stocks and bonds held in their reported loans and others do not. If, in the interval between two statements, any of these stocks and bonds are turned into cash by a bank which has not been in the habit of reporting them in loans, the cash of that bank would increase out of proportion to any decrease there might be in its reported loans and deposits. The statements of the banks, as made to the Clearing-House, are not sworn to, nor is there apparently any other precaution taken to insure accuracy or uniformity. We have no desire to suggest that there is or has been any inaccuracy in any instance, but the peculiarity referred to in the statement of the 24th of September indicates that, in some respects, the reports made to the Clearing-House, to say the least, do not show the full strength of the banks. In a matter of so much importance to the country as the weekly statement of the Clearing-House banks of New York city, every care should be taken to insure uniform reports, which show the full strength of the situation, and which will not cause glaring inconsistencies in the figures from one week to another.

FROM AN INTERESTING article on the cotton crop of the United States for the year ending September 1, 1887, published in the *Commercial and Financial Chronicle*, it appears that the total crop reached 6,513,623 bales, the exports being 4,458,326 bales, and the amount used in the country 2,077,587 bales, leaving 82,086 bales on hand. The total crop for the year ending September 1, 1886, was 6,210,215 bales, and for that ending September 1, 1885, was 5,669,021 bales. The total cotton consumption of the world for the year 1887 was 9,718,000 bales, of which Great Britain used 3,707,000 bales, the continent of Europe 3,588,000 bales, and the United States 2,423,000 bales. With regard to the cotton industry in the United States, it is stated that the manufacturers during the twelve months have been more actively employed and at a better margin of profit than for several years past. In the South the conditions have been favorable. Returns received show that there were 232 mills in operation in that section of the country, consuming 183,201,000 pounds of cotton.

THE FAILURE OF Henry S. Ives & Co. has been made the text of a vast amount of newspaper reflection, the grand sum total of which is, on the one hand, that there is nothing so successful as success, and, on the other, that pretenders to wealth and resources which they do not possess are sure to be unmasked. The history of Ives' transactions, of the manner in which he acquired the interests which finally culminated in his virtual possession of the Cincinnati, Hamilton & Dayton Railroad, reads like the history of Aladdin and the wonderful lamp. It is a maxim which is founded on human experience, but is also a recognition of human weakness, that all stable things are of slow growth. The process of accumulation of property is supposed to be slow, although

men are constantly racking their brains to discover or invent some more rapid methods, and many patents have been taken out. Some have been successful in availing themselves of these inventions, and have used them to build up fortunes which they have retained. Many more have made money, but lost it again. The case of Ives, instead of being anything unique or peculiar, is merely one of a long line of similar ones which have from time to time occurred. How many great undertakings which finally have achieved success have, in the course of their development, been on the very verge of disaster? How desperate and perhaps dishonest have been the means adopted to keep them from falling to pieces! When a wreck does occur, and the inside powers that moved the scenes are exposed to view, the air is filled with demonstrations that the means employed could never, under any circumstances, have succeeded.

THE LARGE NUMBER of banks which the enterprising force of Bank Examiners now employed by the Comptroller of the Currency discover to be in a dangerous condition in time to prevent irretrievable disaster indicates that the Examiner is becoming too sharp for the average dishonest bank official. It reminds one of the interesting rivalry which for years has existed between the inventors of big guns and the designers of armor plates, or the equally interesting emulation of burglars and safe makers. First one side apparently gains the advantage, and then the other side surprises it. The advantage now is evidently with the Examiners. The bank officers seem to be handicapped, although they have the advantage of the near proximity of Canada, either by a too conservative inclination to adhere to old methods, or by a lack of inventive faculty. The only way to restore the equilibrium is by an interchange of ideas among those connected with banks who desire to secure the highest personal profits from their institutions. De Quincy mentions a society in England organized for encouraging murder as one of the fine arts. Why not have an association for the purpose of devising and putting in practice the best and safest methods of beating the Bank Examiners? In the past the latter have suffered in public estimation from criticisms based on alleged slowness and inefficiency, but lately they are becoming unsufferably suspicious and acute.

IT IS STATED that the assets of the Columbian Bank of Philadelphia will realize considerably more than the value at which they were appraised. President Phillips was much surprised that the appraised value was no larger, and thinks that the securities of the bank were very much underestimated. It is to be hoped that this statement is based on ascertained facts and is not merely an assertion made to make the creditors more amenable to delay, and the public more favorably inclined to those who were responsible for the failure.

AMERICAN BANKERS' ASSOCIATION.

The convention of this association which will meet at Pittsburgh on October 12, seems to make a retrospect of the history and work of this body a matter of interest at this time. The association had its origin in the feeling that a closer union among the banks of the country would result in the rendition of great services to banking interests and would advance the cause of sound banking. The first meeting of the present association was held in 1876, and consequently the convention of this year is the twelfth that has been held. Previous to the complete organization of this body several attempts had been made to bring about some concert of action among the banks of the United States. As early as 1818 soon after the expiration of the charter of the first Bank of the United States, Secretary Dallas attempted to unite the State banks of the country in the support of a uniform currency to be issued by them under the supervision of the central government, but he found there was such a diversity of interest and such a feeling of rivalry among them that it was impractical to accomplish his design. This attempt is not referred to as strikingly analogous to the efforts which finally resulted in the formation of the American Bankers' Association, but merely to illustrate the difficulties, which from adverse feeling among the banks had, to a greater or less extent be overcome. Perhaps the first attempt made automatically, by the bankers themselves to act together to any great extent, was in 1838. In May, 1837, there was a general suspension of specie payments. When the immediate panic had abated, some of the prominent banks in New York city aided by a few banks in Philadelphia and other large cities issued notices for a convention to be held on April 11, 1838, in New York city, and on that date 158 bank delegates representing banks in 18 States met in that city to take some action in regard to the currency and the resumption of specie payments. The result of the deliberations of this assemblage was a vote to resume in January, 1839. It is also claimed that out of the consultations of this convention was due the establishment of the free banking system of New York State, established by an Act of the Legislature, of April, 1838. A second convention of bankers was held in New York city in 1865, soon after the establishment of the National Banking system. It was largely attended by National Bank officers, but being confined to them naturally did not interest the entire banking interest. A third convention was held at Saratoga, N. Y., in 1875, and this convention may properly be looked upon as the parent of the present association. At this meeting of the bankers of the country a committee was appointed of which Mr. James Buell, President of the Importers and Traders' Bank of New York city was Chairman, to draw up a constitution and by-laws for the permanent organization of an American Bankers' Association. A call was issued in August, 1876, for a convention of bankers of the country to be held at Philadelphia, on October 3, to complete the organization of the association. The convention met on that day at the Judges' Hall, Centennial Grounds, Philadelphia. The meeting was called to order by Mr. Chas. B. Hall, of Boston, temporary chairman. He said that the present convention was an ad-

journed one from that held at Saratoga the previous year. Resolutions had been passed in Saratoga relative to an early return to specie payments, the taxation of banks, and the repeal of the two cent stamp tax. Mr. Hall's remarks as to the success of the endeavor to influence Congress to act in a manner favorable to the wishes expressed by the resolutions, would apply equally well at the present day. They were that "no action had been taken by Congress, although a committee of bankers had waited on the Ways and Means Committee of the House, but that none had been expected, the session being one for political purposes only, and not for legislation beneficial to the people or for the relief of business." Mr. Buell, the chairman of the committee which had been appointed for the purpose presented a draft of a constitution and by-laws. On motion of Hon. E. G. Spaulding of Buffalo, the father of the National Bank Act, the draft was referred to a committee for revision. This committee reported the next day and the constitution and by-laws as revised by them was unanimously adopted. Hon. Chas. B. Hall, of Boston, was elected the first president, and Mr. J. D. Hayes, secretary. Vice-Presidents were then appointed. Hon. Hugh McCulloch, Ex-Secretary of the Treasury, delivered an address of some length on the "Financial condition of the country." There were a number of other resolutions passed and the secretary Mr. J. D. Hayes read a paper on "Panics." The history of the first convention has been given at more length than our space will permit us in regard to subsequent conventions. It will be sufficient in referring to these to give a sketch of the dates and places and the chief matters which occupied the attention of the meetings.

The second convention was held at New York city at Association Hall, corner of 28d street and Fourth avenue. It commenced on Wednesday, September 12, 1877, and continued three days. The executive council provided for by the constitution had been appointed and Mr. Geo. S. Coe was chairman, Mr. James Buell, secretary, and Mr. Geo. F. Baker, treasurer. The report of this committee indicates an immense amount of work done in the way of influencing public opinion in the direction of reasonable views of banking matters. At this convention Sir Francis Hicks, of Canada, delivered an address as did also Mr. Joseph C. Grubb, Hon. Stewart L. Woodford, and Mr. Geo. S. Coe. The topic of all these addresses was the then absorbing one of the "Resumption of specie payments." The second day was occupied by an animated discussion of the "Silver question." The other subjects treated of on this and the succeeding day were "Exorbitant charges for the settlement of bankrupt estates," "Bank taxation," "Municipal bonds," "Savings banks," on which latter subject Dr. Marsland, now secretary, (at that time assistant secretary), read a paper. Officers were elected for the ensuing year, Hon. Chas. B. Hall being re-elected president, Mr. James Buell, secretary, and Mr. Geo. F. Baker, treasurer.

The third convention of the association was held at the Town Hall, Saratoga, August 7, 1878. The report of the executive council shows an immense amount of work done to bring about a condition of the law which should ameliorate some of the hardships under which the banks labored. The principal addresses and papers read at this meeting which, as usual continued three days, were one on "Subsidiary silver coinage," by Mr. O. E. Hale, of Keokuk, Iowa, on the "National Banking system," by the Hon. Geo.

Walker, by Mr. Geo. S. Coe, on the "Resumption of specie payments," by Mr. Geo. A. Butler, of New Haven, on the "Counterfeiting of bank notes." A change in the law regulating the rate of interest was discussed. Mr. Alexander Mitchell of Milwaukee, was elected president for the year 1878-1879. The other officers remained unchanged.

The fourth convention was held at the Town Hall, Saratoga, on August 6, 1879. The president Mr. Mitchell was absent and Mr. Vermilye the first vice-president presided. The secretary's report gave an encouraging account of the influence exerted by the organization in shaping legislation and congratulated the convention on the resumption of specie payments. The same officers were continued for the ensuing year. Hon. Jno. Jay Knox, Comptroller of the Currency had been invited to attend the convention, and made an address in which the various subjects of interest to bankers of the country were discussed. Other papers and addresses were by Mr. L. Halsey Williams, of Pittsburgh, Pa., on "Bank taxation in Pennsylvania," by Mr. Vermilye, who gave an elaborate account of the New York Clearing House, by Mr. Lamb, Superintendent of the Bank Department of New York, on "Savings Banks and their changes," by Hon. Daniel Needham, Bank Examiner for Massachusetts, on the "Interest of labor in the National Banking system." Mr. T. P. Handy, of Cleveland, gave also some reminiscences of banking before the introduction of railroads.

The fifth convention met at Saratoga, at the same place as the two previous ones. The meeting was called to order by Mr. Vermilye who introduced the president Mr. Alexander Mitchell, who addressed the convention. The officers were continued for the next year. A memorial to Congress on the subject of bank taxation was introduced and referred to the executive council. A letter from Secretary Sherman was read by Mr. Edward Atkinson; important papers and addresses were those by Mr. Geo. S. Coe, on the "Silver question"; by Mr. H. H. Camp, of Milwaukee on "Coin deposits as security for National bank notes"; by Dr. Marsland, secretary of the convention, a paper received from the Japanese Minister on the "National banking system of Japan"; by Mr. A. L. Snowden, Superintendent of the Philadelphia Mint, on the "Repeal of the silver law"; by Mr. John Thompson, of New York, "Against the coinage of the silver dollar"; by Mr. Geo. A. Butler on the "Relation of specie payments to other financial questions"; by Mr. Edward Atkinson on the "Industrial growth of the country." Numerous other papers, among them one sent by the Hon. Jno. Jay Knox, Comptroller of the Currency, were ordered printed.

The sixth convention was held at Niagara Falls, at the Pavilion in Prospect Park, on August 10, 1881. In the absence of both the president and vice-president, Hon. E. G. Spaulding was called on to preside. A letter was read from Hon. William Windom, Secretary of the Treasury, giving an interesting account of the extension of 5 and 6 per cent. bonds at $8\frac{1}{2}$ per cent. The addresses and papers at this convention were as follows: on the "Progress of the lake trade," by Mr. Henry Martin; on "Our banking system," by Hon. Reuben E. Fenton; on "When will another panic sweep over this country," by Mr. John Thompson; on "National banks" by Mr. N. B. Van Slyke; on "Money and its legitimate use," by Mr. William E. Gould; "The currency of the future," by Mr. Geo. S. Coe; on the "Progress of our Banking System," by

the Hon. Jno. Jay Knox, Comptroller of the Currency; on "English Banking," by Mr. Palgrave, of England; and on "The resources of the South Atlantic Cotton States," by Dr. Simonds, of Charleston, S. C. At this meeting Mr. Geo. S. Coe was elected president for the ensuing year.

The seventh annual session of the association was held at Saratoga, on August 16, 1882, and continued two days. The attendance at this convention was notably larger than usual. The meeting was called to order by the president Mr. Geo. S. Coe, who delivered an address. Hon. Luke P. Poland presented resolutions in favor of federal legislation establishing uniformity in the law regulating commercial paper in the States.

Papers and addresses were made as follows: on the "Currency of the Future," by Prof. Atwater; on "Clearings," by Col. Grosvenor, of New York; on "Our Financial Situation and the Dangers of the Future," by Mr. John Thompson, of New York; on "Banking in the West," by Mr. A. D. Lynch, of Indianapolis; on "The Industrial growth of Mississippi and the Cotton States," by Mr. W. H. Perkins, of Jackson, Miss.; on "Savings Banks," by Mr. Hepburn, New York Superintendent of Savings Banks, and on the same subject by Mr. W. B. Williams, of Jersey City; on "Is more Coin Needed," by Mr. Chas. Harrison, of Pittsburgh; on "an American Bimetallic Union," by Mr. William Brown, of Montreal. Valuable statistics in regard to banks were received from the Hon. Green B. Raum, Commissioner of Internal Revenue.

A letter was received from Mr. R. H. I. Palgrave, of England, on the tendency to limit the liability of bankers in that country. Mr. S. Dana Horton, since author of the "Silver Pound," made an address in which he expressed the view that the subject of bimetallic currency had not received proper consideration in this country.

The eighth session of the Association commenced on October 10, 1883, and continued two days. It was held at the Masonic Temple, Louisville, Ky. Mr. Geo. S. Coe delivered the opening address. The main feature of this Convention was a paper read by the Hon. John Jay Knox, Comptroller of the Currency, on the "Continuance of the National Banking System." Other addresses and papers were those by Hon. Joseph R. Hawley, of Connecticut, on a "Sound Currency;" by Mr. J. H. Lindenbarger, on the "Improvement the Banking System;" by Mr. E. C. Bohné, of Louisville, on the "Appreciation of Gold;" by Mr. Wm. P. St. John, on "National Banks and the Currency of the Future;" on "The Best Method of Preventing Panics," by Mr. John Thompson, of New York. Many other papers were sent to the Convention and ordered printed. Resolutions in regard to Southern Banking, to a National Bankrupt Law, and against Irresponsible Banking were presented and acted on. This was a meeting of much interest. Letters from Secretary Folger and ex-Secretary Hugh McCulloch were read. Mr. Lyman J. Gage was elected President for the ensuing year.

The ninth session of the Association was held in Putnam Music Hall, at Saratoga, on the 18th and 14th of August, 1884. The meeting was called to order by Mr. Lyman J. Gage, the President, who delivered the opening address. A resolution recommending the discontinuance of the coinage of the standard silver dollar was introduced. It was discussed by Mr. George A. Butler in favor, and, on invitation, by Hon. William Groesbeck, of Cincinnati,

against. The resolution was adopted. Papers and addresses were as follows: On "The Banking and Currency System in its Relations to the Business of the Country," this was read by Secretary Marsland; on "Clearing-House Methods," by Mr. B. B. Comegys, of Philadelphia; on the "Potter Refunding bill," by Mr. W. P. St. John; on "Conflicting State Legislation as to Commercial Paper," by Mr. E. K. Olmstead, of New York; on "Continuance of National Bank Currency," by Mr. Chas. S. Graham, of Newark, N. J.; two other papers on the same subject by Mr. Eben Sutton, of Salem, Mass., and Mr. William Ernst, of Covington, Ky.; on "Raised Drafts," by Mr. Daniel Geary, of Albuquerque, N. M.; on "Uses and Abuses of Banks," by Mr. N. B. Sligh, of Galveston, Tex.; on "Corporate Suretyship," by the Hon. Richard A. Elmer, of New York. Mr. John Thompson presented his usual paper on the "Prevention of Panics," this time in connection with the silver question. The Potter bill was explained at length by Mr. O. B. Potter, its author, and valuable banking statistics were received from Hon. Henry W. Cannon, Comptroller of the Currency.

The tenth Convention of the Association was held at Chicago on the 23d and 24th of September, 1885. Mr. Lyman J. Gage delivered the opening address. The main feature of this meeting was a discussion of the silver question. It was opened by Mr. W. L. Trenholm, of Charleston, since made Comptroller of the Currency, and was participated in by Mr. George Hague, of Montreal; Mr. Edward B. Lacey, of Charlotte, Mich.; Mr. Geo. S. Coe, Mr. James B. Colgate and Mr. Hammond, of Iowa. The subject, of course, was not fresh, but the discussion was particularly interesting, as most of those who participated in it apparently made their maiden efforts. Other papers were on "Collection of Country Checks," by Mr. A. W. Blye, Receiver of the Middletown National Bank, which was an exhaustive and intelligent paper, well worthy of re-publication at the present time; on "Banks and Business of the West," by Mr. C. B. Evans, of Chicago, and on "Extradition Treaties and Their Defects," by Washington B. Williams. Mr. Lyman J. Gage was re-elected President.

The eleventh session of the Association was held at Boston on August 11th and 12th, 1886, Mr. Gage, the President, making the opening address. A communication from the Hon. Hugh McCulloch was read advocating a suspension of the silver dollar coinage as a means of averting the dangers which threatened, as he conceived, the financial interests of the country. Mr. S. Dana Horton, of Pomeroy, O., International Bimetallist, addressed the Convention on the advantages of the rehabilitation of silver, pending the arrival of the Hon. W. L. Trenholm, Comptroller of the Currency, who delivered an address on the "Banking and Financial Situation," in which he fully explained to the assembled bankers the foundation, principles and practical working of the National banking system. A very interesting paper on "Bills of Lading as Documents of Title" was presented by Mr. E. K. Olmstead, of New York. Other papers and addresses were on "Branch Banking," by Mr. Geo. Hague, of Canada; on the "Gold Standard," by Mr. F. H. Tuthill, of Hammond, Ind.; on the "Silver Question," by Mr. W. A. Caldwell, of Jackson, Tenn.; on "Bankruptcy Legislation," by Hon. John Lowell, of Boston; on "Some Phases of Commercial and Industrial Growth," by ex-Governor Hoyt; on "California Banks," by Mr. B. C. Wright, of California, and on the "Silver

Question," by Mr. B. B. Comegys, of Philadelphia. There was also a communication from Treasurer Jordan on the silver question. Resolutions against the silver dollar coinage were passed. Mr. Logan C. Murray, of New York, was elected President for the ensuing year; Mr. H. H. Camp, of Milwaukee, First Vice-President, and Hon. John Jay Knox, of New York, Chairman of the Executive Council. Dr. Geo. Marsland continued as Secretary.

In summing up the work of the Association since its inception, it appears that it started with much enthusiasm, performed a great amount of labor, and exerted a considerable influence on legislation. Many of the best financial measures since 1876 have been suggested and supported by the action of the Association, and to its influence may be properly ascribed the prevention of many proposed enactments which must have proved detrimental to the business of the country. Some unwise laws have been passed in spite of its opposition, notably the Silver Coinage Act of 1878. Of late years, owing to a false cry that the banks were combining to secure advantages to themselves detrimental to the public, Congress has been less inclined to listen to the advice of the bankers. Much has, however, been accomplished, notably the extension law of 1882, and the repeal of the law taxing capital and deposits. That taxing circulation still remains. Of late years, however, the tide of legislation has been unfavorable to the banks, in a negative way, as have also been the decisions of the Courts on the subject of taxation. The signs of some discouragement may be seen in the falling off of interest manifested at some of the more recent Conventions. To some extent, though perhaps not more than is to be expected with such an institution, the Association has been used to advertise individual schemes and ambitions. What has been positively accomplished in the past, though compared with what may have been contemplated by the earnest members of the Association, it may seem small, is yet enough to encourage future effort.

In the resumé of the proceedings of the various Conventions given in this article, it has been necessary to omit mention of very many interesting papers and communications on historical and practical banking, contributed by members, which are to be found in the volumes containing the proceedings in full.

We do not think that there can anywhere be found such an interesting mass of material on all banking subjects gathered by practical men as is contained in those volumes.

From Poor's Railroad Manual it appears that the stock and debt of the railroads of the United States for the year 1886 was about eight thousand millions of dollars. The stock amounted to \$3,999,505,508, and the total of bonds was \$3,882,966,880, and of floating debt \$280,678,814. The gross earnings were \$829,940,886, and the net \$300,603,564. During the year 1886 there was an addition of \$181,810,676 to the stock and \$117,239,264 to the bonds. The years for which the reports of the railways are made up vary as to their ending, and therefore the foregoing figures do not show precisely the increase for the calendar year 1886; but the amounts are rather less than more than the sum that would be obtained if all railway reports were made at the end of the calendar year. In fact, another \$100,000,000 may properly be added on this account.

FUNDING LEGAL-TENDER NOTES.

PLAN FOR FUNDING \$246,681,016 UNITED STATES NOTES IN 2.40 BONDS, TO BE USED BY NATIONAL BANKS AS SECURITY FOR A LIKE AMOUNT OF NATIONAL BANK NOTES TO BE ISSUED IN PLACE THEREOF, AND FOR REDEEMING \$100,000,000 UNITED STATES NOTES WITH RESERVE FUND OF COIN NOW IN THE TREASURY.

There are now in circulation United States notes, known as "legal-tenders," to the amount of \$346,681,016, and the United States Treasury holds \$100,000,000 in specie towards the redemption of these notes, which leaves \$246,681,016 of them unprovided for; practically a debt of the Government for that amount, to holders of these notes, on which interest is not now, and never has been, paid.

The following plan is proposed for the funding of \$246,681,016 of these notes in Government bonds, to be used at first *for banking purposes only*, to secure a paper currency which will take the place, and serve the purposes, of the United States notes so funded.

1. Let the Treasury Department, upon the presentation of United States notes, issue bonds bearing 2.40 % interest, payable, say, in 30 years' time, to
 - a. New National banks organizing.
 - b. National banks already organized desiring to increase their circulation.
 - c. State banks desiring to enter the National bank system.

The amount any bank may receive to be determined by the limitations of the present law, and the proportion to be issued to the different States and Territories to be based on a just and equitable estimate of their respective needs.

2. The bonds, as soon as issued to any bank, to be deposited with the Treasurer of the United States as security for National bank notes (equal to the par value of the bonds) to be furnished to the bank, and issued by it in the place of the United States notes presented for funding.

3. While the \$246,681,016 of United States notes are being funded, a ratable portion of the balance of these notes should be redeemed in coin, or coin certificates, from the \$100,000,000 now accumulated for that purpose; say, for every \$247 funded, \$100 should be redeemed in coin, such redemptions to be made from notes passing through the Treasury in the regular course of its business.

4. The redemption of National bank notes is now provided for by law which compels each bank to redeem its notes "at its own counter at par, in lawful money, on demand," and also at the United States Treasury, where each bank must "at all times keep and have on deposit, in lawful money of the United States, a sum equal to 5 per cent. of its circulation, to be held and used for the redemption of such circulation."

National bank notes issued under this plan, as also those of previous issues now outstanding, being thus redeemable in "lawful money," and "lawful money" (United States notes), being redeemable in coin, should by law be made receivable for "duties on imports" (as United States notes have been since resumption of specie payments, January 1, 1879), and also available for "reserve" purposes, except, of course, that no National bank should be permitted to use any of its own notes for this latter purpose. This scheme would, without financial disturbance, replace the present unvarying, inflexible mass

of United States notes with a currency at first of exactly equal amount, but so constituted as to admit of decrease in case the whole volume exceeded the business needs of the country.

As long as the silver coinage law continues to furnish increased circulation at the rate of \$25,000,000 a year, and the establishment of each new bank diminishes the need for circulation by furnishing other methods of exchange to the people, any need for a circulation greater than the present volume is not reasonably to be looked for without a change in its present conditions.

It might be objected that the Government would have to pay out about \$6,000,000 a year in interest on these bonds, but it must not be forgotten that it has had the use of this large sum for nearly a quarter of a century *without interest*, and that the Government would receive \$2,500,000 directly back from the banks through the present annual 1 per cent. tax on National bank circulation, and in addition would be relieved of the present cost of assorting and handling about \$75,000,000 of United States notes annually, which expense would then be borne by the banks instead.

Of the balance of interest received by the stockholders of banks holding these bonds, a portion, at least, would have been contributed by them in the shape of duties on imports, etc., levied by the Government, and would to that extent be really in the nature of a return to them.

When National bank notes become available for "reserve," and are "receivable for duties on imports," they will cease flowing into the Treasury for exchange as they now do; nearly \$47,000,000 of National bank notes, *in good condition*, having been exchanged for "lawful money" at the Treasury, and returned to the banks issuing them, during the year ending June 30, 1886.

As the banks bear the expense of assorting and handling such notes, and the cost of their transportation both to and from the Treasury, they would be relieved of this expense, and the operations of the Redemption Agency of the Treasury would be mainly confined to replacing the worn-out notes with new ones and to redeeming the circulation of banks "failed," "liquidating," or reducing their circulation.

The new notes issued in replacement of those worn out could either be signed by the agents of the banks empowered by law to sign in place of the officers of the banks now authorized to do this, or the Treasurer of the United States might be authorized by law to sign them for the banks.

It is difficult to forecast accurately the effect of the issue of these 2.40 bonds on the market price of other bonds, but it is probable that by withdrawing the demand for a banking bond from the 4's and 4½'s that the market price of these bonds, especially of the 4½'s, would decline to a price nearer par and one at which it would be clearly to the advantage of the Government to purchase and retire them with such surplus revenue as may accumulate from time to time.

They would furnish to the banks, for years to come, the basis for issuing currency and securing Government deposits, without which delegated Governmental functions the banks have no constitutional right to exist, and be the extended means for building up and perpetuating a system of banking which, after a test of twenty-four years, has proved to be in the true interests of the people at large and one which tends to draw the people in closer sympathy with their Government.

LEGAL-TENDER.

Notes and Comments on
BANKING PRACTICE.

**SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.**

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

Taxes Paid by the Bank.—Advertisements of bank dividends are often accompanied by the announcement that the taxes are paid by the bank. Definitely stated, this means that the various tax bills as they come in are duly paid and charged off to expense account, so that the stockholders receive the full amount of the dividend without any deduction. It really makes no difference to the stockholders as a body whether the expenses are charged off to expense account or deducted from the amount of dividend declared. In the former case there is that much more dividend paid out and that much less to go to undivided profit account; but it does sometimes make a difference to the stockholders, individually considered. Taxes that are assessed on the bank as a corporation fall equally upon every share of stock; but taxes that are assessed upon stockholders on account of their holdings do not always fall equally upon every share. For example, where a National bank is located in a large city the city stockholders will be assessed according to the city rate, while the stockholders residing in the counties of the State are assessed according to the rate of taxation in the respective counties. The county rates are, as a rule, lower than the city rate, and also differ in amount with each other. If, then, the taxes assessed on this account are deducted from each shareholder's dividend according to the amount for which the bank is actually taxed on his account, each pays what is his just proportion; but when all the tax bills are charged in a lump sum to expense account, the stockholders share and share alike without reference to the varying rates of taxation in the city or in their respective counties. It saves some clerical work for the taxes to be charged off in a lump sum, and is, perhaps, on the whole, more satisfactory to all concerned. Though it is fairer to deduct the taxes according to each one's just proportion, yet the difference is not really great, and the plan of paying taxes in a lump is to be commended on account of being more simple and direct.

Unprofitable Business.—There is a constant tendency in an active bank to accumulate unprofitable accounts; unprofitable for various reasons. On account of smallness of the balances, the large amount of clerical work involved, the tendency to deposit large amounts of out of town matter and to check against same while it is still in the mails, overchecking and so on. Some banks make it a standing rule to take all the business that offers, whether it pays or not, claiming that in the long run this is more profitable than to pick and choose. Other banks, on the contrary, decline to open accounts with anybody who does not engage to keep an average balance of a specified amount to his credit. Small personal accounts are likewise refused, and no account is retained on the books unless it yields the bank a fair margin of profit. The argument in favor of this system is that it keeps the clerk hire, etc. down to a minimum figure, and, indeed, there seems to be no reason why a bank should do accommodation business any more than a private firm. Of course a great deal of gratuitous service is rendered customers of the bank the compensation for which is at best indirect and uncertain, but this is quite a different thing from allowing the bank to be used as a public convenience at its own expense. A very large branch of unprofitable business has grown up in the collection department. The old custom, in reference to customers

paying for exchange and so on seems to be gradually falling into disuse, and banks are expected to cash drafts and checks due at far distant points, lay out of funds until they can be collected and to make no charge whatever for its own labor, and the expenses involved. This, of course, is neither just nor reasonable and yet, where competition is active, and the volume of business is not more than enough to go around, even this point at times has to be yielded. For it seems almost impossible for banks to come together in anything like an agreement to charge a uniform scale of prices. But it must be admitted that some, especially the new banks, have built up a great part of their business by a settled policy of accommodating everybody that comes along.

Transferring of Money and Securities.—When a clerk who has charge of money or securities is unexpectedly kept away from his desk by sickness or some like imperative cause it is absolutely necessary that somebody should take charge of his desk and run it until he returns to his duties. In a small bank it might not be very difficult for a new hand to make a rapid review of the valuables and see that everything is all right, but in a large bank with an active business it is practically impossible to do anything of the sort. When a man takes the desk he has his own duties to perform as well as the additional duties imposed by the absence of his fellow-clerk, and he has not the time, even if he wished to do so, to review a whole mass of securities or to count a great pile of money. Nor is it necessary that this should be done. Men are supposed to be honest, and they must, out of necessity, act upon that supposition, and have confidence in each other. It may seem to the theoretical mind a loose and careless way of doing business to have valuables handled first by one person and then by another, and yet no single individual be personally responsible for their custody; but, as a matter of fact, it is impossible to get through the business of the bank in any other way, and it might be further noted that it is an extremely rare thing to find the cash short or securities missing and nobody know anything about it. If that does occur, the bank will have to stand the loss unless matters are so arranged as to fasten the responsibility on not more than two men, and, even then, it would hardly be fair to the innocent one to make him share it with the guilty party. Though a certain amount of confidence in each other is thus absolutely necessary on the part of the bank officers, there is no reason that there should be any more than is really required. For example: when a clerk is going away on his vacation it would be perfectly reasonable to have his substitute examine the money and securities in order to ascertain that everything is in good shape; and the regular clerk on his return might be required to make an examination to see that everything is placed in his hands again as it should be. The same system would apply to transfers when clerks are promoted. Such a system would at least have this recommendation, that it would force a more frequent examination of the funds than is usually the case, even in carefully managed institutions. Where the books of account are thoroughly systematized, and everything made to show at a glance, the temptation to tamper with valuables is, to a great extent, removed, and therefore there is not so much occasion for extraordinary precautions in the matter of which we have spoken; nevertheless, it is well to be on the safe side, and, wherever it is practicable to do so, funds and securities should always be audited when they pass from hand to hand.

Method of Keeping Individual Accounts.—Mr. Myron Campbell, Assistant-Cashier of the South Bend National Bank, Ind., sends us the following interesting communication on this subject:

I herewith hand you an illustration of my method of keeping individual accounts. It differs in some respects but not greatly from methods generally adopted. There may be and probably are quite a number whose forms and routine are similar throughout, except the balance sheet. We all want to take the shortest *sure* way home, and comparison of experiences sometimes helps us to get out of old ruts and cut off angles with entire safety, remembering that a straight line is the shortest distance between two points—if the way is clear. You can use the forms in your valuable JOURNAL or not as you think

best. I register checks and deposits only, as is shown in form A, entering only initials and amounts. I post directly from the checks and deposit tickets and put all items on the ledger, as shown in form B.

I find that this method of posting has several advantages over the usual method of posting from the journal.

- 1st. The work of journalizing is not nearly so great.
- 2d. The posting can be done much faster.

8d. The whole history of the account is complete on one page and much more convenient for reference, making monthly statements, etc.

I extend all credit balances in black ink and debit balances in red ink.* I do not use column for number of check, because our customers do not, with but few exceptions, use numbers. I send you by express, sample of my balance sheet which I have used since 1883. That it is of my own devising may possibly account for part of the satisfaction I get from its use, but it suits me much better than any other method I have tried of proving balances daily.

Its advantages over the usual balance book are, 1st, that as soon as the posting is done we are ready to add without the work of carrying forward unchanged balances; and, 2d, we do away with the work of carrying forward all names and amounts every fifteen or thirty days. I can recommend it for banks with not more than from 200 to 400 depositors, and where not more than 33⅓ to 50 per cent. of its accounts change daily. For banks with but 500 to 1,000 open accounts, in which most of them change daily, it would be rather bulky without saving much in time.

The spaces should be somewhat closer together than in sample, allowing about fifty accounts to the page.

The balance sheet referred to, consists of a board about two feet long by eight and-a-half inches wide and one-quarter of an inch thick. On the edges are fastened strips about one-eighth of an inch thick and three-quarters of an inch wide, leaving a sunken space which is divided into two unequal parts the long way of the board by another strip. These two spaces are subdivided into narrow horizontal compartments on the left side about four inches by one-half inch, and on the right, two inches by one-half inch. The division is effected by short brass pegs stuck into the edges. The compartments on the left are just large enough to accommodate slips of paper on which are written the names of the bank's dealers. Those on the right, the balances. These slips are inserted and are held in place by running under the edges of the strips that surround the board. The compartments on the right correspond to those on the left, and in them are placed slips on which the balances are written, each balance slip opposite its proper name. The idea is that each day the balances which have changed that day are represented by new slips on the board. The ones that have not changed are already on the board and do not have to be again drawn off. This method seems, therefore, to save the work of copying the unchanged accounts each day. In fact, the whole appearance of this contrivance is that of a small bulletin board.

* The figures 30, in the last column of the second cut, represent an over-draft.

Banking Law.—That a little learning is a dangerous thing has passed into popular belief, and so fixed has this idea become in the general mind that unless a person knows a great deal of anything he is commonly supposed to know nothing at all; and, therefore, those who are aware that their opportunities are such that they can learn but little of any subject are rather encouraged to remain in utter ignorance concerning it. The "little learning" of which the poet speaks is not, however, an imperfect or partial knowledge of the subject, but that superficial knowledge which is often mistaken by its possessor for something entirely different. The law is especially said to be a jealous mistress and permits her votaries to worship at no other shrine; but this is applicable only to those who would make the law a profession, and not to those who would simply acquire such knowledge of its principles as, according to Blackstone, every gentleman of property should possess; and so there are certain elementary principles of the law which every man who aspires to a knowledge of the business of banking should have at his command. The law of banking comes under the general head of the Right of Private Property, which is usually said to be a very complex and difficult branch of law. The business of banking itself is so extended and touches so many interests that banking law includes, more or less directly, the whole body of the law merchant. Among the questions which may arise in banking law there may be mentioned those touching the rights and duties of corporations generally, and especially of those organized for the specific business of banking; also those touching

the matter of promissory notes, bills of exchange and other negotiable paper; the general law of contracts, the rights and duties of trustees and administrators, the duties of agents and their responsibilities, and the law of insurance, not to mention the various topics which might come under the general head of laws relating to real estate. This very partial summary may indicate the wide field in which the student of banking may pursue his studies. The list seems somewhat appalling to the uninitiated; and, indeed, it would be little less if a bank manager would be required to master in detail all the subjects above set forth. Even a very diligent student would be well on the way to old age before he might consider himself a graduate; but there are treatises specially relating to the banking business which contain an abstract of the general principles of those laws which relate particularly to banking interests, such as the works of Story and Chitty, and the more recent treatises of Daniel and Morse. If one has industry and the opportunity to study the leading cases which are referred to by the text writers he will find his knowledge of banking law vastly improved; and, while he may not be able to decide correctly all the nice questions which may come up in the course of active business, he will, at any rate, be in a much better position to do so than those who are actually without any knowledge on the subject. An hour a day systematically devoted to the study of any one subject will produce results far beyond expectations, as may be ascertained by any one who will have the industry to put this assertion to the proof for six months or a year. Indeed, it is no unusual thing for a person to attain an eminent degree of knowledge, and on a topic quite outside the range of ordinary duties, merely by devoting an hour or so every day to its study and investigation.

An additional advantage offered by a careful reading of the system indicated is that it puts one in a much better position to converse intelligently with his counsel. There are, in the law, so many technical expressions which mean some definite thing which cannot be indicated precisely by any other form of words that it is difficult for a lawyer to converse with a non-professional without resorting to a great deal of circumlocution. It is so much more satisfactory for a member of the bar to converse in the terms to which his training has accustomed him than to be compelled to resort to numerous explanatory phrases in order to make himself understood as he goes along. And as no one comprehends so thoroughly the circumstances of the case as the person immediately concerned in it, so no one is better qualified to make practical suggestions to his lawyer, provided only that he knows enough about law to make his suggestions in a reasonable way. A course of study for one who simply desires a knowledge of banking law would not be quite so comprehensive as that laid down for students who aspire to admission to the profession. For example, the rights of personal liberty and personal security might be left entirely untouched, while there is a large part even of the law of private property which could be dwelled upon in a very cursory manner. What is needed is correct and definite knowledge concerning such everyday topics as checks, drafts, promissory notes, etc.; and also correct information concerning the latest legal decisions. Banks that are quick to conform their practice to the views of the Courts frequently gain no inconsiderable advantage over their competitors.

Editor Rhodes' Journal of Banking:

SIR:—At one of the sessions of the American Bankers' Association held, I think, about two years ago, a very elaborate plan was drawn up for the purpose of bringing the bank clerks into an auxiliary membership with the Association. While the motives which inspired this scheme were very commendable, yet it seemed to me at the time that the plan proposed was rather cumbersome and hardly offered sufficient inducements to those whom it was designed to attract. An elaborate course of study was laid down, extending over considerable time; examinations were provided for (the expense to be borne by the candidates); and, after all this had been gone through with, the prize held out was a certificate of membership in the Association. While such a certificate is, no doubt, highly prized by those who enjoy the distinction of its possession, yet it seemed a little unequal that a President or Cashier

might have the same if he asked for it, if not, indeed, be asked to have it, while a clerk was expected to acquire a mass of information on various topics, not to speak of a probation of five or ten years, before he could even present himself for an examination to test his worthiness. It, no doubt, would be very desirable to draw all the force of the bank into membership with the Association; but it really seems to me that the only practical way of doing so is to throw the Association open to all alike. The American mind abhors, above all other things, inequalities of position, and it would be rather difficult to induce any considerable number of men to come into an Association of which they were to constitute an inferior class—especially as the distinction between the members of the two classes would be far more imaginary than real. I call this subject to your attention and to the attention of your readers in the hope that the matter may be taken up again and considered from a somewhat different standpoint.

Yours truly,

BANK CLERK.

Ledger Ruling.—Referring to the note under head "Another Form of Ledger Ruling," page 790 of August issue, I give you enclosed the ledger ruling adopted in our bank, which, it seems, is safer against mistakes than the one above referred to.

One posting books in a hurry is liable to use the wrong pen, often giving considerable trouble in finding error when making up Balance Book. By our system it is almost impossible to place amount in the wrong column, if one will take the trouble to look at the printed letters over the Balance columns. Another advantage is gained by the fact that you can copy the balances of the Ledger, and thereby test the correctness of the Ledger independent of the Balance Book, saying nothing of the time lost in changing red from black ink pen.

Sound Banking.—The phrase "sound banking" is of such frequent occurrence in financial articles that it has become somewhat threadbare and does not always convey a very distinct and definite meaning, either to those who employ it or to those to whom it is addressed. It cannot be doubted that there are certain general principles which underlie the business of banking, whether considered as an art or a science, and it is an understanding of these principles, and an adherence to them, that constitutes what is meant by sound banking. The word sound is interchangeable in this connection with such expressions as good, conservative, or correct, and, indeed, any one of these expressions is used almost as frequently as the other. One of the first principles which would seem to underlie the correct conduct of the bank business is the choice of the men who are to carry it on. That is to say, of those persons who are held out to the public as the active and responsible people in the management of the institution. A large majority of persons who keep bank accounts have no other possible means of determining the character of the institution with which they are dealing than by the estimate placed upon the character of the men who control it; and, therefore, it is of the utmost importance that the President and Directors should not only be men of the highest reputation but should really have that character which

they are reputed to possess. It would seem to be superfluous to say that these gentlemen should be required to pay the strictest attention to the management of the affairs which they have taken in charge; but experience has brought to light so many instances of Directorial negligence that a word on this point may not be out of place. In the general methods of its business a bank should pursue always, and without any exception, the path of safety. A disposition to engage in outside enterprises is a sure road, if not to ruin, at any rate to decreased dividends, and, perhaps, impaired capital stock. Neither should a bank permit itself to encourage doubtful or speculative enterprises or to advance money to persons engaged in undertakings which would not merit the approbation of careful and prudent men. Indeed, in the long run, it is not profitable for a bank to deal with speculative people. The profits on this class of business are large and tempting, but the losses are inevitable. When a bank once gets the name of being concerned, either directly or indirectly, in hazardous enterprises, careful people become a little shy of it, and, bye and bye, the quiet accounts that keep heavy balances and employ them but little go away to what are considered safer quarters. Safety, as nearly absolute as may be, is of the first importance, and any disregard of this precept is sure to bear its fruit in due season. It is better to accumulate a surplus fund than to declare large dividends; the latter may be more gratifying for the time being, but the former will surely prove a tower of strength in the needful time of trouble. Carrying a big reserve fund may seem too costly a luxury, but it is really a better way in the end; for, in the future, as in the past, there will come sudden and unexpected stringencies in the money market and the weaker banks are embarrassed, if not injured, while the bank that habitually carries a large reserve is able to go safely through. Some bankers affect an habitual mystery in regard to all their transactions; but a bank is, by its nature, so public an institution that there are hardly any of its transactions which the public has not a right to know. No one, of course, attempts to say that the accounts of individuals should be pried into by outside persons; but there should be no secret made of the condition of the bank as a whole; and, so far from confining itself to the reports that are required to be published by the Comptroller of the Currency a bank which could have the boldness to publish a weekly statement of its condition to all the world would certainly stand fairer with the public than a bank which disclosed its condition only when compelled to do so by law. But, whatever may be the rights of the general public in this matter, it seems to be reasonable that a depositor should know at all times the condition of the institution with which he has placed his available floating capital. A small germ of this principle may be found in the National Bank Act in that section which requires that the list of stockholders should always be subject to the inspection of the shareholders and creditors of a National bank, and the principle of an occasional inspection by all concerned of the bank's condition is found in the provisions requiring published reports to be made upon the call of the Comptroller. While it is true that the relation of a bank to its depositors is the simple relation of debtor and creditor, still the Courts have recognized the principle that bank Directors are a sort of trustees, and from that standpoint justly regard their duties as being subject to many of the principles which control the action of trustees. These latter principles seem to be somewhat lost sight of in these days of corporate banking. Directors considering themselves rather as agents for the stockholders than as in any sort guardians of the money of the depositors. These are some of the principles which underlie all sound banking, and attention to them will, while not insuring success, go very far in producing it.

Suit has been brought against the Directors of the Fidelity National Bank of Cincinnati by the Receiver, seeking to make them responsible in full for gross neglect of duty. The Western National Bank of New York city has also brought suit against the same institution to establish its liability for certain certificates of its stock taken as collateral for a loan by the Western National.

BANKING LAW.

* LEGAL DECISIONS AFFECTING BANKERS.

BONDS AND NOTES UNDER SEAL—NEGOTIABILITY IN NORTH CAROLINA.

This was an action against the maker upon the following sealed instrument :

\$750.

Six months after date I promise to pay Charles L. Heitman, or order, seven hundred and fifty dollars, for value received, with interest from date at eight per cent. per annum, payable annually until paid, it being the balance of the purchase money for 143 acres of land on Reedy Creek, in Davidson County, N. C., sold this day by said Charles L. Heitman to me, and for which I hold a bond for title from said Charles L. Heitman. Witness my hand and seal this 26th day of October, 1886.

(Signed) P. W. MICHAEL. [Seal.]

The payee, Charles L. Heitman, indorsed the above instrument to the plaintiff before maturity, and the latter brought suit thereon against the maker. The defendant claimed payment to the payee, and that as the note was not negotiable, plaintiff took it subject to all the equities which attached in the hands of said payee.

Held, The statute (Code, Sec. 41) makes bonds and notes under seal for money, whether made payable to order or not, "assignable over in like manner as inland bills of exchange are by the custom of merchants," and the person to whom the same shall be assigned or indorsed may maintain an action against the maker and indorser upon the same as in case of inland bills of exchange. A promissory note in this state is a written engagement, under seal or not, wherein the maker stipulates and promises to pay a person therein named, absolutely and unconditionally, a certain sum of money at the time therein specified. The bond in question has all these requisites and qualities in it. There is a certain obligor and obligee, and there is an express promise to pay absolutely and unconditionally a certain sum of money at a time therein specified. It was therefore negotiable. It was indorsed and the plaintiff became the *bona fide* holder of it before it matured, and before the defendant obligor paid the obligee therein named the money which he intended should discharge it.

Further Held, That the reference in the body of the bond to the consideration for which it was given did not render it non-negotiable.

First National Bank vs. Michael, Supreme Court of North Carolina, April 12, 1887

TAXATION OF NATIONAL BANK STOCK IN TEXAS—THE SUPREME COURT OF TEXAS HOLD THAT IT IS NOT TAXED AT A GREATER RATE THAN OTHER MONETIZED CAPITAL IN THE HANDS OF INDIVIDUAL CITIZENS—OTHER OBJECTIONS TO THE TAX CONSIDERED.

Plaintiffs, who were the owners of certain shares of stock in the First National Bank of Galveston, sued out an injunction restraining the Tax Collector of Galveston County from selling certain of their real estate in satisfaction of taxes claimed to be due to the State of Texas, and to the County of Galveston, upon such shares. Upon final hearing the Court below dissolved the injunction and dismissed the bill. From that judgment plaintiffs appealed to the Supreme Court of Texas, insisting that the tax levied upon their shares

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable.

Attention is also directed to the "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

in the said National bank was illegal. In support of their objections to the tax they presented the following issues:

(1) That the State of Texas had not prescribed any system for the assessment of shares of stock in National banking associations, as by the Acts of Congress it was required to do, as a condition precedent to the right of the State to tax said shares, and that the system of assessment in force in the State was not in conformity with the conditions imposed by the Acts of Congress.

(2) That no valid assessment against plaintiffs, upon the shares of stock owned by them, had been made by the Assessor of Galveston County.

(3) That plaintiffs' shares of stock were, under the laws of Texas, taxed at a greater rate than was other moneyed capital in the hands of individual citizens of the State, and that the taxes sought to be collected of plaintiffs were levied and assessed in violation of the Act of Congress by which the State was permitted to tax such shares.

Under the first of these issues plaintiffs made these propositions:

First.—That no provision was made by the tax law of the State, as required by the Act of Congress to be made, for deducting in the process of assessment the value of the real estate and other taxable property of National banks from the aggregate value of the shares of stock in such associations.

Second.—That no provision was made by the tax law of the State, as required by the Act of Congress to be made, for taxing in the city or county where the bank is located, and not elsewhere, the shares of stock owned by non residents of the State.

Third.—That there was no declaration in the tax laws of the State, as was required by the Act of Congress to be made, that the tax upon National bank shares shall not be at a greater rate than upon other moneyed capital in the hands of individual citizens of the State.

Held. It is a sufficient answer to all these propositions to say that the Act of Congress does not require that the restrictions set forth in the Act shall be embodied in the State law of taxation. It is sufficient that, upon a fair construction of the statute law, none of the provisions of the Act of Congress are violated. This was held in the case of *Harrison vs. Vines*, 46 Tex., 22, under the Act of 1864, and there is nothing in the Act of 1868 which requires that it shall receive a different interpretation.

Whether a proper construction of the Acts of our Legislature shows that they tax shares in National banks at a greater rate than other moneyed capital in the hands of individual citizens is the principal question in this case. We do not regard the points made as to the deduction of the value of the bank's real estate from the tax value of its shares as amounting to anything. Our statutes do not contemplate that real estate belonging to banks shall be taxed at all. All the provisions of these statutes which levy a tax upon any property whatever, except shares in National banks, are wholly inapplicable to these institutions. They apply only to other corporations and individuals. To hold them applicable to National banks would make the statutes violate, not only the Act of Congress, but our State Constitution; for it would subject National bank shares to double taxation. Such a construction would be in plain conflict with the whole spirit and intent of the law if not of its letter; and it is against all rules of construction to so interpret a law as to make it unconstitutional or otherwise void when no such interpretation is demanded by its language. (*St. Louis Nat. Bank vs. Papin*, 4 Dill. C. C., 29; *Commissioners vs. Bank*, 23 Minn., 280.)

We hold, then, that under our Revised Statutes of 1879 the real estate of National banks could not be taxed, and any attempt of an Assessor so to do was unauthorized. But because an officer transcends the bounds of his duty and assesses an illegal tax against a person, such a person is not freed from taxation upon other property. And even if he be entitled to a reduction upon other taxes by reason of such unlawful assessment, it is his duty to demand the reduction and pay the tax legally due from him before coming into a Court of equity to enjoin the collection of an entire tax, a part of which it is his duty to pay. (*Nat. Bank vs. Kimball*, 103 U. S., 732; *Pelton vs. Bank*, 101 U. S., 143.) So far from the appellants having done so in the present case, they have neither paid, nor offered to pay, anything upon the tax imposed upon their

bank shares; and the record does not show that the bank has even paid the tax assessed against its real estate.

Nor do we think that National bank shares are assessed at a greater rate than any other moneyed capital in the hands of individual citizens. In the assessment of State banks, brokers, etc., deductions are allowed for deposits made with them and debts due by them. But the same privilege is in effect allowed to shareholders in National banks. The value of a bank share depends upon the value of its franchise, capital, and property of all kinds, less the amount of its debts. All such property in the hands of individuals and corporations, other than National banks, is taxed under our Revised Statutes. We tax bank shares according to their actual value. In arriving at that value we must necessarily deduct liabilities from credits, and in this way the shareholder obtains the benefit of the reduction. The value of his shares is decreased to an extent proportionate to the debts and liabilities of the banking institution. Not to allow banks and individuals a deduction for the property of others held by them, such as depositors, and to tax these against the owner of the deposits would be to impose a double tax upon the same property. If the claim of the appellants is that their individual debts should be taken from the value of their shares, then it should be made to appear that they owed such debts, or else the law is valid as to them. This was in effect held in the case of the Supervisors *vs.* Stanley, 105 U. S., 315, where it is said: "When the shareholder has no debts to deduct, the law provides a mode of assessment for him which is not in conflict with the Act of Congress, and the law in that case can be held valid." For aught that appears, these appellants owed no debts; and, if they did, they may have been already deducted from debts which were due to them in making a general assessment of their property. (Pelton *vs.* National Bank, 100 U. S., 143.) An individual has no right, under our laws, to have his debts deducted from the assessment made against his property generally, but only from the indebtedness due him. A bank share is not a debt due its owner; and if these appellants had debts due themselves and also owed debts, these latter should have been deducted from their credits and not from their shares. As the Assessor was presumptively informed as to the credits, we must further presume that he took from the assessment made against them the whole amount of their indebtedness.

That legal-tender notes and United States bonds belonging to corporations and individuals are not taxed by our laws is not their fault, but is due to the positive requirements of the Acts of Congress. In the case of People *vs.* Commissioners, 4 Wall., 244, assessments against insurance companies and individuals were subject to a deduction on account of investments in securities of the United States, which deduction was not made as to assessments against shares in National banks. The law was sustained by the Supreme Court of the United States, and the decision is cited with approval in People *vs.* Weaver, 100 U. S., 546. We think this case decisive of the question.

The exceptions allowed by our laws are very few, and such as are called for by an enlightened public policy. It has been held by the United States Supreme Court that the allowance of such exemption does not show an unfriendly discrimination against National banks by the taxing power. The case of Boyer *vs.* Boyer, 113 U. S., 609, has no application to our laws, as then the exemption was of a large portion of the moneyed capital of the State, while our laws reach every article of the kind, with trifling exceptions, which the State is allowed to tax.

That some corporations escaped taxation for a large part of their property, by reason of having on hand legal-tender notes, cannot affect this case. This does not occur by any fault of the law, or of its officers; but, under any system of law, it will frequently happen that persons or corporations will escape taxation by various shifts and devices; but this does not vitiate the system or relieve property subject to taxation when listed against its owner. There was not shown in this case any systematic or intentional violation, on the part of the State or its officers, of the laws of Congress in the valuation of moneyed capital. Some of them even allowed shareholders in National banks to deduct the value of their bank's real estate from the value of their shares; others did not; but it was not demanded of them. These officers could not

have assessed legal-tender notes under any circumstances; and it was not shown that the millions of capital invested in State corporations was not assessed and taxed; and we are certainly not to presume that they escaped taxation, when there was nothing in our laws to justify it. We think that our laws, having assessed the same percentage of taxation against every description of property, excepting a few articles exempted from public policy, and having provided means for a just and fair assessment of all moneyed capital, so as to obtain as near as possible an equal rate of taxation upon all, have complied as far as possible with the true intent of the Act of Congress, and its taxation of the shares of National banks is not invalid.

Exact uniformity of taxation is almost unattainable. Shares of National bank stock could not be put upon an exact level with that of other institutions without taxing the shares in these as well as those of the National banks. But it is clear that Congress did not intend that it should be done, or it would not have stricken out the restriction which was in the law of 1864 and not in the law of 1868. States can now tax the capital and property of other corporations while they at the same time tax shares in National banks, and our laws produce as much uniformity as can possibly be attained consistently with the paramount law of the United States. There is nothing in our laws requiring shares in National banks to be taxed elsewhere than in the place where the banks are located; and, if there was, appellants are not affected by the provision.

In making this decision we have referred only to our Revised Statutes and the Act of 1876, which is in effect the same in its provisions, those being the laws governing the case. By the Act of March 31, 1885, the law now in force, an attempt has been made to more literally perform the requirements of the Act of Congress in reference to the taxation of National bank shares.

The tax being valid, the fact that the assessment was not placed upon the proper roll in a proper manner does not vitiate it. The tax was due from the shareholders, and they should have paid or offered to pay so much as was legally due and chargeable for this particular property before asking relief of a Court of Equity. (*Harrison vs. Vines, supra.*)

Judgment affirmed.

Rosenberg and o'rs vs. Weekes, Tax Collector, Supreme Court of Texas, March 26, 1887.

NEGOTIABILITY OF BILLS OF EXCHANGE IN ALABAMA — CONSTRUCTION OF SECTION 2,094 OF THE ALABAMA CODE BY THE FEDERAL COURT IN NEW YORK.

(Section 2,094 of the Code of Alabama provides that "bills of exchange and promissory notes, payable in money at a bank or private banking house, or a certain place of payment therein designated, are governed by the commercial law." *Held*, That a bill of exchange drawn and accepted in Alabama, which was not by its terms payable at a certain place of payment therein designated, was nevertheless governed by the commercial law and negotiable, and that the acceptors could not interpose the defense of fraud and want of consideration to the bill in the hands of *bona fide* holders for value and without notice.)

Plaintiffs sued defendants in the United States Circuit Court for the Southern District of New York upon a bill of exchange drawn upon and accepted by such defendants at Montgomery, Ala. The case was sent to a referee who found that the acceptance of the bill was obtained by fraud and without consideration, but that the plaintiffs received the bill without notice of any actual defense thereto or of any equities existing between the drawers thereof and the payee, in part payment of an antecedent indebtedness of the drawers. He decided that under the law of Alabama the bill of exchange was not a negotiable instrument, and was not governed by commercial law, because it was not by its terms payable at a certain place of payment therein designated. Plaintiffs moved for a new trial before Judge Wallace on exceptions to the rulings of the referee.

Held, The only question which it is necessary to consider is whether bills of exchange are "governed by the commercial law," within the meaning of Section 2,094 of the Code of Alabama of 1876, when they are not by their terms payable at a certain place of payment designated. If they are, as the

plaintiffs were holders in good faith and for value, according to the decisions controlling upon this Court, the bill of exchange in their hands was not subject to the equities existing between the original parties. (Swift *vs.* Tyson, 16 Pet., 1; Railroad Co. *vs.* National Bank, 102 U. S., 14.) The language of the section is as follows :

"Section 2,094. Bills of exchange and promissory notes, payable in money at a bank or private banking house, or a certain place of payment therein designated, are governed by the commercial law."

It is plain upon the maxim, *expressio unius est exclusio alterius*, that promissory notes are not governed by the law of commercial paper, under this section, unless they are made payable at a bank or private banking house, or some other designated place of payment. The inquiry is whether by the terms of the section the same conditions apply to bills of exchange. It is somewhat surprising that, so far as is known, this question has never been decided by the Courts of the State of Alabama, and that it should devolve upon a foreign tribunal to place a construction for the first time upon the meaning of a law of Alabama which has been in force since 1852, affecting a subject so important as the rights and obligations of parties to a bill of exchange.

Reading the section without the assistance of other provisions of the laws of Alabama *in pari materia*, or of antecedent legislation upon the same subject, the question presented would be one of much doubt. The punctuation would favor the view that bills of exchange and promissory notes are both governed by the restrictive terms. But in arriving at the real meaning of statutes the Courts disregard punctuation, and read statutes with such stops as are most consistent with the sense. In other words, punctuation is no part of the statute. (Hannibal *vs.* Loan & Trust Co., 105 U. S., 77.) It was undoubtedly the purpose of the section to change the rule of common law respecting the attributes of promissory notes. If a like intention can be gathered with respect to bills of exchange, it is because both classes of commercial paper are associated together in the section. But this consideration does not advance the inquiry, because the point is whether the qualifying words apply to both classes, or only to promissory notes.

The plaintiff invokes the rule of construction, sometimes resorted to, that relative words must ordinarily be referred to the next antecedent where the intent upon the whole statute does not appear to the contrary. (Broom, Leg. Max., 680; Dwar. St., 590, 591; Cushing *vs.* Worrick, 9 Gray, 388.) This rule is not controlling and has often been disregarded, and it is not necessary to place the decision of the question upon such a narrow consideration.

The Code of 1876 is a revision of pre-existing legislation. It succeeded the Code of 1867, and, like that Code, was authorized by an Act of General Assembly which contemplated that the substance and meaning of former statutes should remain unchanged. When a codification or revision of laws contains provisions which are substantially reproduced from previous Acts of Legislature, and doubts arise from the ambiguity of the language employed, the safest rule by which to ascertain the meaning is to resort to the original sources for the purpose of ascertaining the legislative intent. (U. S. *vs.* Bowen, 100 U. S., 50.) To quote the language of the Supreme Court of Alabama in Landford *vs.* Dunklin :

"No rule of statutory construction rests upon better reasoning than that, in the revision of statutes, alteration of phraseology, or the omission or admission of words, will not necessarily change the operation or construction of former statutes. The language of the statute as revised, or the legislative intent to change the former statute, must be clear before it can be pronounced that there is a change in such statute in construction and operation." (71 Ala., 606.)

As said by the Court in East Tennessee *vs.* Hughes, 76 Ala., 590 :

"Unless the alteration of the original Act is of such a character as to manifest a clear intent to make a change in the construction and operation, effect will be given to the statute as originally framed by the General Assembly."

Section 2,094 is a reproduction of Section 1,525 of the Code of 1852, as amended in 1873, which, as will be seen, did not exclude bills of exchange when

not payable at any designated place from the category of instruments governed by the commercial law. The origin of the legislation in reference to the general subject is found in the Act of January 15, 1828, which reads as follows :

"Hereafter the remedy on bills of exchange, foreign and inland, and on promissory notes payable in bank, shall be governed by the rules of the law merchant as to the days of grace, protest and notice."

This provision was supplemented by an Act of 1832, reading as follows :

"Bonds and other instruments payable in bank shall be governed by the rules of the law merchant as to days of grace, demand and notice, in the same manner that bills of exchange and notes payable in bank now are."

The grammatical construction of the Act of 1828 plainly limits the qualifying words, "payable in bank," to promissory notes ; and the statute is not to be construed as altering the common law, or making any innovations therein, further than the words import. (*Shaw vs. Railroad Co.*, 101 U. S. 557.) Accordingly, by the reasonable interpretation of the Acts of 1828 and 1832, bills of exchange were governed by commercial law, and so, also, were all other instruments when payable in bank, including promissory notes. That this was the true meaning and result of the legislation is made still more clear by the Code of 1852. That Code was not merely a revision of the laws previously enacted, but a code in the wider sense for the adoption of a body of laws "having regard to the general system and true spirit of the existing laws" of the State. Two sections of that Code are to be considered together as being *in pari materia*. Section 1,525 reads as follows :

"Bills of exchange and promissory notes payable in money at a bank or private banking house are governed by the commercial law, except so far as the same is changed by this Code."

Section 2,120 was as follows :

"Every action founded upon a promissory note, bond or other contract, express or implied, for the payment of money, must be prosecuted in the name of the party really interested, whether he have the legal title or not, subject to any defense the payor, obligor or debtor may have had against the payee, obligee or creditor previous to notice of the assignment or transfer ; but this clause does not apply to bills of exchange or instruments payable in bank, or at a private banking house."

Section 1,525 would not, of itself, be decisive of the present inquiry ; but it is to be observed that Section 2,120, which is the first provision in the laws of Alabama by which negotiable paper of any class was explicitly placed on the footing of other contracts for the payment of money, so far as to be subject in the hands of a purchaser to the equities existing between the original parties, makes a distinction between bills of exchange and all other instruments. The section declares that the clause is not to apply "to bills of exchange or instruments payable in bank," etc. It was unnecessary to enumerate bills of exchange unless this distinction was contemplated. They would have been included in the term "instruments," and unless the provision was intended to discriminate between them and other instruments payable in bank, or at a private banking house, there was no reason for specially mentioning them. It is a cardinal rule in the construction of statutes that every part shall be regarded and be so expounded, if practicable, as to give some effect to every part. Promissory notes were not mentioned in the proviso because they were included in the general designation of "instruments." When payable in bank, or at a private banking house, they were within the exception, although not specifically mentioned ; when not so payable, they fell within the general clause. Bills of exchange were mentioned to emphasize the distinction created by the Act of 1828. If this had not been the purpose the word "other" would probably have been inserted between the words "or" and "instruments." Sections 1,525 and 2,120 reproduce the provisions of both the previous Acts, but it is only in Section 2,120 that effect is given to the provisions of the Act of 1832.

Section 1,525 of the Code of 1852 was amended in 1873 so as to read as follows :

"Bills of exchange and promissory notes payable in money at a bank, or certain place of payment therein designated, are governed by the commercial law."

Section 2,094 of the Code of 1876 reproduces the language of Section 1,525 of the Code of 1852 as thus amended in 1873. It is to be read in connection with Section 2,890, which is a reproduction of Section 2,129 of the Code of 1852. Section 2,890 reads as follows:

"Actions upon promissory notes, bonds or other contracts, express or implied, must be prosecuted in the name of the party really interested, whether he has the legal title or not, subject to any defense the payor, obligor or debtor may have had against the payee, obligee or creditor previous to notice of the assignment or transfer; except in actions upon bills of exchange, promissory notes payable in bank, or in a designated place of payment, and commercial instruments, in which cases the suits must be instituted in the name of the persons having the legal title."

By the grammatical construction of this section neither bills of exchange, nor other commercial instruments except promissory notes, are required to be payable in bank, or at a designated place of payment, to fall within the exception.

It is apparent from this collocation of statutes that none of them exhibit any clear intention to restrict the negotiability of bills of exchange, and that the tendency of the legislation of the State has been to enlarge the negotiability of promissory notes since 1852, when they were negotiable only when payable at a bank or private banking house, and to enlarge the negotiability of other commercial instruments which, by the Code of 1852, were placed in the same category with promissory notes, but were withdrawn, apparently, by Section 2,890 of the Code of 1876.

The cases of *Cook vs. The Mutual Ins. Co.*, 53 Ala., 37, and *Oates vs. National Bank*, 100 U. S., 239, are cited in support of the contention of the defendants. Both of these cases were upon promissory notes. There was no occasion to consider the point whether bills of exchange under the statutes of Alabama were governed by commercial law or not, and the point was not considered directly or inferentially. On the other hand, the case of *Knott vs. Venerable*, 42 Ala., 186, is cited in support of the position of the plaintiff. That was a suit on an inland bill of exchange which was not payable at any particular place. The questions litigated related to presentation for acceptance, and to demand and protest. The Court held that in these regards the paper was governed by the ordinary rules of commercial law. No reference was made in the argument, so far as appears, or in the opinion of the Court, to the Code provisions; but it is urged that it can hardly be supposed that Section 1,525 of the Code of 1852, which had been in force for thirteen years when that case was decided, would have been overlooked if the Court had supposed that that section was intended to deprive bills of exchange of their ordinary attributes.

In the absence of any decision of the Courts of Alabama which can be deemed authoritative upon the present question, the duty has devolved upon this Court of deciding it by the aid of the best light of which it is possessed. The conclusion reached is not altogether satisfactory, but it is one which seems most reasonable after a very full consideration. The rules of the common law are not to be changed by doubtful implication, and especially should the Courts be slow to impute an intention to a statute not evidenced by clear, unambiguous and peremptory language, to change the law of commercial paper which circulates largely in foreign States among those who are not supposed to be familiar with restrictions peculiar to the local law of the State where it may be made, or may be payable.

Exceptions to the rulings of the referee sustained and new trial granted.

Gwathmay and others vs. Clisby and others, U. S. Circuit Court, S. D. New York, May 20, 1887.

TAXATION OF NATIONAL BANK SHARES IN NORTH CAROLINA—RIGHT OF SHAREHOLDER TO DEDUCT INDEBTEDNESS.

Plaintiff, on the 1st day of June, 1886, being the owner of 200 shares of capital stock in the Merchants & Farmers' National Bank, and of 182 shares in the First National Bank of Charlotte, both organized and operating under the Act of Congress for the formation of National banking associations, at

Charlotte, rendered during that month a list of his taxable property in which 100 shares of such stock were given in at the par value of \$100 per share, or \$10,000. The whole number of plaintiff's shares—viz., 332—were assessed by the Commissioners at \$85 per share and the plaintiff charged with all the stock at an aggregate value of \$28,220, and the list thus reformed delivered to the Sheriff for collection. The plaintiff reduced this estimated value by deducting his alleged indebtedness of \$18,220, claiming the right to do so, to the sum stated in the list. The Sheriff, acting under the directions of the Legislature of the State in reference to the raising of revenue, refused to make any abatement and was proceeding to enforce payment when, in an order made in the present action against the County Commissioners, they were restrained, he having paid the entire tax against him upon the basis of the reduction claimed and as set out in the rendered list.

Held, The Revenue Act of 1885. Ch. 177, Sec. 12, in its enumeration of taxable property contains this clause, numbered 5 :

"The amount of solvent credits, includes accrued interest uncollected, owing to the party, whether in or out of the State, whether owing by mortgage, bond, note, bill of exchange, certificate, check, or open account, and due and payable, or whether owing by any State or Government, county, city, town or township, individual, company or corporation. Any certificate of deposit in any bank, whether in or out of the State, and the value of cotton, tobacco, or other property, in the hands of commission merchants or agents, in or out of the State, shall be deemed solvent credits within the meaning of this Act. If any credit be not regarded as entirely solvent, it shall be given at its true current or market value. The party may deduct from the amount of solvent credits owing to him the amount of collectible debts owing by him as principal debtor."

Not only are stocks not included in the credits as defined in the clause, but some forms of visible property—crops in the hands of agents—are included in the term. The Act of Congress, without the authority of which no taxation upon the shares of these National banking associations could be imposed, confers the powers of taxation upon the States within whose limits they are located, with the restriction "that the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State, and that the shares of any National banking association owned by non-residents of any State shall be taxed in the city or town where the bank is located, and not elsewhere." (Rev. St., U. S., Sec. 5,219.) The term "moneyed capital" has been construed to embrace investments in banking associations as well as credits in a more strict sense; and hence that an Act denying deductions for indebtedness of the share-owner from the value of his stock, when it is allowed to creditors who owe, is in violation of the permitting Act of Congress, and is void as to shareholders who are indebted and have not such property as the deductions are allowed to be made from. The discrimination against such shares is wholly unauthorized. (23 Wall., 480; 95 U. S., 19; 100 U. S., 539; 101 U. S., 143; *Id.*, 153; 105 U. S., 319; *Id.*, 322.)

McAden vs. Commissioners of Mecklenburg County, Supreme Court of North Carolina, June 3, 1887.

INSOLVENT BANKER—COLLECTION OF FUNDS FOR CUSTOMER—RECOVERY OF PROCEEDS IN FULL FROM ESTATE.

Plaintiff, living in Dakota Territory, bargained with one Rundell, of Grant County, Wisconsin, to sell him his Dakota farm for two thousand dollars. He sent a deed of his farm, with an abstract of title, to Isaac Hodges, a banker doing business in Platteville, Wis., with instructions to collect from Rundell the \$2,000, and on payment of the same to deliver the deed and abstract and remit the money immediately to him in Dakota. The deed laid a few days in Hodge's bank, when Rundell learned it was there, and came to Platteville on the 8th of February, 1884, to get it. He reached the bank about 1 o'clock P. M., when Hodges delivered to him the deed and Rundell paid him the \$2,000 consideration by giving him \$400 in cash, represented by four one hundred dollar bills, and certificates of deposit which Hodges had previously issued to him and others. Hodges continued to do business that day, and at

night his bank closed. Subsequently he made an assignment for the benefit of his creditors. The amount of cash which came to the hands of the defendant, assignee, was about five hundred dollars, but did not include any one hundred dollar bill. Hodges' estate was largely insolvent and the main question to be decided was, did the plaintiff stand upon the same ground as the other creditors of Hodges and must he share ratably with them in the assets? It was claimed by his counsel that the estate in the hands of the assignee was impressed with a trust in his favor, and that upon the facts he was entitled to payment in full. On the other hand, it was contended that the estate in the hands of the defendant was not subject to any trust or equitable charge in favor of the plaintiff, but that he stood precisely on the same footing as the other creditors of Hodges.

Hell, (Following *McLeod vs. Evans*, 66 Wis., 401), that the general assets in the hands of the defendant are impressed with a trust in favor of the plaintiff to the extent of \$2,000, which Hodges wrongfully misappropriated, and that his claim for that amount is entitled to preference over those of the other creditors.

Francis vs. Evans, Supreme Court of Wisconsin, June 1, 1887.

PROMISSORY NOTE—STRANGER TAKING UP AFTER MATURITY—PURCHASE OR PAYMENT?

Anna L. Shaw, on September 5, 1882, made a note for \$500 payable to the order of Thomas Weaver two years after date, with interest after the expiration of one year, which was one of a number secured by a deed of trust to Chapin and Werden, of even date, executed by Mrs. Shaw and her husband. The payee of the note died before it became due. After his death his executor placed the note in the Central National Bank of Washington, D. C., for collection. On the 19th day of January, 1885, more than four months after its maturity, the plaintiff, Kennedy, sent to the bank his check and received from it the note. The check was in these terms:

"Riggs & Co. Pay to order Central N. Bank (for note A. L. Shaw) five hundred forty one dollars and sixteen cents."

The sum mentioned in the check was the amount of principal and interest due. Kennedy brought an action against the trustees to enforce the deed of trust securing the note, but defendants claimed that by giving his check and receiving the note from the bank Kennedy had paid the note and could not maintain the action. The question for determination was whether his transactions in regard to it amounted to a payment or an assignment of the note.

Hell, The delivery of the check must be considered as a payment of the note unless the bank intended to sell it and had power to do so. The executor and Assistant Cashier of the bank both testified that the note was placed in the bank for collection and not for sale; and, in fact, no valid sale of the note could be made without an order of the Orphan's Court if the law of Maryland is to decide this question. The deed of trust conveys land in Maryland and the note is set up in the Courts of Maryland as a lien on this land. We must necessarily be governed by our own law in the absence of proof that the law of the District of Columbia is different. Kennedy believed that he was purchasing the note and not paying it. But no valid purchase can be made without the consent of the owner or his duly authorized agent. And here there was no consent to a sale nor any power to give consent. The transaction amounting to a payment of the note, the action cannot be maintained.

Kennedy vs. Chapin and another, Trustees, Court of Appeals, Maryland, June 22, 1887.

INSOLVENT BANK—LIABILITY OF DIRECTORS TO DEPOSITORS FOR NEGLIGENCE IN PERMITTING BANK TO BE HELD OUT AS SOLVENT.

This was a case in the Circuit Court of Montgomery County, Ill., by a general depositor in a bank, against the Directors of the bank, to hold them answerable for negligence in permitting it to be held out to the public as solvent, when, in fact, it was at the time insolvent. Judgment was rendered for the plaintiff in that Court, which was affirmed on appeal to the Appellate

Court of the Third District, and an appeal was then taken to the Supreme Court of Illinois.

Held, The Appellate Court of the Third District, in its opinion filed on rendering that judgment, holds: *First*, that the Directors of a bank are trustees for depositors as well as for stockholders; *second*, that they are bound to the observance of ordinary care and diligence, and are hence liable for injuries resulting from its non-observance, and *third*, that the present appellants did not observe that degree of care and diligence, and in consequence thereof appellee sustained the damage for which the judgment was rendered. (*Delano vs. Case*, 17 Bradw., 531.) The last proposition we are relieved from inquiring into, since there was evidence tending, though it may be but slightly, to sustain it.

The propositions of law, as above stated, are, in our opinion, free from objection and sustained by authority. (*Percy vs. Millandon*, 3 La., 568; *United Soc. of Shakers vs. Underwood*, 9 Bush., 609; *Morse, Banks* (2 Ed., 138; *Thomp. Liab. Off.*, 395; *Shea vs. Mabry*, 1 Lea, 319; *Hodges vs. New England Screw Co.*, 1 R. I., 312; *Whart. Neg. Sec.*, 510.)

Judgment affirmed. Opinion by Scholfield, J. Sheldon, C. J. and Craig, J., dissent.

Delano and others vs. Case, Supreme Court of Illinois, June 17, 1887.

INDORSEMENT OF NOTE BY CASHIER IN HIS OFFICIAL CAPACITY—PERSONAL LIABILITY.

This was an action by the State National Bank against G. A. Singer to hold him liable as surety upon three promissory notes, aggregating \$8,000, made by L. D. Allen, Jr., to his own order, and indorsed in blank by him, below which the defendant had indorsed "G. A. Singer, Cashier." L. D. Allen, Jr., the maker, had since 1880 conducted a banking business in the city of Monroe under the name and style of the Bank of Monroe, of which Allen was the ostensible President and defendant the Cashier. For several years the plaintiff had been the correspondent of the bank. In May, 1886, the Bank of Monroe desired to negotiate a loan from the plaintiff, and plaintiff being unaware that such bank and L. D. Allen, Jr., were one and the same, made the loan by discounting the notes of Allen, indorsed by Singer, as above set forth, and placed the proceeds to the credit of the Bank of Monroe. At their maturity Allen made default in their payment, and they were protested, and thereupon Singer was sued. He claimed that he was not bound at all, and that he only indorsed his name upon the paper "as a memorandum for the purpose of identifying the same with the account of the bank." On the other hand, plaintiff's theory was that, inasmuch as it *dealt with the Bank of Monroe* and discounted the paper of L. D. Allen, Jr., who was at the time its reputed and ostensible President, and of which G. A. Singer was the Acting Cashier, and the proceeds thereof were placed to the credit of the latter bank, on open account, and in the usual course of their dealings the plaintiff believed and had the right to believe that the Bank of Monroe was bound to it for the amount of the notes *as security* for the maker, but that it subsequently transpired that L. D. Allen, Jr., was *one and the same person as the Bank of Monroe*; and as in this state of affairs G. A. Singer, Cashier, did not and could not bind the Bank of Monroe, as it was already bound by the signature of L. D. Allen, Jr., who was the Bank of Monroe, he (Singer) bound himself personally as surety in its place and stead.

Held, Conceding all that plaintiff claims concerning the Bank of Monroe and Allen having been one and the same judicial person, it cannot change the *status* or increase the liability of Singer. He was Cashier of the Bank of Monroe and had authority to represent it in placing his name, in his capacity as Cashier, on the notes as he did, and he did not and could not incur any personal liability thereby to the plaintiff. He in no way deceived the plaintiff, and it did not discount Allen's note at his request, or on his account, or that of his signature.

Judgment for defendant.

State National Bank vs. Singer, Supreme Court of Louisiana, June 20, 1887.

ABSTRACT OF CASES.

TAXATION OF SHARES IN ALBANY (N. Y.) NATIONAL BANKS—DEDUCTION OF INDEBTEDNESS—LEGALITY OF METHOD OF ASSESSMENT.

In *Supervisors v. Stanley*, 105 U. S., 305, 316, this Court held that the Act of New York, Chapter 761 of the Laws of 1866, was in conflict with the Act of Congress (Rev. Stat., Sec. 5,219)—prohibiting the taxation of National bank shares by a State at a greater rate than is imposed upon other moneyed capital in the hands of individual citizens of such State—so far as it did not permit a stockholder of a National bank to deduct the amount of his just debts from the assessed value of his stock, while by the laws of the State the owner of all other personal taxable property was allowed to deduct such debts from its value; but that neither the statute nor the assessment under it was for that reason void. If the stockholder had no debts to deduct, the mode of assessment adopted was not invalid as to him; he could not complain of it nor recover the taxes paid pursuant to it. If he had debts, the assessment without a deduction for them in the estimate of the taxable value of the stock was only voidable. The assessing officers, in making the assessment, were acting within their authority until duly notified of the debts which were to be deducted. In such case, therefore, the duty devolved upon the stockholder to show to the assessing officers what his debts were and to take such steps as were required by law to obtain a correction of the over-assessment.

The method adopted by the Assessors of the city of Albany to assess all shares of stock in the State and National banks in the city of Albany at par, without regard to their actual or market value, making the requisite deduction for real estate owned by the banks, comes as near as practicable, considering the nature of the property, to securing as between them uniformity and equality of taxation; it cannot be considering as discriminating against either, and is not in conflict with the Act of Congress providing that the taxation shall not be at a greater rate than is imposed on other moneyed capital in the hands of individual citizens of the State.

Stanley vs. Supervisors of Albany, Supreme Court of the United States, May 2, 1887.

BILL OF EXCHANGE—ACCEPTANCE.

The drawee of an inland bill of exchange dated May 5th, but wherein no time of payment was mentioned, on presentation by the payee wrote upon the bill the words "Payable the 15th day of May, 1888," and signed his name.

Held, That this constituted an acceptance, qualified as to time of payment, and the drawee was liable thereon.

Upon certain other inland bills of exchange the drawee on presentation wrote upon them the word "except," to which he also signed his name.

Held, That this bound him as an acceptor.

Vanstrum vs. Liljengren, Supreme Court of Minnesota, July 8, 1887.

PROMISSORY NOTE—ILLEGAL CONSIDERATION—BONA FIDE PURCHASER.

C gave his promissory note, secured by a deed of trust on certain lands, to a firm of brokers to protect and save them harmless because of certain speculations in option deals in grain then pending and thereafter to be made. The note was transferred before maturity to F. & Co. in payment of an indebtedness to the latter. C brought suit to enjoin the proposed sale of real estate under the deed of trust, claiming that the consideration was illegal and the note void in the hands of F. & Co.

Held, We do not agree with the counsel for the plaintiff that the note is void in the hands of a *bona fide* indorsee because of our statute upon the subject of gambling. These statutes (Sec. 5,721-5,723, Rev. Stat., 1879), make all notes "where the consideration is money or property won at any game or gambling devices" void. The assignment of such a note, the statute says, shall not affect the defense. Under these statutes it was held in *Hickerson vs. Benson*, 8 Mo., 8, that a wager on the result of an election was not within their meaning. Subsequently the statute was so amended (Section 5,726) as to include bets and wagers on elections, but the amendment does not include

such contracts as those here in question. The sections of the statute before noted are evidently designed to be in aid of the criminal law. This much is said in the case of *Williams vs. Wall*, 60 Mo., 320. It cannot be said that contracts like those in question come within the provisions of the criminal statutes. These wagering contracts are void, not because prohibited by statute, but because they are against public policy. The note is not void in the hands of an indorsee before maturity simply because based upon such a consideration. This is the view taken of the statute in *Third National Bank vs. Harrison*, 10 Fed. Rep., 243, and we believe to be the correct one.

Crawford vs. Spencer and o'rs, Supreme Court of Missouri, June 20, 1887.

PRINCIPAL AND SURETY—EXTENSION OF TIME—FRAUD—DISCHARGE OF SURETY.

H executed a note to the plaintiff on the 18th of August, 1882, due in six months, whereon defendant was surety. When the note became due H desired an extension and presented to the plaintiff a new note signed by himself, and to which defendant's name was also signed, which plaintiff accepted, and surrendered the former note. At the maturity of this note, H again presented a note to which defendant's name was signed, and secured a second extension. It afterwards transpired that he had forged the defendant's signature to both these instruments; but that fact was not discovered by the plaintiff until he sought to collect the third note from the defendant after its maturity.

Held, As the surrender of the original note and the extensions of time were obtained by fraud, the note was not extinguished by the surrender; nor was the surety discharged by the extensions of time. (Citing, *Kirby vs. Landis*, 54 Iowa, 150.)

Hubbard vs. Hart, Supreme Court of Iowa, June 14, 1887.

NATIONAL BANK—POWER TO ENGAGE IN BUSINESS OF CUTTING TIMBER.

A National bank loaned D a large sum of money to engage in the lumber business in West Virginia. Subsequently D became embarrassed and the bank, with a view of saving its debt, secured a deed of trust upon all of his property; which deed was foreclosed, and the bank purchased the property and was compelled, through its agent, to conduct the business of cutting and selling timber with a view of reimbursing itself, out of the proceeds of the business, for money it had loaned. It was claimed by the plaintiff, who sought to enjoin the bank from carrying on this business, that its acts were *ultra vires*—not only unauthorized by its charter, but inhibited by the National Bank Act under which it was organized.

Held, It may be conceded that there is no express power in the charter of this corporation that would authorize it to conduct a business outside of its legitimate business as a banking institution; but there is connected with all corporations certain implied powers which are incident to the express powers, and without which no corporation can successfully transact business. In this instance, we see but an effort on the part of the bank to secure and collect a debt due it. No one will question the right of a bank to loan its money in the manner authorized by its charter; as a consequence, it must have the power to collect it; and, as incident to the exercise of such power, the right to secure and save the debt. We think this view is well sustained by authority. (Citing, *First Nat. Bank vs. Nat. Exchange Bank*, 92 U. S., 122; *1 Wood R'y Law*, Sec. 169.)

John A. Roebling Sons' Co. vs. The First National Bank of Richmond, Va., U. S. District Court, D. West Virginia, 1887.

PROMISSORY NOTE—PAYABLE TO AGENT—ACTION ON IN AGENT'S NAME—DEATH.

A promissory note payable to the order of an agent of a corporation (the principal as well as the agent being specified by name in the body of the note), is in legal effect payable to the corporation; and while the agent can maintain an action thereon (Code, Sec. 2,209), so can the principal (*Id.*, 3,257).

An action upon such a note by the agent, for the use of the principal, is virtually an action by the principal, and the death of the agent before or pending the action will not affect the suit. The words importing that the

agent sues, and that the suit is for the use of the principal, are surplusage, and may be stricken from the declaration by amendment at any time, whether before or after verdict. (56 Ga., 554; 59 Ga., 644.)

Martin, for use, etc., vs. Lamb, Supreme Court of Georgia, February 26, 1887.

PROMISSORY NOTE—LIABILITY OF JOINT INDORSERS—JUDGMENT.

An action was brought by S in Michigan, under the common counts under the statute, upon a note of which G was maker and A and F were joint indorsers. No judgment was taken against G and the suit stood on trial as a suit against the two indorsers. The defense was a failure to properly present the note for payment and notify the indorsers of its dishonor. The Court below directed the jury that the evidence showed a good demand and notice on A but not on F, and directed a verdict in favor of F and against A, and judgment was rendered accordingly. On appeal,

Held, This action was upon a joint obligation of F and A. The record as framed established the fact that they made it jointly, and they were so charged. They pleaded jointly, and there is no pretence of severance by bankruptcy or other act or thing which could put an end to the liability of one and leave the other bound. This being so, it is well settled law that there must be, in a joint action, a joint judgment or no judgment at all. When the Court found there was no joint liability it was error to hold there was a sole liability against A. Unless both could be held in this action neither could be. Plaintiff could not take judgment against one of two defendants jointly charged. The discharge of one is the discharge of both.

Judgment reversed.

Seligman vs. Gray and o'rs, Supreme Court of Michigan, June 16, 1887.

NATIONAL BANK—POWER TO TAKE REAL ESTATE SECURITY.

A mortgage was given to a National bank, by way of security, for an indebtedness previously contracted and evidenced by new notes of the mortgagor.

Held, In taking such security the bank did not violate the provisions of the National banking law in reference to holding real estate. (Rev. Stat., U. S., Sec. 5,137; 22 Ohio, 516; 23 Ohio, 97; 120 Mass., 153; 16 Kan., 341; Morse, Banks, 2nd Ed., 566.)

Farmers & Merchants' National Bank vs. Wallace, Supreme Court of Ohio, May 10, 1887.

INSOLVENT BANK—CONVEYANCE OF PROPERTY TO DIRECTOR—SETTING ASIDE CONVEYANCE.

The Macon Savings Bank, on February 16, 1882, made an assignment of its property for the benefit of its creditors. Previous to the assignment, on the 2d day of March, 1880, the bank conveyed by deed to Winn, one of its Directors (who was then, and had been since 1874, a stockholder and Director in said bank), two parcels of land, of the value of \$2,700, in consideration of said Winn surrendering to the bank \$2,700 of his paid up stock. Plaintiff, a creditor of the bank, brought suit to compel the property so conveyed to be subjected to sale for the payment of his debt, claiming that at the time these deeds were made the bank was insolvent and in failing circumstances, of which he alleged the Director, Winn, had knowledge. Winn denied that he had any personal knowledge that the bank was insolvent or in failing circumstances at the time he purchased the property, and claimed that he had bought it in good faith although he had heard some rumors that the bank was not solvent.

Held, It is an admitted fact that when these deeds were executed the Macon Savings Bank was insolvent, and in such case the law is settled that the assets of the bank become a trust fund to be managed by the Directors for the benefit of the creditors, and that after such confessed insolvency they cannot in equity secure any advantage to themselves. Under this principle, if the bank was actually insolvent at the time the deeds were made to Winn, and he had knowledge of such insolvency, the deeds must give way to the claims of a creditor when a Court of Equity is asked by him to avoid them.

In view of the admission of Winn that he had heard rumors that the bank was not solvent, and the fact that he had been a Director of the bank since

1873 or 1874 and also a stockholder, under the rulings of this Court (69 Mo., 265; 71 Mo., 356), he is chargeable in the eye of the law, with knowledge.

Winn, having this knowledge, could only thereafter deal with the assets of the bank as a trustee for the creditors and having no beneficial interest as a stockholder, he is chargeable with knowledge of the fact that the \$2,700 of stock which he paid for the land and withdrew from the trust fund, though having a marketable value, was of no value and worthless. The conclusion follows that the deeds to Winn must be held fraudulent in law and the property conveyed subject to the claims of creditors.

Roan vs. Winn, Supreme Court of Missouri, June 20, 1887.

LAW NOTES AND COMMENTS.

NEGOTIABILITY OF BILLS OF EXCHANGE IN ALABAMA.—The opinion of Judge Wallace, of the Circuit Court of the United States for the Southern District of New York, found elsewhere in this number, affords an interesting example of statutory construction. Section 2,094 of the Code of that State provides that "bills of exchange and promissory notes, payable in money at a bank or private banking house, or a certain place of payment therein designated, are governed by the commercial law." At first view it would seem that the words "payable in money at a bank or private banking house, or a certain place of payment therein designated," applied to bills of exchange as well as to promissory notes, and that bills of exchange which did not specify any place of payment would not fall within the provisions of the section. Judge Wallace, while stating that the punctuation would favor this view, holds that the punctuation may be disregarded, and then by tracing the provision to its original source in the law of 1828, shows quite clearly that it never was the intention of the Legislature to restrict the negotiability of bills of exchange to those payable at a bank or other specified place, and that the restrictive words were originally only intended to be applied to promissory notes. It is interesting to note how the changing of the position of a comma will alter the meaning of a whole sentence. The original Act of 1828 provided that "hereafter the remedy on bills of exchange, foreign and inland, and on promissory notes payable in bank, shall be governed by the rules of the law merchant," etc. Here it will be seen the comma was placed after the words "bills of exchange," while after "promissory notes" it was omitted. In the section under construction the comma is placed after the words "promissory notes," and omitted after "bills of exchange," thus apparently placing the two classes of paper in the same category. The meaning which this punctuation would give to the sentence, however, is shown to be in conflict with the original intention of the Legislature, and this being ascertained, is held to govern. This decision, of course, is not binding upon the Alabama courts, but in the absence of any adjudication in that State is useful as an authority. In some of the other States provisions of a somewhat similar nature exist. Thus in Indiana, section 5,506 of the Revised Statutes of 1881 provides: "Notes payable to order or bearer in a bank in this State shall be negotiable as inland bills of exchange, and the payees and indorsees thereof may recover, as in case of such bills."

TRACING TRUST FUNDS.—Wherever the property of a party has been wrongfully misapplied, or a trust fund has been wrongfully converted into another species of property, if its identity can be traced, it will be held in its new form, liable to the rights of the new owner or *cestui que trust*. The general proposition which is maintained both at law and equity upon this subject is that if any property, in its original state and form, is covered with a trust in favor of the principal, no change of that state and form can divest it of such trust or give the agent or trustee converting it or those who represent him in right (not being *bona fide* purchasers for a valuable consideration without notice) any more valid claim in respect to it than they respectively had before such change. (Story's Eq. Juris., Sec. 1,258.)

In Taylor vs. Plumer, 3 M. & Selw. 562, a leading case, Lord Ellenborough said: "The product of or substitute for the original thing still follows the

nature of the thing itself, so long as it can be ascertained to be such, and the right only ceases when the means of ascertainment fail."

Whether in a given case the "means of ascertainment" have failed is often a question of much difficulty. Lord Ellenborough held that the means of ascertainment would fail "when the subject is turned into money and mixed and confounded in a general mass of the same description," because as money it would lose its ear-mark. By the current of recent decision, however, it would seem that the courts have gone much further in permitting trust property to be recovered and that this rule of identity has been relaxed.

In *McLeod vs. Evans*, in the Supreme Court of Wisconsin (*RHODES' JOURNAL*, July, 1886, p. 515), it was held that it was not necessary to trace the trust fund into specific property in order to enforce the trust. That if it could be traced into the estate of the defaulting agent or trustee, this was sufficient.

In *Third National Bank vs. Stillwater Gas Co.*, in the Supreme Court of Minnesota (*RHODES' JOURNAL*, March, 1887, p. 264), it is said: "It is elementary that a person obtaining property by fraud acquires no title to it, but it is held by him and by all persons claiming under him with notice in trust for the original owner. So long as the property can be identified in its original or in a substituted form it belongs to the original owner if he elects to claim it; and if it passes into the hands of an innocent purchaser for value, the title of the defrauded owner, at his option, at once attaches to the avails so long as the identity is preserved, no matter how many transmutations of form the property has passed through. So long as the trust property can be traced and followed into other property into which it has been converted, that remains subject to the trust. The product or substitute has the nature of the original imparted to it. The depositing of trust money in a bank, although it creates the relation of debtor and creditor between the bank and depositor, does not change its character or relieve the deposit from the trust. It is not the identity of form, but the substantial identity of the fund itself which is the important thing. Some cases go so far as to hold that the trust character still adheres to money even though it cannot be traced into specific property."

In *Thompson vs. Gloucester City Savings Institution*, in the New Jersey Court of Chancery (*RHODES' JOURNAL*, May, 1887, p. 474), a savings bank had collected certain drafts for a depositor and then failed. The Receiver resisted the claim of the depositor to the proceeds in full on the ground that they had been mixed with the funds of the bank and their identity as a trust fund lost, and claimed that the depositor was nothing more than a general creditor, entitled to share *pro rata*. The Court held, however, that the owner was not required to point out the identical money, but did all that was required of him if he showed that the money came into the hands of the defendant impressed with a trust to his knowledge. That in such case the Receiver must respond either in the article taken or its value.

And in *Francis vs. Evans*, reported in this number, where a banker collected certain money for his customer and then failed, the Supreme Court of Wisconsin, following *McLeod vs. Evans*, hold the assets in the hands of the Assignee impressed with a trust in favor of the customer to the extent of the amount collected.

These recent cases show a tendency of the courts to break away from the rule that the identity of the trust fund must be preserved in order that a recovery may be had, and to allow a beneficiary to recover even where the trust property has been mixed with other assets and all "ear-mark" has disappeared.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.

A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement on another page.

Editor Rhodes' Journal of Banking:

SAN ANTONIO, TEXAS, Aug. 24, 1887.

I enclose a decision (?) clipped from a sheet published in your wicked city—the one which rejoices in being the successor of Haver's notorious *Thompson Bank Note Reporter*. We are not subscribers. It is from a sample copy which came

here recently. I am fully aware of your feeling of supreme disgust for the sheet in question—its present management as well as the Haver *regime*—but I will esteem it a favor if you will read the clipping. The reply is certainly erroneous and liable to mislead though it is doubtless true it has been seen but by a very few people.

CASHIER.

Editor American Banker:

CENTRAL CITY, Neb., July 5, 1887.

Please answer through the *American Banker* if interest can be collected by law on the three days grace of a note drawn payable Jan. 10th and paid on that day.

SUBSCRIBER.

Answer.—Interest cannot be collected, as it is optional with the maker whether he pays at maturity or on either days of grace.

Remark.—Where law and custom allow days of grace, the true date of the maturity of the note is the last day of grace. A note drawn as specified in "Subscriber's" question would not mature until the third day after Jan. 10. No rebate of interest is allowable on a note paid before maturity unless by the mutual consent of holder and payer. Unless therefore the holder of note mentioned in the quotation were willing to remit the interest for the days of grace the payer would not be released from his obligation to pay it, and it can be collected of him.

Editor Rhodes' Journal of Banking:

WATERTOWN, Me., September 2, 1887.

A manufacturing company is incorporated under the name of—say "The Smith & Jones Manufacturing Co." They keep a bank account in the name of "The Smith & Jones Manufacturing Co." They sign their checks, using simply these words, and indorse checks payable to the company in the same way.

Is such a signature or indorsement, without the name of any Treasurer or other official, customary or legal?

Answer.—The proper manner of signing for a corporation is by writing "The Smith & Jones Manufacturing Company, by James Smith, Treasurer," and it is not customary to affix the bare signature of the corporation without more. In *Draper vs. Massachusetts Steam Heating Co.*, 5 Allen, 338, a note was signed "Mass. Steam Heating Co., L. I. Fuller, Treasurer," and the Court said:

"The name of the company is signed to the note. This signature could not be made by the corporation itself, and must have been written by some officer or agent. It was manifestly proper that some indication should be given by whom the signature was made as evidence of its genuineness, and Fuller added his own name with the designation of his official character. It would have been better if the name of the principal had been inserted in the body of the contract as the contracting party, or if the word "by" had preceded Fuller's name in the signature. But we think the omission to do this does not change the apparent character of the instrument, and that the whole, taken together, shows it to be the signature of the Massachusetts Steam Heating Co. and not of Fuller."

The question remains, Is the signature of "The Smith & Jones Manufacturing Company," without the name of any Treasurer or other official, though not in the customary form, legal? Would such a signature be valid and binding?

In a note to Section 147 of the ninth edition of Story on Agency it is said:

"It has sometimes been thought not a sufficient execution for an agent to sign merely his principal's name as if it were his own personal act, but that he ought to add some words indicating that the signature was signed by an agent and not by the principal. The propriety of such a mode of execution may be easily seen, but it cannot positively be said, upon the authorities, to be absolutely necessary to the validity of the instrument."

In *Wood vs. Goodrich*, 6 Cush., 120, Fletcher, J., said:

"The first question as to the plaintiff's title to the land is, whether the form of executing the mortgage and note by the attorney was a legal execution of his power as such; whether signing the name of the principal, Benjamin Goodrich, as if it were his own personal act and signature (it not appearing upon the instruments to be done by Levi as attorney) was a good execution of the instruments under the power, so as to make them valid as the deed and note of Benjamin. * * * * *

"It should appear upon the face of the instruments that they were executed by the attorney and in virtue of the authority delegated to him for this purpose. It is not

enough that an attorney in fact has authority, but it must appear, by the instruments themselves which he executes, that he intends to execute this authority. The instruments should be made by the attorney expressly as such attorney; and the exercise of his delegated authority should be distinctly avowed upon the instruments themselves. Whatever may be the secret intent and purpose of the attorney, or whatever may be his oral declaration or profession at the time, he does not in fact execute the instruments as attorney and in the exercise of his power as attorney, unless it is so expressed in the instruments. The instruments must speak for themselves. Though the attorney should intend a deed to be the deed of his principal, yet it will not be the deed of the principal unless the instrument purports on its face to be his deed. The authority given clearly is that the attorney shall execute the deed as attorney, but in the name of the principal. There is much learning and much discussion in the books of the law as to the proper mode of executing authority by agents. In what form the agent should exercise his authority so as to bind his principal and not bind himself has been a subject largely considered in elementary works and much discussed in numerous adjudged cases. The rule commonly laid down by all the authorities is, that to bind the principal, the instrument must purport on its face to be the instrument of the principal and executed in his name, or, at least, that the tenor of the instrument should clearly show that the principal is intended to be bound thereby, and that the agent acts merely as his agent in executing it. But it is contended that it is nowhere laid down in any work of authority, or established by any adjudged case, that the agent may put the name of the principal as his own personal act and signature, the execution of the agent, as agent, not being in any way disclosed. Such an execution does not appear to be warranted by the power delegated to execute the instrument as attorney, but in the name of the principal. (*Squire vs. Harris*, 1 Lans., 282; *Webster vs. Brown*, 2 S. C., 428.)

In *Forsyth vs. Day*, 41 Me., 382, it is held that an agent authorized to sign the name of his principal effectually binds him by simply affixing to the instrument the name of his principal as if it were his own name, *Rice, J.*, saying:

"No case, I apprehend, can be found in the books which will sustain the rule so broadly laid down by the learned Judge in the case of *Wood vs. Goodrich*; nor can the doctrine be sustained on principle. It is difficult to perceive any sound reason why, if one man may authorize another to act for him, he may not authorize him thus to act for and bind him in one name as well as in another. As matter of convenience, in preserving testimony it may be well that the names of all parties who are in any way connected with a written instrument should appear upon the instrument itself. But the fact that the name of the agent by whom the signature of the principal is affixed to an instrument appears upon the instrument itself neither proves, nor has any tendency to prove, the authority of such agent. That must be established *aliunde*, whether his name appears as agent or whether he simply places the name of his principal to the instrument to be executed."

In *Berkey vs. Judd*, 22 Minn., 287 (decided November, 1875), it is said at page 302:

"As respects the execution of a deed by an attorney in fact, although it is usual and better for him to sign the name of his principal and to add thereto his own signature with proper words indicating that the act is done by him as such attorney, yet it is not in all cases necessary that he should so append his own name. When the deed on its face purports to be the indenture of the principal, made by his attorney in fact therein designated by name, it may be properly executed by such attorney by his subscribing and affixing thereto the name and seal of his principal alone." Citing *Devinney vs. Reynolds*, 1 Watts & Serg., 328; *Forsyth vs. Day*, *supra*.

While, under the authorities, the omission of the agent's name after that of the corporation may not invalidate the instrument, it is evidently the more proper and safer way to make the signature in the manner we have above indicated.

NOTICE.—We will pay fifty cents a-piece for a limited number of copies of the JOURNAL for January, 1885.

REFUNDING UNITED STATES BONDS.

REFUNDING OF THE UNITED STATES FOURS AT LOWER RATES OF INTEREST (TWO AND-A-HALF, AND ALSO TWO PER CENT.)—COMPUTATION OF PRESENT VALUE OF DIFFERENCE IN INTEREST BY THE GOVERNMENT ACTUARY.

NATIONAL BANK OF THE REPUBLIC,

NEW YORK, September 30, 1887.

Editor Rhodes' Journal of Banking:

SIR:—I transmit herewith two statements prepared at my request by the Hon. E. B. Elliott, Government Actuary, giving the amounts of interest that would be payable in advance to the holders of the four per cent. bonds of the United States from July 1, 1888, if such bonds were made exchangeable for either two and-a-half or two per cent. bonds, maturing at the same dates as the four per cents.; such amounts being the present values of the difference in interest, which would be surrendered by the holders of the fours accepting the exchange, computed at various rates of interest assumed to be realized by the Government. I also transmit copies of two bills heretofore introduced in Congress authorizing such exchange of bonds—one by Mr. Aldrich, in the Senate, on January 14, 1884, and the other by Mr. Hewitt, in the House, on December 13, 1886.

Very truly yours,

JOHN JAY KNOX.

COMPUTATION BY THE GOVERNMENT ACTUARY.

Present value of two dollars a year for nineteen years reinvested quarterly at the following rates of interest per annum.

U. S. TREASURY DEPARTMENT,
September 26th, 1887.

(Signed)

E. B. ELLIOTT,
Government Actuary.

THE ALDRICH BILL.

Introduced by Mr. Aldrich on January 14, 1884.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized to receive at the Treasury from time to time, subject to such regulations as he may prescribe, any bonds of the United States bearing four or four and one-half per centum interest, and to issue in exchange therefor an equal amount in bonds of the United States (coupon or registered), of such form and denomination as he may prescribe, bearing interest at the rate of two and one-half per centum per annum, payable quarterly. Such bonds shall be exempt from taxation by or under State or municipal authority, and shall become payable at the same dates at which the four or four and one-half per centum bonds for which they are exchanged are payable, namely, on the first day of July, nineteen hundred and seven, for bonds exchanged for four per centum bonds, and the first day of September, eighteen hundred and ninety-one, for bonds exchanged for four and one-half per centum bonds: *Provided*, That the two and one-half per centum bonds herein authorized, issued in exchange for four per centum bonds, shall not be called in and paid so long as any bonds of the United States heretofore issued bearing a higher rate of interest shall be outstanding and uncalled; and the last of such bonds originally issued under this Act, or the

substitutes issued therefor, shall be first called in, and this order of payment shall be followed until all of such bonds shall have been called in or paid.

SEC. 2. That in consideration of the reduction of interest effected, the Secretary of the Treasury is hereby authorized to pay, out of any money in the Treasury not otherwise appropriated, to the holders of United States four or four and one-half per centum bonds exchanged for the two and one-half per centum bonds authorized by the preceding section, a sum equal in each case to the aggregate present worth at the time of exchange of the portion of the several quarter-yearly payments of interest from which the United States is released by such exchange: *Provided*, That in ascertaining such present worth interest shall be computed at not less than three per centum per annum, reinvested quarter-yearly; and the four and four and one-half per centum bonds received in exchange shall cease to be evidence of indebtedness against the United States, and shall be canceled and destroyed: *Provided further*, That the payments authorized by this section may be credited to and form a part of the sinking-fund of the United States provided by existing law.

SEC. 3. That when any National banking association shall deposit with the Treasurer of the United States, in the manner provided by law, the two and one-half per centum bonds authorized by this Act, or any bonds of the United States bearing a higher rate of interest, as security for its circulating notes, the association making such deposit shall be entitled to receive circulating notes, in manner, form and denominations authorized by law, not exceeding in amount the par value of the bonds so deposited; and at no time shall the total amount of notes issued to any such banking association exceed the amount at the time actually paid in of its capital stock.

SEC. 4. That all laws and parts of laws inconsistent with the provisions of this Act are hereby repealed.

THE HEWITT BILL.

Introduced in Congress December 13, 1886.

SECTION 1. That out of any money in the Treasury not otherwise appropriated, the Secretary of the Treasury is hereby authorized and empowered to anticipate the payment of so much of the interest on the interest-bearing bonds of the United States as shall be in excess of the rate of 3 per cent. per annum by the payment in gross of such sums in each case as shall be equal to the aggregate present worth of such excess at interest thereon. And for the purpose of ascertaining such present worth, the interest upon the amount paid by the United States in anticipation of such excess of interest shall be computed at the rate of 3 per cent. per annum, reinvested quarterly, so as to secure to the United States the benefit of computed interest thereon.

SECTION 2. That when such payment of interest in anticipation of the maturity thereof shall have been accepted by any holder of the bonded indebtedness of the United States, the bonds shall be distinctly stamped and properly indorsed in such manner as the Secretary of the Treasury may prescribe, so as to show the reduced rate of interest thereafter to be paid thereon, and the coupons, if any, shall be cut off and canceled, and for the coupons so canceled shall be substituted new coupons bearing the reduced rate of interest, and the bonds so stamped shall be receivable by the Comptroller of the Currency as security for the issue of the circulating notes of any National banking association to the full extent of the par value of said bonds instead of 90 per cent., as now required by law.

SECTION 3. That it shall be lawful for the Secretary of the Treasury to deposit from time to time with any National banking association any portion of the money in the Treasury not otherwise appropriated upon the security of an equal amount of the bonded or other indebtedness of the United States; provided the whole amount of special deposits thus made shall not at any time exceed \$100,000,000, and all such deposits shall be subject to call upon such notice as the Secretary of the Treasury may see fit to prescribe.

FINANCIAL MATTERS IN CHICAGO.

[From the Journal's Chicago Correspondent.]

Chicago and the West generally have been less troubled by the stringency of the money market than the East. The market has been strong, and borrowers who in August paid only 6 per cent. were glad to get funds for 7 during September. Many irregular borrowers were refused accommodation at the banks, which confined their lending almost exclusively to their own customers. Yet there was no squeeze, and persons in legitimate business have got along very comfortably. There has been very little local speculation, and the quantity of agricultural products carried here is small; otherwise there might have been some trouble. The regular rates charged at the banks are 6 per cent. for call and 6, 7 and 8 for time. It is only to customers whose accounts are very valuable or who present exceptionally good collateral that bankers lend at 6. The great aggregate of ordinary mercantile paper goes at 7.

It will be readily understood by observers of the course of business that one of the leading causes of the advance in the rates for money here is the absorption of large amounts of Eastern capital in corporate enterprises. It has been a very common thing among our business men in past years to borrow heavily in Boston and New York. Those cities now have little or no money for Chicago use. All of Chicago's business, therefore, has to be done with Chicago money. More than this, even Eastern

cities have of late borrowed in Chicago. Houses that have offices in both cities call on the Chicago banks for funds to be used in the Metropolis. Our banks discriminate against such loans when they can on the ground that all their money is needed for home use. Many direct applications have been made by Eastern people for loans here. This is a remarkable state of things, considering that in past years Chicago has been so dependent on the East for capital. Occasionally Chicago paper which has never before been seen in this city makes its appearance, and business men here are surprised at the high rates their neighbors are willing to pay. Some such paper has been offered at 10 per cent. interest. It was good paper, too, and had our bankers been in a position to lend to any outsiders they would have taken it. Some loans have been made in other cities, such as St. Louis, Minneapolis and Toledo, on wheat receipts and other first-class collateral.

Private lenders have taken advantage of this great demand for money, and good loans have been made as high as 8 per cent. The notes of excellent houses are found among these loans. These houses have received all the accommodations they can get at their banks and are obliged to go on the street for any further funds. But there are other concerns borrowing from private individuals, because they can get the money below bank rates.

But perhaps the most striking peculiarity of the market is the amount of borrowing through note-brokers. This class of men have been of comparatively small consequence here in past years. Their sales were formerly made almost exclusively in the East, but their customers are now chiefly in Chicago and other Western towns. It is easy enough to see why they have lost their Eastern market—the capital has been taken up by railroads and other corporate enterprises—but where the money of the Western people for such investments comes from in such quantities is not so well understood. Some observers have inferred that the farmers are getting out of debt and laying up money, but it is difficult to see how they can do that with prices of agricultural products so low; and others say they have mortgaged their farms, and this money is a part of the proceeds. The more rational explanation is that the immense amount of railroad building in the West has distributed money freely, and those who have received it are investing it in this mercantile paper.

There is no doubt more poor paper afloat in Chicago than for many months, yet the expansion of credit has not yet reached a dangerous point apparently. Very little paper that never should have been made reaches the banks. It is useless to present it there. It goes to the note-brokers. There is a sharper discrimination than usual. Nevertheless, there are people who are willing to lend at 8 to 10 per cent. to small houses which already have too many notes out. It is well that attention be called to the tendency among certain of our merchants to borrow without any very distinct idea as to how they are going to pay. It is not believed that the quantity of accommodation paper afloat is yet large.

It is thought that irrespective of anything the Treasury Department may do, the money market in the West will be easier thirty days hence than it is now. Business affairs are already adjusting themselves to the changed condition of affairs, and many enterprises that have all along depended on easy money will be given up. Meanwhile legitimate trade has not been seriously affected. New York exchange has, however, been almost constantly down to the point at which it pays to move currency from the Metropolis. Meanwhile the shipments of current money from this city to the country towns have reached a large volume. More gold than anything else has been sent out, as it is difficult to get small bills, and silver dollars are not wanted. The movement is by no means on so great a scale as that of last year. The bulk of the funds goes to Minneapolis, St. Paul and other towns in the spring wheat region.

The closeness of the money market has greatly depressed local securities. People will not buy a 5 per cent. bond at par when they can lend to merchants at 7 or 8. The gas and street railway stocks have taken the lead, but almost everything in the way of securities has gone down. There is yet no speculation in the Gas Trust certificates. A quarterly dividend of 1 per cent. will be declared in October, and that with the probable listing of this security on the New York Stock Exchange is expected to give it a higher price.

The mortgage of the Chicago Gas Light & Coke Company, amounting to \$10,000,000, has been executed. Of this amount \$7,650,000 is to be issued at once, \$3,650,000 having been taken by Drexel, Morgan & Co. for sale abroad. The bonds pay 5 per cent., and

were placed at 95. The amount of money brought into the city by the Philadelphia syndicate, who are interested in our street railway and gas companies, will be \$15,000,000 or \$20,000,000, provided their proposed purchase of the West Division Road is consummated. It is said that the \$4,000,000 necessary for the purpose is on deposit here.

The Union Stock Yards Company has reduced its dividend from 9 to 6 per cent. Considerable quantities of the stock of the American Exchange National Bank have changed hands at 110 (or 80 assessment unpaid). The Germans appear to be getting control of the institution.

Our stock speculators are generally bearish. N. B. Ream and N. S. Jones have made large sums selling the market. Some large losses have been suffered by holders of Chicago & Northwestern, and it is said that considerable investment stock has been sold. B. P. Hutchinson, however, buys this stock freely when it goes down. He has recently offered to lend largely on it. Armour still expresses the utmost confidence in St. Paul, and he believes that the recent scare in the stock market was groundless.

Mercantile business is on the whole in excellent condition, and the banks are making more money than in any previous year in their history. H. C. B.

GENERAL BANKING LAW OF MICHIGAN.

On February 23, 1887, Senator Geo. C. Monroe, introduced a bill in the Senate of Michigan to revise the laws authorizing the business of banking, and to establish a Banking Department for the supervision of such business. The bill was referred to the Committee on Banks and Incorporations, and on May 19 that Committee reported favorably upon the measure. Under the existing banking laws of Michigan the State banks report to the State Treasurer, but the committee says that the powers conferred on that officer are not, and never have been, sufficient either in definition or scope to secure such thorough supervision as would amount to anything like an adequate protection of the depositors, customers or stockholders, nor indeed such as to secure ample justice to the banks themselves. In fact, they report that there is a necessity for the establishment of a Department that shall be specially charged with the work of supervision of the banks in the State organized under State authority. This Department is to be presided over by an officer who is to be styled the Commissioner of the Banking Department. The feature of the bill which, in the opinion of the committee, renders it so desirable is that which provides for periodical examinations. The value of examinations is claimed to be two-fold—first to the public, and second to the banks themselves. It is claimed that, in the case of National banks, that the examination required by law not only is a safeguard to the Government and the customers and depositors, but that the Directors of those institutions are incited to more vigilance and frequently institute examinations for their own safety—becoming often very expert in such matters themselves. The other provisions of the bill are largely copied from the National banking laws. Reports of condition are required for past dates to be selected by the Commissioner. The expenses connected with the new law, including salaries of Commissioner and necessary help and the compensation of Examiners, are to be paid by fees paid by the banks themselves. The bill not only provides for commercial banks but also for savings banks, either separate or in connection with the former. When a commercial bank and a savings bank are combined, separate accounts are to be kept for each concern. The capital of savings banks, as well as that of commercial banks, is to be contributed by stockholders, who are liable to double the amount of their stock. The savings bank is not, therefore, a mutual affair, as in New York and many of the States, but is incidentally run for the benefit of the stockholders. The apparent decadence of the National banking system, owing to the rapid payment of the Government debt and the present high prices of United States bonds, have induced many of the States to revise and improve their banking systems, in anticipation that State banks will soon entirely supersede the National associations. The Legislature of the State of Michigan, soon after it was admitted to the Union in 1837, passed a general banking law, but most of the banks organized under it soon failed, and the experience made such an impression that no new general banking law was passed until 1857. In 1850 a new Constitution was adopted by the State, which forbade the issue of special charters, and also that before any general banking law could go into effect it must be ratified by the vote of the people at a general election. This Constitution provided that the stockholders of banks issuing circulation should

be individually liable to the amount of their stock, but when a general banking law was finally adopted by popular vote in 1858 no banks issued circulation under it, and, therefore, the constitutional provision as to individual liability did not apply to any of them. In 1871 this law was amended so as to include the organization of savings banks. Another law, passed in February, 1850, and amended in 1875, regulates the business of private bankers. The bill now before the Michigan Legislature is, therefore, not so much a new law as an amendment of that in existence with the design of making it more suitable for the demands of modern banking. In many respects the law follows the forms of the National Banking Act, which was in effect a compilation of some of the best provisions of State banking laws previously existing. In regard to real estate, the provisions of the bill are more liberal than those of the National banking law, as under it banks both commercial and savings are allowed to invest 50 per cent. of its paid in capital in banking house and other apartments for rent. In some respects the provisions adopted from the National banking law are made clearer, while other provisions, the true interpretation of which is a matter of much legal controversy, are adopted without change. The provisions in regard to the organization of banks leave the point of time from which the period of succession begins to run very much in doubt. The enumerated powers of the banks are also left in the same state of indefiniteness that prevails.

DEATH OF JOSEPH PATTERSON.

Joseph Patterson, President of the Western National Bank and of the Philadelphia Clearing-House Association, died at his home, on Prospect avenue, Chestnut Hill, at 7:40 A. M., on September 25th. Mr. Patterson went home on the 20th suffering, apparently, from indigestion, and a complication of disorders ensued. These did not yield to treatment, on account of his advanced age, and death was caused by exhaustion. Previous to Thursday night he suffered considerably, but after that he was free from pain. His mind remained clear until within a few minutes of his death, and as late as Friday he conversed on financial matters. Mr. Patterson was about eighty-four years old, and was born in Norriton township, four miles above Norristown, on the Schuylkill River. His father, John Patterson, was a native of Ireland, and came to America in 1798. His mother was Elizabeth Stuart, the only daughter of Col. Christopher Stuart, an officer in the Revolutionary army, who was second in command at the storming of Stony Point.

When he was very young, Mr. Patterson came to Philadelphia and went to school. Among his mates were John Welsh, with whom he then began a life-long friendship. At the age of sixteen years he entered the wholesale dry goods house of Thayer, Bryan & McKee, in Market street, near Sixth, and, after serving that house several years, engaged in the same business for himself. In August, 1842, he gave up mercantile pursuits to become President of the institution which is now the Western National Bank, although afterwards he was largely engaged as a dealer in and shipper of anthracite coal, and owned large collieries in Schuylkill County.

When he became President of the bank the country was just recovering from the effects of the panic of 1837, but when it became a National bank, in 1864, a dividend of 100 per cent. was declared out of the profits accumulated during his administration.

On the 15th of August, 1861, Mr. Patterson participated in the conference between Secretary of the Treasury Chase and representatives of the banking interests of Philadelphia, New York and Boston, held in New York. The Secretary asked for a loan of \$50,000,000 in gold to aid in defraying the expenses of the war.

In view of the alarming condition of the nation's finances, the assembled bankers hesitated to accede to his request. Mr. Patterson then made an appeal in behalf of the Government, which convinced those present that they should furnish the needed money, and the associated banks of the three cities loaned the Government at that time \$50,000,000 at par, and later in the same year \$100,000,000 more. From that time the Secretary was accustomed to consult Mr. Patterson regarding the financial policy of the Government, and his successors in office down to the present time have followed his example and availed themselves of Mr. Patterson's advice and experience.

In 1869 Mr. Patterson became President of the Philadelphia Clearing-House Association, and filled that position until his death. He was also an active member of its Executive Committee.

Twice he declined to become Comptroller of the Currency of the United States. When the National Banking Act was passed, Secretary Chase wished him to be the first Comptroller; the other tender of the position was made under a later administration. He also declined the position of Assistant United States Treasurer for Philadelphia.

In 1876 he was a member of the Centennial Board of Finance. In the same year he was appointed one of the Commissioners for the erection of the Norristown Hospital for the Insane. He was elected President of the Commission and gave much time and attention to the management of the trust committed to him and his associates. Mr. Patterson was an active member of the Presbyterian Church and connected with various charities. For many years he was a Manager of the House of Refuge, a Director and Vice-President of the Pennsylvania Institution for the Deaf and Dumb, a Vice-President of the American Sunday-School Union and a Trustee of the Jefferson Medical College.

The memorial to the late John Welsh engaged Mr. Patterson's attention to a large degree. He was Chairman of the Executive Committee of the contributions and made the address on their behalf when the memorial was transferred to the Park Commission.

Mr. Patterson married a daughter of the Rev. Dr. Cornelius C. Cuyler, of Philadelphia. She died many years ago. The surviving children are C. Stuart Patterson and Theodore Cuyler Patterson, of the Philadelphia Bar; Miss Patterson and Mrs. John C. Sims.

NATIONAL BANK STATISTICS.—Statement of the Comptroller of the Currency on October 1, 1887, showing the amount of National Bank notes outstanding, the amount of lawful money on deposit with the Treasurer of the United States to redeem National Bank notes, and the kinds and amounts of United States bonds on deposit to secure circulation and public deposits:

NATIONAL BANK NOTES.		
Total amount outstanding September 1, 1887.....		\$274,018,900
Additional circulation issued during the intervening month:		
To new banks.....	\$614,150	
To banks increasing circulation.....	830,890	
Total.....	\$1,435,040	
Surrendered and destroyed during the intervening month.....	2,801,439	
Decrease in total circulation during the month.....		1,366,399
Total amount outstanding* October 1, 1887.....		\$272,652,501
Decrease in total circulation during the preceding 12 months..	30,559,651	
Circulation secured by United States bonds (as below):		169,931,680
Decrease during the preceding month.....	19,705	
Decrease during the preceding 12 months.....	64,751,056	
Amount of outstanding circulation represented by lawful money on deposit with the Treasurer of the United States to redeem notes of—		
Insolvent National banks.....	829,786	
Liquidating National banks.....	7,913,748	
National banks reducing circulation under Section 4 of the Act of June 20, 1874.....	44,482,071	
National banks retiring circulation under Section 6, Act of July 12, 1882.....	49,495,216	
Total lawful money on deposit.....		\$102,720,821
Decrease in aggregate deposit during the preceding month.....	1,346,694	
Increase in aggregate deposit during the preceding 12 months.	34,191,404	
U. S. REGISTERED BONDS ON DEPOSIT.		
	To secure Circulating Notes.	To secure Public Deposits.
Pacific Railroad Bonds, 6 per cents.....	\$3,256,000	\$225,000
Funded Loan of 1891, 4½ per cents.....	70,030,850	9,664,500
Funded Loan of 1907, 4 per cents.....	116,214,250	17,487,500
Funded Loan of 1882, 3 per cents.....	216,000	650,000
Totals.....	\$189,717,100	\$28,027,000
* Circulation of National Gold Banks not included in the above.....	\$241,349	

W. L. TRENHOLM, Comptroller of the Currency.

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Commissioner's Report.—Commissioner Muirhead, the master appointed to investigate the management of the Savings Institution of the city of Rahway, N. J., which failed in 1878, has made his report. He finds that there was reason for some of the charges brought against the managers, condemns them for some of their acts, and concludes that the bank's affairs should be closed up at once.

The Security Bank, of Kingman, Kas., was established in 1878. It has been engaged in a general banking and collection business, and has a mortgage, loan and bond department under the special charge of the President, James P. Mead. Perhaps for those who desire to make investments of this kind there could be no better way than to do so through a responsible bank doing this kind of business. See advertisement on another page of the JOURNAL.

Imports and Duties at Philadelphia.—The report of John Cadwalader, collector of the port of Philadelphia, shows that the total value of imports for the year was \$40,23,863, an increase of \$3,732,064 over that of 1884, and \$9,850,356 beyond that of 1885. The duties collected the fiscal year just ended aggregated \$17,000,713.25, an increase of \$3,117,806.02 over the previous year, and \$5,399,967.44 above those of 1885. The duties on sugar alone during the past year were \$8,896,509, an increase over 1885 of \$2,212,456.

A Case of Interest to Banks.—A decision has been reached by the Supreme Court of Massachusetts in the case of William C. Cotton, executor of the will of Arria Cotton vs. Atlas National Bank, the same being a bill in equity to procure the return of the \$42,000 worth of stocks held by defendant as collateral security for a note of Frank B. Cotton, a son of said Arria Cotton, who had pledged the same to the bank at her son's request. The note was twice renewed, and it was claimed by plaintiff that this fact operated to release the security. This position is not sustained by the Court, and, in dismissing the bill, the Court says that it appeared in the evidence that the testatrix knew everything about the transaction, and that she was in fact the real debtor, as the money was practically procured by her in order that she might loan it to a third party.

Schedule of Ives' Affairs.—William Nelson Cromwell, assignee of Henry S. Ives & Company, filed on September 6, the schedule showing the assets and liabilities of that firm. The liabilities amount to \$17,656,175 and the nominal value of the assets to \$25,664,268. The actual value of the latter as estimated by the assignee is \$11,122,016. The liabilities consist of \$9,580,116 to unsecured creditors; \$5,402,244 to secured creditors on loan amounts; \$1,673,820 to secured creditors on bills payable, and \$1,010,000 stocks loaned. The assets consist of stocks of nominal value of \$22,703,804 estimated worth \$8,411,687. Bonds nominal value \$1,249,600, estimated worth \$1,219,695. Debts due, \$401,029 estimated to be worth \$298,885. Bills receivable \$1,196,609, estimated worth \$1,086,310; sundry assets, nominal value \$58,075, actual value \$51,189; borrowed stock \$54,250, worth \$54,250.

Gold Out of New York Banks.—When there first began to be talk in Wall street about embarrassments to the Bank of Nevada \$3,000,000 of gold suddenly disappeared from New York banks. It was officially denied that it had gone to Mr. Mackay's bank and the denial was backed up by convincing proof.

The money went West to protect San Francisco banks that have New York agencies, it being feared that the threats of trouble to the Bank of Nevada might lead to a run on these other conspicuous banks. One of these was the Bank of California, whose Wall street branch forwarded \$1,500,000 in gold. The Seligmans sent to their correspondents \$500,000 and Lazard Freres forwarded \$1,000,000. All of this money, for

which it proved there was no such urgent need as had been feared, has remained in San Francisco idle ever since.

Some Peculiarities of Trade in Mexico.—There are three prominent kinds of business houses in Mexico—the “Ropa” (houses making textiles their specialty), the “Ferreteria” (houses which sell everything appertaining to metals and sometimes glass and arms), and the “Abarrotes” (houses dealing in wines, liquors, preserves, produce, candles, etc. There may be added to these the chemists, and a few others dealing in glassware and weapons. The textile houses, formerly in the hands of the Germans, have been mostly secured by French manufacturers of Barcelonnette (Lower Alps), thanks to their untiring efforts and the good name they bear in Paris, where they can easily command a credit of 400,000*f.* to 500,000*f.* A distinguishing characteristic of these houses is that they render each other help when needed, which is of great material advantage to them. The “Ferreteria” houses are all in the hands of Germans, whilst the Spaniards constitute the majority in the “Abarrotes” business. The Mexican trade is almost wholly in the hands of Paris, Liverpool, London, and Hamburg commission houses, and in some cases Mexican houses have a resident partner in one of these cities.

Stolen Bonds.—The following is the list of securities stolen from the Saco & Biddeford Savings Institution by Frank C. McNeally, for whose arrest and conviction a reward of \$2,500 is offered. Five thousand dollars reward is offered for the recovery of the securities:

Thirty-seven United States registered bonds of \$5,000 each, V Letter A, 4 per cent. U. S. consols, payable July 1, 1907, Nos. 18,927, 18,928, 20,063, 20,064, 21,199, 21,200, 21,872, 21,894, 22,131, 22,132, 22,155, 22,452, 24,361, 24,362, 24,363, 24,364, 24,365, 24,456, 24,457, 24,458, 24,459, 24,460, 24,461, 24,565, 24,566, 25,190, 25,191, 25,197, 25,305, 25,306, 25,307, 25,308, 25,309, 25,310, 26,147, 26,351, 26,345; \$11,000 city Fall River (Mass.) 6*cs*, due 1905, Nos. 1,323 to 1,335 inclusive, and No. 1,462; \$6,000 Cleveland city 6 per cent., due 1895, Nos. 408 to 408 inclusive; \$26,000 St. Louis city 6 per cent., Nos. 8, 9, 26 to 38 inclusive, 712 to 720 inclusive, 6,532, 854; \$5,000 Maine Central 7 per cent., consolidated, Class B, Nos. 2,185 to 2,189 inclusive; \$19,000 Eastern Railroad 6 per cent. bonds, due 1906, Nos. 3,065 to 3,083 inclusive; \$7,000 Mad River & Lake Erie (now Cincinnati, Sandusky & Cleveland) 6 per cent., due 1900, Nos. 587, 592, 593, 594, 786, 787, 798; \$6,000 Portland Water Co. bonds, due 1888, Nos. 1,023, 1,029, 1,080, 1,081, 1,082, of \$1,000 each; Nos. 109 and 281 of \$500 each.

The Chinese Bank and Concessions.—The alleged Count Mitkiewicz who is the head centre of the great American-Chinese-Bank Telephone-Railroad syndicate, from his financial record excites astonishment in that he, without having been accredited in any way either publicly or privately by any one in the United States, should have been able to obtain from the Chinese Government, the privileges claimed. The English and Germans have for a long time been seeking to gain some business foothold in China without being able to obtain any satisfactory recognition from the Chinese Government. If there is any foundation whatever to the claims of Mitkiewicz, it must be that he is merely permitted to employ American capital in China at its own risk. That is, the Government takes no interest in or grants no protection whatever to it. If the prejudices of the people or any outcry against foreign investments should arise there is nothing to prevent the Chinese Government from confiscating the whole thing, or ordering those who might be so foolish as to invest in Chinese property to surrender it for state reasons. The Chinese fear Governments that like the English and German have a strong foreign policy. They might be more partial to American capital because less likely to involve them in a foreign war.

Commercial Check on Trade Gambling.—The Rotterdam Chamber of Commerce appears to have recognized at a distance, without any immediate experience, the evils of trade gambling, so prevalent on the American business and financial exchanges. A remedy has been applied immediately upon the appearance of the disorder in Rotterdam. The annual report of the Chamber for the year 1886, contains the following of its introduction and the means adopted for its cure:

The year 1886 saw the first time bargains in Java coffee in this market. It has been thought prudent to put some restriction to this way of doing business, and to prevent our market from degenerating into the state of things found at Havre and New York, where often in one day more coffee is sold than the whole stock amounts to. Consequently it has been arranged that these time-bargains cannot be concluded for a cer-

tain number of bags of coffee without giving further particulars, but only for a definite number of warrants of lots actually in stock. The broker through whom the business is done, has to specify the numbers of these warrants in the contract, thereby giving the buyer the disposal of a definite quantity of coffee. In this way there is no danger that an imaginary quantity of coffee changes hands; the same warrants cannot be sold to different parties at a time and the number of bags represented by the warrants really exists.

Run on the Binghamton Savings Bank.—On September 13 a crowd of politicians gathered on the bank corner prior to the meeting of a county convention. Some of the depositors in the bank thought that they were drawing out money, and a story soon started that the bank was insolvent. Then a run occurred in earnest, and before the close of the day about \$350,000 had been drawn out. The curious part of this incident is that there was no real cause for the panic. The bank was well managed and perfectly solvent. Its total assets were \$965,519, and there was \$909,421 due depositors. The investments of the bank were made under the safeguards of the New York Savings Bank Law, and most of them could be turned into cash within forty-eight hours. The real condition of the bank had no effect on the minds of the panic-stricken depositors. They all rushed blindly after their money, precipitating, if it had been possible, the very thing they dreaded. Confidence was, however, gradually restored, as the bank steadily continued to meet demands. There was to be seen the depositor who, finding that the bank had the money, didn't want it. One individual, supposed to be destitute, supported for some time by the Catholic Church, was seen by the priest to emerge with a sum of money. No doubt the reports of bank failures and defalcations, so promptly reported by the newspapers, have much to do with the substratum of suspicion of the banks which seems to lurk so persistently in the minds of the public.

On September 22, the following circular was issued by the Treasury Department:

DIVISIONS OF LOANS AND CURRENCY, TREASURY DEPARTMENT, }

OFFICE OF THE SECRETARY.

WASHINGTON, D. C., September 22, 1887.

On and after this date the Government will purchase daily until October 8, 1887, at the office of the Secretary of the Treasury, to be applied to the sinking fund, United States 4½ per cent. bonds of 1891 and 4 per cent. bonds of 1907, acts of July 14, 1870, and January 20, 1871, upon the following terms: The 4½ per cent. bonds will be accepted at one hundred and eight and four-tenths (108 4/10) during the above stated period, and the 4 per cent. bonds during the remainder of the present month at one hundred and twenty-five (125) and from October 1, to October 8, 1887, at one hundred and twenty-four (124), which prices include accrued interest to date of purchase.

The aggregate amount of both classes of bonds which will be accepted within the time above specified is not to exceed \$14,000,000.

Offers should state the specific character of the bonds, whether registered or coupon.

No further bids for bonds as provided in Circular No. 90, dated August 3, 1887, will be received after this date.

Interest due October 1, 1887, on United States bonds, amounting to about \$6,500,000, will be paid on the 23d inst. without rebate.

(Signed) HUGH S. THOMPSON, Acting Secretary.

On the day of the issue of the circular \$3,494,700 in bonds were offered and purchased of which \$694,700 were 4½, and \$2,800,000 4 per cent. bonds. The names of sellers are quite advisably not made public. On September 23d, \$1,835,650 were purchased of which \$791,850 were 4½s and \$1,044,000 were 4 per cent. bonds; on the 24th the amount purchased was \$1,900,350, \$522,650 4½s and \$1,377,700 4s.

Holiday Law of Virginia.—The following is the text of the latest enactment in regard to holidays in Virginia, approved March 6, 1886:

Be it enacted by the General Assembly of Virginia, that Sections 3 and 4 of Chapter 151 of the Code of Virginia, edition of 1873, be amended and re-enacted so as to read as follows:

Section 3. The following days, namely, the 1st day of January, commonly called New Year's Day; the 22d day of February, commonly called Washington's birthday; the 4th of July, called Independence day; the 25th of December, known as Christmas Day, and any day appointed or recommended by the Governor of this State, or the President of the United States, as a day of thanksgiving or of fasting and prayer, or other religious observance, shall for all such purposes whatsoever, as regards the presenting for payment or acceptance and of the protesting and giving notice of

dishonor of bills of exchange, promissory notes, bank checks and negotiable notes, made after the passage of this Act, be treated and considered as the first day of the week, commonly called Sunday, and as public holidays; and all such bills, checks and notes otherwise presentable for acceptance or payment on any of said holidays, or on any Sunday, shall be deemed to be presentable for acceptance or payment on the secular or business day next preceding such holiday or Sunday.

Whenever the 1st day of January, the 22d day of February, the 4th day of July, or the 25th day of December shall fall on Sunday, the Monday next following shall be deemed a public holiday for any and all purposes aforesaid; provided, however, that in such case all bills of exchange, checks, negotiable and promissory notes, made after the passage of this Act, which would otherwise be presentable for acceptance or payment on said Monday shall be deemed to be presentable for acceptance or payment on the business or secular day next preceding.

Laying the Corner Stone of the Consolidated Exchange.—The following was the programme of this interesting ceremony which took place on September 8th. At 3:15 o'clock the members of the Exchange formed in procession in front of their present business quarters on Broadway, and under command of General Phillip H. Briggs and headed by Dodworth's Thirteenth Regiment Band, marched around the sister Exchanges and back to the site of their new building. The ceremonies were opened by the presentation of the site by the Vice-President of the Building Company to the President of the Exchange for the purpose of laying the stone, which was followed by an acceptance of the same by the President. The following programme was then most successfully carried out: Prayer—Rev. Dr. J. H. Rylance. Hymn "America"—Exchange Glee Club and Band. President's address, followed by the laying of the corner-stone. Oration—Hon. Frederic R. Coudert. Addresses by the Hon. Algernon S. Sullivan; Mr. Miller, President of the Cotton Exchange; Hon. D. D. Whitney, Mayor of the City of Brooklyn; Orestes Cleveland, Mayor of Jersey City; C. L. Wheeler, President of the Bradford Oil Exchange; George Drakeley, Secretary of the Coffee Exchange, and Senator S. M. Griswold. The addresses were followed by a closing prayer and benediction by the Rev. Dr. Joseph H. Rylance, after which the hospitality of the Exchange was extended to a host of friends in the large dining rooms of the Hoffman Cafe, where the prosperity of the Exchange and the success of the new building was pledged and repledged in the most approved style.

The contents of the metallic box placed in the corner-stone are as follows: Copy of the Constitution and By-Laws, list of officers of the Exchange since its organization, list of the present members, names of the Building Committee, names of the architect and of the contractors for the principal parts of the building, a copy of the plans and specifications of the new building; the following New York papers of Sept. 8, 1887; *Journal of Commerce*, *Commercial Advertiser*, *Daily Commercial Bulletin*, *Herald*, *World*, *Tribune*, *Times*, *Sun*, *Star*, *Daily News*, *Mail and Express*, *Evening Post*, *Wall Street Daily News*, *Stockholder*, *Daily Investigator*, *Daily Graphic*, *Daily Indicator*, and *Financial Chronicle*, and *Mining Record* of Sept. 8, 1887; Annual Report of Consolidated Stock and Petroleum Exchange (fiscal year ending May 31, 1887), New York Produce Exchange Annual Report for 1886, New York Cotton Exchange Annual Report for 1886, blanks for margins, set of blanks of Consolidated Clearing Company, set of United States silver coin.

The plan of the building has been given heretofore in the JOURNAL.

Reforms Recommended by Committee of Stock Exchange.—Some months ago the New York Stock Exchange appointed a special committee to ascertain the causes of the depression existing in the business of the Exchange, and to suggest a remedy therefor. They recently reported, at a meeting of the Governing Committee, a series of amendments to the Constitution, providing for quite radical changes in the methods of doing business. The report was adopted by the Governing Committee by a large majority, and this action has been sustained by the members of the Exchange. The object of the proposed changes is to make the terms and conditions of doing business in the Stock Exchange easier and less expensive to the customers of the members. The rapidly-growing number of those who find pleasure, if not always profit, in dealing in stocks and bonds, often of small means, led to the establishment of the Consolidated Exchange with a lower rate of commission and a system of clearing contracts by which a greater amount of business could be done on a small

cash capital. Beyond this, there are the bucket shops, which do business in a manner offering even greater temptation to customers of small means. The proposition is now to adopt the London Stock Exchange system of clearances and of fortnightly settling days. The rates of commission are to be reduced from one-eighth of one per cent. to one-sixteenth.

The settling days are fixed for the 5th and 20th of each month, on which days all transactions are to be cleared and differences settled, but arrangements are made for carrying a transaction from one settling period into another. An Auditing Committee of five members is to be appointed to have charge of all matters relating to the clearances, and it shall meet every week.

Other amendments permitting brokers to establish branch offices and allowing banks, bankers and brokers having regularly-established offices for the transaction of business to become agents for members of the Exchange and to receive a percentage of the profits of such business have been proposed.

The Treasury Circular of October 22, relative to the purchase of bonds at fixed rates, revoked that portion of the circular of August 3 soliciting proposals of lowest rates at which holders would part with bonds. The results of this circular of August 3 to Wednesday, August 31st were given in the September JOURNAL. On September 7th the fifth lot of proposals were opened. The offers were as follows: E. H. Wood, of Aurora, Ind., \$1,000 registered at 108½; National Bank of the Republic, Washington, \$22,500 registered at 108½; Providence Institution for Savings, Providence, R. I., \$250,000 registered and \$100,000 coupon at 108; James P. Kohler, New York, \$500,000 registered at 108½; Maverick National Bank, of Boston, \$33,000 registered and \$7,000 coupon at 108.44; Paul Fenn, of New York, \$25,000 registered and \$75,000 coupon at 108.49; W. J. Wilson, New York, \$100,000 registered at 110; Sailor & Stevenson, Philadelphia, \$10,500 coupon at 108½; A. S. Rosenbaum & Co., New York, \$25,000 registered at 108.40; White, Morris & Co., of New York, \$30,000 registered at 108.49, \$30,000 coupon at 108.74, and \$30,000 coupon at 108.99; A. S. Pratt & Son, Washington, \$12,500 registered at 108½; Harvey Fisk & Sons, New York, \$1,500,000 registered at 108.22; Lewis Johnson & Co., Washington, \$14,000 registered at 108½.

Those offers were all regarded as too high by Assistant Secretary Thompson, and none of them were accepted.

On September 14th the proposals aggregated \$5,175,900, of which \$4,080,000 were registered and \$1,095,900 were coupon. The prices asked ranged all the way from 107 98-100 to 110. The largest single offering was \$3,500,000, by Harvey Fiske & Sons, of New York, at 108. All of the proposals at and below this figure, and one small lot of \$30,000 at 108½, making in all \$4,199,500, were accepted. The successful bidders were the Providence Institution for Savings, \$350,000 at 108; Rhode Island Hospital Trust of Providence, \$200,000 at 108; Chauncey & Gwynne Bros., of New York, \$25,000 at 108; Maverick National Bank of Boston, \$35,000 at 107 98-100; E. H. Ward, of Aurora, Ind., \$1,000 at 108; Reddle & Davis, of New York, \$30,000 at 108 25-100, and Harvey Fiske & Sons, \$3,500,000 at 108.

On September 21st the proposals amounted to \$1,370,300, of which \$1,065,300 were accepted.

The history of the circular of August 3 sums up as follows:

	Bonds offered.	Accepted.
August 10th	5,422,000	250,000
August 17th	8,233,700	2,990,000
August 24th	7,143,000	3,125,000
August 31st	3,450,200	401,700
September 7th	2,775,500	None.
September 14th	5,175,000	4,199,500
September 21st	1,370,300	1,065,300
	33,905,400	11,955,300

Law Against Compounding Felony.—A dispatch from Washington recently stated that in his next report to Congress the Comptroller of the Currency may include an important suggestion to the effect that the National Bank Act be so amended as to prevent, under severe penalties, the compromising by any bank of any case of misap-

proprietorship, embezzlement, misapplication of funds or anything else which now renders any officer or employee of a National Bank liable to a criminal prosecution under the acts now in force.

The sections of the Revised Statutes relating to the National Banks set out with great clearness and exactitude of language the various acts that are made criminal offences. Embezzlement or the tampering with any of the books, records or securities of a bank by any one connected with it, the counterfeiting of a bank note, the having in one's possession plates from which notes are printed, and, in fact, any other thing of the same character, are all severely punished. But nothing is said about a Cashier getting away with \$100,000 and the Directors agreeing not to prosecute him if he returns \$50,000. Compounding a felony is illegal, yet the Revised Statutes are silent on this point; and, in the compilation of the various sections made by the Comptroller of the Currency for the guidance of National bank officers, not a word is said about the subject. Yet, as a matter of fact, officers and employees have embezzled funds and escaped the penitentiary either because they stole enough to make a respectable showing by a compromise or else because their bondsmen made good the amount.

A case in point is that of Charles B. Ide, book-keeper of the First National Bank of Glens Falls, N. Y., an embezzler to the extent of \$18,000. "Ide will not be prosecuted," the dispatch concluded.

Acting-Comptroller of the Currency Abrahams said that the banks were not supposed to compromise cases of this kind, and it was certainly not in the interest of good morals to do so. The office of the Comptroller of the Currency, he said, was not charged with criminal prosecutions, but he thought it ought to be taken out of the power of a bank to grant immunity from a criminal prosecution, and it ought to be made incumbent on the bank to bring the criminal to justice.

The amusing part of this is the assumption that a bank can grant immunity from prosecution, or that the bank should bring the criminal to justice. What if the bank Directors do promise not to prosecute if the money is returned? Is it any the less the duty of the Department of Justice to do so when evidence of guilt is furnished to it by the Comptroller of the Currency or comes to it from any other source? The guilty act is not wiped out by the return of the money.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- Comptroller Trenholm is taking a month's vacation.
- On September 20th, the surplus in the United States Treasury is \$50,380,000.
- The Citizen's National Bank of Concordia, Kansas, is to have a new building.
- Up to September 8, applications for pre-payment on \$90,680,150 of bonds had been received.
- Hundreds of well executed counterfeit silver dollars have been put in circulation on Long Island.
- The San Francisco papers boast that the value of the natural products of California exceeds that of any other State in the Union.
- The distillers of this country are losing their foreign trade very fast, owing chiefly to commercial treaties unfavorable to this country.
- The books of the First National Bank of Dansville, N. Y., are missing. The first step is to use up the funds and the next to destroy the books.
- The prices asked the Government for $4\frac{1}{4}$ per cent. bonds at the bidding on September 7th, averaged 1 per cent. higher than at the bidding of the previous week.
- The president and cashier of the First National Bank of Burlington, Col., were arrested in Kansas City, Mo., on August 26, charged with robbing their bank of \$40,000.
- A St. Louis banker expresses surprise that that city has not a single savings bank conducted on the Eastern plan, and he knows of no such institution west of the Ohio River.
- The statement of the condition of the savings banks of the State of New York, recently issued by the Banking Department indicates that the savings deposits of the

people of the state have increased to an amount \$26,500,000 greater than was shown by the report of the previous year. There are \$1,298,045 open accounts, and the amount on deposit is \$496,038,000.

— The State Bank of Lake Crystal, Minn., was burned out on September 15. The vault and safes were found to be safe and the bank is doing business as usual. They rebuild at once.

— One way to get bank directors to attend board meetings is to pay them regular fees for attendance. There is no reason why directors, who really direct should not have regular salaries.

— The report of Referee Cornelius A. Runkle, appointed to pass upon the accounts of Frederic P. Olcott, Receiver of the Wall Street Bank, charges Mr. Olcott with a balance of \$59,785.86.

— The actual state debt of Missouri at this date is \$10,385,000. Of this \$7,022,000 is in 6 per cent. bonds, and \$3,363,000 in 3¼ per cent. bonds. On the first day of January, 1873, the State debt was \$21,768,000.

— James C. Flood has resigned the presidency of the Nevada Bank of San Francisco, on account of ill health. His successor is Ex-United States Senator James G. Fair. George L. Brander, Vice-President also resigned.

— The Panama Canal shares have recovered some value owing to the belief that M. De Lesseps can induce the French Government to lend money to the enterprise. There is more chance of his success than is generally believed.

— Charles B. Ide, book-keeper of the First National Bank of Glens Falls, N. Y., is stated to be a defaulter to the extent of \$18,000. This will not affect the bank which has a large surplus. The money is said to have been lost in Wall Street.

— The assay office recently received a package of gold brought from Patagonia, from a man who sold a sailing vessel there and took the gold in part payment. It weighed over five ounces and was made up of grains gathered from the river sands by the natives.

— The Comptroller of the Currency has paid a final dividend of 10 per cent. with interest in full to August 18, 1887, in favor of the creditors of the City National Bank of Williamsport, Pa. The bank failed May, 1886, and the claims proved amounting to \$130,772 have been paid principal and interest in full.

— The gold held by the U. S. Treasury in its vaults is said to weigh 519 tons. The silver in the same vaults weighs 7,396 tons. These immense masses of the precious metals lying apparently as dormant and inert in the vaults of the Treasury as they did in the mines from which they were dug serve the same purpose in sustaining the financial fabric of the country, that the loadstone did in floating the flying island of Laputa, mentioned by the veracious Gulliver.

Mr. F. F. Webb, Assistant Manager of the Philadelphia Clearing-House, writes: "We consider it (the JOURNAL) by far the best publication of the kind which we receive."

Mr. E. W. Hazard, Cashier of the Bank of Hull, Iowa, writes: "We prize your JOURNAL very much. It is as full of practical information as a nut is of meat. Success to you in your efforts."

Mr. C. A. Hubbard, Cashier of the Lake City Bank, of Lake City, Minn., in renewing his subscription says: "We have been subscribers to the JOURNAL several years, and could not keep house without it."

Mr. Walter N. Carroll, formerly Cashier of the First National Bank, of De Smet, Dakota, and now doing a fine business as investment banker at the same place, writes: "Think you issue the best periodical devoted to the banking business."

Mr. S. G. Crandall, Cashier of the First National Bank, of Pomeroy, Washington Territory, writes: "I have taken the JOURNAL for some five years, and find that it grows better every year. Keep up the good work." Mr. Crandall's signature was among the difficult signatures given in the September number of the JOURNAL. The First National Bank, of Pomeroy, is building a new \$20,000 banking house.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

CERTIFICATES OF DEPOSIT AND PROMISSORY NOTES.

Editor Rhodes' Journal of Banking:

SIR:—In a decision of the Supreme Court of Ohio regarding a certificate of deposit, reported in the JOURNAL of August, it is said that a certificate of deposit possesses all the requisites of a negotiable promissory note, and, as such, is governed by the rules and principles applicable to that class of paper. There is, I believe, one point wherein a certificate of deposit differs from a promissory note. If there be several indorsements on a certificate of deposit and the first one—that of the payee—be forged, and the certificate be paid by the bank where it is payable, the bank has no recourse against the other indorsers; if, however, a note payable at a bank is paid with the indorsement of the payee a forgery, the bank has in the case of the note recourse against the indorsers subsequent to the forged indorsement. Is not this the case?

MILWAUKEE, August 22, 1887.

Yours respectfully,

SCRUTATOR.

Answer.—The rule that a banker paying a certificate of deposit on which the indorsement of the payee has been forged cannot recover back the money has been laid down by the Supreme Court of Missouri in *Stout vs. Benoit, et al.*, 39 Mo., 277, and wherever this rule is applied it constitutes a point of difference between the two classes of instruments, as stated by our correspondent. The reason of the rule is that a banker is in a position to know the signature of his depositor (the payee), and alone possesses the means of knowing whether the indorsement is genuine, and should bear the loss in preference to a stranger who has had no such means of knowledge. In the case of a promissory note payable at a bank whereon the indorsement of the payee is forged, here the banker has no means of knowing the genuineness of the payee's signature, and, consequently, may recover back the money paid in case the demand is made within a reasonable time. The rule in the case of *Stout vs. Benoit* is founded on the authority of *Price vs. Neal*, 3 Burr., 1,355, which held that a drawee who had paid two bills which turned out to be forged could not recover back the money, chiefly on the ground that he was presumed to know the drawer's handwriting. The justice of this rule, however, has been questioned by Mr. Daniel (2 Dan'l Neg. Inst., Sec. 1,361), who maintained that when the holder of an unaccepted bill, whereon the drawer's signature is forged, presents it to the drawee, he "represents, in effect, to the drawee that he holds the bill of the drawer and demands its acceptance or payment as such. If he indorses it he warrants its genuineness, and his very assertion of ownership is a warranty of genuineness in itself. Therefore, should the drawee pay it or accept it upon such presentment, and afterward discover that it was forged, he should be permitted to recover the amount from the holder to whom he pays it, or as against him to dispute the binding force of the acceptance, provided he acts with due diligence." The same reasoning applies to the case of a banker who has paid a certificate of deposit upon the forged indorsement of the payee, the latter standing in the position of drawer and the banker of drawee, and from what is here said it may be doubted if the rule will receive universal application.

Some of the Courts have found other points of difference to exist between certificates of deposit and promissory notes, and while in Wisconsin, Michigan and California certificates of deposit payable on the return of the certificate have been held to be in substance and legal effect promissory notes payable on demand, due as soon as issued without demand, and on which the Statute of Limitations commences to run from date, other cases have held that such certificates are not due until presented, and hence that the Statute of Limitations does not commence to run against them until such presentation. Some cases deny that certificates of deposit are promissory notes.

Thus, in *Shute vs. Pacific Bank*, 136 Mass., 487, the Court stated that a certificate of deposit payable on the return of the certificate properly indorsed, while having in most respects the incidents of a promissory note, and classed as such, differed from a common promissory note in important particulars. That a promissory note payable

on demand was due as soon as it was given; that an action might be brought upon it immediately without demand, and that the Statute of Limitations began to run against it from its date; whereas a certificate of deposit was not due until a demand was made and the certificate returned or tendered.

Also, in an article in the *Weekly Law Bulletin and Ohio Law Journal*, of September 5th, Mr. John F. Kelly, of Bellaire, Ohio, in commenting upon the decision by the Supreme Court of Ohio, published in our August number, maintains that certificates of deposit are not promissory notes. He says: "Deposits in banks are bailments and are of three kinds; (1) Evidenced by credit in the bank book and subject to check; (2) evidenced by certificate of deposit; and (3) special; wherein the deposit is to be returned in *individuo*. All are obligations to pay a certain sum, at a certain time, to a certain person; all are negotiable—the first by check or assignment, the others by the certificates which represent the deposits in whole or in part. Hence these evidences of deposit contain the elements of a promissory note, but are not in form or in fact notes. They are evidences of deposit, and when the question litigated is the negotiability or non-negotiability of the paper, and the liabilities arising therefrom, the rules and principles of the negotiability of commercial paper apply. * * * When the certificate contains words of negotiability and is a negotiable instrument, it is as to its negotiability governed by the same principles which control all negotiable instruments, hence the liability of an indorser is the same as upon an indorsement of any promissory note or other negotiable instrument. (Citing, 82 Wis., 85; 60 N. Y., 265; 25 Mich., 191; 22 Cal., 340.) But because it assimilates with a promissory note in the one point of negotiability it does not follow that in every point it is a promissory note, and is in truth and fact such an instrument."

COLLECTIONS FOR OUTSIDE PARTIES.

Editor Rhodes' Journal of Banking:

SIR:—In your September number you have a short article from the Collection Clerk of the Central National Bank, of this city, in reference to the "Dead-Head" annoyance in collecting items, from outside parties. I do not consider it at all a "want of courtesy" to return these items without making any effort to collect them. In fact, I think the "want of courtesy" is altogether on the part of the senders of these "duns" in ignoring the claims of their local banks. The plan we adopt, and have had in use for a number of years, is to return the drafts at once with the enclosed explanatory card:

NATIONAL BANK, PHILADELPHIA.

We respectfully return you, herewith, the paper received from you to-day, which you ask us to collect.

We are under the necessity of declining all such business, where remittances are required, except as it comes to us regularly, through banks or bankers.

We are never troubled afterwards by the same parties, and are not required to keep a "black list." If you choose to publish the card you can do so. J. G.

PHILADELPHIA, September 19, 1887.

OVER-CERTIFICATION OF CHECKS.

Editor Rhodes' Journal of Banking:

SIR:—While I usually have the pleasure of agreeing with the JOURNAL in its positions with regard to banking and financial matters generally, I find myself unable to concur in the views which you express in your September issue in regard to the over-certification of checks; and as your department of "Open Letters" seems to be a fair field and no favor for all who may choose to come, I may be excused for asking a brief space to present some views on the unpopular side of this subject. The poet tells us: "If any man, in any cause, shall be the one man, he shall be so to his cost." And this admonition is generally found to contain more truth than poetry by those who have had occasion to oppose the views of the sacred majority. Generally speaking, the case against over-certification is not always stated quite fairly. The practice, even in New York, is confined to a comparatively few banks, not perhaps more than eight or ten, and is carried on by these banks with far more attention to prudence and safety than critics seem to imagine. It is not quite correct to state that a bank over-certifies a check for a broker without any security. There is security, and that of two kinds.

There is, in the first place, the security which arises from the fact that the transaction is based upon valuable property actually in existence, namely, the stocks or bonds involved in the transaction. In other words, every over-certified check rests upon a definite amount of actual property pledged for its payment; and this is far more than can be said for the huge bulk of single name paper with which the banks are constantly loaded down, and which every now and then goes to pieces in the most disastrous manner. The second security consists in the honor and honesty of the parties to the transaction. From the way this subject is treated in newspaper editorials one would suppose that honor and honesty are unknown virtues on the floor of the Stock Exchange; whereas, in point of fact, there is scarce any place in which they flourish in more undiminished vigor. There are, it is true, instances of dishonorable and dishonest transactions, but such instances are conspicuous on account of their rarity; and it is not going too far to say that the vast bulk of the transactions on the floor of the Stock Exchange are conducted with the most scrupulous observance of honorable dealing. One hears so much and so continually about "bears" and "bulls" that one would suppose that their antics constituted the entire business of the Exchange; whereas, in point of fact, the speculation, pure and simple, is really only the froth that floats on top. By far the greater part of the enormous transactions of the Stock Exchanges are usually legitimate, and just as much out and out buying and selling as any mercantile transaction could be. There are railroads by the score whose stocks and bonds are never bought nor sold except in a purely legitimate and regular way. There are corporations whose very names are never heard of among the ring of speculators. Even if over-certifications were abolished entirely, either by law or by general agreement, there could be nothing to prevent a bank from making temporary advancements to its customers on unsecured promissory notes. Indeed, the latter matter is one which must be relegated to the managers of the respective banks. It is a matter which should rest entirely within their discretion. If they err in judgment the bank must suffer the consequences of that error. But before the objectors to over-certifications push their point too far, it might be in order for them to provide some practical substitute for the existing methods of conducting the business of the Stock Exchange and all the banks with intimate relations therewith. In other words, we ask that they shall not be iconoclasts; that is to say, that they shall not break up our present system until they have a better substitute for it. No one claims that the present system of settling exchanges by means of over-certified checks is by any means a perfect system, or even, in itself, a very desirable one; but the point is that it is the only system that has as yet been worked out. There may be another and more perfect way, but we have not as yet found it. For the uninitiated there may seem to be an analogy between a Clearing-House for settling checks between banks and a stock Clearing-House for settling the delivery of stocks, but there is really no similarity whatever between the two kinds of transactions. Nobody would welcome a stock Clearing-House more heartily than stock brokers themselves if they could only see one that would work not only in theory but in practical operations. The matter has been talked over again and again by men thoroughly acquainted with the business in its practical aspects. It has been held up in every light of which it was capable. It has been viewed on every side and from every point, and the result so far has not been specially encouraging, and the stock Clearing-House seems to be as much in the dim future as ever. Now we say to the objectors of the present plan: What do you propose to substitute in place of it? What scheme have you to offer which will work smoothly, and which will be sufficiently simple to be understood by everyday people? Do not destroy until you are prepared to rebuild. When it is remembered that it is an open secret that the present law against over-certifications by National banks had its origin and its principal support in the desire on the part of one or two State banks to control all the stock business, one may be pardoned for suspecting that its chief support does not consist entirely of disinterested devotion to the public welfare.

NEW YORK, September 16, 1887.

STOCK BROKER.

GOVERNMENT GUARANTEE OF NATIONAL BANKS.

Editor Rhodes' Journal of Banking:

SIR:—The notion that National banks work under a sort of Government guarantee of good conduct is so popular and widespread that to combat it seems almost a hopeless task. The phrase "National bank" implies to many persons an indefinite idea of

a bank created and controlled and, to some degree, owned and managed, by the National Government. Of late years people have become so accustomed to look to the Federal Government to supply all their wants that at last the popular opinion seems to be that everything ought to be done by the Government and that nothing can be done without it. As a natural corollary of this opinion, there is the disposition to hold the Government responsible for everything that goes wrong. Thus when a National bank goes to the wall there is a great cry raised against the Comptroller and the National Bank Examiners; the former should have done this, the latter should have done that. What is the use of supervision that does not supervise? Has it not become necessary for the Government to appoint a superior grade of *Inspectors* to look after the *Examiners*?—and so on to the end of the chapter.

Now nothing could be farther from the truth than to suppose that the Government guarantees the management of a National bank in any manner whatever. The National Bank Act provides a certain system under which banks may be incorporated and conducted. Upon institutions organized under this Act certain privileges are conferred and certain conditions imposed. The functions of the Government are necessarily and strictly limited to seeing that these privileges are not abused nor the conditions imposed violated. Outside of these limits the Government cannot and does not pretend to go. Within these limits the management of the bank is absolutely intrusted to the stockholders and to their authorized agents—the President and Directors. The stockholders may err in choosing their agents; these agents, whether President and Directors or Cashier and clerks, may be honest or dishonest, wise or foolish, but in no case can the Government control their actions so long as they keep within the law. And as to how many ways there are of evading the law the Comptroller's office could many a tale unfold.

Since, then, the Government is strictly limited in its action by the provisions of the law, the only question that can arise is whether the agents of the Government have fully performed their duty in enforcing the legal provisions. Under the thorough and careful administration of the gentlemen who have successively held the office of Comptroller of the Currency it would be difficult to show one instance where the Government has wilfully failed in its duty. No mere men are infallible, and all are liable to be deceived. The public knows the frauds that have occurred in spite of the vigilance of the Department, but it does not know the many more numerous instances where frauds and irregularities of all sorts have been detected and prevented. And this, too, in face of the fact that the compensation the Government allows its officers in this Department is not sufficient to retain the most competent men in its service. It is indeed high time that in this, as in other matters, the people of this country should learn to help themselves and should cease to look to the Government for constant aid and support in every difficulty.

PHILADELPHIA, September 4, 1887.

PROPOSED BANKING LAW IN MICHIGAN.

Editor Rhodes' Journal of Banking:

SIR:—The last session of the Michigan Legislature passed an Act for the revision of the banking laws of the State. This is to be submitted to the popular vote at the next general election. Voters should understand for themselves just what they are expected to vote upon, otherwise interested parties, and others who may be particularly requested, only will vote.

The new law, as applied to State banks proper, is an improvement upon the old. Many requirements necessary to good banking are incorporated into the Act. A Banking Department is provided for; direct, positive supervision is required; statements called for without previous notice are to be published five times in each year; past due paper and accounts must be charged off at stated times. Provision is made for the increase and reduction of capital stock, and for making good any impairment of capital.

There is also a new wording of the clause respecting the liability of stockholders, removing the doubt that now maintains as to its meaning. The liability, to an amount equal to the original value of the shares, is made positive. The Act is more definite with respect to discounting and investing funds, and in requiring a legal reserve to be kept always at hand.

There is one important principle that is questionable. Savings banks may be regarded under the same law, and may transact, at the same time, all business

authorized to State banks. That is, they may do a commercial business as well as savings. This is contrary to the experience, practice, and precedents of older States and some of the new. The two are better separate. Savings depositors should not be liable to jeopardy from commercial revulsions, and commercial dealers may be much inconvenienced and suffer delays and, perhaps, loss, should a run upon a savings bank occur. Illinois has wisely passed an Act for the separate organization of "Savings Institutes"—distinct from banking generally.

All banks may loan on mortgage security.

The Michigan law may fall of approval by the people at the election next spring. Heretofore private bankers have resisted any attempt to revise banking laws. This does not touch their business in any way, unless they choose to organize under it. If no stir is made the Act will become a law. Should a vigorous onset be made upon it by the press and any class of bankers it would be rejected. In defence of this species of banking it is represented that there are many small towns in Michigan that have but one bank, and then a mixed business is a necessity. This can be provided for by making such towns or villages an exception.

It is not intended to argue the point here, but only to state the position, that public attention may be called to it. XX.

Editor Rhodes' Journal of Banking:

SIR:—A letter from Grand Island, Neb., in the JOURNAL for August inquires if a draft payable to S. Jones, Treasurer, but indorsed S. Jones, and on that account refused payment by the drawee bank, should have been protested for non-payment or returned to be correctly indorsed.

You answer that the draft should simply have been returned to have the indorsement completed.

I ask, would it not have been the proper thing to have the drawee bank *certify* the draft, but not *pay* till properly indorsed? The draft might be good when first presented, but bad before it returned properly indorsed. As I understand, when a bank certifies a draft it certifies that it is ready to pay it if the indorsements, etc., are correct, but it does not necessarily undertake to pay it as it is when presented for certification. SCRUTATOR.

MILWAUKEE, Sept. 22, 1887.

PUBLICATION OF NAMES OF SHAREHOLDERS.

Editor Rhodes' Journal of Banking:

With your permission, I should like to lay before the banking community, through the medium of the JOURNAL's "Open Letters," some suggestions in regard to publishing the names of the shareholders of National banks. The framers of the National Bank Act seem to have kept steadily in view the great advantages of public scrutiny in preventing irregularities and violations of the law in the management of the National banks. To this end, among other provisions, there is a requirement (Rev. Statutes, Sec. 5,210), that every National bank shall keep a list of its shareholders, with the residences and number of shares held by each; such list to be subject, during the usual hours of business, "to the inspection of all shareholders and creditors of the association and the officers authorized to assess taxes under State authority."

Under ordinary conditions, the classes of persons entitled to inspect this list would seem to include all whose interest in the association is sufficiently immediate to give them a right to such a privilege. But the position of a bank, in respect to the general public, is vastly different from that of an ordinary corporation. On the one hand, the great corporations and wealthy capitalists; and, on the other, the Savings banks that hoard the scanty earnings of the poor, are equally interested in the solvency of the National banks. Indeed, the banks themselves are so intimately connected, and by so numerous ties of mutual intercourse, that the concern of one may well be said to be the concern of all. There are no corporations more closely bound up with the general welfare of the mercantile world. The banks gather up, as it were, the very life-blood of commerce, distributing it again to every part of the commercial system. Hence, it follows that the failure of one of these reservoirs, so to speak, to perform its functions is always most injurious. It is further provided, in the section already alluded to, that a list of the shareholders of the National banks, as of the first day of July, shall be annually reported to the Comptroller of the Currency. Why not require the

publication of this list? Are not the public entitled to know precisely who are carrying on the public business of banking? Does it not closely concern the welfare of the community that it should be matter of common knowledge what persons are ultimately responsible for the proper conduct of the incorporated banks? It is true that, so far, the spirit of speculation seems to a great extent to have spared the banks (except indirectly in individual instances), but there is no resisting the spirit of the age, and slowly, perhaps, but none the less surely, the banking interests will be drawn into the whirlpool. But it may be said that the list of shareholders is essentially private and that it is no part of the business of a bank to make known its owners to the general public. To this it may be replied that banks, whether State or National, are essentially public institutions, carrying on a public business, chartered by public authority, and established, professedly, at least, in the public interests. The law already requires that National banks shall submit their membership to the inspection of their shareholders and creditors; why not go a step farther and require all banks, whether State or National, to publish an annual list of their membership for the information of the public, which has created and which maintains them. **BANKER.**

BALTIMORE, September 1, 1887.

A TREATY WITH CANADA.

Editor Rhodes' Journal of Banking:

SIR:—As a measure of protection to the banking interests of the United States the absolute necessity of a treaty with Canada for the extradition of embezzlers becomes more and more apparent. This matter has again and again been brought to the attention of Congress and of the Department of State, but, so far, nothing effectual has been accomplished. True, this result, so far at least as Congress is concerned, is only what might have been expected from the habitual indifference of that body to the banking interests of the country; an indifference which, in some members, intensifies into opposition and even hostility. But the time has now arrived when the banks must take this matter in hand for themselves and push it vigorously through to a successful conclusion. Canada affords too easy a refuge for defaulters and embezzlers for this condition of affairs to be longer tolerated. The "boodler" colony across the border is not only an international disgrace, but an evil in itself as well, for it holds out to all intending criminals that promise of immunity from punishment which is one of the surest encouragements to crime. For it is well settled that it is the certainty rather than the severity of punishment that really acts as the deterrent to the commission of offences. Should the Federal Government still prove unwilling or unable to effect a desirable treaty with our northern neighbor recourse might be had to the various State Governments here and to the legislative bodies in the British possessions. Laws forbidding, under severe penalties, the bringing of stolen property into the States or into British territory would go far to check, if not, indeed, to cure, the evil here complained of. At first glance one might suppose that nothing could be easier than to effect an international treaty between adjoining countries, securing and protecting for each other the full enjoyments of the rights of property. But, alas! the ways of law-makers are in the depths of the sea, and there is a deep-seated popular conviction that there are other ways of preventing the passage of good laws besides arguments and petitions. It may be asked, what are the interests arrayed in opposition to a treaty with Canada for the extradition of embezzlers and defaulters? Does any person or any interest dare to range itself openly on the side of the criminal classes? It seems hard for an honest man to believe that such can be the case, yet it cannot be denied that the influence of the criminal classes is distinctly felt in every Legislature in the Union—even in the halls of Congress itself. We cannot blind our eyes to this fact, even if we would; the examples are, alas! too many and too high. In the specific case under consideration it is this influence, watchful and potent, that is met and must be fought at every move in the game. At every turn one feels this strong and steady, though invisible, pressure, as it were, of unseen hands. This is the chief force that must be reckoned with as opposed to the adoption of desired measures, and, in this instance, it is a force amply supplied with the "sinews of war." But the indifference and even hostility already referred to must not be lost sight of. Popular prejudice against banks and bankers is of ancient date and so ingrained with those who have least to do with either that it is no wonder to find it persistently surviving even in these modern days of progress and enlightenment. And so one finds that so

soon as any legislation is proposed in favor of or is supported by the banking interest the representatives of this prejudice are up and ready, and are not to be silenced except by the pressure of overwhelming necessity. There is, however, some hope that, should the present agitation of the Fisheries question result in a Commission to frame a new treaty with Canada, consideration may at the same time be given to a more satisfactory provision for the extradition of criminals. CASHIER.

BUFFALO, N. Y., September 10, 1887.

FROM A PRIVATE BANKER'S STANDPOINT.

Editor Rhodes' Journal of Banking:

SIR:—We have noticed and read with a good deal of interest the articles that have appeared from time to time in the JOURNAL in regard to the statute affecting private banks in Minnesota passed by the former Legislature of 1887. And we are much surprised to note your commendation of what seems to us a most flagrant violation of common law and constitutional right in that this Act authorizes the taking away by law of that which is of value without any compensation. You may say "incorporate;" we answer: But suppose a private bank has not sufficient capital or does not wish to tie capital up in bonds to secure deposits, etc.? One of the chief complaints of National banks, in the West at least, is that they have to invest so much of their capital in low interest bonds that are constantly being called, and they have to pay a premium to replace them. Now if banks with a large capital complain, how would it be with institutions of small capital? It would be bound to cripple them to some extent at least if they were obliged to tie capital up in this way for any reason. As to the protection corporate banks afford the public more than unincorporated ones, we differ with you, and would respectfully beg leave to ask and obtain through the columns of the JOURNAL your answers to the following questions:

- (1) Has the public any means of knowing anything more about, or, rather, does it know anything more about the condition of a National or State bank than the sworn statement of its Cashier discloses until the Examiner comes along some day and discovers the cash gone and the President or Cashier in Canada?
- (2) Does a public Examiner ever prevent such financial disaster as the failure of the Fidelity National Bank and dozens of others that come under your notice?
- (3) Is it not a matter of fact that National bank Presidents, Cashiers and Tellers steal from the bank year in and year out and pull the wool over the eyes of Examiners, Directors and the public?
- (4) Does not this question all simmer down to one thing—that the public is safe in depositing its funds with a bank only when that bank's officials are honest men, whether it be National, State or private; and can you prove to me that there are not just as many honest private bankers as National or State bank men, or that if a private banker is dishonest, that incorporating will make him honest? Will it not rather give him a greater chance to steal by placing more funds at his disposal if he is fortunate enough to get people to invest in his stock?

There was no public demand for this Act in Minnesota. It was passed by the Senate the last thing they did before adjourning in the interest of one man in order to kill time and prevent a bill of vastly more importance from being discussed, and if a bill had been brought before them for an appropriation to ascertain if the moon is made of green cheese it would have received the same consideration at their hands. You are mistaken, we think, in your conclusion that private banks will in most cases incorporate, as we have talked with a number of bankers and so far they will all change name; and we venture to predict that within a year from January 1, 1888, the Supreme Court of this State will decide the Act unconstitutional.

Respectfully yours, B. B. WARFIELD, private banker.

BATTLE CREEK, Minn., August 24, 1887.

The Wayne County Savings Bank, of Detroit, Mich., made its sixteenth annual report on October 1, 1887, it having commenced business on October 1, 1871. During its existence the bank has paid \$1,540,000 in interest to 46,120 depositors, and has loaned \$3,068,238 on mortgages and \$13,455,066 on collaterals. Its securities and assets on October 1, 1887, were \$4,858,000, and its liabilities to depositors \$3,960,000, indicating an excess of assets of \$900,000.

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

ENGLAND'S NATIONAL DEBT.

(*Boston Commercial Bulletin.*)

At the peace of 1815, after the fall of Napoleon, Great Britain was almost overwhelmed with debt, specie payments were suspended, consols ruled low, and trade was depressed. How to manage the great debt and at the same time revive trade, were questions of vital importance. A faint attempt was made to begin paying the debt, but statesmen reasoned that posterity, ever on the increase, would be better able to pay it than the present. In other words, that forty millions would more easily begin to pay the debt than twenty millions, and therefore, it would be much better, as the revenue increased, to remove taxes, take the shackles from industry and revive trade. And this policy has been steadily pursued with advantage, until the revenue is now raised from about a dozen articles.

As the population increased, to relieve the mother country, emigration was organized upon a grand scale, and the foundations of new nations in Australia, New Zealand, the Cape of Good Hope and Canada, have been laid. These have opened new markets for the parent State. If trade is dull at intervals, is less more owing to over-production and increase of population and a decline in emigration, than to mismanagement of the National debt. The Government viewed as a business firm, has shown remarkable wisdom. Excessive competition has no doubt overstocked the market with goods, but this no free government can regulate; it must be left to regulate itself. The unseen, but ever potent laws of trade, are as inexorable as the unseen, but ever-felt law of gravitation.

What a government can do is to equalize taxation as far as possible, and leave manufacturers to work out their own salvation in their own way. This is not a question of free trade or protection, but of domestic industry. By removing taxes Great Britain has almost monopolized the steam traffic of the world afloat and will hold it while her coal mines hold out, but even then it is not to be supposed that she will give up without a struggle what she may have built up with so much prudence and foresight. The greatest coal trade the world has ever seen will be organized in the near future. Even the Great Eastern or vessels like her will be employed carrying coal from the United States and Nova Scotia to the British Islands. Already some of the British papers have begun to discuss the subject.

The National debt of Great Britain is owned by her own people, its rate of interest is low and it is easily managed. It is doubtful whether it will ever be paid. Some of our own statesmen have said that a "National debt is a National blessing," because it is a check upon revolution, owing to the fact that so many people of the best class are interested in it, but we have adopted a different policy and one which has worked with marvellous success. Posterity in our own country will have every reason to admire the present for its great sacrifices in paying off the National debt and preserving the Union.

RHYTHM IN COMMERCIAL AFFAIRS.

(Hon. David A. Wells, in *Popular Science Monthly*, for September.)

As prices fall and profits shrink, producers working on insufficient capital, or by imperfect methods, are soon obliged, in order to meet impending obligations, to force sales through a further reduction of prices; and then stronger competitors, in order to retain their markets and customers, are compelled to follow their example; and this in turn is followed by new concessions alternately by both parties, until gradually the industrial system becomes depressed and demoralized, and the weaker succumbs (fall), with a greater or less destruction of capital and waste of product. Affairs now having reached their minimum of depression, recovery slowly commences. Consumption is never arrested, even if production is, for the world must continue to consume in order that life and civilization may exist. The continued increase of population also increases the aggregate of consumption; and, finally, the industrial and

commercial world again suddenly realizes that the condition of affairs has been reversed, and that now the supply has become unequal to the demand. Then such producers as have "stocks on hand," or the machinery of production ready for immediate and effective service, realize large profits; and the realization of this fact immediately tempts others to rush into production, in many cases with insufficient capital (raised often through stock companies), and without that practical knowledge of the detail of their undertaking which is necessary to insure success, and the old experience of inflation and reaction is again and again repeated. Hence, the explanation of the now much-talked-of "periods" or "cycles" of panic and speculation, of trade activity and stagnation. Their periodical occurrence has long been recognized, and the economic principles involved in them have long been understood. But a century ago or more, when such a state of affairs occurred in any country, it was mainly confined to such country, as was notably the case in John Law's "Mississippi Scheme," or the English "South-Sea Bubble," in the last century, or the severe industrial and financial crises which occurred in Great Britain in the earlier years of the present century—and people of other countries, hearing of it after considerable intervals, and then vaguely through mercantile correspondence, were little troubled or interested. During recent years, however, they have become less local and more universal, because the railroad, the steamship and the telegraph have broken down the barriers between nations, and, by spreading in a brief time the same hopes and fears over the whole civilized world, have made it impossible any longer to confine the speculative spirit to any one country.

WITHDRAWAL OF BONDS BY NATIONAL BANKS.

(*Boston Post.*)

Treasury officials express surprise at the fact that during the past few days the National banks have withdrawn a considerable amount of 4 per cent. bonds and surrendered a corresponding amount of their circulating notes. While the treasury was engaged in calling 3 per cent. bonds for redemption National bank officers and others interested in the maintenance of the National bank system complained that the rapid redemption of bonds was calculated to interfere with the demands of business by a forced contraction of the circulating medium, and also to shorten the existence of the present National bank system. The action of the treasury in calling 3 per cent. bonds for redemption forced the banks to withdraw that class of securities held against their circulating notes, and, therefore, surprise is expressed that the banks have voluntarily begun to surrender 4 per cents. that have still twenty years to run. The withdrawal of these long time bonds at this time may have no special significance, yet it has directed attention to the fact that with the annual requirements for the sinking fund the basis of the National banking system is threatened with early extinction, and by the action of the banks themselves. The $4\frac{1}{2}$ bonds, of which \$240,000,000 are outstanding and of which amount the banks have on deposit with the Treasurer to secure circulation \$70,000,000, become payable Sept. 1, 1891. During the intervening four years the sinking fund will require at least \$200,000,000. That amount must be purchased unless the sinking fund law should be repealed or modified, and should the present ratio of excess of receipts over expenditures be continued, the treasury will be required to purchase double the amount of bonds named in order to disburse the surplus and return the money to business channels. The total amount of interest-bearing bonds outstanding is about \$970,000,000. Under existing laws and conditions the treasury, in the next five years would absorb the larger portion of that sum and practically terminate the present National banking system. The bonds held by the treasury to secure bank circulation are steadily decreasing, the amount now held being \$189,000,000, which represents about \$207,000,000 of National bank circulating notes. Should the banks continue the surrender of interest-bearing bonds this amount will be correspondingly reduced, and, in any event, there is likely to be a large reduction during the five years next ensuing. These facts are being seriously considered by the President, Secretary Fairchild and Comptroller of the Currency Trenholm, and will be discussed by each in his forthcoming report to Congress. The absorption by the Treasury of interest bearing bonds and the consequent curtailment and ultimate extinction of the National banking system suggest a highly important and serious problem for the solution of Congress, and the President is of the opinion that that body should enter upon its consideration at the earliest practicable day.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

NOTE.—We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this department.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report.

Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.

- 3777—Ablene National Bank, Abilene, Kansas. Capital, \$150,000.
 3778—Lumbermen's National Bank, Chippewa Falls, Wisconsin. Capital, \$100,000.
 3779—First National Bank, Scandia, Kansas. Capital, \$50,000.
 3780—San Diego National Bank, San Diego, California. Capital, \$100,000.
 3781—Tazewell County National Bank, Delavan, Illinois. Capital, \$50,000.
 3782—First National Bank, Manhattan, Kansas. Capital, \$50,000.
 3783—First National Bank, Snow Hill, Maryland. Capital, \$50,000.
 3784—Flour City National Bank, Minneapolis, Minnesota. Capital, \$400,000.
 3785—Texarkana National Bank, Texarkana, Texas. Capital, \$100,000.
 3786—Sturgis National Bank, Sturgis, Texas. Capital, \$60,000.
 3787—Pratt County National Bank, Pratt, Kansas. Capital, \$50,000.
 3788—Wright County National Bank, Clarion, Iowa. Capital, \$50,000.
 3789—National Bank of Commerce, Tacoma, Washington Territory. Capital, \$200,000.
 3790—Kansas National Bank, Topeka, Kansas. Capital, \$500,000.
 3791—Second National Bank, McPherson, Kansas. Capital, \$50,000.
 3792—Asbury Park National Bank, Asbury Park, New Jersey. Capital, \$100,000.
 3793—German-American National Bank, Kansas City, Missouri. Capital, \$350,000.

ALABAMA.

ANNISTON.—Bank of Anniston is reported here. President, J. R. Draper; Cashier, C. D. Woodruff.

CLAYTON.—Clayton Banking Co. is reported here. Capital, \$80,000. President, James J. Winn; Vice-President, A. H. Alston; Cashier, Jos. L. Pitts.

ARIZONA.

PHOENIX.—National Bank of Arizona; Vice-President, Sol Lewis.

ARKANSAS.

PINE BLUFF.—Citizens' Bank; H. C. Rather, Cashier, in place of Andrew J. Thompson.

CALIFORNIA.

ELSINORE.—Bank of Elsinore reported here. President, Thompson Frame; Vice-

President, N. G. Youum; Cashier, Daniel M. Fraser.

LOS ANGELES.—Los Angeles Safe Deposit and Trust Co. has been incorporated. Capital, \$500,000.

OAKLAND.—California Bank and Trust Co. is correct title of new bank reported in September JOURNAL. Capital, \$50,000. President, A. C. Henry; Cashier, Frank H. Brooks.

PASADENA.—Pasadena National Bank; Assistant Cashier A. H. Congar.

RIVERSIDE.—Citizens' Bank of South Riverside is reported here.

SAN DIEGO.—San Diego National Bank has been authorized to commence business. Capital, \$100,000. President, D. Henderson; Vice-President, C. K. Daner; Assistant Cashier, G. W. Jones.

SAN FRANCISCO.—Nevada Bank of San Francisco; James G. Fair, President in place of J. C. Flood; John F. Bigelow, Vice-President, in place of Geo. L. Brander.

SAN JOSE.—Commercial and Savings Bank; F. P. Ryland, Cashier, in place of T. F. Morrison; John T. McGeoghegan, Secretary, in place of F. P. Ryland.

COLORADO.

BUENA VISTA.—Bank of Buena Vista; proprietor, R. W. Hookaday.

DENVER.—McIntosh & Mygatt are reported here.

KIT CARSON.—Bank of Kit Carson is reported here. President, E. F. Madden; Cashier, A. B. Montgomery.

CONNECTICUT.

GREENWICH.—Greenwich Loan and Trust Co. is reported here. Capital, \$50,000. President, Hanford Lockwood; Treasurer, Alfred A. Bunde.

NEW LONDON.—Mariners' Savings Bank; Daniel D. Latham, President, in place of C. C. Comstock, deceased.

DAKOTA.

CANTON.—Lincoln County Bank; President, A. R. Brown; O. K. Brown, Cashier, in place of A. R. Brown.

DE SMET.—Walter N. Carroll is in business here.

FOREST CITY.—Bank of Forest City is reported here. President, Andrew W. Smoot; Cashier, B. F. Bullard.

NORTHWOOD.—Bank of Northwood is reported here. Capital, \$25,000. Cashier, Sydney C. Lough.

YANKTON.—Yankton Savings Bank; President, Amos W. Howard, Vice-President, Herman Ellerman; Cashier, Miles T. Wooley.

FLORIDA.

FERNANDINA.—Bank of Fernandina is reported here. Capital \$20,000. President, Fred. W. Hoyt; Vice-President, W. O. Jeffers; Cashier, R. C. Cooley.

TAMPA.—Citizens' National Bank is being organized.

GEORGIA.

BRUNSWICK.—Oglethorpe National Bank; Vice-President, W. E. Burbage; Assistant Cashier, F. E. Cunningham.

IDAHO.

MOUNTAIN HOME.—Heifrich & Miller are reported here.

SHOSHONE.—Bank of Shoshone; discontinued.

ILLINOIS.

BEMENT.—Farmers' & Merchants' Bank is reported here. President, Wm. M. Camp; Vice-President, Wm. T. Bower; Cashier, H. S. Bower.

DELAVER.—Tazewell County Bank (Crabb & Frey); succeeded by Tazewell County National Bank. Capital, \$50,000. President, Erastus S. Hobart; Vice-President, I. W. Crabb; Cashier, Rudolph Frey; Assistant Cashier, I. N. Hall.

EARLVILLE.—D. A. Town & Son are in business here. Style, City Bank.

KINGS.—King, Oakes & Co.; Cashier, A. B. Sheadle.

MARSHFIELD.—First National Bank; W. A. Moray, President, in place of S. N. Chapple.

MOUNT MORRIS.—Bank of Mount Morris (Newcomer & Rice); Ralph W. Trine, Cashier, in place of O. H. Swingley.

PRINCETON.—Farmers' National Bank; W. W. Ferris, Cashier, resigned.

URBANA.—First National Bank; P. Richards, President, in place of Chas. L. Burpee; H. I. W. Mahan, Cashier, in place of P. Richards.

INDIANA.

NAPPANEE.—Farmers' & Traders' Bank; John C. Mellinger, Cashier, in place of Samuel Bechtel, deceased.

IOWA.

BANCROFT.—Farmers & Traders' Bank; President, R. M. Richmond; Vice-President, R. R. Richmond.

BLOOMFIELD.—Bradley's Bank; succeeded by State Bank. Capital, \$25,000. President, Henry H. Trimble; Cashier, John R. Wallace.

BRISTOW.—Bank of Bristow is reported here. Cashier, Geo. W. Moore, Jr.

CENTERVILLE.—First National Bank; J. R. Hays, Cashier, in place of Wm. Evans.

CLARINDA.—Iowa State Bank; discontinued.

CLARION.—Bank of Clarion (Duane Young & Son); succeeded by Wright County National Bank. Capital, \$50,000. President, Duane Young; Cashier, Charles Duane Young.

CLINTON.—Merchants' National Bank; Vice-President, James P. Gage; Assistant Cashier, C. D. May.

DAVENPORT.—Davenport National Bank; no Cashier in place of Geo. E. Maxwell, resigned.

DEDHAM.—Caton & Curtis have recently opened the Bank of Dedham.

DES MOINES.—Des Moines Nat. Bank; R. T. Wells, Cashier, in place of W. E. Hazen.

GREENE.—First National Bank; M. Hartness, Cashier, in place of C. H. Wilcox.

NORA SPRINGS.—Farmers' Exchange Bank is reported here. President, H. Gage;

Cashier, F. H. Gage; Assistant Cashier, W. F. Gage.

ROCK RAPIDS.—First National Bank; E. L. Partch, Cashier, in place of C. H. Huntington.

SIoux CITY.—Union Stock Yards State Bank is reported here. Capital, \$500,000.

KANSAS.

ABILENE.—Abilene Nat. Bank; Vice-Pres., W. P. Rice; Assistant Cashier, A. K. Perry.

ATCHISON.—Farmers' Bank; Assistant Cashier, J. S. Wood.

AUGUSTA.—Farmers' State Bank; E. R. Grant, President, in place of F. L. Ayres; Vice-President, Edwin Hill; F. L. Ayres, Cashier, in place of F. Rice.

BELOIT.—First National Bank; Vice-President, Alex. Campbell; Assistant Cashier, S. J. Best. — Campbell, Best & Co.; discontinued.

BLUFF.—State Bank of Bluff City is reported here. Capital, \$50,000. President, H. B. Schuler; Vice-President, L. D. Latham; Cashier, W. T. Clark.

CHERRY VALE.—First National Bank; Geo. Elkins, Vice-Pres., in place of W. W. Brown.

CIMARRON.—First National Bank; Vice-President, J. K. Hoppert.

CINCINNATI (P. O.: Surprise).—Porter, Slater & Co. are reported here. President, J. C. Porter; Cashier, Wm. A. Slater.

COOLIDGE.—Citizens' Bank is reported here.

HOPE.—Union Banking Co. is reported here. President, Geo. H. Stearns; Cashier, Edwin Coles.

HUGOTON.—Hugoton State Bank is reported here. Capital, \$50,000. President, C. E. Cook; Cashier, J. W. Calvert; Secretary, Charles L. Harlan.

JETMORE.—Union Banking Co. is reported here. President, Geo. H. Stearns; Cashier, Marion Shelden.

KANSAS CITY.—Armourdale Bank; Vice-President, N. McAlpine; Assistant Cashier, G. A. Taylor.

NEW BRUNSWICK.

MONCTON.—Bank of Montreal; A. H. Beddome, Manager, in place of F. M. Cotton.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, Oct. 3, 1887.

The month of September has been a most remarkable one in the history of the money market. Stocks have gone lower than at any period during the year, notwithstanding the continuous assertions of the general prosperity of the country and the increase in the aggregate amount of the currency through the issue of silver certificates and the importation of gold coin. The report of the Bureau of Statistics for the month of August, recently issued, indicates that the gold importations during the month exceeded the export by \$5,786,813, and that during the year ending August 31, 1887, the excess of gold imports has been \$36,393,672.

It is the more surprising that stocks have been so low inasmuch as large amounts have been purchased during the year by foreign investors. The condition of the stock market must be ascribed to the feeling of uncertainty that seems to exist as to the future of the money market. All the year the latter has been affected by recurring periods of stringency. The surplus of the U. S. Treasury has a great moral effect upon the public mind, and as we have heretofore pointed out there has been much money locked up in the purchase of U. S. bonds with the hope that the apparent necessity the administration lay under of relieving the money market, would induce it to buy at exorbitant prices. The Treasury Department has shown itself willing to adopt any reasonable measures in its power to relieve the situation. The circular of August 3, asking for offers of $4\frac{1}{2}$ per cent. bonds, at lowest prices that holders would take, produced the good effect of showing speculators that the government was not at their mercy, and the subsequent circular of September 22d, doubtless afforded the opportunity to many who had been holding the bonds for higher prices, to get rid of them, without much loss. It moreover had a further effect, in quieting apprehensions for the future. The interview of Secretary Fairchild, with the New York bankers, while not resulting in any definite plan gave a very favorable impression of the good intentions of the Secretary.

Railroad earnings reported continue to show an increase of business over the previous year. The dry goods trade all over the country appears to be in a very prosperous condition. While there has been an increase of business as shown by the increase in bank clearings, there has also been an increase in the business failures for the year. Some of the recent failures have exhibited a surprising discrepancy between the liabilities and assets, and this may cause apprehension that many firms are perhaps conducting business too extensive for their capital. There is at the present time so much competition in all branches of trade, and the profits being small the temptation is to extend business at almost any risk. This may perhaps amount to some extent for the difficulty in obtaining the discount of commercial paper during the past month. There is no doubt but that such failures as that of Ives & Co., of Wheeler, and others, with assets of little value have a tendency to render bankers cautious if not suspicious.

The interview of Secretary Fairchild with the New York bankers, called up the point whether under the Act of March 3, 1881, the Secretary could purchase bonds in addition to those which he is authorized to purchase for the sinking fund. There was some diversity of opinion on the subject, but the general opinion appears to be that he has not the power. That Act was passed for a special purpose to enable Secretary Windom to purchase five and six per cent. bonds, which then stood at about par. It would appear to be straining a point to construe it as intended to apply to present circumstances, when bonds are at a high premium. On the whole, however, the action of the Treasury has

been very beneficial in its results to the money-market, but how permanent in its effect remains to be seen.

Foreign Exchange for the week ending September 9th was very dull and rates unsettled. The next week it was moderately active. The next week it was again dull, and the last week the same. During the month, \$13,911,575 in gold have arrived, and more is said to be coming. The Bank of England rate continues at four per cent. The large purchases of American stocks abroad are supposed to explain a large portion of this influx of gold. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.80½; sight, nominal, \$4.85; 60 days, actual, \$4.79½@4.80; sight, actual, \$4.83½@4.84; Cable transfers, \$4.84½@4.85; Prime commercial sterling, long, \$4.78½@4.78¾; Documentary sterling, 60 days, \$4.78@4.78¾; Paris, bankers', 60 days, 5.26¾@5.26¼; sight, 5.25@5.24¾; Paris, commercial, 60 days, 5.28¾@5.28½; sight, 5.26¾@5.26¼; Antwerp, commercial, 60 days, 5.29¾@5.28¾; Swiss, bankers', 60 days, 5.26¾@5.26¼; sight, 5.25@5.24¾; Reichsmarks (4), bankers', 60 days, 94@94½; sight, 94½@94½; Reichsmarks (4), commercial, 60 days, 93½@93¾; sight, 94½@94¼; Guilders, bankers', 60 days, 39 11-16@39¾; sight, 39¾@39 15-16; Guilders, commercial, 60 days, 39½@39 9-16; sight, 39 11-16@39¾; Copenhagen, Stockholm, and Christiania, krona, 60 days, 26½@26 11-16; sight, 26¾@26 15-16. Paris dispatches quote exchange on London 25f. 12½c.

The following shows the posted rates for prime bankers' sterling bills on London, at 60 days, and sight, and prime commercial sterling, together with exchange on Paris, on August 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of August and September:

August.	BANKERS'		Cable Transfers.	Commercial.	PARIS	
	60 days.	Sight.			60 days.	Sight.
Highest.....	4.83¼	4.85¼	—	4.81	5.23¼	5.20¾
Lowest.....	4.81¼	4.84¼	—	4.79¼	5.25¾	5.23¾
Sept. 1.....	4.81	4.85	—	4.79¼	5.26	5.23¾
" 8.....	4.81	4.85	—	4.78¾	5.26	5.24
" 7.....	4.80¼	4.84¼	—	4.78¼	5.26¾	5.24

Victoria sovereigns.....	\$4 83 @ \$4 88	Fine gold bars par @ ¼ % premium on the	
Twenty francs.....	3 85 @ 3 90	Mint value.	

HOME MONEY MARKET.—There has been considerable stringency in the home money market during the month and there has been considerable difficulty at times in securing the discount of commercial paper. This difficulty has been due perhaps to failures of firms, with a bad showing. There has however been little difficulty in securing loans on really good collateral. For the week ending September 2, loans on stock and bond collateral ranged from 3 to 8 per cent., commercial paper, 6 to 7. For the week ending September 9,

loans on collateral were from 3 to 7 per cent., commercial paper, 6 to 7. For the week ending September 16, loans on collateral were from 3 to 7 per cent., and commercial paper, from 7 to 8. For the week ending September 23, rates on collateral loans were from 3 to 7 per cent., on commercial paper, 6½ to 8 per cent. For week ending September 30, rates on collateral loans were from 4 to 7 per cent., and on commercial paper, from 6 to 7½.

The following are the latest rates of exchange on New York: Savannah, par, selling ¼ @ ¼ premium. Charleston, buying 3-16 @ ¼ discount, selling par. New Orleans, commercial, \$2 per \$1,000 discount, bank, par. St. Louis, 50 @ 75c. per \$1,000 discount. Chicago, 70c. per \$1,000 discount.

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of September, and the highest and lowest during the month. Actual sales marked *:

The public debt less cash in the Treasury has decreased \$14,247,969.80 as compared with a decrease of \$4,809,475 during the month of August. The outstanding interest-bearing debt on September 1 was \$1,060,853,712, and October 1 it was \$1,047,114,442. The accrued interest at the latter date was in addition \$11,415,570. The statement includes \$64,623,512 of Pacific Railway bonds. Four and a-half per cent., bonds outstanding on August 31, were \$244,251,600 and on September 30, these had been reduced to \$231,673,350, a reduction of \$12,578,250. Four per cent. bonds in the same time were diminished from \$737,812,800 to \$733,654,150 a reduction of \$4,158,650. The debt statement also shows that the interest prepaid by the Treasurer on fours and four and a-halves up to October 1, was \$1,092,988. One fact that seems to show the difficulty in the way of Treasury relief of the money market, is that those who are entitled to receive money for matured debt and accrued interest do not draw it. For instance the debt statement of August 31, showed that \$14,698,983.27 held ready to pay such matured debt and accrued interest, and that of September 30, showed \$15,389,938 so held. The moral effect of the willingness of the Treasury to buy bonds is greater than would be supposed, because it enables a reservoir of cash outside the ordinary money market to be drawn on. If the U. S. bonds held in anticipation of government purchases amounting to nearly 14 millions of dollars, had been thrown at once upon the ordinary New York market, the price of fours would have gone perhaps as low as 120, and all other stocks and bonds would have been similarly affected. It was doubtless the consciousness of this in banking circles that caused the great uneasiness and apprehension, which has been felt during the greater part of the month. Evidently a panic was averted by the action of the Treasury in issuing the circular of September 22d. Nevertheless the condition which rendered this action necessary was the result of the anticipation

that the government would be compelled to buy bonds. Acting on this, prices were forced up in the market, and all the offerings for several months were purchased by the speculators. The government did not respond as speedily as was expected and those who had purchased the bonds were in a tight place. Prices began to decline. How much they would have declined, if the government had not interfered, will never be known. It is certain that the Treasury upheld its own credit as well as helped the holders by fixing the prices it did. But at the same time that these bond speculators had placed themselves in an unpleasant predicament, the market generally was affected by this fact, and the aid from Washington was welcomed by all.

The following table shows the net gold and silver held by the United States Treasury on the 1st of October and on the 1st of September and August :

	Oct. 1, 1887.	Sept. 1, 1887.	Aug. 1, 1887.
Gold coin and bullion.....	\$290,702,629	\$282,039,534	\$281,296,417
Gold certificates outstanding.....	97,984,683	88,765,340	94,990,087
Gold owned by Treasury.....	\$192,717,946	\$193,274,193	\$186,306,330
Silver dollars and bullion.....	\$217,954,668	\$218,236,868	\$216,621,247
Silver certificates outstanding.....	154,354,826	147,876,385	144,166,141
Silver owned by Treasury.....	\$63,599,842	\$70,360,483	\$72,455,106

The Treasury Statement for the 30th of September, shows that the Treasury net holdings were as follows : the holdings for the three previous months and for July 1, 1886, are also given.

U. S. Treasury Net holdings of.	July 1, 1886.	July 1, 1887.	Aug. 1, 1887.	Sept. 1, 1887.	Oct. 1, 1887.
Gold	\$156,793,749	\$186,875,669	\$186,906,930	\$193,274,193	\$192,717,946
Silver	96,229,539	73,348,425	72,455,106	70,360,483	63,599,842
U. S. notes	22,868,317	21,767,376	20,013,797	21,157,538	17,610,212
Bank notes	149,014	197,048	273,802	219,313	174,370
Fractional silver....	20,282,496	27,004,192	26,803,846	26,259,313	25,064,830
In Treasury.	\$305,323,115	\$307,529,129	\$335,472,823	\$311,270,859	\$299,197,200
In Depository B'ks.	14,435,199	22,991,302	23,493,267	25,824,902	25,438,630
Total	\$319,758,314	\$330,520,431	\$358,966,090	\$337,194,760	\$324,635,830

The cash in the Treasury has decreased \$12,073,659 during September, as against an increase of \$5,798,036 during the month of August. The following table shows the amount of bonds purchased under the Secretary's circular of September 22d.

Date.	Total amount.	4 per cents.	4½ per cents.
September 22	\$3,494,700	\$2,820,000	\$694,700
September 23	1,835,650	1,044,000	791,650
September 24	1,900,350	522,650	1,377,700
September 26	1,253,250	177,050	1,076,200
September 27	717,850	181,850	540,500
September 28	253,900	99,950	153,950
September 29	405,950	338,450	67,500
September 30	49,450
Total	\$9,911,100	\$5,113,450	\$4,748,200

The changes during the month are a decrease of \$556,247 in net gold coin and bullion held, and a decrease of \$6,760,641 in silver dollars. In addition to the silver mentioned above the Treasury held trade dollar bullion, \$6 796,683, trade dollars, \$298,353, and fractional silver coin, \$24,984,219. Silver

certificates outstanding increased \$6,478,441. The receipts of the Government for September were \$33,859,805, and the expenditures \$18,789,968, showing an excess of receipts of \$15,069,837. The result of the bond purchases has, however, been to diminish the cash in the Treasury. The usual Treasury statement as to cash in the hands of the people shows an expansion of \$32,350,375 in the available currency of the country during the month of September.

From the statement of the Comptroller of the Currency of October 1, it appears that the total decrease in National bank circulation during the month was \$1,366,399. Of the circulation issued during the month \$614,150 was to new banks, and \$820,890 to banks increasing circulation. The total amount of lawful money on deposit with the Treasurer to retire outstanding bank circulation was \$102,720,821, which indicates a decrease in this deposit of \$1,346,697 during the month.

The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on the dates indicated:

	Oct. 1, 1887.	Sept. 1, 1887.	Aug. 1, 1887.	July 1, 1887.	Jan. 1, 1887.
Currency 6 per cents.	\$3,256,000	\$3,206,000	\$3,176,000	\$3,175,000	\$3,680,000
4½ per cents.....	70,030,850	69,953,550	69,023,500	67,743,100	59,636,200
4 per cents.....	116,214,250	116,202,900	115,890,950	115,842,650	113,903,200
3 per cents.....	216,000	*734,500	*1,349,350	*5,205,950	52,218,950
Total.....	\$189,717,100	\$190,096,950	\$189,445,800	\$191,966,700	\$229,438,350
* Called.					

The bonds to secure public deposits amounted to \$28,027,000, including \$225,000 currency 6s, \$9,661,500 4½s, \$17,487,500 4s and \$650,000 called threes. The decrease of bonds on deposit to secure circulation is very gradual since the redemption of the three per cents. Since January 1 the total diminution in bonds has been \$39,721,250. At that date the banks held \$52,218,950 of three per cents, all of which except \$216,000 have been withdrawn. There has also been a decrease of \$424,000 in currency sixes. The total reduction in these two classes of bonds has been \$52,426,950. Of this amount \$2,311,050 has been made up by a deposit of four per cents, and \$10,394,650 by the deposit of 4½s. The probability is that not very many of the banks holding the threes in January have replaced them; they have simply reduced their circulation. The increase in fours and four and a half probably largely represents deposits made by new banks. The constant decrease of National bank circulation is not felt at the present time so much because of the increase of gold and silver coin and certificates based thereon. It is not the actual decrease in the circulation that is so alarming as the impossibility of increasing it in case of necessity. At present there is an abundance of currency of various sorts, but in the aggregate gold predominates, and the continued coinage of silver and other causes may combine to deprive the country of the use of gold as money. In such case the inability to put out National bank circulation would be seriously felt.

NEW YORK BANKS.—The following table shows the condition of the New York Clearing-House Banks for a number of weeks past, as well as about this time in 1886 and 1885.

1887.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Oct. 1..	\$344,795,400	\$75,144,800	\$20,328,800	\$345,826,000	\$8,205,100	\$9,017,100
Sept. 24..	346,422,800	70,521,900	20,521,900	341,935,900	8,237,000	5,816,725
Sept. 17..	347,096,100	68,931,600	20,608,200	342,880,500	8,128,600	3,818,675
Sept. 10..	347,442,900	68,120,400	21,743,300	342,837,500	8,118,200	4,154,325
Sept. 3..	344,838,900	68,579,300	22,745,100	344,447,100	8,114,600	5,212,625
1886.						
Oct. 2..	310,196,700	74,082,900	18,570,100	346,756,300	8,164,400	5,963,925
1885.						
Oct. 3..	330,759,300	107,091,300	30,747,900	385,380,000	9,905,500	41,409,200

The great increase of the surplus reserve which occurred after September

17, was doubtless due to the sale of U. S. bonds to the Government by some of the banks. The reserve held on October 1, of this year is much stronger than that of about the same date in 1886. The preponderance of the New York banks as compared with the other banks of the country is shown by the following table prepared in the office of the Comptroller of the Currency which exhibits the loans and discounts, and reserves of the banks in sixteen reserve cities. Comparative figures are given showing the same items for May 13, 1887, and October 7, 1886.

STATEMENT OF LOANS AND DISCOUNTS AND BANK RESERVE IN RESERVE CITIES.

	LOANS AND DISCOUNTS.		
	Aug. 1, 1887.	May 13, 1887.	Oct. 7, 1886.

Totals.....	\$197,243,149	\$170,826,389	\$190,965,722

The figures do not show any very great increase of business in Chicago, or St. Louis as the result of their having been made central reserve cities. The loans of the St. Louis banks although large on May 13th, on August 1, had decreased to about the same amount they were in October, 1886. New York holds nearly one-half of the total reserves of the country, and the proportion would be larger were the reserves shown cash reserves, which, except in the case of the central reserve cities they are not, and in Chicago, and St. Louis, they are cash only on the two latest dates. New York city banks also show about two-fifths of the total loans and discounts of the country. It must also be remembered that only the National banks, of New York, are shown by the table. The loans of the State banks of that city by their official statements of September 17th, amounted to \$73,642,800 and their reserves to \$10,422,900.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of September, the highest and lowest since January 1, 1887, and also during the year 1886:

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange.

The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Board.—Col. Green B. Board, President of the Farmers' National Bank, of Salem, Va., died September 18th. He was also President of the Board of Trustees of Roanoke College.

Cleveland.—William Cleveland, President of the Orange Savings Bank, of Orange, N. J., died on September 8th. He was a second cousin of President Cleveland.

Crane.—Walter B. Crane, a prominent resident of Rondout and for many years Vice-President of the Rondout National Bank, died recently at the age of eighty.

Derry.—Henry F. Derry, Assistant Cashier of the First National Bank, of Dexter, Me., died on August 28th. He was Town Treasurer and a highly respected citizen.

Fleming.—Hugh S. Fleming, President of the Third National Bank, of Allegheny, Pa., died on July 2d.

Holbrook.—Colonel Charles L. Holbrook, of Boston, died September 13. For thirty or more years he had been an officer in the Suffolk National Bank.

Johnson.—William Johnson, President of the Corn Exchange National Bank, of Philadelphia, died suddenly on the evening of September 21.

Kennedy.—Robert Lenox Kennedy, of New York city, died on September 14th on board the steamship "Trave" on his return from a European trip. He was formerly President of the National Bank of Commerce.

Lewis.—James M. Lewis, of Elizabeth, N. J., who formerly for twenty-six years was Cashier of the Union National Bank, of New York city, died during the month at the age of 78 years. He was well known in New York banking circles.

Lincoln.—A. S. Lincoln, Paying Teller of the Bank of Commerce, of Boston, died at Medford, Mass., on September 14th, in the seventy-sixth year of his age. He had been employed in the Bank of Commerce thirty-five years, and left a record for faithfulness and honesty.

Mowry.—Hon. Spencer Mowry, of Woonsocket, R. I., died on August 25th. He was well known in banking circles, having in 1837 been elected Director of the Smithfield Union Bank and President of the Globe Bank, afterwards National Globe Bank, of Woonsocket. At various times he has been connected with every savings bank in Woonsocket. He was eighty-five years of age.

Patterson.—Joseph Patterson, President of the Philadelphia National Bank and the oldest bank President in Philadelphia, died on September 25th, at the age of eighty-four. He was active in assisting Secretary Chase to negotiate a war loan of \$50,000,000 and in aiding other financial operations of that period. His death removes one more of that rapidly disappearing group of men which for half a century constituted the centre of the business and intellectual activities of Philadelphia. Earnest in work, active in patriotic endeavor, and ever alert in keeping pace with the mental progress of the century, Mr. Patterson was a delightful companion to every intelligent man, and a shining example of the cordial but ever dignified bearing which constituted so much charm in the true gentleman of the old school. When a man has passed fourscore years it must be that he does but "join the majority" of his friends when he is called away; but the city will long regret the loss of the well-weighed counsel and matured judgment of one of its most eminent citizens.

Reed.—Hon. Isaac Reed, of Waldoborough, Me., and President of the Waldoborough National Bank, died on September 19th, at the age of 78. He was President of the bank mentioned for the thirty-two years of its existence as a State and National bank.

Seaver.—Abraham W. Seaver, Cashier of the Northborough National Bank, of Northborough, Mass., died on September 2d, at the age of 78. In 1854 he, with others, organized the Northborough Bank and became its first Cashier, and, with the exception of a brief period, held the office until his death.

Whitin.—Chas. P. Whitin, President of the Whitinsville National Bank, of Whitinsville, Mass., and of the Whitinsville Savings Bank, died August 29th.

Whitney.—Charles Whitney of Boston, Massachusetts, and formerly President of the Wameet National Bank of Lowell, Mass., died September 22. He was a leading lumber merchant of Boston and his estate is estimated at from \$3,000,000, to \$5,000,000.

Williams.—H. F. Williams, President of the First National Bank, of Northampton, Mass., died on September 6, of consumption. He was highly respected as a citizen and had held many positions of trust under the town and city government.

WANTED—OFFICERS AND CLERKS, POSITIONS, BANKS FOR SALE, LOCATIONS WANTING BANKS, ETC.

[Notices under this head—space not over four lines—cost \$2 an insertion. If replies are to be sent to this office the advertiser must send us two stamped envelopes addressed to himself, in which the replies will be forwarded.]

WANTED.—A banker, thoroughly posted in the details of both city and country banking, having occupied positions from Teller to President, conversant with mortgage and other investment securities, desires a position in, or will undertake the entire management of bank. Address D. Y. W., care RHODES' JOURNAL OF BANKING.

RHODES' JOURNAL OF BANKING.

Vol. XIV. NOVEMBER, 1887. No. 11.

THE Secretary of the Treasury has recently signified his willingness to make deposits with the National banks, designated as public depositories, to the extent of \$110 for every \$100 four per cent. bond deposited as security. The JOURNAL has several times pointed out that four per cent. bonds having a market value of 125 were satisfactory security for a much larger amount of public deposits than has heretofore been permitted. This action of the Treasury has had a much better effect upon the money market than the purchase of bonds, because the money goes at once to the banks, and from them to the loan market, while the money paid out in the purchase of bonds might or might not take this course. Mr. St. John, in a paper read at the Bankers' Convention, at Pittsburgh, advocated an enlargement of the public deposits with the designated depositories. In order to discover what could be done under the law, he asked the *Journal of Commerce* whether Section 5,153 of the United States Revised Statutes which, provides that the Secretary of the Treasury shall require the designated depositories to give satisfactory security, by the deposit of United States bonds and otherwise, for the safe keeping and prompt payment of the public moneys deposited with them, empowers the Secretary to lodge with designated National banks, under satisfactory security, any portion of the fund in the Treasury (now 102½ millions of dollars) received from National banks for the redemption of their surrendered circulation. The *Journal of Commerce* sapiently replied, after deprecating the exercise of this authority as a "tremendous power in one man's hands," "We have no doubt that he has the right to make such deposits, and we pointed it out as one of the possible dangers of the National banking system when the project was first broached, twenty-five years ago." Systems may come, and systems may go, but the *Journal of Commerce* goes on forever. We presume it was in existence when the public moneys were deposited in the pet banks during Jackson's administration, and that it has never recovered from the bank terror of that day sufficient to exercise its powers of discrimination. There can be no better means of putting Government money in

circulation than through responsible banks. The banks of Jackson's day were not responsible, and they could not be made so, as National banks can to-day, by requiring them to deposit Government bonds, for in 1837 there was no Government debt. The deposit of Government bonds makes the Government sure either of its money or of the payment of its debt. There can be no favoritism shown by the Secretary in depositing public money where all depositories are required to put up security worth more than the money received. That he might offer deposits in too large amounts, and cause a rise of prices by the resulting ease in the money market, may be admitted; but how this is a danger arising from or affecting the National banking system we fail to see. It is a danger resulting more from the system of having a Secretary of the Treasury than from the system of having National banks. The latter have to put up ample security, and they are not likely to take more money than they can loan to advantage. If section 5,153 be construed in all its possibilities, it could be held to give the Secretary of the Treasury authority to designate any National bank to compel it to take any amount of public deposits and put up security therefor, whether it wanted to or not. Any one can see the absurdity of such a proposition, and this is the only way in which the National depositories can be made to take more money than they can profitably loan. The only difficulty with this method of relieving the Treasury is that the Government gets no benefit from the use of its money, as it would in employing it in refunding its debt at a lower rate of interest.

THE ATTORNEY GENERAL of the United States, in compliance with the request of the Comptroller of the Currency, on Monday, the 23d of October, made a motion in the United States Supreme Court to have the case of E. H. Movius, Receiver of the First National Bank, of Buffalo, against Elbridge G. Spaulding and others, Directors of the bank, advanced on the calendar, and set down for argument on an early day. This case involves the responsibility of Directors of National banks for losses resulting from neglect of duty. It was first tried in the Circuit Court of the United States for the Northern District of New York, and the decision rendered was that the Directors, with the exception of Lee, the President, who wrecked the bank, and another, were not liable for neglect. The main points of this decision were published in the July number of the JOURNAL. In comment on this case in the same number, it was remarked that this decision "refines the liability of Directors for simple neglect of duty to a point that virtually amounts to nothing"; and that "If this decision is sustained by the United States Supreme Court, it will render the office of Director of a National bank a sinecure without labor or difficulty." The Comptroller deserves credit for ordering the appeal on this important question to the Supreme Court of the United States. Not that this course is at all new or unusual. Under his predecessors in office, the Supreme Court was

called upon to finally settle many questions involving points arising under the National banking laws. Mr. Trenholm, has, however, we think, laid himself open to criticism, because he has permitted some important questions to be settled by decisions of the lower Courts, when there was a good chance of reversal by the Supreme Court of the United States. This was notably the case with the question of the right of a National bank to borrow money upon time promissory notes, which arose in the case of Brown Brothers, of Baltimore, against the Receiver of the Exchange National Bank, of Norfolk. There was quite a large sum of money involved, which would have been saved for the creditors of the bank by a reversal of the decision; but this was of less importance than an authoritative settlement of the legal point that would save an immense amount of future litigation. As it is, this question will have to be fought over again the next time it arises. In the letter to the Attorney General, asking that the case against the Directors of the First National Bank, of Buffalo, be brought to a speedy trial, the Comptroller says:

"In support of the request, I have the honor to say that I regard it exceedingly important that the Supreme Court should lay down at the earliest day practicable the principles upon which the responsibilities of bank Directors are to be measured and enforced. Of National banks alone there are now in the United States upward of three thousand in active operation, and there are also quite a number of State and Savings banks. The stockholders and depositors in these various institutions are entitled to know to what degree of responsibility they can hold their Directors, and, on the other hand, the Directors themselves are entitled to know what responsibilities they incur in accepting their offices. The decisions of record are conflicting, not only as to the application of principles, but as to the principles themselves underlying the general question of responsibility, and for that reason it would appear to be of national importance that the present state of uncertainty should be terminated, and that conclusive judgment should be rendered upon the points in controversy. I believe that the case cited above involves the most important and the most fundamental of the issues awaiting determination."

The full importance of a decision at this time, establishing the liability of Directors, can be realized when it is remembered that the liability of the Directors forms the most important asset of the Fidelity National Bank, of Cincinnati, and of the First National Bank, of Dansville, as well as the first National Bank, of Buffalo.

THE FAILURE OF the Stafford National Bank, of Stafford Springs, Conn., has raised the storm of criminations and recriminations that, recently, always appears to arise when the question of who is to blame is asked in connection with the failure of a National bank. As far as can be gathered from the various accounts, the true history of this feature of the case is as follows. When Mr. Hyatt became Treasurer of the United States there was a vacancy in the office of National Bank Examiner for Connecticut. After some delay it was discovered that the man best fitted to fill the office was perhaps Michael T. Dooley, Chairman of the Democratic State Committee. The holding of this latter position indicates general ability, but Mr. Dooley had no special experience in examining banks. It was therefore necessary before

appointing him to give him some opportunity to learn. Mr. Forman, the Examiner for Illinois, was ordered into Connecticut, and instructed to go around with Mr. Dooley making examinations. In the course of their trip the irregularities at Stafford Springs were detected. This of course was a feather in the caps of Messrs. Forman & Dooley, though whether Mr. Forman found the defalcation and showed it to Mr. Dooley, or Mr. Dooley first detected the embezzlement and pointed it out to Mr. Forman, does not appear. All would have gone well had not some of the newspapers friendly to Mr. Dooley seized the occasion to blame Mr. Mygatt for not discovering the condition of the bank when he examined it in 1886. Other papers, in defending Mr. Mygatt, brought out the fact that Mr. Hyatt examined the bank in January, 1887, and reported it all right. Last of all a Washington dispatch alleges that Comptroller Trenholm has said that the newspapers are unjust in blaming Treasurer Hyatt for not discovering the irregularities while Bank Examiner. He is quoted as saying further :

"The discovery of the criminal conduct of the Cashier is, in my judgment, due in the first instance to the fact that the bank was examined unexpectedly. In the regular course of things the examination would not have taken place until next January, but Mr. Hyatt, who examined it last January, mentioned to me that he intended to make a re-examination during the summer, and suggested that whoever should be appointed his successor should be instructed to visit that bank. For this reason Bank Examiner Forman was ordered to make the September examination which, as Mr. Hyatt expected, took the Cashier unawares and led to the detection of the embezzlement."

We thus find the blame shifted from Mr. Mygatt to Mr. Hyatt, and from Mr. Hyatt to the Comptroller, who admits that Mr. Hyatt informed him in January, 1887, that the Cashier must be taken unawares, but the Comptroller did not act on the suggestion until September. He probably wanted the Cashier to be taken very much unawares, as the Cashier undoubtedly was when Messrs. Forman & Dooley bore down upon him. Both the evil and the good of political influence in the appointment of National bank Examiners are shown in this history. The evil, in that the vacancy could not be filled until the political factions in the State were agreed on some man, and the good, that in opening up a school for the instruction of candidates the teacher was enabled to illuminate the subject with a brilliant object lesson. If however, the Comptroller could send Mr. Forman into the State of Connecticut in September, why could he not have sent him in February, immediately after Mr. Hyatt intimated that the Cashier of the Stafford National Bank needed watching ?

THE LABOR QUESTION received some attention at the Bankers' Convention. The address of President Murray was largely a plea for union between labor and capital. Comparing the bankers and the laboring classes he said :

Twenty-five years ago laborers received one dollar a day wages; now they are receiving an average of two dollars a day, and these two dollars will buy more of the necessities of life than five dollars would twenty-five years ago. A banker gets a lower rate of interest for his money than he did twenty-five years ago, yet his living is more

expensive and his wants are increasing; the demands upon him for charities increase in untold amount, and his happiness is not augmented in a relative proportion. Unquestionably the last twenty-five years have given the race for happiness, contentment and profit in this country to the laboring class * * *

* * * Here to-day let honest labor and honest capital be bethrothed to each other in a mystical tie as one flesh. Let no man enter in with his theories to mar this contract. What will be your answer, ye laboring men? If yes, then what God has joined together let no man put asunder.

These and other portions of Mr. Murray's address, set forth what may be called the optimistic view of the labor question. Assuming that moral rectitude, and self control, were universal among capitalists and laboring men alike this view would be the correct one. If every man would pursue the path in life which reason and experience point out to be the best, always making the wisest use of his opportunities, and never turning aside through any temptation, there would doubtless be universal contentment and happiness. There is no doubt about what men ought to do, or about what they can do, if they permit their reason to guide them. Unfortunately, it is not the material conditions and surroundings of humanity that are so much at fault; as the moral condition of humanity itself. The emotions and passions of men have more to do with their conduct than their reason. You can lead a horse to the water but you can't make him drink. The laboring classes number more individuals than the capitalists, and, as Falstaff said, "the more flesh the more weakness." In other words, the larger the number of individuals in any class the larger the number that will not make the best use of the advantages offered, and the larger the number of those who suffer from the consequences. Then the question arises is there to be no allowance for sympathy, for charity, or for the exercise of forbearance toward those whose lack of wisdom has prevented them from improving the chances they have. The doctrine of the survival of the fittest would have it, that in the struggle for existence all the weak, the incompetent and the foolish are gradually weeded out, but the history of the world does not bear out the theory. There is as large a proportion of those individuals in all classes who are unable to succeed in life as there ever was. It is useless to expect that such will be any more contented with their lot, though their misfortunes may be due to themselves, because the opportunities they have failed to appreciate are proved to have been ample. Alleged grievances of labor can be ameliorated by good laws bringing about suitable conditions, but the real settlement of the labor question rests with the laborer himself, to whatever class he belongs.

Another paper exclusively on the labor topic was presented by Mr. Elliott F. Shepard of New York. Mr. Shepard started by saying,

"Let us look a moment at the fundamental principles underlying this much vexed question of capital and labor; and the inspection will show that there is, and can be, no conflict between them, but that they are identically the same thing, one and inseparable, one and indissoluble."

This reminds one of the lawyer who endeavored to convince his imprisoned client that he could not be put in jail. The people of

Pittsburgh doubtless have a vivid recollection of certain labor riots that once occurred there, which looked a little as if there might be such a thing as a conflict between labor and capital. Mr. Shepard said in another place,

"Statisticians have shown that it is possible for a wage-earner to save thirty per centum of his income, and put it accumulating as surplus or capital, and that it is possible for the employer to make and put to accumulating, not more than from five to twenty per centum upon the amount he pays the wage-earner."

This is undoubtedly true. The extreme to which saving may be carried has been often exemplified in the lives of celebrated misers, but such a statement as that quoted, is simply a truism about as satisfactory to the laborer, as the similar statement that two and two make four, except when they make twenty-two. In fact, the whole of Mr. Shepard's paper was of this truly edifying character and read to an assembly of bankers, was singularly inappropriate, and more calculated to incite than to allay antagonism. In fact, if there was any conclusion to be drawn from it at all, it was merely that these laboring people have only themselves to blame for their poverty, and they deserve no sympathy.

Papers on the labor question drawn up by capitalists naturally lean toward their own class, and the same may be said of those drawn up by the advocates of labor. We have often thought these papers should be exchanged, in order that those prepared by the capitalists might be read in the labor conventions, and those by the labor advocates in the conventions composed of capitalists. Each could then see clearly the light in which they were viewed by the other.

MR. KKOX'S REFUNDING PLAN, as set forth in his address at the Pittsburgh Convention, has attracted much attention from the press of the country. As a rule, the comments have been exceedingly favorable. There is, however, evidence that some of the conceptions upon which the plan is based are not clearly understood even by those most favorably inclined. It has been suggested that the Government cannot save compound interest, because it has no way of investing its money at compound interest. Under the plan, the Government, taking the gross sum that it will require to pay $1\frac{1}{4}$ per cent. of the interest on the 4 per cent. bonds for the next $19\frac{1}{4}$ years as a basis, proposes to discount this sum at a certain rate. If it was six per cent. simple interest it would be easy to say what the discount would be. It is no more difficult to say what the discount will be at $2\frac{1}{4}$ per cent. compounded quarterly. The amount of the discount is arrived at as easily in one way as the other. Assuming \$199,500,000 to be the gross amount of $1\frac{1}{4}$ per cent. of the interest on the four per cent. bonds for 19 years, it is found that a discount of $2\frac{1}{4}$ per cent. compounded quarterly on this sum is \$32,478,200. Deducting this discount the Government pays \$167,021,800, instead of \$199,500,000. How can any one say that the Government does not make, or more properly save, the \$32,478,200?

Roughly estimated, the \$32,478,200 saved is over 16 per cent. of the total interest which would otherwise have to be paid in the next nineteen years.

GOVERNMENT OFFICIALS WERE conspicuous by their absence at the Bankers' Convention, even the Comptroller of the Currency sent a letter of regret, alleging as the cause of his inability to attend, the labor incident to the preparation of his annual report. The only prominent person connected with any branch of the Government was the Hon. Beriah Wilkins, Chairman of the Banking and Currency Committee of the House of Representatives. There seems to be a feeling among politicians that whatever is recommended by bankers is for that reason unpopular. It was said by some of the speakers at the Convention that it was unwise to make any recommendations as to legislation, as the recommendation of the bankers of the country is a drawback to the success of any measure. Even admitting, for the sake of argument, that this is true, it does not follow that the bankers should give up trying to secure just treatment from legislators. It is certainly a new doctrine to assert that obstacles are to be overcome by flying from them. There has always been something of a popular feeling against banks, and demagogues are constantly attempting to make the most of it. Notwithstanding this, the banks are able to exert a great influence upon legislation, or at least as much as any other business interest. It is not so much the difficulty of securing bank legislation as it is the difficulty of securing any legislation at all that has characterized the sessions of recent Congresses. If the let alone policy should be adopted by the banks, it is more reasonable to conclude that Congress, instead of taking more interest, will become more indifferent than ever.

A TWO PER CENT. BOND would be a better bond for the Government to issue in exchange for fours, if a refunding law is enacted by Congress in accordance with Mr. Knox's plan, than a two and a half per cent. bond. The two per cent. bond would always be below par in the market, and if the revenues of the Government are not reduced could always be bought at prices not to exceed par. Such a bond would be equally useful to the National banks as a basis for circulation, so long as its market price did not sink below ninety. The Government, in exchanging two per cents. instead of two and a halves for fours, would buy two dollars of the interest for nineteen years instead of one dollar and a half of interest for nineteen years. The discount or profit to the Government would in each case be computed at the same rate, but the purchase of the larger amount of interest would permit the immediate and profitable use of a larger portion of the Government surplus. The surplus for the next two or three years being thus disposed of, and the fours refunded into twos, if a further surplus still continued to accumulate, the two per cents., though having a definite time to run, being below par in the market, could always be purchased by the

Government. In fact they would combine the advantages both of an optional and of a fixed date bond.

THE WASHINGTON CORRESPONDENT of the New York *Daily Indicator* says that Acting Secretary Thompson told the correspondent that before the issue of his circular, offering to buy \$14,000,000 in bonds, he went to New York and made a personal acquaintance with the condition of the banks, and found it to be good. The Secretary has, it seems, been advising the New York banks not to tie "themselves up too tightly with real estate paper," and lays it down as a fundamental principle that the assets of a bank should be in a "fluid state," and that the more frequently a bank can turn over its funds the more money it will make and the better it is for the commercial community. The banks and bankers of the country will breath freer, knowing that Secretary Thompson has discovered these fundamental principles of banking. "*Fluid state*" is especially good. The advice to bankers, not to tie "themselves up too tightly with real estate paper," should be observed. It reminds one of the solemn decree issued by the imbecile Roman Emperor, Claudius, to the vine growers of Italy, that the best time to trim their vines was in the spring. (See Suetonius.)

THE MAJORITY OF the New York bankers, consulted by Secretary Fairchild, were of the opinion that the Act of March 3, 1881, permits him to purchase United States bonds for cancellation in excess of the amount required for the Sinking Fund. Perhaps Secretary Fairchild thought that the bankers might not prove the best authority on a purely legal point, and he still is of the conviction that he will have to apply to Attorney General Garland for an opinion on the subject. After all, the Attorney General and not the Secretary of the Treasury very often has the shaping of the financial policy of the Government. Secretary Windom never dared to extend the fives and sixes of 1881 at three and a half per cent. until Attorney General Wade McVeagh gave him backbone in a favorable opinion. Yet the three and a halves were called "Windoms" and not "McVeaghs."

THE RESOLUTION PRESENTED by Mr. O. M. Carter, of Ashland, Neb., at the Bankers' Convention, requires the Executive Council to prepare a bill, embodying desirable and expedient amendments to the National banking laws, which is to be sent to members of the Bankers' Association for criticism and suggestion. The measure, as finally corrected and adopted by the Council, is to be presented to Congress. Each member of the Association is to use his influence with the members of Congress and Senators of his State to secure the passage of the perfected bill. The Executive Council is also required by the resolution to examine the banking laws of the various States and endeavor to secure uniform bank legislation throughout the country. The expense is to be assessed on the members of the Association.

THE SURPLUS AND THE PUBLIC DEBT.

ADDRESS OF THE HON. JOHN JAY KNOX, OF NEW YORK, BEFORE THE
AMERICAN BANKERS' ASSOCIATION, AT PITTSBURGH,
ON THE 12TH OF OCTOBER, 1887.

Mr. President and Gentlemen of the Convention :

Truth is stranger than fiction ; and there is no better illustration of the force of this saying than the history of the growth of the public debt of a great nation like England, or that of France, or the United States. The historian Macaulay gives a graphic description of the growth of the English debt, which dates its beginning in the year 1692, and continued to increase for 123 years, until it reached the maximum of 800 millions pounds sterling, or about 4,000 millions of dollars, in the year 1815, just after the wars of the French Revolution. From time to time it has been slightly reduced, but again increased, so that it is but 44 million pounds less than when it attained its greatest proportions.

ENGLISH DEBT.

Mr. Knox then quoted from Macaulay the history of the origin and growth of the English debt, the quotation ending with the following passage : " Soon, however, the wars which sprang from the French Revolution, and which far exceed in cost any that the world had ever seen, tasked the powers of public credit to the utmost. When the world was again at rest the funded debt of England amounted to eight hundred millions. * * * "

" It was, in truth, a gigantic, a fabulous debt ; and we can hardly wonder that the cry of despair should have been louder than ever. But again that cry was found to have been as unreasonable as ever. Like Addison's valetudinarian, who continued to whimper that he was dying of consumption, till he became so fat that he was shamed into silence, England went on complaining that she was sunk in poverty, till her wealth showed itself by tokens which made her complaints ridiculous. The beggared, the bankrupt society not only proved able to meet all its obligations, but, while meeting these obligations, grew richer and richer so fast that the growth could almost be discerned by the eye. In every county we saw wastes recently turned into gardens ; in every city we saw new streets, and squares, and markets, more brilliant lamps, more abundant supplies of water ; in the suburbs of every great seat of industry we saw villas multiplying fast, each embosomed in its gay little paradise of lilacs and roses. While shallow politicians were repeating that the energies of the people were weighed down by the weight of the public burdens, the first journey was performed by steam on a railway. Soon the island was intersected by railways. A sum exceeding the whole amount of the debt at the end of the American war was in a few years voluntarily expended by the ruined people on viaducts, tunnels, embankments, bridges, stations, and engines. Meanwhile taxation was almost constantly becoming lighter and lighter ; yet still the exchequer was full. It may be now affirmed without fear of contradiction that we find it as easy to pay the interest of eight hundred millions as our ancestors found it a century ago to pay the interest of eight millions. * * "

" Those who so confidently predicted that England must sink, first, under a debt of fifty millions, then under a debt of eighty millions, then under a debt of

a hundred and forty millions, then under a debt of two hundred and forty millions, and lastly under a debt of eight hundred millions, were beyond all doubt under a two-fold mistake. * * They erroneously imagined that there was an exact analogy between the case of an individual who is in debt to another individual, and the case of a society which is in debt to a part of itself; and this analogy led them into endless mistakes about the effect of the system of funding. They were under an error not less serious touching the resources of the country. They made no allowance for the effect produced by the incessant effort of every experimental science, and by the incessant effort of every man to get on in life. They saw that the debt grew, and they forgot that other things grew as well as the debt." *

THE DEBT OF THE UNITED STATES.

The debt of the United States affords a still better illustration of this saying, for until the late civil war, the public debt was but a trifle when compared with the resources of the country which, to a large degree, were undeveloped. In the course of about four years the great debt of the civil war was accumulated and immediately thereafter the work of its reduction commenced, and in the course of about twenty years it was decreased considerably more than one-half. In striking contrast to the history of the English debt, the most important financial question now under discussion by the American people and one of greatest interest, is not how the revenue can be realized for the reduction of the debt; but how the holders of the debt may be induced to surrender for payment the bonded indebtedness of the nation, payable four and a half years hence at a premium of 8.40 per cent., or the other and larger indebtedness of the four per cents, payable in nineteen and a half years at a round premium of 25 per cent.

But a few days since the highest officials of the General and of the State Governments assembled at your neighboring City of Philadelphia to celebrate the Centennial Anniversary of the framing and the promulgation of the Constitution, which, however, was not formally adopted until the year 1789. During this, less than a century, which may be said to be but a year in the life of a nation, many important financial events have been recorded.

IMPORTANT EVENTS IN THE HISTORY OF THE DEBT.

Alexander Hamilton was appointed Secretary of the Treasury in 1790, and his plan, the first in the history of the country, for the payment of the debt of the Revolution, was almost immediately presented to Congress. The question of the Government of the United States, assuming the debts of the different States for their full value, encountered serious opposition, and was discussed throughout the country under an excitement fully equal to that caused by the discussion of the greenback issue during our time; and the first great measure of Alexander Hamilton was only finally carried by the aid of Jefferson, and the change of vote of two southern members, who were induced to make the change upon the promise of the subsequent passage of the measure providing for the location of the Capital upon the banks of the Potomac, where it now stands.† Among the most notable financial events during the first century of our existence, are:

The purchase by Jefferson against his constitutional scruples, of Louisiana, from the First Napoleon, under the treaty of 1803, by which the United States

* Macaulay's *History of England*, Vol. 4, pp. 260-2.

† McMaster's "*History of the People of the United States*." Vol. 1, p. 582. N. Y., 1863.

acquired the control of the Mississippi River, and of that immense tract of country reaching from the Mississippi to the Pacific, out of which so many great States and Territories have been developed.

The sinking fund first established in 1802.

The loans of the war of 1812 that increased the debt from 45 millions, to which it had been reduced at the beginning of that year, to over 127 millions in 1816. This was the time when our national credit was at the lowest; it being estimated that 80 millions bonds placed on the market only realized 84 millions to the Treasury.

The purchase of Florida under the treaty of 1819, by which was set at rest the Spanish claim, to that land, of "sand heaps, mosquitoes, frogs, serpents and alligators," as it was then through misapprehension of its beauties styled by the opponents of the treaty.

The extinction in 1836 of the entire public debt, including the charges of the wars of the Revolution and of 1812, was followed by the distribution or more properly deposit with the States of the surplus that by 1837 had accumulated in the Treasury; an event in the history of the United States looked upon by some as affording a precedent for disposing of our present surplus.

The borrowings of the Government rendered necessary, in time of peace by the financial crises of 1837 and 1857, the earlier of these crises being closely connected with the distribution of the surplus.

The war with Mexico in 1847 and '48, and the additional debt which it entailed are still fresh in the recollection of the majority of the Convention. Either of these events would in itself constitute an interesting topic for an occasion like this.

Last and most important are the financial operations of the civil war beginning in 1861, during which period of four years the United States succeeded in incurring a debt that in magnitude rivalled the debts which England and France had taken centuries to accumulate.

LOANS JUST PREVIOUS TO THE CIVIL WAR.

Just previous to the civil war in 1860 a loan of 21 million 5 per cent. bonds was authorized. Such bonds at that time were selling in the market at 3 per cent. premium, and the whole amount offered was subscribed for at par, or a small premium, but on account of the political complications which were impending just previous to the war, some of the subscribers failed to make good their subscriptions. Upon the recommendation of the Secretary, Congress authorized instead of bonds the issue of 10 millions of Treasury notes at 6 per cent. interest, or at the lowest rates possible. This amount of one-year notes was issued, about one-half of which were subscribed for at 10 per cent. interest, and the remainder at 12 per cent. Additional offerings ranging from 15 per cent. to 86 per cent. were declined. Only about 7 millions of this subscription at these high rates was taken by the subscribers, and the credit of the Government had become so low that Secretary John A. Dix proposed in effect that the States with whom the surplus moneys had been deposited in 1837 should guarantee the notes and bonds of the Government. Not long thereafter 18 million of 6 per cent. twenty-year bonds were sold at a discount of about 17 per cent. When Mr. Chase became Secretary on March 7, 1861, the bonds of the Government were selling in the market at 88, when money was worth at call in New York from 4 per cent. to 5 per cent. At the same time the interest bearing Treasury notes were sold at par, because they

could, by the terms under which they were issued, be used at the Custom-House in payment of duties, exactly as the silver certificates are now used.

THE OUTBREAK OF THE CIVIL WAR.

Civil war was inaugurated by the attack on Fort Sumter on April 12th, about one month after Secretary Chase had entered upon his duties.

"The fort surrendered on April 14th, and on the following day President Lincoln issued a call for seventy-five thousand soldiers. The Southern States were declared blockaded. Seven of these States had, by ordinances, publicly declared their secession from the Union, and their defiance of the National authority, and a convention at Montgomery, Ala., had organized a new Government, under the name of 'The Confederate States of America.' Massachusetts soldiers, on their way to Washington, were attacked by a mob in Baltimore. In the month of May, the confederate capital was removed to Richmond; North Carolina and Arkansas seceded, and the Union Army crossed the Potomac into Virginia, and took possession of Alexandria and Arlington Heights. In June, Tennessee passed an ordinance of secession, and General Butler was defeated at Big Bethel. The two-year Treasury notes which had been recently issued at par were at $2\frac{1}{2}$ per cent. discount; and the Government, instead of disposing of the notes, borrowed five millions at sixty days upon them as collateral security. During the following month the disastrous results of the first battle of Bull Run startled the entire country. The Union Army, defeated, fell back upon Washington, and the capital of the country was believed to be in danger. Two days thereafter, President Lincoln called for five hundred thousand three year volunteers. An extra session of Congress had been called for July 4, 1861, and on that day, amid events like these, Congress was called upon to provide the means for continuing a civil war which proved in magnitude to be unequalled in the history of nations.

SUSPENSION OF SPECIE PAYMENTS.

Specie payments were suspended on December 28, 1861. The war was carried on chiefly by the use of Treasury notes as a circulating medium. The purchasing power of these notes rapidly declined. Prices of all kinds advanced rapidly, and particularly the prices of articles most needed for the supply of the army. The expenditures of the Government during the four years of the war were vastly increased beyond the amount which would have been necessary if the war could have been conducted upon the gold standard, instead of upon the fluctuating standard of the legal tender paper dollar.

RAPID INCREASE OF THE PUBLIC DEBT.

Never was a great national debt contracted so rapidly. In 1863, the country was entirely out of debt. General Lee surrendered at Appomattox, on April 9, 1865; which date was four years, lacking five days, after Fort Sumter had surrendered to the enemy. On the first day of July, 1861, the debt was ninety millions; at the close of that fiscal year it had reached five hundred and twenty-four millions; and at the end of the succeeding year, it was considerably more than twice that amount, being on July 1, 1863, \$1,118,772,138. During the following year it increased nearly seven hundred millions. For the next nine months, to the close of the war, it increased at the rate of about sixty millions a month. An immense amount of obligations against the Government were presented, after the close of the war, and for the five months thereafter the ascertained debt increased at the rate of three millions a day. The cost of

conducting the war after it was once fully inaugurated, was scarcely at any time less than thirty millions a month. At many times it far exceeded that amount; sometimes it was not less than ninety millions a month, and the average expenses of the war, from the date of its inception to its conclusion, may be said to have been not less than two millions each day.”*

CHARACTER OF THE LOANS.

To carry on this war large loans were made at six per cent. interest, and every kind of Treasury note that had heretofore been known was authorized, and new notes in almost every conceivable form were put in circulation, among which were the seven-thirty notes, one and two-year notes, compound-interest notes, and fractional currency. About four years after the war had commenced, in August, 1865, the public debt amounted to 2,845 million 907 thousand fifty-four hundred and twenty-six dollars; and included in this huge mountain of indebtedness, there were 1,540 millions of Treasury notes, either payable on demand or bearing interest, of which more than 1,500 millions was a legal tender. If temporary loans, payable in 80 days, and certificates of indebtedness, payable one year after date, should be included with Treasury notes, the whole would amount to considerably more than three-fifths of the 2,845 millions of the debt of the country. Of this debt there were 880 millions of legal tender seven-thirty notes, 217 millions of compound-interest 6 per cent. legal tender notes, 26 millions of fractional currency, and 433 millions of demand legal tender notes.

FUNDING AND REFUNDING OF THE DEBT.

Under the administration of Secretary McCulloch chiefly, these large amounts of notes, and other different kinds of temporary loans, were funded into 6 per cent. bonds with such skill and sagacity as to command the admiration of financial men. Subsequently, under the administration of Secretary Sherman,† the large 6 per cent. and 5 per cent. loans of the United States were refunded into 4 per cent. and $4\frac{1}{8}$ per cent. bonds, and by his successors into $3\frac{1}{2}$ per cent. and 3 per cents., and these loans have since either been paid or reduced to the amount outstanding on the first of the present month, about 967 millions, showing a reduction of about 1,500 millions in the total debt since 1865, and about 1,414 millions in the funded debt, and a reduction of the annual interest charge of 111 millions.

The present funded debt, properly so called (and not including the Navy Pension fund of 14 million 3 per cents., and the debt due from the Pacific

* United States Notes, or a history of the various issues of paper money by the Government of the United States—8d Edition. Scribner, New York. 1897.

† In April, 1878 it was my privilege to accompany Secretary Sherman and Attorney-General Devens to New York, and arrange a meeting between them and twelve of the officers of the principal banks of that city, for the purpose of negotiating the sale of 50 millions of $4\frac{1}{8}$ per cent. bonds, the avails of which were to be used for resumption purposes. The money market was not favorable for such a negotiation, and the officers of the banks gave the Secretary no encouragement in reference to the purchase of the bonds.

Upon our return to the Secretary's room at the Fifth Avenue Hotel, which was upon the first floor adjoining the Twenty-third street entrance, we were met by Mr. Belmont, the agent of the Rothschilds. He had previously called upon us in the morning, and ridiculed the Secretary's proposition to sell the bonds at a premium of $1\frac{1}{4}$ per cent. After a brief consultation, in which he endeavored to reduce the premium, he produced a cable dispatch from the Rothschilds accepting the purchase on the terms proposed for the account of the syndicate. Upon the following day we returned to Washington after an absence of three days, and the success of the negotiation was announced, much to the chagrin of members of Congress who were bitterly opposing the scheme proposed for the resumption of specie payments. This negotiation was the first of a series of brilliant financial transactions preceding and following the great fact of resumption on January 1, 1879.

Railroads), consists of 234 millions of 4½s, payable three and a half years from July next, in 1891, and 733 millions of 4s, payable nineteen years from July next, in 1907.

PROPOSITION FOR REFUNDING THE FOURS AND FOUR-AND-A-HALFS.

The Comptroller of the Currency in his report for 1882, recommended the refunding of these two loans into another bearing a lower rate of interest.

This recommendation was repeated the following year.

BILLS INTRODUCED IN CONGRESS.

A bill embodying provisions similar to those here suggested, was introduced in the Senate on January 14, 1884, by Senator Aldrich of Rhode Island, and subsequently, during the same session, a somewhat similar bill was introduced in the House by Hon. Orlando B. Potter, a distinguished representative from New York city, and earnestly advocated by him during two sessions of Congress.

THREES AND THREE-AND-A-HALF PER CENTS.

On March 1, 1881, there were 469 millions of 5 per cent. bonds outstanding, redeemable at the option of the Government after two months, and 202 millions of 6 per cent. bonds, redeemable after July 1, 1881. The signature of President Hayes was wisely withheld, for abundant reasons, from a refunding bill which authorized the sale of 8 per cent. bonds for the purpose of providing the means for the payment of these maturing bonds. In this emergency 563 millions of these 6 and 5 per cents, without any special legislation authorizing the measure, were continued, with the consent of the holders, at 8½ per cent., payable at the option of the Government.

It is one of the many interesting and curious incidents in our financial history that the plan for extending the 6 and 5 per cents into 3½s should have originated with a distinguished Democratic banker of the city of Lexington, Ky., and having passed through the hands of the senior Senator from that State and of Treasury officials without consideration, should not long thereafter have been adopted by a Republican Administration and carried into effect as one of its most brilliant achievements.

A portion of these bonds, amounting to 259 millions, were subsequently refunded into 3s, and the calling and payment of this large amount of 3s and 3½s, amounting in all to 579 millions, has furnished an outlet for the surplus in the Treasury, so that there has not been until recently any urgent necessity for the passage of an Act authorizing the refunding of the present 4 per cents into bonds bearing a less rate of interest.

THE HEWITT BILL.

Circumstances have changed, and there is now no practical way for reducing the surplus except by the purchase of bonds at a high premium. This embarrassing situation was anticipated by the Hon. Abram S. Hewitt, the leading representative from the city and State of New York. In December last, just previous to his resignation to accept the more responsible position of Mayor of New York, he introduced into Congress a bill,* with the provisions of which many of the members of this Convention are well acquainted. I venture to say that if this bill had passed Congress during its last session the financial machinery of the Government would have run smoothly and noiselessly and to the satisfaction of the people, and that there would have been no necessity

* The full text of "Aldrich" and "Hewitt" bills was printed on page 1,014 of the October number of the JOURNAL.

for the Secretary of the Treasury to come to the relief of the money market on account of the daily withdrawal of about a million of dollars from the channels of circulation at a period of the year when it was indispensable to business.

PURCHASE OF BONDS BY THE SECRETARY OF THE TREASURY.

A small amount of these bonds have recently been purchased by the Government, and the action of the Secretary of the Treasury in doing this for the purpose of releasing a small portion of the surplus cannot be too highly commended. But this plan is open to serious objections. The time, the rate and the method of the purchase of these bonds is subject to the action of one person and is not regulated by law. Thus far the action of the different Secretaries of the Treasury has not been subjected to any severe criticism, but it is the almost unanimous opinion of all financial men that the power to interfere with the money market and to increase or reduce the amount of currency in circulation should not be left to the discretion of any one man, but should be governed by laws clearly defined. It was estimated by the Secretary in his last report that the amount of the receipts of the Government over expenditures would fully equal one hundred millions, and there is but little doubt that the accumulations of the surplus for the next two years will not be far from one hundred millions annually or two hundred millions in the aggregate.

PROBABLE INACTION OF CONGRESS.

It is true that Congress is to assemble in December next, and it is also admitted by the members of both political parties that the revenues of the Government ought to be so reduced that this excessive accumulation of surplus shall be curtailed; but the methods of reducing the surplus are diverse, and there is no reasonable hope that even those Congressmen who are friends of the present administration, and who compose the majority of the House of Representatives, can agree early in the session upon any measures which would secure such reduction. The most that can be expected is that some bill may be matured after protracted discussion in the House and the Senate, which will go into effect and produce this result some time in the year 1890. But what is to be done in these next two years? The responsibility will be with Congress; but is there any prospect that the Fiftieth Congress will promptly authorize the Secretary to continue to purchase bonds at the present premium? Such a course would be contrary to the whole past policy of the party in power, and against the precedents of both parties during later years. Is there any prospect that the present administration will be authorized by Congress to expend large sums of money in the cause of education, in internal improvements, in subsidies, in building up a navy, in the increase of the army, or in fortifications, or in the purchase of large amounts of ordnance through the War Department?

Those who have for a series of years watched the action of Congress during the session preceding the election of a President, know that such legislation is almost if not quite hopeless. Why, therefore, cannot all parties unite in such non partisan action as will give prompt relief to the business interests of the country during the years 1888 and 1889, and in the meantime endeavor to mature with deliberation a bill which shall permanently reduce the revenue and go into effect in the following year?

*** COMPUTATION BY THE GOVERNMENT ACTUARY.**

According to the computation of the Government Actuary (copies of which have been distributed among the members of the Convention), the equal and

* The computations were given on page 1,014 of the October number of the JOURNAL.

exact difference to be paid by the Government in exchanging 738 millions of dollars of 4s, so as to save the Government $2\frac{1}{2}$ per cent. on its money, is about 167 millions of dollars (\$167,021,800). To those who have not examined the subject the amount of this payment of interest in advance may seem excessive, but the explanation is that this is a large transaction of over 700 millions of dollars. The interest upon \$700,000,000 for one year at 1 per cent. is \$7,000,000, at $1\frac{1}{2}$ per cent. it is \$10,500,000; and if this amount be multiplied by the number of years, the total amount, as may be perceived at a glance, would be \$199,500,000. From this amount the Government Actuary has deducted the interest on the interest payable quarterly which the Government can save by the present use of its surplus. The computations of the Government Actuary have also been extended to payments based on other rates of interest, and cover an exchange of 4s for 2 per cent. as well as $2\frac{1}{2}$ per cent. bonds.

THE PROPOSITION FOR REFUNDING NOW PRESENTED.

The present proposition* is similar to that of Mr. Hewitt's, except that it proposes to refund the fours into two-and-a-halves instead of threes. Assuming that on July 1, 1888, when the fours have nineteen years to run to maturity, the market price will be about 123 (122,63168), the rate realized by a purchaser, whether it be the Government or an individual, will then be $2\frac{1}{2}$ per cent. I mean by that, that if any one invests funds in fours at about 123 (122,6316) on July 1, 1888, to hold to maturity, the amount the investment will actually pay will be $2\frac{1}{2}$ per cent. only, because he will lose the premium paid. In other words, the difference between the actual rate of $2\frac{1}{2}$ per cent. and the nominal rate of four per cent., viz., $1\frac{1}{2}$ per cent., is required to make good the loss of about \$23 (22,6316) premium. Assuming the fours to be worth about 123 (122,6316) on July 1, 1888, $2\frac{1}{2}$ s maturing on the same date as the fours would on July 1, 1888, be worth par, and a holder of \$100,000 in fours should receive as the equivalent of his bonds \$100,000 in the new $2\frac{1}{2}$ s worth par, and about \$23 (\$22,63156) in cash. Such a cash payment would enable the Government to save $2\frac{1}{2}$ per cent. for nineteen years upon the money disbursed in making the exchange. If the bondholder who accepts the exchange invests the cash payment at $2\frac{1}{2}$ per cent. he neither gains nor loses, unless it be considered an advantage to have a larger amount of his investment in principal and a less amount in interest. The exchange will, however, be of advantage to holders of fours for other reasons.

* There are reasons for believing that even a two per cent. bond would be accepted in exchange for fours by holders of the latter, provided a proportionately higher cash payment were made to them, and that there would also be some advantage to the Government in offering a two instead of a two-and-a-half per cent. bond. If a cash payment of 22,63168 is the computed difference in value on July 1, 1888, between a \$100 two-and-a-half per cent. bond and a \$100 four per cent. bond, each having on that date nineteen years to run, then \$30,17557 would be the difference in value between a \$100 two per cent. bond and a \$100 four per cent. bond, each having nineteen years to run. Assuming the $2\frac{1}{2}$ per cent. bond to be worth par, the 2 per cent. bond would be worth \$92,245611. The advantage of a bond below par to the long bond holder would be the certainty of its rise to par at maturity and the gain thereby. The two per cents would be equally good for circulation at 90 per cent. of their par value, and in case of failure the Government could cancel them at a profit and redeem the circulating notes. As far as the Government is concerned the bonds being usually below par could be purchased by it under most conditions of the money market as readily as an optional bond could be redeemed, and at even a greater profit. In fact, two per cent. bonds would combine the advantages both of an optional bond and of a bond with a fixed date of maturity. Being always obtainable in the market at par or below, there would be less objection to extending the date of their maturity, provided the time was not so extended as to bring their value above par.

WHO HOLD THE FOUR PER CENTS.

The bondholders are divided into three classes.

First.—The National banks, which hold about 125 millions.

Second.—The trust companies, insurance companies, savings banks and private individuals.

Third.—The holders of bonds as trust funds.

The banks can readily invest the \$22.68 they would receive with each \$100 of the new two-and-a-halves at a rate of interest from five to six per cent. They are forced by law to hold a certain proportion of Government bonds whether they desire circulation or not, and nearly all of their bonds are held in the Treasury at Washington either as security for circulation or for Government deposits.

Insurance companies and other corporations are required to deposit United States bonds with the State authorities, and the new two-and-a-halves would answer this requirement as well as fours. These companies are in a position to use the cash payments received from the Government at rates from four to six per cent. The same may be said of trust companies which hold Governments for a reserve, and because they are not subject to taxation. As a reserve the new $2\frac{1}{2}$ s will answer the same purpose as the fours, and, like them, will be exempt from taxation. Savings banks cannot usually loan money at as high rates, but even the investment of the cash payment at four per cent. would effect a handsome saving.

It is not usual to specify the kind of United States bonds in which trust funds shall be invested. The requirement is usually that such funds shall be invested in Governments. The amounts that are specifically invested in fours is small. All other Governments held as trust funds would be almost certain to be placed in the new two-and-a-halves. It may be said generally that the low-rate bonds payable at the same date as the fours would answer all these purposes as well as the fours, while the cash received in payment for the interest surrendered could, by all of the corporations mentioned, be invested in a manner to increase their several incomes. There is then no reason why the exchange should not take place if it is for the advantage of the holder. I know of no savings bank that does not pay at least three per cent., and all of the larger holders of the bonds can certainly readily realize from three to six per cent. upon their cash receipts from the Government. The bill of Mr. Hewitt provides that low-rate bonds shall be received as a basis for banking at the same rate as the fours are now received. This would immediately create a demand for the bonds for banking purposes, for there will then be a profit upon circulation upon the two-and-a-halves, while upon the fours there is very little, if any.

SUGGESTIONS FOR INCREASING THE VALUE OF THE TWO-AND-A-HALVES.

The value of the proposed two-and-a-half per cent. bonds could be further enhanced. First, by permitting National bank circulation to be issued upon them to their par value. Second, by extending the time of the maturity of the whole or a portion of them. Third, by making the earliest numbers taken by those who first accepted the exchange payable last, as was done with the three-and-a-halves and subsequently with the threes and fours, and lastly, by the repeal of the tax on circulation. The second method, that of extending the time of payment, is feasible, for it will not be possible to pay the whole amount

of the fours, which mature on July 1, 1907, on that day; and to grant a longer time for payment of a portion of the two-and-a-halves would only be authorizing now for the benefit of the Government what must necessarily take place at the maturity of the bonds.

Either of the two bills which were pending at the close of the last session of Congress can be so amended that the date of the payment of the new two-and-a-halves to be issued may be postponed, at the same rate of interest, beyond the maturity of the fours, and made payable in instalments of 100 millions, or less, annually during each year succeeding July 1, 1907, the last instalment of \$30,000,000 falling due on July 1, 1914.*

Or, if the annual payments were fixed at 80 millions, then the final payment of 37 millions would be in the year 1917, ten years after the maturity of the present bonds.

ADVANTAGE TO THE BONDHOLDERS.

The inducements to the bondholders to make the exchange may be summed up as follows:

1st. The advantage the new bonds would offer as a basis for National Bank circulation, this advantage being still greater if circulation is issued to the par value of the bonds, and greater still if the law taxing circulation be repealed. Under these circumstances the $2\frac{1}{2}$ s would command a premium. 2d. The cash payment can be invested either in the $2\frac{1}{2}$ per cent. bonds, or in ways to secure a higher rate of interest. Thus the whole cash payment of interest for nineteen years can be invested at once, instead of investing and reinvesting the quarterly interest upon the 4s as at present. But the strongest point is that most of the bondholders will have no difficulty in investing the cash payment at higher rates of interest than $2\frac{1}{2}$ per cent. Savings Banks pay not less than 8 per cent., and it will be easy for most holders to obtain from 4 to 6 per cent. This will be greatly appreciated by bondholders who are now unable to use the premium locked up in fours. If the time of the payment of some of the new bonds is extended beyond 1907, there will be an additional inducement to make the exchange. Those seeking the longest investments would compete for the long bonds, and would be eager to obtain the bonds bearing the lowest numbers, which will bring a higher premium in the market than the bonds of the latest issue, as you will remember was the case a few months ago with the threes.

If the rate of interest upon the interest is reduced to the borrowing power of the Government, the advantage of the bondholder would be increased. If reduced to two per cent., the cash payment to the bondholder would be \$23.66 on each \$100 bond.

ADVANTAGE TO THE GOVERNMENT.

So much for the advantage to be derived by the bondholder from this proposition; but it is equally important to consider the advantage which the Government will derive from it. The accumulation of surplus in the Treasury has recently caused serious inconvenience in New York, and will continue to cause embarrassment in all parts of the country. When there were three per cent. bonds outstanding which the Government could call and pay for this use of the surplus, it saved the three per cent.

If the fours could be called and paid at will, the operation would gain the Government four per cent. But as this cannot be done, in order to use the

* There is a precedent for making bonds under the same law payable at different dates in the bonds issued by the Government to Pacific Railways, which mature at seven different dates, commencing January 16, 1896, and ending January 1, 1899.

surplus at all the Government must be content with a less rate. By the exchange of two-and-a-halves for fours it may make two and a half, and perhaps three per cent. on all the surplus it pays out in meeting such exchange. The Treasury is somewhat in the condition of a merchant who has a note which does not mature until a certain date, but before that date has the money with which to pay it in whole or in part. Instead of seeking to buy the principal of the indebtedness, the Government, by the proposed loan, seeks to purchase a portion of the future interest. It says to the bondholder you hold my note payable nineteen years hence, being four per cent. interest. If you will surrender $1\frac{1}{2}$ per cent. of the interest and accept $2\frac{1}{2}$ per cent. on the note instead of four per cent. I will pay you the present value of the difference in cash. This I can afford to do receiving the low rate of $2\frac{1}{2}$ or 3 per cent. interest, because I can use my money in no other way, and you can afford to accept the proposition, because you can use the money I pay you at the higher rates of four, five, and six per cent. On account of the peculiar situation in which the Government finds itself, a transaction under this proposition would be one of those rare instances when the exchange would be profitable to both parties.

CONCLUSION.

It was my privilege to be associated in official life from the commencement of the war until near the date of the inauguration of the present administration with Treasury officials; and during that time there were ten Secretaries of the Treasury.

Next to the conduct of the war, the most important work of the Government was the management of its finances, and particularly the funding and refunding of the public debt. Nothing in connection with the public service will be so long and so proudly remembered by the American people as the rapid growth in the public credit. In 1861 large amounts of money were borrowed at 7.30 per cent., and not long thereafter these certificates were funded into the 6s of 1881. Other loans were made at 6 and 5 per cent., and subsequently the 6 and 5 per cents. were refunded into $4\frac{1}{2}$ and 4s; and more recently extended into $3\frac{1}{2}$ and 3s.

This administration has it in its power not only to exceed the work of previous administrations by refunding the only loan which will be outstanding after the year 1891 at $2\frac{1}{2}$ per cent.; but in so doing to place at par a large loan at a lower rate of interest than that of any government in existence. It can do this not only with a clear profit to itself, but in the doing of it confer a lasting benefit upon every industry and business interest.

"The scheme can easily be put into execution, if Congress would pass a statute to authorize it. It proceeds on the assumption that what the country needs is something to reduce the surplus temporarily, say for about three years, while Congress is deliberating and perfecting the details of a plan for permanent reduction. This of itself would be a great relief to the country. All through the past year, and in fact for several years past, Congress has felt that there was a necessity for some legislation to reduce the revenue of the Government, but although the pressure was strong it seemed impossible for the members to agree. The plan is exceedingly simple and apparently need not create any strong animosity against it. It treads on the toes of no man who cherishes a particular theory of the tariff. It interferes with neither free trader or protec-

tionist. It appeals rather to the common sense of both of these parties, and can be adopted without partisanship by Republicans and Democrats alike." *

If the present administration fails to appreciate this opportunity, the extension of the payment of the fours before maturity into a fund bearing a less rate of interest, will remain not only an important, but also a necessary measure, to be carried into execution by some future administration.

* *Utica Morning Herald*.

NORMAN ON GOLD AND SILVER.

An advance sheet has been received of an article by John Henry Norman, of England, the author of the Single Grain System for determining the par value of all moneys of account, upon the "Dislocation Between Gold and Silver," published in the October number of the *London Chamber of Commerce Journal*. Mr. Norman is an expert on all topics connected with the currency, and his views are always of interest, and throw much light on the necessarily intricate subjects of which he treats. He seems, however, in this article to be affected by a bias, which leads him to favor the view that the commercial and manufacturing difficulties, which have caused such serious complaint in parts of England and India, are due to some extent to the dislocation in the prices of gold and silver. This bias is, it would appear, that of the man who deals exclusively with one topic, in this case gold, silver and paper currency, and who naturally magnifies the importance of the thing in which he is especially interested. This is a fault all writers on the currency are apt to betray. Unlike the advertisers of a patent medicine who regard their nostrum as a cure for every disease, these writers are apt to believe that the currency of a country is responsible for nearly every evil that arises.

Mr. Norman starts out, as we believe, by placing the cart before the horse, in announcing that bi-metallism is dead, because no Mint in the world is open to the unlimited coinage of both gold and silver, and especially in that he says the death of bi-metallism inaugurated the declining gold value of silver. More properly the declining gold value of silver gradually brought about the death of bi-metallism. He seems to entirely ignore the fact that the increased production of silver resulting from cheaper methods of mining and the discovery of new mines, must have had the usual effect of increase of supply, although he quotes the evidence of Professor Roberts-Austin, F. R. S. of the Royal Mint, London, before the currency commission, that the actual cost of mining silver was in 1888 at the seats of production, only 20 pence per ounce without interest on capital, or with such interest as Mr. Norman himself estimates only 23 pence per ounce. At this rate of production it is no wonder the market price of silver has fallen to about 44 pence per ounce. In fact the wonder is that the price has remained so high. That the use of silver as money appreciates its value, the same as its use for any other purpose is not to be disputed, but no use of this metal as money can ever keep it at any fixed relative value with gold, and further it is of no importance, whatever, that the relative value of silver to gold should be permanently fixed, even if it could, any more than it is of importance that the value of copper or any other commodity to gold should be fixed.

Prices of commodities are the marks of variation in their value measured, by weight of gold, in gold standard countries, and by weight of silver in silver

standard countries. There may be inconvenience to some and opportunity to others, in the fact that different standards are adopted by different countries, but it is not scientific to say that the general rise or fall of prices, measured by weight of silver in a silver standard country, is affected by the fact that another country measures the prices of its commodities by a weight of gold. If there is commerce between the gold standard country and the silver standard country, prices in each are reciprocally affected by the demand from one side to the other, but the effect of this foreign demand is measured in each country by its own standard. If a gold dollar of 23.22 grains were the standard of England, and a silver dollar of 871.25 grains were the standard of India, and wheat was \$1.00 a bushel in England; assuming that 1 grain of gold were worth 21 grains of silver, the corresponding price of wheat in India would be about \$1.24 in silver. Supposing England trades cloth for wheat, and eight yards of cloth are worth a gold dollar in England, then in India the corresponding price in silver is \$1.24 the same as in the case of the wheat. But assuming that the market price of silver having shown a ratio to gold of 1 to 21 suddenly changes to 1 to 80. Then the gold price of wheat being a dollar a bushel, and cloth eight yards for a gold dollar, the corresponding price in India for each would be about \$1.46. Any one who bought wheat in India at \$1.24 would be able to sell it for \$1.46 in silver, but assuming that prices had not changed in England the latter would in trade with that country get the same as before the fall in silver, obtaining eight yards of cloth for a bushel of wheat. There may be more cloth manufactured in England so as to reduce the price of cloth, or less so as to increase it, or more or less demand for the cloth in India effecting the same thing; there may be more wheat grown in India or less demand for it in England, affecting its price, but the difference in standards or the fluctuations in these standards, does not affect the exchange of commodities between two commercial countries.

The people of the country with the inferior standard are, however, more subject to the evils of speculation among themselves than the people of that with the superior standard. Thus the man who bought wheat in India at a silver price of \$1.24 and sells it for \$1.46, gains 22 cents in silver on each bushel. Before all commodities within the country have settled themselves to the new gold market price of silver, this individual buys real estate say at old prices. It is in trading in the infinite number of articles which are dealt in within any country that fluctuations of a standard enable some to make large profits at the expense of others. Commerce being a trade of goods regulates itself.

Mr. Norman says :

"To procure the same weight of silver in silver standard countries a less weight of gold has become necessary, until now at one part of gold for 21 parts of silver it amounts to 23.23 per cent. less weight of gold for the same weight of silver, which latter we will call *a*. Assuming that prices have not risen in silver standard countries, the trader in a gold standard country can purchase and despatch silver to silver standard countries and purchase with the silver, *a.*, goods, say wheat, there which will yield him 23.23 per cent. profit upon the same gold prices as before the fall in the gold value of silver. This profit would result solely from the dislocation between gold and silver; but the trader would not enjoy this 23.23 per cent. All except the ordinary profit obtained under the ordinary condition of the trade would go to the consumer and prices of wheat generally would be lowered in gold standard countries. Under these conditions guided by the teaching of political economists, one would expect that the export trade of the silver standard country would be stimulated and the

import of silver increased until the advance in silver prices equalized the fall in the gold value of silver."

This is assuming that a wheat dealer in India does not know that by sending his wheat to England he can get the gold price there. If he knows it would he not do so? or, if he sold his wheat in India, would he not demand the equivalent of the known gold price in England? Therefore, if more wheat can be obtained in India for the same weight of gold, is it not more reasonable to say that prices have gone down than that they have not risen? In other words, if prices measured by silver are stationary when silver is going down, then it means that the cheapening of products from other causes has been somewhat coincident with the cheapening of silver, but has not taken place on account of such fall in silver.

Mr. Norman again puts the cart before the horse in starting his wheat buyer from England, when he should have started his wheat seller from India.

There are plenty of reasons other than the fall of silver to account for the nominally stationary, but really falling, prices in India. On the other hand, if the English cotton manufacturer gets less for his cloth, it is not due to the fall of silver, but to the greater competition of cotton manufacturers in India itself and in other parts of the world. The cheapening of silver should have increased prices in silver, but in India it has not done so. Measured by gold, prices in India have fallen about the same as elsewhere.

The assumption that the general fall in prices throughout the world is the result of the appreciation of gold is again a putting of the cart before the horse. Admitting an appreciation of gold to be shown by a general fall of the gold prices of commodities, this does not indicate any baleful effect of the measure selected, but the natural effect of the advance of civilization, with its arts and sciences, manufactures and commerce. If Mr. Norman would get rid of the bias mentioned and apply the skill and experience he manifests in handling these questions to data which include all the elements of which the general fall of prices is the result, we think he would arrive at the conclusion that the share the so-called dislocation between gold and silver has in the matter is very small indeed.

ON PAGE 884 of the September number of the JOURNAL it was announced that the essay entitled to the prize offered for the best essay on Domestic Exchanges would be decided upon by the vote of subscribers to the JOURNAL, and the request was made that subscribers would indicate their preference by postal card. The cards received in accordance with the announcement mentioned having been counted, it has been found that "Nemo," published in June, page 575; "Let every tub stand on its own bottom," published in July, page 679, and "Edmund," published in September, page 889, have each received the same number of votes. The result being a tie it has been decided to divide the prize of \$100 equally between the writers of the three essays named. "Nemo" is Mr. John Gault, Manager of the Merchants' Bank, of Canada, Quebec. The motto, "Let every tub stand on its own bottom," indicates Mr. Myron Campbell, Assistant Cashier of the South Bend National Bank, of South Bend, Ind., and "Edmund" is Mr. E. M. Longcope, Assistant Cashier of the First National Bank, of Lampasas, Texas.

AMERICAN BANKERS' ASSOCIATION.*

Proceedings of the Twelfth Annual Convention, held at Pittsburgh, Pa., October 12 and 13, 1887.

The Twelfth Annual Convention of the American Bankers' Association, held at Pittsburgh on October 12th and 13th, though perhaps not as largely attended as some of the Conventions in previous years, was, notwithstanding this, a most interesting one. The smaller attendance was doubtless due to the date selected and the business demands arising during the fall season, which render it impossible for many bankers to leave their homes. There has seldom been an occasion of this kind when so many new and valuable ideas and suggestions were presented for the consideration of the Convention.

The meeting was held in the Pittsburgh Opera House. The building is situated on Fifth avenue, a short distance from the Post Office. The stage was set to represent a drawing room, and in the wings were placed tropical plants in profusion. There was also a beautiful display of flowers.

The Convention was called to order by the President of the Association, Logan C. Murray, President of the United States National Bank of New York, at half-past ten on Wednesday morning. Prayer was offered by the Rt. Rev. Cortland Whitehead, Bishop of Pittsburgh, after which the Hon. Daniel Agnew, late Chief Justice of the Supreme Court of Pennsylvania, welcomed the members of the Convention in behalf of the banks and bankers of Pittsburgh and Allegheny and the Chamber of Commerce of Pittsburgh. He referred with graceful enthusiasm to the historic interest which attaches to the place and said:

"On this very spot England and France, at the middle of the last century, began their contest for the inland possession of this continent. Here, in 1753, the young Washington, on his mission to the French forts at Le Boeuff and Venango, saw in prophetic vision the future greatness of the confluence of these rivers, where they form the beautiful Ohio. Here the French commandant, Coutrecoeur, in the spring of 1754, descending the Allegheny with a thousand French and Indians and eighteen cannon, built Fort Duquesne, and in the same year engaging Washington at the Great Meadows, after his defeat of Jumonville, drove him back to Fort Necessity, and compelled its capitulation. Here again, marching out of Fort Duquesne, the combined French and Indian force, in 1755, below Turtle Creek, met and defeated the gallant but haughty Braddock, and destroyed the flower of his army.

"But in 1758 victory perched on the banner of England, when the dying Forbes, coming down upon Duquesne 'like a wolf on the fold,' compelled its abandonment, drove the French westward, and built Fort Pitt. Here, too, Colonel Boquet, in 1764, after the bloody battle of Bushy Run, rescued the devoted band in Fort Pitt, surrounded and assailed by savages. Peace, however, came not to this region until 'Mad Anthony,' camping at Legionville, eighteen miles below us, in the winter of 1782-3, carried the

* The American Bankers' Association was organized in Philadelphia on October 8, 1876, and held its first Convention there, consequently the meeting at Pittsburgh is the twelfth annual Convention of the Association. There had been meetings of bankers previous to this, as detailed in the article published in the October number of the JOURNAL. A Convention of Bankers was held at Saratoga in 1875, and at this meeting it was agreed to form an Association, and a Committee was appointed to draft a Constitution and By-laws, but the Association was not actually organized until 1876.

war to the Miami of the Lake, and routed the Indians at the 'Fallen Timbers' in August, 1794.

"Pittsburgh was not the scene of French and Indian warfare alone. Domestic strife filled her with alarm. Virginia claiming this entire western territory, created the District of West Augusta, erected the counties of Monongahela, Ohio and Youghania, and extended over them her Courts, offices and civil jurisdiction. A warfare of writs, arrests, imprisonments and fines threatened Western Pennsylvania with bloodshed. Virginia titles, ratified by after agreement, dot this territory. One lies across the river at the mouth of Sawmill Run, butting against the head of the Ohio. Here in 1794 Washington quelled the 'Whiskey Insurrection.'"

Returning to the present, Judge Agnew spoke of the wonderful resources and manufactures of Pittsburgh:

"Look around and you will see mills, factories, furnaces and glass houses, where iron and steel in every form equal and excel foreign manufacture, and where glass in every variety has no rival, and plate is superior to the best French glass.

"A grand summary of business six years ago, collected by the Chamber of Commerce, gave 8,583 industrial establishments, 101,200 employes, and in value an annual product of \$181,014,000.

"In 1884 the output of coal mined in the surrounding region was 54 per centum of all the coal mined in Pennsylvania, and 20 per centum of all mined in the United States.

"In 1886 the output of coal mined within the Pittsburgh bituminous district was 15,761,186 tons. Most of this was carried away by rail and river. The Pennsylvania Railroad alone transported 2,157,000 tons, while the river shipments were 4,123,945 tons and 100,000 tons of coke. The unmined coal in the counties of Allegheny, Westmoreland, Fayette, Greene and Washington is carefully computed at 16,100,000,000 tons.

"There are fourteen organized companies to furnish gas, drawing supply from 210,000 acres of tested territory, having a capital invested of \$17,306,000, using 1,580 miles of lines of iron pipe from six inches to thirty inches in diameter, weighing about eighty-five tons to the mile and giving a total of 135,000 tons of buried iron, delivering 500,000,000 cubic feet of gas daily, and yielding a net profit of about 10 per centum, the same wells being capable of yielding one thousand million cubic feet daily. The total capital invested in natural gas production in Western Pennsylvania is estimated at \$25,000,000, and \$5,000,000 in Ohio. The amount of coal displaced by natural gas is daily 25,000 tons.

"Plate glass has become a most important branch of new industry. The capital invested in finished works and in course of construction is \$3,000,000. One commencing with \$500,000 has now \$2,000,000 invested. Five years ago the product was 50,000 square feet per month, now it is 250,000 feet. Twelve years ago plate glass sold at \$2.25 per foot, now it sells at 70 cents. At first it was sold as French plate, but now the home product is preferred as superior to the foreign.

"A magnificent system of railways, also, like the radiating filaments of a spider's web, reaching out in every direction, fastens its clues upon Philadelphia, New York, Baltimore, Washington, Cleveland, Detroit, Cincinnati, Louisville, Chicago and St. Louis, and by connected lines stretches to New England, Canada and the two great oceans.

"Boston may be the hub of letters, but Pittsburgh is the centre of arts."

The warm welcome extended by Judge Agnew was responded to by President Logan C. Murray in an address which ably set forth the purposes of the annual Convention of the Association and the peculiar advantages to be derived from holding this meeting at Pittsburgh:

"It is not unfortunate that we have been invited to sit at Pittsburgh, but, on the contrary, most agreeable. Here it is that plough-shares and pruning-hooks are made, and we declare for peaceful pursuits also. We listen to the click of these thousands of trip-hammers with especial satisfaction. We shall look in wonder at the mighty force poured from underneath us from the laboratory of the ages to aid this army of workmen. Let us join in happy accord and spirit, in our way, as one arm of the service, indispensable and in absolute sympathy, and rejoice that we have a share in it all for the betterment of a common people and a common country.

"Perhaps in no other city on this continent could the representatives of our great money interests have met, face to face, with so large a body of skilled workmen as

in the city of Pittsburgh. If it were possible, I should like to have them listen to what we, as bankers, have to say to them as workingmen, constantly upon the common ground that prosperity to them means prosperity to us.

"We must never expect that in political meetings or on the floor of Congress the truth will be told by politicians to the people concerning these things, and I believe the clergymen, who constantly have the ear of the people, should be students of the question, and ready for good influence rather than uttering a single word of discord—this is their profession. The American clergy is expected to teach that America is God's most eloquent gift to mankind of all material things.

"A large percentage of the bankers who compose this Association are men who are closely identified with the farming interests; they come from the villages and small towns of agricultural districts; many are the representatives of that class. Surely there can be no great quarrel between the tillers of the soil and the workingmen in the shop. Let us, therefore, come together as skilled mechanics, farmers and bankers. Honesty is a normal condition, and is a matter of course, and a man should not feel especially complimented to be called simply an honest creature; that is his natural state; therefore we assume that the three classes, the mechanic, the workingman and the banker, will each be honest in his demands upon the other for justice.

"I desire especially to congratulate the fraternity in those States which have formed State Banking Associations. In time we shall hope that all the States will organize them, and that from each there will be selected delegates as associate members to this National Association. I would also suggest the foundation of a Bankers' National Library, to be placed in New York or Chicago, to which will be constantly added, by gifts, valuable books and pictures, and later on a building shall be donated by some fortunate banker, and thus establish a National institution for all time.

"I cannot too highly recommend that the State banks will promptly second Comptroller Trenholm in his efforts to condense statistics by promptly furnishing him with such data as he has asked at their hands.

"The National banks must continue. Now that it is not desirable to buy bonds as a basis for circulation, it would seem desirable that the law should be so amended that National banks could be established without requiring one-fourth part of the capital, or even fifty thousand dollars, to be lodged in the Treasury. Let this limit be discarded and one thousand dollars of bond only be required from any bank, great or small, anywhere.

"I want to pause a little and speak familiarly, arm in arm, as it were, to my brethren of the profession from the Southern land, a land ever dear to me, whose apple blossoms bear to me the sweetest fragrance from yonder sunlit hillsides, whence the song and passion of the nightingale calls ever to her wandering sons. I would speak especially to those of my own age, in the high noon of work time; and to those somewhat younger, in whose thought only dwells a zeal for the betterment of the land. The care of the property of others is a sacred trust; that trust is above all self-enrichment. It will devolve upon you to care for the fast accumulating capital there, and the incoming flow for investment. See that these investments continue profitable for the long run, then the influx will continue, otherwise you may only expect a retarded growth and stagnation. Cast your votes for those men who believe that credit is a valuable something, truly the keystone of the rich, and if removed will bring a common ruin. I verily believe, as in the German proverb: 'Those that are homelock shall reach home.' So the banker or the politician who prizes credit as without price will find it his security at last."

On the conclusion of Mr. Murray's address the Treasurer's report was read, showing receipts from subscriptions during the period since the last Convention aggregated \$13,126.50; the total receipts were \$14,718.48, the disbursements were \$13,898.83, leaving a balance of \$1,320.15 in the Treasury. The report was approved.

This was followed by the report of the secretary, Dr. Geo. Marsland, which was also read and approved. It shows the membership of the association to have increased materially during the past year, especially in the South and West, and expresses the belief that the increase will be even more marked the coming year. The aggregate number of the active members is now 1,683, against 1,402 last year, 1,864 the year before, and 1,111 for 1882. The general influence

of the association is steadily increasing among the non-affiliated banks throughout the country. In addition to the ordinary labor of the association, about one thousand dollars were spent last year in aid of the capture and imprisonment of several of the most dangerous forgers that have ever committed depredations on the banking community in the United States. The expenditure this year for the same important object has been considerable and several cases are still pending. The arrangements for holding the annual convention required by the constitution, article 4, have awakened considerable interest among our members. Chicago, St. Louis, Cincinnati, New York, Buffalo, New Orleans, and Detroit have been mentioned. A motion to appoint the usual committee of five to consider officers for the next year was carried. First, however, the chair called for the address of the Hon. John Jay Knox, President of the National Bank of the Republic of New York city and ex-Comptroller of the Currency. As involving the question of the future of the National banking system, this was perhaps the most important address presented to the Convention. The payment of the bulk of the debt of the United States is delayed until 1907 by terms upon which it was contracted, and the present premium upon the United States bonds is so high as to be a bar to the extension and progress of the National banks. The banks suffer, and the Government suffers because it cannot use the money which its excessive revenues bring it. Mr. Knox in his address presented a plan which he has already twice recommended to Congress as Comptroller of the Currency, and which has been embodied in several bills introduced in Congress, since the first recommendation in the Comptroller's report in 1882. These were the Aldrich bill, introduced in the Senate by Mr. Aldrich of Rhode Island, on January 14, 1884, the Potter bill introduced in the House by Mr. Potter of New York city, on February 12, 1884, and the Hewitt bill, introduced by Mr. Hewitt, now Mayor of New York city, on December 18, 1886. Mr. Jordan when Treasurer of the United States also, in an interview with the Finance Committee of the Senate in January, 1887, also recommended a modification of the same plan. In fact since its first suggestion, although there have been differences of opinion as to the proper method of carrying out the details, the general principles on which the plan rests have been approved by the best informed financiers of the country. As Mr. Knox clearly shows, the plan at once relieves the Government and the banks. It relieves the immediate pressure on the Treasury, and gives time for consideration of questions of revenue reduction. The address is printed elsewhere, and an account of its effect in the Convention will be referred to in due course.

Mr. Chas. B. Alexander, of New York city, upon the conclusion of Mr. Knox' address, read a paper entitled, "Commercial Credits and Trust Receipts." Mr. Alexander is particularly competent to give a valuable opinion on this topic of so much interest to the bankers of the country, as he has been employed in important cases involving the questions treated of in his paper. The JOURNAL will present the main points made to its readers at some future time. One of the Pittsburgh papers described Mr. Alexander as "a young man, with an energetic, clear, and rapid delivery, and rather English in appearance, though thoroughly American in his opinions."

A CONGRESSMAN APPEARS.

The Hon. Beriah Wilkins, Chairman of the Committee on Banking and Currency, was asked to come upon the stage, but desired that his address be

postponed until the afternoon session. Judge Agnew then read an able paper on "The Legal Features of the National Banking system." This paper showed great care and learning, and covered the constitutional questions that since the inauguration of the present form of Government of the United States have arisen in connection with the charters of the two banks of the United States and the present system of National banks. This paper merits more extended comment than our space at present allows, but like many other of the good things presented at the Convention, will afford subject for remark in future numbers as well as in the present number of the JOURNAL. The Judge's style of delivery is deliberate and impressive.

On the conclusion of this paper, the president, Mr. Murray, announced the following committee on nominations of officers for the ensuing year:—W. S. Culbertson, of Indiana, W. P. St. John, of New York, J. W. Lockwood, of Virginia, T. H. Hinchman, of Michigan, D. B. Hallet, of Massachusetts, W. A. Hannan, of Illinois, Wm. G. Deshler, of Ohio.

AFTERNOON SESSION.

The afternoon session commenced about three o'clock. There had been some complaint of the temperature of the hall at the morning session, as an unexpected fall in the thermometer Wednesday morning doubtless disturbed the calculations of those having the heating apparatus in charge. This was corrected as soon as possible. Wm. P. St. John, President of the Mercantile National Bank, of New York city, made the first address, in which he submitted suggestions for legislation. His first suggestion was in regard to the injustice done National banks by the law compelling them to pay the transportation charges on their notes sent to Washington for redemption; and he presented a copy of a proposed bill for repealing this law. He explained the operation of the present statute as follows:

"All charges in the redemption and returns for National bank notes are paid at the expense of the National banks, such of the redeemed notes as are fit for circulation being forwarded to the bank of issue. This was a wise provision when public confidence in the National bank note was yet to be established, but to-day the provision is abused. Thus, for instance, a National bank is located, say, in Montgomery, Ala. Among its neighbors is a banking firm competing in the business. At certain seasons of the year exchange on New York will rule at a premium. Meanwhile, for cash in Montgomery, the National bank notes are as available as coin, and the banker conveniently accumulates them in part of his cash reserve. So soon as exchange on New York has reached a premium in Montgomery this banker ships the notes to Washington, requesting remittance in redemption to his correspondent in New York. A few days thereafter the notes fit for circulation, many of them scarcely wrinkled, are returned by the Treasurer to this bank of issue, to be again put into circulation. The banker continuing his accumulating gathers in, with others, these same notes and forwards them to Washington for redemption and remittance to New York; repeating the operation not once or twice, but several times a season, and every time at the expense to his neighbor, the aforesaid National bank.

"Under every other system of bank note issue and redemption the note-holder, or his agent, must himself present the note to obtain redemption; and at his own expense of course. It will be no hardship in the case of the National bank note, therefore, if the National bank shall be required to pay no more of the necessary expenses of redemption than fairly applies to notes unfit for use."

He also strongly urged that the Government should redeem at par all its light-weight subsidiary coin.

"It is not proposed that the Government shall part with any of the profit already realized on the original purchase of bullion for its coinage. It is merely asked that it shall forego a second profit in redemptions when that second profit can be acquired

only at the sacrifice of individual holders of its coin. That the measure of this sacrifice under existing law may appear, let us suppose that the silver in a full-weight standard dollar has a present market value of but seventy-five cents, and let one of these coins be thrown out as of light weight. The owner's sole recourse is to the bullion dealer where in addition to the shortage of weight, he must endure a loss of 25 per cent. If his light-weight silver be two half dollars his immediate loss is an additional 7 or 8 per cent., say 35 or 33 per cent., besides the loss in weight. On the other hand, suppose the law amended, and the Government were to redeem by purchase at the full legal-tender valuation of its coin, and let the dollar be 2 per cent. light of standard weight; the Government thereby becomes possessed at par of 98 per cent. of the sufficient silver to recoin the dollar, and the required 2 per cent. may be obtained in market at a discount of 25 cent. This redemption and recoinage of the dollar will thereupon be made at a profit to the government of a half a cent per dollar. It would thus appear that the matter need only be brought to public attention in order to secure for the proposition its prompt enactment into a law."

He then went on to consider the subject of surplus money in the Treasury, referring to the partial success of the recent bond purchases for the sinking fund, as an indication of what may be accomplished in this way in case of an emergency. He proposed as an adequate remedy for the accumulation of the surplus, a wider interpretation of Section 5,153 of the United States Revised Statutes which provides, that in dealing with National bank depositories the Secretary of the Treasury shall require the associations acting as such to give satisfactory security by the deposit of United States bonds, and otherwise for the safe keeping, etc., of the public moneys deposited with them, viz.: that the Secretary of the Treasury may under this section deposit any of its surplus from whatever source derived with the designated banks, and require any satisfactory security by the deposit of United States bonds and otherwise. In addition to the bill which Mr. St. John presented to the convention for the consideration of Congress, he further favored the convention with the form of circular which the Secretary should issue, in order to carry out Mr. St. John's views of Section 5,153.

Hon. Beriah Wilkins then addressed the convention, upon the general topic of the "Finances of the Country," and particularly the growing revenues and the surplus. He said :

"In the year ending June 30, 1886, there was collected from all sources \$336,430,727.06, and expended for all purposes \$242,483,138.50, and during the fiscal year just closed, June 30, 1887, \$371,408,207.66, and expended \$267,932,179.97.

"Since June 30th of the present year the revenues of the Government exceed by a large amount the current expenditures. A comparative statement furnished me at the Treasury shows the receipts for the first three months of the present fiscal year from all sources to be \$100,293,798.84, as against \$94,945,562.57 for the same quarter in 1886, showing an increase in the receipts of \$5,348,236.27. There have been no extraordinary importations to cause this enormous increase, neither have there been excessive payments from the internal revenue source, the entire increase being about ratably divided between the two. Evidencing that the increase from every source is steady and continuous, and is no more than may be expected in the natural growth and prosperity of the country, which under our present rates of taxation and system of raising revenue will continue to largely increase as the years roll away. The country is to be congratulated that the business of the people has been so prosperous as to the yield this large surplus of income to the Government. But we are now at the point of actual embarrassment, at the point where redundant revenues, without compensating expenditures, are accumulating in the Treasury to such an extent as to cause alarm for the financial future, and that, too, at a time when the country is enjoying a period of unprecedented prosperity."

He spoke of the various plans for dealing with the embarrassing accumulations, referring at length to the plan of distributing the revenues among the

states. This scheme he considered as unconstitutional and opposed by the greatest weight of historical authority. Mr. Wilkins plan for the abatement of the surplus consists in a reduction of the revenues. He said :

"Without going into detail, repeal the tax on tobacco ; reduce the duties on sugar, on rice, on lumber, salt and common cloth ; reduce the tax on flannels and earthenware, on window-glass and certain kinds of iron products ; a large portion of the tax on circulation of the National banks could be remitted. A reduction of the revenues can be made, the tariff can be revised, discriminations of such character can be made if a spirit of fairness pervades, in such a way as will impose the least burden upon and best promote the great industrial interests of the country. Revenues can be reduced and yet continue the honest payment of our debt and the sacred preservation of the public faith ; taxation can be reduced, compelling economy in public expenditure and a more careful guarding of the interests of the whole people. And if relief comes to us it must come in this way ; it can come in no other."

H. M. Kingman, Cashier of the First National Bank, of Chicago, followed Mr. Wilkins, and read the following paper entitled "Commercial Paper and Its Importance as a Factor in the Discount Account of Banks," prepared by Mr. William Vincent Baker, of the firm of Baker & Parmele, of Chicago.

"If in this paper it shall appear that I have diverged from the paths or lines of discussion usually traversed at previous Conventions, my only apology is the importance of the subject in view to the object and purpose of the Association. The subject has not received all the consideration in your discussions it is justly entitled to. Essays and papers have been read on many subjects relating to banks and good banking, but this great adjunct to safe and successful banking, involving in its character the relations of dealers in it to banks and bankers, has, in a measure, been overlooked. With the increasing industries of the country, and more especially those of the West, the buying and selling of commercial paper has become a distinct branch of the banking business, and an important auxiliary to bankers. The cause is easily traced. In the States of Illinois, Iowa, Michigan, Wisconsin, and Indiana, the growing tendency and desire of bankers is to find investment for their surplus funds away from home, where each year the facilities for safe investment are diminishing ; and they naturally turn to the great money center to make their investments. The reason for this tendency to outside investments is obvious. As the country advances in wealth and increases in population, banks necessarily multiply with other branches of industry, and in course of time an increase of unemployed funds is the result. The question that then presents itself to the mind of the banker is, "What shall be done with the surplus funds?" Now, the supply of home-borrowers generally fails to meet the demand, consequently investments must be made elsewhere. If, however, the home supply did not fail, the bankers throughout the middle Western States, more particularly, are beginning to see the advantage and safety of buying in the large money centers. They can there make a selection from the numerous well-rated business "receivables" submitted to them, and in doing this can obtain not only the information possessed by the sellers of, or the first investors in, commercial paper, but secure the opinion of their city correspondents. With all these safeguards it may readily be seen how preferable would be investments of surplus funds through outside channels, and how comparatively small the danger of loss would be.

"For the various processes of investigation to which a careful and sagacious dealer will subject an account before buying the paper, is not only a safeguard to the country banker, but relieves him of all anxiety and trouble in making the purchase. He has, for instance, before him the fact that the paper is given for merchandise, bought of a responsible jobber, or for material furnished and labor performed, constituting value received, and creating direct responsibility on both maker and endorser ; added to this, he has the advantage of a thorough and comprehensive investigation by the dealer of the affairs of both maker and endorser, which the dealer makes for his own protection, and which he confirms by a judicious use of commercial reports and private inquiries.

"That dealing in commercial paper should be made a separate branch of banking business must be evident to all bankers in large cities. In all of the principal banks of the large money centers the business has grown so large, and has extended so far in

its ramifications, that it is becoming divided up into departments, and the wisdom of it is plain, for the person in charge of a department soon acquires a special knowledge of the business transacted therein, and consequently is able to give a more intelligent and reliable opinion respecting any business that properly belongs to his department; hence, dealing in commercial paper should, to lessen the risks of loss, be carried on as a special and separate business. It requires great vigilance, caution and knowledge of the financial methods of the sellers of paper, and these qualities become sharpened and developed in the person who devotes all his time and abilities to this branch; for the very nature of the business tends to make him discriminating in his purchases—when he buys he assumes liabilities till paper is sold or has matured—hence, self-preservation would make him thorough in his investigation as to the responsibility and integrity of makers and endorsers. He would be careful and cautious in handling any account that was not exclusively placed in his hands, or any paper that had the taint of accommodation about it.

"The opinion seems to be prevalent among some country banks that dealers in commercial paper are in reality "brokers," that is, "an agent who transacts for commission," and that, as a fact, they assume no responsibility in offering the paper they handle, as they do not buy it outright from the indorsers. This is an erroneous impression, for a responsible dealer or "banker (*i. e.*, 'one who discounts notes,')

" buys his customers' paper, and thereby becomes the owner. In rare instances, with certain restrictions, he may accept a consignment, and make advances thereon, but for obvious reasons this kind of transaction should be avoided.

"Another advantage gained by investing in large money centers is in the facilities afforded country banks for the immediate and safe investment of daily surplus. In considering what to do with his surplus funds the country banker sees but two legitimate channels of investment: The first is the local home-borrower; the second is the investing of his current funds in outside commercial paper held by bankers near some money center, who deal therein. He knows that by investing at home he may be able to secure 8 per cent. or 9 per cent. interest, while he may not be able to get in outside investment over 6 per cent. Yet, if wise, he will invariably select the latter course in the disposition of his surplus funds, for the reason, that if a loss occurred of 1½ per cent. on, say, \$100,000 loaned at 9 per cent. to depositors—farmer, stock dealer, merchant or manufacturer—in his town, it would wipe out the difference in gain of interest for a year on the same amount invested at 6 per cent. on outside approved paper. His experience has taught him that the home discount account is largely made up of paper which it was a matter of policy rather than good judgment on his part to renew. On the other hand, he knows that in his outside investment the danger of any loss is reduced to a minimum; that the paper he buys is first-class business paper, carefully selected under the suggestion and advice of the dealer, besides, he feels that when the paper matures there will be no extension or renewal expected, as may be the case with local borrowers. The outside investment also places him in a more independent position, for he is dealing with strangers, and not with friends, and depositors who are sometimes disposed to ask favors of their bank not consistent with the duties its officers owe to the stockholders. Another advantage secured by outside investment is in the closer and more confidential business relations established between banker and dealer. In order to achieve satisfactory results, the banker must have confidence, both in the integrity and judgment of the dealer. Unless such confidence exists, his (the dealer's) business will be limited for the present and profitless for the future. Their interests, to a certain extent, are identical, though the impression exists in the minds of some bankers that the buying and selling of commercial paper tends to inflate values and promote illegitimate transactions. This is not only a false impression, but, as a matter of fact, the prudent, conservative dealer can do more to suppress "shinning" and to elevate the character of the paper seeking discount than possible for any banker to accomplish. As stated before in this paper, his avenues of information are far more abundant, his facilities vastly superior—while it is vitally important to the success of his business that perfect integrity shall be preserved, and the paper he offers shall legitimately represent the passing of value between maker and endorser. The greater the strength the more perfect the integrity, and the higher the character of the paper he offers his buyer, the more complete will be his ultimate success.

"By a conscientious adherence to facts and avoiding extravagant and highly colored statements; by not asserting or insinuating as a fact something that is simply

'hearsay,' and by offering no paper for sale he would not willingly carry to maturity himself, he not only subverts his own interest, but makes himself invaluable to the banker. The result of these relations between banker and dealer would be, that the volume of business in this branch would be greatly increased, and banks, instead of discounting their customers' paper, would allow this business to drift into the hands of the dealers and would buy of the latter alone to utilize their surplus funds. Another beneficial result would be that if the special dealer in commercial paper was more generally consulted as to the character of the security offered for sale, it would not be long before borrowers became convinced that unless the paper was solvent and of a high character it would be useless to attempt to negotiate or discount it through banking channels.

"Before concluding, I desire to call attention to the wide field for profitable and safe investment afforded to Eastern banks in the volume of high grade commercial paper issued in the West. It is well known that during the last few years there has been an unusual demand for money in the West. The opening up of new territory, the clearing up and cultivation of new land, the building of new lines of railway, the development of manufacturing and lumber interests, all have so universally increased, that the demand for money has been unprecedented. While a large portion of the supply consists of Eastern capital—that supply has been almost wholly confined to railway enterprises—and although the investments in other industries are small, taken separately, in the aggregate they amount yearly to a very large sum. Now, if Eastern bankers were to turn their attention to and deal in this class of paper, freely taken by Western banks, they would find a safer investment for their funds than they do now in handling to some extent a certain class of paper, which, though rated high and wearing an air of gilt-edged responsibility, is nevertheless 'accommodation' paper, and is received, offered and sold as such. By availing themselves of information obtainable by Western dealers regarding the quality or character of the paper offered, Eastern banks might open a new and prosperous field for investment. Certainly it would be worth a trial wherever there is no sufficient outlet in the East for their unemployed funds, and at each of the large money centres of the West—Chicago, Milwaukee, Kansas City, St. Louis, St. Paul and Minneapolis—may be found, through dealers long established in the business, a high grade of commercial paper. This business is no longer an experiment in the West. It is a fact known to me that over thirty millions of paper was sold by one Chicago firm before a single default in payment occurred. What bank can show a similar record?"

Colonel Henry Exall, of the newly organized North Texas National Bank, of Dallas, Texas, was next introduced by President Murray, and entertained the Convention with a 10-minute extemporaneous speech on "The Business Growth of Texas." After apologizing to the Convention for departing from the routine of finance and banking, Colonel Exall said :

The growth of Texas is phenomenal, and almost entirely unknown to the people who have not had the good fortune to visit the largest State in the Union. Texas in 1870 had a population of 800,000 and 2,000,000 acres of land under cultivation, and the man with the plow and the hoe was said to have no business that far West. It belonged to the cattle raiser and ranchman. In 1880 her population had increased to 1,600,000, and to-day Texas has a population of upwards of 2,500,000 and 20,000,000 acres in successful cultivation. And in the not far distant future I expect to see 5,000,000 happy, prosperous people in our cities, in our work shops, in our factories, and on our farms, enjoying the fruitful products of 50,000,000 acres of land, owned largely by the men who till it.

In my business wanderings I have visited almost every State in this grand Union. From the Green Mountains of Vermont, across the blue grass of Kentucky to the foot hills of the Rockies, and all through the rich and populous States of the Mississippi Valley; and with this experience, and in this intelligent presence, I say without fear of successful contradiction, that the country known as *North-Texas* will support as dense a population as any country of which I have any knowledge.

You read in your Eastern papers of drouth in Texas. Mr. President, Texas is 850 miles across in one way and 750 in another, and it may be very dry at both ends and leave it very wet in the middle, and I admit that it has been too dry on the edges, and sometimes not just as we would have it in the centre, but I am glad to be able to say

to you that the heavens have opened, the rain has come, the streams are full, and the earth is saturated, even in the driest sections. This is a fair assurance of abundant harvests for the coming year.

Our crop this year, taking everything into consideration, corn, cotton, cattle, and all other products, is the best in the history of the State. In Llano and Mason counties deposits of magnetic iron ores, said by experts to be equal in quality, and quantity, to any on this continent, have recently attracted the attention of capitalists who will develop them.

Mr. President, we are a prairie State, and yet we have 40,000,000 acres of virgin forest awaiting the handicraft of the artisan, and the money of the capitalist, to fashion it for the uses of man.

With new railroads grid-ironing the State, with a people as intelligent, happy, and prosperous as any in the world, we only want one thing—*capital to develop our almost unlimited resources*. Nothing that I can say of Texas can do her justice. We want you to come and see her as she is; and as the delegate of the Bankers' Association of the State of Texas, and in behalf of the State Fair Association, of Dallas, and as a citizen voicing the sentiments of every man, woman, and child of a hospitable State, I extend to this body an invitation to visit Texas, and hold their next annual Convention in the city of Dallas, during the session of the State Fair, in October, 1888.

Mr. President, I wish I could find words to express to you the warm welcome that our people would extend to this Association. My inability to do so calls to mind an incident illustrative of my position. On my father's farm in Virginia there lived, many years ago, an old negro known as "Uncle Mose." He was kind-hearted, clever and true, an oracle among his people and a philosopher in his way. The colored people and the younger whites always went to him for comfort and advice when in trouble. A colored boy, known as "Sid," came to him one day in great distress. Uncle Mose, seeing that he was in trouble, asked the cause. "Sid" said: "The fact is, Uncle Mose, I loves Nancy, but I dunno what to say to her." "Lor, chile," says Uncle Mose, "don't let that trouble your heart. Jes wait, till you get her all alone, by herself, and take her little hand in yours, (here Col. Exall grasped the hand of President Murray), and *it will come to you what you ought to say to her.*"

And I say to you, bankers of America, come down to Texas, put your hands in ours, and it will come to our people how to welcome you.

A report was at this point read from the Executive Council upon what was facetiously dubbed "the Canada Cashier resolution," which was worded as follows:

Whereas, The failure to agree upon a proper extradition treaty between the United States and Great Britain for the return of a class of offenders who seem to ever be found with us.

Whereas, It has come to be a matter of course that the class of criminals known under the designation of defaulters and embezzlers have immunity from arrest, trial and punishment by reaching the British possessions, where now in Canada there are large numbers residing.

Resolved, That the Executive Committee are requested to appoint a Committee on behalf of the Association to represent to our State Department the great evils now existing, and to urge the early amendment of our extradition treaties with Great Britain so that the existing evils may be abated.

Samuel Norment, of Washington, D. C., offered the following resolution, saying that he thought there was a good chance to inject a little patriotism into the financial discussion and land booms of the Convention:

Whereas, It is proposed to hold at the National Capital, in 1890, a joint celebration by the sixteen American Republics in honor of the centennial anniversary of the inauguration of Constitutional Government upon the Western Hemisphere. And it is also proposed to hold at the National Capital, in 1892, a world's exposition in honor of the four hundredth anniversary of the discovery of America by Christopher Columbus, which exposition of the history, arts and industries of the three Americas is intended to be permanent.

Resolved, That the American Bankers' Congress heartily favors this movement toward more intimate relations between the several sister nations of the three

Americas, and commends it to the people of the United States as a matter of great practical importance, and that the Secretary be instructed to send copies of this resolution to the President of the United States, to the President of the Senate and to the Speaker of the House of Representatives.

The matter was discussed by Mr. Norment and A. D. Anderson, of Washington, and then referred to the Executive Committee.

Letters of regret were read from the Hon. William W. Crapo, of New Bedford, Mass., who suggests as one of the means of reducing further growth of the surplus that the tax be taken off the National bank circulation; from Secretary of the Treasury Fairchild; from Comptroller W. L. Trenholm, and from General W. T. Sherman, who, President Murray announced, was a pioneer banker in California. Henry M. Brady, Secretary Fairchild, Carl Schurz and Senator Daniel, of Virginia, all expressed their regrets that other engagements kept them away. Senator John Sherman and John A. Bingham, of Ohio, Governor Colquit, of South Carolina, and Hon. John A. Kasson expected to be here, but were prevented by unforeseen circumstances. Governor Proctor Knott, of Kentucky, and ex-Governor Hoyt, of Pennsylvania, were expected, but did not arrive.

The Convention then adjourned until the next morning.

THURSDAY'S SESSION.

On Thursday morning the Convention came to order at ten o'clock. When the report of the Nominating Committee appointed the previous day was called for, Mr. H. B. Wilson, Cashier of the First National Bank, of Ironton, Ohio, made a motion, "that it is the sense of this Convention that in future all nominations for President, Vice-President and Executive Council shall be made upon the floor in open Convention and that the vote shall be by ballot." This motion was the outgrowth of a feeling on the part of a number of members on the floor that the business of the Convention and the management of the Association was conducted too much in a cut-and-dried fashion, and that the real sense of the members was not allowed fair opportunity for expression. There seemed to be a feeling that there should be some reform. On the other hand, it must be remembered that the American Bankers' Association consists of about 1,700 members, and that a very small proportion of them are in attendance at any one Convention. The members at one time on the floor cannot, therefore, be said to represent the sense of the full membership. For this reason the Executive Council, under the Constitution of the Association, has first to pass on all resolutions and motions emanating from the floor. The Executive Council is composed of representative bankers from all parts of the country, and is guided in its action by the expressed desires of the banking community. The motion of Mr. Wilson was accompanied by some temperate remarks disclaiming any wish to interfere with the nominations already made by the Nominating Committee which had been appointed on the previous day, and was referred to the Executive Council for an immediate report.

The following resolution was then offered by Judge Ewing:

Resolved, That we favor a rapid extinguishment of the public debt, and therefore recommend the continued purchase by the Secretary of the Treasury of the outstanding Government bonds. We consider a reduction of the revenue wholly unnecessary, inexpedient and unwise. Let the surplus be promptly and constantly applied to the liquidation of the debt and let the action of the Treasury in the work of buying the bonds be further regulated, systematized and controlled by additional legislation.

Mr. St. John offered an amendment, that the existence of National banks is not dependent on the National debt, which was accepted by Judge Ewing.

The resolution was referred to the Executive Council, with the approval of the Convention.

A resolution extending thanks to the bankers, merchants and citizens of Pittsburgh was unanimously carried.

President,

LOGAN C. MURRAY, President United States National Bank, New York, N. Y.

First Vice-President,

CHARLES PARSONS, President State Savings Association, St. Louis, Missouri.

Vice-Presidents,

ALABAMA—R. M. Nelson, President Commercial Bank, Selma.

ARIZONA—M. W. Kales, of Kales & Lewis, Bankers, Phoenix.

ARKANSAS—Creed T. Walker, Cashier German National Bank, Little Rock.

CALIFORNIA—S. G. Murphy, Cashier Pacific Bank, San Francisco.

COLORADO—David H. Moffat, President First National Bank, Denver.

CONNECTICUT—George A. Butler, Vice-President National Tradesmen's Bank, New Haven.

DAKOTA—Asa Fisher, President First National Bank, Bismarck.

DELAWARE—Edward Betts, President First National Bank, Wilmington.

DISTRICT OF COLUMBIA—Samuel Norment, President Central National Bank, Washington.

FLORIDA—Daniel G. Ambler, President Nat. Bank of State of Florida, Jacksonville.

GEORGIA—J. L. Hammond, Vice-President Merchants' National Bank, Savannah.

IDAHO—John Huntoon, Cashier First National Bank of Idaho, Boise City.

ILLINOIS—Geo. Schneider, President National Bank of Illinois, Chicago.

INDIANA—W. S. Culbertson, President First National Bank, New Albany.

IOWA—William D. Lucas, Cashier Valley National Bank, Des Moines.

KANSAS—John R. Mulvane, President Topeka Bank, Topeka.

KENTUCKY—James M. Fetter, President Kentucky National Bank, Louisville.

LOUISIANA—Joseph H. Oglesby, President Louisiana National Bank, New Orleans.

MAINE—Ira P. Farrington, President Casco National Bank, Portland.

MARYLAND—Douglas H. Thomas, President Merchants' National Bank, Baltimore.

MASSACHUSETTS—John Cummings, President Shawmut National Bank, Boston.

MICHIGAN—Theo. H. Hinchman, President Merchants and Manufacturers' National Bank, Detroit.

MINNESOTA—Henry P. Upham, President First National Bank, St. Paul.

MISSISSIPPI—James P. Roach, President First National Bank, Vicksburg.

MISSOURI—Rufus J. Lackland, President Boatmen's Saving Bank, St. Louis.

MONTANA—Samuel T. Hauser, President First National Bank, Helena.

NEBRASKA—Henry W. Yates, President Nebraska National Bank, Omaha.

NEVADA—D. A. Bender, President First National Bank, Reno.

NEW HAMPSHIRE—George B. Chandler, Cashier Amoskeag Nat. Bank, Manchester.

NEW JERSEY—C. S. Graham, President North Ward National Bank, Newark.

NEW MEXICO—Jefferson Reynolds, President First National Bank, Las Vegas.

NEW YORK—Henry C. Brewster, Cashier Traders' National Bank, Rochester.

NORTH CAROLINA—William E. Breese, President First National Bank, Asheville.

OHIO—William Means, President Metropolitan National Bank, Cincinnati.

OREGON—Henry Failing, President First National Bank, Portland.

PENNSYLVANIA—Benjamin B. Comegys, President Philadelphia National Bank, Philadelphia.

RHODE ISLAND—Francis W. Carpenter, President American National Bank, Providence.

SOUTH CAROLINA—Andrew Simonds, President First National Bank, Charleston.

TENNESSEE—W. D. Bethell, President State National Bank, Memphis.

TEXAS—HENRY EXALL, Vice-President North-Texas National Bank, Dallas, Tex.

UTAH—W. S. McCormick, of McCormick & Co., Bankers, Salt Lake City.

VERMONT—Charles W. Woodhouse, President Merchants' National Bank, Burlington.

VIRGINIA—William M. Hill, Cashier State Bank of Virginia.

WASHINGTON—Dexter Horton, of Horton & Co., Seattle.

WEST VIRGINIA—J. Nelson Vance, President Exchange Bank, Wheeling.

WISCONSIN—N. B. Van Slyke, President First National Bank, Madison.

WYOMING—T. B. Hicks, President First National Bank, Cheyenne.

Executive Council.

New York City.	JOHN JAY KNOX, President National Bank of the Republic.
	GEORGE S. COE, President American Exchange National Bank.
	WILLIAM P. ST. JOHN, President Mercantile National Bank.
	WILLIAM A. NASE, President Corn Exchange Bank.
Philadelphia.	MORTON MCMICHAEL, Cashier First National Bank.
	WILLIAM H. RHAWN, President National Bank of the Republic.
Chicago.	LYMAN J. GAGE, Vice-President First National Bank.
	JOHN J. P. ODELL, Vice-President, Union National Bank.
Boston.	EDWARD TYLER, Cashier Suffolk National Bank.
	JAMES H. BOUVE, President Boston National Bank.
	Baltimore, Md.—J. THOS. SMITH, Cashier National Bank of Baltimore.
Cumberland, Md.	DANIEL ANNAN, Cashier Second National Bank.
Richmond, Va.	J. W. LOCKWOOD, Cashier National Bank of Virginia.
Pittsburgh, Pa.	W. E. SCHMERTZ, President Third National Bank.
Milwaukee, Wis.	HOEL H. CAMP, President First National Bank.
Columbus, Ohio.	WILLIAM G. DESHLER, President National Exchange Bank.
Sandusky, Ohio.	AUGUSTUS H. MOSS, President of Moss National Bank.
Syracuse, N. Y.	EDWARD B. JUDSON, President First National Bank.
Little Rock, Ark.	LOGAN H. ROOTS, President First National Bank.
Henderson, Ky.	S. K. SNEED, Cashier Henderson National Bank.
Omaha, Neb.	A. U. WYMAN, Vice-President Omaha National Bank.

Mr. O. M. Carter, of Ashland, Neb., then offered the following resolutions, which were sent to the Executive Council for consideration :

"Resolved, That the Executive Council is instructed to prepare a bill embodying such amendments to the National Banking Act as may seem desirable and expedient; transmit a copy thereof to each member of the association with a letter inviting criticisms for consideration by the Executive Council, after which the bill shall again be brought before said Council for consideration and final adoption; it shall then be presented to Congress, and a copy mailed to each member of the association, with a request to use their personal interest and influence with the members of Congress and United States Senators from their respective States to secure favorable action.

"Resolved, That the Executive Council is hereby instructed to examine the banking legislation of State and Territory, and endeavor, through the local members of this association, to secure uniform bank legislation throughout the country.

"Resolved, That the Executive Council have authority to make such levies on the association as may be necessary to carry out the instructions."

Mr. Nelson, of Alabama, read a paper prepared by Elliott F. Shepard, of New York city, of which the following is an abstract :

"That portion of the surplus labor of the United States represented by the bankers of the country is a fine illustration of the truth that capital and labor are one, for if they did not labor incessantly they would have none of the surplus called capital, and if they had no capital that would prove they did not labor.

"Let us look a moment at the fundamental principles underlying this much vexed question of capital and labor; and the inspection will show there is, and can be, no conflict between them, but that they are identically the same thing, one and inseparable, one and indissoluble.

"It is not Adam Smith, nor Henry George, nor Herbert Spencer, nor Stewart Mill; not to Lovelace, Leibniz, John Swinton, Powderly, Robert Owen, Malthus, nor Marx, that we must turn in order to find the true philosophy of finance and industry, but it is to the greatest of all, to God, 'for it is He that giveth thee power to get wealth.'

"A strike illustrates the unity of capital and labor. One week is 2 per centum of a year. Suppose a strike to continue two weeks. Then, to recover the loss of earnings for that time, the strike must secure an advance of 20 per centum in wages for a period of one year. No strike has ever been known to do this. So that to cease to labor is to cease to have capital.

"Labor and capital are but different stages of the same existence. When a boy of 10 becomes a man of 50 he is still the same individual, not somebody else: so capital is only labor matured.

"Labor is wealth; wealth is capital; therefore, capital and labor are one. The practical reflections that arise from this truth are few and simple.

"I.—Every course of action by employers and employes that is in unison with truth will benefit both of those classes.

"II.—Whatever improves the employe cheapens the cost of employing him.

"III.—Whatever increases production and the number of employes tends to increase the rate of wages.

"IV.—Poverty can no more be abolished than wealth.

"V.—Land owned in severalty in fee simple is a mark of civilization, and to confiscate land would reduce America to the degraded condition of savage Africa.

"VI.—Liberty should be fully enjoyed in all trades and occupations for the support of mankind.

"Commercial, industrial, and financial history fully support each of these six propositions, and render unnecessary their elaboration in this paper; and the bankers of America have it in their power to disseminate them until their truth shall be acknowledged by all classes."

At this stage of the proceedings, Mr. Tyler, President of the Suffolk National Bank, of Boston, Mass., presented the following resolution from the Executive Council :

"Resolved, That the American Bankers' Association recommend the passage of a bill providing for the refunding of United States 4 per cents. into 2½ per cents. by anticipating the payment of so much interest on the 4s as is in excess of the proposed rate. The present worth of such excess of interest to be computed at a rate not above the borrowing power of the Government, and also providing for the extension of the time of payment of the proposed 2½s by annual payments of \$100,000,000 from July 1, 1907, to July 1, 1913; and

"Resolved, That a copy of this resolution be forwarded to the President of the United States, the Secretary of the Treasury, the Comptroller of the Currency, and the Financial Committees of both houses of Congress."

This resolution was opposed by Judge Ewing, of Penn., by Mr. St. John, of New York, by Mr. Sneed, of Kentucky, and was finally laid on the table. The arguments against it were that it sustained a plan which would delay the payment of the debt, that after the exchange of fours for 2½s was made the Government might still be compelled to buy the latter at a high premium, and that it was not good policy for the Convention of American Bankers to approve any important legislation, as such approval would be used as an argument against the measure in Congress. The first was Judge Ewing's argument, the second that of Mr. St. John, and the third that of Mr. Sneed. These arguments were not replied to at the time, as Mr. Knox, whose plan for refunding the debt the resolution approved, was at the time in attendance on a meeting of the Executive Council. The resolution was therefore at this time tabled.

The Hon. Henry M. Knox, Public Examiner and Superintendent of Banks for the State of Minnesota, next read an interesting paper, explaining the character, history, and duties of his office. An abstract of this valuable paper will be given in a future number of the JOURNAL.

Mr. Henry B. Wilson, of Ironton, Ohio, followed with a paper on Bank Examinations. He portrayed the ideal examiner, and graphically described the fault of the present system, and made suggestions as to the manner in which the defects might be remedied. He did not, however, nor perhaps was it within the line of thought he had marked out, touch upon the question of remuneration, which certainly is a most important factor in materializing the ideal examiner. This omission was supplied by the Hon. Beriah Wilkins who said :

"I think there should be a fixed fund, taken out of the tax on circulation, to pay the salary of the bank examiner, that he may become the agent of the Government: that he may give his entire time, rather than a small portion of it, to his work. I

also think all the expenses of the shipment of your circulation should be paid out of the same fund. This tax should be reduced to such a sum that it should only pay these two items of expense. There should be a Chief Examiner at Washington with several deputies, who should go out as occasion requires. These officials should know the difference between a certificate of stock and a certificate of deposit. I think I shall offer a bill this winter either to relieve the banks of taxation or to make it just enough to meet the expenses I have mentioned."

Several reports from the Executive Council were then taken up. The Committee on the Silver Coinage made a report, which the Secretary of the Association attempted to read, but the reading of which was stopped by a motion made on the floor, and sustained by the Convention. The report therefore hung suspended, like Mahomet's coffin, until Mr. Deshler, the Chairman of the Committee on Silver Coinage, insisted on its being read and disposed of. It was finally read and adopted by the Convention and is as follows:

"The committee appointed to consider the whole silver question in every particular and to report to the executive council of this association at such early date as shall be found convenient, as provided in the resolution passed at the Convention held at Boston on August 12, 1886, has after much correspondence and consideration come to appreciate the vastness of the question and to realize the magnitude of the duties which have devolved on it. Three of the appointed members declining to serve, the president filled the vacancies, and Messrs. Deshler, Knox, Colonel McMichael, Odell, Potter, Barrett, Simonds and Lackland now constitute the committee.

"The committee made a partial report at the meeting of the executive council held in the city of New York, June 8, 1887, asking for further time, which was granted.

"The American Bankers' Association has always taken the ground that both silver and gold are required as the money of the world, but that an international agreement only, on the part of a majority of the chief commercial nations of the world, can practically settle the relative value of gold and silver when coined. Though several international conferences have heretofore been held no conclusion has as yet been reached.

"The conference of 1881, in which Germany, Austria, Hungary, Belgium, Denmark, Spain, the United States, France, Great Britain, British India, Canada, Greece, Italy, Portugal, the Netherlands, Russia, Norway and Switzerland participated, passed this resolution: "That there is ground for believing that an understanding may be established between the States which have taken part in the conference, but that it is expedient to suspend the meetings of the Convention to give opportunities for diplomatic negotiations.

"The British Government has appointed a royal commission to investigate the silver question, which has made a preliminary report that, according to the *London Economist*, is adverse to the double standard. As the assent of England has been recognized by the most eminent bimetallicists as essential to any effective international agreement upon the silver question, owing to the fact that the city of London is the centre of the financial world, the committee recommends that this association delay action for the present and await the final report of the royal commission to parliament and the action of parliament thereon. In the meantime the committee regards the question as one, the judicious settlement of which is of the highest importance to this and other nations.

"Should parliament on receiving the final report of the royal commission, decide on participating in another international conference, this association is of the opinion that Congress should take the necessary steps to insure that the United States be adequately represented at such international conference.

"The committee further recommends that the coinage of silver dollars by the United States under the Act of Congress of February, 1878, be suspended until the points at issue of the silver question be settled by international agreement."

The resolution presented by Mr. Norment of Washington, on the previous day relative to the world's fair and centennial celebration to be held in that city was reported on favorably by the Executive Council and approved by the

Convention. The Convention also approved a report made by the Executive Council favorable to the adoption of a system of uniform checks and drafts, first suggested and adopted by the bankers of Chicago, and the Iowa Bankers' Association.

The Committee on Necrology reported the deaths of Hon. Alex. Mitchell, a former President of the Association; Hon. Luke P. Poland, of Vermont, a former Vice-President, and Joseph Patterson, of Philadelphia, and appropriate action was taken.

At this part of the proceedings Mr. Knox remarked that the resolution approving the plan for the refunding of the fours, advocated in his address had been tabled during his absence and he had not heard the arguments adduced against it. On this Mr. St. John, said that as a matter personal to himself he asked that the resolution might be taken from the table, inasmuch as he had overlooked the fact of Mr. Knox's absence when he addressed the Convention in opposition to the resolution. On this the resolution was taken from the table. The arguments against it were reiterated by Messrs. Sneed, Ewing, St. John, and others. Mr. Knox replied by showing that Mr. Ewing's argument in favor of the payment of the debt, was in no way antagonized by the refunding plan inasmuch as the latter afforded a way for the immediate payment of a portion of the debt. To Mr. St. John's argument he replied, that the plan was one for temporary relief only, it would dispose of the surplus for the next two or three years, during which time Congress could make progress in reducing the revenues of the Government. In answer to Mr. Sneed's argument, that, Congress turned a deaf ear to the recommendations of the Bankers' Association, and that therefore the Convention should make none, he referred to the fact that the Executive officers of the Government were constantly making recommendations to Congress, which are treated with indifference, yet that was no reason why they should not continue to recommend. The bankers were treated no worse than the officials of the Government. They were entitled to express their financial opinions, and if as was asserted, the Association cared nothing for Congress, why should it fear to express its opinions? Moreover if the argument that the approval of the Convention was a detriment to proposed legislation, be correct then, said Mr. Knox, "the best thing that can happen to this resolution will be to have it disapproved by this Convention." After the debate Mr. Tyler withdrew the resolution.

Mr. Knox, from the Executive Council, reporting on the motion of Mr. Williams, which had been referred to it in the morning, said: "The Executive Council have considered the motion of Mr. Williams, and they recommend that a committee be appointed who shall present to this Convention at its next session its conclusions upon the proposed change in the method of electing its officers. There is something to be said upon both sides of the question. Wherever a Convention is held, as in the case of Pittsburgh here, a very large proportion of the delegates are from the immediate vicinity. The whole country is not largely represented. Therefore the result of the election might depend upon the choice of the delegates from the vicinity where the Convention is held. Besides, the number of delegates present this afternoon is small. Probably the next Convention held at Saratoga, or elsewhere, will be very much larger, as this is a very trying year and a time of the year when it is very inconvenient for any banker to leave his place of business. We are

proposing a change in the method of electing the officers of this Association. It is probable that you would have a perfect right to pass this resolution if you see fit to do so, but we think it would be better to have a committee appointed to bring the matter properly before us in 1888, at the first session of the next Convention."

The report from the Executive Council, on motion duly seconded, was unanimously adopted, with the order that the committee be appointed by the President.

The PRESIDENT—We have now completed the business of the Convention, what is your pleasure?

It was moved and seconded that the Convention adjourn. The motion was unanimously adopted, and the Convention adjourned.

The following papers and address were ordered to be printed: On "English and American Systems of Banking," by the Hon. Theo. F. Hinchman, author of "Banks and Banking in Michigan." An address upon the fruitfulness and prosperity of California, entitled "Business and Banking in California," by Mr. Benjamin C. Wright, and a paper in favor of silver money, by Mr. W. S. McCornick, of Salt Lake City, entitled "Justice to the Country's Products."

OUTSIDE THE CONVENTION.

To complete the account of this Convention, it is necessary to speak of the hospitable and generous reception extended to the visiting bankers by the citizens of Pittsburgh. Every precaution was taken that the arrangements made for their comfort and entertainment should be beyond criticism. The reception committee consisted of one hundred of the most prominent bankers and citizens of Pittsburgh. William E. Schmertz was President and Parker L. Walter, Secretary. Another committee of reception consisting of eleven members of which the Chairman was John B. Jackson, represented the Chamber of Commerce. The committee on entertainment consisted of eighteen members, Mr. Charles E. Speer being Chairman, and Mr. Joseph G. Siebeneck, Secretary. The committee on invitations and the press, numbered twelve members. Geo. D. Whitney was Chairman and Parker L. Walter, Secretary. The committee on convention numbered six members, Wilson McCandless being Chairman and John M. Chaplin, Secretary. The city of Pittsburgh is wonderful for its industries, and the plan of entertainment included the widest introduction of the visiting bankers to all that was of interest in the city and vicinity. A reception was held at the Monongahela House on the evening of the 12th which served to make all those present feel at home with each other.

After the Convention adjourned on Thursday there was an excursion on the river on board the steamer "Mayflower," in the course of which a magnificent lunch was served. The route first taken was down the Ohio River as far as the Davis Island dam built across the Ohio to raise the level of the water at Pittsburgh, which it accomplishes to the extent of twelve feet. At this dam is the largest lock in the world, used to let the coal boats from the level above to the level below the dam. When the water in the river is high, the dam is so constructed that by the raising of sections, all obstruction to the flow of the water is removed. It was built by the Government and cost \$1,000,000. On this part of the river were to be seen the immense fleets of coal barges which give Pittsburgh the right to claim a larger tonnage and cheaper system of transportation than any other commercial or manufacturing city. After visiting

the dam the steamboat turned and went back up the river visiting the window chimney and bottle glass works, the wire rod and tube mills, the iron works, and last the Edgar Thomson steel works. In all these industries the fuel used is natural gas. In all the operations of transmuting the sand into glass and the iron ore into steel rails, wire, rods, tubes, etc., natural gas furnishes the necessary heat, except the first operation of extracting the iron from the ore. It has not yet been successfully applied to blast furnaces, in which coke is still used. As a fuel natural gas is not only cheaper but answers a better purpose than coal. In the case of glass, that manufactured with the gas is 83 per cent. clearer than that formerly made with coal. At the steel works every step in the manufacture of iron, from the ore to the finished steel rail was shown to the guests. The molten metal ran from the blast furnaces into enormous crucibles holding twelve tons mounted on cars, which when filled were drawn to the agitator, or "Parnell" as it was styled by the men, and the metal emptied therein, where it was mixed with the other constituents which transform the iron into steel. Then run into blooms in molds, it was passed on to other furnaces, trip hammers, etc., where the masses of white hot steel cut into suitable sizes were rolled out into rails. Everything was handled by machinery. Human muscle had very little to do. The excursionists returned with a vivid idea of the wonderful utilization of natural forces which to-day places Pittsburgh at the head of the glass and iron manufacturers of the world. On Friday there was an excursion by railway in the course of which were visited the plate glass works where now plate glass better than the French is made; the Pittsburgh water works with the largest pumping engines in the world; other glass works where all kinds of glassware were produced, and lastly the natural gas station, where all the different appliances for safely utilizing the gas were shown to the visitors. Seldom has so much been seen and enjoyed within so short a time. The visiting bankers departed for their homes with the best wishes for the success of the people of Pittsburgh who had manifested so warm a desire to do all in their power to insure the success of the Bankers' Convention, and to show to the members all the wonders of their city.

NOTES ON THE BANKERS' CONVENTION.

[From the Pittsburgh papers.]

All the banks suffered runs yesterday, not on them, but from them—to the Convention.

President Murray is a handsome man, rather young, and very much resembles President Cleveland.

Delegate Patterson's remarks about the coolness of the Grand Opera House was the coldest stab that natural gas has as yet received.

Wall street was greatly depressed yesterday because of a rumor that the bankers of the country were withdrawing their capital to buy Pittsburgh.

The presiding officer announced the Hon. John Jay Knox, ex-Comptroller of the Currency. As Mr. Knox stepped before the footlights he was given a warm welcome.

To the visiting bankers we would say in the language of the Western-boom circular: "The extent and prosperity of our industries are so great that we can't lie about them."

William P. St. John is a tall, fine-looking, full-bearded man, apparently not over 35 years of age. He is President of the Mercantile National Bank of New York, and a forcible speaker.

Judge Ewing said yesterday before the bankers that the best investment a man could make was in his own paper. That's so, Judge: that's why the *Commercial Gazette* is the success it is.

The President of the Bankers' Convention yesterday put more sound sense into a few words on the subject of trusts and pools than is often heard in a gathering of exclusive capitalists.

Congressman Beriah Wilkins was then introduced. The Ohio Congressman is a fleshy man, of good stature, with chin-whiskers, a clear complexion, resonant voice and pleasing manner.

Mr. Wilkins examined everything critically, and his tribute was: "A revision of the tariff wouldn't hurt this plant or its products." He stopped short, never to go on again, and continued looking.

A number of local bankers are justly indignant at the caricatures of them published in this morning's *Post*, and if the "Only's" woodchopper hath mind upon his health he will give the Convention floor a wide berth.

Said President Murray at the Edgar Thompson steel works last night: "For fourteen months I have labored to get this convention here, because I realized something of what we could see, but I didn't realize half."

All the bankers were dressed in black; a colored tie among them was as hard to find as a green leaf in the woods to-day, and they would have made any less vividly colored and less gorgeous surroundings sombre and sad to the eye.

President Murray made a happy hit when, in his address, he remarked that no one had any objection to a man riding a hobby even if it were ridden to death; the only objection arose when he insisted upon taking up the whole road with it.

Colonel Exall is a medium-sized, wiry, active man, with gray-black hair and mustache, and his speech was in every sense a "rattler." It livened up the Convention noticeably, and he was heartily applauded at the conclusion of his talk.

President Murray makes an excellent presiding officer, his manner being easy and graceful. Although he had an easy Convention to handle, he clearly demonstrated that he could facilitate business even with more hustling material before him.

At this juncture a few more nice-looking ladies entered, and the solemn proceedings visibly brightened as each listener sat a little higher in his chair, and the solemn and dignified personages upon the stage looked, if possible, a trifle more dignified.

Ex-Comptroller John Jay Knox followed in his most excellent address, which is generally regarded as the gem of the session. It was evidently prepared with the utmost care, and none of its many points was lost upon the attentive assembly.

Wm. P. St. John, President of the Mercantile National Bank, of New York, spoke for half an hour upon proposed legislation affecting the National banking system. He is a handsome man, with a well-trimmed blonde beard, tall, straight and of excellent physique.

Frank Malone, one of the Texan bankers, said, as he stood on deck last evening: "This is indeed a magnificent city, but it's a great pity you haven't some of our level prairies for a location. It wouldn't take many years to build a city as large as New York if you had."

William Wallace, of Omaha: "Pittsburgh is, indeed, the most wonderful city of the United States, and the greatness of her future no one can predict. I have known of her importance a long time, but I am greatly surprised at the number and variety of her industries."

Samuel Norment, a Washington, D. C., banker, remarked to a friend in the course of the afternoon: "I never half realized the wealth and importance and the natural advantages of Pittsburgh before. It is destined to become one of the great cities of the world in a few years."

President St. John, of the Mercantile Bank, New York, said: "Pittsburgh is one of the most wonderful cities in the world. I have long known of its importance as a manufacturing center, but I had never realized half the extent and development of her manufacturing interests."

"This country is a delicious revelation after the flat prairies of the West," remarked Mr. Cartwright, an Omaha banker, as he stood in the signal-box, his face glowing with the grateful breeze which whistled up the river. "I have been seriously considering

moving here eventually, and this experience almost decides me. It is the greatest treat I have had in many a day."

Ex-Comptroller John J. Knox remarked last night, as the boat landed: "This is indeed a mighty city, both from natural advantages and from the great developments the energy and shrewdness of her people have made in utilizing those advantages."

The boozy individual who came into this office and inquired if we had put a double-strength safety lock on our safe in view of the Bankers' Convention, is hereby warned that we wish to parley with him in argument no longer. Let him go and rent out as a walking delegate, or better, as an illicit liquor still.

An old banker from Asheville, N. C., like St. Peter, overcome by the great diameter of the driving wheels, the volume of flame and wilderness of sparks, stammered forth: "This place is bigger than my whole town, and if I should go home and tell my people of this thing every d--d tar-heel would say I was a liar."

The Hon. Beriah Wilkins sat in the doorway of the saloon yesterday afternoon, and remarked: "Do you know, I take a sort of a personal pride in all these good words I am hearing for Pittsburgh. I live so near here that I almost claim this as home; and they can't overrate Pittsburgh. It is a city with a magnificent future."

Mr. Murray, President of the Bankers' Convention, is a quiet yet forcible talker, and impressed everybody most favorably, both in his manner and what he advocated. He is a fine-looking man of middle age, tall and heavy-set, with a heavy brown mustache. Mr. Murray is President of the United States National Bank, New York.

The handsome gold-embossed programme which had been distributed demanded a great deal of the audience's attention. This programme is typical of the average banker who gazed at it—heavy, substantial, gold-embossed and gilt-edged, and with one corner turned over, appropriately illustrative of the particular hobby or "turn" of each.

Mr. Knox's address commanded the closest attention of the bankers. The total abstinence from conversation and the mumbling occasioned thereby was noticeable. To be sure local bankers and investment companies flooded the house with circulars, pamphlets, and books, but even these were not sufficient to distract the attention of the Convention from the fund of information contained in the address.

President Murray, a stoutish, handsome man of middle life, with an impressive manner, then introduced ex-Chief Justice Agnew, of Pennsylvania.

The slender, springy, nervous figure which is familiar to our people in this city as being that of the youngest old man in the State, came down to the music rest, which was the temporary reading desk, and began his address of welcome.

The pioneer banker, Justus Clarke, of Iowa, said, after visiting the Oliver mills "You have a great city here. With your natural gas and coal no one can compete with you; but I couldn't help thinking when I saw those girls working in the wire mill that it would be better for them if they were scattered through our great Western farm lands making butter and taking care of the homes of prosperous farmers. The tendency of our people is too much toward building together in cities and living on the pittance that some one else pays for labor. But I don't know as they could find a better city than Pittsburgh."

At this juncture several delegates discovered that something was wrong with the heaters and that they were not working properly. Overcoats came into general use all over the house, and considerable quiet kicking was indulged in. Finally Joseph Patterson, a delegate from Alabama, arose and claimed the attention of the chair.

"Mr. Patterson, of Alabama," said President Murray, by way of introduction.

"Yes, I'm from Alabama—the land of flowers and of warmth. I am away from home, now, however, but if, as Judge Agnew has said, Pittsburgh is hell with the lid on, I hereby move that the lid be removed and the heat turned on."

W. P. St. John, of New York, one of the most prominent among the visiting bankers, said last night: "This visit is a revelation to us. We have gone into a wire mill and seen wire fencing and telegraph and telephone wires made. We have gone a few steps further and seen beautiful tumblers and glasses and goblets of various kinds of glassware made. We have followed at Bessemer a piece of brown ore through the furnace into the steel mill and through the rolls until it came out a finished rail. We

have seen at this same works an invisible fuel every day displace 350 tons of coal and give no outward token of its presence, displacing with the coal its concomitants of soot and grime and dust. We have seen this gas illumine the great Ohio and Monongahela Valleys with almost the brilliancy of day. We have seen a city of more substantially, more diversified industries and greater natural advantages than we had dreamed of in this country. The trip has been a revelation."

A pleasant and most unexpected meeting during the bankers' reception last evening was that of Col. J. M. Schoonmaker, of this city, and Capt. Harrison, President of the Somerset County Bank, of Somerset. During one of the scenes of battle in the Shenandoah Valley, in the late war, Col. Mulligan, of one of the Pennsylvania Reserve Corps, was mortally wounded. Col. Schoonmaker, then commanding the Fourteenth Pennsylvania Cavalry, and Capt. Harrison, commanding a Virginia Company, were both personal friends of Col. Mulligan. They happened to be near the latter officer when he fell and both assisted in removing his remains from the field and conveying them to his home. Under those sad circumstances was the first and last time Col. Schoonmaker and Col. Harrison met until in the banquet-hall last night, about twenty-four years afterward. They recognized each other at once and after a vigorous hand-shaking were soon in a quiet corner talking over their war experiences, particularly the sad incident related above. Capt. Harrison said afterward that he found the Pittsburgh Colonel just as gallant among the ladies at a banquet as he was on the battlefield.

There was quite a group always congregated about Hon. John Jay Knox, President of the National Bank of the Republic, and ex-Comptroller of the Currency, on the deck of the boat. He talked considerably about literature, as well as banking and manufacturing topics—for Mr. Knox is a versatile writer, too. From time to time he has collected material with the intention of publishing at some future day a history of banking in the United States. The results of these investigations have appeared in his official publications, in occasional addresses before the American Bankers' Association and the Chamber of Commerce of the city of New York, in lectures before the students of Johns Hopkins University, and in contributions to Appleton's and Johnson's Encyclopedias, and the Encyclopedia of Political Science and of Political Economy, published by Rand, McNally & Co., of Chicago. A timely volume upon "United States Notes; or, A History of the Various Issues of Paper Money by the Government of the United States," has recently been published by the Scribners from the pen of Mr. Knox. It may be incidentally mentioned here that Mr. Knox does business in New York on what is rated as the most valuable bit of real estate on the Western Continent—the bank building and site at the corner of Broadway and Wall street, known as the United Bank Building, erected at a cost of \$1,200,000, and now estimated to be worth \$2,200,000.

Preparation of Paper Money.—There is much complaint among bankers and others in regard to the inferior quality of the paper money produced by the Bureau of Engraving and Printing at Washington. That there should be a deterioration in the work is quite natural, as there is no competition serving to keep the various processes of the manufacture up to the highest standard. Formerly a large part of the work of preparing the United States legal-tender and National bank notes, and other obligations of the Government was done by private bank note engraving companies, which vied with each other and the Bureau of Engraving and Printing at Washington in producing the best possible results. Upon one pretext and another the work was gradually taken from the private companies, and absorbed by the Government Engraving Bureau, until that bureau now does all the work. Naturally, when no competition is feared the tendency is toward laxness in all departments of work. There will be little real improvement in the paper money in use in this country until the designing and preparing of it is thrown open to public competition. The Bureau of Engraving and Printing should do a portion of the work as a check on that done outside, but to permit it to monopolize all, will surely cause the manufacture of a high grade of paper money to become a lost art in the United States. The designing and printing of one side of the notes should be done under proper restrictions by private bank note companies.

**Notes and Comments on
BANKING PRACTICE.**

**SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.**

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

Hours of Bank Officers.—The impression seems to be quite general that the hours of bank officers are much shorter than those of men engaged in other professions, and, probably, in most instances, this is true; but in a great many banks there will be found one or two clerks, who, from some cause or other, are unable to get through their work in the ordinary time. This is a point in the inside working of the institution, which is not usually made clear to the President and Directors. As long as the work is done properly and no direct complaints are made they presume everything is as it should be, and the Cashier, mindful of the desirability of keeping the expense account at the lowest point, does not trouble himself to make representations to the Board of Directors which might result in an increase in the salary list. It will usually be found, where a clerk is constantly detained beyond any reasonable hour, that the work appointed to him is really beyond his ability to accomplish. In such a case it is the duty of the executive officer of the institution to make such arrangements as will provide for the work being done in proper hours. It is true that a great many men lose time by their own lack of system and order in doing their work, and some men are naturally slow under any system; but when it is considered that bank clerks usually pass their lives in the institution, it seems hardly fair that the major portion of the force should leave in the early afternoon, while one or two remain behind for three or four hours to do work which could be easily distributed so as not to be felt very severely at any one desk.

Rotating Clerks.—A favorite theory among persons who would devise schemes for preventing defalcations is to rotate clerks from one desk to another; in order, as they say, that no one man may make a secret of his special duties. The plan of rotation has many advantages from a theoretical point of view; but it is an exceedingly difficult one to put into actual practice, especially in a large bank doing an active business. In smaller banks the work is generally so much divided that practically there is very little use of formal rotation. It is not so difficult to interchange the individual Book-keepers, because their accounts are small, involving the very plainest kind of sailing; but if we take a higher desk, as for example, that of the Paying-Teller, there are only two or three men in the bank who can rotate with him, that is the Receiving-Teller and the general Book-keeper; and when a schedule of rotation becomes to be arranged it will be found that these men will have to rotate with each other, and if there is any stealing going on, three men can steal better than one, seeing that they will cover each other up more effectually. In the case of the general ledger and the Corresponding Clerk it is almost impossible to have clerks constantly changed. There is so much special minute information involved in each day's work that it would produce a great deal of inconvenience first to have one man and then another at either of these desks. And so it is with the Discount Clerk; that is to say, if the clerks are to be anything more than mere machines. If a clerk is to be really of any efficient aid to the Cashier besides the mechanical work of putting down figures, he must be a thorough master of the special information which he acquires by daily work at his own desk. If he is changed first to one desk and then to another he not only loses track of

what is going on at any special point ; but, what is equally important, he loses interest in the matter also, and what is everybody's business to know very soon becomes nobody's business. Another consequence of the system of rotation which must be taken account of is that it necessarily brings divided responsibility, and when errors are made it is almost impossible to blame anybody in particular. And again, where two or more clerks are rotated about from pillar to post, it follows that the burden of keeping up the work to the proper standpoint will fall on the more industrious and conscientious, while the lazy and idle fellows will have numerous opportunities to shirk their fair share. A system of rotation that will apply to cases of absence for sickness or on holidays may be very readily worked out ; but constant shifting must inevitably cause a great degree of confusion and uncertainty, which is very detrimental to the proper working of the institution. It is better to give each man his work and let him do it the best way he knows how, and at the same time hold him to a proper responsibility by strict oversight. In nine cases out of ten, where there is stealing in a bank, it is done by some man who ought to have been properly overseen by his superior officer ; but who, instead of being subjected to such oversight, was allowed to do pretty much as he pleased.

Names of Banks.—It appears to have been the design of some of the founders of the National system that all banks should be known by numbers and not by names. However strong the argument for this method may be on the score of convenience, yet the natural disposition to name things instead of numbering them, has proved in this, as in other instances, too strong to be overcome by mere conventional agreement. It may be much more convenient, for example, to number and letter streets than to name them ; but some how or other, people prefer names to mere numbers and letters, and so the latter scheme has not been extensively adopted outside of the cities in which it was first put to use ; and the same has been the case with the banks. People will insist upon giving a determinate name to institutions in which they take an interest, and will not be content in assigning them only a numerical designation. An exception, however, must be made in favor of the first ordinal, probably because of the inference which it is supposed the public will draw ; that is, the The "First" National Bank is necessarily the oldest institution in the place where it may be located. In naming their several institutions bankers have given themselves as wide a range of fancy as the circumstances of the case would admit. Naming a bank may not be quite so important as naming a book ; yet it is generally conceded that a bank ought to have a name which will at least be an attractive one. The natural limitations of the case shut out fanciful and strange designations as inappropriate ; and, consequently, those who have the choosing of the name are confined within a comparatively small circle. Some seem to have been inspired by patriotic emotions, and, in consequence, have chosen such name as Centennial, Independence, Republic, United States, and so on. Others take in a wider scope and call their institutions the Bank of North America or of America generally, or perhaps even the Continental ; while those who adopt the names of the Globe and the Inter-National appear to have had a world-wide range of ideas. Some desire to perpetuate the memory of great men who have adorned the annals of our country. Among those thus commemorated may be mentioned Washington, La Fayette, Franklin, Penn and Gallatin. Webster, Everett and Stephen Girard have also been honored in this way, while among more modern names those of Chase, Lincoln and Garfield will readily occur. Names indicating that the bank will be devoted to the interest of certain classes in the community are of frequent occurrence. Farmers, butchers, drovers and mechanics have institutions specially devoted, so far as the name goes, to their peculiar interests, while the commercial world is attracted by a variety of titles to express the idea of a business institution, such as Traders, Tradesmens, Mercantile, Commercial and so on. Some banks strive to give by their title an assurance of the manner in which their business will be conducted, such as Security, *Fidelity* and similar designations. Others indicate their locality as the Central Western, Broadway and Market Street. The founders of the savings banks seem to have exhausted their ingenuity in

finding attractive names for their institutions as Peoples, Provident, Economy, Enterprise, Dime, Half-Dime, and even the Penny Savings Bank. Some banks bear in their names a suggestion of the manner in which they were originated as the Chemical and the Manhattan Company, and some are, unintentionally, perhaps, rich in historical associations as the Mount Vernon and the Monticello; while the Bank of Elbow Lake and the National Bank of Bijou Hills have a touch of the fanciful.

Duplicate Signatures.—It is a fact well known to bank Tellers that very few men write a perfectly uniform signature; their handwriting will vary somewhat according to the circumstances under which it is done, and some men gradually change their signatures so that in the course of two or three years the form in daily use is quite unlike the original sample furnished the bank. The change from this latter cause can be provided for by renewing signatures every year; but a lack of uniformity which springs from other causes can, to a certain extent, be guarded against by taking several signatures of the depositor at the time of his opening the account. That is to say, instead of having him write his name once in the signature book let him write it several times on a sheet of paper, these several writings by the same hand will bring out more clearly the points both of resemblance and difference. These remarks apply, of course, principally to persons who are not in the habit of dealing with banks. Business men as a rule are very particular about their bank signatures and maintain a reasonable degree of uniformity in making them.

Bank Supplies.—The active genius of the American inventor has not been idle in the field of furnishing banks with the latest and most improved means and appliances for conducting their business. A well equipped bank of twenty years ago would find itself much behind the times at the present day, and would be lacking in many things which are now deemed essential to a well-furnished bank office. The improvements in the manufacture of wire railing has afforded to bank officers a great many conveniences. And the same may be said with regard to plate glass and wooden work, not to mention the numerous contrivances in the way of stationery, and small things generally. Some old-fashioned managers object to spending money for these little improvements, deeming their action a point of economy; but, on the contrary, the most economy is found in providing as many appliances and contrivances as can be made use of. In point of fact it is an actual saving of time to a bank to be well equipped with everything which tends to lessen the labor of its employees.

One-Man Power.—An objection is sometimes urged against a bank which is entirely run by the President or Cashier, that it is not well for an institution to be wholly under the power of one man. Safety is proverbially said to lie in the multitude of counselors, though the same authority tells us that confusion may arise from the same source. There seems to be an instinctive feeling that it is well not to trust absolute power to any one man, for experience shows that the trust is too often apt to be abused, and this apprehension is well founded in cases where the responsibility and authority are given to some one person all at once; but in the case under consideration, namely, that of the President or Cashier of a bank, this objection does not apply, for it would be found upon investigation that the one-man power complained of arises usually from the fact that the one man in the case has earned by a long and successful career the entire confidence of his colleagues; that is to say, the Board of Directors are willing to place the entire management of their institution in the hands of the President because they are thoroughly satisfied that in his hands the institution is perfectly safe, and this opinion is the result of long daily experience. If at any time the President proves incompetent or negligent, none perceive it sooner than his fellow-Directors at the Board, and none are, as a rule, more willing to take prompt and vigorous measures to correct the evil. In point of fact, if an institution is to succeed it cannot well have more than one man at its head; otherwise there would be a conflict, not only of authority, but of opinion, which would necessarily be injurious to the interests of the institution.

BANKING LAW.

* LEGAL DECISIONS AFFECTING BANKERS.

TAXATION OF NATIONAL BANK SHARES IN IOWA—NO DISCRIMINATION AGAINST SUCH SHARES IN THE TAXING OF SAVINGS BANKS—A COMPARISON OF THE TAX UPON SHARES IN A NATIONAL BANK WITH THAT IMPOSED UPON THE PROPERTY OF A PRIVATE BANK—RIGHT OF SHAREHOLDER TO DEDUCT INDEBTEDNESS.

The complainants, who were stockholders in the First National Bank of Rock Rapids, taking exception to the assessment made of their shares of stock by the Assessor of the incorporated town of Rock Rapids, and to the action of the Mayor and Trustees of said town, acting as a Board of Equalization, in refusing to reduce the assessments made, took an appeal from the ruling of the Board of Equalization to the Circuit Court of Lyon County, Iowa, and in that Court filed a petition, setting forth the grounds upon which it was claimed the assessment was unequal, invalid and contrary to the true meaning of Section 5,219 of the Revised Statutes of the United States, making the town of Rock Rapids defendant to such petition. The defendant appeared and filed a motion to dismiss the appeal and to strike the petition from the files, which was overruled; and thereupon the complainants filed a petition for the removal of the cause to the Federal Court, on the ground that the amount involved exceeded \$500, and the question arose under the laws of the United States. The State Court refused to grant an order of removal and proceeded, against the objection of complainants, to the hearing of the cause, holding that the complainants were not entitled to the relief sought. Complainants appealed from the order refusing the removal to the Supreme Court of the State, and also filed a transcript of the record in the Circuit Court of the United States for the Northern District of Iowa. Defendant appeared in the Federal Court and moved that the cause be remanded to the State Court. The Court overruled the motion to remand and upon a consideration of the merits of the case.

Held, Counsel for complainants rely upon three propositions as grounds for relief, the first being that Sections 818, 820, Code of Iowa, providing for the taxation of the shares in National banks, and Chapter 60, Laws of 1874, are invalid and void, because they discriminate against the shareholders in National banks, in that the capital in the savings banks is taxed to the corporation, and in National banks the shares are taxed to the shareholders. In support of this proposition reliance is mainly had upon the ruling of the Supreme Court of Iowa in *Hubbard vs. Board of Supervisors*, 23 Iowa, 130, in which case it was held that the laws of the State in force in 1866 did not provide for the taxation of shares in banks organized under State authority, and therefore the Act of 1866, providing for the taxation of shares in National banks, was unauthorized and void, in that the same contravened the second proviso in the fourth section of the Act of Congress of 1864, which declared that the tax imposed by the States upon the shares in National banks "shall not exceed the rate imposed upon the shares in any of the banks organized under the authority of the State where such association is located." If this clause of the Act remained in force, it would still be a question whether savings banks were properly included within the term "banks" as therein used; but the clause itself has been

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL's Law Department as early as obtainable.

Attention is also directed to the "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

repealed, and therefore the ruling in *Hubbard vs. Board of Supervisors*, so far as it is based thereon, is wholly inapplicable to the case now before the Court.

Section 5,219 of the Revised Statutes does not contain this proviso. It declares that shares in National banks may be included in the valuation of the personal property of the owner thereof, and that the Legislature of the State may determine and direct the manner and place of taxing shares in National banks, subject only to two restrictions: (1). "That the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State;" and (2), "that the shares of any National banking association, owned by non-residents of any State, shall be taxed in the city or town where the bank is located, and not elsewhere."

As the law now is, the right of the State to tax the shares in National banks is not dependent upon the question whether shares in State or savings banks are taxed. The right to tax such shares exists, and the manner of imposing the tax is for each State to determine for itself, subject only to the two restrictions above cited. It is not therefore sufficient, as is assumed in argument, to show merely that the State laws provide a different mode or manner of taxing moneyed capital invested in savings banks or other corporations from that applied to the taxation of money invested in National banks. Before the assessment of the shares in National banks can be held invalid and void, it must be shown that there is in fact a higher burden of taxation imposed upon the money thus invested than is imposed upon other moneyed capital.

If, however, it appears that either by the express provisions of the State statutes, or by the mode in which the same are construed by the State officials, or by the manner in which the valuation of the property is arrived at, money invested in National banks is intentionally subjected to a greater burden of taxation than is imposed upon other moneyed capital, then the tax thus imposed will be invalid, and the owners of the shares thus discriminated against will be entitled to protection and relief.

Thus in *People vs. Weaver*, 100 U. S., 539, it is held that a State statute which establishes a mode of assessment, by which the shares in National banks are valued at a higher rate than other moneyed capital, is in conflict with Section 5,219 of the Revised Statutes, although the percentage of tax levied was the same.

In *Pelton vs. National Bank*, 101 U. S., 143, it is ruled that although, for the purposes of taxation, the State statutes provide for the valuation of all moneyed capital, including shares in National banks, at the true cash value, yet if the taxing officers systematically and intentionally valued the shares in National banks at their full value, while other moneyed capital was assessed at far less than its actual value, such assessment was in violation of the Act of Congress. To the same effect is the decision in *Cummings vs. National Bank*, 101 U. S., 153.

In *Boyer vs. Boyer*, 113 U. S., 691, it is held that by the modification of the Act of 1864 by the Act of February 10, 1868, it was intended to provide that the validity of the State tax was thereafter to be determined by the inquiry whether it was at a greater rate than was assessed upon other moneyed capital in the hands of individual citizens, and not necessarily by a comparison with the particular rate imposed upon shares in State banks; that, while exact uniformity or equality cannot be expected under any system, it was the intent of Section 5,219 to place capital invested in shares of National banks upon a substantial equality with other moneyed capital, however invested, whether in State bank shares or otherwise; and that, as the statute of Pennsylvania exempted from local taxation railroad securities, shares of stock in certain corporations, mortgages, judgments, moneys due on contracts for sale of real estate, loans by corporations, and other like investments, but did not in like manner exempt shares in National banks, the effect of the statute was to discriminate against money invested in National banks.

In *Mercantile National Bank vs. Mayor of New York*, 7 Sup. Ct. Rep., 826 (RHODES' JOURNAL, May, 1887, page 484), all the previous decisions are reviewed, and it is held that "the main purpose of the Act of Congress in fixing limits to State taxation on investments in the shares of National banks was to render it impossible for the State, in levying such a tax, to create and

foster an unequal and unfriendly competition, by favoring institutions or individuals carrying on a similar business, and operations and investments of like character. * * * But 'moneyed capital' does not mean all capital the value of which is measured in terms of money. In this sense, all kinds of real and personal property would be embraced by it, for they all have an estimated value as the subject of sale. Neither does it necessarily include all forms of investment in which the interest of the owner is expressed in money. Shares of stock in railroad companies, mining companies, manufacturing companies, and other corporations, are represented by certificates showing that the owner is entitled to an interest, expressed in money value, in the entire capital and property of the corporation; but the property of the corporation which constitutes its invested capital may consist mainly of real and personal property, which in the hands of individuals no one would think of calling 'moneyed capital,' and its business may consist in any kind of dealing in money or commercial representatives of money. So far as the policy of the Government in reference to National banks is concerned, it is indifferent how the State may choose to tax such corporations as those just mentioned, or the interest of individuals in them, or whether they should be taxed at all. * * * The business of banking, as defined by law and custom, consists in the issue of notes payable on demand, intended to circulate as money where the banks are banks of issue, in receiving deposits payable on demand, in discounting commercial paper, making loans of money on collateral security, buying and selling bills of exchange, negotiating loans and dealing in negotiable securities issued by the Government, State and National, and municipal and other corporations. These are the operations in which the capital invested in National banks is employed, and it is the nature of that employment which constitutes it in the eye of this statute 'moneyed capital.' Corporations and individuals carrying on these operations do come into competition with the business of National banks, and capital in the hands of individuals thus employed is what is intended to be described by the Act of Congress. * * * The terms of the Act of Congress, therefore, include shares of stock or other interests owned by individuals in all enterprises in which the capital employed in carrying on its business is money, where the object of the business is the making of profit by its use as money."

Having thus defined the meaning of the phrase "moneyed capital" as used in Section 5,219, the Court held that the fact that, under the mode of assessment pursued in New York, the securities held by life insurance companies, the stock of incorporations for manufacturing purposes and the stock owned in New York in corporations created outside of that State escaped taxation did not render invalid the taxation imposed upon the shares of National banks. In regard to savings banks it was held that they did not come in competition with National banks, and that the exemption from taxation of the deposits therein did not render invalid the taxation upon the shares of National banks.

The doctrine of these decisions of the Supreme Court shows that, so far as the relief sought by the complainants is based upon the allegations that Sections 818, 820 of the Code of Iowa, and Chapter 60 of the Laws of 1874 are in contravention of the provisions of Section 5,219 of the Revised Statutes of the United States, the exceptions thereto are not well founded. Chapter 60 of the Laws of 1874 provides for the organization of savings banks and enacts that the shares of stock therein are taxable, but that the deposits are not. Such provision does not discriminate against National banks or the capital therein invested.

It is, however, also claimed on behalf of petitioners that in the actual administration of the State laws a discrimination against the capital invested in the First National Bank, of Rock Rapids, has been exercised, in that a greater burden has been imposed thereon than in the case of the assessment upon the property of another banking institution in the same town known as the "Lyon County Bank." The statement of facts upon which the case is submitted shows that in assessing property in the town of Rock Rapids for the year 1886 the basis taken was one-fourth of the actual cash value; that the capital of the First National Bank was \$50,000; "that the shares of the stock-

holders in said First National Bank were assessed at the full one-fourth of their full value," to wit, \$12,500; that the Lyon County Bank was not a corporation, but a partnership of two general partners and one special partner, the paid-up capital being \$50,000, with a surplus of \$15,000; that the average value of the moneys and credits of said bank for the year previous to the assessment in question was \$90,152.89; that the average deposits and bills payable for the same time was \$78,120, of which sum \$62,460 was deposits; that the latter sum was deducted from the former, leaving \$12,032.89, which was assessed at one-fourth the face, making the sum of \$3,008.21; that the said partnership had invested in real estate in various places and counties the sum of \$36,583, which realty was assessed and taxed where located; and that the partnership had also invested in stock in banks in the State of Minnesota to the amount of \$27,000, which was assessed by the Assessor of Rock Rapids at one-fourth of its value; that the Board of Supervisors of Lyon County had rebated this part of the assessment, and the town of Rock Rapids had by *certiorari* carried the question of the right to assess and tax this stock before the District Court of Lyon County, where the cause is now pending.

Passing, without deciding it, the question whether complainants can entitle themselves to relief by simply showing that, in one instance, the property of a competing State bank had been assessed at a lower valuation, do the facts show that in the particular instance any unfair or illegal discrimination has been exercised by the taxing officials against the stockholders of the National bank? It appears that the assessment of that bank was arrived at by taking the actual value of the shares and dividing the same by four, and the same method was pursued in regard to the realty owned by the bank, valued at \$3,000 and assessed at \$750. It is not claimed that the realty or shares were not worth the respective sums of \$3,000 and \$50,000. The value of the shares represents the difference between the value of the property and franchises of the corporation and its liabilities. In the case of the private bank the valuation could not be arrived at in the same way, because there are no shares therein. The total amount of the moneys and credits was ascertained, and from this sum was deducted the liabilities. If the partnership had no other property, this would represent the value of the property over and above liabilities, the same as does the stock in the corporation. It is also shown that the partnership owns some \$36,000 of realty, which is taxed as such, and the remainder of its property consists of bank stocks in institutions located in Minnesota. Whether the latter is or is not subject to taxation by the town of Rock Rapids is now the subject of judicial determination.

From this state of facts the Court is asked to assume that the money invested in the shares of the National bank is subjected to a burden of taxation greater than that imposed upon the money invested in the same business by the partnership doing business under the name of the "Lyon County Bank."

But certainly these facts do not sustain the claim of discrimination made on behalf of the National bank. The total assessments against the bank and its shareholders is \$12,500 on the shares and \$750 on the realty, or \$13,250 in all. If the realty owned by the Lyon County Bank is assessed at one-fourth of its value—and it certainly cannot be assumed that the valuation will be below this ratio—this will give the sum of \$9,145.75, which, added to the valuation of the moneys and credits, to wit, \$3,008.21, gives a total of \$12,153.96, to which may possibly have to be added the valuation of the bank stocks owned in Minnesota, to wit, \$6,750, which would make in all, \$18,903.96. It is true that the realty is not situated in Rock Rapids, or at least but a portion of it, and that the taxes assessed thereon do not go to that town; but that does not affect the result, as the real question is whether the taxation imposed by the authority of the State creates a heavier burden upon the money invested in National banks than upon money invested in like modes of business. If the total burden of taxation upon the property of the Lyon County Bank is substantially equal to the total burden upon the property of the National bank, the latter cannot complain simply because the Lyon County Bank, under the laws of the State, pays such tax in more than one place.

The agreed statement of facts does not show the amount of the deposits or liabilities of the National bank, nor the mode in which its funds are invested.

It is simply stated that it owns realty in Rock Rapids worth \$3,000, has a paid-up capital of \$50,000, and that its shares are worth \$50,000 in the aggregate. The value of the shares represents the difference between the value of the property of the bank and its liabilities, so that, upon the showing made, it appears that \$50,000 represents fairly the excess of property over liabilities. It is agreed that the Lyon County Bank has \$90,152.89 in moneys and credits, \$36,583 in real estate and \$27,000 in Minnesota bank stocks, or a total in all of \$153,735.89 of assets, and owes in all \$78,120, leaving a surplus of assets over liabilities of \$55,615.89. The valuation for taxing purposes placed on the \$50,000 surplus in the National bank is shown to be \$18,250, and it is not shown or claimed that the property of the bank is assessed in any other place than Rock Rapids; so that this valuation represents the entire burden of taxation imposed upon the money invested in that bank. In regard to the Lyon County Bank it is agreed that it is assessed upon its realty in the proper localities and at a proper rate. The percentage of value is not stated, but we cannot assume it to be less than one-fourth of its agreed value, which would give \$9,145.75. The surplus of moneys and credits over liabilities is assessed at \$3,008.21, making in these two items the sum of \$12,153.96.

If the town of Rock Rapids is successful in the case brought to determine whether the Minnesota bank stock is taxable, then there will be added a further sum of \$6,750, making in all a valuation of \$18,903.96 imposed upon that bank. Until it is finally decided whether these stocks are or are not taxable it cannot be known whether the burden of taxation imposed upon the Lyon County Bank may not largely exceed, in the aggregate, that imposed upon the First National Bank. Certainly there is nothing shown that would justify the Court in holding that an unjust discrimination had been exercised in imposing the burdens of taxation upon these banks. While the mode of taxation is different, it does not appear that the actual burden of taxation upon the National bank is in excess of that upon the private bank, and hence no ground of complaint in this particular is made out.

The last ground of relief set forth in the complainants' bill is that the assessor and equalizing board refused to deduct from the valuation of the shares in the National bank the amounts of indebtedness owing by the holders thereof. Section 814 of the Code of Iowa provides that from the gross amount of moneys and credits held by one liable to taxation may be deducted all debts by him due and owing. In *People vs. Weaver*, 100 U. S., 539; *Supervisors vs. Stanley*, 105 U. S., 305, and *Boyer vs. Boyer*, 113 U. S., 689 it is ruled that where State laws permit the individual citizens to deduct their just debts from the valuation of their personal property or from the sum of their moneys and credits, this right of deduction exists in favor of the owners of shares in National banks, as a refusal to allow it would operate to tax the latter at a greater rate than other moneyed capital.

In the agreed statement of facts it is set forth that B. L. Richards is the owner of \$17,500 of the capital stock of the First National Bank, and was justly owing the sum of \$15,500 at the date of the assessment complained of, and had no other moneys and credits from which to deduct said indebtedness; and that C. H. Huntington owned \$1,000 of the stock, and owed an amount in excess thereof, and had no other moneys and credits from which to deduct the same. Under this state of facts these parties were entitled to the deduction claimed, and the refusal to allow the same upon proper demand was in violation of the provisions of Section 5,219. Upon payment, therefore, or proper tender, of the amount of the tax due from B. L. Richards, after making the proper deduction, he will be entitled to an injunction restraining the collection of any further sum. As to C. H. Huntington, it is clear that he is not taxable in any amount upon the stock owned by him, and is therefore entitled to restrain the collection of any tax thereon for the year 1886. So far as the other shareholders are concerned, it is not shown that they have debts properly deductible from the assessments made upon their shares, and as to them the bill is dismissed.

Richards and others vs. Incorporated Town of Rock Rapids, United States Circuit Court, N. D. Iowa, W. D. May Term, 1887.

PRESIDENT OF BANK—NO INHERENT POWER TO BIND BANK BY COMPOSITION AGREEMENT RELEASING PART OF DEBT—A CONSIDERATION OF THE POWERS AND DUTIES OF THE OFFICE.

The firm of Wheat & Durff, doing business as merchants, made an assignment for the benefit of their creditors, and the trustee instituted this action to settle the trust. One of the creditors, the Bank of Louisville, having been made a defendant, asserted a considerable indebtedness against the firm, and made its answer a cross-petition against its members. John L. Wheat, one of the members of the firm, alone filed an answer to the cross-petition. He did not deny the indebtedness, but averred that shortly after the failure the creditors, at a creditors' meeting, agreed with Wheat & Durff and each other to accept 50 per centum of their claims in full discharge thereof; and that the bank so agreed, being represented at the meeting by its President. He further averred (as the indebtedness of the firm to the bank was evidenced by paper which it had indorsed to the bank, and upon which other parties were previously liable), that subsequent to the making of the composition agreement, it was further agreed between Wheat & Durff and the bank (represented by its President) that the bank should collect the indebtedness so far as possible from those first liable therefor, and when no more could be collected than Wheat & Durff should pay to the bank 50 per centum of the amount uncollected, and in consideration thereof be discharged from all further liability. The bank by a reply denied that it ever made either agreement, and asked judgment for the entire debt. The lower Court gave judgment for the bank for the full amount, and Wheat appealed. The question at issue was the authority of the President to bind the bank by any agreements so made.

Held, Appellant urges that the bank's recovery should be confined to a sum equal to 50 per centum of its debt, and the question arises whether the bank is bound by the action of its President in making these agreements. The charter of the bank gives him no such power. It provides that the administration of its affairs shall be under the control of a Board of Directors. It is conceded in argument, upon the part of the appellant, that he had no express authority to so bind the bank, and that he never advised its Board of any such action by him. Neither is it contended that he, *virtute officii* merely, could compromise or release its debt. If he had such power it must be traced to the assent of the Board of Directors, either express or implied. In truth, the position of President of a bank is one of dignity rather than of power. There is an indefinite general responsibility attached to the place. He is expected to watch more closely the daily transactions of the bank than the other Directors; and while they, or usage, may confer upon him special powers, and extend his authority, yet that inherent in the position is very slight. Indeed, it seems by judicial decision to be confined to taking charge of the litigation of the bank. Mr. Morse says: "The same species of limitation in the power of the President forbids him to surrender or release claims of the bank against any person, from whatsoever source arising, or to stay the collection of an execution against the estate of a judgment debtor. For either of these acts is the exercise of a discretionary authority over the affairs and property of the bank, which is the peculiar and exclusive province of the Directors." (Morse, Banks & B'kg, 133.) This is the general rule; and undoubtedly he has no power by virtue of his office to bind the bank in an unusual manner, or in any undertaking outside of its customary routine of business. No authority goes beyond this line. It was held in *Smith vs. Lawson*, 18 W. Va., 212, that the President of a bank could not transfer or assign a note belonging to it; in *Olney vs. Chadsey*, 7 R. I., 224, that he could not surrender the securities held by his bank to secure a debt; in *Hodge's Ex'r. vs. Bank*, 22 Grat., 51, that he had no right to release a debt owing to his bank; and in the case of *Bank vs. Dunn*, 6 Pet., 51, that his agreement that the indorser upon a note should not be liable was not binding on the bank.

It is contended, however, that the President of appellee acted under such circumstances as to raise the presumption that he was empowered by it to so act; and that third parties being therefore equitably entitled to rely upon his representations, the law will presume the authority and hold the bank bound

by his action, if not *ultra vires*, although in point of fact he had no such authority, or was even acting in violation of the instructions of its Board of Directors. The bank must, however, in some way be a party to such circumstances, or chargeable with notice or knowledge of them, in order to so hold; and this record fails to exhibit such a state of case. It is true that the appellee's debt was a large one, and its Directors were therefore likely to watch closely whatever steps were taken looking to its payment, or the settlement of the trust estate. They held several meetings between the time of the failure of Wheat & Durff and the first creditors' meeting, when the composition was proposed; and also between such first meeting and the second one, when it was accepted. They probably knew their President attended these meetings; but these circumstances did not, in our opinion, authorize third parties to presume that they had given the President unlimited authority in the matter, or the power to agree to a composition of the debt. In fact, the evidence shows that while no vote had been taken in the Board of Directors, yet each member had at its meetings expressed himself as opposed to accepting anything less than the full amount of it. The president of a corporation may without express authority perform all acts which are properly incident to the trust reposed in him, or which necessity or custom may impose upon the office. The release or composition of a debt due to a bank, however, is a matter peculiarly within the province of its directory. If there be any matter which more than any other falls within the scope of their duty it is this one, because it not only affects the prosperity of the institution, but may involve its very existence. Necessity does not require the President to exercise his judgment alone as to it; indeed, the proper management of a bank dictates that he should not do so, and it is not therefore a matter incident to the performance of his duty. There is no evidence whatever in this record that it had been customary for the President of appellee to control such matters, or to agree to the release or composition of the debts of the bank, without express authority from its directory, and we fail to see upon what ground third parties had an equitable right to believe that he had such power. If he had been in the habit of doing so by the consent or with the knowledge of the Directors of the bank, or if they by act or conduct had held him out to the public as authorized to do so, then a proper policy, as well as common justice to third parties dealing with him in good faith, would estop the appellee from now denying his authority. It not having done so, and having in no way authorized, recognized, or ratified his action, it is not bound by it; and the judgment below for the entire debt must therefore be, and is, affirmed.

Wheat vs. Bank of Louisville, Court of Appeals, Kentucky, September 8, 1887.

PROMISSORY NOTE—INTERPRETATION OF PROVISION THAT IN CASE OF DEFAULT IN PAYMENT OF INTEREST "THIS NOTE SHALL IMMEDIATELY BECOME DUE AT THE OPTION OF THE HOLDER"—OPTION MUST BE EXERCISED WITHIN REASONABLE TIME.

This was an action to foreclose a mortgage given to secure the payment of a promissory note executed by Page to Rhodes, and by the latter indorsed to the plaintiff. The note to secure the payment of which the mortgage was executed was as follows:

"\$8,153.50.

"STOCKTON, Cal., June 30, 1884.

"On or before three years after date, without grace, I promise to pay to Alonzo Rhodes, or order, the sum of eighty-one hundred and fifty-three and fifty one-hundredths dollars, payable only in gold coin of the government of the United States, for value received, with interest thereon in like gold coin, at the rate of eight (8) per cent. per annum from date until paid, interest payable annually, and if not so paid as it becomes due to be added to the principal and become a part thereof, and bear interest at the same rate; but if default be made in payment of the interest, as above provided, then this note shall immediately become due, at the option of the holder thereof.

"C. A. PAGE."

Default was made in the payment of an installment of interest and seven months thereafter plaintiff exercised the option given in the note and brought

this action. The Court sitting without a jury, rendered judgment against both Page and Rhodes, but upon motion duly made, granted a new trial as to Rhodes. From the order granting the new trial plaintiff appealed.

Held, The contract was that in case of default in the payment of interest "this note shall immediately become due, at the option of the holder thereof." This is not the same as saying that the note shall become due immediately upon the option of the holder. The meaning is that the note is to become due immediately upon the default, at the option of the holder. And this is a different thing from saying that it shall become due seven months after default at the option of the holder. The holder was entitled to a reasonable time to exercise his option; but this time was nothing like what elapsed before the election was made. To allow him to wait seven months before doing anything would be to make the contract read that in case of default the holder has the option to make the note become due at an indefinite time after default, whereas, what it says is that it shall become due immediately upon the default, at the option of the holder, which is to be exercised at furthest within a reasonable time. In exercising a right like this the holder must keep within the terms of his contract. Not having done this he had to wait until the next installment of interest should fall due and remain unpaid, which had not taken place when the action was brought. This being so it may well be presumed that the Court below came to the conclusion, after a re-examination of the evidence given upon this point, that it did not sustain the decision and therefore granted a new trial; and it is our opinion that the order made in the premises was right and should be affirmed.

Crossmore vs. Page and another, Supreme Court of California, August 24, 1887.

CERTIFICATE OF DEPOSIT—NECESSITY OF DEMAND TO SET THE STATUTE OF LIMITATIONS RUNNING—THE MINNESOTA RULE.

(A certificate of deposit in the ordinary form issued by a bank is in substance and legal effect a promissory note, following *Cassidy vs. Bank*, 30 Minn., 87. It is due immediately and no actual demand is necessary in order to set the statute of limitations running.)

Plaintiff brought an action upon a certificate of deposit which had been issued more than six years previous. Defendants pleaded the statute of limitations as a bar.

Held, The contract or obligation sued on is what is commonly known as a certificate of deposit made in the ordinary course of business, and dated March 29, 1876. The last payment thereon was made more than six years prior to the commencement of this action; and the question here presented is whether a suit might have been brought upon it immediately upon its execution without a previous demand, as in the case of promissory notes payable on demand, or whether in order to set the statute of limitations running, the certificate should have been first presented for payment.

In *Branch vs. Dawson*, 33 Minn. 399, it is held in the case of a general deposit of money, that the engagement of the bank, according to general commercial usage, is to pay the money when called for at the bank's place of business. In that case the amount of the deposit was simply entered upon the books of the bank and the pass-book of the depositor in the ordinary way, and the bank made and issued no certificate or contract in writing importing an express promise or undertaking to pay the amount as a debt or obligation of the bank.

In *Cassidy vs. Bank*, 30 Minn., 86, we held that a similar writing was in effect a negotiable promissory note, and that its character as such was not qualified by the provisions therein, making it payable on the return of the certificate. As it is payable upon demand, it follows logically that the instrument is to be placed upon the same footing as ordinary demand negotiable securities. And this proposition is, we think, decisive of the question here involved. It is true that the consideration of the promise is recited in and shown by the writing to be for money deposited, but we do not see that this is material. The rule as to pleading, proof and defences would be the same as in the case of ordinary promissory notes, and a *bona fide* indorsee or holder might recover on the instrument purchased on the faith of its validity as

contract or obligation of the bank, though no money had in fact been deposited. (*Barnes vs. Ontario Bank*, 19 N. Y., 153, 159; *Farmers & Mechanics' Bank vs. Butchers' Bank*, 16 N. Y., 180; *Miller vs. Austen*, 13 How., 228.)

Such demand certificates fall within the sixty day limitation fixed by Gen. St., Ch. 23, Sec. 11, as to presentment and dishonor, and there is no reason why any distinction should be made as to the necessity of a previous demand between them and other negotiable securities. It is better that the rule be understood to be uniform as to all such securities, that when payable on demand, unless upon their face containing a stipulation showing a different intention (as in *Brown vs. Brown*, 28 Minn., 501), whether with or without interest, they are to be treated as due immediately, and that an action thereon against the maker is barred by the statute of limitations, unless brought within six years from the day of date thereof. (*Wheeler vs. Warner*, 47 N. Y., 519; *Howland vs. Edmonds*, 24 N. Y., 307; *Payne vs. Gardiner*, 29 N. Y., 178; *Wright & Selden*, J. J.)

The defendants received the money of the plaintiff, and by the instrument sued on promised and agreed to repay it, with interest, and by placing their obligation in this form they manifest an intention to change the character of the transaction from that of an ordinary deposit to that of a debt or loan evidenced by an instrument construed to be a promissory note payable on demand. If the parties desired to place any other or further limitations upon the rights or obligations of either, it should have been expressed upon the face of the instrument.

Upon the question under discussion it is admitted that the authorities differ. In New York the cases indicate much conflict of opinion. Some of them hold that such certificates of deposit are promissory notes; others, mere receipts or written evidences of a deposit, and as such, continuing securities which, though negotiable, are not dishonored until after an actual demand. See *National Bank Ft. Edward vs. Washington Co. Bank*, 5 Hun., 607. But if they are promissory notes payable on demand then, under the statute above referred to, they would be dishonored after sixty days. But this could not consistently be the case if the paper was not due until an actual demand. But it is manifestly the better rule in practice to hold that such demands become stale and outlawed unless collected or sued within six years. (*Brummagin vs. Tallant*, 29 Cal., 504; *Tripp vs. Curtenius*, 36 Mich., 494; *Curran vs. Witter*, Supreme Court of Wisconsin, *RHODES' J'L. May*, 1887, page 468.)

Mitchell vs. Wilkins and ano., Supreme Court of Minnesota, July 29, 1887.

PROMISSORY NOTE—PROVISION FOR PAYMENT OF ATTORNEY'S FEE—
NEGOTIABILITY.

(A promissory note promising to pay to the order of the payee a specified amount, at a time certain, at a bank in Georgia, "with all costs of collection, including ten per cent. attorney's fees" is a negotiable instrument, its negotiability not being affected by the provision for the payment of the costs of collection and attorney's fees.)

Plaintiff brought an action against defendants in the United States Circuit Court for the Southern District of Georgia on a promissory note made by defendants in the following language:

"Four months after date we promise to pay to the order of M. Nussbaum & Co. \$536.46, for value received, payable at the Exchange Bank, Macon, Ga., with interest from March at the rate of 8 per cent. per annum, with all costs of collection, including 10 per cent. attorney's fees. (Signed), T. C. ARLINE & Co."

Plaintiff who sued as indorsee, having taken the note by assignment, from Nussbaum who was the payee, was a non resident of Georgia, but Nussbaum resided in that State. Defendants demurred to the declaration and to the jurisdiction of the Court, because the suit was by an assignee, when the assignor could not have sued because of his residence in the same State with defendants, and insisted that the note sued on was not negotiable by the law-merchant, because it contained a provision that the maker should pay all costs of collection, including 10 per cent. attorney's fees. It was conceded that the Federal Court would have no jurisdiction of the action unless the note was negotiable by the

law-merchant, and the question for determination was as to the negotiability of the instrument.

Held, The demurrer presents a question upon which the decisions of the Courts have been very conflicting. A promissory note, or note of hand, as it is often called, is an open promise in writing by one person to pay to another person, or to his order, or to bearer, a specified sum of money, absolutely, and at all events. Daniel, Neg. Instr. Sec. 28. "In order to fulfil the definition given, the paper must carry its full history on its face, and embrace the following requisites: *First*, it must be open—that is, unsealed; *second*, the engagement to pay must be certain; *third*, the fact of payment must be certain; *fourth*, the amount to be paid must be certain; *fifth*, the medium of payment must be money; *sixth*, the contract must be only for the payment of money; and *seventh*, it is essential to the operation of the instrument that it should be delivered." Dan'l Neg. Instr. Sec. 30.

The defendants insist in this case that two requisites are wanting: (1) That the amount to be paid is uncertain; and (2) the contract contains stipulations other than for the payment of money.

The defendants strongly rely on *Smith vs. Nightingale*, 2 Starkie, N. P. 375, where Lord Ellenborough held that an instrument wherein the promise was "to pay J. S. the sum of sixty-five pounds or lawful interest for the same, and all other sums which should be due to him," was not a promissory note. Byles, Bills, 147. This is clearly indefinite.

Lord Kenyon in *Carlos vs. Fancourt*, 5 Term Rep. 423, observed: "It would perplex commercial transactions if paper securities of this kind were issued into the world encumbered with conditions and contingencies, and if the person to whom they were offered in negotiation was obliged to enquire whether these uncertain events would probably be reduced to a certainty."

Defendants also cite *Thompson vs. Sloan*, 23 Wend. 71 to show that a promise to pay a certain sum in Canada money is not negotiable, and 1 Pars. Notes & B. 37, where it is declared the maxim *id certum est, quod certum reddi potest*, has no application to the question of negotiability by the law-merchant, is also cited.

In *Ayrey vs. Fearnside*, 4 Mees. & W. 168, Parke B. held that the words "and all fines according to rule" destroyed the negotiability. That eminent judge makes it plain, however, that the word "fines" might import pecuniary fines and forfeitures, and was altogether indefinite.

Leading Cases upon Bills of Exchange and Promissory Notes, by Redfield and Bigelow, page 10, is cited for the dissenting opinion of Campbell, J., in *Baxter vs. Stewart*, 4 Sneed 213; and *Hughitt vs. Johnson*, 28 Fed. Rep. 865, (RHODES' JOURNAL, February, 1887, pp. 147, 148), is cited for the opinion of Judge Brewer who holds that a note is rendered non-negotiable by the incorporation therein of an agreement to pay the sum named "with exchange." This case, however, is overborne by the mass of authority cited by Mr. Daniel in his admirable work on Negotiable Instruments, Section 54, and note.

In *First National Bank of New Windsor vs. Bynum*, 84 N. C. 24, reported in 37 Amer. Rep. 604, the counsel fees and expenses of collection were promised, but were left altogether uncertain, and the time of payment, which is also important, was left to the option of the payees. There the note was held non-negotiable.

In *First National Bank of Stillwater vs. Larsen*, 60 Wis. 206, it is decided squarely for the defendants that a provision for the payment of 10 per cent. attorney's fees for collection destroys the negotiability of the note; and this decision is placed upon the authority of the opinion of Mr. Justice Sharswood in *Woods vs. North*, 84 Pa. State, 407, and *Maryland F. & M. Co. vs. Newman*, 60 Md. 54.

Justice Sharswood had to consider a 5 per cent. attorney's fee, and he intimates that it is possible the attorney might ask more, rendering the amount promised uncertain. It seems, however, the maker would not be liable for such excess. In the Maryland case which, from the high character of the Court, is entitled to very careful consideration, the promise was to pay all costs and charges for collecting the same, with interest, and the authorities *pro* and *con* are collated with the usual fairness of that distinguished tribunal. The Court there declares, "the cost and charges of collection could never with

accuracy be known until the collection had been made complete; and hence, by coupling the certain sum mentioned in the note with that which is uncertain, and treating the note as an entire contract, it is for an unascertained sum, and therefore uncertain on its face as to the amount promised to be paid. This as we have seen is not allowable in notes intended to be negotiable." Here the terms "costs and charges" were apparently understood by the Court and counsel to mean all the expenses of the litigation.

It will be, however, perceived that all of these cases, except that from Wisconsin, are distinguishable from the note before us. Here the promise is to pay 10 per cent. attorney's fees. This, I think, is definite and fixed, so far as the maker of the note is or can be affected, and the word "costs" imports the expenses of the suit which may be recovered by law from the losing party. Bouv. Law Dict. tit. "costs." This being the proper construction the words as to "costs" are merely surplusage because it follows necessarily that, in case of suit, the costs at law fall upon the losing party. See *Davis vs. State*, 38 Ga. 531; *Wetherbee vs. Kusterer*, 41 Mich. 359.

It follows then that the amount promised by the note is definite and fixed; the promise of the makers to pay 10 per cent. attorney's fees excludes the possibility that they could be held to pay more or less than that amount.

The note can very well represent money effectually, and there is no chance of mistake as to the amount of money of which it takes the place and performs the function, and this perfects its negotiability.

Mr. Daniel, in his work on Negotiable Instruments, before quoted, page 73, argues that when the amount of fees is fixed by a certain percentage or certain sum, as in many cases, the objection to the negotiability of the paper becomes exceedingly technical and sophistical, and it is only when their amount is left undetermined that such objection seems to be forcible. See also *Adams vs. Addington*, 16 Fed. Rep. 89. The waiver of exemption and homestead in a note does not affect the amount or the time of payment, and therefore does not affect negotiability. *Zimmerman vs. Anderson*, 67 Pa. St. 421; *Daniel Neg. Inst. Sec. 61, et seq.*

We think all the tendencies of the law have been to enlarge the rules relating to the negotiability of promissory notes. It was strenuously denied by Lord Holt that they were negotiable at all at common law, and he said that the effort to place them on the same footing as bills of exchange "proceeded from the obstinacy and opinionativeness of the merchants, who were endeavoring to set the law of Lombard street above the law of Westminster Hall." The merchants, however, had their way, and Parliament put promissory notes on the same footing with bills of exchange in the time of Queen Anne, (1705).

In this case we are the more inclined to hold the instrument negotiable, and maintain the jurisdiction of the Court, in the absence of controlling authority to the contrary, because upon principle it would seem that, where there are stipulations which provide for the payment of a fixed and certain per cent. for attorney's fees, and a waiver of those exemptions which tend to delay and defeat payment, such stipulations and waivers largely enhance the value of the note which is, after all, a main element of negotiability, and there is no reason, save the authority of certain State Courts, why the Federal Courts should deny to suitors otherwise competent to sue the right to collect these demands now so numerous, in the National tribunals. Besides, this is a question of general commercial law, and the Federal Courts are controlled by the general principles of jurisprudence, and are not bound by the decisions of the Courts of the State even where the Federal Court is held.

Demurrer overruled.

Schlesinger vs. Arline and o'rs, United States Circuit Court, S. D. Georgia, W. D. June 27, 1887.

ABSTRACT OF CASES.

PURCHASE OF OVERDUE NOTE—REPRESENTATION OF MAKER—ESTOPPEL.

Plaintiffs inquired of A, the maker of a note which was past due, whether he had given the note and whether it was all right. A replied that he had given the note, that it was all right, and that he expected to pay it the 1st of

January. Upon this information the plaintiffs purchased the note. In a suit by the plaintiffs against the maker—

Held, That A was estopped from pleading a failure of consideration even though at the time he made the representation he was unaware of the facts on which he based that defense. McIver, J., said: "When a person executes a negotiable note in favor of another, he thereby, in the eye of the law, invites the world at large to trade for it without inquiry into its origin or consideration, and no representation by him is necessary to fix his liability absolutely, no matter how defective the consideration may be. But when such a paper becomes past due, and thereby loses its negotiability, in the full sense of that term, and one wishes to trade for it, he is warned, by the fact that it is past due, that further inquiry is necessary, in order to fix the liability of the maker; and if he takes a transfer without such inquiry he must bear the consequences if the maker, when called upon for payment, is able to show that the consideration has failed, or that there is any other valid defense to the note. But if, before taking the transfer, he makes inquiry of the maker and learns from him that 'it is all right,' and is thereby induced to make the trade, it would seem that, upon the same principle, he ought to be protected. If the purchaser of a note strictly negotiable is protected because the maker has, by putting such paper in circulation, impliedly represented to any one who may purchase it that it is all right, it does seem that one who has purchased upon a similar representation, expressly made to him by the maker, should be entitled to the same protection. Any other view would operate a fraud on the purchaser, whether so intended or not.

"It is urged, however, that a representation to raise an estoppel must be a statement of existing or past facts, and not of something in the future—not a mere statement of opinion or intention; and it is argued that the statement relied on here was of the latter character. We do not so understand it. The defendant must necessarily have known, when the plaintiffs inquired of him with a view to purchase of the note, whether it was all right, that their object was to ascertain whether he had any defense or offset to it, and his reply can only be construed to be an assurance that he had none. The additional remark—'I expect to pay it in January'—relied on to show that the representation made was nothing more than a declaration to do something in the future, cannot be so construed in the connection in which it was used. If this remark stood alone, then possibly it might be so construed, though even then, when made in response to the inquiry whether the note was all right, it would be more properly construed as an assurance of the highest kind that the note was all right, and because it was all right he expected to pay it. But when considered in the connection in which it was used, we think it clear that the purpose of the additional declaration of an expectation to pay in January was simply to intensify his previous statement that the note was all right.

"Again it is urged that the representation to raise an estoppel must be made with knowledge of the facts, and that here the defendant did not, at the time the representation was made, know the facts upon which he based his defense of failure of consideration. * * * It seems to us clear that the representation relied on for the purpose of raising the estoppel was amply sufficient; and if, as we must assume from the verdict of the jury, the plaintiffs were thereby induced to trade for the note, the defendant is estopped from setting up the defense of failure of consideration as against these plaintiffs. Having assured them, when they were about to trade for the note, that it was all right, the defendant cannot now, when called upon to pay, be heard to say that the note is not all right."

Lites vs. Addison, Supreme Court of South Carolina, July 19, 1887.

PAYMENT BY NEGOTIABLE NOTE—WHEN DEBT IS DISCHARGED—THE QUESTION OF INTENTION.

The taking a negotiable note for a pre-existing account or note is *prima facie* a discharge of the old debt and a substitution for it of the new note. It is a question of intention, and the intention to discharge the old note is presumed where a different intention is not shown by the evidence or inferred

from circumstances. When it appears that it will be for the benefit of the creditor that the old debt should be kept alive, the presumption does not arise and the debt is not discharged. Accepting a negotiable note for a secured debt will not discharge the debt, because it will not be presumed that the creditor intended to give up his security (*Pomroy vs. Rice*, 16 Pick, 22; *Appleton vs. Parker*, 15 Gray, 173; *Dodge vs. Emerson*, 131 Mass., 467; *Green vs. Russell*, 132 Mass., 536), though the new note includes a new debt. (*Taft vs. Boyd*, 13 Allen, 84; *Hill vs. Beebe*, 13 N. Y., 556; *Brinkerhoff vs. Lansing*, 4 Johns, Ch. 65.)

Cotton vs. Atlas National Bank, Supreme Judicial Court of Massachusetts, Suffolk, September 7, 1887.

PROMISSORY NOTE AS PAYMENT—RENEWALS.

A promissory note given for a debt and notes given in renewal merely extend the credit, and do not, unless paid, discharge the debt or give any ground of defense to a suit founded on the original cause of action.

Fry vs. Patterson, Supreme Court of New Jersey, August 1, 1887.

NEGOTIABLE NOTE PAYABLE AT BANK—RULES AS TO PRESENTMENT, PROTEST AND NOTICE.

In an action by the holder against the makers and indorser of a negotiable note payable at a bank in West Virginia, the Supreme Court of Appeals of that State have decided the following points:

(1) *Proof of presentment at bank necessary.* Where a negotiable note is by its terms payable at a particular bank, proof of presentment at that bank for payment at its maturity is indispensable to a recovery in an action thereon against the indorser.

(2) *Presentment to Cashier at the bank.* In such an action it will not be sufficient to show that such note was presented for payment to the Cashier of the bank at which it is payable, unless it further appears that such presentment was so made to the Cashier at the bank.

(3) *Protest is prima facie evidence of facts stated therein as to presentment, dishonor and notice.* The true construction of Section 7 of c. 51 and of Sec. 8, c. 99 of the Code is that the protest of a negotiable note and other instruments mentioned therein shall be *prima facie* evidence of the facts "stated therein, or at the foot or on the back thereof, in relation to presentment and dishonor and notice thereof."

(4) *Nature of notarial certificate of protest.* The notarial certificate of protest is in the nature of *documentary evidence*; and the proper construction as well as the legal effect thereof as an instrument of evidence of the facts stated therein are *questions of law*, to be determined exclusively by the Court.

(5) *Due diligence.* When the facts are undisputed, what constitutes *due diligence* is a question of law, to be determined exclusively by the Court.

(6) *Due presentment or notice.* What constitutes "due presentment or notice" sufficient to charge an indorser are not, properly speaking, *facts*, but *conclusions of law*, to be drawn by the Court from undisputed or admitted facts.

(7) *Notice to indorser.* Where the indorser resides in the same city or town where the demand of payment was made, the notice to the indorser must be personal or left at his dwelling house. If he resides at a different place the notice must be sent to him by the first mail which leaves after the day of dishonor is passed, and does not close before early and convenient hours of the day succeeding the day of dishonor, directed to him at the place of his residence or at his nearest post-office, or to the post-office where he usually receives his mail matter, advising him of the protest.

(8) *Facts not stated in certificate of protest will not be inferred.* Where the only evidence introduced to prove presentment, dishonor and notice is contained in the notarial certificate of protest, the Court upon a demurrer to the evidence will not infer that any step was regularly taken or that any fact existed which is not certified to in such protest.

(9) *When certificate of protest insufficient to prove due notice.* Where such protest simply states that notice was addressed to the indorsers at a certain

place, without adding that such place was a post-office or residence of the indorser, the Court upon a demurrer to evidence will not *infer* that such was the fact, and such certificate is therefore insufficient to prove due notice.

(10) *The same.* Where such protest simply states that notice thereof was sent by mail to the indorsers, directed to their "several addresses," such certificate, in the absence of all other evidence, is insufficient to prove due notice.

(11) *Burden of proof of due steps taken to charge indorser rests upon plaintiff.* The burden of proof that due presentment of the note for payment has been made and due notice of the protest thereof given to the indorser, or that due diligence has been used to give such notice, rests upon the plaintiff; and clear proof upon his part of such presentment, dishonor and notice is a condition precedent to his right to recover against the indorser.

Peabody Insurance Company vs. Wilson and others, Supreme Court of Appeals of West Virginia, April 9, 1887.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.
A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement on another page.

Editor Rhodes' Journal of Banking:

CIRCLEVILLE, Ohio, Oct. 10, 1887.

SIR:—When is a draft, dated New York, October 6, 1887, payable one day after date, due? We claim it is due on the 10th. The payor says not, because it was not presented until then, and claims that the time commences to run from the day of presentment.

L. WELDON.

Answer.—The draft was due on October 10th. The time runs from the date of the draft, and not from the date of presentment.

Editor Rhodes' Journal of Banking:

YONKERS, N. Y., October 20, 1887.

SIR:—We enclose John Jones' note, endorsed by his wife, Jane Jones. Will you please inform us if the indorsement requires her to state that she charges her separate estate with the payment of the note. The Bank Examiner calls this single-named paper, and claims we could not hold her for the payment of the note.

PETER J. ELZING, Vice-President.

Answer.—Since the enactment of Chapter 381 of the Laws of 1884, we think the indorsement of "Jane Jones" would be sufficient to bind her without making an express charge upon her separate estate. Chapter 381 provides as follows:

"Section 1. A married woman may contract to the same extent, with like effect and in the same form as if unmarried, and she and her separate estate shall be liable thereon, whether such contract relates to her separate business or estate or otherwise, and in no case shall a charge upon her separate estate be necessary.

"Section 2. This Act shall not affect nor apply to any contract that shall be made between husband and wife."

Editor Rhodes' Journal of Banking:

MADISON, Neb., October 17, 1887.

SIR:—Should a notary attach his seal to all notices of protest, or will it do if he puts his seal on the protest and merely signs the notices as a notary. I have had an argument with our notary and want your opinion. This is a point which I find many disagree upon, and we have finally left the matter for your decision. * * * *

Answer.—According to the law-merchant it is no part of the official duty of a notary public to send notices of protest. If he does so, it is as the agent of the holder, and not as notary; and the notices are generally signed, "John Smith, Notary Public," without the addition of any seal. All the forms of notices by notaries public found in any of the books will be found to give the signature as notary without any seal. This being the case generally, is there anything peculiar in the laws of Nebraska to require a seal upon the notices of protest given by a notary? In Chapter 61 of the Compiled Statutes of Nebraska it is provided that the notary must have a seal, "with which seal, by impression, all his official acts as notary public shall be authenticated." In the enumeration of his powers the statute provides that he "is hereby

authorized and empowered * * * to demand acceptance or payment of any foreign, inland or domestic bill of exchange, promissory note, or other obligation, in writing, and to protest the same for non-acceptance or non-payment, as the case may be, and give notice to indorsers, makers, drawers or acceptors of such demand or non-acceptance or non-payment, etc.

Here it will be seen the statute authorizes and empowers the notary to give notice, and requires him to authenticate all his official acts with his official seal; and under this statute it might be claimed that the giving of notice being expressly enumerated by statute, it became an official act of the notary, requiring his seal. But, inasmuch as the rule of the law-merchant providing that notice may be given by any agent of the holder, not necessarily a notary, is not abrogated, the giving of notice by a notary, without the addition of his seal would in our opinion be regarded as sufficient as being the act of the agent of the holder, though not an official act as notary.

Editor Rhodes' Journal of Banking:

ROLFE, Iowa, Oct. 17, 1887.

SIR:—Is it customary for Chicago banks upon receiving sight drafts for collection, with a slip attached reading "no protest. Take this off before presenting," to tear off the "no protest" slip on the end and protest the draft, when the Cashier who sends it for collection has neglected to state in his letter not to protest? It seems to me the notice attached to draft should be sufficient notice that the draft is not to be protested.

C. A. GRANT, *Cashier*.

Answer.—Bankers take different views as to the sufficiency of the "no protest" slip as an instruction not to protest, when the letter enclosing the draft omits a direction to that effect. We have always taken the view that the "no protest" slip was a sufficient instruction, but there are many who tear it off, and disregard it unless a direction not to protest is contained in the letter. In the July 1886 number of the JOURNAL, there is an extended article on this subject, and the opinions of many bankers are published. There has been no legal decision directly on the question of the sufficiency of such a slip.

Editor Rhodes' Journal of Banking:

NASHVILLE, Tenn., Sept. 27, 1887.

SIR:—Brown ships car of merchandise to his own order, and makes draft (*No. protest*) at 3 days' sight on Jones, with bill of lading attached; then endorses draft and bill of lading, and sends to Smith for collection, requesting Smith to forward to Young. Smith receives, endorses draft, and forwards same (with bill of lading attached, *unendorsed by him*), to Young for collection and return.

Young receives items, Jones accepts draft, and bill of lading is delivered to him.

Has Jones any legal right to bill of lading till draft attached is paid? Is Young liable for amount of draft if he detach and deliver bill of lading upon the mere acceptance of draft? Is Smith liable in any way for amount, in case Jones fails and cannot pay his acceptance? If not, to whom should Brown look for his pay, or return of bill of lading?

MERCHANT.

Answer.—Under the ruling of the Supreme Court of the United States in *National Bank vs. Merchants' Bank*, 91 U. S., 92, the collecting agent is authorized, in the absence of special instructions, to surrender the bill of lading to the drawee on his acceptance of the draft, and it is not his duty to hold the bill of lading after the acceptance for the payment. If the shipper wants the bill of lading held until payment, he should give special instructions. Where none have been given, the collecting agent cannot be held liable for a neglect of duty on surrendering the bill of lading on acceptance, and in case the acceptor fails the shipper must look to his estate for payment.

Editor Rhodes' Journal of Banking:

PEABODY, Kans., Oct. 10, 1887.

SIR:—Suppose A executes a note payable to B thirty days after date, dated October 9, 1887 (it being Sunday), and delivers it the following day, will this make it valid? I contend it does not. Will you please give me your opinion, under the laws of Kansas. By so doing you will greatly oblige

E. W. DEIBLER, *Cashier*.

Answer.—Under the laws of Kansas the note is valid. *Johnson vs. Brown* 18 Kan., 529.

FINANCIAL MATTERS IN CHICAGO.

[From the Journal's Chicago Correspondent.]

The money market in this city has grown easier this month, particularly the latter part of it, though there is no change in the rates quoted by the bankers. The case is discoverable more in the willingness to lend on local stock and bond collateral than by any other sign. There is an excellent mercantile demand. The rate for call loans is 6 per cent., and time loans are made at 6, 7 and 8. The bankers are holding large reserves in view of another possible period of stringency and the certainty of a large demand from the packers in November and December. The banks of the Northwest are sending in more paper for rediscount than most of the bankers care to take, but the requirements of the country towns for carrying wheat are comparatively small. Less Chicago capital is now used for carrying grain than for many years. Our elevators are comparatively empty; and as for other markets, the farmers are withholding their wheat from them to a great extent and keeping it in their own granaries. There is a good demand for paper on the street, but buyers discriminate sharply between the good and the questionable. The deposits at the banks are not varying very much, but nearly all our institutions are getting new accounts in large numbers from parts of the country which have heretofore done their business elsewhere. This is partially due to the operation of the new reserve law, but more to the increasing importance of Chicago.

Early in October the banks were ordering considerable quantities of currency from New York, but of late the movement has been small. Exchange has ruled from 75 cents discount per \$1,000 to par. As for the movement of currency to the country towns from this city, it continues smaller than last year. Probably not over two-thirds as much has thus far been sent out as at this time in 1886. It is still a matter of comment among the bankers that the money which goes out every year comes back slowly, and much of it not at all. A leading banker expresses the opinion that not over 25 per cent. of the currency that has been sent to the country towns in the last two years has returned.

The security market has been very dull with a decided downward tendency, but bank stocks hold up better than anything else, as it is known that the banks are making money fast. National Bank of America has sold at 140, first National at 240, and National Bank of Illinois at 180. The Gas Trust certificates have fluctuated violently on a small volume of business. An injunction having been applied for to prevent the issue of the \$10,000,000 5 per cent first mortgage bonds of the Chicago Gas Light & Coke Company, the certificates declined the latter part of the month to about 85, but on the belief that the injunction proceedings would not amount to anything they have since advanced to 42, reacting, however, to about 40. There is a considerable demand for these securities from New York. The stock of the West Division Street Railway has recently sold at \$570 a share. It is yet uncertain whether the Philadelphia syndicate will get control of the property. The Pullman Car Company makes a remarkably good showing in its annual report, having a surplus of about \$6,000,000. The issue of \$1,000,000 more of stock has been authorized, probably for the purpose of getting control of the Baltimore & Ohio special sleeping-car service.

Most of the leading stock speculators of Chicago have been bears for a month or more, but of late some of them have changed their tactics. N. S. Jones is supposed to have made a large amount on the short side, also N. B. Beam, but they have both probably covered most of their stocks. There have been many sales of investment stocks by the western people, owing to the recent uncertain course of prices and the fear of trouble.

Merchants agree that trade is in good condition in this city. Sales of goods are larger than in any other year in the history of Chicago. Complaint is made that profits are small, but collections are pretty good. Many new areas of country have recently been opened to the merchants of Chicago, and the prosperity of the smaller towns farther west contributes to our wealth.

H. C. B.

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

Secretary of the American Bankers' Association.—On October 18th, last, the Executive Council of the American Bankers' Association elected Mr. W. B. Greene Secretary of the Association from and after November 1st, in place of Dr. Geo. Marsland. Mr. Greene was for fifteen years in the office of Comptroller of the Currency at Washington, as chief of division, and is in every way fitted for his new position.

Pardon of a Defaulter.—It is said that a petition is about to be circulated for the pardon of W. E. Gould, the defaulting Portland bank Cashier, on the ground that he did not run away, but did all he could to repair the injury to the bank, and that his punishment has already served its purpose.

Old Bank Note.—The Bronson Library, of Waterbury, Conn., has received a \$50 bank note on the once noted Eagle Bank of New Haven. It has no intrinsic value, but would bring much more than it represents from collectors. The celebrated failure of the Eagle Bank is still remembered by the older residents of New Haven, Conn.

The London Bankers' Magazine for October continues the series of Biographies and Portraits of distinguished English Bankers, with a portrait and biography of Robert Ruthven Pym, of Coutts & Co. The portrait is an exceptionally fine one, and the biography appropriate and interesting, giving in brief an excellent idea of the kind of man Mr. Pym is.

Dividends of Boston Banks.—The dividends of the Boston banks for the six months ending October 1st, show a more profitable business than during the preceding six months. The total amount paid in dividends for six months ending April 1, 1887, was \$1,411,250, and for six months ending October 1, 1887, \$1,583,750. The capital was the same in each case.

Mr. E. H. Walker, for many years statistician of the New York Produce Exchange, has joined the editorial staff of Bradstreet's, the well-known commercial and financial newspaper published in New York, to which he will give his exclusive services. Mr. Walker is well informed on the statistics of grain, flour, provisions, live stock and kindred lines. He is the author of complete records of this kind and the inventor of the "visible" grain statement.

Demand for Minor Coins.—The Mint officials say that the demand for minor coins this year has surpassed that of any year within the recollection of the oldest employe. Last year \$391,147 in cents, \$552,376 in nickels, and \$1,005,279.50 in dimes were coined in Philadelphia, and yet the Mint is now \$70,000 short on orders for small coins, and cannot catch up with the demand. The increased demand for them is doubtless due to the development of the country, and also to the fact that they are used to an extent never known before, especially in the South and West.

The Active Greenback.—"Stone walls do not a prison make, nor iron bars a cage," sang the stout package of greenbacks in the dreary obscurity of the bank's vaults.

"Don't make such a noise!" cried the bundle of registered bonds next to it.

"Stuff!" replied the greenbacks. "You can't get out because you're not negotiable, but I have a particular little engagement with the cashier to-morrow night."

And it was kept.

Recovery by Receiver.—By a recent decision of the United States Court at Rutland, in the case of Receiver Watson of the First National Bank against Albert Sowles and his Assignees, the Receiver scores a victory for the bank and gets hold of \$15,000 in real estate and \$3,000 in personal property, for the benefit of the bank's

creditors. The defendant's threaten to appeal the case to the United States Supreme Court, but the Receiver looks for no different decision there. The \$23,000 will help materially toward the dividend for which the depositors have been waiting for some time.

Sale of President Phillips' Library.—The law and miscellaneous library of President Phillips, of the Columbian Bank, was recently sold at a price far in advance of the appraisement. The valuation placed upon it by the appraisers was but \$650, while the proceeds of the sale in round numbers amounted to \$1,750.

The excess of the sale over the appraisement was caused chiefly by the fact that the books were appraised very hastily, without sufficient time to examine them, and much of what appeared to be old rubbish was really valuable. This was particularly the case with a lot of old pamphlets, some of which were publications dating as far back as 1731. One of these pamphlets sold for \$50, while many others brought good prices.

Run on a Leadville Bank.—On October 15th there was a heavy run on the Carbonate Bank at Leadville, caused by wild and alleged malicious statements. There was great excitement and a wild rush by depositors, but the bank remained open until 5 o'clock to show depositors that the officers felt equal to the emergency. C. B. Kountze, President of the Colorado National Bank, of Denver, was in correspondence with the Carbonate Bank, and said they were honoring all drafts and would continue to do so. He said the rumors were caused by an enemy of the Carbonate Bank. State Treasurer Peter W. Breene stated that the Carbonate Bank was solvent, keeping on hand a reserve fund of 45 per cent. The State Treasurer had \$45,000 in the bank, and said he would leave it there.

Banking in Dakota.—"Yes," said the good Boston lady, "my son lives out in Dakota, and is, I think, doing a good work for his town."

"Is he in the ministry?"

"Oh, no; but he has been running a bank there for the last five years—a Savings bank, I take it, and must certainly do a great deal toward preventing the poor people from spending their money foolishly, as I know he is very enthusiastic about anything of the kind, and says his bank sometimes has more business than it can do. But the poor boy has discouragements after all; only last week he wrote about one of his dealers stealing \$50 of the rake-off, whatever that may be."

Return of Comptroller Trenholm.—The Comptroller returned from his vacation on October 8th, and immediately issued a call for a report of the condition of the National banks at close of business on October 5th. It is anticipated that these reports will be of unusual value for the additional light they will throw upon the amount and stability of the reserves of the new reserve cities of the West. The law requires the Comptroller to call for at least five reports during the year upon past dates. As a rule three reports showing the condition of the banks during the winter and spring, one during the summer, and one in the autumn are called for. The dates vary a little, but the general order is observed. From the date of the Comptroller's call about a month is required before an abstract of the reports is completed.

Count Mitkiewiez is one of the boys, a real buster, whose character has been extensively discussed of late in the papers. By gad, the T. C. remembers well when Eugene came here first, fifteen years ago, and raised the deuce generally. The count was short of funds at that time, and was compelled to negotiate a loan of \$500 from a butcher on the overland train. Being rather slow in settling up, the butcher pitched into the count in the hall of the Occidental Hotel, and the newspapers had a delicious scandal. Even the paper which devoted several columns to the count and his career has forgotten to look back over the files. The lads used to say that the count was Irish, Micky by name and lived by his wits. 'Twas a poor pun, but when the count heard it he swore a mighty Russian oath that it was superb, and opened the wine like a true nobleman.

The Secretary of the Treasury, following up his policy of affording all possible relief to the money market, has authorized certain well known banks that are willing to deposit large amounts of fours as security to hold deposits to the extent of \$1,100,000 on every \$1,000,000 of such bonds deposited. The New York city banks so far accepting this offer, are the American Exchange, the Western, the Bank of Com-

merce, the Chase, and the National Bank of the Republic. The Third National Bank of Cincinnati has also availed itself of the opportunity. Any other bank able to put up a million dollars in four per cents. can secure deposits on similar terms. Why \$1,000,000 of four per cents. is any better security for \$1,100,000 of deposits than \$100,000 of fours would be for \$110,000 of deposits, or \$10,000 of fours would be for \$11,000 of deposits, is difficult to see.

Omaha Banks.—The special edition of the *Omaha Daily World* of August 15th, devoted to booming the various business interests and industries of that city, states that there are eight National banks, five private banks, and one Savings bank in Omaha. No bank has failed there for over a quarter of a century. The cause is stated to be the steady prosperity of the city, the conservatism and ability of her bankers, and their refusal to encourage or participate in speculation. The deposits in the National banks have grown from \$2,206,000 in 1877, to \$12,772,000, and their capital has grown from \$480,000 in 1878 to \$2,970,000 in 1887. The capital of the private banks is \$290,000, and their deposits \$700,000. There are two banks at South Omaha, one National and one private, their capital is \$90,000, and deposits \$184,000. The paper also gives cuts of three very fine buildings recently erected by banks of the city.

Excitement at the Treasury Department.—A persistent and cantankerous claim agent named Manning meeting Mr. MacLennan, the Chief of the Warrant Division, in the ante-chambers of the Secretary's office, accused him of accepting bribes to expedite claims. Mr. MacLennan immediately attacked Mr. Manning and proceeded to knock him out. The latter, in great disorder, burst into the Secretary's room and rushed up to that official for protection. Secretary Fairchild was at that time engaged in discussing the silver question with a distinguished foreign nobleman, Lord Herschel, of England. The wild and discomfited Mr. Manning attracted Mr. Fairchild's attention, and as the Secretary had previously had some unpleasant interviews with the claim agent, he imagined that the latter had turned cranky and was seeking for blood. The instinct of self-preservation came to his aid, and gazing sternly on the supposed assailant, he said: "Put it in writing, sir."

Costly Bank Stock.—The Farmers' National Bank, of Constantine, Mich., recently came into possession of ten shares of stock belonging to its absconding cashier. Under the law a National bank taking its own stock for debt is obliged to sell the same within six months from the date of its acquisition. The stock had a real value of \$180 per share, and was sold at public auction. There were two factions among the stockholders, each struggling for the control of the bank, and the one that acquired the ten shares would obtain the desired pre-eminence. The shares of stock having a par value of \$1,000 and a market value of \$1,800, sold under this competition for \$44,350. Of course the premium paid goes into the undivided profits of the institution, and each stockholder will receive his pro rata proportion of it either in dividends or in the increase value of his shares. There was, therefore, not so much loss, as might at first appear, to the controlling faction in the high price they paid for the shares.

The Oldest Bank President.—Referring to the item that Adam Spraker, of Fonda, N. Y., President of the National Mohawk River Bank, is the oldest bank President, an exchange gives the following account of Nicholas H. Ridgely, President of the Ridgely National Bank, of Springfield, Ills. He was born April 29, 1800, and has served as an officer in a bank continuously since 1823, a portion of the time serving as President and Cashier of two different banking institutions. He commenced his banking career as Cashier of the United States Bank (St. Louis branch) in 1823, and in 1835 removed from St. Louis to Springfield, Ills., where he was placed at the head of the State Bank of Illinois, remaining as its Manager until 1840. He then conducted a private bank until 1866, at which time the Ridgely National Bank was organized. Mr. Ridgely is still in possession of all his faculties, and can daily be found at the bank performing his duties as President. He is a man of extraordinary intelligence, and has amassed a large fortune as the result of his connection with monetary institutions.

Distribution of Surplus.—Secretary Sherman is said to favor a plan for the distribution of surplus revenues among the States. This plan has many good points and many of those who attack it seem to do so for very insufficient reasons. The main argument against it seems to be a reiteration of the story of the panic of 1887; as if that was to be ascribed to the mere distribution of the surplus among the States. This

panic was in some measure due to the deposit of Government moneys without adequate security with irresponsible State banks, that failed as soon as they were ordered to pay the money over to the States. If the deposits had been secured by Government bonds deposited by strong banks, the mere turning over of the money to the States would have caused no panic. Neither was the panic caused by any expansion consequent on the States receiving the money because it commenced before the States had any opportunity to use the funds they managed to get hold of. Another objection made to the plan is that taxes should not be taken from the people simply to return them again, as the expense of the proceeding is a dead loss. But, if a protective tariff is a benefit to the country, such benefit more than compensates for the loss in collection and returning the revenues; besides there is the advantage that the money received from the United States Treasury would enable the States to reduce their own home taxes. The real objections to the plan as heretofore pointed out in the JOURNAL are, first its doubtful constitutionality, and second the undue increase of power it would give to the central Government at the expense of the States. The latter would in time become mere dependants of the Federal Treasury.

The Robbery of the Dexter Bank.—The confession, or fabrication, of Chas. F. Stain brings up again for public discussion the mysterious death of John W. Barron, Treasurer of the Dexter Savings Bank, of Dexter, Me. On the evening of February 22, 1878, he was found lying bound and gagged in the Savings bank. He died about six o'clock the next morning. At the time there were two opinions of the occurrence. Barron was at first regarded by all as a hero, who had given up his life rather than surrender the funds of the bank. But about a year after the occurrence, the bank officers became impressed with the belief that Barron was a defaulter who had committed suicide to avoid disgrace. It was alleged that false entries were found on his books, and in December, 1879, suit was brought against the executors of his estate to recover an alleged defalcation of \$6,000. Auditors were appointed by the Supreme Court, who reported the balance due the bank to be \$2,011. Of this sum, \$567.91 was interest, \$373 cash short, \$650 for special deposits made but not entered by Barron, \$530 charged by Barron for a United States bond, but not purchased. Stain's confession is that his father, David Stain, with four others, named Cromwell, Andrews, Kelly and Thompson, were the bank robbers and murderers. Andrews, Kelly and Thompson have proven satisfactory alibis; but there is some evidence which corroborates young Stain's statements as to his father and Cromwell. The old discussion still goes on; many discredit the confession altogether, and adhere to the suicide theory. It is possible the trial of Stain and Cromwell may throw some light on the matter, although it is very evident already that much of the younger Stain's confession is untrustworthy.

The details of the case were stated at length, and the evidence analyzed, in the JOURNAL for April, 1879, in which number a portrait of Mr. Barron was given.

Dansville National Bank.—General Lester B. Faulkner, ex-Director of the Dansville National Bank, who was arrested for complicity in the frauds that resulted in the failure of the bank, had a hearing before United States Commissioner Fairchild at Buffalo on October 11th and 12th. Bank Examiner Getman was the chief witness. He testified that he had examined the affairs of the Dansville Bank in November, 1886, and in May, 1887. On August 27th he took possession of the bank, acting on an order from the Comptroller. At first he had some difficulty in finding any of the bank's officers, but at last he obtained the keys from Cashier Kuhn. After a week he met Gen. Faulkner, but had not seen James Faulkner then or since. He discovered that the bank's books, which he had seen on previous visits, were missing. Witness had held conversations with defendant on various occasions and he (defendant) seemed anxious about the condition of the bank. Witness had pointed out to defendant direct violations of the law in the management of the bank, such as loans to stockholders in excess of 10 per cent. of the capital stock. He found defendant's account was \$15,000 in excess, James Faulkner's \$10,000, and Director Williams's \$10,000. The loans from outside banks were \$30,000 in excess of the amount prescribed by law. All this was at witness's first visit, and at the second visit things were in a worse condition. Loans from banks had been increased to \$90,000, James Faulkner's account was \$35,000 in excess of the law, Lester B. Faulkner's \$17,000, and Mr. Williams's \$23,000. At that time witness read to Gen. Faulkner a letter from the Comptroller of the Currency, which stated that while that official appreciated the difficulties under which the defendant

then labored, he declined to take any further risk. The letter also said that unless there was an immediate straightening of the affairs of the bank a Receiver would be appointed. Mr. Faulkner was advised to procure a long loan on the property of his family, and put the bank on a sound basis. This letter was read to both James and Lester B. Faulkner. The latter said in reply that he must know the true condition of the bank before he could act intelligently. He acknowledged the excessive loans and urged his brother to make a true statement, as he could not rely on the balance sheet. Defendant thought we were pressing him very hard, as the excessive borrowing had been a necessity. He also intimated that he was being persecuted by some party. Acting on witness's suggestion, defendant had gone to Washington on May 30th and had seen the Comptroller. This visit resulted in extra time being granted to the bank. Mr. Getman thought that the signatures of defendant on the bank's statements were genuine. After the failure he found the assets of the bank to be as follows: Cash and cash items, \$1,200; notes and bills discounted, \$8,400. The liabilities were \$175,000. The Commissioner ordered Gen. Faulkner to be held for the Grand Jury.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- There is a business boom in New Orleans.
- The Canadian Postal Savings banks hold \$20,000,000, owned by 90,000 depositors.
- The number of United States National bank depositories on October 15th was 225.
- Southern papers are full of reports showing the growing prosperity of the South.
- Reports from the South indicate a good demand for money, but no special stringency.
- The Malden National Bank of Malden, Mass., occupied its new building about October 1st.
- The business of the banks at Little Rock, Ark., indicates great business activity at that point.
- The Traders' National, of Boston, will move into new quarters, at No. 83 State street, about January 1, 1888.
- The Carbonate Central Bank of Leadville, notwithstanding the run upon it on October 15th has met all demands.
- Hon. Samuel J. Randall predicts that within less than a generation the South will be the richest half of the Union.
- The three per cent. water stock of New York city recently placed on the market was taken at a slight premium.
- C. F. Maurice, of Sing Sing, formerly President of the First National Bank of that place, has had a stroke of paralysis.
- A new bank building is in process of construction for a National bank to be organized at West Berkley, Alameda County, Cal.
- The various methods of calculating the reserve of National banks were fully set forth in the July, 1883, number of the JOURNAL.
- Brown Brothers & Co., of Philadelphia, recently occupied their new building at the southeast corner of Fourth and Chestnut streets.
- Judge Collins, of Chicago, has decided that the bucket shops cannot be prevented from obtaining the quotations of the Board of Trade.
- The J. C. Baird & Co. Bank, of St. Charles, Ills., was robbed of \$10,000 the night of October 15th. The safe was blown open with dynamite.
- The City of Boston proposes to have a Bourse modelled on the plan of the Bourse at Hamburgh. All industries are to be represented.
- H. R. Forbes, of Forbes & Co., private bankers and brokers, of Toronto, Canada, left that city on October 17th under suspicious circumstances.
- Colonel Tower, of the Boston banking firm of Tower, Giddings & Torrey, has given \$35,000 for a public library building at Lexington, Mass.
- The losses of the Union Trust Company of Philadelphia by the defalcation of James N. Taggart, the Paying and Receiving-Teller of the company, including

attendant expenses incurred, foot up \$37,277.07, or \$279.80 more than the net undivided profits. The surplus fund amounts to \$85,000.

— The stockholders of the Columbian Bank of Philadelphia are to be held liable for the losses of the creditors. It turns out to be a bad failure.

— Mr. E. H. Harriman, of the firm of E. H. Harriman & Co., of New York city, has been elected Vice-President of the Illinois Central Railroad Company.

— The Receiver of the Pacific National Bank of Boston has compromised the claim of the bank against the Utah & Pleasant Valley Railroad for \$33,000.

— Mr. William A. Camp, Manager of the New York Clearing-House, is ill of a fever caused by a cold and overwork. It is denied that he is dangerously ill.

— After much talk of reorganizing the First National Bank of Corry, Pa., which failed in September, the Comptroller of the Currency finally appointed a Receiver.

— The Clearing-House Association of the Philadelphia Banks on October 3d, adopted a memorial on the death of Mr. Joseph Patterson, President of the Association.

— Stephen W. Rawson, President of the Union Trust Company of Chicago, was recently shot by his step-son. There is a chance that his wounds may not prove fatal.

— The Comptroller of the Currency, on October 17, appointed Charles M. Joslyn, of Hartford, Conn., Receiver of the Stafford National Bank of Stafford Springs, Conn.

— The Stafford Springs Savings Bank, has been examined by the State Bank Commissioners and found to have lost nothing by the failure of the National bank of that place.

— *Mammon* is the name of a new daily financial paper to appear in Wall street, Mammon, as applied to money, is a term of abuse; as if one should call money dross or filth.

— Vice-President Stevens, of the Columbian Bank of Philadelphia, resigned his position some time before the failure of the institution, because he knew it was badly managed.

— Chief Brooks, of the Secret Service, recently ordered the destruction of a large amount of "business college currency," which was printed in too close imitation of real money.

— C. Stuart Patterson received a letter, signed by a number of bank Presidents of New York city, expressive of their high regard for his father, the late Joseph Patterson, of Philadelphia.

— Mr. Edward D. Adams, of Winslow, Lanier & Co., of New York, is interested in art. He is endeavoring to secure a fund of \$200,000, to carry out a plan for the encouragement of American art.

— The Yale National Bank of New Haven, Conn., having lost \$40,000 by E. S. Wheeler & Co., reduced its semi-annual dividend from $3\frac{1}{4}$ to 1 per cent. rather than use the surplus of \$185,000.

— The Farmers' Bank at New Castle, Del., was entered by masked robbers on September 20th. The Cashier fired at them and drove them off, wounding one of the burglars. They got nothing.

— A man traveling in Maine gets people to sign alleged pledges that they will not kill a bird for one year. The pledges, it is said, turn out to be promissory notes in the hands of innocent third parties.

— A Mrs. Jennie Thorley attempted to have a forged check for \$15,000 on the New Orleans National Bank cashed at the National Exchange Bank at Lynchburg, Va., on September 20th. She was arrested.

— Mr. J. G. Martin, of Boston, has compiled a book giving the Debts of New England and other States, and of the principal cities, counties, towns, etc., with full information in regard to such debts.

— Columbus Delano, Secretary of the Interior under Grant, is said to have secured the success of his bank at Mount Vernon, O., by charging six per cent. only, when eight was the legal rate. Of course he was a popular banker.

— T. J. Fuller, an aged citizen of Jackson, Miss., buried \$16,000 in gold during the war. His nephew and a negro dug it up and divided the money. The negro was

arrested and informed on the nephew. In the meantime Fuller died, and the case was compromised by the payment of \$2,000 and costs.

— Arthur H. Snell, Teller of the Fulton Bank of Brooklyn, paid out \$2,824.98 on worthless checks. His confederates in robbing the bank were Ward C. Hepburn, R. H. Johnson, Edward Tomler. All except R. H. Johnson are in jail.

— The British Government recently commissioned Mr. G. Jenner to prepare a report on opportunities for the investment of English capital in Mexico. He has made a report which is of great importance to American as well as English investors.

— The law limiting the jurisdiction of the United States Courts to cases involving at least \$2,000, without interest, though intended to reduce the volume of business in those Courts has had the effect of cutting off much small credit dealing between the East and West.

— Mr. James V. Watson, President of the Consolidated National Bank of Philadelphia, was, on October 4th, elected President of the Clearing-House Association of that city. He succeeds the late Mr. Joseph Patterson, and is the oldest bank president in the Association.

— William Herbet, former President of the First National Bank of Glenrock, Penn., was sentenced on October 17th to five years' imprisonment for embezzling the bank's money. Jacob S. Herbet his son was sentenced to a similar term for aiding and abetting his father.

— The gross exchanges of the thirty leading Clearing-Houses of the United States for the month of September, 1887, were \$4,086,357,842 of which \$1,391,113,472 were outside of New York. For the month of September, 1886, the total exchanges were \$3,861,528,489 of which, \$1,255,728,682 were outside of New York.

— The Master to whom the Court referred the accounts of the Penn Bank of Pittsburgh, which failed five years ago, submitted his report on September 10th. He found W. N. Riddle, M. K. McMullen and J. P. Beal responsible for the failure of the bank, and recommended a decree against them for \$765,091.88.

— John R. Mulvane, President of the Bank of Topeka, Kan., was at the Convention. His bank is the largest in Topeka. Mr. Mulvane understands thoroughly the banking wants of his section of the country, and the success of his institution is largely due to his management. He took a prominent part in the debate in the Bankers' Convention on Thursday.

— A Washington correspondent says, that unlike Mr. Manning, Secretary Fairchild advocates every plan to put out money, and adds: "To Mr. Fairchild's influence is properly due the rapid extinguishment of the 3 per cent. debt." This is unjust to Mr. Manning. If we wished to be as unfair to Mr. Fairchild as the correspondent is to Mr. Manning we might suggest that there was no such money stringency under Mr. Manning as there has been under Mr. Fairchild.

— O. M. Carter, President of the National Bank of Ashland, Neb., introduced an important resolution in the Convention at Thursday's session. It is printed in full elsewhere. The object was to secure some light as to the systems of State banking now in operation in the several States, and to attempt, through the medium of the American Bankers' Association, to have the States adopt some uniform law in which all the best features of the existing banking laws, State and National, are to be embodied.

— The United States Grand Jury at Cincinnati has found a number of indictments against those who wrecked the bank. Among them five indictments fifty-seven counts against Vice-President E. L. Harper; against Cashier Ammi Baldwin four indictments with fourteen counts; Josie Holmes, four indictments five counts; Ben. E. Hopkins, Assistant Cashier, four indictments forty-eight counts; J. W. Wilshire, four indictments eleven counts. W. H. Chatfield and Henry Payne have also been indicted for signing false returns to the Comptroller.

Debt of Canada.—The monthly statement of the public debt of the Dominion shows a decrease for September of over \$1,000,000. The net debt on August 31st was \$228,494,461, and the net debt on September 30th was \$227,341,475, a decrease of \$1,152,986 during the month of September. The monthly statement of revenue and expenditure shows an excess of revenue for September of \$1,248,684.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

DOMESTIC EXCHANGES.

Editor Rhodes' Journal of Banking:

I have read with much interest some of the articles on Domestic Exchange which you have published. I have not sufficient leisure at command to read them *all*, nor compare them one with another, with that care that should be bestowed on them by one undertaking to decide upon their relative merits; so that I do not propose to act as a juror in this case. But there is one aspect of the matter, mentioned in the progress of the discussion, which I desire to *emphasize*. I refer to the method of dealing with "collections sent;" a kind of paper which all banks are compelled to handle in large volume.

I keep an account in St. Louis and New York—these are sufficient for my needs, why should I keep others? If I receive a collection on points easily reached by my correspondents in these cities, I ask them to collect for me. For instance, I have a piece of paper payable in Louisville, Ky.; my St. Louis correspondent keeps an account in Louisville, and my St. Louis correspondent can easily collect through his Louisville correspondent. But if I have a bill on Lexington, Ky., it is asking altogether too much to ask my St. Louis correspondent to collect from a point at which he keeps no account. My excuse might be that I keep no account at Lexington; but neither does he, and why should I not attend to my own business rather than shove it off on him?

My New York correspondent, it is to be supposed, keeps an account in Philadelphia. I, therefore, send to New York my Philadelphia bills, because my New York correspondent having a Philadelphia account can make my Philadelphia collections at a minimum of expenditure. But if I have a bill on Richmond, Va., I never think of unloading it either on St. Louis or New York. I deal directly with Richmond, and ask the payer to send me a New York bill.

Remarks in this line could be extended indefinitely, and illustrations given in great quantity, but the above will suffice to give my meaning.

Unless they can be made without extraordinary trouble, and unless they can be made in the ordinary course of DIRECT dealing between YOUR correspondent and HIS correspondent, you should never trouble your correspondent with them.

I have actually handled the following cases:

A commercial traveler in Arkansas drew for \$5.00 on his employers in a country town in St. Charles County, and his bill took this journey: Fort Smith, Kansas City, St. Louis, St. Charles. Why did not Fort Smith send direct to St. Charles? Was it laziness? Was it because they were in a rut and did not have energy enough to get out of it?

A Connecticut company held paper on a St. Charles company, and it went this round: Hartford, Chicago, Kansas City, St. Charles. (It is a wonder it did not go through St. Louis).

A dealer in Vermont drew on his customer in St. Charles, and his paper took this trip: Barre, Vt.; Chicago, Kansas City, St. Louis, St. Charles. (Why not give New York a chance at it?)

An American lady in Paris drew on her banker in St. Charles, and her check was sent by American Exchange in Paris to American Exchange in New York, and (though the St. Charles banker was the local correspondent of American Exchange) was deposited in a New York city bank and went to Kansas City, St. Louis, St. Charles.

A man sent to Minnesota his check on his St. Charles Bank, and it went to Minnesota, Shelbyville, Ky.; Louisville, Kansas City, St. Louis, St. Charles—actually passing through St. Louis twice before reaching St. Charles.

In these cases why did not Fort Smith, Hartford, Barre, New York, Shelbyville, send direct to St. Charles? Why burden the intermediate banks with labor and expense of handling these bills? Every bank that touched them lost money by the

border very close upon dishonesty, may enrich themselves at the expense of their fellow share-holders; but such instances are comparatively rare, when we regard the whole volume of railroad operations in the country. In stating that the relative volume of speculation is over-rated reference is made to speculation pure and simple, and not to the large mass of legitimate transactions which take place on the floor of the exchange, for the great bulk of the stock exchange business consists of the actual buying and selling of valuable properties, either for investment or for holding for higher prices at a future time. The point that is insisted upon is that too much importance is ordinarily attached in newspaper articles to the influence of speculation upon legitimate trade, and the laws by which the course of that trade is affected.

NEW YORK, October 23, 1887.

COMMERCIAL.

UNIFORMITY OF LETTER HEADS.

Editor Rhodes' Journal of Banking:

SIR:—I am much pleased with the movement on foot to secure more uniformity in the forms of checks and drafts and heartily wish the Chicago Bankers' Club the greatest success in their efforts. At the same time I could wish that some one, speaking with authority, would undertake to induce the banks to adopt some uniform style of letter heads, or at any rate, if not adopting a uniform style to do away with many of the cumbrous and inconvenient forms now in use. Some banks overlay their letter heads with all sorts of requests which the receiving bank must attend to at its peril. Others indulge in the luxurious use of ornamental type, with curious and wonderful arrangements thereof. Some put the Cashier's name at the top of the letter, some in the middle, and some put it at the bottom. It would certainly be a vast saving of time to the clerks generally, if letter writers would adopt a plainer style of letter heads, and would work into some convenient and uniform size.

J. S.

BALTIMORE, October 18, 1887.

Report of New York State Banks.—The summary of the condition of the banks of the State of New York, on September 17th, shows the following:

RESOURCES.		LIABILITIES.

STATE OF NEW YORK, BANKING DEPARTMENT,
ALBANY, September 29, 1887.

I certify that the preceding statement is an abstract of the quarterly reports made to this department by the several banks, banking associations, and individual bankers (as far as was practicable to arrange the items of the several reports under general heads), in pursuance of the third and fourth sections of the act entitled, "An act to abolish the office of Bank Commissioner, and for other purposes," and the acts amendatory thereof and additional thereto; together with the summary thereof, according to law.

WILLIS S. PAINE, Superintendent.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

NOTE.—We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this department.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report. Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.

- 3794—Howard National Bank, Howard, Kansas. Capital, \$50,000.
 3795—National Bank of Paola, Paola, Kansas. Capital, \$100,000.
 3796—First National Bank, Clarion, Iowa. Capital, \$50,000.
 3797—First National Bank, Clayton, New York. Capital, \$50,000.
 3798—First National Bank, Sanford, Florida. Capital, \$50,000.
 3799—National Bank of Dayton, Dayton, Washington Territory. Capital, \$50,000.
 3800—Bronson National Bank, Painted Post, New York. Capital, \$50,000.
 3801—Central Nebraska National Bank, David City, Nebraska. Capital, \$50,000.
 3802—Citizens' National Bank, Orlando, Florida. Capital, \$50,000.
 3803—McPherson National Bank, McPherson, Kansas. Capital, \$100,000.
 3804—Burrill National Bank, Ellsworth, Maine. Capital, \$50,000.
 3805—First National Bank, Jetmore, Kansas. Capital, \$50,000.

ALABAMA.

- ANNISTON.**—Ledbetter & Co. Land & Loan Association (incorporated) is reported here. Capital, \$100,000.
BIRMINGHAM.—Central Trust Co. is reported here. President, Thos. B. Lyons; no Cashier.
CULLMAN.—Parker & Co. are in business here.
FLORENCE.—C. H. Patton & Co. are in business here.
MONTGOMERY.—J. R. Adams & Co.; succeeded by J. B. Trimble & Co.

ARKANSAS.

- BEAR.**—Miners' Exchange Bank is reported here. Capital, \$30,000. President, J. W. Barnes; Cashier, C. S. Rogers; Assistant Cashier, J. P. Durham.
MONTICELLO.—Monticello Bank is reported here. Capital, \$40,000. President, C. L. Burks; Cashier, R. F. Hyatt.
MORRILLTON.—Bank of Morrillton will shortly open.

CALIFORNIA.

- ELSINORE.**—Exchange Bank is reported here. Capital, \$37,000. President, F. H. Heald; Vice-President, S. A. Stewart; Cashier, L. Wright; Assistant Cashier, John Brown.
LOS ANGELES.—California Bank has commenced business. Paid-up capital, \$150,000. President, H. G. Newhall; Vice-President, M. L. Wicks; Manager, H. C. Witmer; Cashier, T. J. Weidon. — Los Angeles Safe Deposit & Trust Co.; paid capital, \$55,000. President, C. M. Wells; Secretary & Manager, J. H. Burks. — Los Angeles Savings Bank; W. M. Caswell, Secretary, in place of J. V. Wachtel. — A Clearing-House has been established here. President, J. W. Hellman; Vice-President, Geo. H. Bonebrake; Manager, J. M. Elliott; Secretary, G. T. Blair.
NATIONAL CITY.—Bank of National City has been recently opened. Authorized capital, \$300,000; paid capital, \$30,000. President, Frank A. Kimball; Vice-President, Warren C. Kimball; Cashier, J. S. Gordon; Assistant Cashier, C. B. Whittlesey. — San Diego County Bank (A. H. Reynolds); closing.
OCEANSIDE.—D. H. Horne & Co.; succeeded by Bank of Oceanside, organized under State laws. Capital, \$50,000. President, D. H. Horne; Vice-President, Charles L. Morrill; Cashier, E. S. Payne.
ONTARIO.—Ontario State Bank has been organized. Capital, \$25,000. President, S. P. Hildreth; Vice-President, O. S. Picher; Secretary, C. Frankish.
SAN BUENAVENTURA.—Wm. Collins & Sons are in business here.
SAN FRANCISCO.—California Safe Deposit & Trust Co.; James H. Goodman, Treasurer, in place of Chas. R. Thompson. — Home Investment Co. has been incorporated. Capital, \$400,000.

SANTA ROSA.—C. Stahl is reported here.

UKIAH.—A. F. Redemeyer is in business here.

WEST BERKELEY.—First National Bank is being organized. President, John McMullen.

COLORADO.

- BURLINGTON.**—Barlow Bros. Banking Co. is reported here. Capital, \$15,000. President, John W. Barlow; Assistant Cashier, J. E. Barlow.
CHEYENNE WELLS.—Russell Bros. are reported here. Capital, \$10,000. President, H. W. Russell; Cashier, C. P. Russell; Assistant Cashier, C. C. Russell.
DENVER.—Charles Hallowell is in investment business here.
GLENWOOD SPRINGS.—Geo. Arthur Rice & Co. are in business here.
GRANADA.—Thomas Doak is in business here. Style, Granada Exchange Bank.
STERLING.—M. H. Smith is in business here. Style, Bank of Sterling. Cashier, J. M. Henderson.
WEST CLIFFE.—Morton E. Post & Co.; failed.

CONNECTICUT.

MIDDLETOWN.—Middletown Savings Bank; Geo. W. Harris, Treasurer, deceased.
STAFFORD SPRINGS.—Stafford National Bank; closed owing to defalcation of R. S. Hicks, Cashier.

DAKOTA.

ALMA.—Hathaway & Arthur (Bank of Alma); succeeded by C. G. Hathaway.
ARLINGTON.—Central Dakota Bank (L. A. Kidder); Cashier, E. F. Coleman.
ARTESIAN CITY.—Cameron Brothers are in business here. Cashier, J. B. Cameron.
BANGOR.—Walworth County Bank (W. R. Green); Cashier, E. B. Green.
BLOOMINGTON.—Farners' Bank; D. H. Henry, retires. Sole owner, M. T. Post.
BUFFALO GAP.—Lake & Halley have opened an office here. Acting Cashier, G. C. Smith.
CHURCH'S FERRY.—Morgan & Davis are reported here. Style, North Dakota Bank. Capital, \$10,000. Assistant Cashier, C. J. Lord.
CLAREMONT.—Bank of Claremont is reported here. Capital, \$25,000. President, F. H. Hagerty; Cashier, R. A. Mather.
EUREKA (P. O.: Roscoe).—Exchange Bank, of Hillview, now located here.
GRAND FORKS.—Vermont Loan and Trust Co. has been reorganized. Authorized capital, \$250,000. President, H. Mann, Jr.; Secretary, R. M. Sherman; Treasurer, F. W. Wilder.
HAROLD.—Bank of South Dakota is reported here. Capital, \$25,000. President, T. H. Leach; Cashier, M. Young.
HIGHMORE.—Anglo-Dakota Loan & Trust Co. is reported here. Capital, \$100,000. President, R. C. Walton; Treasurer, John F. Goudy; Secretary, Ferd. W. Goudy.
HILLSVIEW.—Exchange Bank; removed to Eureka.
HOSKINS.—McIntosh County Bank is reported here. President, Geo. W. Lilly; Cashier, C. C. Hammond.
HURON.—Central Dakota Mortgage Co. is in business here. President, Frank E. Stevens; Cashier, Edward Crist.
IROQUOIS.—Lostutter & Co. are in business here. Style, Farmers & Merchants' Bank. President, D. M. Fredericks; Cashier, L. L. Lostutter.
LAKOTA.—Chas. A. Bowne is in business here. Style, Bank of Lakota.
MADISON.—American Mortgage & Investment Co. is reported here. Capital, \$100,000. President, S. W. Jacobs; Cashier, E. H. Jacobs.
MILLBANK.—Farmers' Bank is in business here. Capital, \$25,000. President, A. M. Knight; Cashier, R. F. Gibson.
MILLER.—Farmers & Merchants' Bank is reported here. President, C. H. Morrill; Vice-President, F. W. Hunter; Cashier, F. S. Morrill; Assistant Cashier, C. A. Morrill.
MILNOR.—Bank of Sargent County; title changed to Sargent County Banking Co.
SANBORN.—Barnes County Bank; E. W. Siegfried, Cashier, in place of J. M. Burrell; no Assistant Cashier in place of E. W. Siegfried.
SHRLDON.—Citizens' Bank is reported here. Capital, \$15,000. President, Albert O. Runice; Cashier, Edwin A. Lucia.
VILAS.—Abc Cohn is in business here. Style, Bank of Vilas. Capital, \$25,000.
WESTPORT.—C. B. Shouse is in collection business here.
WILMOT.—Bank of Wilmot is reported here. Proprietors, Wm. M. Sargent and W. J. Speer.

DELAWARE.

MILFORD.—First National Bank; Henry B. Fiddeman, President, deceased.
ODESSA.—New Castle County National Bank; John C. Corbit, President, in place of Charles Tatman, deceased.

FLORIDA.

EUSTIS.—Bishop Brothers are in business here. Style, Bank of Eustis.
JACKSONVILLE.—Stuart, Hungerford & Co. are reported here. Style, Jacksonville Savings Bank.
LAKELAND.—L. J. J. Nieuwerkamp is in business here.
LAKE WEIR.—F. C. & E. H. Buffum are in business here. Style, Bank of Lake Weir.
MADISON.—Madison Cotton Ginning Co. are about to commence banking business.
ORLANDO.—Citizens' National Bank has been authorized to commence business. President, Leigh O. Garrett; Vice-President, Henry S. Kedney; Cashier, Hardy G. Garrett.

GEORGIA.

ATLANTA.—Foster & Ackerman are in collection business here.
FORT GAINES.—Pataula Banking & Cotton Co. has made application to Legislature for incorporation.
MONROE.—W. G. Felker is reported here.

IDAHO.

WALLACE.—Bank of Murray (of Wardner) has an agency here. Cashier, C. M. Hall.

ILLINOIS.

ATLANTA.—People's Bank will commence business December 1st. Capital, \$25,000. President, George W. Funk; Cashier, Chas. H. Gurner.
CHICAGO.—Park National Bank; J. N. Witherell, 1st Vice-President, in place of L. McWilliams; M. T. Roberts, 2d Vice-President, in place of L. C. Wachamuth; J. H. McGay, Acting Cashier, in place of John J. Akin, Cashier. — Chicago Trust Company has been incorporated. Capital, \$500,000. — Security Loan & Savings Bank is in business here. Capital, \$100,000. President, E. R. Walker; Cashier, F. M. Bailey. — Barker & Parmele are in business here.
ELLSWORTH.—C. F. Shinkle is in business here. Style, Exchange Bank.
FORRESTON.—H. Dovenbarker & Co. are reported here.

FRANKLIN.—Keplinger & Wight are in business here. Style, Franklin Bank. Cashier, H. G. Keplinger; Assistant Cashier, C. H. Tietzort.
GRAYVILLE.—First Chemical Bank has recently commenced business here. President, M. E. Miller; Cashier, H. M. J. Boord.
ILLIOPOLIS.—Sangamon County Bank has been organized. Capital, \$100,000. President, A. H. Lucas; Vice-President, L. E. Miller; Cashier, O. J. Lucas.
MOUNT CARMEL.—Wm. H. Hughes is in business here.
MURPHYSBORO.—D. C. Walker is in business here.
NATIONAL STOCKYARD.—Stock Yard Bank (Newman & Farr); transferred to Isaac H. Fox.
PLANO.—Albert H. Sears is in business here.
SIDELL.—Lyons, Alexander & Co. are in business here. Capital, \$50,000. Cashier, Jos. Alexander.
TONICA.—G. G. Pratt is in business here. Style, Tonica Exchange Bank.
WOODSTOCK.—First National Bank; John J. Murphy, President, in place of Edward A. Murphy; Edward C. Quinlan, Cashier, in place of John J. Murphy.
XENIA.—Thos. M. Cox is in collection business here.

INDIANA.

CRAWFORDSVILLE.—Investment Bank is reported here. Capital, \$25,000. Owners, A. F. Ramsey and John M. Schultz.

NATIONAL BANK STATISTICS.—Statement of the Comptroller of the Currency on November 1, 1887, showing the amount of National Bank notes outstanding and the amount of lawful money on deposit with the Treasurer of the United States to redeem National Bank notes:

NATIONAL BANK NOTES.		
Total amount outstanding October 1, 1887		\$272,652,501
Additional circulation issued during the intervening month:		
To new banks	\$238,520	
To banks increasing circulation	1,848,280	
Total	\$1,586,800	
Surrendered and destroyed during the intervening month	2,438,027	
Decrease in total circulation during the month		851,227
Total amount outstanding* November 1, 1887		\$271,801,274
Decrease in total circulation during the preceding 12 months ..	29,432,546	
Circulation secured by United States bonds (as below):		160,215,087
Decrease during the preceding month	716,813	
Decrease during the preceding 12 months	50,495,589	
Amount of outstanding circulation represented by lawful money on deposit with the Treasurer of the United States to redeem notes of—		
Insolvent National banks	958,902	
Liquidating National banks	7,732,498	
National banks reducing circulation under Section 4 of the Act of June 20, 1874	48,756,970	
National banks retiring circulation under Section 6, Act of July 12, 1882	45,077,848	
Total lawful money on deposit		\$102,586,207
Decrease in aggregate deposit during the preceding month	134,614	
Increase in aggregate deposit during the preceding 12 months ..	21,063,043	

W. L. TRENHOLM, Comptroller of the Currency.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, November 3, 1887.

The interview of the Secretary of the Treasury last month, with the New York Bankers, at which the legal point was discussed whether under the Act of March 3, 1881, Mr. Fairchild had the authority to purchase and cancel United States bonds, in addition to those he is authorized to purchase for the sinking fund, seems to have resulted in the Secretary's concluding that he had better take the advice of the Attorney-General of the United States. Whether he did so or not does not yet appear, but there has been a very radical change in the policy of the department, in regard to surplus, since that interview. The circular of September 22d, as was remarked last month had a very beneficial effect on the money market, not only in New York, but throughout the country. But while this was the immediate effect, it was soon seen that the purchase of bonds would not have the effect of permanently quieting all apprehensions for the reason that first, it was doubtful, from the slowness with which toward the last, bonds were offered, whether ten millions of bonds could be purchased every month, and second, if purchases could be made, whether there was any law authorizing the purchase of an amount, in excess of the requirements of the sinking fund. Moreover, the purchase of bonds did not necessarily place the money paid for them in the loan market. A large portion was immediately permanently invested in real estate or other bonds. At any rate the feeling of relief soon wore off, and fears of tight money from Treasury absorption were again the order of the day. These continued to increase until a report of an alleged interview with Mr. Chauncey M. Depew, in which he was made to say that, a panic which would affect the whole country was imminent, served to cause a complete collapse in the stock market, on Friday, October 14th.

The Secretary of the Treasury about this time adopted a plan which has frequently been adverted to in the JOURNAL, viz., the enlargement of the deposits of public moneys made with the National bank depositories. He agreed to permit deposits to the extent of \$1,100,000 upon the deposit of \$1,000,000 in 4 per cent. bonds. It has been estimated that the excess of revenues over expenditures for each month averages about \$10,000,000. More than this is received monthly from the internal revenue, and legally any part or the whole of this revenue may be deposited with National banks acting as the fiscal agents of the Government. Therefore, if banks can be found willing to take these public moneys and deposit bonds to secure them on the terms offered by the Secretary, the danger of segregation in the Treasury of large amounts of the available currency of the country will be avoided. To what extent the banks will find it to their advantage to deposit bonds and take public moneys cannot yet be told, but it is plain that it is not much more profitable to take public moneys on deposit of bonds than to take out circulation on bonds, inasmuch as a reserve has to be kept on the public deposits. Whatever may be the real extent to which the banks will be willing to take the public deposits, the moral effect has been most excellent. Money has been easier ever since it was known that the Secretary was willing to make deposits on such liberal terms. When the surplus is deposited with the banks it is, of course, available for loans to the public. Leaving the funds with the banks untouched, and making all payments from the funds in the sub-treasuries, will give much confidence and stability to the money market.

FOREIGN EXCHANGE.—During the week ending October 8th, sterling exchange was dull, though rates continue firm, and a trifle higher. The

arrivals of gold were \$1,990,000. For the week ending October 15th the demand was greater, on account of foreign sales of stocks. There was an advance in rates; the gold received was \$3,300,000. The week ending October 22d the demand fell off somewhat; there was an increased supply of commercial bills. The gold arrivals aggregated \$1,980,000. For the week ending 29th there was a slight increase in demand, a smaller supply of commercial paper, and rates were higher. The gold received was \$1,590,000. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.82½; sight, nominal, \$4.86½; 60 days, actual, \$4.81¾@4.82; sight, actual, \$4.85@4.85¼; Cable transfers, \$4.85¾@4.86; Prime commercial sterling, long, \$4.80¾@4.81; Documentary sterling, 60 days, \$4.80¼@4.80½; Paris, bankers', 60 days, 5.25@5.24¾; sight, 5.22½@5.21¾; Paris, commercial, 60 days, 5.26% @5.26¼; sight, 5.24¾@5.23¾; Antwerp, commercial, 60 days, 5.27½@5.26%; Swiss, bankers', 60 days, 5.25@5.24¾; sight, 5.22½@5.21¾; Reichsmarks (4), bankers', 60 days, 94¾@94%; sight, 95¼@95¾; Reichsmarks (4), commercial, 60 days, 94¾@94½; sight, 94¾@95; Guilders, bankers', 60 days, 39 15-16@40; sight, 40½@40 3-16; Guilders, commercial, 60 days, 39¾@39 13-16; sight, 39 15-16@40; Copenhagen, Stockholm, and Christiania, krona, 60 days, 26½@26 11-16; sight, 26¾@26 15-16. Paris dispatches quote exchange on London 25f. 32½c.

The following shows the posted rates for prime bankers' sterling bills on London, at 60 days, and sight, and prime commercial sterling, together with exchange on Paris, on September 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of September and October:

SEPTEMBER.	BANKERS'		Cable Transfers.	Commercial.	PARIS	
	60 days.	Sight.			60 days.	Sight.
Highest.....	4.81	4.85	—	4.79½	5.26	5.24½

						Low	108	124	124	121	129

The price of fours and four-and-a-halves appears to have been advanced by the demand to secure public deposits under the recent offer of the Secretary of the Treasury.

The public debt less cash in the Treasury has decreased \$16,833,695 during the month of October, as compared with a similar decrease of \$14,247,969 during the month of September. The outstanding interest bearing debt on November 1, was \$1,041,770,742, with accrued interest amounting to

\$7,763,273. This statement includes \$64,623,512 Pacific Railroad bonds. Four per cent. bonds have diminished from \$733,654,150 on October 1, to \$732,447,550 on November 1, and four and a halves from \$231,673,350 to \$230,544,600.

The following table shows the net gold and silver held by the United States Treasury on the 1st of November and on the 1st of September and October :

	Nov. 1, 1887.	Oct. 1, 1887.	Sept. 1, 1887.
Gold coin and bullion.....	\$302,544,605	\$290,702,620	\$282,039,534

Public deposits in the depository banks have increased \$6,328,838 during the month.

From the statement of the Comptroller of the Currency for November 1st it appears that the total decrease in National bank circulation during the month was \$851,227, as against a decrease of \$1,366,399 during the month of September. Of the circulation issued during the month \$238,520 was issued to new banks and \$1,348,280 to banks increasing circulation. The total amount of lawful money on deposit with the Treasurer to retire outstanding bank circulation was \$102,586,207, a decrease of \$14,614 during the month.

The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on the dates indicated :

	Nov. 1, 1887.	Oct. 1, 1887.	Sept. 1, 1887.	Aug. 1, 1887.	Jan. 1, 1887.

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange.

The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

BANKERS' OBITUARY RECORD.

Bearse.—Owen Bearse, Vice-President of the First National Bank, of Hyannis, Mass., died suddenly of heart disease on October 6, 1887. He was 73 years old.

Brown.—Mrs. Lizzie A. Brown, Assistant-Cashier of the Bank of Athens, Ga., died on September 20th. Her husband, Jas. D. Brown, Cashier of the bank, writes: "Her ideas of business and loans were very good and accurate; she was a good judge of mankind and of their prospects, and I never made a loan contrary to her views but it gave me trouble, and business that I have refused on her advice I never had cause to regret."

Buchanan.—Ronald Mackenzie Buchanan, who for sixteen years was Cashier of the Fulton National Bank, of New York city, died suddenly during the night of October 20th, of heart disease. He was 76 years old and had been 54 years in the bank. Mr. Buchanan was born in New York. He was a brother of the late Judge Buchanan, of the Louisiana Superior Court, and was related to Sir Alexander Mackenzie, the English navigator and explorer.

Dana.—Newton C. Dana, Cashier of the Butchers & Drovers' Bank, of Providence, R. I., is dead.

Fiddeman.—Colonel Henry B. Fiddeman, President of the First National Bank, of Milford, Del., died October 26th, at the age of eighty years.

Harrison.—T. A. Harrison, President of the Security Bank of Minneapolis, Minn., died recently. He was born at Belleville, Ill., December 18, 1811. He removed to Minneapolis in 1860. A man of perfect integrity, though personally retiring and unostentatious, there were few men whose judgment was more unerring or whose friendship more valued.

Hyde.—Dr. Frederick Hyde, President of the Cortland Savings Bank, of Cortland, N. Y., died on October 15th, in the 81st year of his age. He was a Trustee from the organization of the bank in 1866, and its President for the last ten years. He was also the President of the Local Board of the State Normal and Training School of Cortland, and one of the faculty of Syracuse University.

Kilham.—A. D. Kilham, Vice-President of the Beverly Nat'l Bank, of Beverly, Mass., and also of the Beverly Savings Bank, died October 25th, of paralysis, at the age of 72.

Lyons.—Robert Lyons, private banker, of Cadiz, Ohio, is dead.

Tatman.—Charles Tatman, President of the New Castle County National Bank, of Odessa, Del., died on October 21, at the age of 95. He was born in Delaware, and elected President of the bank mentioned, in 1854. He was regarded as the oldest bank President in the country.

Taylor.—M. G. Taylor, Cashier of the Clark County National Bank, of Winchester, Kentucky, is dead.

IMPORTANT DECISION.—In the case of the First National Bank of Indianapolis vs. Valentine Barr, the Court held that where the drawer of a check delivers it to the party in payment of a debt, or for any other *bona fide* purpose, and such holder presents it to the bank, and, instead of receiving the money on it, secures its certification by the bank, that is "good" for the amount named in it, and retains the check for use and payment thereafter. By such act the holder releases the drawer from liability on the check and the bank becomes the only debtor to the holder. This rule, however, does not apply where such certification is procured by the drawer of the check before he uses it or delivers it to the payee.

FAILURE OF A ST. LOUIS BANK.—The Fifth National Bank, of St. Louis, is in charge of H. A. Forman, National Bank Examiner. The history of the failure is as follows: On Saturday, November 6th, the bank did not have enough money to pay its Clearing-House balance, and Mr. Specht, one of the Directors, and Mr. Crecelius, the Cashier, called at the Continental Bank and obtained a loan of \$20,000 from Mr. Bullen, Cashier of that institution, on good collateral. They said that amount would carry them over until Monday. On Monday they were surprised to receive a notification from the Clearing-House that there was a forty-thousand dollar balance against them. They had previously spoken to Mr. Bullen and told him that \$100,000 would carry them through their trouble. Mr. Bullen and others looked into their affairs and came to the conclusion that it would take at least \$250,000 to carry them, and that they could not advance that amount. The Fifth National then paid back \$12,000 of the Continental loan, and gave its note, secured by good collateral, for the balance. Then it suspended. Mr. Forman took charge on November 8th, and will make a thorough examination of the character of the assets, and remain in charge until a Receiver is appointed. He says the depositors will be paid in full and stockholders will realize about 70 per cent. It appears that the bank was troubled by the refusal of a New York bank to honor its draft and by the publication of a paragraph saying the bank's stock was being sold on the street. The real cause of the failure is said to have been indiscriminate lending of money to business concerns which were doing a large business on small capital.

RHODES' JOURNAL OF BANKING.

Vol. XIV. DECEMBER, 1887. No. 12.

IN THE OCTOBER number of the JOURNAL we published, among the open letters from bankers, one headed "From a Private Banker's Standpoint," which rather took us to task for speaking approvingly of the law passed by the last Legislature of Minnesota at the beginning of 1887, and which, if sustained by the Courts, will, after January 1, 1888, compel private bankers either to do business as such or become incorporated banks under the State law, and be subject to the supervision of the bank Examiner appointed by the State. A large number of these private concerns were and have for a long time been known by names which gave the impression to the outside public that they were incorporated banks. The law in question, which was printed on page 813 of the JOURNAL for August, prevented existing private bankers from using the corporate names by which they had previously been known. It is highly probable that this portion of the law, applying to existing private bankers, will be declared unconstitutional by the Courts, inasmuch as it seems to interfere with the vested rights of individuals. But the law as applicable to those who hereafter go into the business of private banking appears to be a necessary and important measure. It is similar to the law now in operation in Michigan. There is no justice or right in a private firm holding itself out to the public as an incorporated bank, particularly in States where the incorporated banks are subject to restrictions and supervision which assuredly strengthen their credit. It is unfortunate that this sort of thing has been permitted to go on so long in Minnesota that some private bankers have acquired vested rights in certain titles. While we agree with the view that it is unconstitutional to deprive them of these titles now, it would probably be perfectly constitutional to require them, while still using the title, to print the words "private bank" or "private bankers" on their letter-heads. The JOURNAL is as friendly to the private bankers as to any other class of the banking community, but it is to those that announce themselves as such, and not those that seek to pose before the public as incorporated banks. It is because it seeks to do away with a pretension that the JOURNAL approves of

the Minnesota law. The arguments in the open letter, "From a Private Banker's Standpoint," entirely evade the real question. The JOURNAL institutes no invidious distinctions between National, State or Private banks. Each has its place, and honesty is the rule in the administration of all. We would, however, have it understood to what class any banking concern belongs, so that a customer who prefers a Private bank to deal with may not be led unawares to deposit in a National or a State bank, and a customer who prefers to deal with an incorporated bank may not be induced by a pretentious name to deal with a Private bank. We print two open letters this month received from bankers, one in the East and the other in the West, who take issue with the writer of "From a Private Banker's Standpoint."

IT IS SUGGESTED that the National Banking law should be amended so that the banks shall not be required to keep any reserve upon Government deposits; as the law now stands it seems to require reserve to be kept on all deposits without distinction. Public moneys deposited with National bank depositories are in addition to the reserves which the banks holding them are required to keep protected by a deposit of United States bonds with the Secretary of the Treasury. As the Government invariably holds bonds worth more than the public moneys entrusted to the banks it is argued that the requirement of keeping the reserve on such deposits similar to that kept on individual deposits is unnecessary. At first sight there is much plausibility in this view, and in ordinary times and under ordinary conditions of the money market doubtless a reserve on hand of available cash might safely be dispensed with. It would be perfectly safe to permit National banks having public moneys on deposit to hold them without reserves other than the securities deposited in Washington so long as the Government has a large surplus of unappropriated cash in its vaults. It might not, however, be so safe if the Government revenues were reduced so as to leave very little, if any, margin between them and expenditures. Supposing a National bank depository holding a large amount of public moneys is suddenly drawn on, and that it has kept no available reserve. To pay the draft must certainly run down the reserve held against individual deposits and jeopard the interests of individual customers. A bank must not only be able to pay its liabilities; it must also be able to meet all immediate demands, and even United States bonds in Washington require time to convert into means for paying checks when presented. As long as the Government has an overflowing Treasury and is willing to buy bonds at any time, there might be little difference between cash revenue and a reserve of United States bonds, but if money becomes very scarce there might be reason which, even if there were no law, would induce conservative bankers to keep a reserve in public money deposits, notwithstanding the security deposited at Washington. We do not think, therefore,

that the law should be amended so as to unconditionally except public money deposits from the requirements of the reserve law. We believe, however, that Section 5,153 already gives all the law that is necessary on this point. This section provides that "the Secretary of the Treasury shall require the associations thus designated (as depositories) to give satisfactory security by the deposit of United States bonds and *otherwise*, for the safe keeping and *prompt payment* of the public money deposited with them." It will be observed that there are two things to be secured ; (1) the safe keeping and (2) the prompt payment of the public moneys. The safe keeping is absolutely secured, so far as the Government is concerned, by the deposit of United States bonds, but *prompt payment* cannot be said to be secured by such deposit. The only way in which prompt payment is to be secured is by the keeping of a reserve. It is plain, therefore, that if the class and amount of security to be required for the safe keeping of the deposits is by this section of the law confided to the discretion of the Secretary of the Treasury, the kind and amount of security for the *prompt payment* when demanded, otherwise the reserve to be kept, is equally within the discretion of that office. Under present conditions the bonds deposited are ample pledge both for the safe keeping and the prompt payment of the public moneys, but other conditions may arise when the Secretary might find it necessary to insist that in addition to the bonds deposited, a certain proportion of reserve must be kept to insure *prompt payment* on demand. To sum up, it is the object of this argument to show that the question of reserve on public deposits is not governed by the provisions of Section 5,191, which requires a certain proportion of reserve to be kept on ordinary deposits, but that the question of reserve on public deposits is solely governed by the provisions of Section 5,153, and that the provisions of this section make the proportion of reserve to be kept on public moneys discretionary with the Secretary of the Treasury. This office can therefore decide whether the bonds deposited are sufficient security for both safe keeping and *prompt payment*, or if for the *prompt payment* some reserve in addition to the security of the bonds deposited must be kept. It seems plain however that unless the Secretary does decide that some reserve other than the bonds deposited in Washington need be kept, that these bonds in the view of the law, are all that is required to insure both safe keeping and prompt payment and that no other reserve is really necessary.

THE PLAN FOR perfecting and perpetuating the National banking system, which is advocated by Mr. John Thompson the veteran banker of New York city, printed elsewhere is, if Congress could be prevailed upon to adopt it, one of the best methods of extending bank circulation yet proposed. While Mr. Thompson deserves the greatest credit for the energy with which he has agitated this matter he does not, we believe, claim the plan as entirely original with him. In fact, in the

circular which he has recently issued he prints an extended extract from the report of the Hon. Henry W. Cannon, Comptroller of the Currency in 1885, in which, in substance the issue of circulation in excess of the par value of the United States bonds deposited is advocated, and the records of the office cited to show that the circulation of insolvent National banks would have been redeemed from the proceeds of assets, even if no bonds had been held as security by the United States Treasury Department. The strongest point made in Mr. Cannon's report, is the suggestion that in order to secure the circulation issued in excess of bonds, the tax of 1 per cent. on circulation should be funded as a safety fund, to redeem the excess of notes of such banks as might fall after the proposed change in the law should have been made. This proposition in Mr. Cannon's report for 1885 is based upon a similar suggestion contained in reports of his predecessor Mr. Knox, and the original basis of the plan is the safety fund system which was legalized in New York State in 1829 when Mr. Van Buren was Governor. This safety fund system was first elaborated in a letter from Judge Forman of Syracuse to Governor Van Buren. It was as Judge Forman says in his letter based on the agreement made by the merchants in the China trade who belonged to what was known as the Hong. The merchants belonging to the Hong, bound themselves to collectively pay the debts of any delinquent member. Under the safety fund law of 1829, each bank doing business under a charter obtained from the State of New York was required to pay annually an amount equal to one-half of 1 per cent. of its capital, towards a fund to be held by the State, and to be used to pay the debts, not only circulation but all debts, of any contributing bank which might become insolvent, until it had contributed an amount equal to 3 per cent. Upon any depletion of the fund by payment of losses contributions had to be renewed until the limit was again reached. The result of this safety fund system in New York State is a matter of history, and it shows conclusively that if the contribution had been only used to redeem the circulation of the failed banks belonging to the New York system that the safety fund would have been ample for the purpose. This is the more remarkable, as legally, the banks might issue circulation equal to the amount of their capital, and as moreover there were no safeguards to prevent illegal issues. Each bank bought its own plates, had its own bills printed, and there was really no check beyond the honesty of the bankers against printing and issuing any amount. That the laws of the State were violated and over-issues made in so few instances speaks well for the high character of the New York State bankers of this period. The cases in which over-issues were made were flagrant instances of law breaking and the amounts so over issued were large. Yet the safety fund would have paid all the issues of the failed banks legal and illegal, if it had been devoted to the redemption of circulation alone. It was the attempt to make it pay all the debts of the failed

banks including circulation which brought the safety fund system of New York into disrepute and gave the impression that it was a failure. The history of this system in New York State makes it evident that a fund made up from a tax of $\frac{1}{4}$ of 1 per cent. upon the circulation of National banks, would be ample to redeem the notes of all National banks that might fail, issued in excess of an amount secured by bonds, in a proportion not to exceed 30 per cent. of capital. In other words, if a contribution of $\frac{1}{4}$ of 1 per cent. of capital was sufficient under the New York safety fund law to redeem the notes of all insolvent banks when legal issues might be made to the extent of 100 per cent. of capital or more, much more would a fund made up of the annual tax on circulation of National banks be sufficient to redeem the notes of such National banks as might fail, issued to the extent of 30 per cent. of capital in excess of their notes based on bonded security.

AT THE BANKERS' CONVENTION at Pittsburgh, Mr. Knox proposed a plan for refunding the 4 per cent. United States bonds now outstanding in lower rate bonds, which if adopted by Congress would enable the Treasury Department to use its surplus to great advantage. It has been very widely endorsed by the press of the country and is so plainly a practical solution of the surplus difficulty for the next two or three years, that it is hard to understand the opposition it has encountered in some quarters. At the Bankers' Association the chief opponent of the plan was Mr. St. John, who in 1884 was a strong advocate of the Potter bill embodying precisely the idea advanced previously and since by Mr. Knox. In 1884 there was no such pressure from accumulating surplus as there is now, the 3's were payable at the option of the Government, and the principal motive at that time for the passage of the Potter bill was that it would help the National banks, especially those holding 3's, as Mr. St. John's circular issued in 1884 clearly shows. The condition of things has much changed since 1884. Now the Government is the anxious party and not the banks, and the refunding plan is really one for the benefit of the Government, to be carried out with the assistance of the banks. We are sorry that Mr. St. John, who occupies a prominent position among the younger financial authorities of the country, permits the Potter bill and his disappointment in reference thereto, to float around in his mind like a derelict upon the ocean, coming in contact with and endangering the safety of a later development of a similar idea.

One of Mr. St. John's arguments against Mr. Knox's plan is based on a misapprehension of its terms. Mr. Knox's calculations, intended simply to illustrate the theory of the proposition, are based on the assumption that on July 1, 1888, when the 4's have still nineteen years to run, the price of these bonds will be about 123, which will make 2 $\frac{1}{4}$'s having nineteen years to run worth par at that date. This being the case, by giving a 2 $\frac{1}{4}$ per cent. bond worth par, and \$23 in cash, the

Government gives the holder the exact equivalent of a \$100 4 per cent. bond worth \$123. Mr. St. John continues by saying that 4's are now worth 125 $\frac{1}{4}$, and argues from this that to make Mr. Knox's proposition a success, the 2's must be worth more than par or the holders will not accept. It is, therefore, the element introduced by Mr. St. John and not Mr. Knox's calculations that are at fault, and the terrible dilemma that "either the holders of the 4's will not accept a plan by which they must lose 3 per cent., or the proposition must inure to the disadvantage of the Government" results from this interpolation. Another objection raised by Mr. St. John, is that if the Government gives the 2's in exchange at par, the market price may hereafter rise, and the Government after paying the present premium on the 4's in making the exchange would hereafter, when wishing to purchase the 2's have to pay another premium. The answer to this is that if no exchange were made and the 4's continued outstanding the same conditions that would cause a rise in the price of 2's would also cause a corresponding rise in the 4's, and if bonds have to be purchased hereafter it would cost the Government just as much more to then purchase 4's as the premium upon the 2's would then amount to.

Equally unfair was the objection raised by Judge Ewing, that Mr. Knox's plan contemplated any postponement of the payment of the debt. The *Bankers' Magazine* has fallen headlong into the mud of this stupid objection. One would have thought that a magazine usually so perspicuous would have seen that there was nothing of this kind to be fairly deduced from the plan. The mathematical faculty ought to be strong in any publication treating of financial topics, at least strong enough to enable it to understand that, if by a certain time an amount is to be paid in the liquidation of the combined principal and interest of a debt, and the payment of the principal is prevented by the terms of the contract, the payment at a discount of the interest, in whole or in part, with the consent of the holders is no postponement of the payment of the debt.

Other objections to the plan are founded on the belief that the surplus may be more profitably used by the Government in the purchase of the 4's than in refunding them into 2's. The reasoning is as follows : \$125 of surplus of 4's are at a premium of \$125 on Jan. 1, 1888, it will purchase a 4 per cent. \$100 bond on that date having 19 $\frac{1}{4}$ years to run. The Government thus pays \$100 principal and stops 19 $\frac{1}{4}$ years of interest at 4 per cent. or \$78, in all \$178, by the present use of \$125. By Mr. Knox's plan of exchanging a \$100 2 $\frac{1}{4}$ bond and \$23 cash for a \$100 4, \$125 surplus would allow an exchange of \$552.18 in 4's for an equal amount of 2's. The principal would remain the same but the difference of 1 $\frac{1}{4}$ per cent. on \$552.18 would be stopped for 19 $\frac{1}{4}$ years, equal to \$161.52, the difference in favor of purchase of bonds being some \$16.50. This method of reasoning is as unfair to Mr. Knox's plan as that adopted by Mr. St. John, in that new mathematica

elements are injected, and it does not take into account the effect of compound interest. A computation made at compound interest indicates that, the terms of the problem being properly taken, the gain to the Government by the use of a given amount of surplus in buying a portion of the interest is the same as in buying the bonds outright. The actual amount to be paid at any time under a refunding plan is purely a matter of mathematical computation and must be determined at the time the exchange of bonds is made. Any figures given in illustration of the theory are subject to changes which may be rendered necessary by the circumstances existing when the theory is put in practice.

ARTICLES RECENTLY published in the *New York Commercial Advertiser*, attacking the management of the Comptroller of the Currency, give the impression that both in the past and at the present time the management has been inefficient, and that many failures have occurred that might have been prevented. The manner in which insolvent National banks have been closed by Receivers, under the direction of the office, has been made the object of special attack. It has been intimated that the operations of these Receiverships have been designedly concealed from the public; that the amounts collected from the assets have been largely absorbed in the expenses of conducting the Trust, including the salaries of Receivers.

The articles in the *Commercial Advertiser* show a lamentable ignorance of facts which have already been published in regard to the management of National banks that have failed. The matter of expenses of Receiverships was fully elucidated in the report of the Comptroller of the Currency for the year 1879. Not only was it shown that these banks were wound up at a very moderate expense, but also that losses incurred by the failure of National banks were very small in comparison with the losses suffered by the public through the failure of State, Savings, and private institutions. The information given in this report disposes of the two principal criticisms of the paper named. First, as to the expense of Receiverships, and second, as to the uselessness of the office of the Comptroller of the Currency in preventing losses.

On page 34, of the report of 1879, is a table showing the number of National banks which had failed in each State up to that date; their capital, the claims proved against them, the dividends paid, the estimated dividends yet to be paid, and the estimated losses. We find that up to November, 1879, eighty-one National banks had failed, having a capital of \$17,452,600. That the claims proved against them amount to \$24,859,472; that of this \$15,975,223 had already been paid. That additional dividends of \$2,664,000 were yet to be paid, and that the entire loss to the depositors through all these banks would be \$6,240,189.

On the next page the report states that, for the purpose of comparing the losses of insolvent National banks with those of insolvent banks other than National, much pains had been taken to obtain as reliable

and complete statistics as possible relating to State and Savings banks and private bankers in the different States during the three years ending January 1st, 1879. Before giving the results, attention is particularly directed to the fact that the estimated losses of the eighty-one National banks which had failed amount to \$6,240,189, including all the losses experienced from National bank failures during sixteen years ; whereas the losses of the State, Savings, and private banks given by the Comptroller were for three years only. During the three years ending January 1st, 1879, two hundred and ten State, Savings, and private banks had failed, from which returns had been obtained, and of course there were many others not obtained by the Comptroller's bureau. The claims proved against these amounted to \$88,440,028. The sum already paid and expected to be paid in dividends obtained from the most reliable sources, was \$58,152,638, showing losses during three years, by the failure of State, Savings, and private banks, of \$32,616,661.

This seems to dispose, up to 1879 at least, of the charge that the Bureau of the Comptroller of the Currency is managed in a way that affords no protection to the public. To show this more forcibly, it may be stated that out of an average number of about two thousand National banks in operation during a period of sixteen years, only eighty-one had failed, and were wound up by Receivers, with a total estimated loss to depositors of \$6,240,189. While out of an average of five thousand State, Savings, and private banks, two hundred and ten had failed in three years, and were wound up with a loss amounting to \$32,616,661.

This makes it plain that, as has always been claimed by the JOURNAL, although no supervision will absolutely prevent failures, yet the supervision of the National banks of the country, by the office of the Comptroller of the Currency, has had a very marked influence in reducing the losses which are sure to occur under any systems of banking, and especially under those not subject to Governmental supervision.

In the same report the losses to creditors through the failures of National banks in the cities of New York and Brooklyn for the sixteen years during which the National banking system had then been established were compared with those sustained through the insolvency of Savings banks in the same cities during the eight years previous to 1879. The result of this comparison went to show that seven National banks which had failed in New York city during the time mentioned were wound up by Receivers with a loss to depositors of \$91,421 only, whereas the depositors of the twenty-two Savings and other State banks which had failed within eight years in the same cities had experienced a loss of \$4,475,061.

As to the expense of liquidating National banks in the hands of Receivers, a table is given on page 37 of the same report, which shows the total expenses which had been incurred in winding up insolvent National banks to that time. This indicated that the eighty-one

National banks which had failed had been closed at an average expense of 6.7 per cent. of the total net cash collected. As this cash included the amounts received for the margin, interest, and premium on the bonds deposited to secure circulation over and above the amount necessary to redeem the outstanding circulation of these banks, the percentage of expenses should perhaps be placed at one or two per cent. higher.

This table includes the Ocean National Bank, of New York city, which had been wound up at an expense of 8.3 per cent., and the Union Square National Bank, of New York city, which had been wound up at an expense of 6.3 per cent.; the Eighth National Bank, of New York city, which had been wound up at an expense of 7.2 per cent. The Atlantic National Bank at an expense of 8.5 per cent. The National Bank of the Commonwealth wound up at an expense of 5.3 per cent. The greatest expense in winding up an insolvent bank in New York city was in the case of Croton National Bank, where the cost was 12.8 per cent of the net cash collected.

A very large portion of the expenses incurred arose from litigation. Many persons who punctually pay their obligations to banks when solvent do so only at the end of a law suit, when the same bank has been placed in the hands of a Receiver. Complicated questions arise in the forced settlement of a bank's affairs, which are frequently carried up to the court of last resort before they are finally determined.

If there is any one special branch of the work done in the office of the Comptroller of the Currency of which that office has a special right to be proud it is its record in the matter of liquidating the affairs of the insolvent National banks.

The tables given in the *Commercial Advertiser*, by which it is sought to be shown that large amounts collected from the nominal assets of involved National banks, cannot be accounted for, are seriously and admittedly imperfect, because of the lack of information on the part of those who prepared them. The figures are mostly taken from a table in the Comptroller's report for 1886, which does not pretend to give the disposition made of the moneys collected, further than to show the amount of dividends paid to the date of the report. The amount used to redeem the circulating notes of the several banks is not given, and this omission goes far to explain the discrepancies over which so much unnecessary fuss has been made. The omission of expenses and losses on assets compounded by order of court will probably in every case fully explain the remaining apparent differences.

The *Advertiser's* articles referred to above were written by one William J. Best, of unsavory reputation in connection with various bank Receiverships in this city, and the Pacific National, of Boston. Emanating from such a source, they are really unworthy of any attention whatever, and we would not have taken the trouble to refer to them, but for the fact of their appearance in a respectable newspaper.

CONSUL-GENERAL BONHAM writes from Calcutta to the Department of State that the area devoted to wheat in British India in the year 1886 was about 27,392,742 acres, and the total yield was 288,938,496 bushels, or an average of ten and a half bushels per acre. The quality of the Indian wheat is, he says, inferior to that grown in the United States, and the flour made from it is of a darker color and inferior in quality to the American flour.

The methods of cultivating the soil and harvesting and threshing are still very rude. The native farmers have a great prejudice against using modern agricultural implements. The land is plowed or rather scratched over with a plow made of a forked stick with an iron point. Wheat is sown with the hand, and covered with a bamboo harrow. The grain is reaped with an old-fashioned sickle; tramped out by cattle, and winnowed by pouring it out where there is sufficient breeze. The reason why, with these imperfect methods and implements, the Indian farmer is able to compete with those of the United States is, that the Indian farmer's entire farming outfit does not represent a capital of more than forty or fifty dollars. And his hired help can and does work, feed and clothe himself on about \$2.50 per month.

In 1868 the quantity of wheat exported from India was 299,385 cwts. During the season of 1885-6, 21,060,519 cwts. were exported.

It is claimed that the United States has nothing to fear from competition in wheat growing in India, but Consul-General Bonham strongly expresses the opinion that there is much to be feared in this respect.

THE ANNUAL REPORT of the Treasurer of the United States, an abstract of which we print next month, was made public Nov. 17th. The report is a pamphlet of nearly one hundred pages, reviewing the financial operations of the last fiscal year ending June 30th, 1887. It appears that there has been an increase of every item of public revenue over that of the preceding year, the largest increase being in the custom receipts.

The bond redemptions of the year amount to \$127,911,950. The gold coin and bullion has increased \$34,705,623, and silver dollars and bullion have decreased \$26,143,181. It appears from the report that the demand for five, ten and twenty dollar greenbacks, and for the new one, two and five dollar silver certificates has been greater than the Treasury could supply. When the United States Government undertakes to supply the currency of the country it should certainly take measures to do so to the extent that such currency is demanded, but the Treasurer's report shows that larger appropriations must be made and better facilities afforded for supplying currency than were made during the past fiscal year.

The JOURNAL holds that part of the difficulty in this respect is due to the fact that the entire work of preparing and printing the paper money of the country is relegated to the bureau of engraving and

printing at Washington, and that both the quality and quantity of the work done are deteriorated under this system. We hold that the remedy for this is to call upon the private bank note companies of the country to do a portion of the work. That this is not only necessary for supplying the demand and obtaining a good quality of currency, but it is also a proper step to encourage this class of American art and industry.

WE PRINT this month the address of Hon. Henry M. Knox, public and ex-officio Bank Superintendent of the State of Minnesota. This address explains the entire method by which the banks and public institutions, and County Treasurers of the State of Minnesota are subject to supervision. In no other State is there an officer of this character. The banking laws of other States frequently require periodical examinations of the banks, but the County Treasurers and financial affairs of other public institutions are not under such supervision.

It appears from Mr. Knox's address that the difficulty in introducing a system of examination of county officers is due to political influence. Attempts have been made to introduce a similar law in other States but they have always met with strenuous opposition.

NOTWITHSTANDING that there was a large increase in the amount of money deposited with the National Bank Depositories during the month of October the cash in the Treasury increased in the same month eight million dollars. The relief afforded by the action of the Secretary in depositing one hundred and ten thousand in public moneys for each one hundred thousand of 4 per cent. bonds put up as security, does not therefore seem to be due so much to the actual reduction of the surplus in the Treasury as it is to the feeling which it gives rise to that if the necessities of business require more funds there is a ready way in which the banks may obtain them.

INTER-STATE COMMERCE COMMISSION.—The Inter-State Commerce Commission are, it is stated beginning to find out that but few of the railroads are complying with the law, and particularly the long and short haul sections, and hitherto they have only considered questions of this kind arising against railroads when formal complaints were presented to the commission, but recently they have requested information from the roads themselves as to whether they complied with the law.

SUPPLY OF SILVER CERTIFICATES.—It seems very strange that the Treasury Department cannot supply silver certificates as fast they are demanded by the public. Various excuses are made for the delay in printing a sufficient supply. The bureau of engraving and printing seems to be run to its utmost extent for so many other purposes that there is no chance for it to manufacture these notes, which are in much

demand with the banks and the people. Probably the real reason of the delay is that there is not storage room at present in the Treasury Department for the silver which is presented in exchange for the certificates. If the real reason of the failure to supply the certificates in sufficient quantities is the inability of the engraving and printing bureau to supply them it is another argument against the monopolizing by that bureau of the printing of all Government obligations. If, as formerly, a portion of this printing were done by private bank note companies, there would now be no difficulty in supplying the demand for silver certificates.

THE PRESENT SESSION OF CONGRESS is one of great interest to the banks and bankers of the country. The great excess of the revenues of the Government over expenditures would necessitate a rapid payment of the public debt, if that debt were payable at the option of the Government; but inasmuch as the terms upon which it was contracted do not admit of its immediate payment, the accumulation of surplus revenue in the Treasury Department must necessarily continue, and cause great apprehension.

The most obvious way, under the present circumstances, to equalize the revenues and expenditures of the Government is, of course, by a radical change in the revenue laws; and the tariff reformers and free traders generally regard the present situation as one likely to force the carrying out of their ideas. But no mistake must be made by assuming that Congress will feel this pressure sufficient to induce it to take immediate action in the direction of revenue reduction. A large class might support some modification, but slight changes will not effect any reduction of revenue. To do this the change must be radical, and it is very doubtful whether a majority in Congress can be obtained to enact sweeping modifications of our present system of taxation. Those who expect a short and decisive settlement of the problem will doubtless be disappointed. Relief of the present financial situation must be the result of compromise between the conflicting elements, and no compromise can be made until each side has proved its strength or weakness. We therefore believe that if Congress takes any decided action it will not be until after much discussion, and late in the session.

THE ATTEMPT of Wm. J. Best to get possession of the records of the office of the Comptroller of the Currency, so that he might use them for his own purposes, reminds one of the ancient story of the clever scamp who beguiled the old housewife into furnishing the materials for a nourishing soup by getting her permission to boil pebbles by her kitchen fire. The Comptroller rightly declined to permit Mr. Best to practice a similar species of fraud on his office. Best is a barren rascal, and, like the Fool in "Twelfth Night," is done when no one furnishes him with a cue.

BANK STATEMENTS.

The science of banking grew up by degrees, and for a long time was experimental. The first individual who received a deposit from another kept it in the same form in which it was deposited, ready to be returned when called for. He was not a banker, because that word implies one who receives deposits from a number of people. When, instead of the deposit of one person, he began to receive those of hundreds, and noticing that as soon as some were withdrawn other deposits were made with him, he discerned that there was no identity in money, and that the deposits of one day generally paid the withdrawals for that day, leaving constantly in his hands a fund of greater or less amount that was seldom or never disturbed. Looking at the matter entirely on the practical side, he recognized the further fact that if he imparted the secret to his depositors he might perhaps soon have none. The minds of the public could not yet grasp the idea, and continued in blissful ignorance of the fact that a banker could loan a large portion of his deposits and yet always meet the demands of such as might need their money, he retaining a comparatively small proportion. By degrees something of this secret leaked out : some of these early bankers failed ; their cases got into the courts, the lawyers on both sides explained the kind of business they had been doing to the judges ; the judges were intelligent men and recognized the fact that banking was a good thing, and that the failures were but exceptional cases, due to misfortune or dishonesty.

Gradually the relation of the banker and the depositor became fixed on a sound legal basis. Bankers dealt with each individual customer without reference to his relation to other customers. No banker cared to tell the amount of deposits he had, and what amount he kept to meet demands. This reticence had its disadvantages, although generally it covered the most sterling honesty. It could be, and was, used for a cloak for fraud. Among the members of the craft the limits of safe banking under various circumstances, and what proportion of reserve it was necessary to keep, and to what extent their business might be extended, were well known. As a rule these limits were adhered to, but the spirit of reticence and concealment gave a grand opportunity to men of a predatory disposition, and some of these went into banking as the best method of exercising their faculties in the plundering of the public.

The public have been taught the necessity and economy of good banking, and in what good banking consists, and the bankers have been compelled by law to make their methods of business known, in order that the public may be enlightened and be able to judge intelligently of the confidence that may be properly imposed in the banks. One chief method taken by legislators to accomplish this end has been to require bankers to make reports of the condition of their business to governmental authorities, and to provide for the publication of these reports. The requirement to make reports to the authorities was first looked upon by the banks as in the nature of a penalty or restriction, but in the course of time the majority of banks and bankers have seen the advantage, not only of making these financial reports, but of frankly

and fully, of their own volition, exhibiting the condition of their affairs to the public. In this country the banking laws of most of the States for many years past have required the banks organized under them to make reports to the State officers.

In the year 1832 Congress passed a resolution directing the Secretary of the Treasury to procure and publish as full returns as possible of the resources and liabilities of the State banks. Previous to this, whenever the State banks were used by the Secretary of the Treasury as depositaries of public money, they had been required to make reports of their condition to that officer. Under the act of 1832 the Secretary of the Treasury communicated with the officials of the various States having charge of the execution of the banking laws, and as far as possible obtained from them reports made by the banks in their respective States. These reports were collected and published by the Treasury Department up to the time the national banking system went into operation. In 1863, when the national bank act was passed, a tax was imposed upon the capital, deposits and circulation of the State and private banks as well as upon the capital, deposit and circulation of national banks. State and private banks and bankers were required to pay this tax to the Commissioner of Internal Revenue, and as part of the system of collection they were required to make reports to that officer. The national banks were required to make much fuller reports of their condition to the Comptroller of the Currency, as well as reports for taxation to the United States Treasurer, as under the laws of 1863, relating to the national banks and to the taxation of State and private banks and bankers, the Treasury Department received statements more or less complete from all the banks of the country, and the collection of reports of the State banks, under the act of 1832, appears to have been discontinued. Inasmuch, however, as the reports of the State and private banks and bankers, for the purposes of taxation, did not give all the information desired in regard to them, in February, 1873, Congress passed an act directing the Comptroller of the Currency to obtain from all sources which he might find available, information in regard to the State and private banks and bankers. This act was similar to that of 1832, excepting that the Comptroller of the Currency was entrusted with its execution instead of the Secretary of the Treasury. The result of these various laws, State and national, is to be found in the public documents of the several States, and also, in a more condensed form, in the reports made by the Secretary of the Treasury of the United States from 1832 to 1865, and in the reports of the Comptroller of the Currency from 1863 to the present time, which financial reports have undoubtedly accomplished much in bringing the public and the banks into a truer relation with each other; and while they also have a tendency to establish a higher standard of banking, they are made too infrequently to furnish a comprehensive present knowledge of the condition of the banks.

Of late years there has been a tendency on the part of the banks themselves to supplant the official reports by reports made of their own volition. It has become a custom with many banks to make reports of their condition to their stockholders and customers as an advertisement; but isolated and sporadic reports of single banks are not of much value to the general public. It would have a much greater effect in quieting the apprehensions based on surmise and ignorance if, for instance, a reliable report of the condition of every bank in

the country could be made and published at more frequent intervals, and abstracts made of the principal items in these reports.

In a country as large as the United States, if a harvest fails in one locality, the failure is compensated for by the abundance which prevails in other parts of the country. Means of knowledge and communication bring about this result, or we might starve in New York while wheat was a drug in Chicago, as formerly people have starved in Rome while the storehouses of Egypt were full. The knowledge that the corn was in Egypt saved an enterprising race of commercial people to the world, and since that day they have shown the same acumen as to the value of correct information as was in that instance shown by their progenitors. It is not so easy to obtain a knowledge of the condition of the banks, or to form a correct judgment in regard to it, as it is to obtain information as to the status and movement of products. Knowledge in regard to the condition of banks, to be of value, should be comprehensive and immediate. The plan of having reports every day from all the banks would be impracticable, but it would be a great help if the condition of the banks in the chief money centers were known weekly. The money centers of the country are indicated nearly enough for the purpose by the presence of clearing-houses. When the banks in any locality do business enough to render a clearing-house a necessity, that place may be regarded as a money center. There are at present about forty towns and cities in the United States, the banks located in which make their exchanges through clearing-houses. If the banks in each of these places were to make reports weekly on a uniform day, and these reports were immediately collected, a very comprehensive view of the business of the country would be the result. As it is now, banks belonging to only three clearing-houses of the country make weekly itemized reports, showing the condition of each bank in the association, viz.: those in New York, Boston and Philadelphia. The banks of Chicago, St. Louis, Baltimore, Pittsburgh, Louisville, Cincinnati, Detroit, Milwaukee, New Orleans and San Francisco make no itemized reports, nor do those belonging to the clearing-houses in the twenty-seven smaller places. What would be the effect if all the banks connected with the clearing-houses of the country should on every Saturday put in their reports, as is done by the associated banks of New York, Boston and Philadelphia, can be seen by the beneficial effect produced on the money markets of the country by the weekly bank statements issued by the clearing-houses of the cities above named. It is believed that if the managers of the various clearing-houses of the country would take this matter in hand and secure some uniform form of report, to be adopted by the banks connected with all clearing-houses of the country, such reports to be made weekly upon a uniform day, and to be collated at some common center, that great good would result to all financial and business interests. A weekly report of all the prominent banks of the country would prevent a scarcity of currency in any one city from injuriously affecting the whole. Several times when the weekly statements of the associated banks of New York showed that their reserves were low, if it had been possible to obtain reports of the same date from the principal banks of the West, South and central portions of the country, it would have been seen that there was an abundance of currency available, and the necessity of calling upon the Treasury might not have been so seriously felt. The expense of such a system of reports would not be heavy.

Notes and Comments on
BANKING PRACTICE.

**SOME NEW IDEAS ON HOW TO CONDUCT A BANK WITH SUGGESTIONS AND HINTS
REGARDING THE OLD METHODS.**

Written for RHODES' JOURNAL OF BANKING by a Bank officer—supplemented by
occasional contributions from others who are interested in the subject.

Books About Banking.—There are two kinds of men who know how to manage a bank successfully: first, those men who, by force of character, great natural abilities, and special aptitude for the business, achieve success almost, it would seem, without effort. These are men concerning the causes of whose success it is idle to speculate. They are men who succeed in favorable and in unfavorable circumstances alike. No matter from what quarter the wind blows, it always seems to bring them fortune; endowed with a Midas touch, everything they handle turns to gold, and even errors, which to others would be fatal, seem, in the end, rather to increase their prosperity; but there is another class of men who, if they do not achieve so brilliant a measure of success, yet succeed so fairly well as to entitle them to be ranked among the successful men of their time. Not furnished by nature with any extraordinary powers or special aptitudes, yet imbued with a strong desire for success and sustained by a powerful determination to achieve it, they set themselves resolutely to work to climb by slow and laborious paths until they reach the summit of their ambition. It is often a matter of wonder among unobserving persons how some men manage to succeed so well, in spite of the generally admitted fact that their natural endowments are in no wise superior to the average run of their fellows. These are the men who read and study and think, who are not above gathering information from every available source, and who despise not the day of small things. The business of banking is so exceedingly practical in its nature that it is very hard to reduce its principles to definite rules, and for the additional reason that there are very few persons who understand the principles sufficiently well to make any successful attempt to explain them to others. Indeed, many of the most successful bank Managers would be utterly at a loss to explain definitely and correctly the causes of their own prosperity. This point was illustrated recently by one of the daily papers, which published interviews with a number of rich men concerning the principles which had guided them in the acquisition of their means. One gave one answer, another, another; but, after all, there was but very little information afforded the public which would be any guidance to those who were endeavoring to attain the same end. There was a good deal of talk about industry, honesty, and all that sort of thing, virtues which are often practiced by very many people without resulting in any marked degree in that sort of riches which are suitable to be laid up on earth. Practical men who are more accustomed to deal in actions than in words and have neither the time nor the disposition for philosophical and scholarly reflections are usually quite at a loss to reason correctly as to the causes of their own success, while those persons, on the contrary, who are given to theorizing are usually so much absorbed in their own speculations as to afford anything but an encouraging example to those who would pursue that way of acquiring riches. Not, to be sure, that there is any lack of literature concerning banking and finance, for these have been attractive subjects to writers in all ages. Cicero tells us that commerce, if conducted on a wholesale basis, is not altogether disgraceful, and in later times Lord Bacon writes essays on the subject of riches, and shows his appreciation of the practical side of the question by

exhorting Mr. Justice Hutton to keep his hands clean and uncorrupt from gifts, while he himself, at the same time, was receiving bribes, and thereby increasing his own material fortune. In more modern times Adam Smith discoursed of the "Wealth of Nations," and laid the foundations of modern political economy; but if one asks to-day, what is the best book about banking for practical men to read? the answer is somewhat difficult to give. There are books for lawyers which treat of banking law, there is a whole library of books on political economy, and every month additions are made to the number. There are treatises on finance, and acres of printed matter on special subjects, as, for example, on the silver question; but none of these are exactly the books which one would recommend to a person desiring to equip himself with the information which would be especially useful to a practical banker. It is true that, to him who would be thoroughly informed upon the subject, there is nothing that would come altogether amiss; but there are some books which are more valuable than others, and unless time is unlimited there are some books which it is well to read and study to the partial or even to the total neglect of others; but the special information required by a practical banker is not really to be found in any one treatise on the subject. It is scattered through fugitive articles in the newspapers; in occasional controversies between well-informed people which bring out the fine points of the subjects under discussion. Curious as the statement may seem, a great deal of very necessary information is to be found in the mathematical text books. Indeed, there are some problems concerning rates of interest on stocks and bonds which cannot be solved without the aid of comparatively high mathematical attainments. The United States Government, for example, employs a special officer styled the Actuary to make these calculations for the Treasury Department. Whatever may be said of the comparative ease of obtaining satisfactory treatises on banking law, it is by no means easy to get trustworthy and full information on bank practice, practice which often has almost as much force and effect as law itself. It is all very well for bankers of twenty or thirty years' standing to talk about the valuable lessons of experience, but the competitive spirit of the present day does not permit a man to wait twenty years to find out that which he is expected to know now. That even the general principles of banking practice are not thoroughly understood and generally agreed upon, is shown by the controversies which arise from time to time in the newspapers and in the banking magazines. Indeed it is amusing to note the errors into which even well-informed men will fall in stating what they consider to be well established banking practice. While the study of books on political economy is to be commended, yet books of a more practical nature are really desired by a man who wishes to qualify himself for the position of a manager of a large bank, and it is exactly these practical books which are so exceedingly scarce. Men of experience have neither the time nor the inclination to put themselves on paper, while men whose knowledge is merely theoretical are not fully equipped for the task; hence, as stated before, for the practical banker the best books are the current periodicals especially devoted to the subject of banking, and those newspapers which give special attention to the preparation of their financial articles.

Banks as Special Partners.—In the granting of discounts it should be borne in mind that the bank in extending the accommodation assumes to a certain degree the risk of the business of the firm or corporation to whom it lends its money. Especially is this the case with unsecured single name paper, for here the bank actually becomes a participant in all the risks which attend the business of the maker of the note without sharing any of the profits beyond the actual interest charged. The same remarks apply, though less forcibly, to the discounting of a firm's bill receivable. The increasing volume of single name paper that is constantly manufactured for the market should induce an extra degree of caution on the part of lenders, and the manager should never lose sight of the fact that his bank shares to a certain degree, either directly or indirectly, all the risks of the borrower's business, and consequently loans should not be made to those whose enterprises do not commend themselves to the judgment of prudent financiers. Indeed, in all lending of money to persons

engaged in speculative enterprises the bank encourages the speculation itself, and on that account might, in some cases, be held morally responsible for the extent of the speculation. Indeed, it has been suggested that the banks themselves are largely to blame for a great deal of the wild-cat speculation that is indulged in by advancing money to borrowers, who use it rather for such purposes than for legitimate business enterprises.

Public Opinion and Banking Interests.—It is a common assertion that the majority of men usually desire to do what is right; but, when acting as a body, they are seldom able to carry out their designs. In this country, in which popular government reigns supreme, public opinion is a great lever in political action, and members of the Legislature are often more susceptible to its influences than to the arguments of reason. It is often said of the most desirable measures, that they are all very well in themselves, but that public opinion is not yet quite ripe enough to receive them favorably, and therefore they must wait. Perhaps there is no substantial interest in the country more under the ban of public prejudice than the banking interests. The public seem to be possessed with an idea that all bankers are necessarily very rich, and consequently any addition to their stores is, so to speak, but painting the lily or gilding refined gold, and therefore any effort in that direction is really a work of supererogation. Accordingly the public view with jealousy and suspicion any measures which seem to tend to promote a wealth already apparently sufficiently great. A curious illustration of this feeling is instanced in the growth of the American Bankers' Association. For the first few years the Association did very effective work in securing the passage of laws favorable to the banking interests, and often very greatly to the interest of the public generally, but bye-and-bye the idea began to be diffused among the members of Congress, who have a sharp eye to the views of their constituents, that it would not do to pass so many measures in the interest of an Association of banks and bankers. There seemed somehow to be an irrepressible conflict between the banks and bankers on the one hand and the interests of the dear people on the other, and what was thought beneficial to the former could not fail to be prejudicial to the latter. Indeed some members got themselves into such a mental condition on the subject that they viewed with suspicion any measure that had the approbation of leading financiers, on the principle that gentlemen of wealth were not in the habit of drawing up measures in the interest of anybody but themselves. It is undoubtedly true that public opinion after a long while is likely to reach an accurate conclusion, but the trouble is that it gets there so very slowly, and while passing through its various phases, is apt to do damage by the violence of its expressions. Hence it has always been the endeavor of the framers of our Constitution and statutes to interpose between public opinion itself and the legal expression thereof a barrier of some sort which would prevent the violent and sudden changes which mark purely popular governments. The Senate of the United States serves as an excellent example of a provision of this sort, but unfortunately the tendency of our Constitutions are such that barriers of this sort have a constant tendency either to fall into disuse or so change their constitution as to really become of little value to the purpose for which they were intended. And thus it has come to pass that the opinion of the public generally exercises a strong and direct influence upon every measure pending before a State Legislature or before Congress, and it is only under very strong pressure that measures are passed in the face of existing popular opinion. It is this public opinion making against the interest of the banks which exercises so strong and often so harmful an influence on the interests of the banking community generally. It is true that these interests generally are so intertwined with each other that it is impossible to affect one either favorably or unfavorably without affecting, in the same way, the other, and in these days of corporate banks, the real banker, that is, the owners of the capital stock, are frequently persons of limited means, and not by any means that rich class which, according to the popular view, compose the banking fraternity. It is strange that no organized efforts have ever been made to break down the influence of this popular prejudice, especially as it forms two-thirds of all the opposition to bank measures.

BANKING LAW.

* LEGAL DECISIONS AFFECTING BANKERS.

CERTIFICATES OF DEPOSIT—PAYMENT BY BANK TO PARTY WHO DEPOSITED FUNDS AND RECEIVED THE CERTIFICATES, ALTHOUGH NOT THE PAYEE THEREIN NAMED—LIABILITY OF BANK TO PAYEE—A QUESTION ON WHICH THE SUPREME COURT OF CALIFORNIA ARE NOT UNANIMOUS.

(P, the clerk of H, without the knowledge or authority of H, deposited certain funds with the defendant bank and took certificates of deposit certifying that H had deposited the amount, payable "to self or order." P also wrote in the register of certificates of deposit, under the head of "To whose order," "N. Honig by S. A. Peyser." Subsequently P received the money on all the certificates and surrendered them to the bank. Some time after their payment H learned of the above facts and brought suit against the bank upon the certificates. *Held* (two Judges dissenting), that H could ratify the unauthorized act of his agent, P, in depositing the money, without authorizing P to indorse his name upon the certificates and receive payment, and, as the amount had not been paid to plaintiff or his order, he was entitled to recover.)

This was an action by the plaintiff, Honig, to recover the amount of six certificates of deposit made and executed by the defendant. They were all in the same words, except as to date and amount. The following is a copy of the first issued :

<p>"\$250.</p>	<p>No. 3,289.</p>	<p>Series B.</p>
<p>PACIFIC BANK,</p>		
<p>N. W. COR. SANSOME AND PINE STREETS.</p>		
<p>SAN FRANCISCO, January, 19, 1885.</p>		
<p>N. Honig has deposited in this bank two hundred and fifty dollars in gold coin, payable to self or order on the return of this certificate, properly indorsed.</p>		
<p>S. G. MURPHY, Cashier.</p>	<p>M. W. UPTON, Teller."</p>	

The deposits for which these certificates were issued were, in fact, made by one S. A. Peyser, who was the clerk of Honig, and the certificates were delivered to him. When he made the deposits Peyser demanded certificates, and wrote in the register of certificates of deposit under the head of "To whose order," "N. Honig by S. A. Peyser," and the money was subsequently paid to him on each and all of the certificates. Honig had for many years been a well-known business man in San Francisco, but he had never had dealings with the defendant other than to collect money on checks on the bank; and it did not appear otherwise than by the register and the issuance of the certificates that the officers of the bank ever knew of his existence.

Peyser was in the employ of Honig and was intrusted with the collection of moneys, but Honig did not authorize him to make these or any deposits with the bank; did not, in fact, know of the deposits, or that any certificates had been issued, until long after the certificates had been paid to Peyser as before stated. Of course Peyser had no authority from Honig to indorse the certificates or to obtain the money upon them. Some time after their payment Honig discovered the fact and brought this suit upon the certificates, although they had been so paid, and had, in fact, been surrendered by Peyser to the bank and were still in the possession of the bank.

As to the register of signatures the Cashier testified as follows: "The register book of certificates of deposits is a signature book, or book of identi-

* All the latest Decisions affecting Bankers rendered by the United States Courts and State Courts of last resort will be found in the JOURNAL'S Law Department as early as obtainable.

Attention is also directed to the "Law Notes and Comments" and "Replies to Law and Banking Questions," which are included in this Department.

cation, which is placed before a person making a deposit in this way, and in which he writes his name then and there; and opposite to that man's name is the amount that the certificate is issued for and the number; and on the return of that certificate to the bank the Paying Teller is required to examine and compare the signature of the indorsement with the signature of the party depositing the money; and if that signature is not genuine, and has not the appearance of being genuine, and written by the party who deposits the money, payment is refused upon it."

Held, It is contended that a certificate of deposit is a form of deposit by one with whom the bank has not a regular account; that the depositor, on leaving his money, leaves also his signature, thereby designating upon what indorsement the money may be drawn; that the contract really is to pay upon the surrender of the certificate, indorsed by the same person and in the same way that the register is made in the certificate of deposit book. But the trouble with this contention is that the certificate is a negotiable instrument. On their face the certificates sued on are payable to N. Honig or order. The register is a private book kept by the bank for its own convenience and protection. It forms no part of the negotiable instrument issued by the bank. If an indorsement is required, the character of it is indicated on the face of the paper itself, which is expressly made payable to Honig or order.

The exigencies of the defendant's case would require us to hold that (1) had Honig presented in person the instrument which is expressly made payable to him or order the bank could have properly refused payment, and that upon such refusal no action would lie upon the part of Honig against the bank. (2) That had Honig assigned the certificate for a valuable consideration the Assignee could not have obtained the money, although by law it is negotiable and is expressly made payable to Honig's order. (3) That Peyser could have indorsed Honig's name and demanded the money, although the defendant knew he was no longer in the employ of Honig and that Honig expressly protested against his authority to indorse his name or receive the money for him. That is, that Peyser was able without Honig's knowledge or consent to constitute himself Honig's agent and that the agency was irrevocable. And (4) in case of Honig's death his Administrator could not get the money, but Peyser could still obtain it; and in case of his death his Administrator too could have drawn the money.

If I send my messenger boy to make a deposit for me and he discloses his principal, and the certificate is issued payable in terms to me, the contention is that I cannot collect the money until I cause my own name to be indorsed on the certificate by the boy, who at the time may be in Hong Kong. This cannot be so. If the bank keeps a certificate book for its protection its officers must see to it that they get the right signature in the book. It cannot, by taking the wrong signature, prevent the true owner from getting his money on demand.

There is no contract expressed or implied that the certificate was payable only when indorsed according to the signature in the register. The certificate of deposit register is evidently a mere private book whose contents cannot concern the holder of a negotiable certificate; but if it were otherwise it is difficult to discover how it could help the defendant. For, after all, this book only shows the number of the certificate, the amount for which it was drawn and to whose order it was made payable, which in this case was Honig. The Cashier is presumed to know that no act of his could authorize Peyser to act as Honig's agent, and that, if Peyser had then been the agent of Honig, it was competent for Honig to withdraw the agency at any time.

It is said that a person may deposit in a fictitious name, or may give any name he chooses to the bank: so he may represent himself as the agent of a fictitious principal, and in such case he can draw the money in the name in which the deposit was made. Let this be admitted. It does not cover this case. Here the principal was not fictitious. The bank cannot assume that a named principal is a fictitious person, or if it does so it will be at its peril. (*Morgan vs. Bank*, 1 Duer, 484.) The fact that the certificates were in possession of the defendant is immaterial. They had been executed and duly delivered to the plaintiff through his agent. The defendant came

into possession of them wrongfully and without having paid them to plaintiff or his order.

It is said that plaintiff cannot recover the full amount of all the certificates, for he has not shown that defendant received more than \$300 altogether. This is upon the theory that Peyser may have drawn the money on the first certificate and then re-deposited it, or some of it, to purchase the second certificate, and so on. This would perhaps have been a tenable position if Honig had sued for money had and received, ignoring the certificate on the ground that the deposit was not authorized by him. But there can be no doubt of the proposition that plaintiff was at liberty to ratify the unauthorized act of his agent and sue on the certificates, and that he could do this without authorizing Peyser to indorse his name upon the certificates. They were entirely distinct transactions. The action, then, was brought upon several negotiable instruments, each of them reciting the exact amount of money received from Honig and promising to pay the same to Honig or his order. None of them have been paid to plaintiff or his order or to his agent. When plaintiff proved the execution and delivery of the instruments and that they had not been paid he made out his case. All that appears in answer to this is that under the peculiar circumstances of this case it is possible that only \$300 of Honig's money was received by the bank. We cannot disturb the finding of fact by the trial court on the ground that upon the evidence it is possible that the defendant did not receive so much of the plaintiff's money. The burden of proof was clearly shifted to defendant.

The defendant having possession of the certificates the plaintiff was not required to produce and surrender them; but, if that were necessary, it was done when the defendant was compelled to produce them and submit them to the Court. Having come into possession of them unlawfully defendant held them for the plaintiff.

Judgment of the lower court for \$1,250 and interest in favor of plaintiff affirmed.

The opinion of the Court was delivered by Temple, *J.*, and Searls, *C. J.*, and McKinstry and Sharpstein, *J. J.*, concurred. McFarland and Paterson, *J. J.*, dissented.

McFarland, *J.*, in his dissenting opinion, after reciting the averments of the complaint and the proof before the trial Court, said: "The undisputed facts of the transaction are these: On the 19th of January—the day of the first certificate—one S. A. Peyser went into the bank of defendant and deposited \$250 and took for it a certificate of deposit. It is the custom of the bank, when a man wants a certificate of deposit, to request him to write his name in a signature book, or book of identification. Opposite his signature is written the number of the certificate issued him, with date, amount, etc., so that when it is presented for payment the Paying-Teller, by comparing the signature by which it is indorsed with the signature previously written in the book, may see that they are the same, and that therefore the certificate is 'properly indorsed.' In accordance with this requirement Peyser wrote in the signature book 'N. Honig, by S. A. Peyser,' under the heading, 'To whose order,' and the certificate was issued and delivered to him with 'N. Honig' named as depositor. In a few days Peyser returned with the certificate indorsed just as written in the signature book—'N. Honig, by S. A. Peyser'—was paid the money and delivered up the certificate to the bank for cancellation. Shortly afterwards he made another deposit and received another certificate in the same way, which, in a few days, was paid to him in like manner; and so on until the six certificates had been thus issued and paid, except that one of them was payable to 'N. Honig per S. A. Peyser,' and another was also indorsed by a firm called 'Davis & Co.' and seems to have passed through the Clearing-House. Each time Peyser wrote in the signature book 'N. Honig by S. A. Peyser,' and the certificate was thus indorsed before payment. Each certificate was paid before its successor was issued, so that the greatest amount which Peyser ever had at the bank at any one time was \$300.

"While these transactions were taking place the plaintiff, Honig, knew nothing whatever about them. He had never authorized Peyser to deposit any of his money at that bank, and did not know that Peyser had made any deposits

there of any character. Honig had never been a customer of the bank, had no account there of any kind, and had never himself received from it any certificate of deposit; and he was entirely unknown to the bank. But after the transactions were concluded and all the certificates had been paid and taken up by the bank Peyser died; and a few months after his death plaintiff, having then learned of these transactions, demanded of defendant that it should pay all said certificates over again to him; and the demand being refused, this action was commenced. He made no proof at the trial that any of the money deposited by Peyser belonged to him (plaintiff), but he relied entirely upon the mere fact that his name was in the certificates as depositor.

"Upon these facts I do not think the plaintiff was entitled to judgment. I do not see how the principles of law applicable to the peculiar qualities of negotiable paper can be invoked in this case. These principles apply ordinarily when the rights of sureties, indorsees, guarantors, and other persons generally, intervene. If the certificates invoked in this case had not contained the words 'or order,' or any equivalent words, the claim of plaintiff would not have been of any less legal value. If it be shown that a negotiable instrument made by A to B was without consideration, B cannot maintain an action upon it against A. Between the original parties there is not often any difference whether a bailment or debt be evidenced by a simple receipt or a negotiable promise, except that in the latter case a consideration is presumed. If the money deposited by Peyser with the defendant was not the money of plaintiff upon what principle can he recover in this action? If he had obtained possession of the certificates before payment and then had demanded payment, or had indorsed them to third parties, different questions might have arisen. The only parties to the contract were the bank and Peyser; part of that contract was that the certificates should have the indorsement which had been written in the book of identification; they were returned with that indorsement, the money was paid and the instruments were taken up and cancelled; and thus the contract was executed and ended before there was any assertion of the claim—real or pretended—of plaintiff.

"The only position having any strength which plaintiff could take is that the certificates, being in form negotiable, import a consideration; that is, make a *prima facie* case of ownership of the money by plaintiff. Plaintiff, however, in his testimony entirely repudiates the agency of Peyser in every part of the transaction. He says that he knew nothing about the certificates until after Peyser's death. But if Peyser was not plaintiff's agent in receiving the certificates, then the insertion of plaintiff's name therein goes for naught and he can base no right thereon. On the other hand, if, notwithstanding his testimony, he seeks now to adopt and ratify the agency of Peyser, he must adopt the whole of that agency or none. (Story, Ag., Sec. 250.) But suppose it be assumed that the money belonged to plaintiff and was in the possession of Peyser as his agent, how would the case stand then? It has been held in some cases that an original bailor may maintain detinue against a second bailee, but never, we apprehend, where the second bailee has safely re-delivered the thing bailed, according to his contract, to the first bailee before notice and demand by the original bailor. (Story, Bailm., Sec. 105-107.) If B, having custody of the money of A, intrusts it to C for temporary safe keeping, and C returns it to B before any notice or demand by A, then A has no action either *ex contractu* or *ex delicto* against C, because C has neither broken a contract nor done a wrong.

"However, I think that no case can be found where an action has been successfully maintained directly upon a negotiable instrument not lost or destroyed before cancellation when the plaintiff has never been in possession of the instrument and has never known of its existence until after its existence had ended. Here the bank was in possession of the instruments sued on at the time the action was commenced, claiming to own them as cancelled obligations. And it has been directly held in *Crandall vs. Shroepfel*, 1 Hun, 557, that a party claiming to own a promissory note in the possession of another, who also claims to own it, cannot maintain an action on it, and that the title to the note cannot be settled in such an action. Of course this case differs widely from the common case where a man opens a general account

with a bank and a *contract relation* between the parties exists from the start. There the original party alone has the right to draw against the account, no matter by whom he may send deposits. It no doubt would have been more regular and safer if the bank had required Peyser to take the certificates in his own name; but under the facts here, in my opinion, there is no phase of justice and no rule of law which compels the bank to pay these dead and cancelled instruments."

Paterson, *J.*, in dissenting, said: "The bank and Peyser had the right to enter into an agreement that the former should pay the money deposited by the latter to the order of 'N. Honig, by S. A. Peyser,' and this agreement was binding, unless the rights of innocent parties intervened. The instrument never was delivered to Honig. The fact that it is negotiable in form is immaterial. If plaintiff's right of recovery depends upon the agency of Peyser it is sufficient to say that plaintiff must ratify or repudiate all of his acts. He cannot ratify the deposit and repudiate the indorsement. There is nothing to show that the plaintiff owned the money deposited by Peyser. At most the plaintiff ought not to recover more than \$300."

Honig vs. Pacific Bank, Supreme Court of California, September 27, 1887.

PROMISSORY NOTE—STIPULATION FOR PAYMENT OF FIXED SUM AS ATTORNEY'S FEE—SUCH A PROVISION IS NOT USURIOUS, WITHOUT CONSIDERATION, OR AGAINST PUBLIC POLICY, BUT IS VALID AND ENFORCEABLE.

A promissory note contained an agreement that if it was not paid when due an attorney's fee of \$30 was to be paid by the maker, if the note was placed in the hands of an attorney for collection. In a suit on the note the declaration averred the non-payment at maturity, the placing of the note in the hands of an attorney for collection, and the payment by plaintiff of \$30 as a fee to said attorney for his services therein.

On behalf of the defendant it was contended that the promise to pay such attorney's fee was (1), usurious; (2), wholly without consideration; (3), its enforcement would be contrary to sound public policy; and (4), that it was within the prohibition of Section 6, Chapter 74, of the Revised Statutes of Illinois.

Held, It is apparent that the cases of *Nickerson vs. Babcock*, 29 Ill., 497, and *Easter vs. Boyd*, 79 Ill., 325, where it was held that an attorney's fee could not be recovered because by the contract it was not due when the suit was brought, can have no application here. In this case, if recoverable at all, it became due by the terms of the contract when, after non-payment at maturity, the note was placed in the hands of an attorney for collection.

If enforcing this promise to pay an attorney's fee would directly or indirectly have the effect of giving the payee, or of requiring the payer to pay a greater compensation for the loan, use, or forbearance of money than is allowed by law, then unquestionably the contract would be usurious. The law will not tolerate any shift or device to evade its provisions. The sixth section of Chapter 74 provides that "all contracts executed after this Act shall take effect, which shall provide for interest or compensation on account of non-payment at maturity, shall be usurious." It therefore follows that if the \$30 stipulated to be paid is interest or compensation on account of the non-payment of the principal sum and interest reserved, then the contract would be usurious and should be so held. On the other hand, if this portion of the contract gives to the creditor no additional interest or compensation, or provides no penalty for the non-payment of the note, but is intended only as indemnity against actual loss to the creditor from the failure of the debtor to keep his agreement, we are unable to perceive upon what principle he should be debarred from requiring it as a condition to the extension of the credit, or of enforcing it, to an extent necessary to save himself from actual loss, in the contingency of loss occurring to him by the default of the other party to the contract.

By the statute all penalties, whether as additional interest or as compensation for the use of money, are prohibited; but where, as here, no additional or new compensation is provided for, and the contract is only for such sum as the payee would be obliged to expend in compelling the maker to perform his

undertaking, the statute contains no inhibition upon the power of the parties to contract that the same shall be paid by the party whose default occasions the necessity of the expenditure. In this view we are sustained by the authority of very many Courts of the highest respectability.

Upon the question as to whether contracts of this nature are void as against public policy, this Court, as well as those of other States, is also fully committed. In *Clawson vs. Munson*, 55 Ill., 394; *Dunn vs. Rogers*, 43 Ill., 261; *McIntyre vs. Yates*, 104 Ill., 491, and other cases—contracts of this character have been upheld and enforced by this Court. The right of the parties to thus contract has been expressly recognized; and when the contract has been for such reasonable attorney's fees only as would indemnify and preserve the payee from loss, and where due at the time of suit brought, this Court has in every case sustained the plaintiff's right of recovery. (See also *Imler vs. Imler*, 94 Pa. St., 372; *McGill vs. Griffin*, 32 Iowa, 445; *Huling vs. Drexell*, 7 Watts, 126; *Peyser vs. Cole*, 11 Or., 39; *Smith vs. Silvers*, 32 Ind., 821; *Tuley vs. McClung*, 67 Ind., 10.)

Nor do we see anything in the section of the statute quoted that would change the rule. Thereby the parties are prohibited from contracting for interest or compensation to be paid to the payee on account of the non-payment of the principal debt at maturity. In *Armour vs. Moore*, 5 Bradw., 432, the note provided that if it was not paid when due, it should thereafter draw interest at the rate of 2 per cent. per month as liquidated damages; and it was very properly held that if the provision for the payment of 2 per cent. per month if not paid at maturity, was divisible from the note proper, so that the note might be held to be untainted with usury, and the provision for the 2 per cent. regarded as a means of insuring prompt payment of the note at maturity, the agreement to pay the 2 per cent. per month would nevertheless under the statute be usurious and unlawful. It is apparent there the agreement fell directly within the statute. The agreement here provides for no new or additional compensation or interest for the use of the money, because of the failure to pay at maturity. It is not in the nature of a contract for additional interest, but a provision merely against loss or damage to the payee, specifically pointed out, and which will necessarily result if the debtor fails to fulfil his undertaking; and there is no reason why he may not contract to bear the loss occasioned by his own default. It is apparent that the payee must not derive any benefit from the amount agreed to be paid, and the amount contracted for must be only such reasonable sum as will save him from loss in consequence of the default of the maker. It is not pretended here that the amount agreed to be paid was unreasonable or that the payee derived any benefit whatever therefrom. On the contrary, it is shown to be reasonable, and the whole amount was paid to the attorney for his services in the proceedings to collect the note.

The right of the payee to require the indemnity against loss, and the right of the maker of the note to contract to secure the payee against the same, necessarily dispose of the objection that the promise was without consideration. If, while the creditor may not contract for more than the legal interest for use of his money, or for additional compensation or interest for the non-payment of the note at maturity, he is not debarred from requiring, as a condition to making the loan, or extending the credit, that he should be secured against expense occasioned by the default of the debtor, it follows that the making of the loan or extension of the credit would be a good consideration for the promise of indemnity by the debtor.

Judgment for plaintiff.

Farmers & Merchants' National Bank of Vandalia, Ill., vs. Barton, Supreme Court of Illinois, September 28, 1887.

ACTION AGAINST NATIONAL BANK TO RECOVER PENALTY—JURISDICTION OF STATE COURT.

The plaintiff, Overman, brought an action in the District Court of Johnson County, Nebraska, against the First National Bank of Tecumseh, under Section 5198 of the Revised Statutes of the United States, to recover \$100 as a

penalty under said section for the taking of illegal interest. Judgment for that amount was rendered in favor of the plaintiff and the bank appealed the case to the Supreme Court of the State, claiming that the trial court had no jurisdiction.

Held. It is provided by the concluding paragraph of Section 5198 that "suits, actions and proceedings against any association under this title may be had in any circuit, district, or territorial Court of the United States, held within the district in which such association may be established, and in any State, county or municipal Court in the county or city in which such association is located, having jurisdiction in similar cases." This removes the impediment to the exercise of jurisdiction created by the Act of 1789 (Rev. St. U. S. Sec. 711), and expressly confers jurisdiction on the State Courts, as above specified, concurrent with the Federal Courts, in "suits, actions and proceedings against any association under the Banking Act." The Statutes of the United States extend over every State as a part of its laws; and, although exclusive jurisdiction may be given to the Federal Courts, yet if it is not so given, either expressly or by necessary implication, the State Courts, having competent jurisdiction in other respects, may be resorted to. (*Hade vs. McVay*, 31 Ohio St. 236; *Kinser vs. Bank*, 13 N. W. Rep., 59; *Ordway vs. Bank*, 47 Md. 217; *Clafin vs. Houseman*, 93 U. S., 130; *Gruber vs. Bank*, 19 Alb. L. J., 187; *Pickett vs. Bank*, 32 Ark., 346; *Dow vs. Bank*, 50 Vt., 112; *Bletz vs. Bank*, 87 Pa. St., 87.) Authority is therefore expressly conferred on the State Courts having jurisdiction in similar cases.

Further Held. It is very strenuously contended on behalf of the bank that Congress cannot impose duties on the State Courts, and that therefore they had no authority to act in the premises. But Congress has not sought to compel the State Courts to act in a case like that under consideration, nor has it sought to impose duties upon them. It simply confers the authority—in effect, permits them—to hear and determine such cases, but without compulsion. (1 Kent, Comm., 400.) The State Courts do not exercise a new jurisdiction conferred upon them, but their ordinary jurisdiction, derived from their constitution under the State law. (*Clafin vs. Houseman*, 93 U. S. 130.) The State tribunals, therefore, have jurisdiction.

Judgment affirmed.

First National Bank of Tecumseh vs. Overman, Supreme Court of Nebraska, September 23, 1887.

PROMISSORY NOTE—FORGERY OF NAME OF "WILLIAM R. STEPHENS" BY WRITING "BILL STEVENS" — SUCH A SIGNATURE MAKES THE NOTE APPARENTLY VALID AND WILL SUSTAIN A CONVICTION.

The defendant, Rudicel, signed a promissory note with the name "Bill Stevens" and endeavored to negotiate it as the promissory note of William R. Stephens. He was convicted of forgery in the trial court and an appeal was taken to the Supreme Court of Indiana, his counsel contending that as the appellant intended to defraud by forging the name of William R. Stephens, and instead of writing that name wrote the name "Bill Stevens" no case was made out because the instrument was not such as would deceive any person.

Held. We cannot assent to this doctrine. It is true that the forged instrument must on its face appear to be one of some legal efficacy; but it is sufficient if the legal validity be apparent, and not actual. It is only where the instrument appears, as matter of law, to be void that the accused can escape. Mr. Bishop thus states the law: "Since men are not legally presumed to know the facts, a false instrument which is good on its face may be legally capable of effecting a fraud, though inquiry into extrinsic facts should show it to be invalid, even if it were genuine." (2 Bish. Crim. Law, Sec. 541.)

In this instance the note was perfect in form, and it is only by inquiry into extrinsic facts that it can be ascertained that it will not bind the person whose note the accused represented it to be. If the note had been sued on and it had been averred that William R. Stephens had executed it under the style of "Bill Stevens" he as defendant would have been compelled to defend by way of answer and an inquiry into extrinsic facts would have been necessary to determine the validity of the note; so that it is obvious that the validity of the

instrument could not have been determined from a mere inspection. If the note had been bought by the person to whom it was offered as the note of the man William R. Stephens, he would have been defrauded had he believed the representations of the accused, because the validity of the note was not disclosed as matter of law, but depended upon extrinsic facts. It is not the character of the signature that determines, as matter of law, the validity of a promissory note, perfect in form and substance; for if the note is signed, the manner of signing does not necessarily impair its force.

It is not necessary that the prosecution should show that the instrument was in due legal form; it is sufficient if it be shown that it so resembles a valid promissory note as renders it likely to deceive a purchaser. (*Garmire vs. State*, 104 Ind. 441; *Rollins vs. State*, 22 Tex. App. 548.)

Where the accused intends to forge the name of a person and attempts to utter the note as that of the person whose name he intended to forge, he is guilty of the crime of forgery, and will not be allowed to escape punishment on the ground of an error or omission in writing the forged signature. (*Powers vs. State*, 87 Ind. 97.) In the case of *Lemasters vs. State*, 95 Ind. 367, the forged note purported to be signed by one who could not write, and although a space was left and indicated for a mark it was held that the forgery might be alleged upon such a note, notwithstanding the fact that there was no mark. In *Myers vs. State*, 101 Ind. 379, the instrument was represented to have been executed by Vincent T. Wert, but it was signed "Dr. Wert" and a conviction was sustained.

It is always competent to prove that different names may, in fact, identify or relate to the same person. (*Johnson vs. State*, 46 Ga. 269; *Com. vs. Gale*, 11 Gray, 320; *State vs. Dresser*, 54 Me. 569.) It is competent therefore to prove that a man often or usually signs instruments by initials, or by any abbreviation he chooses, or by any familiar name others may give him; and it cannot be said as matter of law that William R. Stephens did not often or usually sign his name "Bill Stevens"; so that it cannot be held that such a signature disclosed the invalidity of the note.

Judgment affirmed

Rudicel vs. State, Supreme Court of Indiana, September 30, 1887.

CERTIFIED CHECK—LIABILITY OF BANK TO HOLDER WHERE THE INSTRUMENT IS NOT INDORSED.

(W, in payment of a diamond which he had purchased, delivered to the plaintiff a check to the order of himself, certified by the bank, but which he had not indorsed. In an action by the plaintiff against the bank, *Held*, That the bank could not be made liable to pay to third persons the funds of W by any transfer of this check except one evidenced by the indorsement of his name thereon.)

One F. F. Wilder purchased of the plaintiff, Theresa Lynch, a diamond of the value of \$500, and delivered to her in payment therefor a check drawn on the defendant, the First National Bank of Jersey City, signed by himself, and reading, with its indorsements, as follows:

JERSEY CITY, N. J., June 1, 1883.	
First National Bank pay to myself, or order, five hundred dollars.	
(Signed)	F. F. WILDER.
Certified: First National Bank, Jersey City. Payable at the American Exchange National Bank, New York. Omberson.	

(Indorsed) "T. LYNCH, R."

The check was not indorsed by Wilder. Omberson was Assistant Cashier of the defendant, authorized to certify checks, and certified the one in question on June 1, 1883, at the request of the drawer, Wilder, while still in his possession, and who at that time had funds in the bank. Payment of the check being refused, plaintiff sued the bank, and the Court below directed a verdict in her favor. On appeal,

Held, Upon the evidence, it is clear that there was no contract made between Wilder and the plaintiff whereby any transfer of the deposit in the bank was

intended to be made beyond that which would follow the mere delivery of the check. The action can be supported only by proof that all of the conditions upon which the authority of the bank to pay the check was made to depend by the drawer have been performed. (*Freund vs. Importers & Traders' Bank*, 76 N. Y., 357.)

It therefore seems to us that the only question in the case is whether the bank could be made liable to pay to third persons Wilder's funds by any transfer of this check except one evidenced by the indorsement of his name thereon. It is well settled by authority that the mere drawing and delivery of a bank check to a third person by a depositor does not constitute an assignment to the payee therein named of the fund held by such bank. (*Ætna National Bank vs. Fourth National Bank*, 46 N. Y., 82; *Commercial Bank of Albany vs. Hughes*, 7 Wend., 94.) A check is analogous to a bill of exchange, and a bank cannot be made liable thereon except by its acceptance indorsed upon it in writing. (*Riley vs. Phoenix Bank*, 83 N. Y., 318.)

An acceptance of the check, however, was made by the bank, we think, when through its agent it indorsed thereon a certificate of genuineness and directed its payment by the American Exchange Bank. That operated as a promise to pay upon presentation at the American Exchange Bank bearing Wilder's indorsement. The obligation of the bank as shown thereby amounts to a representation that the drawer has funds in the bank with which to pay the check, and that it will retain and pay them to the holder, by its agency in New York, upon its presentation there bearing the indorsement of the drawer. (*Farmers & Mechanics' Bank vs. Butchers & Drovers' Bank*, 14 N. Y., 623; 16 Id., 125; 28 Id., 425; *Security Bank vs. National Bank*, 67 N. Y., 458, 460; *Clews vs. Bank of New York*, 89 N. Y., 218.)

Such a contract the defendant had a right to make limiting its liability to an order properly indorsed by the depositor or his payee, and the depositor had a right to impose upon the bank the condition that his money should be paid out by it only upon a check indorsed by himself, or its payee. If the bank should disregard such a requirement it would do so at its own risk, but the holder has no legal right to impose such a liability upon it against its consent. It would certainly add much to the hazard of the transmission of funds by check, draft, or otherwise through the mail or express if the banks or agencies upon which they were drawn should be compelled to pay them to the holder by an action at law where they do not bear upon their face the evidence of the performance of the condition upon which the drawer has authorized their payment.

It was held in *Freund vs. Importers & Traders' Bank* (*supra*) that a certification by the bank of a check in the hands of the holder who had purchased it for value from the payee, but which had not been indorsed by him, rendered the bank liable to such holder for the amount thereof. By accepting the check the bank took, as it had the right to do, the risk of the title which the holder claimed to have acquired from the payee. In that case the bank entered into a contract with the holder by which it accepted the check and promised to pay it to the holder notwithstanding it lacked the indorsement provided for, and it was held that it was liable on such acceptance upon the same principles that control the liabilities of other acceptors of commercial paper. In the case at bar the certification of the bank was made at the request of the drawer and was subject to the condition imposed by him, plainly written in the check, that it should not thereafter be payable except by his indorsement.

The relation existing between a bank and its depositor is that of a debtor and creditor, and the bank holds the fund subject to be paid out upon the direction of the creditor according to the terms and conditions imposed by him. (*Ætna National Bank vs. Fourth National Bank*, 46 N. Y., 82; *Crawford vs. West Side Bank*, 100 N. Y., 56.) The bank's protection in the payment of checks consists in the fact that it has followed strictly the depositor's directions in disbursing his funds. Where a depositor has imposed the condition that his check shall not be paid without it bears his indorsement, the depository, if it pays it to a holder without such indorsement, runs the risk of the transaction and takes the burden of showing that such holder has acquired in some way the lawful title to receive the funds. It may successfully defend such payment

if it can show that it made it to a person who, as against the drawer, was legally entitled to receive it, for in that event the drawer would suffer no damage thereby.

It was held in *Riley vs. Phoenix Bank*, 88 N. Y., 318, that a parol contract by a depositor for the transfer of the whole or any part of his deposit is valid in law and invests the transferee with the right to sue for and recover the amount of such deposit or such part thereof as was intended to be transferred. It was also held in the same case that a depositor might, concurrently with the delivery of a check to a third person, enter into such a contract by parol as would transfer the fund represented by the check to the person named therein. In such a case the liability of the depository is not predicated upon the check, but that is used, in connection with the parol agreement, as evidence of the contract transferring the debt. (*The Oneida Bank vs. The Ontario Bank*, 21 N. Y., 490; *Riley vs. Phoenix Bank*, *supra*.) The action arises upon the contract of assignment and not upon the check.

We are of opinion that the evidence in this case did not authorize the trial Court to find that Wilder intended to transfer any part of his deposit to the plaintiff, and there is no other theory upon which the action can, under the evidence, be maintained. The verdict was therefore improperly directed for the plaintiff.

Judgment reversed.

Lynch vs. First National Bank of Jersey City, New York Court of Appeals, October 18, 1887.

ABSTRACT OF CASES.

NEGOTIABLE INSTRUMENT—ACTION ON BY BONA FIDE HOLDER—DEFENSE—DEMURRER TO EVIDENCE.

In an action brought by the *bona fide* holder of a negotiable promissory note, it is not error to sustain a demurrer to the evidence of the maker, where there is no testimony tending to show want of consideration for the note or any fraud in the inception thereof, when these are the only defenses set up in the answer.

Lowe vs. Higginbotham, Supreme Court of Kansas, October 8, 1887.

PROMISSORY NOTE—PLACE OF PAYMENT NOT SPECIFIED—DUTY OF MAKER—INTEREST.

It is the duty of the maker of a matured, outstanding note in which no specific place of payment is appointed, to seek out the persons entitled to receive payment, and discharge his debt without waiting until those entitled establish their right. (*King vs. Finch*, 60 Ind., 420.) If he elects to wait until those entitled bring him into Court, it must be held that he does so upon condition that he pay interest as the statute (Revised Statutes, Ind., 1881, Sec. 5,200) provides.

Gale vs. Corey, Supreme Court of Indiana, September 20, 1887.

DEMAND NOTE—WHEN OVERDUE?—REASONABLE TIME.

The rule in this country is that a note payable on demand is overdue for the purposes of negotiation, unless it is negotiated within a reasonable time; and what constitutes such reasonableness of time cannot be determined by any fixed and exact rules, but must depend upon the circumstances of each case. (1 Pars., N. and B., 375-379; *Herrick vs. Wolverton*, 41 N. Y., 581; *Carri vs. Brown*, 2 Mich., 401.) It has been said that where the note is given for a loan of money, or is payable with interest, it may be presumed that an immediate demand was not within the contemplation of either party, and that, even after the lapse of months in some cases, the note may be considered as still not overdue. (1 Daniel, Neg. Instr., Sections 607, 608.) Whether what is reasonable time is a question of law for the Court, or a question of fact for the jury, is a matter which has been a good deal controverted; but undoubtedly the better

view is that it is a mixed question of law and fact, and that, except where the facts are few, simple, and undisputed, in which case the Court shall decide it, it should be left to be decided by the jury under the direction of the Court, upon the particular circumstances of the case. (1 Daniel, Neg. Instr., Section 612; 1 Pars., N. and B., 269; Wyman vs. Adams, 12 Cush., 210, 214.)

Bacon vs. Harris, Supreme Court of Rhode Island, July 30, 1887.

NEGOTIABLE PROMISSORY NOTE—PURCHASE FOR VALUE BEFORE MATURITY—KNOWLEDGE THAT CONSIDERATION IS FUTURE AND CONTINGENT DOES NOT SUBJECT PURCHASER TO EQUITIES BETWEEN ORIGINAL PARTIES.

If it were known to the transferee of a negotiable promissory note, acquired for value and before maturity, on taking it, that the consideration was future and contingent, and that there might be offsets against it, this would not make him liable to the equities between the original parties. It cannot affect the negotiability of a note that its consideration is to be thereafter realized, or that from some contingency it may never be enjoyed.

State National Bank vs. Cason, Supreme Court of Louisiana, July 5, 1887.

ACTION ON PROMISSORY NOTE—DEFENSE—ADMISSIBILITY OF EVIDENCE OF CONTEMPORANEOUS AGREEMENT FOR PAYMENT OF NOTE IN MERCHANDISE.

In defense of an action upon a promissory note, when it is between the parties to the note, and where the object is to show that the note has been satisfied, evidence is admissible to show that, contemporaneously with the making of the paper, it was agreed between the parties to it that merchandise should be taken in satisfaction of the amount to become due, coupled with proof that the merchandise was delivered according to the agreement. The admission of such evidence does not infringe upon the well-settled rule that evidence of contemporaneous declarations is inadmissible to vary the terms of a written contract.

Buchanan vs. Adams, Court of Errors and Appeals of New Jersey, June Term, 1887.

PROMISSORY NOTE—FRAUDULENT ALTERATION—EFFECT.

Where a note signed by a husband and wife was secured by a mortgage upon their homestead, and the husband, when about to deliver the note and mortgage to the mortgagee, changed the word "date" in the clause, "With interest from date," in the mortgage and note, to "due," but upon being detected in his act by the mortgagee, corrected the note so as to read, "With interest from date," as originally signed, and the mortgagee accepted the note and mortgage with the understanding that both read, "With interest from date," and loaned his money thereon, *Held*, As the note was corrected before delivery so as to read as originally signed, and as the mortgage was intended to secure said note, and the word "date" was changed to "due" fraudulently, without the knowledge of the mortgagee, or the wife, that the mortgagee is entitled to recover thereon, as there was no material alteration in the note, and the fraud of the husband in attempting to change the mortgage could not defeat the foreclosure thereof.

Osborn vs. Andrees, Supreme Court of Kansas, October 3, 1887.

BILLS AND NOTES—TRANSFER AFTER DUE—HOLDER TAKES SUBJECT TO EQUITIES—RIGHT OF ACCOMMODATION INDORSER TO AVAIL HIMSELF OF EQUITIES BETWEEN ORIGINAL PARTIES AS A DEFENSE TO NOTE TAKEN AFTER DUE.

The general rule is that he who takes a note after it is due, takes it subject to all equities to which it was liable in the hands of him from whom he takes it. Daniel, in his book on "Negotiable Instruments," Volume I., Section 726, says that in England it is held that the rule does not apply to bills and notes drawn, indorsed, or accepted for accommodation, it being considered that

parties to accommodation paper hold themselves out to the public to be bound to every person who shall take the same for value, the same as if it were paid to themselves, though Mr. Daniel also says the earlier authorities were otherwise. But see *Parr vs. Jewell*, 16 C. B., 684. The English rule has not been followed in this country. In *Chester vs. Dorr*, 41 N. Y., 279, the Court decided that an accommodation indorser, without consideration, of a promissory note, is not liable to a transferee of the note after maturity, although such transferee paid a full consideration; for the reason that it cannot be supposed that such an indorser intends to give the note currency by the loan of his credit for a period longer than it is to run according to its terms. In *Bower vs. Hastings*, 36 Pa. St., 285, it was held to be a good defense to an action by an indorsee against the maker of a promissory note, that it was made for the accommodation of the payee, without consideration, and negotiated by him when overdue.

The New York case and the Pennsylvania case were both carefully considered on both reason and authority, and are entitled to the more weight because New York and Pennsylvania are the leading commercial States in this country. See also *Hoffman vs. Foster*, 43 Pa. St., 187. In *Kellogg vs. Barton*, 12 Allen, 527, the Supreme Judicial Court of Massachusetts decided in the same way, though apparently without special consideration or inquiry; and to same effect see *Cummings vs. Little*, 45 Me., 183, and *Battle vs. Weems*, 44 Ala., 105.

We know of no American case which directly applies the English rule, though there are American cases which refer to it as the rule. Of course it is highly important that the rule in this country should be uniform, and we therefore think that the rule laid down in the great commercial States of New York and Pennsylvania, the same being in our opinion just and reasonable should be, as it probably will be, adopted in the other States.

Bacon vs. Harris, Supreme Court of Rhode Island, July 30, 1887.

OVERDUE PROMISSORY NOTE — TRANSFER BY INDORSEMENT — PRESENTMENT AND NOTICE — REASONABLE TIME — LIABILITY OF INDORSER.

Overdue promissory note may be transferred by indorsement—When indorser liable? A promissory note, negotiable in form, though overdue, is still capable of being transferred by indorsement; and when so transferred the indorser is, in the absence of anything to the contrary, liable upon his indorsement, if, in a reasonable time thereafter, the note is presented to the maker for payment, and notice given in case it is not paid.

What is reasonable time for presentment? In such case a reasonable time for its presentment is the lapse of such a period after the indorsement as, under all the circumstances, will enable the holder, in the exercise of reasonable diligence, to present the note for payment.

Reasonable time a mixed question of law and fact. What is a reasonable time is generally a mixed question of law and fact. Where the facts are in dispute, it should be submitted to the jury for its determination under proper instructions from the Court; but where the material facts are admitted, or not in dispute, it is a question for the Court, and cannot properly be submitted to the jury.

Insolvency of maker no excuse for non-presentment. The known insolvency of the maker, and that he himself cannot pay, does not dispense with the necessity of presentment for payment in order to fix the liability of the indorser.

The foregoing principles applied to facts. B, the payee of a negotiable promissory note overdue, transferred it by indorsement to W for a valuable consideration, on the 30th of July, 1883. The makers were, to the knowledge of the parties, insolvent at the time of the transfer, and had made an assignment for the benefit of their creditors; and it was known that, by reason of certain litigation between the general and secured creditors, the note would not be paid immediately from the funds in the hands of the assignee. All the parties resided in the same city, and nothing was said at the time of the indorsement as to whether the note should be presented to the makers for payment or not. Upon the determination of the litigation in favor of the secured creditors, the note

- was, on the 21st of November, 1883, presented to the makers for payment, and immediate notice of non-payment given to the indorser.

Held, (1), That there is nothing in the facts of the transaction from which an inference can be drawn that presentment for payment has been waived by the indorser; (2), that the note was not presented to the makers for payment within a reasonable time, and (3), that the indorser was discharged.

Bassenhorst vs. Wilby, Supreme Court of Ohio, October 4, 1887.

LAW NOTES AND COMMENTS.

Stipulations for Attorney's Fees.—The Federal Court in Georgia in a case reported in our last number, pass upon the effect of an agreement to pay costs of collection and attorney's fees inserted in a promissory note, holding that such a stipulation does not destroy the negotiable character of the instrument.

In the present number a decision of the Supreme Court of Illinois is published, to the effect that such a stipulation is not usurious, against public policy, or without consideration, but is valid and enforceable.

In recent years it has frequently been the practice, especially in the Southern and Western States, to insert in promissory notes and other instruments a clause for the payment of a fixed percentage as an attorney's fee, or of a "reasonable attorney's fee," in case the instrument should not be paid at maturity. This has resulted in a flood of legal decisions bearing upon the validity of such stipulations and the negotiability of the instruments containing them, and adjudged cases may be found supporting every conceivable view of the question. Some cases hold that such a stipulation is valid and enforceable, and does not affect the negotiability of the instrument. Others, while holding that the stipulation is valid and may be enforced, decide that it destroys the negotiability of the note and makes it a mere contract. Another line of cases hold that such a stipulation is absolutely void and will not be enforced, as being a stipulation for a penalty or forfeiture, tending to the oppression of the debtor and to encourage litigation, a cover for usury, without any valid consideration, and against public policy. And other cases wherein the question of negotiability has arisen, hold that because such a stipulation is void and of no effect, it does not consequently affect the negotiability of the instrument to which it is attached. The cases are so numerous and the views of the Courts so various that a brief run over the course of adjudication in the different States may be both interesting and instructive.

Arkansas.—In *Merchants' Nat. Bank vs. Sevier and ano.*, in the Circuit Court for the Eastern District of Arkansas, 14 Fed. Rep. 662 (1882), the action was against the makers of a promissory note which contained an agreement that in the event payment was not completely made at maturity, the makers "further agree to pay an attorney's fee of 10 per cent. on the amount due and unpaid if suit be brought to enforce payment of this note, which said fee shall become due and recoverable in the action brought to enforce the payment of this note for the use of the attorney bringing said suit." The Court held that such a provision was a stipulation for a penalty or forfeiture, and tended to the oppression of the debtor and to encourage litigation; that it was a cover for usury, was without any valid consideration to support it, was contrary to public policy, and void.

In this case judgment was allowed for the principal and interest of the note, and no more. The question of negotiability was not involved as the case arose between the immediate parties to the paper.

In *Trader vs. Chidester*, in the Supreme Court of Arkansas, 41 Ark., 242 (1883), the action was against the makers, by the indorsee before maturity, of a promissory note containing an agreement that "in the event of this note being collected by suit at law (the makers) agree to pay an attorney's fee of 10 per cent. of the amount of principal and interest due, waiving any and all relief whatever from valuation and appraisal laws." The question was as to the negotiability of the instrument so as to cut off a defense of the makers, and the Court held that such a stipulation did not affect its negotiability. Referring to the case of *Merchants' Nat. Bank vs. Sevier*, the Court said that

that case did not involve the negotiability of the paper and that "the logical sequence of denying the validity of the stipulation is to affirm the negotiability of the note." The question whether such a stipulation was valid and enforceable was not presented in the case as the fees were not claimed in the action.

Mr. Justice Eakin dissented, and was of opinion that the insertion of a stipulation to pay attorney's fee in the event of suit renders the note non-negotiable.

In *Boozer vs. Anderson*, 42 Ark., 167 (1883), the note in suit contained a stipulation that in the event suit became necessary to collect it the maker would pay an attorney's fee of 10 per cent. on the amount that should be recovered. The stipulation for the attorney's fee was sought to be enforced, but the Court held that it was an agreement for a penalty and void.

Georgia.—The decision of the Circuit Court of the United States for the Southern District of Georgia (1887), in *Schlesinger vs. Arline*, reported in the November number, is to the effect that a stipulation in a note promising to pay "all costs of collection, including 10 per cent. attorney's fees" does not render the note non-negotiable.

Illinois.—*Nickerson vs. Babcock*, 29 Ill., 497 (1863), was an action upon a note which provided as follows: "And we further agree if the above note is not paid without suit, to pay \$10 additional to the above, for attorney's fees." The Court held that the \$10 could not be recovered in the same action with the principal of the note, saying: "The sum was not due until suit was instituted, and no rule of practice is more uniformly recognized than that a suit cannot be maintained before a demand is due. The plaintiff is therefore limited in his recovery to the debt or damages due at the time of issuing the writ."

In *Nickerson vs. Sheldon*, 33 Ill., 372 (1864), an ordinary promissory note contained this additional clause: "And we further agree if the above note is not paid without suit, to pay \$10 in addition to the above for attorney's fees." It was claimed that this clause destroyed the negotiability of the note, but the Court held otherwise, saying: "The amount due by this note is absolutely certain and it possesses all the requisites of a negotiable instrument under the statute. There is no uncertainty as to the precise sum of money to be paid on the maturity of the note."

In *Short vs. Coffin*, 76 Ill., 245 (1875), a promissory note contained a clause providing for the payment in addition to the amount of the note of an "attorney's fee of 10 per cent. on the amount due, as liquidated damages, in case of the collection thereof by suit at law or otherwise, to be added to and made a part of the amount due, or of the judgment." The action was by the indorsee against an indorser and the Court disallowed the attorney's fee holding that in an action brought by the indorsee of a promissory note against the indorser, the measure of damages is the amount paid by the assignee to his assignor, with interest; and that the recovery could in no case exceed the amount of the note and interest.

In *Easter vs. Boyd*, 79 Ill., 327 (1875), the case was similar to *Nickerson vs. Babcock*, providing for an attorney's fee in case of suit, and the same ruling was made that the attorney's fee not being due at the time the action was commenced, it could not be recovered in the same action. The Court, however say: "Had these notes contained a provision authorizing the recovery of an attorney's fee, on default of payment of principal and interest when due, then, under the contract, the amount claimed might probably have been recovered; but as the contract embodied in the notes falls clearly within the rule announced in *Nickerson vs. Babcock*, no recovery can be had."

In *Farmers & Merchants' Bank of Vandalia vs. Barton* (1887), reported in this number, the note contained an agreement that if it was not paid when due, an attorney's fee of \$30 was to be paid by the maker if the note was placed in the hands of an attorney for collection. The Court held that the cases of *Nickerson vs. Babcock* and *Easter vs. Boyd*, *supra*, did not apply, as by the terms of the contract the attorney's fee became due before suit brought; and that the stipulation was valid and enforceable in a suit on the note.

Indiana.—In Indiana, before the enactment of the statute in 1875 making void any agreement to pay an attorney fee depending upon any condition therein set forth, there were several decisions which will be briefly noted.

In 1858, in the case of *Billingsley vs. Dean*, 11 Ind., 331, a provision in a note that if not paid when due the maker would pay "all attorney's fees and other costs and charges for the collection thereof" was held not to render the contract usurious, and was enforceable.

In *Smith vs. Muncie Nat. Bank*, 29 Ind., 158 (1867), a bill of exchange on its face contained an agreement to pay attorney's fees. It was held that when accepted, the acceptor came under an absolute obligation to pay the bill according to its tenor, being liable thereon the same as the maker of a note.

In *Smith vs. Silvers*, 32 Ind., 321 (1869), it is held that a stipulation in a promissory note whereby the maker agrees to be liable for reasonable attorney's fees in the event of suit, is not usurious and will be enforced.

In *Stoneman vs. Pyle*, 35 Ind., 103 (1871), a note was payable at a bank in the State and contained a stipulation for the payment of attorney's fees in the event suit should have to be instituted thereon. Held that this provision did not destroy the negotiability of the paper.

In *Wyant vs. Pottorhoff*, 38 Ind., 512 (1871), which was a suit upon a note providing for the payment of attorney's fees if suit was brought, it was held that there must be proof of the value of the attorney's services to authorize a finding therefor, and the Court cannot take judicial notice of their value.

In *Hubbard vs. Harrison*, 38 Ind. 325 (1871), it was held that a promise in a note to pay "attorney's fees if suit be instituted on this note" can be enforced against an indorser.

In *Mathews vs. Norman*, 42 Ind., 176 (1873), it was held that an agreement to pay reasonable attorney's fees if the holder is required to resort to legal proceedings to collect the note, is valid.

In *Smiley vs. Meir*, 47 Ind., 559 (1874), the note contained this stipulation: "And 10 per cent. attorney's fees if suit be instituted upon this note." Held, that *prima facie* the amount or rate of attorney's fees stipulated for is to govern in a suit on the note, and where the note does not specify the amount of attorney's fee, evidence of the amount should be given on the trial. It was also held that the attorney's fee should be included in a judgment with the principal and interest of the note, and could not be sued for in a subsequent action.

In *Strong vs. Gear*, 48 Ind., 100 (1874), where a note provided for the payment of "attorney's fees of _____ per cent. if suit be instituted on the note" it was held that the note was payable with reasonable attorney's fees, and that "of _____ per cent." was surplusage.

It will be noticed that in the majority of these cases the stipulation to pay attorney's fees was upon a condition, viz., if suit should be brought, and the Legislature probably intended to do away with these stipulations entirely when in 1875 (Act approved March 10th), it enacted "That any and all agreements to pay attorney fees, dependent upon any condition therein set forth, and made part of any bill of exchange, acceptance, draft, promissory note, or other written evidence of indebtedness, are hereby declared illegal and void; provided that nothing in this section shall be construed as applying to contracts made previous to the taking effect of this Act."

In *Churchman vs. Martin*, 54 Ind., 380 (1876), this Act was held constitutional, and a clause in a note for the payment of "10 per cent. attorney's fees if suit be instituted on this note" was held to be within the terms of the statute and illegal and void, and that it could not be considered in estimating a recovery upon the note.

Whatever the intention of the Legislature, however, as to abolishing stipulations for attorney's fees in promissory notes and other instruments, its only effect under the construction put upon it by the Supreme Court of Indiana was to do away with *conditional* stipulations for attorney's fees where the condition was *set forth* in the instrument, and in all other cases they have been upheld.

Thus, in the same case of *Churchman vs. Martin*, it was held that a clause in a note reading "and 5 per cent. attorney's fees" was an unconditional promise to pay 5 per cent attorney's fees, not within the statute, and enforceable.

And it was further held as to a stipulation contained in a note to pay 5 per cent. expenses of collection, other than attorney's fees, if suit should be

instituted on the note; and a stipulation in another note to pay 5 per cent. exchange and other expenses incident to the collection thereof, other than attorney's fees, if suit should be instituted on the note, that these were valid stipulations, were not usurious, did not violate the statute and could be enforced.

The Court said: "Two things are clearly and unequivocally required to bring a case within the statute. First, the agreement to pay an attorney fee must be dependent upon a condition. Second, the condition must be set forth in the instrument. We cannot assume that the Legislature intended to make all agreements to pay attorney's fees, made part of any bill or note, etc., illegal and void. The language employed utterly excludes such inference. * * * The statute expressly limits the prohibition to agreements depending upon any condition set forth in the instrument."

In the following cases the ruling in *Churchman vs. Martin* was followed, and stipulations to pay attorney fees, contained in promissory notes, were held unconditional and valid.

Brown vs. Barber, 59 Ind., 538 (1887).

Sinker vs. Fletcher, 61 Ind., 278 (1878).

Smock vs. Ripley, 62 Ind., 81 (1878).

Garver vs. Pontious, 66 Ind., 191 (1879).

Tuley vs. McClung, 67 Ind., 10 (1879).

In *Proctor vs. Baldwin*, 82 Ind., 370 (1882), a promissory note payable at a bank in the State promised to pay the amount and "attorney's fees." The Court held that it was commercial paper, and the agreement contained in the note to pay attorney's fees did not deprive it of such character.

In *Maynard vs. Meir*, 85 Ind., 317 (1882), it was held that a void stipulation for attorney's fees in a promissory note does not invalidate the note.

Iowa.—In *Sperry vs. Horr*, 32 Iowa, 184, a promissory note concluded with this clause: "If not paid when due and suit is brought thereon, I hereby agree to pay collection and attorney's fees therefor." The Court held that this stipulation did not affect the negotiability of the instrument, saying: "The agreement for the payment of attorney fees in no sense increased the amount of money which was payable when the note fell due, and we are unable to see that it rendered that amount uncertain in the least degree. It simply imposed an additional liability in case suit should be brought, and such liability did not become absolute until an action was instituted. This agreement relates rather to the remedy upon the note, if a legal remedy be pursued, to enforce its collection than to the sum which the maker is bound to pay. It is not different in its character from a cognovit, which when attached to promissory notes does not destroy their negotiability."

In *McIntyre vs. Cagley*, 37 Ia., 676 (1873), a promissory note provided: "And we agree also to pay an attorney's fee of 10 per cent. if this note is collected by suit." The Court held that this stipulation would not be regarded as in the nature of a penalty to cover the expense of collecting the note by action, and therefore recoverable only to the extent of such actual expense which must be shown by evidence, but as liquidated damages for which the plaintiff may have judgment. *Cole J.*, dissented, claiming that the sum fixed should be construed as a penalty.

In *First National Bank vs. Krance*, 50 Iowa, 235 (1878), where a note provided for the payment of a reasonable amount for attorney's fees, it was held necessary to have proof of the amount of such fees and a judgment could not be entered without such proof.

In 1880 the Legislature (by an act approved March 27th) enacted that "in any action upon a written contract for the payment of money, made after the taking effect of this act, in which is an agreement to pay an attorney's or collection fee, no greater recovery for attorney's fee shall be had against the maker of such contract than is provided for in Section 2 hereof, anything in said contract contained to the contrary notwithstanding." The statute then fixes the rate at which attorney's fees may be recovered, and makes certain regulations as to their allowance.

Kansas.—In *Seaton vs. Scoville*, 18 Kan., 438 (1877), a note executed in 1874 contained a promise to pay "costs of collecting, including reasonable

attorney's fees, if suit be instituted on this note." *Held*, that this clause did not render the note non-negotiable.

In *Howenstein vs. Barnes*, in the United States Circuit Court for the District of Kansas, 5 Dill., 482 (1879), a promissory note, executed in Kansas and payable in Missouri, provided for the payment of "10 per cent attorney's fees if suit be instituted on this note." The Supreme Court of Kansas had decided that such notes were negotiable instruments; the Supreme Court of Missouri had decided that they were not negotiable instruments. *Held*, that the paper was negotiable.

By Chapter 77 of the Laws of 1876, the Legislature of Kansas provided "that hereafter it shall be unlawful for any person or persons, company, corporation or bank to contract for the payment of attorney's fees in any note, bill of exchange, bond or mortgage; and any such contract or stipulation for the payment of attorney's fees shall be null and void," etc.

Kentucky.—In *Gaar vs. Louisville Banking Co.*, 11 Bush., 180 (1874), it is held that an agreement in a bill of exchange that if the bill should be sued upon, a reasonable attorney's fee should be paid to the holder, does not make the amount due thereon uncertain so as to deprive the paper of its negotiability. Further *Held*, that such a contract is not an agreement to pay usury, but an agreement to pay a penalty in default of payment of principal and lawful interest at maturity, or before suit.

In *Witherspoon vs. Musselman*, 14 Bush., 214 (1878), in the body of the note was this stipulation: "If the note is collected by suit, we are to pay a reasonable attorney's fee." *Held*, We are clearly of the opinion that all such contracts are absolutely void. They are contrary to the policy of our laws, which prescribe the amount of attorney's fees that may be taxed against the unsuccessful litigant. They are agreements to pay penalties, tend to the oppression of the debtor, and to encourage litigation.

Louisiana.—In *Dietrich vs. Bayi*, 28 La. Ann., 767 (1871), the note provided: "Should the note not be paid at maturity and judicial proceedings be instituted, the lawyer's fees, fixed at 10 per cent., to be at the cost of the maker." *Held*, That the clause as to lawyer's fees did not make the note non-negotiable.

Maryland.—In *Maryland, etc., Co. vs. Newman*, 60 Md., 584 (1883), the note provided that if not paid when due, the maker promised and agreed to pay all costs and charges for collecting the same, with interest. *Held*, That this rendered the note non-negotiable; but while it could not be treated as a negotiable promissory note, it was a contract for the payment of money, and the indorsee of such instrument may declare on such contract as assignee thereof.

Michigan.—In *Bullock vs. Taylor*, 89 Mich., 137 (1878), a provision in a promissory note for "\$15 attorney's fees over and above all taxable costs should any proceeding be instituted to collect this note" is held to be a stipulation for a penalty and void. The Court say: "It is opposed to the policy of our laws concerning attorney's fees, and it is susceptible of being made the instrument of the most grievous wrong and oppression. It would be idle to limit interest to a certain rate if under another name forfeitures may be imposed to an amount without limit."

To the same effect is *Meyer vs. Hart*, 40 Mich., 517 (1879.)

Minnesota.—In *Jones vs. Radatz*, 27 Minn., 240 (1880), it was held that a stipulation in a note for the payment of "reasonable attorney's fees if suit be instituted for the collection of this note" destroyed its negotiability.

To the same effect is *Hardin vs. Olson*, in the U. S. Circuit Court, D., Minnesota, 14 Fed. Rep., 705 (1882).

Mississippi.—In *Meacham vs. Pinson*, 60 Miss., 217, a note was executed containing a stipulation to pay all attorney's fees and costs expended in collecting it. The Court say: "The validity of the stipulation for the payment of lawyers' fees is assailed by counsel for the appellants. The question has been much mooted elsewhere, and the authorities are not harmonious. We see nothing immoral or contrary to public policy or usurious in such contracts, and concur with those Courts which hold them valid."

Missouri.—In *First National Bank vs. Gay*, 68 Mo., 38 (1876), it is held that an instrument in the ordinary form of a promissory note, but which

contained a clause that if it was "not paid at maturity, and the same is placed in the hands of an attorney for collection, we agree and promise to pay an additional sum of ten per cent. as attorney's fee," was not precise as to the amount to be paid and was not a promissory note.

To the same effect are *Samstag vs. Conley*, 64 Mo., 476; *First National Bank vs. Marlow*, 71 Mo., 618 (1880); *First National Bank vs. Gay*, 71 Mo., 627; *Storr vs. Wakefield*, 71 Mo., 622, and *First National Bank vs. Jacobs*, 73 Mo., 85 (1880).

Nebraska.—In *Heard vs. Dubuque County Bank*, 8 Neb., 10 (1878), a promissory note otherwise negotiable is not rendered non-negotiable by reason of containing a clause in these words: "And if suit is brought to enforce collection I will pay reasonable attorney's fees."

In *Dow vs. Updike*, 11 Neb., 95 (1881), the maker of a note promised to pay in addition to the amount of the note in case it was not paid at maturity "a reasonable attorney's fee for instituting and prosecuting to judgment a suit on this note." *Held*, In this State attorneys' fees were not allowed prior to the passage of the Act of 1873, and the Legislature, by repealing that Act, evidently intended to withdraw from the plaintiff the right to recover the same. The stipulation for attorneys' fees is therefore unauthorized and void.

North Carolina.—In *First National Bank vs. Bynum*, 24 N. C., 24 (1881), in addition to the specific sum promised, the instrument stipulated for the payment of "all counsel fees and expenses in collecting the note if it is sued on or placed in the hands of an attorney for collection;" it was made payable "with exchange on New York;" and it further provided that the payees should have full power to declare said note due at any time they may deem it insecure, even before maturity. The Court held that the instrument was not negotiable for uncertainty; (1) as to the amount to be paid, by reason of the stipulation for attorney's fees and rate of exchange, and (2) as to the time of payment, by reason of the provision which makes it payable before maturity at the future option of the payee.

Ohio.—In *State vs. Taylor*, 10 Ohio, 378 (1841), a stipulation to pay five per cent. as collection fees, in addition to the legal interest for money loaned, is held against public policy and void.

Oregon.—In *Wilson S. M. Co. vs. Moreno*, in the U. S. Circuit Court, Oregon, 7 Fed. Rep., 206 (1879), it is held that a stipulation to pay a reasonable attorney fee in case of suit is just and valid and ought to be enforced.

In *Bank of British N. A. vs. Ellis*, 2 Fed. Rep., 44, in the same Court, it is held that an agreement to pay an attorney fee contained in a promissory note was binding on defendants, who were accommodation indorsers.

In *Peyser vs. Cole*, 11 Ore., 39 (1884), a promissory note contained a stipulation that in case suit was instituted the maker would "pay such additional sum as the Court may adjudge reasonable as attorney's fees in such suit or action." This the Court held valid and enforceable against the maker of the note.

Pennsylvania.—In *Woods vs. North*, 84 Pa. St., 407 (1877), the insertion of a clause in a promissory note to pay "five per cent. collection fee if not paid when due" is held to render the note uncertain, destroy its negotiability and relieve the indorser from liability thereon.

In *Johnston vs. Speer*, 92 Pa. St., 227 (1876), the note contained the clause, "and with _____ per cent. attorney's commission if collected by legal process." *Held*, that the note was not negotiable.

Texas.—In *Miner vs. Paris Exchange Bank*, 53 Tex., 559 (1880), a stipulation to pay the usual attorney's fees in the event suit had to be instituted to enforce the note was held legal and founded upon a valuable consideration.

In *Adams vs. Addington*, 16 Fed. Rep., 89 (U. S. Circuit Court, N. D. Texas, 1883), the note sued on contained this clause: "And in case of legal proceedings on this note agree to pay 10 per cent. of the amount for attorney's fees." The note was held negotiable under the law-merchant.

Wisconsin.—In *Morgan vs. Edwards*, 53 Wis., 599 (1881), the instrument contained a promise "to pay all expenses, including attorney's fees, incurred in collecting." *Held*, that the instrument was not a promissory note, and therefore not negotiable.

In *First National Bank vs. Larsen*, 60 Wis., 206 (1884), the instrument contained a clause agreeing, if the note was not paid at maturity or before suit

brought, "to pay ten per cent. attorney's fees thereon, in addition thereto, for the collection thereof." The Court held that this stipulation was valid, but that the amount fixed was not conclusive on the defendant; and that the amount to be recovered under such a stipulation must be fixed by the Court and jury on the trial of the action. It was further held that the amount recoverable being uncertain, the instrument was not a negotiable note.

REPLIES TO LAW AND BANKING QUESTIONS.

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this Department.
A reasonable charge is made for Special Replies asked for by correspondents—to be sent promptly by mail. See advertisement on another page.

Editor Rhodes' Journal of Banking:

MEMPHIS, Tenn., October 10, 1887.

Please state when the paper described below is due?

J. W. PROUDFIT.

\$50.00.

MEMPHIS, Tenn., June 14, 1887.

To J. N. Frost. Please pay J. W. Smith & Co., Fifty dollars and charge my account.

R. L. JONES.

Across the face of the paper was written the following: Accepted, payable in sixty days. J. N. Frost, June 15, '87.

Answer.—The acceptance carries grace, and is payable in 63 days, viz.: August 17th.

Editor Rhodes' Journal of Banking:

HUMMELSTOWN, Pa., November 3, 1887.

I enclose a copy of a note, as follows:

\$1,500.

HUMMELSTOWN, Pa., October 31, 1887.

Sixty days after date the Hummelstown Mutual Fire Insurance Company of Hummelstown, Pa., by its Secretary, promises to pay to the order of James Jones and John Smith fifteen hundred dollars, without defalcation, for value received, payable at the Hummelstown National Bank,

Witness my hand and the corporate seal of the said Hummelstown Mutual Fire Insurance Company.

PETER SMITH, Secretary,
H. M. F. Ins. Co.

SEAL.

(Indorsed)

JAMES JONES,
JOHN SMITH.

I would like to have your opinion whether it is a negotiable note. The company is incorporated, and the question arises whether affixing the seal of the company takes it out of the statute? What I want to know specially is, whether the endorsers are liable? An early reply will oblige yours truly,

JNO. J. NISSLEY, Cashier.

Answer.—The Supreme Court of Pennsylvania, in the year 1842, in *Hopkins vs. Railroad Company*, 3 Watts & S., 410, held that a note similar to the foregoing was not negotiable. In that case the defendant corporation executed a note in form strictly negotiable, but to which its corporate seal was affixed. The corporation being sued by an indorsee, the question arose whether plaintiff's cause of action was open to the defense that no consideration passed to the defendant for the note. The Court held that the note was not negotiable; that the affixing of the seal made the note a specialty, and the consideration of it was open to inquiry in the hands of the assignee or indorsee as much as if held by the original payee. One of the cases quoted by the Court in support of its decision is *Frevall vs. Fitch*, 5 Whart., 825 (an action by the indorsee against the endorser of the note of a banking corporation, negotiable in form, but which bore the corporate seal), wherein the Chief Justice said: "It is clear that recourse cannot be had to the defendant on his endorsement. Bearing the corporate seal of the bank on its face, though framed in other respects as a promissory note, the instrument is a specialty, and no obligation arose from the endorsement of it, either by the statute or the custom of merchants."

The rule here laid down does not appear to have been changed by any subsequent statute or legal decision, and is therefore applicable to the present case.

THE OFFICE OF PUBLIC EXAMINER—A MINNESOTA NOTION.

AN ADDRESS BY HON. HENRY M. KNOX, PUBLIC EXAMINER AND EX-OFFICIO BANK SUPERINTENDENT OF MINNESOTA BEFORE THE BANKERS' CONVENTION AT PITTSBURGH, OCTOBER 13, 1887.

Mr. President and Gentlemen of the Convention:

To the ordinary work of a Bank Examiner having the supervision of fifty-five banks rapidly increasing in number, three recently organized Trust companies, seven Savings banks under five different acts, add the examination of the State Treasury with its auditing office, the duty of visiting and supervising the books and financial accounts of the several public institutions of the State (including two State prisons, three hospitals for the insane, the State University and four Normal schools, the Institute for the Deaf, Dumb and the Blind, Idiots and Imbeciles, the State Reform School, the School for Indigent Children, and the Soldiers' Home)—weight this down with the care of eighty counties, each having eleven officers whose accounts should be examined, and the proceedings of whose two accounting officers, with their local Board of Commissioners, are expected to be gone over in detail annually, and you have that phenomenon which in the West is called "The Office of the Public Examiner."

I am by request to give you something of the history and objects of this office, and the methods by means of which its efficiency is secured. The limits of your time will admit of only a most condensed statement.

HISTORY.

The office of Public Examiner for the State of Minnesota was created by the Legislature in 1878, the present incumbent assuming his duties on May 1st of that year. It has therefore been in operation something over nine years. Its establishment is due mainly to the energetic efforts of the Hon. John S. Pillsbury, the Governor of the State. Its main purpose was to control the actions of the County Treasurers, whose accounts had fallen into a state of chaos, and whose numerous defalcations had created general alarm. The State Treasury and the public institutions were naturally placed under its supervision, and the banks (but thirteen in number at that time, with its seven Savings Associations) were included as a sort of annex. The Annuity, Safe Deposit and Trust Companies, since incorporated, were placed under the same supervision.

OBJECTS AND METHODS.

1. *Moneyed Institutions.*

As to the objects to be attained and the methods to be pursued under the Act in its relations to the moneyed corporations, they may be dismissed, as they are not other than those with which you are familiar under the National Bank Act. But in passing from this division of my subject, and remembering that I address a body of practical bankers, I may properly add a word in reference to the banks and banking laws of our State. The basis of the banking laws of Minnesota is a general Act passed July 28, 1858. Considerably more than one-half of its forty-six sections relates to the securities, issuance and redemption of circulating notes, and are, of course, inoperative at the present time. The remaining portion was grievously defective as to the organization and general powers of the banks, and entirely wanting in any effective controlling or restrictive limitations of the business. The law remained, however, in the form in which it was originally passed until the Examiner Office was instituted, since which time it has been liberally amended and improved. The Act as it now stands can, however, be considered as no more than a passable make-shift, awaiting the time of its intelligent recasting and codification.

By an Act of the Legislature of 1887 all the duties under the laws regulating the business of banking, which heretofore had been performed by the State Auditor, were transferred to the office of the Public Examiner. These relate principally to the authorization of State and Savings Banks, the calling for reports, the institution of proceedings in the case of violation of the laws, and in extremities for the annulling of the existence of the corporation. In the exercise of these functions, entirely

different from those imposed by the Act creating the original office, the Public Examiner is vested with the *ex-officio* title of "Superintendent of Banks."

From the official statements rendered to this officer in July of the present year it appears that the fifty-four incorporate banks of the State reported their capital and undivided profits as amounting to \$6,420,000, and their total resources to \$22,000,000. The seven Savings Associations report deposits amounting to \$3,900,000, and the three Trust companies, a capital of \$1,250,000.

On August 1, 1887, fifty-seven National banks in the State report to the Comptroller of the Currency a capital and undivided profits of \$16,900,000 and total resources amounting to \$54,130,000.

In July, 1886, there were also in Minnesota one hundred and thirty private banks, seventy-one of which were unofficially stated as having a capital and surplus of some \$2,300,000. Of these one hundred and thirty private banks, the report of the Examiner for that year gave a list of one hundred and nineteen having artificial names indicating legal authorization and not distinguishable from those which had been incorporated under the laws. Whereupon the Legislature of 1887 passed an Act forbidding the use of any corporate or artificial name after January 1, 1888, by any person or persons engaged in the business of banking and not subject to the supervision of the State. The main provision of the Act is identical in language with the provision of a similar Act passed by a late Legislature of the State of New York, without the amendment however which makes the law inoperative as to the banks in existence at the time of its passage, and which would seem to annul any salutary effects to be derived therefrom. The Act was carried notwithstanding a violent opposition. The private bankers of the State have since formed an organization for the purpose of testing the constitutionality of the Act.

2. *State Institutions.*

Returning now to the objects to be attained by the Examiner Act, it may be said that as to the several Public Institutions of the State the methods employed for the purpose of securing a wise and economical use of the funds appropriated for their support are—the visitations of the Examiner to each at irregular periods and without notice—the supervision of their books and financial accounts—the enforcement of correct methods of keeping the same—exhaustive examinations of the balances of cash on hand and of the vouchers for expended funds, and a thorough inspection of the purposes of the expenditures. The officers of these institutions are appointed by the Governor and chosen by reason of their substantial character and fitness for the position, and are thus free from the corrupting blight of politics.

3. *The County Finances.*

In regard to the county treasuries, the first great need was found to be, as anticipated by the Act, a simple and uniform system of accounts. These were found to be in the most dire confusion. The Accounting Officers were chosen every two years politically, and with very little inquiry as to their qualifications for performing the duties of their offices. The system of bookkeeping (if system it could be called which had none) had been introduced by each officer for himself, either as imported by memory from the various States of the Union and nations of the globe, or as copied from other officers, imperfections included. The main item of the account, namely, the revenues derived from taxation, appeared upon the books but three times a year, and then at irregular intervals and with no details by means of which its accuracy could be proven or ascertained. In most of the counties no off-setting account of the cash appeared. The different funds for which taxes were levied or money received were simply credited with their collections, and the sum of all the balances of these accounts was the only method of indicating the amount of money which should be in the treasury. The Treasurer had, therefore, no clue to his own accountability except (perhaps) at the three tax settlements of the year, when all the accounts had received their total credits. With no experience or facility in handling money it is easy to predict that these irregular balances were by no means satisfactory. If the cash proved to be "over" the excess must belong to the Treasurer; if "short," the error must be in the account, and it was easy to correct an account that preserved no details and was not subject to supervision. Many a well-meaning officer who would gladly have done better had he known how became helplessly entangled in his own figures, and was led on to worse things. The few who were intentionally fraudulent had a wide open door before them. Favoritism was universally practised. Obligations of a

friendly, political or financial nature were repaid from the treasury, by immunity in the payment of taxes either as to time or in amount, by influence in the auditing of claims of a doubtful character, or by a loan of the public funds. Thus the taxpayers were plucked on every hand, and when the day of reckoning came the official bond on which the public relied was found, in form and execution as well as in security, to be a rope of sand.

Were you able to imagine the condition of the National banks, were their officers nominated by political strikers and chosen for thirty years in the prevailing methods at elections held biennially; were there no consistent code of banking laws, but only a patch-work of incoherent shreds, put together without reference to each other, at odd times during all this period; and were there no provision by means of which the public could become acquainted with what was going on, you would have a picture not far different from the one attempted to be presented.

The first duty of the Examiner under the Act was to order and enforce a correct and uniform system of accounting, with a suitable check upon the mutual action of Auditors and Treasurers, insuring a thorough supervision and safety of the public funds. The ordering of such a system was promptly performed, and the enforcement of it is also at length in a large measure accomplished, the delays being such as must naturally be expected under a politically elective system, and one subject to constant changes in the officers.

Great progress has been made also in the repeal of conflicting laws, or in their amendment, so as to bring them into harmony with the purposes of the Examiner Act. To those of you, however, who have had to deal with the legislative branch of Government, it will occasion no surprise to learn that the main difficulty in carrying out this reform ordered by the Legislature itself, lies in its own action, or more properly in its inaction.

The very structure of the laws providing for the collection of the taxes and other revenues of the State, gives the control both of the money collected and of the original data from which it is collected into the hands of the County Treasurer. The County Auditor is indeed nominally the county's bookkeeper, but so far as the accounts are concerned he is not an independent or even a co-ordinate officer. He must receive the data for measuring the Treasurer's accountability from the Treasurer himself, and is not compelled by law to audit the Treasurer's figures. Each Legislature for several years has been made fully acquainted with this radical defect in the existing legislation; ample measures for its remedy have been introduced; three successive Governors have strongly recommended the passage of such a measure; every committee before whom it has been argued has recommended it to pass, and each time it has been defeated, not in open and manly debate, but by dilatory tactics. The nominal objection to the measure is the increased expense of the amended methods, as though anything can be more expensive than the disposition of Trust funds in the hands of a single officer and without check upon them. The real opposition is, however, well known to be the dependence of legislators upon the county officers for political support and advancement. Party politics is everywhere the bane of safe legislation. We need a civil service reform that shall reach far below the presidential appointees.

Progress in many other directions cannot be more than mentioned here, as in cleansing the treasuries of a vast amount of extraneous matters, providing safe depositories for the funds on hand, preparing printed forms for the official bonds of all officers and providing for their submission to the Attorney-General for his approval or disapproval in writing as to their legal form and execution, and in many ways creating a public sentiment which should demand a great improvement in the personnel of the service, and the administration of its duties.

POWERS UNDER THE EXAMINER ACT.

I may, perhaps, be expected to allude to the facilities furnished the Examiner under the Act, and the authority granted him and others for enforcing its provisions. As has been seen, he has full authority to expose false or erroneous systems of accounting, and to prescribe and enforce correct ones, to reduce all systems to uniformity whenever practicable, and to provide every check and safeguard necessary for the control and protection of the public funds.

He can call for verified statements and trial balance sheets from county officers as often as he may deem necessary. As the Superintendent of Banks he is required to

call for statements of condition of the banks not less than four times each year, and on a past day by him specified, and as Examiner he may call for special reports at any time.

He has full power and authority to examine books and all documents pertaining to the duties of the various officers, to issue subpoenas and examine under oath all trustees, officers, managers, employees, agents or other persons in control of or doing business with any of the above institutions or corporations. He has supervision of all official bonds of State and county officers, with power to reject or approve any or all the sureties thereon.

The assistance of the Attorney-General is provided in case of refusal or neglect to obey instructions, and for the enforcement of the laws. The Examiner is to report to the Governor forthwith as to the condition of the moneyed corporations, together with his suggestions or recommendations, and in regard to any failure of duty by the financial officers, as often as the public interests may require. The Governor may in his discretion cause any of the Examiner's reports to be published. Plenary power is also conferred upon the Governor to suspend, and on trial, if demanded, to remove from office any derelict county officer so reported to him.

EXAMINERS IN OTHER STATES.

Inquiry has been made as to the existence of an officer of this character in other States, and as to the adaptability of the provisions here set forth to other localities. Other States have more or less ample provisions for the examination of State and Savings banks, and some, notably in New England, for the supervision of their public institutions. The Legislature of Dakota passed an Act during the present year substantially in accord with our own, but providing for two Examiners, thus anticipating the possible action of Congress in admitting the territory as a divided State. I know of no other State which extends its supervision over county officers, although vigorous inquiry has been made as to the working of our law by many others as widely separated as Massachusetts, Montana and New Mexico. In several of the Legislatures Acts of this character have been introduced. They have always met with strenuous opposition, as was the case in our own State, where the measure was finally carried by a majority of but a single vote.

Its methods are especially applicable to States in which, like Minnesota and others, the entire revenues for State, county, town and school purposes pass through the county treasuries. Even in our young State the amount collected annually for these objects already reaches the sum of \$9,000,000, and is increasing at the rate of from one-half to three-fourths of a million dollars per year. The officers who act as the receivers and disbursers of these funds are not chosen by reason of their business experience, they are subject to the constant mutations of party strife, they have not the benefit of the control or direction of boards of men noted for their sagacious business methods. Without supervision they are subject to unusual temptations. Competent and law-abiding officers are not restive under examination, but rather court it for the honor of the service in which they are engaged. With all our criticisms of our public servants there are very many officers of this class. The large proportion are at least well-meaning. The wilfully and intentionally fraudulent are but few. For the vindication of the faithful, the instruction and encouragement of the well-disposed, and for bringing to condign punishment the designedly bad this new branch of the public service has been found to be greatly useful and worthy of recommendation.

Unclaimed Money in Savings Banks.—The law recently enacted in the State of Massachusetts, vesting authority in the Savings Bank Commissioners to require savings banks to publish annually their lists of deposits which for twenty years have remained unclaimed, has already been conformed to by several of the banks. The amount of unclaimed deposits in the State amounts to more than a million dollars. In the Five Cents Savings Bank on School street, Boston, \$89,102, divided into deposits of from \$25 to \$2,000, has been unclaimed for twenty years. This sum represents 367 deposits made by persons who had mostly lived in Massachusetts. The Provident Institution on Temple Place has an aggregate sum unclaimed of \$148,972, the larger part of which was originally owned by Boston residents. Two hundred and sixty-eight deposits are represented in this amount, of which four are for sums of more than \$3,000; fifteen more than \$2,000 and less than \$3,000; and twenty-eight more than \$1,000 and less than \$2,000.

THE NATIONAL BANK SYSTEM.

* A PLAN FOR PERFECTING AND PERPETUATING IT, BY JOHN THOMPSON, VICE-PRESIDENT OF THE CHASE NATIONAL BANK, NEW YORK.

The two subjects of vital interest to the community at large are the *Tariff* and the *Currency*. In relation to the *Currency*, I beg to express my opinion freely. We have now two kinds of what is considered money. One, real money, coin, greenbacks and National bank notes. These are not liable to be discredited in times of stringency and panic. The other I call "token" money, consisting of checks, drafts, letters of credit, etc. The latter always has been and always will be liable to discredit when distrust arises.

Such token money now constitutes nineteen-twentieths (ninety-five per cent.) of our business transactions, while real money is so scarce that when a panic overtakes the business community it is inadequate, and unreasonable depreciation in values necessarily takes place. Discrediting token money is such a vital contraction of our moneyed facilities that it becomes apparent we should have more *real* money to save us from bankruptcy of enormous magnitude. We have too much *token* money and too little *real* money to be on a safe foundation.

These facts were apparent in 1873, when travelers in Europe were incommoded because their letters of credit were refused when cash was solicited. And these facts were still further corroborated by our savings banks losing confidence in their credits at deposit banks, drawing their balances in greenbacks and storing them for safe keeping in safety deposit companies, so that our banks for several weeks were deprived of their reserve money. Stringency is always intensified by hoarding, and the smaller the volume of real money the more active this dangerous element becomes.

Therefore, it becomes a necessity to devise some plan that will give us more real money. How this shall be done is one of the questions which will come before Congress, and is very interesting to every business man—yes, every American citizen.

Having studied for months (and I may say a few years) this subject in all its aspects, I ventured in a communication to the Hon. W. L. Trenholm, Comptroller of the Currency, November, 1896, to chalk out a method which in my opinion will bring about the desired result. It is as follows:

1st. *Permit the banks to discontinue the deposit of Government bonds as security for currency, and in lieu adopt the following:*

2d. *Make it legal for banks to obtain currency from the Treasury Department of 50 per cent. on capital paid up.*

3d. *Give this issue of currency a preferred lien on the entire assets of the bank, including the individual liability of stockholders, in case of insolvency.*

4th. *Divert the annual internal revenue tax of 1 per cent. per annum on circulation into an insurance fund to be held in the Treasury of the U. S. as a guarantee for the redemption of any currency which may fail to be redeemed under the above preferred arrangement.*

Preserve in the National bank law all the requirements now in force under that act, keeping intact the central redemption at Washington and the deposit of 5 per cent. for such redemptions, keeping also in force all the restrictions and regulations as to the organizing and management of banks, also the system of examinations.

These simple amendments to the National bank act will obviate the necessity of working up any new banking schemes, it will make the National bank system a permanency, and give to the people a currency as universally accredited at par as our present issue of National bank notes. It will invite into the system State banks and individual bankers to an extent that will make the banking of the country almost uniform and much safer for depositors and holders of other obligations, such as

* This communication is addressed to the bankers of the United States, to the public press, as well as to the members of the next Congress.

drafts, etc., than the present diversified systems now in operation throughout the country.

As regards "elasticity," it is apparent that the banks working under the proposed change can retire and re-issue their currency with great freedom and facility as compared with the present system.

The objectors to this proposed change may assert that the "safety fund" system of New York was a failure and that this is of like character. To this my answer is, the contribution to the "safety fund" was only one-half of one per cent. per annum on capital, and this contribution ended when three per cent. on the capital had been paid, and it was liable for deposits as well as for circulation.

Circulating notes were issued by the State bank officers without any restraints, guards, or State supervision. The legal limit was *two of currency to one of capital*.

Several banks made what was called "over issues," rendering false statements leading to disaster.

The New York "safety fund" was a delusion, and should not be named in connection with our National bank system, under which the banks can issue only the notes furnished to them by the Treasury Department.

Should the suggested amendments to the bank act be adopted, it is my estimate that in three years 500 millions of National bank note currency will be in circulation, and the guarantee fund will exceed ten millions of dollars. When this fund becomes unnecessarily large (as it surely will) a judicious portion of it could be covered into the Treasury.

I hope all who take an interest in keeping our currency at *par* everywhere, will exert an influence for this or any better measure, for there is an under current in favor of returning to the old State system of banking and State bank currency, with all its danger and discount.

J. T.

FINANCIAL MATTERS IN CHICAGO.

[From the JOURNAL'S Chicago Correspondent.]

The money market has been very steady during the month, both borrowers and lenders being measurably satisfied with the situation. Rates have probably strengthened somewhat, though there is no change in the quotations. Bankers state that they are lending very little as low as six per cent., and that seven is a common rate for call loans. The best borrowers in the city cheerfully pay seven for ordinary mercantile accommodations. The revival of speculation on the Board of Trade has made little difference with the market. The quantity of grain carried here is very small, and about the only impression made on the money market by this speculation is in the form of margin deposits at the banks by those who are short of grain or provisions. Applications have been made to our banks and private capitalists in large numbers for loans to parties in St. Louis, St. Paul, Minneapolis, and other Western cities, who are carrying grain. The demand from St. Louis has been specially large of late. The failures there have necessitated considerable borrowing. Paper has been sent in for rediscount from the country banks in considerable quantities. Our banks have not been able to meet all these demands on account of the home market requirements.

The funds of private capitalists are a factor of increasing importance. They are in some cases loaned below bank rates. Such lenders often take a good class of paper, which has been rejected by the banks because it has too long a time to run. The note brokers too are doing a good deal of business and are now selling considerable paper in Boston and New York, which cities were entirely closed against their operations during the recent period of tight money.

It is the time of the year when the great packing-houses are usually heavy borrowers, but they have not yet cut much of a figure in the market. Their requirements will, however, constantly increase during the remainder of the year. It is not expected that there will be any decline in rates till the middle of January.

The movement of currency to the country towns continues small, and the total this year will be from one-half to two-thirds of the aggregate last year. Exchange on New York has been at a discount all the month and was particularly abundant the third week on account of the shipment of large quantities of agricultural products.

The bank clearings have been noticeably large. They began to show a marked increase before the revival of speculation on the Board of Trade. The increase is due

mainly to the expansion of legitimate trade. One of the biggest checks ever seen in Chicago passed through the Clearing-House about the middle of the month. It amounted to \$1,015,000 and was the first installment (25 per cent.) on the stock of the West Division Street Railway, purchased by the Philadelphia syndicate and their Chicago associates. The entire expenditure of these people in buying and cabling the road will be not far from \$10,000,000.

The sale of the West Division road, releasing as it has a large amount of local capital, has, along with other influences, given some strength to the local security market and there is a good demand for bank stocks, of which, however, the offerings are moderate. A small lot of Merchants' Loan & Trust Co. was recently sold at 235. J. T. Lester, a well-known broker, has bought 400 shares of First National at about 240. The stocks of nearly all the other banks are much sought for. The profits of the Chicago institutions this year will be larger than in any previous year. Other securities are quiet, except the Gas Trust certificates, which have been active of late at advancing prices on account of the settlement of a suit in which it was sought to enjoin the issue of \$10,000,000 of bonds by the Chicago Gas Light & Coke Co.

Our large stock speculators are bears, though they are apparently not doing much in the market just now, preferring to operate in grain. They take the position that the short crops, the curtailment of railroad building and the decline in iron will inevitably force a lower range of prices for securities.

An effort is in progress to get the United States Sub-Treasury into the Clearing-House. New York is the only city where the Sub-Treasury is a member of the Clearing-House. The advantages of the arrangement are obvious to any banker, and there is much complaint here of the inconvenience of having to deal with so important a financial concern by the old and clumsy methods. Local bankers have had conferences on the subject and a petition will be sent to the Secretary of the Treasury.

A suit has been brought for the annulment of the charter of the Chicago Trust & Savings Bank on the ground that the change in the name and location made when its charter was purchased was unconstitutional. The real motive for the suit is that the methods of the bank are regarded by other banks as bad and a menace to the banking interests of the city. It lends on chattel mortgage and similar security and charges rates of interest that ought to be satisfactory to a pawn-broker. H. C. B.

The Comptroller of the Currency. Mr. W. L. Trenholm, has prepared a codification and revision of the National banking laws to be submitted to Congress, with an explanatory letter. The original Currency Act was drawn with much care in 1863 and aimed to embody the provisions of the several State banking laws, which up to that time had stood the test of experience. This law was revised and further improved by Congress in 1864. Further additions and amendments were added from time to time until December, 1873, when a complete revision, made by a Congressional Committee composed of experienced lawyers, was approved by Congress and embodied in the Revised Statutes of the United States. Other amendments and additions have been made since. As the law now stands almost every provision has been tested by litigation in the courts, and nearly every doubtful expression has been construed. Some amendments and additions are necessary. The portions of the law in reference to circulation are, in many points, at variance with the present condition of the finances of the Government. Still, the points where amendment is absolutely necessary in the National banking laws proper are comparatively few. The legislation which would cure the evils under which National bank circulation now labors concerns the management of the public debt. A sweeping revision of the National banking laws is both unnecessary and attended with the danger that many points now well settled by court decisions will be affected by the changes, and that much of the costly litigation of twenty-five years will go for nothing. Slight modifications of law always require new decisions as to their effect. It will be a notable achievement if, after an experience of a year and a half as Comptroller, Mr. Trenholm can judge so well of the workings of the National bank laws as to be able to subject them to an exhaustive revision, eliminating or amending such provisions as are useless and imperfect without changing for the worse many other provisions acknowledged to be plain and beneficial. It is a big task, and we hope some good may come out of it.

BANKING AND FINANCIAL NEWS.

THIS DEPARTMENT ALSO INCLUDES: OPEN LETTERS FROM BANKERS, THE WORLD OF FINANCE, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

An Editor's Preferment.—The following, clipped from the *New York Times* of November 11th, may interest some of the JOURNAL's readers:

"Of course it's a compliment, but don't spend any money," was an expression very generally used by the friends of BRADFORD RHODES after he had received the Republican nomination for Assembly in the Second Assembly District of Westchester County, N. Y. The district had generally gone Democratic by a majority of about 1,100. Mr. RHODES is editor of the JOURNAL OF BANKING, published in William Street. He lives at Mamaroneck, which generally gives a Democratic majority of from 50 to 60. The town's total vote this year was 320, and Mr. RHODES' majority was 227. The result of his canvass was astonishing, even to the candidate. He had visited every town and village in the district, and in every one of them the young men made a special effort to defeat the opposition candidate, J. H. Byron. They succeeded beautifully. Even East Chester, which is generally good for 150 Democratic majority, and is Mr. Byron's home, was carried by Mr. RHODES by a majority of 149. Mr. RHODES carried every town in his district except West Chester, and there the usual majority of 250 was cut down to 95. His total majority in the district foots up 967.

"Mr. RHODES made a vigorous canvass. To his exertions and his standing in the community he owes his election. His success simply staggered the old political managers of both parties, but in spite of it he is not unduly elated, and expects to maintain his good reputation when he attends to his duty as a legislator. He is a bright man with a clean record."

These facts should be supplemented with the statement that the JOURNAL's Editor is not "in politics" in the sense usually implied by that term. He has never held any public office except that of School Trustee in his home town, and, besides, the nomination above referred to came to him entirely unsought. It is certain that his course in the Legislature will be guided solely by the desire to promote the best interests of all the people.

Mr. RHODES' duties as a legislator will not in the least interfere with the management of the JOURNAL, but, on the contrary, he trusts that in his new capacity he may be of greater service to the banking community.

Mr. WILLIAM B. GREENE, who has been connected with the JOURNAL during the past year as Associate Editor, will continue as heretofore.

North Texas National Bank of Dallas, Tex.—This institution will be opened for business on January 8, 1888, with a paid-up capital of \$500,000. The history of banking in Texas for the last ten years has been phenomenal, and the profits have been exceptionally large. There is, therefore, every reason to believe that the North Texas National Bank has a bright future before it. The population of the State doubled between 1870 and 1880, and there is every indication that even this great increment will be exceeded by the growth between 1880 and 1890. Banks in Fort Worth, Tex., which has a population of 18,000 and a banking capital of \$1,800,000, pay from 12 to 18 per cent. per annum. Dallas, with 45,000 inhabitants, has as yet only \$1,110,000 banking capital, so that there is a loud demand for another National bank. The stock has been largely subscribed for in New York city, Pittsburgh, and other Eastern cities. There cannot certainly be a more promising investment. Col. Henry Exall, the Vice-President, and Mr. F. R. Malone were at the Bankers' Convention at Pittsburgh, and created a most favorable impression with all who met them. Their high personal character and eminent capacity as bankers are well known in Texas and wherever they are known.

Commerce of New York.—The foreign imports during the month of October, 1887, at the port of New York were the largest of any October except that in the year 1880. The total valuation of imports during the month were \$49,927,704. Of this, \$30,121,120 was the valuation of the merchandise, and \$10,806,604 specie and bullion. The large imports of precious metals in view of the adverse balance of trade attracted

some little attention. This was probably due partly to the great demand for money in this country, and partly to the sale of American securities abroad. Although the duties collected during the month of October do not all represent the duties paid on the merchandise imported during that month, they were very large, amounting to \$12,380,655. The total amount of customs received at New York during the first ten months of 1887 were \$127,864,856. The exports during the month of October from New York amount to \$28,481,274. Of this, \$26,808,660 was the valuation of domestic produce exported. It is estimated that the imports for the month of October at all ports of the United States will reach seventy millions of dollars, and that the exports are likely to fall below that amount. This will have a tendency, other things being equal, to cause an exportation of gold, but this tendency may be countermanded by the sale of our securities abroad, or by the investment of foreign capital in this country.

California Bank Commissioners' Report.—We have received the ninth annual report of the Bank Commissioners of the State of California for August 1, 1887. The Board is in the tenth year of its existence, and has, as is acknowledged both by the banks and the public, been a great benefit to the State. There are now eighty-eight commercial banks and twenty-four savings banks, in all 112 banks, showing an increase of sixteen since the closing of the last report. The number of savings bank depositors on January 1, 1887, was 90,500, and the amount due them was \$65,196,189.54, an average of \$731.38 for each depositor. The commercial banks of the State on July 1, 1887, had a capital stock of \$19,555,960, and deposits, including those to banks and individuals, of \$49,391,834.04. The report includes statements of the National banks and private bankers of the State, although these institutions are not under the control of the Commissioners.

Minnesota State Banks.—Hon. Henry M. Knox, Bank Superintendent of the State of Minnesota, has prepared his abstract showing the condition of the State banks on Saturday, October 15, from which the following summary has been taken :

RESOURCES.	LIABILITIES.
Loans and discounts..... \$15,827,606.96 Overdrafts..... 112,833.35 United States bonds on hand..... 3,402.37 Other stocks and bonds..... 833,046.07 Due from other banks..... 1,973,583.68 Banking house, furniture, and fixtures..... 608,000.25 Other real estate..... 319,143.35 Expenses paid..... 118,186.91 Taxes paid..... 8,165.50 Checks and cash items..... 48,446.73 Exchanges for Clearing House..... 848,968.93 Cash on hand..... 1,461,195.12 Other resources..... 452.30	Capital stock paid in..... \$5,308,000.00 Surplus fund..... 701,908.83 Other undivided profits..... 646,434.28 Dividends unpaid..... 3,568.00 Due to depositors..... 13,752,366.16 Due to other banks..... 807,972.75 Notes and bills rediscounted..... 314,288.62 Bills payable..... 225,200.84 Other liabilities..... 5,311.04
Total resources..... \$21,761,030.52	Total liabilities..... \$21,761,030.52

The last call for reports was for July 23, 1887. Since that date there was an increase of one in the number of banks, making a total of 55. As compared with the July statement there was a falling off in the individual deposits of over \$676,000. The cash means of the banks had decreased as follows: In due from other banks, \$460,700, and in cash on hand, \$411,700, or a total decrease of \$872,400. Bills payable and rediscounts had restored the equilibrium by an increase of \$171,800. The cash reserve per October statement was: In banks, 14.3 per cent., and in cash, 10.6 per cent.; total, 24.9 per cent., as against a total of 23.3 per cent. per July statement. The legal requirement is 20 per cent. of immediate liabilities, of which one half must be cash in hand. The report indicates the usual increased call for funds in the autumn for the purchase and movement of produce, somewhat accelerated by the late stringency in the money market.

The Dry Goods Credit Guarantee & Indemnity Co., about to be incorporated in New York city with a capital of one million dollars, says in its prospectus that the credit system in vogue in the United States has become very much strained. The necessity for relief has become apparent. The new company proposes, for a reasonable

consideration, graduated in every instance to the character of the risk insured, to insure the applicant against loss upon any debt or debts due or to become due upon specific sales and for fixed periods of time. The contracts will, if desired, provide for the assignment of the claim against the insured at any time upon demand and the subrogation of the company to all the rights of the assured. The affairs of the company will be under the management of a board of nine directors. Although the title of the company seems to limit its operations to the dry goods trade, it has taken the entire commercial world for its field.

The Bay Shore Bank is a new institution with \$50,000 capital, which opened for business December 1st, in Bay Shore, N. Y. Mr. R. M. Raven, one of Bay Shore's leading and wealthiest citizens is President.

The Sub-Treasury Robbery.—Henry M. Jackson, Paying-Teller of the United States Sub-Treasury at New York, recently took from his cash ten thousand dollars, and departed for Canada. The Treasurer and his bondsmen are responsible for the amount lost by the Government.

The Clearings for the month of October, 1887, at the principal Clearing-Houses of the country amount to \$4,539,936,737, of which sum \$2,978,940,406 represents clearings of New York city banks, and the balance of \$1,560,996,331, represents the clearings of points outside of New York city.

The United States Supreme Court has refused to advance the case of the First National Bank of Buffalo against the Directors of that bank, which involves questions of liability of National Bank Directors, as requested by Attorney-General Garland at the suggestion of the Comptroller of the Currency.

The Real Estate Exchange of St. Paul, Minn., is organizing a Loan and Trust Company with "a banking attachment." The amount of capital is not yet stated, but according to the *Pioneer Press* the only wish is to provide facilities for taking care of certain branches of business for which there is no provision now.

The Central Bank of Canada.—This institution suspended on November 16th. It is expected that the bank will receive assistance, which will enable it to commence business again within the near future. The capital of the bank was \$1,000,000, with \$500,000 paid up. It is expected that the depositors will suffer no loss.

A Bank is being organized at North St. Paul, Minn., which will be ready for business January 1, 1888. More than double the stock required has already been subscribed. The organizers of the institution have purchased the furniture and fixtures of the Third National Bank, St. Paul, and will have them transferred to North St. Paul immediately.

The Osawatamie Bank is an institution recently opened at Osawatamie, Kansas. It is incorporated, has a paid up capital of \$50,000 and the following officers: E. W. Warfield, President; L. A. Wheeler, Cashier. The latter was formerly Assistant Cashier of the United States National Bank, Atchison, Kans. Will transact a general banking business.

New York City Stock.—Comptroller Loew, of the city of New York, recently obtained proposals for \$600,000 three per cent. consolidated stock, known as school-house bonds, payable November, 1897. The bids received aggregated \$4,475,000. Four hundred thousand dollars of the bonds were awarded to Moller & Co., at 101.27; and \$200,000 to A. M. Hyatt, at 101.56.

Bank of Montreal Statement.—The Bank of Montreal statement for the six months ending October 31st, which was published on November 11th, shows the net profit for the semi-annual period, after deducting all bad and doubtful debts, of \$665,064, or over 5¼ per cent. The profits therefore are less this year than they were for the corresponding period last year, when they were 6½ per cent.

Governor Church, of Dakota, has appointed Mr. John D. Lawler Territorial Treasurer, to date from January 1, 1888. Mr. Lawler is President of the First National Bank of Mitchell, Dak., and his appointment is said to give general satisfaction. He was elected a member of the Territorial Council last year by a large majority, and his record as such has proved him to be a capable and conscientious legislator.

Savings Banks for Girls.—In Germany there is a kind of Savings bank for girls, which is similar to what is known in the United States as the Endowment Plan in life

insurance companies. On the birth of a girl parents in moderate circumstances, by paying a small sum in one of these Savings banks can insure that on the completion of her eighteenth year she will have a certain capital to start with in life, or as a dowry.

Demand for Small Coins.—The demand for small coins, cents, nickels, and dimes is so great that working night and day the Philadelphia mint cannot keep up with it. In October the mint coined \$350,000 in five cent pieces and \$41,770 in cents, and still it is \$200,000 behind the orders. The Superintendent says the demand for small coins is almost unprecedented, and probably reflects the great commercial prosperity of the country at the present time.

The Argentine Republic is rapidly running into debt in order to secure capital for building railways, and for carrying on other enterprises, government and private. Thirty-four million pounds were borrowed during the years 1883 and 1884 inclusive, and since 1882 a total of forty-eight million pounds; or about two hundred and forty one millions of dollars have been borrowed by a country which has a population not greater than the State of Illinois.

Silver Currency in China.—The Viceroy of Canton has presented a memorial to the Emperor, asking permission to establish a mint. He points out that there would be much advantage to the Government in having a National currency.

He proposes to strike off one million dollars first, and if that goes into circulation four million more will be minted, and offers to pay the cost of the experiment from the revenues of his own province.

John Harper, the veteran President of the Bank of Pittsburgh, belongs to the old regime. He believes that the establishment of the National banks was a piece of unsound political economy, in that he does not think that the Government should guarantee a person's security for money loaned him any more than it should guarantee a farmer a crop from the seed he sows in the spring. He thinks that the National bank system is bound to disappear with the National debt.

The Savings Fund of the Pennsylvania Railroad.—The Pennsylvania Railroad are making preparations to establish a saving fund department for the benefit of their employes. The company's agents in the larger towns along the Pittsburgh and Erie line will receive sums exceeding five dollars, on which an interest of four per cent. will be paid. Ten days' notice will be required for the withdrawal of deposits. It is stated that the details of this scheme will be analogous to the Postal Savings System of Great Britain.

New National Bank at Sumter, S. C.—The Simonds National Bank of Sumter, S. C., commenced business on November 15th, with a capital of \$50,000. The business of Wallace & Simonds, private bankers, has been transferred to the new bank, as has also that of the defunct National Bank of Sumter. Dr. Andrew Simonds, the well-known President of the First National Bank of Charleston, S. C., will be President of the new bank also. R. M. Wallace will be Vice-President and resident Manager, and James M. Carson, Cashier.

Columbia Bank.—There will be a change in the Presidency of the Columbia Bank, of New York City, after January 1st. Mr. Joseph Fox recently bought out the interest of President John H. Watson, and enough other stock to give him the controlling interest. He has been elected Director, taking the place of Theo. E. Smith. This bank was organized several years ago, by Elliot F. Shepard, son-in-law of the late Wm. H. Vanderbilt. The stock sold seems to have brought about 115. The Columbia Bank has heretofore been very prosperous.

Comptroller of the Currency's Report.—The report of Comptroller Trenholm contains the result of inquiries which have been made for a number of months past, as under the provisions of the law of February, 1873, as to State banks, savings banks, trust companies, etc. Tables show the capital invested in each of the States in National banks and in banking institutions of other classes named; the amount of deposits held, business transacted, etc. The report will be published in the January number of the JOURNAL, with comments on its leading features.

Movement of Specie for the Fiscal Year Ending June 30, 1887.—The report of the Bureau of Statistics of the Treasury Department shows that for the fiscal year 1887 imports of gold and silver coin and bullion amount to \$80,170,732. Of this \$41,238,214 were received at New York city, \$10,598,215 at El Paso, Texas, \$4,004,888 at San Francisco,

and \$7,239,495 in all other custom districts. For the same year the exports of gold silver, coin and bullion were \$35,997,691, of which \$18,163,661 were exported from New York city; \$17,602,812 from San Francisco, and \$231,218 from all other custom districts.

Steven A. Northway, at one time President of the Second National Bank, of Jefferson, Ohio, and who has for a number of years been under indictment for embezzling the funds of that bank, was recently brought to trial. On November 10th the trial came to a sudden termination. The Judge stated that the funds alleged to have been lost had been invested in New York city, and therefore the case should not have been brought to trial in Ohio. The indictment was also deemed to be defective, in that it did not show that Northway had anything to do with the fraud committed in New York.

Successful Embezzlement.—A paragraph states that a trusted clerk in a Massachusetts National bank speculated heavily in California Mining Stocks, using the bank's money. When discovered the stocks were down, but the Directors compelled him to surrender all that he had in his possession. Before the surrendered stocks could be sold they had so risen in value that the bank made money on the defalcation. The defaulter however went to prison, and always regretted that he had not waited a week or so longer before surrendering the stocks, as he would have been all the richer and the bank none the poorer.

Causes of Stringency in the Money Market.—One of the Boston papers holds that the stringency which has more or less prevailed during the past year is due to five leading causes. First and most apparent is the accumulation of money in the National Treasury by the excess of revenues over expenditures. The second cause is the increase of railroad mileage. Third is the remarkable boom of business at the South. Fourth a heavy increase in emigration. And fifth the great real estate speculation all through the West. In regard to the latter it is remarked that by this last cause a large amount of money is rendered unproductive for a time, and in many cases for eternity.

The Condition of the Fidelity Bank of Cincinnati.—The Comptroller of the Currency has received from Mr. David Armstrong a full schedule of the liabilities of the bank. The value of the assets is upwards of \$5,800,000, of which about one-half are classed as worthless or doubtful. The valid claims against the bank amount to about \$3,800,000, and there are claims in dispute in addition aggregating \$1,500,000.

The subscriptions for the increase of capital stock amount to \$1,600,000, but less than half this amount was paid outright in money. No estimate of dividends which will ultimately be paid can now be made. The Receiver has recently paid a dividend of 25 per cent.

Vermont Savings Banks.—We are indebted to Hon. Carroll S. Page, Inspector of Finance, for a copy of annual report of Savings Banks and Trust Companies of the State of Vermont for the fiscal year ended June 30, 1887. From this it appears that the various Savings institutions and Trust companies have now nearly 54,000 depositors, an increase of 4,357 over last year, and the amount of deposits has increased from \$14,254,000 to \$15,600,000 or nearly 10 per cent. It is stated as an evidence of Vermont's prosperity that in addition to the foregoing nearly one million dollars have been invested in Western farm mortgages by the people of two towns alone—Weathersfield and Springfield.

Dairy Products.—While the bank capital of the country is a little less than six hundred and seventy-one millions of dollars, it is estimated that in the dairy interests there are more than three billion dollars invested. The number of milk cows is estimated at twenty-one millions, giving each an average of three hundred and fifty gallons of milk annually. Four thousand million gallons are used for butter, seven hundred millions for cheese, and the remaining two billion four hundred and eighty million gallons are used in the original state. The value of the dairy products of the United States the last twelve months was nearly five hundred million dollars, which is one hundred and twenty million more than the average wheat crop of the country.

Bank Robbery.—F. F. Bickel, a clerk in the Union National Bank, Duluth, Minn., robbed that bank of packages of money amounting to \$24,000. When the vault was opened he noticed that when the Cashier read his paper he held it above his face in such a way that a man could easily slip into the vault without being noticed by the

Cashier. Taking advantage of this, on September 16th he slipped into the vault and stole the amount above mentioned. The Cashier however discovered the robbery the afternoon of the same day, and as the movements of Bickel had been suspicious attention was attracted to him. The next week he started for Chicago, and when he arrived there he was arrested by a detective, and all the money except about \$150, was recovered.

Stafford National Bank.—The Receiver of the Stafford National Bank, of Stafford Springs, Conn., has made a report of the assets and liabilities of that unfortunate institution. He finds nominal assets to the amount of \$492,623, which he estimates to be worth \$310,021. The liabilities, or proven claims, amount to \$301,622. If the Receiver's estimate of the value of the assets is correct it will leave a balance of \$8,396 for the stockholders. This, however, leaves no margin for expenses. The bank had a capital of two hundred thousand and a surplus of twenty-four thousand, which has been virtually wiped out by the operations of Hicks, the defaulting Cashier. The statement, however, seems to be far more satisfactory than might have been expected under the circumstances.

Receipts and Expenditures of the City of New York.—A detailed statement of the receipts and expenditures of the city government of the City of New York for the year ending August 1st, published by Comptroller Loew, shows that the total receipts for the year were \$64,487,621, which, with the balance on hand on August 1, 1886, makes up a total of \$67,596,249.63. The total expenditures on account of the city Treasury were \$64,619,212.15; and the balance in the city Treasury August 1, 1887, was \$2,979,000.37. The sinking fund account shows that the balance in the city Treasury August 1, 1886, on that account was \$2,015,310.16. The receipts for the sinking fund during the year were \$19,942,300.61. The expenditures were \$20,229,773.77, leaving a balance on August 1, 1887, to the account of the sinking fund of \$1,727,537.

The Annual Report of the Register of the Treasury.—The annual report of the Register of the Treasury shows that the amount of outstanding bonds on June 30, 1887, was \$893,493,312, of which \$11,001,860 or one and twenty-three one hundredth per cent. is held by foreign investors, and \$212,415,450 were deposited with the Treasury by the National banks—this sum includes deposits both for circulation and deposits for public money. Individuals, Trustees, insurance companies and Savings banks in the United States hold \$670,076,062, the Savings banks holding \$208,000,000 and the insurance companies \$55,500,000.

The commission appointed to report upon amounts paid for interest, commissions and expenses of funding of the public debt since the foundation of the Government, have, it appears, a difficult task, and find that to secure a complete statement of all expenses connected with the National indebtedness will require more time than was anticipated.

Banks of Franklin, N. H.—The Franklin Savings Bank was organized August 23, 1869, and was opened for business in October of that year. In 1874 the amount of deposits was \$241,750, and on the first of September, 1887, the amount was \$667,655. The guarantee fund is \$26,183.01, and the surplus is \$34,430.07. The present officers are: President, Geo. W. Nesmith; Treasurer and Secretary, Alexis Proctor; Trustees, Geo. W. Nesmith, D. Barnard, W. F. Danell, J. H. Rowell, John Taylor, Walter Aiken, D. S. Gilchrist, A. W. Sulloway, H. A. Weymouth, I. N. Blodgett, E. B. S. Sanborn, C. C. Kenrick, F. L. Morrison. Judge Nesmith has been the President for many years. He visits the bank every week and maintains his old time interest. As the bank pays a tax of 1 per cent. on the deposits, the town receives a handsome revenue.

The Franklin National Bank was organized on November 22, 1879. The aggregate amount of money deposited during the year of 1886 was \$2,069,385, and the amount of exchange drawn on the First National Bank, of Boston, in the same time was \$1,556,189.72. Beginning with the first year of its organization it has paid regularly 3 per cent. semi-annual dividends, besides accumulating a handsome surplus. A. W. Sulloway is the President of the bank and Frank Proctor, Cashier.

Panama Canal.—There has recently much been said in the public press in regard to the difficulties in the way of completing the Panama Canal, and these expressions receive some warrant from articles which have appeared in the *Economiste Francaise*. The French, however, notwithstanding the alleged difficulties which have been

encountered, and the discouraging reports which have been rife, have still great faith in De Lesseps. It must be remembered, too, that a similar outcry was raised in regard to the Suez Canal at various stages of its progress. The great financial success of that undertaking has, of course, much to do with the faith in De Lesseps' ability to finish the Panama Canal.

It is not, however, for Americans to find fault with the interest taken by the French in the enterprise of dividing the Isthmus. If the canal were completed there is no doubt but what the United States would derive eventually more benefit from it than any other nation, and there is no doubt but what the work will be completed at some future day. Even if the French should fail in their undertaking the work which has been accomplished by them would be of great advantage to those who subsequently undertake the completion of the project. We can understand why a feeling of National jealousy should induce the American press to decry the undertaking as long as it is in French hands, but why they should desire to show it to be impossible of completion under any circumstances we do not see.

Missouri Banks.—The financial condition of the State banks of Missouri, as appears from a recent statement made to the Hon. M. K. McGrath, Secretary of State, is as follows:

RESOURCES.	LIABILITIES.
Loans undoubtedly good on personal or collateral security..... \$49,184,739.29	Capital stock paid in..... \$13,866,294.58
Loans and discounts undoubtedly good on real estate security..... 3,573,887.79	Surplus funds on hand..... 7,845,038.00
Overdraft by solvent customers..... 941,109.32	Undivided declared dividends..... 110,115.68
United States bonds on hand..... 623,979.75	Deposits subject to draft at sight..... 47,779,785.40
Other bonds and stock at their present cash market price..... 4,738,560.99	Deposits subject to draft at given dates..... 11,544,653.23
Due from other banks, good on sight draft..... 12,882,707.35	Bills payable..... 446,496.53
Real estate at present cash market value..... 2,407,968.84	Due other banks and bankers..... 8,068,154.50
Furniture and fixtures..... 408,171.76	Expenses now due..... 3,780.71
Checks and other cash items..... 2,112,628.68	
Bills of National banks and legal-tender United States notes..... 7,741,943.29	
Gold coin..... 1,537,628.83	
Silver coin..... 303,701.33	
Exchange maturing and matured..... 3,187,301.71	
Total..... \$89,704,818.68	Total..... \$89,704,818.68

The First Run on a Bank.—The extravagant luxury of the court of Charles II., combined with its utter want of principle and incapacity to carry on the memorable contest with Holland, produced the first run upon bankers that ever was made. The Government had suffered a succession of humiliating disasters. The extravagance of the court had dissipated all the means which Parliament had supplied for the purpose of carrying on offensive hostilities. It was finally determined to wage only defensive war, but even for that the vast resources of England were found insufficient. The Dutch insulted the British Court, sailed up the Thames, took Sheerness, and carried their ravages to Chatham. The blaze of the burning ships was seen in London; it was rumored that a foreign army had landed at Gravesend, and military men seriously proposed to abandon the Tower.

The people, accustomed to the secure reign of Cromwell, were in consternation. The moneyed portion of the community were seized with a panic. The country was in danger; London itself might be invaded. What security was there then for the money advanced to the Crown? The people flocked to their debtors and demanded their deposits. London now witnessed the first run upon the bankers!

The fears of the people, however, proved groundless, for the goldsmiths, as the bankers were then called, met all demands that were made upon them. Confidence

was restored by royal proclamation that the demands on the exchequer should be made as usual, and the run collapsed.

MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- The First National Bank, Ellsworth, Maine, is building a new vault.
- The involved estate of E. S. Wheeler will, it is estimated, pay less than 15 per cent. on the dollar.
- Simpson's Bank, of Sidney, Ohio, is constructing a new building, to be used by the bank for offices.
- The Second National Bank of Atlantic city, N. J., opened for business on the 10th of October last.
- John Reston, private secretary to B. C. Faurot, of Lima, Ohio, was recently arrested for forgery.
- Stock of the Chemical National Bank, New York city, recently sold at \$3,000 per share, par value \$100.
- The Chestnut Street National Bank, of Philadelphia has been designated as a Government depository.
- Work has been commenced on the new building for the National Bank of Commerce of Minneapolis, Minn.
- Lon V. Stephens, of Boonville, Mo., was appointed Receiver of the Fifth National Bank of St. Louis, November 15th.
- The National Bank of the Republic, New York city, has obtained an attachment against the property of Walter E. Lawton to recover \$14,111.50.
- It is rumored that the Bank of California is to be sold out to and hereafter managed by a syndicate of Scotch bankers.
- The statement that Mr. Wm. K. Vanderbilt was in some way connected with the proposed Chinese Bank has been authoritatively denied.
- On October 31st F. C. McNealy, the Teller who stole a large sum of money from the Saco Savings Bank, Me., is said to have been in St. John, N. B.
- Herr Sandbank is the name of a Berlin financier who recently failed. Those who trusted in him had the usual luck of those who build upon the sand.
- John Taylor, the London banker, has been in Philadelphia to introduce his scheme for distributing the surplus of the Pennsylvania Railroad among its stockholders.
- In the Baltimore and Ohio matter Henry S. Ives & Co. paid Mr. Garrett \$215,000 in cash, and gave him \$1,500,000 preferred stock of the Cincinnati, Hamilton & Dayton Railroad.
- The Comptroller of the Currency on October 25th declared a dividend of 25 per cent. in favor of the Fidelity National Bank, of Cincinnati on claims proven, amounting to \$2,386,566.
- The stockholders of the American Exchange National Bank, of Chicago, are debating whether to bring suit against D. W. Irwin for the recovery of money lost in a wheat deal.
- The wool crop of the United States for the present year is estimated at seventy million pounds, and the number of sheep forty million, an increase of five million since the last census.
- There is much doubt as to the present conditions of the concessions said to have been granted by the Chinese Government to an American syndicate represented by Count Mitkiewicz.
- Providence, R. I., with 140,000 inhabitants has more banks than Philadelphia, with nearly a million, but then Rhode Island is ahead of any State in the Union in wealth per capita.
- Julian T. Davies, Receiver of Grant & Ward, recently filed his annual report in the County Clerk's office in New York city. The assets in possession of the Receiver consist of \$45,400, in real estate, assets which are claimed by other parties, \$385,000, and

assets due the Receiver, \$1,578,382, of which \$1,395,752 consists of the warrant out against W. S. Warner.

— The Cashier of the Stafford National Bank, of Stafford Springs, Conn., has, it appears, been engaged in speculating for a number of years. He was a defaulter to the amount of \$100,000.

— We see that the old proposition for the issue of legal-tender notes by the Government is being revived. Greenbackers are always on hand whenever financial questions are discussed.

— The semi-annual duty collected from the National banks during the year amounts to \$2,044,922, making an aggregate of \$134,637,876, collected from the banks since the organization of the system.

— Mr. S. M. Nickerson, President of the First National Bank of Chicago, has recently presented the "Interior of St. Marks," the picture painted by David Neil, to the Art Institute of that city.

— The Comptroller of the Currency on October 12th appointed Mr. M. Crosby, Corry, Pa., to be Receiver of the First National Bank of that city, which closed its doors about the middle of September.

— An exchange remarks that the youngest stockholder of any bank in America is Miss Olive Cowens, of North Platte, Nebraska, who was presented with a share of the First National Bank of North Platte.

— A man dropped two fifty dollar bills. They were finally returned by the finder, who stated that he was at first inclined to keep the money, but that his conscience troubled him so much that he had to return it.

— An attempt recently made to rob the First National Bank, of Abingdon, Ill., was frustrated. The doors of the vault were blown open, but the thieves were frightened away before they could open the money box.

— Mrs. Howe, of the Woman's Bank notoriety, recently started one of her peculiar institutions in Chicago, and after successfully running it for some time departed, it is said, with some seven or eight thousand dollars of her depositors' money.

— During the month of October 5276 tons of silver ore, valued at \$265,808, were imported from Mexico into the United States by way of El Paso, Texas, which gives an average of 176 tons per day. The average value of the ore is \$50 per ton.

— The Comptroller of the Currency has declared a fourth dividend of ten per cent. in favor of the creditors of the First National Bank, of Leadville, making a total of forty per cent on claims proven, amounting to \$200,854. The bank failed January 24, 1884.

— Lester Hays, nineteen years of age, Cashier of the Bank of Commerce at La Junta, Colo., disappeared on October 31st with about \$8,000 of the bank's money. It is believed that he has fled to Mexico. His bondsmen are good and the bank will lose nothing.

— Dispatches from St. Louis claim that there is an unusual money stringency existing throughout the South-West. Reports come from Wichita and Kansas City that there are immense amounts of real estate paper looking in vain for discount in the West.

— Cablegrams from Berlin announce that the Imperial Bank of Germany has ceased to lend money on Russian securities. This is supposed to be Bismarck's method of retaliation against the Czar for raising the tariff on goods imported into Russia from Germany.

— The United States Grand Jury has found indictments against Crecelius, Cashier of the Fifth National Bank, of St. Louis, and against two of the Directors. The Cashier has been indicted for making false entries and false reports, and the Directors for having guilty knowledge of the bank's condition.

— The Third National Bank, of St. Paul, Minnesota, voted on November 4th to go into voluntary liquidation. The business of the bank will hereafter be transacted by the Merchants' National Bank, of St. Paul. The liabilities of the institution will be paid in full, and the stockholders will realize about 60 per cent.

OPEN LETTERS FROM BANKERS.

An Interchange of Opinion by the Journal's readers.

COMBINATION AMONG BANKS.

Editor Rhodes' Journal of Banking:

It is unnecessary to go beyond the history of our own country to prove the existence of a law, that with the increase of population and development of the country, a vast number of manufactories and industrial enterprises have sprung into existence through combinations of capital, so regulated by competition that their value is almost incalculable, and so long as the money invested therein yields only the returns of legitimate enterprise, strikes, mobs and social disturbances will only temporarily check their prosperity.

The advantage to the traveling facilities and traffic of the country derived from a combination of many weak and struggling railroad corporations into one grand organization or system, is fully appreciated by all except those who, realizing their own incapacity to conceive and intelligence to successfully execute such an undertaking, would deny the persons, to whose energy, industry and skill we are indebted for such consummation, any share of the increased value the property has acquired by reason of greater importance and usefulness. However, the passage of the Inter-State Commerce Law clearly demonstrates the existence of an intelligence, which makes it possible to thus provide for our comfort and promote general prosperity, and at the same time, prevent an unjust exercise of the power thereby obtained.

Again: Such corporations being dependent for success upon the prosperity of the people, for whose convenience they are brought into existence, must meet with irretrievable ruin when they fail to accomplish this result.

All other industrial and commercial combinations are subject to this same general principle; they must promote the public welfare or cease to exist. It is true combinations are sometimes formed to prevent competition, to advance the price of various commodities beyond a reasonable profit above the cost of production, but the inordinate selfishness of man, which in the first instance conceived this plan of extortion, is its own antidote; possibly they may last a day, a year, or a decade, but at most their existence is ephemeral, and they are soon forgotten.

If then associated action, or combination is required to accomplish any great object, and there is a natural universal law preventing long continuance of attempted oppression by such associations, the aggregation of capital in banking institutions must be governed by this edict, and our interests demand the system be founded upon the broad principles of equal and exact justice to all, and susceptible of development to meet the requirements of the future.

Whether our National system meets these requirements, the future alone can determine.

The first bank established by the United States met the requirements of the first years of its life, but a rapidly growing country soon demanded a system of larger scope and wider usefulness. So apparent was its inadequacy to accomplish the expected result, that at the expiration of its charter the affairs of the bank were brought to an honorable close. The State bank system was then greatly expanded with results so unsatisfactory that a second bank was chartered by Congress with results not calculated to increase confidence in the usefulness of another institution of like character.

From the subsequent history of banking until the establishment of the National system, it is clearly apparent local legislation uninfluenced by the banking fraternity, is inadequate to secure the solidity and elasticity now required to satisfactorily transact the business of the country.

What the future is to develop depends largely upon the action of the members of the American Bankers' Association. Isolated individual action is without practical results; the sessions of this convention for the discussion of abstract questions and the social pleasures it affords, will not protect the National banking system from the

dangers now threatening it, nor commend the usefulness of the association to the class of practical men usually found at the head of responsible and influential financial institutions. Definite, decisive and vigorous action is demanded from this convention if we expect to preserve the valuable features of the National banking system, and add the additional safeguards experience has demonstrated to be necessary for the future.

Fortunately diversity of interests are not so great as to prevent practical unanimity in the adoption of wise measures of relief, and certainly Congress will not long hesitate to pass suggested legislation if every member of the association will make a personal appeal to their Senators and Representatives for support of measures formulated by a committee of representative bankers appointed by this convention. (A committee is suggested for the reason, it will be impossible to hold this convention together sufficiently long to give matters of great importance due consideration.)

The failure of Congress to devise a satisfactory plan for perpetuating the National banking system is not surprising when we remember so few familiar with the details of banking, and the general principles governing financial affairs are members of that body. If this convention should attempt to compile a set of rules governing practice in the United States Supreme Court, it is hardly probable our success would be remarkable.

Bankers as a class are not politicians, nor do they often make a simultaneous and determined effort to influence legislation; the probable result of such an effort can be best judged by recalling occurrences during the first years of the late civil war. At that time the necessities of the Government were such, that the banks were masters of the situation and dictated the financial policy of the country with such wisdom, that the nation promptly met its obligations, and came out of the struggle with a credit enabling it to borrow money at a nominal rate of interest, and a National system of banking vastly superior to anything yet devised in this or any other country. Here was a case of pressing necessity, which fortunately was of such a nature that its management must be placed with those most competent by education and practical experience to solve the difficult problem.

The success at that time attained is in marked contrast with the more recent financial policy adopted by Congress, the principal features of which seem to be, the compulsory coinage of debased silver dollars for storage in Government vaults, and the accumulation of an enormous surplus in the Treasury by the withdrawal from circulation of millions of dollars required to properly transact the business of the country, rendering it possible to frequently create a stringency in the money market, unsettling values, destroying confidence, and making it impossible to maintain the commercial equilibrium necessary to the continued prosperity of the varied industries of the country.

Again the power of combinations among banks to avert impending calamities, was strikingly illustrated in New York during May, 1885: this, too, was a case of self preservation and was made possible by the successful results attending the former efforts for preservation of the National credit; these instances out of many which might be mentioned, clearly show the propriety of employing bankers to look after the financial legislation of the country; to have such laws devised and shaped by the average legislator, either State or Congressional, is like employing a blacksmith for landscape gardening, or a carpenter to construct a steam engine.

The inefficiency of Congress to provide the necessary legislation required by our banking interests is equalled only by the stupidity of some among many excellent provisions of the State legislation of an Eastern commonwealth, which permit Savings banks to make long loans upon real estate within the State, where values are in many localities depreciating, up to 60 per cent. of its present valuation, but deny the privilege of placing money outside the State where rates of interest are double the amount received at home, and the security not only productive but rapidly increasing in value.

Again, three names must appear on every note not secured by real or collateral security, but tangible evidence of responsibility is not required; the subtle wisdom which conceived these provisions considered it unsafe to make a small loan with only two names, even with abundant evidence to establish the undoubted responsibility of borrowers.

Such laws are based upon the conviction that legislative enactments can supply intelligence, and render harmless the ignorance and incapacity of the officers of

financial institutions. However, it is to the honor of the enlightened and progressive bankers of the State mentioned, that these laws were not suggested by them, nor do they remain upon the statute book with their approval.

The exemption law of a Western territory, which makes it almost impossible to collect a note unless it is secured by mortgage, and the paucity of bank legislation in some of the States, is the opposite extreme.

State laws in regard to interest and usury are based upon principles widely divergent. Arkansas voids the contract as to principal and interest, and vitiates negotiable instruments in the hands of innocent holders if more than 10 per cent. is exacted. Dakota declares usury a misdemeanor punishable with a fine of five hundred dollars and six months' imprisonment. Georgia is inviting Northern capital to develop her resources with a provision on her statute books, providing mortgage deeds given to secure a debt bearing more than 8 per cent., shall be null and void. In Oregon the penalty for usury is a forfeiture of the debt to the school fund. Does any one believe such laws encourage the investment of money in the States mentioned?

Connecticut has no usury law. Her people have wisely concluded the law of supply and demand is superior to and will annul legislative enactments, as it does to-day in every State having a rigorous usury law.

Why the hire of money should be regulated by law, and the rent of a house or the income from land, left free from this restriction is not apparent to the man of average intelligence, particularly when it is clearly apparent the people for whose benefit the statute exists, are the principal sufferers from its unwise provisions; the borrower not only pays for the use of the money, but also an additional amount as a compensation for the risk incurred, a risk which would not exist in the absence of the law mentioned.

The public welfare requires, however, that not only the National banks shall be under the supervision of authority competent to determine their solvency, and enforce compliance with regulations regarding the transactions of business, with power to immediately close an institution unworthy of confidence, but all individuals, associations and corporations soliciting the care and custody of the earnings of the poor, the patrimony of orphans, the hoardings laid aside for old age, as well as the daily balances of the business man, should be placed under restrictions which experience has shown to be the most adequate for insuring safety and creating the mutual confidence among financial institutions necessary to maintain public and private credit.

Again, legitimate banking needs protection from unsafe business methods of responsible individuals and financial institutions engaged in the banking business, which are not under the supervision of any authority charged with the duty of protecting the public interests. The greatest financial panics have been caused by the failure of such houses, and we can all call to mind many instances when serious disasters, which might have caused widespread ruin, have been averted only through timely assistance rendered to private and State banks by solid and conservatively managed institutions.

Many individuals, associations and corporations are to-day transacting business outside the National banking system, in order that the public may not be informed regarding their financial weakness and unsafe methods of conducting business. Such concerns are an excrescence upon the financial system of the country, and the managers of legitimate banking institutions are certainly derelict in their duty, so long as they neglect to endeavor to protect the interests entrusted to their care from the effects of this morbid growth, either by urging the necessary legislation, or a combination of all honorable financiers to bring them to merited disgrace.

Idle discussion, without action, will accomplish nothing, and individual effort is futile to secure a uniform system of banking throughout the length and breadth of the country and protect legitimate institutions, as well as the public, from the vampires which now affect the financial world.

One object of the American Bankers' Association should be to initiate combined action for mutual protection, which will secure legislation necessary for the continued existence of National banks; establish a uniform system of banking throughout the whole country, and surround it with all the safeguards experience has demonstrated to be necessary for the protection of the public as well as the banks themselves, either by compulsory adoption of the National system, or securing uniform State legislation of a similar character; the repeal of all usury laws, which will soon equalize interest rates between the East and West, and North and South, and make desirability and

sufficiency of security and character of borrower, rather than location, determine amount to be paid for use of money, and secure the adoption of extradition treaties, which will prevent escape from swift and merited punishment for all violations of the law. Can this be accomplished, and if so how? It is suggested this convention select from each State and Territory an active, progressive, experienced and successful banker, who together shall form an Executive Council and be entrusted with the duty of deciding upon such State and National legislation as may seem necessary, and the preparation of and presentation to State Legislatures and Congress, of properly prepared bills for enactment into laws, and then bring to bear upon the law-making power the influence of each and every member of this association. A united effort of this character by such a large number of prominent and influential bankers attempting to secure laudable results, could hardly be successfully resisted or long delayed.

The advantages to the whole country that would be derived from a successful effort of this kind, are almost incalculable, and the diversity of interests which might appear in a council, composed of men from sections so remote from each other, cannot from the nature of their business be sufficiently divergent to prevent harmony of action; and although perfection cannot be expected from the first effort, the situation is such that we may reasonably expect the prompt removal of many of the incongruities of existing State legislation, and at least some supervision over financial institutions in States and Territories where none now exists.

It is conceded by all, the National Banking Act must soon be amended, or placed with the rubbish of the past.

State legislation, based upon principles ante-dating the era of Wampum currency, cannot long survive, nor will financial institutions existing in States where no banking legislation has yet been attempted, be allowed to long continue thus unmolested.

We seem to have arrived at a time when important changes in our banking systems are required and must soon occur.

Whether these changes shall be made by those who are almost entirely ignorant of the practical effect of proposed measures, or under the supervision of others, competent by education and experience to suggest and formulate wise financial legislation, largely depends upon the united action of the bankers of the country.

* O. M. CARTER, President First National Bank, Ashland, Neb.

EFFECT OF THE LAW OF MARCH 3, 1887, CREATING RESERVE CITIES.

We have received the following letter from a correspondent:

Editor Rhodes' Journal of Banking:

SIR:—I have read your remarks about reserve cities. If you were a banker at this Western end of the banking line you would appreciate the Act of March 3, 1887, making interior cities places for National banks to keep their reserves.

When we were obliged to keep our reserves in Chicago and New York it took from two to five days, at heavy express charges, to receive currency; therefore we had to carry nearly all our idle money in our safe. Now we can deposit in reserve banks in interior cities and the interior cities can deposit in New York.

PAOLA, Kans., November 5, 1887.

A. W. SPONABLE, *President.*

Our correspondent has somewhat misapprehended the remarks heretofore made in the JOURNAL with regard to the effect of the reserve law of March 3, 1887.

We have claimed that this law has had no effect as far as the distribution of cash was concerned between New York city and Chicago and St. Louis.

It is no doubt true that by permitting the majority of banks in certain cities to decide that such cities may be reserve cities of the second class it has become more convenient for country banks in certain portions of the country to obtain cash, but we think that the figures derived from the reports of Chicago and St. Louis banks, made to the Comptroller of the Currency during the year 1887, do not show that the National banks in those cities hold more cash reserve than they did prior to the enactment of the law. At least any increase may be readily accounted for in the business done in those cities in the past rather exceptional year.

If the only feature of the bill had been to create additional reserve cities of the second class in portions of the country remote from New York city, in which the

* Mr. Carter introduced the resolution printed on page 1099 of the November JOURNAL, instructing the Executive Council to take measures to secure a uniform system of banking throughout the United States. Mr. Carter's letter embodies the remarks he would have made in the convention had his motion met with opposition.

country banks might keep a portion of their reserve, there is no doubt that to this extent it was a desirable measure.

The original National banking law contemplated an increase of these reserve cities of the second class as the business of the country extended. This feature of the bill, however, was not esteemed of any importance by the Comptroller of the Currency in his recommendations. His idea, as far as can be gathered, in recommending the measure was to compel all banks to keep as large a portion of their reserve as possible at home, whereas the effect of the bill, as it seems from the letter of our correspondent, has been to permit country banks to utilize a portion of the reserves hitherto kept at home by depositing them with their reserve agents.

It has been claimed by many that the new law has had the effect of lessening the natural preponderance of the banks in New York city; and all that the JOURNAL has contended is that this or no other law can affect the natural tendency of money to the natural financial centres, and that, law or no law, no more money will in the long run be held at any point than is required by the necessity of business at those points.

FROM A NATIONAL BANKER'S STANDPOINT.

Editor Rhodes' Journal of Banking:

In a recent number of the JOURNAL there is a letter from a private banker in Minnesota, who seems greatly concerned in regard to four questions, which he puts in precise numerical order. He wishes to know first, whether the public has any means of knowing anything more about the condition of a National or State bank than the sworn statement of its Cashier discloses until "the Examiner comes along some day and discovers the cash gone and the President or Cashier in Canada." The curious intimation that the Examiner "comes along," as it were, by mere chance and accident implies a lack of appreciation of the methods of the Comptroller's office. The Examiner does not "come along" at all; he is the accredited agent of the Comptroller of the Currency, and under the orders of his superior officer, makes a rigid examination of any designated bank as often as the Comptroller may deem such an examination necessary or desirable. Every bank is examined at least once every year, and oftener if necessary. The discovery that the cash is gone and the President or Cashier in Canada is certainly no fault of the Examiner; but rather a reflection upon the Managers of the institution, and it might not be out of place to remark that there have been instances in this country where unincorporated banks and private bankers have been discovered to be woefully deficient in assets, though in the latter case there have been no stockholders to assess, and very little capital to fall back upon, and the depositors come off with next to nothing; in National bank failures they average seventy per cent of their claims. What more about the business of the bank does the public want to know than what is disclosed by the usual sworn statement of the Cashier. Is n't even that, small though your correspondent thinks it, a good deal more than is known about the affairs of unincorporated banks and private bankers, who have been known to do business for years, banking all the time on nothing but their reputation in the community. Don't these statements furnish the means of knowing the bank's condition, or does your correspondent think that the crime of perjury is so common among bank Cashiers that their sworn statements are not entitled to general credence? If a depositor has the slightest reason to believe that there is anything the matter with his bank he has a very simple way to ascertain the state of the case by drawing his check for his balance. If the check is honored, what more does he want? If it is not honored, is not he much better off than if he were banking with an unincorporated bank or private banker? Is it so usual a thing to find the cash gone and the Cashier or President in Canada that one may regard that condition of affairs as the normal one? Is all the honor and honesty of the financial world confined to the proprietors of unincorporated banks and private bankers? Do they never go to Canada with money belonging to other people? Do they never pull the wool over the eyes of a trusting and confiding public?

The Public Examiner very frequently prevents such disasters as the failure of the Fidelity and "dozens of others" that come under his notice.

The experience of the office of the Comptroller of the Currency is full of instances where mismanagements have been discovered by the Examiner, called to the attention of the directors, and effectually corrected, not to mention the fact that the whole

National bank act is filled with provisions especially designed to prevent bank failures. Being the work of human hands, the National bank act has, of course, some imperfections. It is not, even by its best friends, said to be free from all errors, and, consequently, under this system and under any system, there will be failures like that of the Fidelity National; but they are not as many and not as bad as if there was no banking law, and everybody conducted the business in whatever happy-go-lucky style that struck his fancy. It is a fact, and one very much to be regretted, that National bank officers do at times deceive the public and the Examiner; but these instances, when one considers the vast army actually engaged in National banks, are comparatively rare. They seem numerous because each one that happens is reported in the newspapers, and, though the bank itself may be as distant as the width of the continent, yet so prompt and accurate are the press reports that the occurrence seems to happen at our own door. Will your correspondent, for example, go over in his mind all the bank officers whom he personally knows, and then say exactly out of that number how many are defaulters? It may be, it is true, that there are many such who have not been as yet discovered; but that is arguing entirely on the unknown, and carrying the discussion into altogether undiscovered regions. It is just as logical to assume that all are honest as it is to assume that all are dishonest; but even of defalcations that come to light, comparatively few have been carried on year in and year out, mostly they do not extend over one or two years. The question of comparative honesty between private bankers and the managing officials of National banks is of too delicate and personal a nature to bear much discussion, but certainly it is not unfair to private bankers to say that at any rate the managers of National banks do not, in this particular respect, suffer by comparison. It is not altogether a question of honesty or dishonesty, that is a comparatively small point in the argument; it is a question of sound banking or the practicing of principles which have commended themselves to the financial authorities as accurate in the banking business. Without going into a general discussion of this branch of the subject, it will suffice to say that the National bank act embodies those provisions which experience has shown to be conducive to sound and legitimate banking, and National banks are compelled to conduct their business under these restrictions. A National bank is managed according to sound rules proved by experience and tested by actual practice; a private banker conducts his business precisely as he thinks proper, and no two of them, in this respect, or perhaps in any other respect, think exactly alike; consequently, apart from any question of honesty or dishonesty, a National bank by the very nature of its constitution, and the rules which govern its transactions, is safer as a financial institution than a firm composed of private bankers, or than an unincorporated bank. But, waiving the question of comparative advantage, what we say to your correspondent is this, you must not hold yourself out to the public as an incorporated bank when in fact you are only a firm of private bankers. If you assume the name of a bank you must become a bank. You must not hold yourself out to the public to be that which you are not. What object have you in calling yourself a bank except to induce the public to believe that you are conducting your business under those restrictions which the laws of the State throw around an incorporated institution. Why call yourself a bank if a private banking firm is just as good? In other words, you shall not enjoy the advantages of incorporation without, at the same time, subjecting yourself to its disadvantages and restrictions. As your correspondent seems to have made a special study of the imperfections of the National bank act and the present system of bank examinations, it may not be out of place to request him to place before the banking community a definite statement of what these imperfections are. The friends of the National bank act would apply themselves to find the proper remedies.

NATIONAL BANK.

BALTIMORE, November 19, 1887.

Dedicated to the notorious bank Receiver who receives all he can lay his hands on, but disburses as little as possible:

"In vain we call old notions fudge,
And bend our conscience to our dealing;
The Ten Commandments will not budge,
And stealing will continue stealing."

CONDITION OF NATIONAL BANKS ON OCTOBER 5, 1887.—The following is an abstract of reports made to the Comptroller of the Currency, showing the condition of the 3,049 National Banks in the United States at the close of business on Wednesday, the 5th day of October, 1887; and, for comparison, an abstract of the reports of May 13, 1887. [Cents omitted:]

* The amount of circulation outstanding at the date named, as shown by the books of the Comptroller's office, was \$272,387,176, which amount includes the notes of insolvent banks, of those in voluntary liquidation, and of those which have deposited legal-tender notes under the Acts of June 20, 1874, and July 12, 1882, for the purpose of retiring their circulation.

THE WORLD OF FINANCE.

Current Opinion on Monetary Affairs from many sources.

A VOLUNTEER PROTECTOR OF THE PUBLIC.

(*New York Evening Post.*)

Some attention has been drawn to the fitness of Mr. William J. Best as a volunteer assistant to the Comptroller of the Currency in the investigation of National banks by recent editorial articles in an evening paper in New York. The House Committee on Banking and Currency made an investigation of the failure of the Pacific National Bank of Boston, in 1884. During this investigation Mr. William J. Best, who had examined the bank upon the request of its directors, circulated a pamphlet in the committee-room written by himself, in which he gave the following account of a transaction he had with the Receiver: "Soon after taking charge, Receiver Price gave me a number of claims to collect, all of which he had classed as bad. I collected a note of \$5,000, and was in a fair way to make other collections. As the bank owed me money for services before the Receiver's appointment, I asked my own counsel and Mr. Stone whether I should not retain the amount in my hand on account. Both advised me to do so. Subsequently I learned I was not at liberty to apply the funds of the Receiver in payment of the bank's indebtedness; but having done so, and my fortune being locked up in railroad enterprises, I could not promptly respond to the Receiver's demand for payment. Nearly a year ago I paid him half the amount, or \$2,500, and the remainder would have been settled very soon thereafter had he not, in his usual foolish way, interfered in my affairs. Since then he has subjected me to all sorts of petty annoyances, culminating in his applying to the Supreme Court of this State for an order of arrest against me. I have recently paid the balance of this claim." * * *

Mr. Ranney, Member of Congress from Massachusetts, then made this statement:

"I have been, Mr. Chairman, one of the counsel for the Receiver, Mr. Price. I have had, as counsel, charge of some special matters. The general business of the collection of debts due to the bank and the Receiver has been in charge of Richard Stone, Jr., of the firm of Morse & Stone. I have been advisory counsel of the Receiver, and have had charge of three special matters. One of them was a matter connected with Mr. Best, of this nature: Mr. Carruth, of Dearborn & Carruth, had borrowed from the bank about \$60,000—maybe a little more. He had given a transfer to the bank of an income, which was due him from an estate left by his father in trust. His father had left about \$70,000 or \$80,000 in trust with a man named Miles Washburn; the income alone was to be paid to Carruth yearly or semi-annually. He had transferred that income to the bank as security for his indebtedness of about \$60,000. I found that after Mr. Best came into the bank after the failure, Miles Washburn, the Trustee, had resigned. Mr. Best was appointed Trustee in his place by the Probate Court. I found that Best had been appointed Trustee and had given straw bonds—bonds which are probably worthless. Instead of keeping the Trust-fund, he had sold and disposed of the whole of it, and, so far as I can learn through the investigation, he had given to Carruth a large portion of the principal sum which he was bound to hold as Trustee. He had taken a portion of it and invested in some railroad enterprises, South or West. At all events, it was sold or gone. Best is also a stockholder in the bank. Ten shares stand in his name on the books, and he has transferred about sixty more to his minor children."

MR. KNOX ON THE CONVERSION OF THE FOURS.

(*The London Statist*, November 5th, 1887.)

Mr. John Jay Knox, ex-Comptroller of the United States Currency, read a paper at the recent meeting of the American Bankers' Association at Pittsburgh, in which he sketched out and defended a plan proposed by himself some years ago for preventing the action of the Treasury from disturbing the trade of the country. In its essential principles it is identical with that which we ourselves suggested some weeks ago in

these columns, but it is better than our plan in some of its details, and it has this further great advantage, that it is recommended by the high authority of Mr. Knox. Explained as briefly as it can be put popularly the plan comes to this: the four per cents, which amount in round figures to 730 millions of dollars, and which cannot be called in and paid off at par until July, 1907, Mr. Knox would replace by an equal amount of two-and-a-half per cent. bonds, and he would compensate the holders of the fours for the loss of $1\frac{1}{4}$ per cent. in interest by paying the present value of the interest so lost in cash. The two-and-a-halfs would have all the privileges now attaching to the fours; in other words, they could be lodged as security in the Treasury, both for note circulation and for Treasury deposits; they could be held in the same way by trustees; and, in short, they would differ in no respect from the fours except that the interest would be less. It will be seen that the holder of the fours would lose nothing by accepting the conversion, while they would gain something if, at the same time, Congress were to allow notes to be issued to the full nominal value of the new bonds. Our readers will recollect that only 90 per cent. of the nominal value of the existing bonds can be issued in note circulation. If the limit were extended to 100 per cent. there would be a gain in note issues of fully 11 per cent. This would be a very great recommendation of the new bonds to bankers, at any rate, who we learn from Mr. Knox hold about 125,000,000 out of the total of 730,000,000 of dollars, the rest being held by Trust companies, Insurance companies, Savings banks, private bankers, Trustees, and the like. Mr. Knox would allow the same currency to the new bonds as to the old—that is to say, they could not be called in and paid off at par until 1907; and he suggests that they would be more attractive to investors if they were made to fall due in series. It is quite clear that the whole amount of 730 millions of dollars could not be paid off at once. There would, therefore, be no real advantage in making them all fall due at the same time; it would be better to make them fall due in series of 80 or 100 millions of dollars every year, and if this were done the last of the bonds would run on until about 1917 or say, about 30 year's time.

As regards the Government, it would gain by the transaction. At present it is bound to pay 4 per cent. on the whole of these bonds, though its credit is good enough to borrow at par at $2\frac{1}{4}$ per cent., or perhaps even lower. Were the interest reduced to $2\frac{1}{2}$ per cent. it would save somewhat by Mr. Knox's plan for it would only pay $2\frac{1}{2}$ per cent. interest on the new bonds and the present value of an annuity of one and a half per cent. running till first July, 1907. There would thus be a saving to the Government and there would be a great advantage to the bond-holders as we have just been explaining, inasmuch as they would receive in cash which could be employed in their business the difference in the value of a four per cent. and a two-and-a-half per cent. bond. They would receive also a two-and-a-half per cent. bond against which they could issue notes and borrow from the Treasury, and in which Trustees and others could invest; and moreover, if Mr. Knox's other recommendation were adopted the time of maturity of some of the bonds would be extended about 10 years. While the note issue on the security of the bonds might be increased about 11 per cent. Lastly, if the first bonds converted were made the last to be redeemed a further inducement would be held out for early conversion. We have thus a plan by which both the Government and the bond-holders would gain, and as we shall presently see, so also would the general public. The great financial difficulty at present is that the revenue greatly exceeds the expenditure; that the surplus accumulates rapidly in the Treasury, denudes the market of funds and thereby deranges the whole trade of the country. Now, if the 730 millions of dollars of bonds were exchanged in the way suggested by Mr. Knox, the Government would have to pay in cash the difference in value between a two-and-a-half per cent. and a four per cent. bond, altogether about 43 millions sterling, and the payment of this cash would take out of the Treasury the surplus revenue of say, a year and three-quarters without any difficulty of any kind, automatically, as it may be said, the accumulation of the surplus in the Treasury would thus be prevented, and time would be given to Congress to consider and discuss carefully the permanent measures to be adopted for preventing the revenue thus inconveniently accumulating in the Treasury. As we have often pointed out, it is not to be expected that a great remission of taxes will be carried when there is no powerful popular agitation to compel it. Yet, unless some plan such as Mr. Knox suggests is adopted the revenue must be cut down and very greatly too, or the expenditure must be enormously increased (and in any case if a crisis in the money

market is to be avoided there must be prompt action. Mr. Knox's plan, however, would offend neither free traders nor protectionists, while it would leave time to Congress to make up its mind as to the ultimate measures it would adopt.

AMERICAN INVESTMENTS ABROAD.

(*London Economist*.)

The decline in the prices of securities, which has characterized the stock markets for some months past, has been much accentuated during the last two or three weeks, especially in the market for American railway shares. * * * The absence of any serious difficulties is attributed to the fact that many of the more speculative American railway stocks, in which the fall has been most severe, are firmly held by operators with large resources, who bought freely at the low prices touched in the early spring, when a conflict between France and Germany was feared, and who, not unnaturally, expected to realize at an advance during that period of activity in business and firmness in prices which is so often experienced in the autumn. But these hopes have been disappointed.

Judging, too, from the outlook, further trials may yet have to be faced. Our reason for saying this is based upon the extremely adverse influences which the collapse of the Baltimore & Ohio Railroad Co., and its present temporary fall into the non-dividend ranks, is likely to exercise upon the minds of British investors—an influence which may for some time neutralize the effects of such factors as good trade and expanding traffic returns. And that it should do so is quite natural, for in the long list of American railway scandals it is doubtful if there have really been any much worse than this last business of the Baltimore & Ohio. To realize this it is only necessary to take a brief survey of the Company's past history and present position. * * * The illusory nature of the surplus, to which we drew attention some months ago, is perhaps the main point that attracts attention. That fund is now seen to be, for the most part, of such a nature that it cannot be realized, consisting, as it mainly does, of the estimated difference between the capital expended upon the line and the capital represented by outstanding securities. This difference no doubt indicates in a large measure the amount of money that has been expended out of income upon capital account—that is, expended in extending the system and its equipments; but, in so far as this was the case, the surplus was subject to the liens of the various mortgages which cover the entire property of the Company. The remainder not accounted for in this way consists of securities useful for "control" purposes, but not, as a rule, salable, and various sums receivable, which figure as credits, but are really of the nature of bad debts, which should have been written off long ago.

The Baltimore & Ohio is not, however, the only company that has flourished a large "surplus" or "balance" in the face of the public, although in no other case has it been of anything like the same magnitude. Most American railway companies, in fact, show a more or less substantial surplus balance, which is frequently proved to be of a more or less fictitious character, owing to its coincidence with a rather bare treasury or a lack of dividends. For instance, the Louisville & Nashville Company failed to pay any dividend for 1886, although the accounts issued a few weeks ago showed a net balance of over \$1,000,000.

Other companies might be named that show large but doubtful surpluses in their balance sheets, including even undertakings of so high a character as the New York Central and the Pennsylvania.

These large paper surpluses may perhaps appear justifiable from an American point of view, for in the United States it is generally understood that they are simply balances comprising, like suspense accounts, a number of more or less doubtful items, but they are none the less utterly delusive to a British investor.

MR. KNOX'S PLAN OF FINANCE.

[*The New York Evening Post*.]

At the National Bankers' Convention Mr. John Jay Knox gave an elaborate statement of the plan of dealing with the 4 per cent. bonds and the Treasury surplus, which he suggested in his report as Comptroller of the Currency in 1882. There is some difficulty in making it popularly understood, and this is one reason why it has not received the attention in Congress which it deserves. Another cause for the public indifference to it heretofore has been the fact that it was not of pressing importance. So

long as there was an abundant outlet for the surplus funds of the Treasury by redemption of the 3 per cents., few persons would take the trouble to read or understand any plans for dealing with embarrassments which, although inevitable, were still distant. The situation is now changed. The embarrassment has come, and it is worse than anybody expected that it would be, because the public revenues are greater than anybody anticipated, and also because money has become more "active" than at any time since 1882. Mr. Knox now emphasizes a fact which has been adverted to in the columns of the *Evening Post*, that however diligent Congress may be in meeting the crisis, a year or two must elapse before the reduction of taxation can take effect. Most probably the better part of a year will have passed before any anti-tax law can be matured and agreed to by a majority of both Houses, and then there will be another considerable interval before the law will begin to operate. What shall be done meanwhile? Shall money be allowed to accumulate in the Treasury at the rate of more than \$100,000,000 per annum.

Mr. Knox proposes that the holders of the 4 per cent. bonds which have still twenty years to run, shall be offered a new 2½ per cent. bond running the same length of time, and also a cash payment equal to the value of the existing premium on the bonds, say 23 per cent. The market premium is somewhat higher than this but as the bondholder gets the use of the premium as active capital for twenty years, he can afford to take something less. This is a matter for the determination of actuaries. It belongs to the domain of mathematics, and there we may leave it. Whatever is the present worth of a twenty-year 4 per cent. bond put up in the manner proposed, i. e., divided into a 2½ per cent. bond and a cash premium, the bondholders will receive. It is an easy calculation that on a 4 per cent. bond for \$1,000 running twenty years, the Government will eventually pay \$1,000 principal and \$800 interest—total, \$1,800; and that under the proposed plan it will pay \$1,000 principal, \$500 interest and \$300 premium—total, \$1,730, a saving of \$70. On \$733,000,000 the saving would be \$51,310,000, but if a computation be made of interest on interest, the saving would be much larger. But as the Government cannot transact business so as to gain either compound or simple interest, we can only reckon on the saving of the sum mentioned, which is sufficiently large to justify the transaction, even if there were no collateral advantages to be gained.

The immediate collateral advantage is the providing of a way to dispose of the surplus revenue before any anti-tax bill can come into play. This is so important a matter that Congress can hardly overlook a plan so easy of adoption and so economical in the end. If it be asked whether the holders of the 4 per cents would consent to the change, Mr. Knox shows that the national banks, holding about one-fifth of the outstanding fours, would be almost certain to fall in with it, because it offers them a premium which they can immediately use in their business and which will be extinguished in the course of twenty years—that is, at the rate of 5 per cent. per annum. He thinks that trust companies, life and fire insurance companies and savings banks will agree to it, for the same reasons, and that trustees who are required by law to invest their trust funds in United States bonds, but not in any particular class of bonds, will be moved by the same considerations in order to save the premium thus put within their reach. The plan seems to offer large advantages to both the Government and the bondholders, without harm to any living creature. Mr. Knox quotes the following paragraph from a strong protectionist paper, the *Utica Herald*, in support of the plan, to which the *Evening Post* gives its assent from the opposite pole of the tariff question:

"The scheme can easily be put into execution if Congress would pass a statute to authorize it. It proceeds on the assumption that what the country needs is something to reduce the surplus temporarily, say for about three years, while Congress is deliberating and perfecting the details of a plan for permanent reduction. This of itself would be a great relief to the country. All through the past year, and in fact for several past, Congress has felt that there was a necessity for some legislation to reduce the revenue of the Government, but although the pressure was strong, it seemed impossible for the members to agree. The plan is exceedingly simple and apparently need not create any strong animosity against it. It treats on the toes of no man who cherishes a particular theory of the tariff. It interferes with neither free-trader nor protectionist. It appeals rather to the common sense of both of these parties, and can be adopted without partisanship by Republicans and Democrats alike.

NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

NOTE.—We shall esteem it a favor if readers of the JOURNAL will notify us of any changes in the banks with which they are connected, as well as of new banks and banking firms organized or recently opened in their place or vicinity, in order that the changes and additions may be made without delay in this department.

New National Banks.—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report. Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.

- 3806—First National Bank, Iron Mountain, Michigan. Capital, \$50,000.
 3807—Humboldt First National Bank, Humboldt, Kansas. Capital, \$60,000.
 3808—Mountville National Bank, Mountville, Pennsylvania. Capital, \$50,000.
 3809—Simonds National Bank, Sumter, South Carolina. Capital, \$50,000.
 3810—First National Bank, Horton, Kansas. Capital, \$50,000.
 3811—First National Bank, Durham, North Carolina. Capital, \$100,000.
 3812—Jewell County National Bank, Mankato, Kansas. Capital, \$50,000.
 3813—First National Bank, Osage City, Kansas. Capital, \$50,000.
 3814—First National Bank, Ellsworth, Maine. Capital, \$50,000.
 3815—Merchants' National Bank, Ocala, Florida. Capital, \$50,000.
 3816—First National Bank, Terrell, Texas. Capital, \$50,000.
 3817—Canandaigua National Bank, Canandaigua, New York. Capital, \$100,000.
 3818—San Bernardino National Bank, San Bernardino, California. Capital, \$200,000.
 3819—First National Bank, Chanute, Kansas. Capital, \$50,000.
 3820—Ketcham National Bank, Toledo, Ohio. Capital, \$250,000.

ALABAMA.

ANNISTON.—Anniston Savings Bank & Safe Deposit Co. is in business here. Capital, \$50,000. President, John B. Rees; Vice-President, W. S. Larned; Cashier, T. C. Stephens. — Turner & Hammond, Brokers, are in business here.

ARIZONA.

PRESCOTT.—Bank of Prescott; in liquidation.

ARKANSAS,

ARKADELPHIA.—Banking House of John N. Stuart (McNutt & Stuart); style now, Elkhorn Bank. Capital, \$20,000.

BEAR.—Merchants' & Miners' Bank; succeeded by J. P. Durham.

BENTONVILLE.—People's Bank has just been organized. Capital, \$50,000. President, John Smart; Vice-President, I. B. Gilmore; Cashier, F. E. Gilmore.

HARRISON.—Harrison Investment Banking Co. is reported here. Capital, \$25,000. President, F. M. Garvin; Cashier, W. M. Duncan.

CALIFORNIA.

ELISINORE.—Exchange Bank; Assistant Cashier, N. F. Baird.

PASADENA.—San Gabriel Valley Bank; W. Aug. Ray, President, in place of H. W. Magee, resigned.

SAN BERNARDINO.—San Bernardino National Bank has been authorized to commence business. Capital, \$200,000. President, J. G. Burt; Cashier, E. H. Morse.

SAN BUENA VENTURA.—Wm. Collins & Sons; President, Wm. Collins; Cashier, John S. Collins; Assistant Cashier, J. C. Morrison.

SAN FRANCISCO.—Pacific Bank; R. H. McDonald, Jr., Vice-President, resigned.

SAN DIEGO.—Consolidated National Bank; James M. Pierce, Vice-President, deceased. — Savings Bank of San Diego; James M. Pierce, President, deceased.

SANTA BARBARA.—Santa Barbara Savings Bank; now Commercial Bank. Same officers.

COLORADO.

BUENA VISTA.—Bank of Buena Vista (R. W. Hockaday); Assistant Cashier, B. H. Hockaday.

CARBONDALE.—J. K. Robinson & Co. are in business here. Style, Bank of Carbondale. Capital, \$10,000. President, J. K. Robinson; Cashier, W. Kopter.

GRAND JUNCTION.—Commercial Bank (J. F. McFarland); succeeded by Geo. Arthur Rice & Co. Cashier, J. F. McFarland; Assistant Cashier, T. M. Jones.

HOLYOKE.—Holyoke State Bank is reported here. Capital, \$25,000. President, L. Tinkel; Cashier, R. E. Webster.

LA JUNTA.—Bank of Commerce; Lester Hays, Cashier, reported defaulter.

LAMAR.—Bank of Lamar (Borders & Scott); closed by creditors.

TRINIDAD.—Trinidad National Bank; E. D. Wight, Cashier, in place of T. B. Collier; no Assistant Cashier in place of E. D. Wight.

VILAS.—W. B. Choekley & Co. are reported here. Style, Bank of Vilas.

CONNECTICUT.

ESSEX.—Saybrook Bank, Edwin Ayres, President, in place of Samuel C. Ely.

HARTFORD.—Hartford Trust Co.; R. W. Cutler, President, in place of Henry Kellogg; Frank C. Sumner, Treasurer, in place of R. W. Cutler.

MIDDLETOWN.—Middletown Savings Bank; Henry H. Smith, Treasurer, in place of Geo. W. Harris, deceased; Arthur L. Allin, Secretary, in place of Henry H. Smith.

DAKOTA.

ARLINGTON.—Central Dakota Bank (L. A. Kidder); E. L. Coleman, Cashier, in place of H. L. Whitney.
 CENTERVILLE.—Bank of Centerville; now incorporated. Capital, \$20,000.
 EUREKA.—Bank of Eureka has been recently opened. Capital, \$25,000. President, Charles Pfeffer; Cashier, Wm. Brameier.
 FAULKTON.—Security Bank is reported here; Cashier, Charles A. Morse.
 FORMAN.—Bank of Forman (D. F. Vail & Co.); Cashier, L. V. Babcock.
 GROTON.—Bank of Groton; L. H. Neff; President, in place of T. H. Hagerty; W. B. Miller, Cashier, in place of L. H. Neff; W. S. Crawford, Assistant Cashier, in place of W. B. Miller.
 LAKE PRESTON.—Farmers' Bank is reported here. Capital, \$50,000. President, Augustus N. Eddy; Cashier, Chas. E. Murison.
 MADISON.—Dakota Loaning Association of Winfred will open here about May 1, 1888.
 MANDAN.—Northern Pacific Bank; proprietor, Charles E. Meech.
 OELRICHS.—Bank of Oelrichs is reported here. Capital, \$12,000. President, M. Flannigan; Cashier, S. Parker.
 ORIENT.—Bank of Orient is reported here. President, L. M. Sprowls; Vice-President, J. C. Campbell; Cashier, Geo. F. Cromer.
 PARKER.—First National Bank; W. L. Baker, Cashier, in place of Geo. W. Stone. — Citizens' Bank; proprietor, W. A. Houts.
 SANBORN.—Barnes County Bank; Daniel Doolittle, Assistant Cashier, in place of E. W. Siegfried.
 TRIPP.—Jacob Schaetzel & Son in business here. Style, Mortgage Loan Co.; Cashier; Julius Schaetzel.

DELAWARE.

MILFORD.—First National Bank; James M. Hall, President, in place of H. B. Fiddeman, deceased.

FLORIDA.

OCALA.—Bank of Ocala (J. F. Dunn & Co.); succeeded by Merchants' National Bank. Capital, \$50,000. President, John F. Dunn; Cashier, R. C. Jekis; Assistant Cashier, R. B. Mc Connell.
 ST. AUGUSTINE.—First National Bank; Josiah James, Cashier, in place of Geo. W. Gibbs.
 TITUSVILLE.—Indian River Bank is reported here. President, James Pritchard; Cashier, W. M. Brown.

GEORGIA.

ATLANTA.—Atlanta Mercantile Co. has been chartered. Authorized capital, \$500,000. Paid capital, \$50,000. — Capital City Bank has been recently opened. Capital, \$400,000. President, Wm. A. Hemphill; Vice-President, D. Mayer; Cashier, Jacob Haas.
 DAWSON.—J. R. Mercer & Co.; succeeded by First State Bank. Capital, \$51,000. President, John B. Perry; Cashier, John R. Mercer; Assistant Cashier, J. F. Lark.
 ELBERTON.—Citizens & Farmers Bank has been recently opened. Capital, \$30,000. President, H. K. Gardiner; Cashier, W. T. Vananzer.

IDAHO.

WARDNER.—S. F. Chadwick & Son (Bank of Wardner) succeeded by J. S. Atchison.

ILLINOIS.

AURORA.—Merchants' National Bank will open for business March 1, 1888. President, J. O. Curry; Vice-President, S. C. Gillett; Cashier, W. C. Estee.
 BLOOMINGTON.—Third National Bank; A. S. Eddy, Cashier, in place of F. L. Bunn.
 CHICAGO.—S. A. Kean & Co.; Cashier, J. E. Lewis.
 QUINCY.—First National Bank; Frederick Boyd, Assistant Cashier, in place of J. G. Rowland.
 TROY.—Jarvis & Padon (Troy Exchange Bank); succeeded by W. W. Jarvis.

INDIANA.

ELWOOD.—Citizens' Exchange Bank; Assistant Cashier, S. Fred.

IOWA.

CAMBRIDGE.—Gallup & Keller (Citizens' Bank); succeeded by W. H. Gallup. H. M. Silliman, Cashier, in place of M. M. Keller.
 CLARION.—First National Bank; Vice-President, L. L. Estes; N. F. Weber, Cashier, in place of Ed. Hartsock; Assistant Cashier, F. E. Estes.
 DAVENPORT.—Davenport Savings Bank; Walker Adams, President, deceased.
 DECORAH.—Citizens' Savings Bank; C. W. Burdick, President, in place of Geo. Phelps; E. J. Curtin, Cashier, in place of C. W. Burdick; no Assistant Cashier in place of E. J. Curtin.
 DES MOINES.—Des Moines Clearing-House has been established. President, Wm. D. Lucas; Manager, J. G. Rounds.
 ELLSWORTH.—Dailey & Brinton are in business here. Style, Bank of Ellsworth. Capital, \$40,000. Cashier, J. O. Leuning.
 GRANVILLE.—Bank of Granville is reported here. President, Theo. Graff; Cashier, H. Ricker; Assistant Cashier, N. H. Graff.
 HOLSTEIN.—Holstein Bank; succeeded by Holstein Savings Bank (Incorporated). Capital, \$25,000. President, James W. Reed; Vice-President, H. J. Rode; Cashier, Chas. J. Wohlenberg.
 MILTON.—Citizens' Bank (J. D. Nash); now, President, J. W. Car; Vice-President, J. E. Billups; Cashier, W. D. Russell.
 ROCK VALLEY.—State Bank of Rock Valley has been incorporated. Paid capital, \$25,000. President, E. A. Hazard; Vice-President, G. D. Harrington; Cashier, James T. L. Harrington.
 SIOUX CITY.—J. W. Carver is in the collection business.

UTR.—First Ute Bank is reported here. Capital, \$10,000. President, G. P. Moorhead; Vice-President, S. J. Patterson; Cashier, J. W. Bickford.

WALL LAKE.—A. Herrig is in business here.

KANSAS.

ARKANSAS CITY.—Union Bank is reported here.

ATCHISON.—United States National Bank; L. A. Wheeler, Assistant Cashier, resigned.

BALDWIN.—Baldwin City Bank; S. R. Humphrey, Vice-President, admitted.

BELOIT.—Beloit State Bank is new bank here. Capital, \$60,000. President, Henry Casey; Cashier, W. S. Search.

CENTRALIA.—Citizens' State Bank has been chartered. Capital stock, \$50,000. — Centralia State Bank; to be succeeded, about January 1, 1888, by First National Bank. Capital, \$30,000. President, A. J. Best; Vice-President, F. P. Brown; Cashier, A. Oberndorf, Jr.

CHANUTE.—First National Bank has been authorized to commence business. Capital, \$50,000. President, R. N. Allen; Cashier, R. L. Nay.

CHEERYVALE.—State Bank; Assistant Cashier, R. T. Webb.

CIMARRON.—Cimarron Bank; assigned.

CLAPLIN.—Bank of Claplin is reported here. Capital, \$20,000. Cashier, J. H. Cannon.

CLYDE.—State Bank; W. A. Mosher, Assistant Cashier, in place of A. L'Euey.

COLUMBUS.—Cherokee County Bank is new bank here. President, Thos. P. La Rue;

Cashier, Geo. W. Brock. — Bank of Columbus; sold to Cherokee County Bank.

CONCORDIA.—Citizens' National Bank; J. W. Peterson, Cashier, in place of C. P. Tilden.

DIGHTON.—Frazier & Sawyer (Lane County Bank); failed.

Moon, a broker of Cleveland, was recently indicted for aiding and abetting Isaac Stanley, Paying Teller of the National Bank of Commerce, to embezzle one hundred thousand dollars of the bank's reserve funds three years ago. Moon claims that he did not know the money he obtained from Stanley was taken from the bank.

Mr. S. G. Crandall, former Cashier of the First National Bank of Pomeroy, W. T., writes: "I have taken the JOURNAL for some five years, and find that it grows better every year. Keep up the good work." Mr. Crandall's bank moved into their new building, recently constructed at the cost of \$30,000, on November 1st. His signature was recently published in the JOURNAL.

A Guarantee Trust & Loan Co., has recently been organized at Chattanooga, Tenn., with a paid-up capital of \$100,000. The company is composed of representative business men in Tennessee, Georgia and Alabama. They claim an individual responsibility of the membership amounting to one million five hundred thousand dollars. The object of the company is to negotiate loans of Eastern capitalists to develop the resources of the Southern States.

THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, December 3, 1887.

The enlargement of the deposits of public money made with the National bank depositories by the Secretary of the Treasury, supplementing the purchase of 4's and 4½'s in the market has averted until the present time the worst of the dangers which were apprehended from the accumulation of currency in the Treasury of the United States. Now that Congress has organized, the Executive branch of the Government will doubtless be inclined to feel relieved from the responsibility that has been thrown on it during the summer and fall. Whether this shifting of responsibility will redound to the benefit of the money market remains to be seen. Under the present laws, the Treasury Department has been enabled at critical times to exert its influence to avert serious financial trouble, but now that Congress is in session it is highly probable that the Secretary of the Treasury will deem it less incumbent on him to continue to carry a responsibility which necessarily rested upon him while Congress was not in session.

There are two things which it is necessary for Congress to accomplish. First, to dispose of the surplus already accumulated, and second to make such changes in the laws for raising revenues as will reduce the income of the Government to an amount not greater than its expenditures. As to the means to be employed to accomplish each of these objects there is much difference of opinion. While the surplus now in the Treasury could be most profitably used in reducing the interest on the public debt, it is very probable that the present session will see many schemes broached which, for their operation, contemplate more or less assistance of the United States Treasury. It is not to be expected that this suggestive opportunity for furthering private plans for the public benefit will be neglected. There will doubtless be propositions for increasing pensions, for paying claims of various descriptions, for commencing extensive public works, and for private enterprises for the public good similar to the Nicaragua Canal. To suggest ways of spending money is easy, more especially when they may be of benefit to the suggestors.

Any attempt to reduce the revenue, will, as it has been in the past, be met with much opposition from the many interests which must necessarily be interfered with. Hardly any change can be made in the present tariff laws without encountering some opposition. It is plain, therefore, that however successful the legislative branch of the Government may be in eventually effecting measures for the relief of the financial situation, this will only be accomplished if at all after extended discussion which may consume several months. In the meantime the country will as heretofore, be obliged to rely on the judgment of the Secretary of the Treasury for immediate relief if any necessity arises.

During the last month there has been little change in the condition of the money market. There has been no reduction in the demand for currency from the West and South. There have been two bank failures of importance, one at St. Paul and the other at St. Louis, but these cannot be said to have had any general effect.

The report of the Department of Agriculture for the month of November estimated that the cotton crop of the United States would be less than that of the previous year, and also reduced its estimate of the corn crop.

Railroad building has been checked somewhat by the difficulty of procuring funds, and this has had an effect upon the iron and steel market.

Taking everything into consideration, a review of the money market for the past eleven months shows that, while there has been a great revival of business, and all the tendencies have been toward a hopeful undertaking of new

enterprises, there has, notwithstanding an apparent increase in the amount of available currency, been a real deficiency in the amount required to carry on the many projects which have been started during the year. This may be regarded in two ways. As having rendered the development to be expected from so hopeful a business outlook less than it would otherwise have been; or on the other hand as having exerted a conservative influence, and confined the enterprises which have been entered into to those of the more sound and conservative character, and as having prevented many schemes which could only have resulted in loss, from being carried into operation. We believe that, with the speculative and enterprising spirit, which seemed to exist throughout the country at the beginning of the year, an unlimited supply of currency, such as might have been obtained in the days when the State banks were permitted to make almost unlimited issues, might have resulted in a financial crisis as disastrous as either of those of 1837 and 1857. The soundness and comparative inflexibility of the currency of the country has doubtless prevented a serious financial crisis. The surplus in the Treasury has acted somewhat as a safety valve, relieving the pressure when it became unbearable in other directions. As a whole the business of the country has undoubtedly been satisfactory and profitable during the past year.

FOREIGN EXCHANGE.—During the week ending November 5th the demand for sterling exchange was light, and the business done was of a limited character. The supply of commercial bills was quickly absorbed. Dullness prevailed, and the rates were somewhat easier. There were no importations of gold. For the week ending November 12th the demand was at no time sufficient to make an active market. There was no change of rates. During the week ending November 19th there was little fluctuation, although in the latter part the market was somewhat stronger. During the early part of the week ending November 26th there was quite an active demand, and a scarcity of commercial bills followed by an advance in rates, but the demand soon fell off. The Bank of England lost £183,000 in specie from October 30th to November 26th, and the Bank of France lost 8,350,000 francs in gold and gained 4,325,000 francs in silver during the same period. The discount rate of the Bank of England remains unchanged at 4 per cent. The following are the latest posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.82; sight, nominal, \$4.86; 60 days, actual, \$4.81; sight, actual, \$4.84½; Cable transfers, \$4.85½; Prime commercial sterling, long, \$4.80½; Documentary sterling, 60 days, \$4.80½; Paris, bankers', 60 days, \$5.24½; sight, 5.22¼; Paris, commercial, 60 days, \$5.26½; sight, \$5.24; Antwerp commercial, 60 days, \$5.27½; Swiss bankers, 60 days, \$5.24½; sight, \$5.22; Reichmarks (4) bankers, 60 days, \$94¾; sight, \$95¼; Reichmarks (4) commercial, 60 days, \$94½; sight, \$94.6-8; Guilders bankers, 60 days, \$39.15-16; sight, \$40½; Guilders commercial, 60 days, \$39¾; sight, \$40; Copenhagen, Stockholm and Christiana, krona, 60 days, \$26½; sight, \$26¾.

Paris dispatches quote exchange on London 25f. 84c.

The following shows the posted rates for prime bankers' sterling bills on London, at 60 days, and sight, and prime commercial sterling bills on London, at 60 days; and sight, and prime commercial sterling, together with exchange on Paris on October 1st, the changes in rates that occurred during the month, and the highest and lowest during the months of October and November.

Victoria sovereigns.....\$4 83 @ \$4 88	Fine gold bars par @ ¼ % premium on the
Twenty francs 3 86 @ 3 90	Mint value.

HOME MONEY MARKET.—During the first part of the month a better tone prevailed in the home money market. There was a stronger market for bonds, and the sales at the Stock Board showed an improved business at rather better prices. This continued until the end of the third week in November. There seemed to be a popular feeling of a greater confidence in values, and there were larger sales. During the remainder of the month there seemed to have arisen a general feeling that money would be higher, and the market for stocks was much less active. During the week ending November 5th the rates for call loans on stock and bond collateral, ranged from 3 to 5 per cent.; commercial paper from 5½ to 6 per cent. For the week ending November 12th the rates for call loans ranged from 3 to 7 per cent., commercial paper from 5½ to 6 per cent. For the week ending November 19th loans on collateral ranged from 3 to 6 per cent., the rates for commercial paper from 5½ to 6 per cent. The week ending November 26th loans based on stock and bond collateral were from 3 to 7 per cent.; those on commercial paper from 5½ to 6 per cent. There has been a gradual rise in the price of money during the month; in fact, all the signs indicate a continued demand from all parts of the country during the winter. The following are the latest rates of exchange on New York:

Savannah, buying at par; selling ¼ premium. Chattanooga, Charleston, buying ½ discount; selling at par. New Orleans commercial, \$1.50 per \$1,000 discount; bank, par. St. Louis, 75c. per \$1,000 discount. Chicago, 70¢@80c. per \$1,000 discount. These rates show a strong tendency of money from New York to the West and South. We would refer our readers to the letter from the Chicago correspondent of the JOURNAL, which indicates that much Western paper is being discounted in the East.

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of November, and the highest and lowest during the month. Actual sales marked *:

NEW YORK CITY BANKS.—During the week ending November 4th the combined currency and gold received by the New York banks amounted to \$1,864,000. The amount shipped to the interior by the New York banks was \$2,760,000, showing a loss of \$896,000. In their dealings with the Sub-Treasury the New York banks lost \$150,000, making a net loss of currency and coin of \$1,046,000. For the week ending November 12th the New York city banks shipped to the interior, in excess of the amount received by them, \$1,152,000 in gold and currency, and in their transactions with the Sub-Treasury they experienced a loss of \$100,000, making a total loss that week of \$1,252,000 in gold and currency. During the week ending November 19th they lost currency and gold in their dealings with the interior of the country amounting to \$1,251,000, and in their dealings with the Sub-Treasury their loss was \$500,000, making a total loss in currency of \$1,751,000 for the week. The week ending November 26th the total loss in coin and currency in the New York banks amounts to \$3,468,000, made up of \$2,368,000 loss in dealings with the interior of the country, and \$1,100,000 loss in dealings with the Sub-Treasury. These losses alone during the month go far to explain the general rise in rates for money during the month. The following table shows the condition of the New York city Clearing-House banks for a number of weeks past, as well as about the same time in 1885 and 1886.

The following table shows the condition of the New York Clearing-House Banks for a number of weeks past, as well as about this time in 1886 and 1885:

1887.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.

In Depository B'ks.	14,436,199	22,991,302	25,438,630	81,797,468	42,423,670
Total	\$319,759,314	\$330,520,431	\$324,635,830	\$382,696,890	\$346,658,862

The public debt, less cash in the Treasury, has increased \$490,871 during the month of November, as compared with a decrease of \$16,833,695 during the month of October. The outstanding interest bearing debt on December 1st was \$1,041,761,542; with accrued interest in addition amounting to \$10,918,759. This statement includes \$64,623,512 Pacific Railroad bonds. Four per cent.

bonds have diminished from \$732,447,550 on November 1st to \$732,440,850 on December 1st. The amount of public moneys on deposit with the depository banks has increased from \$31,767,468 to \$42,428,670 on December 1st. The increase during the month, therefore, is \$10,661,202.

The following table shows the net gold and silver held by the United States Treasury on the 1st of December and on the 1st of November and October :

	Dec. 1, 1887.	Nov. 1, 1887.	Oct. 1, 1887.
Gold coin and bullion.....	\$302,661,278	\$302,544,605	\$290,702,629
Gold certificates outstanding.....	90,780,753	99,684,773	97,984,683
Gold owned by Treasury.....	\$211,880,525	\$202,859,832	\$192,717,946
Silver dollars and bullion.....	\$219,909,213	\$218,897,528	\$217,954,668
Silver certificates outstanding.....	168,149,274	160,713,957	154,354,826
Silver owned by Treasury.....	\$51,759,939	\$58,183,571	\$63,599,842

The changes during the month are an increase in the net gold coin held of \$9,020,693 and a decrease in silver dollars and bullion of \$6,423,632. In addition the Treasury held fractional silver coin amounting to \$24,158,004.

From the statement of the Comptroller of the Currency for December 1st it appears that the total decrease in National bank circulation during the month of November was \$2,152,133, as against a decrease of \$851,227 during the month of October. Of the circulation issued during the month \$150,710 was issued through new banks, and \$1,528,187 through banks increasing circulation. The total amount of lawful money deposited with the Treasury to retire outstanding bank circulation was \$101,785,322, showing a decrease during the month of \$800,886, as might be expected from the large amount of National bank currency redeemed during the interval. Bonds to secure public deposits amounted on December 1st to \$141,768,000, including \$436,000 6s, \$11,083,500 4½s, \$29,728,500 4s, and \$520,000 called 3s.

The following shows the amount of each description of bonds held by the Treasurer to secure National bank circulation on the dates indicated :

	Dec. 1, 1887.	Nov. 1, 1887.	Oct. 1, 1887.	Sept. 1, 1887.	Jan. 1, 1887.
Currency 6 per cents.....	\$3,256,000	\$3,256,000	\$3,256,000	\$3,206,000	\$3,680,000

3 per cents.....	181,500	*144,500	216,000	*734,500	52,218,950
Total.....	\$187,147,000	\$188,828,000	\$189,717,100	\$190,096,950	\$229,438,350
* Called.					

During the month of November \$6,696,699 in National bank notes were redeemed by the Treasury of the United States. Of this amount \$808,040 were returned to the banks, and the remainder, \$5,888,629, was destroyed. The coinage executed at the mints of the United States during the month of November was as follows : Double eagles of a value of \$3,460,000 ; standard dollars, \$3,400,000 ; dimes, 267,000 ; five cent nickels to the extent of \$120,000 ; and one cent pieces to the amount of \$49,570 were also coined. The total valuation of the coinage for the month was \$7,297,290.

The 25th annual report of the Comptroller of the Currency has been issued. The important points of this report will be fully presented to our readers in the January number of the JOURNAL.

Since the foregoing was written the President's Message has been sent to Congress. It is uncompromisingly in favor of tariff reduction, and does not view with favor any of the plans proposed for the use of the surplus. Tariff reduction is, of course, the radical remedy for the prevention of accumulation of surplus in the future, but the immediate pressure is to provide for the surplus already accumulated, and that which will accumulate before the radical prescription can be compounded and applied.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of November, the highest and lowest since January 1, 1887, and also during the year 1886:

STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange.

The Quotations indicate the last bid or asked price. Where there was no quotation during the past month the last previous quotation is designated by a *. The highest and lowest prices for the year 1886—actual sales—are given for comparison.

NOTICES OF NEW BOOKS.

Pratt's Digest of the National Bank Act and other laws relating to National Banks, from the revised statutes of the United States with Amendments and additional Acts, to which is appended information how to proceed in organizing National Banks; also rules and regulations governing the redemption of United States and National Bank Notes, and Circulars issued by the Treasury Officials: of interest to Bankers. Edition of 1886, revised to June 1, 1887. Prepared and published by A. S. PRATT & SONS, National Bank Agents, Washington, D. C.

This is a work of great practical worth to banks and bankers of all classes. Messrs. Pratt & Sons have been agents of National banks at Washington since the commencement of the National banking system. Their intimate acquaintance with the Bureau of the Comptroller of the Currency and of the Treasurer of the United States enables them to give accurate information to all doing business with those offices. The digest gives, and shows where to obtain, useful practical information about the relations of National banks to the Government. No National bank should be without it. It is valuable to State banks and bankers who may wish to enter the National system, and also to private bankers for the same reason.

Sketch of American Finances, 1789-1835. By JOHN WATTS KEARNEY. New York and London: G. P. Putnam's Sons. The Knickerbocker Press, 1887.

Mr. Kearney's sketch covers a most interesting period of the financial history of the United States, and, as he suggests in his preface, may be studied with much benefit as a means of throwing light upon the present financial condition of the country.

The period treated of extends from the assumption of the Revolutionary debts contracted by the Continental Congress and the several States, by the new Government inaugurated under the Constitution of 1789, and ends with the complete liquidation in 1835 of this debt and others contracted in the interim. Although during this period there was a gradual reduction of the old debt, yet at several dates it was quite largely increased first, by the expenses of the anticipated French war and the trouble with the Barbary States, then by the bonds issued for the Louisiana purchase, and more largely by the expense caused by carrying on the war of 1812.

The book, however, is a mere sketch of the financial events of the period covered. It does not give, to the extent that might be desired, the historical reasons for the various transactions that it mentions. It is very meagre in regard to the foreign debt contracted during and immediately subsequent to the Revolutionary War, and very incompletely elucidates the history of the sinking fund of that period. It is, however, an attempt in the right direction, and will be read with interest by many at this stage of American history, so near the end of the first century of the existence of the Government.

Natural Law in the Business World. By HENRY WOOD. Boston: Lee & Shepard. New York: Charles T. Dillingham. 1887.

All business continuously done becomes after a time a matter of routine, and many scientists appear to make the mistake of regarding a routine originally determined by human action, either individual or united, as a law of nature. Properly, a natural law is supposed to be something that works just as well without human assistance. The ebb and flow of the tides, the motion of the earth, are in obedience to the law of gravitation, and the tide rises notwithstanding the implicit commands of King Canute. But it lately appears to be the fashion to conclude that, because men have for a long time performed certain actions in certain prescribed ways, these methods attain the dignity of natural law, and have an equal fixity with the law that controls the planets. The work, the title of which is given above, treats of the various relations of business and social life with much ability, but we think that the author falls into the error we have indicated above, and has given a too ambitious title to his book. If we regarded the business methods we see around us, and the various economic regulations of society that prevail as the results of some unchangeable recondite natural law, this view would be a serious bar to any reform. If the man who mows with a scythe gets it into his head that the use of scythes is determined and fixed by a natural law of the universe, he would lay himself open to the charge of fighting against nature if he used a mowing machine. When railroads were unknown, a philosopher, seeing that stage-coaches were generally used as a means of travel might say there is a natural law of transportation which directs the use of stage-coaches

drawn by horse power. A belief in this would tend to prevent the introduction of railroads. So, if we assume that the various ways of doing business and of regulating social questions that now prevail are the results of the working of a natural law, it would be useless to hope for any amelioration of what may be bad in the present social and business system. The machinery of modern life is, however, presented very intelligently and clearly in Mr. Wood's book. There has already been a great demand for it, and, to meet this demand, the present edition in paper binding has been issued.

Silver Question in England.—The American bankers at their Convention at Pittsburgh approved a resolution recommending the discontinuance of the coinage of the silver dollar, until after the settlement of the contest which is at present taking place between the mono-metallists and bi-metallists in England. London is the financial centre at which the market price of silver is regulated for two reasons. Because London is the financial centre of the world, and because India, one of the largest users of a silver currency, is at present an appanage of England. The settlement of the question, in one way or the other, is of more importance to the peace of mind of English financiers than to that of the statesmen of this country. But in England, as well as in the United States, there are political as well as financial elements involved in the settlement. Mr. Goschen, Chancellor of the Exchequer, is particularly cautious about committing himself. Speaking of certain questions of a financial nature, among which that concerning silver was the most prominent and important, he said: "We cannot allow those questions to drift without bringing them at last to a real authoritative decision. I look forward to the autumn not for a holiday, for ministers must not expect much holiday; but I do look forward to the autumn and to the winter for time in which real efforts can be made in the direction of studying some of those problems, the solution of which is demanded by every interest in this country. (Cheers.) I look forward to approaching that task." The *London Bankers' Magazine* in commenting on the attitude of Mr. Goschen remarks: "Note the cheers in parenthesis given in the report of the speech. Had Mr. Goschen said plainly that bi-metallism was an impracticable and unstatesmanlike system, as, to such a mind as his, it must appear then there would have been no cheers. Farmers, workmen, and others have a vague idea that, but for the dearness of gold, profits and earnings would be better than is actually the case. Mr. Goschen can hardly own to vagueness of ideas on the subject. It is useless for him to go on keeping up the farce of having an open mind on the subjects mentioned. * * * As to the question of bi-metallism, Mr. Goschen ought to know, and we can hardly accuse him of not knowing, that its very discussion throws a cloud over the real causes of depression, which must be sought in foreign competition, and the wars of modern industry, the cheapening of produce by steam and machinery, the want of technical education, and the natural disposition to sink into sloth after the enervating prosperity lately enjoyed." This is the whole thing in a nutshell, and is not very complimentary to erratic individuals who, like S. Dana Horton, author of the "Silver Pound," have crossed the ocean to teach the true principles of finance to English statesmen. The clamor in England has for some time been so great for the quack remedy of bi-metallism, that a Royal Commission was appointed to investigate the question. This Commission has examined witnesses, and has made a preliminary report unfavorable to the assumptions of the bi-metallists. This report has, of course, to be passed on by Parliament. From Mr. Goschen's cautious tactics we can see how widely the bi-metallic error has spread in England, and the necessity there is of time for discussion, in order that the traditional English common sense may have time to assert itself.

Whist!—The most expert players of this "finest of all games" say that the little book containing the principles and rules of the modern scientific game of whist, as explained and compiled by a well-known Milwaukee lady, and published by the Chicago, Milwaukee & St. Paul Railway, as a clever advertising medium for that great institution, is a true guide for the beginner, and a better standard reference for the American admirers of the game than the treatises of Pole, Cavendish, and others. No family circle or whist club can feel properly equipped without a copy of "Whist and How to Play It," which can be easily obtained by inclosing *ten cents* in postage, with your full name and address, to A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.—*Adv.*

BANKERS' OBITUARY RECORD.

Adams.—Walker Adams, President of the Davenport Savings Bank of Davenport, Iowa, is dead.

Bateman.—Seth Bateman, Director and for many years President of the Merchants' Bank of Newport, Rhode Island, died November 1st, at the age of 85 years.

Brown.—B. E. Brown, director of the Fannin County Bank of Bonham, Texas, died on November 21st, of Bright's disease.

De Forest.—Cornelius V. De Forest, special partner in the Stock Exchange firm of Colbron, Chauncey & Co., New York city, died November 9th, aged 70 years.

Foote.—Geo. Luther Foote, of the banking firm of Foote & French, of Boston, Mass., died November 24th. He was for many years Cashier of the Monument National Bank of Charlestown.

Gates.—Geo. W. Gates, Vice-President of the National Bank of White River Junction, Vermont, died on November 22d, at the age of 62 years.
