New York bank stocks the highest and lowest actual prices of a year ago are also given, for comparison. The quotation tables on the following pages include *all securities listed at the Stock Exchange*.

NEW YORK BANKS.—CAPITAL AND SURPLUS, QUOTATIONS OF STOCK, and LAST DIVIDEND.

The following table shows the Capital and Surplus of the National and State Banks, on and since January 1, 1883. The Surplus includes, in the case of Clearing-House Banks, the undivided net profits, and, in the case of other banks, the undivided profits. The Banks which are *not* members of the New York Clearing-House Association are indicated by a (*). Not listed at the Stock Exchange by a (†). This table includes all the Commercial banks of New York.

BOSTON BANKS.—CAPITAL and SURPLUS, QUOTATIONS OF STOCK, and LAST DIVIDEND.

The following table gives the latest quotations of Bank Stocks in the Boston Market, which are mainly sold by auction. The Capital and Surplus given are from the last official report, April 28, and all the banks are National. The surplus includes the undivided net profits. All the banks belong to the Clearing-House, except Bunker Hill, First Ward, Mechanics', National Market of Brighton, People's, and Rockland, which are located out of the city proper, but within city limits, and they clear through other banks.

Failure of an Illinois Banker.—The bank of P. H. Tompkins, of El Paso, Illinois, failed on April 5. Tompkins made an assignment to W. G. Randall, attorney, putting his liabilities at \$250,000; assets, \$110,000. Authorities state that the assets will not realize over fifteen or twenty thousand dollars. Creditors representing fifty thousand dollars had a meeting and signed a paper requesting Randall to withdraw. Nearly all of the losers are citizens of El Paso, and lost from five thousand dollars to small sums. It is supposed that Tompkins has been speculating in options.

State Banks of New York.—Following is a statement showing the aggregate of resources and liabilities of the State Banks of the City of New York, on March 31, 1883, as exhibited by their reports to the Superintendent of the Bank Department, together with the totals on December 16, 1882, for comparison:

DAILY RECORD OF FINANCIAL EVENTS.

APRIL, 1883.

2. MONDAY.—Reduction in the public debt in March, \$9,344,826; since July 1, 1882, \$111,983,173.
4. WEDNESDAY.—Walter Q. Gresham, of Indiana, appointed Postmaster-General.
Peter Cooper died in New York, aged 92.
7. SATURDAY.—Discount on prime commercial paper in New York, 6@3 per cent.; call loans, 6¼@7 per cent.
Discount in London on 60 days to 3 months' bank bills, 2½ per cent., and trade bills, 2¾@3¼ per cent.
The National Convention of the Amalgamated Association of Iron and Steel Workers held at Pittsburgh.
9. MONDAY.—The Baltimore Coffee Exchange formally opened.
10. TUESDAY.—The lease of the Wabash to the Iron Mountain Railroad ratified by the stockholders.
The New York Stock Exchange and Board of Trade (a new open board) organized.
11. WEDNESDAY.—It was declared by the Italian Foreign Minister that the sole object of the recent alliance between Italy, Austria and Germany was the preservation of peace.
12. THURSDAY.—Specie payments resumed by the Italian Government without difficulty.
13. FRIDAY.—A corner in oil recently organized by speculators in Paris resulted in a ruinous failure.
The regulation forbidding the importation of American hog products into Germany was gazetted at Berlin.
14. SATURDAY.—Discount on prime commercial paper in New York, 5¼@6¼ per cent.; call loans, 4@7 per cent.
Discount in London on 60 days to 3 months' bank bills, 2¼@2½ per cent., and trade bills, 3@3¼ per cent.
18. WEDNESDAY.—Navigation open on the St. Lawrence.
19. THURSDAY.—The count of the cash in the United States Treasury completed; the amount found correct.
20. FRIDAY.—A great fire occurred at Delhi, India; 2,000 houses destroyed.
21. SATURDAY.—Discount on prime commercial paper in New York, 5¼@6¼ per cent.; call loans, 3@3 per cent.
Discount in London on 60 days to 3 months' bank bills, 2½ per cent.; trade bills, 3@3¼ per cent.
23. MONDAY.—A destructive cyclone passed over parts of Mississippi, Iowa, Tennessee and Georgia.
25. WEDNESDAY.—Convention of the Irish National Land League of America held at Philadelphia.
27. FRIDAY.—Willis S. Paine nominated by the Governor as Bank Superintendent of New York State.
The contract for the purchase of the Hannibal and St. Joseph Railroad by the Chicago, Burlington and Quincy signed.
28. SATURDAY.—Discount on prime commercial paper in New York, 5¼@6¼ per cent.; call loans, 6@4 per cent.
Discount in London on 60 days to 3 months' bank bills, 3 per cent., and trade bills, 3@3¼ per cent.
30. MONDAY.—The importation of American pork into Greece forbidden by the Government.

RHODES' JOURNAL OF BANKING.

NEW SERIES. {
VOLUME XI. }

JUNE, 1883.

No. 6

After considerable delay Attorney-General Brewster has delivered his opinion on the effect of the provision of the Tax and Tariff law, approved March 3d last, which repeals the taxes on the capital and deposits of banks. This opinion confirms the view of the law which was given in the March number of this Journal, and expressed in the language of Senator Sherman, as follows: "The bill repeals all taxes named from the date on which they were last due and payable. The law prescribes semi-annual periods for these collections, and the fact that the bill passed in March does not mean that taxes are to be collected for January and February. That could not be done. All taxes, however, which were due on January 1, and which have not been paid, must be collected." In quoting this passage, we said at the time, that it seemed "to give the intention of Congress in passing the act, as well as the plain interpretation of the language." It seems to be doubted in certain quarters, however, that Congress intended to make the repeal retroactive. If not, then a very simple blunder was made by the members, and very likely because they lost sight of the fact that, according to the old law, the taxes became due and payable only at the expiration of each half-year. It is a fortunate thing that the mistake, if mistake it was, involved a matter of no more serious importance. There can be no question on the point that the taxes had been entirely too long in existence already. It will be a happy day for this country when the blunders of its legislators cost it no more than this one did.

The so-called Page bill, which was intended to widen the field for the investment of savings bank funds in New York State, aroused such general opposition as to leave no room whatever for surprise when Governor Cleveland vetoed it, but rather created some inquiry as to how the Legislature could have determined to pass so important a measure without giving those who were interested an opportunity to

express their opinions upon it. The very general opposition to the bill was mostly based on the ground that the savings banks are organized primarily for the purpose of keeping the savings of the depositors in perfect security, the rate of dividends being a secondary consideration. This is certainly the true view to take of the matter, but still it does not cover the whole ground. It should be remembered that while deposits are steadily increasing, the legal means of investment are constantly narrowing, and it is therefore a very desirable thing that additional means for safely investing the funds should be found. As this is a matter of interest to other States besides New York, it deserves the best consideration possible.

Let us see what kind of securities or property the New York savings banks are allowed to invest in: (1) United States bonds and District of Columbia 3-65s; (2) New York State bonds; (3) bonds of other States which have not defaulted in payment of principal or interest for ten years; (4) bonds of any city, county, town or village of New York State, or any interest-bearing obligation of the city or county where the bank is situated; (5) bonds and mortgages to one-half the value of improved real-estate, or 40 per cent. on unimproved, but not more than 60 per cent. of the deposits may be so invested; (6) a bank building worth not more than one-half the surplus of the bank. Now, the Government bonds are being rapidly paid off, and, besides, they are held at abnormally high rates on account of the demand for them for national bank purposes. It is a question, too, if the amount of really first-class city and State bonds is not decreasing rather than increasing. So that probably the only means of investment that is increasing with the increase of deposits is bonds and mortgages.

There were points for strong objection in the Page bill, but there is room for question if part of its provisions should not be utilized. Would it not be better, for instance, that some competent financial board should pass on the particular State and local bonds authorized as investments, under general law, instead of having them classed in a general way as at present? Perhaps there are States which have not defaulted in ten years whose bonds are not perfectly safe investments, or there may be such in future. It is certain, also, that some town bonds in New York State should be disallowed. On the other hand there are bonds of certain railroad and other corporations that are strictly first-class securities. The Page bill gave to a board composed of certain State officers the right to choose any securities at will. This was too broad a provision. The Connecticut law, passed in 1880, allows investments in first mortgage bonds of railroads which have paid dividends of not less than five per cent. for five successive years. Could

not the New York law be safely altered to include securities of a class as high as this, especially if the list of available securities was under the supervision of a board of competent financiers? Such a board might be composed, perhaps, of the Bank Superintendent and some of the chief officers of the largest savings banks, and no security should be placed on the list without their consent, and they should be empowered to strike out any security deemed unsafe. Of course, the law should continue to limit the field within which they would be at liberty to choose.

The Bank of England toward the end of April took a step which created a slight and temporary disturbance in the money market, but which is considered to be a movement in the right direction. It appears that it has been the custom for some years back for the bill brokers, in cases of temporary stringency to depend upon the bank for short loans to tide over the difficulty, which loans they generally obtained at the bank's minimum rate of discount. Sometimes, however, if the borrower wanted too large an amount he would be charged an advance upon the posted rate, as the directors are careful to not commit themselves too largely on a single risk. These loans, which were, of course, a great convenience to the bill brokers, used, a few years since, to be made for so short a period as five days, but more recently the bank has insisted that borrowers must take the money for at least ten days. The new rule mentioned is, however, still more severe on the brokers, for the bank gives them notice that an advance over the published rates will be charged on short loans, excepting at the period at the close of each quarter, when funds for the payment of interest on the public debt are accumulating in its coffers.

Of this action of the bank the London "Economist" says that it is certainly right. "There can be no doubt that, of late, brokers have come to rely far too much on the bank. They have reckoned upon getting advances there almost as a matter of course whenever they applied for them, and in this belief they have entered into engagements which, if they had not thought the bank was behind them, they possibly would not have risked. The belief, too, that the resources of the bank would always be available at ordinary rates if necessary has enabled the brokers to borrow more freely outside than they would otherwise have been able to do, because the outside lender had, or thought he had, the assurance that if he called in his money the broker would be able to fall back upon the bank. There, of course, are times, such as during the past quarter, when the revenue collection was sweeping the customary outside supplies of money into the bank, when it is reasonable to expect that it will lend freely. Nor does there seem to be any intention

on the part of the directors of restricting advances at such times. But after the dividends have been distributed they may very reasonably hold, that as the market has command of all the usual resources, it should stand upon its own feet, and not lean upon the bank, as it has latterly been too much accustomed to do. This is the view which the older discount houses have been in the habit of taking, and which used to be generally acted upon; and if it can be made to prevail, it may do something to check the over-keen competition which has made it so difficult for the bank of late years to make its rate effective."

The consequence of the move was that the rates of discount in the open market were increased until they reached the bank rate, and there was no reason to expect a reduction soon. The over-competition in the loan market mentioned by the "Economist" has been characteristic of the London market for many years, but there have been numerous indications of late that New York was beginning to resemble it. In fact it has been a matter of frequent remark that mercantile houses in good standing were getting more and more into the habit of leaving their paper with brokers for discount, instead of with their banks. In London the brokers have followed the practice of receiving money subject to call, paying very low rates for it, and discounting bills at rates sometimes as much as 1 1-2 per cent. lower than the bank rate. They took the risk of having the money called in, relying upon the bank for short loans at its minimum rate to tide over the period of tight money. Thus they have kept the open market rate abnormally low, the bank supplying the means whereby outsiders were enabled to successfully compete with it. It has now, however, taken means to make this a matter of more difficulty.

The wet and unseasonable weather which prevailed during most of May had an unfavorable effect upon business throughout the country. So much depends upon the coming crop that it is not surprising that much hesitation has been displayed in entering upon business ventures. It is certain that the winter wheat crop will be short, but it is too early to judge of the later harvests. Late advices state that while the prospects are good in France, in England it is considered certain that the returns will be below the average. The situation is complicated in this country by the labor troubles that are constantly occurring, and the probability of a long strike of the iron-workers. In view of the fact that new railway construction has very largely fallen off, the result of the suicidal policy of the workmen to themselves can easily be foreseen; but, in the meantime, it increases the depression of business. While there is no cause for alarm, there is abundant reason for caution. New and doubtful ventures should be avoided.

PROGRESS OF THE NATIONAL BANKS.

As the basis upon which the national banking system was founded and rests (*viz.* : the national debt) is steadily and rapidly disappearing, it becomes a matter of constantly increasing interest to know the effect on the banks of the numerous Treasury bond calls, and the other conditions that arise from time to time. Among the latter the provisions of the act to enable national banks to extend their corporate existence, approved July 12, 1882, must be counted among the most important recent ones, and especially Section 8, which allows banks having a capital of \$150,000 or less to reduce the amount of their bonds deposited with the United States Treasurer to secure circulation, to one-quarter of their capital stock. For the purpose of showing in what ways and to what extent the banks have been influenced by the causes mentioned, we have compiled some tables from the reports made to the Comptroller of the Currency, extending over the year beginning March 11, 1882. They will be found to be much more full in some important respects than the statements published by the Associated Press, as well as much more succinct, only the principal items being given.

Table A shows that the banks increased steadily in numbers during the year, the gain being 156 banks, while the aggregate capital was augmented by 21 million dollars. The figures showing the amount of deposits and loans is useful to show the volume of the business of the banks, but the changes are only considered to be significant as indicating the condition of general business at the respective dates:

TABLE A

* Including United States certificates of deposit.

are distributed throughout the United States, in Table B the country is divided into sections as follows:

Division 1.—Comprising the New England States.

Division 2.—New York, New Jersey, and Pennsylvania.

Division 3.—Delaware, Maryland, District of Columbia, Virginia, and West Virginia.

Division 4.—North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Kentucky, and Tennessee.

Division 5.—Ohio, Indiana, Illinois, Michigan, and Wisconsin.

Division 6.—Iowa, Minnesota, Missouri, Kansas, and Nebraska.

Division 7.—Colorado, Nevada, California, and Oregon.

Division 8.—Arizona, Dakota, Idaho, Montana, New Mexico, Utah, Washington Territory, and Wyoming.

By this means we are able to show that the increase in the number of national banks and in capital invested was very slight in the Eastern and Middle States during the year under review. There was a fair increase in both items in the Southern States (Division 4); but in the States north of the Ohio River (Division 5) the increase in capital (nearly 9 millions) was most marked, while in the States just across the Mississippi (Division 6) there was a still greater increase (51) in the number of banks. There was a large proportionate increase in both items mentioned in the Territories, but the Pacific States form a marked contrast with this state of things. There has, indeed, been much complaint of late because capital was leaving California on account of Granger legislation.

The other items shown in the table bear less directly on our subject, but they are worthy of attention. The decrease in gold held by the banks was about as noticeable in the Middle Western as in the Eastern and Middle States.

Table C shows the condition, so far as the principal items are concerned, of the national banks in the sixteen reserve cities on October 3, 1882, and on March 13, 1883, an interval of a little over six months. It also enables the reader to compare the aggregates of the items with those for the remaining national banks. For the sake of bringing the table into convenient compass the figures are given in millions of dollars, four or five figures being elided in each case. For instance: the aggregate capital of the national banks on March 13 last was \$490,456,932; in Table C it is given as 490.5, which is close enough for ordinary purposes.

It will be noticed that in New York there was a decrease in the capital stock during the six months, while there was only a slight increase in the aggregate for all the banks in the reserve cities. Their surplus was considerably strengthened, however. This table shows the amount of the bank circulation at the dates mentioned, the de-

TABLE C—Showing the condition of the national banks in the reserve cities on October 3, 1882, and March 13, 1883, by the principal items contained in their reports, and in millions of dollars.

crease of over 2 millions in New York being partly balanced by an increase in the Western cities. The large decrease in deposits, especially in New York, seems to merely indicate a decrease in the volume of business passing through the banks, especially in New York. At some future time we may be able to give a table similar to the above, but extending the comparison over the space of a year.

SAVINGS BANKS OF NEW JERSEY.

We are indebted to the Hon. Henry C. Kelsey, Secretary of State of the State of New Jersey, for a copy of the "Annual Statements of the Banks and Savings Institutions of the State of New Jersey, for the year 1883," being his report to the Legislature, under date of March 13, 1883. The following information in regard to the savings banks has been gleaned from it:

On the 1st day of January, 1882, the total assets of all savings banks in the State amounted to \$26,874,861.23; liabilities, except surplus, \$25,499,362.13; surplus over all liabilities, \$1,375,499.10; number of open accounts, 86,448.

January 1, 1883, their total assets amounted to \$29,163,807.93; liabilities, except surplus, \$27,649,309.46; surplus over all liabilities, \$1,514,498.47; number of open accounts, 91,951.

On the 1st day of January, 1882, the number of depositors was 86,448; and the amount due depositors, \$25,321,712.64; and on the 1st day of January, 1883, the number was 91,951; and the amount due depositors, \$27,344,035.24; an increase in number of depositors, 5,503; and in amount, \$2,022,322.60.

There are a number of these institutions still the wards of the Chancellor, and the proceedings in each case warrant the conclusion that they are being managed, under his direction, for the best interest of depositors.

On the 9th of January, 1883, the Fifth Ward Savings Bank of Jersey City suspended payment.

An examination of its affairs was made, and the Attorney-General notified that in the judgment of the State Board the bank should not be allowed to continue business.

The managers of the bank applied to the Chancellor for authority to continue business, whereupon he appointed a master to make an examination of the bank, which resulted in an order by the Chancellor that the Board of Managers continue in charge of the affairs and assets of the bank, subject to the supervision and control of the court.

The following is a recapitulation of the tables showing the condition of the savings banks on January 1 last, supplemented with some important statistics:

RESOURCES.

Estimated value of real estate.....	\$896,562 65
Loans on bonds and mortgages.....	8,819,604 97
Investment in stocks and bonds, viz.:	
United States bonds.....	\$8,470,189 20
All other stocks and bonds.....	2,996,245 12
	<hr/>
Call loans on collaterals.....	11,466,434 32
Cash on hand and in bank.....	5,924,911 25
All other assets.....	1,100,362 82
	<hr/>
Total.....	\$29,163,807 93

LIABILITIES.

Amount due depositors.....	\$27,844,085 24
All other liabilities.....	306,274 22
Surplus over liabilities.....	\$1,514,498 47
	<hr/>
Total.....	1,514,498 47
	<hr/>
	\$29,163,807 93

MISCELLANEOUS.

Number of open accounts January 1, 1882.....	86,448
Number of open accounts January 1, 1883.....	91,951
Amount deposited in 1882.....	\$23,000,890 61
Amount withdrawn in 1882.....	22,421,053 29

Two laws were passed by the Legislature, session of 1883, affecting the savings institutions. The first, approved February 23, 1883, amends section 19 of the act entitled "An act concerning savings banks," approved April 21, 1876. It decrees "that whenever a manager of any savings bank shall hereafter borrow, directly or indirectly, any of the funds of the savings bank of which he is a manager, or upon his becoming a surety or guarantor for any money borrowed of, or loan made by, such savings bank, or upon his failure to attend the regular meetings of the board, or to perform any of the duties devolved upon him as such manager, for six successive months without having been previously excused by the board for such failure, the office of such manager shall thereupon immediately become vacant; but the manager vacating his office by failure to attend meetings or to discharge his duties, may in the discretion of the board be eligible to a re-election."

The other law was approved March 22, 1883, and is a supplement to the same act of April 21, 1876, which was amended as above. It decrees that the managers of savings banks shall, as soon as practicable, invest the moneys deposited with them in the securities named in the 26th section of the act, "except that for the purpose of meeting current payments and expenses in excess of the receipts, there may be kept an available fund of not exceeding ten per centum of the whole amount of deposits with such corporation; and the same may be kept on hand, or on deposit in any bank or banking association in this State, organized under any law or laws of this State or the United States; or the same may be deposited on call, at interest, in such solvent trust

company or safe deposit company incorporated under and by virtue of the laws of this State or of the State of New York or Pennsylvania, as a majority of the managers of such bank or institution for saving may direct, by resolution adopted at a regular or special meeting, and duly recorded on their minutes; or such available fund, or any part thereof may be loaned upon pledge of the securities, or any of them, named in subdivisions one, two, three and four of section twenty-six of this act, but not in excess of seventy-five per centum of the cash market value of such securities so pledged nor in excess of the par value thereof; and should any of the securities, so held in pledge, depreciate in value, after making any loan thereon, it shall be the duty of the managers to require the immediate payment of such loan, or of a part thereof, or additional security therefor, so that the amount loaned shall at no time exceed seventy-five per centum of the market value of the securities pledged for the same."

AMERICAN SECURITIES IN HOLLAND.

The United States Consul at Amsterdam makes, under date of February 28, 1883, a report on American securities in Holland. All financiers are aware that Holland, and perhaps especially Amsterdam, contains an unusually large proportion of capitalists, the people from their plain and frugal habits, and their industry combined with financial enterprise, having a natural turn that way. It will be remembered that during and after the civil war they invested largely in United States bonds, and it is a matter of some interest how far they have substituted the bonds sold or redeemed with other securities of this country. For this reason, and because the report mentioned has been intelligently prepared and contains considerable information concerning the past and future of the European market for securities, it is liberally quoted from below:

In a report I made on this subject about a year ago, the facts were mentioned that a considerable decline in the prices of American railroad stocks took place during the latter half and at the close of the year 1881; that during the months of January and February of 1882 the market was even still more depressed, and that matters generally were looked upon as portending more than merely a passing fluctuation of the price or value of such securities, but rather as the beginning of a period of settled or fixed reaction.

Whilst thus the prospects for extensive and profitable transactions for 1882 were far from promising, they were not altogether so discouraging as to shut out all expectations of a change for the better in the then near future. At all events, such expectations, whether justified or not, were largely indulged in, but doomed to be surely disappointed.

As the year progressed, affairs constantly went from bad to worse,

and this not only respecting losing operations in American railroad stock, but fully as much, if not even more so, as concerning transactions in European securities of many descriptions.

The political horizon of Europe was hardly at any time during the year without some signs causing disquietude and uncertainty in financial circles and in the stock market.

The ever existing "Eastern question," intensified in 1882 by its culminating in a war between England and an Egyptian army, and various other political events of more or less importance, contributed here, as everywhere else in Europe, to this almost constant state of agitation on the stock market.

The financial crash in Paris, owing, apparently, to senseless over-speculation, the downfall of the Union Generale, and other large banking institutions in France, also had its injurious effect. The indirect consequences of occurrences such as above alluded to, and of still other untoward circumstances, entailed continued and heavy losses to many capitalists, speculators, and investors in this country.

Great confidence in American railway and other enterprises has long since become established in Holland, despite occasional checks on account of the introduction and placing in its markets some years ago of millions of dollars worth of securities, at high rates, covering enterprises of only too doubtful a character, as was subsequently proven, to the great injury of investors here. However, under any ways favorable conditions, the Dutch people remain more than inclined to continue to invest in certain of our securities. The past year's transactions would seem to furnish the proof of this. Notwithstanding that a great deal of money was lost here in American railroad securities during the latter part of 1881 and in the early part of 1882, still, under prevailing circumstances, particular attention of capitalists and others here was again directed to the United States. What seems particularly to attract their attention to our country, with a view of investments therein, is considered to be the comparative immunity of the United States from external political complication of any such character as at any time to justify apprehensions for the preservation of almost perpetual peace. When considering the situation of the United States in this respect, in contradistinction to European countries, no one, they say, and wisely so, can fail to observe the great boon and advantage our country enjoys. The further and important facts of our country's almost exhaustless resources, and its ever increasing means for their development, are also fully understood and taken into account. The natural result of this was, that in the course of the year the holding of American railroad securities, especially shares, again considerably increased, being then purchasable at more or less lower figures from former quotations. This, however, does not refer to any new sorts of shares or bonds, excepting in one or two instances, but to such as had been introduced and were

dealt in before in this market, and consisting more particularly of shares of the following companies : Denver and Rio Grande; Wabash, Saint Louis and Pacific; Louisville and Nashville; Buffalo, Pittsburgh, and Western, &c.

At one time, but only as it were for a moment, it appeared that, through the largely augmented investments and transactions in American railroad shares, the already sustained great losses in American and European securities might, in a measure, be again recovered or made up. But this was not to happen; on the contrary, the favorable indications for a continued or sustained rise in prices soon disappeared again, and thenceforth to the end of the year and up to the present, a downward tendency ruled the stock market, and further great losses resulted. This state of things causes, and very naturally, renewed disappointments, and gives rise here to occasional severe criticism.

There are not wanting those who believe and claim that it is owing in a great measure to the unrestrained power and influence in the hands of certain parties in the United States, which they have used and do use for their personal aggrandizement, and in such manner as thereby to prevent the many natural advantages of our country from exerting themselves and working out as it were their own results, which could only be beneficial as respecting our vast railroad interests and the value of securities.

Another noteworthy circumstance consists hereof, that during the year 1882 the Dutch public largely increased their holdings of American railroad securities by investing almost exclusively in shares instead of in bonds, as was formerly more generally the case. These shares having since then depreciated in value and bearing no interest, makes their losses to be so much greater, and weakens and reduces present transactions. On the whole, it may safely be stated that the national wealth of the Netherlands suffered a considerable diminution in 1882. The losses sustained from the very large possession by its people of securities of many descriptions contributed to this unfortunate result, but, as represented to me, it is more chiefly on account of the recent and great depreciation in the value of all kinds of real estate throughout the country, and the rather unfavorable outcome of the general commerce and trade of the past year.

Dealings in United States bonds have about ceased here, but 4-2 per cents (1876's) are, to an inconsiderable amount, still held; so are some continued 4 and 5 per cent. bonds still left here. They are, however, gradually finding their way back to the United States.

In concluding this report I would remark that the statements it contains are based more especially upon information received from parties intimately acquainted with the subject than upon my own observations or knowledge of the same.

WALL STREET METHODS.

AS EXPLAINED BY THOSE WHO UNDERSTAND THEM.

(Continued from the May number.)

What Mr. Gould could tell about corners, stock speculation, railroad management, etc., should be, perhaps, more curious than the experience of any other living American, but, in the present instance, his revelations were chiefly confined to general views, the particulars (in regard to such matters as Black Friday, for instance) being, for the most part, avoided. Testifying, on December 15, 1882, he gave his business as "manager of railroads," having followed it upwards of twenty years. He was familiar with stocks, but had never dealt in grain. There was very little dealing in futures in stocks at present. His opinion concerning the system of making corners and dealing in futures with reference to its effect upon commerce and its influence upon the public welfare was as follows:

"My impression of that is that it makes a very large market here; that is, all the world is connected by cables and telegraphs, and the large market is where all the consumers come to buy. The larger you make our market the more attractive it will be to buyers all over the world. If our market was narrowed down to so small a compass that every time a large dealer had to buy any grain he had to go and hunt up the farmer out West and buy it, he would go somewhere else. The roads that I am interested in are those that reach the producing districts, so that I may say that it is the producers that I deal with, not the consumers."

The only effect of corners upon the transportation interests was perhaps uneven transportation. They rather helped the transportation interests on the whole, by creating a large market. Corners also probably gave the producer a better price, on the whole. The producers make the money, and not, generally, the men who make the corners. Mr. Gould thought that the consumer paid more by reason of corners, and his observation had been that it was usually the speculators who suffered. The latter was probably the case in the corner of 1879.

Regarding stock corners, he said the late corner in Hannibal and St. Jo. "resulted very disastrously to the man who made it. * * * He brought the stock up to a very high price, paid more than it was worth, and after he got through with his corner he had the stock on hand—no market for it."

Q. Have you been interested in any cornering transactions in stock within the last ten years? A. I was interested in the Chicago and North-Western corner.

Q. Please explain about that corner. A. Chicago and North-Western stock was selling, I think, at about 80—75 or 80. I considered it cheap at that price and commenced buying. There was a disposition to break it down. My brokers had orders to buy all that was sold, and before I knew it they had bought a good deal more than there was. When called in to pay for it, the price ran up. I did not pay over 80, I think; I paid what I thought it was worth.

Q. How did that corner result? A. It resulted in carrying the price up very high; the stock fell back after the corner to about 80, I think.

Q. How high did the stock go up? A. I don't remember now; I think it went up to about 250. I think I was induced to part with some at about that price.

He did not think that corner had the slightest effect upon the commercial interests of the country. There were no bankruptcies from it. "We did not allow anyone to fail. If they could not pay we let up on them." It had not the slightest effect upon the road itself.

Regarding the selling of futures he thought that "everything that tends to facilitate speculation really benefits the country—draws capital from all parts of the world." Regarding such speculation being called gambling that would depend upon the legislation of the country. If the Legislature should say that dealing in futures was gambling, or the national Legislature should say that, it would be gambling; but until they say that it is not gambling. The speculators have grown up from small beginnings to very large interests, and it is just as legitimate as any other business until the Legislature makes it gambling.

Regarding corners in the money market, they created a temporary depression, which was soon overcome by money being drawn from other centers. So far as they tended to make business men careful they were a good thing, but when panics were created they were bad. Panics in the money market were not necessarily produced by corners, but might be caused by anything which created a general distrust in the public mind. The panic of 1857 was caused by the news of the Schuyler frauds; the next was caused by the outbreak of the civil war; that of 1869 ("Black Friday") resulted from the large fluctuation in gold and commodities—over-trading—following the war. The panic of 1873 was produced by over-trading again and an over-extension of railroads on credit. Panics have their evil and their good effects. They seem to be a necessary evil.

Q. Do you think it is possible to remedy these evils by legislation? A. I do not; I think it would be impossible to legislate against any of

these great trades and businesses that have grown up. If you legislate in New York to prevent dealing in grain they will make some other center and drive the capital away.

Q What would you think of national legislation in regard to the matter? A. I don't think it is practicable or feasible. I think that you can put some restrictions on it; in dealing in grain you might say that the loss should not exceed a certain price, or in dealing in stocks that the loss should not be beyond a certain price. For instance, the London Stock Exchange have adopted a similar rule; I think it is ten per cent. there.

Q. The loss shall not exceed that? A. Yes; that prevents failures and it prevents corners. There is no use of making a corner you know, if you have got to settle at a limited price.

Q. How could that be done to prevent such corners as the Keene corner. You have heard of the Keene corner? A. Very easily, because if the board would adopt a regulation that the settling price should always be not to exceed ten per cent. of the selling price, it would be easy to regulate just the same as in stocks. Say that the settling price should never exceed ten per cent. of the selling price; that would cure these extreme corners. But I am very clear that you should throw the marts of commerce open to draw capital and benefit the public. I would make capital in New York as free as the wind.

Q. And only restrict it in that way? A. That the loss should not exceed a certain per cent.

It was on December 18 that Mr. James R. Keene was examined. In reading the full report it has been noticed that he treads very lightly over the ground where he might get hurt, but wasn't at all afraid of stepping on other people's flower-beds.

He had been in the business of "speculating" for twenty years. He had never known a corner that worked injury to the business of the country, excepting one, because all the corners in commodities had been in breadstuffs, and they lasted so short a time that their influence in raising the price of the necessities of life had never worked any injury whatever. These corners had benefited the agricultural interests. Cornering was, however, a foolish thing, and always injured the promoter.

The only corner that injured the public was the present one that exists in coal; that arrangement between the anthracite coal companies by which the prices are fixed at exorbitant rates. This corner originated out of the necessity for the companies to pay dividends and interest on excessive issues of stock and bonds. The consequent injury to the great manufacturing interests of the country cannot be overestimated. The witness thought that coal was sold at tide-water for one dollar a ton more than ought to be charged.

The system of dealing as carried on in the "Bucket-shops" was demoralizing, as it was actually gambling. It should be abolished by

law. The transactions at the Produce Exchange, the Stock Exchange and all the great exchanges of the country were of an entirely different character.

"If a man buys a future in Chicago he contracts to pay his money for the article that he buys at a certain time when it is delivered to him, and he must take it. He makes an absolute purchase. If I buy a thousand shares of stock to-day in the Stock Exchange I must pay for it to-morrow. * * * I may re-sell it again, but I have to pay for the identical stock I bought and re-deliver the stock I sell again; and if I buy a million bushels of wheat in Chicago for next month, I have bound myself by my contract to take that million bushels. When it is tendered to me, according to the rules of the Exchange, I must take it. I may in the meantime sell it out again, but that is a separate transaction; and if I do not sell it, of course the transaction remains that I must take the wheat and pay for it—and provide for it. I think the committee are under the idea that what is called dealing in futures is a mere gambling transaction that carries no responsibility except putting up a margin, and that you do not buy the article outright. That is a mistake: you do."

The case is different in "Bucket-shop" transactions, because no obligation is made to either take or deliver the thing sold. It is mere gambling on the fluctuations in price. Without speculation in futures for the long and the short account, the business of this country could not be conducted. It would be wonderfully restricted and would work a great oppression, particularly to the producer, and very largely to the purchaser in a financial way.

Q. You have been speaking of the legitimate system of dealing. You are aware, however, that there is a large amount of dealing in futures and transactions in grain carried on which could not be called purely legitimate, are you not? That is to say, persons come in simply to get all they can make out of their speculations without rendering either to the producer or the consumer any profit? A. That is what we are all doing—trying to make as much money as we can in a speculative way—everybody. There is not, I suppose, a person in this room nor in any other room, nor anywhere else, that would not buy something if he thought it was going up. People dealing in stocks buy because they believe they are going up. They intend to sell them again. Neither is wheat, cotton, or pork bought for investment. It is bought with the expectation of selling it at a profit. Nevertheless, it is not any more speculative than the purchasing by a wholesale dealer on Broadway of a large amount of cotton prints at a Lowell factory in the expectation of the firm making it that they could re-sell the property in a month or six weeks at a very handsome advance. Failing in that, they sell the goods for what they can get, and make a loss. Now, can you see any difference in those transactions? Then, if you destroy the speculative feature about all stock, and grain, and

cotton transactions, you work a great injury to the investor, because you may have an investment of \$100,000 in some stock down in Wall street, which pays you an excellent dividend, and you might have occasion to go to Europe, and feel that, in going there, you would rather shift your property into something probably more permanent. How are you to do it if you haven't got a speculative market? You might wait two weeks before you got a bid for it. Now, all you have got to do is to go down and in five minutes the sale is made and you get your money. This whole thing is in accordance with the progress of ideas all over the world. You cannot go back. You cannot restrict speculation in this great speculative country. Speculation is the great civilizer of this country. * * *

Q. What do you think of the system of speculation which is usually carried on in Wall Street? A. I think it is all right.

Q. It was said by one witness here, who claims to be an expert, that the system consisted in something like this: that a few managers were there, and when the "lamb" came, they fleeced them. A. Well, I have no doubt that that frequently occurs; but there is nothing to compel a "lamb" to go into Wall Street unless he wishes to go.

Mr. Keene did not think that corners affected the transportation interests at all, excepting temporarily. Nor did they last long enough to influence the foreign export trade.

Q. Now, Mr. Keene, a good deal has been said in regard to what is known as the Keene corner. A. Yes.

Q. Now, we would like you to explain that to the committee. We have heard so many versions of it that we presume you are prepared to give us— A. It is so long ago that I have forgotten all about it, really. I never was engaged in a corner in my life.

Q. Never? A. Never, sir.

Q. Why, then, has the corner to which these persons refer been called the Keene corner? A. Well, I suppose because I was the central figure in the combination which owned at that time a very large amount of wheat; but that combination was not formed for the purpose of cornering the market. It was only formed for the purpose of defending the individual purchase of the syndicate, previously made, and which we felt we could better do by combining than by submitting ourselves to the tender mercy of the bears, who were very active and wanted to sell it, and came near knocking the price down.

The aggregate holdings of the individuals of the syndicate, when they came together, comprised pretty much all there was in existence. They did not combine together to purchase all the wheat and corn in the country; but they held certain quantities, and combined for a common advance. After the outcry about the "corner" they were finally compelled to sell at a loss. They held perhaps fifteen or twenty million bushels of grain. The syndicate was formed in December, many of the parties dropped out from want of funds, and the rest sold

out by April, May, or June. There was no "corner" at all, because a man that wanted to could buy anything that he wanted, and there was no arbitrary price fixed. Transportation from the West may have been restricted at the time, for wheat was higher in the Chicago market than in New York, and perhaps this combination was the cause. The burden of the high price fell on the syndicate. The farmer benefited by it and the consumer did not suffer very much by it. Wheat was at that time (the spring of 1880) worth \$1.15 to \$1.20 per bushel.

If the railroads were unfavorably affected, the reason probably was that their rates were too high, as they are at present. Their rates are cornered—are arbitrarily fixed—by Mr. Fink and the railroad men of the trunk lines. This is prejudicial to the business of the country, because the rates charged are entirely out of proportion to the service that is given for them. They are 25 per cent., at least, too high.

Q. Is it not true that over-speculation, making corners and high rates of transportation tend to increase prices, so that foreign consumers cannot purchase them as cheaply as they can find supplies elsewhere? A. * * * Over-speculation depends very much on whether it is on one side of the account or the other. I don't know what you mean exactly by—

Q. Such a system of speculation as is usually carried on in our various products? All the speculators make money, I am told. A. You haven't been in Wall Street.

Q. And we are also told that the effect of this speculation is to enhance the cost of products. If that be so, would it not tend to diminish our exports?

[The last three questions are only given here for the purpose of illustrating the very crude ideas that are often entertained on important economical matters by intelligent men.]

Q. It has been stated that our shipping is falling off annually. It has been said that they are now five million dollars less than they have been in other years. A. Five million *tons* less?

Q. Five million *dollars* less (that is, if I can read it), so that the balance of trade will be against us in a short time, if we do not look out—that is, that our exports are not keeping up as they have been in former years. A. Well, but they didn't raise anything last year. How could they keep up? This is what has driven the ships away. We had no crop to sell. The consequence was the tonnage sought other countries that could employ it, and has not got back again. * * *

Q. Does our present system of speculation not tend to create artificial values? A. I don't think it does, sir.

The evil produced by the overcharging of the railroads should be overcome by passing a law that parallel roads should not be allowed to pool their earnings and fix arbitrary rates. Mr. Keene was a member of the Tide-water Pipe Line Company. The Standard Oil Company

had not attempted to corner or crush out their refineries, excepting by instituting a very active competition.

Mr. Henry Clews, of the well-known firm of Henry Clews & Co., bankers and brokers, being interrogated on December 23, said that corners "are the result of speculations at times carried to extremities. They are not frequent, and are liable to be less so owing to the result to the parties connected with them, which has not been successful—scarcely ever. It usually leaves the parties with the material on hand * * * without a market for their property, and has always seriously embarrassed them, and invariably led to disaster."

Speculation, he said, is the method now adopted for adjusting differences of opinion as to future values; whether of products or securities. It is more common than in former years because the facilities for procuring information have increased with the greater intelligence with which business is now conducted, and also from the greater rapidity with which such information can be transmitted by telegraph and cable. In former years the results of a crop were known only when the crop came to be marketed. Now, all is ascertained before the crop is gathered. This advance information naturally becomes the subject of speculative transactions which could not exist in former times.

Speculation brings into play the best intelligence as to the future of values. It has always two sides. The one that best comprehends the facts and conditions of the situation wins in the end; and the result of the conflict is the nearest possible approach to the correct valuation. The result of speculation for a fall in prices is based on the presumption of an over-supply. If it succeeds, the production of the particular article is checked until prices recover, and, in the meantime, production is diverted to other articles less abundant. Thus, speculation proves a regulator of both values of production. A speculation for a rise in prices is based on a presumption of scarcity or short supply, and its direct effect is to quicken production and thereby restore the equilibrium of prices. "Corners" usually come from running a speculation to an excessive length, by which the sellers become responsible for deliveries beyond what they can possibly make, and thereby place themselves at the mercy of those with whom they have made contracts. These exigencies chiefly affect the speculators, and affect the producing community but little. Extreme prices usually grow out of them; but they are only momentary, and have no effect upon regular or "cash" transactions, which sympathize very remotely with these momentary artificial quotations.

Speculation should not be judged by its occasional excesses, but by its general effects, which the foregoing considerations show to be beneficial.

It regulates production, first, by instantly advancing prices when there is scarcity, and thereby stimulating production; and, secondly, by putting down prices when there is an over-supply, and thereby

checking production. And it equally regulates prices, also, by keeping them adjusted to the best obtainable information respecting the conditions of supply and demand.

Speculation is not really the factor that produces fluctuations in prices. It is only the agency for giving effect to the fluctuations in supply and demand, which are the actual factors controlling values.

Prices would equally fluctuate in the absence of speculation. But the changes would come more slowly, and later; and, therefore, in most cases the variations would come too late to regulate preparations for the succeeding crops. It is one of the great advantages of speculation that it makes conspicuous the results of the present crop in time to adjust preparations for the next; thereby tending to prevent two large, or two light crops in succession, and thus it becomes an important means of maintaining an even course of prices, and also of evenly distributing capital and labor as among the various industries.

Corners invariably follow enterprise. All kinds of business that are exclusive lead to corners, such kinds as are covered by patents especially. All importing houses deal in "futures." They sell goods by samples, contracting to deliver at a future stated period, varying from thirty days to one year. In the meanwhile the goods sometimes have to be made or grown, and brought from a distance of 3,000 or more miles. All such corners are the natural and legitimate result of enterprise, and they will continue to exist and increase in all future time. The intervention of Congress or State Legislatures is not needed to put down American enterprise, and Yankee goaheaditiveness. It will beat the world if left alone. The law of supply and demand is the real regulator, and it always asserts its power in the end. Those who do not obey its mandates will become the victims. People who buy cheap and sell dear make the money in all lines of business.

During the war Congress passed an act to suppress the selling of gold short. The result was that the general trading in it was broken up and the business was driven into a few hands. These parties then had a monopoly, and a corner resulted which caused the premium to almost double in a comparatively short time. The wise statesmen who originated the measure, and who were instrumental in having it passed, took alarm at the result produced, and at once had the act repealed. Another attempt at interference was made by Secretary Hugh McCulloch, who made a minute calculation that Gold v. Greenbacks should not range higher than 129 7-8 premium [29 7-8 ?], and hence undertook to keep it at that limit by selling Treasury gold whenever it reached 130. His brokers, therefore, had *carte blanche* to meet all demands at 130. This was prior to the cable period, and all foreign news came by steamer. One afternoon, at about half-past two o'clock, the news struck the street that a serious panic was prevailing in England. Overend, Gurney & Co. had failed, and hundreds of merchants, and many banks as well. The foreign bankers here had imperative orders

from their correspondents to remit gold to England at once. The orders were sent to the gold room, and in less than half an hour the Government gold broker was baled out of \$25,000,000 of gold. Immediately thereafter the premium advanced to 40, and before the close of the next day it reached 60. It was the cheap Government gold that was shipped, and its arrival in England stopped the panic. But for this, general bankruptcy in England would doubtless have been inevitable, thereby causing England's high credit to be impaired, and, in consequence, the sooner building up New York city as the financial center of the world—her future destiny.

Corners in stocks now seldom occur. All that have been inaugurated have resulted in loss to the conspirators and, in most cases, their ruin. It was so in the "Black Friday" corner, the Prairie du Chien corner, the Rock Island corner, the Northwest corner, and the more recent Hannibal and St. Jo. corner. They invariably leave the parties to such nefarious transactions high and dry with all the stock on hand, and without a market therefor. The "Bucket-shop" business in stocks and grain should, however, be suppressed. Railroads should be prohibited from pooling, and coal companies from combining. Also, the telegraph companies should be prevented from consolidating. By these means monopolies are built up, enriching and making all-powerful the few at the expense of the many, and injuring, politically and otherwise, the great interests of the nation.

Almost simultaneously with the news that the Attorney-General had decided that the banks were relieved from any further assessment for taxes on capital and deposits, came word that the banks of the Province of Quebec were rejoicing over a decision somewhat similar. It appears that the Province, having been very generous with its funds and credit, had recourse to a number of devices to raise money. Among the rest was a law to tax banks and other financial institutions doing business in the Province. This law being considered unconstitutional, payment was refused and the Government brought suit against the Ontario Bank, with the result that the court has declared the act unconstitutional and invalid. In his decision, Mr. Justice Rainville refers to the fact that under the Constitution of the United States the powers of the National Government are restricted to certain enumerated limits, the powers not delegated to the Government being left to the States. In Canada the reverse is the case, the Provinces only enjoying certain enumerated powers. Under the Constitution the Provincial Legislature can raise money by direct taxation only. The Justice decided that the disputed tax was not a direct tax; it was not imposed within the Province, being upon bank capital, part of which was owned and used outside; the law encroached on the power vested in the central Government to regulate banks and their incorporation. The case was appealed, but it is doubtful if the law will be upheld.

BANKING AND FINANCIAL NEWS.

(With Comments on the more important matters. This Department also includes General Business News—Notes from Foreign Banking Centres, including Canada—A Complete List of New Banks, Changes in Officers, Dissolutions and Failures—Banking and Monetary Tables—Bankers' Obituary Record, &c.)

The Bank-Tax Decision.—The Attorney-General has just decided that national banks under the new tax law are not required to pay any taxes on their deposits and capital stock for the period between the date of the act of March 3, 1883, and January 1, 1883, and that the tax on the deposits and capital of other banks and bankers is not to be paid for the period between the date of the same act and December 1, 1882.—*Washington, May 23.*

In the course of the opinion of the Attorney-General, which is too long for publication in full here, he says:—"At the period referred to taxes upon the capital and deposits of national banking associations were imposed by and collected under the provisions of sections 5,214, 5,215, 5,216 and 5,217 Revised Statutes, and those upon the capital and deposits of other banks and bankers under the provisions of sections 3,408, 3,409, 3,414 and 3,415 Revised Statutes." After an examination of the language of these sections, and of sections 1 and 13 of the act of March 3, 1883, repealing the taxes imposed by the former, except as to such as are "now due and payable," the Attorney-General says: "It is the accruing right, not the accruing tax, that is saved. The right to duties here does not come into existence during the half year, but only on the expiration thereof; it then accrues, although the duties are not yet assessed, and it may be said to be thenceforth accruing until the assessment of the duties and ascertainment of the amount thereof; that is to say, until payment of the dues is demandable. Besides, it may fairly be inferred, from the express exception in the repealing clause of section 1, of 'such taxes as are now due and payable,' that this was the only qualification contemplated, and that no other taxes on the deposits and capital stock of banks, &c., not even those accruing on the current half year, were meant by Congress to be saved from the repeal. To repel this inference there must be found in section 13 or elsewhere in the statutes language clearly indicative of a contrary intent. I discover nothing therein showing such intent."

Referring next to sections 3,408, 3,409, 3,414 and 3,415 of the Revised Statutes, the Attorney-General says:

"The duties imposed by these sections, like those imposed by the sections which relate to national banking associations, are assessed semi-annually upon returns required to be made semi-annually, and become due and payable semi-annually, at stated times, but they are estimated by monthly, not by half-yearly periods. The tax on deposits is calculated upon the monthly average, and

that upon capital upon the amount thereof employed monthly; whereas, in the case of national banking associations, the duty upon both deposits and capital stock is levied upon the average amount for the half year. However, I do not think this difference in the mode of assessing and ascertaining the duties is material in connection with the subject in hand.

"The reasons adduced in support of the construction above placed upon the provisions of the act of March 3, 1883, considered with reference to duties on the deposits and capital stock of national banking associations, seem to me to be equally applicable to the same provisions when considered with reference to duties on the capital and deposits of other banks and bankers. There is no ground for assuming that Congress intended to discriminate between the two descriptions of banks as regards the scope and effect of the repeal. Viewed as above, it operates to relieve not only national banking associations, but other banks and bankers from the duties mentioned, excepting such as were 'due and payable' at the date of the repealing act.

"I may observe here that section 13, Revised Statutes, has not been overlooked by me. The provisions of that section (which with respect to the act of March 3, 1883, seem to be superseded by those of section 13 of that act) include 'any penalty, forfeiture, or liability incurred' under the statute repealed. But on the third of March, 1883, banks, bankers, and national banking associations were not liable for the duties in question, and would not be liable therefor until the end of the then current half year. Hence, as to such duties, there were at that time no 'liabilities incurred,' nothing for the said provision to save from the operation of the repeal in the act of 1883, even if they are applicable to that act (*R. R. Co. vs. United States*, 101 U. S., pp. 549, 550).

"I am accordingly of the opinion that duties are not assessable and collectible on the deposits and capital stock of national banking associations for the period between the date of the act of March 3, 1883, and January 1, 1883, nor on the deposits and capital of other banks and bankers for the period between the date of the same act and December 1, 1882."

Redemption of Unused Check Stamps.—In view of the repeal on and after July 1, 1883, of all taxes payable by check and proprietary stamps, the Commissioner of Internal Revenue has issued a circular containing regulations for the redemption of unused stamps, under the provisions of section 3,426 of the Revised Statutes, as amended March 1, 1879. The circular quotes the section named, and also part of section 17 of the Act of March 1, 1879, which provides "that claims for allowance on account of stamps * * * may be allowed, if presented within three years after the purchase of said stamps from the Government, or a Government agent." * * * Following are the regulations:

1. Check or proprietary stamps presented for redemption should be addressed to "The Commissioner of Internal Revenue, Washington, D. C.;" and must be forwarded at the risk and expense of the consignor.
2. The stamps should be accompanied by a claim, on Form 81, copies of which form will be furnished upon application to this office.
3. Claims may be sworn to or affidavits made before any internal revenue officer authorized to administer oaths, without fee. Any other person administering an oath or affirmation must show, by seal or certificate from the proper authority, that he is qualified to do so. An officer in signing a jurat should give the title of his office.

4. Check and general proprietary stamps will be redeemed at their face value, less 5 per centum; private-die proprietary stamps at their face value, less 5 or 10 per centum, according to the rate of commission allowed on their purchase. Stamps may be exchanged for other check or proprietary stamps of equal value until July 1, 1883.

5. In cases where stamped checks or drafts are presented which have been filled up and signed, satisfactory evidence must be furnished that they have never been issued or used in any manner whatsoever. If they have been passed to the payee, or indorsed, the stamps have no redeemable value.

6. In cases where claims for redemption of *imprinted* stamps are allowed prior to July 1, 1883, the blanks upon which the stamps are printed will, in accordance with a long-established rule of this office, be destroyed. In the case of such claims allowed on or after July 1, 1883, the blanks will be destroyed, unless the claimant shall specially request their return. Upon receipt of such a request, the word "Redeemed" will be impressed on the check or draft in letters 3-16 of an inch in size, and the blanks, with the stamps so cancelled, will be returned to the claimant by registered mail, free of expense, unless he shall otherwise direct, in which latter case they will be returned at his expense. In cases of rejected claims, stamps are always returned to claimants.

7. In cases where an allowance is asked for stamps destroyed, the facts in the case should be submitted to this office, and special instructions as to the evidence required will be given.

8. Stamps will only be redeemed when presented by a *bona fide* owner, or a duly authorized agent or representative of such owner. When a claim is made by a person acting as agent, executor, receiver, or in any other representative capacity, the authority of the representative to so act must be shown.

9. In view of the limitation imposed by statute upon the presentation of claims for redemption of stamps, it will be necessary to submit evidence with each claim as to the date on which the stamps for which redemption is asked were purchased from the Commissioner of Internal Revenue, or a "stamp agent." Stamps imprinted on checks are not sold by stamp agents, and it is often impracticable to ascertain when they were purchased from the Commissioner. In such cases, evidence may be furnished as to the date on which the stamps were imprinted on the blanks. Information as to the date of imprinting can usually be obtained from the stationer who printed the checks. Full instructions concerning the form of affidavit required are printed on Form 81.

10. Claims will be acted on, as nearly as possible, in the order of their receipt, and in all cases as soon after their receipt as the condition of the public business will permit.

The New Bank Superintendent of New York.—On May 3 Mr. Willis S. Paine entered upon his duties as Superintendent of the Banking Department of New York State. He was recommended to the Governor by such banking men of New York as Messrs. John A. Stewart, John T. Agnew, Augustus Schell, Orlando B. Potter, E. Kellogg Wright, Waldo Hutchins, Charles D. Bailey, Andrew Varick Stout, John Quincy Adams, William Dowd, and Edward King.

Still better than even these references is Mr. Paine's own record as receiver of the Bond Street Savings Bank, which stands out in bright contrast to the several receiverships of W. J. Best, and the obnoxious mass of humbuggery and deceit which grew out of the Lamb-Best regime while H. L. Lamb was

Acting Superintendent of the banking department. It will be remembered that Mr. Paine was placed in charge of the Bond Street Bank while Mr. De-Witt C. Ellis was at the head of the bank department, only a short time before the Best-Lamb combination came before the public. Mr. Paine was an efficient member of the Committee which revised the banking laws of New York State last year.

The "Christian at Work" gives the following in regard to his career:— "The Governor has made an admirable appointment of Bank Superintendent in the place of Hon. A. B. Hepburn. The office is a very responsible one, requiring peculiar aptitude and inflexible integrity. Governor Cleveland, last week, selected Mr. Willis S. Paine, of this city, for the position, and the appointment has been received with almost universal approval. Mr. Paine is the receiver of the Bond Street Savings Bank, which failed in the fall of 1876. And he has so admirably managed the affairs of the institution that the depositors have already got eighty per cent. of their investment, and are likely to get ten per cent. more. He is an energetic young lawyer, who was born in Rochester, of which city his father was at one time mayor. He was fitted for college in that city, but was obliged to leave Williams in the second year on account of ill health. He afterward studied law in the office of the late Sanford E. Church, chief judge of the Court of Appeals. He early made his mark in the profession, and was appointed to investigate trust companies, a difficult work, which he performed so creditably that Governor Cornell selected him, with Hon. William Dowd, to revise the banking laws of the State. And the work was done in the most satisfactory manner, at half the expense expected, and the Legislature gave the commission a unanimous vote of thanks for their work. Mr. Paine will carry into his difficult and responsible duties the best wishes of a host of friends, among whom are many of our best citizens."

Savings Bank Investments.—The Page Bill.—A bill was introduced by Mr. Page and passed at the recent session of the New York Legislature, which was intended to extend the list of securities in which the officers of savings banks are allowed to invest the funds. The provisions for this purpose were contained in the following two paragraphs which were to be added to section 260 of the act of July 1, 1882:

7. In bonds of any corporation or individual, secured by first mortgage upon property in this State, worth at least double the amount of all the bonds secured by the same mortgage, to be certified to by a like committee as provided above in subdivision fifth and by the Superintendent of the Banking Department; provided such savings bank so investing in or loaning upon such bonds shall have or acquire the right itself to foreclose and sell or to direct the trustees named in such mortgage to foreclose and sell the property upon the default of payment of interest or principal. Where any such bonds run to bearer, it shall be lawful for the corporation or individual issuing the same to register, in the name of any savings bank, the bonds held by it; and on its disposing of such bonds again to make them bearer bonds, both by proper indorsements thereon.

8. In other good securities (excepting bills of exchange, promissory notes, deposits of personal property and stocks, to which by law the personal liability of stockholders attaches) which may be approved by the Superintendent of the Banking Department, the Governor, Comptroller and State Treasurer, or a majority of them.

The bill was vetoed by Governor Cleveland on May 19.

The veto was applauded almost unanimously by the newspapers, as well as savings bank officers, who had very generally opposed the bill. At the hearing granted by the Governor on May 16 the bill was strongly advocated by

Mr. Elliott F. Shepard, and was opposed by Mr. Henry L. Hoguet, of the Emigrant Industrial Savings Bank, and J. Harsen Rhoades, of the Greenwich Savings Bank, and D. M. Turnure, of the Seaman's Savings Bank, of New York; A. C. Miller, of the Utica Savings Bank, and Ex-Senator D. P. Wood, of Syracuse. Bank Superintendent Willis S. Paine presented statements showing that of 115 savings banks in operation in the State, replies as to their opinion of the bill had been received from all but 22. Of these 86 were against the bill and seven in favor.

The opposition was generally based on the grounds mentioned in the Governor's memorandum accompanying the veto, from which we quote:—"It must be conceded, I think, that no absolute certainty attends the judgment of men in relation to the matter of good securities. The State officers mentioned in the bill should not be burdened or intrusted with this important duty. I see no provision in the bill by which any security can be withdrawn from the list if once approved by these officers, even though it may become unsafe or worthless as an investment. Considerations have been urgently urged upon me touching the ability of savings banks to pay a fair interest to depositors with the present limitations upon the character of their investments. But I am firmly of the opinion that these institutions are, as their name implies, a place of deposit for the savings of those among the poor and laboring people who see the necessity of putting aside a part of their earnings for future need, or as the beginning of an accumulation. Such depositors are not, and should not be, investors seeking as a paramount purpose an income by way of interest on their deposits. When they come to that, there are other instrumentalities which should be employed.

"Absolute safety of the principal deposited is what the patrons of savings banks should seek, and any Governmental control over these institutions should first of all be directed to that end. I am not satisfied that this is done when State officials already charged with onerous duties are called to decide upon the value of proposed securities, and when the safety of deposits is left to their determination and the care of Directors and Trustees often tempted to speculative ventures beyond their power to resist. A due regard to the protection of a class of citizens which should especially deserve the care of the State requires, I believe, that the institutions having their savings in charge should be limited in the use of such deposits to investments prescribed by the law, and which, as nearly as possible, insure absolute exemption from loss. I am unwilling to assent to the increased risk which I am convinced lurks in the provisions of the proposed bill."

The Election at the New York Stock Exchange, which occurred on May 14, was much more sharply contested than usual. Mr. A. S. Hatch, of Fisk & Hatch, was chosen President, having received 621 out of 846 votes. Following is a list of the officers elected:—*President*, A. S. Hatch; *Chairman*, James Mitchell; *Vice-Chairman*, Alexander Henriques; *Treasurer*, D. C. Hays; *Secretary*, George W. Ely; *Trustee of the Gratuity Fund*, S. J. Harriott; *Members of the Governing Committee*, (to serve four years) F. N. Lawrence, C. J. Osborn, E. A. Drake, Henry Graves, Laurens Joseph, F. L. Eames, W. B. Lawrence, H. S. Wilson, W. S. Nichols, C. M. Stead; (to serve two years) D. A. Boody, T. F. Ryan; (to serve one year) David Richmond.

Upon being installed in his office the next day, Mr. Hatch made the following remarks:—"In assuming the office to which you have elected me, I trust that I do so with becoming recognition alike of the honor which it confers and

of the responsibility which it imposes, not unmixed with misgivings as to my ability to meet your expectations. I shall endeavor to the best of my ability, and according to the opportunities that may be offered me, to contribute to the welfare and prosperity of the New York Stock Exchange, to promote harmony and just legislation in its councils with zeal and efficiency in the administration of its affairs, and a dispassionate and impartial but firm and vigorous enforcement of its laws. I shall consider it my duty at all proper times and in all places where opportunity or occasion may arise to lend whatever personal or official influence I may have to uphold its honor, defend its rights, and to maintain its independence. In the pursuit of this I expect your cordial co-operation. I believe I make no mistake in assuming that whatever personal or individual interest may have been aroused by the unaccustomed excitement of a contested election will be buried under the common impulse to work together for the good of the organization, in the maintenance of whose prosperity, influence and good repute we have a common interest."

The Union National Bank, of Chicago, has recently decided to increase the paid-up capital stock from \$500,000 to \$1,000,000. This, with the present surplus fund, will give the bank a total working capital of \$1,750,000, and will tend to strengthen its reputation as one of the largest and securest banks in the West. The new stock was issued at par to the old shareholders, and the recent quotation (200 bid and 220 asked) applies to the new shares.

It is not intended that the working capital shall be limited to the above figure, as it has consistently been the policy of the bank to add a liberal proportion of the profits to the surplus fund. This accounts for its present large amount, being greater than the surplus of any other local Chicago bank. It numbers among its customers many of the old and leading houses in all departments of trade of Chicago, and, besides, it has a large clientage among outside banks, holding relations with many of the best banks in the Western States. It devotes special attention to city collections and other business for out-of-town customers, and has excellent facilities for making collections and transferring funds from one point to another through its numerous correspondents. It also deals in United States and other first-class bonds, and executes orders for the purchase and sale of investment securities. It has, in addition, opened a foreign department, where foreign exchange is bought and sold on all the principal cities of Europe and letters of credit, etc., are furnished. This department has grown to be an important branch of the business within a short time. The directory includes the following well-known names: David Dows, C. R. Cummings, C. B. Farwell, J. H. Dwight, David Kelley, C. A. Munn, W. B. Howard, Nathan Corwith, and W. C. D. Grannis. The officers are: W. C. D. Grannis, President; C. B. Farwell (of John V. Farwell & Co.), Vice-President; John J. P. Odell, Cashier, and W. O. Hipwell, Assistant Cashier.

The Final Dividend of the Freedman's Savings and Trust Company to its creditors has been declared by the Commissioner. It is for 7 per cent. of the claims, making the total realized by depositors and other creditors 62 per cent. The Washington depositors began to be paid on May 16, and others on the 21st, at the Washington office.

Payments will be made, as heretofore, upon presentation or receipt of the pass books or other evidence of the Company's indebtedness, by check on the United States Treasury, and the pass books with dividend checks will be re-

turned to the persons forwarding them as soon as practicable. Depositors residing at a distance should forward their books, &c., by mail or express, or through some responsible bank or banker, accompanied by their return address. The amount required to pay the final dividend, on the basis of the amount called for on the third dividend, is \$182,397 72. The amount paid on the four preceding dividends was \$1,449,264 78, and the balance of the fourth dividend likely to be called for within the two years allowed for its payment is \$13,780 78. The amount of barred claims, the payment of which is authorized by the Act of February 17, 1883, is \$6,931 77, and the special deposits and preferred claims paid amount to \$73,565 03. The total payments made, and estimated to be made, to the creditors of the Company aggregate the sum of \$1,543,549 36.

The Hon. James Gilfillan recently resigned the office of Treasurer of the United States to accept the Presidency of the Mutual Trust Company, of New York, and went there about the middle of April to enter upon the duties of his new position. He has since resigned, and at the same time George S. Boutwell, who had been elected Vice-President, and two directors—Henry Haines, President of the Provident Trust Company, of Philadelphia, and T. M. Perot, of Philadelphia—also resigned their offices. Mr. Gilfillan has since accepted the Presidency of the Henry and Bonnard Bronze Company.

The reason assigned for this action was, that the conduct of the affairs of the company was in the hands of parties (or a party) other than the ostensible officers. Mr. Gilfillan is reported to have said that he accepted the Presidency of the Mutual Trust Company with the belief that he was to be so in fact as well as in name, but when he found that he had neither control nor power to regulate the business he did not care as a business man to hold the office any longer.

Cotton Exchange Trust Company.—The Governor has signed the bill amending the charter of the Cotton Exchange Trust Company.—*Albany, May 16.*

This act amends chapter 333 of the laws of 1874, being the act to incorporate the Cotton Exchange Trust Company. It creates the following, together with other such persons as shall hereafter become stockholders thereof, into a body corporate under the name of "The Commercial Loan and Trust Company," viz.: Frederick Zerega, John L. McCaulay, Paudelli Fachiri, Mayer Lehman, Alexander G. Black, Solomon Ranger, George Blagden, Ambrose Fachiri, Michael B. Fielding, Henry Hentz, Leonidas Calvocaressi, and Israel Ulman. The company is authorized to receive on deposit money, or on storage any property which any party to any contract for the purchase or sale of any merchandise may desire to deposit as a margin on any contract, or in performance thereof to guarantee the performance of such contract, for such compensation as the directors may determine; to make advances in cash or by their time acceptances on all property so deposited with or consigned to them; to advance money or credits upon bills of lading, receipts, or certificates representing merchandise in store or transit; to act as trustee and receive money in trust, etc., as do other trust companies.

International Congress of Savings Institutions.—The second quinquennial session of the *Congres Scientifique Universel des Institutions de Prévoyance* is announced to be held in Paris from the 2d to the 7th of July, 1883. *Le Petit Journal* says that the results of the first session in 1878 have been so considerable, in the amelioration of laws and the organization of societies in the interest of the people that,

in the seventeen countries of Europe and America in which these institutions flourish, the most competent economists and statisticians have been active in preparing new reports and other works, in order to keep each other informed of the progress that has been made in the last few years.

As we understand it, this congress passes no resolutions and takes no votes. It is merely held for the collection of information from all countries in regard to provident institutions such as postal, school, and ordinary savings banks, co-operative societies, life assurance societies, co-operative credit societies, and kindred institutions. Members of the Congress of 1878 will be admitted to the coming one, and others who wish to attend or to send reports should communicate with M. de Malarce, 68 rue de Babylone, Paris, France.

Walter Evans, of Kentucky, who was appointed on May 21 as Commissioner of Internal Revenue to succeed Gen. Green B. Raum, resigned, is a native of Kentucky, about 42 years of age. He was a Union officer during the war, and is a lawyer by profession. He has been a State Senator, and a candidate for Congress, for United States District Attorney, and for United States Marshal. He was a Grant man at Chicago in 1880.

Columbia Bank.—This name has been chosen in place of The Bank of Banks by the shareholders of the new bank which is to be started in June at Fifth Avenue and Forty-second Street, New York. The capital is \$100,000. There has been a change in the Board of Directors, which is now composed as follows: A. B. Hepburn, George H. Potts, F. A. P. Barnard, Loomis L. White, William M. Bliss, R. L. Edwards, James D. Fish, William L. Strong, Nicholas F. Palmer, William B. Dinsmore, Elliott F. Shepard, William H. Guion, John H. Van Antwerp, Leland Stanford.

The Maine Savings Bank, of Portland, gives notice that the field of savings bank investments having been somewhat enlarged and the State tax reduced $\frac{1}{4}$ per cent., it is enabled to earn a small average profit on new business, and will therefore receive deposits on new and old accounts to the amount of \$2,000 each, but not more. It pays 4 per cent. per annum dividends. On March 15 the deposits amounted to \$3,592,794, of which \$1,195,500 was invested in United States bonds. The net profits earned were \$319,613. The surplus on estimated market value of investments was \$597,571.

Bank Clerk's Mutual Benefit Association of Providence, R. I.—The 13th annual meeting was held on April 18, last. There was a net gain of 27 memberships during the past year, the present number of members being 123, and of memberships 138. Of these 33 are advanced members, entitled to \$600 at death, the rest being entitled to \$500. One of the latter class was lost during the year. The assets increased by \$1,536, so that the total cost value is \$15,649, which is \$800 less than the market value. The Rhode Island Hospital Trust Co. has subscribed \$500 to the association payable in five annual instalments. It is very satisfactory to see so laudable an institution in such a satisfactory condition.

The American Savings Bank has been organized in New York by the election of A. B. Hepburn, late Superintendent of the Bank Department, as President; William L. Strong as First Vice-President; Frederick Billings as Second Vice-President; William Irvin as Secretary. The building is at No. 501 Fifth Avenue, corner of Forty-second Street, and business was to begin on May 21. The other trustees are Elliott F. Shepard, A. D. Juilliard, John R. Brady, Walter S. Gurnee, Henry B. Barnes, William H. Fogg, Richard A. McCurdy, Isaac N. Seligman, Jacob Hess, E. D. Morgan, Jr., John D. Crimmins, Robert Lenox Belknap, John Roach, Charles MacRae, Henry E. Russell, James A. Striker, Russell Raymond, David Dows, Jr., Benjamin S. Walcott, Joseph W. Drexel and Loomis L. White.

Adventures of an Unsigned Check.—Several months ago a check for the salary due him was sent from Washington to an officer of the U. S. Geological Survey, who had it cashed by the nearest post trader. The latter made it over to one of his creditors, and it slowly came East, passing through several hands, and in time reaching an Eastern city, where it went through the Clearing-House, and whence it was sent to Messrs. Riggs & Co., of Washington, for collection, being drawn upon the

United States Treasurer. When presented in the cash-room for payment it was discovered that the check was not signed by the disbursing officer who drew it, but of all the persons and banks whose indorsements covered its back not one had noticed the lack of a signature. At last, after all its wanderings, the disbursing officer signed the check and Riggs & Co. received the money.

Transportation of United States Notes.—Treasurer Wyman issued, on May 28, a circular stating that "No appropriation having been made for the transportation of United States notes to the Treasurer of the United States for redemption during the next fiscal year, the express charges on remittances of such notes received by the Treasurer on and after July 1, 1883, will not be paid by the Government. When the charges have been prepaid at private rates, returns will be made, if so requested, by the Treasurer's transfer check on any Assistant Treasurer of the United States, drawn to the order of the sender or of his correspondent. If not prepaid, the express charges upon the notes received and upon the notes returned therefor will be deducted from the proceeds of the remittance at the rates established under the Government contract with the Adams Express Company. This circular does not apply to national bank notes, which will be redeemed and paid for in the same manner as heretofore."

A Bank Suit Decided.—The second trial of the suit brought by the City National Bank, of Dallas, Texas, against the National Park Bank, of New York, was concluded on May 11 in the Supreme Court Circuit, at New York, before Judge Barrett and a jury. The suit was to recover a balance of an account to the credit of the Dallas bank in the National Park Bank. The defence set up was that the money was loaned to the former President of the Dallas bank while he was only nominally President, the bank having previously deprived him of his authority on account of his heavy indebtedness to it; that the money was loaned to him individually on worthless securities, and that the money was applied to his indebtedness to the Dallas bank; and that the loans would not have been made individually if the latter bank had not deceived the defendant by holding out the President as its officer when, in fact, he was not. The jury rendered a verdict for the plaintiff for \$29,331. On the first trial the jury disagreed.

Boston Banks and Gold Certificates.—On May 1 the Clearing-House Association will abandon its practice of issuing certificates for use in settling balances between banks. For some months the practice of storing gold and using exchange certificates has been in successful operation. The same custom has been adopted in New York and Chicago, where the security afforded and the convenience resulting have been greatly appreciated. But it has been decided to use hereafter in Boston the Government gold certificates in ordinary business between banks, and each bank must store its own gold. The certificates now in use are of value only between Boston banks, members of the association, and any loss results in inconvenience only. A gold certificate, such as will be used, is cash in the hands of the holder. But the original necessity, the great loss by friction in gold coin, having been removed by liberal issue of gold certificates, it has not been deemed worth while to perpetuate the custom on account of the security against accidental loss or robbery which it affords.—*Economist*.

The Bank of North America (of Philadelphia), which celebrated the centennial anniversary of its existence last year by the issue of an elegant history of its career, recently lost, by resignation, its President, Mr. Thomas Smith, who had held the office since 1830, and he has since died on May 20. He was born in June, 1817, in the old District of Moyamensing; received a good ordinary school education in Philadelphia, and, at the age of fifteen, entered the counting-house of William S. Smith, then near Pine street Wharf. He possessed remarkable physical strength and force of character, and early developed an extraordinary talent for business. In a few years he was given an interest in the firm, of which he subsequently became the head. Long before the war he took an active interest in politics, and had, at times, to defend himself and his friends from rough and fraudulent opponents at the ballot boxes. He was first elected a director of the Bank of North America in January, 1854, and was chosen President, August 20, 1860. He held the office longer than any of his six predecessors. He, it was, who carried on the correspondence with Secretary McCulloch, in 1864, which

ended in the privilege which the bank solely enjoys, of retaining its old name, although it is a national bank. This was allowed largely on account of the financial support which the institution lent to the Government at the critical period at the beginning of the war. A notice of his death will be found on another page.

Loans by a National Bank on its Own Stock.—A decision was recently rendered by the United States Supreme Court in the case of the First National Bank of Xenia, Ohio, against D. M. Stewart and others, administrators. In error to the Circuit Court of the United States for the Southern District of Ohio. This was a suit brought by the administrators of Daniel McMillan to recover from the bank the proceeds of thirty shares of the bank's own capital stock deposited by McMillan as collateral security for a loan and sold by the bank to satisfy McMillan's indebtedness to it. The court below charged the jury that if they found from the evidence that the bank stock was delivered by McMillan to the bank as collateral security for a loan of money made by him at the time, his administrators were entitled to recover the amount of the proceeds with interest from the time of sale, for the reason that the bank was prohibited by the Currency act from thus receiving its own stock.

This Court holds that if the prohibition of the law can be urged against the validity of the transaction by any one except the Government, it can only be done before the contract is executed and while the security is still subsisting in the hands of the bank. It can then, if at all, be invoked to restrain or defeat the enforcement of the security. When the contract has been executed and the security sold and the proceeds applied to the payment of the debt, the courts will not interfere with the matter. Both bank and borrower are in such case equally the subjects of legal censure, and will be left by the courts where they have placed themselves. It follows that the administrators in this case cannot recover. Judgment reversed with costs and cause remanded with directions to award a new trial. Opinion by Justice Field.

Formation of Trust Companies.—A law has been passed in New York State, and signed on April 20, 1883, to amend the law regarding the formation of safe deposit and guarantee companies. The following is a copy of an official copy supplied by Bank Superintendent Paine:

CHAP. 273.

AN ACT to amend chapter six hundred and thirteen of the laws of eighteen hundred and seventy-five, entitled "An act to authorize the formation of corporations for the safe-keeping and guaranteeing of personal property."

PASSED April 20, 1883.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section one of chapter six hundred and thirteen of the laws of eighteen hundred and seventy-five, entitled "An act to authorize the formation of corporations for the safe-keeping and guaranteeing of personal property," is hereby amended so as to read as follows:

§ 1. At any time hereafter, any five or more persons who may desire to form a company for the purpose of taking and receiving upon deposit, as bailee, for safe-keeping and storage, jewelry, plate, money, specie, bullion, stocks, bonds, securities and valuable papers of any kind and other valuable personal property, and guaranteeing their safety, upon such terms and for such compensation as may be agreed on by such company and the respective bailors thereof, and to let out vaults and safes and other receptacles for the uses and purposes of such corporation, may make, sign, and acknowledge, before some officer competent to take the acknowledgment of deeds, and file in the office of the clerk of the county in which the business of the corporation is to be carried on, and duplicates thereof in the office of the Secretary of State, and in the banking department of the State, a certificate in writing, in which shall be stated the corporate name of the said corporation, which shall be in no material respect similar to the name of any other corporation organized and engaged in the business of receiving valuables on deposit for safe-keeping, for hire or of letting out safes, and doing business in the same or an adjoining county; the objects for which the corporation shall be formed, the amount of the capital stock of the said corporation (which shall not exceed one million dollars, nor be less than one hundred thousand dollars, except in cities or villages of less than one hundred thousand in-

habitants, in which the capital stock may be not less than ten thousand dollars), the term of existence of said corporation not to exceed fifty years; the number of shares of which the said stock shall consist; the number of trustees and their names, residences, occupations and post-office addresses, who shall manage the concerns of said corporation for the first year, and the name of the place in which the operations of the said corporation are to be carried on. No company organized under this act shall be authorized to commence or transact business until the whole amount of the capital stock shall have been paid in. But the capital stock of any corporation organized under this act may be increased to an amount not to exceed one million dollars by the board of trustees on application in writing, signed by the stockholders representing a majority of the stock. A statement of such increase shall be filed in the offices aforesaid.

§ 2. This act shall take effect immediately.

MISCELLANEOUS BANK ITEMS.

- The suspension is announced of John Harris & Co., bankers, of Olathe, Kan.
- The private bank of Eugene Angell, at Lansing, Mich., closed its doors on May 19, owing to a run upon it.
- Suit has been brought by the creditors of the defunct First National Bank of Buffalo against the directors.
- The property of C. C. Howell, President of the City Bank of Leadville, Col., was recently attached by the bank for a debt of \$64,900.
- It is reported that the banks under the control of Eugene E. Luce, at Perham and Breckenridge, Minn., have become financially embarrassed.
- Payment has been stopped on eleven Bank of England notes for £1,000 each, numbered 75,180 to 75,190, and bankers and others are warned against negotiating them.
- The Comptroller of the Currency has declared a dividend of 5 per cent. in favor of the creditors of the Mechanics' National Bank of Newark, N. J., making in all 60 per cent.
- The aggregate liabilities and assets of the failed firm of Hatch and Peters, of New York, and of the individual members are: Liabilities, \$299,295; nominal assets, \$276,173; actual assets, \$16,552.
- The Comptroller of the Currency has declared a dividend of 10 per cent. in favor of the creditors of the First National Bank of Butler, Penn., making in all 70 per cent., amounting to \$68,331 paid to the creditors.
- The American Mining Stock Exchange, of New York, has closed after an existence of nearly three years. Some of the members have a suit pending against the Mutual Trust Company on an alleged guarantee given by it.
- Edward Mertens, a Wall Street broker, formerly partner in the firm of Pondir & Co., disappeared recently, leaving debts unsettled of about \$80,000. Creditors in the Stock Exchange will receive about one-half of their claims from the sale of his seat.
- A temporary injunction was obtained on May 18 by William J. Hutchinson, the expelled member of the New York Stock Exchange, to prevent the Exchange from excluding him from it. It was made returnable on May 25, but hearing on the motion for a permanent injunction was then adjourned until June 11.
- The Bank of Townsend North & Co., at Vassar, Mich., was entered by burglars on the night of May 9. The safe was blown open and \$4,000 in specie taken. The thieves were frightened away before they could open another drawer containing \$6,000 in currency. Frank L. Fales, who lives over the bank, was held under revolvers while the robbery was perpetrated.
- The New York Produce Exchange Safe Deposit and Storage Company has been incorporated, with a capital stock of \$150,000. The trustees for the first year are James McGee, Alfred M. Hoyt, Franklin Edson, Samuel Jacoby, Alexander E. Orr, Edwin B. Livermore, Lyman T. Holman, Edmund S. Whitman, Frederick Meissner, Paul Babcock, Jr., Daniel A. Lindley, Herman O. Armour, and Emory M. Van Tassel.

FOREIGN BANKING AFFAIRS.

I. CANADA BANKS AND BANKERS.

[A digest of Banking and Financial News of the British Provinces. By the JOURNAL's Correspondent at Montreal.]

THE DOMINION BANK, after carrying an additional \$355,000 to rest account, has again declared a dividend of 5 per cent.

STANDARD BANK OF CANADA.—Mr. W. F. Cowan, of Oshawa, has been appointed President, and Mr. John Burns, Vice-President.

BANK OF MONTREAL.—The Hon. John Hamilton has been appointed to the vacancy in the Directorate caused by the death of Mr. Edward Mackay.

A LOAN of £500,000 has been successfully negotiated in London by the Bank of Montreal for the Province of Quebec, on, it is said, favorable terms.

CONSOLIDATED BANK OF CANADA.—The Manager has given notice that the liquidators have made a third call upon the unfortunate shareholders for ten per cent. on the amount of the subscribed capital, payable May 21.

MERCHANTS' BANK.—Mr. Andrew Allen has been chosen President. He is not only a popular man, but is reputed a sound and experienced man of business. Mr. John Duncan was elected to fill the place in the Directorate, vacated by the death of Sir Hugh Allen.

MR. LOFTUS CUDDY will hereafter carry on the banking concern at Amherstburg, Ont., which has heretofore been managed as a branch of the Johnston Banking Co., of Strathroy, in his own name, the term of his partnership with Mr. Alexander Johnston having expired.

THE MONTREAL "SHAREHOLDER," on May 4, entered upon its fifth volume. Its managers deserve to be congratulated upon the success they have attained in building up a paper which is solid without being heavy, and which apparently possesses the confidence of the business public which it addresses.

THE AMERICAN, BRITISH AND CONTINENTAL CABLE COMPANY is the new title which has been substituted for European, American, Canadian and Asiatic Cable Company. The prospects of the concern are said to be good; \$1,500,000 has been subscribed, and contracts have been made for laying 6,120 miles of cable.

THE BANK STATEMENT of May 1 shows little change from that of April 1. The public deposits payable on demand were \$45,130,180; payable after notice, \$52,336,806; specie, \$6,008,323, against \$6,487,026 on April 1; Dominion notes, \$10,133,746; assets immediately available, \$38,547,484, against \$38,256,299 on April 1; discounts current, \$146,613,143, against \$147,330,239 on April 1.

INTERNATIONAL MONEY ORDERS.—The Dominion Government has concluded and signed conventions with the Postal Administrations of Germany and Switzerland for an exchange of money orders with Canada, to begin July 1. Negotiations to the same end with France and Italy are so forward as to make it almost certain that money orders may be sent to those countries on the same date, and to Belgium a month later.

THE BANK TAX.—The act passed in the Province of Quebec to tax the banks, which was opposed by the banks on the ground that it was unconstitutional, has been

declared invalid by Mr. Justice Rainville, of the Superior Court. The judgment was rendered in the case against the Ontario Bank, and applies equally to the other banks assessed. An appeal was taken by the Government to a higher court.

MONTREAL STOCK EXCHANGE.—At the annual meeting, on May 2, Mr. D. Lorn Macdougall was re-elected President; Mr. J. Burnett, Vice-President; Mr. H. S. Macdougall, Secretary and Treasurer. The governing board is also the same. The Exchange is to remove to improved quarters in the old reading room of the Merchants' Exchange, which is being refitted for the purpose. The public will be admitted by ticket, a railed space being reserved for spectators.

A COMPARISON of the condition of the Canadian banks with their condition a year ago certainly warrants in some degree, the warnings of the more conservative of the newspapers. The deposits increased from 106¼ million dollars to 108 millions, and the loans and discounts from 171 to 181 millions, while the cash and net foreign balances decreased from 31 millions to 26¼ millions. The principal increase in loans occurred in Ontario, but the decrease in reserve was most marked in the Province of Quebec.

A MINING STOCK EXCHANGE is proposed by members of the Toronto Stock Exchange. This is said to be a result of the recent discoveries of valuable mineral deposits in the Northwest, and the desire of capitalists to arrange for the receipt of reliable information and the transfer of mining stocks. The idea does not commend itself to the judgment of those who have had experience in mining shares. If the stocks are not good enough to be dealt in at the Stock Exchange, then they are not fit objects for speculation.

GENERAL TRADE.—*Apropos* of the approaching close of the financial year for most of the banks, the Toronto "Monetary Times" gives bank officers some sound advice, warning them against presenting too rosy a picture of matters in their statements to shareholders. It says:—"Nothing can be a greater shock than a rude awakening to the realities of the position, after listening to the sanguine estimates of a confiding manager for years. The stockholders of some of our banks have had such shocks, and a very unpleasant experience it is. There is no excuse for further repetitions."

Regarding the outlook, it says:—"Money continues anything but easy. We doubt whether it is likely to be better. Stocks of goods are heavy. A backward season makes sales slow. Manufacturers are overstocked. Mercantile demand for money therefore continues heavy. Crop prospects cannot be called good. Fall wheat is extensively damaged. Altogether it is a time for caution for all parties in business, and for their bankers too."

RAILWAYS.—The "blue book," recently issued, shows that at the close of the last fiscal year, June 30, 1882, there were 8,069 miles of completed railway in Canada, and 3,189 under construction, of which 2,184 were on the line of the Canadian Pacific. There was an increase of 269 miles of railway in operation during the year 1881-82. The increase in traffic over the previous year was greater than in earnings. There were 34 per cent. more passengers carried, but the earnings were only 22 per cent. more. The freight traffic increased 12 per cent., while the receipts actually decreased 5 per cent. The total earnings were \$20,027,789, against \$27,987,509 in 1880-81. The aggregate operating expenses were in 1882 \$22,390,708, against \$20,121,418 in 1881; the net earnings were \$6,637,081 in 1882, against \$7,866,091 in 1881.

DOMINION REVENUE, IMMIGRATION, TAXATION.—In his speech at the prorogation of Parliament on May 25, the Governor-General congratulated the members upon the buoyant state of the revenue, which enabled them to grant aid to railways and for the construction of works of internal improvement. He believed that the Dominion Lands bill would greatly assist and encourage the settlers flowing into Manitoba and the Northwest Territories. He thought that the amendments to the laws respecting the militia would tend to improve the discipline, training, and military education of that force, and that the readjustment of the tariff and the reduction of duties on raw materials, together with the bounty granted on the production of pig iron, must aid in developing Canadian industries. He said he was pleased to know that the financial position of the Treasury allowed of the lowering of taxation by more than \$1,000,000. The new license was referred to and indorsed.

II. NOTES FROM FOREIGN BANKING CENTRES.

[Compiled from Correspondence and other sources for the JOURNAL OF BANKING.]

THE DEATH was announced, on May 25, of Philippe Francois Xavier Théodore Heuschling, a well-known writer on Belzic and German statistics.

TWO DIRECTORS who were charged with fraud in connection with the failure of a Russian savings bank were sentenced to transportation, on May 23.

THE BANK OF ECUADOR, at Guayaquil, was, on May 8, entered by representatives of the Ecuadorian Government, or the Dictator Veintimilla, and robbed of \$320,000.

THE COLONY OF QUEENSLAND is again borrowing, the amount required being £3,733,000, of which £2,500,000 of four per cents are to be offered now and the remainder next year.

CROP PROSPECTS.—On May 21 the Mark Lane (London) "Express" says: "It is now certain that the wheat crop will not amount to an average yield." A later report from Paris says the harvest prospects in France are favorable.

TWO FAILURES.—Lewin Mozley, a money broker of Lombard Street, London, failed about May 9 for £532,000. Turtens & Hadow, London speculators in American and Mexican stocks, failed on May 16, with liabilities of £220,000.

M. PHILIPPART has come into prominence again, having recently been extradited from France to Belgium on a charge of forgery. He declared that if he were kept in prison all the companies under his control would collapse. A delightful state of affairs!

THE CONVERSION of the French 5 per cent. into $4\frac{1}{2}$ per cent. rentes seems to be an idea borrowed from some of our recent Secretaries of the Treasury, as the holders were given the option of accepting the new rente or receiving payment at par. The move was designed to meet a deficiency in the revenue caused by the prosecution of great public works.

ARGENTINE REPUBLIC.—There was a deficit in the Government revenue in 1881 of £1,407,000, but it was estimated that in 1882 the revenue would amount to £5,136,000, and the expenditures to £5,631,000, so that the deficit would be reduced to about £500,000. The public debt at the close of 1881 was £15,879,000, and, at the end of 1882, about £7,000,000 more had been authorized.

MEXICO'S DEBT.—The negotiations for the settlement have proceeded so far that at a meeting of the bondholders in London they unanimously accepted the terms that had been offered. It is reported that these provide for the issue of new 6 per cent. bonds to the amount of one-half the old 3 per cent. bonds, and that the creditors agree to lend \$20,000,000 more at 9 per cent interest, guaranteed by a percentage of the customs receipts. Fuller particulars are necessary in order that the matter may be understood.

A NEW SUEZ CANAL.—The Suez Canal has been for some time unable to accommodate the traffic that sought it. A meeting of leading English shipowners was held in London on May 10, in favor of constructing another canal across the isthmus, and at a second meeting on May 24, £20,000 was subscribed for preliminary expenses. M. de Lesseps immediately took steps to forestall the project, and on the 23d the Suez Canal Company announced that they proposed to commence the cutting of a parallel canal across the isthmus forthwith, and had applied to the English Government for their support in obtaining the necessary concession of land from the Khedive.

FRENCH SAVINGS BANKS.—It would appear that some difficulty had arisen in these institutions, for on May 17, in the Chamber of Deputies, M. Waldeck-Rousseau, Minister of the Interior, replying to a question in regard to a circular which had been sent to the various Prefects relative to a panic which prevailed among depositors in savings banks, said the circular was simply intended to reassure persons interested in savings banks. M. Tirard, Minister of Finance, explained that the State would actually profit by a diminution of depositors in the banks, for it could obtain money at 2 per cent. interest, while it paid depositors in the banks 4 per cent. Those who desired to withdraw their money could obtain it without difficulty.

NEW BANKS, CHANGES, FAILURES, ETC.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National Banks organized since our last report:

BOWMANVILLE.—Burk & Jones; Edmund G. Burk retires; Thomas W. Dobbie admitted. Style, Jones & Dobbie.

MANITOBA.

MINNEDOSA.—Wallis, Ramsay & Co.; dissolved, A. M. Ramsay retiring.

AFTER BANK HOURS.

— "Do you think I could get a pension?" asked an enterprising Philadelphian of a pension lawyer. "I guess so, if you were in the Army," was the reply. "Well, to tell the truth I never was," said the enterprising man, "but I celebrated a big victory by getting drunk, slept all night in the gutter, caught the rheumatism and have had it ever since." The agent says his case is good for \$24 a month, and that he will get it in a few weeks.—*Lowell Citizen*.

— Alexander H. Mitchell, of Milwaukee, is said to be worth \$15,000,000, and he has in Scotland, whence he came, a schoolmate who is said to be worth \$40,000,000. It is related that the two met in France a few years ago, and spent the day together. The Glasgow man paid all the bills. At the close of the day, when the two sat down to dinner, the Glasgow banker pulled out a card, and turning to Mitchell he said: "Sandy, you owe me \$1 65." This was Sandy's share of the expense of the day.

— In a life so long and of such varied experience as Peter Cooper's, there were many incidents of both the humorous and the pathetic type. His charitable works were almost numberless, and though sometimes imposed upon by unworthy persons, Mr. Cooper never allowed his anger against the impostors to prevent him from giving a patient and sympathizing hearing to the next comer. Once he learned that two young men had deliberately gone to work to get money from him, not because they needed it, but simply to show that they could successfully play on his sympathies. They were well-to-do bank clerks, and having obtained the money as a proof of their abilities as actors, they were debating whether to send it back to him or to give it to a charitable institution. In some way Mr. Cooper learned of the trick that had been played on him, and the way in which he took his revenge was a durable lesson. He allowed a report to reach the ears of the young men that, having discovered the cheat, but not having learned the names of the guilty persons, he had taken out a warrant against "parties unknown" for obtaining money under false pretences, and had placed it in the hands of detectives. Mr. Cooper's angry and vindictive state of mind was represented to the young fellows in such an alarming light that they both hurriedly took a vacation, left the city, and wrote letters of humble apology and regret to Mr. Cooper, asking him to overlook their foolish conduct and allow them to return home. After leaving them in suspense a few days, Mr. Cooper sent for them, gave them a fatherly lecture, and let them go. In later life these two young men were said to have been among the most charitable of the wealthy citizens of New York, and they both attributed it to the knowledge they had gained of Mr. Cooper's private, unobtrusive charity.

NEW YORK CITY NATIONAL BANKS.—The following is an abstract of the reports made to the Comptroller of the Currency, showing the condition of the national banks in the City of New York at the close of business on May 1, 1883, the number of banks being 48. The figures for March 13, 1883, are also given for comparison:

BANKERS' OBITUARY RECORD.

Concklin.—Walter W. Concklin, Treasurer of the Irving Savings Institution, New York, died May 8, 1883. He was born in New York on March 2, 1798; succeeded in 1820 to the salt business established by his father before the revolution, to which he added wholesale groceries and provisions; and retired in 1855. He was then elected President of the Irving Savings Institution, which office he held, with the exception of one year, up to 1879, when he was made Treasurer, Mr. Castree becoming President.

Culbertson.—Edmund Culbertson, President of the National Bank of Chambersburg, Pa., died March 3, 1883, aged seventy-one years.

Davis.—Francis F. Davis, Cashier of the National Bank of Chester Valley, at Coatesville, Pa., died March 27, 1883, aged sixty-three years.

Foster.—Charles W. Foster, of Foster & Co., Fostoria, Ohio, father of Governor Foster, died April 23, last, aged 82 years. He was born at Brookfield, Mass., in 1800; in 1818 removed to Genesee county, N. Y., and in 1827 to Ohio, where in time he settled at Fostoria, which was named after him. He was successful in business, and in 1834 he began the banking business in connection with his son, which still exists.

Hall.—Charles B. Hall, President of the Boston National Bank, of Boston, Mass., died May 8, 1883. The deceased was born at Oxford, N. H., on June 23, 1815. He began business at Haverhill, Mass., when young; was postmaster for eight years, and represented the town in the Legislature in 1850. He was Treasurer of the State in 1851 and 1852, and a member of the Constitutional Convention of 1853. In this year the National Bank, (afterward the Boston National) was organized and he became its Cashier, being elected President in 1878. This position he held until his death, serving, so long as health remained, with great credit to himself and advantage to the stockholders. He was a man of public spirit, and enjoyed the confidence of his fellow men.

Hart.—Hon. Roswell Hart, Secretary and Treasurer of the Rochester (N. Y.) Savings Bank, died in that city on April 20 last. He had charge of the railway mail service in New York and Pennsylvania when the service was first organized, and was a Representative in Congress in 1864. He was a Trustee of the savings bank for twenty-one years, and its Secretary since 1876. His death, which is lamented in a highly laudatory set of resolutions by the Trustees, occurred after an illness of only about 36 hours.

Richards.—Selden S. Richards, a well-known member of the New York Stock Exchange, died May 6, 1883. He was born in New York in 1836, his father being T. P. Richards, a Wall Street broker. He was graduated from the scientific department of Yale College, and began professional life in Brooklyn as an engineer. His natural disposition, however, led him into Wall street, and in 1864 he was elected a member of the Exchange; of late years he dealt exclusively in bonds.

Rindge.—Samuel B. Rindge, President of the Charles River National Bank, of Cambridge, Mass., died May 8, 1883. He was born in that town in 1819, received his education at the district school, and at an early age entered the employment of Parker, Wilder & Co., of Boston. By industry and faithful care of the interests of the firm he rose to be a partner. His business qualifications caused him to be chosen to many positions of trust. Beside his office of President of the above bank, he was a Director of the Lechmere National Bank, a Trustee of the Cambridge Savings Bank, and was interested in many other corporations. He was a generous giver to deserving objects.

Smith.—Thomas Smith, who very recently resigned the office of President of the Bank of North America, died May 20, 1883, in his sixty-sixth year. He had held the position since 1860, and rendered valuable assistance to the Government during the civil war. A friend, "M. D.," says:—"For over twenty-three years he was a leading power with the moneyed institutions of our city, and, though much crippled by disease, showed an energy and indomitable will that overcame all obstacles to the prosecution of his plans. * * * Throughout his long career Mr. Smith was always noted for a love of truth, sterling integrity, and an unswerving adherence to every principle of honor, socially or commercially." A further notice will be found in the news department.

Stone.—Amasa Stone, the Ohio millionaire, whose melancholy death by suicide on May 11 has been so widely noticed, was a Director of the Merchants' Bank of Cleveland, the Bank of Commerce, the Second National Bank, and the Cleveland Banking Company. He was for several years President of the Toledo branch of the old State Bank of Ohio.

Wadsworth.—Hiram Wadsworth, President of the First National Bank of Barre Mass., died April 21, 1883, aged seventy-five years. His early life was passed at Barre Plains, and there he began and continued business for a number of years. He then spent eight years of business life in Boston, and subsequently returned to Barre. He was a Director of the above bank from its organization, and held the office of President for the last seven years. His business experience and tact eminently fitted him for the position.

NOTICES OF NEW BOOKS.

Labor and Capital; A New Monetary System: the only Means of Securing the Respective Rights of Labor and Property, and of Protecting the Public from Financial Revulsions. By EDWARD KELLOGG. Edited by his daughter, Mary Kellogg Putnam. New York: John W. Lovell Company. 1883.

The author of this work (which forms a number of "Lovell's Library,") who died some years ago, was a merchant of New York city. Urged apparently by an ardent and generous nature to right the evils arising from the unequal division of wealth, he studied the matter intently for years and gave the result to the world first about the year 1843, and at intervals subsequently. His opinion was that the difficulty arose from high rates of interest: that he who could loan money even at two per cent. steadily, had the advantage of the majority of the community. His proposed cure was that the Government issue paper currency convertible at pleasure into Treasury notes bearing 2 per cent. interest, this currency to be loaned to anyone on good security at a low rate of interest.

The Battle of Coney Island; or, Free Trade Overthrown. A scrap of History written in 1900. By an Eye Witness. Philadelphia: J. A. Wagnerseller, Publisher. 1883.

This brochure (perhaps imitated from the *Battle of Dorking*) hardly fulfils the promise of its title, as the tariff question is only an incident, and not by any means a necessary one, in the progress of the story. To be sure free trade is dragged in by the hair of its head to be spanked (as it were) in every few pages. If the author had confined himself to illustrating the danger we are in from insufficient means of national defence, and had done this well, his book might have made a "hit." As it is there has been hardly any attempt to keep up the illusion, and no intelligent reader will be convinced by the reasoning. It may be mentioned, by the way, that "Minnie"

rifles should only be used in connection with Sally ports. Cavalry horses are not usually called teams, much less "teams."

Wealth-Creation. By AUGUSTUS MONGREDIEN, Author of "Free Trade and English Commerce," etc. With introduction by SIMON STERNE, Author of "Constitutional History and Political Development of the United States." Cassell, Petter, Galpin & Co., New York, London and Paris.

The author of this work is a practical man of business, but he is one of the few who have been able to take a broad view of economical problems, and has therefore produced something of great and permanent value. The object of the book is, first, to show that obstacles to the creation of wealth should be removed in the interest of rich and poor; second to point out and discuss the aids to wealth-creation; third, in like manner to show the obstacles to wealth-creation. The simplicity of form which the book takes from its theme is not the least of its attractive features, but notwithstanding this, and the clearness of the style, it will require study, as it treats incidentally most of the difficult economical questions that are now in dispute. Among the aids to wealth-creation are set down, division of labor, free commercial intercourse, intelligent employment of capital, machinery and labor-saving processes, facilities of intercommunication, scientific discoveries, education and morality. Among the impediments are, insecurity of person and property, superfluity of unproductive consumers, wars and international rivalries, national debts incurred for war purposes, commercial isolation, and so-called protection. The writer takes the ground that, were the obstacles removed, the poor might be raised to comparative ease and comfort. In the introduction by Mr. Sterne the particular obstacles to progress in this country are discussed.

Twenty-fifth Annual Report of the Corporation of the Chamber of Commerce, of the State of New York, for the year 1882-'83. In two parts. Compiled by GEORGE WILSON, Secretary. New York: Press of the Chamber of Commerce. 1883.

The first part of this report contains the proceeding of the oldest and most influential commercial organization in the country. Part second, (which is very ably compiled and edited) contains in addition to reports for the year 1882 on each of the principal trades of New York, an immense mass of commercial and financial statistics of the port of New York, the City and State of New York, and of the United States.

Futures. By JULIUS ARONI, of the New Orleans bar. New Orleans: James A. Gresham. 1882.

This monograph has been elicited by the fact that the dealings in futures have grown to such immense proportions within a few years, while there was no work in existence treating on the law of the subject. The author disclaims all intention of presenting the book as a professional treatise on the subject, but he has here collected many authorities to show the general principles of law governing futures, supported by well-considered opinions of courts of recognized authority. We may mention that the uniform verdict in England and America has been that contracts for future delivery are in principle, undistinguishable from contracts for the sale of things in actual existence, and are therefore recognized by law and enforceable. Baron Alderson said, to hold the other principle "would put an end to half the contracts made in the course of trade."

Geer's Analysis of the Science of Accounts. Its Theory, Principle, and Practice, as adapted to Modern Book-keeping, etc. By GEORGE P. GEER. Holyoke, Mass.: Clark W. Bryan & Co., 1882. Large 8vo., p. 300. Sold by the author at Springfield, Mass. (\$3).

In order to keep pace with the latest improvements in book-keeping, accountants need to keep their eyes open for every new book of importance on the subject. Mr. Geer has been a practical book-keeper for forty years, being for sixteen years cashier and accountant for Thompson & Co's Express, and the New England Division of the

American Express Company, at Springfield, Mass. While in the service of these companies he introduced improvements in the book-keeping, of his own invention, which his employer attests to have been highly satisfactory. He also invented in 1848 a style of journal which saves nearly one-half of the labor of posting. The work seems to have been very carefully prepared. It contains a well executed chart exhibiting the opening, closing and final balance of the ledger, forms and instructions for executors' and trustees' books, etc.

Fifth Annual Report of the Bureau of Statistics of Labor and Industries of New Jersey.

For the year ending October 31, 1882. Trenton, N. J. 1882.

We are indebted to Mr. James Bishop, Chief of the above Bureau, for a copy of this valuable report. Space is lacking in which to give its contents due notice this month. It contains 75 pages of statistics on the earnings of wage-workers; six chapters of suggestions in behalf of workingmen; statistics of the building and loan associations of the State, etc., etc.

"*Bullion*, the Quarterly Review of Transport, Trade and Money, and Manual of American Railroad and Allied Interests," has taken a new departure. The manual part has been extended so as to include a digest of, we believe, every railroad in the United States, and additional items are given in the digests. As the title indicates, it is to be issued quarterly. R. C. Stone, Editor and Proprietor, 42 Broad street, New York.

Reports from the Consuls of the United States on the Commerce, Manufactures, etc., of their Consular Districts. Nos. 27-30.—January to April, 1883. Published by the Department of State, according to act of Congress.

Commerce of the World, and the Share of the United States Therein. Letter from the Secretary of State Transmitting the Annual Reports upon the Commercial Relations of the United States with Foreign Countries for the years 1880 and 1881. Department of State. Washington. 1883.

A Record of Stock Exchange Prices in 1882: Showing the Highest and Lowest Points reached during that and the Five Preceding Years, viz:—1877, 1878, 1879, 1880 and 1881, together with the Dividends Paid, etc., etc. London: H. Halford & Co., London, E. C. 1883.

Report by the Secretary of State as Commissioner of Insurance, for the year ending December 31, 1882 State of New Jersey. Part 1. Insurance Companies, other than Life. Henry C. Kelsey, Secretary of State.

Hon. Samuel H. Cross, State Auditor of Rhode Island, sends a copy of his report made to the General Assembly at its January session, 1883.

The Maverick National Bank, of Boston, sends a copy of its Annual for 1883. It is a handsome little book containing a large amount of information on the Government finances, State and local debts, the national bank extension law, etc. It does credit to the institution.

John C. Welch, of Beaver street, New York, has published a "Commercial Calendar of 1882," giving monthly highest and lowest quotations of railroad shares, cotton, produce, petroleum, iron, money, silver, etc. The arrangement is ingenious, the figures being printed on a revolving disk so as to bring them within a comparatively small compass.

J. L. Smith, of 27 South Sixth street, Philadelphia, has issued a splendid new map of Mexico and the Northern Frontier. It measures 70x44 inches and is drawn to a scale of 23 miles to the inch from notes taken during ten years' travel and studies on the spot. The topography of the country is shown, the rivers, actual and proposed railroad lines, steamship routes, telegraph lines, agricultural and mineral products of the various zones etc. The map is handsomely colored and finished in excellent style.

RAILROAD FINANCES AND NEWS.

(A synopsis of Railroad finances and affairs of interest to Bankers, Investors, &c.
Classification: I. New Issues. II. Reports. III. Miscellaneous R. R. News).

I. NEW ISSUES.

THE CENTRAL OF GEORGIA has purchased the Gainesville, Jefferson and Southern Narrow Gauge, now complete from Gainesville to Jefferson. Bonds amounting to \$30,000 are to be issued to complete the road to Monroe.

CONSOLIDATED, OF VERMONT.—The holders of securities of the Vermont Central and Vermont and Canada railroads have been notified by the American Loan and Trust Company of Boston that they can still deposit such securities for exchange into those of the new company, and that they will be entitled to interest from April 1, providing their securities are delivered to the Trust Company before June 20.

HANNIBAL AND ST. JOSEPH.—The transfer of the common stock to the Chicago, Burlington and Quincy has been accomplished, and the Board has been reorganized, Messrs. Gould and their co-operators retiring. The exchange of preferred stock began May 17, but the engraved bonds are not yet ready for delivery.

HARRISBURG, PORTSMOUTH, MT. JOY AND LANCASTER.—The Pennsylvania Railroad Company has notified the holders of bonds due July 1, 1883, that they will have the option until May 31 of extending the time of payment for 30 years at 4 per cent. registered bonds, rating the extended bonds at 94 per cent. of their par value, the remaining 6 per cent. to be paid in cash. Bonds not extended will be paid at maturity.

ALBANY AND SUSQUEHANNA.—Holders of second mortgage 7 per cent. bonds can exchange them for 6 per cent. consolidated bonds due in 1906, by paying 8 per cent. difference in price.

DELAWARE AND HUDSON CANAL.—At the annual meeting it was resolved to increase the capital stock by \$10,000,000, making it \$30,000,000. It will be issued, \$3,500,000 in 1884; \$1,000,000 in 1887, and \$5,500,000 in 1891. The object is to take up an equal amount of 7 per cent. bonds. Stockholders of record May 24, 1883, may subscribe for shares at par, at the rate of one share of new stock for every six shares held.

NEW YORK, WEST SHORE AND BUFFALO.—Early in May bids were opened for \$4,117,000 first mortgage bonds. The bids amounted to \$10,423,000, and the awards ranged at prices from 80.04 to 83.79 flat.

ILLINOIS CENTRAL.—In paying the 17 per cent. dividend in Chicago, St. Louis and New Orleans stock, no fractions of shares will be issued, but settlement for such fractions will be made in cash at 80 per cent. of their cash value. Thus, each holder of 100 shares of Illinois Central stock will receive 17 shares of C., St. L. and N. O. stock; holders of 10 shares will receive one share of C., St. L., and N. O. stock and \$6 in cash. The C., St. L. and N. O. stock is convertible into the 4 per cent. leased line stock of the Illinois Central, and shareholders should file their powers of attorney with the company for the purpose as soon after June 15 as possible.

ST. JOSEPH AND WESTERN.—A proposition will be made to the stockholders, at their meeting at Elwood, Kan., on June 14, to convert part of the first and second mortgage bonds into consolidated 5 per cent. mortgage bonds to the amount of \$5,000,000. The firsts issued amount to \$3,800,000, and the seconds to \$2,400,000.

II. REPORTS.

PITTSBURGH, CINCINNATI AND ST. LOUIS.—The earnings of the Columbus, Chicago and Indiana Central for the year ended December 31 were as follows:

	1882.	1881.
Gross earnings.....	\$5,122,043	\$4,953,722
Operating expenses.....	4,419,358	4,312,663
Net earnings.....	\$703,584	\$641,053

This road was sold under foreclosure January 10, 1883. Steps were being taken to organize it, and thus end the protracted litigation.

Earnings of the P., C. and St. L. for the calendar year:

	1882.	1881.
Total gross earnings.....	\$4,214,923	\$4,069,053
Operating expenses.....	2,831,000	2,758,740
Net earnings.....	\$1,383,923	\$1,309,313
Income account:		
Total income.....	\$2,099,351	\$1,864,673
Total disbursements.....	2,005,422	2,123,455
Balance..... (surp.)	\$93,929	(def.) \$258,782

There was no change in the amount of common stock (\$2,508,000), preferred stock \$5,929,200 or bonds (\$12,617,000), during 1882.

GRAND RAPIDS AND INDIANA.—The total mileage operated in the year ended December 31, 1882, was 519. The total earnings of the main line were \$2,260,291, against \$1,940,570 in 1881; total expenses in 1882, \$1,678,237, in 1881, \$1,377,690; net earnings in 1882, \$582,054, in 1881, \$562,890. Deducting interest leaves \$78,066 profit in operating the road; loss on other roads operated, \$28,907; net profit for the year, \$49,179.

GEORGIA RAILROAD.—Earnings for the year ended March 31, 1883:

	1882-3.	1881-2.
Total earnings.....	\$1,314,482	\$1,326,052
Total expenses.....	851,453	977,485
Net earnings.....	\$463,029	\$348,566

The total income for the year was \$619,712; less paid for rental of road, etc., \$704,435; balance, deficit, \$84,722.

SAVANNAH, FLORIDA AND WESTERN.—Earnings for the year ended December 31, 1882:

	1882.	1881.
Total earnings.....	\$1,675,817	\$1,321,429
Total expenses.....	1,317,054	1,052,606
Net earnings.....	\$358,763	\$268,823

The income account shows a surplus balance for the year of \$15,708. The stock was increased \$109,000; the funded debt was unchanged.

ST. LOUIS, ALTON AND TERRE HAUTE.—The report for the year ended December 31, 1882, says that the company received by order of court, from the lessee company, 30 per cent. of the gross earnings, being from Jan. 1 to Oct. 31, 1882, \$334,699.71. The main line and branch, leased to the Indianapolis and St. Louis Railway Co., had total earnings during the year of \$1,506,586, against \$1,361,019 in 1881.

Earnings of the Cairo Short Line Division, 121 miles:

	1882.	1881.
Gross earnings.....	\$875,458	\$756,024
Operating expenses and taxes.....	446,382	434,815
Net earnings.....	\$429,126	\$321,209

Dividends amounting to 7 per cent. were declared on the preferred stock, settling

its claims to December 31, 1881. The general financial result for 1882 shows a surplus balance of \$20,500.

KENTUCKY CENTRAL.—The report for the year ended December 31, 1882, shows the following earnings:

	1882.		1881.
Total gross earnings.....	\$724,383	..	\$705,127
Operating expenses.....	415,090	..	490,655
Net earnings.....	\$309,273	..	\$214,472
The income account shows:			
Net earnings.....	\$309,273	..	\$214,472
Total disbursements.....	179,042	..	213,744
Balance, surplus.....	\$130,231	..	\$728
Stock and bonds:			
Common stock.....	\$5,584,800	..	\$6,083,500
Funded debt.....	5,334,000	..	5,345,000

The net profit for the year, \$130,230, was about 2 1-3 per cent. on the stock, and as the company was selling bonds to build the new road it was not deemed advisable to divide this.

LITTLE ROCK AND FORT SMITH.—The report for the year ended December 31, 1882, shows the following earnings:

	1882.		1881.
Total earnings.....	\$539,133	..	\$502,657
Operating expenses.....	301,939	..	301,912
Net receipts.....	\$237,193	..	\$200,745

The total disbursements in 1882 were \$236,256, which being deducted from the net receipts, left a surplus of \$937. The land sales were 49,431 acres for \$167,587; total to December 31, 1882, 323,215 acres for \$1,399,061. The average price was \$4.02 per acre, and the remaining 695,390 acres are unsold.

WEST JERSEY.—The report for the year ended December 31, 1882, shows that 175 miles were operated, against 163 in 1881. The rate of dividend was 6 per cent., against 4 per cent. in 1881. The earnings were as follows:

	1882.		1881.
Total gross earnings	\$1,109,410	..	\$988,525
Operating expenses and taxes.....	654,743	..	560,953
Net earnings.....	\$454,667	..	\$427,572
Income account:			
Total income.....	\$454,667	..	\$430,646
Total disbursements.....	350,734	..	316,184
Balance, surplus.....	\$103,933	..	\$114,462
Stock and bonds:			
Common stock.....	\$1,377,750	..	\$1,359,750
Funded debt.....	2,754,900	..	2,761,900

LOUISIANA AND MISSOURI RIVER.—In addition to bonded debt, the report for the year ended December 31, 1882, shows "other indebtedness" of \$351,013. The road is leased in perpetuity to the Chicago and Alton for an annual rent of 35 per cent. of the gross earnings, less taxes and assessments, or a minimum of \$1,370 per mile per annum. The gross earnings for the year were \$549,559, against \$495,345 in 1881. The

rental due the company for the year, was \$188,942. The company has no other assets, and it has all been appropriated to pay interest and expenses.

LAKE SHORE AND MICHIGAN SOUTHERN.—There were 1,340 miles operated in the year ended December 31, 1882, against 1,177 in 1881. The rate of dividend paid was 8 per cent.

Earnings for two years:

	1882.	1881.
Total gross earnings.....	\$18,225,639	\$17,971,391
Operating expenses	11,057,807	11,278,428
Net earnings.....	\$7,167,832	\$6,692,963

Summary of income account:

	1882.	1881.
Total income	\$7,266,224	\$7,781,638
Total disbursements.....	7,082,712	7,771,371

Balance, surplus.....	\$183,512	\$10,267
-----------------------	-----------	----------

Stock and bonds:

	1882.	1881.
Stock.....	\$50,000,000	\$50,000,000
Bonds	44,716,000	38,439,000

MICHIGAN CENTRAL.—The mileage operated in the year ended December 31, 1882, was 1,013, against 949 in 1881. The rate of dividend paid was 2 per cent., against 2½ in 1881, and 8 in 1880.

The earnings were:

	1882.	1881.
Total gross earnings.....	\$8,913,081	\$8,800,487
Total operating expenses.....	6,671,726	6,732,096

Total net earnings.....	\$2,241,355	\$2,068,391
-------------------------	-------------	-------------

Stock and bonds:

	1882.	1881.
Stock	\$18,738,204	\$18,738,204
Funded debt.....	16,732,000	17,267,000

FLINT AND PERE MARQUETTE.—The earnings for the year ended December 31, 1882, were:

	1882.	1881.
Total gross earnings.....	\$2,180,223	\$1,885,413
Operating expenses and taxes.....	1,432,209	1,315,322

Net earnings.....	\$748,014	\$570,091
-------------------	-----------	-----------

Summary of income account:

	1882.	1881.
Net earnings.....	\$748,014	\$570,091
Disbursements.....	731,524	683,553

Balance.....(surp.)	\$16,190	(def.) \$113,462
---------------------	----------	------------------

Stock and bonds:

	1882.	1881.
Capital stock	\$6,500,000	\$6,500,000
Funded debt.....	5,028,000	4,821,560

CHICAGO, MILWAUKEE AND ST. PAUL.—The mileage owned in the year ended December 31, 1882, was 4,520, against 4,217 in 1881. Dividends amounting to 7 per cent. were paid on both preferred and common stock.

The earnings were:

	1882.	1881.
Total gross earnings.....	\$20,386,726	\$17,025,461
Total operating expenses.....	\$12,186,073	10,317,931

Net earnings.....	\$8,200,653	\$6,707,530
-------------------	-------------	-------------

Summary of income account:

	1882.		1881.
Total income.....	\$14,417,477	..	\$11,693,121
Balance, surplus.....	3,619,407	..	5,593,010

Stock and bonds:

	1882.		1881.
Common stock.....	\$27,904,261	..	\$20,404,261
Preferred stock.....	16,447,483	..	14,401,483
Bonded debt.....	89,635,500	..	79,059,000

DENVER AND RIO GRANDE.—The total mileage operated on December 31, 1882, was 1,232 miles, against 1,067 miles at the close of 1881.

The earnings for two calendar years were:

	1882.		1881.
Total gross earnings.....	\$6,404,980	..	\$3,244,780
Total operating expenses	3,821,123	..	3,620,000
Net earnings.....	\$2,583,857	..	\$2,624,780

Income account:

	1882.		1881.
Total income	\$2,620,628	..	\$2,624,784
Total disbursements.. ..	1,900,749	..	2,283,078
Balance, surplus.....	\$719,879	..	\$341,686

III. MISCELLANEOUS R. R. NEWS.

NEW YORK CENTRAL—LAKE SHORE—MICHIGAN CENTRAL.—The boards of directors of the companies met in New York on May 4 and elected the following officers: The New York Central and Hudson River Railroad Company—Chairman of the Board of Directors, Cornelius Vanderbilt; President, James H. Rutter; First Vice-President, Charles C. Clarke; Second Vice-President, Chauncey M. Depew; Third Vice-President, J. H. Hayden; Assistant to the President, J. Tillinghast; Treasurer, E. V. W. Rossiter; Comptroller, Isaac P. Chambers; Secretary, E. D. Worcester. Lake Shore and Michigan Southern Railroad Company—Chairman of the Board of Directors, Wm. K. Vanderbilt; President, John Newell; Vice-President, Secretary and Treasurer, E. D. Worcester. The Michigan Central Railroad Company—Chairman of the Board of Directors, Cornelius Vanderbilt; President, H. B. Ledyard; Vice-President, E. D. Worcester; Treasurer, Henry Pratt.

It will be noticed that while Mr. Vanderbilt retires from the Presidency, and his sons from the Vice-Presidency, under the new by-laws the position of Chairman of the Board of Directors is created, with general supervisory powers. Under this arrangement Cornelius Vanderbilt becomes Chairman of the New York Central and Michigan Central Boards, and William K. Vanderbilt remains President of the Nickel-Plate Road and becomes Chairman of the Lake Shore Directors. Each of them is also a member of the Board of the company of which his brother is Chairman. Mr. William H. Vanderbilt remains a Director of each of the companies and a member of the Executive and Finance committees.

ATLANTIC AND PACIFIC.—The directors chosen recently at the annual meeting, elected the following officers: H. C. Nutt, President, Boston; E. T. Winslow, Vice-President, New York; C. S. Tuckerman, Secretary and Treasurer, Boston; D. L. Gallup, Auditor, Boston. The lands earned by construction are 17,220,000 acres. The Government has accepted 400 miles of the road.

THE BURLINGTON, CEDAR RAPIDS AND NORTHERN has sold to the newly-organized Clinton and Cedar Rapids company the uncompleted line from Clinton to Iowa City, for \$300,000.

THE CENTRAL IOWA having purchased the Peoria and Farmington Railroad, the latter will be operated in connection with the former, as the Illinois Division.

THE CHICAGO AND ATLANTIC RAILROAD was opened for freight traffic on May 14. It extends from Marion, O., on the New York, Pennsylvania and Ohio, to Chicago, 357 miles, entering Chicago over the Chicago and West Indiana. The Erie bought the stock about a year ago, agreeing to complete the road for \$6,500,000 in bonds. This road, together with the New York, Pennsylvania and Ohio, recently leased, gives the Erie an independent through line to Chicago.

COLORADO NORTHERN.—The Seney syndicate has 100 miles of this railroad under construction, General Meily being President. It is said that the outcome will be a narrow-gauge line from Denver to San Francisco. The California and Nevada Railway is part of the system, and construction has begun at San Francisco.

THE DENVER AND RIO GRANDE WESTERN was completed May 17, and trains began to run.

NEW CONSTRUCTION.—The first four months of the year, which ended April 30, were unfavorable to railway construction in a large part of the country, the winter being unusually severe and the spring very backward. Nevertheless a greater amount of track has been laid down this year than was reported for the same period during any previous year except the last, our records showing 1,450 miles added, with some roads to hear from. Arranged by States the figures which we have obtained are as follows:—Alabama, 42 miles; Arizona, 84; Arkansas, 7; California, 170; Colorado, 23; Florida, 49; Georgia, 39; Idaho, 85; Indian Territory, 8; Illinois, 37; Indiana, 26; Iowa, 37; Kentucky, 24; Louisiana, 30; Maine, 3; Maryland, 4; Michigan, 32; Mississippi, 32; Missouri, 73; Montana, 86; New Mexico, 42; New York, 115; Ohio, 57; Oregon, 20; Pennsylvania, 93; Tennessee, 6; Texas, 45; Utah, 156; Virginia, 3; Wisconsin, 6; West Virginia, 16; total, 75 lines in 31 States, 1,450 miles.

In 1882, the year remarkable both for the amount of railway building and for the mildness of the winter, which allowed grading and tracklaying to be prosecuted without interruption, there had been reported up to April 30, about 2,300 miles, and the total for the year 1882 was 11,343 miles. But in 1881, after a very severe and protracted winter, only 950 miles were reported up to April 30, while the new mileage for the year proved to be 9,390. If we assume the reports for the first four months of last year to have been as nearly complete as those for the present year, and ignore altogether the effect of the weather in delaying construction this year, the same proportional increase which gave 11,343 miles at the end of 1882, would make the probable total for 1883 about 7,250 miles. It seems more likely that it will exceed 8,000 miles.

The figures in the table refer to 75 different lines, and of these 50 are still incomplete, while on many others tracklaying is about to commence. The work is reported from 31 States and territories. Pennsylvania has 11 of the 75 lines reporting, Ohio 6, Texas 5, Indiana and Georgia 4 each, and other States a less number.

The construction of the 1,450 miles reported thus early in the season means, at an average of \$25,000 per mile for road and equipment, an expenditure of \$36,250,000. It means that employment has been furnished, at the rate of 5 men to each mile, to 7,250 additional men. It means that a vast area of new territory has been made accessible to population and development. It means a year of far greater activity in railway building and other industries than many have predicted.—*Railway Age*.

MASSACHUSETTS CENTRAL.—The Court having denied the request of the Trustees to run the road, the bill in equity for authority to foreclose the first mortgage will be heard on its merits. All operations on the road were stopped on May 16.

CENTRAL OF NEW JERSEY.—Petition has been made to have the road taken out of the hands of the receiver, and Chancellor Runyon referred it to a special master to inquire and report. Negotiations have been carried on to lease the road to the Philadelphia and Reading for a guarantee of 6 per cent. on the stock.

TOLEDO, CINCINNATI AND ST. LOUIS.—The consolidation of the Cincinnati Northern and the Spring Grove, Avondale and Cincinnati with this company gives a main line of 448 miles now complete from Toledo to East St. Louis. The capital stock is \$30,000,000.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, JUNE 2, 1893.

While there has been no decided revival of business activity since last month (and there was no prospect of such a thing at that period of the season), the outlook has cleared somewhat. The crop reports then, having view especially to winter wheat, were very depressing; but any change in the prospective harvests for the year that has occurred, has been toward improvement. It is conceded that the winter wheat crop will be considerably short—perhaps by 100,000,000 bushels. The season has been late for planting of corn and spring wheat, but the prospects are now very fair.

A cloud that threatened the business horizon for some weeks, was the expectation of a strike in the iron-trade, which would have brought injury to business generally, and disaster to many concerns. This has just been happily averted by the yielding of the employers to the demand of the workmen for a scale of wages similar to last year's. The fact that employers felt able to yield this, is a proof that their business is not in such a precarious condition as had been represented, and that they find it more profitable to continue operations at the old rate of wages than to shut down.

There has occurred a slight hardening in rates for loans in London, which has a reflex influence here. This is, perhaps, partly the result of the action of the Bank of England in restricting its accommodation to the bill brokers (which is mentioned more at length in a former part of this number); but, in fact, the Bank's reserve is about seventeen million dollars less than it was a year ago. The effect has been to raise the rates of foreign exchange here, so that the actual rate for sight sterling, is at $48\frac{1}{2}\%$ @ $48\frac{1}{2}\%$, whereas the rate at which it pays to export gold is 4 90, or about $1\frac{1}{4}$ cents to the pound sterling higher. The depression in the stock market here, is either partly caused, or partly the result of this condition of the London loan market, for the disposition to unload American stocks seems to continue there. A recent number of the "Pall Mall Gazette" says: "The selling of American railroad stocks on English account has, of late, been very heavy. It is estimated on what is good authority—perhaps the best—among the dealers, that hardly a sixth part of the quantity held here two years ago is now possessed by British holders. That was a time, too, when prices were approaching the extreme "boom" point of June, 1881. It is more difficult to form an accurate than a cool judgment on this side, but the probabilities are, seeing the readiness with which New York has been buying of late, that the British are wrong again."

The extent to which the future of business depends upon the crops may be illustrated in this wise: At present the speculation for a rise in breadstuffs based on the expectation of a short crop, causes a partial stoppage in the Eastward movement of grain. The railroads suffer to some extent in their earnings, and hence results dullness

of the stock market and a disposition to return American stocks from abroad. Under these conditions a gold export is more probable than an import, tending to decrease the prices of general merchandise and make business dull. The two causes, it should be mentioned, the decreased export movement, and the return of securities from abroad, work together to raise the rates of exchange upward toward the gold-exporting point. Now, if we suppose that the crop prospects improve, the prices of bread-stuffs will fall, the Eastward movement will be accelerated, the exports will increase, and the railroad earnings will be swollen. The result would probably be an increased demand for American securities abroad, and an increase in merchandise exports, causing reduced rates of exchange, a gold import, a rise in prices and improved business.

THE PUBLIC DEBT was decreased only \$4,890,477 during May, and for the eleven months lapsed of the fiscal year \$119,725,052, against a decrease in May, 1882, of over \$10,000,000, and for the eleven months ending with May of last year of over \$130,000,000. The aggregate reduction during the last fiscal year was \$151,000,000, but for the present year, which closes with the current month, the reduction is not likely to exceed \$125,000,000. This comparatively unfavorable exhibit is owing to the falling off in receipts from customs, which falling off will continue until July 1, when the new tariff act goes into effect, and perhaps for several months after July. The bonded debt shows a decrease since May 1 of over \$10,000,000, that amount of called bonds having been redeemed. The amount of continued $3\frac{1}{2}$ per cent. bonds now outstanding subject to call is only \$33,000,000, and unless the policy of the Treasury Department in reference to the reserve to be maintained is changed, that amount is not likely to be called for redemption for several months. The available cash in the Treasury is \$131,549,331, a decrease since May 1 of about \$5,000,000. This balance is equal to 38 per cent. of the outstanding legal-tenders. Since Aug. 1, 1882, there have been issued seven calls for bonds, these calls aggregating \$107,000,000, which amount has all been redeemed except \$4,500,000.

TREASURY MATTERS.—The Treasurer's statement of liabilities and assets shows an increase in the gold coin and gold bullion held, but there is a decrease of this coin and bullion owned by the Treasury, the amount thus owned being \$133,691,000, against \$140,000,000 on May 1. The gold certificates now outstanding amount to \$59,591,940, an increase of more than \$11,000,000 during the month. The standard silver dollars in the Treasury have run up to nearly \$109,000,000, against which there is outstanding about \$72,000,000 in silver certificates. There is no material change in the volume of silver certificates since May 1.

The revenue receipts for May were nearly \$5,000,000 less than for May, 1882, the decrease being in customs receipts. The total Treasury receipts for the eleven months of the fiscal year just expired were \$363,371,413, against \$376,545,353 in the corresponding period of the last fiscal year, the falling off being entirely in customs.

MONEY AND DOMESTIC EXCHANGE.—The money market has been quite easy of late. Call loans are made on collateral at from 2 to 4 per cent., while the rate of discount on first-class endorsed paper is $4\frac{1}{2}$ to $5\frac{1}{4}$ per cent., and $5\frac{1}{2}$ to 6 per cent. on single named.

The following table shows the range of call loans, and rate on prime paper, for the past five weeks:

	Apr. 28.	May 5.	May 12.	May 19.	May 26.
Range of call loans	3@6	3@10	2 $\frac{1}{2}$ @5	2@4	2 $\frac{1}{2}$ @3
Rate of discount.....	5@6	5@6	5@5 $\frac{1}{4}$	5@5 $\frac{1}{4}$	4 $\frac{1}{2}$ @5

Domestic exchange is generally in favor of New York, indicating a movement of money in this direction. Following are the rates on June 1: Savannah, buying par; selling $\frac{1}{4}$ @ $\frac{1}{2}$ premium; Charleston, buying $\frac{1}{4}$ premium; selling $\frac{1}{4}$ discount; New Orleans commercial \$1 per \$1,000 premium; bank, \$1 50 per \$1,000 premium; St. Louis, 60@75c. per \$1,000 premium; Chicago, 75c. per \$1,000 premium; Boston, par@16c. per \$1,000 premium.

FOREIGN EXCHANGE, as has been mentioned before, has been moving upward. This is in response to the condition of the foreign trade. The latest report of the Bureau of Statistics shows that the merchandise exports in April were valued at only 61 million dollars, against 78 millions in March. At the same time the imports decreased less than 3 millions. The slight demand for American securities abroad has helped to turn the exchange against this country, for the time being.

Following are the posted and the actual rates of foreign exchange on June 1: Bankers' sterling, 60 days, nominal, \$4.86; bankers' sterling, sight, nominal, \$4.86 $\frac{1}{4}$; bankers' sterling, 60 days, actual, \$4.85@ $\frac{1}{4}$ \$4.85 $\frac{1}{4}$; bankers' sterling, sight, actual \$4.88 $\frac{1}{4}$ \$4.88 $\frac{1}{4}$; cable transfers, \$4.89@ $\frac{1}{4}$ \$4.89 $\frac{1}{4}$; prime commercial sterling, long, \$4.83 $\frac{1}{4}$ @ $\frac{1}{4}$ \$4.84; documentary sterling, 60 days, \$4.83@ $\frac{1}{4}$ \$4.83 $\frac{1}{4}$; Paris, bankers', 60 days, 5.18 $\frac{1}{4}$ @5.18 $\frac{1}{4}$; Paris, bankers', sight, 5.16 $\frac{1}{4}$ @5.15 $\frac{1}{4}$; Antwerp, commercial, 60 days, 5.23 $\frac{1}{4}$ @5.22 $\frac{1}{4}$; Swiss, bankers', 60 days, 5.18 $\frac{1}{4}$ @5.17 $\frac{1}{4}$; Swiss, bankers', sight, 5.15 $\frac{1}{4}$ @5.15; reichsmarks (4), bankers', 60 days, 94 $\frac{1}{4}$ @94 $\frac{1}{4}$; reichsmarks (4), sight, 95 $\frac{1}{4}$ @95 $\frac{1}{4}$; guilders, bankers', 60 days, 40@40 $\frac{1}{4}$; guilders, bankers', sight, 40 $\frac{1}{4}$ @40 $\frac{1}{4}$. Paris dispatches quote exchange on London 25f. 29c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days and sight, cable transfers, and prime commercial sterling at 60 days, together with exchange on Paris on May 1, the changes in the rates as they occurred during the month, and the highest and lowest during the months of April and May:

	Bankers		Cable Transfers.	Commercial.	Paris	
	60 days.	Sight.			60 days.	Sight.

RAILROAD AND MISCELLANEOUS STOCKS.—The stock market has generally been very dull, with only now and then a momentary show of activity. There was an average decrease in prices during the month, but toward the latter part a strong feeling was manifested. This was partly based on a settlement of the competition in passenger rates in the West, and aided by the low rates for loans. The principal important event of late is the leasing of the New Jersey Central to the Philadelphia and Reading Railroad Company.

The following table shows the highest, lowest, and closing prices of the most important railway and miscellaneous stocks at the New York Stock Exchange during the month of May:

Companies.	Highest.	Lowest.	Clos'g	Companies.	Highest.	Lowest.	Clos'g.
Canada Southern....	68	63½	65	Lake Shore	111½	107½	107½

RAILROAD AND STATE BONDS.—Business has been comparatively dull in railroad bonds. The public dealings are most active in West Shore bonds, which are at 78½.

Atlantic & Pacific incomes are up to 36, and Texas and Pacific to 65½. Richmond & Danville debentures sell at 69.

The dealings in State securities have been extremely light. Sales are noted of Tennessee compromise bonds at 45¼@45½, and Tennessee 6s at 41. Late quotations of bonds and stock will be found further on in this number.

GOVERNMENT BONDS.—The dealings have been light, but the tendency is toward higher prices, especially for the bonds having a long term of existence.

The following table shows the closing bids for the principal issues of Government bonds on each day of the month of May, and the highest and lowest during the month:

May	3 per cents.	5s, '81. cont'd.	4½s, '91. coup.	4s, 1907. coup.	C'y 6s, 1899.	May	3 per cents.	5s, '81. cont'd.	4½s, '91. coup.	4s, 1907. coup.	C'y 6s, 1899.
1	103½	103½	113½	119½	131	17	103½	103	113½	119½	131
2	103½	103	113½	119½	131	18	103½	102½	113½	119½	131

15	103½	103½	113	119	133	High	103½	103½	113½	119½	133
16	103½	103½	113	119	131	Low	102½	102	112½	119	131

THE NATIONAL BANKS.—The bonds held to secure circulation decreased slightly during the month of May. The chief item of decrease is in 3½ per cents, being probably "called" bonds.

The following will show the amount of each description of bonds held by the Treasurer to secure national bank circulation, on or about the dates indicated :

	March 1.	April 1.	May 1.	June 1.
Currency 6 per cents.....	\$3,528,000	\$3,509,000	\$3,502,000	\$3,502,000
5 per cents	15,000	15,000	15,000	15,000
4½ per cents.....	36,755,200	37,630,400	38,180,400	38,899,900
4 per cents.....	104,950,950	104,948,550	105,242,950	105,188,450
5 per cents extended at 3½.....	14,733,350	11,288,550	10,492,450	8,029,500
6 per cents extended at 3½.....		640,700		
3 per cents.....	197,953,300	199,169,200	199,795,950	200,953,750
Total.	\$356,235,455	\$357,933,800	\$357,223,750	\$356,588,600

THE NEW YORK CITY BANKS are in a much improved condition. The deposits are 21 million dollars greater than a month ago, and the loans 5 millions. The cash reserve has increased 13½ millions, of which 8½ millions are specie. The surplus reserve (over 25 per cent. of the deposits) has risen from less than one million dollars to 9 millions in the month.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1882 and 1881:

1883.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
June 2.....	\$317,575,800	\$62,251,500	\$24,552,500	\$310,929,400	\$16,021,300	\$9,071,650
May 26.....	316,281,500	62,326,800	23,758,300	309,630,900	15,994,400	9,177,400

Bank, Government, Railroad and Miscellaneous Stocks and Bonds.

LATEST QUOTATIONS AND OTHER INFORMATION.

The following tables give the latest quotations of stocks and bonds at the New York Stock Exchange. In the case of all but the New York bank stocks the highest and lowest actual prices of a year ago are also given, for comparison. The quotation tables on the following pages include *all securities listed at the Stock Exchange*.

NEW YORK BANKS.—CAPITAL AND SURPLUS, QUOTATIONS OF STOCK, and LAST DIVIDEND.

The following table shows the Capital and Surplus of the National and State Banks, on and since January 1, 1883. The Surplus includes, in the case of Clearing-House Banks, the undivided net profits, and, in the case of other banks, the undivided profits. The Banks which are *not* members of the New York Clearing-House Association are indicated by a (*). Not listed at the Stock Exchange by a (+). This table includes all the Commercial banks of New York.

BOSTON BANKS.—CAPITAL and SURPLUS, QUOTATIONS OF STOCK, and LAST DIVIDEND.

The following table gives the latest quotations of Bank Stocks in the Boston market; they are mainly sold by auction. The Capital and Surplus given are from the last official report, May 1, and all the banks are National. The surplus includes the undivided net profits. All the banks belong to the Clearing-House, except Bunker Hill, First Ward, Mechanics', National Market of Brighton, People's, and Rockland, which are located out of the city proper, but within city limits, and they clear through other banks.

BANK TITLE.	PAR.	CAPITAL.	SURPLUS.	INT. PAYABLE.	JUNE 1, 1883.		LAST DIV'D.

First National Bank of Helena, Montana.—At a meeting of the shareholders held February 21, the capital stock was increased from \$100,000 to \$300,000. The net surplus and undivided profits at that time amounted to \$203,477, giving the bank a working capital of over half a million dollars, and making it altogether the strongest bank in that region. The Cashier, Mr. E. W. Knight, supplemented his report with some statistics to show the progress of the bank during three years. For instance: the total cash transactions in 1882 were 73 million dollars, against 26¼ millions in 1879; the amount of exchange sold in 1882 was 10 millions in 1882, against 3¼ millions in 1879; the deposits on February 1, 1883, there being 2,501 accounts—amounted to \$1,905,049, against 815 accounts amounting to \$732,787 on February 1, 1879. The net profits for the thirteen months ended February 1, 1883 were \$100,370. This is a remarkably good showing, and not only highly creditable to the management of the bank but an indication of the prosperous condition of that part of the country.

DAILY RECORD OF FINANCIAL EVENTS.

MAY, 1883.

1. **TUESDAY.**—Reduction in the public debt in April, \$2,851,403; since July 1, 1882, \$114,834,575.

4. **FRIDAY.**—Work begun on Eads' Tehuantepec Ship Railway.

W. H. Vanderbilt retired from the Presidency of the New York Central and Hudson River, the Lake Shore and Michigan Southern, and the Michigan Central Railroad Company.

5. **SATURDAY.**—Discount on prime commercial paper in New York, 5@6 per cent.; call loans, 4@2 per cent.

Discount in London on 60 days to 3 months' bank bills, 3 per cent., and trade bills, ¾@¾ per cent.

7. MONDAY.—Erie Canal opened for traffic.
It is officially reported that the crops in Samara, Simbirsk and Astrakhan, Russia, are a total failure.
9. WEDNESDAY.—The New York "World" sold to Joseph Pulitzer.
10. THURSDAY.—The Northern Pacific Railroad opened from St. Paul to Portland, Oregon.
The Bank of England rate of discount raised from 3 to 4 per cent.
11. FRIDAY.—The stockholders of the Central Railroad of New Jersey approved the proposed lease of the railroad to the Philadelphia and Reading.
12. SATURDAY.—Discount on prime commercial paper in New York, 5@6 per cent.; call loans, 4@2½ per cent.
Discount in London on 60 days to 3 months' bank bills, 3½ per cent., and trade bills, 4@4½ per cent.
Opening of the International Fisheries Exhibition in London.
Lake navigation just open to Duluth, Minn.
14. MONDAY.—Annual election at the New York Stock Exchange; A. S. Hatch chosen President.
15. TUESDAY.—The Commissioners of the Freedman's Savings and Trust Company declared a final dividend of 7 per cent. to the creditors, making 62 per cent. in all.
A treaty of peace between Chili and Peru signed.
16. WEDNESDAY.—A commercial treaty between Germany and Madagascar signed.
17. THURSDAY.—The annual meeting of the National Board of Fire Underwriters held at New York.
18. FRIDAY.—Holders of Mexican bonds, in London, unanimously accepted a proposal for the conversion of the debt.
A cyclone did large damage at Racine, Wis.
19. SATURDAY.—Discount on prime commercial paper in New York, 4½@6 per cent.; call loans, 2@4 per cent.
Discount in London on 60 days to 3 months' bank bills, 3½@3¾ per cent.; trade bills, 4@4½ per cent.
21. MONDAY.—Walter Evans, of Louisville, Ky., appointed Commissioner of Internal Revenue.
Cold and heavy snow reported in the West.
Lord Landsdowne appointed Governor-General of Canada.
22. TUESDAY.—The Attorney-General decided that the bank taxes were repealed from December 1, 1882 and January 1, 1883.
24. THURSDAY.—The New York and Brooklyn Bridge (begun Jan. 3, 1870) opened to-day.
The National Exhibition of Railroad Appliances opened at Chicago.
25. FRIDAY.—The Dominion Parliament prorogued.
26. SATURDAY.—Discount on prime commercial paper in New York, 5@6 per cent.; call loans, 3@2 per cent.
Discount in London on 60 days to 3 months' bank bills, 3¼@3½ per cent., and trade bills 3¾@4¼ per cent.
27. SUNDAY.—Alexander III. crowned Czar of Russia.
30. WEDNESDAY.—Decoration day—a business holiday.
31. THURSDAY.—A threatened great strike in the iron trade averted by the manufacturers paying last year's scale.
A National Free Trade Conference opened at Detroit.

RHODES' JOURNAL OF BANKING.

NEW SERIES. }
VOLUME XI. }

JULY, 1883.

No. 7.

It will be seen by reference to our news department, that the Executive Council of the American Bankers' Association has decided that the next annual convention shall be held at Louisville, Kentucky, on October 10 and 11. The reasons prompting the choice of the place are unexceptionable, being the growth of the membership in the South, and the desirability of having a large delegation from the South and West. In order to secure this advantage, however, it would seem that a sacrifice had to be made in appointing a time of year rather too late for a vacation, and when men of business are generally busy. There is no doubt, however, that a trip to Louisville in October will repay any ordinary sacrifice that may be necessary in order to make it. For a number of years a large part of the active work of the Association has been directed toward the repeal of the bank taxes, but now that that matter is disposed of, more attention can be given to other subjects no less important, if less pressing. Among the subjects brought up at the last convention and referred to committees, which are expected to report at the coming convention, are the following: Greater uniformity in the State laws regarding savings banks; interchange between banks through the clearing-houses of information regarding borrowers; a uniform law on commercial paper in the United States; the listing and rating of municipal and county bonds for the use of the members of the Association. It is expected also that other new subjects will be discussed.

An item has been freely circulating through the newspapers to the effect that the saving to the banks by the recent decision of the Attorney-General, that no taxes are due on capital and deposits for the current half-year, was estimated at \$3,000,000. The taxes on deposits and capital, which are now abolished, of the national banks alone amounted in the last fiscal year to \$5,959,703, so that the estimated saving seems to apply only to that class of banks. In the same year, however, the

other banks paid \$5,249,173 in taxes on deposits and capital, making the total paid by all the banks during the fiscal year 1882 on account of the items now repealed, \$11,208,876. At this rate the saving during the current half-year is over five and a half million dollars. The Government collected in taxes from the national banks from 1864 to 1882 a total of 118 million dollars, while the whole cost to the Government of the national banking system was \$5,366,908. Of the total collected, \$52,253,518 was tax on circulation, \$58,166,277 on deposits, and \$7,585,911 on capital. During the same period, 1864 to 1882, the other banks paid in taxes \$66,793,930, of which \$5,487,609 was for tax on circulation, \$46,809,211 on deposits, and \$14,497,110 on capital. The importance of the tax repeal may be roughly estimated by considering that the amount of the tax on deposits and capital paid by the national banks in the fiscal year 1882 was nearly 6 million dollars, while the total net earnings of the same banks for the year ended September 1, 1882, was 53 million dollars. The taxes on the banks which now remain are the United States tax on circulation (one per cent. annually on national banks and ten per cent. on State bank circulation), and the State taxes. These latter are about as heavy as, if not heavier than, the recent Government taxes. The statistics collated by the Comptroller of the Currency show that the United States taxes paid by the national banks in 1881 amounted to 1.9 per cent. of their aggregate capital stock, while the State taxes amounted to 1.8 per cent. But it should be noted that the Government tax included over 3 millions collected on national bank circulation. Now, as the Government tax on State bank circulation amounts to only a few thousand dollars a year, and the State taxes on both kinds of banks are uniform, it follows that the States must collect a much larger amount in taxes from the State banks than the Government was used to do.

One of the most noteworthy circumstances connected with the progress of commerce in these times is the great increase in the means for gathering trade statistics, and in the extent to which they are collected and published. We believe that economic students are agreed that by this means business will, in time, come to be carried on upon a more scientific basis than in the past, so that distribution of products will be accomplished more perfectly and commercial disasters will occur less frequently. The one reason why the repeal of the bank taxation was regretted was that it will be impossible for the Comptroller of the Currency to hereafter present such full statistics regarding the banks in the United States as heretofore, as the State and private banks are no longer required to make returns to the general Government. We are now, however, obligated to Mr. E. Chase, manager of the St. Louis Clearing-House, for an idea, which if generally carried out will add considerably to the value of our present statistics, regard-

ing the amount of business that is done through the banks. He has requested each bank represented in the Clearing-House to furnish him during the month of June with a statement of the full amount of checks received by the bank each day, whether they be for clearance, for payment, or on deposits chargeable to some other customer of the bank. During the first seven business days of the month the clearings amounted to \$28,178,009, while the total amount of checks passed into the banks for clearance and otherwise was \$42,843,095. This shows that 46 percent. of the checks did not pass through the Clearing-House—a larger proportion than might be supposed; but very likely the statistics of a place containing more banks would show a smaller proportion.

A movement has been started in New York looking to the expulsion of the trade dollar from the regular channels of trade. This coin has for some time past been refused at many railroad ticket offices and by concerns which can afford to be somewhat independent of the public; but now the Mercantile Exchange is endeavoring to obtain an agreement to reject the coin among a number of private business firms sufficient to bring the coin into general discredit. The agreement characterizes the trade dollar, when tendered in payment of debts as "an imposition no longer to be tolerated." The New York "Times" in speaking of "these nondescript and bastard coins, which are no more a legal-tender than are the Japanese yen" says that "as they were coined purely on private account, every one of them now in circulation has yielded a fraudulent profit to some swindler." Now, the facts regarding the coinage of the trade dollar seem to us to not justify the language used regarding it. The fact seems to be forgotten that when it was first coined, in 1873, it was declared by law a legal-tender. Afterwards, in 1876, when the value of silver had declined, it was deprived of the legal-tender quality. When the United States stamped its name on this coin, and declared it a legal-tender, the Government made itself morally responsible for it. Common honesty demands that it be either redeemed at its face value or else be once again declared a legal-tender for debts.

The recent failures in Chicago resulting from the collapse of a corner in lard and provisions have given occasion for a repetition of the usual comments on the present mode of doing business at the exchanges. Many intelligent people seem to be under the influence of a curious illusion by which it is made to appear that the business disasters that occur in the speculative kinds of business are the result of dealings in futures, and buying and selling on margins. But it should never be forgotten that there were many failures in the grain, provision and cotton trades before the modern methods were invented.

Even corners were known in ancient times, and it is doubtful if they were any less harmful than at present. It is a fact worthy of attention, that it is generally the speculators who lose under the present methods, and nearly always the ones who speculate on the wrong side. This sounds like a truism, but it nevertheless seems to be often lost sight of. When prices are forced up by speculation beyond the point which the actual condition of trade or the crops will warrant, the bull speculators are sure to be beaten and suffer loss. If the circumstances, however, warrant the increased price, the public is certainly not the loser by the speculation. What makes the prevailing speculation possible is the immense movement of products from point to point and country to country in these times. Could not the Keene corner and the McGeoch corner have been made just the same had there been no such thing as futures and marginal dealings? The thing to be regretted is that so many men are drawn away from legitimate employments into gambling operations, but some other cure must be invented for this than stopping dealings at the exchanges. We do not fill up New York Harbor even though many people do drown themselves there.

We are notified that the time set for the meeting of the Universal Congress of Provident Institutions at Paris, France, has been deferred for a week and that the Congress will sit under the Presidency of M. Leon Say, ex-President of the Senate, ex-Minister of Finance, etc., from July 9 to July 15. Following is a copy of the invitation. It will be seen to contain a polite offer to receive any persons into the deliberations who may be introduced by us, or accept any documents sent under our charge to the Congress. This invitation was received too late for our last number however, and our readers can scarcely avail themselves of it now.

DEUXIEME SESSION QUINQUENNALE
DU CONGRES SCIENTIFIQUE UNIVERSEL
 DES
 INSTITUTIONS DE PREVOYANCE

~~~~~  
 Caisses d'Epargne : scolaires, ordinaires, postales, manufacturières.  
 Unions coopératives : de consommation, de production, de crédit (Banques populaires)  
 Sociétés de Secours mutuels. Assurances sur la vie :  
 Caisses de retraites civiles, militaires, populaires ; etc., etc.

*Paris, le 20 Mai, 1883.*

*Monsieur le Directeur :*

Nous avons l'honneur de vous rappeler que la deuxième session quinquennale du Congrès scientifique des Institutions de Prévoyance, fondé par la Société des Institutions de Prévoyance de France, aura lieu, à Paris, du 9 Juillet au 15 Juillet prochain. Nous serons heureux de votre assistance, et reconnaissants de votre concours.

Nous recevrons avec grand intérêt tout mémoire historique, administratif ou sta-

tistique sur les institutions et les établissements de prévoyance de votre pays ou de votre ressort, et tels autres documents (lois, règlements, statuts, manuels, comptes rendus périodiques, traités, statistiques, etc.) qui pourraient servir l'œuvre du Congrès, surtout avec l'aide de vos lumières. Autant que possible, ces documents devront être envoyés au Secrétariat, 68, rue de Babylone, à Paris, avant le 20 Juin.

Le Congrès ne donne pas lieu à des votes ni à des résolutions, chacun restant libre de mettre à profit suivant ses convenances, pour le bien de son pays, les communications et les observations échangées dans cette réunion d'hommes d'Etat, d'administrateurs, d'économistes et de statisticiens, spécialement compétents.

Nous accueillerons bien volontiers les personnes qui, sous votre patronage, demanderaient à prendre part au Congrès, ou nous enverraient des documents pour cet inventaire scientifique des expériences de tous les peuples.

Une carte personnelle..... pour les séances du Congrès, vous sera envoyée sur votre demande répondant à cette lettre.

Veuillez agréer, Monsieur, l'expression de nos sentiments les plus distingués.

Le Président, LEON SAY.

Le Secrétaire Général, A. DE MALARCE.

à Monsieur the Editor RHODES' JOURNAL, &c., a New York (U. S. A.)

Among the Vice-Presidents d'Honneur the name of Mr. John P. Townsend, Vice-President of the Bowery Savings Bank, New York, occurs, and among the promoters (fondateurs) the Hon. Abram S. Hewitt and Mr. Bradford Rhodes, of New York, are the American representatives.

The "Petit Journal" says that the second quin-quennial Universal Congress of Provident Institutions promises to be even more useful and interesting than the Congress of 1878, the number and importance of the documents received surpassing those received up to the same period before the previous Congress. The institutions represented include not only school, postal and ordinary savings banks, but also mutual benefit, mutual life assurance and co-operative societies of various kinds. The object is not to take any decisive action, or to transact business, but merely to receive and hear reports and exchange views on the condition and progress of these institutions in all civilized nations, with a view to extend the present information on these subjects. The reports are published after the Congress so that they can be consulted by its members, by legislators, economists and others, the last Congress having collected 630 valuable documents. No special invitations have been sent out, but members of the Congress of 1878 have the right to attend the coming one, and others wishing to send documents or to attend the sessions should communicate with the Secretary-General of the Congress, Mons. A. de Malarce, 68, rue de Babylone, a Paris.

---

It seems that the matter of banks lending money on stock collateral has been recently revived in England, in consequence of the failure of some heavy stock brokers, with large consequent loss to others. It is said there, just as it has often been said in this country, that the loaning of money by banks on stock collateral is wrong because it fosters undue speculation. But while it cannot be gainsaid

that a great deal of speculation is aided by the money of the banks, and that everybody would be better off if there were fewer dealings on speculation, yet the opinion that the banks should stop loaning on stocks does not seem a sound one. From the point of view of the banks such loans form a convenient and profitable branch of business, and is safer than a good deal of what outsiders might call more legitimate banking. It is therefore only very unpractical people who can expect the banks to relinquish such transactions because they sometimes prove unprofitable to the borrowers. But, on the other hand, for the banks to refuse to lend on bond or stock security would shut off one of the most potent sources of relief in cases of monetary stringency and panic. As the London "Economist" shows, in commenting on the subject, it was an excellent thing during the Paris crisis for the London Stock Exchange to take international securities from Paris faster than the English public absorbed them, and to have shut out England from those stocks would have greatly intensified the panic. But, of course, the Stock Exchange needed a good deal of money for the purpose. The same principle holds good in a single country, or community, the most necessary thing in order to allay a panic being the ability to borrow money readily on good security. The speculative spirit, so rampant in these times, must be attacked on some other side than this.

---

It was apparent some months ago that the Treasury fiscal year, ending July 1, was not going to make so good a showing as the previous year. The principal cause for this is the immense amount paid on account of pensions, being 65 million dollars up to June 1, and probably 73 millions for the fiscal year. There has been also a large falling off in the receipts from customs for some months, in anticipation of the new tariff going into effect on July 1. The consequence is that the surplus revenue for the year is expected to be nearer 125 millions than the 150 millions which was a year ago considered the normal surplus, under the rates of taxation then in force.

---

The Mexican Congress has ratified the settlement of the debt on the basis of the arrangement which was accepted by the English bondholders in May. A new issue of 3 per cent. external bonds is to be made to the amount of £20,000,000, known as the Sterling Consolidated Debt of the Republic of Mexico, and dated July 1, 1883. Of this amount £15,300,000 is to be exchanged for outstanding bonds and other obligations. For each £100 of the 3 per cents of 1851 with coupons from January 1, 1867, will be given £112 in new bonds, and other obligations, consisting largely of representatives of unpaid interest, are scaled down heavily. Financial authorities on the other side are inclined to think that the Mexicans are trying to make a good showing

in order to induce the investment of foreign capital in their country. It will be some time, however, before cautious capitalists will risk large amounts there, if they ever do. Mexico can only be received "on probation" into the community of solvent nations for some years to come.

---

The Boston "Traveller" says that the national banks of Boston lose money by their practice of taking out-of-town checks from their customers on deposit as cash, thereby furnishing capital to their depositors without charge for interest. It advises the banks to establish a special bank with a capital of \$200,000 or \$300,000, for the specific purpose of doing this business at equitable rates for the business firms of the city. It further expresses the opinion that banks with a capital of \$500,000 and upward would earn at least 1 per cent. per annum more on their capital, if they were paid for the interest and expense incurred in doing the work which they now do for nothing. It seems to us that the banks do this kind of business for the purpose of inducing their customers to keep their accounts with them. Some banks make out-of-town collections gratis for a good customer, while they charge a fee for the same service to a poor customer. This is a matter of practical business. The practice of business houses doing a large part of their discounting through bill brokers, and of private bankers paying interest on daily balances of depositors, show that banks have a considerable competition to meet. It is doubtful if any change in the relations of the banks to their customers will, in the immediate future, be in the direction of restricting the privileges that the latter now enjoy. It will rather be in the other direction. Of course, if the Boston banks find the present practice too burdensome, they should attempt a reform, but the attempt should not be based solely on the idea that they must get a day's interest on all their capital every day.

---

The "American Trade Journal," of St. Louis, in republishing in full the piece of comment in our May number on the bill to tax brokers' sales, prefaces it as follows:—"The following remarks on legislation and legislators in New York State, from RHODES' JOURNAL OF BANKING, contains truths that are worthy of consideration by other communities. New York is not the only State that suffers from 'vicious legislation.'"

---

The statement of the New York banks at the end of June indicates that business on the whole is active, the loans being a little larger than at any previous time this year. The lawful money reserve is strong, however, the plus being over 9 million dollars.

## LAWFUL-MONEY RESERVE OF NATIONAL BANKS.

### METHODS OF COMPUTATION; AND FUNDS AVAILABLE FOR RESERVE UNDER THE LAW.

The law now regulating the reserves which national banks are required to keep on hand to protect their deposits, is found in sections 5191, 5192 and 5195 of the Revised Statutes of the United States\* as modified by section 2 and part of section 3 of the Act of June 20, 1874. The text of the sections mentioned, having reference to reserve, is as follows:

[U. S. Revised Statutes.]

(SEC. 5191.) Every national banking association in either of the following cities, Albany, Baltimore, Boston, Cincinnati, Chicago, Cleveland, Detroit, Louisville, Milwaukee, New Orleans, New York, Philadelphia, Pittsburgh, Saint Louis, San Francisco, and Washington, shall at all times have on hand, in lawful money of the United States, an amount equal to at least twenty-five per centum of the aggregate amount of its notes in circulation and its deposits; and every other association shall at all times have on hand, in lawful money of the United States, an amount equal to at least fifteen per centum of the aggregate amount of its notes in circulation, and of its deposits. Whenever the lawful money of any association in any of the cities named shall be below the amount of twenty-five per centum of its circulation and deposits, and whenever the lawful money of any other association shall be below fifteen per centum of its circulation and deposits, such association shall not increase its liabilities by making any new loans or discounts otherwise than by discounting or purchasing bills of exchange payable at sight, nor make any dividend of its profits until the required proportion, between the aggregate amount of its outstanding notes of circulation and deposits and its lawful money of the United States, has been restored. And the Comptroller of the Currency may notify any association, whose lawful-money reserve shall be below the amount above required to be kept on hand, to make good such reserve; and if such association shall fail for thirty days thereafter so to make good its reserve of lawful money, the Comptroller may, with the concurrence of the Secretary of the Treasury, appoint a receiver to wind up the business of the association, as provided in section fifty-two hundred and thirty-four.

(SEC. 5192.) Three-fifths of the reserve of fifteen per centum required by the preceding section to be kept, may consist of balances due to an association, available for the redemption of its circulating notes, from associations approved by the Comptroller of the Currency, organized under the act of June three, eighteen hundred and sixty-four, or under this Title, and doing business in the cities of Albany, Baltimore, Boston, Charleston, Chicago, Cincinnati, Cleveland, Detroit, Louisville, Milwaukee, New Orleans, New York, Philadelphia, Pittsburgh, Richmond, Saint Louis, San Francisco, and Washington. Clearing-house certificates, representing specie or lawful money specially deposited for the purpose, of any clearing-house association, shall also be deemed to be lawful money in the possession of any association belonging to such clearing-house, holding and owning such certificate, within the preceding section.

\*These sections, together with all the laws governing national banks, can be found in the National Banking Laws, compiled in the office of the Comptroller of the Currency, a copy of which can be obtained by any national bank not already supplied, on application to that office.

(SEC. 5195.) Each association organized in any of the cities named in section fifty-one hundred and ninety-one shall select, subject to the approval of the Comptroller of the Currency, an association in the city of New York, at which it will redeem its circulating notes at par; and may keep one-half of its lawful-money reserve in cash deposits in the city of New York. But the foregoing provision shall not apply to associations organized and located in the city of San Francisco for the purpose of issuing notes payable in gold. Each association not organized within the cities named, shall select, subject to the approval of the Comptroller, an association in either of the cities named, at which it will redeem its circulating notes at par. The Comptroller shall give public notice of the names of the associations selected, at which redemptions are to be made by the respective associations, and of any change that may be made of the association at which the notes of any association are redeemed. Whenever any association fails either to make the selection or to redeem its notes as aforesaid, the Comptroller of the Currency may, upon receiving satisfactory evidence thereof, appoint a receiver in the manner provided for in section fifty-two hundred and thirty-four, to wind up its affairs. But this section shall not relieve any association from its liability to redeem its circulating notes at its own counter, at par, in lawful money on demand.

[Act of June 20, 1874.]

SEC. 2. That section thirty-one of the "national bank act" be so amended that the several associations therein provided for shall not hereafter be required to keep on hand any amount of money whatever by reason of the amount of their respective circulations; but the moneys required by said section to be kept at all times on hand shall be determined by the amount of deposits in all respects, as provided for in the said section.

SEC. 3. That every association organized, or to be organized, under the provisions of the said act, and of the several acts amendatory thereof, shall at all times keep and have on deposit in the Treasury of the United States, in lawful money of the United States, a sum equal to five per centum of its circulation, to be held and used for the redemption of such circulation; which sum shall be counted as a part of its lawful reserve, as provided in section two of this act. \* \* \* \*

It will be seen that section 5191 names sixteen cities, each bank located in any one of which is required to have on hand at all times lawful money of the United States, equal at least to 25 per cent. of the aggregate amount of its circulation and deposits; and that each bank located elsewhere than in the cities named is required to have on hand lawful money at least equal to 15 per cent. of its aggregate circulation and deposits. We have thus at once banks of two classes, 25 per cent. banks and 15 per cent. banks.

That the words *on hand* in this section do not mean in the bank itself—in its own vault or till—may be seen from sections 5192 and 5195. Section 5192 provides that three-fifths of the reserve which 15 per cent. banks are required to keep may consist of balances, available for redemption of circulating notes, due to the association from national associations approved by the Comptroller of the Currency, located in any of the sixteen cities named, the other two-fifths being in bank. Section 5195 provides that 25 per cent. banks outside of New York may each keep one-half of their lawful reserve in a national bank approved by the Comptroller located in New York City. The provisions in the sections quoted having reference to the redemption of circulating notes of national banks at redemption agencies in New York and other reserve cities have been repealed by sections 1 and 2 of the Act of June 20, 1874, quoted, leaving still in force the right to keep

a certain portion of their required reserve with banks in those cities. Sections 1 and 2 of the act mentioned also repeal all provisions requiring reserve on circulating notes, except in the case of gold banks.\*

Instead of reserve on circulation, each national bank is required to keep at all times with the Treasurer of the United States, in lawful money, a sum equal to 5 per cent. of its circulation. This 5 per cent. fund is also permitted to be counted as a portion of the reserve on deposits. The 25 per cent. banks are divided into two classes: those in New York City and those in the other reserve cities.

In New York City the required reserve is 25 per cent. of deposits, all of which must be in bank.

In the other reserve cities the required reserve is also 25 per cent. of deposits only one-half or 12 1-2 per cent. of which need be kept in bank, the remaining 12 1-2 per cent. can be deposited in New York with approved reserve agents.

Outside of New York and the reserve cities the reserve is 15 per cent of deposits, two-fifths to be kept in bank and three-fifths in New York, or in any of the other reserve cities.

These various percentages must be computed on the aggregate deposits, that is, on all deposits which appear on the balanced statement of the bank. It is very doubtful whether national banks have power either to take time deposits or to borrow money and create bills payable. At all events it is believed that whatever agreement may be made with a depositor or party from whom money is received on time, or borrowed, the bank would be obliged to pay on demand if the other parties did not choose to adhere to their agreement. For this reason all time deposits or bills payable reported by national banks are held to require a reserve the same as other deposits.

Deposits are divided for purposes of computing reserve into two classes, viz.: Bank deposits—that is amounts due to banks—in one class, and all other deposits in the other. Certain deductions are allowed from the gross deposits. First, checks in exchanges can be deducted from deposits of any class; but, second, amounts due *from* banks can only be deducted from amounts due *to* banks, and this must be particularly noted.† In a bank belonging to or dealing through a clearing-house, the clearing-house exchanges are the only checks which can properly be deducted from deposits, but in a bank located where there is no clearing-house it is allowable to reduce the deposits by checks on banks in same town or city. If banks desire to have checks on banks in same place allowed as a deduction, such checks must be separated in the schedule of checks and cash items on the back of the report.

#### RESERVE IN BANK.

The funds available for reserve in bank are comprised under the

\*See page 577, hereafter.

† The allowance of any deduction whatever is a ruling of the Comptroller's office.

general term, lawful money, which has been held to mean gold and silver coin of the United States and legal-tender notes. By special statute clearing-house certificates are available for reserve (Section 5192, R. S.) In the same way, are available United States gold and silver certificates (Section 12 of Act July 12, 1882) and United States certificates of deposit of legal-tender notes (Section 5193, Revised Statutes). There were formerly many other forms of certificates and Treasury notes available as reserve under various statutes. These are, however, now obsolete. All the forms in which reserve may now be kept have been mentioned. Some of these obsolete forms were the compound interest notes, 7-30 notes, three per cent. certificates, etc.

#### RESERVE OUTSIDE OF BANK.

With the 15 per cent. banks an amount with an approved reserve agent in any reserve city equal to but not exceeding three-fifths of the total reserve required, is available for reserve. With 25 per cent. banks not located in New York City an amount with an approved reserve agent not exceeding one-half of the total reserve required, is available for reserve.

The 5 per cent. fund, to an amount not exceeding 5 per cent. of the circulation of the bank, is allowed to protect deposits. In the twenty-five per cent. banks it will protect 4 times, and in the 15 per cent. banks 6 2-3 times its own amount of deposits. In all computations given hereafter allowance is made at these rates for this fund. No amount with the Treasurer of the United States in excess of 5 per cent. of circulation can count as reserve.

#### BLANK REPORT.

On page 556 is printed the form of blank sent to national banks by the Comptroller of the Currency, to enable them to make the reports required by law.

In this blank the items used in computing reserve have been distinguished in the printing. The items of deposits on the Cr. side have been printed in SMALL CAPITALS, as well as the items of deductions on the Dr. side. The items available for reserve have been printed in *italics*. An inspection of this blank will show, at a glance, all items upon which reserve is required, those which are allowed as deductions, and those which are treated as available for reserve, in the computations made in the office of the Comptroller of Currency.

The computations divide themselves naturally into the three classes already indicated:

- 1st.—Twenty-five per cent. banks in New York City, where all reserve, with the exception of the Five per cent. Redemption Fund, is kept in bank. Under this head but one example is necessary.
- 2d.—Twenty-five per cent. banks in other reserve cities. To illustrate the computation of reserve for this class of banks, four examples will be given.
- 3d.—Fifteen per cent. banks. The method of computing the reserves of banks of this class will also be illustrated by four examples.

## RESERVE OF NATIONAL BANKS LOCATED IN NEW YORK CITY.

There is very little intricacy in the method of determining the necessary reserve of these banks. All that is required must be kept in bank, or in 5 per cent. redemption fund, and the difficulties arising from a division into reserve with reserve agents and reserve at home do not occur. The rule is as follows:

**RULE.**—Deduct amounts due from banks from amounts due to the same, and also to deduct exchanges for clearing-house from all other deposits, add together the results of the subtractions and deduct from the sum four times the five per cent. redemption fund. Twenty-five per cent. of the remainder is the required reserve which must all be in bank, in one of the forms of lawful money or certificates available for reserve, heretofore described. If amounts due from banks equal or exceed amounts due to the same, both amounts are omitted from the computation.

The figures on opposite page represent the balance sheet of a New York City bank:

## REPORT NO. 1.

The computation of the reserve for the state of facts shown in this statement is given below:

|                                                                                               |                     |                     |
|-----------------------------------------------------------------------------------------------|---------------------|---------------------|
| Dividends unpaid (Item 6, Cr.).....                                                           | \$24,375            |                     |
| Individual deposits (Item 7, Cr.).....                                                        | 13,712,616          |                     |

| Deduct due from the same (items 8-9, Dr.).....                                                | 1,625,788           | 975,266             |
|                                                                                               |                     | <u>\$13,611,478</u> |
| Total deposits requiring reserve.....                                                         |                     | \$13,611,478        |
| 5 per cent. Redemption Fund (Item 22, Dr.), \$22,500, protects four times its own amount..... |                     | 90,000              |
|                                                                                               |                     | <u>\$13,521,478</u> |
| Remainder.....                                                                                |                     | \$13,521,478        |
| 25 per. cent. of remainder equals reserve required.....                                       |                     | \$3,380,369         |
| all of which must be in bank.                                                                 |                     |                     |
| The bank held—Specie (Item 19, Dr.).....                                                      | \$3,697,886         |                     |
| Legal-tender notes (Item 20, Dr.).....                                                        | 489,925             | 4,187,811           |
|                                                                                               |                     | <u>\$807,442</u>    |
| Excess of reserve held.....                                                                   |                     | \$807,442           |

It will be noticed that the amounts due to banks largely exceed the amounts due from the same. If this condition were reversed, and the amounts due from banks had been the larger, the only change in the computation would be to omit amounts due to and from banks altogether. The computation would then be:

|                                                                       |                     |
|-----------------------------------------------------------------------|---------------------|

RESERVE OF NATIONAL BANKS LOCATED IN RESERVE CITIES OTHER  
THAN NEW YORK.

It is only necessary to repeat that the total required reserve in these banks is 25 per cent. of net deposits. One-half of this 25 per cent may be kept with approved reserve agents in New York City; the remaining half being required to be kept in bank. The figures given in Report No. 2 represent the balance sheet of a bank of this class, showing a deficiency both in the reserve at home, and in that with reserve agents.

REPORT NO. 2.

The computation of reserve on these figures is as follows:

|                                                                                                 |                  |                    |
|-------------------------------------------------------------------------------------------------|------------------|--------------------|
| Dividends unpaid (item 6, Cr.).....                                                             | \$8              |                    |
| Individual deposits (item 7, Cr.).....                                                          | 864,899          |                    |
| Demand certificates of deposit (item 8, Cr.).....                                               | 27,834           |                    |
| Certified checks (item 10, Cr.)....                                                             | 24,379           |                    |
|                                                                                                 | <u>\$917,121</u> |                    |

| Total deficiency.....                                                                           |                  | <u>\$26,915</u>    |

The next balance sheet given is that of a bank in a reserve city, having an amount with reserve agents greater than one-half of the total reserve required, the home reserve being at the same time deficient. The object in this instance is to use as much of the balance with reserve agents as can be legally counted as reserve, and at the same time employ the excess, which cannot be counted as reserve, to offset and reduce bank deposits.

## REPORT NO. 3.

It can be seen at a glance that this bank has amounts due to banks much greater than the amounts due from banks. A preliminary calculation will show that one-half of the reserve required on deposits is much less than the amount due from reserve agents. Thus roughly there are about \$1,400,000 of deposits (items 6, 7, 8, 9, 11, 12, 14, 15, Cr.) after deducting due from banks and clearing-house exchanges (items 8, 9 and 16, Dr.). One-half of 25 per cent. of this sum (\$175,000) is all that can be counted as reserve with reserve agents, with which the bank has \$210,000 (item 7, Dr.) or an excess of about \$35,000. It can also be seen at a glance that this excess is not sufficient to offset the excess due to banks (items 14 and 15, Cr.) over amount due from banks (items 8 and 9, Dr.) It is under such circumstances that what is known as the two-sevenths rule applies. In order to understand the necessity for and application of this rule, as well as the principles on which it is based, it may be prefaced that it is a short method of arriving at true reserve which can only otherwise be determined by a long and tedious calculation. In order to easier understand the rule mentioned this longer method will first be given. The above report shows the following items of deposits, etc. :

|                                                                     |             |             |
|---------------------------------------------------------------------|-------------|-------------|
| Dividends unpaid (item 6, Cr.).....                                 | \$80        |             |
| Deposits (item 7, Cr.).....                                         | 1,114,081   |             |
| U. S. Deposits (item 12, Cr.).....                                  | 75,000      |             |
|                                                                     | <hr/>       |             |
|                                                                     | \$1,189,161 |             |
| Deduct exchanges (item 16, Dr.).....                                | 60,220      |             |
|                                                                     | <hr/>       | \$1,119,941 |
| The Five per cent. Fund (\$11,500, item 22, Dr.), protects of above |             |             |
| four times its own amount.....                                      |             | 45,000      |
|                                                                     |             | <hr/>       |
| Leaving .....                                                       |             | \$1,074,941 |
| Due to banks and bankers (items 14-15, Cr.).....                    | \$254,898   |             |
| Deduct due from same (items 8-9, Dr.)..                             | 63,589      | 191,309     |
|                                                                     | <hr/>       | <hr/>       |
| Deposits requiring reserve.....                                     |             | \$1,266,250 |

Thus, after making deductions and allowing for 5 per cent. fund, there are still \$1,266,250 deposits for which reserve must be held, of which \$191,309 are bank deposits not covered or offset by amounts due from banks. Twenty-five per cent., or one-fourth of \$1,266,250, is the total required reserve. One-half of the total reserve, equal to one-eighth of \$1,266,250, can be counted as available for reserve in the hands of reserve agents.

The remaining one-eighth must be in bank. One-eighth of \$1,266,250 is \$158,281, and so much therefore of the sum in the hands of reserve agents may now be assumed to be available for reserve.

The bank has, however, with reserve agents \$210,672 (item 7, Dr.), or \$52,391 more than can be counted as reserve. This excess may now be treated as simply due from banks, and deducted from amounts due to banks so long as such amounts exist to be offset. Making the de-

duction. the deposits requiring reserve are reduced from \$1,266,250 to \$1,213,859. Another difficulty now arises. It has been seen that a sum in the hands of reserve agents equal to *one-eighth* of the deposits can be counted as reserve. By the first assumption the deposits were placed at \$1,266,250 and the *one-eighth* at \$158,281. But the deposits have been reduced to \$1,213,859, and the *one-eighth* available with reserve agents must consequently be reduced to \$151,732. A further excess of \$6,549 thus appears, which must also be deducted from deposits, reducing them still further and also reducing the amount with reserve agents which can be counted as available for reserve, thus leaving a still further excess to be again deducted, etc. After repeating this process several times a point will at length be reached when no further deduction is necessary. In this instance these repeated excesses and deductions are practically as follows. If accurately carried out without omitting fractions each excess would be just *one-eighth* of the preceding one.

| <hr/>                                                 |             |         |
| Deficiency in reserve in bank.....                    | \$26,297    |         |

In order to avoid this long and tedious process the two-sevenths rule has been invented.

It has been seen that the \$1,266,250 of deposits which formed the basis of the preceding computation contained a certain unknown amount which was entitled to be offset by the excess with reserve agents. The amount so entitled to be offset was exactly the same as the excess with reserve agents. Calling this unknown amount X and it appears that the amount \$1,266,250 equals eight-eighths of net deposits plus X, and also that the amount with reserve agent, viz: \$210,-

672, equals one-eighth of net deposits plus X; (for if X, not entitled to count as reserve, is taken away, there is left just what is entitled to count as reserve, viz: one-half of 25 per cent. of, or one-half of one-quarter of, or one-eighth of net deposits.) Now, if from \$1,266,250 is deducted \$210,672, the remainder, \$1,055,578, equals seven-eighths of the net deposits, for one-eighth plus X has been taken from eight-eighths plus X, leaving seven-eighths. Two-sevenths of seven-eighths of the net deposits is the same as 25 per cent. of the net deposits. Hence the two-sevenths rule:

**RULE.**—After making all the usual deductions, from the remaining deposits deduct the whole amount in the hands of reserve agents; two-sevenths of the remainder will be the total reserve, and one-seventh the home reserve required.

By this rule the computation of the reserve on bank statement previously given would be as follows:

|                                                                                           |             |          |
|-------------------------------------------------------------------------------------------|-------------|----------|
| Dividends unpaid (Item 6, Cr.).....                                                       | \$80        |          |
| Deposits (Item 7, Cr.).....                                                               | 1,114,081   |          |

|                                                                                           | <hr/>       |          |
|                                                                                           | \$1,266,250 |          |
| Deduct amount with reserve agents (Item 7, Dr.). . . . .                                  |             | 210,672  |
|                                                                                           | <hr/>       |          |
| Remainder .....                                                                           | \$1,055,578 |          |
| Two-sevenths of remainder equal total reserve required.....                               | \$301,564   |          |
| One-half of which, \$150,797, is protected by same amount with reserve agents.            |             |          |
| One-half is home reserve required.....                                                    | \$150,797   |          |
| The bank had in its vaults—Specie (Item 19, Dr.).....                                     | \$112,579   |          |
| Legal-tender notes (Item 20, Dr.)                                                         | 6,921       |          |
| U. S. Cert's of Deposit for Legal-tender notes (Item 21, Dr.)..                           | 5,000       | 124,500  |
|                                                                                           | <hr/>       |          |
| Deficiency in home reserve.....                                                           |             | \$26,297 |

The same result is thus obtained by both methods, but the two-sevenths rule does away with much labor. If the excess with reserve agents had not been thus allowed the deficiency would have been \$33,781.

When it is found that the excess with reserve agents and the amounts due from banks and bankers together equal or exceed the amounts due to banks and bankers, it becomes necessary simply to throw out bank deposits altogether and proceed as if there were none. The following report is an example of this:

## REPORT No. 4.

## REPORT NO. 4.

A rough estimate will show at once that there are about \$2,500,000 of deposits after deducting exchanges, etc., and that one-fourth, or twenty-five per cent. of this is \$625,000, one-half of which is \$312,500. It will also readily be seen that there is at least \$100,000 excess with reserve agents and \$150,000 due from banks (items 8 and 9, Cr.) which, together, much more than offset the amounts (items 14 and 15, Cr.) due to banks. This excess due from banks cannot be offset against any other class of deposits, and is therefore useless to the bank for any purpose of reserve. The amounts due to banks having been wiped out by offset, the computation is as follows:

|                                                                                                                            |             |         |
|----------------------------------------------------------------------------------------------------------------------------|-------------|---------|
| Dividends unpaid (item 6, Cr.).....                                                                                        | \$405       |         |
| Individual deposits (item 7, Cr.).....                                                                                     | \$2,572,469 |         |
| Demand certificates of deposit (item 8, Cr.).....                                                                          | 2,728       |         |

|                                                                                                                            |             | <hr/>   |
| Deficiency in home reserve.....                                                                                            | \$1,196     |         |

In the three previous cases the deficiencies have been in that portion of the reserve required to be kept in bank.

The following report—No. 5—shows a condition of things the reverse of this, where the largest portion of the reserve is in bank and the deficiency is in that portion which may be kept with reserve agents. It has been seen that no amount in the hands of reserve agents can directly make up for a deficiency in home reserve. An excess in home reserve can, on the contrary, always count, since if a bank sees fit, it can keep all its reserve in its own vaults.

RESERVE OF BANKS OUTSIDE OF RESERVE CITIES, OR FIFTEEN  
PER CENT. BANKS.

The five computations heretofore given have been based on statements of banks located in reserve cities where the reserve required to be kept is 25 per cent. of the net deposits. The banks located outside the reserve cities are required, as has already been stated, to keep a reserve of 15 per cent. only of net deposits, three-fifths of which, at most, may be kept with reserve agents, and two-fifths of which, at least, must be kept in bank. The computations of the reserves of the 15 per cent. banks are the same in principle, but the proportions are changed in accordance with the different requirements of law.

The following—No. 6, on next page—is the report of a 15 per cent. bank, which shows a deficiency both in home reserve and in that with reserve agents.

| Amounts due to banks (items 14-15, Cr.).....                                                                   | \$164,605        |                  |
| Amounts due from banks (items 8-9, Dr.).....                                                                   | 15,385           | <u>\$149,220</u> |
| Total remaining deposits requiring reserve.....                                                                |                  | <u>\$394,339</u> |
| 15 per cent. of above is total reserve required.....                                                           |                  | <u>59,150</u>    |
| Three-fifths of foregoing amount may be with reserve agents                                                    | \$35,490         |                  |
| The bank had with reserve agents (item 7, Dr.)..                                                               | 31,027           |                  |
| Deficiency with reserve agents.....                                                                            |                  | <u>\$4,463</u>   |
| Two-fifths at least must be in bank.....                                                                       | \$23,660         |                  |
| There was in bank—Specie (item 19, Dr.).....                                                                   | \$20,500         |                  |
| Legal-tender notes (item 20, Dr.)..                                                                            | 2,000            | <u>22,500</u>    |
| Deficiency in home reserve.....                                                                                |                  | <u>1,160</u>     |
| Total deficiency.....                                                                                          |                  | <u>\$5,623</u>   |

The next statement\* shows, in the case of a 15 per cent. bank, the method of utilizing the excess in the hands of reserve agents as an offset against amounts due to banks. The method of doing this with banks in reserve cities has already been shown under the head of the two-sevenths rule. With 15 per cent. banks the principle is the same, but the legal proportions of reserve with reserve agents and in bank being different, a different rule is required.

**RULE.**—After all other deductions have been made, the whole amount with reserve agents is to be deducted, and fifteen ninety-firsts of the remainder (instead of two-sevenths, as in the case of 25 per cent. banks), is the total reserve required.

## REPORT NO. 7.

In the above report a rough estimate will show that the amounts due to banks exceed those due from the same by about \$160,000. It can also be seen at once that the total deposits after deductions are made are about \$760,000, 15 per cent. of which, being the total reserve required, is about \$114,000, and that three-fifths of the latter sum is about \$69,000. From this it appears that there being \$128,063 with reserve agents, there is an excess at first sight with these agents of about \$59,000, which can be deducted from the amount due to banks. To do this in the ordinary way would require repeated calculations and deductions, as has already been seen when explaining the two-sevenths rule.

Avoiding this, the result can be obtained at once by following the rule last given.

|                                                                                                                      |                  |

| Two-fifths of required reserve, at least, must be in bank .....                                                      | \$40,494         |
| The bank held—Specie (item 19, Dr.).....                                                                             | \$6,243          |
| Legal-tender notes (item 20, Dr.).....                                                                               | 17,000           |
|                                                                                                                      | <u>23,243</u>    |
| Deficiency in home reserve.....                                                                                      | \$17,251         |

This method for 15 per cent. banks gives, as does the two-sevenths rule\* for 25 per cent. banks, the largest possible deduction for bank balances and makes the required reserve as small as possible.

As in the case of the 25 per cent. banks, so with the 15 per cent. banks, when it is evident that amounts due from banks, together with the excess with reserve agents, are equal to or exceed the amounts due to banks, the latter amounts are omitted from the computation, and any excess due from banks or reserve agents ceases to be of any avail to reduce the required reserve. The following statement illustrates this:

\* In demonstrating the two-sevenths rule it was assumed that deposits were eight-eighths of net deposits plus X, and that fund with reserve agents was one-eighth of net deposits plus X, and by taking one from the other, seven-eighths of net deposits were left. So, with the fifteen ninety-firsts rule it is found that gross deposits are one hundred one-hundredths of net deposits plus X, and that amount with reserve agents is three-fifths of fifteen one-hundredths, or nine one-hundredths of net deposits plus X. Deducting one from the other leaves ninety-one one-hundredths of net deposits; and fifteen ninety-firsts of ninety-one one-hundredths is the same as 15 per cent. of one hundred one-hundredths of the net deposits.

\* Checks on banks in same place.

## REPORT 8.

The deposits roughly estimated are about \$187,000, three-fifths of 15 per cent. of which, or 9 per cent., is \$16,830, showing that in the \$44,509 with reserve agents (item 7, Cr.), there is an excess of about \$28,000, which completely offsets the small balance due to banks.

The computation will then be as follows:

|                                                                                                                                |                  |         |
|--------------------------------------------------------------------------------------------------------------------------------|------------------|---------|
| Dividends unpaid.....                                                                                                          | \$64             |         |
| Individual deposits (item 7, Cr.)....                                                                                          | 170,604          |         |
| Demand certificates of deposit (item 8, Cr.).....                                                                              | 10,736           |         |
|                                                                                                                                | <u>\$181,404</u> |         |
| Deduct checks on banks in same town.....                                                                                       | 1,373            |         |
|                                                                                                                                | <u>\$180,031</u> |         |
| The Five per cent. Redemption Fund will protect 6 and two-thirds its own amount. ....                                          | 25,000           |         |
| Remainder.....                                                                                                                 | \$155,031        |         |
| 15 per cent. of remainder is required reserve.....                                                                             | 23,254           |         |
| Three-fifths of required reserve may be with reserve agent, \$13,952, and is protected by equal amount in hands of such agent. |                  |         |
| At least two-fifths of required reserve must be in bank.....                                                                   | \$9,301          |         |
| There was in bank—Specie (item 19, Dr.).....                                                                                   | \$1,471          |         |
| Legal-tender notes (item 20, Dr.).....                                                                                         | 5,000            | 6,471   |
| Deficiency in home reserve.....                                                                                                |                  | \$2,830 |

The next statement (See No. 9 on next page) is that of a 15 per cent. bank with the largest part of the reserve at home, not having with reserve agents the full three-fifths of the total reserve which it is legally permitted to keep there. There is no deficiency, however, as the computation hereafter given will show. This statement also shows bills payable, upon which, as has been said, a reserve is required.

## REPORT NO. 9.

## Computation:

per cent. or 15 per cent. banks. The figures, of course, will vary, but if the general principles laid down are followed every possible case can readily be worked out.

#### AVERAGE RESERVE.

The average reserve for any given period may be obtained by computing by the methods heretofore shown, the net deposits requiring reserve for each day in that period, and adding the results together for a divisor. In the same way the reserves held on the same days should be added together for a dividend. The quotient will be the percentage of average reserve for the period.

#### GOLD BANKS.

In 1870 a law was enacted authorizing the organization of certain banks called national gold banks. At the present time there are but three of these associations in existence, all of them located in California, one in the reserve city of San Francisco. These banks, unlike all other national banks, are still required by law to keep a reserve upon circulation as well as upon deposits, and not only this, but, like other national banks, they are obliged to keep a fund equal to five per cent. of their circulation at all times with the Treasurer of the United States.

A special statute (Section 5186) provides that these banks, whether in reserve cities or not, shall keep a reserve of 25 per cent. on their notes in circulation. As to deposits, they are under the same provisions of law as other national banks. The result of this is that a gold bank, if located outside of a reserve city, must keep 25 per cent. reserve on circulation, and 15 per cent. reserve on deposits. Of the aggregate reserve on both circulation and deposits, three-fifths may be with reserve agents and two-fifths must be in bank. A gold bank located in San Francisco is required to keep a reserve equal to twenty-five per cent. of its combined circulation and deposits, all of which must be in bank, as by section 5195 gold banks in San Francisco are specially exempted from the provision permitting one-half of reserve to be kept in New York. If, however, there was a gold bank located in any other reserve city, such gold bank could perhaps keep one-half of its reserve in New York. The law authorizing the establishment of gold banks did not evidently contemplate their organization outside of California. The five per cent. redemption fund with United States Treasurer, of a gold bank in a reserve city, protects deposits equal to four times its own amount, while that of a gold bank outside of a reserve city protects deposits equal to six and two-third times its amount. Lawful money, in the case of gold banks, is defined by the statute (Section 5186) to be gold and silver coin of the United States. Legal-tender notes are not, therefore, available as reserve of these banks, although gold and silver certificates are available by a subsequent law. The legal-tender

notes may, however, be deposited with the reserve agent, where such agent is permitted, and thus be indirectly made available for reserve.

#### FIFTEEN PER CENT. BANKS IN RESERVE CITIES.

There are two or three instances of banks now located in reserve cities which are only required to keep a total reserve of 15 per cent. This anomaly arises from the fact that when these banks were organized they were situated in a suburb which has since been absorbed by the growing city. Thus Birmingham was taken into Pittsburgh, Pa. The national bank in Birmingham, organized there before that town became a part of Pittsburgh, still retains, under a decision of the Attorney-General of the United States, the exact status it had at organization, and will retain it until its charter expires. Among other rights retained is that of keeping a reserve of 15 per cent. only. In the same situation are banks in Dorchester, Roxbury, and Charlestown, now parts of Boston, Mass., and in Georgetown, now part of Washington, D. C.

#### APPROVED RESERVE AGENTS.

Approved reserve agents have been frequently mentioned in the foregoing pages. Any bank outside of the reserve cities can select any national bank within any of such cities as a depository for its funds, and such funds so deposited are, when the selection is approved by the Comptroller, allowed to be counted as a part of the required reserve of the depositing bank. In the same way banks in reserve cities can select for approval banks in New York City. The bank making the selection writes to the Comptroller of the Currency and asks his approval of the chosen bank. The approval is usually given, and the necessary entries made in the books of the Comptroller's office. The bank is advised that the selection is approved, and thenceforth all balances due from this approved bank are counted as available for reserve under the law.

#### RICHMOND AND CHARLESTON.

Richmond and Charleston, although named in section 5192 among the cities, wherein 15 per cent. banks are permitted to deposit three-fifths of their reserves, are not named in section 5191, among the cities, wherein banks are required to keep the larger reserve of 25 per cent.—this larger reserve being principally required because of the greater responsibility incurred by receiving the deposit of bank reserves. For this reason no banks located in Richmond or Charleston have ever been approved as reserve agents by the Comptroller.

LAW NOTES, AND REPLIES TO QUESTIONS.

---

**SUIT AGAINST STOCK BROKERS.**—The firm of E. A. Vanderhoof, Jr., & Co., the brokers who recently failed, have been sued in the Supreme Court of New York by Abraham Disbecker, to recover \$3,000. Disbecker sets forth that the firm converted property belonging to him to their own use. In September last he employed the firm as his brokers. He was then the owner of a "call" for several hundred shares of Missouri, Kansas & Texas Railway stock. The brokers subsequently received the stock, and paid \$8,000 for it on his account. He alleges that he paid them for their services in carrying the stock. In May last they purchased 100 more shares of stock for him, and he paid them \$1,000 as margin. In the early part of this month, Disbecker says he requested the firm to deliver to him his 300 shares of stock, he agreeing to pay them \$7,493.37, but they informed him that the stock had been sold, although he had received no notice of the sale. He also charges that the firm sold his stock prior to the last payment as margin made by him. Orders of arrest were issued against the members of the firm, they were taken in custody and were released on giving bail in \$2,500 each.

**THE CASE OF WILLIAM J. HUTCHINSON** against the New York Stock Exchange has been up for argument before Judge Lawrence, of the New York Supreme Court, on a motion to continue the injunction to restrain the Exchange from interfering with Mr. Hutchinson in the exercise of his privileges as a member. A demurrer was put in by the Exchange based on the grounds that no cause of action was shown by the complaint, and that the two causes of action had been improperly joined. After argument on the effect of the demurrer on June 22, Judge Lawrence decided to hear the affidavits in opposition to the continuance of the order, for the reason that it was granted on an affidavit. The affidavits of F. N. Lawrence, late President of the Exchange, and others, were read declaring the investigation before the expulsion to have been a fair one. Mr. Choate, for Hutchinson, moved for an order of reference, as a question of fact had been raised. The motion was denied, and an adjournment was taken until June 30, to enable counsel for the plaintiff to procure counter affidavits.

**PROPERTY IN A STOCK EXCHANGE SEAT.**—A decision has been handed down by Judge Truax, of the Superior Court, of New York, affirming the principle that a seat in the Stock Exchange is, in a certain sense, a privilege and not property. In 1878 Erastus F. Mead, a member of the New York Stock Exchange, went into bankruptcy. Among his assets he included his seat in the Exchange, but his assignee at that time declined to accept the seat

as an asset. Mr. Mead continued to pay his membership dues, and in 1879 transferred his seat to J. Frank Emmons, who was subsequently admitted to full privileges as a member of the Stock Exchange. In 1882 Mr. Mead's assignee, in closing up his accounts, sold "whatever right or title" Mr. Mead possessed in a seat in the Stock Exchange, at auction, to Mr. Henry McCabe, a milk dealer, for \$1. Mr. McCabe brought suit in the Superior Court against J. Frank Emmons and the Stock Exchange, last January, to obtain possession of the seat, with its privileges. On February 6 Judge Ingraham refused to issue an injunction to restrain Mr. Emmons from exercising a member's privilege on account of the seat, and now Judge Truax has dismissed the complaint and ordered judgment for the defendants, with costs.
